	Valley Glen	91401	No	2/11/2022	My need is to get to the Getty, UCLA, places in Westwood like the Federal Building and the Village, and also to transfer to the Purple and Expo Lines in West LA -- I live a few minutes walk from the Woodman G Line stop. Fewer stations mean fewer riders. Skipping the Hollywood Bowl when the Red Line was built was a mistake. Furthermore I don't want to walk a lot when making transfers because it eats up time and may not always be safe. I would vote for Alternative 3 but the exact locations of where the stations are situated is not set up for convenient access. Getting to Ventura Blvd. seems awkward -- the service has to make it easy to get to more places than the Galleria. And what about the air quality waiting near the 405 Freeway? And how do people get to the stops -- walk or will there be parking like what is available to transit riders to get to Washington DC? Also, I worry that the monorail capacity may be too limited for the future. A very serious environmental concern for me: I don't want to see any trees cut down. Metro is far too cavalier about tree removals. The line of Wilshire Blvd trees that were sacrificed for the Purple Line Station near Veteran deprived walkers (who are your riders) of shade for 20 years . . . and planting saplings does not mitigate anything: new trees use too much water, take too long to grow, and have a poor survival rate in our increasing heat. I suggest you also take a serious look at convenience. I travel-trained new riders on Metro for 4 years, and inconvenience and safety were their biggest concerns. And people really like to park and ride. Yet you are decreasing the number of public parking spots at the NoHo Red Line Station with your proposed mixed use development, and it makes no sense when parking there was in short supply before Covid. We have a Catch 22 situation in the Valley of not enough riders because there is not enough service. Local bus service has not worked well in the Valley -- too infrequent and homes are too spread out. These plans you are proposing do not put the riders first. You need to commit to efficiency and ease for traveling on Metro, and really do a deep dive effort to eliminate 6 minute walks at a station to make a transfer. Consider not moving the Sepulveda G Line station as currently planned and instead make it part of this Sepulveda transit corridor project. Please remember, if there are too many cumbersome transfers, people will go by car if they have a choice. Put yourself in the rider's shoes and time paths-of-travel from a lot of addresses that you expect to serve. And remember the disabled and elderly tend not to be bike riders. Yet very likely they prefer not to drive. Try to make the end result user-friendly for everyone. As much as I would like this service yesterday, it needs improvements before ground is broken.

	West Hollywood	90069	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

		90025	No	2/11/2022	What I suggest is Alternative 6, or any Heavy Rail alternative instead of Monorail alternative. There should absolutely be an on-campus station at UCLA without any need to transfer to a bus or people move to reach the campus. Heavy-rail provides the highest capacity for future growth in ridership. Moreover, Metro should not introduce yet another transit mode to a system that already includes Light Rail and Heavy Rail for maintenance and operational efficiency.
	Culver City	90232	No	2/11/2022	I would like to see Alternative 4 built. Alternatives 1, 2, and 3 cannot serve the Sepulveda Pass Transit Corridor well, and will overcrowd easily. This line is paralleling one of the busiest highways in the country, so high capacity is necessary. They make the line cheaper than the heavy rail options by using the highway, but sacrifice ride quality and transit connections in the process. Transit connections are extremely important for a line like this, and they need to be seamless, which Alternative 4 does extremely well. Alternatives 4 and 5 serve the San Fernando Valley the best because Alternative 6 duplicates the East San Fernando Valley LRT unnecessarily whereas Alternatives 4 and 5 add a station at Sherman Way to better serve the Valley. Alternative 4 is less expensive than Alternative 5 because it is elevated over Sepulveda Blvd and takes into account Metro's current plan to move the Sepulveda G Line station directly above Sepulveda Blvd from its current location. Alternative 4 directly integrates with the new station, providing better connectivity than the rest. Not to mention that automated light metro is cheaper to maintain and easy to adjust capacity wise. Bechtel has also built out the original BART system, so they have experience working and building good quality infrastructure in a zone full of earthquakes.
	Van Nuys	91411	No	2/11/2022	No to I-405 Sepulveda Pass ExpressLanes, no to tolls, no to more freeway construction! It will just make all the other lanes even more insufferable and slower. This is no solution. Congestion pricing won't work because many people get told by their employers what hours they need to be at work for and don't have a choice of the time they commute. Don't bother with these or put money into them and focus on something useful like the Monorail, automated heavy rail transit, and increased frequency of busses. It just makes sense to create a rail to connect to the new Purple line and complete L.A.'s transit system. Alternative 2 for the path on these looks best.

	Sherman Oaks	91403	No	2/11/2022	I don't like any of the proposed plans. The only one that I would like is one down the middle of the San Diego Freeway like a monorail. something that is somewhat quiet. I don't need to hear more noise. I don't like the tunnel at Valley Vista or Sepulveda Blvd proposals. If you want to put it underground then put a tunnel under the freeway.

No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
		90005	No	2/11/2022	This really needs to stop at UCLA; it makes no sense for such a large public university to not be on the train line. It would be ideal for it to stop at the Getty as well; that would make the museum much more accessible both for LA residents and for tourists. With those two facets in mind, I think #3 is the best solution.
			No	2/11/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. As far as I am aware the alternatives that don?t require tunneling are cheaper and will take less time to be built. Sincerely,
			No	2/11/2022	February 11, 2022 Dear Metro Sepulveda Transit, I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Los Angeles is an earthquake-prone city and I do not believe that tunneling would be safe or feasible. Furthermore, there would be tremendous opposition by long-term homeowners like myself. I foresee that your proposed tunneling effort would have some of the same logistical, legal, and cost problems that have plagued the CA Bullet Train to Nowhere. Indeed, the whole concept of the Metro Sepulveda Transit Corridor must be reassessed. Metro ridership has been declining during the past decade, especially during the past two years. Current reasons for the decline include homeless persons and crime on the buses and trains. I believe that the voters made a mistake in approving funding for certain aspects of the Metro. Thus, a vote of Bel-Air residents should be taken before there is any further consideration of Metro tunneling under Bel-Air. Thank you very much for your consideration of my comments. Please acknowledge receipt of my comments. Sincerely yours,

		91316	No	2/11/2022	Of the 6 alternatives proposed, alternative 1 is dead on arrival. It's easily the worst proposal as it doesn't even include a direct connection to UCLA, but rather, the worst possible solution which is a shuttle bus presumably using mixed traffic. It should be obvious why this is highly undesirable. Besides the obvious deficiencies here inherent to such a required transfer using that mode, the capacity can't possibly be as high as just having a direct stop on campus and given that UCLA will likely be the largest single trip generator on the line, this "solution" is woefully inadequate. As for alternatives 2 and 3, these proposals are just plain inferior to the heavy rail alternatives in almost every sense. The capacity is lower, the speed is lower for both top and end-to-end run time, requires an entirely new equipment type (from a company with dubious reliability history, as well as likely massive cost inflation later, based on their past projects) adding unnecessary complications with regard to maintenance, storage, and operator training / experience, complete incompatibility with Metro's existing network and equipment / rolling stock, and a requirement for people to board at pedestrian unfriendly locations due to the line being mostly along the 405, rather than directly under or over the urban street grid like the heavy rail line would be. It's objectively worse in every single way except for the views. Pedestrian access, bus connections, speed, maintenance and equipment logistics, and connections to other metro rail lines are all inferior here. Metro, I and likely the vast majority of transit riders, implore you to not choose alternatives 1 through 3. I think that's obvious at this point. The obvious disadvantages and potential complications with the monorail proposals are simply too great to dispense with. The heavy rail alternatives are pretty decent overall though, and are reflective of a more tried and true approach to metropolitan rapid transit. I would like to see a proposal that could include some kind of track connection to the purple (D) line in order to facilitate easy movement of equipment across the system which should lead to cost savings over time and more simple logistics system wide. I would like to even see a plan where trains could travel on either the purple (D) line or the Sepulveda line via a connector junction (flying or flat junction, though a flying junction would be better, as per the existing design of the wilshire / vermont junction, except this would ostensibly be a three way junction). This would allow flexibility of service types and thus multiple end points on the lines. Riders could travel from Van Nuys to Downtown, or Downtown to the Expo (E) line (LAX after phase 2 of course), Van Nuys to Expo (LAX), etc. It is odd that this is not being considered in current proposals given the fact that we are about to build two sets of heavy rail tunnels which would pass perpendicular to each other but offer no direct track connection between them. At the very least, if full passenger service track connections somehow aren't possible, a non-revenue connector track (like the one between the green and blue lines) should at the very least be built between the Sepulveda line and purple line tracks. Naturally, it would follow for Metro to ensure that whatever equipment is used on the new line will also be compatible with the existing heavy rail infrastructure, and vice versa. Not doing so seems like an unnecessary complication where we would end up with two isolated and incompatible heavy rail networks, which would be less efficient for the system long term, and would negate some operational flexibility and easy logistics for future extensions. It is just common sense and best practice to make sure the equipment is cross compatible, and the tracks connected. The elevated valley alternative (alt. 4) is probably the better choice than alternative 5 since the cost is lower for elevated track and stations than underground, while obviously providing the same speed and overall level of service that the underground version would have. If we are going for fully underground, then alternative 6 is a bit more desirable than alternative 5 given that Van Nuys blvd. would receive some level of rail transit along its entire length and provide a sort of "express" alternative to the planned LRT segment between the orange line and Metrolink / Amtrak line, as well as there being more density along Van Nuys than Sepulveda due to the 405 being just west of Sepulveda blvd, which constrains development. As far as Expo / Bundy vs Expo / Sepulveda phase 1 endpoint alternatives, I don't really see why the endpoint chosen is dependent on whether the line runs along Van Nuys or Sepulveda blvd in the valley, as is implied by the alternatives presented and could easily be either-or for all three alternatives. In other words, the choice to run phase 1 tracks to expo / bundy vs expo / sepulveda need not depend on which valley alignment is chosen. One thing that's confusing about alternative 6 though, is the proposed headways of 4 minutes rather than 2.5 for alts. 4 and 5. I don't see any inherent reason why this should be. In any case, you have one chance to make this right, Metro. The right choice is self evident at this point. Heavy rail is a must, not monorail. Signed, A valley native who wants to move past car dependency via high quality convenient rapid transit connections.
			No	2/11/2022	Hello. As an LA native who drives but also makes use of good transit when available, I implore you to choose heavy rail over monorail as the mode of rail transit for this line for what should be very obvious reasons. Let's get right into it. The monorail proposals have inferior pedestrian connections to the street and to other lines due to poorly placed stations further away from the centers of activity (naturally, being that most of them are in the middle of the 405 as opposed to right under or over the street). A particularly egregious example of this is the proposed "101" station, which requires pedestrians to traverse a series of long pedestrian walkways/bridges and through a park-and-ride lot, all of which is located north of the Sherman Oaks Galleria, away from the denser center of activity at the Ventura / Sepulveda intersection and its connecting bus lines. The orange line station also has the same kind of problem with a very long pedestrian connection in basically the same manner. The heavy rail line does a much better job of providing direct station-to-street connectivity, rather than the more suburban sprawling park-and-ride type setup that the monorail stations seem to emphasize, particularly in the valley. There's nothing wrong with having some parking available, but if it comes at the cost of pedestrian access or other transit connections, then that's not the design that we should be emphasizing. On top of all this, the speed is inferior to the heavy rail line due to its route and technology, as well as precluding the ability to move existing rolling stock between it and other metro lines, as this would be the only monorail metro line as of yet and would introduce a third train technology to the metro rail network and would be isolated by design. At least with the heavy rail line, there exists the possibility to connect its tracks (whether for revenue service or not, though revenue service would be highly desirable) to the D line (or any future heavy rail line for that matter). The choice is obvious here, Metro. BYD may have very strong marketing, but the monorail proposal lacks in substance and long term practicality and may not even end up being cheaper ultimately anyway. The inherent flaws here cannot be overlooked. Practically everybody who is multi-modal oriented wants to see the heavy rail line built. Please get this one right, Metro. There's only one chance.

	North Hollywood	91601	No	2/11/2022	I believe the most important criteria when considering the alternatives for the Sepulveda corridor are: 1. Connection with existing and planned lines intersecting the Sepulveda line 2. Walkability/desirability of the area around the stations 3. Speed of transit 4. Rider Capacity The monorail options seem like a short sighted decision that will put transit where the riders aren't (i.e. on the freeway where people are driving instead of in the neighborhoods where people are/want to go or where there existing bus connections are (perfect example of this is why have a 101 station? it's serving a mall instead of the existing robust transit and numerous destinations on Ventura)), doesn't connect well to existing transit (proposed Orange/G line connection isn't where the G line station will be once it's raised/relocated, forcing a lengthy (several) walk at the "transfer" station, and the Purple/D line and Expo/E connections (while better) still isn't as smooth as the heavy rail alternatives requiring around a 5 minute walk), doesn't connect to UCLA directly (except for the one option where it does, but also that option largely eliminates the cost savings of the monorail), doesn't have as high of a max capacity as the heavy rail options, doesn't move as many people, or support having trains as often, and has longer trip times. The only benefit for the monorail options are cost, but those savings are largely eliminated once you account for a direct UCLA connection (which I view as a necessity given the expected ridership of that station), and account for the (unbudgeted) larger stations which are needed to reach the heavy rail options' max capacity. And that doesn't even begin to account for the negative impact of years of construction on the 405, which is not ideal, as well as the unbudgeted mitigations that will likely be required by Caltrans to build adjacent to the 405. Due to all of these unbudgeted issues, it seems to me like the monorail options will end up costing nearly as much as the heavy rail alternatives to get even in the same ball park in terms of line performance, even then it will fall short in terms of connectivity, speed, walkability, and capacity.
		90024	No	2/11/2022	It is imperative that Metro connect the Valley (near 405 and 101) to West Los Angeles/Santa Monica. As housing stock is limited, it is common for those living on one side of the mountain to work/attend school/play on the other side of the mountain. We need to provide a consistent public transit service to connect the areas which a (mostly) underground heavy rail service can accomplish. For that reason, I would like to support Alternative 5. I am happy that it looks like there will be a station for UCLA and a separate station for Wilshire Blvd which will connect with the Purple Line (Metro Line D) (and nearby bus lines). (Off topic, please maintain an express 720 after the completion of these lines as there is the infrastructure for bus only lanes and it serves a major corridor used by a variety of users.) I would be open to having the south of Wilshire stations changed to meet Alternative 6 as it may be beneficial to have the north/south heady rail serve both sides of the 405, however I believe Metro and it's consultants will find the alternative that will serve the most possible users while acknowledging the existing gridlock traveling under the 405 (west/eastbound) during peak hours. I believe Alternative 5's north portion (going along Sepulveda Blvd) is better than Alternative 6 as it gives two options to travel to the Van Nuys Metrolink via rail. Also, I like the idea that Alternative 5 gives better access to the Sepulveda parks (Lake Balboa, Basin Rec area, Wildlife Reserve, etc.). I look forward to this project and the continued dedication of efforts and funds to support reliable public transit.
		90005	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at

	Los Angeles	90066	No	2/11/2022	Hello, I would like write in for my support of alternative 4 for the Sepulveda Transit Project. I believe that alternative 4 is the best of the presented alternatives because it contains the best station placement, and have the proper station size. The station placement on the monorail alternatives are located far too close the freeway, which acts as a barrier, and effectively cuts the walkshed of the stations drastically. Alternative 4's use of elevated track is a great way to make the project more likely to get built, reducing the expected cost and build time for the project. Lastly the shorter, higher frequency automated trains should create a great capacity. Vancouver's Skytrain utilizes this setup and has been very successful, with individual lines carrying more people than the red line does, and doing it with smaller trains, and in a smaller city. My hope with regard to the EIR is that it will be able to project how much use this line be to Angelinos (passenger miles per day), and compare it to projected monetary costs of the project, and I believe that Alternative 4 will perform the best of the listed alternatives. Thanks to everyone at Metro for all you do!

	Sherman Oaks	91423	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
			No	2/11/2022	What ever happens just don't make it a monorail it is the dumbest idea to come out of Los Angeles

	Los Angeles	90049	No	2/11/2022	I would support the project route that tunnels to UCLA. Anything that adds more travel, equipment and people through the 405 or sepulveda is horrendous to people who live near sepulveda is simply a short term myopic answer to the issue. Metro needs to think long term and not try to squeeze more travel to the overcrowd sepulveda pass. We are concerned that it is already difficult to travel near the 405, not to mention pollution, noise, car accidents, and increased congestion. Think long term and move travel away from the sepulveda pass.
	Sherman Oaks	91423	No	2/11/2022	I am in favor of Alternatives 1 - 5. I DO NOT want Alternative 6. Alternative 6 would be too disruptive to the community in terms of noise and ability to access our homes. Thank you.

	Los Angeles	90066	No	2/11/2022	I strongly support Option 6 as providing the safest, most capacious, most accessible link between the valley and the city, including a stop at UCLA and working well with current transit infrastructure. I strongly reject monorail options 1, 2, and 3 as an unproven, unhealthful, less accessible to riders, and inconsistent with current transit infrastructure. Please make the Sepulveda Corridor safe, accessible, and effective.

Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

	Los Angeles	90065	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. 	Granada Hills	91344	No	2/11/2022	I suggest that there is a specific stop close to the UCLA campus. There are a lot of commuters that go from the San Fernando Valley to UCLA. I wish that there could also be an incentive to use the new system instead of driving.
	Redlands	92373	No	2/11/2022	What I suggest is evaluating an option for a Boring Company Tunnel. Has this option been explored? Seems to be working really well in Las Vegas.
	Los Angeles	90077	No	2/11/2022	Dear Metro Executive Team: I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. As a quiet residential neighborhood, we don't want heavy trains rumbling under our homes, dangerous exhaust vents littering our streets, decades of mass construction noise and road impediments, fire safety issues, and countless other issues. There are two alternatives that are more environmentally friendly. I strongly urge you to reconsider and build an above ground monorail on the 405 from Van Nuys to Wilshire with electric bus connection to UCLA. Or a second solution of building an above ground monorail on the 405 from Van Nuys to Wilshire with people mover connection to UCLA.
	Sherman Oaks	91403	No	2/11/2022	Every decision should be laser-focused on what makes the best long-term transit project. I live in Sherman Oaks. Prior to the COVID pandemic, I commuted nearly every day to Downtown LA via some combination of walking, biking, Metro buses, and Metro Rail. My partner commuted nearly every day via Metro bus to UCLA. The project should focus on people like us, not politicians and affluent hillside residents who do not ride transit. That means heavy rail that goes in a straight line from the Valley to UCLA. In the Valley, the decision on route and between elevated vs. subway should be focused on what best serves transit riders and generates ridership. Today, the walk along Sepulveda between Ventura Blvd and the Orange Line is horrific. Due to overhead power lines, there are no trees or shade, making it brutally hot in the summer. There are many unmarked and/or unsafe crosswalks, and the distances between signalized crosswalks is too far. There is no way to bicycle safely along that corridor. The project must include real first and last mile improvements, including undergrounding power lines. That would likely be costly, but much more important to people who actually use transit than the minimal noise from an above-ground track. I live less than one block from Sepulveda, and am 100% with above-ground rail if it means Metro will (for once) fund elements that benefit their actual riders as they walk or bike to stations. A subway that runs under a shadeless, 9-lane mega-road where drivers routinely speed at 50 mph or more does not serve transit riders. This line will be here for 100 years or more. It is a long way between the Orange Line and Ventura, and there should be an intermediate stop (probably at Burbank). By the time this project is complete, Metro will have spend several billion dollars on 405

					Expansion, 405 Express Lanes, and rail transit, which collectively have led the City of Los Angeles to abandon plans for continuous bike lanes through the Sepulveda Pass. This project should include that element.
			No	2/11/2022	I am glad to see Metro Rail expanding. This project through the Sepulveda pass will be a huge step forward for the system. As you continue studying options and making decisions, I hope you keep the following in mind. 1. It looks like the heavy rail options do a much better job of connecting with other stations and transit centers than the monorail options. Connectivity is the key to an integrated network that will be readily used by the community. There will always be a segment of the population that has to use transit, and they will walk several minutes from station to station if necessary. I think the goal should be to create a system that is as easy and convenient as possible for those that have to ride, but also convenient enough to pull people in that don't. Short and quick connections go along way with that. 2. Monorail going through the middle, or being on the side, of the 405 isn't a good idea. Not only does it greatly hamper any future possibilities of reworking or, god forbid, expanding, the freeway, it will condemn those drivers to many years of construction on a roadway that is already one of the worst in the country. Taking the train underground for the entire crossing of the Santa Monica mountains, provides the fastest route and doesn't impact the drivers on the 405. 3. Use the public money in the wisest way possible. That does NOT mean choosing the cheapest option. The Monorail seems to be less expensive than heavy rail, but one has to drill into the details to understand that the monorail number doesn't include a UCLA station and doesn't include stations that are full size to accommodate the longer trains needed to deliver the maximum number or riders. The heavy rail has all that included in the upfront number. Any of the heavy rail options are better long term use of money. Ultimately, I like Alternative 6 the best as it uses existing technology, but I like that Alternatives 4 and 5 are under Sepulveda rather than Van Nuys. I firmly believe Alternatives 1, 2 and 3 (Monorail) should be avoided. The connectivity is bad, and the hidden costs to bring it up to the same serviceability of the heavy rail is potentially huge. I cannot state strongly enough the degree to which I believe the Monorail options should be avoided.
			No	2/11/2022	I am a resident in Brentwood Glen. I support Alternative 5 or 6 as it has a direct stop at UCLA, the least disruption of the 405, and a direct route connecting with the Purple Line and Expo line.
	La Crescenta	91214	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. 	Long Beach	90802	No	2/11/2022	I like Alternatives 3, 4, 5 and 6 because they all have a station at UCLA. The one suggestion for Alternative 6 is to have that terminate at the Sepulveda/Expo station instead of Bundy for future expansion. There should be a reconsideration with the Automated alternatives in 4 and 5 to enable the ESFV LRV trains to run in the tunnel as well to enable one seat rides. The maximum vehicle lengths and widths are similar in size to our 3 car LRV train especially considering the initial studies showed the LRT alternative to have the highest ridership. The extra grade separation in this project will offset the increased ridership. Given the increased projected costs of the ESFV LRT with limited funding there should the consideration of combining ESFV LRT with the Sepulveda Pass Transit Corridor projects into one corridor to enable more efficient use of Measure M resources. The technical expertise in the large single bore tunneling can be useful for future high capacity rail projects that require a lot of tunneling.
	Oak Park	91377	No	2/11/2022	I'm SO happy some form of light rail may finally be coming to the Sepulveda Pass! I moved to LA from Manhattan in 1988 and was shocked that none existed. I was also shocked that Angelenos didn't like to carpool as I discovered when I signed up for something called "The Commuter Computer" which claimed to be able to match interested drivers with other commuters seeking to ride share and though I was commuting 9-5 from Sherman Oaks to Mid Wilshire—high trafficked areas at normal commuting times—the result said, "no matches" which I deduced meant that most Angelenos preferred driving alone. I hope you will build "non smoking" train cars into your light rail plans as well as parking lots near train stations where people who have to drive to the stations can park!
	Sherman Oaks	91423	No	2/11/2022	I would prefer an above-ground monorail through the Sepulveda Pass, connecting to another line directly to LAX. In the Valley, the monorail should be above the centerline of the 405. This creates the least amount of neighborhood disturbance and the right of way already exists.
	Sherman Oaks	91411	No	2/11/2022	I am very excited about this project, the need for more alternatives to get through the Sepulveda pass is extremely important for the quality of life for everyone that lives in the San Fernando Valley. What I like are the Alternatives 5 and 6. I think the underground alignment will have less impact on the character of surrounding neighborhoods and cause less disruptions for traffic than any aerial allignments. Also, in the long run it will be quieter for those of us who live near the route. I live a quarter of a mile away from Sepulveda Blvd, between Burbank and Magnolia, and the traffic sounds alone from the freeway and Sepulveda are already too much at times, I don't see the need to add more noise to the neighborhood if there is a solid alternative. I do not like any of the alternatives that include the monorail. They will be the only monorails in the system and I fail to see how they will integrate into connections to the other lines. Also, I am told that heavy rail will be easier to increase frequency or number of cars to increase the a larger number of possible riders. In conclusion, please only consider Alternative 5 and 6. Heavy Rail with underground alignment along the entire route will be best for everyone, even if it costs more and takes longer to get going. This project will be a major improvement for the quality of life in Los Angeles that will impact many future generations, so you should make sure you get it right and allow for as much growth as possible in the future.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Sherman Oaks	91423	No	2/11/2022	For this new metro project the only alternatives that I support are 1 and 2 but ONLY if the monorail is in the center of the 405 freeway not on east side of valley. I do not wish to see tunneling under neighborhoods or freeways because of risks and costs. and I do not believe we should have any elevated trains in the Valley-This is unsightly and unacceptable and also unaffordable! Alternatives one and two are also appealing because of the timeframe and this is a critical issue as the 405 traffic flows can make it very difficult to get around LA during morning rush-hour and afternoons.
	Sherman Oaks	91403	No	2/11/2022	I want to again state my opposition and that of my wife to Alternative 4, the route above Sepulveda Blvd. We already suffer from extreme traffic delays along Sepulveda Blvd, Valley Vista, Kester, Noble and of course Ventura; in addition to illegal traffic on Stone Canyon, Pacheco, Rayneta, Cody and Woodcliff and others that I don't see myself. Most of it is funneling to Sepulveda. Choking a lane at Sepulveda to allow for an elevated heavy rail will surely exacerbate the problem. Since population and traffic increase continually, I don't see the project siphoning off enough traffic to make up for the loss of a lane. The subway or alternatives that use existing right of way are the only acceptable solution. thank you for this opportunity to comment.
	Woodland Hills	91364	No	2/11/2022	I think that capacity should be prioritized. Getting MORE people for the system to use should outweigh things like headway times. In addition, the subway alternative can provide inter operational compatibility with existing lines.
	Winnetka	91306	No	2/11/2022	I support Alternative 3, Monorail with underground alignment, for the following reasons. 1. Environmental review will tie up any above ground construction for years. The inevitable graffiti will be an eyesore along the route. 2. The recent COVID crisis shows that human drivers are susceptible to absenteeism during a crisis. Automated monorail is the most reliable option. I'd like to suggest a direct line to the Van Nuys station from population centers such as the apartments and condos around Topanga Mall.
Valley Industry and Commerce Association (VICA)	Van Nuys	91406	Merged Document	2/11/2022

HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Hacienda Heights	91745	No	2/11/2022	What I like: alternative 1, aerial monorail with associated stops What I wish: the project is built at an escalated pace to make ready for the 2028 Olympics What I suggest: Keep bidding to previous contractors who have built aerial facilities, use models from Asian countries. Hire American companies.
	Santa Monica	90405	No	2/11/2022	Please be artistic! Los Angeles so needs a Monorail! It doesn't need a another tunnel in a place famous for earthquakes. And include some way to cycle over the pass in this transit plan. How about a bike lane on the southern side? In any case build the Monorail!

	Los Angeles	90049	No	2/11/2022	We live in Brentwood Glen, an area impacted by the previous 405 widening. We were threatened by a possibility of houses being demolished. This would have ruined the very "neighborhood" feel we in the Glen appreciate so much and the reason we chose to buy here. Now we are threatened again. I think any future plans for easing traffic on the 405 corridor should include plans for travel to and from ULCA, which has a huge employer and student population, and should connect to the metrorail being constructed down Wilshire Blvd. Sincerely,
	Inglewood	90301	No	2/11/2022	The Sepulveda Corridor is one of the most vital arteries in Los Angeles' transit network. Adding a high capacity transportation option would provide a necessary connection to Metro's slightly disjointed system. What I suggest is heavy rail, as it would have the speed and capacity to deal with morning and evening rush hour commuters. I'd also like to see a stop at UCLA. Thank you for your time.
Nury Martinez, Paul Krekorian, Niithya Raman, Monica Rodriguez			Merged Document	2/11/2022	
			No	2/11/2022	I am a resident of Bel Air. I support Alternative 5 or 6 as it has a stop at UCLA, very little disruption of the 405, and connects with the Purple Line and Expo line. Easily, the most sense.
	Sherman Oaks	91403	No	2/11/2022	I am thrilled to see that plans to connect the west side and the valley are in the works. It's been a long time coming. A station on the corner of Ventura and Van Nuys will add to the already existing grid-lock we experience daily, morning and night. Additionally, people will use our already cramped streets for parking all day long.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					What I would like to see is a station on Sepulveda (& Dickens). Thank you.
Prewitt Ridge, Inc	Los Angeles	90071	No	2/11/2022	I support Alternative 5 with a stop at UCLA. On a personal note, prior to (and during) COVID I used the Metro rail daily for my commute. Specifically Silver and Green when I lived in DTLA and worked in Hawthorne, and more recently the Red Line to get from SM/Vermont to my job in DTLA. As a business owner, I'm incredibly concerned about the housing crisis and transportation crisis in Los Angeles. I feel strongly that employees should have access to rapid and reliable transportation to their places of business. Having a workforce stuck in traffic on the 405 every day and arriving frustrated is detrimental to the success of a business. Having an underground (with no at-grade crossings) Heavy Rail connection from the SFV with a single transfer into the tech hubs in DTLA (via Purple and Expo), Santa Monica (via Expo), and Culver City (via Expo) will greatly reduce pressure on housing in the immediate areas. We can also more reliably hire brilliant people from SFV communities. Choosing an unproven Monorail design from an unproven contractor that by-design moves less people and is much slower is unacceptable for our growing community. Especially not with center-highway stops. As someone who transferred at the Silver/Green station in the middle of the 105 daily for six years, I can speak to what a miserable experience that is. Please do not subject any more riders to such nonsense. Underground Heavy Rail allows stations to be placed in the middle of area focus points, thus building stronger bonds in our communities. This also serves as an effective "carrot" in getting people out of their cars: avoid the concrete wasteland, and take the train right to where you need to be! It makes the "last mile" problem so much easier to solve, if there is no "mile" to begin with. I'm also incredibly concerned about further community and traffic disruption involved with any at-grade or above-grade construction. Putting the whole system underground would minimize such disruption. We have the technology! Commuting by rail is much different than by automobile. Individuals can read a book, watch a show, or even send out some emails. It's not "dead time," it's time individuals get back for many of their daily tasks and desires. We NEED this project to move forward unobstructed. This is a once-in-a-generation opportunity to get it right. Thank you for studying this project, and I am excited to see it completed!
	Glendale	91204	No	2/11/2022	I like the idea of a monorail. Even if I didn't need it, I would go out of my way to ride it. There's already one at the Getty and that was a nice ride. Same in Seattle, fond memories. Sometimes things need to be appealing to get people to use it. The busses and underground have a bad reputation, unfortunately.
	LOS ANGELES	90049	No	2/11/2022	In my humble opinion: WE MUST SAY "NO" TO ANY AND ALL PROPOSALS THAT DO NOT INCLUDE STOPS AT UCLA, LOS ANGELES's 3rd or 4th LARGEST EMPLOYER. As both a native born and current resident - it is completely absurd that sooo many of the options for the Sepulveda corridor project do not stop at UCLA. What city are you planning for? If you are planning for *THIS* Los Angeles and *THIS* Sepulveda, then you absolutely *MUST* stop at UCLA. Los Angeles's 3rd or 4th largest employer, and the single reason why 30000 people get up every day and commute in and out of West LA (from every direction). We all just spent several BILLION dollars (and five years) on the infamous 405 improvement project - AND IT DID NOTHING! Except delay and construction for five years. There is no change to the fact that we have SINGLE LANE onramps and offramps at UCLA - AT BOTH WILSHIRE AND SUNSET AND GETTY CENTER. SINGLE LANE ON-RAMPS AND OFF-RAMPS at UCLA is the #1 reason why the 405 IS STILL A NIGHTMARE, AN HOUR LONG COMMUTE from LAX and MDR to SUNSET and another HOUR to Van Nuys. Its crazy that we spent so many billions of dollars on "405 Improvement" and we got nothing but more traffic as West LA continues to grow (e.g. Brentwood Academy PROJECTS, MT SAINT MARY's PROJECTS, ARCHER SCHOOL FOR GIRLS PROJECTS). Crazy City Planning here folks. It just keeps growing - we should all put our collective foot down and *INSIST* on SANE and REALISTIC PLANNING. The SEPULVEDA IMPROVEMENT PROJECTS *MUST* - absolutely *MUST* include UCLA STOPS. WITHOUT ANY DOUBT. Otherwise you're just wasting everyone's money - projects that improve city planning budgets and improve construction budgets and improve CALTRANS and everyone else's budgets - and DO ABSOLUTELY NOTHING TO IMPROVE actual conditions in WESTLA and in the SEPULVEDA CORRIDOR. WE MUST SAY "NO" TO ANY AND ALL PROPOSALS THAT DO NOT INCLUDE STOPS AT UCLA, LOS ANGELES's 3rd or 4th LARGEST EMPLOYER. WE MUST INSIST TO IMPROVE THE PLANNING PROCESS FOR BOTH TRAFFIC AND CITY PLANNING - BUT ALSO RESIDENTS. UCLA HAS A PART TO PLAY HERE TO. AS LA's 3rd or 4th largest employer, with 30000 transient traffic flows every single day, UCLA MUST INSIST ON SUPPORT WITHIN THE SEPULVEDA IMPROVEMENT PROJECT AS WELL. ANYTHING ELSE IS JUST WRECKLESS. UCLA AND METRO AND CALTRANS SHOULD ALL INSIST ON ONE (OR SEVERAL!) STOPS WITHIN THE UCLA/SEPULVEDA CORRIDOR.
	Valley Village	91607	No	2/11/2022	The "eventually to LAX" is key here. Not only does the San Fernando Valley need a clean transit run to LAX, but so does the Westside and both should be accomplished ASAP, given that the Olympics will be here again in 2028. This project will also provide a valuable connection from the San Fernando Valley to the Purple Line subway, the EXPO Line light rail and the Crenshaw Line light rail; opening up tremendous commuting stretches. With the expansion of Metro Micro, a true alternative to the one person-one car can finally be established.
	LOS ANGELES	90019	No	2/11/2022	Please include extensive safe, protected bike path feeder network on each side of sepulveda pass. Also include generous covered bike parking on each side of the pass. Oh what the hell, go all in and include space for a convenient post office and and bike repair shop.

			No	2/11/2022	I live with my family on Elderwood Street in Brentwood Glen. I have reviewed the various options the Transit board is considering to make changes to the 405 freeway which is only 5 houses away from my own. I bought my house over two decades ago and the biggest selling point was that our neighborhood was a safe and quiet community to raise a family in. Encroachment into Brentwood Glen would displace many in our small, tight knit community and destroy our experience living here. As a resident of the Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 No encroachment into our neighborhood--While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? Provide a UCLA Stop: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. A stop at UCLA ensures seamless transfers How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? Will the transfers be free of charge? Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County. Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. ? ?What is the noise and vibration impact of the monorail options? Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Please do not destroy our Brentwood Glen neighborhood!! Sincerely,
	LOS ANGELES	90019	No	2/11/2022	Bike parking at the sepulveda line stations and extensive dedicated bike feeder network with safe, protected bike paths. Maybe team up with these folks, it looks like they have learned alot and are willing to share what they've learned: https://www.dutchcycling.nl/en/news/news/921-bicycle-parking-at-train-stations-in-bern
		90064	No	2/11/2022	I fully support high-capacity rapid transit along the Sepulveda corridor. Among the alternatives considered, the monorail alternatives (1-3) stand out as insufficient and inadequate. How can we even discuss alternatives that completely bypass UCLA? How can we even discuss alternatives with stops along I-405? We need to build high-capacity transit where people need it, not with stops on an interstate freeway. Has anyone learned any lessons from the Harbor Transitway fiasco? None of the monorail alternatives have stations properly located and serving people and thus generating high ridership. Sorry, but I can only support the heavy rail alternatives (4-6). As an additional benefit, building a standard heavy-rail line will potentially allow connecting it to other heavy-rail lines in some distant future, so that trains from one line can continue running on another line. Going with a proprietary monorail technology is a recipe for a disaster. Just look at Moscow, a city with a very successful urban rail system: they are now contemplating dismantling their only monorail line and replacing it with a regular light-rail line just because of this incompatibility in technology. Without doubt, monorail alternatives (1-3) should be dropped, and only heavy-rail alternatives (4-6) should be retained and studied further. Thank you very much for taking my feedback into your account.
	South Pasadena	91030	No	2/11/2022	I strongly recommend one of the three heavy rail alternatives for this line. If metro is to look to another system to emulate, it should be BART or Washington Metro, not Disneyland or Las Vegas. I implore Metro to think about how this line fits within the broader system. Why introduce a third type of rolling stock and a completely different type of "track" that will require a new type of maintenance facility? Also, I do not know if Metro plans to ever provide integration of this line with the purple line in order to provide a one-seat ride to downtown LA, but with the Monorail options I know for sure this would be impossible. In addition, any alternative that lacks a direct connection at UCLA should be considered a non-starter. Metro realistically has one chance in this lifetime to get this crucial line correct so as to maximize its utility. Please make the right decision, and pick one of the three heavy rail alternatives. These alternatives will provide better ridership, minimize time spent getting from he valley to the westside, provide connection to UCLA for students who live in the valley, which is crucial, and provides better potential for future integration with the purple, and utilizes currently existing technology within the realm of Metro's experience and institutional knowledge. The monorail alternatives just do not make sense in comparison.

UCLA Graduate Students Association	Los Angeles	90024	Merged Document	2/11/2022	To the Los Angeles Metro Board of Directors, I am the President of the UCLA Graduate Students Association (GSA). GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes. A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region. Sincerely, Musibau Jimoh
	Tarzana	91356	No	2/11/2022	I use the Orange Line to commute to work. I think that the best alternative is the option of having the train entirely underground from the Westside to the Valley. In my opinion, it makes no sense as a user to be changing modes of transportation from underground to aerial in the middle of the route. It's a waste of time, and a hassle for those with reduced mobility. People need convenience and speed, and the least amount of transfers the better. I think that it would be even better if the project included the underground train all the way to Pacoima, instead of having to switch trains from heavy rail to light rail in the middle. It is a waste of time for commuters, and it would be a hassle for working people, on top of being slower due to having to share the way with regular traffic (Expo Line being an example of the inconveniences of at-grade rail).

UCLA Graduate Students Association	Los Angeles	90034	Merged Document	2/11/2022	I am President of the UCLA Public Health Student Association, a member of the Graduate Students Association (GSA). GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes. A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region. Sincerely, Geneva Vogelheim
	Diamond Bar	91765	No	2/11/2022	What I suggest for the Sepulveda Transit Corridor is a an absolute rejection of monorail alternatives. Additionally, I demand that UCLA has a direct station along this line (not a connecting people mover or bus service). Heavy rail, because of greater ridership potential, carrying capacity, and similarity to existing rolling stock of subway cars must be the chosen alternative. Although costs are higher on the heavy rail alternatives than the monorail alternatives, these abovementioned benefits are the reason why spending on heavy rail outweighs possible benefits of the monorail. I suggest the rejection of Alternatives 1, 2, 3, and 6, while wishing to see Alternatives 4 and 5 move forward.
UCLA Graduate Students Association	Los Angeles	90042	Merged Document	2/11/2022	To the Los Angeles Metro Board of Directors, I am the President of Engineering Graduate Student Council for 2021-2022 academic year(~2500 student members). In addition, I sit on the UCLA Graduate Students Association (GSA) council. GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping process. A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region. We want the stop to be directly at UCLA to allow for safe and quick access for UCLA students. Sincerely, Vera Koutnik
	Sherman Oaks	91403	No	2/11/2022	I'm writing to oppose the monorail options for the project, which will be inefficient, hard to use and expose passengers to harmful pollution. As an SFV resident, I support a rail line through the pass, but it must be hard rail. I would give up my car for a hard rail option, but not for the monorail. Please do not build a monorail.
	los angeles	90024	No	2/11/2022	If it is determine that that additional transit paths are needed, I vote for an underground subway. Using one or even more freeway lanes for a monorail type system will reduce car capacity on the freeway. In the end, the cost for a monorail and subway will probably be the same. I think it is wrong to deprive people of their homes along the transit corridor which would ne necessary for the monorail. Once you pay for those homes the cost will be high. Plus there would be no stop for Westwood Village and the VA. With a subway those stops would be available. It just makes sense to build the subway.
	Los Angeles	90043	No	2/11/2022	I prefer option 6. An underground rail is best because waiting for the rail in the middle of a freeway is noisy and polluted. One of the benefits of public transit is having time to read, and it will be easier for students to read while waiting for the train underground compared to in the middle of a freeway. A stop at UCLA as a major educational, employment, and medical center is a must. Also, Sepulveda is a major corridor on the Westside, so it makes sense for the southernmost stop as shown in option 6 to be on/under Sepulveda.
		90049	No	2/11/2022	What I like is that the monorail would be awesome and could become such a defining feature of Los Angeles, which will transform the city into a next-generation metropolis. Since this transit design is for a city far into the future, current leaders should prioritize planning for what the future of a world-class city should be versus selecting an alternative that would satisfy NIMBY people living now who will not be here when this project is completed (this includes myself). Be forward-thinking, not backwards-looking!
	Los Angeles	90068	No	2/11/2022	What I like is option 4 "Heavy Rail" Fully Automated using the Linear Induction Motor Propulsion system. The 3 most recently built subway lines in Japan [Tokyo's Toei Subway L12 and Osaka Metro's L7 & L8] use a fully automated system propelled by linear induction motors. Japan arguably has the best most efficient transit system in the world and if their newest lines have all chosen this technology, then it could help usher in a new efficiency into LA's network. What I also like is innovative approach to tunneling stations with the single bore staggered platform design concept in Sepulveda Transit Corridor Partner's proposal in figure 4.3-15. Thank you
	Los Angeles	90029	No	2/11/2022	Dont listen to the Bel-Air people and don't build the monorail.
	Alhambra	91801	No	2/11/2022	I like encouraging more public transit. The need is there to move away from such a car centric city. With traffic on the 405 becoming worse and worse, constructing this transit corridor should be essential for the climate and for livability for everyone in Los Angeles. I would like any of the underground alternatives. Thank you,

		91731	No	2/11/2022	A station on the UCLA campus must be built as part of the Sepulveda Transit Corridor Project. By Metro's own calculations, this would be the heaviest used non-transfer station in the entire network, allowing students, faculty, staff, hospital patients, and more to access campus without a car. The monorail alternatives 1 and 2 present first/last mile challenges that add unnecessary transfers and travel time would discourage many from using the mode as a replacement for their car. Furthermore, I believe the project must be built with heavy rail, preferably automated. It is already known that monorail is an inferior technology, and it is insane that it is being studied as a real alternative, even moreso at a cost of $70 million. Monorail is a technology that Metro has no experience procuring, operating, or maintaining and this will likely lead to extraordinary budget overruns for a line that would move fewer people at a slower pace than heavy rail. The low cost estimate given by BYD for the monorail is deceptive; their plan (and the rest of the monorail alternatives) cut corners where . Heavy rail tunneled through the Santa Monica Mountains presents the best option for serving Angelenos now and into the future. It provides interoperability, higher capacity, and opportunity to expand service with growth. Although tunneling will be expensive, this is a worthy return on investment of taxpayer dollars. Thank you for taking the time to consider my comments.
	Los Angeles	90059	No	2/11/2022	What I suggest is Heavy-Rail design for the Sepulveda Pass Right-of-Way. This corridor may become heavily used and perhaps other agencies may contract it's use as well.
	Los Angeles	90028	No	2/11/2022	The Sepulveda corridor is one of the busiest commuting routes in the city, county, state, and country, and yet it lacks an efficient public transit link for thousands of workers, forcing them to take private, surface transportation and causing the 405 to become the laughing stock of commuter traffic across the country. Metro needs a heavy rail solution to this problem. The study area for the corridor connects very large employment centers (UCLA, West LA VA) and housing-rich San Fernando valley. There is no current rail nearby, but the Purple/D extension will bring much needed underground relief to the area. I believe that a fully underground heavy rail option is the best option here. I believe that a monorail, especially one over an existing freeway, is in the best interest of potential users of the corridor. It will cause years of construction on an already construction-weary public with the 405 carpool lane just finished a few years ago. Metro knows that transit in freeway medians does not attract the same number of riders as transit strategically located in neighborhoods themselves. I urge Metro to reject the monorail options, Alternatives 1-3. As far as the underground heavy rail goes, for a more seamless heavy rail experience as is on the A and D lines - keep the entire section underground. This will mean no chance of crossings that delay service due to traffic signalling or cars/pedestrians blocking intersections. I like that Alternative 6 includes a more westerly catchment area. The parking desert that is the Sawtelle neighborhood would benefit greatly from enhanced heavy rail transit access.
	Los Angeles	90034	No	2/11/2022	I am worried this project will be unduly influenced by interests that have no intention of ever using it. If this project goes forward as a cheesy Monorail, or has train stations in freeway medians, then it will be apparent that the decision makers are ignoring the needs and preferences of the people who will actually be using the system in favor of the noisy well connected privileged few. We need a tunneled rail connection between the basin and the valley. We need it to be fast, and we need it to have stations that can be a part of the fabric of the areas they serve. To compromise is a crime against the future of the city, and against the environment. Invest in our future. Avoid building a compromised system to the preferred specifications of its saboteurs.
	Encino	91316	No	2/11/2022	Please only consider heavy rail all the way. The rail should only go up van nuys since it was the only area designed to accommodate and will allow future expansion North. The traffic impact on the intersections of Burbank, vanowen, Victory, and sherman way that cross the 405 are already terrible congestion for traffic. People would have to cross over in less than 1000 ft multiple lanes to pull into car park lots when traveling southbound on the 405. The terminal station at the south should be expo line.
	Los Angeles	91436	No	2/11/2022	After attending some of the community scoping meetings and reading the online materials, I would like to share some of my comments and thoughts on the Sepulveda Corridor project. First, as a resident on Encino who frequently travels through the Sepulveda Pass, I would like to express my overall support for the project. Weaving this part of the city into the citiy's overall mass transit system is a much needed and worthwhile objective. Of the six options being considered, I would like to express support for the heavy rail options, as they are the solutions that would most seamlessly integrate the Sepulveda line into the existing metro system and create the least 'friction' for users to utilize the line for daily and eventually airport commuting. I feel that a monorail solution will be less utilized and prove shortsighted due to the uniqueness of the solution in the overall metro system, the added steps needed to switch from one mode of transit to another, and the (admittedly modest) longer travel times through the pass. Within the heavy rail options I would strongly like to voice support for options five and six. As a recent transplant to the valley, (2017), and a undergrad in architecture, I feel very strongly that the intersection of Ventura Blvd and Sepulveda Blvd is probably the nicest urban intersection in the valley and one of the best in the city and deserves to be protected. Adding an overhead transit line through the middle of the intersection would urbanistically degrade the space and complicate an already congested area. I might even hazard to say that were the interesection located on the other side of the hill, the idea to elevate the line before rather than after it would not even be considered. Whether the line remains underground after the Sepulveda/Ventura intersection is a question I'll defer to you and to others, but in my opinion preserving the integrity of that intersection is well worth the cost of tunneling another 1/4 mile. Good luck with the project and I look forward to watching its progress.
	Los Angeles	91423	No	2/11/2022	I am very excited for the Metro Sepulveda Project! This is an absolute necessity for the City. The traffic clogged streets of the Valley and the Westside are in desperate need of reliable, public transit in the form of rail. The vehicle traffic through the Sepulveda Pass on the 405 is one of the most (if not the most) traveled corridors in the nation. As a 20 year resident of Los Angeles and now a recent homeowner in the Sherman Oaks neighborhood, I suggest proceeding with Alternative 6. A subway heavy rail down Van Nuys Blvd. through the Santa Monica Mountains to the Westside accomplishes a variety of needs. Easy connections to the forthcoming East Valley Light Rail, the Metro Orange Line, Metrolink, Amtrak, Metro Purple Line and Metro Expo Line would make this route easily accessible for a variety of Angelenos across a wide range of neighborhoods. Additionally, by traveling along Van Nuys Blvd. as is proposed by Alternative 6, there is more access to more small businesses than there would be by elevated rail via Sepulveda Blvd. To that end, a stop on Ventura Blvd. is far more beneficial than a stop on the 101 as was the case with other Alternatives. Moreover, with UCLA as the

