		91331	No	1/20/2022	I would like very much that you think of those of us with low incomes, I think a bus [is] faster and safer, the underground trains have no security, [homeless] people sleep on them. Thank you for taking our comments into consideration. Original Spanish: Me gustaría mucho que piensen en nosotros las personas de picos recursos me parece muy bien un bus más rápido y además seguro en los trenes subterráneos no hay seguridad las personas sin hogar duermen en ellos gracias por tomar en cuenta nuestros comentarios
		90062	No	1/20/2022	I think its very good. I don't work around there but I know people that come from there to Los Angeles and maybe we'll have job opportunities also there ? Original Spanish: Me parece muy bien no trabajo por ahí pero conozco personas que vienen de ahí hasta los Angeles y talvez tengamos oportunidades de trabajo ahí también ?
		91402	No	1/20/2022	Well it hope it does become a reality because we do need it. Original Spanish: Pues Ojalas se haga realidad pronto por que si lo necesitamos
		91342	No	1/20/2022	I think it's perfect… Original Spanish: Me parece perfecto...
		90250	No	1/20/2022	I've lived in the City of Hawthrone for the past 20 years and I have always had to travel to Santa Monica and there is a lot of traffic, which makes the trip almost 3 hours long, from my place of residency to my workplace during peak times. For that reason I wish that there be a better alternative to help us lessen the travel time. Original Spanish: Yo vivo en la ciudad de Hawthorne desde hace 20 años y siempre me a tocado viajar para Santa Mónica o Culver City y el tráfico es muy ,pero muy pesado lo cual hace que el viaje dure casi tres horas desde mi domicilio hasta mi trabajo en las horas pico ,por lo cual yo desearía que hubiera alguna mejor alternativa para ayudarnos hacer menos pesado el viaje .
		90064	No	1/20/2022	I don’t want the trains to stop at stoplights at wait for cars like the Expo line in Santa Monica. It adds delays and makes the line feel like an afterthought if we’re just going to be sitting at red lights like a bus or car. The rail line should get stoplight priority. Cars should stop for it, not the other way around.
	PACIFIC PALISADES	90272	No	1/20/2022	Why aren't the new lanes being used by a metro rail, like on the 105 freeway? ?That is the only solution that makes senses. Until we have metro trains running up and down the 405, LA does not have a viable transit system. A toll road over the Sepulveda pass is the last thing we need. Our roads should be free, which is exactly why they are called "freeways". Why build something that will ONLY benefit the affluent. I can afford the tolls and will use them but fundamentally disagree with their application. Please follow the same plan used on the 105 freeway. It works great!
	Sherman oaks	91403	No	1/20/2022	It seems like alt 5 would be the best. 4 seems very destructive to the area around it.
Encino Property Owners Association			No	1/20/2022	Can you please provide link to the most simplified version of information including the 6 Alternatives that will be the subject of environmental review.
	Los Angeles	90041	No	1/20/2022	Build heavy rail. The monorail is a scam meant to steal tax payer money.
		90501	No	1/20/2022	LA metro's history is one of compromises that severely hamstring its effectiveness. Please do you duty to future generations and make this high capacity, grade separated heavy rail
	Sherman Oaks	91423	No	1/20/2022	I support options 1, 2, and 3. My need is to commute to the Getty Center, where I work, along with about 1,000 other staff. I will not be supporting any option that does not stop at the Getty Center, which is also one of the city's top 5 destinations for tourism. Thank you.
			No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project: I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro’s goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro’s own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2’s closest stops are 1.5 - 2 miles away from UCLA’s campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It’s an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro’s environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro’s sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won’t achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to

					other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
			No	1/20/2022	Sepulveda street is already full of traffic most hours of the days. Some of us just bought our dream homes in a nice quiet neighborhood only to see that the main road in front of many homes will be torn up, cause horrible structure damage. Etc. This area already has bad soil erosion and any construction that could shake the land or ruin foundations for homes would be disastrous for those of us who live here barely able to support ourselves. What have the environment reports stated the damage would be for wildlife at balboa park and for foundation problems for homes in the area?
		91335	No	1/20/2022	Heavy rail

Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high

	Sherman Oaks	91403	No	1/20/2022	I tried my best to design a way to get to UCLA using public transit from my home, but there was no practical option. The 'best' option would take over an hour, more than half of which was walking, while driving takes less than 20 min. I welcome and support a train from the Valley to UCLA!

	Encino	91436	No	1/20/2022	Hello. I am a physician that works at UCLA Medical Center, which is located within the main UCLA Campus, and live in the San Fernando Valley Reducing vehicular traffic congestion on our streets and highways, while increasing accessibility for those who travel across our region is something we should all strive for and can achieve together. The Sepulveda Transit Corridor must be accessible to all Angelenos and provide stops where people want to go, including students, groundkeepers, custodians, faculty, medical support staff, and administrative staff. According to Metro, an on-campus UCLA station would be the busiest non-transfer station across the entire metro system. Such a station would help connect people to where they need to go for employment, for educational purposes, for cultural and recreational attractions, and for medical needs. Commuters come to the UCLA campus from all directions. Access to transit is a major inequity across Los Angeles, disproportionally affecting people of color and low-income households, who are more likely to depend on public transit, as well as seniors and people with disabilities who depend on public transit for access to work, healthcare, education, and cultural attractions. Three of Metro's six alignment alternatives do not include a direct stop at UCLA and the Purple/D Line station in Westwood Village. This is unacceptable for the thousands of students, staff, faculty, medical workers, patients, and others who come to and from UCLA and Westwood each day. A metro stop at UCLA would take people off the 405 freeway (one the most congested urban highways in the nation); it will shrink the travel time for many of our commuters, enhance their quality of life, help clean our air, and improve our region's environment and sustainability. The Sepulveda Line must include a direct stop on the UCLA campus and a seamless connection to the Purple/D Line Westwood Station. Thank you.
	Woodland Hills	91367	No	1/20/2022	I would greatly benefit from this project. The drive from Woodland Hills to the Westwood/Santa Monica area is terrible. There are way too many cars on the road. We need this metro. It would positively impact the environment, mental, and physical health.
	Los Angeles	90049	No	1/20/2022	Please add stops and shorter wait periods near Getty Center. The current bus is unreliable. Thank you for helping commuters!
	burbank	91506	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Reseda	91335	No	1/20/2022	Option 6 Please - Entirely underground. Yes it's expensive and slower construction, but is a much more maintainable, optimal, stable infrastructure over time/for the future. You don't need stations on the freeway where people are breathing in terribly unhealthy exhaust fumes!!
	Sherman Oaks	91411	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
		91405	No	1/20/2022	That’s great, wonderful…??
	Lake Bslboa	91406	No	1/20/2022	We really need this work to be completed soon.
		91335	No	1/20/2022	We need reliable and frequent trips. The current bus route that goes down Van Nuys Blvd to Sepulveda is not enough especially when trips get cancelled. I would love a rail to easily commute to the West Side especially when going to UCLA/Westwood. It takes too long in traffic and winding roads at the moment. Please no dedicated bus lane like the G Line, it is only a temporary band-aid and ridership will be overwhelmed within a couple of years with a growing population and more people being forced to commute further away due to gentrification.

	Woodland Hills	91367	No	1/20/2022	If there was a bus that would not require much walking to get to the bus stops, I would consider taking the bus from home to work. It would have to start early in the morning since I get to work at 6:00.
	Woodland Hills	91367	No	1/20/2022	The following is text copied from UCLA Transportation, with which I completely agree. In addition, I would like to see adequate space for bicycles on any train over the Sepulveda pass. Conditions for bicycle commuting on Sepulveda Blvd. (and all other roads connecting the valley to Los Angeles) is exceptionally dangerous even for the most brave and experienced, and bike racks on Metro busses are often full during peak commute times. Thanks. -- To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

			No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. 		90031	No	1/20/2022	Please build heavy rail and not a monorail.
		90034	No	1/20/2022	Heavy rail heavy rail heavy rail, NOT monorail!
		90025	No	1/20/2022	Yes more transit please.
		90012	No	1/20/2022	give us a rail and give us one from downtown to weho while ur at it
		90068	No	1/20/2022	The 405 corridor has needed rail forever. Yes please!
		90057	No	1/20/2022	Automatically yes, there should be more connections in that part of LA county. North Hollywood should connect to this as well.
	Van Nuys	91401	No	1/20/2022	As a resident of Van Nuys/Sherman Oaks and a UCLA employee, I would very much like to see this project move forward, particularly with a station on or adjacent to the UCLA campus and a connection to the Purple line.
		90405	No	1/20/2022	I wish for express tracks, not just local.
		91607	No	1/20/2022	Please don’t let the lawless or homeless ruin the ride.
		90034	No	1/20/2022	Ditch the monorail idea and go with the project that garners the most throughput.
		90069	No	1/20/2022	It needs to be FAST and it needs to handle a LOT OF PEOPLE.
		90403	No	1/20/2022	I love the idea. I would love to see more rail and bus options to get from the west side to the valley quickly and efficiently. Then I would love for there to be additional transit options at the stations to make to easier to get around the valley or get around the west side. I hope that they can create an organized, fast, reliable system that is better than driving so that the freeways become obsolete.
		90034	No	1/20/2022	Any kind of rail transit that improves west side travel to and from anywhere else in LA would be excellent. Getting to the valley right now from culver is a very long and roundabout process. Direct rail lines to speed that up would be a godsend.
		91601	No	1/20/2022	I'd love for the track to start in noho and have a stop in sherman oaks before going through the mountains. I also wish it was coming sooner, but I don't think there's much you can do about that...
		90404	No	1/20/2022	I love it just please no monorail. Most monorails systems have poor return. Their systems make track changes extremely difficult to engineer. Don’t do anything cool or exciting put a train a simple repeatable proven solution. I’m a civil engineer who works with planners monorail is not the solution.
		90044	No	1/20/2022	No more homeless people

		90033	No	1/20/2022	Yes I like the orange line but this could be more convenient....
	HERMOSA BEACH	90254-3258	No	1/20/2022	If you build the monorail over heavy rail, Los Angeles County will never forgive you.
	Burbank	91504	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

		91307	No	1/20/2022	I DO NOT wish to have another transit system between the San Fernando valley and Los Angeles. Since the pandemic, a new 'telecommute' workplace has emerged as well as a new 'virtual' teaching experience for the UC system. Traffic has decreased significantly over the past 20 months which does not justify yet another under utilized transit system. The 405 corridor was disrupted for 2 years during the widening expansion. To undo what hundreds of millions of dollars just recently spent to fix, is misappropriation! Not to mention the environmental issues (noise, pollution, trash, additional traffic) caused by a train is unthinkable. This project will negatively impact those who live around the proposed line. I wish politicians would be forced to live in areas that the train would pass by and the bus routes that have been added now pollute. If you would like me to provide documentation, I have included links here: https://californiaglobe.com/articles/citizens-demand-action-on-l-a-s-purple-line-train-cost-overruns-and-mismanagement/ https://la.curbed.com/2019/6/20/18691833/north-san-fernando-valley-brt-opposition
	Los Angeles	90066	No	1/20/2022	This transit system needs a direct stop at UCLA and a connection to the Purple/D Line!!!!!!

		91331	No	1/20/2022	What I like about this project is that it will open access for working people in the San Fernando Valley to explore career opportunities in this area. It will also greatly benefit those who already commute the 405 to and from work. It will also reduce the amount of cars on the road which is great for the environment. As someone who lives in the Valley, I wish that this project becomes a reality. I would like to see more projects like this to help those who cannot get around as easily as others.

	Van Nuys	91405	No	1/20/2022	PLEASE APPROVE ALTERNATIVE 5! It is clear to me that option 5 is the best alternative so far, because: 1- It proposes a FAST connection (heavy-rail and underground). Efficiency will make people actually use the line. 2- It is equitable - other options offer a mix of aerial and underground, but 5 is clearly the one that prioritizes the valley as much as the wealthier communities south of the mountains. 3- It provides a direct and fast connection to UCLA, which is crucial to reducing traffic in Westwood and the 405. Students will be able to live in the valley (which is more affordable). 4- It goes through Sepulveda - unlike option 6, option 5 goes through this major connector blvd in our region. This provides more connectivity with other transit lines.
	Reseda	91335	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these

					Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Granada Hills	91344	No	1/20/2022	There should be a terminal on the UCLA campus
	northridge	91324	No	1/20/2022	Please consider the project, this will ease a lot of traffic, and would be better than a PAID lane.
	Sherman Oaks	91423	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high

					ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Van Nuys	91406	No	1/20/2022	To get to work directly from home(San Fernando Valley- Van Nuys to Westwood). Avoid 405 FWY(traffic). Smog, having to fix street/s from wear and tear, or climate. Purple line(metro) and other connections to and from. Would like saving on gas, parking, insurance for vehicle and maintenance. Wish to have some down time before or after work on the train, and still get home early enough to spend time with family. I suggest maybe a stop somewhere at the Skirball Museum or on top of the mountain on the 405 FWY.
	Canoga Park	91304	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

		91401	No	1/20/2022	I have commuted from the Santa Clarita or San Fernando Valley to UCLA for more than 15 years. I currently reside 8 miles away, directly north of campus and routinely spend 1.5-2hr in the car each day commuting. There has never been a viable public transit alternative. It is therefore VITAL that the STC include a route directly to the westside with a stop in Westwood or at UCLA. Thousands of staff, faculty and students needlessly waste hundreds of thousands of hours each year in the most soul crushing traffic just to get to and from their place of work or learning. Thousands of others work near the UCLA campus and have the same commute. It is unacceptable that LA County has not done anything substantive yet to alleviate the north-south standstill between the San Fernando Valley and the Westside. The current plan links the north valley with Sherman Oaks and North Hollywood--but how on earth are people supposed to get to the westside? Travel 20 miles out of the way through the redline and then the purple line? This is a major quality of life issue that is severely affecting my family and prompting us to look for another city to live in. It is also critical there be sufficient parking in the Valley at the transit access points. I recognize that there is a major long-term goal of reducing driving, but currently you must acknowledge that we are almost entirely car-dependent and still will be when the STC is completed. Regular commuters like myself cannot be expected to walk a mile or more to the transit stop. The overall commute time on public transit must be at least equal to, and ideally much less than, time spent driving, or its use will be suboptimal. A huge part of this is the convenience and ready accessibility of parking. If I cannot drive to and quickly find a place to store my car at the transit stop, I will not use it. Moreover, as a resident of Van Nuys, the parking on my street is already heavily impacted; reducing a lane on Van Nuys Boulevard and installing transit stations without sufficient parking will make our neighborhood subject to even more flow-through traffic and congestion of parked cars.
	Woodland Hills	91367	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; As a graduate student at UCLA who commutes in heavy traffic from the San Fernando Valley, I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. 	Porter Ranch	91326	No	1/20/2022	This is a critical infrastructure update for the UCLA/Westwood Community. As housing costs rise, UCLA Faculty, Staff, Students, and UCLA Health patients are moved further and further from this intellectual and patient care hub. Providing modern, convenient, and efficient transportation to the community is critical for the long-term health of Los Angeles and the UCLA/Westwood Community.
		91403	No	1/20/2022	LA desperately needs more rail lines so I am 100% in favor of this project. I just wish for this project to be done as quickly as possible.

	Los Angeles	91316-1801	No	1/20/2022	UCLA being one of the largest employers in the state, and with employees coming from all over, as far as Antelope Valley and the Inland Empire. This will greatly reduce vehicular traffic congestion on our streets and highways, while increasing accessibility for those who travel across our region. This will greatly impact congestion, automobile fatalities, pollution, etc. Please make possible a Sepulveda Transit Corridor STOP for UCLA students, faculty and staff. Thank you.
		90043	No	1/20/2022	Please no monorail. And train through ucla.
	Los Angeles	90034	No	1/20/2022	I would like to record my support for options 2 and 3 for the future Sepulveda Transit Corridor project that feature a stop at the Getty Center and connections to UCLA/Westwood. As some who has worked/is still working for both UCLA and the Getty Center, it would be a huge improvement to have a metro line connect the Getty Center to other light and heavy rail lines. I have lived within walking distance of various stops on the E line over the past 5 years and would happily take public transit all the way to work, if possible. I like to prioritize access to public transit when I move in the hopes that I can utilize it for work and pleasure, but the gaps in connections across the city, particularly on the Westside, have made it difficult to actually use public transit when going out. I have attempted to use a combination of bus and light rail to get to work in the past and my commute is often over 1 hour long (occasionally 2 hours when buses were late), which is unsustainable when compared to my 13 minute drive. Please, please, please put stops at the Getty Center and UCLA campus. These stops will have such a profound impact for students and professionals at both sites and will encourage many more people to take advantage of public transportation options.

Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Valley Village	91607	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express strong support for the heavy-rail alternatives 4, 5, and 6 for the Sepulveda Transit Corridor alignment. As an Angeleno born and reared in the San Fernando Valley, I want to see Metro leaders make a firm commitment to increasing accessibility, mobility, and equity in transit between the Valley and the Westside. Alternatives 4, 5, and 6 provide the best path forward, and a successful Sepulveda Transit Corridor alignment must include direct stops at UCLA and Westwood Village and connection to the Purple/D Line. As alternatives 1, 2, and 3 fail to provide for those stops, they should be eliminated from consideration. UCLA, including its hospital and medical center, is one of the largest employers in Southern California. Frankly, it would be ridiculous not to include a direct stop at the main campus and in nearby Westwood Village. As a UCLA student, I would love to be able to get to campus from my home in the Valley via a heavy-rail line. Even as someone who loves his car and enjoys driving, I see the immense benefits to environmental justice, equity, and accessibility that alternatives 4, 5, and 6 provide. Please eliminate or adjust alternatives 1, 2, and 3 to include stops at UCLA and Westwood. Sincerely,

Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Granada Hills	91344	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village, and a connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. 					ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3. Personally, I am a transplanted New Yorker, where, during financially trying times, mass transit is a life saver. It enables everyone to got to and from work, to be productive members of society. Also, the environmental consequences of taking out all the trolley lines In LA and forcing everyone into automobiles is well documented. I will probably retire before this project is completed, but I think for the future of LA, it is essential
	Los Angeles	90024	No	1/20/2022	To the LA Metro Board of Directors, I am writing to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. As a UCLA student who wishes she could stop driving so much to get anywhere in this city, who detests the 405 traffic, and who would hope the future of other UCLA students can be different, I hope that these changes can be implemented. It is critical to be on the forefront of environmentally beneficial policies that also can improve community health. I am excited about the metro project and hope that it can be a successful point of pride for Angelenos. Thank you,
	granada hills	91344	No	1/20/2022	I have spent the last 15 years living in the San Fernando Valley and commuting to UCLA. It has not been a pleasant experience. The only blessing from our current pandemic is that I have not had to spends hours in the car stuck on the 405, or various alternate routes, trying to get to work or get back home. I strongly support an option that offers a stop at UCLA/Westwood that is also inter-connected with other Metro lines of service. Without this, most UCLA employees and students will not use the new train line. I would love to have the option of a mass transit service that would improve my commuter experience. Current options are not convenient, take too long in travel time, or are not priced to be cheaper than driving my car. Putting a stop a few miles away seems like a huge miss and there won't be a chance to fix it later. I would not want to transfer to other lines of service to get to the last mile from the train stop. That would be enough deterrence for me to just stay with driving my car. I hope you will seriously explore a solution that allows the large UCLA community to benefit from this new transportation service. Options 4, 5, and 6 seem more closely aligned with that goal.
	West Hills	91304	No	1/20/2022	What I wish is I could have a seamless train transportation from the Valley to the UCLA Campus directly. As a commuter student at UCLA, a vigorous institution, commuting about 1.5 hours on the 405 for just one way is time that I could use to dedicate to my studies. In addition, my father and I use the same car (since he works in the UCLA area) so having a train that I could take directly to UCLA would help me not have conflicting schedules with him and put less stress on him since he has health issues. Having a train from the Valley straight to the UCLA campus would help tremendously mentally, physically, and emotionally.

	North Hills	91343	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6, with special emphasis on alternatives 4 and 5, can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate Alternatives 1, 2, and 3. The heavy rail alternatives 4, 5, and 6, and especially alternatives 4 and 5 with their larger capacity, are the only real solutions for the future Sepulveda Pass line.
		91606	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

	Venice	90291-2455	No	1/20/2022	Hello, based on the project plan alternatives, I would like to see Alternative 6 implemented with Alternatives 4 and 5 (underground automated and driver) as back up options. I believe the comprehensive option is better suited for the long term goals of the transit project and I do not believe the monorail will accomplish those same goals. Additionally, I would like to see a congestion pricing scheme rolled out in concert with the system wide expansion in order to encourage adoption of sustainable transport.
	Burbank	91505	No	1/20/2022	This is so necessary! This would greatly decrease traffic and be very helpful to those who don't have cars.
	Canoga Park	91303	No	1/20/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. 	11009 Encino Ave., Granada Hills, CA 91344	91344	No	1/20/2022	As a commuter from the San Fernando Valley to UCLA for the past 20 years, this is a welcome transportation option from the valley to Westwood. It would be crucial for a direct stop to be available on the UCLA campus.

	Valley Village	91607	No	1/21/2022	I strongly support the construction of heavy rail - not low-capacity monorail - service that would connect the San Fernando Valley with the Westside of Los Angeles via the Sepulveda corridor. In addition to ensuring there is a rider-friendly interface for those of us who would be boarding here in the San Fernando Valley, it is also critical that the rail line include a stop on the UCLA campus. This practical alignment of the route would serve students, UCLA employees, patients at UCLA Medical Center, and visitors to campus for cultural or athletic events. For a multitude of reasons, rail stops were not built for the Red Line at the Hollywood Bowl, for the Gold Line at Dodger Stadium, or for the original Green Line at LAX. The Sepulveda Corridor project is an opportunity to get it right by having a major destination served directly by a heavy rail stop. Selecting the heavy rail alternative with a stop on the UCLA campus is the best decision not only for San Fernando Valley residents or those who work at or attend UCLA. It is the best decision for the future of transportation in our region. Thank you for considering my comments.

Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving hazards. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Sherman Oaks	91423	No	1/21/2022	Option 1 seems like an excellent option! As a Valley resident who works at the Getty, I support any of the options with a Getty stop. This will also be great for our visitors -- over 1.5 million visitors every year!

	Sylmar	91342	No	1/21/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. 	Tarzana	91356	No	1/21/2022	What I like are transportation projects that bring massive levels of efficiency. The need to rapidly transport thousands of Valley residents in rush hour without straining the 405, the 101 and residential streets has been present for many, many decades. I wish I were able to walk or drive to a main stop and get to UCLA in 40 minutes or less, which is how long it takes for me to drive from Corbin/Topham to UCLA, in pandemic rush hour traffic.

The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

	Sherman Oaks	91423	No	1/21/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project: I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
		91406	No	1/21/2022	The 405 near Westwood is one of the most heavily trafficked regions in all of LA. Establishing an efficient public transportation line there would be to the benefit of commuters and residents of the area.
	Venice	90291	No	1/21/2022	The AQMD requires UCLA to do an annual commuter survey , because it is the second or third largest employer on a single site in LA County. And that's just employees. Then there's students. That having a stop at UCLA is even a question is an indictment of the project's management. Additionally, the Purple Line already has a major station under construction at Wilshire and Veteran to service the campus. But that station would require any SFValley folks wanting to get to UCLA and points west to go all the way to downtown LA on the Red line to get to UCLA under current configuration. So the traffic over the Sepulveda pass for this group will continue to be principally by car. Providing a Sepulveda Pass train station at UCLA, one that connects to the Purple Line's station, is the obvious solution.

	Calabasas	91302	No	1/21/2022	Please do this and also look for a better pathway for cyclist too.
			No	1/21/2022	I would like to suggest alternative 5 (Heavy Rail) for Sepulveda line, I live in the valley and would like to see a reliable line and comfortable riding unlike light rail option because I don't think monorail is reliable enough or as efficient.
	North Hollywood	91605	No	1/21/2022	Alternative 5 is the way to go. All that aerial structure (not including next to Metrolink tracks) would be too ugly. And Heavy Rail is 100% the best option. Using Heavy Rail maximizes your economies of scale with those vehicles, plus they are proven to run faster and more reliable than monorail. Monorail seems to be just a gimmick for ooos and aaaahs. Furthermore, extending the subway system (which is what these latter alternatives would do), would build more confidence in riding the subway, using the other lines, and integrating the metro system as a whole.
			No	1/21/2022	I'm against metro on sepulveda it will be messy dirty and more problem finding parking Sherman oaks will be not good location value homes will go down very very Sad
	LOS ANGELES	90077	No	1/21/2022	I would like to see the Sepulveda transit corridor under or above Sepulveda Blvd. A monorail or underground subway under the 405 makes the most sense. I live off Stone Canyon and I know that the soil under my house is very soft alluvium, as Stone Cyn was once a riverbed. We had to go down 45 feet to hit Bedrock when we had a backyard wall built. Also, there is only one way out of Stone Cyn and the construction equipment would be devastating to homeowners. Please follow my suggestion to locate the project near to the 405 or Sepulveda. Thank you very much,
		90015	No	1/21/2022	Keep people who have feces/urine out of public transportation. Hire more security as the train has become too dangerous.
		90064	No	1/21/2022	1. Build using heavy rail: fast, proven, high capacity 2. Build UCLA to D and E lines as Phase 1 incase tunneling through Santa Monica mountains hits delays. Try to build this 3 mile section before the Olympics. 3. Expedite timeline to connect to LAX. Can the LAX section be built simultaneously?
		90064	No	1/21/2022	High speed rail, light rail, mono rail, and options that are reliable and have a low carbon foot print are fantastic. Please look at popular metropolitan areas like Paris or Geneva that have widely used and popular mass transit systems in order to make Los Angeles a green and sustainable city. These projects are necessary for a global powerhouse such as LA and would benefit us on the world stage and for hosting events such as the 2028 Summer Olympic Games. Connect our city in as many ways as possible.
		90038	No	1/21/2022	Yes! Make transportation accessible across LA county. Would be great to see a rail running north and south along the 405. Improving public transportation is great for the environment especially considering how dense traffic is in the LA area. Parking fees and lack of availability make traveling to LA difficult. Improve accessibility to improve the economy!
		91502	No	1/21/2022	This is needed! LA needs an overhaul of it's entire metro system.
		91016	No	1/21/2022	No gentrification!!!! Transit should be free!!! You exploit transit workers and working class people for profits. The people see through your lies.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
		90291	No	1/21/2022	If you are able, adjust lanes on 405 to accommodate a rail system in the middle of the freeway like the I-10. Ensure stops are placed at most suitable intervals for popular places such as The Getty, Sunset, Ventura Blvd, etc. Also, it is important to consider connection points for Metro users to ensure seamless transfers from one line to another.
		91306	No	1/21/2022	I would like it a lot, because I would get home from work faster. Original Spanish: Me gustaría mucho , porque llegaría más rápido a mi casa de mi trabajo
	Woodland Hills	91364	No	1/21/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Burbank	91501	No	1/21/2022	A train from the valley directly to UCLA would help me as a disabled graduate student get easier transportation to campus. Due to impaired vision, I cannot drive myself, so I am reliant on buses or my partner. a train would shorten my commute, and be better for the environment.

			No	1/21/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

					ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90069	No	1/21/2022	I suggest selecting alternatives 4 or 5. I like that 4 and 5 seamlessly integrate with the D line and that heavy rail has significantly higher capacity than monorail. By all means, do NOT select a monorail alternative, that would be a disaster for LA Metro Rail.
	Agoura Hills	91301	No	1/21/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

	Los Angeles	90024	No	1/21/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

	Van Nuys	91406	No	1/21/2022	I wanted to express my concerns regarding the Sepulveda Corridor. I live in the neighborhood between Sepulveda and Victory Blvd. Our neighborhood is concerned that the noise, pollution and construction will disrupt our neighborhood and the value of our houses. We will be trapped between the 405 and this new rail system. Please explain how this will not harm our neighborhood.
	Tarzana	91356	No	1/21/2022	I was born and raised in the San Fernando Valley and have been commuting regularly to UCLA for work for the past 10 years. I support all efforts to create a more efficient method of public transportation to help folks from the valley reach the westside, and specifically the UCLA campus. This will make a world of difference for students, faculty, and staff. Thank you!

		90024	No	1/21/2022	I am excited and have high hopes for the project! I really depend on public transit and would really appreciate a rail built from Westside outwards
	Sherman Oaks	91403	No	1/21/2022	The Valley and UCLA need to be connected to the rest of the city with underground transportation that is similar in nature/style/size to what already exists. It keeps transportation consistent, interchangeable, and should be more cost efficient. Public transportation that is fast and thoroughly connected is the best way we can begin to get our residents out of their cars and off the freeways. This will have the greatest impact on the environment and improving quality of life. I wish Metro would stop looking at above ground rail and monorails for this project. Monorails are not compatible with our current underground system and will not endure in the long run. Elevated trains running down the streets of the heart of the SF Valley are not acceptable. The level of noise pollution to the valley communities would be unacceptable. Option 4 should NOT be studied any further. The Valley needs to be treated fairly, and Metro needs to be forward thinking. If we are making the investment for the 21st century and beyond, let's be sure we get it right and put this project underground. If Metro does pursue the monorail, be sure the connection to UCLA is prioritized. Option 5 serves the SF Valley and the West Side in the best possible way while connecting appropriately to the rest of the city's transportation system with greater ease. I urge Metro to move forward with this Option, as the proximity to the 405 would allow for residents to the North to make the easiest connections from their cars to the underground rail system. Option 6, while underground, will create additional surface street congestion due to its distance from the 405. I hope that Option 5 becomes the choice for moving forward.
		91331	No	1/21/2022	I am a nurse at UCLA Westwood, having an alternate method of transportation for all UCLA staff and students would significantly reduce the amount of traffic seen and experienced via 405 sepulveda pass. Our campus accounts for hundreds if not thousands of commuters daily. Any reduction to this would tremendously improve our air quality and the overall well-being of all Angelinos. Having a station on campus would further encourage all UCLA commuters in the alternative use of a train which would bypass hours of traffic and enhance the work life experience for all commuters.
		91602	No	1/21/2022	Don't go with the monorail option unless you want our city to look like a joke while only having a sub-par travel time/connection between the SFV and west side. I really hope that you guys go with a high captivity and high frequency heavy rail option. This should also be a super high priority for Metro, this would take SO MANY cars off the road and would work miracles with improving our quality of life, carbon emissions, and creating new riders with metro. I live in North Hollywood and haven't been to the west side I,'m well over a year. I,äôd love to go more often, but getting there is such a challenge whether I drive or take metro. Having this connection would increase my mobility and bring more people (and revenue) into the west side.
		90025	No	1/21/2022	I love not having o take the 405, being stuck in traffic and polluting. The transit options absolutely need to stop at the cultural institutions along the 405 including the Getty and skirball. Help make accessing culture easier for visitors and LA residents. This is so needed, and the train should connect from the expo and the Orange line. Ideally also from LAX

		90034	No	1/21/2022	Please build fast and reliable high-speed rail!!
		91403	No	1/21/2022	I'd love this. I decide where to go based on metro options. If it were above ground I'd suffer a lot less from smokers in the stations, which is an issue I have on the red line.
	Sherman Oaks	91403	No	1/21/2022	I think the addition of a Metro's Sepulveda Transit has the potential to dramatically reduce vehicular traffic congestion, improve air quality, and meet the needs of thousands of commuters across the L.A. region, especially from someone who lives in the San Fernando Valley.
		90057	No	1/21/2022	I don't understand now, why buses are ducking late, over an hour. Sometimes they come like 3 or 4 buses together. It's took me like 3 hours last week to get at job. Now we paying this shit!
	Los Angeles	90034	No	1/21/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the

					environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90024	No	1/21/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Los Angeles	90064	No	1/21/2022	I feel that the mass transit from the San Fernando Valley to the LA Westside is long overdue! This project should be done very soon.
		90404	No	1/21/2022	Whatever the transit method it should have a way to be paid for by phone like the big blue bus where you can buy the ticket easily on the app just before getting on. I only use big blue bus lines because I would never bring cash with me and I have no idea where I'd otherwise be able to pay for the bus on other buses!! Easy of buying is key! I take the big blue bus to work every day

	Sherman Oaks	91403	No	1/21/2022	It has come to my attention that the Metro is proposing the Alternative 4 Route through Sherman Oaks and running through Sepulveda. As a resident who lives on Morrison St., just east of Sepulveda, I need to express that I couldn't be more opposed to this. Living near the 101 and 405 freeways is challenging enough when it comes to noise, pollution and traffic. With that, the Metro Alternative 4 Route would be so devastating to the entire Sherman Oaks community that I can't in good faith ever back such a poorly thought out plan. With the heavy rail trains running 20 to 40 feet above Sepulveda Boulevard in the Valley, Alternative 4 will destroy Sherman Oaks forever. Please reconsider and change any plans that would ruin Sherman Oaks and stop Metro from considering the Alternative 4 Sepulveda Pass route. Sincerely,
	Encino	91436	No	1/21/2022	I am in favor of public transit from the SFV to UCLA, that would help my commute tremendously and help improve air quality. thank you

	West Hills	91307	No	1/21/2022	As someone who resides in the San Fernando Valley, what I would like to see is an accessible and equitable Sepulveda Transit Corridor that includes a direct stop on the UCLA campus and a seamless connection to the Purple/D Line. Thank you
		91342	No	1/21/2022	I grew up in the SF Valley and have long waited for this project. This project will remove cars from the Sepulveda pass, providing much relief for the collective air we breathe. Cleaner air is needed more specifically for those communities forced to live near the freeway due to high housing costs. I am particularly excited about the proposed UCLA stop. There are many like me who are forced to take the almost 2 hour bus ride from the Sylmar/SF station to get to work at UCLA and surrounding areas. Not all of us own cars. Not all of us want to own cars. I am now an assistant professor at UCLA. My neighbors and I commute to UCLA and the surrounding campus areas to workfrom as far as the northeast SF Valley. We clean houses, prepare and serve food, take care of and educate children, work on construction sites, and more. In short, without us UCLA and surrounding Westwood commmunities do function. I wish this commute didn't add to the already long days of work we provide. Finally, I actually enjoy being in community. I like catching up with my neighbors while on the way to work instead of waisting time sitting behind the wheel by myself. It would be great if we didn't force already exhausted people to have to stand on packed buses for the 2-hour commute. It would also be great if exhausted commuters didn't have to take another set of transfers just to get to UCLA from the proposed sepulveda pass transit plan.
	Tarzana	91356	No	1/21/2022	The Sepulveda corridor has long been a gridlock for those of us who live in the valley and work in the city or in Westwood/West LA. Expansion of the 405 did not relieve the pressure except to cause great pain for years during the construction. It is time that we have a reliable, consistent public transportation option along the corridor and this should connect to LAX, Santa Monica, and UCLA.
	Van Nuys		No	1/21/2022	To Whom it may concern: My family and I live in the Valley, almost right along Sepulveda. As a family, and a close-knit community, I strongly oppose Alternative 4 of having an elevated rail running down Sepulveda Blvd. I am not opposed to an underground alternative, but as it stands Alternative 4 is a terrible idea and there is considerable evidence throughout this country that elevated railways divide communities, increase noise levels, and tend to be built in low-income areas where there is no opposition. And instead of these communities flourishing like the West Side with at-grade or underground rail, they continue to disintegrate into poorer communities; just take West Oakland as an example of this. PLEASE PLEASE PLEASE DO NOT DO Alternative 4. Best regards from a homeowner and community member in Van Nuys,
		90027	No	1/21/2022	For everyone's health, I wish that all buses and trains are well sanitized and seats are need to be cleaned! We are already start paying fare and it's not worth it! :-(
			No	1/21/2022	hello, I live in Van Nuys and have been following the discussions about the possible metro line expansion up sepulveda blvd. plain and simple - Alternative 4 doesn't work for us. It will divide our community, increase noise levels, and isn't fair. Stop considering Alternative 4 and give us the community access we deserve, just like other parts of Los Angeles like the Westside and Gold Line. We want at-grade or underground rail on Sepulveda. I appreciate your attention and hope that this option is removed from the discussion so that more attention can be paid to the appropriate alternatives.

					other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Sherman oaks	91411	No	1/22/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
		90015	No	1/22/2022	Heavy rail with a station at UCLA to me seems to be the only reasonable proposal. We should be spending the money to get the right solution for this critical transit link. Not the monorail which is slower, lower capacity, and has terrible station locations. Build it right so we have a good transit foundation for years to come.
	Beverly Hills	90210	No	1/22/2022	I live in the Valley and Alternative 4 doesn't work for us. It will divide our community, increase noise levels, and isn't fair. Stop considering Alternative 4 and give us the community access we deserve, just like other parts of Los Angeles like the Westside and Gold Line. We want at-grade or underground rail on Sepulveda.
		91503	No	1/22/2022	To get to the E line Expo from Sepulveda/ Ventura within 30 min or less. Basically a faster alternative to the 761 that currently take 1 hour & 15 minutes

			No	1/22/2022	Dear Metro and Representatives, Metro to even consider an above ground train through Sherman Oaks and the Valley translation . . . Valley residents and don't matter! Government and Metro can purposely decimate our communities illegally and treat the Westside and Little Tokyo as deserving and entitled of underground trains while the Valley is shafted. Metro will purposely cut our Valley with a hideous 20 foot above ground train creating massive noise, traffic, graphiti removal of businesses and homes and of course a lovely place for the homeless to squat. You want to install a train it must only be underground nothing else will suffice. This will be seen as a hostile act to attack and de-value neighborhoods in order to provide underground trains for the cherished Westside residents at others expense. The Valley needs to succeed if this is how Metro and Government treat our residents as the step child of the valued Westside. Metro ridership across the board has plummeted and is deemed unsafe, inconvenient, inaccessible , time consuming, and impracticable. Your train does not serve many and I guess I will have to scooter to reach a station unless of course I am run over or attacked getting to said train station. Metro ridership is down since 2014 due to partly and exodus of riders and LA is way to spread out a train doesn't serve the transportation needs of residents from their scattered locations. There is no parking at the North Hollywood station so unusable . People are leaving CA in droves. The idea of battering Sherman Oaks with an above ground hideous train is unacceptable!!! Not only does it take up valuable space but divides Sherman Oaks and creates an abomination of blight and an eyesore. It will be covered in graphiti and homeless encampments will call it home destroying the safety and beautification efforts.. It is outrageous that Metro would consider based upon dollars to ruin Sherman Oaks and not treat us with the respect we deserve with anything short of an underground system like the Westside. We apparently are considered secondary to the Westside so in Metro's eyes it is acceptable to divide and deliberately create blight in our suburban community. No trains above ground on Sepulveda. Also, we need parking which metro does not provide adequately so that those that want to utilize the trains simply cannot. LA is "sprawl" way to spread out to use a train for part of ones commute without parking to reach the train station. This only serves the public that lives a reasonable walking distance to a train station which does not include everyone else. So Metro's action is all show for limited access and feasibility. Lack of parking is a giant deterrent. Transport needs to save time, be less aggravating, safe and convenient in order to work for urban sprawl and reduce congestion. Living in the hills are we suppose to skateboard down the hill on bumpy streets and sidewalks risking bodily injury in order to comply with the City's out of touch goals of hoping a train? That is discriminatory as we are not millennials riding scooters and bikes (requires balance) to reach a train station. This action shuts people in. LA is not compact like New York. Also, given the condition of stations and buses there is a huge lack of safety (attacks/rapes/threats/violence/mentally unstable patients) on the buses and trains as well as in the vicinity of the station or stop. NO ABOVE GROUND METRO! Metro Trains above ground ruins our community even more, turning our suburban community into a dump site purposely. The City and Metro should be ashamed of itself to welcome the Olympics as tourists can see vividly how out of control LA is. Garcetti moved the homeless from downtown to appear clean to the Olympic Committee and blighted the Valley by his deceptive actions. The Valley has been under attack with SB50 destroying neighborhoods, FAA Flight corridor noise and excessive pollution, homelessness, lack of police, lack of repaired streets and sidewalks and massive crime unchecked. People are leaving the State and we will lose a congressional seat with population decrease. We have had enough destruction of Sherman Oaks!!
	Simi Valley	93063	No	1/22/2022	This would be an excellent idea to alleviate traffic and use the funding to build a brighter future for Californians.
	Los Angeles	90004	No	1/22/2022	I would definitely like there to be some form of public transport available in the corridor, as currently it is difficult to get from one side of it to the other. Of the options available, I prefer heavy rail (with or without a driver) to monorail. Alternative four is my favorite alternative.

			No	1/22/2022	I would like to see Alternatives 4 or 5 to be built. Alternatives 1, 2, and 3 cannot serve the Sepulveda Pass Transit Corridor well, and will overcrowd easily. This line parallels one of the busiest highways in the country, and so clearly high capacity is necessary. BYD makes the cost cheaper than heavy rail options by using the highway for right-of-way, while sacrificing the overall quality of journeys and transit connections in the process. This line will require good and easy transit connections; they should be seamless. In their plans. Bechtel understands this and includes good connections in their plans, however BYD's connections are multiple minutes long and require long walks for a transit connection; this will severely depress ridership. If they are changed, the price will be raised considerably, making Bechtel's proposal much more reasonable. From Bechtel's proposal, I support Alternatives 4 and 5 because they increase the number of people served by taking a different route than the East San Fernando Valley LRT line. In addition, the integration with the current system is planned very well which would allow the line to serve people efficiently. To add on, while Bechtel's listed capacity is lower than BYD's, it's max capacity is far higher and can be achieved simply by adding cars and increasing frequency. This will not have a huge cost. Meanwhile, BYD's proposal would require constructing platform extensions at every single station -- greatly raising costs. Even then, it's maximum capacity will be almost 10,000 passengers-per-hour per-direction less than Bechtel. Besides all this, Bechtel also has experience extending the original BART system, which means they have experience working and building high-quality infrastructure built for earthquakes. BYD meanwhile, has a very stained record. In summary, due to the poor plans to lower costs that BYD has imposed, going with Bechtel's heavy rail plan would be a much more sensible option and would allow the Los Angeles area to have a high quality transit corridor. Thank you for reading.
	Granada Hills	91344	No	1/22/2022	It is not a secret that traveling on the 405 freeway can be an adventure with many effects of being stuck in traffic, being involved in all kinds of accidents that would mean being late for an appointment, work, classes, etc. There are a few alternatives for an alternate route, Sepulveda Blvd. and canyon roads that also become exits for heavy traffic. I understand that a project of this magnitude means a lot of investment, environmental studies, and opinions of the affected residents, but I definitely vote in favor of a solution of an underground or external train, or perhaps of having an express line (both ways) exclusively for public transportation (buses).
	Los Angeles	90024	No	1/22/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Sherman Oaks		No	1/22/2022	Metro, Please focus on the five Alternative Concepts (2 underground and 3 monorail concepts) and stop studying the devastating Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard from Valley Vista to Roscoe in the Valley. Alternative 4 will destroy Sherman Oaks forever. There are NO elevated heavy rail trains anywhere else in Los Angeles. Why is the high speed transit underground from LAX to the Valley and then becomes elevated at Valley Vista along Sepulveda? Once AGAIN, the Valley is not getting its fair share of our tax dollars.
		90049	No	1/22/2022	Sounds good to me It seems very convenient The idea.
	Los Angeles	90077	No	1/22/2022	Please do not consider tunneling under our homes and direct the project to sepulveda or under the freeway so as not to adversely affect the stability of our property and peace and quiet that Bel Air affords all residents and wildlife Thank you for your consideration

	Santa Monica	90405-4140	No	1/22/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90024	No	1/22/2022	We MUST have a UCLA stop on the Sepulveda Corridor! I vote every time for more public transport, and thousands of people would be able to use a Westwood/UCLA stop every day for heslth care, education, and work!
			No	1/22/2022	All right. I am a resident of the Westwood area and (unstable audio). So as such, I am very concerned about the environmental impacts of construction through this area, and I'm pretty informed by it -- about it. Looking at the options, I feel that Option 6 is the best option in all regards for the community. It's vital that -- if this link is to really mean anything to the transportation structure in Los Angeles, it needs to have a direct connection with the UCLA campus, which is a major attractor of traffic on the Westside. Also, the underground Option 6, as well as 4 and 5 have the fewest environmental impacts. I think you need to look at the seismic issues, the air quality issues, the (inaudible) issues, construction issues, and the impact that this construction to this project will have on the community of life and which project will have the greatest overall use. Clearly, a route that has a connection is not an option [sic]. People are not going to spend the time that it takes to make an awkward connection. That sort of mitigates the whole purpose of the link. Thank you very much.
			No	1/22/2022	Yes, good morning, Metro team. Thank you very much. My name is Steven Sann. I'm the chairman of the Westwood Community Council. As I've mentioned in the past, our council is very proud to be part of what is known as the Sepulveda Transit Corridor for all coalition. Our council joins with the virtual unanimous voice of numerous organizations, the Westside Regional Lines, the Council VICA, numerous environmental groups in strongly urging that there absolutely must be a station on the UCLA campus and a direct connection to the Wilshire Purple D Line subway at Wilshire. Regarding the options, as I mentioned in the past, Options 1 and 2 fail completely to connect to the campus. They should be dismissed immediately. Option 3 fails in that it does not connect with the Wilshire subway, that also needs to be dismissed. That leaves us with Options 4, 5, and 6. As the previous commenter noted, Option 6 is clearly the superior choice. I note that both the Red Line and the Purple Line are end to end completely a subway, because the ridership of those two lines absolutely warrants the highest quality mode, which is heavy rail. The projected ridership for the Sepulveda Line blows out of the water the ridership existing for the Red and Purple Lines. So therefore, it should be clear that our friends in the Valley and the Westside and to the airport areas deserve the same high-quality transit system. I would ask, as I've mentioned in the past, please, in studying Option 6, look at terminating at Sepulveda and Exposition rather than at Bundy. That is a straighter approach that shaves travel time and saves cost. Also, I would urge that you look at using rolling stock cars that are compatible with your current Red and Purple Lines, and also that you look at an option of driverless technology, which is proposed for Options 4 and 5, but apparently not proposed for Option 6. Finally, I thank you Metro and ask that you do very thorough scientific analysis to show that a tunnel can be built safely by analyzing the geology, seismology, hydrology, biology, and all the engineering aspects. Thank you very much.

			No	1/22/2022	I'm Coby King, and I'm the co-chair of the transportation committee of VICA, the Valley Industry and Commerce Association, current treasurer, and a former chair of VICA, a member of the CR Club, Angeles Chapter Transportation Committee, and a resident of the West San Fernando Valley and speaking today on my own behalf. The Sepulveda Transit Corridor is the centerpiece of the Measure M Expenditure Plan and more than any public works project in the region and perhaps the nation that could improve people's lives. It's especially true for the people of San Fernando Valley who, if this project is built correctly, we will able to get to the Westside much more quickly and more easily than ever before, but it must be done correctly. It must seamlessly connect to other MetroLinks, and Metro rapid transit lines, to parking in the San Fernando Valley, and to the places people want to go. No place is more important than the UCLA campus. Similar in size to Downtown Phoenix, Arizona, UCLA is the largest employer west of Downtown LA. It's 80,000 daily visitors include not just only students and faculty but all the staff that keep the university working and the patients and staff at UCLA hospital. This project will improve the lives of transit-dependent riders by making their commutes shorter and easier, and if done correctly, will actually attract people off local freeways and roads, including, of course, the notorious 405. The project will mean that people who live farther away, will be able to access the good jobs, education, and health care services on the Westside in the Valley, especially UCLA. This will enhance Metro's important equity and justice goals and that is how these six alternatives should be analyzed. First, any alternative, such as 1 or 2, that does not include a direct on-campus UCLA station should be eliminated now or as soon as possible. Further, any alternative that doesn't provide access to parking in the Valley and seamless connections to the Purple D Line and Expo E Line should also be eliminated. As currently configured, only Alternatives 4 and 5 meet these criteria. I understand that there's serious questions about the elevated portion of 4 and that Valley stakeholders are concerned about equity between the Valley and the Westside in terms of elevated versus subway. Let's make sure that we do this right. Thanks.
			No	1/22/2022	I support the STC for all alternatives to have a main line station at UCLA and also at Ventura. In addition, don't select a locally preferred alternative until Metro identifies and maps specific locations of renters at risk of displacement due to rising rents and until Metro studies and implements mitigation measures that are consistent with the Metro Transit Oriented Communities Policy, equity-first communities, and the equity platform to protect renters before real estate investors buy properties due to the LPA. Second, the heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now Metro's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Metro B Red Line, and Metro D Purple Line. Metro can study automated options for rail cars that match the dimensions of its existing system and for alternatives that it's not currently considering, such as Alternative 6. Third, as the substitute for Alternative 4 going on Sepulveda north of the Metro Orange Line, Metro should study interlining the Sepulveda Line with the Metro Red Line, connecting them and the East San Fernando Valley Line via the Orange Line right-of-way in either Oxnard or Comstock. To study this, Metro must make the heavy rail option match the specs of the Red Line. Metro could use the Sepulveda station parking lot for a rail yard, giving more flexibility to both the Sepulveda and Red Lines. There would be high ridership going in both directions all day because both the Westside and Hollywood and Downtown are strong destinations. Most of the Orange Line ridership is in that segment already, plus the Orange Line is slated already to be converted to rail and this would help distribute the transfers from the North Valley through Sepulveda, Van Nuys, both Hollywood and Valley College. Thank you.
			No	1/22/2022	Good morning. My name is Sam Yebri, an almost 40-year resident of Westwood and candidate for Los Angeles City Council to represent the 5th District. I'm calling today to urge that the Sepulveda Transit Corridor Project include a station located directly on the UCLA campus and a seamless connection to the Purple D Line Westwood UCLA station at Wilshire before continuing on to connect with the Expo E Line and eventually to LAX. According to Metro, an on-campus UCLA station would be the busiest non-transfer station across the entire Metro system. UCLA is the third largest employer in LA County with more than 67,000 commuters to campus each days. For reasons of equity and access UCLA, as a premier public research university with a world class medical center, should be easily accessible to all Angelenos for employment purposes, for educational purposes, for medical needs, and cultural, and recreational attractions. A Metro station located directly on the UCLA campus is the best way to accomplish that for our city and region. Built and designed correctly, the Sepulveda Line will significantly reduce vehicular traffic congestion throughout the Westside and the Valley and through the 405s freeway, Sepulveda, and several narrow mountain passes including the Beverly and Roscomare Road, Benedict Canyon, Cold Water Canyon that drivers use as cut-through routes from the city to the Valley. This reduction in congestion will have very significant environmental benefits by reducing greenhouse gas omissions and our carbon footprint. I join the Westside Regional Line of councils, numerous environmental organizations, and virtually every neighborhood and community councilman, 5th District, and on the Westside in supporting a Sepulveda Line station directly located on the UCLA campus and a seamless connection to the Purple D Line Westwood UCLA station. Thank you.
			No	1/22/2022	Hi, this is James from the East San Fernando Valley, and I would like to see a monorail that goes all the way to Mission Hills, which would be Sepulveda and Chatsworth, because there is a park-and-ride there where busses take people all the way to the Westside, Century City. So there's a lot of transportation going on around there. When the Sepulveda Corridor did their first or their first study, they said that there ridership coming from the East San Fernando environmental wasn't enough Valley because there was just going to be a light rail going down Van Nuys Boulevard, which they said in their study it wasn't needed. So, but now the situation has been become political and now we've got a light rail going through Van Nuys Boulevard, which I think is ridiculous. I mean, this is going to create a lot of problems for first responders. When accidents happen, it's going to be a disaster, in my opinion. But I would like to see a monorail, and I hope that that can be done. Thank you.
			No	1/22/2022	Good morning all. Thank you for taking the time. Lee from Encino Neighborhood Council speaking on behalf of myself. I will mention that the Encino Neighborhood Council has voted previously to do an all heavy rail down Van Nuys Boulevard. As far as things for the folks to consider is, No. 1, the expandability of whatever option for future connections for future projects. It seems that only Option 6, which is the heavy rail underground going up Van Nuys can possibly expand further north in the future. It also should be mentioned that, you know, according to Metro's own numbers, 30 to 40 percent are the ones that are coming down the 5 and that's a significant amount of transportation vehicles on the pass. The Option 6, which used to be HRT Option 1, which I don't understand why the numbers were switched from 1 to 6, I don't know if it's a confusion thing. It should be noted that the alignments currently for 4 and 5 in the southern terminus should also apply to Option 6. That makes the most sense and most cost-effective aspect. I would like to also see, which has been brought up before, is the ramped-up cost for a monorail system versus the already-in-existence mechanics and all that good stuff for heavy rail. That cost apparently has never been clearly annotated and is obviously a hidden cost that should be overall explored. The other thing that should be taken into account in the environmental aspect is the possibility of a catastrophic failure of a monorail system,

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					similar to when the 22 and fell on top of the 5 and then basically shut off a major corridor of transportation and the costs to that were through the roof and that does definitely need to be expanded. Again, my personal preference is definitely the full underground on Van Nuys connecting the north and the south. Thank you.
			No	1/22/2022	I'm ready. So yeah, I think the monorail option, absolutely, can not be gone through. I think it has extremely poor connections with other stations, and that's going to make it very undesirable and overall depress ridership to a level that, you know, you got to think quite long-term with that. So I think Option 4 and 5, with their increases on speed due to their automated transit, and also their connection with Ventura, which has a more direct -- a more populated area than the connection with the station on Ventura in Alternative 6. I think it's -- the technology could really bolster and integrate into the system. Although, I understand that there are, you know, problems that it might use a different rolling straw [sic], but I don't necessarily think that there would be problems with extending it, but it might not integrate quite as well. Overall, I just would highly advocate against the monorail. As before, there's a lot of hidden costs, and I believe that's it. Thank you.
			No	1/22/2022	Okay. Well, I'm a member of the Bel Air Association. I'm not an officer or anything, but I am a member and I am concerned about this tunneling under our area. I wonder if anybody is considering the huge cost of the tunneling under these mountains versus the monorail on the Sepulveda Pass. Monorail seems to me to be a very modern-looking option, and I think it should be considered to enhance our aesthetics, actually, people going over the pass and so forth. I think it would be a very efficient way to do it. Is anybody considering the environment -- the human impact on tunneling under people's homes? I mean, has anybody thought of that? I doubt it. It doesn't sound like it. I know there are a lot of people from UCLA who are hell bent on having this tunnel under Bel Air, but I think they need to consider, also, people from this area have voices and that we should be heard as well. I know that we go by Hilgard a lot where the UCLA busses are. There are very few riders. There's ten busses lined up, and there's very few people on those busses. So I just wonder really how much traffic will be elevated if they do a tunneling project, which can impact people's home values and living conditions and so forth. Considering, I think the above-ground option is the best. Thank you very much.
			No	1/22/2022	My name is Aaron Barrall, and I'm a current graduate student at UCLA, and I actually do take the Metro to campus every day. There are a lot of people that take the busses off of Hilgard, which is where I get off every day too. I think it's really absolutely crucial for the new line directly to UCLA and the D Line at Wilshire, as well as preserve options to extend service to the north and south in the future.I think this project has the ability to really transform our region and expand opportunities for where people can live and where they can work all over the Westside and the Valley. It's really important that we get this right, and Metro needs to look carefully at the potential ridership, as well as the VMP reduction that would occur from having an on-campus station at UCLA. It also needs to think about the areas around the proposed stations and where we can build types of sustainable residential communities, as well as other employment hubs along the line. We know we can't build sustainable employment hubs or residential areas in the middle of a freeway, which is what the monorail options would limit the project to. Let's be careful to get this right. Again, look at · the ridership. I would also encourage Metro to look at the potential visual impact of the monorail and the CalTrans mitigation measures that might be required and might also preclude that option out of hand. Thank you for your time.
			No	1/22/2022	Good morning. My name is Evan Farrar from the Northwestern Neighborhood Council. A broad coalition of stakeholders in Westwood and at · UCLA, all part of the STC for all coalition, favor the heavy rail alternatives. That is because they provide greater capacity, marginally faster service, and most importantly these alternatives go to where people actually want to go, UCLA and Westwood. A UCLA station would be the busiest non-transfer station in the whole Metro system by Metro's own projections. So to miss out on that ridership by passing UCLA and routing riders by a bus connection or people mover just isn't efficient or desirable. It's not particularly surprising that two out of three of the monorail alternatives don't have a stop at UCLA, because it's more expensive to build a monorail below-grade, which all but eliminates the cost competitiveness of the monorail options. With all this in mind, it's important to connect people at UCLA and Westwood with the broader Metro network and most of us here rightly believe that heavy rail is the only serious way to achieve this. Thank you.
			No	1/22/2022	Hello. This is Michael Rich. I live in Bel Air. Our family has lived here for 50 years, and I very · much understand the need to have this wonderful transportation corridor built, but would deeply -- am terribly afraid of tunneling that would occur underneath people's homes. I lived in New York for a few years and heard the subways rumbling underneath my apartment. I really don't want to have to experience that. It would be a dramatic -- just the tunneling alone would require, likely, explosions and heavy shaking. Also, these mountains -- well, I'm sure there will be geological studies -- they're pretty unstable. They're actually filled with springs, and unstable shale. I'm really concerned about the impact on our community. We do have homes here. We are people. I realize that the interest of this -- of the millions of people in this city sometimes have to take precedent, but this would -- I really worry about the potential to destroy the value of our homes, to destroy the peace of our landscape to really essentially take away our homes without us really having proper compensation or a voice. So I urge you to please not do any tunneling options that go under homes. If it has to be a tunnel, perhaps under Sepulveda Boulevard or under the freeway. I think also, we are an earthquake country [sic], and I would personally feel much safer riding in a nice monorail above the ground where I'm not going to be terrified if there's an earthquake and potentially getting stuck under hundreds of feet of rock.

			No	1/22/2022	Hi my name is Peter Kearns. I live in the Westwood area, and I work in the Valley area. My main comments are about the company behind the monorail. BYD has partnered with the City in the past, and they have failed to meet the standards and the requirements put forth in the contract previously. With the monorail project, the company behind it, BYD, had previously worked with us on the electric bus project, I believe, it was in 2012, and every electric bus that BYD provided us has been pulled from service. This is a company that does not necessarily uphold their part of the bargain, and I think that's something important to consider, the track record of the company that will be providing this billion-dollar infrastructure. I think that there will also be a lot of hidden costs associated with the monorail. I believe someone has pointed this out. The spin up of needing workers to work on the lines, needing people to repair the cars, all of the service that wouldn't necessarily -- that the City does not currently have. I believe that Options 6 and 5 present the best options. Again, they provide those direct connections to UCLA. They seem to have pretty good options on expenditure. Again, the important things that I would consider here is the monorail just seems nonviable. It's putting transit in a place where people don't have access to. It's difficult, and, like, people don't live on the freeway. I think that's really it, and, again, I believe people have already pointed this out, but the CalTrans concerns with line of sight and right-of-way have not really been considered by BYD in their proposals. I think that the creep of cost [sic] will just skyrocket for this monorail project. I can't express enough how in and 6.
			No	1/22/2022	Hello, my name is Zack. I live Sherman Oaks area, Encino area on Ventura Boulevard. I bike a lot. I have seen on Reseda Boulevard, they've put nice bike lanes and stuff like that, especially, you know, · because I like to bike ride at Santa Monica, and, you know, like to take the transit over there. Before the whole COVID thing, they had the 788. I personally like that bus. I know it wasn't, you know, you couldn't get on it at Ventura, you had to take it down to the Orange Line and get on the 788, but that bus was definitely really a great thing to have, get you to the Expo Line faster than the 734 back then. But regarding the rail though, like all the other people said before me, I think an above rail would be a great -- a great way to go, especially with the Bel Air residents. I'm not a Bel Air resident, obviously, myself, but I think it benefits everybody including the Bel Air residents having a high-sky rail. Whatever the option was where it's mainly high-sky, especially above the mountains, I think that is mainly the way to go. I don't -- I didn't like the Option No. 6 that goes to Van Nuys Boulevard, because I like -- I usually like to go mainly on Sepulveda. So I think a high-sky rail would mainly be the way to go and benefit everybody else in different areas. Yeah, that's what I have to say.
			No	1/22/2022	I'm Ann O'Connor, and I'm a member of Sherman Oaks Homeowners Association. Metro, please focus on the five alternative concepts, which would be the two underground and the three monorail concepts and stop studying the devastating Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running twenty to forty feet above Sepulveda Boulevard from Valley Vista to Roscoe in the Valley. Alternative 4 will destroy Sherman Oaks forever. There are no elevated heavy rail trains anywhere else in Los Angeles. Why is the high-speed transit underground from LAX to the Valley and then becomes elevated at Valley Vista along Sepulveda? Once again, the Valley is not getting its fair share of our tax dollars. The recent redistricting maps identified 5.7 city council districts just in the Valley. Please treat this going Valley population with the same equity and equality as the rest of Los Angeles using the same high equability of transit options. Please do not switch to aerial heavy rail on Sepulveda once you reach the Valley. That is unfair to the Valley and inequitable. I urge our Valley elected officials to advocate against this elevated heavy rail along Sepulveda in the Valley. Thank you.
			No	1/22/2022	Hello. My name is Edwin Sun. For a long time, I was a primarily transit user and pedestrian. Now I have a car, but, again, for many years, I was a rare Angeleno who mostly took transit and actually had to commute to UCLA regularly. I would like to urge this body to terminate its consideration of Options 1 through 3, all of the aerial configurations. And -- sorry, catching my breath because I'm running -- but do a -- prioritize all of the options that have direct stops at UCLA, which, again, is really the destination that has the highest potential for ridership and really would be very detrimental to Metro's goals if the alternatives are sleeted where commuters have to make unnecessary transfers to UCLA and certainly have to get on and get off within the 405, which is car-oriented infrastructure that isn't really serving the destination that have a large number of amenities or housing. Thank you very much for your consideration.
			No	1/22/2022	Hi. · I would like to echo comments in support of Alternative 6, the full underground heavy rail alternative with an on-campus connection to UCLA, direct connection to the D Line and the Van Nuys Boulevard northern alignment, which serves districts that grew around a now gone Pacific Electric Line, that whole area developed around that. I work in Santa Monica, and I live in the Lamanda Park area in Pasadena, this is also a neighborhood around a former PE Line. But despite living less than two blocks off of Colorado, my closest L Line station is over a twenty-minute walk away on pedestrian hostile streets and waiting on a freeway median is nothing short of awful. So with that in mind, alignments in the median or adjacent to the freeways are non started, the monorail, the Sepulveda aerial, all that. And then regarding the southern terminus, I think both Expo Sepulveda and Expo Bundy have their merits. I'd really like to see how each of those perspective termini would affect potential alignments for Phase 2. I'm really looking at Del Ray and the west side of the core of Culver City is over twenty-minutes walk from the Culver City and Palm stations on the E Line. There's just a lot of areas where Metro stations have been built kind of adjacent to these districts but haven't really served them, and we've really seen that in Pasadena. So I'd really like to see alternatives focus on going right to some of these dense areas and serving them directly, rather than having to do connections. I have a two-hour commute if I use Metro on the way to Santa Monica. Thank you very much.
			No	1/22/2022	Hi, my name is Brissia and I am from the Sherman Oaks community representing myself. I just wanted to speak up against Alternative No. 4, as that would disrupt the body of life of all the communities that live off of Sepulveda going towards West Hollywood. I do hear the needs of the people saying they need the UCLA stop, but I would also like to just speak up for the quality of life and for the needs of the people that live in the community where if a twenty- to forty-foot railroad was to pop up in front of our street, that would disrupt our daily living, whether it's walking, air quality, just our environment around us, as we do have a strong community here that wants to just continue living our life without a railroad running through it every couple of minutes and then construction on a street that is already just a wonderful street to drive down to get through all of our shops and community services here. That's all I wanted to say.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
			No	1/22/2022	Thank you. My name is Nurit Katz. I'm a Valley resident and have commuted to UCLA for over 15 years, both as a student and now as a staff member. I'm speaking both as a resident and in my role as chief sustainability officer for UCLA. I do have empathy for the concerns of neighbors in Bel Air, but I think ultimately even those neighbors are impacted by the heavy traffic in the Sepulveda corridor, which can really only be addressed by having a stop at what is more than just a university, it's really a small city within the city with a daily population of 80,000. So I would like to strongly advocate for the heavy rail options that have a direct stop at UCLA, as well as the really critical connection to the Westwood Purple Line or D Line stop. This is an equity issue for many of our students and staff who are lower income. You know, we have many students facing food insecurity, really challenged, and unable to live right next to campus with long commutes every day and staff as well. So it's an equity issue. It's a traffic issue. I think we all want to see this corridor improve and the heavy rail options with a direct stop at UCLA are going to do that. I also want to emphasize that this isn't just for students and stuff of UCLA. Many people come to UCLA for medical services, doctors appointments, who are unable to drive. There's, you know, a wide range of communities that are served by this critical area. So I really appreciate your time today, and I hope that you will consider this critical stop in your options.
			No	1/22/2022	Hello, everyone. My name is · Darius Terani. I was born and raised in the San Fernando Valley. I'm a USC alumni from the Price School of Public Policy and currently work as an asset management analyst for an international real estate developer. I believe Alternative No. 1 is the best option we have so far. I think so for many reasons. First, because it incorporates what would be -- like · the previous speaker from Bel Air said, it would be a very · aesthetic monorail line from start to finish, as opposed to heavy rail through the Sepulveda Pass. Heavy rail can be a good option for Downtown core, for urban cores, like, you know, because LA is so big we have a Downtown core, or the Westside core, even as we see with the Purple Line extension, everything else, but it doesn't fit for, you know, what would be the very aesthetic Sepulveda Pass. So I think that's why the monorail is a great fit. Alternative No. 1 also keeps the most important Valley station at the intersection of U.S. 101 and Sepulveda Boulevard, unlike Alternative 6, for example, which would throw the course into Sherman Oaks, and it's basically a detour. I think that option had tunneling through the Beverly Hills hillside -- or Bel Air hillside, which would be really unnecessary and throws people off. I would consider what we do think is the gateway to the Valley would be the 101 and Sepulveda intersections. Alternative No. 1 also keeps the line parallel with the 405 and doesn't go into Westwood, which I don't think is necessary, as we already have the Purple Line extension, and it's not like Westwood has a stadium, not like its USC with the Expo line. It's not really something that they need, and I'm considering going to UCLA for graduate school. I live in the Valley, but it's not necessary. It's more important to serve · everyone else to keep the line down with the 405. Then Alternative 1 has the electric bus option, which is fantastic, and that's all that an area -- a suburb like Westwood would need.
			No	1/22/2022	Hi, my name is Julia. I'm currently a resident of Sherman Oaks, and I grew up on the Westside. I just wanted to show my support for what Nurit, Ann, and Brenda from Sherman Oaks are saying. Any above-ground transportation is just going to ruin Sherman Oaks and the quality of living for all of us who live there. Also, I'm just curious if anybody is going to discuss eminent domain with the building project. That is something that happens there. That's all. Thank you.
			No	1/22/2022	Hello, my name is Joseph. I don't live in the area, I live in South LA, but I have a few questions that I think should be addressed in the environmental study of things that should be looked at. The first is ease of station access. I think in terms of actual ridership that will play a huge role and looking at where the stations are located. I hope that gets covered in the environmental study and how that will affect ridership. The second is the ability to accommodate ridership growth. I don't think this is something that other speakers have brought up, at least I haven't heard any other speakers
			No	1/22/2022	Hello, my name is Joseph. I don't live in the area but I have a few questions that I think should be addressed in the environmental study of things that should be looked at. The first is ease of station access. I think in terms of actual ridership that will play a huge role and looking at where the stations are located. I hope that gets covered in the environmental study and how that will affect ridership. The second is the ability to accommodate ridership growth. I don't think this is something that other speakers have brought up, at least I haven't heard any other speakers bring this up yet. There was a study I saw, I do not believe it was conducted by Metro, I don't remember who conducted it, but that projected that this line has the potential to be the second most used transit line in the country behind the 4, 5, and 6 line in New York City, and if you're ever in the 4, 5 and 6 line in New York City during rush hour, it's just sardines. I would like to see it studied, which of these alternatives are able to accommodate growth in ridership, in terms of adding more trains, longer cars, and adding higher frequencies, and if that's possible with the monorail and if that's possible with the heavy rail. I also want to add a comment addressing tunneling, and I'm sure the environmental report will go into this a lot. I think if the tunneling will have an effect on Bel Air homeowners, that definitely might rule out some of the alignments; however, tunneling is done all over the country and all over the world without affecting homeowners. I believe that there would not be any difference and the environmental study will likely show that this is -- you're not going to feel it if you live on top of it, you will not notice the trains --
			No	1/22/2022	Good morning. My name is Jeffrey Hartsough. I am on the Sherman Oaks Neighborhood Council, but I'm speaking as an individual today. First of all, thank you to Metro and the staff for reaching out and listening to people's concerns about the project. I'd also like to thank and show my appreciation for everybody who is coming here today and commenting. It's very interesting and wonderful to hear the insights and feelings of the people that will be affected by the project. This is an important and transformational project for the Valley. By way of information, the Sherman Oaks Neighborhood Council has passed a motion indicating a preference for Alternative 6 or a similar fully-underground heavy rail concept for the San Fernando Valley. They would strongly oppose any alternative, including Alternative 4, that would require displacement of Sherman Oaks residences and businesses. Anyway, I only have a couple concerns. One is about Metro's long-range plans for mass transit in the San Fernando Valley. Although, the decisions about the Sepulveda Transit Corridor Project will be made now and will only result in a finished project in, maybe, fifteen years. It will have a lasting influence on all future Valley transit options. So I'm concerned about how Metro is coordinating with SCAG, LA City Planning, County Planning, and Work Force and Economic Development, and other folks that should be thinking about the future. When I'm talking about future, I'm talking about 2080 and 2100. I'd like to know how this project will fit in with future projects that Metro is planning or I would like them to plan. That would bring greater transportation equity for the whole Valley. My time is up. So I'll just say I'd like to have another stop on Alternative 6 on Sherman Way. Thank you.

			No	1/22/2022	Okay. I'm Dr. Tom Williams, president of Citizens Coalition for Safe Humanity in Culver City, also work extensively on the Aliso Canyon gas blowout, so I know the North Valley quite well and the West Valley where I have relatives. So it's basically a good question as to what one do we want. I have done construction management for Phase 1 Red Line Downtown LA. You want to talk about problems? We solved them all. We went under 12-story buildings. We went under a whole bunch of different things. No problem, other than a little bit down at Union Station. So we have the experience. Metro has the experience. So it's a question as to what is the long-range plan, somebody just mentioned. Give us a fuller out. Does it go from Granada Hills and the 118 all the way down to 105 or maybe down to the 1? So give us how this segment fits into the rest of it, and basically, no above-ground alternatives. Go for Alternative 6, but also go for good stations all the way from LAX to Granada Hills, and in Downtown LA, we have a station for two Metros, that's under a 14-story building. So therefore, make all of the stations into reasonable profitable projects. Each one, especially for public private partnership, can solve a lot of the expense problems.
			No	1/22/2022	Good afternoon. My name is Duane Muller, speaking on behalf of UCLA and calling in to express my strong belief that a successful Sepulveda Transit Corridor Line must include the following: A direct stop at UCLA, a direct stop at Westwood Village, and a connection to the Purple D Line. In connectivity and continuity with communities with which it serves, with Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy rail, Alternatives 4, 5, and 6, can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. A direct stop at UCLA and Westwood Village is not just an issue of connectivity, it's an issue of equity and accessibility to jobs, to health care, to education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Regan Hospital and Medical Center serves hundreds of thousands of patients each year. Due to extreme commutes, many along the Sepulveda corridor, up to one in seven students, experience housing and food insecurity and Westwood Village has over 2300 businesses. To address some of our concerns of our Bel Air residents, Metro has been tunneling under homes for 20 years and there have been absolutely no problems. This is not New York City and a tunnel through the Santa Monica mountains would be many hundreds of feet below the surface. Tunneling is safe. The Sepulveda Transit Corridor has the potential, really, to dramatically change the way we view transit in the west side of LA. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple Line, and · direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources, such as health care, employment, and education.
			No	1/22/2022	Good morning, everyone, and thank you for having this meeting. I would like to suggest to have a stop at the UCLA, which is essential for students, security, staff, and people who would like to work at UCLA but cannot afford to get the equity issues solved. Also, please be sure there is sufficient and free parking for those who would not ride a bike or wait for a bus · to get to the train station to get to the destination to get · the bus to get to their actual destination. It seems that Option 6 seems the best, we should · invest in infrastructure and to stop cutting corners already. No to monorail. You don't have the ability to create a monorail infrastructure system. It is inferior in every way when actually measuring apples to apples.
			No	1/22/2022	Hi, thank you so much. I just remember in the beginning of this meeting you mentioned that you were concerned about equity, and I feel the elevated trains would not be equitable for Valley residents. It would ruin the quality of life in Van Nuys and Sherman Oaks and all over the area, and it would lower our property values, congest Sepulveda, and basically ruin our quality of life, and I just think it would be very unfair. Thank you.
			No	1/22/2022	Real fast, it sounds good and the more transit the better. You guys will figure it out, and I really don't think you can point to one transit project in the entire country that's been bad and stayed bad. You guys will figure out the wrinkles after it's already built just like we did with the Red Line. That's it. Thanks.
			No	1/22/2022	Okay. First of all, I would like to thank the Metro staff for studying all these alternatives and hosting this meeting. I'm a UCLA alumni, and I would like to voice support for any of the alternatives that have a stop at UCLA and Westwood Village, except for the monorail options. I think monorail is an inferior technology and as like a lot of the speakers said before, there are a lot of hidden costs, like platform extensions, the staffing to operate and maintain this technology. I also want to say that tunneling is feasible and safe through the mountain, through the Santa Monica mountains. Yeah, so please, please, please build a station at UCLA and Westwood Village. By your own studies, it would be the most used non-transfer station in the entire system. So, yeah, thank you.
			No	1/22/2022	Great. Thank you so much for giving me the chance to speak today. I appreciate Metro maintaining their transparency with the public. I do want to voice my favor for automated heavy rail options, and I do like the Alternative 6. It seems to be the best right-of-way. Obviously, with the automated technology, I think, you know, if we're building this out in the future, I think the automated is the way to go, because it allows us to dial up and dial down the amount of capacity and frequency of the line without needing to go through a lot of red tape. That being said, I think, as much as I like the six alignment, I think joining with the Expo Line at Sepulveda, given that it's closer to more retail options, and I think it better connects to the rest of the network. It's a little further up, it's a little bit of time savings. I also think that -- I think, even though this may be an unpopular opinion, I think that it can be elevated in the Valley, just because it is a lower density. I don't think elevated is the worst option. I think at-grade is a worse option. I think of elevated as the same as tunneling options, and I think given that the Valley has lower density, I think it does make sense to have it elevated there if cost is an issue, but otherwise, yeah, I'm a proponent of heavy rail and a proponent of the automated technology.
			No	1/22/2022	Yes, I happen to be the land use co-chairf or the Westside Neighborhood Council, but today I'm speaking on behalf of myself. I'm a professional planner for 35 years. I actually live and have been impacted by the fact that the -- right across the street from the Expo Line. So I have a lot of firsthand experience and knowledge about the impacts of above-ground rail. I believe that all alternatives should be studied, nothing should be discarded early. The whole point of an environmental impact report is to evaluate the pros and cons and what the environmental impacts are of all the alternatives that are being considered. On a personal note, our board will be submitting a letter. I will personally be submitting a letter, as well with full comments, but a couple quick things. One is, Alternative 6, I don't understand why it goes to Bundy when all the other alternatives go to the Expo station. I think there's nothing wrong with considering to Bundy, and at least studying it, but I think that alternative should be split into a 6A and 6B version that studies both going to Expo and Bundy if there is a general consensus that people want Bundy considered. Expo is more direct, of course, so I don't understand why that's not included and it should be. General concern, rail above-ground, for those listening on the call who are residents in Sherman Oaks and Bel Air and places that don't have light rail in their areas already, you should consider the light, noise, bull horns, illegal bull horns, loud speakers, and trains running 22 hours a day in your neighborhoods. Tunneling is feasible --

	Los Angeles	90027	No	1/22/2022	Hi, Thanks for taking the time to solicit public comment. I'm writing to express my support for any of the heavy rail alternatives (proposals 4-6). My preferred alignment is #6, because I frequently drive to Sherman Oaks (specifically along Van Nuys and Ventura) to shop, go out to eat, and sometimes to work, and would love to be able to ride mass transit to those destinations. Most of all, I want to say that any of the monorail options would be a horrendous waste of money. The lack of connectivity to other lines (out-of-station transfers, etc.) would make such a project functionally useless to those of us who live on the East side. Same for valley residents who want to go anywhere not adjacent to the 405. The heavy rail alternatives offer the beginnings of a viable LA metro network. The monorail alternatives are a single project in isolation, and should not be pursued. Thank you for your time.
		91504	No	1/22/2022	The main thing I'd like for this project is reliability. Waiting 45-70 minutes for a bus or train is a terrible way to do public transit and has screwed me over when I try to go anywhere farther than walking distance without a car, even to get to a train station you need a car.
Midvale Estates Home group			No	1/22/2022	I represent the Midvale Estates Home group. We are located north of Victory and North to Vanowen, Sepulveda west to the 405. We already suffer from the Noise of 405 and Victory and Sepulveda. We strongly are in unison and disagree with alternative 4, the above ground rail, north of Victory. The noise will destroy our lives. The distance from Sepulveda to the 405 is minimal. This will strongly disenfranchise all the low income renters on Sepulveda. This is unfair and not equitable. Thank You
	Los Angeles	90024	No	1/22/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angleles	90049	No	1/22/2022	I suggest you use an above ground rail system that is like what we have already put in thought out the city. Bangkok has an amazing light rail system that is both on the ground and suspended over areas where it needs to be. Why would you spend such a long time tunneling thru a mountain when you could utilize the centers of frwys. as the location for trains? I would think the project wouldn't take as long and would be much safer than digging under existing communities. Please consider something other than a tunnel! The tunnel doesn't provide anything that above ground can't accomplish.
			No	1/22/2022	“Metro, Please focus on the five Alternative Concepts (2 underground and 3 monorail concepts) and stop studying the devastating Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard from Valley Vista to Roscoe in the Valley. Alternative 4 will destroy Sherman Oaks forever. There are NO elevated heavy rail trains anywhere else in Los Angeles. Why is the high speed transit underground from LAX to the Valley and then becomes elevated at Valley Vista along Sepulveda? Once AGAIN, the Valley is not getting its fair share of our tax dollars.”

	Sherman Oaks	91403	No	1/22/2022	I live on Van Nuys Blvd and work at UCLA. I use Metro options either going down Hilgard or Gayley. Metro going down Hilgard is always standing room only in my experience. Free parking is essential. I agree with option 6 and only spending the effort on environmental impact studies on options 1-3. I would like to see the terminus at Expo. Please provide the total protected costs of all final options. I would like to see the seismic results. I believe in the Sepulveda corridor discussions they already eliminated a monorail option in their studies. Perhaps the two project groups should exchange information. Several callers expressed concerns that this project should be able to use existing inventory and I agree with that. Not a fan of the monorail. Having lived in New York City for 8 years, and travelled the subways in LA and San Francisco, I feel less concern over the failure of tunnels in an earthquake than a structural fail of an overhead rail line - but would appreciate study results on the probability of failure for both. Not in the scope of this project but what direct transit options are you considering for our friends in Burbank/Pasadena/Glendale to get to the UCLA area - as of now there are zero.
	Los Angeles	90008	No	1/22/2022	Clearly, this is a very important project, with the potential to have very high ridership. In particular, UCLA has the potential to be the station with the highest usage in the entire Metro system, per Metro's own projections. As such, any alternative that does not include a station directly on the UCLA campus should be dismissed, as it creates too much friction for reaching such an important place and does not serve the goals of the project. The monorail alternatives should be dismissed for various reasons: 1) stations along freeways are not user-friendly to transit users (they are loud and polluted; people do not live there or want to visit freeways as destinations, clearly; our experience with the Green Line should make it clear that freeway alignments are not the best), 2) the contractor, BYD, does not have a good history of meeting its commitments in prior work in our region, 3) the station connections are not as high quality vs. the heavy rail options (more walking is required), 4) BYD's own proposal shows that in order to achieve the higher levels of capacity, longer stations would be required, and when the cost of the longer stations is included, it almost negates the potential cost savings vs. the higher capacity heavy rail proposals. Taking a long term view is essential with such an important addition to our rail network, which (hopefully) will only be built upon further in the future with further extensions and connections to other rail lines. I believe alternatives 4-6 are the best alternatives for these reasons. Thank you for your time.
	van nuys	91406	No	1/22/2022	Option 4 for the heavy rail down Sepulveda Blvd would be a disaster for the cities of Sherman Oaks and Van Nuys, as well as the businesses and residents who live/work on or near those streets. The residents would not only have their property values decimated, but the quality of life would be destroyed. Access to businesses on Sepulveda would be limited and difficult to frequent, due to the additional traffic on the street, since lanes would need to be removed to accommodate an above ground train. In addition, Sepulveda is a main passageway for emergency vehicles, a main hospital, and several retirement/convalescent communities. Having more traffic, less lanes on Sepulveda, would greatly limit the access to emergency services and could be life threating for those residents along and around Sepulveda Blvd. I live less than 150 feet from Sepulveda Blvd, and I work long and odd hours in the entertainment industry. Having the noise of a train every 6-10 minutes and the additional new traffic due to less lanes, while I am trying to sleep during different hours of the day or night would be detrimental not only to my quality of life, but also my health. It is not fair and equitable to anyone living along or near Sepulveda Blvd for option 4. We feel option 1 or 6 would be fabulous alternatives, as it does greatly impact residents in any community and would provide options for those that need to use mass transit.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90024	No	1/22/2022	STC would allow many commuters to save time. This will provide the community with the opportunity to spend more time doing other productive and meaningful things than being stuck in traffic.
		91403	No	1/22/2022	The main thing I,äôd like for this project is reliability. Waiting 45-70 minutes for a bus or train is a terrible way to do public transit and has screwed me over when I try to go anywhere farther than walking distance without a car, even to get to a train station you need a car.
		91403	No	1/22/2022	Please don't put in a monorail. It would not solve transportation issues in the valley or LA. It would be beneficial if we had a heavy rail with consistent departures. The fact it takes over 20 minutes between buses is a big problem. It,äôs why I tend to drive or bike over taking public transportation. It would also be beneficial if the route went to UCLA and the Getty.
			No	1/22/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Van Nuys	91401	No	1/22/2022	As someone who lives in Van Nuys, and drives down Beverly Glen Blvd every morning to Westwood, I would prefer the Bechtel-Heavy Rail options. As a fan of underground trains I prefer the one that goes under Sherman Oaks, especially if that gets the NIMBY Sherman Oaks Homeowners to say yes. I think any Monorail down Sepulveda wouldn't be future proof as they are harder to maintain and increase capacity on. Futureproof your plans and as cool as a monorail sounds, it wouldn't be cool if it sucks, and riders don't want to use it. Then it's just a vanity project that will need to be redone anyway.
		90024	No	1/22/2022	The monorail alternative is a non-starter, due to it's lack of decent transfers between lines and lack of a UCLA station within budget. In my opinion I think that the first section of this line should be built between the Expo/Sepulveda station on the E line, the Westwood D line station, and UCLA. This would allow the first section of the Sepulveda line to open and be used by Olympic athletes staying at UCLA in 2028. It would improve journey times to the other Olympic venues at USC along the E line, and LAX or the SoFi stadium along the K line.
		90024	No	1/22/2022	I would also like to add to my previous anonymous comment that Bechtel's suggestion to build the line to accommodate "Bombardier Innovia Metro" rolling stock may not be the best move, because the propulsion technology used in those trains has many limitations, especially in regards to speed. This line should be built with similar ambitions to BART in the Bay Area and be able to handle faster speeds and higher passenger capacity.
	Rosemead	91770-1990	No	1/22/2022	What I like is that this is finally happening! What I suggest is that we choose heavy rail to future proof this expensive but necessary investment. Nobody wants a new public transit 405.
			No	1/22/2022	To Metro I live in the Valley and Alternative 4 doesn't work for us. It will divide our community, increase noise levels, and isn't fair. Stop considering Alternative 4 and give us the community access we deserve, just like other parts of Los Angeles like the Westside and Gold Line. We want at-grade or underground rail on Sepulveda. Thank you
			No	1/22/2022	I live in Midvale Estates adjacent to Sherman Oaks. I do not want the ugly above rail Metro built in beautiful Sherman Oaks nor do I want the ghastly sounds. Please STOP this insane prospect. Thank you.

		90276	No	1/22/2022	I am concerned about many things regarding the monorail. The mitigations, the station placement, the low capacity, and the company that is building it. My main concern is the health effects that can be caused by forcing thousands of riders into the freeway for transit. I would like the EIR to look into the effects of consistent noise pollution on our riders, which will be waiting in stations adjacent to, or in the middle of the 405 freeway. Sustained noise pollution can obviously cause hearing loss, but has also been proven to cause mental health problems like anxiety. The pollution from car emissions can cause asthma and other respiratory disorders. How many riders could develop these health issues due to the monorail? I prefer alternative 4.
		90275	No	1/22/2022	I do not like the monorail because of the health problems riders could develop from riding the train and waiting at stations in the middle of the freeway. Noise pollution can cause hearing loss and anxiety. Forcing riders to wait at stations in or adjacent to freeways will expose riders to lots of noise pollution. Pollution from car emissions can cause asthma and other respiratory problems. I would like the EIR to research how noise and car pollution will affect riders. How many riders will develop these issues? How will the noise pollution affect ridership? How will the terrible station locations affect ridership? I prefer alternative 4 because of its high capacity and use of elevated rail.
		90276	No	1/22/2022	Please do not build a monorail!!! Putting trains stations in/near freeways is a bad idea!! Noise pollution will cause many riders to have hearing loss and develop mental illnesses. There have been studies that prove this. The car emissions can cause respiratory disorders. We should do alternative 4 as it is the best for people while still being a good price. The use of elevated rail can set a strong precedent for building cheap high-quality grade-separated transit across the city. We need more elevated rail.
	Venice	90291-2455	No	1/23/2022	Hello, based on the project plan alternatives, I would like to see Alternative 6 implemented with Alternatives 4 and 5 (underground automated and driver) as back up options. I believe the comprehensive option is better suited for the long term goals of the transit project and I do not believe the monorail will accomplish those same goals. Additionally, I would like to see a congestion pricing scheme rolled out in concert with the system wide expansion in order to encourage adoption of sustainable transport.
		91344	No	1/23/2022	Yes. I live the project idea because it will help a lot of people. Si. Me gusta la idea del proyecto porque ayudar??a a mucha gente
			No	1/23/2022	Subject: Alternative 4 Worst idea ever. A light rail through sepulveda pass is sufficient and along and next to 405 freeway is sufficient. People who have cars probably won't use it. And when to use with Covid. People work from home now. Senseless idea.
	Encino	91316	No	1/23/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

		90025	No	1/23/2022	I like the accessibility between the West and East side. I wish it'll be executed efficiently and quickly like we've seen other countries accomplish the same. I suggest whatever is done, security and timeliness are high priorities. Public transportation has garnered a lot of negative attention as of late when it comes to safety. Get the LAPD to do their jobs and protect the paying riders. Get people to follow the rules so everyone can travel safely, check tickets, no one should be vulnerable to attacks while waiting for or using your services.
		91601	No	1/23/2022	My vote would be heavy rail. Will use it either way.
		90057	No	1/23/2022	I like to commute. It's a great to go from a place to another without breaking the bank. I would like to have direct transit to go from LA to the Valley area because by the bus it takes too much time. Please make the transit accessible because it's expensive sometimes up to 5$ for a single trip. It can boost the area tourism's too.
			No	1/23/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 		91343	No	1/23/2022	the US needs public transportation that's environmentaly friendly ,affordable, fast, efficient and connects communities to resources. Not just links to downtown but links that connect suburbs to suburbs.
		90403	No	1/23/2022	I like the idea of train access north/south on the west side. I,äôd like to see access from chatsworth down to LAX, but it should at least connect with the Orange Line, the Purple Line, and the Expo Line.
		90043	No	1/23/2022	There should be free rides again because of covid.
		90405	No	1/23/2022	Hello, based on the project plan alternatives, I would like to see Alternative 6 implemented with Alternatives 4 and 5 (underground automated and driver) as back up options. I believe the comprehensive option is better suited for the long term goals of the transit project and I do not believe the monorail will accomplish those same goals. Additionally, I would like to see a congestion pricing scheme rolled out in concert with the system wide expansion in order to encourage adoption of sustainable transport.
			No	1/23/2022	Stop studying ridiculous Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20to 40 feet above Sepulveda Blvd in Valley. Alternative 4 will destroy Sherman Oaks forever.
		90034	No	1/23/2022	I'm curious the route? It will be Fantastic to take public transportation to and from the west side.
			No	1/23/2022	Dear Metro, PLEASE, PLEASE, PLEASE don't consider Alternate 4 Heavy rail above Sepulveda. I live near Sepulveda and would find raised trains to be a horrible intrusion. The intersection of Ventura/Sepulveda is already of one the most congested in the SFV already. The Alternatives that run underground are the way to go. If it takes a bit more money and time, it's the best for the long run, pun intended. After listening to the online meeting, which I liked very much, thank you, I'm for Alt 6. I think the station at UCLA is important. It's a hub for much activity. If you have ever been to NYC or Chicago near the elevated trains, you'll see lousy residential neighborhoods with lots of dirt and noise. By the way, I'm a METRO retiree. Finally, good job
		91342	No	1/23/2022	We desperately need light rail from the northeast San Fernando valley all the way to Santa Monica and Union Station. It's pretty ridiculous that MTA built light rail into Sta. Monica and Pasadena and NOTHING for the communities of the Northeast San Fernando Valley! People in Sylmar, San Fernando & Pacoima need light rail!

	Los Angeles	90066	No	1/23/2022	Based on the project alternatives that are listed, I see several issues with the monorail and freeway-adjacent trains, including conflicts around freeway widening, obstruction of drivers views while driving, distraction, noise and pollution at transit stations, and ease of access to transit stations. Option 6 (all underground) seems preferable with the most connections to the most populous locations and easy access, as well as distinct separation from freeways that will increase safety for riders and drivers.
	Los Angeles	90019	No	1/24/2022	I want HRT with a connection at UCLA and that connects to the Purple Line. I do not want a monorail. The monorail project from BYD, when all is said and done, will not end up being significantly less expensive than an HRT, since BYD does not take into account the fact that it will have to build larger stations than it has initially planned for its longer trains. BYD has a proven track record of under-projecting costs and under-delivering on projects. Please watch this video for further info: https://www.youtube.com/watch?v=xJdbCgVkH3w
		90404	No	1/24/2022	It's a badly needed transit link. It should connect Green. Expo and Purple lines with the Valley.
	Los Angeles	90019	No	1/24/2022	WE DO NOT WANT A MONORAIL. We want HRT that has a connection at UCLA and connects to the Purple Line.
			No	1/24/2022	I am writing to ask that you stop studying Alternative 4 for the Sepulveda Pass. From the plans we have seen, it looks like this option will put a giant tunnel into the hillside essentially in front (or on top?) of our house, and then run elevated heavy rail trains 20 to 40 feet above Sepulveda Boulevard. Alternative 4 will destroy our neighborhood and Sherman Oaks forever. Please stop this impractical, disruptive, unfair and irresponsible plan.
	Mar Vista		No	1/24/2022	I am a UCLA PhD student living in Mar Vista. I have been eagerly anticipating the construction of this rail project for years now—I think it will be transformative for mass transit in LA. As Metro knows, this figures to be a very high-use line in the rail system, and thus it must be as reliable and efficient as possible. For that reason (among others), I urge Metro to use heavy rail technology, not monorail. I worry that Metro is trying too hard to be innovative by considering this transit mode that is uncommon anywhere outside of theme parks (if Metro wants to truly innovate and do something ahead of the game, they should continue to work on making fares free). Sometimes the tried and true method is the best one. No mass transit city in any major city in the world uses monorail technology; they use heavy rail technology, either exclusively or in combination with some light rail and/or commuter rail. Heavy rail is the only option that is fit for the task of transporting the expected volume of passengers reliably. If Metro were to use monorail, they would now be using three different rolling stocks. While it's possible to replace malfunctioning cars on the A Line with cars from any other light rail line, there would be no other line to requisition monorail cars from, which could severely delay service in emergency situations. Furthermore, the monorail proposals have too many stations in the middle of the 405 freeway. Anybody who has used any of Metro's existing mid-freeway stations could tell you that those stations are noisy, polluted, and unpleasant overall. Plus, stations in the middle of freeways are almost always a long distance from destinations and services that Metro riders would come from or go to. In addition, I would imagine that stations in the middle of the 405 would severely impact traffic for years while they are being constructed. Even though I don't drive the 405 for daily commuting, I'm sure the disruption would draw the ire of many an Angeleno who does. In sum, Metro should never build another station in the middle of a freeway again. Of the three heavy rail alternatives, I tend to lean toward #6 because it seems

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					the most direct (fewest curves) and thus I would think the fastest. I think it's also a plus that it has the fewest stations adjacent to the 405 freeway. Finally, from what I'm reading, unlike alternatives 4 and 5 it has the capacity to run 6-car trains during peak hours. That advantage cannot be overstated. In conclusion, I urge Metro not to select ANY alternative that relies upon monorail technology. And I wish that Metro would select Alternative 6 (heavy rail). Thank you for your time. I hope Metro makes the right decision for the future on this one.
		90024	No	1/24/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3. _
	Huntington park	90255	No	1/24/2022	it is imperative that a stop at the corner of Westwood and Wilshire should be added to the plan. i commute from south east by metro and i transfer the santa monica blue bus to go into campus at the expo stop to go to work at UCLA. i have been doing this commute since the expo line was added. please think about us that live in these communities and we have to go to work at UCLA.
		91367	No	1/24/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high

					ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
		91411	No	1/24/2022	Metro, Please focus on the five Alternative Concepts (2 underground and 3 monorail concepts) and stop studying the devastating Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard from Valley Vista to Roscoe in the Valley. Alternative 4 will destroy Sherman Oaks forever. There are NO elevated heavy rail trains anywhere else in Los Angeles. Why is the high speed transit underground from LAX to the Valley and then becomes elevated at Valley Vista along Sepulveda? Once AGAIN, the Valley is not getting its fair share of our tax dollars.
	Tarzana	91335	No	1/24/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Los Angeles	90036-3209	No	1/24/2022	Thank you for reading through public comments about this project. I want the Sepulveda metro line to connect Cal State Northridge to Long Beach, with transfers to the B line, the D line, the E line, the C line and the A line. The loops such a connecting line would create would make the system much more useful to Angelenos. I want it to include stops at UCLA, LAX and Torrance on the way. I want as few stations as possible placed on the freeway. I like stations that have easy pedestrian access and neighborhood amenities around it, like the Wilshire/Vermont station and the Culver City stop of the Expo Line. I want the B line to be extended to the Burbank airport and then to go west alongside the Ventura County Rail line to connect to the Sepulveda Line. Or else I want the B line to connect to VC Line at the Burbank Airport and for the VC Line to be turned into a Metro line that runs from Chatsworth to Union Station across the Valley every 20 minutes, with a connection to the Sepulveda line. I understand such an expansion will take many years. To start with, please connect UCLA to LAX with transfer loops to the other Metro lines it would cross, and extend the B line to the Burbank airport.

	Los Angeles	90045	No	1/24/2022	From Metro, The Source: "Metro is beginning the environmental review phase for the Sepulveda Transit Corridor project, which will build a heavy rail line or monorail between the San Fernando Valley and the Westside. A second phase will eventually be built to LAX." LINK This project is critical to improving traffic in Los Angeles, in fighting air pollution in the Los Angeles Basin, and reducing carbon gases which are creating the warming of the planet. Global warming is here now, and the estimates of its speed in warming are being met, and exceed, at a frightening pace. We face many unknowns with global warming, but we have many knowns of the dangers to life, agriculture, structures and infrastructure to this city, state, nation, and the world. Action is needed now to take cars and trucks off the roads to reduce carbon gases. A 2019 study from Yale University LINK places transportation as 29% responsible for global warming carbon gasses. Add to that the polluting carbon gasses from oil refining in the Los Angeles Basin, and the figure goes to 40%. It is not getting better. We are driving more. If we continue at this pace the percentage will increase to greater and greater peril to the planet. Action to reduce our carbon footprint is needed now. Yet the Sepulveda Transit Corridor project is bogged down. Instead of going with what is used overwhelmingly throughout the world for transits projects of this size and scope, heavy rail trains underground or for this project a combination above and underground, monorail has beed added to the evaluation of the project. I have written previously about monorails. They look good in amusement parks, zoos and some universities, but as shown below, the numbers do not add up in carrying passengers. To have this monorail alternative inserted into the project evaluation process is not only the fantasy of monorail fans, it is wasting money in the project evaluation. But more critical, we are losing valuable time to incorporate the monorail alternatives into the project evaluations. We don't have this time to try to combat global warming. And the numbers don't add up for monorail. There are six alternative: three automated monorail, three heavy rail. All three heavy rail alternative carry more passengers, at higher speeds. This better serves transit riders. As a transit rider, I know these are two of the greatest parameters in successful transit. Some monorail alternatives also need convoluted and complex secondary, and expensive transfers to UCLA. Enough of this. We don't have the time to waste on making Los Angeles a guinea pig for monorail. The world is getting more polluted, and global warming is accelerating. The monorail alternative needs to be scrapped now, and the project needs to proceed with the proven and better heavy rail. The numbers do not work out. Below are excerpts from Metro's outreach: "Alternative 1: Automated monorail that would be entirely aerial along the 405 corridor and the Metrolink Ventura County Line railroad tracks with an electric bus shuttle to UCLA. Train length/capacity: two to eight cars with an expected six cars during peak periods. Each car could carry up to 76 to 79, overall passengers 152-456. Connection to UCLA: At Wilshire Blvd, an aerial station would be located on the west side of the 405, and an electric bus shuttle would provide service along a 1.4-mile route between the Metro D Line's Westwood/VA Station and UCLA Gateway Plaza, with intermediate stops at Wilshire Blvd/Veteran Avenue and Westwood Blvd/Le Conte Ave. The electric bus shuttle would operate at the same frequency as the monorail. Alternative 2: Automated monorail with aerial alignment along the 405 corridor and Metrolink Ventura County Line railroad tracks with an aerial automated people mover connection to UCLA. Train length/capacity: Two to eight cars with six cars in peak periods. Each car could carry up to 76 to 79, overall passengers 152-456. Connection to UCLA: A pedestrian bridge would run from the monorail station on the south side of Wilshire to an aerial Automated People Mover (APM) station on the north side of Wilshire. The APM would travel on a structure primarily along Gayley Avenue to an aerial station near the west end of Bruin Walk on the UCLA campus. The people mover would operate at the same frequency as the monorail. Alternative 3: Automated monorail with aerial segment along the 405 corridor, an underground segment between Wilshire and Getty Center, then entirely aerial along the 405 and Van Nuys Metrolink Line railroad tracks. Train length/capacity: would consist of two to eight cars and are expected to consist of six cars during peak periods, with each car having a capacity of 76 to 79 passengers, overall passsengers 152-456. Alternative 4: Heavy rail with underground segment south of Ventura Blvd and aerial alignment generally along Sepulveda Blvd in the San Fernando Valley. Train length/capacity: three cars with each car carrying up to 170 people. Trains could be expanded to four cars, over passengers 510. Stations: Four underground stations at Exposition Blvd (Metro E Line), Santa Monica Blvd, Wilshire Blvd (Metro D Line) and UCLA's Gateway Plaza, and four aerial stations at Ventura Blvd, the G Line's Sepulveda Station, Sherman Way and the Van Nuys Metrolink Station. Connection to UCLA: an underground rail station would be on campus at Gateway Plaza. Alternative 5: Heavy rail with underground segment along Sepulveda Boulevard and an aerial stretch along the Metrolink Ventura County Line tracks in the San Fernando Valley. Train length/capacity: three cars with each car having a capacity of 170 people. Trains could be expanded to four cars, over passengers 510. Stations: Seven underground stations at Exposition Blvd (Metro E Line), Santa Monica Blvd, Wilshire Blvd (Metro D Line), UCLA's Gateway Plaza, Ventura Blvd, the G Line's Sepulveda Station and Sherman Way. One aerial station would be at the Van Nuys Metrolink Station. Alternative 6: Heavy rail that would be entirely underground including along Van Nuys Blvd in the San Fernando Valley and with a southern terminus station on Bundy Drive next to the E Line on the Westside. Train length capacity/length: would consist of two, four or six cars and are expected to consist of six cars during peak periods, with each car having a capacity of 133 passengers, overall passengers 266 or 532 or 798." We do not have the luxury of time to be the playground of monorail fans. Scrap the idea of monorail, and proceed, now, with heavy rail.
			No	1/24/2022	I am, have always been in favor of a monorail down the 405 fwy. I have proposed this to various city council members for 20 years now at various Chamber of Commerce meetings and have always gotten a shrug off. If Walt Disney can build a 2.5 mile monorail for Disneyland in 1959 taking only one year to build (over 60 years ago). By now we should be able to build one down the 405 faster and better. We need smart, cost effective, as quick as possible, and visually appealing. And it has to make sense. Alternative 2 Monorail is the best option.
	Sherman Oaks	91403-4602	No	1/24/2022	I am here to voice my support for the heavy rail options. I do not think that the monorail options adequately solve the goals of the project. All three of the monorail options would not have enough capacity to realistically make a dent on the vehicle miles traveled over the sepulveda pass. I fear that the monorail design would be worse than when the exposition line opened and it was immediately overwhelmed. The passenger capacity numbers for the monorail options are overstated. The max capacity quoted could not be achieved without significantly changing the stations, which may not even be possible. While the proposals for the heavy rail are understated. The proposal notes that 90 second headways would more than double the capacity. Please don't spend all this money on a project that is doomed to failure.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					I would hope that you would elect one of the heavy rail options. Thanks.
	Lake Balboa	91406	No	1/24/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3. Thank you

	Valley Village	91607	No	1/24/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

		93444	No	1/24/2022	I would suggest avoiding any alternative that doesn't provide an off-street/grade-separated connection to UCLA. While shuttle services reduce the vehicles for the number of people travelling, buses are part of the flow of traffic and still subject to the inconvenience of everyday traffic, which reduced the desirability of the option. An on-campus stop that requires no connectors would be preferred overall as it avoids any complications involving connectors.
		91342	No	1/24/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Reseda	91335	No	1/24/2022	What I like about options 4, 5, and 6 is that it won't impact the 405 freeway. -this is a major influence for working on the West side. I have commuted this route for 17 years, living in Reseda and working in Westwood. I will use whatever option is chosen, because anything is better than the 405. The 405 Sepulveda pass has just finished a decade of construction for new bridges and carpool lanes (creating more congestion than prior). No one wants to go through that again! What ever the option, I know the main concern will be traffic impact to the 405. My co-workers that live in Santa Monica do not like the above ground E line because it ties up the surface streets. I suggest underground or bust. Population/congestion will always get worse, It's worth it to go underground.
	Encino	91436	No	1/24/2022	Alternative 6 - the Van Nuys Blvd Heavy Rail is the best alternative for the Valley. Heavy Rail which carries the most riders is the ONLY WAY TO GO. Leave the Sepulveda Pass alone.

					ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Sherman Oaks	91403	No	1/24/2022	As someone living in Sherman Oaks and working at UCLA, I would love a a train option for commuting to work rather than driving every day.
		91331	No	1/25/2022	I like that this project helps people who struggle hopping on busses or trains. I wish for more bus routes and train routes to cross one another more fluently. There is nothing wrong with the current routes but improvement is always welcome if it helps I suggest researching the pros and cons and not just thinking of budgets
	Sherman Oaks	91403	No	1/25/2022	This will reduce our property values that is our pursue of life, liberty and happiness. I am maintaining property that will become worthless and then a greedy developer will come and purchase my home which I have maintained for pennies. In the meantime, will be noise, traffic congestion and more crime. For what, so the people who make bad decision have a place to go bathroom, party and perform more criminal acts. I was attacked at Union Station and now there is a reduction in Police presence, thanks to "defund the police". Now there is so much crime, citizens and people do not report. Enough, all ready.. Electric cars are the future, not a train from the 18th century.
		91343	No	1/25/2022	Truthfully for my liking it's better they way we are from Vanuys to Expo La verda para mi gusto es mejor como estamos de vanuys a expo
		90005	No	1/25/2022	Good afternoon to all of you. [They say that] [they are] improving the transportation service, [it's a lie] one has [to wait] 40 minutes for the bus to [come by] it's a lot, [they should] [do something] to better [the service] Buenas tarde ustedes. Disenke est?°n mejorando el servicio del transporte esmentira uno tiene keesperar 40 minutos para kepase elbus esdemasiado devian deaser algo por mejorar elcervicio
		91343	No	1/25/2022	This sounds like an awesome idea I hope it becomes a reality
		91411	No	1/25/2022	I travel to the Westside 5 days of the week (weekends sometimes) a train or easier/more bus schedules would be so beneficial. Affordable prices.
			No	1/25/2022	To Whom It May Concern, Please stop pursuing ridiculous and damaging Alternative 4 for the Sepulveda pass with elevated heavy rail trains running 20-40 feet above Sepulveda in the Valley. Alternative 4 will destroy the fabric of Sherman Oaks. The current streets can barely support traffic as it is.
			No	1/25/2022	Please stop pursuing ridiculous and damaging Alternative 4 for the Sepulveda pass with elevated heavy rail trains running 20-40 feet above Sepulveda in the Valley. Alternative 4 will destroy the fabric of Sherman Oaks. The current streets can NOT support traffic as it is.
		90024	No	1/25/2022	People will mot take it toooooo far from down town
		91303	No	1/25/2022	[lately its been] arriving late. It goes to Falbrook/Ventura. I'm not [liking] this-- I have been getting to work late. ?öltimamente esta llegando tarde Que se va falbrook/Ventura Esto ya no me esta gustando Siempre he llegado tarde en mi trabajo ??
		90255	No	1/25/2022	We need a bigger rail system. Especially in areas that are congested with traffic cut down bus service but you need to increase rail. Like New York City, San Francisco and Chicago.
		91402	No	1/25/2022	I want that project to push through and I wish that project will give easier and convenient travel to all of us who are relying on the metro and I suggest that services should be available even during weekends.
	Huntington Park	90255	No	1/25/2022	I do not support the monorail alignment nor BYD as the approved vendor. They do not meet the requirements stated in the bid proposal and will end up costing Los Angeles a lot of money with their alignment. It seems clear that Heavy Rail is the higher quality technology and will be the better investment into providing connectivity and efficient transport throughout Los Angeles. I look forward to the development of our Metro network into a world class system, but insist that this will only be possible with the heavy rail options.

			No	1/25/2022	Hi. I have a question before submitting my public scoping comment. Can you please confirm which of the proposed alternatives utilize trains, spare parts, repair procedures that are used in any of the other Metro lines (either in operation or planned)? Please reply so I can submit my comment before the end of the public comment period on February 11th. Thanks
	Los Angeles	91316	Merged Document	1/25/2022	
League of Women Voters			Merged Document	1/25/2022	Please see the attached public comment regarding the Sepulveda Transit Corridor Project.
	Sylmar	91342	No	1/25/2022	Any route that does not include a stop at UCLA/Westwood is a non-starter!! That is a major destination in itself for people from all over the Southland. It also serves as a hub from which people travel to Santa Monica, West Los Angeles, and Century City for both work and entertainment. I commuted to UCLA from the San Fernando Valley for 33 years before I retired. Now it is difficult for me to travel to UCLA for medical and intellectual purposes because of traffic on the 405, so I feel cut out of going to the Getty Center, the Hammer Museum, and the UCLA campus unless it is absolutely necessary. This project must include a stop at UCLA/Westwood and provide access to the Purple Line station there.