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					top 4 employer in Los Angeles County, a bona fide stop at UCLA itself is critical; anything less would simply be a failed project. Alternative 6 checks all of these boxes and is an absolute necessity to the City.
	SHERMAN OAKS	91403	No	2/11/2022	I supports an UNDERGROUND subway and prefer Alternative 6. It provides better community access, economic development and is less disruptive. I opposes all above ground alternatives – Alternatives 1, 2, 3, and 4 as they are not aesthetically pleasing, will add to the already terrible traffic and will displace residents and businesses.
	La	90032	No	2/11/2022	I want to see heavy rail! Option 5 or 6
		91401	No	2/11/2022	I support Alternative 6. I live in Sherman Oaks
	Los Angeles	91423	No	2/11/2022	As a new resident of Los Angeles and now a recent homeowner in the Sherman Oaks neighborhood, I suggest proceeding with Alternative 6. A subway heavy rail down Van Nuys Blvd. through the Santa Monica Mountains to the Westside accomplishes a variety of needs. Easy connections to the forthcoming East Valley Light Rail, the Metro Orange Line, Metrolink, Amtrak, Metro Purple Line and Metro Expo Line would make this route easily accessible for a variety of Angelenos across a wide range of neighborhoods. Moreover, with UCLA as the top 4 employer in Los Angeles County, a bona fide stop at UCLA itself is critical; anything less would simply be a failed project. Alternative 6 checks all of these boxes and is an absolute necessity to the City.
	Los Angeles	90068	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
			No	2/11/2022	I strongly support drilling for the new mass-transit project for the Sepulveda Pass. The monorail alternative is insufficient and does not consider the material needs of transit passengers. Bel-Air sits on top of the Santa Monica Mountains. The suggestion that residents would be burdened by construction or transit is absurd and unfounded.
	Los Angeles	90034	No	2/11/2022	I like Alternative 3. I think that having the stop at Westwood / UCLA is an absolute must. The second route required if that stop does not exist will be a deterrent to potential riders. I also like that it's above ground along the 405 so that people stuck in traffic can look up and see it and think, "I should have taken the train."
	Redondo Beach	90277	No	2/11/2022	As a nearly lifelong resident of Los Angeles with and a current commuter to the Sherman Oaks neighborhood, I suggest proceeding with Alternative 6. A subway heavy rail down Van Nuys Blvd. through the Santa Monica Mountains to the Westside accomplishes a variety of needs. Easy connections to the forthcoming East Valley Light Rail, the Metro Orange Line, Metrolink, Amtrak, Metro Purple Line and Metro Expo Line would make this route easily accessible for a variety of Angelenos across a wide range of neighborhoods. This is an absolute necessity for the City. The traffic clogged streets of the Valley and the Westside are in desperate need of reliable, public transit in the form of rail. Citizens Coalition for Safe Community			Merged Document	2/11/2022	I have reviewed the available documents and strongly support for scoping eliminating Alternatives 1, 2, 3, 4, & 5, both above ground and some underground alternatives for the preparation of a Programmatic EIR for the Westside and Valley corridors. I was Environmental Controls Supervisor for the Red Line Phase 1, construction management for 5 years and have contributed to rail transit, and some buses, projects in Seoul Korea, Beijing & Canton China, and Dubai UAE. I have also prepared/reviewed >500 EIRs/EISs worldwide since 1972 for structured project and for infrastructure project, road, transit, water supply, sewers, and flood controls. I also reviewed the SR-710 North Project from 1992-2014 when it was finally focused on TDM/TSM projects. I find the underground plans to be totally inadequate and incomplete with regard to alignment (e.g., keep the route dead straight, NO CURVES between stations) and to the disposition of tunnel debris/muck for hauling away from tunnel heads (e.g., TBM starts from stations at rail lines ONLY). I am always available for clarifications and elaborations, and as President of Citizens Coalition for A Safe Community and retired assistance is Pro Bono, Tom Williams
	Los Angeles	90049	No	2/11/2022	I have been a resident of Brentwood Glen for over 30 years. I am writing this letter in hopes that you will select alternative 5 or 6 when you make your decision. Please see below the talking points I fully agree with from others in my neighborhood and seriously consider them when making a decision. 1. As a resident of the Brentwood Glen, I support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 2. No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? 3. Provide a UCLA Stop: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. A stop at UCLA ensures seamless transfers How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? Will the transfers be free of charge? Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County. 4. Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? 5. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. 6. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. ? ?What is the noise and vibration impact of the monorail options? 7. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Thank you,
	Los Angeles	90042	No	2/11/2022	I am strongly against building an elevated, aerial monorail. This seems way out of alignment with costs and current technology that would make it operate at a loss. It's also adding a big ugly structure to the mountain views along the 405 so just aesthetically I'm against it. and it seems crazy in earthquake country. Please do not build a monorail through the 405. I like the heavy rail options that seem to align with the current technology and methods used by Metro. I wish there was a stop somewhere in between Venture Blvd and Westwood. I wish there was an alternative for heavy rail that would stop at the Getty, without the use of an elevated monorail. I strongly support a direct stop at UCLA. I vote for Alternatives 5 or 6.

	Los Angeles	90049	No	2/11/2022	I am a Brentwood Glen Resident for nearly 20 years. As a life-long Angeleno, I have seen this city go through many changes. I must say that your last project to widen the 405 Freeway was a disaster for particularly those of us who live in the Brentwood area. Not only did it virtually shut down traffic throughout our area for three years, the widening of the freeway did NOTHING to improve the traffic on the 405 Fwy. Because of this experience, I am VERY concerned and actually opposed to ANY of the "Above Ground" projects that runs along the 405 Fwy at any part of the Sepulveda pass as it will deeply impact the Brentwood Glen neighborhood and it's residents. The property value of our homes will also be deeply impacted by an multi-year project and should you decide to acquire some of our homes, our property values for the neighborhood will plummet. I hope you will take into consideration that we have invested everything into our homes along with paying considerable property taxes all these years. For most of us, our homes are our largest financial asset and I am very concerned how the Brentwood Glen residents will be impacted! However, if this project is moving forward, here are my comments and concerns: 1. As a resident of the Brentwood Glen, I support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405. 2. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Sherman Oaks	91403	No	2/11/2022	Both my husband and I, living in Sherman Oaks are against heavy overhead rail going down Sepulveda Blvd for a number of reasons. I believe that is Option 4. We are also opposed to the monorail plans. We believe option 6 is the best plan.
	Valley Glen	91401	No	2/11/2022	I might have commented before, but I really want to emphasize my support for heavy rail and not for monorails or car centric alternatives.
	Sherman OPaks	91403	No	2/11/2022	For the routes using the North side of the Sepulveda Pass, is the plan for the monorail pylons to be on the West side or East side of the Pass? Have considerations been made for the visual impacts of the proposed transit system?
Douglas Emmett Mangement			Merged Document	2/11/2022	
			No	2/11/2022	As a resident of Brentwood Glen I am writing to voice my concerns about the proposed Metro expansion on the west side.
	Encino	91436	No	2/11/2022	I moved to Encino three years ago, and hoped to remain here until this project was announced to be on Sepulveda Blvd. I understand that traffic is problematic, but if one of the Sepulveda Blvd. locations is used, it will actually make traffic worse. As an alternative, I believe the best location is a high rise light rail over the 405. Currently, Sepulveda Blvd. offers a much needed alternate route to the 405. The aging population would not use the new transport. Agers prefer to drive to & fro on Sepulveda Blvd. Please preserve Sepulveda Blvd. as is ! Thank you.
			No	2/11/2022	I am a senior citizen who has lived on Berwick Street in Brentwood Glen for nearly 40 years. I support the Sepulveda transit alternatives five and six because both have a direct stop at UCLA, one of the county's largest employers, and can connect with the purple line and expo line. Both of those alternatives, whether automated or manned, would ultimately ensure the shortest seamless connection to the airport, especially if metro stops at Sepulveda because the train would run parallel to the 405. I listened to the presentation to the Brentwood Glen Association and received no clear answer about property encroachment with an aerial alignment along the 405 into our neighborhood. Given that land acquisition was given as an option for the 405 Sepulveda Pass Expresslanes project and previous land acquisition for the 405 expansion in 2009, I strongly oppose alignments and final designs that would result in the possibility of property acquisition. We are a cohesive neighborhood including a church on Church Lane. Cannibalizing our neighborhood would be devastating not only to those whose homes would be taken.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90049	No	2/11/2022	Dear Mr. Carter, As residents of Brentwood Glen (Burnham Street) and as UCLA faculty/researchers, we support Alternative 5 or 6, because they involve a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection, ultimately to LAX, especially if the Expo line stop is at Sepulveda, because the train would run parallel to the 405 freeway. Regarding Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. Relevant questions are: • How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? • What existing right-of-way will the alternatives with aerial alignments along the I-405 use? Regarding a UCLA Stop: We strongly support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. Note that a stop at UCLA ensures seamless transfers to other parts of the metro system. We wonder: • How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? • Will the transfers be free of charge? • Not having a Metro stop at UCLA would be a missed opportunity in that UCLA is one of the largest employers in Los Angeles County. Regarding Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. For example, • How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? • What will the operational noise impacts be for alternatives with aerial alignments? Regarding efficiency: The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. Regarding disruptions: Alternatives 1, 2, and 3 aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. And alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Blvd. For alternatives 1-3, specifically, • What is the noise and vibration impact of the monorail options? Thank you for the opportunity to comment on this important initiative.
	Los Angeles	90048	No	2/11/2022	Plan number 5 or 6!!!! Underground rail please ?
	Los Angeles	90035	No	2/11/2022	Hello! As a frequent LA Metro user I am excited about an improved transit connection between Westwood and the valley- I've taken the bus between Westwood and Sherman Oaks many times and the experience is extremely frustrating. I strongly urge the Metro to construct below-ground heavy rail, which will have higher ridership, throughput, and help LA metro users travel more quickly between key job and housing centers in LA. Thank you!
	Los Angeles	90034	No	2/11/2022	I suggest considering the impacts on health and safety that an aerial tram alignment with with the 405 corridor would have on passengers. We have learned with the Green Line that the noise and pollution associated with that transit line in close proximity to freeways is harmful to health while waiting for trains, [1] not to mention the undesirable and ugly atmosphere around each station. The tunneled heavy rail alternatives sound much more appealing from a health and safety perspective. Thank you for your consideration. [1] https://innovation.luskin.ucla.edu/sites/default/files/Noise Transit Platforms_0.pdf
	San Pedro	90731	No	2/11/2022	The Monorail concepts are an absurd waste of city funds and a nearly fraudulently dishonest submission by BYD. The heavy rail options are all far superior and realistic. Of these three I have clear preference for options 4 (aerial along Sepulveda) and Option 6 (The non PPP option)
	Los Angeles	90049	No	2/11/2022	As a resident of the Brentwood Glen, I support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Also, combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to (ultimately) the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405. Please no Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented (and defeated) as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable with and strongly opposed to alignments and final designs that result in the possibility of property acquisition.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Panorama City	91402	No	2/11/2022	This project should not go forward as is. It should be a single line, single technology and single process from the San Fernando Metrolink to LAX. To put a subway under an overhead system is a absolute and abominable waste of $$$. To put overhead in the valley and subway on the Westside is to insult the people of the valley saying 'you do not deserve a subway, you have to put up with and overhead line' WE WILL NOT PUT UP WITH THAT ATTITUDE. If it is good enough for the valley, it is good enough for everyone, and if the Westside/Wilshire gets a subway, so does the valley. The 405 plans for an express lane etc. are a no go. Express lane only benefit those who can afford them. They make it worse for the rest of us. They exclude the occasional user, the poor, and those that do not use the road enough to justify a transponder. NO MORE EXPRESS LANES, ANYWHERE, EVER. The way to reduce traffic on the 405 is to make a viable, reliable, well planned, goes where people want to go, includes the last mile, public transit system. The MTA seems to be incapable of doing that. And you do not get to do things, like express lanes, in an attempt to force people into transit by making driving to expensive and to inconvenient. You build the alternative, then restrict the driving. You are a long way from that. Stop the East Valley Project, and give us a complete plan for a transit line from SF Metrolink to LAX. Yes, you will build it in stages, but it should be one plan from the outset.
	Los Angeles	90025	No	2/11/2022	Hello, I would like to strongly reject the monorail options (1, 2, and 3). The monorail options (1, 2, and 3) stop in less-populated, less-accessible areas along the 405. Riders at these stops would have to endure unhealthful air and noise pollution. Worse, the monorail is an unproven major interurban technology (Disneyland doesn't count) and is incompatible with our existing transit infrastructure. Fixing a broken monorail car requires expertise LA Metro just doesn't have. And monorail options 1 and 2 would not stop at UCLA, which is home to many potential riders. I would like to advocate for Option 6. In option 6, trains accommodate some 800 passengers—obviously better—and would serve areas of denser population than would options 4 or 5. Thank you,
	Los Angeles	90027	No	2/11/2022	There is a great need for some form of transit from the south to the north on the west side of the city. Something needs to be done in order to relax the constantly increasing traffic congestion on the 405, since there are no other viable options. I would hope that one of the plans is accepted, but I prefer that either 4,5,or 6 is that option. The alternative of doing nothing is not viable since it just adds more congestion as the population increases.
	Los Angeles	90046	No	2/11/2022	The Sepulveda Transit Corridor is maybe the most exciting project to happen to LA public transit in the past 30 years. It would help lessen one of the worst bottlenecks of traffic in America, and help realize Metro rail's network into one that actually reflects commuting in Los Angeles. It's exactly what we need. But some of these alternatives seem like they lessen and/or ruin the impact of what could be an essential part of Metro's rail network. Alternatives 5 & 6, albeit more pricey, seem to be by far the best investment in the future of the Sepulveda corridor. After construction, they'd ultimately have the least impact on the character of local neighborhoods & stakeholders, and give the best chance at providing Angelenos with a complete transit network.
			No	2/11/2022	To Whom It May Concern: I have been a resident of the San Fernando Valley since 1963. I have watched the entire valley grow to be an important part of Los Angeles. As such, we contribute mightily to the city's tax base. The residents deserve a FABULOUS, QUIET MASS TRANSIT SYSTEM. Many of our residents (and those of other communities such as Thousand Oaks, Palmdale, Lancaster, Canyon Country, etc.) work on the Westside. They use this corridor daily too. We all deserve a quality mass transit system. Any proposal which includes aerial/above ground heavy rails on Sepulveda Blvd. should be eliminated IMMEDIATELY !!!! The noise, the pollution, the ugliness renders any as the worst decision(s)! The best solutions are Plans 5 and 6 . If the downtown area and the Wilshire corridor have the entire system under-ground, the Valley should as well. This city is one of the biggest tourist attractions in the country.....the access to the beaches, the mountains, entertainment venues....(many of which are in the San Fernando Valley) cannot/must not be over looked. PLEASE, PLEASE, PLEASE look toward the future and be sure the valley has a mass transit system which compares well with the rest of Los Angeles as well as other great cities of the world! Don't be penny wise and pound foolish..... Put this UNDERGROUND !!!!!

	Los Angeles	90025	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Los Angeles	90025	No	2/11/2022	Hi- My office is in Brentwood and I specifically work in the area as a realtor. I support Alternative 5 or 6. It has a direct stop at UCLA; the least disruption of the 405; and a direct route connecting with the Purple Line and Expo line.
	Los Angeles	90035	No	2/11/2022	I strongly support the underground heavy rail options (Options 4-6). These options will have significantly less impact on traffic during and after construction and eliminate the need for above-ground service like a bus or people-mover to the UCLA campus (like in Options 1 and 2). Furthermore, underground heavy rail options allow more flexibility in terms of routes, stations, and possible future extensions. Of the six options, I prefer Option 6 the most since it is entirely underground, but 4 and 5 are acceptable alternatives.
	Los Angeles	90024	No	2/11/2022	To the Los Angeles Metro Board of Directors, I am part of the UCLA Graduate Students Association (GSA). GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes. A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region. Sincerely,
	Los Angeles	90034	No	2/11/2022	What I like about the project is that it adds an alternative means of transportation to valley other than driving. I would like to see heavy rail(automated or non-automated) option or alternatively the light rail solution be chosen. As an engineer involved in infrastructure projects in transportation field, I understand the complexity and costs associated with these solutions. At the same time, these solutions along with the rest of Metro rail network can cut the need for driving, further reducing our carbon emissions and footprint and expanding the affordable and safe access to different parts of our city to more people. This will also increase metro ridership, reduce

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					the stress on our roads and needs for maintaining them and further leaving more budget for expanding our rail network. A reliable mode of transport,mainly a train that does not get stuck in traffic jams and traffic lights like buses encourages people to ditch their cars and also gives a boost to our air quality.
UCLA Graduate Students Association	Sylmar	91342	No	2/11/2022	To the Los Angeles Metro Board of Directors, I am the Director of Internal Affairs of the UCLA Graduate Students Association (GSA). GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes. Bel Air Association			Merged Document	2/11/2022	
			No	2/11/2022	I live with my wife and our two sons in the Brentwood Glen on Berwick Street. Below please find my comments on the various alternatives being discussed for the Sepulveda Transit Corridor Project . As a resident of the Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass Express Lanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. Provide a UCLA Stop : We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. Minimize Negative Impacts to Surrounding Neighborhoods : Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. Thank you for your consideration.
	sherman oaks	91403	No	2/11/2022	how will this conflict with the IMT PROJECT at Sepulveda and the 101 ? this will be horribly difficult for any of us living in this area. Where do all the cars go that are going over the hill in the meantime? I am very very opposed to this project. Where will they put the terminal? it will bring more homeless people and more potential crime than we are already dealing with for sure and that's an awful thought. Are you planning to deal with that?
	Los Angeles	90034	No	2/11/2022	I like options 4 through 6 the best, because all the monorail options would have stations in the middle of freeways. Metro even published a piece on their own website a couple years ago about the freeway median-running C Line (Green), reflecting on the downsides of "making the train hard to reach by sticking mostly to the middle of a busy freeway." Even if it's more expensive to tunnel further from the freeway, if this line is supposed to last hundreds of years, it's worth the extra cost to build it where people actually need to go. Also, as a former UCLA student, I think it would be much more of a challenge to convince the many students that otherwise default to expensive rideshare services to take the train if it wasn't centrally located. Having to walk a half hour to the 405 or transfer onto a potentially slow bus could be a deal breaker to many, and add a huge amount of travel time onto a transit commute.
	Eastvale	92880	No	2/11/2022	What I would like for the Sepulveda line is any of the heavy rail alternatives. I simply cannot fathom why a monorail is being considered. This line would be very important as it would allow me to live in a family member's home in Thousand Oaks and allow me to commute to other family in Koreatown.

			No	2/11/2022	Staff Sepulveda Transit, I understand there's a large outcry about the environmental study of the Sepulveda Transit Corridor. I am all in on building a regional transit system that will help us all navigate from our homes to our jobs, with a reduced dependence on our cars for basic job commutes. However, I'd like to point out that with our current housing situation, the places where people can afford to rent/purchase homes are going to be greatly impacted if developers decide to swoop in and buy out these properties, only to build market-rate housing. I would ask the staff and directors to keep in mind that our middle-class and working class are the ones who will be greatly impacted by this decision, and sincerely request that you set a project goal of zero displacement of renters due to the presumptive gentrification that will occur. Anyone who is displaced should have a home to go to, as well as the right to return at the amount they were currently paying. Suggested mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A monitored registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide 50% of their units at rents that are affordable to households with L and VLI relative to AMI • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with L and VLI relative to AMI • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with L and VLI relative to AMI in the project area • Permanent just-cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • Affordable housing financing that is well publicized and readily available. • A permanent mechanism for tracking the loss of rent stabilized units and tenants. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
			No	2/11/2022	I am a resident of Los Angeles and I strongly support Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
			No	2/11/2022	I am a father/husband with 2 children who has lived in Brentwood Glen for nearly 30 years. I support the Sepulveda transit alternatives five and six because both have a direct stop at UCLA, one of the county's largest employers, and can connect with the purple line and expo line. Both of those alternatives, whether automated or manned, would ultimately ensure the shortest seamless connection to the airport.
		91403	No	2/11/2022	The residents of Sherman Oaks do not want their community divided by heavy rail above ground. The chosen option should be heavy rail, to stay below ground.
	Burbank	91506	No	2/11/2022	Hi, as a Burbank resident I'm well-aware of how difficult it is to over the Sepulveda pass. We have to choose a heavy-rail option, do the superior speed, higher capacity, and better inter-station connectivity (ie. closer walks). There needs to be a direct rail connection to UCLA and the Westwood station, as these stations will have massive utilization. This is a once-in-a-lifetime opportunity to get it right--I support heavy rail options 4&5.
	Granada Hills	91344	No	2/11/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Pasadena	91101	No	2/11/2022	I am really excited by the prospect of a mass transit option through the Sepulveda Corridor. The infrastructure associated with the 405 creates an opporunity for further construction of mass transit without causing significant *new environmental degradation. I would like for LA Metro to continue to push for public support for this project by spreading information about the public health, economic, and environmental benefits for this work.
	VAN NUYS	91411	No	2/11/2022	To whom it may concern within Metro, I wanted to voice support for heavy rail alternatives for the Sepulveda corridor project and also wanted to voice opposition to monorail alternatives for the project. If you want the stats and ignore everything else, I oppose alternatives 1-3 and support alternatives 4-6. I like the heavy rail alternatives due to the higher capacity and traditional trainsets. I oppose the monorail alternatives due to the differences from other transit types, potential further distance from connecting stations, and to be honest monorails visually look ridiculous and embarrassing especially for the effort put into such a critical corridor. If you go for a monorail you will make our city look like one big joke. Hopefully you find the blunt response refreshing. I'm really excited for the project, especially living so close to the potential line. I would utilize it extensively upon completion. If you do consider my support and opposition in the final decision, thank you very much, I appreciate it.
	LA	90035	No	2/11/2022	I have reviewed the 6 options and soundly reject Options 1, 2 and 3, all the monorail options, in part due to noxious freeway air quality at the stations on the freeway. Heavy rail is a better choice, and stops with easy access to UCLA are absolutely necessary for the 30,000 students and the myriad of employees and patients that go there daily. Option 6 has the biggest trains (seating 800 instead of 680), works with the existing transit infrastructure, and reaches areas of densest population, including UCLA. My choice is number 6.
Congressman Brad Sherman		91403-1791	Merged Document	2/11/2022	
Brentwood Glen Association	Los Angeles	90049	Merged Document	2/11/2022	Attached is the comment letter for the Brentwood Glen Association. President Brentwood Glen Association
			No	2/11/2022	To whom it may concern: I am very supportive of the Sepulveda Transit Corridor project as it will provide a fast and reliable alternative to traffic on the 405. Regardless of the mode or alignment selected, to enhance the utility of this project now and in the future, I would like to see this project extended to include a southern terminus station at the site of the Santa Monica Airport. Presently, this area contains a mix of uses including the Santa Monica Business Park, the Santa Monica College Bundy Campus, restaurants and housing. In the future, when the Santa Monica Airport closes in 2028, the site is envisioned to be transformed into a large regional park, with the potential for some associated development if approved by the community. This new park will represent a strong regional draw, especially when coupled with the existing land uses. If not feasible to accommodate this station at the present, I hope priority is given to future extensions of this project to include the requested and essential station.

	West Hollywood	90069	No	2/11/2022	Dear Metro Board of Directors: First of all, I would like to thank you all for your service to the citizens of the greater Los Angeles area and for your courage in tackling the many challenges surrounding our mass transit issues. Complaints are easy and solutions are always complicated. But I feel so strongly that the quality of life for me and my family are intricately tied to your wise decisions, both short term and far into the future. I am writing to urge you to proceed with all deliberate speed in the construction of the Sepulveda Transit Corridor Project ("STC"). Connecting this crucial transit line to the rest of the County's growing rail network as quickly as possible is the only way to free Angelenos from ever-worsening traffic, to allow students to travel efficiently to and from school and workers to and from their jobs and still participate fully in raising their children and enjoying their communities, and to reduce our region's carbon footprint meaningfully. I do not have a detailed proposal regarding a preferred route or modality, but would like to offer some considerations. First, the earliest possible project completion should be a top priority and if that means an above-ground monorail, then it should be preferred. Second, the STC should seamlessly connect to as many existing and new lines as possible, including the North Valley light rail line, the Orange Line, the Purple Line and the Expo Line. Every increased burden imposed upon transit users (such as stops that are nearby but not co-terminus, shuttles, changing modalities, etc.) will reduce ridership unnecessarily. Third, the STC should include a stop at UCLA if at all possible, given its inevitable high usage. As a retired University professor from the CSU system, I feel quite strongly about this! It should also be a priority to include stops within the Sepulveda Corridor, such as at the Skirball and the Getty Center, which are important cultural landmarks that would otherwise remain difficult to reach from both directions. Finally, the final alignment should strive to run through as many of the most densely-populated neighborhoods along the route as possible, which would maximize ridership. I would also like to stress that construction of the STC should be conducted in a manner that minimizes to the fullest extent possible any displacement of communities currently residing along the proposed route. It should go without saying that it is counter-productive to displace the very people who are most likely to ride a new rail line when building that line. Thus, the Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to rising rents, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. In gratitude for your consideration of these issues.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Yorba Linda	92886	No	2/11/2022	Every single alternative of the Sepulveda Transit Corridor Project recognizes that the UCLA campus will be a major destination for trips along this route. Alternatives 1 & 2 tacitly acknowledge the need to serve the UCLA campus through connecting services. However, the proposed connections would lower the quality of service, which reveals the fundamental flaws in the design of Alternatives 1 & 2. Metro should instead select an alternative that builds the first high quality heavy rail connection to a University of California campus. To a transit rider, the lowest quality mode of service limits the available hours of service and reliability of a transit trip. The electric bus connection proposed in Alternative 1 has the risk of inadequate capacity during peak transfer periods, as the capacity of the monorail project exceeds the capacity of the bus. Also, nothing prevents Metro from reducing service during off-peak periods, which would degrade the service available to UCLA from Alternative 1. If the bus service does not run to match the full hours of the monorail, then the transit service effectively has reduced hours when traveling to and from UCLA. After future service adjustments, the overall journey may be neither faster than nor more frequent than the existing bus service between Van Nuys Metrolink and the UC Los Angeles campus, which the study notes is not competitive with driving. The choice of a bus for the mode of connection in Alternative 1 appears to be an option that minimizes the capital commitment to service for the UCLA campus. Selecting this option would suggest a corresponding lack of commitment from Metro to provide service to the UCLA campus. Without a capital commitment, Metro can freely reduce service to make the connection more similar to the bus service between commuter rail stations and other UC campuses. UC Irvine/Tustin Metrolink (OCTA 473) and UC San Diego/Sorrento Valley Coaster (SDMTS 972-979) have connections only during the morning and afternoon peaks, which makes any midday rail service effectively unavailable during midday and all non-peak times. A bus route also allows Metro the flexibility to rearrange the route to serve other priorities, only incidentally providing the originally intended connecting service. The bus route between UC Santa Barbara and Goleta Amtrak (SBMTD 12/24) demonstrates a service that incidentally routes near a transit station without synchronization between different modes of service. Selecting Alternative 1 would unavoidably design into the project a structural risk of a poor quality connection to the UCLA campus. Selecting an alternative with a stop on the UCLA campus itself would provide a historic improvement in the form of the first heavy rail connection between any UC campus and commuter rail station. Alternative 2 suffers from largely the same issues as Alternative 1. The construction of an APM may show more capital commitment but does not resolve the fundamental challenges of running a connecting service. The APM provides an additional point of mechanical failure, may not run with sufficient capacity during peak hours, and may have reduced service hours that limit access to the rest of the project. This proposal may develop similar to the (BART) Coliseum-Oakland International Airport line, which charges a relatively high fare yet has failed to meet revenue expectations. In the United States, monorail systems have had very few successful extension projects. After 50 years of service, Seattle's monorail system continues to serve no more than two stops. The Las Vegas monorail has had several extension proposals but no current plans for any construction. Even Disney has not expanded their monorail system to the originally planned extent. Does Metro intend Van Nuys Metrolink and the Expo (E) line to be the permanent termini of the Sepulveda Transit Corridor Project? Every alternative with monorail technology inherently presents a higher risk and higher cost for future expansions. Metro should consider this hidden cost -- which is not present for heavy rail technology -- when comparing the relative costs of each alternative. By contrast, heavy rail systems have a long history of successful extension projects with an abundance of examples that can inform Metro of the potential for expansion in the Sepulveda corridor. Metro itself has existing experience and expertise as demonstrated through the Metro Purple Line Extension (D line). Ultimately, Alternatives 1,2,3 are inferior alternatives due to flawed route design and poorer prospects for extension. Constructing a monorail project may prevent more service from being built than provided by the route itself. Selecting an Alternative that provides service to UCLA requires a tradeoff in the form of a loss of service to the Getty Center. However, the heavy rail alternatives would permit Metro to extend a service to Getty in the future. In the short term, Metro could provide service via an electric bus or an APM from the UCLA station. Alternatives 4 & 5 appear to provide stops closer to destinations than Alternative 6, which appears to provide a faster connection to the Orange line (G line) and the Van Nuys Metrolink. Alternatives 4 & 5 would connect travelers from Van Nuys Metrolink to local stops along Sepulveda Blvd. Alternative 6 seems to provide a better connection from Van Nuys Metrolink to Westside destinations. Automated heavy rail transportation would allow for a greater frequency of service during peak periods and facilitate more service during late night periods.
	West Hollywood	90046	No	2/11/2022	Hello — I'm an advocate for and frequent rider (until the pandemic) of Metro bus and rail. I was proud to push for Measure M, and I believe firmly in the urgent need for the Sepulveda project; with adequate vision it will be a massive game changer. That said, I have several concerns about the suitability of a few of these alternatives. I think we must completely reject the monorail alternatives (1-3). I have no issue with the technology itself, it's the alignments that strike me as simply not good enough for this project: • A real, honest-to-goodness station on-campus at UCLA is a must. I've heard that Metro anticipates this would become the busiest non-transfer station on the system, and that's hardly surprising. No shuttle buses or APMs will do – a destination/job center of that size is too big an opportunity to miss. That eliminates alternatives 1 & 2. • For years my closest rail station was in a freeway median. I know first-hand how miserable waiting on a platform in the middle of a freeway is. It's time to say "no more". That eliminates all the monorail alternatives. • Station locations for easy transfers are critically important. Imagine the missed connections, poor wayfinding, and minutes lost, multiplied by hundreds of thousands of riders every single day — it is absolutely worth it to build this line right the first time. The locations proposed by LA SkyRail Express/BYD are unacceptable. - At Sherman Way, Ventura Blvd, and Santa Monica Blvd, instead of directly serving bus lines, homes, and businesses on Sepulveda, the monorail hugs the freeways, making it less pleasant, less accessible, and therefore less useful. - The Orange Line connection to the monorail is awkward and way too far from Sepulveda. Self-defeating for such a key connection. The same is true for the Expo Line connection: a ~3 min walk, between stations. Is that the best we can do? - Alternative 3's Purple Line transfer station is elevated, rather than making an in-station underground connection. This station will see huge transfer traffic; is it too much to ask for a world-class experience here? Study the monorail if you must, but a better idea is to save the money and drop it now. It is not fit to purpose. Beyond the above objections I am deeply concerned that at crush loads the monorail can't hack it: the full-length platforms are not priced-in to the bid, potential mitigation costs to use Caltrans's ROW are not priced-in. The headline numbers about peak passengers-per-hour and travel time seem laden with gotchas, and this line will be popular. Among the HRT alternatives I don't have strong opinions. Alternative 6 seems interesting but maybe it would be a shame to lose a couple stations in the valley. I am not at all concerned about visual blight from elevated rail – Expo's aerial structures are quite nice looking and in their way, unobtrusive.
	LOS ANGELES	90025	No	2/11/2022	We should have done this 50 years ago. Do it.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Irvine	92618	No	2/11/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	GRANADA HILLS	91344	No	2/11/2022	I could not find the 4 options for the Sepulveda Corridor. That being said, I favor the line that goes as far north in the valley as possible along Sepulveda Blvd. Ending at Roscoe and at the Metrolink station is good (further north would be even better). Also, I also favor whatever option gets this built sooner. I know it takes a long time.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
			No	2/11/2022	Every single alternative of the Sepulveda Transit Corridor Project recognizes that the UCLA campus will be a major destination for trips along this route. Alternatives 1 & 2 tacitly acknowledge the need to serve the UCLA campus through connecting services. However, the proposed connections would lower the quality of service, which reveals the fundamental flaws in the design of Alternatives 1 & 2. Metro should instead select an alternative that builds the first high quality heavy rail connection to a University of California campus. To a transit rider, the lowest quality mode of service limits the available hours of service and reliability of a transit trip. The electric bus connection proposed in Alternative 1 has the risk of inadequate capacity during peak transfer periods, as the capacity of the monorail project exceeds the capacity of the bus. Also, nothing prevents Metro from reducing service during off-peak periods, which would degrade the service available to UCLA from Alternative 1. If the bus service does not run to match the full hours of the monorail, then the transit service effectively has reduced hours when traveling to and from UCLA. After future service adjustments, the overall journey may be neither faster than nor more frequent than the existing bus service between Van Nuys Metrolink and the UC Los Angeles campus, which the study notes is not competitive with driving. The choice of a bus for the mode of connection in Alternative 1 appears to be an option that minimizes the capital commitment to service for the UCLA campus. Selecting this option would suggest a corresponding lack of commitment from Metro to provide service to the UCLA campus. Without a capital commitment, Metro can freely reduce service to make the connection more similar to the bus service between commuter rail stations and other UC campuses. UC Irvine/Tustin Metrolink (OCTA 473) and UC San Diego/Sorrento Valley Coaster (SDMTS 972-979) have connections only during the morning and afternoon peaks, which makes any midday rail service effectively unavailable during midday and all non-peak times. A bus route also allows Metro the flexibility to rearrange the route to serve other priorities, only incidentally providing the originally intended connecting service. The bus route between UC Santa Barbara and Goleta Amtrak (SBMTD 12/24) demonstrates a service that incidentally routes near a transit station without synchronization between different modes of service. Selecting Alternative 1 would unavoidably design into the project a structural risk of a poor quality connection to the UCLA campus. Selecting an alternative with a stop on the UCLA campus itself would provide a historic improvement in the form of the first heavy rail connection between any UC campus and commuter rail station. Alternative 2 suffers from largely the same issues as Alternative 1. The construction of an APM may show more capital commitment but does not resolve the fundamental challenges of running a connecting service. The APM provides an additional point of mechanical failure, may not run with sufficient capacity during peak hours, and may have reduced service hours that limit access to the rest of the project. This proposal may develop similar to the (BART) Coliseum-Oakland International Airport line, which charges a relatively high fare yet has failed to meet revenue expectations. In the United States, monorail systems have had very few successful extension projects. After 50 years of service, Seattle's monorail system continues to serve no more than two stops. The Las Vegas monorail has had several extension proposals but no current plans for any construction. Even Disney has not expanded their monorail system to the originally planned extent. Does Metro intend Van Nuys Metrolink and the Expo (E) line to be the permanent termini of the Sepulveda Transit Corridor Project? Every alternative with monorail technology inherently presents a higher risk and higher cost for future expansions. Metro should consider this hidden cost -- which is not present for heavy rail technology -- when comparing the relative costs of each alternative. By contrast, heavy rail systems have a long history of successful extension projects with an abundance of examples that can inform Metro of the potential for expansion in the Sepulveda corridor. Metro itself has existing experience and expertise as demonstrated through the Metro Purple Line Extension (D line). Ultimately, Alternatives 1,2,3 are inferior alternatives due to flawed route design and poorer prospects for extension. Constructing a monorail project may prevent more service from being built than provided by the route itself. Selecting an Alternative that provides service to UCLA requires a tradeoff in the form of a loss of service to the Getty Center. However, the heavy rail alternatives would permit Metro to extend a service to Getty in the future. In the short term, Metro could provide service via an electric bus or an APM from the UCLA station. Alternatives 4 & 5 appear to provide stops closer to destinations than Alternative 6, which appears to provide a faster connection to the Orange line (G line) and the Van Nuys Metrolink. Alternatives 4 & 5 would connect travelers from Van Nuys Metrolink to local stops along Sepulveda Blvd. Alternative 6 seems to provide a better connection from Van Nuys Metrolink to Westside destinations. Automated heavy rail transportation would allow for a greater frequency of service during peak periods and facilitate more service during late night periods.
			No	2/11/2022	I am writing to express my concern with the proposed Sepulveda Transit Corridor, particularly from the perspective of a UCLA tenure-track faculty member who specializes in urban history. Having reviewed the proposed alternatives, I believe that it is essential that the project serves the UCLA campus directly. In informal and public conversations, our faculty and students all unequivocally express a desire for a clean, efficient mode of transit. Due to the limits of its capacity to expand, as well as serious delays during construction on the 405, I believe that any monorail option is completely unacceptable. Investing in a mass-transit system that cannot do its job of moving students to and from the number one public university in the country would be a colossal mistake and a waste of taxpayer money. Hence, I urge you to adopt one of the heavy rail options. Furthermore, it is essential to reduce operating costs, by keeping compatibility with existing rolling stock on the Purple and Red lines, with a direct transfer station to the Purple at Wilshire/Westwood. Transfers and station locations should be studied to minimize transfer time on foot. Such studies must also include the time it takes to cross surface streets. Stations should further be designed to facilitate foot traffic, including multiple entrances on each side of the street. For this reason, Alternative 4, with a station one block away at Lot 32 is completely unacceptable. It extends travel time by 5-6 minutes at minimum, which makes rail connections with the Purple line uncompetitive with driving. Reducing traffic and congestion requires rail connections to be faster than driving, even in conditions of no traffic. For the same reason, the UCLA station should be located in a central space with immediate pedestrian access to both north and south campus. Finally, Metro should study the effectiveness of station termini at Expo/Bundy and Expo/Sepulveda to facilitate future connections to LAX. The connection at Ventura boulevard should be moved to the intersection of Ventura/Sepulveda, rather than at a parking structure. On the north side of the line, Metro should study an interline continuation of the Sepulveda corridor, linking to the Red Line via the current Orange line corridor, already slated for rail conversion. I thank you for your time.
	Sherman Oaks	91423	No	2/11/2022	This is so needed for better access - help us relieve traffic congestion!

	SHERMAN OAKS	91403	No	2/11/2022	Please don't destroy our beautiful residential neighborhood. I understand you're working on several options, I agree with the Sherman Oaks Homeowner Association recommendations.
	Los Angeles	90014	No	2/11/2022	I am writing to voice my concerns over the monorail option. I find the numbers that were presented about potential ridership and times to be extremely misleading to the point where it is absurd. It is a clear ruse to falsly claim that this option is more cost-effective when it quite clerly is not. Please don't allow this bait and switch manipulations of the numbers work (yet again). The heavy rail alternatives--especially the subway/tunneling alternatives--are the only choice that are worthwhile for such a crucial line that should be a vital connection for the region for generations to come. Haven't we learned from the Green line that placing commuter rail in the middle of the freeway is a waste of taxpayers funds? Please, do not select the monorail option even though the company enjoys a close relationship with they mayor's office. Plese do not succumb to the whining of a minority of the wealthy elite in Bel Air that will never ride the metro. Please do what is right for the majority of Angelenos and invest in making the choice that is the correct one long term. Prioritize the heavy rail options, prioritize tunneling through the mountains for speed, and please prioritize that stations are close to crucial gathering spots such as UCLA. Make this the line that in needs and deserves to be the first time around. Do the right thing.
			No	2/11/2022	I strongly support Metro's proposed alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. The long-term benefits of this major endeavor have the potential to alter the shape of transit in Los Angeles and improve quality of life for future generations as public transportation and all ecologically sustainable means of transportation become more essential for humanity's survival. The potential benefits of the project for all Angelinos and the world at large outweigh the fabricated discomforts that Bel-Air's residents have been told they will experience by leaders of the Bel-Air Association. In addition, the duo rail subway is a much more economical long-term solution in every way, when compared to an impractical above-ground monorail. There are no successful major monorail systems in the United States compared to traditional rail transit systems due to the monorail's physical limitations and high maintenance costs. The most successful monorails remain at theme parks where they belong, as space and maintenance exist in an unnaturally closed bubble, not real-world application. Why would Los Angeles introduce something that has long proven to be ineffective and much more difficult to integrate into the existing transit systems? Please consider the massive benefit the Sepulveda transit corridor subway will have. It will benefit everyone with no tangible change in quality of life for Bel-Air residents.
			No	2/11/2022	Dear LA Metro, I am writing to you to express my support of alternatives 4 and 5, and against the monorail proposals. Heavy rail, especially Bechtel's proposal, is the best option in so many ways. Their plans include integrated stations at the Purple and Expo lines, a much higher maximum pphpd capacity, faster travel time, and overall smarter design when compared to the BYD monorail. BYD says that they have an initial pphpd of 14,000, but that is for a 6-car train. Their maximum of 19,000 only works with an 8 car train. Yet, their plans include stations built for only 6 car trains, so to reach the maximum the stations would have to be expanded--a huge and disruptive project! That's why their cost of 6.1 Billion isn't really honest. Heavy rail displays a different story. Bechtel's stations have built-in capacity to expand the trains from day 1! There is also the issue of UCLA. I am currently a senior student at UCLA. LA Metro predicted that the UCLA station will have the highest ridership outside of a transfer station, and it's not hard for me to see why. There are literally tens of thousands of students crammed into the tiny area of Westwood, all competing for scarce and expensive housing. There is also a large commuter student group, many of whom live in the Valley. Finally, there is a huge faculty and staff influx to campus any day. A metro station on campus would allow for all of these people to commute to work by rail, taking countless cars off the roads, especially the 405. Perhaps most importantly, it would allow students to live in many more places, especially along the Sepulveda or Purple lines, because they could get to campus in 20 minutes from miles away. This would bring down the overall cost of housing for students. Yet, BYD's initial proposal doesn't include a UCLA station! Adding one would cost 2.1 Billion. It would force the monorail to go underground, which is inefficient and more expensive than underground heavy rail. It would also add 4 minutes of travel time. There are even more issues with the monorail. The renderings show much of the line adjacent to the 405 freeway, but will Caltrans allow that to happen? What's to stop Caltrans from killing this project and adding huge increased costs to mitigate violations, as they did with the SR 60 Freeway? Finally, Freeway-adjacent stations are noisy, polluted, and unpleasant. They are also generally not where people (aka potential riders) are. Then there are the issues of the monorail's stations in general. The station which is supposed to connect to the orange line is pictured as having a long, covered walkway to connect the two stations. However, the Orange Line station here is going to be re-located farther to the East, a full 8 mile walk from the monorail station. This could hardly be called a "connector station" and is sure to decrease ridership. Next, instead of having a station on important and busy Ventura Blvd, they plan to build on at...the intersection of two freeways! Again, decreased ridership. The Getty station will serve literally nothing except the museum, and is sure to not pass any cost-benefit analysis. Next, the purple line connection station is a 3 minute walk from the purple line, the Santa Monica and Expo connections are again next to the freeway, with the latter requiring another 3-minute out of station connection. Overall, the entire purpose of the project--to funnel people from all over the valley to all over the Westside and vice versa--breaks down in many places along the monorail. Finally, I don't want to fail to mention BYD's campaign contributions to certain Metro board members, as well as their failed products (like electric buses) in the past). Overall, the choice is clear. Though the initial cost of the monorail is lower than Bechtel's proposal, this number is a farce. Integrating the stations, adding capacity, and tunneling to UCLA will all increase the price to, or beyond, that of the heavy rail. Bechtel's proposal has great maximum capacity, station integration, travel times, and probably less maintenance costs. It is the obvious choice. Please make the right decision. Ditch the monorail, and pick alternatives 4 or 5.