As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	JCZGTC333	No	1/25/2022	I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. 		91364	No	1/25/2022	I love this idea but I'm not sure where the best placing of this would be. Obviously a parallel route along the 405 would be best. I do thing Metro transit in the Valley is long overdue for upgrades. Might I suggest a express Metro bus route along Ventura Blvd from Woodland Hills to Universal City? This would significantly help others and myself commuting to/from work.
	Los Angeles	90020	No	1/25/2022	I write as a former resident of Palms, current resident of Koreatown, and employee at UCLA. I use public transit exclusively, as I do not own a car. What I like are alternatives 4 and 5. Heavy rail will be better integrated with the existing Metro Rail system and therefore easier to maintain and service than a Monorail. I defer to residents of the SFV on aerial versus underground for the northern end, but would prefer alignment with the E line at Westwood/Expo rather than Bundy. I think UCLA deserves a heavy rail stop (as opposed to a transfer to electric bus or an APM) given the volume of university employees and students. With respect to other planning around 405 alternatives, what I wish is to discourage use of high-occupancy toll lanes and congestion pricing. These may be effective at reducing traffic, but are inegalitarian solutions, as both disadvantage low and middle-income drivers by tying access to public goods to market position. Special pricing for low and middle-income drivers would be unlikely to fully mitigate that dynamic, as most similar public assistance programs use highly selective means-tests that exclude many (or even most) of the households that would be significantly impacted. Indeed, that negative financial impact is by design, since the point of such programs is to discourage and limit usage of public goods by a significant fraction of users. Sufficiently wealthy individuals will not modify their behavior, and the majority of cars removed from the road will be from people without the financial means to access the roads that their taxes helped to build.
Holmby Westwood Property Owners Association			No	1/25/2022	To the LA Metro Board of Directors, Holmby Westwood Property Owners Association voted unanimously to support a direct stop at UCLA , a direct stop to Westwood Village, and connection to the Purple/D line, and connectivity and continuity to the communities such as ours which it serves. Our Board of Directors represents 1100 single family homes between Wilshire and Sunset Boulevards, Hilgard and Comstock Avenues on LA's Westside. Our homes are adjacent to the UCLA campus to our west. Only the heavy rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague our residents on a daily basis. It is of vital importance to take people directly to the places they want to go otherwise, they will continue to seek more convenient means of travel. We support the alternatives above as Alternatives 1 and 2's closest stops are 1.5 - 2 miles from UCLA's campus thus requiring F/L mile challenges. This could add to travel time, decrease ridership, and add accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Westwood does not have street space to accommodate shuttles, Ubers, or Lyfts that would wait to pick up passengers arriving from or returning to the rail. We strongly support transit but only one that will achieve high ridership and access to key resources including healthcare, employment, and education. Our association calls upon the Metro Board to eliminate or immediately adjust Alternatives 1, 2, and 3. We urge you to support a direct stop at UCLA!
	Santa Monica	90405	No	1/26/2022	I would like to support including transit stops at the Getty Center. It would be a great service to the thousands of employees and visitors to the campus and nearby temple. Current bus options are very indirect and discourage using public transit to the Getty. Thanks for your hard work on this important project.
	sherman oaks	91423	No	1/26/2022	terminating this line at Ventura and Sepulveda will paralyze the valley--move the striating point closer to Van Nuys--maybe Oxnard, Victory or--Sepulveda Flood Channel area and make it go underground through the pass as it does through the Hollywood Hills to downtown.
		90255	No	1/26/2022	I don't know specifics on this project. But I dream of LA one day being a place that can easily be accessible via rail. Let's also prioritize the metro Santa Ana bridge corridor project. The residents of Huntington Park, South Gate, Cerritos, etc. deserve reliable and efficient transportation. Thank you for all you guys do!
		90232	No	1/26/2022	Safety, cleanliness, convenient and fast way to go from Westwood to San Fernando Valley
	Van Nuys	91406	No	1/26/2022	Option 4 - the one with the above ground heavy rail along Sepulveda - sounds like a truly awful idea that will destroy the neighborhood! If it was left in there simply to make the other options sound better, then that's fine... but there is no way you'll get any support for this idea from anyone who lives in the valley. please remove it immediately so that we can focus on the good options and not waste time and money exploring this terrible, terrible idea.
	Hawthorne	90250	No	1/26/2022	As a UCLA Alum, I think it's of utmost importance to include a train stop directly on campus and in Westwood. Given how awful traffic is along the 405 and around West LA/Westwood, I remember where I lived was crucial to consider before deciding how far from campus I could stay. That really limited the affordability options around the school itself. Also, most students don't have a car to get around either, and having easy access to public transportation opens up LA to a vast majority of students. As a working professional now and am now driving the 405 north and south every day to work, I can't believe there aren't more North and South metro options despite how busy that route is. I'd love to see this line continue all the way down to LAX and eventually the South Bay as well.
	Playa del Rey		No	1/26/2022	I think the effort and money should go to the improvement of the streets to move traffic more quickly. Remove parking and other lane obstructions. Bikes have no reason to be on busy thru streets. If for no other reason it isn't safe. There are other streets/road for bike enthusiasts to use. Traffic and our economy need the clear use of our roads. We all benefit. There is no serious reason to have recreational biking on our commercial streets. Those few who insist on biking everywhere while just have to be disappointed. This is from a life long bike rider. Riding all over several states and in Europe. As many bikes as ride in Europe there are not special lanes and accommodations that I ever saw. Riding on highway in rural France I had to accept commercial traffic and had to share the road. Use your funds to improve our roads for traffic to move more quickly and educate bike riders to ride on streets less traveled.
		90026	No	1/26/2022	How great and we [thank you] for this great work effort to help the city and a lot of us that travel on MTA [??] Que genial y se les agr?°dese gran esfuerzo de trabajo para alludar a la ciudad y a muchos que viajamos en MTA . ????????
		91601	No	1/26/2022	This would be a game changer. Accessing the amenities and jobs of the west side via direct line from the SFV is absolutely vital to the future success of the Valley
	Sherman Oaks	91403	No	1/26/2022	Alternative 6 is the only sensible solution. please do not add disruption to the funnel to get over the hill and back by building in the only way over the hill and back on the 405 and Sepulveda. Any above-ground train in the valley when you are building subway for the west side is wrong period. Do not discriminate against the valley citizens.
		91325	No	1/26/2022	I would really like this project. It is time saving. I wish to travel as soon as possible and not have to wait for the bus.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90049	No	1/26/2022	I am concerned about the underground options that go through the neighborhoods as the routes will disturbance to the neighborhood, create pollution and reduce property value. Please keep it along the 405. Thank you
		90066	No	1/26/2022	Please choose heavy rail over the monorail. Once built, the Sepulveda line will operate for decades, so Metro has one chance to get it right. The heavy rail options connect directly to the E and D lines and serve UCLA directly, which monorail does not. In addition, the monorail stations are adjacent to the freeway, rather than in areas of high density that will encourage transit usage. Further, the heavy rail options are designed to allow increased capacity without requiring extensive additional construction, whereas monorail will require expensive station retrofits to increase capacity. Monorail may have a lower upfront cost, but it will not save money over time and will not provide the integrated solution necessary to make this important line a success. Please choose one of the heavy rail alternatives.
			No	1/26/2022	Alternative 6 is the best. Thank you
	Los Angeles	90047	No	1/26/2022	I strongly voice my support for the Heavy rail alternatives especially in favor of Alternative 6. This option would have the best opportunity to link as many people to where they would like to go. This would drive people away from the freeways and out of their cars. The monorail options have terrible station locations on the freeways, do not connect seamlessly with the current system, and it's low eventual peak capacity. I am also concerned about the more expensive new alternatives drawn that was not include in the initial cost proposal for the monorail options. I am also expressing deep concern over BYD's influence on the metro board. Again, I am strongly supporting the Heavy rail alternatives. What I also wish is that we could also compare the amount of benefits and people that could be served between the full heavy rail alternatives buildout from the Valley to LAX if chosen to go either down Sepulveda and Centinela. In order to fully understand the transparency between both options.
	Los Angeles	90025	No	1/26/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90034	No	1/26/2022	I really like the idea of a heavy rail option that runs from the Valley to UCLA/Westwood and eventually connecting with the LAX people mover. It would also be great to make sure the new transit connects to areas that are already more dense such as Playa Vista. The automated heav rail option would be the fastest option with the least amount of downtime between cars and therefore move the most transit riders. In my opinion, the best way to serve transit riders would be to go with the option that moves the most people the fastest, which in this case seems to be the heavy rail option whether it is with or without a driver. Ideally, the proposal that Metro will ultimately go with will connect to many existing stations to serve those along the Westside who would like to move north and south and even to the Valley. For this reason, I like Alternatives 5 and 6. If costs and timelines are a major issue, I then like Alternative 4. Mostly, I prefer any of the heavy rail options and am not as much of a fan of the monorail options. What I wish of Metro transit right now would be a way to get from the Palms/Culver City area to Playa Vista and Westwood/UCLA solely through using Metro.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Valley Village	91607	No	1/26/2022	Add me to the list of people who think the monorail proposal is a waste of time. You don't want to complicate our mass transit with another rail type that is incompatible with the others (light/heavy rail) already in use, that's more expensive and less scalable. There is a familiarity and expertise already with light and heavy rail learned from building the previous lines, take advantage of that. What I suggest is that you build the line as heavy rail (like the Purple/D Line) underground and have it stop at Ventura Blvd/Sepulveda Blvd. (the HRT-2 proposal). The second best option is HRT-3 which I believe is light rail because it adds a Valley stop and also is partly aerial, meaning people stuck in traffic can see trains go by which will frustrate them and hopefully convince them to stop driving and use the train instead. What I would also suggest, to maximize the usefulness of the rail to ease/reduce traffic, is to extend the East San Fernando Valley Light Rail Transit Line south (when it is built) so that there is a stop at Van Nuys Blvd/Ventura Blvd (and at Magnolia Blvd, there's a huge park there). This would make it more convenient and desirable to use the Metro to go out (and not drive/drive drunk) after work hours in that area making it easier to walk to a train station (either line). Less traffic, less searching for parking, more people using the trains. Mass transit cannot be looked at as only a solution to workforce transportation, we need it for recreational travelling as well. Nightspots draw lots of people, too. The more options to walk to fun afterhours locations, the better. Ventura Blvd has many shops and restaurants that stretches for many blocks east and west. Having even a small part of the Valley that functions like Manhattan would be a benefit to all. It also wouldn't hurt to add another stop north of the Red Line terminus at Lankershim Blvd/Chandler Ave. The NOHO West area or Laurel Canyon Blvd/Victory Blvd would be a great addition, that area will get more traffic as NOHO West ramps up.
		91306	No	1/26/2022	that would be great limited time maybe go all the way to lax
		91306	No	1/26/2022	yes if it goes far enough maybe go from magic mountain/Castaic to lax to long Beach or further down to orange county people would use mass transit more. like the bart system up north but a monorail type.
		90007	No	1/26/2022	Heavy Rail Alternative!! Through Culver City
		90007	No	1/26/2022	Alternative 4. Heavy Rail without driver with the final destination in Culver City would allow for the most Optimal use.
		90037	No	1/26/2022	The only thing that I would like to [strongly] ask you please is why this green bus number 3 is so behind, because this makes me get to work very late. Please I [could be] out of a job, I have been [scolded], Y get to the bus stop with ample time. Please. LO UNICO QUE PUEDO PEDIRLES ENCARECIDAMENTE POR FAVOR PORQUE ESTE BUS VERDE N?öMERO 3 SE RETRASA TANTO ,PORQUE ESTO HACE QUE LLEGUE DEMASIADO TARDE A MI TRABAJO. POR FAVOR PODR?çA QUEDARME SIN EMPLEO. YA ME REGA?ëARON. YO LLEGO A LA PARADA DEL BUS CON SUFICIENTE TIEMPO. POR FAVOR
	Sherman Oaks	91401	No	1/26/2022	As a long term resident of the San Fernando Valley and frequent user of the 405 I believe that the 405 should not be impacted by any new construction. The only feasible solution for the metro line is underground giving a wide berth to the 405. The stations as listed should include Ventura Blvd in sherman oaks, UCLA, LAX and the connecting metro lines in LA. The area above the 405 should be used for a freeway canopy covered in solar panels to provide electricity for the trains and other infrastructure needs. We might need to eventually tunnel under the 405 for a secondary route through the hills. The change in the Valley's people density will eventually make that a necessity.
	Redondo Beach	90278	No	1/26/2022	Transit corridor should use heavy rail. It would be most efficient and be able to carry the most passengers. The more cars that are able to be cut out with this project the better
	Reseda	91335	No	1/26/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Hermosa Beach	90254	No	1/26/2022	I really think that a monorail would be shortsighted. The sepulveda pass project should be heavy rail and designed with future extension in mind. There really needs to be a rail connection from santa monica to the airport/crenshaw line that would connect westside LA north/south

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90068	No	1/26/2022	When it comes to moving from point A to point B, convenience is king. It's why most Angelenos willingly opt to sit in traffic for 30 minutes every day, because they know the bus will take them perhaps 50 minutes to travel over the same A to B, so they drive. In terms of the transit we have in LA county, capacity is also king. Before the pandemic I would commute on the 204 or 754 along vermont, and alternate that with the red line and expo line. On all these routes, it would be standing room only due to the high ridership in this corridor, and sometimes the bus would be so full the driver wouldn't bother stopping as there just isn't room for the dozen of us waiting at the stop. The transfer at 7th street metro center from the heavy to light rail platforms would be downright dangerous with the amount of elbowing happening running down those steps trying to make a train, I'm surprised people aren't trampled more often to be honest. In my opinion, routes like the Expo line have been compromised out of political expedience. For example, it typically takes 15 minutes for this train to run two miles or so from USC to downtown LA due to the lack of grade separations in one of the most bottlenecked areas of LA. If I was in better shape I could probably outrun the train just sprinting on the tracks. This lowers its utility to potential riders, and due to the design of the entire train line from the length of platforms to the lack of turnback stations on either end and sharing grade with the Blue line through downtown, its difficult to lower headways or add cars to trains to prevent a standing room only situation, or such a chaotic situation at transfer stations like 7th street metro. We failed to do the job right the first time with projects like the Expo line, and pay the price today with congested cars and platforms and a long trip end to end. In terms of this project, if we want to do the job right the first time, not suffer from the ills plaguing the current compromised routes we have in LA, and not pay an order of magnitude more decades from now to redo everything the right way when we have no choice but to do something about the anemic transit line, we simply have to pick the most convenient option which offers the fastest speeds end to end in order to lure car drivers off the 405. We also have to use the option with the most available capacity, because like most transit in LA, it will quickly get used to capacity thanks to all the latent transit demand. For this project, doing anything but a heavy rail alignment is downright irresponsible for generations of future Angelenos. Choose carefully, Metro Board. If you all chose the monorail alignment that offers a slower trip and serves fewer people and has no potential to integrate with future transit routes like standard gauge rail does, it's your children and grandchildren's tax dollars that will be wasted redoing all this work in decades time. It's your choice today whether or not to tax your family needlessly in the future. This is our moment to do the job right the first time, to select the heavy rail alignment that offers the highest capacity and end to end speeds, and to ignore the sharks like these private monorail companies that appear out of thin air when the sweet blood of public contract money hits the water.
	North Hollywood	91601	No	1/26/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. As a San Fernando Valley resident who works at UCLA and attended all while living here, I can say such an addition would greatly alleviate transportation issues. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Sherman Oaks	91403	No	1/26/2022	An important addition to LA's public transportation network. The safest, most achievable, shortest timeframe to completion project should be implemented. All of us have to adjust to public transit, it will run a block and a half from my house, I have no concerns with appearance or noise in the interest of getting public transit expanded.
	Los Angeles	90064	No	1/26/2022	The only long-term solution that prioritizes urbanization, clean transit and reduced congestion Is heavy rail. Please do not squander this opportunity by selecting a monorail. Heavy rail is the only solution
		90004	No	1/26/2022	Hello, I would like that there would be betterment of the schedule of the buses to Santa Monica. Because the schedules are very prolonged. Hola, me gustaria que hayan mejor en el horario de los buses a Santa Monica. Porque los horarios son muy prolongados. Gracias.

			No	1/26/2022	Hi. I'd like to know whether is there a tentative look of what the future project will be. Will there be a new metro line? I just want to see what it is/they are and how it/they look. Thanks.
	Brookline	2445	No	1/26/2022	I strongly recommend all underground -- so in other words some variation of Alt. 6. Monorail introduces a new type of equipment so maintenance and logistics would be inefficient and more costly. Any equipment should interoperate and share the same design with with other heavy rails lines. Metro should not limit the number of suppliers as would inevitably happen under monorail. Reliance on Chinese equipment is also a strategic mistake in the current era. Monorail uses rubber wheels. We need to get wheels off the road not just vehicles. SBR rubber has severe but under-recognized negative impacts on air and water quality which are high concerns in Los Angeles. Steel wheels are cleanest. Direct service to UCLA at Gateway Plaza is a must have. An extra leg to access UCLA as in the monorail options 1 & 2 is counterproductive if not laughable. On the other hand, my preferred solution is all underground heavy rail. All underground has the additional benefit of resiliency from wildfires. Alt. 6 would disturb less of the above-ground environment and infrastructure, and avoids travel along the noisy and unattractive 405. Any proposed 405 stations are beyond walking distance from most potential destinations. However, under Alt. 6, I would recommend using the Alt. 4/5 southern terminus of Sepulveda on the E line. This would be the absolute shortest option in miles and trip time. This should likewise have lowest cost among the underground alternatives. Avoiding the 405 area during construction could also save money. The all-underground Option 6 allows for two possible construction phases, which is another reason to choose it. Phasing means that revenue service could begin sooner. The phases would be: 1) E Line to Orange Line, 2) Van Nuys Metrolink segment. It is also possible that the second phase might not be needed for some time if the light rail suffices, which would save money. Maybe it would be better to instead first extend the line south to the K line or even LAX, which would open up new transit service areas and should result in significant traffic reduction on the 405. In addition to general workforce travel, this would connect UCLA to the airport for example. The southern terminus at Expo should be designed for this possible future expansion. I have no strong preference between automated or with drivers although having human eyes on the train would probably yield some safety and operational benefits.

	Los Angeles	90049	No	1/27/2022	I don't understand the purpose of running this line to Van Nuys, if you don't have good transit going from there besides the orange bus line. simply getting people over the pass doesn't do so much good, if there isn't somewhere to go once there. I'd like to see a people mover or light rail going along Ventura Blvd East-west, connecting to WLA so folks can get to/from LAX, but also the major tourist spots like Venice. The only thing of interest in the valley is work locations (spread out) and homes (spread out). Metro should think about the "last mile," have hire cars (like electric scooters) that allow people to shop and dine; not just get over the hill. But then you probably have done extensive research into existing traffic patterns. Just my opinion.

While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

			No	1/27/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am a student at UCLA. I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Sherwood Forest	91325	No	1/27/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. 	Los Angeles	90024	No	1/27/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am currently a UCLA student. When I first got admitted to UCLA, I was so excited to use the Metro to travel from my home in Orange County to school, but I soon found out that there weren't any direct lines to UCLA which made it harder for me to use the Metro. Now that there is an opportunity for a stop by UCLA, I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. 	Los Angeles, CA	90024	No	1/27/2022	I suggest putting a stop at UCLA or Westwood. This would give commuter students a way to get to campus easier and give a safe alternative to students who can not have a car.
			No	1/27/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 		91606	No	1/27/2022	I love everything!! This city needs more of it. All I can see is benefits for the community at all levels.
	Marina Del Rey	90292	No	1/27/2022	I strongly support alternatives 4, 5, or 6. As Metro knows, this is an extremely important project for the future of transportation in Los Angeles. Choosing a heavy rail system that works with our existing system and provides for the future capacity needs is critical. Equally as critical is a station directly on the UCLA campus. Bus transfers, people movers, etc all severely lower the chances that someone will actually use the system so an on campus station is essential. Alternatives 1, 2, and 3 are flawed. They have lower maximum capacities, are generally limited to the 405 (and being stuck on a freeway, distant from places people are actually going, with noisy and exhaust heavy station platforms are noted issues with the C Line), depend on a contractor who has been unreliable in the past with Metro, and either lack the critical on campus UCLA station (1 and 2) or in order to get the UCLA station, cost essentially the same as the Heavy Rail options (3) with all the above drawbacks. It also seems to me that the alignment from Alternative 6 is superior, though it should be built with the systems used in 4/5 with automation and the partnership ideally. However, if building under the SFV light rail is too complicated, alignments 4 and 5 seem to be alright. I do not have strong opinions on elevated or underground in the valley, nor where it should meet the E line. Finally, this is likely not realistic, but it would be nice if the connection with the D line could be studied closely to see if it was possible to briefly interline (with additional tracks and platforms) at the Westwood station, or run parallel. This would of course rely on the systems being compatible. But as the network grows, having future routing options to route trains from Downtown along the eventual Sepulveda line extension to LAX and from LAX to downtown without a transfer would be nice.

Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90024	No	1/27/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. 			No	1/27/2022	I saw the video of your scoping project, but it did not include the public comments so we don't have any idea of people's thoughts or what their criticisms are, so I would like to see that on there, and if you can give me a call and let me know when it's goin gto be available
		90304	No	1/27/2022	Reduces traffic Gives commuters an alternative mode of transportation Allows commuters to go to the valley via metro rail Clear time horizon Real costs, not ongoing costs due to improper planning requiring bond measures (additional) Proper planning and budgeting Consider fault lines
Sherman Oaks Homeowners Association	Sherman Oaks	91413	Merged Document	1/27/2022	
		90009	No	1/27/2022	Hurry up please ???????????? We are light years behind metro cities!?
	Los Angeles	90049	No	1/27/2022	Hello, I am a new Assistant Professor of Human Genetics at UCLA. My wife and I moved here in July 2021 and have so far loved living in Los Angeles. It is my goal to get tenure and stay at UCLA throughout my career. However, we are confronting a quite dismal outlook that many young families in West LA are facing--the severe lack of affordable housing. Even with two incomes, buying property in West LA is not feasible nor will it be for the foreseeable future. This problem is so well known that even faculty recruits from the East Coast are asking questions about housing affordability during their interviews, and some are turning down offers from UCLA for research institutions in more affordable areas. UCLA's inability to attract the most talented scientists could have long term implications, including fewer federal research dollars being brought into the Los Angeles area. One clear solution to this problem would be to improve travel conditions from the more affordable SFV to the UCLA campus. This would broaden housing options for my family and future UCLA researchers. As such, I vehemently support the construction of the heavy-rail options that include a stop directly on the UCLA campus. Specifically, I strongly suggest Options #5 or #6. Thank you.
	Los Angeles	90028	No	1/27/2022	I support options 4, 5, and 6. As a long time transit user, connectivity is key! Please no monorail- there is no reason to add a third type of train to the Metro system. Let's think long term and have the ability to extend lines. Also a stop at UCLA- the biggest destination in the area- is an absolute necessity. To build this line and skip UCLA would be more embarrassing than the original Green line turning away from the airport. :)

			No	1/27/2022	To whom it may concern regarding the Sepulveda Pass transit project. I submit the following public comments: I greatly support this project, but I do have concerns that it be designed and built for operations during fires and for future proofing passenger loads while also adopting some of the lower cost options relating to tunneling and platforms, considering how vital this one link will be to commuters and those eventually accessing LAX and, in general, be the only mass transit between the San Fernando Valley and the west side. Here are my concerns and public comments: 1 . Any design for trains through the Sepulveda Pass MUST be capable of operating even during a brush/wild fire in the Sepulveda Pass that may even shut down the 405 freeway, but the transit trains MUST be able to continue operations during such a fire event. This will be a vital link for thousands, and likely over time, tens-of-thousands of people (or more in the decades after opening day?) who will rely on this line/service between the San Fernando Valley and the west side, UCLA, and eventually LAX, and in later years, beyond. We can not have huge numbers of people stranded on either side of the Pass with no way to work, school, or home because of eventual fires in the Pass. Therefore, it seems that an all subway option through the Sepulveda Pass is the only way to guarantee no interruptions in service during a fire above ground, and the design needs to provide electricity to the subway portion under the Pass that will not be affected by fires above ground in the Pass so that trains can run uninterrupted. 2. The project must be designed with future-proofing in mind. Specifically, we should NOT underestimate how many people will be attempting to board per train. We have witnessed how passenger loads on our MTA rail lines can exceed the rail car design with the Blue Line having to extend platforms to accommodate an additional light rail car at tremendous cost and inconvenience to handle over-saturation, while the Expo Line barely handled its passenger load (from personal experience, people were really crushed in and could not often reach the door to exit at their stop) during rush hours and the disastrous over-saturation of the Expo Line because of poor decision to run trains with just 2 minutes more apart that stranded commuters on the platforms because it was impossible to board the over-crowded trains. Considering the huge number of vehicles on the 405 and the lifeline that is the Sepulveda Pass for motorists using either streets of 405 freeway, the line should be designed to accommodate the greatest number of riders per train--also taking into consideration many people using this service to access LAX who are likely to have luggage. After studying all build options that included various types of rolling stock proposed, it is clear that the ONLY rolling stock option to meet expected and anticipated passenger load is to use HEAVY RAIL cars, specifically the very same cars used for Metro Subway lines than are larger and have more capacity for sitting and standees, and these cars are large enough to remove some seating to accommodate luggage racks/stowing spaces in all cars while still having the larger interior to allow for maximum passenger loads. This can NOT be underestimated, as this will be the ONLY line from the San Fernando Valley to LAX, and smaller cars will not allow for the "unexpected" popularity of this line and will make this line LESS attractive to people who would WANT to use it to LAX because the rail cars are too small to accommodate all riders and their luggage, even if only carry-on lugguge. 3. In addition to using the current B & D line Heavy Rail subway cars specification, the MTA should consider building to accommodate a maximum of 10 car trains for this line as opposed to the current maximum 6 car trains for B & D subway. Yes, this would mean platform and trains lengths of up to 750 feet, but we MUST not underestimate how overwhelmingly popular this line will be considering it will be the ONLY MASS transit option between the San Fernando Valley and the west side, LAX, and, eventually, beyond in the years to follow opening day, and it would be prohibitively expensive to extend platforms once this line is completed; we have ONE shot to get it right. BART platforms and trains are a maximum of 700 feet, just 50 feet shorter than a MTA 10 car heavy rail 750 feet, and those BART trains were standing room only, so there is a precedent. The much smaller (and yes, cheaper) rolling stock proposed by the bidder and the much SHORTER platforms to accommodate SHORTER trains would not be able to handle the passenger demand and their luggage even at their proposed frequency of only a few minutes apart. Those numbers are just not realistic. Consider the MTA's own passenger load predictions and how after the line opens, ridership EXCEEDS (a good thing, if there is room for them) their professional, mathematical, statistical, "scientific" projections. Any uneducated rider of MTA services could have predicted greater ridership numbers based on far less evidence. Given how in the unpredictable future younger generations will seek and demand transportation other than a private or ride-share vehicle with the future generations great concern for eliminating carbon footprints and contributing to an environmental disaster, we should expect even MORE riders than we could imagine, even if we work from home because people still want to travel locally or beyond, people want to get out and do things, and public transit such as the Sepulveda Line's access to places like UCLA and LAX along with easy transfers to Century City for entertainment, dining, etc., and connections to Expo Line and Santa Monica a few blocks from the Pier and the beach, our children and grand children will most likely depend upon the Sepulveda Line providing that transportation more than any other form. 4. An additional argument for standardization of the Speulveda Pass line to use the current Metro Heavy Rail subway cars specification is for cost savings in purchasing rail cars and parts and for compatibility should some cars be pulled from service, B & D line cars could be sent to replace those pulled from Sepulveda service, otherwise riders could be facing long-term disruption and find they can't use the Sepulveda line and, instead, go back to their cars until the unique vehicles can be repaired, that can take longer than we may anticipate due to all manner of delays and parts shortage and MORE expense due to the unique rail car technology (used in a few places around the world) simply does not have the critical mass for economies of scale to produce that many parts and its export to us. Further, there is a benefit from operations personnel and mechanics who already know how to operate (although FULL driver-less is an option) and repair these vehicles without the added cost and complexity of new training for a new--third--type of rail car. The current situation of the MTA having designed the light rail system to ONE type/specification of rail car across all its light rail lines is a good example of the benefits of such standardization. 5. While some of the the points above may cost more than the far smaller rail car options proposed by the bidder, and the longer platforms for the same B & D line specification Heavy Rail cars, such costs to improve the line's capacity and maintain standardization can be offset by the proposed lower cost construction/design that I do support: the single tunnel option and the offset side platform option. This project will see greater ridership than predicted in the earliest stage of operation and can expect more growth in ridership in the years and decades to come and this can increase costs for rolling stock and construction of platforms, but we can lower costs where it is practicable and wise to do so. I support the lower cost SINGLE tunnel design under for any subway portion. Considering that it is in use and under construction for a BART project, it seems a good place to save money without compromise to the performance and experience of the line. Further I support the lower cost off-center, side platform as, again a reasonable compromise in cost in exchange for having this line become reality. However, I would suggest that CAREFUL design or art aesthetics and bright lighting, etc. be used for the sections of platform that will have a lower ceiling so that riders will feel not only comfortable but drawn towards these sections of platforms so riders feel comfortable spreading out to all lengths of the platform. 6. I support that the Spulveda line directly serve the Van Nuys Amtrak/Metrolink station and the Sylmar/San Fernando Metrolink station for easy access to services that transport people regionally. Thank you for the opportunity to send my comments.

		90014	No	1/27/2022	If this is going to be the most heavily used line in the city upon completion, it's got to be done well ! Interconnectivity with the other lines is also crucial.
	Aliso Viejo	92656	No	1/27/2022	I would like to see the project continue in favor of the heavy rail development as opposed to the monorail proposal. The heavy rail project seems better suited for underground station development (UCLA hub) compared to the monorail, plus the monorail seems to follow the I-405 for the most part including many of its planned stations. This makes pedestrian access very uncomfortable (road noise) and requires transfers by bus/rideshare to get to final destinations (homes, businesses), which makes the route even less practical, slower, and more expensive for riders, versus having a station located within walking distance to popular destinations. I feel that for which ever plan gets chosen, the plan should prioritize station locations so that they are as friendly to pedestrian traffic/destinations as possible, and are not designed around transfers to buses or cars.
			No	1/27/2022	Dear Metro, Please put a stop to ridiculous Alternative 4 for the Sepulveda pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Blvd. Alternative # 4 will destroy Sherman Oaks forever. Thank you,
		90034	No	1/27/2022	Start providing restrooms at major terminals which have 24/7 staff, such as Santa Monica. Excuses like preventing drug dealers are just stupid when a patron for a long ride is a pregnant woman with a child in hand, or a senior with a wheelchair or a medical problem. If parks and DMV offices and bike hubs can have restrooms, so can key stations. Offset cleaning costs to TAP cards if necessary.
	Reseda	91335	No	1/27/2022	I would like the project to be heavy rail and completely underground as much as possible. I vote for Alternative 5. Second option would be alternative 4 but I would want information on the noise that it would produce being above ground.
	Sherman Oaks	91403	No	1/28/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am a homeowner in Sherman Oaks and I ride transit to my job at UCLA at the Wilshire and Westwood stop. I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3. Sincerely,
Studio City Residents Association			No	1/28/2022	RE: Studio City Residents Association Support's Alternative 6 MOTION The Board of the Studio City Residents Association (SCRA) only supports "Alternative 6", (running in-line with Van Nuys Boulevard and Westwood Boulevard), with the motto, "You get what you pay for". "Alternative 6", (Heavy Rail"), is the only alternative that truly has a vision of looking to the future with "room for growth" capacity as well as speed; as opposed to slower, smaller capacity "Alternatives 1, 2, and 3 Monorails."

Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	panorama city	91402	No	1/28/2022	How will this project impact student and pedestrian safety to and from school? Van Nuys Blvd. is an incredibly impacted corridor, and it seems that it may become further impacted with the addition of this project?
	San Jose	95135	No	1/28/2022	What I suggest is Alternative 5 of the recently released list of alternatives. I chose this option for a few reasons. First, because a monorail would be slow, expensive, and inefficient. Second, because building an aerial section will be a major visual blight and if the system is already underground the cost of developing a tunnel boring machine will have already been spent, hopefully keeping the price tame. Last, I don't support alternative six because according to what I have read it would be the most technologically challenging. Thank you for reading.
	Los Angeles	90020	No	1/28/2022	What I like is a heavy rail option for the corridor. The elevated section in SFV to lower cost would be preferred, as would automated heavy rail cars.
	Lancaster	93536	No	1/28/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the

	Los Angeles	90068	No	1/28/2022	Please no monorail. It would be an absolute disaster for LA. BYD is so corrupt it would end up with delays and cost overruns, like the Crenshaw line but x10. So please metro board, don't be corrupt JUST for this one line. It's so important for the future of our city. Please don't sell our future to sleazy capitalists.

	Los Angeles	90026	No	1/28/2022	I am very supportive of the transit corridor. The purpose is clear and much needed in Los Angeles to reduce overall car traffic in our city. I would like for the heavy rail proposals to have higher priority over the monorail
		91423	No	1/28/2022	I am calling to comment that I believe this Metro project is entirely wrong and should not be done. It is going to cause a terrible impact environmentally in terms of noise, in terms of visuals and in terms of displacing people and reducing home values in the area of the Sepulveda Pass of Sherman Oaks. I would like to comment that we do not want this in our neighborhood and any rail system should not be built above ground, if there is a below the ground option that should be pursued. But no above the ground options- whatsoever
		90046	No	1/28/2022	I think the project should just be heavy rail, monorail is pointless and makes it harder for the track to be used in different ways. The other main concern is the history of fires in the area as well. But overall, as long as it connects to one of the light rails in the area, we should be good and I look forward to seeing this built
			No	1/28/2022	Hello, While I generally support the Sepulveda Transit project, any plan that includes an above ground rail along Sepulveda or Van Nuys Blvds. is a bad idea. Beyond the tremendous disruptions during the construction phase that this would surely cause, a massive rail and support structure above ground would be nothing more than urban blight. Any areas beneath the rail would become a haven for illegal activities, trash dumping, and homeless encampments. To think that the West Side would get underground rail and the Valley be saddled with above ground portions is outrageous. You wouldn't want an above-ground train running through your neighborhood. What makes you think we want that in ours? Please feel free to reach out for more info or to verify my residency in Van Nuys. Thank you,
	Van Nuys	91405	No	1/28/2022	What I wish is to see a heavy rail line connecting the Valley to the Westside. I believe Alternative 6 is the best alternative. Please abstain from creating monorail line in the San Fernando Valley. Thank you.
		91504	No	1/28/2022	Please put a subway station in Burbank
	Santa Monica	90405	No	1/28/2022	What I suggest is the heavy rail option under the Sepulveda Pass. I like option 5 because it sets up the line to keep going south to LAX. I also wish a connection would be made in the tunnel for some Purple Line trains to travel into the Valley. The monorail option has terrible station locations that will make the system unattractive to use.
		90720	No	1/28/2022	Alternatives 4 or 5 are the best options for the Sepulveda Corridor. Heavy rail will serve the corridor much more efficiently than a monorail and won't require massive construction interferences on the 405. The heavy rail alternatives also better connect to UCLA, a major concern for the project. Choose heavy rail alternative 4 or 5.
		91761	No	1/29/2022	As we all know, the Sepulveda Line, once finished, will become a major transit line to serve the San Fernando Valley and the Westside and eventually to LAX. Therefore, it's important to look at the alternatives not just in terms of cost, but also future implications such as increases in population, and the only way the Sepulveda Line can keep up with demand is through the heavy rail alternatives. Even though the monorail alternatives promise a lesser cost, there are many downsides, including poor transit connection points, low rider capacity, and no direct connection to UCLA, which is essential because of the huge ridership demand expected there. Worst of all, the monorail alternatives are designed to operate, majority of the time, alongside the 405, which, during construction, can make the 405's terrible traffic even worse for years to come. What's more is that the monorails have a much smaller capacity, causing future problems if this will continue to be a major transit line. To expand capacity to reach that of the heavy rail, millions more dollars will need to be invested, making the monorail's cost advantages miniscule.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					On the other hand, heavy rail has everything the monorail has and more. It has a direct connection to UCLA and does not impact the 405 during construction. Even if the heavy rail needs to gain a greater capacity in the future, the stations can accommodate for it right away without further construction and cost. It's clear that the heavy rail alternatives are the right way to go.
	west hollywood	90046	No	1/29/2022	The project should not be a monorail. It should be a world-class underground rail line that would be far more popular and useful to Los Angeles County residents than a monorail system.
		90037, 90024	No	1/29/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Van Nuys	91405-4901	No	1/29/2022	I am one of the newest members of the Van Nuys Neighborhood Council (VNNC) and write to you as a private citizen today. I am extremely excited about this project and all of the projects happening around Greater Los Angeles. I have been following projects since the construction of the Red Line in 1990. I have a good understanding of some of the issues with regards to aerial rail as I lived in Vancouver, BC (Canada) for 10 years from 2006-2016. The upside to an aerial line is for the rider who has the opportunity to enjoy the view. There are many downsides, most importantly the visual and noise pollution that residents who live in its pathway must become accustomed. I strongly recommend an underground rail line. Although more expensive, it is the most efficient form of rail and there are less hidden costs. When you consider all of the hidden costs with the aerial rail, the people movers, the aerial bridges, the shuttle transportation, the costs can creep up and possibly be more costly than the underground rail. The San Fernando Valley has often been left behind when it comes to Public Transportation. In 1990, the Red Line was shortened (it was supposed to go further north and west to the Van Nuys area) due to mismanagement of construction funds. The alternatives that propose aerial to the Valley and underground in the city are shortchanging the needs of the Valley residents. We need rail that is underground, easy to access and quiet. I am suggesting Alternative #5 or #6. While six is the most direct and very appealing, it goes parallel to the East Valley Rail alternative. Alternative 5 gives an opportunity for parts of Sepulveda Blvd to have access to a rail line, with a stop at Sherman Way. Sherman way and Sepulveda is a wonderful place to have a rail stop and desperately needs redevelopment and access to public transportation. This alternative would complement the East Valley Rail, creating a loop for those who wish to go from Sherman Way and Sepulveda to the East Valley Line. They can easily go north to the hub at the Metro Link Station and switch to the East Valley Line going South. Alternative 5 does have 1 aerial portion at the terminus, but that shouldn't cause too much noise and goes through an industrial part of Van Nuys. My first choice is Alternative #5 and my second choice would be Alternative #6. If alternative #6 were to be developed, I would again suggest an AMENDMENT with a stop at Sherman Way/Van Nuys AND Victory or Burbank as there is a large community living in the neighbourhood who could easily walk to the station. I do understand there is a proposed stop at the G Line which is between Victory and Burbank. The terminus station at Saticoy to the G Line is a great distance which should be broken up with at a minimum of 1-2 stops in between. Thank you for the opportunity to share my comments. Very sincerely yours,
		91411	No	1/29/2022	The project is perfect, the only thing is that they have to improve the service, since for some reason, they come by late sometimes they don't come by or sometimes is two buses together, sometimes they are not exact in the schedule, mainly on weekends and I have to take an uber regularly, so I am paying for a service that is [very expensive] El proyecto es perfecto, solo que y lo ??nico es, que deber??an mejorar el servicio, ya que por alguna razon u otra, pasan tarde, aveces no pasan o aveces pasan dos autobuses juntos, aveces no son exactos con el horario, principalmente los fines de semana y por lo regular tengo que tomar Uber, entonces para que estoy pagando por un servicio que es P?âSIMO.
	Los Angeles	90041	No	1/29/2022	I think that proposals 4 or 5 are the best options for the sepulveda corridor, but honestly any option that includes heavy rail is preferable to a monorail option. when considering capacity, possibility for expansion, and connections to other transit lines, all the monorail options are unrealistic and ignorant. Where as the heavy rail proposals are considerably more realistic and beneficial for the overall impact of the sepulveda corridor.
	Sherman Oaks		No	1/29/2022	To whom it may concern, I am a mother of two who lives in Sherman Oaks for 8 years. I have always loved and enjoyed living in this quiet neighborhood. I read about Sherman Oaks as being one of the four potential transit proposals and I am extremely concerned. I go to work taking 405 freeway through Sepulveda. Traffic is already worse during peak hours; sometimes much worse during rainy season when the traffic has to be re-directed due to potential flood in Sepulveda Basin. Having a major construction, such as building a Metro train rail, will further exacerbate the already worsened traffic, especially it will take years to complete the project. Please reconsider your plan of building a rail in Sherman Oaks and thank you for taking the time to read this letter.
			No	1/29/2022	To Whom It May Concern: I would like to see Alternative One be implemented for the following reasons: it seems cheaper to me to build over existing right-of-way and infrastructure than to tunnel through the SM Mountains it would be conspicuously faster for traffic-jammed 405 commuters to see and contemplate as an alternative to sitting in their cars going slower it connects to cultural, educational, and commercial areas (Getty, UCLA with electric bus, and Wilshire Blvd) that would be meaningful for people to access without a car it covers new ground to open access to transit instead of covering the same ground that other projects will cover (LRT of North SF Valley)
	Queen Creek	85142	No	1/29/2022	What I would like to see would be Option 1, 2, or 3, although I see no reason to take monorail underground. All options except monorail seem to be overly expensive to construct and certainly much longer time will be required to complete them. When the ability of monorail guideway components to be fabricated off site, trucked to the site, and erected during non-peak hours is considered, I can't believe anyone would choose an option that requires so much more infrastructure to be constructed or materials (concrete and steel) to be used while also extending the build time by three or four times more than it would take to build a monorail system's guideway. Further, the intermodal connection for the UCLA connector is a perfect opportunity to use monorail as well, since a smaller, circulator system would be ideal for moving the smaller ridership around the UCLA campus. Monorail can climb steeper grades, use a narrower right of way, and make tighter turns than most other forms of light rail or heavy rail all while avoiding the need to dig a massive tunnel through the mountains or clear more roadway space for a dedicated rail line alongside the 405.
			No	1/29/2022	Hi Metro Team, First of all - thank you for embarking on this project, it has the potential to really change our city and I appreciate all the work that has gone into this/will go into this. I think any of the heavy rail options are the way to go given the high potential user base of this line and potential future investments. I think option 6 is the best way to go, but it would be awesome if it could have a stop @ The Getty Center (though not sure how feasible it is). Having a stop at The Getty Center (while keeping the heavy rail) would be amazing for people like myself who also want to use the train line to explore the wonderful options that our city has to offer. But if the options are between heavy rail and The Getty Center, go with heavy rail. Thank you again - hope this helps. Let me know if you have any questions.
	La Quinta	92253	No	1/29/2022	It's time for a monorail!

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90024	No	1/29/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90024	No	1/29/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high

	Los Angeles	90027	No	1/29/2022	Let's do it.
	Northridge	91324	No	1/29/2022	I am a big supporter of solving problems along the 405. I personally find the Junction from the 405 north to the 101 west terribly dangerous. I am not a fan of toll use on the freeway. I feel our country, state, and county has way too much inequality and people of all income levels should be encouraged to use public transport and/or ride-sharing. I personally have used both metro and commuter buses at times to get from the SF valley to either the westside (inc. ucla) or to Cedars-area, but did feel for those who had to during the covid era. I think the covid era highlights the need for planning for many uncertainties in our transportation future. Of the alternatives listed I favor monorail, alt. 2 and alt. 3. I like electric buses, but the streets can be fairly clogged around ucla. If research shows alt 1 to work for the roads on the westside, I am fine with that, especially if it is less expensive. I am also fine with more microbuses over the hill. Thank you for your efforts in making a public transportation system (including the freeway) that really serves all the public (all social classes) Thank you,
		90210	No	1/29/2022	dont build a monorail

	Los Angeles	91344	No	1/30/2022	No monorail defunct system that feels like a theme park ride not transit option, also having to transfer to an APM/Bus would be a hassle and kill ridership. I like heavy rail alt 6 the best all underground. Good stops straight route. I wish it would be self driving but still have metro workers on the train being a safety observers/answering questions. I hope for short headways and late night trains. I think it would be a good idea to add parking building in the valley so some people can commute and take transit for 60% of there ride. Similar to bart.
		32081	No	1/30/2022	Monorail is the least destructive for the environment, heavy rail maybe the most destructive. Other countries (Japan, China) are making monorail work in areas like this. One concern with monorail is standardization, maintaining commonality with another system (such as Las Vegas or Bombardier) will help to reduce costs and improve availability. Monorail can manage grades better than steel rails, reducing costs for grading/cuts/fills.

	Woodland Hills	91364	No	1/30/2022	I support Alternative 2 of the project. I believe that is essential to have public transit from the Valley to the West side to help serve commuters and the students of UCLA. I believe that an above ground monorail would be the most cost effective and most iconic option. A monorail traveling this highly trafficked area would likely even boost tourism in the area. Thank you for taking the time to listen to public comment and working so hard on this important project!

					resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90046	No	1/30/2022	To Whom It May Concern, I am submitting a public comment to say. Please don't build the monorail! Instead build one of the Heavy Rail alternatives that tunnels under the mountains.
	Los Angeles	90095	No	1/30/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. 		91344	No	1/30/2022	It is currently nearly unthinkable to go to the West Side. To go to an appointment in Santa Monica on SM and Seventh would take over 3 hours. Getting to UCLA is almost as bad. So all your efforts to make Sepulveda a true transit corridor that gives Valleyites real access is great.
		89074	No	1/30/2022	I would love to see a monorail considered for this project.
		90211	No	1/30/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 		90004	No	1/30/2022	I would like to see this project a reality! Hey but also red lines busses need to come back! We need to get to our jobs on time and FASTER, also of you charging now you should clean every bus stop on special areas where homeless make them a disaster and put more lights!
			No	1/30/2022	We require/demand/need/want all freeways to have central rail, the 405 absolutely needs more lanes, is double deckering not possible even if they streel? The 105e needs to exoent to the 57,the 710n needs to connect to 210, the 2 needs to connect to the 101 from the 5, the 15 and 5 to Vegas and SF absooneeds more lanes, there's nothing but desert out there, please focus on the future green c line to not end at torran e but extend to long beach Thank you
	Van Nuys	91401	No	1/30/2022	What I like about Alternatives is alternatives one through three have a stop for the Getty Center, but this doesn't justify going with the monorail for three reasons: cost, safety, and capacity. The cost of maintaining monorail will not be optimal for the valley and the city due to the rail and cars being different from what the rest of the Metro Rail system uses for their subways and LRTs. This would mean longer times for peak hour trips and also set the ground for a possible service disruption if one of the monorail cars were to be knocked out of commission. These two things would offset any monetary savings that the monorail may have. The safety issues related to the monorail can be reduced to two reasons: placement and type of rail. The monorails will be in the middle of the 405, which means people will be in the middle of the freeway exposed to large amounts of greenhouse gases and noises which are bound to create health issues for future riders. This also has the extra issues of making the monorail lave long transfer times to other lines when it's built, with some estimates being at 3-9 minutes for places like the Expo/Sepulveda Station and the G Line Van Nuys Station, which serve a large number of riders. In addition, any emergency that may occur in these monorail cars will be worsened because riders won't have anywhere to be able to evacuate in the event they need to due to most monorails being so thin that they don't have an emergency walkway, which will leave them at the mercy of emergency train cats and other vehicles that may take too long to respond to these emergencies. Capacity is also another issue. The monorail capacity listed in the project page lists that each monorail train will have six cars per train, each one being able to carry 76-79 people. Assuming each car will carry 79 people, each train will be capped at 474 passengers maximum for only a 30 second advantage over the automated heavy rail, which will be able to carry 510 passengers since each car will be able to carry 170 people and each train will have three cars. This number begins to stand out more assuming the cars will only be able to carry 76 passengers, where the maximum amount of passengers that the monorail would be able to carry at maximum 456 people. To make sure this project has little issues and delivers on its promise to get cars off the 405, I would suggest Metro go with a modified Alternative 4 or 5 that includes a stop at the Getty Center due to many of the people who live in the valley being unable to access it due to the 405's gridlock. In addition, I would also suggest constructing rail guards to prevent people from falling into the tracks in light of the recent incident that occurred in NYC where a woman was pushed to her death in a station without protective measures.

	Los Angeles	90025	No	1/30/2022	I am writing in support of Alternative 5. I believe the Sepulveda Line has the potential to solve a ton of LA's problems. But it will only work if it is easy to use. The monorail alternatives will not be easy to use. The stations along the 405, as opposed to Sepulveda or Van Nuys, are not useful. The necessary walks from the stations to streets with businesses, etc., and the ugly stations next to/above the freeway and it's ramp, will be embarrassing. More importantly, the monorail does not have the capacity to make this a TRANSFORMATIVE project. Best case scenario, the congestion on the freeways will turn into dangerous and overcrowded stations and platforms. In addition, an underground UCLA and Wilshire/Westwood station is necessary for this project to achieve its potential. Alternatives 4 and 5 use the heavy rail technology to really move Angelenos. I believe it could meaningfully reduce traffic and pollution. I prefer 5 because I believe the underground stations will be better for the Valley. (See above comments about embarrassing freeway adjacent stations.) Wealthy homeowners and lobbyists will tell you to support the monorail. They will say tunneling is too dangerous and their home values will decrease. Both of these are meaningless. They're willing to put up with congestion and pollution so that their homes won't lose a few percentage points of value. If they were really honest, they'd say their neighborhoods should be "exclusive." (Ie: Beverly Hills and the Purple Line. The Ross decision that still plagues this City, nearly 40 years later.) Don't buy it. You have an opportunity to permanently transform LA for the better. For everyone; including those shortsighted homeowners. Metro, DO NOT HALF ASS THIS. A successful Sepulveda Line is necessary to fixing the Westside! We can transform LA into a world class transit city, and finally unite the Westside and the Valley (a lifetime dream of mine.) Or we can half ass it and build a multi billion dollar eyesore monorail that no one will use. It would be a constant reminder of how this city failed to meet the moment. Choose alternative 5. Meet the moment.
		91406	Merged Document	1/30/2022	The EIR should study the visual, noise, and shade and shadow impacts of Alternatives 1-3 on the homes adjacent to the 405 between Vanowen and Sherman Way, Emek Hebrew Academy, and Teichman Family Magnolia Park. It should also study the visual, noise, and shade and shadow impacts of Alternative 3 on Leo Baeck Temple and on the Los Angeles National Cemetery, especially the Geranium Circle.
	Los Angeles	9007	No	1/31/2022	Whatever is done SHOULD NOT BE A MONORAIL. Monorail will make an inefficient and costly transport option which will cause many problems. Any system should not utilize monorail as an option and instead use heavy rail. This will be more efficient and as a plus will not cause more traffic on the 405 during construction. I think OPTION 5 is the best proposal. 4 and 6 are also good, but for no reason should monorail be considered.

While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90059	No	1/31/2022	Why exactly are any monorail alternatives being considered aside from bribing politicians? BYD's numbers are a lie for what they're actually meant to build meaning we the taxpayers will get stuck with a huge bill for something that won't work (which apparently Mayor Garcetti has not learned from, or more accurately doesn't care about, seeing as BYD is the same company that built electric buses for Metro that were discontinued after only 5 months due to mechanical problems) and none of the proposed alternatives using monorail do not properly address the capacity that will be the UCLA station even with the tunnel option for an actual station. Although I'd rather Metro not use a P3 at all, Bechtel's alternatives 4 and 5 (whichever would serve the line better, NOT which one would be cheaper or easier to appease Sherman Oaks with) would serve as a better regional service than Metro's direct build alternative 6.
	Santa Monica	90401	No	1/31/2022	I really like alternatives 4 or 5. 1,2 and 3 are terrible and monorail should not be considered. I like that this will connect to the Expo and Purple lines. I like that 4 and 5 have good connections to UCLA and will be fast and go where people want to go. Also the stations connect well with other public transportation.
	Los Angeles	90025	No	1/31/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Ventura	93003	No	1/31/2022	While I prefer proposal #6, I do believe Angelenos and SoCal residents are more comfortable with aboveground transportation. Even a remotely scenic ride through the pass coming into the L.A. basin would be an experience.
			No	1/31/2022	1. As a resident of the Brentwood Glen, I/we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 2. No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? 3. Provide a UCLA Stop: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. A stop at UCLA ensures seamless transfers How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? Will the transfers be free of charge? Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County. 4. Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? 5. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. 6. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. ? ?What is the noise and vibration impact of the monorail options? 7. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Blvd Thank you for your consideration.
		90035	No	1/31/2022	Please don't build a monorail on Sepulveda pass. Option 4 or 5 would be the best for every stakeholder. Thank you!
		90049	No	1/31/2022	?Mr Peter Carter, We have lived in Brentwood Glen for more than 25years. We support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Combining the best aspects of Alternative 5 and 6 (whether automated or manned) would ensure the shortest seamless connection to the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 We urge any project include No Neighborhood Encroachment. California has a housing shortage. Taking almost all the multi family dwellings in our neighborhood is counter/intuitive. While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. Provide a UCLA Stop: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. 					option. Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods.
			No	1/31/2022	To Whom it may concern: Metro has the civic obligation to use smart urban plan ning objectives when designing a transit system. The designers and planners of the transit options need to study the implications of each concept on the betterment of the built environment and its impact on society. Only Alternative 6 addresses the Valley's growth in a positive manner. Alternative 4 is the opposite, if selected, the elevated trains will destroy the communities of Sherman Oaks, Encino and Van Nuys forever!. Alternative 6 is the better of the concepts but needs re fining . The Sepulveda Transit Corridor is a one - hundred - year project, so let's do it right from a city planning perspective. The subway (below ground heavy rail train) must run under Van Nuys Blvd. and it must stop at the Civic Center where it can link to two other Metro mass transit systems. The transit system should efficiently link up with the East San Fernando Valley Transit Corridor project and the Orange line busway while giving easy pedestrian access to the Civic Center . The next stop, at Van Nuys and Ventura, allows the heart of Sherman Oaks' commercial area to expand in all four directions. Here is where housing, commercial and office functions can together establish a true urban core. Meanwhile, with a stop at the Civic Center, people in the South Valley can commute to Van Nuys for Federal, State and City business. This would also foster major development opportunities in Van Nuys going north from Oxnard continuing past Victory. The Valley is almost 2 million people yet there is no civic/commercial heart. San Francisco is less than 1 million, Portland, Oregon is less than 700,000 and Seattle is less than 800,000. They all have impressive commercial cores, the San Fernando Valley does not. If the regional transportation and traffic issues are to be even somewhat resolved, the traffic over the Sepulveda Pass has to be meaningfully reduced. That can only be achieved by building sufficient Class A office space in the East Valley, specifically in Van Nuys Civic Center where potentially there would be three mass transit systems linking it to the rest of Greater Los Angeles. This is not the time to thoughtlessly miss a golden opportunity for truly smart urban planning. Plan not just to get to UCLA and the airport, plan for everyone, plan for the citizens, plan for the future. I am writing as an individual. However, my current civic volunteer work includes the Sherman Oaks Neighborhood Council PLUM Committee and the Sherman Oaks Vision Committee since 2012. Over these years we have studied ways to accept the coming increase in density and growth as a means to make Sherman Oaks a greener, more walkable and a more livable community.
	Los Angeles	90034	No	1/31/2022	Please Please Please do NOT build the monorail. Don't waste any more money on this option. Heavy rail underground please.
	Los Angeles	90077	No	1/31/2022	Very supportive of the tunneling option, even under Bel Air. As a resident of the neighborhood, I realize the substantial regional benefit of this project and the improvement to the quality of life for thousands of LA county citizens, both in terms of less time spent in traffic, better connectivity and less air pollution and noise. Deep tunnels, such as the ones proposed for this project, have essentially 0 impact on the quality of life and property values for those who live above, and I'm sorry the neighborhood association is adopting such an unreasonable stance towards this project.
		90019	No	1/31/2022	After reviewing all the options, I think that one of the heavy rail lines, NOT MONORAIL, is by FAR the best option. Bechtel is transparent with their costs while BYD is intentionally hiding theirs. Bechtel can operate on faster headways with higher capacity for what is being sold while BYD is doing the opposite. Going with the BYD Monorail would be a disaster for LA and would underserve the communities that desperately need this infrastructure.
	Los Angeles	90024	No	1/31/2022	Hello, I am writing to you in strong support of the heavy rail concepts (options 4, 5, and 6) in the Sepulveda transit corridor study. These options offer the best opportunity to carry the maximum amount of individuals through the corridor of any options presented and quite critically, would connect the transit corridor efficiently to existing and future transit such as the Purple line, enabling further transit connections and enhancing the utility of the project. Additionally, heavy rail would connect effectively to the UCLA campus, a major jobs center and destination in the area. Monorail options would do none of these and lead to significantly less than possible ridership.

		90024	No	1/31/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
		90005	No	1/31/2022	I am urging Metro to please DO NOT consider any monorail option for the Sepulveda Line. Not only is the concept not fully fleshed out and incorrect by BYD. Heavy rail is the only feasible and financially stable option, and will limit construction interference with surrounding neighborhoods (despite what the Bel Air community council says).
			No	1/31/2022	I'm a resident of the San Gabriel Valley, and I'm emailing to express my support for Alternatives 4 and 5 for the proposed Sepulveda Transit Corridor Project. I attended one of the public scoping meetings, and decided to comment via email to better organize my thoughts. One of the principal strengths of public transit is its ability to effectively serve dense communities with a large proportion of non-drivers. Alternatives 1 and 2, which lack a direct rail stop at UCLA, are non-starters and should be disregarded. When it comes to the choice of mode, heavy rail is the only option capable of providing the capacities and speeds that will best serve the LA region not only when the project opens, but decades into the future as the region grows. The monorail alternatives travel more slowly and cannot have their capacity increased to the same degree as the heavy rail alternatives. Additionally, selecting a monorail alternative would preclude all possibility of network reconfiguration in the future. As the LA region grows and changes, its transit needs may change as well, and it may be beneficial to preserve the ability to reconfigure Metro Rail lines in the future. This is being done today with the Regional Connector: the L line will cease to exist, and will be reconfigured to extend the A and E lines. Selecting the same mode does not alone ensure reconfigurability, but it is a necessary first step, and Alternatives 1, 2, and 3 will be fundamentally incompatible with the Metro HRT network. A monorail system would also have entirely unique maintenance requirements compared to the existing network, preventing Metro from benefitting from economies of scale. Alternative 6, while a heavy-rail alignment, makes use of outdated technology which results in lower capacity, lower frequency, and likely higher operating costs compared to Alternatives 4 and 5. As a new, entirely grade-separated line, the Sepulveda Transit Corridor is an ideal candidate for automation. This can serve the LA region as a sort of 'pilot program' to determine if the conversion of other lines to automated rail would be a cost-effective improvement. I comment on parking only because the issue was raised previously at a public scoping meeting. Providing extensive parking at Metro stations should not be a priority of this project. The purpose of a public transit system is to get people out of their cars and into a more sustainable form of transit that ensures public spaces can be cleaner, quieter, and more pedestrian-friendly. Every parcel of land near a Metro station taken up by parking comes with an enormous opportunity cost; these are ideal locations for dense, walkable neighborhoods, transit-friendly housing, and businesses that will thrive from being so well-connected to the LA transit network. Metro riders can walk, bike, or take the bus to Metro rail stations. the Metro should serve to reduce car dependency in the LA region, not reinforce it. The questions that I believe should be answered by the study of alternatives include: To what extent are Alternatives 4 and 5 compatible with the existing Metro HRT network? To what extent can low-cost alterations make it compatible? Accounting for overhead costs of automation, is the automated system expected to reduce operating costs per passenger-mile? If the automated system proves to be a cost-effective alternative to operator-driven trains, could that technology be implemented on existing Metro lines in the future? Are there opportunities to speed up the schedule and/or reduce the cost of the project by utilizing cut-and-cover methods or other cost-saving measures to construct lines and stations?If so, how can Metro effectively communicate to impacted communities that the resulting disruption, while admittedly greater in scale, will be shorter in length

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					compared to “less disruptive” methods? There was much talk at the public scoping meeting regarding the aerial (alternative 4) versus underground (alternative 5) alignment along Sepulveda Blvd north of Ventura Blvd, with some for and some against the aerial alignment. Facts on this topic were limited, and there was a clear concern for the aesthetics of the streetscape.How would an aerial alignment actually affect the streetscape? Aside from cost reduction, are there any positives (perhaps shade) for the aerial alignment? Quick, easy transfers are a key to a high-quality transit system. How well will the aerial vs underground alignments facilitate transfers with the G line, both in its current form as BRT and in the future as light rail? Thank you for your time and dedication to this project and to improving mass transit in the LA region. If any of the statements or assumptions I’ve made are inaccurate, I’d love to be corrected. I look forward to hearing more about the project in the future. My comments are my own and I do not represent the opinion of the California Institute of Technology.

	Sherman Oaks	91411	No	1/31/2022	I wish the Sepulveda Transit Corridor Project becomes a reality as soon as possible. It would be amazing to have more options to commute and be able to not drive so much.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
			No	1/31/2022	Re: Concern on the Future Sepulveda Transit Corridor Project Dear Program Manager: I am writing you to express my concern for the future development of the Sepulveda Transit Corridor Project. IMT Residential is a Sherman Oaks, CA-based privately-held developer, manager, and owner of multi-family residential communities. The company currently has over 17,000 residential units in nine U.S. states. Our corporate office is located at 15303 Ventura Boulevard in the Sherman Oaks Galleria, and my office overlooks Sepulveda Boulevard. As a developer in the San Fernando Valley, IMT Residential has delivered or is in the process of delivering 745 apartment units on Sepulveda Boulevard. 4410 Sepulveda – 31 units 4827 Sepulveda – 325 units 5700 Sepulveda – 131 units 6500 Sepulveda – 160 units 6940 Sepulveda – 98 units My concern is for the more than 1,000 residents that live in our communities on Sepulveda Boulevard and 106 employees that work in our office on Sepulveda Boulevard. I urge the Metro Board to STOP studying the unacceptabl e alternative 4 elevated concept. The elevated heavy rail trains will impact our residents and employees with excessive noise, loss of privacy, and increased traffic congestion on Sepulveda Boulevard, which is already an issue. I understand the need and support for high-quality public transportation in Los Angeles, including Sherman Oaks and the San Fernando Valley, which is why the Metro Board should study the other alternatives. The fully underground and monorail concepts will provide passengers with fast and safe travel times with the least impact on Sherman Oaks, Van Nuys, and Sepulveda Boulevard residents. I support the efforts of the Los Angeles County Metropolitan Transportation Authority as they seek the best, least impactful transit project to connect the San Fernando Valley to the Westside of Los Angeles.
		90034	No	1/31/2022	I support Metro's investment in local and regional rail. I believe this is important to reduce traffic congestion and reduce carbon emissions. As a former UCLA student, I wish I was able to take public rail to directly to campus Additionally I believe Metro should look long term and invest in a heavy rail that will accommodate future growth and ridership. What I suggest is Metro further consider alternatives 4-6
	Reseda	91335	No	1/31/2022	I think option 6 would provide the most needed access. Having a rail run on Sepulveda Blvd would not provide as much relief as a heavy rail would along Van Nuys Blvd. This option would also cause the least amount of traffic since it is all done underground and will not interfere with peoples daily lives as much both during construction and during rail operation.
			No	1/31/2022	Hi Metro, Please drop the monorail options from further consideration along the Sepulveda Corridor. I don't understand why they are even under consideration. I can't think of a monorail/ people-mover outside of something like the system in Downtown Miami or airports in the US. There are no comparison projects to base these proposals, for a 9-mile corridor, off of. Is Metro considering monorail as a sop to Bel Air homeowners already preparing to sue to prevent tunnelling hundreds of feet below their palatial mansions? To appease the Sherman Oaks Homeowners' Association? Please save us time and money that could offset cost overruns and delays on other projects (Regional Connector, Crenshaw Line, West Santa Ana Branch) and focus on the subway options. Thank you.
	Los Angeles	90024	No	2/1/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 		90024	No	2/1/2022	This line must have an adequate connection to the UCLA campus. The monorail proposals provide UCLA/station shuttles through already gridlocked Westwood streets. These monorail proposals are completely unacceptable. Only the heavy rail proposals--all of which feature a centrally located UCLA campus stop--are acceptable. I

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					prefer connecting the heavy rail line to the Sepulveda E line station rather than the Bundy E line Station, but all of the heavy rail proposals are acceptable. All of the monorail proposals are unacceptable.
	Los Angeles	90049	No	2/1/2022	I would like to strongly urge LA Metro to only consider alternatives that connect directly to the UCLA campus, and have a seamless connection with the Purple Line. I would also like to urge against placing any station adjacent to or in the middle of a freeway. I'm sure I don't need to emphasize to you how important of a project this is to our region, and that LA deserves a transit project done right, especially having voted for Measure M with the expectation that LA Metro would follow through on its goals to build a world class transportation system. Nobody wants to exit or enter a train right next to one of the busiest freeways in the nation, and connecting to destinations that people actually want to go (such as UCLA and the heart of Westwood Village) will ensure that transit is utilized to its full potential. This line should also be looked at holistically as part of the wider rail system, and thus connecting to the Purple Line is a must to ensure that we have an interconnected rail system that is convenient and equitable. Thanks you for taking the time to read this, and please get this project right for LA!
Valley Village Neighborhood Council			No	2/1/2022	Alternatives 1-3 involving a monorail line should not be pursued due to: 1. A third transit mode in addition to heavy rail and light rail will incur additional costs for maintenance yards and specialized repair technicians to keep them running. 2. Unlike with rail cars, monorails are difficult to switch from one track to another. 3. The pillars for an elevated monorail line would be at risk of falling down during an earthquake. 4. The passenger carrying capacity of the monorail cars is less than that of the heavy rail and light rail cars. In addition, Alternatives 1&2 involving a monorail line should not be pursued due to: 5. Because these two alternatives are right next to the 405 freeway the stations over the freeway will not be where the passengers are. Transit lines should be routed to serve high density centers rather than along freeways which are seldom next to dense centers. 6. Unless additional parking lots are provided, passengers driving to the stations over the freeway will have difficulty finding parking. The stations will be less accessible to the public. 7. Transit stations located in the medians of freeways or cantilevered above freeways are unpleasant places to wait for arriving trains or monorails due to the noise and the traffic fumes. 8. Alternatives 1&2 will bypass UCLA, a major destination that would attract many passengers. In addition, Alternative 3 involving a monorail line should not be pursued due to: 9. The elevated structure for it over Sepulveda Boulevard would be a visual blight, like the elevated rail lines in older east coast and midwest cities. 10. It would also add increased noise levels to Sepulveda Boulevard, lowering the quality of life for those living in multifamily residential buildings next to Sepulvda Boulevard. 11. It may remove traffic lanes and left turn lanes from Sepulveda Boulevard, increasing traffic congestion. 12 Because of the above listed impacts it is strongly opposed by the homeowners association for Sherman Oaks, other organizations and many individuals. Alternative 6 is the best alternative due to a high capacity heavy rail line that would be located under Van Nuys Boulevard which has a higher overall density of development than Sepulveda Boulevard. However the Ventura/ Sepulveda intersection is an exception to the lower levels of density along Sepulveda. Therefore, the EIR should analyze a variation of Alternative 6 with the route turning southwest from the Van Nuys/Oxnard station to serve the Ventura/Sepulveda intersection rather than the Ventura/Van Nuys intersection in order to determine which intersection would generate the highest ridership. If the Ventura/Sepulveda intersection with its high rise office buildings, a regional shopping center and adjoining multifamily residential development would generate the highest ridership, then the route for Alternative 6 should be revised to serve Ventura/Sepulveda. Valley Village Neighborhood Council
	Los Angeles	90025	No	2/1/2022	I live in one of the neighborhoods that would be served by the project, and I use public transit frequently (and will do so even more when the line is finished). The heavy rail options and alternative 4/5/6 are a much better idea than the monorail. The monorail really does not benefit anyone and will cause significant problems for a long time in terms of the construction impact. The monorail options seem designed to fail as a way to discourage transit in general.
	Los Angeles	90066	No	2/1/2022	As a student attending UCLA and living in Westwood, it would be immensely beneficial for this transit line to have a stop directly on campus. Navigating Los Angeles without a car is incredibly difficult, and the existing public transport leaves a lot to be desired when it comes to being able to travel quickly and inexpensively across the city.

		91436	No	2/1/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Riverside	92507	No	2/1/2022	I strongly support alternatives 4 and 5 over all other alternatives. Alternatives 4 and 5 provide the best option for the corridor. They rely on proven technology from a company that has a long track record of delivering transit projects in the state of California (Bechtel was the prime contractor on the majority of the BART system). Automated medium capacity metro is the gold standard for new metro construction globally and has proven it's mettle around the world. I strongly advise against alternatives 1, 2 and 3. Monorail is uniquely poorly suited for such a high demand corridor. It's low capacity, slow, and less proven compared to automated metro systems. Furthermore, BYD has attempted to hide the true cost of their proposal through semantic tricks and confusing language. We shouldn't put such a high importance project in the hands of a company that needs to deceive its customer in order to be considered as an alternative. Lastly, BYD's proposals avoid (or mostly avoid) the highest potential revenue generators on the corridor, thereby limiting the usefulness of the delivered project under these alternatives.
		91505	No	2/1/2022	Sounds wonderful. The more transit infrastructure you build the more opportunities to ditch our cars we have. I hope the project will have real time tracking for the line as well as some reliable connections to shopping destinations.
		90025	No	2/1/2022	Only options 4, 5 and 6 for heavy rail make sense. Heavy rail is fast and will not become an eyesore like the other above the ground options. Additionally, it will set you up to hopefully one day extend the rail to LAX and then to John Wayne airport in Irvine. Regarding mobility, it is known that trains do not remove cars from the road. The preferred method of traveling in Los Angeles has been, remains, and will remain in the future: automobile. While building underground heavy rail tunnels, please build another toll tunnel for thru car traffic. An additional underground bike path would be a great benefit for humans who want to travel under their own power between the valley and the westside. Thank you.
	Los Angeles	90018	No	2/1/2022	Don't be fooled by NIMBY arguments against tunneling. The only legitimate option is heavy rail.
		94610	No	2/1/2022	Options 4,5 and 6 are the only rational ones possible. Leave the monorail for The Simpsons.
	Sunland	91040	No	2/1/2022	I wish to support the option of heavy rail connecting Van Nuys Blvd. and UCLA/Westwood Village directly. A novel new form of technology should not be introduced into Metro's system. As well, any form of aerial, two-track transit technology cannot be fully reliable in the wake of a serious earthquake, particularly where soil conditions are suspect. Finally, with a subway solution for the Sep Pass Corridor, there would/will be a substantial amount of passengers changing lines at the Westwood Village station. Particular design attention needs to be provided for the easiest way for passengers to change lines. A single set of escalators between platforms would result in a disaster during rush hours and substation numbers of regular commuters living in the SF Valley would just avoid using public transit to workplace access along the Wilshire Corridor.

	Sherman Oaks		No	2/1/2022	I live in and adjacent neighborhood to the proposed raised rail track for Sepulveda Blvd. I am adamantly opposed to such a plan, as it would negatively impact real estate values, local ground traffic patterns, and the relative peace and tranquility of our quiet little neighborhood. NO ABOVE GROUND RAIL on Sepulveda Blvd.
		91605	No	2/1/2022	I would actually use it
	Los Angeles	90024-4341	No	2/1/2022	Dear Metro: I am a long-time homeowner and resident of Bel-Air. I also own several other investment rental Homes in Bel-Air. All of my properties are located between the East and West Gates and between Sunset Blvd. and Chalon Road. I understand Metro is considering tunneling beneath portions of Bel-Air in connection with the Sepulveda Transit Corridor Project. I know that Metro is seeking to build the Project for the general public good, and I have no problem with the concept. But disruption of homeowners and residents of Bel-Air for the public benefit is neither fair nor wise when other alternatives exist. The purpose of this communication is to clearly state my FIRM OPPOSITION to any tunneling under Bel-Air particularly between the East and West Gates and that Metro should consider other less invasive techniques to create the transit corridor. I understand that if Metro decides to tunnel beneath Bel-Air, it may seek easements and other rights from property owners. Please be advised that I have no intention of granting any such rights and that if Metro acts by way of eminent domain, I intend to take all appropriate action to protect the physical integrity and value of my properties from such actions including appropriate severance damages. For perspective, the gross value of my properties is well in excess of $100MM. Please feel free to keep me advised of the status of the Project.
		91403	No	2/1/2022	The Valley already has way too much noise!!!! We are assaulted day and night by excessive traffic from over-population, something that this project will NOT relieve despite naive assertions, as well as day and night air attacks from the irresponsible and unfettered growth of VNY and BUR. While I think the whole project is another enormous waste of money, the ONLY acceptable option is Alternative 6. We do NOT need more visual pollution and NOISE killing any semblance of quality of life in the Valley. NO MORE unsightly mechanical transport systems. Bury it or deny it.
			No	2/1/2022	To the metro board of directors. It has become increasingly clear that affluent and politically connected parties are gaining an ever-increasing power over the selection of metro projects. I am aware of the Bell Air homeowners association attempting to push their weight behind the monorail options of the Sepulveda Pass project. As I am sure you will agree the customer comes first and your costumers are the people that ride your trains and busses. We the users of metro would benefit from a heavy rail. Heavy rail would provide greater capacity, faster head ways, and most importantly better first/last mile connections than yet another freeway centric rail project. Evidence for this can be seen in the Green line being one of Metro's worst performing lines despite being fully grade separated and being one of the fastest. It simply does not take people near the destinations where they want to go due to the constraints it has being built in the median of a busy freeway. Alternative 6 in my opinion would be the best alternative as it would serve the Vannuys corridor, have a station at Sepulveda Blvd., the UCLA campus, and the EXPO Bundy station. I hope that the unrealistic BYD monorail option that include such pie in the sky ideas as an automated people mover or buss connection to the UCLA campus be excluded from any further consideration.

	Santa Monica	90405	No	2/2/2022	Please forget about the monorail options, and continue forward with a heavy rail version. It's also very unfortunate that the Sepulveda pass line and the East San Fernando Valley line will not be using the same rail technology, and thus cannot be connected into a single line. Penny-wise and pound foolish, making for a clunky future system. Please don't make a similar mistake by choosing to push a monorail option forward.
	Porter rancg	91326	No	2/2/2022	I think proposal #6 is best. It's the most direct route, and is faster and higher capacity than the monorail options. I would also be happy with #4 or #5 This is too important of a project to cheap out on. Let's get it right and go heavy-rail.
	Studio City	91604	No	2/2/2022	I support heavy rail over monorail. Out of the 6 alternative, I support alternatives 4 and 5. Here are some reasons. The monorail alternatives have significantly less capacity than the HRT alternatives as well as significantly longer run times over the mountains than HRT. I do not support BYD as a company and cite their previous endeavors as examples as why not to use them (electric bus model). Heavy rail has extremely better plans, stations, capacity, and tun times.

	Kansas City	64106	No	2/2/2022	The option for monorail with an aerial APM (automated people mover) to UCLA sounds like a great option to me. This is alternative 2. Not only would lots of college students have easy access to it, but it would demonstrate that monorail is a great method of getting around. This is because since a monorail rides up high in the air, it's a fun way to travel that offers a fantastic view of the surrounding scenery. Also monorails have the advantage that if emergency vehicles need to pass on the street below, it will never block the path of the emergency vehicle. Alternative 3 also sounds good because it involves an underground alignment between Getty Center and Wilshire Bl. This would make for an interesting alternative as to how transportation systems are configured. Monorails have been known to be a great environment transportation solution since they has a very low carbon footprint. Also existing monorails in cities such as Tokyo, Japan and Daegu, South Korea prove that they reliably get people to their destination and their failure rate is very low.
		92821	No	2/2/2022	heavy rail is ideal for both short term and long term benefits to the area. especially with the increase of passenger usage heavy rails allows for more ideal expansion.
		90020	No	2/2/2022	This project must include a stop at UCLA and the Getty. You will also have lawsuits from the Sherman Oaks and Bel-Air homeowners so maybe an entirely underground train might not be feasible. However, you also need to reduce the number of transfers from the Valley to UCLA. Too many transfers will just encourage people to continue to drive.
			No	2/2/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table.
			No	2/2/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. 	Los Angeles	90077	No	2/2/2022	I am a long-time resident of Bel-Air and I strongly oppose Metro's tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Bel Air is a quiet residential area that has a reservoir as well as a stream above and below ground level together with underground utilities. We do not want a Metro tunnel running underneath our properties.
			No	2/2/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. These are long established neighborhoods with people's communities at stake that should not be disrupted when there are cheaper and quicker options available along the existing 405 Freeway commercial route. Why destroy the neighborhoods and property values of so many people when it isn't necessary? We all want good public transport, but a scenario that envisions tunneling under valuable, residential, urban forest areas like Belair is so wrong.
	Los Angeles	90077	No	2/2/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. I live on Stone Canyon Road and I have been told there is an underground river below our street. Furthermore, the Stone Canyon Reservoir is above our street and constant vibrations of drilling and subway vibrations could undermine the reservoir dam. Stone Canyon has no sewers to divert water from reservoir runoff and storm water. I'm sure that would effect any underground drilling as well. As Bel Air residents we face the dangers of fires, mudslides and earthquakes. There are other viable options and less expensive that do not require tunneling under Bel-Air. Those options are not being considered and should be on the table.

There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Why is tunneling under the 405 SEPULVEDA CORRIDOR NOT BEING CONSIDERED? Heavy rail subways are astronomically expensive, old technology and will be considered obsolete within the next few years. Plus our Bel Air hillsides and soil is decomposed granite, does not compact and is very fragile which can cause landslides and major collapse of homes if tunneling goes under our homes' foundations. An underground subway through Bel Air is not the type of transportation that should be considered. I say NO SUBWAY UNDER BEL AIR-PERIOD!
			No	2/2/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options

			No	2/2/2022	I am unable to open the NOP notice on your website and I am writing a comment letter now. I need a copy of the notice. I need this today. Other questions belocan be answered later if necessary. Has an environmental consultant been hired and if so which firm? If so, has an initial study been prepared or will it? I would like to receive the initial study. I did not see one on your web-site. If not, and you are expecting to go straight to an EIR, has any identification of any proposed individual property acquisitions would be required (whether tunneling or aerial for each of the designs(for stations, car maintenance, power station locations, etc) and if so have they been mapped or a list created by address or Assessor Parcel number?

	Los Angeles	90024	No	2/3/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Culver City	90230	No	2/3/2022	Hello Metro, Please let is be know that I believe this project must be heavy rail and not monorail. We will short change future generations of Angelinos if we don't ensure that this project meets LA's current and future needs. The heavy rail options will already be a scalable option and most likely cheaper in the long run once longer trains / platforms are needed. This project will be a cornerstone project for the region and an incredible 'feather in the hat' from Metro. Please! Please, ensure that this is done correctly and as heavy rail regardless of alternative. Thanks
			No	2/3/2022	Hello, I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Why put a tunnel under a residential community when there are cheaper and more viable alternatives.
			No	2/3/2022	I am a professional planner and I am on the Westside neighborhood council. I was frustrated they did not answer questions at the scoping meeting. I have not been able to download the notice of preparations for the project, I am trying to figure out what environmental issues are identified as being studied in the EIR, what consultants on board, if a initial study is going to be prepared, and if you are going to go straight to the EIR and most importantly I would like to see the novice that you sent and I get an error message when I try to download on the website. Since comments are due Friday and I have a board meeting a week from tomorrow and I have to present a letter to our board by the end of the day tomorrow I would really appreciate an answer as soon as possible
			No	2/3/2022	May I get more info on this project? Bel Air community is opposing some the ideas for the project.
			No	2/3/2022	Please stop studying alternative 4 for the Sepulveda Pass with elevated heavy rail trains running high above Sepulveda Boulevard in Valley. Alternative 4 will destroy Sherman Oaks forever.
			No	2/3/2022	Please stop studying Alt 4 for the Sepulveda Pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Blvd in the Valley. Alt 4 will destroy our property values and be a giant sore for Sherman Oaks. Los Angeles is not a public transportation city and we do not see the value in this metro.

			No	2/3/2022	To Whom it May Concern I am a long-time homeowner and resident of Bel-Air. My family and I live on Stone Canyon Road which will be profoundly impacted should you choose to pursue options 4, 5 or 6 of the the Sepulveda Transit Corridor Project. While I know that Metro is seeking to build the Project to alleviate traffic congestion, Sepulveda Transit Corridor Project options 4, 5 and 6 are untenable as currently drafted for the following reasons: noise and vibration impacting homes, residents, hotel guests, and even wildlife in lower Stone Canyon as the subway rises to 38 feet on approach to the UCLA station; venting; the hazard of tunneling under Stone Canyon Road - a two mile long dead-end two lane street - without considering emergency service access in the event of a fire; loss of property values, etc. Tunneling through a high density residential neighborhood in a high fire zone , near or under two earthen reservoirs , in a flood plain and liquefaction zone without considering the egregious consequences to one of the most pristine residential neighborhoods in Los Angeles makes no sense. I urge you to consider other options - including re-routing the subway down Beverly Glen Boulevard or under the 405 freeway to accomplish your goals. The purpose of this communication is to clearly state my FIRM OPPOSITION to any tunneling under Bel-Air and to encourage Metro to consider other less devastating, less expensive common-sense options in creating the transit corridor. I understand that if Metro decides to tunnel beneath Bel-Air, it may seek easements and other rights from property owners. Please be advised that I have no intention of granting any such rights and that if Metro acts by way of eminent domain, I intend to take all appropriate action to protect the physical integrity and value of my property from such actions including appropriate severance damages. Please feel free to keep me advised of the status of the Project.
			No	2/3/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. You will ruin our lives, destroy our health and environment if you build under our homes! Sincerely,
			No	2/3/2022	To Whom it May Concern I am a long-time homeowner and resident of Bel-Air. 	Los Angeles	90025	No	2/3/2022	Freeway median/adjacent transit doesn't work - not with rail or bus. Look at the green line and silver lines. The Silver line even runs parallel to the busiest Metro local bus line on Vermont and still sucks. Metro recently proposed studying extending the proposed Vermont BRT/LRT beyond 120th down to PCH where the Silver line already goes. This is Metro basically admitting that freeway median transit sucks. Why do it here and expect anything different? Because the sheer demand for an alternative to the 405 will get ridership anyway? The only individuals that will ride the freeway median/adjacent monorail are existing Metro riders, either bus or rail, because they would likely tolerate the freeway noise at the stations more than new Metro customers. The goal is to get new Metro riders and people out of their cars - not transfer them from bus to rail like the Expo line mostly does. Not to mention, freeway median stops would likely mean a handful of moving walkways (or just a normal walk) from the station to the desired cross street intersection i.e. Venice and Sepulveda for example. Very undesirable. A fast, below ground subway with station locations at dense locations where it is needed most is the way to get people out of their cars, the best way to stimulate TODs and the best way to reduce carbon footprint.
City of Santa Monica			No	2/3/2022	To whom it may concern: The City of Santa Monica is supportive of the Sepulveda Transit Corridor project as it will provide a fast and reliable alternative to traffic on the 405. Regardless of the mode or alignment selected, to enhance the utility of this project now and in the future, we would like to see this project extended to include a southern terminus station at the site of the Santa Monica Airport. Presently, this area contains a mix of uses including the Santa Monica Business Park, the Santa Monica College Bundy Campus, restaurants and housing. In the future, when the Santa Monica Airport closes in 2028, the site is envisioned to be transformed into a large regional park, with the potential for some associated development if approved by the community. This new park will represent a strong regional draw, especially when coupled with the existing lang uses. If not feasible to accommodate this station at the present, we hope that future extensions of this project will include the requested station. Please let me know if I can provide any further information.
	Lynwood	90262	No	2/3/2022	Option 4 or 5 are the real options for all riders that also provides the needed rider headways and capacity and doesn't compromise on the promise of connecting the valley to the west side and connecting to UCLA and leverages existing investments of the future purple line and the Expo line as well.
			No	2/3/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table.

		911403	No	2/3/2022	You need to stop studying this ridiculous alternative 4 for the sepulveda pass with elevated heavy rail trains 20 to 40 feet above the Sepulveda Blvd in the valley. The alternative 4 will destroy Sherman Oaks forever. We will have huge trains running every 45 seconds, no privacy or peace not to mention what we've you're just bringing more kind of crime in the area with a Metro train and all that stuff. You're destroying our air quality and not to mention the noise and everything. It is going to affect our privacy and our peace of mind. I am two blocks from the Sepulveda and the air quality, the noise bringing down our home values, nobody wants to be moving towards being on top of a stupid train. Worst traffic will be having on Sepulveda, a construction nightmare for years, destroying our property value. This is also 20-40 feet above the street the columns are going to block our traffic lines, noise will travel for 1 and a half miles. We have enough traffic with airplanes coming from van nuys airport over our neighborhood. Not to mention the air quality and the noise and peace of mind and safety. The ugly lid above the Sepulveda pass for 5 miles just will be no need. It is going to ruin our community. You are talking about a 50 foot tunnel into the hillside. You probably weren't around when we had the '94 quake in this area, the Sherman Oaks gallery and right at venture and sepulveda was damaged so severely they had to take the whole shopping mall down. The whole area is just really a one of the earth place figures, and this is a stupid place to do this and so please get rid of what you are thinking about doing and go put it somewhere else because you are just asking for trouble with what you are thinking about doing because mother nature is going to come along and just destroy the whole thing. And I just hope you just come to your senses and just stop this.
			No	2/3/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. I am vehemently opposed to this alternative personally.
	Los Angeles	90025	No	2/3/2022	We need heavy rail for the Sepulveda corridor. Monorail isn't enough. We need to think long term about this. Please seriously consider heavy rail
	Sherman Oaks	91403	No	2/3/2022	No to 4. Yes to 5 I think that most would agree that it is time for us to address transportation from the valley to the west side. The issue at hand is which mode works best. It is widely known that the 101/405 is one if not the most congested intersection in LA. The only other intersection that is as bad is the intersection of Ventura blvd and Sepulveda in Sherman oaks. This creates total gridlock at this intersection and is due in part from this being one of the only two entrances to the 405 south in Encino and Sherman oaks. It can take up to 30 minutes to travel one block to get through the intersection. This brings up two issues with any above ground option. The removal of a lane of traffic along Sepulveda and the ability to push more people/traffic through this intersection to service the first stop in and out of the valley. To me, this is why we desire to extend the tunnel further into the valley. Any above ground option will only make this situation worse.
	Los Angeles	90046	No	2/3/2022	Metro should only be seriously considering heavy rail options that tunnel through the mountains. The monorail is truly a joke of an option when it comes to what the city needs. While monorail is cool and flashy looking (when you see it passing you by on the parking lot that is the 405), it won't meet the daily needs of Angelenos who just want to move around the city. The heavy rail tunnel options will better serve higher capacities and with faster end to end times. As a UCLA alum, I would have LOVED to have a metro station directly on campus to explore the city. That is a necessary piece of the puzzle as well, given how many students, faculty, employees, fans, and tourists would make use of that station.
	Torrance	90503	No	2/3/2022	I oppose the monorail. Alternatives that can support larger passenger volumes are needed, such as heavy rail. There also needs to be a stop at UCLA to connect students to the surrounding areas without the need to bring their cars into the region.
	Torrance	90503	No	2/3/2022	What I suggest is doing something like a heavy rail as opposed to the monorail. There are higher passenger volumes with the heavy rail that I think could be more beneficial to the community. I also suggest adding a stop at UCLA.
	Los Angeles	90006	No	2/3/2022	What I like are alternative routes 4-6. We need heavy rail transit, not a monorial. Monorails are scams and we have a big population where it would require frequent transit. Please don't choose Monorails.

	Arleta	91331	No	2/3/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3. Also, with the increasing prices of parking fees that UCLA makes their employees pay out of pocket.. it would be extremely helpful to have this mode of transportation available so we can save money on the cost of parking. UCLA offers an annual salary increase of 3% (thanks to our union!) but I feel it doesn't make a difference whatsoever as all the prices go up along with it. So, I would deeply and sincerely appreciate it if this project came into fruition. It would impact so many UCLA workers that live in the valley and be extremely helpful to better our lives and commute. Thank you so much for your time!
	Los Angeles	90049	No	2/3/2022	I would like to register my deep opposition to BYD's monorail alternatives; the heavy-rail alternatives, particularly the Bechtel PPP options, are much more in tune with the needs of the city. First and foremost is the issue of capacity. While the monorail alternatives state a higher maximum capacity, this is only possible if Metro ends up spending significant amounts of money on station expansions. The Bechtel alternatives, on the other hand are essentially one-and-done; capacity can be increased without increased station buildout. Secondly, the heavy rail alternatives provided by Bechtel offer the potential for dramatically lower headways, headways as low as 90 seconds. Reducing time between trains increases flexibility for riders, and reduces effective commute times, as one does not need to waste time waiting for a train. With 90 second headways, one does not need to plan their schedule around train timetables, one needs to only show up. Flexibility is one of the key advantages of car ownership: you can leave a place whenever you'd like. Low headways reduce this advantage, and make transit significantly more competitive with auto ownership. Finally, given rising geopolitical tensions with the People's Republic of China, using a Chinese contractor with deep ties to the Chinese Communist Party poses significant risks. As tensions rise, there is a potential for federal government interference, whether through tariffs, sanctions, or other means, that could lead to significant delays and project overruns. Additionally, justified or not, many will be concerned over the prospect of putting a piece of critical infrastructure in the hands of a foreign company, with ties to an possible adversary nation. Bechtel, on the other hand, poses no such risks. The people of Los Angeles are in desperate need for an alternative to driving down the ever-congested 405, and a rail option is long overdue. This is a once in a generation opportunity, and must be done right. Bechtel's heavy rail alternatives provide for greater capacity without the need to further mine stations, provide for faster capacity, and are a less risky option, due to Becthel's longstanding experience as a U.S. based contractor. For all these reasons, Metro should table the BYD monorail proposals, and advance with the Bechtel alternatives.
	Los Angeles	90064	No	2/3/2022	I support the opinions expressed in this LA Times op-ed: https://www.latimes.com/opinion/story/2021-02-21/metro-sepulveda-pass-monorail LA needs heavy rail; not ineffectual light rail. If we are going to do something big, might as well do it right the first time.
		90038	No	2/3/2022	Please NO monorail. We need heavy rail to tie into the existing purple line and to UCLA.
	Los Angeles	90024	No	2/3/2022	I would prefer the heavy rail option. I believe the monorail option would be ineffective.
		90043	No	2/3/2022	Hello, heavy rail would be the preferred option for this transit corridor. It has the capability to connect to other portions of the existing Metro system, has one of the highest capacity capabilities, and is a proven technology. Please use a heavy rail alternative for this transit corridor. Thank you.

			No	2/3/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Please remember that there is a major body of water up Stone Canyon. Don't be so ridiculous to allow your construction to burst the reservoir. Having the metro in Bel Air will damage the area and cause undo damage, not to mentioned flood the entire area and cause serious damage to life.
		91411	No	2/3/2022	I strongly oppose option 4 ! It will cause many kinds of pollution in the neighborhood.
	Los Angeles	90027	No	2/3/2022	What I would like is for the Sepulveda pass project to be heavy rail. The monorail option is an obvious folly and will not help alleviate the traffic situation.
	Venice	90291	No	2/3/2022	I believe that a heavy rail option is the only one that should be considered. I am in favor of option 6.
	Alhambra	91801	No	2/3/2022	Please do not build a mono rail. Heavy rail is a more realistic project that better suits our needs. In cities around the world monorails have proven to be more expensive and less useful than heavy rail
			No	2/3/2022	To whom this may concern, After listening to everyone speak in the 3rd Metro sepulveda Corridor Zoom meeting, I think Idea #4 would be the most beneficial since Bel-Air residents don't want a sky rail, & same with Westwood UCLA. The fact that it goes above ground after Ventura is personally fine with me. I heard a few others mention that idea #4 is a Compromise between almost everyone's wants & needs. Idea #6 I am personally totally Against since it doesn't connect passengers to Sepulveda & Ventura. Appreciate ur time,
	Lake Forest	92630	No	2/3/2022	I believe that you guys should use trains like the metrolink or amtrak and not monorail. The reason for this is due to the fact that more people could be moved in a smaller period of time. If I could request anything, I would say to maybe even build something like they have over in Europe where they have the train that can carry cars. The #1 reason many people don't use public transportation is due to the fact that many people don't want to worry about how they will get from the train station to home/work. I feel like even if you guys spend billions and billions on building a transportation network, that doesn't necessarily mean that people would be willing to drop the convenience of having their car with them to use public transportation trains then use buses to get where they are then have to walk hone from the bus stops. This is why I believe that we should have some sort of train that people can park their cars on there then go, like they have in Europe. In my opinion, as a southern california citizen, i feel like this would be the most "bang for your buck" scenario. Nevertheless, I am glad though that we are at least opening a discussion on the best possible solutions and thank you for allowing citizens such as myself to be able to display our opinion.
	Encino		No	2/3/2022	I couldnt hear what the first thing you said about Metro or something to get info, I would like to know what is happening. I am in Encino on Valley Vista. I think you said you want my age, I am 85. If you call or want my phone number okay
	Los Angeles	90077	No	2/3/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table.
	Downey	90240	No	2/3/2022	DO NOT BUILD A MONORAIL. La need more heavy rails
			No	2/3/2022	Please consider the Valley residents who live around Sepulveda and stop studying Alternative 4. There are five other alternatives that are at least reasonable (1, 2, 3, 5, and 6) and you should focus on those. All five need refinements and improvements but they can be made viable. Alternative 4 can never be viable for the Valley. Thank you for your consideration
	Los Angeles	90034	No	2/3/2022	For far too long the Sepulveda Pass has been a hinderance to effective public transit needs in Los Angeles. Now that the time has come to actually implement a solution to this problem, we must go with the option that serves the greatest number of passengers at the highest speeds possible. Thus, the only solution is heavy rail.
			No	2/3/2022	Putting an elevated train between Sherman Oaks and Encino is a terrible idea. An elevated train anywhere in this area is a terrible idea. It will ruin large LA home communities like Sherman Oaks and Encino with eyesore, constant pounding noise, trash, filth, grafitti and congestion during and after construction. Homes will be damaged from the myriad of assaults before and after - if not destroyed. Wonderful neighborhoods will be fatally wounded. It will cause a blight on this large, healthy living area nestled in the Santa Monica Mountains, which themselves will suffer mightly. The mountains are a scenic asset, not a target to be assaulted. Sherman Oaks and Encino have been built on shade, quiet, green, family and lack of all such counters to family values. Are we going to turn this prime family area into a New York-style elevated train area where crime festers in steel and concrete corridors? That is what will happen. Our city everywhere is already suffering enough urban blight. You want to add more? That's exactly what an elevated train and it's platform will do. Use the money to clean up the streets, enforce the existing laws, not to add to our already deteriorating situation. We came here in 1983. Sherman Oaks was a great place to raise kids. Please help to steer it back toward that by dropping this elevated train abomination. Go visit where they have been erected in other cities. They are not family oriented. They don't help the cities. To the contrary, they cause and bring all the ills of decayed city life.
		91403	No	2/3/2022	Having read all of the options the city has put forth for the rail project I am deeply disappointed in the work of the city. Any option that is above ground is a non starter and will cause significant issues and harm to the property owners and tax payers of this city not to mention the years of legal wrangling and expense of lawsuits that will follow due to impacts of these projects. I am also disturbed at the lack of oversight that I see in any of the reports and fear we are headed for yet another gross misappropriation of taxpayers money like the Mercy Housing Project on Burbank where we are paying 4 times the average cost per square foot for this type of development and the city has already back pedaled on some of the safety assurances for the surrounding neighborhood. There is also a gross lack of detail in these studies including the exact details of the project, the environmental and land impacts on the surrounding neighborhoods, the acceptance and benefits of the rail lines in the neighborhoods, the plan to maintain safe environs. The city cannot even provide safe transport on the existing metro rail lines causing a significant decrease in ridership. The city needs to figure out how to make the existing rail acceptable and usable before it goes to spending billions of dollars on new rail that will be unusable. I urge the city to go back to the drawing board and come up with a more cohesive and thoughtful plan. Again ANY aerial option that occupies space on anything other than an existing mass transit corridor such as the 405 or 101 freeways should not even be considered .

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Granada Hills	91344	No	2/3/2022	Please make the Sepulveda Transit Corridor a heavy rail line. It would seriously increase the usability of the public transit system.
	Sherman Oaks	91401	No	2/3/2022	I want to voice my support for the sepulveda pass project to be heavy rail. A monorail would be a joke. It is not nearly fast enough, nor a high enough capacity to be a viable option for the vast majority of commuters. No one would choose to take a transportation option that is slower than sitting in the comfort of your own car stuck in traffic. Please, only consider heavy rail for the future of LA
			No	2/3/2022	Hello I'm a resident in the Midvale Estates neighborhood. I've lived here for over 18years, My husband and I bought here because of the sanctuary it once was. Now with the homeless situation and the crime here, we no longer feel safe. And now you're proposal of an above ground metro. I don.'t understand. Why do we need more public transportation, when we have a metro system already that is never operating at full capacity. Not only are you tearing up neighborhoods and businesses, you're also was contributing to more air pollution to and already poor air quality. As a resident of the Van Nuys area, this is an absolutely absurb and terrible proposal.
	Los Angeles	90027	No	2/3/2022	A TBM heavy rail tunnel under the Santa Monica Mountains provides the best service to riders and causes the least disruption to the communities it passes underneath. By providing the fastest possible service, it will therefore convince the most people possible to use it instead of driving and will do the most to reduce 405 traffic. The construction will also have zero disruption to the communities above it, while the above-ground options would cause major interruptions and additional traffic issues.
	Los Angeles	90024	No	2/3/2022	please give college students access to public transit, we need it as many of us do not have cars
			No	2/3/2022	I am a current resident in Sherman oaks on Sepulveda right where the 101 and 405 freeway is. There is already enough noise in my neighborhood and adding a train will make it terribly worse. Please stop studying ridiculous Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard in the valley. Alternative 4 will destroy Sherman oaks and my peaceful living. There is already noise from the freeways and the fire department and this project will make many people move and destroy their lives.
	Santa Monica	90404	No	2/3/2022	I would strongly suggest not going with a monorail solution and instead light rail or subway.
	Mission Viejo	92692	No	2/3/2022	It needs to be a heavy rail, not light rail!
	Irvine	92606	No	2/3/2022	Please spend as little money as possible on the monorail alternative. Based on the research done by the maker of this youtube video https://www.youtube.com/watch?v=xJdbCgVkH3w. The monorail cost savings are based on a poorer performing set up with no room for growth. This is an important transit line and should be constructed with technology that Metro understands how to plan for and operate whether or not the line is a P3. I appreciate everything that BYD has done for transit electrification and bringing jobs to the region, but this does not mean that their alternative is the best choice.
			No	2/3/2022	Metro would be a helpful addition but, please not option 4. The valley seems to get the short end of the stick. The proposals show an underground on the west side and then above ground massive trains on the valley side. Underground is the best solution. If it is possible on the west side it is possible on the valley side.
	Los Angeles	90049	No	2/3/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table.
	Los Angeles	90024	No	2/3/2022	The Sepulveda Pass project is too important to the future of this city to mess up. Please build heavy rail - not monorail! BYD may have shiny advertising, but they are not a remotely practical choice. 1. Connection stations for monorail are all in the wrong places. They have a minimum 3 min to 8/10 min walk from these stations to connection stations. Most, it seemed like outside. Typically 1-2 min is good urban planning. I won't take it if I have to walk half a mile to connect to another train. The rail stations all connect right next to the current ones. 2. The capacity is way, way lower. At the initial costs (10.8 billion for rail, 6.1 billion for monorail), the rail carries ~12000 people. The monorail carries ~14000. This sounds better at first. However, the rail just needs to add a few trains to get the total capacity up to 27000 people. The monorail tops out at 14,000 without extra construction at every single platform. And even with that construction, ultimately it can only handle 19000. This is laughably low for what could make up a major backbone of our city's transit. 3. The advertised completion date and pricing doesn't include UCLA. UCLA is a huge hub and one where tons of riders are going to come from. The monorail price (6.1) doesn't include this. It would most likely cost another 2 billion, and this extra diversion isn't included in the 2030 date. The rail price does, and the timeline of 2030 also includes it.
	los angeles	90013	No	2/3/2022	Heavy rail would be much better than a monorail!
			No	2/3/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There is no need to be tunneling through the bedrock that is beneath much of Bel Air's neighborhoods. These tunneling options are more expensive overall, take longer, and undermine the bedrock that supports earthquake prone Los Angeles. There are other viable options that do not require tunneling under Bel-Air that are not being seriously considered and should be on the table. My personal preference is option 2 It appears Metro has already decided what to do but wants to give the Bel Air residents the appearance of listening to their valid concerns but still going ahead with decisions already made behind closed doors. Shame on the city for allowing this farce to occur!
			No	2/4/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There is no need to be tunneling through the bedrock that is beneath much of Bel Air's neighborhoods. These tunneling options are more expensive overall, take longer, and undermine the bedrock that supports earthquake prone Los Angeles. There are other viable options that do not require tunneling under Bel-Air that are not being seriously considered and should be on the table. My personal preference is option 2 It appears Metro has already decided what to do but wants to give the Bel Air residents the appearance of listening to their valid concerns but still going ahead with decisions already made behind closed doors. 		91403	No	2/4/2022	The option that runs above ground on Sepulveda Blvd. should be eliminated. Too noisy, will eliminate many businesses and homes, and will increase the already heavy traffic on Sepulveda. ANY of the other options is better than this.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90007	No	2/4/2022	The monorail option is terrible, provided by a corrupt company and not adequate for the needs of LA. However, the heavy rail options are significantly better, and must end up being the final option chosen by Metro.
	Los Angeles	90004	No	2/4/2022	A monorail is useless. Build a heavy rail connection to the red line.
	North Hollywood	91601	No	2/4/2022	Absolutely need heavy rail. Anything less is not future proof and just adding to public policy failure and Under deliverance
	Winnetka	91306	No	2/4/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	North Hollywood	91605	No	2/4/2022	What I like... Alternative 4 and 5 heavy rail are the best options. Please dear god do not pick the monorail. Walking distance to get to stops in between connections is horrendous for the monorail option. Pretty much unusable. This is such an important project that will become one of the backbones of metro transport and it has to be done right. Please do not pick the monorail just because it appears cheaper. What I wish... that you guys would stop considering the monorail option. It is so bad. All of my friends and family would just use vehicle transport if monorail ended up being picked. I will definitely protest if you guys choose any of the monorail options. The price tag for the monorail is also deceptively low in my opinion. What I suggest... I suggest you pick alternative 4 or 5.
	Los Angeles	90034	No	2/4/2022	Hello - I writing to support the development of a *heavy rail* transit line for the Sepulveda Line Development project to connect the San Fernando Valley and West side of Los Angeles. Proposals 4 through 6 all encompass heavy rail and would allow a valuable amount of high population use and speed along the line, thus allowing for greater and more equitable use to be provided to our every growing community. Furthermore, lines 4 or 5 are in my opinion the best options for development and should be considered the ONLY real options if we wish to take the development of our public infrastructure seriously for the years to come. As a UCLA Alumni, I am eager to see our wonderful and bright campus interwoven into the greater LA community. Please consider these points in your evaluation of the proposals at hand. Thank you,
	Los Angeles	90024	No	2/4/2022	As a former UCLA student who still needs to visit the area often, I vastly prefer a Heavy Rail option, particularly Alternatives 4 and 5. A Heavy Rail line (including a station at UCLA) would make transit from DTLA and East LA to UCLA (through D Line) seamless, as the transfer can occur within the station. On the other hand, an bus or APM solution (as in Alternatives 1 and 2) clearly will not satisfy the heavy ridership demands on UCLA commuters. The Wilshire intersections rank amongst the heaviest-traffic on the West Coast, and subjecting riders to an at-grade or aerial transfer would only exacerbate the pedestrian traffic in the area. Additionally, Heavy Rail would provide convenient transit from Van Nuys Amtrak station to UCLA, enabling folks traveling across SoCal (e.g., through Pacific Surfliner) to access UCLA in an easy, safe, and modern fashion. Alternatives 1 and 2 would require transfer at the D Line station, significantly and needlessly inconveniencing such trips.
		90241	No	2/4/2022	Please build heavy rail and skip the useless monorail

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
		91343	No	2/4/2022	Please build out heavy rail mass transit system for the Sepulveda corridor. A monorail does not have enough capacity to transport the residents of SFV over the hill and vice versa. Capacity planning needs to be based on future population projections (at least 50 years into the future), not current ones. Also please look into case studies of mass transit projects in Taipei, Singapore and Bangkok.
		91732	No	2/4/2022	Please do not build the monorail. It will not carry as many people and will need to have additional platforms to carry more people. Keep it underground.
		90048	No	2/4/2022	Please do not build the monorail. It will be an eyesore and will be exposed to the elements. The monorail will not have a direct connections with UCLA. Please build the automated heavy rail. Alternatives 4,5 or 6.
		90048	No	2/4/2022	Build the heavy rail. The monorail does not carry enough passengers. Any of the heavy rail alternatives are better than the monorail.
		91791	No	2/4/2022	Build any heavy rail alternative. It carries more people.
	Los Angeles	90024	No	2/4/2022	I am here to show my support for a heavy-rail connection (Alternatives 4,5,6) to connect the San Fernando Valley and the Westside. In particular, I believe the best route to be Alternative 5. The overwhelming demand along this route demands adequate capacity, and the monorail alternatives cannot meet that demand. In addition, pursuing an underground heavy rail alignment will enable more accessible station locations, providing quick and easy connections with existing modes of transit. The ease of transfer should bolster ridership numbers, justifying the added expense of an underground alignment. As a former UCLA student, I recognized firsthand the need for a rapid public transit connection to UCLA campus. Alternatives 1 & 2 do not provide a direct connection to campus, but rather offer a band-aid solutions in the form of an electric bus or APM. UCLA is one of the largest daily commuter destinations in the city, so a transit stop directly on campus would be a great incentive to take transit instead of driving. Not to mention, an electric bus connection would only add further to the congestion on Wilshire Boulevard.
	Santa Clarita	91355	No	2/4/2022	Obviously not the monorail option. Right? We're not doing that option? Or are we completely corrupt? It's really obviously the worst option. We need to have a company do this that has put even a small bit of effort into the planning. 3-8 min away from connecting stations? Seriously? No built-in stop at ucla as part of the budget? Only 19000 people total even AFTER additional construction on every single platform???? I mean, it should have been laughed out of the running at the get-go.
	Lake Balboa	91406	No	2/4/2022	I prefer alternative 5 because of its higher capacity and speed as well as the station locations. From a personal perspective, I prefer the Sepulveda G line station to the Van Nuys G line station because the Sepulveda station is closer to my house. I own a home within the project area and would be happy to have close public transit. From a community perspective, it seems like the Sepulveda location would be less disruptive to local businesses than the Van Nuys location.
			No	2/4/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other options that are not being considered that should be on the table. Sincerely,
			No	2/4/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Sincerely
		91607	No	2/4/2022	We stand in unity with our valley village neighborhood association, an above ground train will destroy our neighborhood and will force our business to move. Why would this even be a viable option? The impact would destroy so much value.
			No	2/4/2022	I am not in support of building this!!! It will affect by business and my home. And it is not critical- buses are already operational!!!! Please confirm that you are aware that I not in support of this!!! And do bot add me to your mailing list. By the way, none of the businesses that will be actually affected negatively have been notified, like the 2 schools.
	West Hollywood	90069	No	2/4/2022	BYD's proposal ultimately will cost the same as any of the other proposals once you factor in the cost to increase to the max capacity. In addition, BYD's station proposals are almost all nearby freeways (one is at the 101/405 interchange, who would even walk there?) and are 7 minutes away from other transfer stations, thus lowering ridership. BYD also has a history of busses that don't work very efficiently, I can only imagine how many issues a broken down monorail car would impose. Heavy rail, which has been proven in L.A. to be efficient, seems like the smarter decision.
		91202	No	2/4/2022	What I like is a heavy rail option. As someone who used to live in the SFV, once commuted to the Westside, and have shared households with Westside commuters, a fast, high capacity rail line would be the ideal option. I know many people who have quite literally changed and given up on jobs due to the commuting issues. A traditional heavy rail would greatly expand opportunities in the SFV, much more than a monorail, which I feel is a less serious commuting option and more a casual novelty. If we want cars off the 405, make the heavy rail infrastructure to properly replace them.
	Union City	94587	No	2/4/2022	I support heavy rail AKA an actual TRAIN like every other civilized nation on earth, please do not use my tax dollars to make a shitty monorail that won't be able to sustain the traffic and population density of the LA area. It's your MORAL DUTY to ensure there are GOOD public transit options and curb the car culture that is contributing to climate change and exacerbating the FIRES that rage across California every year. PLEASE BUILD THE HEAVY RAIL.
	Claremont	91711	No	2/4/2022	Please don't put a monorail in. It is the easy choice, but not the right choice. Please add rail.
	Los Angeles	90041	No	2/4/2022	I am writing in strong support of all three heavy rail alternatives for the Sepulveda Transit Corridor, particularly alternatives 4 and 5. As a lifelong Angeleno, a taxpayer, and a transit rider, I believe that maximizing the value of this project is more important than minimizing the cost per se. Of the available alternatives, 4 and 5 best achieve this goal. Alternatives 4 and 5 are the most feasible long term investments in the County's transit future, use proven technology already in use worldwide, and deliver a transit line that will dramatically increase mobility directly to critical destinations like UCLA. Additionally, I believe the feasibility of monorail alternatives has been overstated by BYD and utilizes novel technology where it need not be deployed. I am very skeptical that what Los Angeles County needs for arguably its most critical transit corridor is a one-off solution with unknown longevity, reliability, and cost. A bus or people mover transfer to UCLA should also be a non-starter for any alternative, as this would significantly degrade ridership and value.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Venice	90291	No	2/4/2022	No mono rail. Touch less features to buy/scan tickets. Clean.
	Glendale	91205	No	2/4/2022	What I suggest is abandoning the idea for any monorail for this proposal. Either subway or above-ground light rail will work better, longer, and cheaper.
	West Hills	91304	No	2/4/2022	I believe an actual underground light rail system, such as a subway, through the cooridor, and ending at LAX, would be a huge improvement for transit in LA. It would allow for connection points at the G Line, E Line, and D Line, and would significantly reduce traffic in the Sepulveda Pass. Most of all, it would move LA closer to a more integrated and easy to use transit system like in Tokyo.
			No	2/4/2022	Even though this project is decades overdue still allows us to improve better late than never, with all the studies ,bureaucracy , and time that involves such a project , And in the meantime wouldn't it make sense to exclusively use the existing carpool lane that no one respects anyway for park and ride purposes with city busses and parking lots along proposed project ? , we already left a good chunk of our lives on the 405 at this point any help is more than welcome , good luck.
		91320	No	2/4/2022	I want actual subway from LA to the valley. Go under the mountains and make something quick that people want to use. Not a stupid monorail that follows the freeway that no one will use.
	Oakland	94602	No	2/4/2022	I support heavy rail AKA an actual TRAIN like every other civilized nation on earth, please do not use my tax dollars to make a shitty monorail that won't be able to sustain the traffic and population density of the LA area. It's your MORAL DUTY to ensure there are GOOD public transit options and curb the car culture that is contributing to climate change and exacerbating the FIRES that rage across California every year. PLEASE BUILD THE HEAVY RAIL.
			No	2/4/2022	I am writing to oppose Option #4 for the Sepulveda Transit Corridor Project access to the City. This option will have a detrimental effect on the neighborhood and businesses. I have seen how the above ground project on Crenshaw Blvd. has divided the commercial and residential corridor and it has had a negative impact on businesses in the area. Please do not destroy another neighborhood! Underground works well on the Westside and it will work well in the Valley, too.
	Los Angeles	90004-4065	No	2/4/2022	I am in support of a heavy rail through the Sepulveda Pass because the heavy rail alternatives have a bigger impact in moving commuters throughout LA in the more dense communities as opposed to a monorail over the 405. If this train is going to make a dent to the car clogged highways and reduction of smog while also encouraging more people to take mass transits we need more station accessibility and that's with the heavy rail routes. I would like to see this to help more people get to their schools and work with less commute time (i've done the two buses and train commute before and that eats a chunk of my day), and I'd like to see getting in and out of LAX faster than getting caught up in the freeways to get there.
		91601	No	2/4/2022	What I'd like to see for the Sepulveda Transit Corridor is HRT underneath Van Nuys Blvd (rail lines do not belong next to highways) in The Valley that continues south underneath Bel-Air to a station at UCLA then connects with the D Line in Westwood and continues to the E Line at either Sepulveda Blvd or Bundy Dr. I'd prefer it to terminate at Bundy Dr as rail lines do not belong next to highways and it also sets up a future extension through Playa Vista to LAX.
	Los Angeles	90034	No	2/4/2022	I am in strong favor of Option 4 or 5. The monorail options are low capacity, slow, and require unrealistic closures to make them happen. Heavy rail is the only option that makes sense. I like the idea of truly capable infrastructure in our city.
	Los Angeles	90034	No	2/4/2022	I am delighted to see this project being evaluated as I live in Palms and commute to North Hollywood/Studio City daily. As a one-car family, this limits my family now that I require the use of our vehicle for my full time job in the valley. Having moved from the midwest in the last 4 years one of the things we like most is how accessible getting around near our home is by foot or utilizing public transit whenever possible. Having a more direct route (that doesn't take 1hr one way) would be life-changing.I would suggest a sort of trial portion where perhaps a bus line or something was added along the 405/Sepulveda corridor to begin to shift interest and accessibility to Metro transit in favor of personal vehicles. Thank you so much for your time and I look forward to the outcome of this project!
		91214	No	2/4/2022	What I suggest is one of the subway options rather than the monorail.
	Van Nuys	91405	No	2/4/2022	What I like is alternative 4 and 5. A Heavy rail option seems to make the most sense in terms of rider volume and speed to destination. Of all the rail projects in LA, this one has the greatest potential to drastically change how people get around the city. That being said, I wish the line extended further down to meet up with the LAX people mover. It doesn't make any sense to create this amazing rail option down the 405 and stop short of our main airport. You shouldn't have to transfer 3 times to get to, arguably, the most important stop in the city. That is the opposite of efficient and I believe would be a huge mistake for such a transformative project. What I would suggest is looking into adding that last stretch between the E Line and the people mover. Or at least, highlight a "future" extension.
Valley Industry and Commerce Association (VICA)	Van Nuys	91406	Merged Document	2/4/2022	Subject: VICA SUPPORTS Alternatives 3, 5 & 6 of the Sepulveda Transit Corridor Dear Metro Board Member, The Valley Industry and Commerce Association (VICA) has been a long-standing supporter of the Sepulveda Transit Corridor, and after considering all 6 options, we are in strong support of alternatives 3, 5, and 6. VICA is proud to represent over 350 businesses and every community within the San Fernando Valley region, and we are strong advocates for transportation projects that improve the Valley's connectivity with the rest of the Los Angeles region. We believe that the Sepulveda Transit Corridor will provide high-quality transit options that effectively service the growing travel demand between the housing and major employment sectors of the San Fernando Valley and Westside. Specifically, VICA has chosen to support alignments 3, 5, and 6. One critical reason for this support is because of these options' inclusion of an on-campus station at UCLA. Direct access to the campus is critical to the university, the 2028 Olympics, and the financial viability of the corridor's operations. VICA would also like to clarify that while we are members of a coalition to support all options with a connection to UCLA, we are only in support of options 3, 5, and 6, as alternative 4 has unresolved equity issues between the Westside and the Valley. Overall, for a transit system to be a competitive travel option that attracts new ridership, it needs to increase speed, frequency, capacity, and reliability, while providing convenient connections to existing and planned transit lines. VICA believes that options 3, 5, and 6 do just that, and we ask for your support of these Sepulveda Transit Corridor alignments.
	Glendale	91208	No	2/4/2022	Please no monorail. We need heavy rail for this project
	Los Angeles	90066	No	2/4/2022	Must have stop at UCLA. Doesn't need to go underground but could be like the Getty on the side of the hill. Bundy/Centinela???