		90065	No	2/11/2022	What I want from the Sepulveda line project is automated Heavy rail because I believe that automated heavy rail has the most benefits to offer LA County and the area along the Sepulveda corridor. Alternatives 4 and 5 serve the local populations along the corridor the best. Alternatives 4 and 5 do not run in the freeway median. Having transit stations in the freeway median will discourage ridership from the community. Because having riders from the community walk under a freeway underpass is not a pleasant walk and increases the distance from station to destination. The freeway is a physical barrier to transportation for residents and commuters. This the one of the main reasons why the Green Line light rail is one of the least used of the rail lines in LA Metro system. Having stations in the communities they serve will be convenient for local residents and visitors. Automated trains can allow increased train frequency while increasing safety. Automated trains can save on operating costs in the long term. What I like about the Alternative 4 and 5 is that these options have a UCLA station as close to campus as possible. A station at UCLA can allow students to find housing farther from campus. It will also allow them access internships and part-time jobs farther away from campus without resorting to cars. What I like is good connections to other transit lines such as the upcoming San Fernando Valley line, Metrolink, Expo line, and the future expansion of the Purple Line. In addition, I like high frequencies of trains. High frequencies even at off peak times can encourage ridership. High frequencies allow riders to feel that transit is reliable. If riders miss their train, they will find solace in the fact that they do not have to wait long for the next train to arrive. High frequencies allow the line to move more people per hour. Alternatives 4 and 5 have high capacity, high frequency, and serves riders in the areas around the stations. Because of these qualities, Alternatives 4 and 5 should attract more ridership than the other alternatives. More riders mean less cars on the road. Less cars on the road means less greenhouse gas emissions released into the atmosphere and less pollutants emitted. In conclusion, Alternatives 4 or 5 are the options I prefer that Metro consider for construction of the Sepulveda Line.
South Robertson People's Committee	Los Angeles	90035	Merged Document	2/11/2022	Friday, February 11th, 2022 Dear Metro Planning Staff, and Sepulveda Transit Corridor Environmental Evaluation Team, We the South Robertson (SORO) People's Committee represent a group of stakeholders in the South Robertson neighborhood of Los Angeles. Our community is bound by La Cienega and Robertson Boulevards, with a northern boundary of Beverly Hills and southern boundary of Culver City. Our stakeholders are regular transit users, with access to key current and future high quality transit corridors. Our organization is a strong supporter of Metro initiatives, including recent changes to the agency's Joint Development policy, the planned Bus Rapid Transit project on La Cienega Boulevard, and future connections to the eagerly awaited Purple (D) Line Extension through the northern segment of our community. Our residents are following the Sepulveda Transit Corridor Project closely, as we will be deeply impacted by the decisions Metro makes. Our community has been a longstanding stakeholder of this transit project, as we have been home to UCLA students commuting to campus by transit for years. Our community straddles both the Expo (E) Line and future Purple (D) Line extension, and the Sepulveda Transit Corridor will provide a much needed missing connection between the two. As Metro continues its evaluation of this project through the conclusion of the scoping phase, we strongly request that Metro focus on the criteria that will benefit disadvantaged, marginalized, and transit-dependent communities. We urge the Metro Planning Department and consultants to focus on certain specific measurable qualities of this project. The key factors that should determine the alternative, route, and transit mode selected should ensure that this project serves the region for generations. These factors include ridership, the speed of travel from end to end, capacity, and the direct service of key locations. The Sepulveda Transit Corridor Project will revolutionize transportation for Los Angeles County, and travel between the Valley and Westside, as well as eventually LAX. Only alternatives with higher ridership should be moved forward, as well as alternatives with the capacity for higher future ridership as travel demand and populations grow over the coming decades, as well as the mode that ensures this capacity. This project will ensure much needed transit equity, and the people of Los Angeles deserve a project with the fast end to end travel time, and a mode that enables these higher speeds. This project has the ability to help connect largely underserved populations, and the people of Los Angeles County deserve direct transit connections to key transit destinations like the UCLA Campus. It is also important that Metro does not sacrifice these crucial criteria in exchange for a cheaper or more quickly delivered project. We strongly prefer that Metro eliminate alternatives and travel modes that perform lower on these measurements, even if that delays the project or results in increased costs. This project is simply too important for Metro to cut corners, and it is preferable that Metro get the project right. Quite frankly, Metro should not pursue a Public Private Partnership (P3) as a delivery tool unless it meets these preferred criteria, and should not rush to implement a project simply for the sake of delivering a project. We strongly support Alternatives 4, 5, and 6, and prefer an Expo (E) Line connection at Sepulveda due to surrounding land use. We support both elevated and underground alignments, and believe a station located directly on UCLA's Main Campus to be crucial. We consider Heavy Rail to be a firm Red Line, and will strongly oppose any the project as a monorail of any alignment. We request the evaluation team to further Alternatives 4, 5, and 6, to look into terminating at the Expo/Sepulveda Station for all alignments, for extended underground station lengths for all alignments, and to eliminate Alternatives 1, 2, and 3. We look forward to engaging with Metro further on this project and others that impact the South Robertson area, and for continued support for Metro initiatives that serve disadvantaged and marginalized communities. YOURS SINCERELY, THE CONCERNED STAKEHOLDERS OF THE SOUTH ROBERTSON PEOPLE'S COMMITTEE

	Los Angeles	90038	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Woodland Hills	91364	No	2/11/2022	I commute from Woodland Hills to my offices Santa Monica and Warner Center, as well as to UCLA where I am studying an executive education program and teaching. The 405 and Topanga Canyon Blvd are my most common routes around the city. I do not use transit now becuase: - there is no transit on Topanga Canyon - the routes on the 405 are slower than driving, even in the worst of traffic - the connectivity to the West Valley is very slow. I strongly support Alternative 4, and Alternative 5 is a close runner up. I like: - direct rail connection to the orange line, without going further east than the most common destinations which will likely be UCLA and Santa Monica. - heavy rail, which is faster, more reliable, and more comfortable than a monorail - urban stations. I would not walk onto a platform in the middle of the 405. The rail line in the middle of the 105 freeway or the 210 freeway is a terrible experience and I'd rather be underground and in the neighborhoods. - UCLA connection - a train that goes *near* UCLA but not *too* UCLA adds another transfer and more time. I'd probably just drive. What I don't like about the other plans: - the monorail. Following the freeway does not follow where people actually want to go. The 405 is not a destination, and requiring connections to start/end at the 405 adds massively to the total travel time. What I wish: - for a rail upgrade to the orange line, as it's incredibly slow. Even with heavy rail, the travel time from Woodland Hills will be borderline as compared to driving. If there's more connections beyond the orange line and a UCLA station, I would just drive.

Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
			No	2/11/2022	Dear Sir/Madam, We live in the Brentwood Glen on Chenault street, and would like to make our comments on the Sepulveda Transit Corridor Project. Please take the following into consideration: As residents of the Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 No Neighborhood Encroachment : While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura

			No	2/11/2022	I am submitting the following comments related to issues that at a minimum should be considered as part of the environmental impacts review of proposed Sepulveda Transit Corridor Project alternatives: 1. the magnitude and duration of impacts from each alternative and the social and material costs of those impacts during the construction phases and throughout the life of the project; 2. the likelihood that involved agencies and political jurisdictions will agree to install and maintain proposed mitigations for the lifetime of the project (see for example failure of multiple jurisdictions adjacent to the 405 to install and/or maintain mitigations promised as part of the 405 widening); 3. the extent to which each alternative requires alteration and disruption to recent and costly improvements to the 405; 4. the extent to which alternatives disrupt wildlife and native habitat in the 405 corridor; 5. potential costly impacts to multiple subsurface water, utility, and gas pipelines in the area between Mulholland and Wilshire: 6. costly increase and disruption of traffic during and after construction; 7. range and degree of impacts to quality of life, noise intrusion, air quality, traffic volume and safety throughout the area and in the vicinity of the project. It would appear to me and others in my freeway adjacent neighborhood that underground options #5 and #6 offer the most promise of meeting the goals of the project over the long-term with fewer long- and short-term impacts than the above-grade options. The above-grade options appear to fall in a relatively costly quick-fix category without actually fixing the problem of providing a needed one-seat cross-mountain connection between key destinations. As such, they provide much less value dollar for dollar. Further, a seamless single-seat underground connection from the San Fernando Valley to the Expo Line, while including an underground station on the UCLA campus (4 th largest employer in the County) and a direct connection to the Metro Purple D Line Subway at the Wilshire/Westwood Station; Alternatives #5 and #6 will provide the greatest connectivity with existing Metro transit Lines, making it easier to use public transportation. Getting commuters out of their single-occupancy vehicles and onto public transportation, a goal of this project, is best done by providing a fast and direct route to where they want to go and need to go daily for work. Other Monorail issues and concerns: The grade of the I-405 freeway through the Sepulveda Pass is very steep, especially the section from the San Fernando Valley (US 101/I-405) to the peak at roughly the Mulholland Bridge. How safe is a monorail on a steep downhill track? How will this monorail perform on this steep uphill grade? How will a steep slope affect monorail speed? How is monorail performance on a steep slope during incremental weather? How will the length of a monorail train of 2, 4, 6, or 8 cars affect the speed at which the monorail can travel, especially up a steep incline like the one over the I-405 in the Sepulveda Pass? Does LA Skyrail's parent company BYD have any existing monorail systems currently operating in other cities? What is BYD's track record on delivering on promised projects and their electric buses? How will a monorail down the middle of the I-405 with an aerial station at Wilshire, at Santa Monica, and at Exposition (in Alternative #1, #2, & #3) connect passengers to street level or other modes of transportation? The major boulevards: Wilshire, Santa Monica, and Exposition Blvds. are all underpasses under the I-405, which is an elevated freeway on the Westside. How big a ground footprint will be needed to build the stairway, escalators, and elevator needed to connect pedestrians to the aerial stations (two stories up)? What are the environmental impacts? How will these new stations affect local boulevard vehicle and pedestrian traffic? What is the cost of construction and operation of all the aerial stations? Where is there land to build a street-level connection to an aerial station? Will bridges need to be built to connect a monorail in the middle of the I-405 to a station at the edge of the freeway? How much will this cost? Descriptions of Alternatives #1, #2, & #3 state "frequency of monorail trains will be every 2 minutes during peak periods". How many monorail trains can travel on the monorail above the I-405 and any one time? How many monorail cars will need to be purchased? How long does each station have to be to accommodate a peak hour of 6 or 8 car monorail trains? How will this affect the existing structures and congestion on the boulevards where stations are planned? How will pedestrians and/or handicapped people access the elevated stations at Wilshire Blvd.? At Santa Monica Blvd? At Expo "E" Line? At Getty Center? At US 101? At Metro G Line? At Sherman Way? At Van Nuys Metrolink Station? How do you get to the monorail station if it's built in the center of the freeway? Will trees need to be removed to build the monorail and the aerial stations? Where will replacement trees be planted? Who will care for replacement trees while they get established? Will the removal of trees have a negative impact on air quality and contribute to climate change? How is maintenance on a monorail handled? What will be the impacts on surrounding areas? Construction of a monorail in the middle of the I-405 will negatively affect commuter times during the construction period. How much will delays and disruption add to the construction cost of a monorail down the middle of the I-405? Or, for a monorail constructed along the edge of the I-405? The I-405 Sepulveda Pass Express Lanes Project is also being planned along this same stretch of the I-405. How will two projects be built on the same strip of land without widening the I-405? How can you build pillars to support a monorail and also add express lanes? Please explain how this can be accomplished? Thank you for your consideration.
	Los Angeles	90024	No	2/11/2022	I am writing to show my support for Alternatives 4 and 5 for the Sepulveda Pass Transit Corridor. As a UCLA student and according to Metro's own internal documents, a prime station at UCLA is critical for the success of this project, given the high ridership demand and trip origin/destination at this location. The Sepulveda Transit Corridor is expected to be the busiest corridor in the Metro Rail network, thus demanding a high quality mode of transportation. Monorail does not have its place in a high quality metro rail network given its slower speeds, grotesque connection issues, and substandard planning. The proposals by Bechtel have thoroughly analyzed the issues on this corridor and propose a sensible solution for heavy rail that lowers construction costs while delivering a transit network LA can be proud of. Long term planning is key and Alternatives 4 and 5 allow for better network integration and future extensions. Please support heavy rail, and especially Alternatives 4 or 5 for the Sepulveda Corridor.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	91324	No	2/11/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90013	No	2/11/2022	What I suggest is that we avoid monorail at all costs. It severely limits interconnectivity to other lines and guarantees a poor ridership experience due to low system capacity. My preference would be for alternatives 4 or 5.
	Los Angeles	91325	No	2/11/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Los Angeles	90013	No	2/11/2022	Please do not seriously consider monorail for the Sepulveda line. We need trains that increase passenger flow through that corridor, and provide a great alternative to all communities on the line (and those not directly on the line, but who will take it to make connections regularly) to sitting on the 405. Going with a monorail through the 405 will be extremely costly (with cal trans likely to add restrictions/major work to maintain standards), make the entirety of LA angry with years of construction on the 405 (which will only make traffic worse), and have less convenient stops for a slightly reduced price, and the need for greater expansion in the future. Do it right the first time, there's a reason that heavy rail is so common for public rail networks. An underground Sepulveda line service that is capable of running trains every 90-45 seconds at max capacity would be WORLD CLASS and become one of the busiest transit corridors anywhere in the world. We would become a shining example of what rail transit in the US can be, however to do that trains must be efficient, not cause disruption to residents, and directly serve high population centers, neighborhoods, and transfer stations/integrations with the rest of the network. An out-of-station multi-minute connection is unacceptable for rail in 2022, especially on an integrated system like metro. An underground service that directly connects with major stations on other lines, and large population/rider hubs like UCLA, will be an incredible asset to LA. I'm begging you, do not make the wrong decision. Do not support monorail, do it right the first time with tunneled heavy rail. And do not give in to vocal minorities that wish to squash this project (especially when the project doesn't serve their community, only passes under it). This is LA's chance to catapult our transit straight to the premier league. Don't make LA the laughingstock of the metro transit world with an inefficient and cost-cutting monorail service that fails to connect directly to neighborhoods and communities in desperate need for rail travel.
	LOS ANGELES	90034-4720	No	2/11/2022	As a lifelong westside resident, this is the holy grail of transit projects for LA County. I think the monorail is slower and doesn't tie in with Metro D line technology, so I prefer alternatives 4-6. I most prefer alternative #5 as the conventional/straight shot from the SF Valley to the westside. I also like #6, but not sure about deviating to the west to Expo Bundy station. What about an alternative 6A that is a straight shot from the SF Valley that terminates at Expo Sepulveda Station instead of Bundy Station? Any of the alternatives #5 or #6, with variations, would be terrific. Also, why do none of the alternatives have a direct connection at the Metro D line station at the VA Building? There is a large parking lot there and could be a great opportunity for a park-n-ride. Thanks for the opportunity to comment.

			No	2/12/2022	I live with my husband and our two sons in Brentwood Glen on Berwick Street. Below please find my comments on the various alternatives being discussed for the Sepulveda Transit Corridor Project . As a resident of the Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass Express Lanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. Provide a UCLA Stop : We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. Minimize Negative Impacts to Surrounding Neighborhoods : Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. Thank you for your consideration.
	Reseda	91335	No	2/12/2022	The heavy rail options have to be the go to choice! This will be the busiest line in Los Angeles and a high capacity is a must!
	Inglewood	90302	No	2/12/2022	I think the line needs to be heavy rail. Alternatives 4,5, and 6 are the best options.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
		91377	No	2/12/2022	I do not want you to pursue the monorail alternatives for the Sepulveda Transit Corridor . Why monorail is bad: -construction will cause disruptions and closures of the 405 freeway -aboveground structure makes it vulnerable to heat and fire damage -aboveground stops are inconvenient for pedestrians and can require up to 6 minutes of walking for transit connections -no direct connection to the UCLA campus, which over 85K commute to daily -no direct connection to the purple line train in Santa Monica -current proposal is not compliant with CalTrans regulations -much lower passenger capacity than heavy rail -much longer travel time than heavy rail -no ability to use existing trains, manufacturing/maintenance facilities, or train operators, will cost extra to build new ones/train new people
UCLA			Merged Document	2/12/2022

	los angeles	90027	No	2/12/2022	OPTION 6 is the only one that makes sense. Please make sure to preserve people's housing situations along the route.
UCLA Public Health Student Association	Los Angeles	90068	No	2/12/2022	To the Los Angeles Metro Board of Directors, I am the Vice President of Community Outreach and Engagement at the UCLA Public Health Student Association and liaison to the UCLA Graduate Students Association (GSA). GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes. A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region. Sincerely, Kathleen Kane --- Attachment: https://drive.google.com/file/d/1uGcFOM9lD2ktX3-DQEqIIa0WMkoT6GXZ/view?usp=sharingsolution Calling For A Direct UCLA Westwood Purple Line Stop on the Sepulveda Transit Corridor.pdf Submission Form: https://metro.commentinput.com/?id=UKJgt
Brentwood Glen Neigh			No	2/12/2022	Metro Brentwood Glen / Sepulveda Transit Corridor Pass 1. As a more than twenty year resident of Brentwood Glen living on Gladwin Street, I support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ultimately ensure the shortest seamless connection to the airport , especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405. 2. No Neighborhood Encroachment : While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass Express Lanes Project and previous land acquisition for the I-405 expansion in 2009, I am uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 Express Lanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? 3. Provide a UCLA Stop : I support increased connectivity established under the Sepulveda Transit Corridor alignments. I strongly support any alignment that includes a direct stop at UCLA . Without this alignment, it places the burden on riders and may make taking transit a less desirable option. A stop at UCLA ensures seamless transfers How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? Will the transfers be free of charge? Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County. 4. Minimize Negative Impacts to Surrounding Neighborhoods : Between construction and operation of a new transit line, I urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? 5. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line . 6. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. · Residents will suffer a substantial negative impact on their quality of life due to disruption of the established community and increased noise and toxic air emissions both during and after construction. Knowing there is a preschool at the church and the Brentwood Glen is a child-friendly community, studies have shown that an increase in air pollution is linked to an increase in pediatric asthma. · What is the noise and vibration impact of the monorail options? 7. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Boulevards 8. The enormous personal cost to residents of Brentwood Glen and financial costs to Caltrans far outweigh any theoretical benefit of providing aerial alignment along the I-405. Thank you for your consideration in this matter,

	Van Nuys	91405	No	2/12/2022	I would like to state my support for a subway under Van Nuys Blvd. This is closest to Alternative 6. While I understand the presented alternatives were derived from proposals by private companies and metro staff I have seen little reason why shorter head ways or automation can not be reasonably applied to any proposed heavy rail routing. I strongly prefer a true heavy rail high capacity transit capability. I prefer underground alignments down streets but can accept above ground if needed. I prefer the route under Van Nuys because it would enable an express service and more transfer options. I hope Metro will start taking a larger systematic view of projects and how they enable transportation in the region as a whole. This includes planning for future system growth. The alignment picked today will likely be in use a hundred years from now. Critical to future capability is the ease of transfer between services, route choice flexibility and express service (something absent from any planning I have seen to date). Alternatives 4 and 5 are acceptable to me. As a person living in a single family home in Van Nuys near all routes I strongly favor the project and hope for higher density commercial and housing development along the alignment. To my mind Van Nuys Blvd is best position to do this. I say this with no desire to see my single family home demolished or developed. But to preserve my neighborhood we need to continue to add density where it is appropriate. This can only be accomplished with increased transit. The Van Nuys train station, which is walking distance from my home, can serve as a much better hub and further transit development should be encouraged. Homeless housing (now covertly in existence) at the station should be temporary or near term solution and replaced in favor of the long term solution of greater destiny enabled by robust transit services. By placing the alignment under Van Nuys Blvd. the use of light rail and subway, connecting Metrolink and the G line could enable higher development with access to a much larger and convenient job and housing market. I should note I very much against a 405 alignment. Freeway alignments make for absolutely terrible stations. Transit works best when designed for capacity and integration within convenient walking distance to destinations. The monorail routing does none of this. As proposed from BYD (LA SkyRail Express), the routing is inconvenient, the capacity limited for the headline price tag (making the claims of reduced cost smoke and mirrors) and the, as proposed, transfer capability atrocious, e.g. the BYD proposed G line transfer required for a far too long a walk. Additionally, I definitely believe the line should serve UCLA/Westwood directly and not with the use of a spur. For the monorail to do this will require tunneling that again raises the price above the presented headline number BYD has associated . BYD proposed stations are also limited in size for the initial build, again making the all to critical future capacity much more expensive. Heavy rail is the only way to go. Big bore, two separate tunnels, automated trains, short headways? These are all adaptable to all routes once the decision has been made to do the job right and for the long term future of our city. I see no reason my the Metro solution of Alternative 6 alignment can't have short headways than 4 minutes with proper signaling technology. I see some advantage to longer head ways but with longer trans given the disruptions I have seen on metro (like passengers throwing bicycles onto the tracks or the general getting the doors to close on time problem). But generally we should push for higher frequency service. I remains concerned that the politicians that serve on the Metro board will be too easily swayed by campaign contributions for projects that if they fail will do so long after their careers have moved on to other positions. Bechtel is no saint, but compared to BYD they have at least proposed a high capacity long term solution as opposed to, what the kids refer to these days as, a rug pull. I'll close by again noting my strong support for heavy rail and my strong preference for a route that provides more development though better and overlapping transit service. Future transit oriented development, commercial and residential, is what the city needs (and helps to preserve single family homes not too far away). The route alignment and mode needs to support this. We need to make the investments now, even if they are large, to support a broad transit system that can connect this city into the future. As the great Carnegie once said of how to run a railroad - "by running 'em fast and running 'em full" - the same hold for designing and running a transit system two hundred years later.
	Sherman Oaks	91403	No	2/12/2022	I am writing to provide Comments on the 6 Alternatives proposed for the Sepulveda Transit Corridor. My preferred solutions are Fully Underground Heavy Rail, first, Alternate #6, and second, Alternate #5. The Alternatives that run underground are the way to go. If it takes a bit more money and time, it's the best for the long run. I also think the station at UCLA is important. Ideally, I would like this transit line to seamlessly connect to Metro's Purple Line, Expo Line, Green line and to LAX. Heavy Rail Alternate #4 is unacceptable, since it is partially above ground. In that case, Metro plans to go underground on the Westside but give the Valley the less desirable, and less costly, option of above-ground heavy rail. This is an issue of equity! And will be a nightmare for these already underserved and congested Valley communities. The above-ground Monorail solutions (Alternates #1, #2 and #3) are totally UNACCEPTABLE.

	Monrovia	91016	No	2/12/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
			No	2/12/2022	I am writing with comments on the Sepulveda line but first I want to thank you for the dedication and all the work Metro has put into this project. I firmly support the initiative to expand the Metro transit network in general, and the Sepulveda Pass (with ultimate extension to LAX) in particular. I have reviewed as much material as I can find and have the following thoughts. General I prefer the heavy rail option with a driver over any automated system without one. I was recently on the B line between Hollywood/Highland and downtown when two different people, seemingly not together, in different areas of the car, were messing around with emergency equipment. Two times the driver had to have words with the individuals. I've also seen altercations occur on the A-line in which the driver had to call police who met the train a couple stops on, and the police removed the offender. On an automated system, there is not that person of authority to intervene in these situations. I'm sure there will be security cameras, but I don't have the same confidence in response from a person at a remote location as a live person on the train. I also prefer the heavy rail option with driver as it stays with current technology in the Metro system. Looking at the map, the ends of the B line and the new Sepulveda line are not a huge distance apart. If, at some time in the future, there was a need/desire to extend one line to the other, or extend both farther north and share tracks, using the same technology preserves the option. Additionally, staying with a technology already in the system, maximizes flexibility if train cars are needed to be moved from one part of the system to another. It also minimizes the different technologies on which maintenance staff must be trained. I understand a separate maintenance facility will be built for this line but still, having the same technology for all heavy rail will allow the staff to be moved between facilities if necessary. Thinking about the pandemic that we are still trying to get through, imagine if everyone got sick in the facility that maintained the new technology. It would seem very difficult to pull in people from the shop of one technology and have them work in a shop with a different technology. Staying with two existing technologies in the system makes a lot of sense to me. Stations One of the goals of Metro for this project is mobility. Having the stations that are part of the Sepulveda line directly connected to, or located very close to, rail stations and transit centers is a necessity—both for ease of users and the ultimate long-term success of the system. Having to walk several minutes to get from a Sepulveda line station to any other transit station, both rail and bus, will be a very large disincentive for transit users that have any other options. Stations along a freeway, whether between driving lanes or beside them should be avoided. Stations along highways are loud, uncomfortable, polluted and typically not close to the places and services that transit riders are trying to access. I take the C-line to LAX from time to time and standing on the platform with traffic whizzing by can be brutal. Stations out in neighborhoods are much more useable and get people closer to and from where they are wanting to be. A station at Ventura/Van Nuys or Ventura/Sepulveda would be infinitely more useful to most riders than a station at the 101 and 405. A station at UCLA is an absolute must. To have a Sepulveda line station that requires a bus or people mover to get from it to the campus will add barriers (additional time and inconvenience) and depress ridership. The extra cost of going underground and a direct connection to campus seems like a positive expenditure for the overall usefulness and success of the system. A station at Getty Center would be great for the very few people that would use it. Personally, I'd love it, but I don't think it would have enough usage to justify the expense to build the station. Alternative Preferences My preferred option would be Alternative 6. It uses technology already in the system and it stops at UCLA. That said, I do like that in Alternative 5, the line is under Sepulveda and picks up a station at Ventura (rather than repeating the Van Nuys/Ventura station.) Is it possible to include the Sepulveda alignment (with stop at Sherman Way) in Alternative 6? That would seem to maximize coverage and connectability. If we must go with an automated system, alternatives 4 or 5 would seem the best solution. They both have the UCLA stop (critical in my estimation as I mentioned before) and they both have the Sepulveda/Sherman Way station. Whether the valley portion is overhead or underground, makes no difference to me. As a transit rider, it is probably a little nicer to be out of the ground and have something to look at, especially when much of this line will be—or at least should be—below the Santa Monica Mountains. Underground would allow the train to make an arc from Van Nuys/Metrolink station to Sepulveda and not have to do the hard left turn. Whichever direction you go, I ask that you make the best decision for the system and not give in to the pressures from neighborhood groups that don't want anything elevated. I do not support the Monorail Alternatives 1, 2 or 3. Alternative 1 does not stop at UCLA and uses a bus to get there. Alternative 2 does the funny little dog leg with an Automated People Mover to get to there. As mentioned above, the extra time of either option will deter many potential riders. These alternatives run above ground (which I am fine with) but building down the middle of, or beside the 405 means many more years of construction along the corridor for those poor folks that have to drive it. Additionally, the stations nestled up beside a freeway are not the right locations when trying to create a good transit network and maximize access for riders. Alternative 3 is mildly better as it does have the UCLA station, but all other criticism of Alternatives 1 and 2 remain. My last thought on a monorail mode is that of perception. I know that decisions cannot be made on perception if economics, ridership, etc. is proving something different, but monorails are perceived negatively by many people, I think. They are a Disney World ride or a horrible failure in Las Vegas. It seems that transit projects always have to fight a battle to get acceptance from the community and support from politicians. Los Angeles has big plans for the Metro system over the next 20 years or so—which I completely support. It is extremely important to not stub our toe on this project that could throw the remainder of the future expansion in turmoil. Monorail seems like a huge risk and should be avoided. Numbers It was hard finding these numbers so my apologies if they are not exactly correct, but hopefully they are close enough that the thoughts are valid. I understand the heavy rail option has a cost of $10.8B and the monorail has a cost of $6.1B. That seems to heavily favor the monorail. But, I also understand that the $6.1B monorail cost does not have the UCLA station and only includes platforms that accommodate 6 cars. To get to maximum ridership numbers (8 cars), future construction would be required that would likely cost billions more. Plus, there are Caltrans mitigation issues that will very likely arise and cost an unknown number of millions to mitigate. The heavy rail cost includes full length platforms so the number of cars can be increased without additional capital costs for station extensions, and is underground so avoids Caltrans issues. Given those facts, the heavy rail option is by far the better choice. The travel time between heavy rail and monorail (including a stop at UCLA) is about 20 and 28 minutes, respectively. Not a giant difference, but as a frequent rider of the A-line from downtown Long Beach to Metro Center, I would give about anything to shave 8 minutes off my travel time. The faster the travel time, the more riders will use it (and the happier they'll be). Definitely heavy rail is a better choice. The capacity of each system was very hard to discern. I found conflicting information so I'm doing my best here. The monorail seems to have a slightly higher pphpd for the initial capacity than heavy rail, 14,000 vs 12,240 respectively, with the legacy technology having a little less. The difference really shows up if alternatives 4 and 5 add a fourth car and reduce headways to 90 seconds which yields a capacity of 27,200 pphpd. The monorail alternative has a maximum of 19,000 pphpd, and requires spending billions to add onto all of the monorail stations—while they are, presumably, in use. I couldn't find anything on maximum pphpd for the legacy system but assume it is probably substantially less than the 27,200 max of alternatives 4 and 5. With the extra capacity that Alternatives 4 and 5 have built in, they seem like the best

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					choice. Summary Ultimately, my first preference is still for Alternative 6 with a slight modification in the Valley to be under Sepulveda with stations at Sherman Way, and at Ventura. My next preference is for Alternatives 4 or 5—especially if the maximum capacity is substantially higher than legacy technology. I reiterate that I am not supportive of the monorail in any Alternative. Thank you so much for considering these thoughts. I look forward to the day when the Sepulveda line goes all the way to LAX. That will truly add a great piece of infrastructure to Los Angeles and our connected Metro system.
			No	2/12/2022	Today being the last day of public comment, I'd like to share that I personally prefer the 3 subway/heavy rail options and do not want the monorail. Thank you for your time!
			No	2/12/2022	I am commenting on the Sepulveda Transit project. I was looking at and favoring plan number 6 of your plans on your website. Thank you, bye.
Center for Biological Diversity			Merged Document	2/12/2022	
	Los Angeles	90020	No	2/12/2022	I think plan #5 with a heavy rail will be best to reduce traffic. Heavy rail has a much larger capacity, while running at around the same times. It also makes LA seem like more of a worldclass city to have an underground system than the ugly above ground trains
		90230	No	2/12/2022	I think we should go with alternative 5; alternative 4 would be my second choice. I prefer heavy rail because we need as much capacity as possible. Even if it seems like it's too much capacity now (not sure if that's the case), we will come to need it in the future - possibly by the time construction is finished. I strongly prefer an underground route through the Sepulveda Pass because the freeway already provides a life-threatening barrier for our mountain lions. If we were to put an additional barrier, such as pillars for an aerial monorail, or tracks for heavy rail, in the middle of the freeway, I assume our mountain lions would stop trying to cross, as they need to do to expand their gene pool, or die trying in even higher numbers than they already do. My slight preference for alternative 5 over 4 is because I think the area will look much nicer if the rail is underground. Thank you.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Van Nuys	91406	No	2/12/2022	Gentlemen, Given the choices, I would choose alternative #6, the underground option. Precisely because everything is underground. I don't know where this option rates in the cost comparison, but my layman's assumption would be that tunneling through earth is more expensive than building on top of it. NEED We need a clean, secure and efficient mass transit system. However, no one wants a train near their home or running through their neighborhood. I have traveled to Japan several times and ridden everything from the bullet train to the local trains that run through neighborhoods. I don't think above ground options will play well here. I also happened to be in Boston when The Big Dig was happening. Traffic and driving conditions were chaotic as expected, but is now a success story. Los Angeles is not a train culture. Los Angeles is "I'll drive how I wanna drive" culture. Simply building a train system won't change that. ENVIRONMENT My home faces the 405 sound wall in Van Nuys. Gratefully, the sound wall and the tall trees help dissipate some of the noise & pollution. Also, since the Santa Monica Airport will be officially closing in a few years, the Van Nuys Airport will have increased air traffic/noise/pollution. As it stands now, the Van Nuys Airport already has increased traffic. Again, this is why I would opt for an underground option. WHAT I LIKE In fairness, I like the idea of a monorail. The "romance" of riding above the ground and seeing the city, but I feel this should've happened about 50 years ago. In addition to noise, one of my fears is that the tressles for above ground transit will become strongholds for unhoused persons to live. Just as every freeway underpass/entrance/exit and set back has become. WHAT I WISH/SUGGEST It would be great to not have to worry about driving. I think it's a conservative estimate that at least 50% of the drivers here are inattentive. Most families have a car for each driver, such as myself and my wife. We each drive a newer model crossover. More car than we probably need, but one that we feel safer in. If you really, truly want to convert Los Angeles into a train commuting city, IT HAS TO BE SAFE, 24 HOURS A DAY, EVERY DAY. FOR EVERYONE. Safety costs money. Just having cameras is not going to do it. You're going to have to have live security. Well-trained security. ALL THE TIME. I've seen how a good train system works. For me, personally, any thing less than what I experienced in Japan - a safe, clean, professional environment--is no option at all.
	Pasadena	91101	No	2/12/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. 					ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Gardena	90249	No	2/12/2022	Please do not use the monorail options. Go with heavy rail. This youtube video compares both options https://www.youtube.com/watch?v=xJdbCgVkH3w and monorail seems very deficient and not well planned construction-wise or for the future.
			No	2/12/2022	I am writing to express my concern with the proposed Sepulveda Transit Corridor, Having reviewed the proposed alternatives, I believe that it is essential that the project serves the UCLA campus directly. In informal and public conversations, our faculty and students all unequivocally express a desire for a clean, efficient mode of transit. Due to the limits of its capacity to expand, as well as serious delays during construction on the 405, I believe that any monorail option is completely unacceptable. Investing in a mass-transit system that cannot do its job of moving students to and from the number one public university in the country would be a colossal mistake and a waste of taxpayer money. Hence, I urge you to adopt one of the heavy rail options.
		91377	No	2/12/2022	construction will cause disruptions and closures of the 405 freeway -aboveground structure makes it vulnerable to heat and fire damage -aboveground stops are inconvenient for pedestrians and can require up to 6 minutes of walking for transit connections -no direct connection to the UCLA campus, which over 85K commute to daily -no direct connection to the purple line train in Santa Monica -current proposal is not compliant with CalTrans regulations -much lower passenger capacity than heavy rail -much longer travel time than heavy rail -no ability to use existing trains, manufacturing/maintenance facilities, or train operators, will cost extra to build new ones/train new people
	Sherman oaks	91403	No	2/12/2022	Please do not destroy our neighborhood! We support the SOHA plan. This work as Proposed is not workable and needs to be stopped before this project destroys the neighborhood.
Westwood Neighborhood Council			Merged Document	2/12/2022	
		90066	No	2/12/2022	I request that all routes from the SF Valley to LAX go through Sepulveda and NOT through Centinela/Bundy.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90049	No	2/12/2022	Peter Carter Project Manager Metro One GatewayPlaza, Mail Stop 99-22-6 Los Angeles, CA 90012 Regarding: Sepulveda Corridor Transit Pass Scoping Comment Mr. Carter: As a resident of the Brentwood Glen, I support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Furthermore, combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ultimately ensure the shortest, seamless connection to the LAX, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405. Having lived in the Brentwood Glen for 36 years, I have lived through several expansions and changes on the I- 405 with the end result not accomplishing what we were told by Metro and CalTrans to improve traffic in the Sepulveda Pass. Instead, it made the traffic both on the freeway and the surrounding surface streets worse. It is imperative there is no Neighborhood Encroachment. While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, I strongly oppose alternatives 1,2,3, and 4 with alignments and final designs that result in the possibility of property acquisition. Minimize Negative Impacts on Surrounding Neighborhoods: Between construction and operation of a new transit line, I urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above-ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for the length of construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. I look forward to L.A. Metro creating an equitable solution that does not negatively impact the surrounding community. Sincerely,
	Valley Village	91607	No	2/12/2022	As a Bruin alum who took public transportation from valley village to UCLA this can't come soon enough. A heavy rail line makes sense since metro has operated the red and purple lines already and adding a monorail seems like it would add unneeded complexity. A line that serves UCLA directly will allow busy students and staff more easily consider taking public transportation instead of driving. A people mover or bus will put students and the most likely next generation of people who *actually* use public transportation at a disadvantage and discourage its use. Connecting the line to both the purple and expo lines will allow people in the valley to go to the beach/Culver/midcity without a route which would strongly discourage that use so it's good the alternatives extend that far.
			No	2/12/2022	Hello, I wanted to share a few thoughts/questions. 1) Will metro look into a route the way the 10 freeway has where the route is betwen the freeway lanes or above the free way. Pros: a) If connecting the valley to UCLA is the goal, this will help expanding in the future. b) It will help people see the vehicle in motion probably motivating people to use it Cons: a) A person at a meeting mentioned the company that won the contract is unreliable and has a bad reputation with previous contacts, if this is the case, it should be investigated how they won the contract. b) Construction on the freeway, we've had car-mageddon before, we could do it again. 2) It was mentioned the goal is to increase access for everyone in the area. This can be achieved better if the final stop goes to the Getty. Pros: a) Looking into the final stop being at the ghetty will increase tourism, provide access to the museum to the general population, possibly increase interest and donors. Cons: a) one con mentioned at a meeting was that people going to UCLA would still need to walk or travel to campus. This should not factor in if government money is being used. Everyone who has gone to college knows travel factors in. Everyone who chooses a job factors in commutes. 3) Safety: a person mentioned during a meeting that a monorail could derail. See point 1a. Also, this could also happen on high speed rails, like the one planned off Sepulveda which could crash in apartments, homes, or a church plus community shops. 4) Sepulveda is one of the last main streets running north and south when heading west. Adding a rail way on the street could increase traffic on all surrounding streets. a) Has there been research on traffic patterns in the area? And how they will be affected? 5) Regarding the line on Sepulveda. Will LA Metro have the funds to buy out the almost million dollar townhomes, surrounding apartments if the main street needs to be expanded? Will metro put money aside to pay the owners of surrounding properties if construction ruins foundations, underground pipes, health concerns for the people that live off Sepulveda? 6) Will an underground tunnel be sustainable? Environmental reports show land and underground soil is unreliable in the area? 7) Regarding rail above Sepulveda. When the Santa Ana winds occur, houses shake off Sepulveda, will the force that occurs each time a train goes by affect the houses?
	West Hollywood	90069	No	2/12/2022	It is imperative that this is a heavy rail line with a direct stop at UCLA. Of the alternatives provided, number 4 is the closest to ideal. The line should be above-ground in the Valley along Sepulveda for cost-savings (that boulevard is wide enough to accommodate) and doesn't double up metro coverage on Van Nuys Blvd. The only change I would suggest to alternative 4 would be to incorporate the southernmost part of alternative 6 and have the Alt 4 terminus be at Olympic/Bundy Expo Station rather than on the eastern side of the 405 at Expo/Sepulveda. The Westside is bounded by the 405 with limited east-west mobility, so adding an additional underground heavy rail line that crosses the 405 and connects with the D-line trains at Wilshire would allow for fewer car trips into/out of the Westside. Plus a future second phase of this line could link up with job centers in Playa Vista and onto LAX via Centinela rather than more east on Sepulveda.

		91403	No	2/12/2022	Decades of population and traffic growth, accommodated in a single sepulveda/405 artery is the proper context for evaluating current scoping alternatives. Your current video and other literature describe a 'natural' barrier of the Santa Monica mountains: that framing of the situation is at least partially mid-leading, if not disingenuous. The problem — and challenge — isn't entirely geological, and must recognise decades of various (largely wealth) neighbourhood and other citizen associations having successfully fought what should have been many other high-speed freeways and other surface routes that would have effectively distributed the immense amount of traffic that makes the current 405 amongst the most heavily-traveled freeways of the entire us system. I mention this to say what I believe to be an essential consideration: a careful assessment made, at this scoping phase, of the significant and potentially highly negative impact of transit connections on the surreounding communities located along (and not only as destination of) the proposed alternatives. I live In Sherman oaks, which could be heavily and negatively impacted especially by alternatives that include considerable amounts of new surface Traffic. Current technologies make underground alternatives considerably more viable, with fewer surface complexities. Connections to UCLA and the new metro line opening at Wilshire and veterans avenues are essential, and will create a valuable east-west, additional, connection to the city. Adding a surface light rail line alongside exiting sepulveda, or other existing surface routes would only add to existing high volumes of surface traffic, density and movement across the valley and sepulveda pass —underground please!
Van Nuys Neighborhood Council	Van Nuys	91411	No	2/12/2022	February 11, 2022 Mr. Peter Carter, Project Manager Sepulveda Transit Corridor Project One Gateway Plaza Mail Stop 99-22-6 Los Angeles, CA 90012 RE: Van Nuys Neighborhood Council Recommendation – Sepulveda Transit Corridor Project Environmental Study Dear Mr. Carter: I write to inform you of the recommended action of the Van Nuys Neighborhood Council (VNNC), adopted at its regular meeting on Wednesday, February 9, 2022, regarding the LA Metro Sepulveda Transit Corridor Project. The VNNC recommends, first, opposition to any proposal to implement that would place any part of the transit project above ground. Second, the VNNC supports Alternative 6 under consideration, providing for heavy rail entirely underground to run along Van Nuys Boulevard from the Northern Terminus at the Van Nuys Metrolink station to the Southern Terminus at the E Line Expo/Bundy station, with amendment to add one additional stop at either Victory Boulevard or Burbank Boulevard. The Council wishes to express appreciation to LA Metro for presenting as part of its outreach on the project to the VNNC Planning and Land-Use Committee on January 27, 2022, all of the alternatives under its consideration. Should you have any questions or wish to further discuss, please feel free to contact VNNC Board Membe Thank you for your consideration. Sincerely,
		91403	No	2/12/2022	I support the Metro expansion to the San Fernando Valley. Of the two proposed sites for the next expansion I support the establishment of a new Metro station at the corner of Sepúlveda and Dickens St. and NOT the corner of Ventura and Van Nuys. The Sepúlveda stop would offer easy access to a multi-plex theatre, several large chain eateries and other commercial enterprises. The alternate site at Van Nuys is already replete with homelessness and does not lend itself as an appropriate location for incoming "visitors" to this area of The Valley.
	Granada Hills	91344	No	2/12/2022	I'd like to make a comment in support of the heavy rail alternatives (alternatives 4, 5, and 6) for Metro's Sepulveda Transit Corridor project. I believe that a high-speed, high-capacity transit line with a direct station at UCLA and good connections to other transit lines/routes. is critical for the Sepulveda pass corridor. I think Alternatives 4, 5, and 6 do this task the best. I hope Metro will be able to implement the project at a reasonable speed, and with minimal cost overrun, while still providing a safe and effective means of transportation through Los Angeles' most important transportation corridor. As someone who's lived in Los Angeles for almost all my life, and has traveled through the Sepulveda pass many, many times, I think that when the project is done, we'll all wonder how we ever managed before (possibly even including the people in Bel Air...) I do suggest that Metro re-consider if it would make sense to extend the current line further north from Van Nuys to San Fernando, replacing the East SFV Light Rail line. I think one less transfer and a faster trip would be greatly appreciated by North Valley transit riders. Though, as this would presumably take a long time to complete due to limited funding, a bus rapid transit line on the ESFV route could be a way to improve transit along the route in the meantime. Also, I hope Metro pays close attention to safety and evacuation needs for Alternatives 4,5, and 6, considering that they go deep under the Santa Monicas for a significant distance. Regardless, I am glad that Metro is undertaking this project, and look forward to the day I can take a traffic-free trip over the hill via fast, environmentally-friendly public transit.
	LOS ANGELES	90017	No	2/12/2022	Metro does not operate any other monorail systems. This lack of knowledge and experience with a new form of transport presents significant risk. All of the monorail options place most stations along the 405 freeway. It has been my experience that other stations near freeways (such as on the C and L lines) expose people to high levels of noise and vehicle exhaust. Freeway adjacent stations also tend to be far from actual destinations, requiring more transfers to other modes of transit such as buses. Alternatives 1 and 2 do not provide a direct connection to the UCLA campus, which is one of the most important and highest trafficked destinations within the study area. These alternatives increase the number of transfers and make the system more inconvenient. None of the heavy rail alternatives (4, 5, and 6) have a stop at the Getty Center. Metro should consider adding an option for a heavy rail station in this location. Only alternative 6 studies a southern terminus at Bundy Dr, while all other alternatives end at Exposition Blvd. Metro should consider including a Bundy Dr terminus option for some of the other alternatives.

	Van Nuys	91406	No	2/12/2022	The only acceptable and functional version of the path for the Sepulveda Transit Corridor is the underground metro option that follows Van Nuys Blvd to UCLA. All other options will ruin Sherman Oaks, not just for residence but also for the general culture of the neighborhood that has been blooming there. Also, if an above ground monorail metro is being considered here, as a property owner and resident, I would like to know how if the Metro and City of Los Angeles will be invoking eminent domain- and if so, what compensation will be given? Because past eminent domain acts by the city have left home owners with less than half what they paid for them? This is even more of a concern now with homelessness and high property costs. Also, what will Metro and the City of LA do about the giant homeless encampment off of sepulveda at the basin? A new metro down Sepulveda will more than likely increase the size of the encampment. If you recall, this encampment was responsible for 2 fires that broke out in the park within the last 3 years. This is an example of what kind of trickledown effect the monorail/metro can have being located on Sepulveda. Not to mention impacting traffic, noise and air pollution even further than it already is currently along Sepulveda Blvd. I urge with an emphatic and affirmative NO to building anything along Sepulveda Blvd and only considering option for an underground metro along Van Nuys.
	Sherman Oaks	91403	No	2/12/2022	The only viable option that wouldn't ruin our air, culture, community and homes is the underground metro running down Van Nuys Blvd to the westside. This option allows easy access to Van Nuys City hall and courts, and would easily connect to UCLA campus as many have expressed being an obvious necessity. Below ground protects our air quality and is quiet and seamless to our community and Neighborhood. Please make this you primary and only option. Thank You.
	Los Angeles	90210	No	2/12/2022	Please build directly under the rich NIMBYs in Bel-Air who whine and complain about everything.
	Los Angeles	90042	No	2/12/2022	The only acceptable and functional version of the path for the Sepulveda Transit Corridor is the underground metro option that follows Van Nuys Blvd to UCLA. All other options will ruin Sherman Oaks, not just for residence but also for the general culture of the neighborhood that has been blooming there. Also, if an above ground monorail metro is being considered here, as a property owner and resident, I would like to know how if the Metro and City of Los Angeles will be invoking eminent domain- and if so, what compensation will be given? Because past eminent domain acts by the city have left home owners with less than half what they paid for them? This is even more of a concern now with homelessness and high property costs. Also, what will Metro and the City of LA do about the giant homeless encampment off of sepulveda at the basin? A new metro down Sepulveda will more than likely increase the size of the encampment. Not to mention impacting traffic, noise and air pollution even further than it already is currently along Sepulveda Blvd. I urge with an emphatic and affirmative NO to building anything along Sepulveda Blvd and only considering option for an underground metro along Van Nuys.
	Sherman Oaks	91403	No	2/12/2022	The Sepulveda Transit Corridor is not a practical option. A tunnel running into the hillside is not safe. Surrounding Businesses and homes will be lost. Elevated trains are dangerous. The only viable, functional and acceptable alternative is the Van Nuys underground metro option.
	Canoga Park	91304	No	2/12/2022	As a Valley resident who uses the Metro B (Red) and G (Orange) lines whenever traveling alone south of Cahuenga Pass, I appreciate that Metro sees fit to give Valley residents a fast alternative to the congested 405 freeway and canyon roads for reaching Westside cities. I believe that the monorail options will draw fewer riders than the heavy rail options, by repeating the mistakes of the C/Green Line. We have learned from experience that most rail passengers are pedestrians at one or both ends of their rides, and nothing is more unfriendly to pedestrians than freeways. Even with safety walls & grade separations, the noise & pollution of freeway traffic repels commuters on foot or bike. That is the chief reason the Green/C Line lags all others by ridership in the Metro rail system. If visibility to drivers was an effective draw, then the C Line would have attracted far more commuters than the B (Red) Line, but the reverse is true. I strongly support Alternatives 5 & 6, especially 6, for Sepulveda Transit Corridor project. Van Nuys Blvd has more upzoning potential than Sepulveda Blvd, and there is more ridership potential in the UCLA-Westwood neighborhoods than to the west adjacent to the 405. There is insufficient dense growth potential in the Sepulveda Pass (near Getty & Skirball Centers) to necessitate the stops that a monorail option would exclusively provide. If Metro's priority in building a Sepulveda Pass alternative is to relieve road congestion, then it must maximize the north south ridership. Who will decide to ride matters less than how many decide to ride. I acknowledge the substantially greater cost & technical challenge of building a subway under the mountains from the Valley, but the higher growth potential in both ridership and Valley land development, combined with a smaller construction footprint that Alternatives 5 & 6 offer, justifies the initial premium. Build Alternative 6 under the Santa Monica mountain range, or if Alternative 5 if funding is inescapably constrained. Include a stop at UCLA so that students, faculty & staff have relief from the insane cost of housing near campus. Don't compromise the future.
	Van Nuys	91406	No	2/12/2022	Hi - I want to say thank you for developing this project as it is sorely needed. I am truly in favor of a subway system, even a trolley to get us to the subway. But I would truly ask NOT to put in an above ground/elevated train. What I didn't hear in the last meeting is if this new system would take us to LAX. My hope is that with all of this work, there will be direct line to the airport. Thank you,

	LOS ANGELES	90034	No	2/12/2022	I am strongly in support of the heavy rail option(s), and opposed to the monorail option(s). My reasons for such are listed below: 1. I think chasing cost-savings by going with a monorail is both the wrong approach, and illusory anyway. Total throughput is going to be critical for the success of this line (and the metro system more broadly), and capping ridership at the low capacity of the monorail proposal(s) will hamstring the system for decades to come. Furthermore, I do not expect the monorail to deliver all of its promises for the price quoted, given several potential delays and unknowns that are hand-waved away by the proposal, as well as necessary features that aren't included in that low figure to begin with. 2. Having grown up in a city that has a widely-used subway system, I believe that the success of any public transit system is contingent, above all else, on ease of use. This means a system that is simple to understand (which metro is admirably moving toward with its new unified line naming system), simple to pay for (which means a single LA-wide transit payment system), and simple to navigate (which means frequent service and easy connections). The monorail option(s) does not propose to connect directly with other lines, requiring riders to exit the system and then re-enter up to a half a mile away, and feels divorced from the rest of the system in style, presentation, and location. The heavy rail option(s) feels congruous with the rest of the system, and will better serve the purpose of a backbone line within the metro system. The importance of the ability to easily transfer between lines cannot be overstated. 3. Steel rail is a more efficient and more reliable technology that monorail. They are also cheaper to construct at grade or underground, which I expect the Sepulveda route to ultimate be, more than the monorail proposal(s) expect. There are also more options for steel rail cars than monorail cars, which would allow metro to avoid vendor lock-in and take advantage of a robust train market. 4. The monorail option(s) is overly reliant on the 405. This both leads to suboptimal station placement (including placements that introduce an entirely superfluous transfer instead of simply routing to the appropriate destination in the line itself) and what I suspect is an overconfidence in their ability to have their way with the highway. The additional transfers would be crippling to the usability of the line, and the imposition on the 405 is an invitation to red tape leading to cost overruns and construction delays. Thank you for your consideration,
	Beverly Hills	90211	No	2/12/2022	I am a local resident, specifically within Beverly Hills, and I want to share my enthusiastic support for this project! The Sepulveda Transit Corridor Project is vital and essential to Los Angeles now and in the future. The need is obvious and the benefits are self-apparent: this transit line could seriously alleviate and alter congestion both in the immediate and surrounding areas. What I like is the ambition set forward for the project, it is an amazing opportunity to address and take care of critical issues that we face in Los Angeles. Personally, I strongly support and advocate for Alternative 6 (Heavy Rail via Van Nuys Blvd., with the initial segment ending at the Bundy E Line station), and for several reasons. For the portion in the valley, having that segment completely underground could significantly mitigate property acquisition needs and would have a less visually-intrusive impact. I also think it would help deter misinformation and opposition from various neighborhood groups who are using the designs as a weapon against the project as a whole. Alt. 6 is also farther from the 405 freeway and deeper within the Ventura Blvd. area, the benefits of which are two-fold: 1. It is well documented that transit lines on freeways are not as popular and their usage suffers as a result. I do not think riders would enjoy stations next to noisy and challenging freeway infrastructure with the air quality, heavy 405-adjacent traffic on Sepulveda Blvd., and the safety concerns those conditions pose. I think it would create a more negative pedestrian experience and harm ridership. 2. I feel being further down Ventura Blvd. would be more positive because it could make for a more pleasant usage experience and give better access to local businesses and residential areas. What I also like with Alt. 6 is a direct station at UCLA, as this would solve a significant issue for the city. People travel from all over just to go to UCLA, driving 40 minutes just from Koreatown simply to go to school, and from even farther places. Having a direct station at/on UCLA's campus would mitigate the need for further infrastructure to transport people there. It would also provide unprecedented access and connections to a place that so many people who live here use and rely on. I feel that this station is critical to the success of the project and mass transit in Los Angeles as a whole. While the monorail options provide a station to the Getty Center, I think the UCLA is more imperative. What I do also wish though is that we can further investigate connecting to the Getty Center and how to make that happen. I do applaud Metro's desire to innovate and try new things, though I am not sure if monorail is the best option for this magnitudal transit project. I also like that there are stations west of the 405 freeway, as I think giving transit access to those areas is an important consideration. This portion of the alignment would create more rail access to the far Westside where many people work (especially in entertainment and tech) and play. It also connects to other transit services on Bundy and Santa Monica Blvd. I think this portion of the alignment would set the project up for future success when extending it to LAX. Furthermore, while I see the value in considering alignments with stations so close to the 405, I refer to my above comments that this would make for a difficult, less safe, and less desirable usage experience. Additionally, Santa Monica Blvd. east (above) the 405 is especially challenging for pedestrians as it is so wide and a car-heavy juncture with the freeway ramps. I suggest seriously considering these conditions and environments and the impact they would have. I would like to suggest providing a clarification (if possible) on the I-405 Comprehensive Multimodal Corridor Plan and how it would connect with and enhance this project. I have not been able to get a clear understanding of it from what I have found and read on it. While alt. 6 is the most expensive option, I feel the investment in the long run is well worth it and could save more. It is fast, high-capacity, and integrate-able system wide. Thank you for your time and consideration in reading my lengthy comment.
			No	2/12/2022	I DON’T KNOW WHY THEY NEED COMMUNITY INPUT. JUST LIKE THE PORTIONS OF THE 10, 110, AND 90 FWYS WERE PRIVATIZED, THE 405 IS NO EXCEPTION. I BELIEVE THE REQUEST OF INPUT IS JUST FOR CHECKS AND BALANCES PURPOSES. IT WON’T STOP THE PROCESS OF PRIVATIZING THE FWY FOR THE BENEFIT OF THE WEST SIDE AND ANYONE WHO CAN AFFORD THE FEES. LOW INCOME COMMUNITIES WILL BEVER ENJOY NOR RIP ANY BENEFITS OF THIS PROCES. ITS JUST SAD TO SEE THAT THE POLITICS ARE STARTING TO LOOK MORE AND MORE LIKE THE ONES SOUTH OF THE BORDER.
	Santa Monica	90405	No	2/12/2022	My top option would be Alternative 3. Underground less and hits the Getty which is a very important tourist destination. Also, will remind drivers it is available. Speed is important and hopefully will alleviate some of the north south traffic on the 405. Need a parking stations at the Valley Stops so people can park and ride. Alternative 1 would be my next top choice. Keeps train aerial and hopefully faster with key connections. Also keeps the line straight without making odd turns which tend to slow

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					down trains like the other line. An extension to the Burbank airport on all of these would be helpful. Would prefer the electric bus be replaced with a monorail with the stops indicated into UCLA in Option 3.
	Long Beach	90802	No	2/12/2022	I strongly support alternatives 5 and 6. I like that they will provide frequent transit service directly to destinations like UCLA and connect to the Metrolink station in Van Nuys. I would suggest that Metro avoid routing the Sepulveda Line on the 405, which has no immediate destinations, and would provide an awful transit experience for riders, due to the noise and air pollution along highways.
	Sherman Oaks	91403	No	2/12/2022	We support a more expensive but more efficient and quiet solution that includes a tunnel connecting the south Central Valley to Westwood. Any alternative that would route a train above ground through the 405 sepulveda pass / 405 corridor would be slow...and slow would make the system far less attractive. Further, it's our hope that the segment connecting this line to LAX will quickly be included. Lastly, please ensure that a station at or near the Sepulveda/Ventura intersection is included.
	Long Beach	90802	No	2/12/2022	I strongly support alternatives 4 or 5. Alternatives 1, 2, and 3 cannot serve the Corridor well because the proposed stations poorly connect to other transit modes, and uses BYD-specific monorail technology. Alternatives 1 and 2 do not directly server UCLA and should not be considered. Alternatives 4 and 5 because they increase the number of people served by taking a different route than the East San Fernando Valley LRT line. Alternative 6 also does not mention automated trains, which I believe add a lot of value to the enormous transit investment in the Sepulveda corridor, since they allow for more frequent operations. I would love to see the automated metro technology employed in alternatives 4 and 5 used for other future Metro expansions as well. The buildout of the light rail lines have been great, but I believe the automated metro trains can drive a lot more ridership due to their increased frequency. Further, I just want to highlight how great I think this project will be if alternatives 4 and 5 are selected. The high-frequency connection from West LA to the valley will get lots of new riders into LA's transit ecosystem. It would be amazing to see the connection down to LAX expedited if possible, since high-frequency rapid transit is needed through that portion of the westside. Up north in the valley, I'd also love to see the Metrolink corridor from Burbank to Chatsworth improved to at least 15 minute frequencies or better. By having the sepulveda line, Orange line, ESFV light rail, and frequent Metrolink, the valley would be much better served by transit. Overall, Bechtel's alignments 4 and 5 have the best routes and use superior technology. I'd love to see one of them chosen for the Sepulveda corridor, and seeing further investments in the valley could really make this project shine. Thank you for reading.
	Norwalk	90650	No	2/12/2022	Please do not move forward with the monorail options. A monorail would complicate transfers with the eventual Purple Line Extension stations at the VA and UCLA. Please choose a heavy rail option with a stop at UCLA and a direct transfer to the Purple Line.
	Los Angeles	90049	No	2/12/2022	There's no doubt a project like this is necessary. However, I don't believe putting in a monorail type system that doesn't effectively tie into our existing rail lines is a prudent plan. The monorail plans also don't have enough stops between the Valley and the Westside to make them attractive to riders. The best plans involve rail, preferably a below ground rail system that would have stops along the way between the Valley and the Westside. There are many UCLA students who would use the rail system if it had a stop on the UCLA campus and/or in Westwood Village. UCLA also has thousands of employees, many of whom travel from the San Fernando Valley onto campus 5 days each week who would use a rail system that had a stop on campus. This is much more efficient than taking a monorail which would leave them off at a location that is blocks away from campus and would require riders to wait again for another mode of transportation to take them to campus or into the Village. Underground rail also has less impact on our environment. Above ground rail is less attractive and the noise from rail is offensive, more so than the hum of traffic on the 405 freeway. The city will only take on this project once, so let it be the most efficient, logical choice of underground rail. A slow monorail which doesn't tie into existing rail lines is a huge waste of money and above ground rail is loud and unattractive next to the beautiful mountains and neighborhoods where it needs to travel. Underground rail is the best option for this project.
		91423	No	2/12/2022	Feb. 11th 2022 If this will effect Sherman Oaks along the LA River we say 'NO' ... that would be 18 of the 19 residents opposite the LA River and nature path between Woodman and Hazeltine on Valleyheart Dr. south side of the LA River ... 	Los Angeles	90066	No	2/12/2022	My feedback is that I think an all-aerial option is definitely called for. Having commuted using the Expo/E Line for years, the aerial aspect was the biggest draw, making it much more efficient and pleasant. Unfortunately, the MOST pleasant part -- access to world-class views -- is methodically being obscured by construction projects green-lit along the whole route. A prime concern to me for all Metro transit projects is that the resources that have made Los Angeles what it is be taken into account: it's natural beauty and climate. Traffic congestion wastes people's time and induces stress. Circumventing that in Los Angeles, I think, calls for allowing people access to light, air, views of the mountains, sky, clouds, greenery, vistas and cityscapes. And the opportunity to allow people views of a scenic mountain pass in a major metropolitan area, while transporting them quickly and efficiently, is a rare opportunity. My route preferences correspond with their numerical order -- having considered the opportunities to enjoy the city's natural resources and the directness of routes -- starting with Alternative 1, Alternative 2, Alternative 3, and then Alternative 4.
		91311	No	2/12/2022	What I suggest, as probably the majority , is to go with the heavy rail project, alternative 5 or 6. And to accommodate whatever projects for future expansion. In the long run, not only will get from point A to point B faster but having cars out of the busiest freeway will definitely help our environment.
West of Westwood Homeowners Association			Merged Document	2/12/2022	
	Culver City	90230	No	2/12/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Arcadia	91006	No	2/12/2022	I strongly believe Metro must build the Sepulveda Line as a Heavy Rail Transit line. HRT is the only mode being considered that will provide the capacity, frequency, and convenience Angelenos deserve. Metro's own studies have found monorail will be slower, and its alignment along the 405 will result in unpleasant, hostile, and inaccessible stations. *Any* train station in the median of, or immediately adjacent to a freeway, is unpleasant (Metro's The Source admitted so itself in reflecting on the Green Line's anniversary!). But building elevated monorail stations at the edge of the 4th busiest freeway in America would be an insulting mistake. We need to build our high-capacity transit stations where people want to go, or at least in places where we can later build TOD destinations. The freeway monorail alignments of Alts 1, 2, and 3 are fundamentally incompatible with this goal. Metro should have learned its lesson from the L Line's Lake and Allen Stations in Pasadena. While the line ostensibly serves the Lake Ave corridor and Pasadena City College, both of those high traffic destinations are at least half a mile from the Metro stations themselves. Stations along Colorado Blvd itself would have served these destinations directly, thereby dramatically improving their utility and ridership, and paved the way for the smart growth and densification of Colorado Blvd. Instead, we're left with unpleasant freeway median stations. While we can't control what's already passed, we can avoid the same mistake by putting rail on the commercial corridors of Sepulveda or Van Nuys themselves, as called for in Alts 4, 5, and 6. Also, it is absolutely essential that Metro build a UCLA Station *on campus* as part of this project. To not do so would be a terrible disservice and mistake. A Sepulveda Line UCLA station that connects to the D, E, and Crenshaw lines would allow residents from across the County to commute into UCLA to study or work, and conversely allow students to enjoy LA without needing a car. Alternatives 1 and 2 are wholly unacceptable in this regard: a bus bridge is inadequate to serve one of the nation's most prestigious universities in the nation's second largest city. A people mover would be an unnecessary waste of money that adds travel time and complexity, and requires a whole new maintenance facility to maintain its own proprietary fleet of vehicles. Building a people mover is only a solution if a station located directly on the UCLA campus was absolutely impossible, which it *is not*. Further, it is also essential that the Sepulveda Line's transfer connection to the D Line be as seamless as the transfer at 7th/Metro. Passengers must be able to switch between the lines by simply taking an escalator/staircase to another platform on the next level. As a near daily L Line (Gold) rider, the three-floor, roundabout transfer between the L Line platform and the B/D Line subway platform at Union Station is unpleasant and adds upwards of 4-5 minutes to travel time. Monorail - by design - will never succeed in this regard. Only an HRT alignment like Alts 4 and 5 have clear plans to easily interface with the new Westwood D Line Station. Additionally, Metro's recent service cuts necessitated by limited staff availability reveal another key point: the new Sepulveda Line should be fully automated, as called for in Alts 4 and 5. Metro's train operators are amazing people - I'm indebted to gracious operators who have re-opened the doors for me when I was running late - but the fact is automated trains are more efficient and cheaper to operate than human driven trains. Vancouver's SkyTrain is an excellent example of automated trains providing headways unheard of in LA at low operating costs. If trains came every 90 seconds, which Alts 4 and 5 can provide, I wouldn't need the doors to re-open at all. Metro must select HRT and Alternatives 4, 5, or 6 for the Sepulveda Line. Alts 4 and 5, due to their automation, are further preferred over Alt 6. We only get one chance to build it right.
	Santa Monica	90404	No	2/12/2022	I suggest Alternative 6, with the main difference I see being the heavy rail line extending past the 405 to Bundy. As someone who lives in Santa Monica, that seems more convenient to me.
		90006	No	2/12/2022	NO MONORAIL!!!!! The heavy traffic on the 405 only goes to show that a monorail simply will not be sufficient in terms of capacity. Alternative 6 I find to be the best option.
Westwood South of Santa Monica Bl Homeowners Association			Merged Document	2/12/2022	
	Van Nuys	91406	No	2/12/2022	I would like to see subway, no to rail system.
	Glendale	91206	No	2/12/2022	Hi there folks! I've lived in Los Angeles most all my life and it's awesome to see Metro continue to grow and develop viable transit alternatives. Thank you all for your continued work! Here's my two-cents: I implore Metro to AVOID the tremendous waste of money that is the Monorail. There is a clear reason why in the entire world (from Europe to Asia) a monorail is avoided. An entirely new maintenance crew would have to be trained ONLY for that ONE monorail. It's low capacity and unreasonably high cost would make it unviable for the cities transit needs. Whereas with Heavy Rail you can add or subtract rail cars with ease. These are just one of the multitude of reasons to choose heavy rail over monorail. Here are two videos that do a better job at explaining why Monorails are an inherently bad idea for large scale pragmatic mass-transit: https://youtu.be/9f__nhlHC1g (by AdamSomething titled 'Why Monorails Are A Bad Idea' and https://youtu.be/cN-z0fGraDw by Cheddar titled 'Why Monorail Keeps Failing') I encourage you all to take a look these brief but excellent videos. A far better solution would Alternatives 4, 5 and 6. I personally would love to see Alternative 6 being chosen, as I feel it is the most 'future-proof' of them all. But Alternatives 4 and 5 are also great! The Heavy Rail would integrate far better Metro system, provide a truly world class transit experience worthy of LA, not to mention it's proven track-record (no pun intended). In conclusion: please AVOID any and all Monorail and instead choose Heavy Rail. The Sepulveda Pass is worthy of such. Monorails firmly belong within airports and Disneylands EPCOT attractions, not for serious mass transit in one of the worlds largest cities.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
					Thank you all of your time and consideration! And thank you again for your important work in bringing high quality, world-class, affordable public transit to our city. Those yet unborn are counting on us making the right decisions today. Forward thinking heavy rail is the way forward and Metro should lead that charge!
			No	2/12/2022	I have lived and raised my children on Berwick Street in the Glen for almost 30 years with my husband. As a resident of the Brentwood Glen, we support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line. Likewise combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ensure the shortest seamless connection to ultimately the airport, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405 While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, we are uncomfortable and strongly oppose alignments and final designs that result in the possibility of property acquisition. We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option. Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line. A stop at UCLA ensures seamless transfers Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for 5 – 10 years of the construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura. Nevertheless, of all the alternatives, which concept option is the most mature? Which alternative will have the greatest chance of completing on time and on budget? Our concerns: How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection? What existing right-of-way will the alternatives with aerial alignments along the I-405 use? How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop? Will the transfers be free of charge? Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County. How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise? What will the operational noise impacts be for alternatives with aerial alignments? ? What is the noise and vibration impact of the monorail options? Sincerely,
	Los Angeles	90066- 1029	No	2/12/2022	I Like Alternative 3 - Mono rail should be less costly and faster to build. The 405 fwy is a nature transportation path with no utilities to move. This system directly serves Westwood and UCLA, a must for this most heavily traveled education and business destination center. Why this system does not continue to LAX is ignores the millions of travelers who travel there from the valley and westside.
		91402	No	2/12/2022	I would like to see alternative #6 come to fruition.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Sherman Oaks	91423	No	2/12/2022	Hello. I am a car-less resident of Sherman Oaks who travels to the Westside on a regular basis on the (now, once again) 761 bus line. I will most likely be dead when the future underground (clearly preferred by most transit and neighborhood advocates) or aerial rail/track between the San Fernando Valley and West Los Angeles is running. I support the project, but do not expect to benefit from it. So the present and next-decade-plus of this transit route concerns me most of all. A significant amount of attention needs to be given now to both improving and robustly promoting the current line 761 bus service through the Sepulveda Pass, and promoting the bus lines that feed the 761 bus on both ends, particularly on the SFV end of the corridor. The current line 761 ridership is a microcosmically small fraction of the drivers and passengers who traverse this route today in cars, SUVs, and pickups -- the same population expected to shift in some significant greater numbers to the coming public transportation through the corridor. This project will cost billions. At least some portion -- larger than evidently currently planned -- of the massive expenditure on Metro's Sepulveda Corridor Transit Project should be devoted to improving the frequency, capacity, comfort, and ease of traveling by bus from multiple locations in the SFV to the Westside, and the converse. For example, an attractive new-design bus stop occupying the courtyard of the commercial building on the southwest corner of Sepulveda and Ventura Boulevards with a major shade structure would be nice; hopefully that building's owners and the operators of the adjacent restaurant would appreciate this upgrade on their property -- but if not, the acquisition of this small space by eminent domain for the bus transit hub should be undertaken. And a portion of Sepulveda Corridor Transit Project monies should go to the near-term multi-media promotion of the 761 and the lines that feed it on both sides of the Santa Monica Mountains. For example, half of every bus on line 761 should bear colorful attention-grabbing side banners proclaiming THIS BUS GOES TO THE WESTSIDE AND BACK and the other half proclaiming THIS BUS GOES TO THE SAN FERNANDO VALLEY AND BACK. And every bus in the Valley that takes passengers to the SFV portion of the 761 route should carry banners declaring THIS BUS GOES TO THE WESTSIDE VIA LINE 761 or a similar message -- starting with the Ventura Boulevard 240 and 150 buses (I thank Metro that the little-used 750 is gone), especially the 240 bus whose other terminus is the under-used Red Line Subway that takes folks to every point in central and east L.A. In fact, the 240 buses should sport banners (on the other side of the bus) declaring THIS BUS GOES TO THE RED LINE SUBWAY TO HOLLYWOOD/DOWNTOWN/AND BEYOND and the like (this could and should have been done years ago). Building up part of the expected future ridership of the future very costly Sepulveda Pass subway/rail/monorail/Hyperloop (maybe???) is an effort that should start now by improving the system for the largely lower-income, lower-carbon, car-less young and old Angelenos who are already Metro's (and public transport's) patrons, and thereby attracting the needed additional passengers. This is a matter of equity and of practical preparation for this major transit addition that will benefit those of us who are here and need better carriage between these two parts of our city now, while the groundwork is laid for the better connection for those who will come later. The side-of-bus ad revenue lost to Metro advertising itself and these lines instead of lawyers and movies is part of the modestly redirected portion of the multi-billion-dollars Sepulveda Corridor Transit Project I propose here. I hope these ideas are acted on to help me and my fellow transit customers -- and Metro itself -- here in the third decade of the 21st century. I ask that this comment be made a part of the official record of public sentiment regarding this very important transit corridor. Thank you.
	Sherman Oaks	91411	No	2/12/2022	As a Magnolia Woods resident, I strongly oppose any above-ground metro along Sepulveda. While I am a staunch supporter of mass transit, and have voted for many bond measures and tax increases in support of metro projects, the elevated rail plans would exacerbate noise pollution and turn a vibrant thoroughfare into an eyesore. Any community advantages would be undermined because the area beneath the rail lines would become a dead zone. The noise, lack of light, and industrial feel would discourage any meaningful growth or commercial investment. Let's take the time and spend the money to create lasting infrastructure that benefits communities rather than destroying them. Underground rail is the better choice, the safer choice, and, in the long run, the most effective choice to connect the valley with west LA.
	Burbank	91505	No	2/12/2022	I wish that either alternative #5 or #6 are chosen, featuring heavy rail underground. Thank you for accepting public comments and thinking through the details of this much needed 405 alternative.
	Culver City	90232	No	2/12/2022	I like alternative 6 because it is completely underground. It seems that this would be the least intrusive to existing traffic.
		90007	No	2/12/2022	Build it underground with heavy rail
	SALIDA	95368	No	2/12/2022	Hi, I'm a individual who is thinking about potentially moving to Los Angeles in the future. I believe that options 4 or 5 for the Sepulveda Transit Corridor would be best as it would be able to move far more people in the long term and be faster than a monorail. As well the monorail system would most likely have to have their stations retrofitted to support longer trains if it is to increase to the max capacity, which will take far more time and money. I hope if I do end up moving to L.A. that I can ride a fully functioning heavy Rail line like option 4 or 5.
The Transit Coalition			Merged Document	2/12/2022	
	Thousand Oaks	91362	No	2/12/2022	In all due Respect, how many studies will transpire, over decades. Nothing will happen, people paid for metro's effort, and, again, nothing will come from Metro. Here's one for you: If not now, when ??? Mark my words. There is no transportation answer between Laurel and Topanga, and both sides of Santa Monica Moutain Range. Stay safe during COVID epidemic, and God Bless your efforts.
		91304	No	2/12/2022	Hello, I like plan 6 because the other heavy rail plans might slow down Sepulveda Blvd itself and monorail seems a bit slower than heavy rail. It would be nice if we had a wall with doors like Singapore's MRT system so nobody falls on to the tracks.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90024	No	2/12/2022	Hello, Thank you for taking public comment on this very important and massive investment in improved and more environmentally friendly transportation. I am writing as a member of the UCLA Green New Deal Group, working to improve sustainability efforts in and around UCLA. One of the major sources of emissions we are seeking to reduce is commuters driving to campus. This line could be hugely instrumental in achieving that goal. My highest priorities for the Sepulveda line rail project are, in order: 1) A direct stop on the UCLA campus. Thousands of students and employees commute to UCLA from the San Fernando Valley every day, we must use this project to give them a better and environmentally friendly option for their commutes. An extra transfer in Westwood just doesn't cut it. 2) Easy and quick transfers from the Sepulveda Line to the Purple Line, Expo Line, G/Orange Line, and Metrolink. Some of BYD's monorail proposals do a particularly bad job with this. Also of note is the integration between the planned Van Nuys Blvd light rail line and the Sepulveda line. Perhaps this should all be one line to eliminate that transfer entirely, especially since a high percentage of the Van Nuys Blvd light rail ridership is predicted to be transfers to the Sepulveda line for commuters. 3) High maximum capacity and fast trip times. Heavy rail wins over monorail in this regard. 4) Please also consider speeding up the planning for the second phase of the project, connecting Westwood and the Valley to Inglewood and other SW LA communities Thank you again,
	Los Angeles	90012	No	2/12/2022	I believe Metro should heavily favor alternatives that include a direct UCLA stop (without requiring any transfers to people movers or buses) because that is very likely to be a final destination for many riders. I also believe Metro should avoid the monorail alternatives. Monorails only save on construction costs when they run in an elevated configuration, and the alternative with a direct UCLA stop would require tunneling. Additionally, monorails are hard to extend into a good transit network because of difficulties around switching tracks and their inability to run on other tracks. In this case a monorail would mean that Metro is choosing a system that will be hard to work with in the future and is incompatible with what is already installed. Please consider the future of LA's public transit and choose one of the heavy rail alternatives. The decisions we make now will leave a lasting impact on our children and grandchildren.
	Playa Del Rey	90293	Merged Document	2/12/2022	Please do not select any monorail options for the Sepulveda Transit corridor. BYD has underrepresented the costs required, overstated the max system passenger throughput compared to Bechtel, will likely complete their project later than 2030, and doesn't fully understand all the aspects of the project and area. In addition, BYD has a history of failing to deliver a good product - instead relying on shiny marketing and inside political influence. Finally, their proposed project, if built successfully, isolates stations from population centers and transfer connections. This will depress ridership and reduce the effect of transportation options. Options 4 and 5 offer the most promise, are in line with international transit standards, and will best allow people to flow from the San Fernando Valley to and from the LA West Side. Please review the attached PDF for detailed discussion on all points discussed, as well as a review of station placement, company history, build strategies and future-proofing. I know this submission is late in the comment time, but it's in earnest and well researched (and cited). Please reach out to me for questions.
		90004	No	2/12/2022	Strongly suggest HRT alternatives (4, 5, 6). Wish list: For on-campus UCLA station, would like to see connections to any nearby buildings (Luskin, Pauley, Ackerman, Engineering VI, Lot 4, Lot 8, Lot 9, depending on precise location of station). For Wilshire D Line station, would like to see space around current Lot 36 developed with some use beyond surface parking lot (e.g., multi-story mixed use development, university residential, academic, and/or office building, transit hub to accommodate multiple buses from multiple agencies (Metro, BBB, Culver City, LB Transit, LADOT, Santa Clarita, AVTA, Amtrak California), public gathering or park space, subterranean public parking). Similar comments about connections to nearby buildings and additional uses of space above and/or adjacent to stations throughout line. For all stations, would like to see bike facilities for parking and repair, Metro Bike Share, and possibly docks/parking spaces for micromobility devices.
		90034	No	2/12/2022	Requirements: - An on-campus UCLA station. - A Real train, not a monorail regardless of how exotic or sexy it may seem at first. - Connections to all train lines and other major transit lines crossed. - Direct route to LAX, no transfers. - If any portions are on the street, the rail line must have complete priority. - Accommodations for bicyclists and other modes. - Restrooms in stations. - Pleasant, not shrill or grating: bells, chimes, buzzers, etc. - Proper shelters from sun & rain. Highly Desirable but Optional: - A Station at Getty Center. Optionally, align the route so as to accommodate a future Getty Station. Like UCLA, the Getty is a major institutional asset. - Equipment compatible with other trains on the system. - Mulholland station.
			No	2/12/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Regards,
			No	2/12/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. There are other viable options that do not require tunneling under Bel-Air that are not being considered and should be on the table. Sincerely,
			No	2/12/2022	1) The criteria for selecting the Local Preferred Alternative have not been made clear by Metro. 2) The decision should be made without regard to cost, funding, and project timing. 3) The future mass transit in the Valley will be guided by the design of this project. 4) The decision should be made based on how best to make Los Angeles City and the San Fernando Valley a world class livable environment of the future. 5) This is a project that will be operational for over 100 years. 6) Decisions should be guided by a vision of what Los Angeles should be in 2100. A place that offers its residents affordable housing, workforce development, economic growth, and a quality of life captured in the concept of the 15-minute neighborhood. 7) A wrong answer today will not be replaced. We will live with and suffer the consequences of a sub-optimal decision forever. 8) We don't need the LA depicted in the movie Blade Runner. 9) This scoping period offered no meaningful discussion between the public and Metro.
Westwood Community Council, Inc.	Los Angeles	90024	Merged Document	2/12/2022	Please see attached letter. Thank you.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Van Nuys	91405	No	2/12/2022	I'm looking forward when there is an alternative mode of transportation like the Sepulveda Transit Corridor in the San Fernando Valley for many reasons but the main reason is moving towards a more sustainable future both in equity and environmentally; To remove yourself from gas power vehicles is essential and to have better access for walkers, bicyclist, skateboarders and other means of travel. I'm in support of alternative # Van Nuys will receive much an impact from this project along with the San Fernando Valley transit Corridor especially towards development along street corridors like Van Nuys Blvd. I would like to see an updated community plan from city planning to address design overlay zone vision in bringing public transportation infrastructure, urban development, housing and social space. I would highly suggest Metro and the City of LA to create more parks, nature (landscaping) and design in reimagining neighborhoods like TOC, transit stations, commercial corridors and abandon properties where growth, urban density and real estate speculation will definitely occur. Lastly, I would like to see that no corporate entities be involve in naming rights of places and things, and if there are involved in the construction of the project in any form they should be more transparent by providing monthly reports (financial/ construction schedule phases) to Metro and the public.
	North Hollywood	91601	No	2/12/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. I think it's pretty simple: make transit more available to Black and Hispanic communities without gentrifying and pushing them out in the process. I wish I didn't have to write you to respect people's basic dignity of a roof over their heads and yet, here I am with hundreds of others asking you to consider the following demands. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.

		90024	No	2/12/2022	I urge Metro do what is right by the people of Los Angeles and choose heavy rail. The monorail proposals should not have made it this far. -Monorail cannot directly serve what is expected to be the busiest station, UCLA. -Monorail would have unacceptable stations adjacent to or in the medians of one of the worst and most polluted freeways in the country, if not the world. That would be a travesty for equity, to put it lightly. -Monorail's capacity will surely not be enough for what will certainly quickly grow to be Metro's busiest rail line. Given the perpetual traffic jam that is the 405, if you really imagine all those people taking the train would you really not want to have the most capacity available? -Monorail adds another unique vehicle type to Metro's fleet. This means completely separate facilities for it and no chance of being able to quickly deploy replacement or extra vehicles. These relatively rare vehicles would likely leave Metro beholden to the specific manufacturer for parts, upgrades, etc., instead of being able to put source from any manufacturer through a competitive bid. On a personal note, I have actually ridden a public transport monorail before: the Tokyo monorail to the airport there. It was not a great experience, which is really saying something given the reputation of the Japanese rail system. The trains had a very awkward layout that made it very cramped with only a modest amount of people on board. Needless to say this kind of experience is far from ideal for a line expected to connect major destinations of the valley, UCLA, and LAX, and be a major competitor to the 405. In closing, please do not give in to pressure from misinformed homeowners and companies with unproven track records and only their own interests at heart, and do what is right for current and potential riders and for our region's future. Imagine how much our city could change for the better if we get this right. Please do not give the public further reason to lose faith in Metro. Choose heavy rail. Thank you.
	Los Angeles, CA, 99223	90019	No	2/12/2022	Please DO NOT PICK MONO RAIL. The only sustainable and good option is to choose heavy rail. Do not let the pockets of bel air change the course of public transit! Please this line could permanently change LA for the future. PLEASE CHOOSE HEAVY RAIL
	Valley Glen	91401	No	2/12/2022	I support heavy underground rail for the entire route with connection to Amtrack Station in Van Nuys. Unclear what the benefits are of auto vs driver trains, that should be explained more clearly to the public.
	Los Angeles	90066	No	2/12/2022	These plans are all too limited and too far out in the future. What I suggest is to consider more significant scope, I.e. connect all the way to beach cities, offer express capabilities, and bring service online in 10-15years from today, not 25. Require $15bn and make it a joint federal infra project
	Los Angeles	90025	No	2/12/2022	I prefer heavy rail, specifically alternatives 4 and 5.
			No	2/12/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. 	Inglewood	90302	No	2/12/2022	What I like is that there is recognition that the 405 is a problem, traffic along the 405 from LAX to the Valley feels almost constant and a reliable public transit option will do a lot to fix the problem. Of all the routes, my preferences are for those that serve both the Getty Center and UCLA. Both institutions provide jobs and attract visitors (which contributes to the traffic!). The issue to me is that some of the proposed plans are complicated by different rail grades (above ground and under ground). Given the delays to the Crenshaw line, part of which seems to be the complexity of being below, at, and above grade, a single track type might ensure a speedier completion of the project. I think the first is the best when it comes to serving multiple users while also being the simplest in terms of construction.
Van Nuys Neighborhood Council			Merged Document	2/12/2022	
	Los Angeles	90064	No	2/12/2022	We must have heavy rail. Monorail will be a debacle. BYD is corrupt and corrupting the City Council. BYD is lying about costs and ridership. Only heavy rail directly serving UCLA will work.

	Sherman Oaks	91403	No	2/12/2022	As someone who lives in the Sherman Oaks neighborhoods, we are all excited about an alternative way to access the west side! However the 405 already creates a substantial amount of noise pollution, and I as well as most of my neighbors would love to avoid any additional noise from above ground rail lines & construction. As such we think Alternatives 5 & 6 are the truly good solutions here, as they'll create minimal traffic & noise during construction while providing a weatherproof, expedient and very quiet means to get around LA. Thank you!
	Los Angeles	90064-4317	No	2/12/2022	I live in West LA (90064) and strongly support this crucial Project. We must have heavy rail. Monorail will never work. BYD has a history of corruption and compromising the City Council. BYD woefully mistates costs and ridership. Only heavy rail directly serving UCLA is workable and makes sense.
	Los Angeles	90024	No	2/12/2022	Dear Metro Commission, I recommend that Metro add a line which goes from the Sepulveda station to LAX, either above ground or underground, in the same right of way for the 405 Freeway. If it were to be underground, it would be directly under the 405 freeway from the Sepulveda station around Ventura Boulevard follow the 405 freeway south until Century Boulevard and LAX. It could also be an above-ground or elevated trolley above the 405 freeway. Along the way during this path, there would be stops in Westwood and Culver City and Playa Vista, thereby creating a direct route from the Valley and Westwood and other parts of the west side to LAX, and it would all be within the existing right of way of the 405 freeway. By staying in the existing right-of-way of the 405 freeway, there should be significant cost savings. After completion of this line, there should be a significant drop of car traffic on the 405 freeway from the Valley to LAX.
		91504	No	2/12/2022	Build alternative 4 or 5 for the sepulveda expansion

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90049	No	2/12/2022	I am writing regarding the Sepulveda Transit Corridor Project. I am generally in favor of monorails and other rail-based public transportation alternatives. These could be designed to utilize existing transit corridors and could avoid the unnecessary and fruitless confiscation of homes and businesses for increased car traffic. Having said that, I could only support alternative 5 or 6. Any public transportation alternative that does not stop at UCLA would be extremely stupid because UCLA is one of the largest employers in West Los Angeles, with thousands of employees who are potential users of the public transportation IF it stops at or near their place of employment. This is a no-brainer. Second, I would vigorously oppose any confiscation of homes for any project. Existing roadways provide sufficient room for elevated projects. Taking homes and trashing existing neighborhoods only exacerbates Los Angeles' OTHER BIG PROBLEM: not enough housing. Eliminating housing along the corridor would mean that residents would likely have to move farther out, and thus have to join the hordes of people who have to drive in long distances to their jobs. Thus, rather than alleviate traffic congestion, taking homes would increase it. Thanks.
	Studio City	91604	No	2/12/2022	Strongly support this project and it should be done with efficiency in mind. If tunneling and an overpass is needed to make use more convenient and likely to be used this should be encouraged
	Anaheim	92807	No	2/13/2022	I firmly believe that the line should be built as heavy-rail rather than monorail due to the many benefits of the heavy-rail plans as opposed to the monorail.
	Oakland	94602	No	2/13/2022	We must have heavy rail. Monorail will be a debacle. BYD is corrupt and corrupting the City Council. BYD is lying about costs and ridership. Only heavy rail directly serving UCLA will work.
			No	2/13/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/13/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sent from my iPhone
			No	2/13/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
	Los Angeles	90016	No	2/13/2022	I am a LA native representing myself and I would like to drop this message advocating and putting my full support for the heavy rail option of the Sepulveda Transit Corridor as an LA native who has grown up on and with LA's public transportation system, I deeply care for it and advocate for it whenever possible and I really want to see it thrive as best as it can, especially considering I have lived here for almost my entire life and I just feel so deeply connected and because of this I believe it is really really really important that we choose the heavy rail option instead of the monorail option. The monorail option being offered by BYD is simply not efficient in its use of funds. It is going to be much more expensive than the heavy rail option once all of the necessary modifications are made to it in order for it to actually be a feasible line that would actually transport an actual significant amount of people. It is a badly planned route, all three of the options proposed by BYD and because of this I would like to strongly advocate for either options 4, 5, or 6, some of which are being contracted by Bechtel and Order to construct. I believe that Bechtel's proposals have a lot more promise in becoming an actual useful line that many many many riders in Los Angeles would use. It is a crucial project and Bechtel's option truly would allow for it to thrive in its best state, something that BYD is simply unable to offer. BYD has shown a consistent pattern of underdelivering its previous promises for low budgets and it also has various ties to corruption, especially in the LA metro Board members. Because of this I believe that BYD would be an absolutely terrible option to go with as a partner for the construction of this line. I believe that Bechtel's proposal is a lot more robust for the future of Los Angeles and would actually provide crucial public transit for the many many people that would be using that line, especially considering that that line includes and will include some of the most heavily used transfer stations and stations in general of the entire LA Metro transit system. I believe that it is crucial that we do not mess this up by going with a company that is dead set on scamming cities such as Los Angeles in order to actually create a great Metro transit system and add on to what we already have. I believe that the monorail is simply not a good idea and that the heavy rail really should be considered as an actual option compared to the monorail.
UCLA Graduate Students Association	Los Angeles	90034	Merged Document	2/13/2022	To the Los Angeles Metro Board of Directors, I am the Director of Social Media/Web Manager of the UCLA Graduate Students Association (GSA). GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes. A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region. Sincerely, Fitz Gerald I. Diala

		91406	No	2/13/2022	Staff Sepulveda Transit, I call on Metro to change the scope of its environmental study of the Sepulveda Transit Corridor project, including on impacts on renters at risk of gentrification, routes, technologies, stations, and the project area, as requested by housing and transit groups here: https://bit.ly/MetroJusticeLetterFeb2022 As the biggest project Metro is working on, this will affect residents and taxpayers across LA County, including me, and it will set a precedent for how Metro handles other projects. HOUSING This project must set a goal of zero displacement of low income renters due to gentrification. Any low income renters temporarily displaced must have a right to return. The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to gentrification, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. These mitigation measures could include, but are not limited to: • A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control • A registry of rental apartments owned by corporations or LLCs • Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income • Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income • A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area • Permanent just cause eviction protections • Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place • Protections for renters when owners convert apartments to condominiums • A small site acquisition program similar to San Francisco's • Affordable housing financing • Track the loss of rent stabilized units and tenants Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS. ROUTE Elevated rail next to homes is unacceptable. Instead, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange. As a substitute for Alternative 4 to going on Sepulveda north of the Orange Line, Metro should study interlining the Sepulveda Line with the Red Line, connecting them and the East San Fernando Valley Line via the Orange Line. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. TECHNOLOGY The heavy rail option must be compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Red Line and the Purple Line. Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system. Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information. STATIONS As requested by the STC4All Coalition, the project must serve UCLA directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money. Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure at a parking structure near the 101/405 interchange instead, which is unacceptable. The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
			No	2/13/2022	If this project significantly reduces the reliance on cars great. If it will reduce pollution great. If it will simplify single destination goals – fine. I worked downtown for years and driving was no fun. The convenience of having a car however cannot be equaled.
	Los Angeles	90016	No	2/13/2022	As an LA native who has grown up here for almost my entire life, I have lived and grown up with the LA Metro Transit system for as long as I can remember. I am heavily invested in making sure that LA Transit is able to thrive in becoming the best version of itself that it can. This is why I am writing to heavily advocate for LA Metro to choose proposals 4, 5, or 6 utilizing heavy rail rather than monorail to build it's Sepulveda Transit corridor. Heavy rail would position this project to be able to serve many more people than a monorail option would, with sizeably better ridership capacity. On top of this, this project will likely be cheaper than a monorail option in the mid- to-long run. BYD's proposal for a monorail may be cheaper in terms of upfront costs, but all of the costs required to make BYD's monorail a viable line able to serve the tens of thousands of riders would push costs to far above that of a heavy rail option, well also heavily underperforming in terms of ridership capacity. It also must be taken into account that BYD has shown a history of swindling public officials and LA Metro board members into projects which end up being very costly, significantly more than proposed price tags, while also delivering very low quality products (i.e. the fiasco with low quality underperforming electric buses which BYD sold to LA Metro.). This is not even to mention the corruption that has happened involving these officials and BYD. BYD has already shown that it is a terrible private partner to work with on public transit projects, so for it to manage the construction and operation of this massively crucial transit corridor would be absolutely catastrophic to say the least. If Los Angeles truly wants to improve the lives of hundreds of thousands of people, it should prioritize the benefits that would be incurred to them by choosing heavy rail over monorail for this essential transit corridor. Any other choice would be detrimental and would fundamentally undermine the credibility of Los Angeles officials and of LA Metro to manage public transportation in the second most populated city in the United States.
	Sherman oaks	91403	No	2/13/2022	Alternative 6 looks like the best option for routing. Thank you!
			No	2/13/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Santa Monica	90405	No	2/14/2022	I encourage the people responsible for the planning and building the new rail line going from the San Fernando Valley to the Westside of Los Angeles to have the new rail line connect with the Expo Line that runs from Santa Monica to downtown Los Angeles. By making the connection of the EXPO and the SEPULVEDA lines will benefit people and business, medical centers, Community Colleges, and Universities and people wanting to take a day to enjoy different areas of LA County without having to deal with congested streets and freeways, parking cost and more.
			No	2/14/2022	Hello, I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. I would rather strongly prefer the alternatives that involve above-ground monorails on the 405 from Van Nuys to Wilshire with either electric-bus or people-mover connections to UCLA. Thank you. Sincerely,
			No	2/14/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor. Sincerely,
			No	2/14/2022	To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project; I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region. Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail. A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region. As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals? The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.
	Los Angeles	90034	No	2/14/2022	1. Building along the I-405 Corridor will have significant traffic impacts to the surrounding regions, including through the residential streets of Roscomare Rd, Sepulveda Blvd, and Beverly Glen Blvd. Deep single-bore tunnel options should be the only ones presented for environmental review, as traffic impacts due to construction on I-405 will be too great. 2. No transit dollars should go towards planning for or building any parking structure, park and ride, or impacts to other car-oriented facilities - let CalTrans, and other Departments of Transportation funded by my gas taxes be the ones to foot the bill. If no gas tax funds or vehicle taxes can go towards transit, no transit funds should go towards automobiles. 3. What I like about the existing proposal are the automated metro options in the deep bore tunnels. No constructions impacts, no labor disputes, improved reliability, and if we're going to spend the money, we might as well spend it on getting the most bang for our buck. 4. Any proposed UCLA station should be on UCLA campus. 5. Connecting with the Expo line further up at either Sepulveda Blvd or (ideally) Westwood Blvd would improve connectivity with the rest of the system, with the opportunity to serve a huge number of people at Pico and Westwood. Put the service where the demand is now, because the demand will only grow. 6. Putting the line along Van Nuys would serve a more-developed corridor with more demand, including improving the economy of the area by attracting riders from the west LA to actually have an easy ride to the valley. 7. Station designs should be minimal, focus on the service instead. 8. Design stations from the perspective of a bicycle or personal mobility system (like a scooter) as the ridership of those forms are the fastest growing segment and will continue to grow in popularity.

The Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Metro should study Phase 1 south termini at Expo/Sepulveda and Expo/Bundy and study which corridor to LAX would generate the greatest ridership in Phase 2. Currently, Metro is proposing to study only Expo/Bundy for Alternative 6. No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations. PROJECT AREA Include adjacent areas with significant numbers of transit riders going to or through the project study area, such as Del Rey, Mar Vista, Palms, and parts of Encino that are currently excluded.
	Ventura	93001	No	2/14/2022	I believe that the Sepulveda Transit Corridor Project must logically include a direct stop at UCLA campus (probably on the north end), a direct stop in Westwood Village, and a direct connection to the Purple/D Line. Otherwise, why bother building a transit line down Sepulveda which bypasses the most densely populated and utilized spot on the entire corridor? Bypassing direct connections in Westwood would result in citizens concluding that government is unable to grasp their logical and obvious needs, and wondering if government is incompetent or corrupt. Please don't give citizens any reason to distrust government. Thank you for considering my opinion.
	Los Angeles	90077	No	2/15/2022	The Bel Air Association recently sent you a letter regarding the issue of the proposed project connecting the SF Valley and LA's Westside via the Sepulveda. I support building underground, out of sight and out of mind. I am writing to remind you of two issues: The Bel Air Association does NOT represent the wishes of the residents of Bel Air. It is NOT a Home Owners Association. Only a minority of Bel Air residents are even members. The opinions were not culled or solicited from the residents of Bel Air. There was no concensus and no poll ever done. It is merely the opinion of the vocal monied minority who sits on Board of that organization. Those that have a vested interest in controlling what happens around their homes, with no regard for the welfare of the non-members (the majority of Bel Air residents). It is not a community group representing the interests of the residents of Bel Air. It only represents the interests of the Board members! It is NOTHING MORE THAN THAT ASSOCIATION'S VESTED interests. Regarding an above ground train, near the 405: Who wants to see a big elevated Metro train rumbling down the center of the freeway for the next 100 years! What a big loss to the beauty of LA! The 405 freeway is enough of an eyesore in the Sepulveda Pass! Why compound the problem with more visible transportation trains. They are a big loss in Chicago and New York City where above ground trains are present. The present Metro trains are fabulous and well placed and well concealed from view. Thank you. Regardless of the outcome, thanks for attending to this issue, and it will be fantastic either way
		91103	No	2/15/2022	BYD has created great union jobs and has help many people people in the community leave a better life.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
	Los Angeles	90064	No	2/15/2022	I am so sorry to be late in submitting this, but I hope you will seriously consider my comments. I have lived at for 38 years. My backyard is narrow, and just over the brick wall is Bundy/ Centinela Drives (at the intersection of Ocean Park Boulevard). PLEASE, PLEASE, PLEASE do not have the terminus of the new 405 Sepulveda Pass project end at the Bundy Expo terminal. It makes a lot more sense for it to end at the Sepulveda/ Pico terminal for these reasons: A line going south on Sepulveda (which would be the next logical extension to the airport), would affect FAR fewer residents. Both north and south of Pico, there are mostly businesses, and very few residences. The sixth alternative, which proposes that the line end at Bundy (with a future extension to the airport), means a line down Centinela. That affects numerous single family homes and multiple apartment buildings all the way down Centinela. Addditionally, there are more residences to the north, where the proposed line would end at Bundy/ Expo. On a personal note, both I and my neighbors would not be able to tolerate the noise of the construction in our backyards and it will ruin home values. I would have to move and now I am too old to do so, and it would ruin my finances. Importantly, there is no parking at the Bundy/ Expo station, whereas there is a public parking lot at the Sepulveda/ Pico terminal. Thank you,
	Sherman Oaks	91403	No	2/16/2022	As a condo owner at the corner of Sepulveda Blvd. and Magnolia Blvd. in Sherman Oaks, I hope this project will not impact the use of Sepulveda Blvd. it is my main way in and out of my neighborhood. I also hope this will be an EV train and will not contribute to more air pollution for me and my family. Lastly, increased noise level is also a concern during construction and after. Thank you.
	West Hollywood	90046	No	2/16/2022	What I wish is for this line to prioritize a stop on campus at UCLA. As a public institution with a major hospital, we have a large volume of folks commuting to campus that would benefit from his stop. It would also help us provide accessible, sustainable transportation to campus & reduce the number of folks who need to drive across LA. With a high proportion of UCLA students qualifying for the Pell Grant, we have a lot of folks who would use this transit option and be able to better afford their education because of it. Please make a stop at UCLA!
		90035	No	2/17/2022	Please do not choose a monorail. LA needs to think long term and heavy rail is the best way to do so. Choosing heavy rail could mean better interoperability, higher quality transfers, more rolling stock options, and higher capacity long term.
			No	2/17/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
	North Hollywood	91606	No	2/18/2022	Heavy rail is the only option that makes sense. The monorail is too slow and does not carry enough passengers and is not expandable to handle the growing demands of this rail service.
		90250	No	2/19/2022	What I vote for is Alternative 4: Heavy rail. I know it is passed the dead line but I'm just hearing about this and disappointed I missed all the meeting and deadline,but I hope this comment can still make it in. The monorail will be a big waste of time, money, and effort. Just added another ugly freeway like structure and STILL requiring a bus? All monorail options are terrible. Please don't even consider those. What I wish is for the heavy rail options to be used, this project is one of the more important ones, we HAVE to get this one right! All future generations and future studets will be foreverthank full for such a system. A huge cut in traffic will surely occur with such a desirable alternative. Thank you for your time, and PLEASE no monorail.
			No	2/20/2022	I am a resident of Bel-Air and I strongly oppose Metro's existing alternatives that involve tunneling beneath Bel-Air for the Sepulveda Transit Corridor.
		90025	No	2/21/2022	I would really appreciate this project, my commute is from the west side to the valley and it would greatly make the commute faster.
			No	2/22/2022	Metro, Please focus on the five Alternative Concepts (2 underground and 3 monorail concepts) and stop studying the devastating Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard from Valley Vista to Roscoe in the Valley. Alternative 4 will destroy Sherman Oaks forever. There are NO elevated heavy rail trains anywhere else in Los Angeles. Why is the high speed transit underground from LAX to the Valley and then becomes elevated at Valley Vista along Sepulveda? Once AGAIN, the Valley is not getting its fair share of our tax dollars.
	Sherman Oaks	91411	No	2/22/2022	As a resident of Van Nuys / Sherman Oaks I am against Alternative Concept #4. The San Fernando Valley is years passed its rural roots. Concept #4 ignores the already extensive development along the Sepulveda corridor and will severely impact the residential neighbors that back up to Sepulveda Boulevard. Metro, please focus on the five Alternative Concepts (2 underground and 3 monorail concepts) and stop studying the devastating Alternative 4 for the Sepulveda Pass with elevated heavy rail trains running 20 to 40 feet above Sepulveda Boulevard from Valley Vista to Roscoe in the Valley. Alternative 4 will destroy Sherman Oaks forever. There are NO elevated heavy rail trains anywhere else in Los Angeles. Why is the high-speed transit underground from LAX to the Valley and then becomes elevated at Valley Vista along Sepulveda? Once AGAIN, the Valley is not getting its fair share of our tax dollars.
	Van Nuys	91411	No	2/22/2022	This may be disregarded because I found out about this initiative just today, but I will leave my comment nevertheless. Other comments preferring the heavy rail option seems to make sense, even if I am not an expert in transit engineering. Anyway it will be decided, please stop at the Getty Center. It is one of LA's top destinations, which hosts 1.8 million visitors (mostly from out of town) per year and over 1,000 employees every day. Running a line right in front of the Getty without a stop would miss an opportunity to serve all these people and would almost seem like a slap in the face. Please consider this option, whether it's monorail or heavy rail. Thanks.
	Los Angeles	90032	No	2/22/2022	A stop at the Getty Center would be transformational for LA communities underserved by arts organizations. The Getty is among LA's most important cultural treasures and transportation is the key factor preventing many Angelenos from taking advantage of it.

Submitted By	City/ Town	ZIP	Attachment	Date Submitted	Submission Text
International Monorail Association			No	2/23/2022	Dear Mr. Carter and the Sepulveda Transit team, Through our member companies, we have learned about the recent public hearing of your proposed Sepulveda Transit Corridor project. First, we would like to express that your open technology approach is very remarkable. This is not always the case with such challenging projects. Nevertheless, we can imagine that the 6 different alternatives will not be discussed without prejudice. The International Monorail Association is a non-for profit Members Association whose mission is to organize the mass transit global monorail sector, promote the application of monorail, publish information, and promote the establishment of performance standards. Currently our association has 37 member companies - spread around the globe. Our aim is to provide a platform for interaction between Public Authorities, the Monorail OEM Industry, the Monorail Operating and Maintenance Companies, Monorail Consulting Engineering Companies and Monorail System Builders, with the purpose to aid in the responsible and efficient use of Monorail for Public Mass Transit. In this respect, we would like to take the opportunity to enter into a dialog and share with you information on technology assessment. To this end, you will find enclosed three presentations that go into great detail about the various transport solutions and explain their advantages and disadvantages. For your Sepulveda Transit Corridor Project, we see several advantages with the use of a monorail system: In addition to the topographical requirements for routing, which monorails can meet well with comparatively tight curve radii and larger inclines, the speedy project implementation is one of the most compelling arguments. The results are quickly visible and, above all, usable for the population. Other major advantages are comparatively low investment costs and low operating costs. Monorail systems are an easy fit to urban areas (unobtrusive track) and match for difficult terrain due to its simpler infrastructure. Consider this email as an invitation for further exchange. We would also be happy to discuss this matter in more depth with our experts from the member companies.
	los angeles	90039	No	2/25/2022	PLEASE BUILD THIS!!! I was just driving today from compton to inglewood to west hollywood and was like, damn if only there was a better subway that went from van nuys to redondo beach, it could connect the valley bus, the santa monica line and the green train. THEN i saw the K line being built and got very excited that about half my idea was created, but this is the next step. A subway instead of the 405 would be so amazing because if I wanted to go to the beach or south LA I wouldn't have to sit in a bunch of goddamn traffic. Sure, I live in silver lake now and wish there was a line to get from here to burbank and then something that connected burbank to the yellow line through glendale to pasadena but truthfully the 405 subway line would be so fucking awesome.
	Northridge	91326	No	2/26/2022	Alternative 4 is most the sensible. It balances underground and aerial sections. I like the underground direct line from the Ventura Blvd station to the UCLA station. It makes more sense than the meandering aerial along the 405. I commute on the 405 and I can't wait for this project to start operations, but I hate to see aerial work along the 405 and live through 5 years of construction impacts, similar to the 405 widening project a few years ago.
	Los Angeles	90034	No	3/1/2022	Please take the heavy rail option with a stop at UCLA rather than the monorail option! I am a graduate student at UCLA and I think that heavy rail with a stop at UCLA is the best option. The monorail is worse in every possible way but cost, and that makes a LOT of assumptions about monorail cost. The heavy rail line will be extremely useful for students, faculty, workers, and anyone who needs to go to the hospitals near UCLA. A stop at UCLA is extremely useful and the only practical benefit of the monorail is that it makes Bel Air NIMBYs happy. Having a normal rail connection will also be useful when the rail line to downtown is finished, making a better overall connection for people to get around the city and to further reduce traffic.
		91402	No	3/1/2022	Would like alternative 6. Wish there were platform barriers.
	Covina	91722	No	3/1/2022	The line formerly known as the gold line; L Line, is as successful as it is, because it links so many community colleges and university campuses. It makes sense. A high concentration of people, with limited parking, and often people are not earning a high enough income to drive cars. The monorail proposal leaves out a UCLA stop. This plan should be considered dead on arrival because of that.
	Thousand Oaks	91360	No	3/1/2022	Please consider a heavy rail option, this has the potential to be completely transformative for the Westside and SFV, and as a commuter from Ventura County to Culver City, could make feasible public transit options from Ventura County to the Westside.

Appendix Q-2.
Letters from Organizational Stakeholders

Sherman Oaks Homeowners Association

The Sherman Oaks Homeowners Association submits the attached letter with ten critical questions concerning the Sepulveda Transit Corridor Project. Our questions are based on community concerns from local organizations, residents, and businesses. Metro has implied that many answers will be forthcoming during the environmental analysis process. THIS IS NOT GOOD ENOUGH! In the past, SOHA has submitted many questions and Metro has never answered any of them. SOHA has also submitted many substantial comments which Metro has ignored. METRO CAN NO LONGER IGNORE THE PUBLIC! Metro has been totally silent or at best misleading with the public about many basic critical technical, route, financial, and other aspects of the five concepts. It appears that Metro prefers to give the public trivial levels of information, so the public is unable to ask tough questions that Metro is afraid to answer. THIS IS SIMPLY WRONG! The public needs real substantive information and rapid definitive answers to questions now – not in six months or a year or two years when it will be too late to do fix anything. SOHA is finished playing the game by Metro's rules – because these rules deny the public the influence and answers that they deserve. To these ends, SOHA demands that Metro provide substantive answers to our questions within one week. These are basic questions about how Metro is managing the project and Metro should have answers readily available. If they don't, shame on them. These are not questions that can be relegated to an appendix of an environmental or study report. These are questions that Metro should have already answered in public meetings – but chose not to answer. SOHA also demands that Metro notify us in writing within one day (by December 7th) whether they will be providing substantive responses to our questions or will not, and when we will receive the responses. Thank you. We look forward to hearing from you promptly.

Sepulveda Transit Corridor Project
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012
sepulvedatransit@metro.net

Subject: SOHA Critical Questions on the Sepulveda Transit Corridor Project

The Sherman Oaks Homeowners Association (SOHA) submits ten questions concerning the five concepts that Metro is currently evaluating for the Sepulveda Transit Corridor Project – the three Pre-Development Agreement (PDA) concepts and the two Metro-developed true subway concepts:

1 – LA SkyRail Express (LASRE) PDA Baseline Monorail along the 405 Freeway
2 – LA SkyRail Express Monorail PDA Alternative with underground UCLA section
3 – Bechtel Heavy Rail PDA Halfway (subway on Westside and in Pass but elevated in Valley)
4 – Metro Heavy Rail True Subway under Sepulveda Boulevard in Valley
5 – Metro Heavy Rail True Subway under Van Nuys Boulevard in Valley

Our questions are based on community concerns from local organizations, residents, and businesses. Metro has implied that many answers will be forthcoming during the environmental analysis process. THIS IS NOT GOOD ENOUGH! In the past, SOHA has submitted many questions and Metro has never answered any of them. SOHA has also submitted many substantial comments which Metro has ignored. METRO CAN NO LONGER IGNORE THE PUBLIC! Metro has been totally silent or at best misleading with the public about many basic critical technical, route, financial, and other aspects of the five concepts. It appears that Metro prefers to give the public trivial levels of information, so the public is unable to ask tough questions that Metro is afraid to answer. THIS IS SIMPLY WRONG! The public needs real substantive information and rapid definitive answers to questions now – not in six months or a year or two years when it will be too late to do fix anything. SOHA is finished playing the game by Metro's rules – because these rules deny the public the influence and answers that they deserve.

To these ends, SOHA demands that Metro provide substantive answers to our questions within one week. These are basic questions about how Metro is managing the project and Metro should have answers readily available. If they don't, shame on them. These are not questions that can be relegated to an appendix of an environmental or study report. These are questions that Metro should have already answered in public meetings – but chose not to answer.

SOHA also demands that Metro notify us in writing within one day (by December 7th) whether they will be providing substantive responses to our questions or will not, and when we will receive the responses.

Question 1 – Metro has stated that the overall PDA process will focus on refining and evolving concepts during environmental studies over the next several years. As noted in Metro's February and March 2021 presentations to the Metro Board and Executive Management Committee, the five concept designs will "… be refined based on technical study and public feedback through environmental/PDA Process." There will be "multiple off-ramps" for unsuccessful concepts. Metro's PDA process will allow concepts and their routes to evolve and even significantly change into better concepts based on engineering and environmental considerations – and, most importantly, PUBLIC INPUT. However, Metro has provided the public minimal and insubstantial insight into how or when this refinement and evolution will occur – and provided zero insight into the level of public involvement that can be expected. SOHA wonders why Metro has not championed their PDA process with the public and if Metro is truly committed to the PDA process or is it just window dressing.

How exactly will Metro's PDA process be used to refine and evolve the five currently selected concepts? How will the PDA process be conducted in concert with the Metro Environmental Process? How will Metro make the PDA process much more transparent to the public than prior Metro project feasibility studies? How will Metro better provide more PDA/environmental progress/decision information, more outreach, more substantial concept information, more timely study report publication, and more actual timely Metro responses to questions from the public?

Question 2 – Metro seems to be conducting two somewhat mutually exclusive sets of studies and analyses in parallel: (1) the five-phase Pre-Development Agreement (PDA) activities and (2) the project Environmental Studies Process. The PDA phases are listed below with each phase's duration, as defined in the PDA Request for Proposals (RFP).

- PDA Phase 1	Alternatives Refinement	9 months
- PDA Phase 2	Conceptual Engineering & Analysis	13 months
- PDA Phase 3	Completion of Conceptual Engineering to Support Locally Preferred Alternative Selection	9 months
- PDA Phase 4	Final Technical Concept	11 months
- PDA Phase 5	Project Implementation Proposal	10 months

The PDA activities begin with nine months of concept Alternatives Refinement. The environmental studies begin with a shorter, 30- to 45-day Scoping Study. Metro has only recently announced that the Public Scoping Period began in December 2021. The public has no idea how the PDA activities, especially the Alternatives Refinement, are related to and interact with the Environmental Studies. Metro has provided no information on this nor a detailed schedule of activities.

How are the PDA contract activities, including Alternatives Refinement, the Environmental Studies, and all other efforts related to selecting the Locally Preferred Alternative (LPA) interrelated and integrated with each other? What is the detailed schedule for all activities, including all public outreach/feedback efforts and deliverables?

Question 3 – The five concepts being evaluated have five different routes. The public was not involved in route selection and evaluation for any of these concepts. Metro developed these routes without public input and simply told the public what they were. Metro collected public comments after the fact and simply chose to put them in a log and ignore them.

How did Metro develop these routes? Why wasn't the public involved with development of the routes before they were selected? How many alternative routes were evaluated and what were they? Will the PDA contractors (LASRE and Bechtel) be reevaluating the routes for their concepts as part of the PDA Phase 1 Alternatives Refinement activities with true public involvement? Will Metro be reevaluating the routes for its own two subway concepts in parallel with the PDA Alternatives Refinement or during the Scoping Period for environmental Studies? How will the public be involved and engaged in route reevaluations, so their concerns will not simply be ignored?

Question 4 – Metro is considering use of a Public-Private Partnership (P3) to construct and operate the selected concept (called the Locally Preferred Alternative, LPA). Metro has provided zero information to the public on how a P3 would work and on which concepts it would be used or not used.
Will Metro use a P3 for each of the five concepts? If not, which concepts will not use a P3 and why? What are the P3 financial arrangements for the LASRE and Bechtel concepts? Does Metro have a backup plan to construct and operate the LPA should Metro be unable to execute a P3 agreement? If not, why not?

Question 5 – Metro is currently evaluating five concepts. Three of the concepts are being studied and refined under Pre-Development Agreements (PDAs) – the two LASRE monorail concepts and one ridiculous Bechtel "halfway" concept, a subway on the Westside and under the heavily populated hillside areas in Bel Air and Sherman Oaks with elevated heavy rail trains above Sepulveda Boulevard in Sherman Oaks and Van Nuys. The two remaining concepts are true subways that a Metro contractor developed through studies conducted over the last four years. SOHA has the redacted proposal documents for the three PDA concepts. These proposals contain information about the three PDA concepts that is at least an order of magnitude more detailed than the essentially trivial information that Metro has provided about its own true subway concepts. Much of the information about the Metro concepts is not as up to date as that for the PDA concepts and is often presented in a different form. For example, passenger capacity for the PDA concepts is presented as passengers per hour per direction (pphpd) while passenger capacity for the Metro concepts is presented as predicted daily ridership. It is impossible to compare one capacity to the other because Metro has not provided data for assumed boardings by hour during the day. As a second example, LASRE is proposing a two-minute headway (time between trains in each direction), while Bechtel is proposing an initial two-and-one-half-minute headway leading to an eventual one-and-one-half-minute headway. Metro seems to have proposed a five-minute headway for its two true subway concepts. These are very different and have direct impacts on passenger capacities. As exemplified, much of the Metro concept information is both outdated and not useful to the public.
How is Metro planning to update its own two true subway concepts? Does Metro plan to update the information on its own two concepts, the subway under Sepulveda Boulevard in the Valley and the subway under Van Nuys Boulevard in the Valley, and provide this updated information to the public, so the public can fairly compare the three PDA concepts to the two Metro concepts? Will Metro staff be updating the two true subway concepts, or will Metro relegate the updates to an outside contractor, such as HTA Partners who Metro already has under contract to perform the environmental review and conceptual engineering activities for the project? How and when will this detailed information be presented to the public? How will Metro update the public on progress of the updated true subway concepts, including route changes under the Santa Monica Mountains that would make the concepts more viable to the public? More simply put – what is going on?

Question 6 – When Metro decided to ask industry consortia to propose innovative concepts for the project using the Pre-Development Agreement (PDA) approach, Metro formally did this through a Request for Proposals (RFP). The RFP specified the exact work to be done by proposing industry consortia and requested information about the consortia, their concepts, their plans, their financial arrangements, and their costs. The consortia's proposed concepts have both positive and negative impacts on the communities they serve. However, Metro's procurement process was flawed because it did not specifically request that industry teams review Metro's publicly available comment/letter logs and address and alleviate noted community impacts in their proposals. In fact, Metro never bothered to ask the proposing consortia to provide potential community impacts or their possible mitigations, which is a fairly common practice in such procurements. Metro's evaluation process to select winning concepts was flawed because the Metro RFP did not include evaluation criteria for community impacts. This was an unconscionable slap in the face to communities negatively impacted by the project, such as Sherman Oaks and Bel Air, and broke any trust that communities might have with Metro. This flaw may also have led to erroneous evaluation and selection of the final PDA concepts.
Why did Metro not require proposing consortia to provide community impacts of their concepts? Why did Metro not evaluate the concepts' community impacts before making their PDA selections?

Question 7 – From the best information available from Metro reports and the redacted PDA proposals, the capital cost estimates for the five concepts seem to be (in billions of 2020 dollars):

LASRE Baseline Monorail along the 405 Freeway	$6.1
LASRE Monorail Alternative with underground UCLA section	$8.1
Bechtel Heavy Rail Westside Subway elevated in Valley	$10.8
Metro Heavy Rail Subway under Sepulveda Blvd in Valley	$13.6
Metro Heavy Rail Subway under Van Nuys Blvd in Valley	$13.4

The public needs to know the costs in order to understand the financial impacts of the concepts.
What are the current best cost estimates (in 2021 dollars) for each of the five concepts?

Question 8 – The Measure M estimated budget for the Sepulveda Transit corridor Project (STCP) is $2.837 billion (in 2015 dollars) for the Valley side and $2.837 billion for the Westside, for a total of $5.674 billion for the entire project. This includes Measure M funds plus local, state, federal, and other funding. Escalated to 2020 dollars, the budget is about $7 billion. Metro has not provided updated budget numbers to the public and needs to do this.
What is Metro's estimated available budget for the Valley-to-Westside portion (Phase II) of the Sepulveda Transit Corridor Project in 2021 dollars so the public can fairly compare the available budget to the estimated concept costs?

Question 9 – The LASRE Baseline Monorail PDA concept along the 405 (the one not running under the UCLA campus) appears to be the only concept affordable within the current Measure M budget.
Why is Metro wasting taxpayer dollars by evaluating unaffordable concepts like they did for the East San Fernando Valley Transit Corridor project? What is Metro's rationale for spending taxpayer dollars designing concepts that Metro cannot afford to build? How and why is this fiscally responsible? Why did Metro's Measure M include an unconscionably lowball cost estimate for the Sepulveda Transit Corridor Project – the most critical project to the County of Los Angeles?

Question 10 – With only one of five concepts appearing to be affordable within Metro's currently available budget, significant additional funding will be necessary to build any of the other four concepts – $8 billion or more for Metro's two most costly true subway concepts.
What additional sources of funding is Metro investigating to obtain this capital? What is the likelihood of securing each source? What is Metro's backup plan should no additional funding sources be available?

Thank you. SOHA is evaluating additional questions on the project and may submit them in the future.

If you need clarification, please contact me at BobHillsideOrdinance@gmail.com or (213) 364-7470

Reseda Neighborhood Council

The Reseda Neighborhood Council opposes plans 1-3 for the Sepulveda Transit Corridor. Plans 1-3 call for a monorail to serve this corridor. Monorails would mean introducing a new piece of technology rather than allowing for interchangeable technology that we currently have in light and heavy rail and would exacerbate maintenance issues and replaceability. The company proposing the monorail, BYD, has a history of overpromising and under delivering. Additionally, public transit stations along the 405 makes for a worse experience for the transit user. Stations would be highly polluted by car exhaust, noisy, and inaccessible for pedestrians. Lastly, building along the 405 is financially infeasible and hazardous to life. As experience with the gold line expansion in Pasadena shows, Caltrans now requires additional barriers at increased cost due to the high probability of a car crash directly interfering with highway aligned transit routes.

Options 4-6 are all heavy rail and include a direct stop at UCLA. A station directly at UCLA is crucial to the usability and benefit of the residents of the San Fernando Valley.

Subject: SOHA Critical Questions on the Sepulveda Transit Corridor Project
The Sherman Oak s Homeowners Association (SOHA) submits ten questions concerning the five concepts that Metro is currently evaluating for the Sepulveda Transit Corridor Project – the three Pre - Development Agreement (PDA) concepts and the two Metro - developed true subway concepts : 1 – LA SkyRail Express (LASRE) PDA Baseline Monorail along the 405 Freeway 2 – LA SkyRail Express Monorail PDA Alternative with underground UCLA section 3 – Bechtel Heavy Rail PDA Halfway (subway on Westside and in Pass but elevated in Valley) 4 – Metro Heavy Rail True Subway under Sepulveda Boulevard in Valley 5 – Metro Heavy Rail True Subway under Van Nuys Boulevard in Valley
Our questions are based on community concerns from local organizations, residents , and businesses. Metro has implied that many answers will be forthcoming during the environmental analysis pro cess. THIS IS NOT GOOD ENOUGH! In the past, SOHA has submitted many questions and Metro has never answered any of them. SOHA has also submitted many substantial comments which Metro has ignored. METRO CAN NO LONGER IGNORE THE PUBLIC! Metro has been totally silent or at best misleading with the public about many basic critical technical, route, financial, and other aspects of the five concepts. It appears that Metro prefers to give the public trivial levels of information, so the public is unable to ask tough questions that Metro is afraid to answer. THIS IS SIMPLY WRONG ! The public needs real substantive information and rapid definitive answers to questions now – not in six months or a year or two years when it will be too late to do fix anything . SOHA is finished playing the game by Metro's rules – because these rules deny the public the influence and answers that they deserve. To these ends, SOHA demands that Metro provide substantive answers to our questions within one week. These are basic questions about how Metro is managing the project and Metro should have answers readily available. If they don't, shame on them. These are not questions that can be relegated to an appendix of a n environmental or study report. These are questions that Metro should have already answered in public meetings – but chose not to answer. SOHA also demand s that Metro notify us in writing within one day (by December 7 th) whether they will be providing substantive responses to our questions or will not , and when we will receive the responses
Question 1 – Metro has stated that the overall PDA process will focus on refining and evolving concepts during environmental studies over the next several years. As noted in Metro's February and March 2021 presentation s to the Metro Board and Executive Management Committee, the five concept designs will "... be refined based on technical study and public feedback through environmental/PDA Process." There will be "multiple off - ramps" for unsuccessful concepts. Metro's PDA process will allow concepts and their routes to evolve and even significantly change into better concepts based on engineering and environmental considerations – and , most importantly, PUBLIC INPUT. However, Metro has provided the public minimal and insubstantial insight into how or when this refinement and evolution will occur – and provided zero insight into the level of public involvement that can be expected. SOHA wonders why Metro has not championed their PDA process with the public and if Metro is truly committed to the PDA process or is it just window dressing. How exactly will Metro's PDA process be used to refine and evolve the five currently selected concepts? How will the PDA process be conducted in concert with the Metro Environmental Process? How will Metro make the PDA process much more transparent to the public than prior Metro project feasibility studies ? How will Metro better provide more PDA/environmental progress / decision information, more outreach, more substantial concept

information, more timely study report publication, and more actual timely Metro responses to questions from the public?
Question 2 – Metro seems to be conducting two somewhat mutually exclusive sets of studies and analyses in parallel: (1) the five - phase Pre - Development Agreement (PDA) activities and (2) the project Environmental Studies Process. The PDA phases are listed below with each phase's duration, as defined in the PDA Request for Proposals (RFP). - PDA Phase 1 Alternatives Refinement 9 months - PDA Phase 2 Conceptual Engineering & Analysis 13 months - PDA Phase 3 Completion of Conceptual Engineering to Support 9 months Locally Preferred Alternative Selection - PDA Phase 4 Final Technical Concept 11 months - PDA Phase 5 Project Implementation Proposal 10 months The PDA activities begin with nine months of concept Alternatives Refinement. The environmental studies begin with a shorter, 30 - to 45 - day Scoping Study. Metro has only recently announced that the Public Scoping Period began in December 2021. The public has no idea how the PDA activities, especially the Alternatives Refinement, are related to and interact with the Environmental Studies . Metro has provided no information on this nor a detailed schedule of activities. How are the PDA contract activities, including Alternatives Refinement, the Environmental Studies, and all other efforts related to selecting the Locally Preferred Alternative (LPA) interrelate d and integrate d with each other? What is the detailed schedule for all activities, including all public outreach/feedback efforts and deliverables?
Question 3 – The five concepts being evaluated have five different routes. The public was not involved in route selection and evaluation for any of these concepts . Metro developed these routes without public input and simply told the public what they were. Metro collected public comments after the fact and simply chose to put them in a log and ignore them . How did Metro develop these routes? Why wasn't the public involved with development of the routes before they were selected? How many alternative routes were evaluated an d what were they? Will the PDA contractors (LASRE and Bechtel) be reevaluating the routes for their concepts as part of the PDA Phase 1 Alternatives Refinement activities with true public involvement? Will Metro be reevaluating the routes for its own two subway concepts in parallel with the PDA Alternatives Refinement or during the Scoping Period for environmental Studies? How will the public be involved and engaged in route reevaluations, so their concerns will not simply be ignored?
Question 4 – Metro is considering use of a Public - Private Partnership (P3) to construct and operate the selected concept (called the Locally Preferred Alternative, LPA). Metro has provided zero information to the public on how a P3 would work and on which concepts it would be u sed or not used . Will Metro use a P3 for each of the five concepts? If not, which concepts will not use a P3 and why? What are the P3 financial arrangements for the LASRE and Bechtel concepts? Does Metro have a backup plan to construct and operate the LPA should Metro be unable to execute a P3 agreement? If not, why not?
Question 5 – Metro is currently evaluating five concepts. Three of the concepts are being studied and refined under Pre - Development Agreements (PDAs) – the two LASRE monorail concepts and one ridiculous Bechtel "halfway" concept , a subway on the Westside and under the heavily populated hillside areas in Bel Air and Sherman Oaks with elevated heavy rail trains above Sepulveda Boulevard in Sherman Oaks and Van Nuys. The two remaining concepts ar e true subways that a Metro contractor developed through studies conducted over the last four years. SOHA has the redacted proposal documents for the three PDA concepts. These proposals contain information about the three PDA concepts that is at least an order of magnitude more detailed than the essentially trivial information that Metro has provided about its own true subway concepts. Much of the information about the Metro concepts is not as up to date as that for the PDA concepts and is often presented i n a different form . F or example, passenger capacity for the PDA concepts is presented as passengers per hour per direction (pphpd) while passenger capacity for the Metro

concepts is presented as predicted daily ridership. It is impossible to compare one capacity to the other because Metro has not provided data for assumed boardings by hour during the day. As a second example, LASRE is proposing a two - minute headway (time between trains in each direction), while Bechtel is proposing an initial two - and - one - ha lf - minute headway leading to an eventual one - and - one - half - minute headway . Metro seems to have proposed a five - minute headway for its two true subway concepts. These are very different and have direct impacts on passenger capacities. As exemplified , much of the Metro concept information is both outdated and not useful to the public. How is Metro planning to update its own two true subway concepts? Does Metro plan to update the information on its own two concepts, the subway under Sepulveda Boulevard in the Valley and the subway under Van Nuys Boulevard in the Valley, and provide this updated information to the public, so the public can fairly compare the three PDA concepts to the two Metro concepts? Will Metro staff be updating the two true subway concepts, or will Metro relegate the updates to an outside contractor, such as HTA Partners who Metro already has under contract to perform the environmental review and conceptual engineering activities for the project ? How and when will this detailed information b e presented to the public? How will Metro update the public on progress of the updated true subway concepts, including route changes under the Santa Monica Mountains that would make the concepts more viable to the public? More simply put – what is going on?

Question 6 – When Metro decided to ask industry consortia to propose innovative concepts for the project using the Pre - Development Agreement (PDA) approach, Metro formally did this through a Request for Proposals (RFP). The RFP specified the exact work to be done by proposing industry consortia and requested information about the consortia, their concept s , their plan s , their financial arrangements, and their cost s . The consortia's proposed concepts have both positive and negative impacts on the communities they serve . However, Metro's procurement process was flawed because it did not specifically request that industry teams review Metro's publicly available comment /letter logs and address and alleviate noted community imp acts in their proposals . In fact, Metro never bothered to ask the proposing consortia to provide potential community impacts or their possible mitigations , which is a fairly common practice in such procurements . Metro's evaluation process to select winning concepts was flawed because the Metro RFP did not include evaluation criteria for community impacts. This was an unconscionable slap in the face to communities negatively impacted by the project , such as Sherman Oaks and Bel Air, and broke any trust that communities might have with Metro . This flaw may also have led to erroneous evaluation and selection of the final PDA concepts. Why did Metro not require proposing consortia to provide community impacts of their concepts ? Why did Metro not evaluate the concepts' community impacts before making their PDA selections?

Question 7 – From the best information available from Metro reports and the redacted PDA proposals, the capital cost estimates for the five concepts seem to be (in billions of 2020 dollars) : LASR E Baseline Monorail along the 405 Freeway $6.1 LASRE Monorail Alternative with underground UCLA section $8.1 Bechtel Heavy Rail Westside Subway elevated in Valley $10.8 Metro Heavy Rail Subway under Sepulveda Blvd in Valley $13.6 Metro Heavy Rail Subway under Van Nuys Blvd in Valley $13.4 The public needs to know the costs in order to understand the financial impacts of the concepts . What are the current best cost estimates (in 2021 dollars) for each of the five concepts? Question 8 – The Measure M estimated budget for the Sepulveda Transit corridor Project (STCP) is $2.837 billion (in 2015 dollars) for the Valley side and $2.837 billion for the Westside, for a total of $5.674 billion for the entire project. This includes Measure M funds plus local, state, federal, and other funding. Escalated to 2020 dollars, the budget is about $7 billion . Metro has not provided updated budget numbers to the public and needs to do this . What is Metro's estimated available budget for the Valley - to - Westside portion (Phase II) of the

Sepulveda Transit Corridor Project in 2021 dollars so the public can fairly compare the available budget to the estimated concept costs? Question 9 – The LASRE Baseline Monorail PDA concept along the 405 (the one not running under the UCLA campus) appears to be the only concept affordable within the current Measure M budget. Why is Metro wasting taxpayer dollars by evaluating unaffordable concepts like they did for the East San Fernando Valley Transit Corridor project ? What is Metro's ration ale for spending taxpayer dollars designing concepts that Metro cannot afford to build? How and why is this fiscally responsible? Why did Metro's Measure M include an unconscionably lowball cost estimate for the Sepulveda Transit Corridor Project – the most critical project to the County of Los Angeles? Question 10 – With only one of five concepts appearing to be affordable within Metro's currently available budget, significant additional funding will be necessary to build any of the other four concepts – $ 8 billion or more for Metro's two most costly true subway concepts. What additional sources of funding is Metro investigating to obtain this capital? What is the likelihood of securing each source ? What is Metro's backup plan should no additional funding sources be available? Thank you. SOHA is evaluating additional questions on the project and may submit them in the future. Subject: SOHA Critical Questions on the Sepulveda Transit Corridor Project

The Sherman Oaks Homeowners Association (SOHA) submits ten questions concerning the five concepts that Metro is currently evaluating for the Sepulveda Transit Corridor Project – the three Pre-Development Agreement (PDA) concepts and the two Metro-developed true subway concepts:

1 – LA SkyRail Express (LASRE) PDA Baseline Monorail along the 405 Freeway
2 – LA SkyRail Express Monorail PDA Alternative with underground UCLA section
3 – Bechtel Heavy Rail PDA Halfway (subway on Westside and in Pass but elevated in Valley)
4 – Metro Heavy Rail True Subway under Sepulveda Boulevard in Valley
5 – Metro Heavy Rail True Subway under Van Nuys Boulevard in Valley

Our questions are based on community concerns from local organizations, residents, and businesses. Metro has implied that many answers will be forthcoming during the environmental analysis process. THIS IS NOT GOOD ENOUGH! In the past, SOHA has submitted many questions and Metro has never answered any of them. SOHA has also submitted many substantial comments which Metro has ignored. METRO CAN NO LONGER IGNORE THE PUBLIC! Metro has been totally silent or at best misleading with the public about many basic critical technical, route, financial, and other aspects of the five concepts. It appears that Metro prefers to give the public trivial levels of information, so the public is unable to ask tough questions that Metro is afraid to answer. THIS IS SIMPLY WRONG! The public needs real substantive information and rapid definitive answers to questions now – not in six months or a year or two years when it will be too late to do fix anything. SOHA is finished playing the game by Metro's rules – because these rules deny the public the influence and answers that they deserve.

To these ends, SOHA demands that Metro provide substantive answers to our questions within one week. These are basic questions about how Metro is managing the project and Metro should have answers readily available. If they don't, shame on them. These are not questions that can be relegated to an appendix of an environmental or study report. These are questions that Metro should have already answered in public meetings – but chose not to answer.

SOHA also demands that Metro notify us in writing within one day (by December 7th) whether they will be providing substantive responses to our questions or will not, and when we will receive the responses.

Question 1 – Metro has stated that the overall PDA process will focus on refining and evolving concepts during environmental studies over the next several years. As noted in Metro's February and March 2021 presentations to the Metro Board and Executive Management Committee, the five concept designs will "… be refined based on technical study and public feedback through environmental/PDA Process." There will be "multiple off-ramps" for unsuccessful concepts. Metro's PDA process will allow concepts and their routes to evolve and even significantly change into better concepts based on engineering and environmental considerations – and, most importantly, PUBLIC INPUT. However, Metro has provided the public minimal and insubstantial insight into how or when this refinement and evolution will occur – and provided zero insight into the level of public involvement that can be expected. SOHA wonders why Metro has not championed their PDA process with the public and if Metro is truly committed to the PDA process or is it just window dressing.

How exactly will Metro's PDA process be used to refine and evolve the five currently selected concepts? How will the PDA process be conducted in concert with the Metro Environmental Process? How will Metro make the PDA process much more transparent to the public than prior Metro project feasibility studies? How will Metro better provide more PDA/environmental progress/decision information, more outreach, more substantial concept information, more timely study report publication, and more actual timely Metro responses to questions from the public?

Question 2 – Metro seems to be conducting two somewhat mutually exclusive sets of studies and analyses in parallel: (1) the five-phase Pre-Development Agreement (PDA) activities and (2) the project Environmental Studies Process. The PDA phases are listed below with each phase's duration, as defined in the PDA Request for Proposals (RFP).

- PDA Phase 1	Alternatives Refinement	9 months
- PDA Phase 2	Conceptual Engineering & Analysis	13 months
- PDA Phase 3	Completion of Conceptual Engineering to Support Locally Preferred Alternative Selection	9 months
- PDA Phase 4	Final Technical Concept	11 months
- PDA Phase 5	Project Implementation Proposal	10 months

The PDA activities begin with nine months of concept Alternatives Refinement. The environmental studies begin with a shorter, 30- to 45-day Scoping Study. Metro has only recently announced that the Public Scoping Period began in December 2021. The public has no idea how the PDA activities, especially the Alternatives Refinement, are related to and interact with the Environmental Studies. Metro has provided no information on this nor a detailed schedule of activities.

How are the PDA contract activities, including Alternatives Refinement, the Environmental Studies, and all other efforts related to selecting the Locally Preferred Alternative (LPA) interrelated and integrated with each other? What is the detailed schedule for all activities, including all public outreach/feedback efforts and deliverables?

Question 3 – The five concepts being evaluated have five different routes. The public was not involved in route selection and evaluation for any of these concepts. Metro developed these routes without public input and simply told the public what they were. Metro collected public comments after the fact and simply chose to put them in a log and ignore them.

How did Metro develop these routes? Why wasn't the public involved with development of the routes before they were selected? How many alternative routes were evaluated and what were they? Will the PDA contractors (LASRE and Bechtel) be reevaluating the routes for their concepts as part of the PDA Phase 1 Alternatives Refinement activities with true public involvement? Will Metro be reevaluating the routes for its own two subway concepts in parallel with the PDA Alternatives Refinement or during the Scoping Period for environmental Studies? How will the public be involved and engaged in route reevaluations, so their concerns will not simply be ignored?

Question 4 – Metro is considering use of a Public-Private Partnership (P3) to construct and operate the selected concept (called the Locally Preferred Alternative, LPA). Metro has provided zero information to the public on how a P3 would work and on which concepts it would be used or not used.
Will Metro use a P3 for each of the five concepts? If not, which concepts will not use a P3 and why? What are the P3 financial arrangements for the LASRE and Bechtel concepts? Does Metro have a backup plan to construct and operate the LPA should Metro be unable to execute a P3 agreement? If not, why not?

Question 5 – Metro is currently evaluating five concepts. Three of the concepts are being studied and refined under Pre-Development Agreements (PDAs) – the two LASRE monorail concepts and one ridiculous Bechtel "halfway" concept, a subway on the Westside and under the heavily populated hillside areas in Bel Air and Sherman Oaks with elevated heavy rail trains above Sepulveda Boulevard in Sherman Oaks and Van Nuys. The two remaining concepts are true subways that a Metro contractor developed through studies conducted over the last four years. SOHA has the redacted proposal documents for the three PDA concepts. These proposals contain information about the three PDA concepts that is at least an order of magnitude more detailed than the essentially trivial information that Metro has provided about its own true subway concepts. Much of the information about the Metro concepts is not as up to date as that for the PDA concepts and is often presented in a different form. For example, passenger capacity for the PDA concepts is presented as passengers per hour per direction (pphpd) while passenger capacity for the Metro concepts is presented as predicted daily ridership. It is impossible to compare one capacity to the other because Metro has not provided data for assumed boardings by hour during the day. As a second example, LASRE is proposing a two-minute headway (time between trains in each direction), while Bechtel is proposing an initial two-and-one-half-minute headway leading to an eventual one-and-one-half-minute headway. Metro seems to have proposed a five-minute headway for its two true subway concepts. These are very different and have direct impacts on passenger capacities. As exemplified, much of the Metro concept information is both outdated and not useful to the public.
How is Metro planning to update its own two true subway concepts? Does Metro plan to update the information on its own two concepts, the subway under Sepulveda Boulevard in the Valley and the subway under Van Nuys Boulevard in the Valley, and provide this updated information to the public, so the public can fairly compare the three PDA concepts to the two Metro concepts? Will Metro staff be updating the two true subway concepts, or will Metro relegate the updates to an outside contractor, such as HTA Partners who Metro already has under contract to perform the environmental review and conceptual engineering activities for the project? How and when will this detailed information be presented to the public? How will Metro update the public on progress of the updated true subway concepts, including route changes under the Santa Monica Mountains that would make the concepts more viable to the public? More simply put – what is going on?