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90025	No	2/4/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Encino	91316	No	2/4/2022	Monorail does not have the build out capacity or speed to match the heavy rail options. In addition the UCLA station needs to be close to UCLA and not served by a bus or another tram. The extra transfer makes a big difference. Any of options 4-6 are better than the monorail in 1-3. I like 5 and 6 the best for the development options it brings. 3 is the preferred of the monorail options, but I would not say 3 is good.
	Los Angeles	90034	No	2/4/2022	If you go with the monorail option it will be remembered as a mistake for generations to come. It's not expandable and the current proposal doesn't even include UCLA, which we can expect to be a major hub. Please build an actually heavy rail, with 1-2 minute walk connections to existing lines!
			No	2/4/2022	I am in complete opposition to the above ground rail line. That would only make for a nightmare and not a solution. Please don't waste any more money on nonsensical ideas. Thank you ,

	Sherman Oaks	91403	No	2/4/2022	Purpose and Need: The whole project is one that is not needed and a giant waste of taxpayer money. This money would be MUCH better spent on improving our education system, not for moving people around. Give the timeframes being discussed for the project and the increasing move to remote work, a trend that is clearly here to stay, this project is trying to fill an increasingly antiquated need and won't even be ready for years, if not decades. Look no further than the California High-Speed Rail project - while that clearly has a different scope, there are massive cost overruns for a project that is filling a very limited need. With the current California emissions standards, by the time this project is complete, we will have many more EVs on the road as opposed to gas-powered vehicles and the trend of remote work is making transportation less necessary. Tying up traffic for years upon years, and the fact that very few, if any, projects of this scope have ever come in on time or on budget, makes this project untenable and unnecessary. Alternatives: Let natural course of events play out with regard to transportation -- improving emissions standards, more EVs, likely self-driving cars, less need for daily mobility, these are all trends we're seeing. This project is trying to 'urbanize' a sprawling city that does not need this project. Essentially, one of the main points of government is to improve the lives of its citizens. From that perspective, this project would be an unmitigated disaster. Creating a traffic nightmare for 5-10 years is nobody's idea of improved living conditions. Furthermore, education is one of the keys to success later in life. The city could improve the lives of hundreds of thousands of children by investing these same dollars in education, especially in underserved communities. Education has been perpetually underinvested, and this is where the city can gain the most bang for its buck. Moving people around the city to only 'potentially' reduce traffic volumes a little bit is not a noble goal for a city with the geographic footprint of Los Angeles. Lifting people out of poverty and investing in their future through improved education certainly is a noble goal. Environmental Issues: I would defer to environmental experts on this topic. What I suggest is that this project be abandoned altogether, it is completely unnecessary, and really the only winners would be the planning and construction firms who would profit. This project will be a complete disaster, and it does not improve the lives of the city's citizens.
	Encino	91436	No	2/4/2022	The Valley deserves the best possible project for mass transit. Alternative 6 - Subway aligned with Van Nuys Blvd, under the Santa Monica Mountains is the best option for Encino and the Valley. The 1.75 Million residents of the Valley should demand the best option for the Valley.
Bel Air Beverly Crest			Merged Document	2/4/2022	Please find attached a letter from the Bel Air-Beverly Crest Neighborhood Council regarding the Notice of Preparation for an Environmental Impact Report on the Sepulveda Transit Corridor Project.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90049	No	2/4/2022	Dear Metro Board of Directors: I am writing to urge you to proceed with all deliberate speed in the construction of the Sepulveda Transit Corridor Project ("STC"). Connecting this crucial transit line to the rest of the County's growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic, to allow students to travel efficiently to and from school and workers to and from their jobs and still participate fully in raising their children and enjoying their communities, and to reduce our region's carbon footprint meaningfully. I do not have a detailed proposal regarding a preferred route or modality, but would like to offer some considerations. First, the earliest possible project completion should be a top priority and if that means an above-ground monorail, then it should be preferred. Second, the STC should seamlessly connect to as many existing and new lines as possible, including the North Valley light rail line, the Orange Line, the Purple Line and the Expo Line. Every increased burden imposed upon transit users (such as stops that are nearby but not co-terminus, shuttles, changing modalities, etc.) will reduce ridership unnecessarily. Third, the STC should include a stop at UCLA if at all possible, given its inevitable high usage. It should also be a priority to include stops within the Sepulveda Corridor, such as at the Skirball and the Getty Center, which are important cultural landmarks that would otherwise remain difficult to reach from both directions. Finally, the final alignment should strive to run through as many of the most densely-populated neighborhoods along the route as possible, which would maximize ridership. I would also like to stress that construction of the STC should be conducted in a manner that minimizes to the fullest extent possible any displacement of communities currently residing along the proposed route. It should go without saying that it is counter-productive to displace the very people who are most likely to ride a new rail line when building that line. Thus, the Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to rising rents, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. Thank you for your consideration of these issues.
			No	2/5/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Encino	91436	No	2/5/2022	I vote for alternative #6, the subway aligned with Van Nuys Blvd.
	Encino	91436	No	2/5/2022	I believe that option 6 is the best one for the valley.
		90805	No	2/5/2022	Lets please try to get back to being a world class city. Underground options only please. Future generations of children will thank you.
	Los Angeles	90024	No	2/5/2022	I support option 6 (and am strongly against monorail options 1, 2, and 3). All the monorail options (1, 2, and 3) stop in less populated and harder to access areas, and the stops would be along the 405. Riders waiting at their stop would have to endure heavy, unhealthy air and noise pollution from standing in the middle of a huge highway. I know how unpleasant it is to walk across highways or to wait in loud locations. The monorail is an unproven technology and is incompatible with existing transit infrastructure. This means that fixing a broken car might require expertise LA Metro does not currently have, and it could end up being unexpectedly expensive. Also, options 1 and 2 would require a connection for UCLA, which is home to many potential riders and people without cars. Options 4 and 5 use smaller trains (at most 680 capacity), while option 6 allows for almost 800 passengers at peak times. For a heavily trafficked area, more capacity is better. Options 4 and 5 also require trains incompatible with existing transit infrastructure in LA. And, option 6 passes through denser areas than options 4 or 5.
		91381	No	2/5/2022	Heavy rail seems to be a much better option than the monorail. Throughput alone is enough reason, but there are many. Say no to the monorail options!
	Northridge	91343	No	2/5/2022	I would like a direct connection to the Metro ORANGE line. I would like a direct stop at UCLA. Having to switch to a people mover or bus to get to UCLA makes it a much less attractive project. I would like a direct connection to the Metro PURPLE line. I would like a project which is built right the first time so that it has enough capacity now and into the future. I think that means the heavy rail options are the best choice. I would like the travel time to be short so that the train is better than driving. I would like the train to come at least every 10 minutes during non-peak times. With students using the line to get to UCLA, we don't always go at peak commute hours. I would like it to be quiet when riding the train. Loud squeaking and squealing makes it less enjoyable.
	Los Angeles	90025	No	2/5/2022	As someone who drives through the Sepulveda Pass frequently, I have long dreamed of a public transportation option through the pass contacting the city with metropolitan regions like San Fernando Valley and Conejo Valley. As we finally reach a point to contemplate such a solution, I am against a monorail proposal as I do not see that it offers the volume and robustness to handle the volume of traffic through the pass well into the future. The only path I see is a dedicated underground subway system that connects to the rest of the metro subway system that runs through the city of LA.
		90025	No	2/5/2022	I would like to propose the following one seat options: 1. Alternative 6 replace East San Fernando Valley Light Rail line with Alternative 6's extension. 2. Extend East San Fernando Valley Light Rail line south through the pass along Alternative 6. The section south of Sherman Oaks will be underground Ideally the entire valley section will be grade separated, whether by elevating the rails or putting them underground.

Thank you for your consideration of these issues.
	Buena Park	90621	No	2/5/2022	To whom it may concern, I support having a subway go through the Sepulveda Pass since would be a great benefit to the entirety of Los Angeles County, especially within the West L.A. region. Our area is known for having notoriously awful traffic, causing great detriment amongst those who stay on the roads for hours upon hours to get to point A to point B, and if individuals are unable to drive then they're absolutely out of luck. By implementing this type of public transportation infrastructure, millions of residents (including low income BIPOC individuals) can have the opportunity to visit loved ones, go to work, or simply take a break from the hassle of driving (did I mention reduced traffic accidents?). I do hope the subway project can come into fruition because with more accessibility comes more freedom for all.
	Bellflower	90706	No	2/5/2022	Alternatives 4 and 5 are what I like. I prefer alternative 4 because it offers riders a scenic view at the northernmost portion of the line.
	Norwalk	90650-2459	No	2/5/2022	My suggestion is that heavy rail is the only option that can adequately address our current and future public transportation needs. A monorail is not the answer for such an important (if not the most) link between the Valley and the central Los Angeles area. Please let's keep this heavy rail.
	Tarzana	91356	No	2/5/2022	I would like to suggest if going with any one of the options. What I would suggest. Is looking at moving one of the suggested stops. From Sherman Way to Vanowen St. You have Valley Pres Medical Center. Which is a good size point of interest for many people in the region. It would link the Hospital to Metrolink/Amtrak with a one seat ride for those to work and visit. Also I like to suggest to move the Terminal/End of the route stop. From the Van Nuys Train Station to Woodman Ave. As you have Kaiser Hospital. With in walking distance of the Line. And that would attract more rider as well. And If this line is going to be heavy rail. Like the Red Line. I like to suggest looking at extending the Red Line from North Hollywood to Van Nuys. That would really connect the SF Valley to Metro Rail Service.
	Los Angeles	90025	No	2/5/2022	I highly support having a subway/rail system because it's both environmentaly friendly and is in general great to have public transportation. Not every had the time and money to commute with personal cars.
	Sherman Oaks	91403	No	2/5/2022	I strongly support the Sherman Oaks Homeowners Association point of view. If there is money in the budget - the more underground the better. But STC project Alternative 4 is definitely not acceptable.
			No	2/5/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table.
	Bel-Air		No	2/5/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Please understand the tragic changes to our neighborhood that would occur if this should proceed.
			No	2/5/2022	TUNNELING UNDER BEL AIR IS FINE. If they can tunnel under San Francisco Bay, they can tunnel under Bel Air. I don?t see a problem!
			No	2/5/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. 	Los Angeles	90077	No	2/5/2022	We are residents of Bel-Air and strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Our main concern is seismic/geological issues related to the stability of hillsides that are often extremely steep (45-60 deg slopes) and whose soil consists of gravely stone with vegetation that consists largely of grasses and occasional bushes, but without any deep root structure. The hillside in our backyard is so steep one can only crawl up on hands and knees while backsliding on the shifting rubble underneath. The environmental impact has been inadequately studied. In addition, we are extremely concerned about subway ventilation sounds from trains passing underground every few minutes, turning a historic Los Angeles neighborhood into a thoroughfare. These issues have been inadquately studied, and inadequately described to the residents of our neighborhood. Sincerely,

			No	2/5/2022	I am writing to voice my adversity to option 4 of the Metro proposal. We don’t want an above rail train. We don’t want our businesses ruined and people dislocated. I live just off of Sepulveda and we have had to live through the building of the Skirball. And the refitting of the bridge that crosses the 405. I think you could find another way. How about somewhere else than here.
			No	2/5/2022	I am a resident of Bel Air and strongly oppose Metro’s existing alternatives that involve tunneling beneath Bel Air for the Sepulveda Transit Corridor. There are other viable, less expensive, options that do not require tunneling under Bel Air that are not being considered and that should be on the table.
		90034	No	2/5/2022	The monorail is a waste of money and time for something that's incredibly inefficient. I support proposals 4-6
			No	2/5/2022	Please stop studying the ridiculous alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20-40 feet above Sepulveda Boulevard in the Valley. Alternative 4 will destroy Sherman Oaks and other areas in the valley with an un-necessary, ugly, overhead train. I am very supportive of the other alternatives - running underground is much more in line with modern transport systems, does not devalue anyone's neighbourhood (in fact increases value and provides more direct pedestrian access to many businesses, which is not the case for the Alt 4. I am strongly against Alt 4 and will actively campaign and block. I'm a firm believe in public transport and building key infrastructure for the long term, however also a firm believer in taking the path that best ensures the our neighbourhood does not have additional noise and traffic when there are better, viable alternatives.
	Encino	91436	No	2/5/2022	I support Alternative 6, providing mass transit from the Valley to the Westside. Considering we already have 1M commuters coming out of the Valley, the high density developments happening all over the Valley (bringing more residents/commuters to the area), in addition to the amount of $$ that will be spent - this project must provide an ROI that positively impacts the residents in this area.

	Santa Clarita	91390	No	2/5/2022	I suggest that you go with the heavy rail options. They provide the best options in terms of station locations. We need a station at the UCLA campus. I would provide staff, students, and visitors with an easy way to access the campus and hospital systems. The heavy rail options also allow for easier navigation of metro routes. The monorail option is not a good option. Having an ariel line above the 405 is a horrible idea. LA drivers are not the best and having another distraction to many others is not a smart idea. In addition, a people mover from a monorail is not ideal. Simplify the transportation process, that is what people like. I want to go from point A to B. Not from point A to B to C.
	Toluca Lake	91602	No	2/5/2022	This project should 100% be heavy rail as monorail is simply not compatible with the LA Metro system. Option 4 is presumably less expensive but it seems option 5 fully underground is likely the best option for community support.
	Culver City	90230	No	2/5/2022	I strongly support Option 6! all monorail options stop in less-populated, less-accessible areas along the 405. Riders at these stops would have to endure unhealthful air and noise pollution. Worse, the monorail is an unproven major interurban technology (Disneyland doesn't count) and is incompatible with our existing transit infrastructure. Fixing a broken monorail car requires expertise LA Metro just doesn't have. And monorail options 1 and 2 would not stop at UCLA, which is home to many potential riders. Options 4 and 5, while not involving a monorail, offer smaller trains which are incompatible with existing transit infrastructure. Option 6 trains accommodate more passengers and would serve areas of denser population than would options 4 or 5.
	Los Angeles	90077	No	2/5/2022	I am a 2nd generation resident of Bel-Air, and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. My husband and daughter are both in the entertainment business and they do professional recordings, where quiet sound is essential to the quality of the work. Please and thank you.
		90250	No	2/5/2022	For the Sepulveda Transit Corridor, I suggest the Metro adopts Alternative 4 or Alternative 5. I believe that Alternatives 4 and 5 provide the best connection to existing Metro station and lines. Alternatives 4 and 5 also provide the best capacity for increased ridership, as ridership will increase as the Metro expands. (Especially southbound towards LAX where the line would be most convert for me.) The initial cost may be greater than other alternatives, but Alternatives 4 and 5 are worth the initial cost because future expansion will be cheaper and easier. Alternatives 4 and 5 would also avoid construction on the 405 and avoid an increase of traffic or other delays to commuters. I also suggest Alternatives 4 and 5 because I believe that they would provide the best connection to UCLA. A convenient, on-campus connection would allow UCLA students to easily access the Metro without addition hassle of a bus or people mover. Thank you for considering my comments!
			No	2/5/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. These alternatives must be considered. Thank you.
	Santa Monica	90404	No	2/5/2022	Dear Metro Board of Directors: I am writing to urge you to proceed with all deliberate speed in constructing the Sepulveda Transit Corridor Project ("STC"). Connecting this crucial transit line to the rest of the County's growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic, to allow students to travel efficiently to and from school and workers to and from their jobs and still participate fully in raising their children and enjoying their communities, and to reduce our region's carbon footprint meaningfully. While I do not have a detailed proposal regarding a preferred route or modality, I would like to offer some considerations. First, the earliest possible project completion should be a top priority, and if that means an above-ground monorail, it should be preferred. Second, the STC should seamlessly connect to as many existing and new lines as possible, including the North Valley light rail line, the Orange Line, the Purple Line, and the Expo Line. Any increased burden imposed upon transit users (such as nearby stops but not co-terminus, shuttles, changing modalities, etc.) will reduce ridership unnecessarily. Third, the STC should include a stop adjacent to UCLA as possible, given its inevitable high usage. It should also be a priority to include stops within the Sepulveda Corridor, such as the Skirball and the Getty Center, which are important cultural landmarks that would otherwise remain difficult to reach from both directions. Finally, the final alignment should strive to run through as many of the most densely-populated neighborhoods along the route as possible, which would maximize ridership. I would also like to stress that construction of the STC should be conducted in a manner that minimizes to the fullest extent possible any displacement of communities currently residing along the proposed route. It should go without saying that it is counter-productive to displace the very people who are most likely to ride a new rail line when building that line. Thus, the Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route after mapping specific locations of tenants at risk of displacement due to rising rents, mitigation measures are studied and implemented consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. Thank you for your consideration of these issues.

	Los Angeles	90024	No	2/6/2022	To the Esteemed Members of the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3. Thank you for your time and consideration. Sincerely,
	Los Angeles	90011	No	2/6/2022	PLEASE build this project as HEAVY RAIL. It's one of the most inoperable transit projects in the world right now and we need to do it right. Yes, the monorail proposal looks to be more affordable, but it will underserve riders and also end up costing far more per passenger (once BYD's artificial deflation of their price is exposed as the farce it is). Metro riders and our planet deserve heavy rail.
	Los Angeles	90024	No	2/6/2022	Hello! I'm sure you've heard from UCLA students before about this project, but as a freshman at UCLA, I'd like to add another voice of support for all of the heavy rail options currently being considered. It's a simple fact that very few students living on campus, especially freshman like me, bring a car with them to campus. Although we have some options available for transportation across LA, these options (public buses, micro mobility, Uber, etc.) often have an unnecessarily high cost of time or money to us. What students would benefit from more than anything is flexibility and ease of transit, meaning not having to worry about the cost of travel every time we want to leave Westwood. A heavy rail subway with an on-campus metro station and the capacity to handle our very high demand of untapped ridership would provide exactly the kind of flexibility that we need. I've seen all too many students not even consider riding public transit due to the inconvenience of current bus options. But increased ridership is exactly what LA transit needs to grow and become the best it can be. With the implementation of heavy rail through the Sepulveda transit corridor, students will have all of Los Angeles opened up to them, which will also cut carbon emissions from students living off-campus, who currently need to drive to get almost anywhere quickly. Although I likely will have graduated and moved on from UCLA by the time this project is completed, I know that in the long run, the capacity, reliability, convenience, and speed of heavy rail will benefit students, the local economy, and the future of Metro more than any other options being officially considered. Heavy rail has proven its value time and time again in transit projects around the globe, and I know it will do the same for students here at UCLA and across Los Angeles.
	Los Angeles	90025	No	2/6/2022	I prefer option #5. Heavy rail, underground, with stops at all major locations, and en route to lax. Thanks!
			No	2/6/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table.
			No	2/6/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. More important than the Metro nonsense is the suggestion that we will not be able to build our houses again after the 'animal protection initiative' is implemented. The Metro is a stupid idea but after we are forbidden to rebuild our houses, the Metro will make no difference. We need to recall our council member who is sponsoring this bill. If any of us are left, the Metro is a bad idea. But Koretz is going to make our property worth nothing so the Metro, which will be completed in the next 100 years like the bullet train, will be too late for most of us.

			No	2/6/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Tunneling involves open ended cost as the subsoil conditions are not knowable in advance and will inevitably run way over. A great deal for the contractors and an unnecessary risk for the city. Sent from my iPhone
	Van Nuys	91406	No	2/6/2022	What I really like is the 5th alternative for very personal reasons: it would provide a station very close by (Sherman Way). I could walk to the station, and a station to my workplace UCLA. It would completely eliminate my need to use a car. What I wish is a more walkable city. Right now, it is more and more dangerous to walk around my neighborhood. Many cars do not respect red lights making it hazardous to cross Sepulveda. The pandemic has made it worth. Also, I would like to see if the plans include more vegetation: we need more indigenous trees to help with the pollution in the Valley, and bring shade during the hot months. The train would be electrical: any plan on using as much as possible renewable energy (i.e solar energy). If yes, how would that be integrated into the design of the project? I am very concerned about the noise impact on the neighborhood: would an aerial train be loud? I'm also concerned about parking: many people would drive to a station and park their car. Currently in the North Hollywood Station, the parking lot is just too small. My family and I will be directly impacted by the construction work. What are the steps taken to minimize the impact of construction on the neighborhood? How would air pollution from the construction be controlled? How long will the construction be? Will we be kept informed of the stages and progress so we can be prepared to change our habits if need be? Thank you for reading my comments.
	LAKEWOOD	90713	No	2/6/2022	What I suggest is selecting one of the heavy rail options. The monorail alternatives offer little in the way of connections to other lines and will result in a waste of time and money.
	Sherman Oaks	91403	No	2/6/2022	As a resident of Sherman Oaks, we have huge concern and worry over what you are doing. Our home is right at Sepulveda and Valley Vista Blvd's, the Alternative # 1 for the metro project to the Westside is the only possible answer. To dislocate people from their homes and start a massive construction project to remove buildings and re arranging people's lives is insanity and expensive. The answer is staring you in the face, do it quicker, do it cheaper and do it before the next turn of the Century. The traffic will ease and flow much better not to mention the air quality. Los Angeles is known for being a trend setting City, but in this case we are so far behind other metropolitan cities in the World, it's embarrassing and not a priority and should be. This is about making progress and advancing into the 21st Century. We are still in the "I won't get out of my car stage" once removed from the horse and buggy when those street cars came along and actually were wonderful. Sadly, they got rid of those and replaced the mode of transportation with the automobile, we are known as the car capital now, but not so good for our City. Now it's Metro's chance to take the lead and evolve into a smarter and more efficient and environmentally responsible community that helps everyone get around this huge sprawling city in a better faster and cleaner way. Alternative 1 without a doubt. Just get it done!
	Los Angeles	90064	No	2/6/2022	What I like is Alternatives 5 or 6 with a preference for 5 since heavy rail, underground causes the least amount of disturbance for nearby communities and traffic before and after construction as well as providing critical stops at locations like UCLA Gateway Plaza with frequent, high capacity trains that Metro SHOULD EXPECT to max out at peak hours. What I suggest is dropping the monorail options altogether because the station locations, the routes, the train capacities and frequencies of service are not up to the standards Metro should be aiming for and do not meet the needs of the public, including myself. For further comment, I point to this analysis of the Sepulveda Transit Corridor: https://www.youtube.com/watch?v=xJdbCgVkH3w&t=1s
			No	2/6/2022	First and foremost, the monorail options are entirely unacceptable for the Sepulveda Pass. The train routes above ground and in the middle of the of the 405 causes all sorts of health issues and poor rider experience. Metro only needs to ask the frequent riders on the C Line to ascertain how they feel about being in the middle of a freeway. Not to mention the years of construction in one of the most traffic clogged freeways in the entire country, exacerbating those problems for drivers and the blow back that will come from that on both Metro and City Hall in the foreseeable future. Even after completion, the monorail options' many poor choice of station locations and underwhelming train capacity and frequency will leave long lasting stains on the credibility of Metro, City Hall and those who voted for the monorail alternatives. By comparison, the heavy rail, underground Alternatives 5 and 6 cause little to no disturbance to traffic or the communities it will serve. The trains carry a high capacity and frequency for riders with convenient station locations such as the crucial UCLA Gateway Plaza stop, which Metro SHOULD EXPECT to hit max capacity at peak hours. For further perspective, I point to this analysis of the Sepulveda Transit Corridor: https://www.youtube.com/watch?v=xJdbCgVkH3w&t=1s
		90005	No	2/6/2022	I strongly prefer Alternative 5 or Alternative 6. Sophisticated public transit systems all over the world utilize underground heavy rail. We should strive to emulate these well-planned systems. A monorail is NOT what we need or want in Los Angeles. The monorail plans are inferior in almost every way and are not suited to Los Angeles' needs in the short-, medium-, or long-term. WE DO NOT WANT MONORAIL OR BYD. DO NOT WASTE TAXPAYER MONEY ON A MONORAIL.
	Los Angeles	90049	No	2/6/2022	I have lived in the Brentwood Glen for nearly 20 years and on the Westside for most of my 70 years. Alternative 5 & 6 make sense and the rest don't. UCLA makes sense and the rest is frivolity. We just went through the remaking of this Freeway for 5 years and here we go again. Please just don't ruin this side of town so the developers can build to Lancaster. How about have the Construction Companies bus their people in in clean vans? This doesn't make sense…….

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
			No	2/6/2022	Dear Metro, I am writing to express my support for the heavy rail alternatives (4-6) and to urge Metro to reject the monorail alternatives (1-3) for the Sepulveda Line Project. More specifically I believe that Alternatives 4 or 5 would be the best for Los Angeles, a position explained in the following paragraph. To start, monorail in general is a bad mode to consider for the Sepulveda Line Project because of the huge expense of tunneling underground, which would be a requisite for a station on the UCLA campus. Thus, all of the monorail alternatives proposed naturally hug the 405 almost the entire way in order to stay elevated. Having most or all stations in the middle of or adjacent to one of the busiest stretches of freeway in the country would subject riders to noise and pollution, and stations along the 405 reduce connectivity to other lines such as the G, D, and E lines. Because one of the main priorities of this project is to provide a north south link to connect the various east west lines in the Valley and on the Westside, any alternative which does not make transfers as seamless and effortless as possible will reduce overall ridership and utility of the line. In addition, stations in the middle of freeways, far from places people want to go and overall unpleasant places (as my experience taking the L line from Allen station has shown me first hand), will further depress ridership. Lastly, the monorail alternatives all take the most time to make the trip from the Van Nuys metrolink station to the E line, thus reducing time competitiveness with driving. The heavy rail alternatives on the other hand, will provide the capacity, speed, and connectivity needed for such an important line in the Metro system. Of the three heavy rail alternatives, I believe Alternatives 4 & 5 to be the best because of their use of automated metro technology, which would allow shorter headways than manually operated metros, thus allowing a higher total capacity if/when the line becomes heavily used. While the Sepulveda Line is projected to be very well utilized in the first phase, once the line extends to LAX, ridership will increase further, and the line will need to be able to cope with that demand. Only Alternatives 4 & 5 will be suited to meet that demand in my opinion and either would result in a transit line that a world class city like Los Angeles deserves. Thus, for all the reasons stated above, I urge Metro to reject alternatives 1-3 and to choose either alternative 4 or 5 for the Sepulveda Line Project.
	Los Angeles	90025	No	2/7/2022	Strongly in favor of option 6. Strongly against options 1, 2, and 3 — these options do not work because they stop in less-populated, less-accessible areas along the 405. Riders at these stops would have to endure unhealthful air and noise pollution. further, the monorail is an unproven major interurban technology (Disneyland doesn't count) and is incompatible with our existing transit infrastructure. Fixing a broken monorail car requires expertise LA Metro just doesn't have. And monorail options 1 and 2 would not stop at UCLA, which is home to many potential riders.
	Los Angeles	90069	No	2/7/2022	I suggest selecting alternatives 4, 5, or 6. Heavy rail would be great for connecting with other metro rail lines
	Reseda	91335	No	2/7/2022	I believe this project will drastically improve the traffic congestion many Angelinos have grown to tolerate for decades commuting from the valley to the west side. Public transportation offers something for everyone to benefit from to get around the city in a timely and efficient manner. I think this project will be important for the future of the city and developing our public transport needs in LA.
		91345	No	2/7/2022	I would like to state my preferences for this project. Alternative 4 is the very best option because this option transports the most people based upon prior information given by Metro and it's cost is very good compared to the other Heavy Rail options. Fact is that the intersection of Van Nuys Blvd and Ventura Blvd is not a major employment center. The intersection of Sepulveda Blvd and Ventura Blvd has major office buildings, a Mall, a hotel and other significant employment centers nearby. Alternative 5 is my next favorite option if Metro can find the money to underground the line beneath or around Sepulveda. The Monorail options are terrible. The Gold Line trains in the middle of the freeway is terrible so please don't build anymore lines like this anymore. I suggest that Metro should do the best thing for the city/region and not pursue a Monorail system or build a system along Van Nuys Blvd because it's a bad alignment. I like either Alternative 4 or 5. Thank you
	Pasadena	91103	No	2/7/2022	A monorail aligned with the 405 freeway is unappealing for commuters that will be forced to wait outside in smoggy and loud conditions and then will be forced to inconveniently transfer to commute to UCLA. It will also limit future options such as extending the train line to Culver City, the Expo Line, and LAX. An underground system with comfortable stations will attract more ridership and be a symbol of our status as a world-class city. I believe that Los Angeles will benefit the most from building a transit system that covers as large of an area as possible, which is why I support option 5 the most. It will allow more people to be closer to trains and give them the option of public transit to commute.
	Los Angeles	90065	No	2/7/2022	Hi I wanted to share my support for alternative 5 for the Sepulveda route. I am strongly in favor of heavy rail transit lines. I ride the metro on the gold line area where I live and I worked for Cubic Metro for years riding the train rails. Wanted to voice my opinion :)
			No	2/7/2022	I am a resident of Bel-Air and I support Metro's existing alternatives that involve tunneling. Creating a transit system that is for the vast majority of people sometimes requires sacrifice. If Metro needs some properties in Bel Air and is prepared to pay for them, I support the effort to connect the Valley to UCLA and the Purple Line stop in Westwood.
	Los Angeles	90065	No	2/7/2022	Hello. I would like to suggest alternative five, the heavy rail option.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
		90049	No	2/7/2022	Dear Metro Board of Directors:I am writing to urge you to proceed with all deliberate speed in the construction of the Sepulveda Transit Corridor Project (“STC”). Connecting this crucial transit line to the rest of the County’s growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic. It would allow students to travel efficiently to and from school and workers to and from their jobs, while still being able to participate fully in raising their children and enjoying their communities. It would also reduce our region’s carbon footprint meaningfully.I do not have a detailed proposal regarding a preferred route or modality, but would like to offer some considerations. First, the earliest possible project completion should be a top priority and if that means an above-ground monorail, then it should be preferred. Second, the STC should seamlessly connect to as many existing and new lines as possible, including the North Valley light rail line, the Orange Line, the Purple Line and the Expo Line. Every increased burden imposed upon transit users (such as stops that are nearby but not co-terminus, shuttles, changing modalities, etc.) would reduce ridership unnecessarily.Third, the STC should include a stop at UCLA, if at all possible, given its inevitable high usage. It should also be a priority to include stops within the Sepulveda Corridor, such as at the Skirball Museum and the Getty Center, which are important cultural landmarks that would otherwise remain difficult to reach from both directions. Finally, the final alignment should strive to run through as many of the most densely-populated neighborhoods along the route as possible, which would maximize ridership.I would also like to stress that construction of the STC should be conducted in a manner that minimizes to the fullest extent possible any displacement of communities currently residing along the proposed route. It should go without saying that it is counter-productive to displace the very people who are most likely to ride a new rail line when building that line.Thus, the Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to rising rents, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA.Thank you for your consideration of these issues.

			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Please reconsider using more appropriate location for this project, such as the existing transportation corridor, 405 Freeway. Boring under a residential neighborhood is likely the most expensive option available, to consider. All the necessary easements required for ventilation, access ports, along extremely narrow residential streets, poses an unacceptable life safety risk, in event of fires, earthquake, etc. emergency equipment going up the winding streets, just as all local residents are fleeing, is an avoidable disaster. Sincerely
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. After reading the available material it is abundantly clear that the solution is the 405 corridor at a fraction of the time and cost and with minimum environmental damage or disastrous harm to the Bel-Air hills, not to mention the risk of substantial and ongoing harm to private property. Any option other then 405 will result in endless costly litigation that Metro will inevitably lose. Sincerely,
			No	2/7/2022	Dear Metro Board, I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Please help the Bel-Air community understand why the LA Skyrail Express Monorail is not taking the lead over Betchel's Subway tunneling. The LA Skyrail is less expensive than the subway, why triple costs to the tax payers of California. In addition, digging an underground tunnel along an unstable corridor does not protect our community. It is unfair that you hold our community in your hands and do not even take the time to listen to the residents. Sincerely,
	Los Angeles	90077	No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,

			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. I will personally dedicate all time and financial resources to make sure NO subway is built. It is unexplainable to me how you could justify this unnecessary time and expense if you choose a subway. We need fiscally responsible solutions and we need the transit now. My community feels the same. The fact that you are wasting our taxpayer money and your time on investigating subways is shameful--you should all be replaced. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. I think a monorail along the 405 and/or even Sepulveda Boulevard would be more efficient and less costly means of connecting the city to the valley. The concept is tunneling under an entire community with the expense, disruption, creation of soil and ground instability in addition to many other factors make this a far less feasible and much more expensive process. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Please consider constructing a monorail down the 405 which would be more cost effective, practical and time efficient. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. It is not safe for our community and would greatly impact our community. We already deal with fires each year and don't need to worry about another major issue in the area. There are GREAT alternatives like the above-ground alternatives that won't impact our community or anyone else. Please use those alternatives; it only makes sense. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. A monorail, above ground seems way more practical and environmentally sound. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely, Best,
			No	2/7/2022	I am a resident of Bel-Air and have lived on Stone Canyon for 20 years. I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
	Los Angeles	90077	No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. You must NOT tunnel beneath Bel-Air. We will fight this any way possible. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly approve Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. What is the precise underground route under canyons or hills? Sincerely,
	Los Angeles	90077	No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,

			No	2/7/2022	To The Metro Executive Team, We are aware of the six alternate plans that are proposed for the Metro for the Sepulveda Transit Corridor. We find it extraordinarily surprising that you would consider any option that tunnels underground when two good above ground options are available. We are opposed to the existing alternatives that involve any tunneling anywhere in and under the Santa Monica Mountains or the hills of Westwood and Bel-Air. The above ground options have so many more positive aspects to them. They include: * So much more pleasant to ride with the pretty views of the mountains and ocean in the distance heading southbound. North bound is the view of the expansive valley. And, on a clear day the views both ways are amazing. * Think of how fun the monorail is at Disneyland. So much more to see and enjoy. Think tourism. * Faster to be completed and ready to use so much earlier. * A lot less unknowns to hold up the project. * Less costly for the tax payer, which as a taxpayer, we HIGHLY support. Tunneling, when not necessary is fiscally irresponsible!! * No potentially nasty and unsafe underground stations. * Catering to a much wider demographic by going straight to Wilshire Blvd. * The optics of having a stop at UCLA could be perceived that they are special. Why do they get a special stop? * The impact on the stability of the mountains would be significantly less. We live and work in the Westwood area and strongly oppose any choices that involve tunneling between Van Nuys and Westwood. We hope that you will do the responsible thing and choose above ground. Sincerely
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Please take this into consideration. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I STRONGLY oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Why would you possibly want to tunnel when you could have an above ground metro line running parallel to the freeway?!? I am interested in your financial reasoning for choosing tunneling and who won the bid for this project. Please forward that information to me. Thank you. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
	Los Angeles	90077	No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. The monorail option along the 405 seems much more reasonable - NO tunneling underground and this option can be completed much more quickly than tunneling. Is an underground transportation system in a city that lies on the Sant Andreas fault line really a good idea? NO! Once again, I STRONGLY OPPOSE Metro?s existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
	Los Angeles	90049	No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are far better options available. Sincerely,

			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.We support a monorail from Van Nuys to Wilshire with either an electric bus or a people mover to UCLA. From a taxpayer standpoint, wouldn't this make so much sense?Sincerely
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. A train that runs above the 405 fwy seems to be a much more efficient and less costly alternative. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
	10545 Fontanelle way		No	2/7/2022	A resident of Bel air for more than 50 years, I strongly oppose this transit tunneling project, I have spent my life in development and construction and this is a nightmare just waiting to happen hopefully common sense will prevail. Sent from my iPhone
			No	2/7/2022	Sepulveda Transit Corridor Project One Gateway Plaza, MS 99-22-6 Los Angeles CA 90012 Attention: Peter Carter, PM LA Metro RE: Sepulveda Transit Corridor Project - West LA - Options 1-6 I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives (Options 3-6) that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Please be advised we reside full time at the address noted above which is located in Bel Air community. Due to lack of clear and concise information on routes 3-6 as presented on your virtual information sessions/online materials and u tube presentations it is difficult to ascertain how specifically our property would be impacted by the above noted project alternatives and specifically alternatives 3-6. Needless to say these alternatives clearly could have massive negative impacts to the solely residential neighborhood of Bel Air. Some of our concerns with the process and the project would be summarized as follows: 1. As noted above the materials presented to date really have a lack of detail and lack impactful information to make anything beyond general comments. It would have been helpful to have such further information such as detailed route maps-superimposed on aerials to see how residents could be impacted/location of surface construction and permanent structures/information on high level costs on each alternatives/depth of underground structures/information on noise/vibrations/emissions etc.. 2. Lack of outreach to the community/residents which could be directly impacted by this project by your organization. Have to date received no information directly from LA Metro either via email/mail etc. on the project or the project approval process. 3. Virtual sessions are too late in the process. 4. It seems odd that LA Metro would award a contract of 69M (of LA residents tax dollars) to the STCP Proponents so they can advance their proposals and self interests. This seems to be a clear conflict of interest. Of course Bechtel and its other private equity partners have a vested self interest in a larger cost/tunnel proposal. Has there been any funding of similar nature/magnitude for residential associations to advance their concerns/interests in the project? 5. Options appear to have a very significant and negative impact on the residential aspects of the Bel Air community and potential to negatively impact property values in the area. 6. Options 3-6 appear to be several billions of dollars more expensive currently than options 1-2 without factoring massive recent increases in worldwide and NA construction costs. This is especially impactful on the tax paying residents of Los Angeles and CA. 7. Concerning that LA Metro has not been more focused on routes that would use the existing high transport/commercial corridors that lack residents who would be impacted. Ie heavy rail under 405 corridor. Look forward to receiving more information/outreach from LA Metro. I can be contacted at the above noted number/address or via return email. Thank you. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. You?re solution you destroy our homes, roads & community is pure madness! We vehemently oppose any metro construction under neath our homes! Sincerely, A very concerned bel air resident
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Bad for the environment. Opting for a monorail down the 405 verses a subway in our hills will have far less negative environmental impact and be far safer for those riding the transit should a fire or earthquake occur. Improving mass transit from the valley is a worthy objective-but it must be done responsibly. A subway under Bel-Air is not the answer. Rather, a monorail down the 405 will service far more people, cost half as much, and be completed in 1/3 the time. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. This truly doesn?t make sense. Thank you for your consideration. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I STRONGLY oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely
			No	2/7/2022	Feb 7, 2022 To whom it may concern: I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,

			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Stop wasting taxpayers dollars on white elephant projects. A monorail down the 405 is obviously a better use of our dollars. Sincerely,
	Bel Air	90077	No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
	Los Angeles	90077	No	2/7/2022	I have been a resident of Bel-Air for almost 10 years. It was a lifelong goal to eventually live here, in peace and beauty? and in quiet. Additionally, we have struggled with getting Insurance as we?re already considered a High Risk Zone. I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. This would be TERRIBLE for our residents, and potentially damaging beyond measure to the neighborhood. The plan for 405-ABOVE-GROUND improvements is more safe, less intrusive, less expensive, and less dangerous? Seems like the choice should be obvious. But if not, writing to you just in case! Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,

			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.This is wrong to do this to residents who pay high property taxes. Bel air is a special place that draws tourism and wealth to the city. The city benefits in many ways. Losing this will cause problems for the city funds and future. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. This is an ill advised and intrusive approach to a problem that can be solved more effectively in other ways. Sincerely,
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. During this volatile time with climate issues and fragile environmental conditions, your team should be considering a less severe and overly complicated solution for public transportation that has a more predictable and wise financial plan such as the two good options below. Any plan to use project teams, lobbyists, engineers, contractors and sub-contractors to build an underground tunnel underneath Bel-Air could possibly have intense IRS investigations, environmental groups being notified, anti-IOC groups engaged, and community outrage and protest. It is assumed your group can guarantee intense investigations during the entire time of construction from various groups which will be called to ensure fiscal responsibilities are met every step of the way and climate/environmental standards are adhered to. We believe, as residents of Bel-Air, that the below two options are the obvious and superior options for public transit. It is to be expected that there will be intense scrutiny, skepticism, and publicity from various public interest groups if your group chooses an invasive and environmentally hazardous option thereby forgoing all obvious and logical public-land use options such as the two options below. *Alternative 1:* Above ground monorail on the 405 from Van Nuys to Wilshire with electric bus connection to UCLA (Acceptable) *Alternative 2:* Above ground monorail on the 405 from Van Nuys to Wilshire with people mover connection to UCLA. (Acceptable) Sincerely
	Encino	91316	No	2/7/2022	This would significantly help not only traffic for commuters but also help the air pollution which is important for everyone in the city. As someone who lives in the valley and spends over an hour in traffic, it would be amazing to see this project become a reality.
	Panorama City	91402	No	2/7/2022	As a constituent of the San Fernando Valley, and someone who commutes to the UCLA campus on a weekly basis, I understand and see the great purpose the Sepulveda Transit Corridor would make not only for my benefit, but for the benefit of the greater community in the San Fernando Valley who commutes to work or learn. What I would like is quicker and more accessible ways to get to campus.
	Santa Monica	90405	No	2/7/2022	we don't want an inefficient, unhealthful, untested monorail system crossing the valley and the city. Please support Option 6 for Sepulveda Transit Corridor project. I strongly reject options 1,2 and 3.
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.

			No	2/7/2022	I am a resident of Bel-Air and I strongly approve Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. What is the precise underground route under canyons or hills?
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Tunneling would be not only disruptive but destabilizing on many different levels environmentally, politically, and socially. It is difficult to believe smart, trusted officials would entertain this option.
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
			No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Tunneling is an extremely costly and environmentally irresponsible approach that disrupts our community. Please refrain from it and choose less costly and agreeable alternatives.
	Los Angeles	90077	No	2/7/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
	Sherman Oaks	91403	No	2/7/2022	I think the whole idea putting money into mass transit is a waste - infrastructure funding should go towards electric vehicle infrastructure instead.
	Van Nuys	91406	No	2/7/2022	I don't think anyone is truly addressing the concerns of the tens of thousands of RENTERS that live on Sepulveda from the Sherman Oaks to Roscoe, that will be greatly affected by an above ground transit. It will destroy their quality of life, the noise alone.... and these are mainly low income housing units.
	Playa Vista	90094	No	2/7/2022	Alternative 6 with automated driving is the best option. Every urban planner knows that a monorail is a horrible decision.
	Los Angeles	90014	No	2/7/2022	The entire route should be from California State University Northridge through Van Nuys Amtrak/Metrolink Station under UCLA and directly to LAX with J-hook east to downtown Inglewood and SOFI Stadium. There should definitely be a station along Van Nuys Blvd situated where the Superior Court/Civic Buildings are.
	Sierra Madre	91024	No	2/7/2022	As a Southern California native for over 60 years, and a driver for over 40 of those years, I've grown up with the burgeoning, now exploding, traffic in the Los Angeles area. Every new LA Metro rail line that is completed is greeted by applause from me because these lines provide more and more opportunities to leave my car and the commuting headache that goes with it at home. I have avoided the 405 corridor from Wilshire to the 101 freeway east like the plague for decades; the reduced traffic flow window (9 p.m.-ish to 4 a.m.-ish) is usually outside the bounds of my travel times when I venture to the west side; Sepulveda Blvd. is usually a crush at almost any time of the day (I frequently drove an ailing friend to UCLA from Sherman Oaks for chemo treatments; I enjoyed the time and conversation with him, but it was a LOT of time, each way...). When I first heard that you were considering options for the Sepulveda corridor, my first reaction was "what took you so long???!" It has often been posited that good things come to those who wait, and this is a better-late-than-never example of that adage. When I first heard that one of the options was a monorail right down the center of the freeway, my heart skipped a beat. Not only can I easily and happily envision this, I am so excited at the prospect of whizzing down the freeway median, looking down on those poor suckers who continue to brave the gnarl of traffic on the freeway when they could be flying in the sky, ha-ha-ha! Monorail is a proven technology, having been utilized very successfully as a reliable transit mode in Japan for 60 years (as old as me!) and it would represent a big, bold step into the future for the Los Angeles area, one that's so long overdue, and it sure beats tunneling through the mountains. I'd rather have the spectacular view that a monorail would afford than be buried under the earth. Monorail is clean and green and lean, and I just LOVE this idea!
	Inglewood	90302	No	2/7/2022	Pleaseuse an existing rail gauge. Do not create a break of gauge Yes the vehicles could be different ie longer. But you should choose either heaven rail (RED LINE) yup red line. or the existing light rail loading gauge. Millions of people will use this line if built proper. Do not create a tire train or monorail.
	Sherman Oaks	91403	No	2/7/2022	Mostly I am concerned about the noise. When people visit from L.A., Indiana, New York... they always say "IT IS SO QUIET HERE". "I Can't believe you are in the city... so peaceful." I AM CONCERNED THAT THERE WILL BE CONSTANT CONTINUING NOISE FROM THE TRANSIT 24 HOURS A DAY.
	Santa Monica	90403	No	2/7/2022	I vote for Alternative 2 with Monorails above ground ... not underground We don't need more disruptive underground construction.. thx
	Lancaster	93536	No	2/7/2022	I am a commercial real estate advisor and broker in Los Angeles. I use public transportation throughout the world and I am happy to see that you are proceeding with the Sepulveda Corridor Project. I was on the call where you discussed the six options. I understand that an under-ground option gives better connectivity to Westwood and UCLA but I have to believe one of the monorail options would be much smoother to permit, design and build. Tunneling is a tough and expensive endeavor and I think the Bel Air and wealthy communities have a good argument not to tunnel where earthquakes are normal. A monorail could also be more attractive and visible. I am stuck on the 405 pretty regularly and would like to use this system myself. I regularly use Metrolink from Palmdale or Lancaster to DTLA; regularly use the Gold, Exposition Line, Red and Purple lines. I expect to use the Crenshaw Line for LAX soon and I am interested in investing along the Green Line. I sold a property in Bellflower a few years ago and there is a new line stopping at that property (DTLA to Artesia). I think this Sepulveda Corridor should extend around LA and Orange County as a "Ring Road" such as the Yamanote Line in Tokyo. In closing, I am in favor of this projects whatever its form, but I think a monorail makes most sense. I was in high school during the '84 Olympics and I think this project will really be a lifeblood of the city. I dread driving to the westside and would like to see a well-planned transit system.
	Santa Monica	90403	No	2/7/2022	I like Alternative 2 and Alternative 3, which connect UCLA to the valley. It's very hard to recruit to UCLA when our faculty want to live in the more affordable Valley but face a long and tiring commute.
	Chatsworth	91311	No	2/7/2022	What I suggest is the elevated monorail crossing of the pass; it should less expensive and faster to build than the underground alternatives. It would also be a constant marketing plus. One of the stations should be at the Fly-a-Way station in Van Nuys with possible future extension to the North.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
		91401	No	2/7/2022	First of all, it is fantastic that a rail line is being built via the Sepulveda Pass. I've had to commute across the Santa Monica Mountains for years, and it is not an easy commute by transit. This would make life significantly easier for anyone who already depends on transit to get around the city (like me, on a $20/month MTA student pass at the time), and everyone whose commutes would be faster using the Sepulveda Transit Corridor project than by driving. A few things that I think are very important: 1) We can't let the interests of the few (Bel Air mansion owners who are currently lawyering up to fight tunnels under their properties; property owners in the valley worried about elevated train tracks) outweigh the massive benefit this project would have for 100s of thousands of commuters, if it is planned correctly (i.e., to serve as the most useful line for riders) 2) Modern elevated tracks are not a significant nuisance. I've lived near several old elevated tracks for years, and even then I'd rather have the transit option rather than a subway line that avoids dense areas (and is therefore less useful for riders). I've been to cities with modern elevated metro tracks (Taiwan, Vienna, Beijing), and I'm always struck by how quiet they can be if designed correctly. Since the alternative with the elevated track over Sepulveda (Alt 4) with more stations in the valley is expected to have more ridership for less money, it should be the one chosen. It's also the best for network connectivity, in that it adds more destinations to the Metro network, which Alt 6 does not. 3) Frequency, especially for off-peak riders (who are more likely to be transit-dependent and underserved by existing city services!) is freedom for riders. Trains should come frequently all day, and into the late evenings and early mornings, as is common in modern automated systems (such as the Copenhagen Metro or Vancouver's Skytrain). I would heavily prioritize a system with smaller stations and shorter trains that arrive more frequently, over a system with giant stations, large trains, where trains only come every 10-20 minutes (like is often the case with the B/D / former Red/Purple Lines). This would also allow for smaller platforms despite serving more riders, which saves costs! Alt 4-5, with 2.5 minute headways (but shorter trains) would therefore be logical to me. 4) I would like to strongly voice disapproval to Alts 1 and 2. Transit in a freeway corridor will never be as useful as transit that actually serves destinations people are trying to travel to / from. Not serving the core of Westwood takes away one of the largest opportunities to reduce travel times for system riders that this project could offer. Stations by freeways will expose riders to particulate matter and noise pollution. Following the meandering route of the 405 adds travel time. Monorails _can_ be useful in certain situations , but given the existence of vastly superior alternatives (4-5 in particular), the monorail alternatives appear to be solutions in search of a problem. In short, my ranking of alternatives would be 1) Alt 4 2) Alt 5 3) (with a gap) Alt 6 and Alts 1-3 should be removed from further study. Thank you for your work on this project. I greatly look forward to one day riding it. PS: With Alts 4-5 perhaps someday the East SFV transit project can be extended to Sepulveda/Ventura via Van Nuys and Ventura Blvds, to provide connectivity to the westside for riders south of the G / former Orange Line
	Los Angeles	90016	No	2/7/2022	Going from the westside to the Valley would be huge---I have friends who live in the valley and it basically feels like they are on the moon unless we choose to drive. A UCLA stop is a necessity as well as that is a huge campus with lots of students and lots of people who work there.
	North Hollywood	91606	No	2/7/2022	This project is a long time coming and needs to be completed as soon as possible! For the monorail or heavy rail line, I don't know which one is cheaper but I vote for the one that can be built fastest, and can travel faster. I support heavy rail will travel faster but digging tunnels will take a much longer time. If so, I support heavy rail because more people can be transported that way. And driverless is the way to go! Alternative 6 would be my top choice. I support the ExpressLanes as well.
	Sherman Oaks	91403	No	2/7/2022	I'm very skeptical about the project. If it will be build with proposed solution, it will destroy life and dramatically decrease property values of communities it passing through. We have enough from people looking from cheap solutions. In the end of the day the solutions are not cheap and not effective. Let's talk about I-405 Sepulveda Pass improvement project: it did take long time, cost 1.6 billion dollars and does not improve traffic situation at all! The solution I can see- tunnel. The solution successfully implemented in number of cities around the world.
		91406	No	2/7/2022	Please DO NOT proceed with the above ground, heavy rail. This will ruin the neighborhood and is prejudice against the lower-income neighborhoods. We should have a below ground mass transit - not a poorly thought out, noisy above ground rail line that will cause congestion on an already-busy street. It should increase property values - not lower them. above ground heavy rail is not the solution!
			No	2/7/2022	I live in Bel Air, and want to express my opposition to the current plans being considered for tunneling under our community. First of all, this hardly seems like the most cost effective proposal given some of the other alternatives. While it may well shorten the route, it seems likely that the cost of tunneling through these hills and mountains would in no way be cost effective. Secondly, I live in an area where construction is constantly ongoing. There hasn't been a time in the twenty plus years that I have lived in the Stone Canyon area that there weren't several major development projects going on simultaneously. Add on top of that DWP and cable company construction which occurs consistently, and the ability to get anywhere is severely compromised. We have one road out. There have been times when I, and the people who live around me, cannot move an inch for over 30 minutes. Ordinarily that is ridiculous, but what happens if there were a serious medical emergency and no one could drive out, or an ambulance (or a firetruck!) could not get in. Would Metro be willing to stand a wrongful death lawsuit? Would anyone at Metro have any moral concern about that? I would imagine that tunneling is mostly going to occur at either end, but I am sure that there must be quite a bit of work that needs to be done along the tunnel route. The traffic caused by that work would be unbearable. I love the Metro system. I went downtown on the Expo line just a week ago. I want that line to come over from the Valley and it would be cool to drive into Westwood, park, and use a people mover or a shuttle to get to the stop at the VA. Don't spend the money to bore through mountains when there are better alternatives.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	SHERMAN OAKS	91403	No	2/7/2022	Hi! I would prefer this train to underground. We live close to the freeway and having an above ground train will be an eyesore, unknown air problems, noise pollution, and destroy home values. Are you setting aside money to compensate home owners for that lose of value? I took the time buying my house 8 years ago to call your department and they told me that an above ground was not feasible engineering wise and now here we are 8 years later and you are proposing that very thing. With that level of accountability, I can only guess how far over schedule you will go on building it and how much more of an eyesore it will be than what you claim. I love the idea of providing transit, but underground is the only way we will favor it. Thank you for your time!
	Culver City	90232	No	2/7/2022	We need to do everything we can to reduce car use and provide alternate options. Most ideal would be a rail line, which should be as fast and reliable as possible. Despite living and working on the Westside, I rarely go to the San Fernando valley because I don't want to deal with the 405. That would change instantenously the moment a rail line was available.
	Sherman Oaks	91403	No	2/7/2022	I prefer the monorail concepts, favoring Alternatives 1&2. I dislike Alternatives 3&4, since they provide unequal implementation between Sherman Oaks and Bel Air. I very much dislike Alternative 6, I think Van Nuys and Ventura is a terrible place to put a station.
		90230	No	2/7/2022	Please commit to increasing public transit access on this rail line. Investment in this will increase ridership.
	Los Angeles	90049	No	2/7/2022	I strongly support the underground solution for the Rail line from the Valley to UCLA and do not support the light rail down the middle of the 405 the freeway.
		90277	No	2/7/2022	I have spent many hours as a lay person reading and understanding the proposed project alternatives and the trade offs and benefits involved. I support the use of heavy rail (Alternatives 4, 5, and 6) and do not support the use of the monorail alternatives (1, 2, and 3). Alternative 1 relies on a bus connection to UCLA. Among other problems with the monorail proposals, I believe this should disqualify it. Alternative 2 relies on a people mover for what would be the most used station in the system. Among other problems with the monorail proposals, I believe this should disqualify it. Alternative 3 at least has a real UCLA station, but the monorail system itself has significant problems with extremely inefficient cost/rider freeway stations, lack of connections to other Metro stations, infeasible construction techniques and locations, and generally poor future uses due to its limited technology. I believe these factors should disqualify it. Alternative 4 and 5 are broadly similar in my view, and I believe both represent the most cost effective, future looking, and environmentally sound alternatives at this time. While I understand that some may not like the idea of above grade rail, I believe the negative impacts are massively overstated, and the benefits to local property values are shown by projects such as the very successful development of properties near the Expo line, including near its elevated components. Alternative 6 is also an alternative I would support and I believe it does make potential sense from an operations cost standpoint to use equipment compatible with Metro's other heavy rail lines. However, I understand that the northern portion of the line would have significant challenges while tunneling under the ESFV line. I believe 4, 5, and 6 offer the greatest service flexibility for the future, the greatest opportunity for future expansion, the best use of the resources available to metro, and the best benefit to the future of Los Angeles as a greater whole. Thank you!
	Van Nuys	91401	No	2/7/2022	I'd like to express my support for Alternative 6, which is a heavy rail subway running below Van Nuys Blvd through the Sepulveda Pass to the Westside. Alternative 6 allows for the fastest connections and allows for a station at the intersection of the Van Nuys orange line and the ESFV light rail which is within an existing high density area with many of jobs in and around the Van Nuys civic center. All other project alternatives run up Sepulveda Blvd instead of Van Nuys Blvd, which is a missed opportunity because Sepulveda does not have as high of a concentration of jobs and it has more low density residential area surrounding it. Having a stop at the Van Nuys orange line station will allow for a seamless transition for existing riders who are already familiar with taking the current Valley to Westside bus service (the 761), which runs on Van Nuys Blvd. The Van Nuys Civic Center is a regional destination which warrants a heavy rail subway station, whereas the Sepulveda orange line area is more of a thoroughfare for vehicles to travel through, with auto oriented retail and single family zoning. Alternative 6 will be more beneficial to existing low income riders because there are more transit dependent residents living along Van Nuys Blvd within the study area than along Sepulveda. I suggest altering Alternative 6 so that it has the same southern end point as alternative 5, which is a connection at the Sepulveda Expo line station. Metro states that only around 5% of projected riders would get to the stations by car (regardless of which alternative is chosen), which means it's not necessary to have the route close to the 405 freeway because most riders would transfer to the subway anyways, therefore Alternative 6's route along Van Nuys Blvd makes the most sense. Thank you.

Thank you.
	Sherman Oaks	91403	No	2/7/2022	Please do not consider the ridiculous alternative 4 for the Sepulveda pass with elevated heavy rail trains.Alternative 4 will destroy Sherman oaks forever.
	Los Angeles	90066	No	2/7/2022	PREFERENCE: I prefer the all-above ground solutions (#1 & #2). I'm imagining high cost, excessive time & longterm surface traffic disturbance to boring underground. I also think underground tunneling is less safe for our earthquake-prone region, and more vulnerable to expensive repair after a "Big One." I also have concern about how underground stations get grungy & stinky and are less safe crime-wise. Elevators in particular (needed for porting bikes upstairs). That's my experience on the Metro. So overall, a monorail-type transpo above the Sepulveda Pass fwy is most logical to me. I also love the idea of some kind of electric vehicle or people mover transpo into the heart of the UCLA campus. Our year-round good weather is conducive to elevated transportation w/ w/ sleek windows & pleasant views. Incorporating solar panels into structural station designs would also give you kissy-points! LEARNING FROM OTHERS: I was in Old Town San Diego yesterday (02/06/22) witnessing their interlocking system of Amtrak rail (running hourly) adjacent to local electric trolley (every 5-10 mins) adjacent to the bus boarding area. This transpo hub is all above-ground and looks like it works very efficiently! Plus clean and well patrolled. My son who is currently attending UCSD is appreciative of the newly built trolley stop 500 yards from his on-campus apartment. If their system works to connect people & places, hopefully ours can too. SIDE BENEFIT: With a well-functioning network of transporation, our lower income workforce and UCLA students could find less expensive housing further from the Westside -- as long as the hours of operation support workers and students with w/ early or late schedules. CONFUSION? I'm a little confused about the the Expo line (E) connection point. Your video says the Sepulveda station but the website shows the Exposition station. Exposition station is more residential, but closer to UCLA. Sepulveda is a better hub, but would create more disruption while being built. I don't have a preference, but you may want to clear up that confusion before the next feedback window. Bundy is also a good hub, but not if you're going to dig a tunnel to get to it (IMO). My family is most interested in the NEXT phase: connecting this new transit line with LAX. That's our neighborhood! So please keep us posted when that time comes. Thank you for this opportunity to share opinions
	Sherman Oaks	91403	No	2/7/2022	What I suggest is that the Valley portion of the project remains fully underground,as a subway, for its entire length. The first station on the Valley side should be at Sepulveda/Ventura and then turn so the second station is at Van Nuys/Ventura. The route should then continue underneath Van Nuys Blvd. for the rest of the route, going north. Having the line above ground in the Valley will severley compromise quality of life for all residents near the line. It would also cause major traffic congestion and many other hazards. The price is higher that an elevated line but if it's going to be built, it needs to be built right. Afterall this project is going to serve the city for generations so let's do it right for them.
	Los Angeles	90034	No	2/7/2022	What I would like to see is the Sepulveda Transit Corridor use HEAVY RAIL instead of a monorail. This is a high throughput zone requiring high throughput transit options and heavy rail, while larger upfront costs, will pay significant dividends in the future for the growth of Los Angeles.
	Los Angeles	90034	No	2/7/2022	What I wish is that this project continues all the way to LAX, connecting the valley to LAX and all the commercial hubs in between.
	Los Angeles	90034	No	2/7/2022	monorail
			No	2/7/2022	I strongly oppose tunneling and drilling beneath Bel Air, especially with the monorail providing a more modern, and higher tech alternative along the freeway.
			No	2/7/2022	To whom it may concern, I'm an undergraduate student in the Norwalk area, and I've been following the scoping process and proposals for Metro's Sepulveda transit corridor over the last few months. Based on my experience using public transit in greater LA, and reading about transit systems around the world, I'm writing to express my support for the heavy rail alternatives 4, 5 and 6 . My main reasons for this are connectivity and capacity. Connectivity: I travel somewhat regularly on Metro's C and A lines, and while the experience is generally positive, getting to Norwalk station from my neighborhood in La Mirada is inconvenient by bus, meaning that I usually end up driving or carpooling. Being able to access mass transit directly makes a huge difference, which is why it's critical that an alternative be chosen that connects directly to UCLA. Capacity: Heavy rail, both automated and conventional, has been shown worldwide to have better capacity and reliability than monorails. Modern signalling technology enables automated rail to achieve up to 90 second headways, with higher peak speeds than any monorail. The sepulveda line would be best served by heavy rail given its high capacity demands. For these reasons, as well as those of travel times, construction disruption, and vehicle reliability, I strongly recommend proceeding with a heavy rail alternative rather than a monorail.
		90066-2718	No	2/7/2022	I see options 1, 2, 3 and 4 as potentially wonderful additions to our transit system. Option 5, however concerns me deeply regarding the southern terminus, which is not on Sepulveda. As was mentioned early on in the planning of the Sepulveda Transit Corridor, if the eventual hope is to extend the route to LAX, putting the route along

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					the east of the 405 along Sepulveda is the obvious way to go. The right of way is already there and it is already a huge roadway able to easily accommodate more traffic than Sawtelle, Inglewood, or Centinella, the other most used north south routes which are already in constant north south gridlock after 2:30 each weekday.
	Sherman Oaks	91403	No	2/7/2022	When considering the environmental impacts of this project, I would hope the committee would consider the impacts of NOT doing the project, meaning the continued amount of pollution we deal with daily from car congestion. Reducing car traffic would make such a difference to the environment and I cannot wait for the day I can take a train from Sherman Oaks to where I work at UCLA.
	LOS ANGELES	90049	No	2/7/2022	I really like the idea of rail connecting the Valley with UCLA and the westside. My wife works as a doctor at UCLA and we live in an apartment in Brentwood, but now that we have had a kid we are looking for housing in the valley because the Westside is so expensive. As more and more of the UCLA community gets pushed further away, it's important for us to be able to access it quickly and sustainably rather than adding more cars, traffic and emissions to the 405. I suggest using a heavy rail option to connect the Westside. Pre-pandemic I often took the Expo line to go to my own office downtown, but it was very slow and driving was typically faster even though the line ended right at my office. Repeating this same approach of slow, frequently stopping rail will result in many people continuing to opt to drive -- a wasted opportunity for such a long and expensive project. I hope that Metro opts for option 4, 5 or 6 as described at https://thesource.metro.net/2021/11/30/public-comment-period-begins-today-for-sepulveda-transit-corridor-environmental-study-here-are-the-six-alternatives/ .
	Sherman Oaks	91403	No	2/7/2022	I prefer options 4 or 5. Heavy Rail along Sepulveda Blvd. in the valley, especially the one that is above ground. It would be cheaper and faster to build. Heavy Rail has the highest passenger capacity and would connect better with Metro's other lines. The areas in Sherman Oaks along Sepulveda that would be affected are not that upscale and the community would be better served by a visible rail line. Nice that it would connect with the Orange Line, which should be a light- rail line. (Your new number naming system is a too confusing by the way. Please return to color coding. Much easier.) I also see no point in running the new line along Van Nuys Blvd. which is soon going to get an above-ground street car line. I also cannot imagine the traffic problems construction would cause on Beverly Glen, which is even now hard to navigate. Please also do not listen to the SOHA. They are just a couple of guys against anything that would change things in a positive, meaningful way. I have lived here in Sherman Oaks for 30 years and do not feel they accurately represent my opinions or those of my neighbors. Please do what is best for all of LA, not just for a small, self-appointed clique of nay-sayers. I also hope you can get construction started sooner rather than later, as I want to live long enough to ride the thing. I also wish you could have a station near the 405 and Mulholland or the Getty Center. (I should mention that prior to covid, several years ago I attended several community meetings at Van Nuys City Hall to learn about this project from Metro and am disappointed that several years later there is still no plan decided upon, much less a start date for construction announced. Let's get going!)
	encino	91436	No	2/7/2022	do it now.
	Los Angeles	90077	No	2/7/2022	Hello, Are you aware ALL residents who live on Stone Canyon Road in Bel Air have to carry flood insurance? Not only is there a great deal of water under the street all year round--when it rains hard the street turns into an impassable river. Insurance companies know there is also the threat of the Stone Canyon Reservoir Dam leaking or breaking from either earthquake, intense vibrations, or weakening the earth around it. Tunneling anywhere even remotely close to that old earthen dam built in 1924 could weaken it significantly. If the Stone Canyon Reservoir Dam ever breaks thousands of people will be killed. Tunneling under narrow Stone Canyon Road which used to be a horse trail is not safe or smart. Also, the hillsides in Bel Air have very crumbly soil which does not compact well. A developer built a new home on one of our fragile hillsides. He is now required by The City to remove it because the home does not have a safe foundation and is poised to fall down the hill onto several homes below. There are many other facts but these are just a few reasons why tunneling in Bel Air is a bad idea.
	Sherman Oaks	91403	No	2/7/2022	I strongly support alternative 4 & 5 both will be underground and will allow the public to avoid traveling the 405 but also allow the San Fernando Valley residents to not be exposed to more above ground travel noise. Please keep in mind that the Van nuys airport has increased its private jets and operations in such a way that the noise pollution from the landing/taking of private small jets has become unbearable and to add another above ground rail will not at all be healthy and good for the San Fernando residents. It is time that the San Fernando residents are being treated equally with the Bel Air and Beverly Hills residents. Most of the tax money is currently not at all being spend on the SFV Roads traffic light improvements or starting to move power lines below ground. All of what has been realized in the Westside areas of LA.
			No	2/8/2022	Please do not select the one that ruins long established neighborhoods and displaces so many families. With housing costs, we would never be able to get into another home like we have. There are other ways to avoid misplacing humans and animals. Maybe you should wait until you get funding for the hard rail thru the mountain? DO not take the cheapest option available to you, but you will and not worry about disrupting commuters, office dwellers, business', apartment dwellers. Beacause we have learned you do not value our lives. Only what you think we want. You ask for opinions but you really do not care. It is a farce to think you do.
	Los Angeles	90004	No	2/8/2022	Metro should never again build transit stations at - or even adjacent to - freeways. Metro's existing mid-freeway stations on the C and L lines are noisy and polluted. Please do not make this error again on the Sepulveda transit project. Any freeway stations designs should include structures and ventilation to mitigate air quality and sound issues - at a minimum similar to Hannam Station in Seoul, South Korea.
	Los Angeles	90064	No	2/8/2022	I very strongly support this project in general, and I love that LA is working to add public transportation options to connect more parts of the region. I strongly prefer alternatives 4-6 over 1-3 because freeway-based public transportation can be dangerous and a deterrent to public transportation riders. I would like to see research on whether the Expo Line Sepulveda or Bundy station is a more convenient Southern terminus for riders.
	van nuys	91406	No	2/8/2022	Alternative #6 would be best for Sherman Oaks residents and businesses

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Camden	71701	No	2/8/2022	As an advocate for mas rail transit everywhere in the world, I have some thoughts about the Sepulveda Corridor: I am of the opinion that any option for the Sepulveda Corridor that misses the UCLA campus completely should NEVER be considered, so alternatives 1 and 2 are out; If LACMTA insists on building monorail, then 3 is the only acceptable option. If LACMTA is shooting for heavy rail, the rolling stock for any Sepulveda Line should be 3 cars with an option for 6. And the line should have footings to allow for an eventual extension to Los Angeles's International Airport. We know Getty Center won't have a station, so anyone wanting to access the Getty Center from the Metro will be in for a really long trek. I am in agreement with SkyscraperCity users wen they state that it's clear that Monorail is a terrible option, and heavy rail is the end-all-be-all. Los Angeles is not Chongqing or Sao Paulo. Bus lines and people movers are not going to help a major city's biggest transit hubs, either. I implore the Los Angeles County Metropolitan Transportation Authority: Get this right the first time so we won't have to waste any money demolishing it later just to fix the problem you accidentally create. One SSC user (BJC450Chicago), lower-capacity monorail will cripple the LA Metro system forever. This is why LA's still-growing population needs to rise up against monorail. LA's Metro should get more and more extensive because of it, and I hate the high costs of building grade-separated metro in the U.S. of A., or anywhere else in the world.
			No	2/8/2022	I am in favor of Alternative 6, the underground subway in the Valley. I don't want elevated trains.
	Sherman Oaks	91403	No	2/8/2022	The Sepulveda Transit corridor would help me get to and from work immensely. I live in Sherman Oaks and commute to Westwood every Monday-Friday. I hate sitting in traffic on the 405 every single morning and evening, and would love the alternative to take a train through that corridor where I could read or work on my commute, rather than stare out my windshield mindlessly watching the bumper of the car in front of me.
	Sherman Oaks	91423	No	2/8/2022	Your Alternative Concept #4 is a NO! VERY OPPOSED TO #4 Planning to put underground through the Westside and stick the Valley with noisy above-ground heavy rail that will cause the removal of MANY homes & businesses...? NO WAY! Alternatives 5 & 6 are good but so far out of budget. The other Alternatives are OK with ROUTE CHANGES.
	Los Angeles	91401	No	2/8/2022	I'd like to express my support for Alternative 6, which is a heavy rail subway running below Van Nuys Blvd through the Sepulveda Pass to the Westside. Alternative 6 allows for the fastest connections and allows for a station at the intersection of the Van Nuys orange line and the ESFV light rail which is within an existing high density area with many of jobs in and around the Van Nuys civic center. All other project alternatives run up Sepulveda Blvd instead of Van Nuys Blvd, which is a missed opportunity because Sepulveda does not have as high of a concentration of jobs and it has more low density residential area surrounding it. Having a stop at the Van Nuys orange line station will allow for a seamless transition for existing riders who are already familiar with taking the current Valley to Westside bus service (the 761), which runs on Van Nuys Blvd. The Van Nuys Civic Center is a regional destination which warrants a heavy rail subway station, whereas the Sepulveda orange line area is more of a thoroughfare for vehicles to travel through, with auto oriented retail and single family zoning. Alternative 6 will be more beneficial to existing low income riders because there are more transit dependent residents living along Van Nuys Blvd within the study area than along Sepulveda. I suggest altering Alternative 6 so that it has the same southern end point as alternative 5, which is a connection at the Sepulveda Expo line station. Metro states that only around 5% of projected riders would get to the stations by car (regardless of which alternative is chosen), which means it's not necessary to have the route close to the 405 freeway because most riders would transfer to the subway anyways, therefore Alternative 6's route along Van Nuys Blvd makes the most sense. Thank you.
		91403	No	2/8/2022	NO OVERHEAD option. Metro underground is preferred. less noisy. less ugly. less disruptive
	Los Angeles	90034	No	2/8/2022	I am writing to urge you to proceed with all deliberate speed in the construction of the Sepulveda Transit Corridor Project ("STC"). Connecting this crucial transit line to the rest of the County's growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic, to allow students to travel efficiently to and from school and workers to and from their jobs and still participate fully in raising their children and enjoying their communities, and to reduce our region's carbon footprint meaningfully. Please consider the following: • First, the earliest possible project completion should be a top priority and if that means an above-ground monorail, then it should be preferred. • Second, the STC should seamlessly connect to as many existing and new lines as possible, including the North Valley light rail line, the Orange Line, the Purple Line and the Expo Line. Every increased burden imposed upon transit users (such as stops that are nearby but not co-terminus, shuttles, changing modalities, etc.) will reduce ridership unnecessarily. • Third, the STC should include a stop at UCLA if at all possible, given its inevitable high usage. It should also be a priority to include stops within the Sepulveda Corridor, such as at the Skirball and the Getty Center, which are important cultural landmarks that would otherwise remain difficult to reach from both directions. Finally, the final alignment should strive to run through as many of the most densely-populated neighborhoods along the route as possible, which would maximize ridership. We would certainly hope that construction of the STC should be conducted in a manner that minimizes to the fullest extent possible any displacement of communities currently residing along the proposed route. Thus, the Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to rising rents, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. Thank you for your consideration of these issues.
			No	2/8/2022	I am opposed to having a subway built

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Sherman Oaks	91401	No	2/8/2022	I am leaning toward the underground alternative for the Sepulveda transit corridor. I would like to limit the displacement of existing homes and businesses. When the environmental review is conducted, I would also like more information about the potential environmental impacts of the alternatives--how noisy would an above-ground train be? Are any of the alternatives more energy efficient? The Sepulveda pass is also an ecologically sensitive area for wildlife and fires--how would the impact of the construction and the presence of trains be mitigated? Thank you.
	Santa Monica	90405	No	2/8/2022	Please have a 3rd rail for express train. Trains should have priority at traffic lights
		91423	No	2/8/2022	I am in favor of Alternative 6, the underground subway in the Valley. I don't want elevated trains. I am opposed to all other options.
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
		91403	No	2/8/2022	What I wish is for the transit to be underground as opposed to above ground. This is due to environmental concerns, noise pollution, eye sore and loss of home value
	Sherman Oaks	91423	No	2/8/2022	I have been riding the North Hollywood subway since 2000. That successful project should serve as an example for the Sepulveda Transit Corridor. I am in favor of Alternative 6, the underground subway in the Valley. I don't want elevated trains ruining the quality of life for Valley residents.
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. A subway under Bel-Air is not the answer. Rather, a monorail down the 405 will service far more people, cost half as much, and be completed in 1/3 the time. Also, opting for a monorail down the 405 versus a subway in our hills will have far less negative environmental impact and be far safer for those riding the transit should a fire or earthquake occur.
	Los Angeles	90068	No	2/8/2022	What I Like.. more mass transit What I wish... that HOV lanes become a thing of the past. They don't work. As a commuter through the corridor the more roads built, the more cars. Los Angeles has spent billions on expanding roads and it is a waste of money. Would be great to have this as a monorail to work within the same footprint of the corridor which would minimize neighborhood impact and possibly lessen costs. What I suggest...look at this through the eyes of climate impact only. It's a crisis, it's real. No more cars. Don't fall back on the tired "but people in LA love their cars." Give them a really, really good reason to not drive anymore.
	Los ngeles	90034	No	2/8/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90034	No	2/8/2022	Please support a heavy rail train that will return a better investment for the city, rather than a monorail.
	Sherman Oaks	91403	No	2/8/2022	As a 23 year resident of Sherman Oaks, I know what is good for my neighborhood, and I know what is bad for my neighborhood. If Metro wants to build an above ground transit system through the streets of this neighborhood, that is a very BAD idea. The trains will be noisy, the construction will be disruptive to daily life, the elimination of residences to build the infrastructure will cause people to have to be moved, at a cost to the taxpayers, and a huge disruption to their lives. The above ground construction will cause dust, dirt and noise. I will only support an UNDERGROUND subway and prefer the proposed Alternative 6. This solution will provide

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					better community access, economic development, be less disruptive and cleaner to the environment. I oppose all the above ground alternatives – Alternatives 1, 2, 3, and 4. They will be Noisy, ugly, create traffic issues, displace residents and impact local businesses. I don't want elevated trains in my neighborhood.
	Los Angeles	90015	No	2/8/2022	All major highways in the Los Angeles basin have either rail or BRT close by, with the Expo, Green and Silver lines following the course of the 10, the 105 and the 110 respectively. The glaring omission is the 405, which leaves those traveling between Santa Monica, Playa Vista, and the Beach cities no other option but to sit in traffic. Metro should fix this oversight as soon as possible.
		91606	No	2/8/2022	I like Alternative 6 the most with Alternative 5 being a close second choice.
			No	2/8/2022	My comment is I like alternative 4 and 5 I think heavy rail makes the most sense for the amount of traffic that the line is likely to get and underground I think would be more practical seeing as it would go straight to UCLA and then stop right on the E line, the only negative to this of course is that it will not hit the Getty Center. So I am not opposed to a plan like 3, alternative 3 where it goes to the Getty center, but that is a monorail option and that is what I have more of a problem with, is the monorail does have less people available to ride on it at a time. I know that it shows up more but I think heavy rail still makes more sense. The last comment I would like to make is more of a suggestion and you may have covered it but I really think it is worth exploring further, extending the line the little last bit from the E line all the way down to where the LAX people mover will be. I know there are other rail lines that do connect or will connect at some point but you would have to go out of your way to get on the E line and then get on the crenshaw line to get to the people mover when that would be a significant **inaudible** where as a straight direct line would be much more practical, I know more expenses and more time consuming, but would help a lot of people and since you are going through the trouble already digging the line potentially, continuing on or putting plans for an extension in place so that people know that it is coming in the future if you just want to get there with what is currently in plan placed first. So thank you and this is someone who is in the valley, Van Nuyes and yes thank you very much.
			No	2/8/2022	I am in favor of Alternative 6, the underground subway in the Valley. I don't want elevated trains.
		91423	No	2/8/2022	I would like to express my support for Alternative 5. This option seems the most reasonable and balanced while providing access to the most critical locations along Sepulveda Blvd. in the valley.
	Agoura Hills	91301	No	2/8/2022	I support Alternative 6: Heavy rail that would be entirely underground including along Van Nuys Blvd in the San Fernando Valley and with a southern terminus station on Bundy Drive next to the E Line on the Westside. It would accommodate some 800 passengers and would serve areas of denser population than would Alternatives 4 or 5.
		90024	No	2/8/2022	This is certainly a long overdue project. I certainly support the project as a whole. However, I am somewhat puzzled by the monorail alternatives. First of all, the alignment seems to be quite misguided. A line along I-405 with stations in the worst possible locations along the freeway? Bypassing UCLA completely? Seriously? These are very strange choices that cannot be supported. From the prospective of the alignment alone, all monorail alternatives make the project mostly worthless. Besides the alignment issue, I think it is a mistake to go with an untested proprietary technology. I know of another monorail - in the Newark International Airport (my family lives in that area) - and that monorail seems to have spent more time being closed or "upgraded" over less than 20 years of its existence than in an operational condition. I don't think we need such a boondoggle here, in California. Let's go with the proper heavy-rail alternatives and build a full-scale subway line this metropolitan area fully deserves and needs. Thank you.
		91411	No	2/8/2022	I like option 6 as it is entirely underground and as such I believe it would not cause disruptions to Sepulveda Blvd or the 405 freeway. I am against option 4 because of the disturbance, additional noise, and increased traffic on Sepulveda.
	Sherman Oaks	91401	No	2/8/2022	What I would like is a seamless subway connection from mid-San Fernando Valley to UCLA to LAX, completely underground. What I wish for is an end to total reliance on the 405 Freeway, Sepulveda and side streets to handle all people movement from SFV to UCLA (Westwood) and LAX. Get the commuter traffic off our suburban Sherman Oaks streets. Integrate the Sepulveda Transit Project with the emerging transit network and easy transfer stations. What I would settle for is the proposal 3 as a compromise. I appreciate Proposal 6 as the favorite of Sherman Oaks Neighborhood Council (SONC), but I think it is very far-fetched.
			No	2/8/2022	I live in the Valley and Alternative 4 doesn't work for us. It will divide our community, increase noise levels, and isn't fair. Stop considering Alternative 4 and give us the community access we deserve, just like other parts of Los Angeles like the Westside and Gold Line. We want at-grade or underground rail on Sepulveda.
			No	2/8/2022	I live in the Valley and Alternative 4 doesn't work for us. It will divide our community, increase noise levels, and isn't fair. Stop considering Alternative 4 and give us the community access we deserve, just like other parts of Los Angeles like the Westside and Gold Line. We want at-grade or underground rail on Sepulveda.
	Oxnard	93036	No	2/8/2022	Use the first half of Option 5 and the second half of Option 6. This should have the least amount of impacts while still providing the Valley with equal high quality transit design that is found in Downtown and Hollywood. The heavy rail design also allows for larger passenger volume trains, which will most likely be necessary. Also, the Sherman Oaks Homeowners Association and Bel-Air Association are wrong in their assumptions that the lines would cause significant disruptions outside of construction, or that it would cause impacts to land values. Studies have shown that increased access to high quality transit actually improves land values. I would also not abandon the monorail design but instead look at connecting the Metro E-Line or Ventura Blvd station to Ventura County (Ventura or Oxnard). Granted this is outside the scope of this project, but i wanted to mention it for the future.
	Los Angeles	90077	No	2/8/2022	I've lived on Roscomare Rd. for almost 30 years and have witnessed an enormous amount of increased traffic jams on the 405 corridor to the point of insane gridlock! The Billion Dollar$$$ "Carmegedan" project a few years ago has done little, if anything, to improve the movement of vehicles on the 405 corridor. What a waste of taxpayers' money! Mass transit is THE ONLY SOLUTION to alleviate the problem of getting all of us to get to our respective destinations on time and unfazed. A Monorail would be ideal.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Tarzana	91356	No	2/8/2022	Dear Metro Board of Directors: I am writing to urge you to proceed as quickly as possible in the construction of the Sepulveda Transit Corridor Project ("STC"). Since I am not a transportation expert, I can only tell you what is most important to me, as a homeowner in the San Fernando Valley with friends and family throughout the city, some of whom I rarely see because of the traffic challenges. After reading proposals, sitting in on meetings, and listening to speakers here is what I would ask: Do it quickly. It is really the only way to bring our city together, allow everyone to get to their jobs, schools, families and cultural events without having to sacrifice their sanity and also to get our region to reduce pollution in a meaningful way. Do it using existent lines whenever you can and with as few barriers for transit riders as possible. Stop at UCLA, if at all feasible and also within the Sepulveda Corridor so the Getty and Skirball Centers are also accessible to all. Try to run through those areas that are already densely populated. Clearly that will tend to get more riders. Be very judicious about making lower income people move; displacement of those most likely to use the service is counterproductive and must be avoided. Needs of renters should take precedence over disproportionate gains for real estate developers. Thank you for doing your best to assure that the Sepulveda Transit Corridor Project is reflective of the inclusive, compassionate, environmentally forward-thinking community Los Angeles County is striving to be.
	Sherman oaks	91403	No	2/8/2022	This massive boondoggle sounds just like the idiotic plans of the 1980s re monorail and/or subway and/or light rail — and we know how THAT ended! Subways through the mountains? Monorails atop freeways? Light rail destroying such heavily traveled vehicle routes as Sepulveda and Van Nuys Blvds? What about all the businesses and residences that would be destroyed and with no improvement to current roads and other infrastructure. What about PARKING and STATIONS for these pie in the sky ideas using monorails/subways/light rails. What about $$$$$?? No amount of funding will ever be enough! Leave transport as it is! ALL of the recommendations are beyond ridiculous and will resolve NOTHING, JUST CREATE MORE CHAOS. AN EMPHATIC NO on ANY of the 6 insane options!!!
			No	2/8/2022	Alternative 6!! The best option to not DISRUPT all the homeowners / nature along Sepulveda pass. We all had to endure the widening of the 405 frwy and now another construction (noise/ traffic) for the next few years? PLEASE consider option 6!!
Laborers International Union Local 300			Merged Document	2/8/2022	
			No	2/8/2022	To whom it may concern, A moveable median on the sepulveda pass would be the most effective and fiscally responsible solution to the traffic. The golden gate bridge has a wonderful example of this. I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/8/2022	To Whom it May Concern, I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/8/2022	We are a resident of Bel-Air and we strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. My concerns are on many, multiple, levels. First, the tunneling project will be disruptive; I am concerned about the impact of easements for the air vents that could end up on anyone's street or property. Second, there will be noise and vibration during operation. Finally, the long term cost is an issue- I worry that this alternative will turn out to be the most costly and will likely not see operation until the 2050s. The tunneling project potentially involves the loss of hundreds of millions in property value as well. Sincerely,
			No	2/8/2022	I am a 45 year resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. You will ruin what is one of the most precious residential areas not only in the city but in the country. You should not even be considering such a thing. DON'T DO IT! Sincerely,
	Los Angeles	90049	No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Why would you pay more to go underground, when the Sepulveda pass can easily accommodate a metro train that would be a fraction of the cost, and would better serve all communities? What safety studies have been conducted to ensure that any estimates that this can be done are even correct or priced right? Please vote no on any underground solution that would tunnel under Bel Air or further in the neighborhoods surrounding UCLA. The Sepulveda Pass has the ability, openness, and correct price structure to make that the correct choice for placement of any mass transit.
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. - It will take resources away from other important causes/priorities for the city - this is the most expensive option, multiples the price of other options like monorail or even gondolas. As a result, it shifts billions of dollars away from being able to deal with many of the critical issues facing the city - like homelessness for example - It will expose the city to significant liability from the impact of digging/explosions on shifting foundation of older homes in the area - we have seen this in other cities, except that these are more expensive older homes that will be damaged - It will reduce home values in Bel Air thus reducing the city's residential tax base, reducing the city's ability to tackle other problems - It is a less attractive option for tourists to the city - the aboveground options could have stops at the Getty, Skirball Center, and expose tourists to the beautiful views of Santa Monica mountains, driving. instead they would see a tunnel and nothing else - The construction will take significantly longer than an above-ground option, resulting in less benefit for the consumers of the transportation On any and all measures the tunneling options are far inferior to the above ground options. They are multiple times more expensive, would take significantly longer to develop, expose the city to more liability, reduce the tax revenue base, and

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					would be less attractive. There is currently an above ground transportation option being developed from UCLA to the west side - why wouldn't the city just continue that mode up to the valley? The city must choose an above ground option - it is the only right option for *all* citizens of Los Angeles.
			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.

			No	2/8/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Notably, Bel-Air contains important environmental areas such as Riparian zones (Stone Canyon), protected native trees areas and significant wildlife.
	Los Angeles	90068	No	2/8/2022	I wish that the alternative with the highest ridership and fastest north-south trip is chosen. This is a once in a lifetime opportunity to do things right, and build a rail line that is fully underground and doesn't have inaccessible stations in the middle of a highway. Do the right thing. I can't wait to ride on this line! Thanks to Metro for all the hard work in making this happen.
		91303	No	2/8/2022	Rail transit is long overdue for this corridor. There must be a stop on the UCLA campus, as that destination generates a lot of the traffic through Sepulveda Pass.
	Sherman Oaks	91403	No	2/8/2022	I am in favor of Alternative 6, the underground subway in the Valley. I don't want elevated trains.
	Los Angeles	90034	No	2/8/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90049	No	2/8/2022	Dear Metro Board of Directors: I am writing to urge you to proceed with all deliberate speed in the construction of the Sepulveda Transit Corridor Project ("STC"). Connecting this crucial transit line to the rest of the County's growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic, to allow students to travel efficiently to and from school and workers to and from their jobs and still participate fully in raising their children and enjoying their communities, and to reduce our region's carbon footprint meaningfully. I do not have a detailed proposal regarding a preferred route or modality, but would like to offer some considerations. First, the earliest possible project completion should be a top priority and if that means an above-ground monorail, then it should be preferred. Second, the STC should seamlessly connect to as many existing and new lines as possible, including the North Valley light rail line, the Orange Line, the Purple Line and the Expo Line. Every increased burden imposed upon transit users (such as stops that are nearby but not co-terminus, shuttles, changing modalities, etc.) will reduce ridership unnecessarily. Third, the STC should include a stop at UCLA if at all possible, given its inevitable high usage. It should also be a priority to include stops within the Sepulveda Corridor, such as at the Skirball and the Getty Center, which are important cultural landmarks that would otherwise remain difficult to reach from both directions. Finally, the final alignment should strive to run through as many of the most densely-populated neighborhoods along the route as possible, which would maximize ridership. I would also like to stress that construction of the STC should be conducted in a manner that minimizes to the fullest extent possible any displacement of communities currently residing along the proposed route. It should go without saying that it is counter-productive to displace the very people who are most likely to ride a new rail line when building that line. Thus, the Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to rising rents, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. Thank you for your consideration of these issues. Best,
			No	2/8/2022	I am a resident of Bel-Air and I strongly support Metro's alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor because they provide direct access for UCLA students, staff and parents without unnecessary bus or people mover transfers. I have no concerns tunneling would impact our community as I have read the tunnel proposal for the single bore alternatives and it states they would require no ventilation shafts. I believe the monorail would result in constant 405 closures that would impact us much more than a tunnel which would be far too deep underground for us to ever notice. To alleviate my neighbors concerns I believe Metro should first tunnel the portion between UCLA and Expo to prove how limited the impact would be.
	Sherman Oaks	91423	No	2/8/2022	I would suggest that the new metro line be an above ground metro. I used to live in Santa Monica and the metro rail was built at the end of my street at Colorado Blvd and 11th Street. I feel an above ground metro will be safer and cheaper to build. Thank you.
	north hollywood	91602	No	2/8/2022	Hello, I have been following this project for some time now, and I strongly prefer the Alternative 4 hybrid aerial and underground heavy rail option. If there's any cost issues, having the valley portion of the line to the 405 be in the air should help. I also like this line being separate from the proposed light rail line on Van Nuys Blvd, but still connecting to the Orange Line at Sepulveda Station. I wish that a monorail was not an option for this project, as introducing another form of rail is bad for rail network connections, specifically for the new Westwood purple line, not to mention the addition of a people mover from the monorail to reach UCLA. On that note, I would suggest that Sepulveda line connecting to the Purple line at the proposed Westwood station, with a n additional station on the UCLA campus, before connecting to the Expo Line, as you'll get the highest ridership with UCLA students and faculty, as well as those working, living, and shopping in Westwood. Thank you for your time.
	Beverly Hills	90210	No	2/8/2022	What I need from this project most of all are simple, sane connections to other Metro rail lines. For that reason, alternatives 1-3 (monorail) are totally unworkable from my perspective, since those alternatives' stations don't even come close to reasonably connecting to the D or E line stations. That's not even to mention the loud, smelly freeway stations, the much slower commute, and the years of construction traffic on the 405 all guaranteed by the monorail alternative. Alternatives 4, 5, and 6 would all work well from my perspective. I'm especially a fan of 6 because it has a stop by Sawtelle, an area I'd like to be able to take the train to.
		90293	No	2/8/2022	Everyone should do themselves a service and look into the history of corruption between the city of Los Angeles and transit company BYD. Make it known that we don't want that corruption to continue into this project. The monorail proposals from BYD are insufficient, shortsighted, and would cause construction on the surface of the 405 for a decade. Members of city government who are willing to shortchange a generation of Angelenos should be called out for their willingness to do so and contributions from BYD need to be disclosed. SAY NO TO THE MONORAIL.
	Sherman Oaks	91403	No	2/8/2022	I am against this issue. It will make it easier for get always when it comes to crime. It will invite more transits. This is a very bad idea. Also our wildlife in the Santa Monica mountains will suffer as well. Homeless on the south side of Ventura Bl. in residential area. Our street smell of urine. This is what our current administration has done to our neighborhood. Don't forget the graffiti every place as well.
	Granada Hills	91344	No	2/8/2022	Please do not choose the Disneyland style monorail! This line needs to be heavy rail to accommodate the amount of people that will be using it. It WILL be the most used line in the Metro System. Invest in the future...it is worth the cost. PLEASE DO NOT DO WHAT SPRINGFIELD DID IN THE SIMPSONS!!!! Respectfully-

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Van Nuys	91401	No	2/8/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Fountain Valley	92708	No	2/8/2022	Please go with the heavy rail options. They will serve UCLA with higher capacity. Proposals 4 or 5 are the best of them.
	Los Angeles	90077	No	2/8/2022	I'd like to encourage you to think more boldly. A train down the Sepulveda Pass, probably a combination of surface, elevated, and underground where appropriate, is less expensive and faster to build and maintain. Most rights of way already exist and it would have the least impact on residential neighborhoods. Also, please consider that building down to LAX now makes the most sense. New funds are available from the recently passed Infrastructure Plan and the state has a large windfall. We should take maximum advantage of the current financial situation. Adding roughly 2'x4' solar panels within the track design would produce a tremendous amount of energy over the distance, far more than necessary to power electric trains. Excess could be fed to general use in the city. Using existing freeway lanes on the 405 wouldn't be a sacrifice, but rather, a boon since it would dramatically improve transportation overall. The lanes added recently have done little to improve traffic flow and we should be discouraging auto traffic for a host of reasons. A surface train all the way to LAX would be a huge step forward and it seems inefficient to build a Valley to Westwood line, then later and at higher cost, continue to LAX. Far better to do it as one integrated project. Given the scale of the project and the necessity of building more such lines in the Los Angeles area in the near future, I recommend asking for carriage and engine design for a wholly electric system from visionary constructors, seeking reduced carriage weight, solar integration, and other imaginative ideas that can reduce costs of operation and maintenance and, at the same time, create a very pleasing experience for riders as well as adjacent communities. Fortune favors the bold.
	Los Angeles	90034	No	2/8/2022	I like alternative 6 most, but 5 and 4 are preferable to any of the monorail options (alternatives 1-3). I think a genuine UCLA connection on campus like in Alternatives 3-6 is a must. Having the connection be near the 405 is way too far from such a high traffic location. I also strongly suggest going fully underground like in Alternative 6. It makes for straighter lines and avoids any problems with sight lines above ground stations. I assume the straighter lines should enable shorter ride times--which I think is very important. I also like alternative 6 because it supports the most riders (highest capacity) of the six options. Building a train with lower capacity seems like a wasted opportunity.
		90034	No	2/8/2022	I am a westside resident and I strongly support Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. The wealthiest and most entitled residents of our city and region should not be able to derail a critically important transportation project like this. The Sepulveda cooridor should be HRT with a stop directly on the UCLA campus and monorail options should be off the table.
			No	2/8/2022	I am a stakeholder of Bel-Air and I strongly Support Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Future of LA is needs more subways, monorails, and mass transit!
			No	2/8/2022	As a resident of Los Angeles County and avid transit rider, I encourage Metro to chose the route and path that benefits the future of transportation in the city and not be strong-armed by a few wealthy homeowners who do not understand leaving the world a better place that they found it. The monorail alternative is a relic and should not be considered. We need proper integration of our system, a high-quality transportation option linking where people live and where they work. That’s equality. LA has a history of folding to a vocal minority in opposition and if they hadn’t 40 years ago, the city would have equity and equality unparalleled in the nation. Instead a

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					small group feels like they've earned a larger voice because of the zip code they were born into. Teach wealthy Angelenos that fear mongering works no more. Approve a single bored HRT route and educate those uninformed that the science does exist (and is being studied for this) that does not require ventilation shafts.
			No	2/8/2022	I am a resident of Los Angeles and I strongly support Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. These alternatives will benefit the community as a whole and any aesthetic pain (ventilations shafts on public property) born by this echo chamber community will be vastly outweighed by the economic and environmental benefits provided to Los Angeles County and the broader region. Please ignore any community input from this deeply unserious group of obstructionists and push forward with what's best for Los Angeles (not a monorail).
	LOS ANGELES	90049	No	2/8/2022	Dear Metro Board of Directors: I am writing to urge you to proceed with all deliberate speed in the construction of the Sepulveda Transit Corridor Project ("STC"). Connecting this crucial transit line to the rest of the County's growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic, to allow students to travel efficiently to and from school and workers to and from their jobs and still participate fully in raising their children and enjoying their communities, and to reduce our region's carbon footprint meaningfully. Thank you for your consideration of these issues.
	Los Angeles	90035	No	2/8/2022	The sepulveda line must have a stop at UCLA that connects to the other lines. This service is vital to students and campus workers like myself. To fail to include it would be a massive failure of transit policy. I urge you to demand the UCLA stop is included!
	Los Angeles	90034	No	2/8/2022	I currently work at UCLA's School of Public Affairs. I think UCLA definitely needs a stop along the Sepulveda Transit Corridor, which would support both students and workers have the possibility of living in the Valley without a car (which would definitely open some options for more affordable homeownership options). In terms of the specific options available, I don't have a strong opinion other than the option chosen needs to quickly get commuters end-to-end. A large part of the people not riding the metro in LA is seeing it as an inferior good to driving. The reality is driving is whack in LA but light rail doesn't always cut it for commuters.
			No	2/8/2022	I just listened to the sound provided on the Bel-Air association website of what it would sound like to have the Sepulveda transit corridor and I find it to be quite calming! I look forward to the corridor being completed and bringing a nice sense of peace to this fraught community.
			No	2/8/2022	I've seen some information from the Bel-Air association about the new transit line from metro and I'm extremely thrilled by the access that would provide and don't find the noise disruptive in the least. In fact, I can't imagine how I would even hear that without setting my phone on a sewer grate just for the sake of causing a Karen fuss to keep public transportation out of my wealthy neighborhood. I would like to voice my full support for this metro line.
		90731	No	2/8/2022	The Sepulveda Pass Corridor Project is a critical link between multiple major job and residential centers in the region. It is important this project is done right to secure an effective transit line and network. The best option is Alternative 6. Alternative 6 is the fastest, most efficient way to connect major centers such as UCLA, Sherman Oaks, and Bundy Station. Monorail is not a good idea because it is a new type of transit for LA. This means monorail unforeseen issues during construction, as well as the need for entirely new maintenance practices and parts on hand, which will make for less efficient operation. There is only one international case study of monorail transit, where there are countless heavy rail success stories, including within Los Angeles. The heavy rail alternatives also avoid a potential protracted legal battle with Caltrans that could extend costs and construction schedule. Alternative 6 also provides the best path forward for expansion. Transit lines and stations adjacent to Freeways are historically less successful and environmentally safe than their counterparts that focus stations in community centers. It is critical that Metro has an effective connection to UCLA, and connects other community centers without requiring riders to use Freeway-adjacent stations to use the system. For these reasons, Alternative 6 is the only viable path forward for Sepulveda Pass. Thank you.
			No	2/8/2022	I am a resident of Bel-Air and I strongly approve of Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90024	No	2/8/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project: I suggest that the Sepulveda Transit Corridor include the following: 1. Direct stop at UCLA 2. Direct stop at Westwood Village 3. Connection to the Purple/D Line A UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system. With a daytime population of over 82,000 (equivalent to that of a mid-sized city), Metro would be missing a huge opportunity to serve that population. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. I would like Metro to eliminate alternatives 1 and 2 and instead investigate this alternative: 7. Heavy rail with underground alignment including along Van Nuys Bl in the San Fernando Valley (as in Alternative 6), and southern terminus station at Exposition Bl (Metro E Line). Thank you,
	Los Angeles	90024	No	2/8/2022	As I understand it, many alternatives have been proposed for this project. The options that build a monorail along the 405 may be cheap or efficient, but they aren't what people need. The purpose of rail should be to move people from place to place in a convenient way. Walking from city centers to the 405, or otherwise having to transfer seven times to get on the monorail isn't feasible for many people. A stop at UCLA/Westwood along the STC will be efficient, convenient, and is exactly what the people in our community need.
	North Hollywood	91601	No	2/8/2022	I STRONGLY support the construction of a monorail or rail transit in the Sepulveda corridor that connects Van Nuys to UCLA/Westood and the Expo Line. This would dramatically improve travel between the West Side and the San Fernando Valley ??and go an enormous way to bringing LA's public transit into the modern era. LA deserves a public transportation system on par with the other great global metropolises. Please do not yield to those who will attempt to stop this project for the sake of their hilltop views or their property values. Thank you, Resident of LA for 18 years
	Northridge	91325	No	2/8/2022	A toll lane on 405 is the worst idea I have ever heard.People in can barely afford a place to live and now you want to make them pay to get to work on time? But if you have money you can just skip the line. This is just cruel.
	Los Angeles	90066	No	2/8/2022	Please have congestion pricing. People need to be disincetivized to use the roads.
	Los Angeles	90049	No	2/8/2022	Metro should NOT support any type of monorail project. That is a waste of money and will cause more traffic on the 405 freeway by removing needed traffic lanes on the 405. Metro should also NOT support any type of paid HOV lane. The current HOV lane was sold to the taxpayers as a carpool lane that would be free, except for the tax money used to construct it. Metro should not participate in a lie or breaking a promise to the citizens of Los Angeles.
	Los Angeles	90049	No	2/8/2022	I believe this project is essential to modernize the Los Angeles area and hope it can go forward smoothly.
	Sherman Oaks	91403	No	2/8/2022	Dear Metro Staff, I'm pleased to have the opportunity to comment on this project. While I understand SOHA and some individuals in my community would prefer a fully below ground option, I feel their concerns are unwarranted. What I like: - Option 4 seems to move the greatest number of people the most quickly. - Option 4 also seems to control costs while allowing quicker implementation by avoiding tunneling. What I suggest: - I grew up in an area of Maryland where the Washington DC Metro is above ground. Property values have continued to soar in the areas adjacent to Metro stations. I also currently spend time in South Pasadena, CA which has above-ground trains and high property values. I suggest sharing data that shows how above-ground trains can still support high property values as this is a concern in online comments I've read and in the SOHA literature. Thank you for your work and diligence.
			No	2/8/2022	I am a Los Angeles resident who strongly supports Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
		90502	No	2/8/2022	HOV LANES YES. EXPRE$$ LANES NO!
	Sherman Oaks	91403	No	2/8/2022	I'm very against this project. It would be much too noisy to the residential area and cause our property values to go down. I live at Magnolia & Sepulveda. I hear so much traffic noise as it is now. I can't imagine more traffic!
	Sherman Oaks	91403	No	2/8/2022	I have lived in two cities (Chicago and Paris) with elevated train service similar to what is being proposed. I used both systems to commute to work, which saved me thousands of hours in the car. Both systems were constructed in the early 1900s, and I imagine that it must have been a hassle for local residents at the time. But they have allowed millions of people to reduce their dependency on automobiles. I fully support the project as it is currently planned and I hope to live long enough to see it implemented.
	Canoga Park	91304	No	2/8/2022	I favor all above ground transit. Underground will take too long. Option #2 sounds the best to me. We need alternatives to the 405 ASAP.
			No	2/8/2022	My family resides in Bel-Air and I strongly support Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Our city and neighbors need better access to public transportation.
	Valley Village	91607	No	2/8/2022	Alternatives 4-6 are the best options by far. To connect residents of the Valley and really alleviate traffic conditions it's key to connect to the main modes of transportation and hubs. I think concerns around property values in Sherman Oaks are incredibly overblown, as having an economic and fast connection to the rest of the city can only be a positive as environmentally conscious and traffic-tired 30-somethings reach homeownership age. Personally, I would happily ditch my car permanently if there was easy

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					access to the west side and the beach, and I am significantly more likely to consider Sherman Oaks / Van Nuys as a potential home if there was a clear and efficient transportation pathway, not just a vanity monorail.
	Encino	91416	No	2/8/2022	Hello there needs to be in Metro rail added from mission hills all the way to the airport using the sepulveda Blvd some from the top and some from the bottom in the meantime 101 from the Vermont exit to downtown it is the worst traffic you can imagine I drive it every day there needs to be a solution if they add and combine the 2 freeway with the 101 and reduce the traffic there and extend the two freeway the issues will be solved also the 10 freeway what ever you guys do it doesn't solve the traffic there needs to be a solution for that as well too the Metro rail did not help I suggest to go double on 101 passing downtown we have that in Texas I need help a lot also the bus is on the 110 needs to be removed I'll put an actual Metro and let the traffic flow whatever you guys do you tighten the traffic it's not the opening it it's looking bottle and the cap is tight for the cars to go in but once you're in it opens up all you have to do is to open the cap and they can also go from the bottom they don't have to go from the top thank you so much
	Canoga Park	91304	No	2/8/2022	PLEASE bring back the 788 and the 734 for us while MTA is figuring this out please. How much longer before MTA realizes how desperate we are to have these two lines and the 750 back? You yourself have stated above how difficult travel is between the Valley and Metro/West Los Angeles side of Los Angeles through the Sepulveda Pass. Why would you take these lines away from us and make the commute MORE difficult??? What is the matter with you? The 761 is NOT sufficient enough for public transportation riders while MTA takes an eternity to get this new project going. How much longer do we have to suffer while MTA plays God with people's lives? MTA makes people very unhappy.
			No	2/8/2022	Increasing transit opportunities for all residents of Los Angeles instead of catering to the unfounded fears from economically privileged is a good thing. Public transit is a good thing for all residents. Do not succumb to rich and influential who wish to create further divide and strife between socioeconomic classes.
		90031	No	2/8/2022	Thank you for this project. It has been a long time coming. I really like the idea of being able to travel between the Valley and the Westside by train. I wish this train had existed years ago, so I wouldn't have had to waste so many hours sitting in traffic on the 405. I would prefer any of the heavy rail alternatives. As a rider I would like to see transfers between trains minimized and easy connections to the Expo and Purple lines. If possible please consider ways to connect people to the Getty and Skirball. It would also be nice to see Metro Bike share incorporated into the first/last mile solutions.
			No	2/8/2022	As a long-time property owner and business owner and resident of Sherman Oaks our family strongly opposes any transit system above any streets . We favor a below ground system or one along the 405 freeway median. A system above the street would be a disaster for the community creating enormous problems for everyone - some of them without solution. The transit system is for the benefit of valley residents and workers. Please be mindful of our needs.
	Signal Hill	90755	No	2/9/2022	I like option 3, because it services Getty and UCLA on the same track and seems to limit the amount of expensive tunneling. Ultimately I would like to see a transit corridor built to LAX in a much more timely fashion i.e. within the scope of the first project. (we don't have 30 years to reduce emissions from vehicle traffic and congestion to LAX). I would be first in line for an express line that serviced the Valley and Long Beach/San Pedro (for the cruise ship terminals) - with express lines that minimize transfers between major terminals (i.e. Van Nuys Train/Metro to LAX). Or even consider boat ferries/taxis from Santa Monica to an LAX people mover - but the focus should be LAX, as there is not only the airport but major tech industry that would connect more neighborhoods to these areas. These lines need to be a more efficient and timely option to driving if they are to sway the majority of people, not just those who cannot afford car travel.
	Santa Monica	90404	No	2/9/2022	Given that UCLA is the major destination on this line, I find it inconceivable to study any alternative that does not provide a direct connection. Providing a shuttle bus link is not a useful option compared to a station in the heart of campus.
		90016	No	2/9/2022	I strongly support Option 6 for the Sepulveda Transit Corridor project

	Los Angeles	90034	No	2/9/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

	Los Angeles	90057	No	2/9/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

	Monterey Park	91754	No	2/9/2022	Metro should pick the heavy rail options as they will provide the most value to the public. Heavy rail will be able to reliably transport thousands of people both the fastest and at the most convenient and best placed stations. Please strongly consider selecting the heavy rail option for this transit project.
	Van Nuys	91411	No	2/9/2022	No monorail on Sepulveda. To ruin both Sepulveda Bl and Van Nuys Bl—thru construction—and forever—makes no sense. I tell my friends "You'll never go to WAL*MART (VN Bl At Roscoe) again." Run both lightrail and monorail all down Van Nuys Bl. Sepulveda Bl can't lose a lane. A major intersection of ORANGE LINE and SEPULVEDA to WEST LA line at Oxnard must be carefully done. You'll compromise the bypass lane along the ORANGE LINE—you won't fix The Victory—Sepulveda intersection, worst in Valley. It will be worse if Han ever. The new repair yard at the Sepulveda-Oxnard station will sacrifice the bypass lanes from Haskell/Victory toSepulveda. I've used those bypass lanes to go to the West Valley 200 days a year—avoiding the Sepulveda/Victory intersection—.