Question 6 – When Metro decided to ask industry consortia to propose innovative concepts for the project using the Pre-Development Agreement (PDA) approach, Metro formally did this through a Request for Proposals (RFP). The RFP specified the exact work to be done by proposing industry consortia and requested information about the consortia, their concepts, their plans, their financial arrangements, and their costs. The consortia's proposed concepts have both positive and negative impacts on the communities they serve. However, Metro's procurement process was flawed because it did not specifically request that industry teams review Metro's publicly available comment/letter logs and address and alleviate noted community impacts in their proposals. In fact, Metro never bothered to ask the proposing consortia to provide potential community impacts or their possible mitigations, which is a fairly common practice in such procurements. Metro's evaluation process to select winning concepts was flawed because the Metro RFP did not include evaluation criteria for community impacts. This was an unconscionable slap in the face to communities negatively impacted by the project, such as Sherman Oaks and Bel Air, and broke any trust that communities might have with Metro. This flaw may also have led to erroneous evaluation and selection of the final PDA concepts.
Why did Metro not require proposing consortia to provide community impacts of their concepts? Why did Metro not evaluate the concepts' community impacts before making their PDA selections?

Question 7 – From the best information available from Metro reports and the redacted PDA proposals, the capital cost estimates for the five concepts seem to be (in billions of 2020 dollars):

LASRE Baseline Monorail along the 405 Freeway	$6.1
LASRE Monorail Alternative with underground UCLA section	$8.1
Bechtel Heavy Rail Westside Subway elevated in Valley	$10.8
Metro Heavy Rail Subway under Sepulveda Blvd in Valley	$13.6
Metro Heavy Rail Subway under Van Nuys Blvd in Valley	$13.4

The public needs to know the costs in order to understand the financial impacts of the concepts.
What are the current best cost estimates (in 2021 dollars) for each of the five concepts?

Question 8 – The Measure M estimated budget for the Sepulveda Transit corridor Project (STCP) is $2.837 billion (in 2015 dollars) for the Valley side and $2.837 billion for the Westside, for a total of $5.674 billion for the entire project. This includes Measure M funds plus local, state, federal, and other funding. Escalated to 2020 dollars, the budget is about $7 billion. Metro has not provided updated budget numbers to the public and needs to do this.
What is Metro's estimated available budget for the Valley-to-Westside portion (Phase II) of the Sepulveda Transit Corridor Project in 2021 dollars so the public can fairly compare the available budget to the estimated concept costs?

Question 9 – The LASRE Baseline Monorail PDA concept along the 405 (the one not running under the UCLA campus) appears to be the only concept affordable within the current Measure M budget.
Why is Metro wasting taxpayer dollars by evaluating unaffordable concepts like they did for the East San Fernando Valley Transit Corridor project? What is Metro's rationale for spending taxpayer dollars designing concepts that Metro cannot afford to build? How and why is this fiscally responsible? Why did Metro's Measure M include an unconscionably lowball cost estimate for the Sepulveda Transit Corridor Project – the most critical project to the County of Los Angeles?

Question 10 – With only one of five concepts appearing to be affordable within Metro's currently available budget, significant additional funding will be necessary to build any of the other four concepts – $8 billion or more for Metro's two most costly true subway concepts.
What additional sources of funding is Metro investigating to obtain this capital? What is the likelihood of securing each source? What is Metro's backup plan should no additional funding sources be available?

Thank you. SOHA is evaluating additional questions on the project and may submit them in the future.

If you need clarification, please contact me at BobHillsideOrdinance@gmail.com or (213) 364-7470

Re: Sepulveda Transit Corridor Support for Alternative 6

On July 28, 2021 the Encino Neighborhood Council passed a motion by a vote of 20 yes, 0 no, 0 abstentions regarding Sepulveda Transit Corridor Options, clearly stating its support for the following alternative, which is currently Alternative 6: **Heavy Rail that is underground inline with Van Nuys Blvd carrying the maximum number of riders that would be a straight line from the East Valley Transit Center in Sylmar riding light rail down Van Nuys Blvd, which is already approved, then traveling heavy rail under the Santa Monica Mountains to the Westwood Station already being built.**

Thank you for your consideration.

Patricia Bates
President
Encino Neighborhood Council
President@encinonc.org

cc:
Laurie Kelson, Encino NC Transportation Chair pkelsondds@aol.com
CD 4 Deputy Kevin Sanchez-Morales kevin.sanchez-morales@lacity.org

Kindly note that the original motion referred to and supported Alternative 5. Under the current alternatives, Alternative 6 is identical to the original Alternative 5, and therefore, the resolution is modified accordingly.

WESTWOOD VILLAGE

January 19, 2022

To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project;

I am writing to you on behalf of the Westwood Village Improvement Association (WVIA). The WVIA is contracted by the City of Los Angeles to represent our community of over 2,300 unique businesses, and to administer benefits to the Westwood Business Improvement District.

After considerable review, the WVIA Board of Directors has determined that the Sepulveda Transit Corridor Project be underground, include a stop at the UCLA campus and also include direct connectivity to the Purple Line Extension. The position of the WVIA aligns with heavy-rail alternatives 5 and 6 and we strongly encourage the LA Metro Board of Directors to approve only these solutions that can best address Metro's goals of improving mobility, accessibility, equity, and sustainability while providing the best solutions to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region, and the Westwood Business Improvement District.

Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 82,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail.

A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day

from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region.

As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. Alternative 4 includes an aerial alignment that is not only aesthetically undesirable but will also significantly devalue adjacent properties. Alternatives 1, 2, 3, and 4 might be less expensive, but is it worth investing any money at all in a system that won't achieve its goals?

The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, 3, and 4.

Sincerely,

Andrew Thomas

Please see the attached public comment regarding the Sepulveda Transit Corridor Project.

LEAGUE OF WOMEN VOTERS® OF LOS ANGELES COUNTY

Dear Members of the Los Angeles Metro Board,

The League of Women Voters of Los Angeles County strongly supports connecting the San Fernando Valley and the Westside with a new rail line. LWV California Transportation Policy supports transit that lowers VMT, is efficient, convenient, and cost effective; is safe and secure; serves all segments of the population and diverse geographic needs; minimizes harmful effects on the environment; and is integrated with land use.

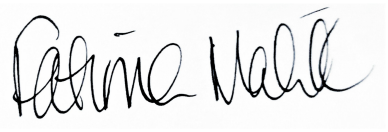
In selecting among options for this project, we urge Metro to prioritize the following criteria:

- Easy connections to the Purple and Expo lines.
- A stop at UCLA, the most popular destination on the Westside
- No stops on freeways as in alternatives #1, #2, #3
    - Freeway stops do not directly connect to communities or destinations
    - Freeway boarding platforms expose riders to unsafe levels of noise and pollution
- Compatible with existing rail stock
    - Metro already runs light and heavy rail. It would be unnecessarily expensive and complicated to run a third type of rail car
- Minimize disruptions to local communities

We believe that out of the six alternatives mentioned in The Source blog of November 30, 2021, #4, #5 and #6 conform to these criteria.

We ask that you only consider alternatives #4, #5 and #6 going forward.

Thank you,



Fatima Malik

President

League of Women Voters of Los Angeles County

The Sherman Oaks Homeowners Association submits our positions, comments, and questions on Metro's environmental process and the six Sepulveda Transit Corridor Project alternatives.
Metro is Running this Project Like a Fiscally and Morally Irresponsible Schoolyard Bully. The evidence is clear. It's time for our elected officials and the public to step up and stop this out-of-control bully from destroying our Sherman Oaks community and this project.
Metro – Meet with Sherman Oaks Community Leaders to Resolve our Concerns. Prove we're wrong! Not a "meet & greet" or public meeting. A working meeting between equals. We hope to hear from you.
Metro Public Scoping Meetings Were a Sham and Withheld Vital Information! Metro's scoping meetings provided trivial information about the project's six alternatives. No route details. Useless cartoon maps. No technical details. No tunneling impacts. No train noise information. No hints on station parking. No cost or affordability considerations. No schedules. No public-private partnership facts. The public cannot make meaningful comments based on trivial information. Trivial information ensures that public comments are trivial and ignorable. Metro is being unfair and irresponsible. Tragically, Metro's lack of information has also fostered the spread of misinformation. The public is uninformed and confused.
Metro Never Answers Questions! On December 6 , SOHA sent ten basic questions to Metro and asked for answers (Reference 1). Answers to help us and our members submit better informed comments. Metro did not have the professionalism or courtesy to respond. Why is Metro afraid to answer questions?
Metro's Environmental Review Process Is a Sham that Trivializes Public Input and Makes Back-Room Decisions! Metro stops accepting public comments on February 11 . They don't accept further public comments until the Draft Environmental Impact Report (DEIR) is complete in a couple of years. Metro promises to keep the public updated but there are no public meetings until the DEIR is complete. The public comments on the DEIR and then Metro selects the Locally Preferred Alternative (LPA) for construction. "Locally Preferred" makes it sound like the public was involved. They weren't.
SOHA Will Continue to Make Comments and Ask Tough Questions! We will not buy into this shameful process. SOHA will continue to submit comments and ask questions well after February 11 . We want Metro to schedule interim public meetings and inform the public how each alternative is evolving during environmental studies. We plan to hold our own public meetings to keep communities informed. We will encourage the public to submit comments. We expect Metro to respond clearly and truthfully.
SOHA Cannot Yet Support Any of Metro's Six Alternatives Because All Have Flaws! Some flaws are minor and fixable. Some are major and not fixable. SOHA studied every Metro document referenced in this letter (2,800+ pages) to learn what was going on because Metro has kept the public in the dark.
SOHA Adamantly OPPOSES Alternative 4 with Elevated Trains in the Valley! This alternative is subway under the Westside and Sepulveda Pass but elevated heavy rail trains above Sepulveda Blvd in the Valley. This is irresponsible. Why decimate the wellbeing of Valley residents and businesses by studying noisy elevated trains. It is an abomination that will destroy our community. Stop Alternative 4 now!
SOHA Has Positions on All Six Alternatives. Our positions are shown in the table. We based them on three criteria: technical acceptability, financial affordability, and schedule reasonableness. We

cannot support any alternative that does not fulfill all three criteria. The world's greatest alternative cannot be acceptable if it is unaffordable and can't be built on a reasonable schedule.
ALTERNATIVE 1 -- Driverless Monorail along 405 with Electric Bus Connection to UCLAACCEPTABLE – ONLY IF route realigned to 405 median (versus east shoulder) in Valley AFFORDABLE – Probably buildable with currently available Metro budget SHORTEST SCHEDULE – Quickest to build with no tunneling
ALTERNATIVE 2 – Driverless Monorail along 405 with Automated People Mover Connection to UCLA ACCEPTABLE – ONLY IF route realigned to 405 median (versus east shoulder) in Valley ALMOST AFFORDABLE – Almost buildable with currently available Metro budget SHORTEST SCHEDULE – Quickest to build with no tunneling
ALTERNATIVE 3 – Driverless Monorail along 405 with Tunnel Under UCLA ACCEPTABLE – ONLY IF route realigned to 405 median in Valley AND IF no tunneling under Bel Air UNAFFORDABLE – At least $2 billion more than currently available Metro budget LONGER SCHEDULE – Three-mile tunnel under UCLA adds at least two years
ALTERNATIVE 4 – Driverless Subway under Westside and Pass; Elevated above Sepulveda in Valley UNACCEPTABLE – Ridiculous elevated heavy rail trains in Valley – TERMINATE STUDYING THIS NOW! UNAFFORDABLE – At least $5 billion more than currently available Metro budget LONGER SCHEDULE – Nine-mile tunnel under Westside/Sepulveda Pass adds at least four years
ALTERNATIVE 5 – Driverless Subway under Westside, Pass, and Sepulveda Blvd in Valley ACCEPTABLE – ONLY IF route realigned under 405 freeway through Sepulveda Pass UNAFFORDABLE – At least $9 billion more than currently available Metro budget LONGEST SCHEDULE – Fourteen-mile tunnel adds at least five years
ALTERNATIVE 6 – Driver-Operated Subway under Westside, Pass, and Van Nuys Blvd in Valley ACCEPTABLE – ONLY IF modern automated technology AND IF route better under Beverly Glen near Sunset UNAFFORDABLE – Almost $9 billion more than currently available Metro budget LONGEST SCHEDULE – Thirteen-mile tunnel adds at least five years
No Alternative Is Technically Acceptable Yet. Although the monorail and heavy rail technologies are fully viable, no alternative fulfills all basic requirements such as route alignment equity and minimal community impacts. All current alternatives need at least one flaw corrected to be technically acceptable, except Alternative 4 which can never be acceptable.
Alternative 1, 2, and 3 are flawed because their monorails run on the east shoulder of the 405 in the Valley. They must be relocated to the median to minimize community impacts. Alternative 5 is flawed because it tunnels under the Sherman Oaks and Bel Air communities with potentially serious impacts. The route must be relocated under the 405 freeway. Alternative 6 is flawed because it uses old-fashioned driver-operated heavy rail trains. It must use the same modern driverless trains as the other heavy rail alternatives. It's also being designed by the same contractor that will supposedly independently study its environmental impacts.
Alternative 4 with Elevated Trains in the Valley is an Abomination and Not Acceptable. This flawed alternative can never be technically acceptable. Stop wasting public money studying it. If Metro had responsibly listened to Valley communities, this alternative would have been terminated years ago. Stop it now! Alternative 4 Is a Desperate Metro Ploy to Cut Costs and Still Get a Subway on the Westside.
Alternative 4 causes massive and unnecessary eminent domain on Sepulveda Blvd south of Ventura Blvd. The Metro rendering shown was posted at the June 2019 public meetings, yet Metro stated they had not yet thought about eminent domain. Alternative 4 will destroy our Sherman Oaks community from Valley Vista Blvd to Oxnard St. Its only purpose is to lower cost enough to have subway on the Westside and under the Pass, even though the Valley get screwed with elevated

trains. Metro's continued consideration of Alternative 4 illustrates their disdain for the Valley. The Valley currently has only two Metro heavy rail stations but almost 20 percent of LA County's population. None of this is fair!

Few Alternatives Are Financially Affordable Because Metro Lowballed Measure M Cost Estimates to Entice Voters. Measure M funds all Metro projects. Had it not passed in 2016, the Sepulveda Transit Project would not exist. Measure M did pass, but its cost estimates were woefully low – less than half what were really needed. Because Metro low-balled the estimates, only one or two of Metro's Sepulveda Pass alternatives are now affordable. This is a pretty stupid place to be at this point in such an important project.

Measure M Budget for Sepulveda Transit Corridor Project is about $6.9 Billion in 2022 dollars. We escalated the official Measure M 2015 budget, which includes federal, state, county, and city funds.

Project Affordability Worsened by Major Flaw in Metro Capacity Analysis. Many won't remember, but when Metro began the Sepulveda Transit project in 2018, none of the routes went north to the Van Nuys MetroLink station in the Valley. Many routes stopped at the OrangeLine (GLine) at Oxnard St (Reference 17). Then at Metro's January 2019 public meetings, Metro explained that they made a serious mistake in their passenger capacity analysis. Now the project route had to be one to two miles longer than originally planned (Reference 16). Metro also didn't explain that the project's Measure M budget cannot increase, and that Metro's flawed analysis instantly made this critical project much less affordable.

Additional Metro Funding Will Be Hard to Get! There are many rumors about other available funding. Metro recently requested $10 billion from the California budget surplus for ten rapid transit projects. Sadly, the highest priority projects seem to be the West Santa Ana Transit Corridor and the Purple Line (D Line) Extension along Wilshire Blvd. We hear rumors that the Sepulveda Transit Corridor Project is far down on Metro's priority list. The Sepulveda Pass project might get an additional $0.5 billion from the state. Metro is also hoping for funds from the new federal Infrastructure Bill. However, the total funding available for rapid transit across all of California is only $9 billion. The Sepulveda Pass project might get $0.5 billion.

Sepulveda Pass Project Funding Might Be At Most $7.9 Billion with Luck! Metro might be able to get an extra $1 billion in funding for the Sepulveda Pass project, bringing the total budget to $7.9 billion.

Metro Purposely Suppressed Costs for the Six Alternatives at its Public Scoping Meetings. Metro provided cost estimates at their July 2019 public meetings (Reference 15). Metro's contractors provided further cost estimates in their 2019 proposals (References 5 and 6). The table shows Metro's cost estimates for the six alternatives inflated to 2022 dollars. Five alternatives exceed the currently available $6.9 billion budget. Four exceed the potentially available maximum $7.9 billion budget. Where's the extra funding coming from to build the unaffordable alternatives? Why is Metro wasting taxpayer dollars studying alternatives that they can't afford to build? It appears that Metro has abrogated its fiscal responsibility by continuing to study unaffordable concepts.

Currently Available Measure M Budget for Sepulveda Transit Corridor Project is $6.9 billion Budget with Potential Federal and CA Supplements Might Reach at Most $7.9 billion ($2022) Alternative Description Alternative 1 – Monorail on 405 (UCLA Electric Buses**) Alternative 2 – Monorail on 405 (UCLA People Mover**) Alternative 3 – Monorail on 405 and under UCLA Alternative 4 – Elevated Heavy Rail in Valley Alternative 5 – Heavy Rail Subway under Sepulveda Blvd Alternative 6 – Heavy Rail Subway under Van Nuys Blvd Cost* ($2022 billion) $6.9, $7.0, $8.9 $12.1 $15.9 $15.5 Affordability Affordable Almost Affordable Unaffordable Very Unaffordable Grossly Unaffordable Grossly Unaffordable * Costs escalated using US Bureau of Labor Statistics PPI Construction Index for Los Angeles County ** Added $15 million for UCLA electric buses and $100 million for UCLA automated people mover

Affordability Concerns Favor the Alternative 1 or 2 Monorails. These monorail alternatives simply have the best chance of being built with today's available funding. The Alternative 5 or 6 subways cost more than twice as much as Metro has available. They might be made technically acceptable but are still grossly unaffordable. Unless Metro can convince us that Alternatives 5 and 6 can be made affordable, SOHA cannot support them – although we really like the Alternative 6 route under Van Nuys Blvd.

Why Won't Metro Tell Us If a Public-Private Partnership Will Solve Metro's Affordability Crisis? Metro has stated that they may build the Locally Preferred Alternative using a public-private partnership (PPP). They imply that the PPP is more affordable. This is fantastic! If a PPP can turn an unaffordable alternative into an affordable one, Metro should be telling the world about it. But Metro never presented any information at all on their PPP approach at the public scoping meetings. SOHA asked Metro a question about using PPPs (Reference 1). Metro never responded. Has Metro dismissed PPPs?

Lack of Schedule Reasonableness Makes Many Alternatives Less Attractive. If an alternative takes too many years to build, it is less attractive. Metro has proven it cannot build anything on schedule and that makes it worse. Schedule delays increase costs. Alternatives with shorter, more reasonable schedules are more attractive. Schedule reasonableness must be a bottom-line criterion for supporting an alternative. This makes any alternative with tunneling less attractive because tunneling takes a long time.

SOHA has a history of challenging projects that damage our community and helping to fix, improve, or stop them. An example is the Deervale Park project which began as a huge housing development on a dangerously steep site. We got the city to purchase the site and make it a public park and wildlife preserve. Another example is the Sunkist project where SOHA worked with the developer's design team to improve the proposed building layout, parking plan, and public view of the existing structure. SOHA will take whatever actions are necessary and these can significantly delay project schedule.

Litigation is also a schedule consideration. Some organizations have already threatened litigation against certain of the Metro alternatives. While litigation might not stop an alternative from being built, it can certainly significantly delay construction – possibly a decade or more. Metro's irresponsibility and lack of cooperation with the public could easily result in lengthy litigation.

SOHA DETAILED INFORMATION AND POSITIONS FOR EACH ALTERNATIVE

ALTERNATIVE 1 – Monorail along 405 with Electric Bus Connection to UCLA Being designed by LA SkyRail Express (Metro contractor). Technical Acceptability Route – 15.3 miles along 405 but route is along 405 east shoulder in Valley. Only acceptable if route realigned above 405 median in Valley to minimize community impacts. Technology – Monorail train with six cars per train and automated operation. Train every two minutes during peak periods. Capacity – Highest peak capacity: 14,040 passengers per hour per direction (pphpd). Future potential up to 18,780 pphpd using eight cars per train. Noise – Rubber tires on concrete guideway for very low noise level. Stations – Eight aerial stations with four in Valley – Ventura Blvd, Orange Line (Oxnard St), Sherman Way, and Van Nuys MetroLink. Ventura Blvd station location not known and could require eminent domain. UCLA Connection – 1.4-mile electric bus connection is lowest cost but probably least desirable for UCLA – but might be necessary for affordability. Financial Affordability Capital Cost – $6.9 billion in 2022 dollars (Reference 15). Affordable based on available Metro $6.9 billion budget. Financing – Public-private partnership could be more affordable, but Metro has provided no information. Schedule Reasonableness Schedule – Quickest schedule because no tunneling. Possibly buildable by 2033 or earlier.

ALTERNATIVE 2 – Monorail along 405 with Automated People Mover Connection to UCLA Being designed by LA SkyRail Express (Metro contractor). Technical Acceptability Route – 15.8

miles along 405 but route is along 405 east shoulder in Valley. Only acceptable if route realigned above 405 median in Valley to minimize community impacts. Technology, Capacity, Noise, and Stations – Same as Alternative 1. UCLA Connection – 1.0-mile UCLA automated people mover connection is higher cost and probably more desirable but may not be affordable. Financial Affordability Capital Cost – $7.0 billion in 2022 dollars (Reference 15). Almost affordable based on available Metro $6.9 billion budget. Financing – Public-private partnership could be more affordable, but Metro has provided no information. Schedule Reasonableness Schedule – Quickest schedule because no tunneling. Possibly buildable by 2033 or earlier.

ALTERNATIVE 3 – Monorail along 405 with Tunnel Under UCLA Being designed by LA SkyRail Express (Metro contractor). Technical Acceptability Route – 16.2 miles along 405 but route is along 405 east shoulder in Valley. Only acceptable if route realigned above 405 median in Valley to minimize community impacts. Current UCLA access route tunnels under Bel Air community. Only acceptable if underground route realigned away from community, for example, under or near 405 freeway right-of-way. Technology, Capacity, Noise, and Stations – Same as Alternative 1. UCLA Connection – 3.3-mile tunnel under Bel Air community to on-campus UCLA station. Most desirable but causes significant cost and schedule increases. May not be affordable. Financial Affordability Capital Cost – $8.9 billion in 2022 dollars (Reference 15). At least $2 billion more needed above available Metro $6.9 billion budget. Financing – Public-private partnership could be affordable, but Metro has provided no information. Schedule Reasonableness Schedule – Tunnel to UCLA adds at least two years to schedule.

ALTERNATIVE 4 – Heavy Rail Subway under Westside but Elevated above Sepulveda in Valley Being designed by Sepulveda Transit Corridor Partners Bechtel (Metro contractor). Technical Acceptability Route – 14.0 miles under Westside and Sepulveda Pass but elevated tracks in Valley. Completely unacceptable route. Technology – Heavy rail train with three cars per train and automated operation. Train every two and one-half minutes during peak periods. Capacity – Good peak capacity: 12,240 passengers per hour per direction. Future potential up to 16,320 pphpd using four cars per train. Noise – Steel wheels on steel tracks have extremely high noise level on elevated tracks in Valley and very detrimental to community. Stations – Eight stations with four aerial in Valley – Ventura Blvd, Orange Line (Oxnard St), Sherman Way, and Van Nuys MetroLink. Financial Affordability Capital Cost – $12.1 billion in 2022 dollars (Reference 15). More than $5 billion more needed above available Metro $6.9 billion budget. Financing – Public-private partnership could be more affordable, but Metro has provided no information. Schedule Reasonableness Schedule – 9-mile tunnel adds at least four years to schedule.

ALTERNATIVE 5 – Heavy Rail Subway under Westside, Pass, and Sepulveda Blvd in Valley Being designed by Sepulveda Transit Corridor Partners Bechtel (Metro contractor). Technical Acceptability Route – 14.0 miles under Westside, Sepulveda Pass, and Sepulveda Blvd in Valley. Only acceptable if underground route in Pass is realigned away from Sherman Oaks and Bel Air communities, such as under 405 freeway. Technology and Capacity – Same as Alternative 4. Noise – Steel wheels on steel tracks have high noise level but operate in tunnel. Stations – Eight stations with three underground in Valley, Ventura Blvd, Orange Line (Oxnard St), Sherman Way, and one aerial at Van Nuys MetroLink. Financial Affordability Capital Cost – $15.9 billion in 2022 dollars (Reference 15). At least $9 billion more needed above available Metro $6.9 billion budget. Financing – Public-private partnership could be more affordable, but Metro has provided no information. Schedule Reasonableness Schedule – 14-mile tunnel adds at least five years to schedule.

ALTERNATIVE 6 – Heavy Rail Subway under Westside, Pass, and Van Nuys Blvd in Valley Being designed by HTA Partners (Metro Environmental contractor).

Technical Acceptability Route – 12.6 miles under Westside, Sepulveda Pass, and Van Nuys Blvd in

Valley. Only acceptable if underground route in Pass is realigned away from Sherman Oaks and Bel Air communities, such as fully under Beverly Glen Blvd. Valley route under Van Nuys Blvd preferred because best aligns with commercial corridor and civic center along Van Nuys Blvd. Technology – Heavy rail train with six cars per train and non-automated operation (driver). Train every four minutes during peak periods. Different technology from Alternative 5 makes no sense. Only acceptable if train technology is same as Alternative 5 for apples-to-apples comparison. Capacity – Lowest peak capacity: 11,970 passengers per hour per direction. Noise – Steel wheels on steel tracks have high noise level but operate in tunnel. Stations – Seven stations with three underground in Valley – Ventura Blvd, Orange Line (civic center), and Van Nuys MetroLink. Financial Affordability Capital Cost – $15.3 billion in 2022 dollars (Reference 15). Almost $9 billion more needed above available Metro $6.9 billion budget. Financing – Public-private partnership could be more affordable, but Metro has provided no information. Schedule Reasonableness Schedule – 12.6-mile tunnel adds at least five years to schedule.

SOHA COMMENTS AND QUESTIONS SOHA Submits 24 Comments and Questions to Metro and Asks for Prompt Responses. Metro practices discourage responding to public comments. We only hope that Metro may awaken to see the value of interacting with the public. It's sensible to respond because Metro will get better comments and enhance positive rapport with communities. Hiding behind neanderthal practices does not make the project better.

Comments/Questions on Metro Environmental ProcessMetro has received a significant number of comments and questions on the project. Does Metro plan to respond to any or all comments and questions? If not, how does Metro justify not responding? Is Metro planning to maintain a scoping comments log on their website, as they used to do? If not, why not?

Metro's online description of their environmental process notes that they will keep the public informed of updates to alternatives during environmental studies. How will Metro do this? Will Metro accept public comments concerning changes? If not, why not? Will Metro add several interim public meetings to thoroughly explain the progress of the environmental studies? If not, why not?

Metro has collected many public comments during the environmental scoping period. How will Metro use these comments in developing the Draft Environmental Impact Report (DEIR)? How will these comments influence the Locally Preferred Alternative selection process?

The public is given a 45-day public hearing and comment period after Metro completes the Draft Environmental Impact Report (DEIR). Will Metro consider all DEIR comments before their selection of the Locally Preferred Alternative? If not, why not?

Comments/Questions on All Metro AlternativesMetro developed the routes for the six alternatives without real public consultation and simply forced them onto the public. How did Metro develop these routes? Why wasn't the public involved with development of the routes long before they were selected? Will Metro consider realigning the routes? If not, why not?

Many communities are concerned about noise impacts from elevated monorail or heavy rail trains. Rubber-tired monorails should operate very quietly but heavy rail trains operate at very high noise levels. What are the expected noise levels for monorail Alternatives 1, 2, and 3, and the elevated heavy rail train Alternative 4? Will Metro provide detailed noise signature data to the public for each alternative? If not, why not?

Metro chose to not present project budget or cost estimate information for each alternative at the public scoping meetings. What is the total actually available current project budget in 2022 dollars? What is the current cost estimate for each of the six alternatives in 2022 dollars?

Metro has chosen to study alternatives that are obviously grossly unaffordable. How does Metro justify their choice to do this? Why does Metro think this is a fiscally responsible thing to do? With only one or maybe two of the six alternatives appearing to be affordable within Metro's

currently available budget, significant supplemental funding is necessary to build the other alternatives. What additional sources of funding is Metro investigating to obtain this capital? What is the likelihood of securing each source? What is Metro's backup plan should no additional funding sources be available?
Metro is considering a public-private partnership (PPP) to construct and operate the selected Locally Preferred Alternative. Metro has provided zero information to the public about how a PPP would work and how it would change project funding. Does Metro plan a PPP for each of the six alternatives? If not, which alternatives will not use a PPP and why? Will a PPP make unaffordable alternatives affordable? What are the detailed specific PPP financial arrangements for each of the six alternatives? Sherman Oaks Homeowners Association 8 of 12 SOHA Positions and Comments on the Sepulveda Transit Corridor Project – January 27, 2022 11.
Metro presented no schedule information for the alternatives at the public scoping meetings. What are the current construction schedule estimates for each of the six alternatives?
Comments/Questions on Metro Alternative 1 – Monorail on 405 with Electric BusesThe monorail route in the Valley north of the 101 freeway is on the east shoulder of the 405 freeway. This creates significant visibility and other issues for nearby communities and is not acceptable. Will Metro consider studying and relocating the route above the 405 median? If not, why not?
The Sepulveda Blvd-Ventura Blvd monorail station location has not been specified. This is a crowded residential and business area that may require significant eminent domain to construct a station. We are concerned that many homes, condos, apartments, and/or business could be lost. What is the planned location of the Sepulveda-Ventura station? What eminent domain would be required to construct it?
Comments/Questions on Metro Alternative 2 – Monorail on 405 with Automated People MoverThe monorail route in the Valley north of the 101 freeway is on the east shoulder of the 405 freeway. This creates significant visibility and noise issues for nearby communities and is not acceptable. Will Metro consider studying and relocating the route to above the 405 median? If not, why not?
The Sepulveda Blvd-Ventura Blvd monorail station location has not been specified. This is a crowded residential and business area that may require significant eminent domain to construct a station. We are concerned that many homes, condos, apartments, and/or business could be lost. What is the planned location of the Sepulveda-Ventura station? What eminent domain would be required to construct it
Comments/Questions on Metro Alternative 3 – Monorail on 405 and under UCLA The monorail route in the Valley north of the 101 freeway is on the east shoulder of the 405 freeway. This creates significant visibility and noise issues for nearby communities and is not acceptable. Will Metro consider studying and relocating the route to above the 405 median? If not, why not?
The Sepulveda Blvd-Ventura Blvd monorail station location has not been specified. This is a crowded residential and business area that may require significant eminent domain to construct a station. We are concerned that many homes, condos, apartments, and/or business could be lost. What is the planned location of the Sepulveda-Ventura station? What eminent domain would be required to construct it
An underground station on the UCLA campus requires tunneling from the 405 freeway. The current proposed route tunnels under the Bel Air community. Several organizations are very concerned about this. How and why was this route selected? What other route alignments are possible? Will Metro consider alternate routes that better protect local communities, such as tunneling under or near the 405 freeway right-of-way? If not, why not?
Comments/Questions on Metro Alternative 4 – Elevated Heavy Rail in Valley Metro's proposed subway route tunnels under the Sherman Oaks and Bel Air communities. Many are concerned about the impacts and dangers of tunneling. Many are concerned about noise and vibration during

operation. How and why did Metro select this specific route? Did Metro evaluate potential impacts of tunneling under residential communities? Will Metro consider relocating the tunnel away from communities, such as under the 405 freeway where it will have minimal impacts? If not, why not? Metro is aware that Alternative 4's elevated tracks above Sepulveda Blvd in the Valley are despised by Valley communities. How does Metro justify the use of noisy elevated trains in residential neighborhoods? Why is Metro continuing to study this abominable and unaffordable alternative? Will Metro terminate studying this alternative? If not, why not? Sherman Oaks Homeowners Association 9 of 12 SOHA Positions and Comments on the Sepulveda Transit Corridor Project – January 27, 2022

Comments/Questions on Metro Alternative 5 – Heavy Rail Subway under Sepulveda Blvd in Valley

21. Metro's proposed subway route tunnels under the Sherman Oaks and Bel Air communities. Many are concerned about the impacts and dangers of tunneling. Many are concerned about noise and vibration during operation. How and why did Metro select this specific route? Did Metro evaluate potential impacts of tunneling under residential communities? Will Metro consider relocating the tunnel away from communities, such as under the 405 freeway where it will have minimal impacts? If not, why not?

Comments/Questions on Metro Alternative 6 – Heavy Rail Subway under Van Nuys Blvd in Valley

Metro's proposed subway route tunnels under the Sherman Oaks and Bel Air communities. Many are concerned about the impacts and dangers of tunneling. Many are concerned about noise and vibration during operation. How and why did Metro select this specific route? Did Metro evaluate potential impacts of tunneling under residential communities? Will Metro consider relocating the tunnel away from residential communities and fully align it under Beverly Glen Blvd where it will have minimal impacts? If not, why not?

Alternative 6 uses old-fashioned driver-operated heavy rail trains while Alternatives 4 and 5 use modern heavy rail trains with automated operation. Using two different train technologies for similar routes is just plain stupid. It will be impossible to fairly compare alternatives. It could also favor Alternative 5 over Alternative 6 for the wrong reasons, or vice versa. How does Metro justify their choice to use different technologies? Will Metro consider changing the Alternative 6 technology? How will Metro fairly compare the technologies during LPA selection?

Alternatives 1, 2, 3, 4, and 5 are being designed by the two Metro pre-development agreement (PDA) contractors – LA SkyRail Express for Alternatives 1, 2, and 3, and Sepulveda Transit Corridor Partners Bechtel for Alternatives 4 and 5. Alternative 6 is being designed by HTA Partners, Metro's environmental contractor. Why did Metro choose a different non-PDA contractor to design Alternative 6? Isn't Metro concerned that having their environmental contractor do both the design and environmental studies for this alternative creates at least a perceived conflict of interest, or worse? Does having a different design contractor put Alternative 6 at a disadvantage? If not, why not?

SOHA Truly Wants the Best Sepulveda Transit Project Possible. This can't happen if Metro continues to ignore us and the rest of the public. We reiterate our offer from the first page of this letter. Meet with Sherman Oaks community leaders to resolve our concerns. Not a "Meet & Greet" or public meeting, but a real working meeting between equals. We hope to hear from you. Sepulveda Transit Corridor Project
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012
sepulvedatransit@metro.net

Subject: **SOHA Positions and Comments on the Sepulveda Transit Corridor Project**

References: see page 10

The Sherman Oaks Homeowners Association submits our positions, comments, and questions on Metro's environmental process and the six Sepulveda Transit Corridor Project alternatives.

Metro is Running this Project Like a Fiscally and Morally Irresponsible Schoolyard Bully. The evidence is clear. It's time for our elected officials and the public to step up and stop this out-of-control bully from destroying our Sherman Oaks community and this project.

Metro – Meet with Sherman Oaks Community Leaders to Resolve our Concerns. Prove we're wrong! Not a "meet & greet" or public meeting. A working meeting between equals. We hope to hear from you.

Metro Public Scoping Meetings Were a Sham and Withheld Vital Information! Metro's scoping meetings provided trivial information about the project's six alternatives. No route details. Useless cartoon maps. No technical details. No tunneling impacts. No train noise information. No hints on station parking. No cost or affordability considerations. No schedules. No public-private partnership facts. The public cannot make meaningful comments based on trivial information. Trivial information ensures that public comments are trivial and ignorable. Metro is being unfair and irresponsible. Tragically, Metro's lack of information has also fostered the spread of misinformation. The public is uninformed and confused.

Metro Never Answers Questions! On December 6th, SOHA sent ten basic questions to Metro and asked for answers (Reference 1). Answers to help us and our members submit better informed comments. Metro did not have the professionalism or courtesy to respond. Why is Metro afraid to answer questions?

Metro's Environmental Review Process Is a Sham that Trivializes Public Input and Makes Back-Room Decisions! Metro stops accepting public comments on February 11th. They don't accept further public comments until the Draft Environmental Impact Report (DEIR) is complete in a couple of years. Metro promises to keep the public updated but there are no public meetings until the DEIR is complete. The public comments on the DEIR and then Metro selects the Locally Preferred Alternative (LPA) for construction. "Locally Preferred" makes it sound like the public was involved. They weren't.

SOHA Will Continue to Make Comments and Ask Tough Questions! We will not buy into this shameful process. SOHA will continue to submit comments and ask questions well after February 11th. We want Metro to schedule interim public meetings and inform the public how each alternative is evolving during environmental studies. We plan to hold our own public meetings to keep communities informed. We will encourage the public to submit comments. We expect Metro to respond clearly and truthfully.

SOHA Cannot Yet Support Any of Metro's Six Alternatives Because All Have Flaws! Some flaws are minor and fixable. Some are major and not fixable. SOHA studied every Metro document referenced in this letter (2,800+ pages) to learn what was going on because Metro has kept the public in the dark.

SOHA Adamantly OPPOSES Alternative 4 with Elevated Trains in the Valley! This alternative is subway under the Westside and Sepulveda Pass but elevated heavy rail trains above Sepulveda Blvd in the Valley. This is irresponsible. Why decimate the wellbeing of Valley residents and businesses by studying noisy elevated trains. It is an abomination that will destroy our community. Stop Alternative 4 now!

SOHA Has Positions on All Six Alternatives. Our positions are shown in the table. We based them on three criteria: technical acceptability, financial affordability, and schedule reasonableness. We cannot support any alternative that does not fulfill all three criteria. The world's greatest alternative cannot be acceptable if it is unaffordable and can't be built on a reasonable schedule.

SOHA POSITIONS ON METRO SEPULVEDA TRANSIT CORRIDOR PROJECT ALTERNATIVES
ALTERNATIVE 1 – Driverless Monorail along 405 with Electric Bus Connection to UCLA
ACCEPTABLE – ONLY IF route realigned to 405 median (versus east shoulder) in Valley
AFFORDABLE – Probably buildable with currently available Metro budget
SHORTEST SCHEDULE – Quickest to build with no tunneling
ALTERNATIVE 2 – Driverless Monorail along 405 with Automated People Mover Connection to UCLA
ACCEPTABLE – ONLY IF route realigned to 405 median (versus east shoulder) in Valley
ALMOST AFFORDABLE – Almost buildable with currently available Metro budget
SHORTEST SCHEDULE – Quickest to build with no tunneling
ALTERNATIVE 3 – Driverless Monorail along 405 with Tunnel Under UCLA
ACCEPTABLE – ONLY IF route realigned to 405 median in Valley **AND IF** no tunneling under Bel Air
UNAFFORDABLE – At least $2 billion more than currently available Metro budget
LONGER SCHEDULE – Three-mile tunnel under UCLA adds at least two years
ALTERNATIVE 4 – Driverless Subway under Westside and Pass; Elevated above Sepulveda in Valley
UNACCEPTABLE – Ridiculous elevated heavy rail trains in Valley – **TERMINATE STUDYING THIS NOW!**
UNAFFORDABLE – At least $5 billion more than currently available Metro budget
LONGER SCHEDULE – Nine-mile tunnel under Westside/Sepulveda Pass adds at least four years
ALTERNATIVE 5 – Driverless Subway under Westside, Pass, and Sepulveda Blvd in Valley
ACCEPTABLE – ONLY IF route realigned under 405 freeway through Sepulveda Pass
UNAFFORDABLE – At least $9 billion more than currently available Metro budget
LONGEST SCHEDULE – Fourteen-mile tunnel adds at least five years
ALTERNATIVE 6 – Driver-Operated Subway under Westside, Pass, and Van Nuys Blvd in Valley
ACCEPTABLE – ONLY IF modern automated technology **AND IF** route better under Beverly Glen near Sunset
UNAFFORDABLE – Almost $9 billion more than currently available Metro budget
LONGEST SCHEDULE – Thirteen-mile tunnel adds at least five years

No Alternative Is Technically Acceptable Yet. Although the monorail and heavy rail technologies are fully viable, no alternative fulfills all basic requirements such as route alignment equity and minimal community impacts. All current alternatives need at least one flaw corrected to be technically acceptable, except Alternative 4 which can never be acceptable.

Alternative 1, 2, and 3 are flawed because their monorails run on the east shoulder of the 405 in the Valley. They must be relocated to the median to minimize community impacts. Alternative 5 is flawed because it tunnels under the Sherman Oaks and Bel Air communities with potentially serious impacts. The route must be relocated under the 405 freeway. Alternative 6 is flawed because it uses old-fashioned driver-operated heavy rail trains. It must use the same modern driverless trains as the other heavy rail alternatives. It's also being designed by the same contractor that will supposedly independently study its environmental impacts.

Alternative 4 with Elevated Trains in the Valley is an Abomination and Not Acceptable. This flawed alternative can never be technically acceptable. Stop wasting public money studying it. If Metro had responsibly listened to Valley communities, this alternative would have been terminated years ago. Stop it now!

Alternative 4 Is a Desperate Metro Ploy to Cut Costs and Still Get a Subway on the Westside. Alternative 4 causes massive and unnecessary eminent domain on Sepulveda Blvd south of Ventura Blvd. The Metro rendering shown was posted at the June 2019 public meetings, yet Metro stated they had not yet thought about eminent domain. Alternative 4 will destroy our Sherman Oaks community from Valley Vista Blvd to Oxnard St. Its only purpose is to lower cost enough to have subway on the Westside and under the Pass, even though the Valley get screwed with elevated trains. Metro's continued consideration of Alternative 4 illustrates their disdain for the Valley. The Valley currently has only two Metro heavy rail stations but almost 20 percent of LA County's population. None of this is fair!

Few Alternatives Are Financially Affordable Because Metro Lowballed Measure M Cost Estimates to Entice Voters. Measure M funds all Metro projects. Had it not passed in 2016, the Sepulveda Transit Project would not exist. Measure M did pass, but its cost estimates were woefully low – less than half what were really needed. Because Metro low-balled the estimates, only one or two of Metro's Sepulveda Pass alternatives are now affordable. This is a pretty stupid place to be at this point in such an important project.

Measure M Budget for Sepulveda Transit Corridor Project is about $6.9 Billion in 2022 dollars. We escalated the official Measure M 2015 budget, which includes federal, state, county, and city funds.

Project Affordability Worsened by Major Flaw in Metro Capacity Analysis. Many won't remember, but when Metro began the Sepulveda Transit project in 2018, none of the routes went north to the Van Nuys MetroLink station in the Valley. Many routes stopped at the Orange Line (G Line) at Oxnard St (Reference 17). Then at Metro's January 2019 public meetings, Metro explained that they made a serious mistake in their passenger capacity analysis. Now the project route had to be one to two miles longer than originally planned (Reference 16). Metro also didn't explain that the project's Measure M budget cannot increase, and that Metro's flawed analysis instantly made this critical project much less affordable.

Additional Metro Funding Will Be Hard to Get! There are many rumors about other available funding. Metro recently requested $10 billion from the California budget surplus for ten rapid transit projects. Sadly, the highest priority projects seem to be the West Santa Ana Transit Corridor and the Purple Line (D Line) Extension along Wilshire Blvd. We hear rumors that the Sepulveda Transit Corridor Project is far down on Metro's priority list. The Sepulveda Pass project might get an additional $0.5 billion from the state.

Metro is also hoping for funds from the new federal Infrastructure Bill. However, the total funding available for rapid transit across all of California is only $9 billion. The Sepulveda Pass project might get $0.5 billion.

Sepulveda Pass Project Funding Might Be At Most $7.9 Billion with Luck! Metro might be able to get an extra $1 billion in funding for the Sepulveda Pass project, bringing the total budget to $7.9 billion.

Metro Purposely Suppressed Costs for the Six Alternatives at its Public Scoping Meetings. Metro provided cost estimates at their July 2019 public meetings (Reference 15). Metro's contractors provided further cost estimates in their 2019 proposals (References 5 and 6). The table shows Metro's cost estimates for the six alternatives inflated to 2022 dollars. Five alternatives exceed the currently available $6.9 billion budget. Four exceed the potentially available maximum $7.9 billion budget. Where's the extra funding coming from to build the unaffordable alternatives? Why is Metro wasting taxpayer dollars studying alternatives that they can't afford to build? It appears that Metro has abrogated its fiscal responsibility by continuing to study unaffordable concepts.

Currently Available Measure M Budget for Sepulveda Transit Corridor Project is $6.9 billion Budget with Potential Federal and CA Supplements Might Reach at Most $7.9 billion ($2022)		
Alternative Description	**Cost* ($2022 billion)**	**Affordability**
Alternative 1 – Monorail on 405 (UCLA Electric Buses**)	$6.9	Affordable
Alternative 2 – Monorail on 405 (UCLA People Mover**)	$7.0	Almost Affordable
Alternative 3 – Monorail on 405 and under UCLA	$8.9	Unaffordable
Alternative 4 – Elevated Heavy Rail in Valley	$12.1	Very Unaffordable
Alternative 5 – Heavy Rail Subway under Sepulveda Blvd	$15.9	Grossly Unaffordable
Alternative 6 – Heavy Rail Subway under Van Nuys Blvd	$15.5	Grossly Unaffordable

* Costs escalated using US Bureau of Labor Statistics PPI Construction Index for Los Angeles County
** Added $15 million for UCLA electric buses and $100 million for UCLA automated people mover

Affordability Concerns Favor the Alternative 1 or 2 Monorails. These monorail alternatives simply have the best chance of being built with today's available funding. The Alternative 5 or 6 subways cost more than twice as much as Metro has available. They might be made technically acceptable but are still grossly unaffordable. Unless Metro can convince us that Alternatives 5 and 6 can be made affordable, SOHA cannot support them – although we really like the Alternative 6 route under Van Nuys Blvd.