	Los Angeles	90024	No	2/9/2022	Dear Metro Board of Directors: I am writing to urge you to proceed with all deliberate speed in the construction of the Sepulveda Transit Corridor Project ("STC"). Connecting this crucial transit line to the rest of the County's growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic, to allow students to travel efficiently to and from school and workers to and from their jobs and still participate fully in raising their children and enjoying their communities, and to reduce our region's carbon footprint meaningfully. I do not have a detailed proposal regarding a preferred route or modality, but would like to offer some considerations. First, the earliest possible project completion should be a top priority and if that means an above-ground monorail, then it should be preferred. Second, the STC should seamlessly connect to as many existing and new lines as possible, including the North Valley light rail line, the Orange Line, the Purple Line and the Expo Line. Every increased burden imposed upon transit users (such as stops that are nearby but not co-terminus, shuttles, changing modalities, etc.) will reduce ridership unnecessarily. Third, the STC should include a stop at UCLA if at all possible, given its inevitable high usage. It should also be a priority to include stops within the Sepulveda Corridor, such as at the Skirball and the Getty Center, which are important cultural landmarks that would otherwise remain difficult to reach from both directions. Finally, the final alignment should strive to run through as many of the most densely-populated neighborhoods along the route as possible, which would maximize ridership. I would also like to stress that construction of the STC should be conducted in a manner that minimizes to the fullest extent possible any displacement of communities currently residing along the proposed route. It should go without saying that it is counter-productive to displace the very people who are most likely to ride a new rail line when building that line. Thus, the Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to rising rents, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. Thank you for your consideration of these issues.

		91401	No	2/9/2022	I favor alternatives 6 and 5 because of its inclusion of majority heavy rail. There is a reason why the 405 pass is one of the busiest traffic corridors in the nation. This is primarily a commuter corridor (less so for tourists) and heavy rail must be a component of this route if we want to see lasting success for our community. If LAX, UCLA, and the westside are major connecting destinations, ridership demand would require no less than heavy rail. The San Fernando Valley has been grossly underestimated in terms or ridership in seeing some failures of the Orange Line to properly service demand. We should not make that same mistake with the 405 project; underground heavy rail should be required criteria from the start. I'm a single family home owner and disagree with some community members that claim heavy transit will our lower property values. I've seen that proximity to efficient public transport helps to invigorate the neighborhoods and types of businesses around it. The areas of Van Nuys and Sepulveda Blvds (north of Ventura) are already in dire need of reinvestment. I doubt the addition of public transit options will make it any worse. If I live to see it, the downside is that it may cause gentrification and displacement of lower income populations as the cost of living in these reinvigorated areas increase. We may see these populations get pushed more north and east/west along the mid-valley belt -- another problem for another day, and probably another lifetime to solve.

PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
North Westwood Neighborhood Council			Merged Document	2/9/2022	Attached is a resolution passed by the North Westwood Neighborhood Council in favor of the heavy rail alignments in Alternatives 4, 5, and 6 proposed for the Sepulveda Transit Corridor Project. We hope the Board will take into account our preference for these alternatives as they identify the "locally preferred alternative" for this project.
	LOS ANGELES	90045	No	2/9/2022	I advocate for heavy-rail Option 6 and for strongly rejecting the monorail options (1, 2, & 3). Why? - Because the monorail makes riders wait at polluted, less-accessible stops right along the 405 Freeway. - Because the monorail is an unproven interurban technology that's incompatible with our existing transit infrastructure. - Because two of the monorail options don't even stop at UCLA for its many transit-dependent riders. - Because only Option 6 provides capacious trains (seating 800 instead of 680), works with existing transit infrastructure and reaches areas of densest population, including UCLA.

Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Santa Monica	90403	No	2/9/2022	Please build heavy rail from the valley to LAX!

	Los Angeles	91331	No	2/9/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. 	Toronto	M1E 3T1	No	2/9/2022	Alternative 4 of the Heavy Rail option is the best option LA Metro could pick for this line. LA needs a high-capacity transit line that parallels one of the busiest highways in the United States. All 3 of the monorail options don't have as much capacity as compared to an automated metro. Another problem with the monorail options is that connections to local destinations are much worse than the heavy rail options since the monorail parallels the 405 Freeway throughout its entire length. Further away from local communities. Not to mention without adequate shelter/protection, waiting for a monorail in the middle of a freeway could prove harmful for your ears as exemplified by the K Line. As for the heavy rail options, Alternative 5 is more expensive than Alternative 4 because Alternative 5 is underground under Sepulveda Blvd in order to appease the local residents in the area, costing more money as a result. And Alternative 6 unnecessarily parallels the East San Fernando Valley LRT. But Alternatives 4,5 and 6 would still be far better alternatives than the monorail alternatives. Bechtel already has railway experience as they have built the original BART network in the late 60s and early 70s and are currently working as a delivery partner for the planned Ontario Line subway project in Toronto, Canada which is also planned as a fully automated metro.

UCLA Undergraduate Students Associated Council (USAC)	Los Angeles	90024	Merged Document	2/9/2022	To the Los Angeles Metro Board of Directors, I am the General Representative 1 on the UCLA Undergraduate Students Associated Council (USAC). USAC represents over 30,000 undergraduate students at UCLA. Last year, our council unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that undergraduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes. A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region. Sincerely, Hailey Valles

	North Hollywood	91601	No	2/9/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

		90024	No	2/9/2022	The new line needs to have a stop at UCLA, directly on campus. This is not just out of convenience for those who attend or work at UCLA, but it would be crucial to convincing UCLA students and workers to ride Metro and would increase ridership overall. I personally am willing to ride a 15 minute bus ride to get to the Expo line, but I know many people who aren't. A 5 minute trip on an APM or bus would reduce the time to a Metro line, but it does not change the inconvenience of transferring, e.g. walking, waiting, worrying about missing a connection. A direct line would encourage many people to take Metro and consider it as a viable alternative to driving. Moreover, if tons of money is going to be invested in the project, it should be spent on a line that people will actually use. Building a stop directly at UCLA would ensure this line is used properly. And if this line is to grow in ridership (which it should), then the capacity should be there to handle enough riders. That means that heavy rail would be the best option. Even with high initial costs, the effects of heavy rail will be worth the cost.

No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Los Angeles	90027	No	2/9/2022	I believe that Alternatives 4 and 5 would provide the best service for the corridor. Monorail alternatives should be rejected due to the horrible passenger experience waiting for trains on a freeway median.
		91403	No	2/9/2022	I would like to voice my support for alternatives 4, 5, and 6 using automated heavy rail transit. I wish to have the shortest transfer and walk between connecting lines / stations. I do not support alternatives 1, 2, and 3 with aerial alignment in Interstate 405.

	Los Angeles	90065	No	2/9/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

	Los Angeles	90034	No	2/9/2022	Dear Metro Board of Directors: I have lived within a mile of the 405, just south of the 10 for 33 years now and have lived on the Westside for 41 years. I also drove back and forth between the Westside and the Valley every work day for the last ten years of my career (teaching), so I am very familiar with the Sepulveda Pass and its traffic problems. I am writing today to urge you to proceed with all deliberate speed in the construction of the Sepulveda Transit Corridor Project ("STC"). Connecting this crucial transit line to the rest of the County's growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic, to allow students to travel efficiently to and from school and workers to and from their jobs and still participate fully in raising their children and enjoying their communities, and to reduce our region's carbon footprint meaningfully. I do not have a detailed proposal regarding a preferred route or modality, but would like to offer some considerations. First, the earliest possible project completion should be a top priority and if that means an above-ground monorail, then it should be preferred. Second, the STC should seamlessly connect to as many existing and new lines as possible, including the North Valley light rail line, the Orange Line, the Purple Line and the Expo Line. Every increased burden imposed upon transit users (such as stops that are nearby but not co-terminus, shuttles, changing modalities, etc.) will reduce ridership unnecessarily. Third, the STC should include a stop at UCLA if at all possible, given its inevitable high usage. It should also be a priority to include stops within the Sepulveda Corridor, such as at the Skirball and the Getty Center, which are important cultural landmarks that would otherwise remain difficult to reach from both directions. Finally, the final alignment should strive to run through as many of the most densely-populated neighborhoods along the route as possible, which would maximize ridership. I would also like to stress that construction of the STC should be conducted in a manner that minimizes to the fullest extent possible any displacement of communities currently residing along the proposed route. It should go without saying that it is counter-productive to displace the very people who are most likely to ride a new rail line when building that line. Thus, the Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to rising rents, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to

	Los Angeles	90025	No	2/9/2022	Dear Metro Board of Directors: As a resident of Los Angeles' Westside, I am writing to urge you to make the construction of the Sepulveda Transit Corridor Project ("STC") a high priority. As data shows, the traffic is this corridor is particularly heavy. STC will enable Los Angelinos to connect effectively with the other lines already available, making the entire system an integrated network. My communities had worked hard to get Measure M to pass because of the vital role that good transportation along Sepulveda plays. We hold our elected officers accountable to fulfilling the plans for which the funding was approved. I would like you to vote for a speedy implementation of the project. With the hope that you will indeed see the urgency of this project for the health of the entire county, I wish you all the best,
Bel Air Crest Association	Bel Air	90077	Merged Document	2/9/2022

	Los Angeles	90065	No	2/9/2022	I like the proposal for the Sepulveda line that incorporates heavy rail. Ridership in the long run would increase as would the ride ability and attraction to neighboring communities! Please do not make this a monorail!
	Los Angeles	90015	No	2/9/2022	As a resident of Downtown Los Angeles, I support a project plan for Metro's Sepulveda Corridor Project that includes a direct stop on the UCLA campus and a seamless connection to the Purple/D Line Westwood Village station, which would accommodate the potential high ridership in the area. This would encourage higher transit usage throughout our region from the San Fernando Valley to the Westside and Downtown Los Angeles by making it easier to access various destinations and lower car dependence resulting in a variety of benefits which fall downstream of that including reduced emissions of greenhouse gases and criteria pollutants. And a more reliable, useful transit system will thus help spawn more dense development that'll further support the state's climate, air quality, and housing goals.
	Los Angeles	90042	No	2/9/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

	Los Angeles	90049	No	2/9/2022	1. As a resident of the Brentwood Glen, I/we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 2. No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? 3. Provide a UCLA Stop: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. A stop at UCLA ensures seamless transfers How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? Will the transfers be free of charge? Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County. 4. Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? 5. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. 6. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. ? ?What is the noise and vibration impact of the monorail options? 7. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Blvd
	Los Angeles	90049	No	2/9/2022	I'm writing to express concern about an aspect of your proposal. Your plans to widen the 405 by expanding into Church Lane would pose a serious health risk to everyone living in the adjacent neighborhood. Right now, the area is slightly protected from the worst effects of freeway pollution, not just by the wall, but by the space that Church Lane takes up between the 405 and adjacent properties. A well known study out of UCLA has shown that, while living within a mile of a freeway is dangerous— living within 1000 feet of a one significantly increases risks of asthma, cancer, strokes, heart attacks, preterm births and birth defects. The 405 is one of the most heavily used freeways in the nation. The level of air pollution it generates is considerable. If you expand the 405 to encompass Church Lane, you will be eliminating the physical barrier that protects the adjacent neighborhood (the wall and the tree barrier that helps block and absorb air pollutants), but moreover— you will be expanding the freeway to be physically adjacent to surrounding homes, eliminating the fairly minimal buffer zone — and resulting in increased deaths and health issues for residents. The benefit, meanwhile, in easing traffic for that small stretch, would be fairly minimal. What I suggest... is restricting any freeway expansion to north of sunset, to avoid the impact on more heavily populated areas. Homes in the pass between sunset and the valley are mostly elevated and separated from the 405 by large hills or expanse of natural spaces. https://www.latimes.com/local/california/la-me-freeway-pollution-what-you-can-do-20171230-htmlstory.html
		48442	No	2/9/2022	The Sepulveda line will be very important to public transit in the metro area so it should be done right. I suggest alternatives 4-6 should strongly be considered as heavy rail will be much more efficient than the monorail alternatives. A direct UCLA station is also the most practical option as it will move the most amount of people wishing to go to and from campus.
		90401	No	2/9/2022	What I suggest is to go with Alternative #4, since it's the most efficient with costs, construction, maintenance, and overall public satisfaction with the UCLA on campus station.
	Sherman Oaks	91423	No	2/9/2022	Regarding the Sepulveda Transit Corridor Project, I am in favor of Alternative 5 , the mostly underground subway in the Valley. Elevated trains should be very limited in this project. I adamantly oppose Alternative 6 due to its location and the congestion it will add to this massively over congested area.
	Sherman Oaks	91423	No	2/9/2022	Regarding the Sepulveda Transit Corridor Project, I am in favor of Alternative 5, the mostly underground subway in the Valley. Elevated trains should be very limited in this project. I adamantly oppose Alternative 6 due to its location and the congestion it will add to this massively over congested area.
	Sherman Oaks	91504	No	2/9/2022	As a condominium homeowner in Sherman Oaks, I am in favor of the Alternative 6 Metro Rail option, and opposed to any above ground option, which would destroy my property value, be noisy and disruptive, and a vector for crime.

	Los Angeles	90049	No	2/9/2022	My wife and I have lived in the Brentwood Glen for twelve years. This is one of the most unique and charming neighborhoods in Los Angeles. It is a mixture of Multi and Single family housing. We even have a church on Church Lane! This is the type of neighborhood that recent zoning laws are trying to promote. Though Brentwood has homes valued in the tens of millions of dollars this neighborhood is still one of the most affordable on the West Side. To even think it is a possibility that either the Sepulveda Pass Freeway and or Metro projects could entertain encroaching further into the Glen is unimaginable and irresponsible. 1. As a resident of the Brentwood Glen, I/we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 2. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Blvd Please consider these alternatives,
	Los Angeles	90039	No	2/9/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at

					Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
		90005	No	2/9/2022	NOT A MONORAIL! Options 4,5,6 make a lot more sense as they use standard off-the-shelf, proven, interoperable technology. But of these 6 seems the most straightforward. A straight-shot tunnel from Van Nuys Bl to UCLA seems like the ideal solution, more direct, faster, less disruptive. I love the idea of automated heavy rail trains like the ones shown in the Milan example. But I wonder if using a compatible system to the current heavy rail is a better choice for future integration with the rest of the Metro system? A continuation of the line to LAX should happen sooner rather than later, if construction costs are going to rise anyway why not keep boring from the Westside all the way to LAX in one go, at least build the tunnels then do the rest of the infrastructure and stations when more funds are available? And then in the future continue from LAX to Union Station via the Harbor Subdivision with the same system used for the Sepulveda Pass (standard or automated heavy rail). This project will be transformational for the West side, it can't happen soon enough!
	Los Angeles	90027	No	2/9/2022	I'm excited by the potential of the alternate 4 route. My partner and I have family in Westwood and Sherman Oaks. This would make it substantially easier to visit them.
		90049	No	2/9/2022	My wife and I are a residents of Brentwood Glen and live on Burnham Street. As residents of the Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. We have a 10 month old and plan to expand our family soon and this would make our daily lives for the coming years fairly difficult and possibly dangerous.
		91401	No	2/9/2022	I think the biggest crime of the monorail alternatives is running along I-405 and missing UCLA. The stations need to be where people are, not where cars are. All alignments along I-405 are simply unacceptable. And so are the two alignments missing UCLA. The Metro should go with heavy rail and build stations where people live and work. Alternatives 4, 5, and 6 are the only ones that should be seriously considered. Alternatives 1, 2, and 3 should be rejected. Thank you.

	Los Angeles	90049	No	2/9/2022	My family owns a home and lives in Brentwood Glen. As a resident of Brentwood Glen, and the broader Los Angeles community, we support Alternatives 5 or 6 for the reasons summarized below. These alternatives reflect the most seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line, and ultimately LAX . For usage and utility, we also think it is important that the selected alternative has a direct stop at UCLA. Equally as important, we urge LA Metro to select the alternative that will result in the least negative impact to surrounding neighborhoods . While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. We strongly oppose alignments and final designs that result in the possibility of property acquisition. Alternatives 1, 2 and 3 will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. We also understand Alternative 4 will cause considerable disruption at the Sepulveda Blvd. and Ventura Blvd. intersection. Disruption at the intersection of these important and highly traveled arteries would have a significant negative impact on the surrounding San Fernando valley towns, the 101 and 405 freeways and West Los Angeles surface streets. As residents of West Los Angeles that use the 405 freeway daily in the area that will be impacted by these alternatives, and who rely on the surface streets in the surrounding area to get to work, school and other essential locations, we much prefer the Alternatives that minimize this impact over the lengthy term of this project . We appreciate you taking into consideration our views in selecting an alternative. Best regards,
	Azusa	91702	No	2/9/2022	What we really need is a viable Underground subway system with Logistical connections. Fast tracking this project makes Sence, it's an environmental imperative to get us off our cars!!
	Van Nuys	91405	No	2/9/2022	I am a current valley resident and I have also grown up in the valley--primarily in North Hollywood, Van Nuys, Panorama City, and Sylmar. Since I can remember, using public transportation in the valley has been difficult especially getting from the valley to Los Angeles. In the recent years, public transportation has become better and equitable. What I like is for the Sepulveda Transit Corridor Project to occur. What I wish is for this project to alleviate the traffic from the 405, 118, and other related freeways that are affected by rush hour traffic

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
			No	2/9/2022	I am a resident of LA County who frequently commutes between the westside and valley. I strongly support your existing alternative 4 that involves tunneling a single-bore tunnel under Bel-Air (without a ventilation shaft) for the Sepulveda Transit Corridor and an elevated segment running through the valley. I strongly support alternative 4 as this option allows for flexibility in constructing expansion stubs where the line meets the metrolink tracks in Van Nuys so the new automated metro can have the potential to be expanded with little disruption of service north towards Sylmar/Santa Clarita, west towards Northridge/Chatsworth (CSUN would be extremely happy to have a direct rail connection to its campus) or more east past the Van Nuys Metrolink station to allow the line to serve as a funnel into the west side and valley. If alternative 5 is built, it means that if there is an attempt to expand the line through the valley, it would require service disruptions and cost loads of money to construct a proper underground junction box. Bechtel's automated technology has so much potential here in Los Angeles and has already been proven successful in other cities around the world such as with the Vancouver SkyTrain or the Paris RER which I believe are similar to the system that will be developed for Alternatives 4 and 5. Thinking long term, the Sepulveda transit corridor can be the backbone of a robust automated regional express metro for the Los Angeles region which I firmly believe would transform the region for the better as there would be multiple options for people to get around the city. Light rail and heavy rail could both act as "local" services while the new system could act as an "express", moving people around on a regional scale. I would also love for Metro to start considering long term planning so situations like what going to happen to the Wilshire/Vermont junction when we build the Vermont subway?" don't happen again. Connecting the K Line to the C Line wasn't too disruptive because of the long term planning approach that was taken when constructing the C Line. Consider the long term implications of this line as these automated metros are the future of transit and move people around very quickly. Also please don't build a monorail. I love this city too much for it to become a prime example of how cities in the US are mainly built for cars and treat transit riders like second class citizens. Thank you and can't wait to see this project break ground,
	Sherman oaks	91423	No	2/9/2022	This is one of the dumbest ideas I have seen in a while. Your solution to an already congested highway is to turn one of the existing lanes into a pay lane? In what world does that ease traffic for anyone but the rich? How about adding more than one exit lane for the interchange between 2 of the most traveled highways in LA between the 101 and 405? If you people install this stupid toll on our lives, then it's completely out of shear corruption and greed and not for the good of normal people. This is what we're paying for? For you to figure out if a dumb idea is dumb? And I would bet the person making this decision walks around all day with some false sense of righteousness, like they are helping anyone.
	Los Angeles	90024	No	2/9/2022	Please do not do a monorail. I like alternative option 6 - heavy rail.
CommunityLA			Merged Document	2/9/2022	
	West Hollywood	90069	No	2/9/2022	Los Angeles is in desperate need for a true metro/transit network; one that is consistent and serves Angelenos where we are and need to go. Pictures of the 405 across the Sepulveda Pass highlight the increasing need for connecting the Valley to the Westside and beyond in Los Angeles. That said, Alternatives 1, 2, and 3 all completely miss the mark. The fact that no other major metro area in the world uses Monorail should be a major red flag for its usage. Plus, why would LA use monorail on just one line, requiring now a completely new set of skills and parts for maintenance and repair. Let's be realistic in the needs for LA, not try to create something that "looks cool." Alternatives 2 and 3 would be a complete waste of time and money and reduce the credibility that LA Metro is trying to build a network for Angelenos. Anyone who have ever tried to take transit that is highway adjacent knows just how terrible of an experience it is. We need to be encouraging more Angelenos to ride transit and therefore, the transit built needs to be enjoyable, accessible, and go where we need to do. Anything that run along the 405 a) doesn't actually meet us where we are and b) would be an abhorrent rider experience. This means, we'd spend all of this money on a line that few would want or decide to ride. Therefore, the only realistic Alternatives are 4, 5, and 6. These three alternatives clearly serve Angelenos, moving along key commercial and residential areas and most importantly, create a true network that allow riders to transfer with ease (and enjoyably) from line to line in order to get where they need to and want to go. Moreover, these are the only alternatives that realistically serve UCLA, which is arguably the most important service hub that the Sepulveda Line will end up serving. Put yourself in riders shoes when deciding which Alternative is the right now. We need to start getting Angelenos out of their cars and onto transit and they will only do so if it (with ease and enjoyably) take us where we need to go from where we are. Alternatives 4, 5, and 6 do that and will help elevate the entire LA Metro network overall. Thanks!
		91326	No	2/9/2022	The Sepulveda Transit Corridor has needed a change for a long time. I think any of the heavy rail alternatives are good. Although I think the one that would transport the largest number of people with the shortest wait times would be the best. There should absolutely be a station at UCLA.
	Los Angeles	90077	No	2/9/2022	Please use the mono-rail as it is less destructive to the hills and Bel Air
			No	2/9/2022	Our smart, dedicated Sherman Oaks public and private entities believe a subway under Van Nuys Boulevard from the Valley to the Westside is the way to go. Utterly destroying Sherman Oaks with a heavy rail line down Sepulveda Boulevard makes no sense at all. Please don't do it.
		90049	No	2/9/2022	As a resident of the Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and the Expo line. NO NEIGHBORHOOD ENCROACHMENT: While details were not provided as to how the options would be built with an aerial alignment along the 1-405, it leaves on the table the possibility of LAND ACQUISITION and FURTHER NEIGHBORHOOD ENCROACHMENT into SURROUNDING BRENTWOOD COMMUNITIES, such as BRENTWOOD GLEN. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass Express Lanes Project and previous land acquisition for the I-405 expansion in 2009, WE ARE VERY UNCOMFORTABLE AND STRONGLY OPPOSE ALIGNMENTS AND FINAL DESIGNS THAT RESULT IN THE POSSIBILITY OF PROPERTY ACQUISITION. POVIDE A UCLA STOP: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. MINIMIZE NEGATIVE IMPACTS TO SURROUNDING NEIGHBORHOODS: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in THE LEAST NEGATIVE IMPACT to surrounding neighborhoods. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless

					connection between the San Fernando Valley, the Purple Line and the Expo Line. ALTERNATIVE 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Blvd. Thank you for your consideration of these important points!
	L.A	90049	No	2/9/2022	I am doubtful that expanding the I-405 will alleviate the heavy traffic. I like that you are encouraging community response in this matter. I wish that none of the alternatives included land acquisition from the Brentwood Glen. I strongly suggest that you consider Alternatives 5 or 6 and that you have a stop at UCLA. The shortest and most direct route between the valley, the Purple line and the Expo line would be best.
	Los Angeles	90034-1841	No	2/9/2022	I am advocating for Option 6 and—even more important—strongly rejecting the monorail options (1, 2, and 3). All monorail options (1, 2, and 3) stop in less-populated, less-accessible areas along the 405. Riders at these stops would have to endure unhealthful air and noise pollution. Worse, the monorail is an unproven major interurban technology (Disneyland doesn't count) and is incompatible with our existing transit infrastructure. Fixing a broken monorail car requires expertise LA Metro just doesn't have. And monorail options 1 and 2 would not stop at UCLA, which is home to many potential riders. Options 4 and 5, while not involving a monorail, offer smaller trains (up to 680 seats) which are incompatible with existing transit infrastructure. Option 6 trains accommodate some 800 passengers—obviously better—and would serve areas of denser population than would options 4 or 5. I don't want an inefficient, unhealthful, untested monorail system crossing the valley and the city. Thank you.
			No	2/9/2022	This is my comment on the project based on my experiences using the metro, driving in los angeles, and living in Westwood. Between options 1-6 Only 4 5 and 6 should be considered. The monorail would be built with a company that does not have a successful track record with city contracts (Electric buses anyone?) in a way that would cause massive short term upheaval. Construction on the 405 would do 2 things 1 it would cause a reduction in the ease of driving and then when the line is ready to open it would return that ease. It would almost be like adding a lane after the project- this would kill ridership and early adoption. 2 it will be longer than planned. I would like to point to the project currently underway to replace the median on the 101 between the 405 and 135. This is approximately the same distance the monorail line will have to go. It has been 2 years and it is not completed. A median- literally just a line of concrete. I think this is a useful example to show that they are DRASTICALLY underestimating how difficult it is to work in the middle of the busiest freeway in the US. Heavy rail lines are scalable compatible and most importantly USEFUL. A heavy rail line can accommodate far more riders and already has built in infrastructure throughout los Angeles. Please put all our resources to options 5 and 6! Heavy Rail all the way!
	Los Angeles	90024	No	2/9/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options

	van nuys	91406	No	2/10/2022	In my opinion, Alternatives 1 to 3 based around the monorail system are unworkable. They have much more inconvenient transit stops along a freeway, less rider capacity in a rapidly growing city, slower times, and less direct connection to UCLA, which would serve as a primary stop of the whole route. The stops at the Getty would also be a waste of resources as the Getty is not near any employment hubs or dense residential areas for locals who would be the main daily riders. Of the remaining viable Alternatives, Alternative 6 would run directly underneath another transit line which seems redundant. Between 4 and 5, which in my opinion are far and away the best options, Alternative 4 includes an underground portion that minimizes the effects in the densely populated surrounding communities in the Valley. Alternative 5 only affords this to the affluent communities on the Westside, while Alternative 4 provides a better, more equal experience for all communities involved. When reviewing all Alternatives, it is clear that Alternative 4 is the best choice.
			No	2/10/2022	Hi! I'd just like to throw in my thoughts supporting alternatives 4, 5, and 6 for the Sepulveda pass project, and my opposition to alternatives 1, 2, and 3. I love riding the subway in LA, and I live in studio city. I'd easily be able to take the bus or ride my bike to Sepulveda, then take the project to Westwood, swatelle, or transfer to go to Santa Monica, which I do frequently to visit friends, go to church, and just hang out. All monorail options would make me go to the 405. I'd have to go up an intricate system of stairs and elevators, to wait next to the free way, then transfer to a bus or a people mover to get to UCLA. It's inconvenient and dangerous, it isn't fast, and it doesn't hold as much capacity as a subway would. I prefer alternative 4, where it has a stop at Sherman way, and saves money by being elevated. The views of the valley from the train would be fantastic. Alternative 5 is my next preference because it's just more expensive, and you wouldn't see the valley. Alternative 6 is my next preference, because it doesn't have the stop near Sherman way. No matter what I'm opposed to the monorail. It's a joke that we're even considering it when every major world city from Tokyo, to London, to New York, Mumbai and Mexico City, all have extensive subway networks, and LA is considering building something that won't work between a highway. Thanks for letting me give feedback! And I hope we can get this project right and transform the region!
		90095	No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 		90024	No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

Southwest Regional Council of Carpenters			Merged Document	2/10/2022	Good Afternoon Mr. Carter, please find attached written comment regarding the Southwest Regional Council view on the Sepulveda Transit Corridor project.
	Los Angeles	90024	No	2/10/2022	What I suggest is the building of a stop at UCLA definitely because it is one of the primary organisations in the city. UCLA is not just about the students but also thousands of healthcare workers who work at UCLA Health and hundreds of faculty members who are contributing to so much research for the country. This metro stop will be catering to almost 100,000 people and so I believe it's a brilliant step and investment.
			No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. 	Los Angeles	90025	No	2/10/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Los Angeles	90024	No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. Also why not combine the ending stops of Bundy Dr. & Sepulveda Blvd. Riders should have the option for both stops. ALSO ADD AN EXPRESS LANE. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

		90025	No	2/10/2022	The Sepulveda corridor is among the most congested in LA, and is clearly in need of relief. However, certain alternatives are significantly less helpful in addressing this issue. Overall, Alternatives 4, 5, and 6 are the most effective in addressing the existing congestion, as these alternatives have the best alignment. Alternatives 4,5 and 6 provide a direct heavy-rail connection to the UCLA campus and Westwood. In addition, there is no need for the rail alignments to be built completely underground through the Sepulveda pass. With modern technology, a heavy rail alignment consisting of rail viaducts and short tunnels can traverse most of the pass, far less expensive than the current entirely underground options. In addition, other possibilities, such as automated metro vehicles could be viable options to be considered. It seems LA Metro has chosen to only offer expensive heavy rail alternatives. I hope the LA METRO is not attempting to sabotage and sandbag these alternatives, with such an extreme proposal. I suggest LA Metro choose the best alignments according to station placement from Alignments 4, 5, and 6, then embark on further study into specifics. Alternatives 1, 2, and 3 should be removed or modified, as all these alternatives rely on monorail. Monorail is well-known as a niche mode of transport, primarily used in denser urban areas or tourist destinations for short distance(under 10 miles), for many good reasons. Monorails will have lower capacity per vehicle(less than 500) and high maintenance costs due to unique technology. Monorail is unsuitable for the 12-14 mile long route of this project. Heavy rail is the strongest option. Heavy rail will allow for significantly increased capacity, simpler maintenance, and increased passenger comfort. Heavy rail rolling stock can also be easily purchased off-the-shelf, reducing costs compared to a likely custom monorail. In addition, heavy rail will help strengthen Metro's existing transit network through transfer stations, capable of handling large volumes. In addition, alternatives 1 and 2 also provide inadequate service to the UCLA and Westwood area, the densest and highest-demand area along the Sepulveda corridor. Automated heavy rail may provide the best of both worlds, with the higher frequency of monorail along with the higher capacity/comfort of heavy rail. While the proposed peak frequency of automated heavy rail is only 2.5 minutes, with 3-car trains, automated heavy rail is capable of 1.5 minute frequencies with 8-car trains, such as on the Paris Metro. In fact it is probably advisable to increase the planned train frequency and size from the current proposal to accommodate for future growth. Now is the time to invest boldly and effectively in public transportation. I urge the LA Metro to pursue Alternatives 4, 5, and 6, which use a heavy rail alignment with stops in UCLA/Westwood area. Although these alternatives are considerably more expensive than the others, the long-term benefits of improved journey time, higher capacity, and lower maintenance costs for this critical corridor outweigh the drawbacks. I hope the LA Metro will take my comments into consideration.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	North Hollywood	91606	No	2/10/2022	I am excited about this future line. I request that it be entirely hard rail track through the Santa Monica Mountains. I hope that Metro Board, staff, and consultants, prioritize the voices of people of color and renters that are the backbone of ridership in this city. While there are dissenting voices of older, wealthier, and whiter homeowners, making false arguments about this project, it's important to recognize that they are a loud few. Please do not advance the No Plan Alternative, which I imagine is receiving ample support, especially from Sherman Oaks. I wish that with the help of this new and much needed investment in the San Fernando Valley, we'll create a more connected, transit-friendly, less car-dependent, and more equitable city. As someone who grew up taking transit and still does when most convenient, I prefer HRT (with driver). Given the capacity and investments to grow it for the Orange Line, I believe the Van Nuys station and/or Sepulveda station will become one or two of the most popular transit stations in Los Angeles. I ask that the monorail alternatives be removed from consideration, as this City needs a longer-term investment with greater capacity that the HRT alternatives would provide. As a Valley resident, I prefer Alternative 6. This option is entirely underground and HRT. This would address concerns with traffic and "blight" any above-ground options would cause. Given the Northeast SFV Light Rail project along Van Nuys blvd will have been completed years earlier, the local residents deserve this long-term investment as well as a break from the temporary inconveniences it will cause. Indeed, working communities in the San Fernando Valley deserve this investment and I look forward to once day getting to the Westside without needing to brave the 405-S! Thank you.

With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	La Canada Flintridge	91011	No	2/10/2022	I have been impressed with the progress Metro has made in making alternative transit a priority in LA. Growing up in the Bay Area I have seen BART's very small extension projects take decades to implement while LA has rebuilt their rail network to a large extent in the same time frame. Any alternative listed is better than the status quo. Option 4 I feel is the most realistic, however. It extends the currently supported heavy rail infrastructure used by the red and purple lines. By going aerial it also sets the foundation for what may not yet be considered for the orange line- an aerial extension of the red line for a seamless connection. What I suggest is to please not let NIMBY organizations slow this progress down. Choose an alternative and start building as soon as possible. Don't let this project get mired down in legal challenges.
	Irvine	92606	No	2/10/2022	I already made a comment requesting that Metro give minimal attention to the monorail alternatives (1-3). In addition to other negative aspects when you read the fine print you realize that all three alternatives have un budgeted elements for connecting with UCLA Alt. 1) Automated People Mover (who pays for that?) 2) Electric bus (I assume its a BYD bus? also who pays) 3) the detour is not in the initial cost estimate.
	Covina	91722	No	2/10/2022	I do not like the monorail option and would like that the project directly serve UCLA without a shuttle. I like Alternative 4 the best as it uses commonly used rail technology, not a proprietary monorail, and balances elevated rail along the San Fernando Valley while going underground as needed. I do not support a station at Getty Center in any alternative as it will not be well used and will not be a good investment given the surrounding development type (museum and single family mansions). I also do not like Alternative 6 ending at Bundy and the Expo Line. This route will preclude further expansion south to LAX and the South Bay. I suggest the following two stations be studied in the EIR for feasibility and ridership - Sepulveda/Magnolia, Sepulveda/Vanowen, and Woodman/railroad tracks. The first two serve high density housing and Sepulveda/Vanowen also serves Valley Presbyterian Hospital and connects to a high frequency bus line. Woodman/railroad tracks will provide access to jobs, high density housing to the north, and is walkable to Kaiser Panorama City. If the maintenance facility is being built west of Woodman south of the railroad tracks it should not be much effort to extend it a short distance to terminate at Woodman itself.

	Los Angeles	90064	No	2/10/2022	Staff Sepulveda Transit, With the rise in homelessness, displacement, and gentrification I am urging Metro to adopt the goal of it's projects causing zero displacement! As the biggest project Metro is working on, it will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of renters due to gentrification. Any renters temporarily displaced must have a universal right to return! Ellis Act filings should be frozen! Owner occupancy, resident manager, and capital improvement evictions must also be frozen. There need to be the strongest tenant anti-harassment ordinances in place and enforced! Tenants must effectively reached out to. (See additional suggestions below). The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control Tenants owning directly as a cooperative! • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to the actual neighborhood. NOT the Area Median Income. • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to the actual neighborhood. Not Area Median Income. • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down! • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. Thank you.
			No	2/10/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

		90041	No	2/10/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. 	Los Angeles	90045	No	2/10/2022	We need any and all transit options to improve commutes to the Westside in the same way Downtown L.A. is served by MetroRail and Metrolink. The commute to the Westside needs relief now.

	Burbank	91506	No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

	Culver City	90232	No	2/10/2022	I would like to recommend the use of a use of Option 6. Option 6 has the following advantages over the other options. It makes use of Heavy Rail, has the best station locations, and its construction will cause fewer inconveniences than building a monorail system. Heavy Rail is tried and true technology, used successfully around the world and in Los Angeles, while monorail technology has never been popular. Heavy rail is compatible with LA's existing rail system and there are plenty of suppliers making subway cars and rail equipment. In contract, monorails are a niche product. Beyond some demonstration projects, it has not been used in countries even with the most advanced rails system. Option 6 has the stations in the most advantageous locations and are superior to the proposed monorail stations. The stations will be convenient and easily accessible by pedestrians, while the monorail stations are in the middle of the freeway and will be noisy, polluted, and generally not a comfortable place to wait for a train. Additionally, having a station on the UCLA campus is essential for the success of the rail line and to remove automobile traffic from the roads. Having been a student at a university that was successfully served by heavy rail, I was a witness to hundreds of people getting off of each train which arrived every few minutes. Requiring people to take a connecting bus or people mover, as required by the monorail, would cut that that passenger count. Finally, building a monorail system would require rebuilding and reconfiguration of the freeway. This would cause a traffic nightmare for many years, providing the system with plenty of negative publicity even before it starts operating. For these reasons, I believe Option 6 has the most advantages and is well worth the investment. Thank you

UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

	Los Angeles	90042	No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. 					ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90004	No	2/10/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a

	Los Angeles	90077	No	2/10/2022	We are residents of Bel-Air and, while acknowledging the importance of easing traffic to and from The Valley, we strongly oppose Metro's alternative plan of tunneling beneath Bel-Air for the Sepulveda Transit Corridor. We have read the proposal and have acquainted ourselves with its components, and we don?t understand why doing this is even under consideration when building a monorail adjacent to the 405 is certainly less costly, requires less time to construct, and has far less environmental consequences. It just makes more sense in every single way, and is the most obvious and logical plan to adopt. Sincerely,
			No	2/10/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely, Sent from my iPhone
			No	2/10/2022	I am a resident of Bel Air and I strongly oppose ANY tunneling beneath Bel Air for the Sepulveda Transit Corridor. In addition to compromising the integrity of the hillsides and our properties, it is completely financially irresponsible.Monorails are significantly less disruptive and destructive, along with being billions of dollars less expensive! Please DO NOT TUNNEL UNDER BEL AIR!!!
	Los Angeles	90077	No	2/10/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,

					issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
		90024	No	2/10/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

			No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Sunland	91040	No	2/10/2022	What I suggest is that Metro choose Alternative 6 when building out one of the most important transit projects in the city's history, the Sepulveda Transit Corridor. A project like this has been been long overdue, and the city cannot afford to cut corners, as suggested in some of the other alternatives (Alt. 1 and 2). What I suggest is that the city build a station at Gateway Plaza on the UCLA campus, and not a station off-campus, as adding the station off-campus and connecting it via a BRT or APM will significantly deter ridership. Additionally, what I wish is that the line travel below Van Nuys Blvd in the Valley, as it allows for easier connections from both the East and West Valley, in addition to being a more natural continuation of the future East San Fernando Valley Line (despite being at different grades). What I also hope is that Metro is not deterred by HOA's like those seen in Sherman Oaks and Beverly Hills. This project, if built out correctly, can have an absolutely massive impact on those living in the Westside, the Valley, or those who work at/attend UCLA. Thank you.
	Los Angeles	91403	No	2/10/2022	I support the Sepulveda Transit Corridor Project because it represents a strong opportunity to better connect the San Fernando Valley, UCLA and the Westside There is no doubt about the utility of this new line. Thank you for making us react to the alternatives proposed. I really reject alternatives excluding an easy and direct access to the UCLA campus. The first two alternatives are too complex with the creation of a secondary line with electric buses (alternative 1) and another monorail line (alternative 2). I believe there will be an enormous loss of utility with the additional connection time. I wished that this new line would allow an easy connection with the Purple Line's extension, which alternative 2 doesn't provide. Serving the UCLA campus and Century city, West Hollywood (Purple line's extension) can be done without complicating the exiting network. On top, I am sure that those alternatives imply a superior budget. About the transfer stations proposed, I like the positions of the connections in alternatives 4 and 5. They avoid the 405 freeway, making their access easier. Alternative 3 is very interesting because it is coming up with another transfer station with the Orange and future Blue Lines, serving my neighborhood (Sherman Oaks). On the contrary, in alternatives 1, 2 and 3, the accessibility of the stations and between different lines in transfer stations will be complicated and time costly because of the level difference (aerial monorail vs subway in underground). I am against the option of putting the monorail line alongside the 405 freeway (alternatives 1, 2 and 3). I am strongly opposed with a station in the middle of the Santa Monica Mountains because the Bel-Air neighborhood is already connected though the extension of the Purple line and the 405 freeway (less congested with the new transport line). And it will increase the transport time between San Fernando valley and downtown, the opposite of this new line's goal. The ExpressLanes project will impose the monorail to shift to the right, damaging more nature space (Getty View Park). I strongly support the heavy rail options (alternatives 4, 5 and 6): they offer a larger capacity, and it seems to be less complicated to improve the quality (comfort of passengers, security, speed) than monorail trains. There are many car manufacturers established in the US which will make it much easier to expand or change the fleet in the future. In addition, I really have doubts about the monorail technology. They are only a few in service applications (in China?), there seems to be a very limited number of manufacturers and evacuation of passengers in case of fire or other emergencies have never been really proven. Any proprietary technology is always much more complicated and much more expensive to operate. You would also be stuck with the supplier in case you wanted to expand the line further south, to LAX for example, later on. Also, as this has never been tested, I guess LA may end up as experiment zone with additional delay for the opening of the new line I am opposed to a transfer station in the middle or very closed to the 405 freeway (Van Nuys neighborhood) because I don't want to have another situation like the Metro Green Line (alternatives 1, 2 and 3). We will be more exposed to noise and pollution from the freeway.

					So, in a nutshell, alternative 6 looks like the best one, while alternatives 4 and 5 represent a good value for the various neighborhoods around the 405. Alternative 4 is probably the best value for money. All monorail options (alternatives 1, 2 and 3) would be huge mistake for LA.
	Mission Hills	91345	No	2/10/2022	What I like are the heavy rail, underground options. This would cause minimal disruptions to the 405 and is also capable of increased throughputs compared to the monorail option. I prefer alternative 5 because from what I can tell from the map is that it bypasses significant residential areas while maintaining the number of stops. Tunneling might be costly however the monorail alternative might be costlier as residents in the area may bring litigation due to the sight of the monorail and it's tracks. True the subway option may bring opposition but as it is sight unseen it should be more convincing as a viable option. Please don't let those who don't even use public transportation in the first place dictate and even destroy Metro's progress towards a more interconnected transit system in Los Angeles. With fuel prices remaining high, the Valley needs better transit options getting over to the Westside and this would be it. Thank you and have a great day!
	LOS ANGELES	90068	No	2/10/2022	I'm all for this transit line. I think it is a vital and much needed public transit pathway for two reasons: 1. It connects the SFV more directly into LA proper. As a resident of SFV, it often feels like living on an island because it is not easy to travel to other areas of LA if you don't have a car. I truly feel this line would open up more job and recreation opportunities for residents in the SFV, both of which are very important. 2. Economically, I believe this would help boost business in both the Westside and SFV. It would expose more people to businesses in both areas. I think there's real potential for a boost in business in both of these areas. Personally, I never go to the Westside, mainly because it's so cumbersome and difficult to travel to. I would be much more inclined to explore restaurants and shops there if I could get there more efficiently.

	Los Angeles	90025	No	2/10/2022	I want this line: - to have at least 1 stop directly on UCLA campus!! - to NOT implement the monorail design option, which has an unrealistic cost estimate, noisy and poorly located stops (see next point), and less ridership than other options. - to NOT have stops immediately on, under, or adjacent to the 405 freeway - to be built ASAP, considering all possible options to accelerate approval and construction, including Public-Private Partnership (P3). - to eventually extend south to LAX and potentially beyond.
Brentwood Community Council		90049	Merged Document	2/10/2022	
			No	2/10/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Also, I was originally told that we are connecting the valley to LAX. Why then do we disrupt Bel Air and not go directly down the 405 route either above or underground route?
			No	2/10/2022	Please stop proposing the Alternative 4 for the Sepulveda Pass. It would be the final solution & the nail in the coffin of the ruin of our Sherman Oaks neighborhood. The 405 has already compromised the peace & loveliness of our area with freeway roar, pollution & deadlocked traffic to access the freeway. For the sake of the thousands of families that would be impacted by the elevated train proposed by Alternative 4
			No	2/10/2022	Please stop & abandon this terrible blighting proposal.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	LOS ANGELES	90049	No	2/10/2022	1. As residents of Bolas Street in Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 2. No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? 3. Provide a UCLA Stop: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. A stop at UCLA ensures seamless transfers How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? Will the transfers be free of charge? Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County. 4. Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? 5. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. 6. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. ?What is the noise and vibration impact of the monorail options? 7. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Blvd
	Los Angeles	90049	No	2/10/2022	1. As long-time residents in Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 2. No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? 3. Provide a UCLA Stop: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. A stop at UCLA ensures seamless transfers How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? Will the transfers be free of charge? Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County. 4. Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? 5. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. 6. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. ? ?What is the noise and vibration impact of the monorail options? 7. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Blvd.
COMSTOCK HILLS HOA	Los Angeles	90024	No	2/10/2022	The Comstock Hills Homeowners Association located just north of Century City supports the inclusion of a direct stop at the UCLA campus and seamless connection to the Purple D Line/Westwood Station in the Sepulveda Transit Corridor project.
	Encino	91426	No	2/10/2022	I urge you not to place any aerial alignment of trains in the valley. Option #6 would be the best selection, if you have to do this at all. It would be unfair to valley residents to have them suffer increased congestion along Sepulveda Blvd., the noise and negative visual impact of aerial trains and the loss of property value and peace of mind. The inequity of putting valley residents through this, while not burdening people living on the west side and in the hills, would be very unfair. I don't think anyone should have to suffer the serious impact of aerial trains. A direct shot to Van Nuys Blvd., via subway, would make the most sense.

	Los Angeles	90011	No	2/10/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

			No	2/10/2022	I am a 20-plus year homeowner and resident of Bel-Air. My family and I live on Stone Canyon Road, which will be profoundly impacted should you choose to pursue options 4, 5 or 6 of the Sepulveda Transit Corridor Project. While I know that Metro is seeking to build the Project to alleviate traffic congestion, Sepulveda Transit Corridor Project options 4, 5 and 6 are untenable as currently drafted for the following reasons: noise and vibration impacting homes, residents, hotel guests, and even wildlife in lower Stone Canyon as the subway rises to 38 feet on approach to the UCLA station; venting; the hazard of tunneling under Stone Canyon Road - a two mile long dead-end two lane street and home to an iconic hotel and countless valuable and unique properties - without considering emergency service access in the event of a fire; loss of property values, etc. Tunneling through a high density residential neighborhood in a high fire zone , near or under two earthen reservoirs , in a flood plain and liquefaction zone without considering the egregious consequences to one of the most pristine residential neighborhoods in Los Angeles makes no sense. I urge you to consider other options - options which quite clearly appear to be more practical, more appropriate, and less risky - to accomplish your goals. These include re-routing the subway down Beverly Glen Boulevard or under and/or over the 405 freeway. The purpose of this communication is to clearly state my FIRM OPPOSITION to any tunneling under Bel-Air and to encourage Metro to consider other less devastating, less expensive common-sense options in creating the transit corridor. I understand that if Metro decides to tunnel beneath Bel-Air, it may seek easements and other rights from property owners. Please be advised that I have no intention of granting any such rights and that if Metro acts by way of eminent domain, I intend to take all appropriate action to protect the physical integrity and value of my property from such actions, including appropriate severance damages. Furthermore, every Bel Air neighbor that I have spoken to feels the same. Please feel free to keep me advised of the status of the Project.
Studio City Neighborhood Council			Merged Document	2/10/2022	Attached please find the Studio City Neighborhood Council's passed motion supporting only Alternative 6 (Heavy Rail) regarding the Sepulveda Transit Corridor Project.

	Los Angeles	90024	No	2/10/2022	Lifelong resident of Westwood, Member of Westwood Neighborhood Council, Comstock Hills Homeowners' Association Board of Directors and UCLA Parent Council. I support the inclusion of a direct stop on the UCLA campus and seamless connection to the Purple D Line/Westwood Station in the Sepulveda Transit Corridor project. I would like to see an above-ground monorail/train route to the valley that would be able to stop on the UCLA campus underground seamlessly (ie no changes required whether coming from north or south) and continue south to the Westwood station and then continue further south to the airport rising above ground south of Exposition. I would like it to continue north from UCLA underground until Sepulveda then above ground all the way to the valley and beyond. Think of the red line in Boston. Thank you.
	West Hills	91304	No	2/10/2022	I am thrilled that Metro is finally going to build a viable transit option between the Valley and West LA! We've sorely needed this for decades. Still, I can't recommend strongly enough that any monorail option be dropped immediately. They are nice in theory but have far too many practical issues: generally low top speeds, extreme complexities of track changing (which also affects ability to adjust trains in circulation), and extraordinary maintenance costs due to the vanishingly few other monorails in operation. There is not a single successful monorail line in the world of comparable length anywhere outside of East Asia for a reason. However, Metro already operates plenty of other useful heavy rail lines. Simply expanding the existing fleet size would be cheaper upfront and offer economies of scale in the future. I also suggest dropping the Getty Center stop. I can't imagine it getting use anywhere comparable to a stop in the Westside, and it would greatly slow transportation times through the pass unless Metro was to offer rides that skipped it. That said, I really like the stops at UCLA and the Sherman Oaks Galleria which provide direct access to popular destinations and would likely boost ridership. With all this in mind, I believe alternatives 4 and 5 are easily the superior proposals. The fully underground Alternative 5 seems the better of the two as it would create far less noise once built and would not require a continuing above-ground footprint. Whatever you decide, PLEASE don't let the over-privileged, rich neighborhoods in the hills dictate the project's course. They already forced the voter-approved 1980s proposal to be scrapped, and we've been suffering the disastrous traffic and environmental consequences since then.
			No	2/10/2022	Metro: "Stop studying ridiculous Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard, in the Valley. Alternative 4 will destroy Sherman Oaks forever." The proper plan to be followed is to put a metro monorail system running down the 405 Freeway which would not impede on residential areas and any corridor on the Valley flats should be a subway system as you are providing for on the Westside of the project. Stop being a bunch of assholes and pull your heads out of where the sun doesn't shine and do the right thing just like you would do if your neighborhood was subject to this insane transportation plan that you have under consideration.
			No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	91335	No	2/10/2022	I like the idea of a train that goes under the mountain. I used to commute from North Hollywood to UCLA using public transit and I tried a variety of routes over the years. None was very satisfactory. It took 2 hours and I had long waits for my connections. I think this could be a big improvement, if it is fast and goes directly to the UCLA campus. I live close to the orange line now (in Tarzana near Reseda Blvd). It would be great if this train connects to the orange line or I could take the bike path and take my bike on the train.

					a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Irvine	92612	No	2/10/2022	Dear LA Metro, Please, for the sake of our city's future in combating climate change effectively long term, let's go with heavy rail options 4 or 5 instead of the monorail options. Heavy rail will have higher throughput, modularity, and won't have as many technical issues in moments of repairs or fixes. Monorail, while looks "cooler", is a short term solution and will deteriorate just like how it has done countless times in other American cities. I hope our city doesn't fall into the hands of special interests or NIMBY's who time and time again have fallen short in Los Angeles' urban history. Thanks,
	Sunland	91040	No	2/10/2022	What I wish is that this project is seen through and that everyone sees the benefits to our environment and city. Maybe we can incorporate a wildlife crossing or two. Market this public transit in a way that makes one feel good about not driving alone in their car day after day. Who cares about the make model and color of a metal (or fiberglass), can on 4 wheels . Everybody has one, no one is special because of a car! Take the train, because you can!! Make practicality cool!
	Los Angeles	90015	No	2/10/2022	I strongly support Alternative 4 for this project. As someone who frequently visits the long beach area as well as santa monica, I know how important time for transit is. I am someone who prefers taking public transit when possible, however, it is almost never faster to take it than to drive here. I previously lived in New York City and Boston, and there it was frequently faster to take public transit than to drive. However, this is never the case here. A monorail will be slow, and no one who doesn't have to take it will take it as a result. Heavy rail could provide a service that would actually get people out of their cars. There are Simpsons bits about how monorails are a joke. They should be kept to airports. If it was proper light rail that could move at high speed and was automated, that would be another consideration, automation is a good idea, but monorail is just not the look of a 21st century city. Additionally, diversification of the train fleet with a monorail would increase future maintenance and acquisition costs. I appreciate passing a line through UCLA, a dense and vibrant campus that would have large demand for rail taking it to the rest of the city. The proposed route which has stops right in UCLA is a great idea. Having a people mover or bus connection will greatly increase transit times and decrease the number of people who want to use the line. We cannot add more transfers to an already transfer heavy and sprawling transit network. Raising up sections as alternative 4 suggests would have a large impact on cost, and modern heavy rail like that in Washington DC or San Francisco is quite quiet. I do not mind rail passing by me, it is not loud like New York or Chicago, and it already near a fairly loud highway. Cost should be a primary concern so the city can build more great rail projects. If you run the monorail through the middle of the highway, people have to walk to it. I get headaches when near the highway for too long from air pollution and loud noise, and I suspect that having to go to stations on the highway will be a large deterrence for people using the line. You want to make transit easy to use, convenient, and fast, so that people see it as a real option to get aroun. Ff you must go to a place where only cars are meant to be, on foot, just to board the train, everyone will constantly be reminded how it would be more pleasant to drive. Please do not put stations in the middle of the highway. BYD, behind the proposal of the monorail, also has a history of overpromising and under delivering in our city, and we should not give them more contracts. Please choose alternative 4 or 5, with preference to lower cost alternative 4.

Playa Vista Compass		90291	No	2/10/2022	What I suggest when working on the extension to LAX is to consider stops that serve commercial developments in Playa Vista and Playa District (formally Howard Hughes Center). These hubs are home to several employers whose commuters will benefit immensely from a rail station located in or adjacent to their worksites. Recent employee travel survey data shows that employees are living further away as a result of the pandemic and increase in remote work practices. While a fifth of respondents indicated they will remain working 5 days per week at home on average when their firm opens their office for return, the remaining respondents who indicated they would work from home 0 to 4 days on average varied.
	North Hollywood	91606	No	2/10/2022	I would like to strongly suggest that Metro and its partners devote their time and efforts solely on Options 4-6, with particular focus on Options 5 and 6. The notion that the BYD proposals have resorted to recommending bus shuttles and aerial trolley routes suggests their complete lack of awareness and attention to members of the communities along the route. Mobility issues aside, forcing students and UCLA workers to transfer onto a secondary mode of transport to arrive on campus would add onto commute times and disrupt the local communities through extensive construction timelines with additions such as a secondary aerial trolley route. For Option 3, tunneling through a portion of the Westside would cancel out the supposed cost-saving measures that the monorail would provide. These first 3 options are non starters, and should not be considered in any meaningful capacity. As for Options 4, 5 and 6, it would behoove Metro to work towards fully underground routes. One aspect to note in relation to the Bechtel proposals, is their plan to use a single-bore tunnel. This would greatly accelerate construction times and limit disruptions to local commutes during construction. In addition, the possibility of an automated system should be taken into consideration, which will boost train arrival times and reduce delays, even if new rolling stock will need to be bought. Some other suggestions: please work to minimize the time it takes to make a transfer at the Westwood/UCLA station with the Purple/C line, without the need for large escalators or deep elevators. Look into approriating the site at 7101 Sepulveda Blvd and/or 7111 Sepulveda Blvd, 90045 (currently a derelict, abandoned building and its parking lot) as a possible station site at Sepulveda/Sherman Way. And for the storage/maintanence yard, I would suggest placing it at the site near the Metrolink station, which is currently underutilized.
	Long Beach	90807	No	2/10/2022	I support alternative 4 proposal for this project. The elevated sections will keep costs down while still giving reliable, frequent service between the San Fernando Valley and the Westside. I also think the tunnel through Bel Air should be single bore to avoid needing to create ventilation in Bel-Air. I think LA Metro should also add paid carpool lanes on the 405 to increase funding for this project.

Westwood Hills Property Owner Association			No	2/10/2022	Westwood Hills Property Owner Association (WHPOA) SUPPORTS Heavy Rail alternatives #5 and #6 or a hybrid of the best of these two Heavy Rail technologies and routes. Alternatives #5 and #6 will provide a seamless single seat underground connection from the San Fernando Valley to the Expo Line, while including an underground station on the UCLA campus (4 th largest employer in the County) and a direct connection to the Metro Purple D Line Subway at the Wilshire/Westwood Station. Alternatives #5 and #6 will provide the greatest connectivity with existing Metro transit Lines, making it easier to use public transportation. We believe that getting commuters out of their single occupancy vehicles and onto public transportation is best done by providing a fast and direct route to where they want to go and need to go daily for work. With the completion of the A Line (7 th St/Metro Center), B Line (Red Line to North Hollywood), the D Line (DTLA to Western portion), and the current construction of the D Line Extension (Western to the Westwood/VA), LA-Metro has gained experience with building/boring subways. We believe this experience with underground boring and station construction will deliver the best transit project for the Sepulveda Transit Corridor and meet the goal to create greater ridership on public transit. WHPOA OPPOSES taking any private property to widen the I-405 to facilitate the construction of an aerial monorail and/or stations for the monorail. Additionally, we oppose widening the existing footprint of the I-405 to add additional lanes to the freeway, as part of the I-405 Sepulveda Pass Express Lanes Project . Metro recently spent $1.6 billion (and ran 55% over budget) on the I-405 Sepulveda Pass Widening Project that added HOV Lanes, built new On & Off Ramps, 3 new bridges and huge retaining walls and tied up I-405 traffic for 5-6 years while the project was under construction. The critical decisions about the Sepulveda Transit Corridor project should not be made with a similar short-term lens, but rather must take into consideration what will best serve the people of Los Angeles over the long-term, well into the future. WHPOA SUPPORTS connecting the Sepulveda Pass Transit Project to the Expo Metro E Line at Bundy Dr. or Sepulveda Blvd. rather than at Olympic Bl (Metro E line), this appears to be a shorter route and would reduce the cost of tunnel construction, as well as improve travel times. WHPOA OPPOSES ALL of the Monorail Alternatives (#1, #2, or #3) and has many concerns about the construction of an aerial monorail on the I-405 from the Expo E Line to the San Fernando Valley. During the scoping process Metro must explore and report all of the many environmental, financial, accessibility, and equitability questions presented by these options. Some Monorail issues and concerns: The grade of the I-405 freeway through the Sepulveda Pass is very steep, especially the section from the San Fernando Valley (US 101/I-405) to the peak at roughly the Mulholland Bridge. How safe is a monorail on a steep downhill track? How will this monorail preform on this steep uphill grade? How will a steep slope affect monorail speed? How is monorail performance on a steep slope during incremental weather? How will the length of a monorail train of 2, 4, 6, or 8 cars affect the speed at which the monorail can travel, especially up a steep incline like the one over the I-405 in the Sepulveda Pass? Does LA Skyrail's parent company BYD have any existing monorail systems currently operating in other cities? What is BYD's track record on delivering on promised projects and their electric buses? How will a monorail down the middle of the I-405 with an aerial station at Wilshire, at Santa Monica, and at Exposition (in Alternative #1, #2, & #3) connect passengers to street level or other modes of transportation? The major boulevards: Wilshire, Santa Monica, and Exposition Blvds. are all underpasses under the I-405, which is an elevated freeway on the Westside. How big a ground foot print will be needed to build the stairway, escalators and elevator needed to connect pedestrians to the aerial stations (two stories up)? What are the environmental impacts? How will these new stations affect local boulevard vehicle and pedestrian traffic? What is the cost of construction and operation of all the aerial stations? Where is there land to build a street level connection to an aerial station? Will bridges need to be built to connect a monorail in the middle of the I-405 to a station at the edge of the freeway? How much will this cost? Descriptions of Alternatives #1, #2, & #3 state "frequency of monorail trains will be every 2 minutes during peak periods". How many monorail-trains can travel on the monorail above the I-405 and any one time? How many monorail cars will need to be purchased? How long does each station have to be to accommodate a peak hour 6 or 8 car monorail trains? How will this affect the existing structures and congestion on the boulevards where stations are planned? How will pedestrians and/or handicapped people access the elevated stations at Wilshire Blvd.? At Santa Monica Blvd? At Expo "E" Line? At Getty Center? At US 101? At Metro G Line? At Sherman Way? At Van Nuys Metrolink Station? How do you get to the monorail station if it's built in the center of the freeway? Will trees need to be removed to build the monorail and the aerial stations? Where will replacement trees be planted? Who will care for replacement trees while they get established? Will removal of trees have a negative impact on air quality and contribute to climate change? How is maintance on a monorail handled? What will be the impacts on surrounding areas? Construction of a monorail in the middle of the I-405 will negatively affect commuter times during the construction period. How much will delays and disruption add to the construction cost of a monorail down the middle of the I-405? Or, for a monorail constructed along the edge of the I-405? The I-405 Sepulveda Pass Express Lanes Project is also being planned along this same stretch of the I-405. How will two projects be built on the same strip of land without widening the I-405? How can you build pillars to support a monorail and also add express lanes? Please explain how this can be accomplished? Evaluate ridership projections for a one seat ride to a UCLA campus station vs ridership projected if a connection to the UCLA campus required a time-consuming secondary people-mover or bus connection. Compare the total travel times which would include wait times for making connections from Alternatives #1, #2, or #3 to get to the UCLA campus with comparable travel times for heavy rail alternatives. How can you justify using eminent domain to remove any homes that may be part of an above ground route given the housing crisis and LA's need to build more housing? Often, there are fires in the Sepulveda Pass. Please discuss how an aerial monorail that follows along the I-405 would be affected? Please describe how noise level and vibrations would increase in Westwood Hills and other adjacent neighborhoods if a monorail is the final choice. Please compare this to any impact if tunneling is used. The FBI occupies a large portion of the Federal Building at 11000 Wilshire, Alternative #2 shows an aerial monorail wrapping around the Federal Building and the description says " A pedestrian bridge would run from the monorail station on the south side of Wilshire to an aerial automated People Mover (APM) station on the north side of Wilshire ". And, Alternative #3 shows an above ground monorail cutting across the Federal Building property, how would this impact FBI facilities and operations? What does the FBI think about these plans? The Aerial People Mover (APM) shown in Alternative #2 will need to be supported on some type of pillars, how will this be integrated with the sidewalks, street trees, and street configuration on Gayley Ave.? Will the APM interfere with the emergency vehicle route to the UCLA Med. Center? There are countless utilities buried under Sepulveda Blvd. including a Shell Oil petroleum pipeline and a Chevron gas pipeline that had to be moved when the I-405 Sepulveda Pass Widening Project moved Sepulveda Blvd eastward (Wilshire to Sunset) to add width to the I-405. Additionally, there is a 12 ft. x 12ft. storm drain that couldn't be moved and had to be protected from weight bearing construction, please evaluate the feasibility and additional cost of relocating or protecting these utilities and storm drain if an aerial monorail is built at the eastern edge of the I-405. Sincerely yours,

		90015	No	2/10/2022	While monorails look flashy on the surface, in reality it does not make much sense for this project. LA already has established light and heavy rail, and so there is pre-existing systems in place to maintain these systems. There are trained drivers and maintenance crews. LA would need to train and hire an entirely new fleet of workers for a single line that has less capacity and less flexibility compared to elevated heavy rail. What would happen if a monorail train becomes in-operational during peak hours? The entire line may need to be shut down in order to remove it. On a recent trip on the Dark Blue line to Long Beach, a train was disabled a station in front of us. Within 15 minutes, we were able to continue our journey. Such a feat would not be possible with a monorail system unless many redundancies are built into the design, which adds to the cost. One of the primary concerns the board should consider is speed from one end of the line to the other. In order to incentivize commuters to switch to transit, it should be speed competitive. Current rail is currently 1.5-2x longer than car travel times. As this is a congested corridor, LA citizens want this rail to help alleviate traffic and reduce car noise and pollution. Whichever proposal (that is not monorail, as capacity is also important) can make riders arrive at their destination fastest should be considered. While I would be happy with Alternative 4, 5, or 6, I do think Alternative 4 is the most attractive option, with Alternative 5 being a close second. Tunneling is expensive and does not increase capacity or speed. Having the system be aerial means trains do not need to wait in traffic, which is important to be speed competitive. Both of these alternatives have peak frequency of 2.5 minutes which is attractive. Alternative 4 has the price reductions of the monorail while having the flexibility and pre-existing infrastructure of heavy rail. Existing cars could potentially be used, or at least be ordered with companies where a relationship is already established to reduce cost. Heavy rail is traditionally faster than monorail and switching between tracks is faster and easier. I am highly in favor of this project moving forward, as more transit is needed in LA. While heavy rail is the best choice in my opinion, any new transit project is better than no transit at all. Alternative 4 is my first choice with Alternative 5 being a close second.
			No	2/10/2022	I salute the Sepulveda Transit Corridor project's purpose in improving transportation options between the Valley and the Westside. As someone who was born and raised in Inglewood but later went on to live in cities and countries around the world with much better public transport options (e.g. Philadelphia; Seoul, South Korea; Switzerland), it is perhaps more obvious to me than most that Los Angeles needs to greatly improve public transport options for it to modernize and develop into a 21st century city. (My reference to "public transport" in this comments refers to subways, heavy rail, light rail, trams — not buses, of which there are plenty in the Los Angeles but do not serve it particularly well, given the large geographic scope of the metropolitan area and the great distances between population centers.) With climate change looming and a growing population, the future of this city does not lie with private vehicles but rather with public transport, and those public transport options need to be abundant, easy-to-use, and affordable, and have, as much as possible, a time-savings benefit to users. What I like about the project is that it is finally providing a north-south public transport connection that does not emanate from Downtown LA. Los Angeles is a unique, sprawling city, and its train, subway, and light rail systems should reflect our unique nature rather than follow the traditional wheel-and-spoke model with a single center. What I would wish is for the Project to eventually continue southward to connect through Inglewood and the South Bay beach cities, providing a meaningful north-south public transportation alternative. It is important for the Sepulveda Transit project to focus on having stations with the greatest likelihood of attracting riders and to provide seamless connections with the existing Metro system in Los Angeles, in order to provide time savings to users, therefore encouraging greater public transport use in Los Angeles. If this is not the case, I fear the new segment will be heavily underutilized and live up to its potential. For these reasons, Alternatives 1, 2, and 3 (the monorails with aerial alignment at the 405) are no-gos for me. I don't think that having stations on the 405 freeway, where there are little to no areas of interest or population centers around, would be a good use of this project's time and money. Additionally, having to stand and wait for a train in the middle of a freeway is not a pleasant experience for riders. (I've experienced this on the Green Line.) Again, the priority should be in providing a quick, pleasant alternative for getting as many people as possible across the Santa Monica mountains (from/to the Valley to LA). One suggestion, not explored in the current Alternatives but nevertheless something to keep in mind, is to explore "express" trains (on the same line) that do not stop at every single stop, in order to improve speed and distance covered for those who need/prefer it, while still maintaining connections to local communities. For example, Switzerland, train stops/stations typically serve as the "hub" for local bus lines, providing a distributed and decentralized "hub-and-spoke" model, that focuses not on one central locus (e.g. Downtown Los Angeles) but creates dozens of them, in several layers (regional, local, etc.) Given that it is a major cultural institution that should have a public transportation alternative (especially for tourists), it would be nice to have a stop at the Getty, but I don't think the downsides of Alternatives 1-3 are worth it. I suggest perhaps arranging for a shuttle from the nearest Metro stops to the Getty, as I do think it is important to keep important cultural institutions on the radar when planning public transportation.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90024	No	2/10/2022	Dear Sirs – I am submitting the following comments with the scoping for feasibility and environmental issues on the proposed Sepulveda Transit Corridor Project. I support Alternatives #5 and #6, as both provide a seamless single-seat underground connection from the San Fernando Valley to the Expo Line, while including an underground station on the UCLA campus (4 th largest employer in the County) and a direct connection to the Metro Purple D Line Subway at the Wilshire/Westwood Station. I support Alternatives #5 and #6 because they will provide the greatest connectivity with existing Metro Transit Lines, making it easier to use public transportation. Getting commuters out of their single-occupancy vehicles and onto public transportation is best done by providing a fast and direct route to where people want to go and need to go daily for work. I OPPOSE taking any private property to widen the I-405 in order to construct an aerial monorail and/or stations for the monorail. Additionally, I oppose widening the existing footprint of the I-405 to add additional lanes to the freeway (and also strongly oppose turning the current taxpayer-funded free carpool lane into a paid Fast-Track lane) as part of the I-405 Sepulveda Pass Express Lanes Project . Metro recently spent $1.6 billion (and ran 55% over budget) on the I-405 Sepulveda Pass Widening Project that added HOV Lanes, built new on & off ramps (which were poorly designed and have proved to only slow freeway transitions), 3 new bridges and huge retaining walls -- and tied up I-405 traffic for 5-6 years while the project was under construction. I support a direct underground station on the UCLA campus -- UCLA is the largest employer in the area. Without a direct UCLA station, considerable transit time and transfer time would be added to commute times, making taking transit a less desirable option. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, UCLA, the Purple D Line, and the Expo Line. Minimize Negative Impacts to Surrounding Neighborhoods : Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods like Westwood Hills. Alternatives #1, #2, and #3, aerial alignments, will cause considerable disruption to the freeway and surface streets during construction. Additionally, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt, and continue with long-term negative impacts. In looking at Alternatives #1, #2 and #3, there are no actual methods provided by which consumers will seamlessly move from the I-405 monorail to the employment centers at UCLA, the VA, in Westwood Village and along the Wilshire Corridor, all of which are too far to expect commuters and customers to walk. And it is simply unrealistic to expect that most adult commuters and customers (and patients headed to the VA or UCLA medical centers) will want to hop onto an electric scooter or ride-share bike to cover the last mile or two. Are there currently aerial monorails being used for public mass transit in other cities with conditions similar to the steep slope grade of the Sepulveda Pass? If so, please provide details. The Board of Directors of the Westwood Hills Property Owners Association, representing more than 600 homes, voted to support Alternatives #5 and #6. This is an important long-term project that should be designed to serve the region for decades to come, with the least disruption to surrounding areas. Alternatives #5 and #6 are the best solution. Please do not succumb to choosing the cheapest alternative – as has been done over and over in public projects in Los Angeles with negative long-term results. Thank you
		90032	No	2/10/2022	Staff Sepulveda Transit, Dear Sepulveda Transit staff and Metro directors: I would like to request that Metro change the scope of its environmental study of the Sepulveda Transit Corridor project, to include impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded. Thank you for your attention to these important issues.
			No	2/10/2022	I am a Retired Zoning Administrator with the City of Los Angeles. Currently, I am also an Adjunct Professor at CSUN in the Urban Studies and Planning Department. I would appreciate a phone call to discuss the status and the process for this project. Could someone involved in this project please give me a call to briefly discuss.
	Los Angeles	90032	No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
SMART Sheet Metal Workers Local 105	Glendora	91740	No	2/10/2022	SMART Sheet Metal Workers Local 105 is proud to endorse Monorail Alternatives 1-3 for the Sepulveda Transit Corridor Project. We believe that these plans are the most cost effective and efficient plans that will benefit the taxpayers, LA Metro customers, and the workers or LA County. Monorail Alternatives 1-3 are the only plans that fit within the LA Metro Measure M Budget. The other alternatives would require significant investments from the state and federal government to complete which are not guaranteed and would delay the start of the project. These increased costs would also jeopardize a connection to the LAX extension making the efficiency of the route much diminished. The Monorail will take significantly less time to construct as well. Taxpayers are already grumbling about the long construction time frames promised under Measure M, so completing a high visibility project like the monorail will provide comfort and a visual representation on how tax dollars are being spent. Furthermore, the recent rates in inflation show us how project delays can lead to unexpected cost overruns and budget shortfalls. Completing this project efficiently will help to keep costs in check. The monorail also brings the promise of local jobs in LA County. How else can Metro ensure that the county is being a good steward of the public money than by those dollars go to support local jobs. The monorail cars can be built right here in LA County with union labor ensuring middle class wages, family sustaining benefits, and quality working conditions. Finally, the monorail will keep good on a promise that LA has been making since the 1960's. LA has dreamt of building a monorail system to zip citizens from one part of town to the other. The monorail at Disneyland was built over 50 years ago as a proof of concept, and it is a shame it has take this long to make the dream a reality. The all-electric monorail will be a visually stunning project worthy of the unique environment and culture of Los Angeles.
	Santa Monica	90402	No	2/10/2022	Let me start by saying I full heartedly support this project. Los Angeles deserves a fast, extensive mass transportation system. I have traveled around the world and love using mass transit. I was most recently in Moscow, and used the subway to get around everywhere. I have a job and a car, but if Los Angeles was to build out a mass transit system that allowed me to travel to wherever I needed to go across the city at a speed comparable to the automobile, I would always chose that as my go-to transportation option. That being said, the Sepulveda Line needs to be HRT. Monorail would be absolutely the wrong choice for this project. It would be slower, fit less people, and the proposed station placements would be inconvenient and inhospitable. I don't want to have to walk to a parking lot next to a freeway in order to ride a mass transit line. I want the station to be where I already am going to be! This is an incredibly important line, arguably the most important line for Los Angeles, and it needs to be done right. There MUST be a direct connection between the Wilshire / Westwood purple line station and the Sepulveda Line station. Having to exit the Purple Line station and walk multiple blocks to the Sepulveda Line station would be a deathknell for the project. However, I am not sold on the alignment of the Sepulveda Line through both the valley and the westside. As of now, the line is planned to travel down the length of Sepulveda. I feel as though the line should travel beneath Westwood instead, so that instead of running alongside the barrier of a freeway, it travels beneath a lively commercial corridor surrounded by dense residential housing. Santa Monica and Sepulveda is a no man's land, but Santa Monica and Westwood is one of the central nodes of the Westside. Similarly, I feel as though the project should travel up Van Nuys instead of Sepulveda once it reaches the SFV. I still struggle to understand why this project wasn't combined with the Van Nuys light rail. From what I understand, the Van Nuys light rail will travel at the same speed as a bus and has had it's budget inflate from 1.5. to 3 billion dollars. For 3 billion dollars, why not just extend the Sepulveda Line up to the planned terminus of the Van Nuys Light rail? The Sepulveda Line is already proposed to travel half the length of the Van Nuys Light Rail, so it doesn't seem terribly difficult to extend it that much further. Moreover, I'm sure future riders would appreciate having an option that is markedly faster than the current travel speeds of a bus, and would flock to the line in even greater numbers than they would otherwise. Lastly, looking at the two HRT options, I am excited by many of Bechdels planned innovations in constructing an underground subway. It is about time we have automated transit, especially considering that metro is having to cut back on it's schedule due to driver shortages. I am particularly excited about having open gangway cars, like they have in Asia and Europe. However, I am worried about the maximum length of the proposed subway stations. I think that the station lengths should be increased to fit five car trains, instead of capping out at four. The required minimum amount of passengers able to be moved through the stations per hour always seemed to me to be an underestimate, something that Metro has done in the past. I expect this to be one of the busiest lines in the system, due to how competitive it will be with existing automotive options, and would hate to have the system become uncomfortably overcrowded due to Metro trying to cut a few costs. This line has the potential to be one of the great mass transit lines in America. I hope Metro allows it to become so!

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90024	No	2/10/2022	Dear Sirs, I am submitting the following comments related to issues that at a minimum should be considered as part of the environmental impacts review of proposed Sepulveda Transit Corridor Project alternatives: 1 the magnitude and duration of impacts from each alternative and the social and material costs of those impacts during the construction phases and throughout the life of the project; 2. the likelihood that involved agencies and political jurisdictions will agree to install and maintain proposed mitigations for the lifetime of the project (see for example failure of multiple jurisdictions adjacent to the 405 to install and/or maintain mitigations promised as part of the 405 widening); 3. difficulty and cost of obtaining right of way required for each alternative; 4. the extent to which each alternative requires alteration and disruption to recent and costly improvements to the 405; 5. the extent to which alternatives disrupt wildlife and native habitat in the 405 corridor; 6. the extent to which alternatives could aggravate fire and geological instability in the Sepulveda corridor and the difficulty posed for emergency responders; 7. potential costly impacts to multiple subsurface water, utility and gas pipelines in the area between Mulholland and Wilshire: 8. costly increase and disruption of traffic during and after construction; 9. range and degree of impacts to quality of life, noise intrusion, air quality, traffic volume and safety throughout the area and in the vicinity of the project. It would appear to me and others in my freeway adjacent neighborhood that the underground options #5 and #6 offer the most promise of meeting the goals of the project over the long-term with fewer long- and short- term impacts than the above-grade options. The above-grade options appear to fall in a relatively costly quick-fix category without actually fixing the problem of providing a needed one-seat cross-mountain connection between key destinations. As such, they provide much less value dollar for dollar. With a seamless single-seat underground connection from the San Fernando Valley to the Expo Line, while including an underground station on the UCLA campus (4 th largest employer in the County) and a direct connection to the Metro Purple D Line Subway at the Wilshire/Westwood Station, Alternatives #5 and #6 will provide the greatest connectivity with existing Metro transit Lines, making it easier to use public transportation. Getting commuters out of their single occupancy vehicles and onto public transportation, a goal of this project, is best done by providing a fast and direct route to where they want to go and need to go daily for work. Other Monorail issues and concerns: The grade of the I-405 freeway through the Sepulveda Pass is very steep, especially the section from the San Fernando Valley (US 101/I-405) to the peak at roughly the Mulholland Bridge. How safe is a monorail on a steep downhill track? How will this monorail preform on this steep uphill grade? How will a steep slope affect monorail speed? How is monorail performance on a steep slope during incremental weather? How will the length of a monorail train of 2, 4, 6, or 8 cars affect the speed at which the monorail can travel, especially up a steep incline like the one over the I-405 in the Sepulveda Pass? Does LA Skyrail's parent company BYD have any existing monorail systems currently operating in other cities? What is BYD's track record on delivering on promised projects and their electric buses? How will a monorail down the middle of the I-405 with an aerial station at Wilshire, at Santa Monica, and at Exposition (in Alternative #1, #2, & #3) connect passengers to street level or other modes of transportation? The major boulevards: Wilshire, Santa Monica, and Exposition Blvds. are all underpasses under the I-405, which is an elevated freeway on the Westside. How big a ground foot print will be needed to build the stairway, escalators and elevator needed to connect pedestrians to the aerial stations (two stories up)? What are the environmental impacts? How will these new stations affect local boulevard vehicle and pedestrian traffic? What is the cost of construction and operation of all the aerial stations? Where is there land to build a street level connection to an aerial station? Will bridges need to be built to connect a monorail in the middle of the I-405 to a station at the edge of the freeway? How much will this cost? Descriptions of Alternatives #1, #2, & #3 state "frequency of monorail trains will be every 2 minutes during peak periods". How many monorail-trains can travel on the monorail above the I-405 and any one time? How many monorail cars will need to be purchased? How long does each station have to be to accommodate a peak hour 6 or 8 car monorail trains? How will this affect the existing structures and congestion on the boulevards where stations are planned? How will pedestrians and/or handicapped people access the elevated stations at Wilshire Blvd.? At Santa Monica Blvd? At Expo "E" Line? At Getty Center? At US 101? At Metro G Line? At Sherman Way? At Van Nuys Metrolink Station? How do you get to the monorail station if it's built in the center of the freeway? Will trees need to be removed to build the monorail and the aerial stations? Where will replacement trees be planted? Who will care for replacement trees while they get established? Will removal of trees have a negative impact on air quality and contribute to climate change? How is maintance on a monorail handled? What will be the impacts on surrounding areas? Construction of a monorail in the middle of the I-405 will negatively affect commuter times during the construction period. How much will delays and disruption add to the construction cost of a monorail down the middle of the I-405? Or, for a monorail constructed along the edge of the I-405? The I-405 Sepulveda Pass Express Lanes Project is also being planned along this same stretch of the I-405. How will two projects be built on the same strip of land without widening the I-405? How can you build pillars to support a monorail and also add express lanes? Please explain how this can be accomplished? Thank you for your consideration.
	Encino	91436	No	2/10/2022	Build HRT3 with the Bechtel group! (Sepulveda Transit Corridor Partners). Rather than building underground on Van Nuys and doubling already existing service (the LRT line down Van Nuys), expand the service area with the Sepulveda Blvd alignment. My only suggestion: Keep the line underground until north of Ventura Blvd. A portal between Ventura Blvd and the 101 seems much better for the overall environment (such as permitting increased density around the Ventura/Sepulveda intersection) and would hush the Sherman Oaks Homeowners who oppose an elevated railway in their neighborhood. Personally I would much prefer a loud elevated railway compared to today's alternative: Nothing at all and insufferable traffic. Anyway, my vote: HRT3, keep underground until north of Ventura Blvd. Thank you for your consideration!
	Sherman Oaks	91423	No	2/10/2022	To the decision makers, I am in favor of Alternative 6, the underground subway in the Valley. I don't want an elevated trains. With the new technology in boring construction system, I think it is not anymore expensive to do a subway system. In constructing this subway, it will not make a big disturbance or impact to the traffic and the residence of Sherman Oaks than when you construct an elevated train. I hope you will consider my opinion as it may impact my neighborhood. Thank you very much for your consideration.
	Los Angeles	90035	No	2/10/2022	I am writing to advocate and support heavy-rail Option 6 and I strongly reject monorail options 1, 2, and 3: a. The monorail makes riders wait at polluted, less-accessible stops right along the 405. b. The monorail is an unproven interurban technology ("The Simpsons" and Disneyland notwithstanding) that's incompatible with existing transit infrastructure. c. Two of the monorail options don't even stop at UCLA, home to many transit-dependent riders. d. Option 6 has the biggest trains (seating 800 instead of 680), works with the existing transit infrastructure, and reaches areas of densest population, including UCLA.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90035	No	2/10/2022	I strongly reject monorail options 1, 2, and 3: a. The monorail makes riders wait at polluted, less-accessible stops right along the 405. b. The monorail is an unproven interurban technology ("The Simpsons" and Disneyland notwithstanding) that's incompatible with existing transit infrastructure. c. Two of the monorail options don't even stop at UCLA, home to many transit-dependent riders. I support Option 6 has the biggest trains (seating 800 instead of 680), works with the existing transit infrastructure, and reaches areas of densest population, including UCLA.
	los angeles	90013	No	2/10/2022	the monorail option seems problematic because it 1) doesn't connect efficiently to the Orange line, 2)skips UCLA, a major employer and transit center, and 3) requires using maintenance technology the county doesn't already employ. I prefer HRT options 4,5,6 and am more likely to use those than a monorail.
	Los Angeles	90036	No	2/10/2022	I strongly support an alignment that is tied to the Van Nuys rail line with a tunnel under the hills and UCLA connecting with the Wilshire and Westwood station under construction. A monorail which is slow and would serve no one is foolhardy. Rail should be closer to where people want to live and work. UCLA is a huge employer. There are huge opportunities to create more housing along this line especially in Westwood. Cant do that when your line is in the middle of a freeway canyon. The connectivity to other transit is also superior. I am a former Disney Imagineer and can say that monorails are just a ride, not transit. If LA wants to be serious we have to make hard decisions. A monorail in the middle of the freeway is a bad idea. Please support the tunnel option that connects the Valley to UCLA and the Wilshire subway. In the long run that is what the region needs.
	Los Angeles	90036	No	2/10/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

	Bellflower	90706	No	2/10/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	LONG BEACH	90806	No	2/10/2022	I would like to share my support for option 6. It is healthier for riders (less waiting in pollution), it reaches UCLA, which several monorail options do not, and it works with existing transit. In addition, it has a higher carrying capacity, which is especially important as ridership continues to expand.
	Santa Monica	90403	No	2/11/2022	Before I get to the copy pasted portion, I want to bring up my dad, who commuted from the valley to UCLA every day for 20 years. Had he been able to take public transportation (and he'd occasionally try, but it would take hours), taking just his car off the road would have saved 2 metric tons of CO2 (260 miles a year back and forth x 404 g of CO2/mile) Multiplying that out by the many people who work at UCLA and live in the valley, and it is clear that there must be a stop at UCLA to make the train as convenient as possible and get cars off the road. I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions,

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
			No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. 	Marina Del Rey	90292	No	2/11/2022	Hi My wife and I oppose the monorail options 1, 2, 3 and support option 6 with the largest trains. Thank you. Best,
			No	2/11/2022	To Whom it May Concern: My wife and I have lived on Stone Canyon Road as residents of Bel Air for almost 25 years. We are writing to strenuously object to options 4, 5 and 6 of the Sepulveda Transit Corridor Project (the "Project") due to the irreparable harm that we believe the project will cause us and the many other residents of Bel Air that will fall within its path. This Project involves tunneling underneath Stone Canyon Road in a densely populated area designated as a "Very High Fire Hazard Risk Severity Zone" by the Los Angeles Fire Department. Stone Canyon road is a 2-mile stretch of road, portions of which are quite narrow, and which dead ends just above the entrance to the Stone Canyon Reservoir. There is no alternative route of ingress or egress for approximately 1.5 miles of that stretch of road, from the dead end up to Chalon just past the Bel Air Hotel. Aside from the noise and vibration from heavy trains rumbling under our homes every two minutes, in addition to dangerous exhaust vents scarring the landscape and destruction of property values, the traffic caused by this construction on a dead end road that also handles hotel and restaurant traffic from the 103 room Hotel Bel Air will be intolerable. It is inconceivable that a project of this duration and magnitude would not result in frequent insufferable congestion that will block many residents from getting to or leaving their homes, not to mention the inconvenience to hotel guests and employees. Of greater concern is the risk to life in the event of a fire, as road blockages from the construction could leave many people entrapped and emergency vehicles unable to reach them. There are many other potential safety issues for this tunneling project that is located so close to homes in a flood plane and a liquefaction zone, as well as concerns over the environmental impact that will affect the abundant wildlife that exists in this canyon. We appreciate that you are working to resolve some of the traffic issues in Los Angeles, but urge you to pursue a safer and more practical option. We believe a better choice is to run a monorail down the 405. A monorail will service far more people, cost half as much, and be completed in 1/3 the time. Also, opting for a monorail down the 405 verses a subway in our hills will have far less negative environmental impact and be far safer for those riding the transit should a fire or earthquake occur. Thank you for considering our concerns.
	Los Angeles	90004	No	2/11/2022	Choose alternative 5 because heavy rail has greater capacity and it's underground section will help avoid issues related to Sherman oaks home owners. Reducing headways by shortening the trains and automating the system would be great. The system has to be as user friendly as possible. Alternative 4 is decent. I don't expect alternative 6 will be considered which is fine. It's easy to point out that a monorail is the wrong choice. And as proposed it's clear that those proposals will not integrate well into the metro system because they do not have an inadequate understanding of that system and it's proposed future. Below I have pasted links you should not blindly follow but link to videos by a fellow on YouTube. The channel is called "nandert" and I watched his analyses a couple months ago. The videos demonstrate a solid understanding of the metro system, how new lines should integrated, and the reasons Alternative 5 is best. Choose alternative 5, I hate traffic jams and more housing is great but if we keep jumping into cars because we don't have another choice, it's just going to getting worse. https://youtu.be/xJdbCgVkH3w https://youtu.be/xozPb6LaktM

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Studio City	91604	No	2/11/2022	I like Option 6 and strongly reject monorail options 1, 2, and 3: a. The monorail makes riders wait at polluted, less-accessible stops right along the 405. b. The monorail is an unproven interurban technology that's incompatible with existing transit infrastructure. c. Two of the monorail options don't even stop at UCLA, home to many transit-dependent riders. d. Option 6 has the biggest trains (seating 800 instead of 680), works with the existing transit infrastructure, and reaches areas of densest population, including UCLA. Thank you!
	Sherman Oaks	91403	No	2/11/2022	I would favor a monorail down the middle of the 405, with stops at Sunset, Wilshire, Santa Monica, Olympic and Pico. It's quiet, there are no aerial obstructions and it's fast. We would just need more buses along those streets on the route.
	Sherman oaks	91423	No	2/11/2022	I support ONLY UNDERGROUND options, specifically alternative 6. Anything above ground is a horrible, ineffective plan. Thank you
		91423	No	2/11/2022	I wanted to voice my support for alternative 6. I think that if we are going to put the money into it then we might as well do it right the first time. I just graduated from UCLA and I think it would be quite silly if we built a train that goes over the Sepulveda pass but forces you to take a bus or a people mover or a tram to transfer to UCLA. I think thats ridiculous. I think it would make a lot more sense to have a direct to just have a direct connection to UCLA because I feel like there's more demand there. I mean 40,000 people work there every day. I also wanted to put my support for having a train run down Van Nuys Blvd. Especially Victory and Van Nuys and Ventura and Van Nuys are huge transit hubs and pedestrian hubs. i think it would really help revitalize Ventura Blvd. So yea, alternative 6, thank you!
			No	2/11/2022	Hi, I'm writing to submit my opinions on this project. I SUPPORT ALTERNATIVE 6. I adamantly oppose anything above ground…it would only cause Noisy, ugly, traffic issues, displaces residents and businesses. Thank you,

City of San Fernando	San Fernando	91340	No	2/11/2022	The City of San Fernando would like to see strong connectivity to the proposed Sepulveda Pass Transit Corridor for San Fernando and Northeast San Fernando Valley community members, especially with phase 2 of the East San Fernando Valley Light Rail Transit project. The City suggests multiple modes of connection, including, but not limited to, light rail, rapid bus service, micro-transit service, and safe and protected bike/pedestrian paths that are easy to use and accessible for San Fernando residents. Strong connectively will increase utilization by Northeast San Fernando Valley users by providing multiple ways to get to the proposed project.
	Los Angeles	90019	No	2/11/2022	I am writing in support of Option #6. I am opposed to the Monorail options for many of the reasons already stated. I like the fact that Option 6 offers us the biggest trains (seating 800 instead of 680), works with the existing transit infrastructure, and reaches areas of densest population, including UCLA--all of these points are very important to me.
	SOUTH PASADENA	91030-6004	No	2/11/2022	I'm a frequent rail commuter and I support options 4 and 5. LA needs a heavy rail system that seamlessly links into the existing and future network. It's already painful to do in-station transfers due to long headways, it would be ten times worse if the monorail gets built and you have to walk to an entirely different station.
	Sacramento	95816	No	2/11/2022	I'm a strong proponent of Option 4, the Automated Heavy rail line. It uses the best technology for this route and it should be selected. I'm also in favor of Option 6 especially how it crosses the 405 freeway and connects to Sawtelle and the Bundy Station. From then on, on it's way to LAX it could connect to Mar Vista, Playa Vista and SM Airport which hopefully gets developed into a TOD neighborhood as well. But lets pick a Heavy Rail option and not the completely Asinine monorail.
	Los Angeles	90049	No	2/11/2022	As a 20-year resident of Brentwood and a public transit enthusiast/user, I am a full-throated supporter of a heavy rail option, particularly Alternative #6 which winds up connecting to Bundy in West LA.
Dassault Systemes	Woodland Hills	91367	Merged Document	2/11/2022	Please see attached uploaded file for comments from Dassault Systemes, 6320 Canoga Ave #300, Woodland Hills, CA.
	Sherman Oaks	91423	No	2/11/2022	I am in favor of Alternative 6, the underground subway in the Valley. I don't want elevated trains. Subways are the way to move people quickly and efficiently while not ruining our beautiful state.
		91202	No	2/11/2022	Dear Metro, thank you for working to create this critical link! The thousands of transit riders and I who have spent significant time riding lines with stations astride or near FWYs generally agree they are a bad idea. It is an environment no one with a choice will endure. My family and I support the subway and oppose the monorail.
	los angeles	90063	No	2/11/2022	Under no circumstances should the monorail options be selected. This NEEDS to be a heavy rail project,whether it be aerial or underground. i would also like to voice support for the one tunnel building approach. Whether we go with the PPP option with bechtel or not, one tunnel seems to have a lot of advantages with few drawbacks.
	Los Angeles	90066	No	2/11/2022	LA, among large world cities lacks a competitive transit infrastructure. While major east/west advancements have been made a major north/south connection on the west side of Los Angeles remains elusive. As the city continues to grow, continued expansion of the highway system becomes unsustainable, not to mention having to be dependent on a car in a congested city is miserable. Considering the size of the Valley's population a heavy-duty rapid transit line is needed to funnel the large-scale daily migration that takes place. This is something that should be built not only for today, but for tomorrow, for a city that envisions a large increase in transit-oriented transportation. Based on the measures shown, I don't believe the monorail project to be best suited to those needs. Heavy rail would provide the fastest routes and highest capacity. It would also enable additional construction for building offices and homes along transit corridors without the added congestion of the monorails above ground structure. I want a system that is more efficient than my car. I want a way to get to the valley without having to consult my watch and performing time calculations to figure out if it's less of a hassle to just stay home. The city should be accessible, and this helps create not only a conduit to the Valley, but a major transit connection on the west side. It's one more avenue for LAX guests to use to take them to the many parts of town.
	Los Angeles	90049	Merged Document	2/11/2022	Please see attached NOP Comment letter along with attachments. This letter is divided into three (3) separate files to accommodate the 30MB file size limit. Please include all three parts in order for the administrative record. Thank you,

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
			Merged Document	2/11/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Other viable alternatives exist without tunneling beneath a residential neighborhood and wildlife corridor. Unfortunately, the METRO Community Meetings held never addressed the concerns directly — only took the question but no one from METRO was knowledgable enough to answer on the spot. I have listed below my concerns for my community and my home: TUNNELING BENEATH BEL-AIR IS A BAD IDEA: Concerns with Environmental Issues, Air Quality Issues, Noise & Vibration Issues, Fire Issues, Geological Issues, Metro's "Transparency" Issues, Property Rights & Property Values Issues and Enforcement Issues 1. Environmental • Subway ventilation shafts will not only be noisy, the vibrations and air flow will disrupt delicate (including protected species) wildlife. • Bel-Air is located in one of the 36 biodiversified hotspots in the world with a number of endangered wildlife species in its hillsides. We have protected species in our area (see attached video of protected mountain lion on Stradella Road). 2. Air Quality • Noise, gases and fumes from subway ventilation shafts that travel from the tunnel every 2-4 minutes can upset the delicate balance of wildlife sensitive area and create unhealthful living conditions for families. • Where is the research on how will ventilation shafts in canyons and hillsides, with trains running every 2-4 minutes, affect our pets and children? • Will smoke and gases from subway ventilation shafts accumulate and be trapped in the basins of our canyons? 3. Noise & Vibration • The Federal Transit Administration (FTA) "Transit Noise and Vibration Impact Assessment Manual" (September 2018) is an insufficient guide to the impact of noise and vibration as the manual fails miserably by omitting research in sensitive wildlife protected areas. See Table 4-3 of manual. • With the subway tunnel and ventilation shafts on streets and property, and with trains running every 2-4 minutes, the disruption to the well-being and quality of life for wildlife and humans is at risk. 4. FIRE RISK INCREASED!! • Bel-Air is in a Very High Fire Hazard Severity Zone (VHFSHZ) as designated by Cal Fire. What happens if there is a methane leak — as in 1985 that caused a fiery explosion in the Fairfax area? Earthquakes can cause methane leaks in tunnels: Research suggests that earthquakes can cause methane leaks , and that's a possibility that Metro has also evaluated, according to environmental reports prepared for the Purple Line project. In the event that methane enters a subway tunnel, high-powered fans at nearby stations will begin working in tandem to clear the air. (excerpt from CURBED LOS ANGELES) https://la.curbed.com/2019/1/16/18178979/subway-tunnels-earthquake-fault-lines • Due to wildfire risk, homeowners have had their fire insurance cancelled – will these shafts, whose purpose is to remove dangerous gases and smoke – make it any easier to get fire insurance? By the way, the California FAIR Plan does not apply to many Bel-Air homeowners as it only applies partial coverage – so METRO should not use it as an answer. 5. Geological Issues • Bel-Air abounds with geotechnical, subsurface and seismic hazards as liquefaction, which many homeowners must carry additional insurance and any construction requires soldier piles (caissons). 6. METRO's "Transparency" • Metro's several public comment meetings did not adequately address important homeowner concerns and questions, often mentioned they will address those concerns "later." • METRO has removed transparency with non-disclosure contracts from prospective contractors and has not responded to list of reasonable questions submitted by impacted communities. For example, Sherman Oaks Homeowners Association has been shut out by METRO. • METRO not forthcoming to answer questions from public during public comments. Next step for METRO is Environmental Analysis that involves geological and soils surveys. • According to METRO's blog, "The Source," a posting on "Property acquisition fact sheet now online for Westside Subway Extension" - for the Purple Line, it states: "As a part of the environmental study phase, Metro has been talking to landowners and identifying properties — on a preliminary basis — that the agency may need to acquire or lease. Final determinations will be made when the Metro Board of Directors approves the project's final environmental impact report, which is currently being finished. At that point, the fact sheet notes, "Metro's Real Estate Department will contact property owners to initiate the process for acquisition of the property and/or easement." • HOW WILL I KNOW IF MY PROPERTY WILL BE TARGETED FOR AN EASEMENT ACQUISITION? If Bel-Air is treated as the Westwood homeowners were during the Purple Line easement acquisition process, we homeowners will not know until the Draft Environmental Impact Review (DEIR) is completed and approved by METRO. METRO may then share a map showing a detail of the tunneling and the properties impacted. 7. Property Values • Logically, property value will decrease if easement acquisition is acquired by METRO. 8. Enforcement • Bel-Air has experienced rogue developers who do not follow building codes resulting in compromised public safety of the community (Bedrosian vs Hadid, Nile Niami's "The One"). The City of Los Angeles could not or did not address these building code violations in a timely manner and, therefore, put public safety at risk. Is METRO capable of ensuring public safety? If not, what are the significant consequences for METRO?
	Sherman Oaks	91403	No	2/11/2022	I think the utility of the project would be maximized by selecting options that minimize total trip time. The heavy rail options (4,5,6) are much faster than the monorail options. I would suggest options 4 or 5 since the stops at Sepulveda/Ventura would be convenient for people coming from all directions in the San Fernando valley. Both these options also have good connectivity to other transit lines at UCLA and at the expo line.
	Los Angeles	90049	No	2/11/2022	1. How will Metro and Caltrans (ExpressLanes Project) coordinate and mitigate environmental issues and land acquisition if the projects have separate EIRs and separate approvals? 2. If Metro chooses an Alternative that requires land acquisition to fit in a monorail and Caltrans chooses an Alternative that requires the same parcel(s) of land, how is it determined what Agency (Metro or Caltrans) will condemn and/or purchase the parcel(s)? In summary, studying these two inter-connected projects requires one lead agency – Which agency will it be?

			No	2/11/2022	Dear Metro Board, I am a resident of Bel Air. Has any cost benefit analysis been done at all to justify spending many, many billions of taxpayer dollars to tunnel under the mountains and residential neighborhood of Bel Air to provide a few students and riders direct transit to UCLA? It seems there is something very fishy going on with this entire tunneling project idea since it is, by far, the most expensive, most time consuming to build and least cost efficient method of providing transportation from the Valley to the West side of Los Angeles. Is it really worth the possible death and danger to homeowners whose older foundations could collapse as a result of the tunneling? Is it really worth all of the expensive lawsuits against the Metro and the City that will be filed when that happens? As we all know, the beginning of a project this large will be quoted as one amount but to finish it years later the cost will rise to an astronomical level that could even prohibit its completion…as in the case of the bullet train. Then, if tunnels are left abandoned they will pose a health and possible criminal hazard to the Bel Air area. The best alternative is to keep this project above ground since it is less expensive, futuristic looking and less time consuming to build with no danger to any residential neighborhoods. A monorail down the middle of the 405 could move many people or special busses in a dedicated lane could also work. No tunneling under Bel Air! Thank you
		91744	No	2/11/2022	To whom it may concern, Regarding the project Metro is proposing, I am concerned about the efficiency that a monorail would bring to our community. Although a monorail would be an interesting feature to display, it would only serve as a tourist attraction / landmark. I do not see it as a means of transportation and would do little to no service for travelers like myself. It would not be as fast or hold many occupants as much as a subway line would. In a manner of speaking, you could contrast it to an amusement theme park ride in terms of its speed and service it would provide. Aside from its performance, a major concern that I would like to emphasize would be the disruption of daily life. If the project was approved, it would only congest the troubles commuters and travelers have. Construction on the 405 freeway would be pandemonium to everyday life. This freeway is a major lifeline of travel from the Greater Los Angeles area. Traveling during construction would make travel in horrendous. The 405 connects Southern California residents to places from Greater Los Angeles to Orange country, including three airports. Adding more traffic to the equation for a monorail isn't beneficial to the members of the community if it means daily life is disrupted and made more difficult to travel due to the construction and existence of the monorail. What I would like to see is further development and investment in the subways that already exist. Subway travel will be in demand as commuters look to public transportation to an alternative to coping with heavy traffic. Since subway travel is fast and can hold many occupants, adding to the subway network would be more beneficial to the community. With subway projects, extending lines and locations would be a better project to invest in that would better serve the people. A possible add on to the subway lines would be connecting a line underneath UCLA. It would provide more ridership and easier transfers, especially for students who live off campus and would have less difficulty making it to campus with the L.A. traffic. With other subway locations, travel by train would me more reliable and effective than a monorail that would operate on its own track. As your financial talks and planning takes place, I ask you take these points into consideration towards your final decision.
			No	2/11/2022	Please stop studying Alternative 4 for the Sepulveda Pass. Elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard is not an effective solution to the transportation problem and will destroy our Sherman Oaks neighborhoods in the process.
			No	2/11/2022	Elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard is not an effective solution to the transportation problem and will destroy our Sherman Oaks neighborhoods in the process. Please stop studying Alternative 4 for the Sepulveda Pass. Sincerely,

	Los Angeles	90045	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Los Angeles	90045	No	2/11/2022	Provide for future growth in bicycle access and parking for the Sepulveda Transit Corridor project The following factors should be incorporated into the scoping of the project: Anticipate future growth in bicycle parking demand. As ever-more dramatic actions are implemented in response to the worsening climate crisis and as Los Angeles's bicycle infrastructure is built out, bicycle ridership is likely to soar. Because cycling has proven to be an ideal way to connect to public transit, sufficient space needs to be planned for growth over time on a scale calibrated to the experience of cities with the robust bicycle mode share that our region aspires to. This could eventually result in the demand for thousands of secure bicycle parking spaces at some stations. The space needed for such growth should be anticipated at the earliest scoping, planning and funding stages of the project. Design provisions should be made that will enable the conversion of initial uses to bicycle parking if needed. Uses such as car parking, driveways, landscaping, etc. should be designed so they can be converted with minimal expense to bicycle parking as the need develops. Assure that bike parking is secure Bicycle parking at transit stations must be secure to be useful. Cyclists must be confident that their bikes will be there when they return or they will not risk using this mode. Therefore, bicycle parking planned for the project's stations must be designed to provide a high level of security by means such as card-key-access storage rooms, staff presence, video monitoring and other means. Again, cities with robust secure bike parking at their rail stations should be looked to for best practices. Locate bike parking for convenience A convenient location is important to generating meaningful participation in biking to transit. Transit users who arrive by bicycle rather than car should not have to walk any farther than the nearest car parking spaces to get to platforms. Assure bicycle connectivity to the local bike network Station area mobility planning should anticipate the need for cyclists to have safe, convenient access to the stations. Whether from existing bikeways, planned bikeways or existing roadways, planning should address the needs of cyclists to connect to the station area.

	Los Angeles	90034	No	2/11/2022	I'm really excited about putting permanent transit unaffected by traffic through the Sepulveda Corridor. I would use this transit at least weekly if it were present today, and my partner would likely use it for work commutes. Being able to easily get from where I live near Sepulveda and Exposition to Westwood, Van Nuys, and eventually to LAX would be amazing. We spend plenty enough of our time planning around what will allow us to avoid traffic, and trains along Sepulveda would be wonderful. I don't believe, however, that the monorail options make sense. This corridor needs high throughput and fast service from the Valley to West LA, and definitely needs to connect to UCLA campus. A monorail that has slower connections or bypasses UCLA would be shortsighted and ensure lower usage than a heavy rail option. Additionally, stations along or in the middle of 405 would be difficult to access and much less pleasant for riders. I believe that it is crucial to eventually build rapid service through the westside from the Purple D and Expo E lines to LAX, and slow service north through Sepulveda pass would make this so much harder. Please consider making stations as central to where people already live and work so that ridership will be eager for this line right away. I'm less concerned about whether the rail line is above ground or below ground, as long as it is grade-separated and never has to wait for traffic or lights like the A and E lines. I mildly prefer an alignment near Sepulveda over an alignment along Bundy/Centinela on the south end, but either one would be very nice. My suggestion would be to prioritize investing in the right option now to have this project provide the best level of service to people over the long term, rather than focusing on what might allow sooner opening or a cheaper build.

	Los Angeles	90036	No	2/11/2022	Hello. I am writing in opposition to the Monorail options for the Sepulveda transit corridor, and in favor of any of the heavy rail options (ideally those that end at Expo/Sepulveda). The monorail options have the worst transfers, a station at the getty is not necessary, it would be foolish not to have a train station at UCLA, and the monorail will likely cost almost the same as the heavy rail at the end. Also many people including myself are aware of certain insider interests going on between certain Metro board leaders, LA politicians, and the company BYD pushing the monorail. If you do not want the people of LA to accuse Metro of corruption, you will choose the heavy rail options and ditch the BYD sponsored monorail. This Video explains why you should choose heavy rail in greater detail: https://www.youtube.com/watch?v=xJdbCgVkH3w&ab_channel=nandert