Why Won't Metro Tell Us If a Public-Private Partnership Will Solve Metro's Affordability Crisis? Metro has stated that they may build the Locally Preferred Alternative using a public-private partnership (PPP). They imply that the PPP is more affordable. This is fantastic! If a PPP can turn an unaffordable alternative into an affordable one, Metro should be telling the world about it. But Metro never presented any information at all on their PPP approach at the public scoping meetings. SOHA asked Metro a question about using PPPs (Reference 1). Metro never responded. Has Metro dismissed PPPs?

Lack of Schedule Reasonableness Makes Many Alternatives Less Attractive. If an alternative takes too many years to build, it is less attractive. Metro has proven it cannot build anything on schedule and that makes it worse. Schedule delays increase costs. Alternatives with shorter, more reasonable schedules are more attractive. Schedule reasonableness must be a bottom-line criterion for supporting an alternative. This makes any alternative with tunneling less attractive because tunneling takes a long time.

SOHA has a history of challenging projects that damage our community and helping to fix, improve, or stop them. An example is the Deervale Park project which began as a huge housing development on a dangerously steep site. We got the city to purchase the site and make it a public park and wildlife preserve. Another example is the Sunkist project where SOHA worked with the developer's design team to improve the proposed building layout, parking plan, and public view of the existing structure. SOHA will take whatever actions are necessary and these can significantly delay project schedule.

Litigation is also a schedule consideration. Some organizations have already threatened litigation against certain of the Metro alternatives. While litigation might not stop an alternative from being built, it can certainly significantly delay construction – possibly a decade or more. Metro's irresponsibility and lack of cooperation with the public could easily result in lengthy litigation.

SOHA DETAILED INFORMATION AND POSITIONS FOR EACH ALTERNATIVE

ALTERNATIVE 1 – Monorail along 405 with Electric Bus Connection to UCLA

Being designed by LA SkyRail Express (Metro contractor).

Technical Acceptability

Route – 15.3 miles along 405 but route is along 405 east shoulder in Valley. **Only acceptable if** route realigned above 405 median in Valley to minimize community impacts.

Technology – Monorail train with six cars per train and automated operation. Train every two minutes during peak periods.

Capacity – Highest peak capacity: 14,040 passengers per hour per direction (pphpd). Future potential up to 18,780 pphpd using eight cars per train.

Noise – Rubber tires on concrete guideway for very low noise level.

Stations – Eight aerial stations with four in Valley – Ventura Blvd, Orange Line (Oxnard St), Sherman Way, and Van Nuys MetroLink. Ventura Blvd station location not known and could require eminent domain.

UCLA Connection – 1.4-mile electric bus connection is lowest cost but probably least desirable for UCLA – but might be **necessary for affordability**.

Financial Affordability

Capital Cost – $6.9 billion in 2022 dollars (Reference 15). **Affordable** based on available Metro $6.9 billion budget.

Financing – Public-private partnership could be more affordable, but Metro has provided no information.

Schedule Reasonableness

Schedule – Quickest schedule because no tunneling. **Possibly buildable by 2033** or earlier.

ALTERNATIVE 2 – Monorail along 405 with Automated People Mover Connection to UCLA

Being designed by LA SkyRail Express (Metro contractor).

Technical Acceptability

Route – 15.8 miles along 405 but route is along 405 east shoulder in Valley. **Only acceptable if** route realigned above 405 median in Valley to minimize community impacts.

Technology, Capacity, Noise, and Stations – Same as Alternative 1.

UCLA Connection – 1.0-mile UCLA automated people mover connection is higher cost and probably more desirable but **may not be affordable**.

Financial Affordability

Capital Cost – $7.0 billion in 2022 dollars (Reference 15). **Almost affordable** based on available Metro $6.9 billion budget.

Financing – Public-private partnership could be more affordable, but Metro has provided no information.

Schedule Reasonableness

Schedule – Quickest schedule because no tunneling. **Possibly buildable by 2033** or earlier.

ALTERNATIVE 3 – Monorail along 405 with Tunnel Under UCLA

Being designed by LA SkyRail Express (Metro contractor).

Technical Acceptability

Route – 16.2 miles along 405 but route is along 405 east shoulder in Valley. **Only acceptable if** route realigned above 405 median in Valley to minimize community impacts. Current UCLA access route tunnels under Bel Air community. **Only acceptable if** underground route realigned away from community, for example, under or near 405 freeway right-of-way.

Technology, Capacity, Noise, and Stations – Same as Alternative 1.

UCLA Connection – 3.3-mile tunnel under Bel Air community to on-campus UCLA station. Most desirable but causes significant cost and schedule increases. **May not be affordable.**

Financial Affordability

Capital Cost – $8.9 billion in 2022 dollars (Reference 15). **At least $2 billion more needed** above available Metro $6.9 billion budget.

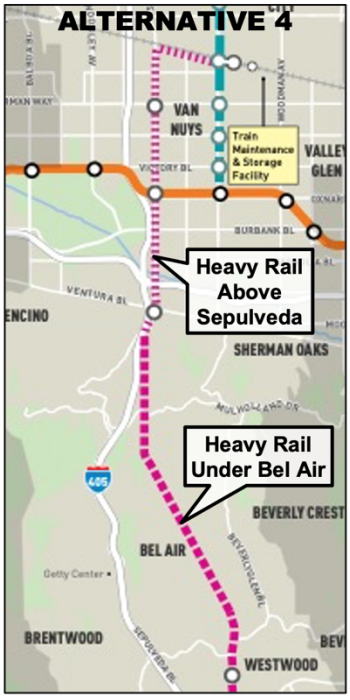
Financing – Public-private partnership could be affordable, but Metro has provided no information.

Schedule Reasonableness

Schedule – Tunnel to UCLA **adds at least two years to schedule**.

ALTERNATIVE 4 – Heavy Rail Subway under Westside but Elevated above Sepulveda in Valley

Being designed by Sepulveda Transit Corridor Partners Bechtel (Metro contractor).



Technical Acceptability

Route – 14.0 miles under Westside and Sepulveda Pass but elevated tracks in Valley. **Completely unacceptable route**.

Technology – Heavy rail train with three cars per train and automated operation. Train every two and one-half minutes during peak periods.

Capacity – Good peak capacity: 12,240 passengers per hour per direction. Future potential up to 16,320 pphpd using four cars per train.

Noise – Steel wheels on steel tracks have **extremely high noise level** on elevated tracks in Valley and very detrimental to community.

Stations – Eight stations with four aerial in Valley – Ventura Blvd, Orange Line (Oxnard St), Sherman Way, and Van Nuys MetroLink.

Financial Affordability

Capital Cost – $12.1 billion in 2022 dollars (Reference 15). **More than $5 billion more needed** above available Metro $6.9 billion budget.

Financing – Public-private partnership could be more affordable, but Metro has provided no information.

Schedule Reasonableness

Schedule – 9-mile tunnel **adds at least four years to schedule**.

ALTERNATIVE 5 – Heavy Rail Subway under Westside, Pass, and Sepulveda Blvd in Valley
Being designed by Sepulveda Transit Corridor Partners Bechtel (Metro contractor).

Technical Acceptability

Route – 14.0 miles under Westside, Sepulveda Pass, and Sepulveda Blvd in Valley. **Only acceptable if** underground route in Pass is realigned away from Sherman Oaks and Bel Air communities, such as under 405 freeway.

Technology and Capacity – Same as Alternative 4.

Noise – Steel wheels on steel tracks have high noise level but operate in tunnel.

Stations – Eight stations with three underground in Valley, Ventura Blvd, Orange Line (Oxnard St), Sherman Way, and one aerial at Van Nuys MetroLink.

Financial Affordability

Capital Cost – $15.9 billion in 2022 dollars (Reference 15). **At least $9 billion more needed** above available Metro $6.9 billion budget.

Financing – Public-private partnership could be more affordable, but Metro has provided no information.

Schedule Reasonableness

Schedule – 14-mile tunnel **adds at least five years to schedule**.

ALTERNATIVE 6 – Heavy Rail Subway under Westside, Pass, and Van Nuys Blvd in Valley
Being designed by HTA Partners (Metro Environmental contractor).

Technical Acceptability

Route – 12.6 miles under Westside, Sepulveda Pass, and Van Nuys Blvd in Valley. **Only acceptable if** underground route in Pass is realigned away from Sherman Oaks and Bel Air communities, such as fully under Beverly Glen Blvd. **Valley route under Van Nuys Blvd preferred** because best aligns with commercial corridor and civic center along Van Nuys Blvd.

Technology – Heavy rail train with six cars per train and non-automated operation (driver). Train every four minutes during peak periods. Different technology from Alternative 5 makes no sense. **Only acceptable if** train technology is same as Alternative 5 for apples-to-apples comparison.

Capacity – Lowest peak capacity: 11,970 passengers per hour per direction.

Noise – Steel wheels on steel tracks have high noise level but operate in tunnel.

Stations – Seven stations with three underground in Valley – Ventura Blvd, Orange Line (civic center), and Van Nuys MetroLink.

Financial Affordability

Capital Cost – $15.3 billion in 2022 dollars (Reference 15). **Almost $9 billion more needed** above available Metro $6.9 billion budget.

Financing – Public-private partnership could be more affordable, but Metro has provided no information.

Schedule Reasonableness

Schedule – 12.6-mile tunnel **adds at least five years to schedule**.

SOHA COMMENTS AND QUESTIONS

SOHA Submits 24 Comments and Questions to Metro and Asks for Prompt Responses. Metro practices discourage responding to public comments. We only hope that Metro may awaken to see the value of interacting with the public. It's sensible to respond because Metro will get better comments and enhance positive rapport with communities. Hiding behind neanderthal practices does not make the project better.

Comments/Questions on Metro Environmental Process

1. Metro has received a significant number of comments and questions on the project. Does Metro plan to respond to any or all comments and questions? If not, how does Metro justify not responding? Is Metro planning to maintain a scoping comments log on their website, as they used to do? If not, why not?
2. Metro's online description of their environmental process notes that they will keep the public informed of updates to alternatives during environmental studies. How will Metro do this? Will Metro accept public comments concerning changes? If not, why not? Will Metro add several interim public meetings to thoroughly explain the progress of the environmental studies? If not, why not?
3. Metro has collected many public comments during the environmental scoping period. How will Metro use these comments in developing the Draft Environmental Impact Report (DEIR)? How will these comments influence the Locally Preferred Alternative selection process?
4. The public is given a 45-day public hearing and comment period after Metro completes the Draft Environmental Impact Report (DEIR). Will Metro consider all DEIR comments before their selection of the Locally Preferred Alternative? If not, why not?

Comments/Questions on All Metro Alternatives

5. Metro developed the routes for the six alternatives without real public consultation and simply forced them onto the public. How did Metro develop these routes? Why wasn't the public involved with development of the routes long before they were selected? Will Metro consider realigning the routes? If not, why not?
6. Many communities are concerned about noise impacts from elevated monorail or heavy rail trains. Rubber-tired monorails should operate very quietly but heavy rail trains operate at very high noise levels. What are the expected noise levels for monorail Alternatives 1, 2, and 3, and the elevated heavy rail train Alternative 4? Will Metro provide detailed noise signature data to the public for each alternative? If not, why not?
7. Metro chose to not present project budget or cost estimate information for each alternative at the public scoping meetings. What is the total actually available current project budget in 2022 dollars? What is the current cost estimate for each of the six alternatives in 2022 dollars?
8. Metro has chosen to study alternatives that are obviously grossly unaffordable. How does Metro justify their choice to do this? Why does Metro think this is a fiscally responsible thing to do?
9. With only one or maybe two of the six alternatives appearing to be affordable within Metro's currently available budget, significant supplemental funding is necessary to build the other alternatives. What additional sources of funding is Metro investigating to obtain this capital? What is the likelihood of securing each source? What is Metro's backup plan should no additional funding sources be available?
10. Metro is considering a public-private partnership (PPP) to construct and operate the selected Locally Preferred Alternative. Metro has provided zero information to the public about how a PPP would work and how it would change project funding. Does Metro plan a PPP for each of the six alternatives? If not, which alternatives will not use a PPP and why? Will a PPP make unaffordable alternatives affordable? What are the detailed specific PPP financial arrangements for each of the six alternatives?

11. Metro presented no schedule information for the alternatives at the public scoping meetings. What are the current construction schedule estimates for each of the six alternatives?

Comments/Questions on Metro Alternative 1 – Monorail on 405 with Electric Buses

12. The monorail route in the Valley north of the 101 freeway is on the east shoulder of the 405 freeway. This creates significant visibility and other issues for nearby communities and is not acceptable. Will Metro consider studying and relocating the route above the 405 median? If not, why not?
13. The Sepulveda Blvd-Ventura Blvd monorail station location has not been specified. This is a crowded residential and business area that may require significant eminent domain to construct a station. We are concerned that many homes, condos, apartments, and/or business could be lost. What is the planned location of the Sepulveda-Ventura station? What eminent domain would be required to construct it?

Comments/Questions on Metro Alternative 2 – Monorail on 405 with Automated People Mover

14. The monorail route in the Valley north of the 101 freeway is on the east shoulder of the 405 freeway. This creates significant visibility and noise issues for nearby communities and is not acceptable. Will Metro consider studying and relocating the route to above the 405 median? If not, why not?
15. The Sepulveda Blvd-Ventura Blvd monorail station location has not been specified. This is a crowded residential and business area that may require significant eminent domain to construct a station. We are concerned that many homes, condos, apartments, and/or business could be lost. What is the planned location of the Sepulveda-Ventura station? What eminent domain would be required to construct it

Comments/Questions on Metro Alternative 3 – Monorail on 405 and under UCLA

16. The monorail route in the Valley north of the 101 freeway is on the east shoulder of the 405 freeway. This creates significant visibility and noise issues for nearby communities and is not acceptable. Will Metro consider studying and relocating the route to above the 405 median? If not, why not?
17. The Sepulveda Blvd-Ventura Blvd monorail station location has not been specified. This is a crowded residential and business area that may require significant eminent domain to construct a station. We are concerned that many homes, condos, apartments, and/or business could be lost. What is the planned location of the Sepulveda-Ventura station? What eminent domain would be required to construct it
18. An underground station on the UCLA campus requires tunneling from the 405 freeway. The current proposed route tunnels under the Bel Air community. Several organizations are very concerned about this. How and why was this route selected? What other route alignments are possible? Will Metro consider alternate routes that better protect local communities, such as tunneling under or near the 405 freeway right-of-way? If not, why not?

Comments/Questions on Metro Alternative 4 – Elevated Heavy Rail in Valley

19. Metro's proposed subway route tunnels under the Sherman Oaks and Bel Air communities. Many are concerned about the impacts and dangers of tunneling. Many are concerned about noise and vibration during operation. How and why did Metro select this specific route? Did Metro evaluate potential impacts of tunneling under residential communities? Will Metro consider relocating the tunnel away from communities, such as under the 405 freeway where it will have minimal impacts? If not, why not?
20. Metro is aware that Alternative 4's elevated tracks above Sepulveda Blvd in the Valley are despised by Valley communities. How does Metro justify the use of noisy elevated trains in residential neighborhoods? Why is Metro continuing to study this abominable and unaffordable alternative? Will Metro terminate studying this alternative? If not, why not?

Comments/Questions on Metro Alternative 5 – Heavy Rail Subway under Sepulveda Blvd in Valley

21. Metro's proposed subway route tunnels under the Sherman Oaks and Bel Air communities. Many are concerned about the impacts and dangers of tunneling. Many are concerned about noise and vibration during operation. How and why did Metro select this specific route? Did Metro evaluate potential impacts of tunneling under residential communities? Will Metro consider relocating the tunnel away from communities, such as under the 405 freeway where it will have minimal impacts? If not, why not?

Comments/Questions on Metro Alternative 6 – Heavy Rail Subway under Van Nuys Blvd in Valley

22. Metro's proposed subway route tunnels under the Sherman Oaks and Bel Air communities. Many are concerned about the impacts and dangers of tunneling. Many are concerned about noise and vibration during operation. How and why did Metro select this specific route? Did Metro evaluate potential impacts of tunneling under residential communities? Will Metro consider relocating the tunnel away from residential communities and fully align it under Beverly Glen Blvd where it will have minimal impacts? If not, why not?
23. Alternative 6 uses old-fashioned driver-operated heavy rail trains while Alternatives 4 and 5 use modern heavy rail trains with automated operation. Using two different train technologies for similar routes is just plain stupid. It will be impossible to fairly compare alternatives. It could also favor Alternative 5 over Alternative 6 for the wrong reasons, or vice versa. How does Metro justify their choice to use different technologies? Will Metro consider changing the Alternative 6 technology? How will Metro fairly compare the technologies during LPA selection?
24. Alternatives 1, 2, 3, 4, and 5 are being designed by the two Metro pre-development agreement (PDA) contractors – LA SkyRail Express for Alternatives 1, 2, and 3, and Sepulveda Transit Corridor Partners Bechtel for Alternatives 4 and 5. Alternative 6 is being designed by HTA Partners, Metro's environmental contractor. Why did Metro choose a different non-PDA contractor to design Alternative 6? Isn't Metro concerned that having their environmental contractor do both the design and environmental studies for this alternative creates at least a perceived conflict of interest, or worse? Does having a different design contractor put Alternative 6 at a disadvantage? If not, why not?

SOHA Truly Wants the Best Sepulveda Transit Project Possible. This can't happen if Metro continues to ignore us and the rest of the public. We reiterate our offer from the first page of this letter. Meet with Sherman Oaks community leaders to resolve our concerns. Not a "Meet & Greet" or public meeting, but a real working meeting between equals. We hope to hear from you.

Thank you. Please contact me at BobHillsideOrdinance@gmail.com or (213) 364-7470

Respectfully,

Bob Anderson
Board Member and Chair, Transportation Committee
Sherman Oaks Homeowners Association

Subject: VICA SUPPORTS Alternatives 3, 5 & 6 of the Sepulveda Transit Corridor

Dear Metro Board Member,

The Valley Industry and Commerce Association (VICA) has been a long-standing supporter of the Sepulveda Transit Corridor, and after considering all 6 options, we are in strong support of alternatives 3, 5, and 6.

VICA is proud to represent over 350 businesses and every community within the San Fernando Valley region, and we are strong advocates for transportation projects that improve the Valley's connectivity with the rest of the Los Angeles region. We believe that the Sepulveda Transit Corridor will provide high-quality transit options that effectively service the growing travel demand between the housing and major employment sectors of the San Fernando Valley and Westside.

Specifically, VICA has chosen to support alignments 3, 5, and 6. One critical reason for this support is because of these options' inclusion of an on-campus station at UCLA. Direct access to the campus is critical to the university, the 2028 Olympics, and the financial viability of the corridor's operations. VICA would also like to clarify that while we are members of a coalition to support all options with a connection to UCLA, we are only in support of options 3, 5, and 6, as alternative 4 has unresolved equity issues between the Westside and the Valley.

Overall, for a transit system to be a competitive travel option that attracts new ridership, it needs to increase speed, frequency, capacity, and reliability, while providing convenient connections to existing and planned transit lines. VICA believes that options 3, 5, and 6 do just that, and we ask for your support of these Sepulveda Transit Corridor alignments.

Sincerely,

Victor Berrellez
VICA Chair

Stuart Waldman
VICA President

Please find attached a letter from the Bel Air-Beverly Crest Neighborhood Council regarding the Notice of Preparation for an Environmental Impact Report on the Sepulveda Transit Corridor Project.

Bel Air Beverly Crest
NEIGHBORHOOD COUNCIL
Building a Better Community

February 2, 2022

VIA EMAIL (sepulvedatransit@metro.net)

Peter Carter, Project Manager
Metro
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, California 90012

Re: Sepulveda Transit Corridor Project

Dear Mr. Carter:

The Bel Air Beverly Crest Neighborhood Council serves a large, multi-community, open space, wildlife corridor area in the Santa Monica Mountains. The Council is advisory to the City of Los Angeles on issues that affect our territory. Its western border is the Sepulveda Scenic Corridor/I-405 Freeway. Its eastern border is Laurel Canyon. Its northern border is Mulholland Drive. Its southern border is Sunset Blvd. Significant segments of the proposed project routes will definitely be located within our borders. We offer these comments as a courtesy, representing the views of our Board of Directors. This letter should not, however, be interpreted as representing the position of the City of Los Angeles as a whole or a communication from the City, which is represented by the Mayor in intergovernmental relations.

The Metro Sepulveda Transit Corridor Project ("Project") area includes important canyon routes between the valley and West Los Angeles. Benedict Canyon, Beverly Glen (a secondary highway), Stone Canyon, Roscomare Road (a canyon collector street), Bellagio Road leading to Sunset Boulevard, and Sepulveda Boulevard (a secondary highway). The I-405 Freeway leads to and from WLA to the San Fernando Valley.

BABCNC concurs that the Environmental Impact Report (EIR) should address all of the topic areas listed in Appendix G of the CEQA Guidelines, as described in the Notice of Preparation (NOP). We offer additional comments on several topic areas and propose additional alternatives that should be included in the analysis.

Study Area

The Study Area defined for the project is too small. Impacts to any canyon road in terms of traffic (e.g., during construction) have spillover effects that extend several canyons over because of the few north-south routes through the hills. The study area should be extended eastward to at least include through Franklin Canyon.

Wildfire

The BABCNC territory is within a Very High Fire Hazard Severity Zone as designated by Cal Fire. Several significant fires have swept through this area and burned tree canopies, homes, and wildlife. We take this threat with all seriousness. As part of the description of the project area and baseline conditions, please investigate all arson, electric, and spontaneous fires, especially those within the proposed project footprint within the last 5 years. You may not find all of the car fires, but the residents can testify that they happened. Fire Department records may or may not have been retained, and smaller incidents may not be documented. You have only to examine both the east and west sides of Sepulveda to find the answers related to the two larger fires. Fires have been started by faulty electrical wires, the homeless, including cooking fires and pyromaniacs. Cars fires/accidents on the freeway or on both sides of Sepulveda can cause a gas tank to explode, spewing gasoline onto hillsides and burning the hillsides in Bel Air. A full understanding of the historical and current fire risk must be included in the wildlife risk analysis, and special attention paid to any additional risk from Project construction and ongoing operations from all alternatives. We have been told by LA Fire Department officials that a wind-driven fire beginning in the Kirkwood Bowl area could reach our western border within 15–30 minutes. Burning embers from our tall non-native trees, such as pines, eucalyptus, and palm trees can fly great distances in a windstorm. Given our dense residential areas within our canyons, what escape routes are available for passengers on trains, in tunnels, or on aerial monorails? What escape routes are available to fire evacuees, who would have to leave their Bel Air Beverly Crest communities both during and after construction?

Geotechnical, Subsurface, and Seismic Hazards

We request that Metro investigate all earthquake fault lines in the Project area, such as the fault along Mulholland Dr. from approximately Benedict Canyon and west to the I-405. We have had

two recent earthquakes along that fault. We have been told by USGS that earthquake faults cannot be remediated and can reach 3 miles deep.

On several mountainsides, there has been earth slippage. A chunk of the Mulholland roadway east of Coldwater Canyon (part of the BABCNC territory) literally broke off and fell into the canyon below. The analysis should map all current and historical landslide areas and assess the impacts of construction and operation of all alternatives on them.

Our residents report that there are many springs and aquifers in the project area. Some, but not all of these have been mapped. A thorough investigation, starting with existing data (Dark et al. 2011, Liu et al. 2011) and including field inspections should be made of springs and near-surface aquifers. To assist this effort, we compiled the following examples.

1. A large, intermittent spring exists at the top of Beverly Glen and Mulholland Drive.
2. Another major spring feeds a stream on the west side of Stone Canyon Road.
3. As homes have been developed in the hills, springs and/or surficial aquifers have invaded foundations. Some basements had to be rebuilt.
4. Milken School is across the Mulholland Bridge on Mulholland Drive. The gym had to be rebuilt 3 times because water from springs undermined the gym floor.

Fully describing the underground waters is essential to a complete impact analysis because of the potential adverse impacts of dewatering any tunnels and access shafts. Such adverse impacts would include potential geotechnical hazards, subsidence, and loss of biological function of surface ecosystems dependent on streams or surface aquifers.

How will dewatering of subsurface tunnels affect subsidence and where? How much water will be pumped out of tunnels and how will it be disposed of? How long will such dewatering take place (during construction, indefinitely)? Will clean, fresh water pumped from tunnels simply be discharged into the stormdrain system and wasted by discharging it into the ocean? Can the project design include reuse of any water pumped from tunnels to replenish existing aquifers to ensure continued ecological function of streams and riparian zones dependent on near-surface water? Where will any dewatering pumps be located and what route will any removed water take? How will dewatering affect wildlife? What do studies show about springs draining into tunnels? How will wildlife fare if traditional sources of water are no longer available on the surface?

We are certain that the Lower Stone Canyon reservoir area is prone to liquefaction, based upon insurance policies issued to homeowners in the area. Some Sepulveda Canyon homes are marked on maps as liquefaction locations. Stone Canyon Road is on a flood plain. The Stone Canyon reservoir is not lined and is supported by an earthen dam. A second such dam was built elsewhere by the same man: William Mulholland. That dam failed/ collapsed years ago. The EIR should consider the relationship between project elements and liquefaction risk, and the impacts

on any tunnel that may be close to a liquefaction zone in if an event occurs. Please confirm and identify the entirety of the liquefaction areas within our boundaries in the EIR.

Given the fate of the other Mulholland designed dam, how will tunneling affect the stability of the Stone Canyon Reservoir Dam? Will tunneling below and or around the reservoir and/or Stone Canon Creek/Stone Canyon Road destabilize the area?

Residents have concerns about the number of tunnels. The geotechnical analysis should evaluate the differential effects of one or two tunnels on stability, noise, and vibration.

Noise and Vibration

Community residents are concerns about noise and vibration, both from underground and aboveground project elements. The noise analysis should include three-dimensional analysis of noise propagation from the project elements, including rail segments, tunnel vents, maintenance yards, stations, and other project elements. Such analysis should be done using software capable of mapping the influence of buildings and topography on noise propagation and not using generic assumptions about the fall-off of noise with distance. Those who live in the hillsides know that topography can exacerbate and concentrate noise and any analytical approach must be done using a fully three-dimensional noise propagation model. Differential propagation during different weather conditions should also be considered. Noise from the I-405 expansion can now be heard by stakeholders more than 1 mile from the freeway. The noise analysis therefore needs to be extended beyond 1 mile from any sources.

Effects of noise on wildlife should be considered, and such analysis must consider the frequencies of sound to which other species are sensitive and not based on human auditory sensitivity. What significant sounds/noise emit from vents, fans, electrical charging facilities, and any other ancillary equipment necessary for any proposed mode of transportation? What remedies would the team recommend, such as sound walls, to reduce noise in our neighborhoods and mountainsides?

Characterization of sound from the monorail alternatives are of interest, as are the sounds that might be emitted from any tunnel vents. All communities are concerned about the results of vibrations from underground tunnels as well. Some communities are concerned about the vibrations and sounds carrying into their communities. The EIR should describe the expected vibrations/sounds above the ground which result from aerial monorail transit.

Visual Quality and Aesthetics

Many areas within the project area are designated as scenic corridors. These include the Sepulveda Pass, Beverly Glen Boulevard, and Mulholland Drive. What visual effects will the monorail option have on these scenic resources, including for the residents for Bel Air Crest.

The bridge over the entrance to Bel Air Crest is 16.5' at its highest point. Add the height of the monorail support columns and the height of the monorail on the monorail track, and the top of the monorail cars will be about 50' from the ground. Since the community of Bel Air Crest is situated uphill from its entrance, please study the visual effects inside the community and inside a monorail car. How would people be affected by monorails traveling no less than every 2 minutes in each direction both day and night?

We already have a serious problem with light pollution in our mountains and on the freeway. While laws are on the books, it is difficult to trace the multiple sources of significant light. These lights negatively affect the mountain wildlife, particularly raptors and night foraging animals which are not biologically suited to hunting for prey in artificial lighting conditions. For all aboveground project elements, what is the spectral distribution and intensity of light that will be emitted from trains, monorails, and associated infrastructure at night?

Air Quality

The EIR should address the local air quality impacts of traffic disruptions during construction, and the spillover impacts on canyon roads if construction along the I-405 causes traffic to reroute.

Sustainability

The project alternatives each introduce a new form factor for rail transportation, either a monorail or a different gauge rail. The EIR should examine the sustainability implications of a rail system made up of a patchwork of technologies. Will the infrastructure built be reusable if the technology becomes obsolete? What is the difference in greenhouse gas emissions for maintaining a system with several different technologies compared with a single rail technology?

Alternatives

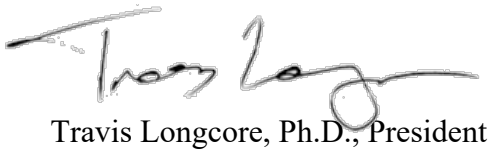
We suggest the following alternatives that could achieve the project goals while reducing the environmental impacts of construction and operation.

Low/Zero Emission Bus Alternative. Given the huge cost of the proposed project and capacity of the 405 Freeway, the same money spent immediately on low/zero emission busses that connect through the Sepulveda Pass is likely to be a far more cost effective and climate-smart alternative. One project alternative should include expansion of the bus system using express lanes on the 405 instead of a rail project.

Sepulveda Pass Underground Rail Alternative. The project alternatives conspicuously lack an underground alternative that uses the existing transit corridor and property under the 405 Freeway.

This letter was approved by the Board of Directors of the Bel Air-Beverly Crest Neighborhood Council at a duly noticed, regularly scheduled meeting on January 26, 2022 by a vote with 25 in favor, 1 opposed, and the President abstaining.

Sincerely,



Travis Longcore, Ph.D., President
Bel Air-Beverly Crest Neighborhood Council

RE: Sepulveda Transit Corridor Public Scoping Comments

Dear Mr. Carter:

On behalf of Laborers International Union Local 300 and the thousands of construction laborers, maintenance workers, and plant workers that we represent throughout Los Angeles County, I am writing to convey our strong support for the Sepulveda Transit Corridor Project. We believe that the Project will create hundreds of high-skill and high-wage construction jobs will serve as a much-needed shot in the arm to our local economy and will create an important public transportation link from the San Fernando Valley to the Westside.

As Metro continues to work through the environmental process, we believe it is essential for the agency to fairly and equally consider both current alternatives – Monorail and Heavy Rail – and to use a factual analysis conducted without bias. We also urge Metro to ensure that the selected alternative will be affordable and consistent with voter-passed Measure M. Other projects throughout the County will provide more jobs – it is essential that Metro balance its construction budget accordingly.

I appreciate your considering our views and look forward to continuing to work with Metro on much-needed transportation projects here in Los Angeles County.

Sincerely,

Sergio Rascon
Business Manager
Laborers International Union Local 300

Feel the Power

Anonymous Anonymous

Attached is a resolution passed by the North Westwood Neighborhood Council in favor of the heavy rail alignments in Alternatives 4, 5, and 6 proposed for the Sepulveda Transit Corridor Project. We hope the Board will take into account our preference for these alternatives as they identify the "locally preferred alternative" for this project.

North Westwood Neighborhood Council

- RESOLUTION -

February 2, 2022

RE: Sepulveda Transit Corridor Project

To the LA Metro Board of Directors,

We write to you as the neighborhood council representing thousands of residents, students, business owners, and other stakeholders in North Westwood. We are tasked with advocating on behalf of our community to the city on various issues—transportation and land use included—that impact the neighborhood we serve.

We call on the LA Metro Board to require that the Sepulveda Transit Corridor Project include a direct underground station on the UCLA campus and seamless underground connection to the imminent Purple Line Extension. Alternatives 4, 5, and 6 align best with our vision and priorities for this project, and we believe they also comport best with Metro's own stated evaluation criteria outlined in the Initial Screening Report for this project.[1] Accordingly, we strongly urge the LA Metro Board of Directors to move forward with these solutions as Metro proceeds through the environmental review phase of the project.

Before proposing the six alternatives now under consideration for environmental review, Metro established a number of evaluative criteria in their initial screening phase. These criteria were: (1) to improve mobility, (2) to improve equity of access, (3) to protect the environment and support community and economic development, and (4) to provide a cost-effective solution to current transportation issues along the Sepulveda corridor. At the core of all of these goals is achieving optimized ridership; a lot of riders would demonstrate improved ease/equity of access, reduced car dependence, and that project benefits exceed costs. This council believes that nothing is more important to guarantee healthy ridership than routing the project where people actually want to go.

Conveniently, Metro's own projections show that UCLA and Westwood Village are high-demand destinations. According to Metro's estimates, a UCLA stop would be the busiest non-transfer stop in the entire network. This is no surprise; almost 50,000 students attend UCLA, with 20% of these students commuting daily. Accounting for faculty and staff, UCLA has a daytime

[1] The initial screening report from October 2019 is found at this link.

population of over 82,000 people, and is the largest employment hub west of downtown. To route this project around UCLA would add unnecessary time to students' and workers' commutes, and make using Metro far less desirable. The importance of a Metro station to UCLA students, in particular, is immense. Westwood Village has some of the highest rents in the state, but students cannot live anywhere else in the Valley or Westside without a car due to a lack of rail connectivity. Students without cars are effectively barred from accessing jobs and career opportunities, putting them at a grave disadvantage in the job market. As a public, state-funded, land-grant institution, UCLA students (many of whom are the first in their families to attend college) should have equal if not greater access than privately funded (and more financially inaccessible) educational institutions such as USC.

This is not to say that other populations in Westwood do not need public transit. A direct connection to the Purple Line in Westwood is essential for our business district, which currently has a vacancy rate greater than 20%, to revitalize and thrive. Workers from across Los Angeles would be able to access jobs at over 2,000 businesses within our districts without being forced to own or drive a car. Visitors who aim to enjoy the historic nature of the Village and its entertainment - from films and theater to Michelin-starred restaurants to art museums and athletics - would not only be able to access amenities more easily, but also without polluting our air and congesting our streets. Failure to include a direct Purple Line connection effectively severs our district from true Metro system connectivity, isolating our residents and amenities from reaching the greater Los Angeles region.

Aside from lacking a UCLA station and/or connectivity with other Metro lines, we also have grave concerns about the public health implications of the monorail alignments in Alternatives 1, 2, and 3. Exposure to the pollution of the 405 freeway would create an unpleasant and unsafe experience for riders. Given that these alternatives would not take riders to where they want to go, there is also little reason to believe that traffic (and thus pollution) would get any better on this freeway.

We understand that the monorail alignments are cheaper, and that cost-effectiveness is a key priority for Metro. But it is clear to us that selecting an alternative that would prove inferior to heavy rail with a stop at UCLA and direct connectivity to the Purple Line is not worth the money Metro would be saving. This project could potentially transform the way that people in Westwood get around Los Angeles. But we can only reach that potential if we invest in a project that would serve our community well. Alternatives 4, 5, and 6 are clearly the only acceptable options because they include direct underground connections to the UCLA campus and the Purple/D Line. Going forward in the environmental review process, any alignment without these criteria is destined to fail.

Signed,

The North Westwood Neighborhood Council

Hailey Valles

To the Los Angeles Metro Board of Directors,

My name is Hailey Valles and I am the General Representative 1 on the UCLA Undergraduate Students Associated Council (USAC). USAC represents over 30,000 undergraduate students at UCLA. Last year, our council unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that undergraduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes.

A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region.

Sincerely,

Hailey Valles

A Resolution Calling For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor

WHEREAS, the LA Metro scoping process for the Sepulveda Transit Corridor Project began on November 30th and runs through February 11th[1], and

WHEREAS, LA Metro is considering six alternatives for the Sepulveda Transit Corridor Project, which will connect the San Fernando Valley to the Westside by train, with a proposed end-to-end travel time of 30 minutes[2]; and

WHEREAS, Alternatives 1 and 2 do not contain a direct stop at UCLA and a direct connection to the Purple/D Line station in Westwood[3]; and

WHEREAS, Alternative 3 does contain a direct underground stop at UCLA but does not contain an underground connection to the Purple/ D Line station in Westwood and does not connect to other key Metro lines including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines[4]; and

WHEREAS, Alternatives 1, 2, and 3 utilize monorail technology and an alignment that runs along the 405[5], posing environmental justice, public health, and safety concerns for users that would have to stand along the 405 freeway while waiting for trains as well as first-last mile connectivity concerns, as key destinations along the corridor are not located along the 405 freeway[6]; and

WHEREAS, UCLA has approximately 47,000 undergraduate and graduate students[7], as well as an additional 46,000 staff and faculty members[8], including essential first responders and medical workers, who are all stakeholders of LA Metro; and

WHEREAS, 23% of UCLA students and 48% of UCLA employees commute to campus each day. Of those commuters, over 36% drive alone to campus.[9] 42% of commuter students in a

survey reported sleeping in their cars overnight as a result of their commute and 7% reported experiencing homelessness since starting college[10]; and

WHEREAS, the Sepulveda Pass (405 freeway) has some of the worst traffic in the LA region and is the only option for car commuting from the Valley to UCLA[11]; and

WHEREAS, average rent in Westwood is the most expensive in California, forcing many students to live elsewhere along the Sepulveda Corridor[12]; and

WHEREAS, many students do not have a car with them at UCLA, and rely on public transit for connections to the greater LA region; and

WHEREAS, lack of public transit connectivity greatly limits job and internship opportunities for students, reducing their competitiveness in job pools post-graduation, and posing an equity issue wherein students with cars have greater opportunities than those without; and

WHEREAS, UCLA is a destination for Angelenos from all over LA County, providing health services, employment, education, and entertainment; and

WHEREAS, UCLA has a daytime population of 82,000, equivalent to that of a small city, and is expected to be the most highly trafficked stop in the entire corridor[13]; and

WHEREAS, the Purple/D Line station located in Westwood Village is a key connector to Culver City, Downtown Los Angeles, and the Expo Line to Santa Monica[14]; and

WHEREAS, UCLA currently has no Metro rail connectivity, unlike many local community colleges and USC; and

WHEREAS, undergraduate students are directly impacted by the proposed alternatives; and

WHEREAS, students and the Undergraduate Students Association have consistently been allies and activists in the fight to bring accessible and equitable public transportation to UCLA and Westwood Village.

Bel Air Beverly Crest
NEIGHBORHOOD COUNCIL
Building a Better Community

February 2, 2022

VIA EMAIL (sepulvedatransit@metro.net)

Peter Carter, Project Manager
Metro
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, California 90012

Re: Sepulveda Transit Corridor Project

Dear Mr. Carter:

The Bel Air Beverly Crest Neighborhood Council serves a large, multi-community, open space, wildlife corridor area in the Santa Monica Mountains. The Council is advisory to the City of Los Angeles on issues that affect our territory. Its western border is the Sepulveda Scenic Corridor/I-405 Freeway. Its eastern border is Laurel Canyon. Its northern border is Mulholland Drive. Its southern border is Sunset Blvd. Significant segments of the proposed project routes will definitely be located within our borders. We offer these comments as a courtesy, representing the views of our Board of Directors. This letter should not, however, be interpreted as representing the position of the City of Los Angeles as a whole or a communication from the City, which is represented by the Mayor in intergovernmental relations.

The Metro Sepulveda Transit Corridor Project ("Project") area includes important canyon routes between the valley and West Los Angeles. Benedict Canyon, Beverly Glen (a secondary highway), Stone Canyon, Roscomare Road (a canyon collector street), Bellagio Road leading to Sunset Boulevard, and Sepulveda Boulevard (a secondary highway). The I-405 Freeway leads to and from WLA to the San Fernando Valley.

BABCNC concurs that the Environmental Impact Report (EIR) should address all of the topic areas listed in Appendix G of the CEQA Guidelines, as described in the Notice of Preparation (NOP). We offer additional comments on several topic areas and propose additional alternatives that should be included in the analysis.

Study Area

The Study Area defined for the project is too small. Impacts to any canyon road in terms of traffic (e.g., during construction) have spillover effects that extend several canyons over because of the few north-south routes through the hills. The study area should be extended eastward to at least include through Franklin Canyon.

Wildfire

The BABCNC territory is within a Very High Fire Hazard Severity Zone as designated by Cal Fire. Several significant fires have swept through this area and burned tree canopies, homes, and wildlife. We take this threat with all seriousness. As part of the description of the project area and baseline conditions, please investigate all arson, electric, and spontaneous fires, especially those within the proposed project footprint within the last 5 years. You may not find all of the car fires, but the residents can testify that they happened. Fire Department records may or may not have been retained, and smaller incidents may not be documented. You have only to examine both the east and west sides of Sepulveda to find the answers related to the two larger fires. Fires have been started by faulty electrical wires, the homeless, including cooking fires and pyromaniacs. Cars fires/accidents on the freeway or on both sides of Sepulveda can cause a gas tank to explode, spewing gasoline onto hillsides and burning the hillsides in Bel Air. A full understanding of the historical and current fire risk must be included in the wildlife risk analysis, and special attention paid to any additional risk from Project construction and ongoing operations from all alternatives. We have been told by LA Fire Department officials that a wind-driven fire beginning in the Kirkwood Bowl area could reach our western border within 15–30 minutes. Burning embers from our tall non-native trees, such as pines, eucalyptus, and palm trees can fly great distances in a windstorm. Given our dense residential areas within our canyons, what escape routes are available for passengers on trains, in tunnels, or on aerial monorails? What escape routes are available to fire evacuees, who would have to leave their Bel Air Beverly Crest communities both during and after construction?

Geotechnical, Subsurface, and Seismic Hazards

We request that Metro investigate all earthquake fault lines in the Project area, such as the fault along Mulholland Dr. from approximately Benedict Canyon and west to the I-405. We have had

two recent earthquakes along that fault. We have been told by USGS that earthquake faults cannot be remediated and can reach 3 miles deep.

On several mountainsides, there has been earth slippage. A chunk of the Mulholland roadway east of Coldwater Canyon (part of the BABCNC territory) literally broke off and fell into the canyon below. The analysis should map all current and historical landslide areas and assess the impacts of construction and operation of all alternatives on them.

Our residents report that there are many springs and aquifers in the project area. Some, but not all of these have been mapped. A thorough investigation, starting with existing data (Dark et al. 2011, Liu et al. 2011) and including field inspections should be made of springs and near-surface aquifers. To assist this effort, we compiled the following examples.

1. A large, intermittent spring exists at the top of Beverly Glen and Mulholland Drive.
2. Another major spring feeds a stream on the west side of Stone Canyon Road.
3. As homes have been developed in the hills, springs and/or surficial aquifers have invaded foundations. Some basements had to be rebuilt.
4. Milken School is across the Mulholland Bridge on Mulholland Drive. The gym had to be rebuilt 3 times because water from springs undermined the gym floor.

Fully describing the underground waters is essential to a complete impact analysis because of the potential adverse impacts of dewatering any tunnels and access shafts. Such adverse impacts would include potential geotechnical hazards, subsidence, and loss of biological function of surface ecosystems dependent on streams or surface aquifers.

How will dewatering of subsurface tunnels affect subsidence and where? How much water will be pumped out of tunnels and how will it be disposed of? How long will such dewatering take place (during construction, indefinitely)? Will clean, fresh water pumped from tunnels simply be discharged into the stormdrain system and wasted by discharging it into the ocean? Can the project design include reuse of any water pumped from tunnels to replenish existing aquifers to ensure continued ecological function of streams and riparian zones dependent on near-surface water? Where will any dewatering pumps be located and what route will any removed water take? How will dewatering affect wildlife? What do studies show about springs draining into tunnels? How will wildlife fare if traditional sources of water are no longer available on the surface?

We are certain that the Lower Stone Canyon reservoir area is prone to liquefaction, based upon insurance policies issued to homeowners in the area. Some Sepulveda Canyon homes are marked on maps as liquefaction locations. Stone Canyon Road is on a flood plain. The Stone Canyon reservoir is not lined and is supported by an earthen dam. A second such dam was built elsewhere by the same man: William Mulholland. That dam failed/ collapsed years ago. The EIR should consider the relationship between project elements and liquefaction risk, and the impacts

on any tunnel that may be close to a liquefaction zone in if an event occurs. Please confirm and identify the entirety of the liquefaction areas within our boundaries in the EIR.

Given the fate of the other Mulholland designed dam, how will tunneling affect the stability of the Stone Canyon Reservoir Dam? Will tunneling below and or around the reservoir and/or Stone Canon Creek/Stone Canyon Road destabilize the area?

Residents have concerns about the number of tunnels. The geotechnical analysis should evaluate the differential effects of one or two tunnels on stability, noise, and vibration.

Noise and Vibration

Community residents are concerns about noise and vibration, both from underground and aboveground project elements. The noise analysis should include three-dimensional analysis of noise propagation from the project elements, including rail segments, tunnel vents, maintenance yards, stations, and other project elements. Such analysis should be done using software capable of mapping the influence of buildings and topography on noise propagation and not using generic assumptions about the fall-off of noise with distance. Those who live in the hillsides know that topography can exacerbate and concentrate noise and any analytical approach must be done using a fully three-dimensional noise propagation model. Differential propagation during different weather conditions should also be considered. Noise from the I-405 expansion can now be heard by stakeholders more than 1 mile from the freeway. The noise analysis therefore needs to be extended beyond 1 mile from any sources.

Effects of noise on wildlife should be considered, and such analysis must consider the frequencies of sound to which other species are sensitive and not based on human auditory sensitivity. What significant sounds/noise emit from vents, fans, electrical charging facilities, and any other ancillary equipment necessary for any proposed mode of transportation? What remedies would the team recommend, such as sound walls, to reduce noise in our neighborhoods and mountainsides?

Characterization of sound from the monorail alternatives are of interest, as are the sounds that might be emitted from any tunnel vents. All communities are concerned about the results of vibrations from underground tunnels as well. Some communities are concerned about the vibrations and sounds carrying into their communities. The EIR should describe the expected vibrations/sounds above the ground which result from aerial monorail transit.

Visual Quality and Aesthetics

Many areas within the project area are designated as scenic corridors. These include the Sepulveda Pass, Beverly Glen Boulevard, and Mulholland Drive. What visual effects will the monorail option have on these scenic resources, including for the residents for Bel Air Crest.

The bridge over the entrance to Bel Air Crest is 16.5' at its highest point. Add the height of the monorail support columns and the height of the monorail on the monorail track, and the top of the monorail cars will be about 50' from the ground. Since the community of Bel Air Crest is situated uphill from its entrance, please study the visual effects inside the community and inside a monorail car. How would people be affected by monorails traveling no less than every 2 minutes in each direction both day and night?

We already have a serious problem with light pollution in our mountains and on the freeway. While laws are on the books, it is difficult to trace the multiple sources of significant light. These lights negatively affect the mountain wildlife, particularly raptors and night foraging animals which are not biologically suited to hunting for prey in artificial lighting conditions. For all aboveground project elements, what is the spectral distribution and intensity of light that will be emitted from trains, monorails, and associated infrastructure at night?

Air Quality

The EIR should address the local air quality impacts of traffic disruptions during construction, and the spillover impacts on canyon roads if construction along the I-405 causes traffic to reroute.

Sustainability

The project alternatives each introduce a new form factor for rail transportation, either a monorail or a different gauge rail. The EIR should examine the sustainability implications of a rail system made up of a patchwork of technologies. Will the infrastructure built be reusable if the technology becomes obsolete? What is the difference in greenhouse gas emissions for maintaining a system with several different technologies compared with a single rail technology?

Alternatives

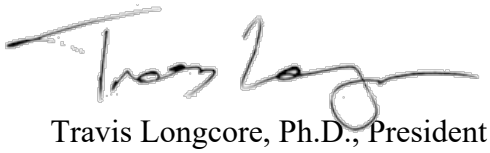
We suggest the following alternatives that could achieve the project goals while reducing the environmental impacts of construction and operation.

Low/Zero Emission Bus Alternative. Given the huge cost of the proposed project and capacity of the 405 Freeway, the same money spent immediately on low/zero emission busses that connect through the Sepulveda Pass is likely to be a far more cost effective and climate-smart alternative. One project alternative should include expansion of the bus system using express lanes on the 405 instead of a rail project.

Sepulveda Pass Underground Rail Alternative. The project alternatives conspicuously lack an underground alternative that uses the existing transit corridor and property under the 405 Freeway.

This letter was approved by the Board of Directors of the Bel Air-Beverly Crest Neighborhood Council at a duly noticed, regularly scheduled meeting on January 26, 2022 by a vote with 25 in favor, 1 opposed, and the President abstaining.

Sincerely,



Travis Longcore, Ph.D., President
Bel Air-Beverly Crest Neighborhood Council
tlongcore@babcnc.org

Mr. Peter Carter
Project Manager, Metro
One Gateway Plaza
Mail Stop 99-6
Los Angeles, CA 90012
Via email: sepulvedatransit@metro.net

Dear Peter:

On behalf of Move LA, I would like to submit this letter to you and your staff to be included in the Sepulveda Pass Scoping Comments file that LA Metro is assembling based on your three scoping meetings, as well as comments that have come into Metro during the comment period closing on February 11th.

As you will note from the points I have listed below, Move LA is strongly urging Metro, its staff, and consultants to continue to weigh both current project bidders' approaches to the Sepulveda Pass Transportation Corridor without any preconceived conclusions or preferences until the environmental process is completed. Both current options—Heavy Rail and Monorail—must be fairly and equally considered throughout this stage of the process, based upon a factual analysis conducted without bias.

We urge Metro to strongly consider the most compelling PCA alternative that will bring maximum benefits to the County in terms of sustainability and reduction of GHG from construction to operation to maintenance. Metro must also keep the 2028 Olympics at the forefront of scheduling and planning as the Westside, Valley and UCLA will be significant players in the games.

Our key points are:

- Both options utilize proven, high speed, high-capacity, safe technology that is being or already has been built in several of the world's largest cities.
- Both options should also be compared with respect to the cost, schedule, and constructability aspects of extending the line all the way to LAX, as defined in Measure M.
- The assessment should also include environmentally significant benefits created by variations in project capital and operating costs. For example, if, as previously indicated, the Monorail project costs were on the order of $3 B less than the subway project costs, that could well enable the extension of the Monorail all the way to LAX, perhaps in the near term. Such an extension would create direct transit access to LAX from the Valley, UCLA and communities along the Sepulveda corridor, as well as direct to LAX connections from the Purple Line and Exposition LRT stations. Such access and connectivity would enhance the project's ridership potential significantly and would enhance expected reductions in corridor VMT and GHG emissions.

- Both the Monorail Alternative 3 and Heavy Rail alternatives 4 and 5 appear to provide high frequency, direct service to UCLA with an underground station located near the center of campus and a Purple Line transfer station at Wilshire Blvd. Both options appear to provide similar connectivity to the Purple Line.
- Both the Monorail and Heavy Rail alternatives appear to provide frequent convenient transfer connections to Metro's crossing local, express, and Rapid bus lines; the Orange Line BRT in the Valley; the Purple Line subway; and the proposed East San Fernando Valley and existing Exposition light rail lines. Both would involve transfers to and from those crossing lines, whereby transferring passengers would need to change levels from an aerial (Monorail) or underground (Heavy Rail) station.
- Metro should compare the passenger experience of underground v. above ground technologies which could impact system ridership. Creating a high-quality passenger experience is very important, especially since many potential riders have other mobility options, including access to a private automobile.
- In view of the severe funding challenges Metro faces, it is extremely important to compare the cost and schedule impacts of the technology options. It is important that building the Sepulveda Corridor will not adversely affect funds available to build other Measure M corridors, such as West Santa Ana, Crenshaw North Extension, Orange Line Conversion to LRT, Green Line Extension, and the Gold Line East Extension
- We want to hear more from Metro how each proposal will meet Metro's minority hiring and transportation equity goals. We are concerned that fully automated systems of any transit technology will reduce employment prospects for Los Angeles residents.

Move LA is excited about this project and we want to work closely with Metro and the bidders to ensure the most robust communication, outreach and stakeholder interface on this project. Move LA proposes to work with Metro to produce a forum where both teams could present their visions for the project including, costs, schedules, construction methods, and their approaches to building the system from the Valley to UCLA and the Westside of Los Angeles, ensuring connectivity to the Purple Line and Exposition LRT and the extension of the project seamlessly to LAX.

Many thanks for your time and attention and I hope to discuss this issue and our concerns with you and your staff at your earliest convenience.

Sincerely,

Denny Zane
Executive Director
Move LA

Attn: Mr. Peter Carter, Project Manager

Re: Proposed Sepulveda Transit Corridor Project

Dear Mr. Carter:

This correspondence shall serve as a follow-up to the Bel Air Crest Homeowner Association Boards of Directors' letter to Metro dated February 22, 2019 and comments submitted during public meetings.

The three (3) Bel Air Crest Boards and community residents discussed the six (6) alternatives as submitted by Metro for the above referenced project at Board Meetings held in December 2021 and January 2022.

GENERAL ACCESSIBILITY TO and FROM BEL AIR CREST

The community would like to remind Metro that BAC residents completely depend on the 405 Freeway and Sepulveda Boulevard for ingress and egress.

REQUIREMENTS and RECOMMENDATIONS

The BAC Boards are not in favor of Alternatives 1, 2 and 3 due to the long term potential impact on accessibility to the community during construction.

AIR / WATER / LAND

The Boards would like to remind Metro of the community's concerns regarding the possible impact of construction on existing infrastructure in the Sepulveda Pass Corridor, including but not limited to, the petroleum and natural gas pipes that are located under Sepulveda Boulevard.

The Boards and community residents have concerns regarding potential noise, visual, and air quality impacts the aerial monorail system would have on homesites adjacent to the Metro project.

REQUIREMENTS and RECOMMENDATIONS

The BAC Boards are not in favor of Alternatives 1, 2 and 3 due to potential safety hazards during construction and the long term impacts on residents in the Sepulveda Pass corridor.

WILDLIFE CORRIDOR

Bel Air Crest is a designated wildlife corridor, including but not limited to, the entrance area on Bel Air Crest Road, Sepulveda Boulevard, and the 405 Freeway underpass.

REQUIREMENTS and RECOMMENDATIONS

The Boards are not in favor of Alternatives 1, 2 and 3 due to the long term potential impact on Santa Monica Mountain wildlife, including protected species such as mountain lions who live and travel in and around the BAC community.

MULTIMODAL OPTIONS

The Boards are concerned with the options that utilize a combination of two or more modes of transportation.

REQUIREMENTS and RECOMMENDATIONS

The Boards are not in favor of Alternatives 1, 2, 3, 4 and 5 due to proposed multimodal transport forcing riders to change between aerial, underground, people mover and/or bus systems which will result in a loss of efficiency and ease of use for riders.

ALTERNATIVE 6

Based on the preliminary information provided by Metro, the Boards are in favor of Alternative 6. However, it has also been brought to the attention of the Boards that Alternative 6 utilizes trains that are not compatible with existing Metro tracks and trains. Furthermore, the information provided by Metro to date does not include geological studies for the Alternatives that include underground tunnels.

REQUIREMENTS and RECOMMENDATIONS

The Boards are requesting that Metro reconsider the proposed trains for Alternative 6. The trains approved for the transit project should be interchangeable with existing Metro trains and tracks. The Boards are also requesting copies of geological studies regarding proposed underground tunnels in Alternatives 3, 4, 5 and 6.

As stated previously, the Bel Air Crest Boards and community residents appreciate the value that the proposed effective high-capacity rapid transit will bring to Los Angeles.

However, this project impacts numerous communities, schools, and institutions, as well as the movement of thousands who utilize the Sepulveda Pass corridor. The Boards look forward to receiving updates regarding the proposed transit project. In addition, the Boards may submit further correspondences in the future for Metro's consideration.

Sincerely,

TRANSPORTATION MOTION - Sepulveda Transit Corridor Project

Submitted By:

BCC Transportation Committee

The Brentwood Community Council (BCC) supports LA Metro's efforts to provide a fast, safe, affordable, and environmentally friendly way to travel between the San Fernando Valley and West LA. The BCC recognizes and supports the monumental Sepulveda Transit Corridor Project and the project's goals to reduce single occupancy vehicle traffic on the I-405 for reduced emissions, to improve quality of life, and to increase access across the region. The Brentwood Community Council has **the following four goals and concerns we would like LA Metro to address in its full environmental review.**

- Provide a UCLA Stop: We are supportive of the increased connectivity that is established under the Sepulveda Transit Corridor alignments. It would be a missed opportunity to select an alignment that does not have a direct stop at UCLA, and therefore **we strongly support an alignment that includes a direct stop at UCLA**. Without this stop, riders will experience an extra burden and may make taking transit a less desirable option. More details on this stance can be found in the Westside Regional Alliance of Council Motion.
    - How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop?
    - Will the transfers be free of charge?
    - How will LA Metro measure residential and commercial hub connectivity to ensure the alignment with the highest transit connectivity be selected?
    - How will transfer accessibility be ensured for all riders, regardless of ability?

- Consider Wildfire Risks. Both the construction and operation of the Sepulveda Transit Corridor Project may impose a fire risk upon both the hillsides and canyons of Brentwood's Very High Fire Hazard Severity Zone north of Sunset Blvd. **For both the monorail and heavy rail options, Metro must consider impacts on wildfire and evacuation.**
    - How many fires have arrise in the Corridor in the last 10 years? How many have shut down the freeway or required evacuation from the area?
    - What are the wildfire risks during construction and what safety measures can be put into place to prevent fires?
    - Does either technology have the potential to spark wildfires in operation?
    - Under what conditions would monorail or tunnel riders be forced to evacuate or stay in place?
    - If a fire were to break out in the Corridor and the monorail riders were required to evacuate, where and how would they exit safely?

- No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding

Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, **we strongly oppose alignments and final designs that result in the possibility of property acquisition.**
    - How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 Express Lanes final selection?
    - What existing right-of-way will the alternatives with aerial alignments along the I-405 use?

- Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider an alternative that will result in the least negative impact to surrounding neighborhoods, while still providing a stop at UCLA.
    - How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise?
    - What will the operational noise impacts be for alternatives with aerial alignments?

Thank you for your time and we look forward to continuing to work with Metro as this project progresses through its environmental review.

RE: SCNC Board Agenda Item 9(b)

Dear Metro Board Member and Councilmember Krekorian, et al.:

On January 19, 2022, at its regular meeting, the Studio City Neighborhood Council passed the following motion:

The Board of the Studio City Neighborhood Council (SCNC) ***only*** supports "Alternative 6" with the

motto, "You get what you pay for." "Alternative 6 (Heavy Rail)," is the only alternative that truly has a vision of looking to the future with "room for growth" capacity as well as speed; as opposed to slower, smaller capacity "Alternatives 1, 2, and 3 Monorails."

Randall Fried
President,
Studio City Neighborhood Council

Dassault Systemes

February 11, 2022

Mr. Peter Carter, Project Manager
Metro
One Gateway Plaza, MS 99-22-6
Los Angeles, CA 90012

In Re: **Environmental Impact Report Scoping Comment for Sepulveda Transit Corridor Project**

Dear Mr. Carter,

On behalf of Dassault Systemes, I am writing in support of the Los Angeles County Metropolitan Transportation Authority (METRO) proceeding toward selection of a preferred alternative for the Sepulveda Transit Corridor Project. As a multinational company with three locations in Los Angeles County, we believe this project would provide more sustainable options for personal mobility via a high-capacity fixed guideway transit solution between the San Fernando Valley and the Westside of Los Angeles.

3DS operates in Woodland Hills, Long Beach and Downtown Los Angeles. Our Woodland Hills office is proximate to the Study Area, with an office that supports nearly 100 engineering, sales and operations professionals and a 10-minute walk to the Canoga Orange Line Station that would connect riders to the future Sepulveda Line. As we celebrate our 40th anniversary providing innovative 3D design, modeling, simulation and lifecycle solutions to customers in the aerospace, automotive, high technology, construction and other industrial sectors, southern California has for more than two decades been a pillar of our North American corporate footprint.

At Dassault Systemes, our core belief is that achieving a more sustainable future is made possible by leveraging the virtual world to simulate the real world. 3DS enables 3D design, engineering, simulation and project lifecycle management, and our team is highly familiar with the complex issues METRO must fully understand, integrate and balance as it moves to select a preferred alternative. Until those complexities are fully digested, mapped and understood by METRO and the public, it is conceivable that any of the six current Alternatives could merit selection as the Preferred Alternative.

Therefore, 3DS commends the project leadership for steps taken so far to engage the public and seek comments from affected stakeholders, and urges METRO to take actions that allow best design and engineering practices, and data-driven decision making to support a collaborative and transparent selection of the Preferred Alternative.

However, our experience with construction clients demonstrates that the end of construction only brings an owner/operator to the birth of the asset that needs active lifetime management. We therefore urge project leaders to fully consider the best means to ensure on time and on-budget construction, and *also* how METRO will best equip itself with data-driven and model-based tools to ensure safe and efficient operations during many projected decades of service for residents and visitors of Los Angeles County.

In examining lifecycle costs, we are aware of data showing that roughly 20 percent of total cost is incurred during project delivery, with the remaining 80% is expended during operation of the asset.[1] When appropriate, 3DS would welcome the opportunity to share our expertise in this field, which comes from working with design, engineering and construction firms globally to deliver complex infrastructure projects with a lifecycle focus, from construction execution to procurement, systems integration and asset management. Our clients benefit from all project data and information sharing and transfer, co-design development and project execution being accessible in a common data environment.

By aggregating project data and information in a common data environment that meets BIM Level 3 requirements, our 3DEXPERIENCE® Platform enables a single and integrated model allows real-time collaboration leveraging our core modeling capabilities to consolidate deliverables and accelerate schedules to meet critical time and budget needs.

As a corporate citizen and local stakeholder, Dassault Systemes appreciates the opportunity to comment during the scoping process, and wishes Metro all success with next steps on the Sepulveda Transit Corridor Project. We ask that the project team provide guidance in the resulting Environmental Impact Report (EIR) on how it will assess best construction and lifecycle management processes into the project construction delivery and lifetime asset operations and management, and appreciate your full consideration of these comments as part of the scoping process.

Best Regards.

Dan Beattie

Valley Industry and Commerce Association (VICA)

Subject: VICA SUPPORTS Alternatives 3, 5 & 6 of the Sepulveda Transit Corridor

Dear Metro Board Member,

The Valley Industry and Commerce Association (VICA) has been a long-standing supporter of the Sepulveda Transit Corridor, and after considering all 6 options, we are in strong support of alternatives 3, 5, and 6.

VICA is proud to represent over 350 businesses and every community within the San Fernando Valley region, and we are strong advocates for transportation projects that improve the Valley's connectivity with the rest of the Los Angeles region. We believe that the Sepulveda Transit Corridor will provide high-quality transit options that effectively service the growing travel demand between the housing and major employment sectors of the San Fernando Valley and Westside.

Specifically, VICA has chosen to support alignments 3, 5, and 6. One critical reason for this support is because of these options' inclusion of an on-campus station at UCLA. Direct access to the campus is critical to the university, the 2028 Olympics, and the financial viability of the corridor's operations. VICA would also like to clarify that while we are members of a coalition to support all options with a connection to UCLA, we are only in support of options 3, 5, and 6, as alternative 4 has unresolved equity issues between the Westside and the Valley.

Overall, for a transit system to be a competitive travel option that attracts new ridership, it needs to increase speed, frequency, capacity, and reliability, while providing convenient connections to existing and planned transit lines. VICA believes that options 3, 5, and 6 do just that, and we ask for your support of these Sepulveda Transit Corridor alignments.

Geneva Vogelheim

My name is Geneva Vogelheim and I am President of the UCLA Public Health Student Association, a member of the Graduate Students Association (GSA). GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping processes.

A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region.

Sincerely,
Geneva

A Resolution Calling For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor
Sponsor: Abdallah Daboussi and Musibau Francis Jimoh

WHEREAS, the LA Metro scoping process began on November 30th and runs through February 11th, and

WHEREAS, LA Metro is considering six alternatives for the Sepulveda Transit Corridor Project, which will connect the San Fernando Valley to the Westside by train, with a proposed end-to-end travel time of 30 minutes; and

WHEREAS, Alternatives 1 and 2 do not contain a direct stop at UCLA and a direct connection to the Purple/D Line station in Westwood; and

WHEREAS, Alternative 3 does contain a direct underground stop at UCLA but does not contain an underground connection to the Purple/ D Line station in Westwood and does not connect to other key Metro lines including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines; and

WHEREAS, Alternatives 1, 2, and 3 utilize monorail technology and an alignment that runs along the 405, posing environmental justice, public health, and safety concerns for users that would have to stand along the 405 freeway while waiting for trains as well as first-last mile connectivity concerns, as key destinations along the corridor are not located along the 405 freeway; and

WHEREAS, UCLA has approximately 47,000 undergraduate and graduate students, as well as an additional 46,000 staff and faculty members, including essential first responders and medical workers, who are all stakeholders of LA Metro; and

WHEREAS, 23% of UCLA Students, and 48% of UCLA employees commute to campus alone in their automobile each day

WHEREAS, the Sepulveda Pass (405 freeway) has some of the worst traffic in the LA region and is the only option for car commuting from the Valley to UCLA; and

WHEREAS, average rent in Westwood is the most expensive in California, forcing many students to live elsewhere along the Sepulveda Corridor; and

WHEREAS, many students do not have a car with them at UCLA, and rely on public transit for connections to the greater LA region; and

WHEREAS, lack of public transit connectivity greatly limits job and internship opportunities for students, reducing their competitiveness in job pools post-graduation, and posing an equity issue wherein students with cars have greater opportunities than those without; and

WHEREAS, UCLA is a destination for Angelenos from all over LA County, providing health services, employment, education, and entertainment; and

WHEREAS, UCLA has a daytime population of 82,000, equivalent to that of a small city, and is expected to be the most highly trafficked stop in the entire corridor; and

WHEREAS, the Purple/D Line station located in Westwood Village is a key connector to Culver City, Downtown Los Angeles, and the Expo Line to Santa Monica, which are all key economic and employment hubs; and

WHEREAS, UCLA has no Metro rail connectivity, unlike many community colleges and USC; and

WHEREAS, graduate students are directly impacted by the proposed alternatives; and

WHEREAS, students and the Graduate Student Association have consistently been allies and activists in the fight to bring accessible and equitable public transportation to UCLA and Westwood Village.

THEREFORE LET IT BE RESOLVED, that the UCLA GSA strongly supports Alternatives 4, 5, and 6 of LA Metro's Sepulveda Transit Corridor Project scoping period, as they contain both a direct stop at UCLA and a direct transfer to the Purple/D Line in Westwood Village; and

LET IT FURTHER BE RESOLVED, that the UCLA GSA calls on LA Metro to eliminate or immediately amend Alternatives 1, 2, and 3, as they do not include a direct stop at UCLA, a direct transfer to the Purple/D Line in Westwood Village, or connectivity to other Metro lines across Los Angeles; and

LET IT BE RESOLVED, that the UCLA GSA emphasizes the importance of graduate students as stakeholders in the LA Metro scoping process and affirms to LA Metro the importance of including student input equally as stakeholders in any scoping processes.

I, Musibau Francis Jimoh, President, Graduate Student Association hereby certify that the foregoing resolution was duly passed and adopted at a regular GSA forum meeting held on the 19th day of January 2022.

_____

Vera Koutnik

To the Los Angeles Metro Board of Directors,

My name is Vera S. Koutnik and I am the President of Engineering Graduate Student Council for 2021-2022 academic year(~2500 student members). In addition, I sit on the UCLA Graduate Students Association (GSA) council. GSA represents over 13,000 graduate students at UCLA. Early this year, the GSA unanimously passed "A Resolution For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor," which is attached to this comment letter. We want to emphasize that graduate students are stakeholders in the LA Metro scoping process and affirm the importance of including student input equally as stakeholders in any scoping process.

A Sepulveda Transit Corridor without a direct, underground Metro station on the UCLA campus and a direct, underground connection to the Purple/D Line does a grave disservice to the students of the number 1 public university in the nation, the number 1 hospital in the state, and an immensely important institution in the Los Angeles Region.

We want the stop to be directly at UCLA to allow for safe and quick access for UCLA students.

Sincerely,

A Resolution Calling For A Direct UCLA/ Westwood Purple Line Stop on the Sepulveda Transit Corridor
Sponsor: Abdallah Daboussi and Musibau Francis Jimoh

Citizens Coalition for Safe Community

I have reviewed the available documents and strongly support for scoping eliminating Alternatives 1, 2, 3, 4, & 5, both above ground and some underground alternatives for the preparation of a Programmatic EIR for the Westside and Valley corridors. I was Environmental Controls Supervisor for the Red Line Phase 1, construction management for 5 years and have contributed to rail transit, and some buses, projects in Seoul Korea, Beijing & Canton China, and Dubai UAE. I have also prepared/reviewed >500 EIRs/EISs worldwide since 1972 for structured project and for infrastructure project, road, transit, water supply, sewers, and flood controls. I also reviewed the SR-710 North Project from 1992-2014 when it was finally focused on TDM/TSM projects. I find the underground plans to be totally inadequate and incomplete with regard to alignment (e.g., keep the route dead straight, NO CURVES between stations) and to the disposition of tunnel debris/muck for hauling away from tunnel heads (e.g., TBM starts from stations at rail lines ONLY). I am always available for clarifications and elaborations, and as President of Citizens Coalition for A Safe Community and retired assistance is Pro Bono,

I also reviewed the SR-710 North Project from 1992-2014 when it was finally focused on TDM/TSM projects. I find the underground plans to be totally inadequate and incomplete with regard to alignment (e.g., keep the route dead straight, NO CURVES between stations) and to the disposition of tunnel debris/muck for hauling away from tunnel heads (e.g., TBM starts from stations at rail lines ONLY).

I am always available for clarifications and elaborations, and as President of Citizens Coalition for A Safe Community and retired assistance is Pro Bono, ctwilliams2012@yahoo.com.

A major general comment: Get a Program for how this segment fits with the broader transit plan and the SCAG Transportation Plan for 2045 and beyond, a West Main Line from Sylmar/Granada Hills by way of this Project to LAX then to Torrance/Palos Verde, with CEQA considerations as a Programmatic EIR (PEIR) with the current efforts as a Project EIR in the PEIR.

As a major part of the Program and current Project depends on ridership, provide a thorough, quantified, modelled, financial/revenue program based on SCAG 2045 projections, and new Transportation Models related to implementation of the Program during part or all of the 2045 forecast period, e.g., Torrance<>Sylmar by 2045. Provide transit models for passengers, number-car/train, headways, speeds, and loading/unloading flows within and between stations.

Program Concept Alignment and Current Sepulveda Project Corridor

Recognizing the cost and risks for underground systems, the PEIR must reconsider all stations throughout the Metro system, and as exampled by the B/Red Line/Phase 1 Station – 7th/Flower, provide for all Project stations to support 2-4 levels of underground commercial/community/parking centers with 10-20 floors of above ground mixed uses, residential, commercial, and community spaces. This approach will greatly benefit the Public-Private-Partnership (PPP) and moderate the public costs of the Project and Program across West LA and East San Fernando Valley.

Tunnel diameters/numbers must consider twin-tubes of 20-30ft diameters and minimum depth to top of tunnel of 60-100ft. Comparisons and cost estimates for larger single tunnels (40-50ft) must include time for availability, costs, time for assembly, construction ventilation and debris/muck production, and costs for production, transport, and assembly/disassembly during construction. All tunneling boring machines (TBMs) must be used for the Project tunnels and then "parked" for the next project continuation, not disassembled. Disassembly and relocation should be considered only where twin TMBs are used to reduce total construction time for the tunneling and they meet in the middle somewhere and are disassembled and removed from the tunnel and returned to the starter shafts for continued tunneling beyond within the Program corridor.

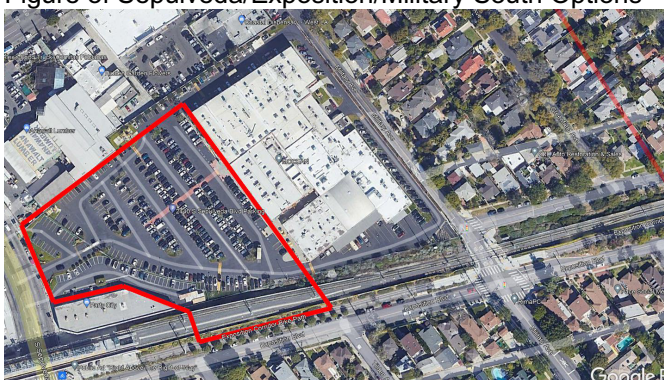
As part of the Draft PEIR/EIS, provide a Draft MMRP within the D-PEIR, rather than only during Final EIR. Similarly, provide for mandatory rather than conditional uses of mitigation, monitoring, and public reporting during construction and provide public reporting via in-person meeting and virtual meetings, and a project web-page, by station and tunnel segments.

As part of Project construction workplan, provide for acquisition for all ground level parking/storage/vacant yards (larger than 20,000sf, four typical R1 house plots) within 1000ft of stations and tunnel segment shafts which can be later integrated with Project O&M facilities and buildings after construction (e.g., areas on south side of MetroLink Tracks – Orion & Raymer, Van Nuys).

Figure of Van Nuys Yard North Options

and

Figure of Sepulveda/Exposition/Military South Options



Provide these yards for the current Project and then for continuation of tunneling Program further south to LAX and beyond and north to Sylmar.

Provide for immediate seismicity monitoring for all expected fault zones within this Project segment and next Program segments.

For station designs, provide incorporation of commercial uses for intermediate underground levels (two-three) above the platform levels (#1: 0ft gl - -25', #2 -25' - -50', and #3 -50' - -75ft, Platform level.

For corridor design and alignments, provide for all change of tunnel alignments within the station connection and within 500 feet of connecting tunnels in deceleration/acceleration elements of each tunnel.

Provide for all cross-overs between track sets to be within station and/or within 500ft of stations.

As part of the Public-Private-Partnership contracting, provide that PPP partner(s) be responsible for underground commercial/community spaces and any above ground structures above the stations up to 10-20 floors. Further consideration must be provided for paid parking replacing station underground commercial levels if justified.

Provide for a thorough geotechnical review and documentation and for groundwater studies beneath all water features (e.g., Stone Canyon Reservoirs and LA River Channel

RISK ISSUES

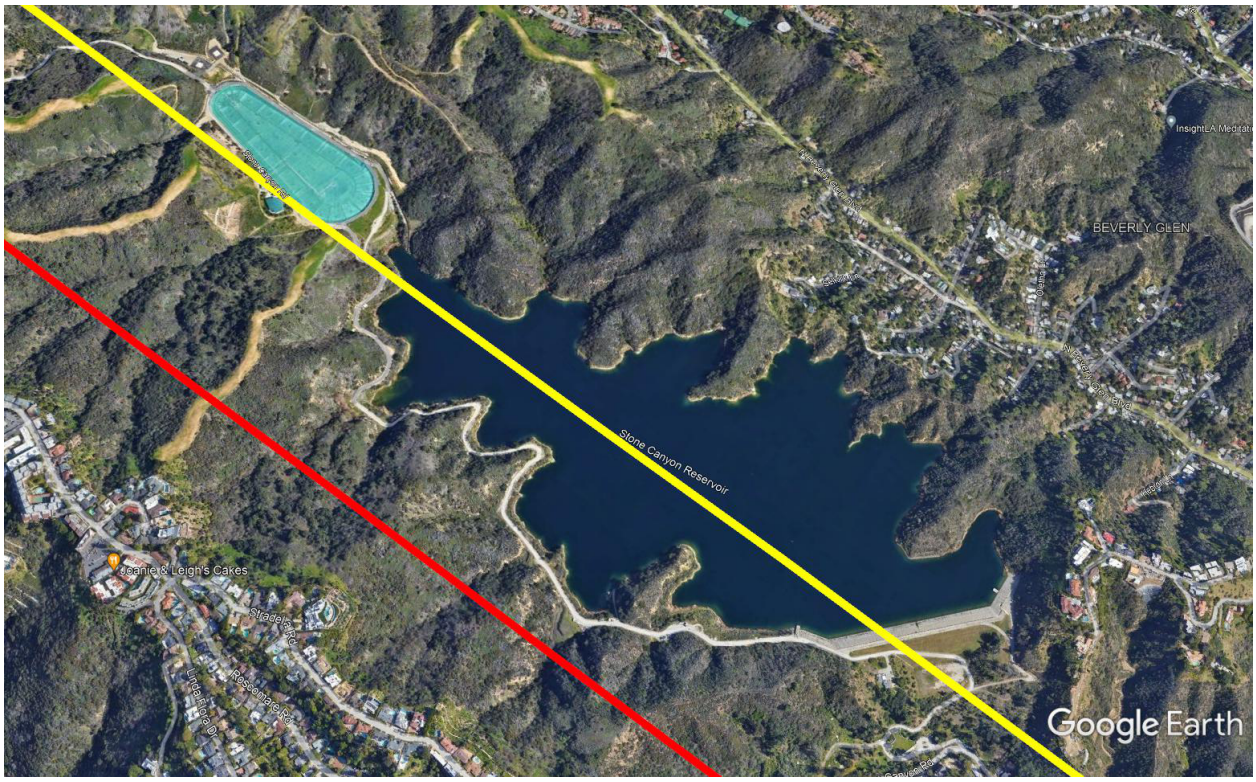
Groundwater and Recharging

Provide for initial and pre-construction geologic investigations regarding the context of tunnels/stations for the current Sepulveda Project and later Program projects.

Provide an initial ground risk assessment for all project segments for both tunnels and stations and any other underground specialized structures, e.g., fault crossing, underground cross-overs and stand-by facilities, based on dead-straight alignments between stations.

As justified by costs and risks, provide further, more intense ground risk assessments incorporating other underground structures between stations.

Based on the figure below, provide for documentation, review, and assessment of potential risks of ground level uses and structures and needs to relocate/realign project tunnels when ground risks require both for risk to Project and risks of Project on surface facilities due to ground failure above the Project.



Metro currently has heavy rail transit systems and the recommended alternative of heavy rail underground transit systems must be integrated with existing physical and O&M systems in place now, while they can be gradually upgraded during the Program implementation of numerous projects, including the current Sepulveda Project.

As part of the current Project and the Program startup, provide for compilation, review, and comparison of all Heavy Rail Systems (HRS) currently used in Metro and for documentation/assessment of all differences for reaching standard Heavy Rail System (HRS) for rails, trains, and cars by 2045. Such a unified system must become the model and specification basis for the Program/Project transit system. Where minor differences may exist the Project system must allow for minor variations during the construction and operations of the Project while setting an upgrade pathway to unify the HRS transit.

An important 2022 element for the HRS Transit must focus on the digitalization of the entire Transit system beginning with the Sepulveda Project and how to incorporate more-modern designs and implementation of upgrades to the 20th century systems to the digital/electronic/automated systems by 2045. Provide as part of the Project Description, review/assessment/alternatives and selections of an upgraded and upgradable Transit system for implementation during this Sepulveda Project and for later upgrading during subsequent projects in the Program. A central focus of upgrade of HRS tech must be electronic-based automated operating system compatible with existing and upgraded Metro Transit and eventual operator fail-safe/over-ride system on mostly automated transit system.

Provide for a construction process involving the Project and Program involving the same (with repairs/upgrades) four-six tunnel boring machines (TBM) working to build one 14-km (9-mile) long north tunnel for single tracked 20-25ft diameter tunnels. Provide for segment deliveries and debris removal to common offsite yards elsewhere in LA County, with use of existing rails at night.

Provide for daily passenger levels of 150,000-200,000 roundtrip riders (300K-500K line trips) in 2045. Provide modelled, comparative, quantified estimates for both Off- and On-Peak weekday/end travel periods.
Provide the financial relations with capital, construction, and O&M costs and funding for all modelled conditions of travel.
Provide a thorough, adequate, and complete quantified numerical model for construction costs/expenditures, operations and maintenance, travel/property revenue generation, replacement costs, and major repair/upgrade funds (with 25 years of operations).
Provide ridership costs/benefits for each Project segment and the overall Program system.

Provide a thorough risk/safety program for normal and event-based construction activities, including fire, explosions, shaking, earthquake collapses/dislocations, evacuations, and controls

Provide for Project and Program tunnel profiles for entire Program corridor. Provide for minimum of 60ft depth to top of tunnel and allow for deeper depthz 500ft beyond stations. Provide for constant grades between stations (e.g., UCLA-Ventura Blvd. Project tunnel grade: 1.2% slope).

For PROJECT DESCRIPTION, Provide precise location and boundaries shown on detailed maps with topography, community plan zoning, and private/public/federal ownership of surface properties and all subsurface properties for Full Route SR118-Sylmar to SR1/Torrance Ttl 36 mi, Project/Phase 1 Central 13 mi, Phase 2 North (Sylmar/Mission Hills) 5 mi, Phase 3 LAX 8 mi, Phase 4 Ballona/Playa Vista 5 mi, and Phase 5 South (Torrance) 5mi.

Scoping comments must lead to the Project's development and establishment of specific alternatives which can be quantitatively compared and assessed:
All alternatives must be tunneled Projects and Program. Alternative must include specific alternative station and surface yards for construction and O&M/Storage facilities locations.
Alternatives must be developed and compared using quantifiable Goals and Objectives (NEPA: Purposes and needs).
Provide Project Goals, related objectives, and policies and pathways for achieving and quantification of accomplished objectives.
Provide Program/Project goals, objectives, policies, and accomplishments for public review throughout the CEQA process.
Provide range of alternatives, comparative quantifications, and comparisons of alternatives throughout the CEQA process as appendices and online public accessible online web pages.
Provide each alternative with a progressive upgrading program for 2025-2045

Provide DRAFT Mitigation, Monitoring, and Reporting Plan in the DPEIR, DEIR-segments, and FEIR-segments and reporting/upgrading throughout the construction mitigation periods on a dedicated, publicly accessible, weekly updated web page. Provide all mitigation and monitoring as clear mandatory statement, without use of should/would/may.

Provide review, assessment, and mitigation for uses of alternative transit networks, arterials, and freeways within the Central SF Valley and West Side areas during Project's construction and the initial five-year operations as background for initiating subsequent Program-Projects phases.

Provide locations for historically disadvantaged communities within the project area and assess potential dislocation due to Station and accesses induced demand and costs increases.

Scoping comments – Basis of Design
Provide a Program and Project review, analyses, and assessment as to **ridership** , including distances, times, frequency and off-peak usage for the Program and this Project.
Provide ridership and platform on-/off-boardings for peak hour, 2nd-peak, and off-peaking periods
Provide Peak-hour and off-peak period train capacities, numbers of cars, headways/frequency
Provide train speeds for Peak, Second-Peak, and Off-Peak services

Provide train transfer pathways and coordination within each Project station and amongst related pedestrian and transit pathways and connections.
Provide flowcharts/pathways as to passenger transfers of Bus:Train and Train:Bus and for at least five destinations/origins served by Station in the pedestrian First-Last Mile connections.

Provide review and assessment of improve accessibility by income category (e.g., at least two groups below and two above median household incomes of the riders) and measures for station access and travel patterns to promote equity.

Provide pathway access networks for riders' origins and destinations for each station, and Project improvements of such, e.g., improved access for Equity Focused Communities (EFC).

Provide SCAG's based 2029-2045 EFC projections and focused measures of each Project alternatives to address needs and conflicts for EFC.

Provide review and assessment of Program corridor/service area and ten greatest mobility needs and a comparison of Project and Program measures to meet such needs.

Land Use
Provide SCAG projected populations, households, and jobs for 2045 and highlight any imbalance of population and jobs by TAV within the service area of the immediate, and later transit projects for the Sylmar-Torrance corridor.
Provide land use and growth conditions and 20-year projections for the one mile radius of each station along with current and expected commercial expansions and raising building lines (2>4>8>16>30+ floors)
Review potential for Growth Inducement in accordance with and beyond that current projected in the City's General Plan and Project Community Plans.
Provide projections of transit-oriented corridors for each station and affected arterial corridors.
Review, assess, and mitigate potential growth within 2500ft surrounding the stations/and above ground structures through the SCAG projections through 2045.

Infrastructure
Provide technical/environmental review for adding water supplies, sewerage, and power systems within top and bottom compartments of typical round tunnel sections with rectilinear track boxes to augment existing nearer surface systems for support of future service requirements to and beyond 2045.
Provide specifically for a purified wastewater force main from Hyperion Treatment facilities to the LAX Project Segment thence northward through the Sepulveda Project and eventually to the north Valley-Sylmar Project Segment. Such a force main may either replaced or augment the currently Dept. Public Works proposed Carson>DTLA>Glendale>Sylmar force main.

Transportation
Provide review, comparisons, and assessments of the Project and Program of projects for all rail transit projects of I-110/US-101/SR-170/I-5 with the SCAG/SCAQMD Transportation Plans through 2045. Provide current and projected bus/road transit projects and their relationships and combined services through 2045.
Provide for cycling/active-pedestrian pathways within 2500ft of each station, including tree planting for shade for pedestrian/surface transit stops.

Visual/Aesthetics,
Provide review and assessment for visual/noise impacts associated with stations, structures, and surface development within 2500ft of each station.

Cultural Resources/Tribal Cultural/Paleontological Resources,
Provide review of all historic aerial photos and surface descriptions to review and assess historic, prehistoric, and paleontological resources for each station and surface access facilities.

Provide review of potential paleontological resources for each station and segments and provide mandatory review of rock sampling/preservation, e.g., inspection/sampling/preservation at 500-1000ft intervals during tunneling and mitigative collection/preservation of fossil as part of each station facilities.

Provide surface trial pits and excavation monitoring and subsurface (e.g., boreholes) borings for documentation, review, and assessment of all surface facilities, connected to tunnels, and assess likelihood of fossil and unique geologic structures during excavations and tunneling. Provide collections, preservation, and public access to documents for all unique and valued resources and provide storage and exhibition for most.

Geology

Provide a thorough and complete review of all known/expected fault lines discovered near to or crossing the Project and Program corridors.

Provide geotechnical borings and assessment for potential and known soil liquefaction and risks within 500ft of the LA River channel and of the Stone Canyon reservoirs.

Provide images and reports of ground surface subsidence and uplift and for LiDAR surveys of the Project corridor prior to construction.

Provide collection, review, assessment, and public access available via websites for all geological considerations, reviews, and assessment of seismicity/topography for all tunnels and stations. Implement immediately micro-mega seismicity monitoring (-2 - +4RM) of the entire Program corridor and enhanced risk evaluations (enhanced arrays for locating and event recording) for Project corridor and stations.

Provide designs/plans for a twin tunnels with cross-overs at/in fault crossing boxes and include as a Project element as needed (e.g., for Benedict Canyon and Hollywood/Sta.Monica Faults).

Provide compilation of all known reported fault traces in or within 5000ft of the Project/Program corridors.

Provide for movements of tunnels on smaller, less risky faults, e.g., N-S ends of Stone Canyon Reservoirs and others as identified during Project development and actual tunneling.

Provide weekly updated construction tunneling progress and documentation with seismicity monitoring/recording.

Provide thorough documentation and review of historic and current Hazardous Waste/Materials within sites and 100ft lateral extension, and provide a 3-5 level tiered assessment of risks for encountering contamination of wastes, gases, or fluids during station excavations and tunneling.

Hydrology

Provide thorough documentation and review of historic and current water resources within station sites and 100ft lateral extension and along tunnel segments (e.g., groundwater, tanks (e.g., Stone Canyon), reservoirs (e.g., Stone Canyon), major water pipes and sewers (>24in diam.) and provide a 3-5 level tiered assessment of risks for encountering such or influencing such hydrologic assets and hindrances.

Provide for groundwater monitoring throughout the tunneling process and for 6 months prior to and following tunneling, e.g., borehole and monitoring for groundwater at the depth of the tunnel and 50ft below.

Air Quality

Based on both construction and operations, establish and provide the pre-construction and then quarterly updated air quality conditions and impacts of construction and operations and provide for daily updated public reporting by web-pages and with public subscriptions.

Provide monitoring, assessments and mitigation measures for Project segments' construction sites, including at least one quarter prior to initiation of construction.

Provide evaluation of mitigation effectiveness and require upgrades on a quarterly basis for sites with lesser effective mitigations.

Provide continuous air quality and local meteorological monitoring stations at one-mile intervals within each Project segment for the construction and 5 year operation periods.

Project

Provide comparison of all existing Metro heavy rail systems including specifications and all vertical and horizontal clearances required for safe, normal operations and the lengths and locations of any variations, west of DTLA (e.g., Metro B/Red Line and Metro D/Purple Line.

Provide comparisons and evaluations for establishing design specifications for the safest and most economic heavy rail transit specifications and configurations.

Provide a thorough, adequate, and complete review and assessment for automated options for each heavy rail alternative compatible with physical dimensions of its existing system and recommend selection for the proposed Program and current Project.

Provide review and design plans for interconnecting tracks and underground tunnels, including those of surface Heavy Transit Rail systems.

STATIONS

All Project alternatives must have stations at: Metro-Link/RR, Ventura Blvd., UCLA, and north of Santa Monica Airport and connecting with the D/Expo Line.

The southerly-/northerly-most stations must provide for southerly connections for the LAX Extension Segment and for future Sylmar extension of the Program.

No station should have any “long-term parking” structures unless related to commercial structural development.

UCLA Station

The Project must serve the main UCLA campus directly, so Metro must eliminate the above ground monorail Alternatives 1-3, entirely. The Project must include at least review/assessment/mitigation for three station site alternatives for review/assessment. As examples:

1) Intermural Fields/WoodenCenter
2) Fowler Slope between Wilson Plaza and Dickson Court
3) Parking Structure 8 Transportation Office

As part of the PPP, UCLA alternative stations must include on- or off-campus properties and subsurface property owners with 2-3 levels of convertible underground parking replacement and training-community-commercial facilities (e.g., W Los Angeles/Marriott) in addition to the Transit Platform.

Segment Terminal Stations

Where possible (and as alternative) stations must be provided at/beneath existing rail corridors and provided with construction access to nighttime use of existing tracks for export of tunnel/station debris and delivery of station and tunnel materials (e.g., ties, rails, train-cars, concrete, and tunnel segments).

Over the Program life, 2030-2070, provide for rail interconnections with compatible trackworks, Provide for vertical conveyance of export/imported materials and equipment. Provide for all construction access to be used for operations and maintenance.

SCAG TAV 2045 Transportation Model

Provide for SCAG incorporation of the HRS Westside/Valley Program into the future SCAG Transportation Plan for 2045 and later.

February 9, 2022

To: The LA Metro Board of Directors regarding the Sepulveda Transit Corridor Project

RE: Sepulveda Transit Corridor – Support Alternatives 5 & 6; Oppose Alternatives 1, 2, 3, & 4

I am writing to you on behalf of Douglas Emmett to submit our positions and comments on Metro's environmental process and the six Sepulveda Transit Corridor ("STC") alternatives. Douglas Emmett owns and operates over 18 million square feet of office properties, a large number of which are located above purple line stations at Wilshire/La Cienega, Wilshire/Rodeo, Century City, and Westwood. We also own large commercial properties situated on three of the four corners at the intersection of Sepulveda and Ventura Boulevards in Sherman Oaks, an intersection with a station proposal in Alternatives 4 and 5.

Douglas Emmett is supportive of the expansion of the Los Angeles's subway system. The completion of both the Purple Line and the STC will provide quick, seamless access linking the San Fernando Valley to Downtown LA with stops at major job centers along the way. These subways will ease traffic congestion by removing cars from our streets and freeways which, in turn, will reduce tailpipe emissions that are a major contributor to global warming and undesirable health issues for people living alongside our major streets and freeways. A subway will also provide an economical transportation alternative for lower income Angelinos to reach our job centers.

To be successful we believe that the STC must provide effortless access between the San Fernando Valley and job centers on the Westside and Downtown Los Angeles. Of the six proposed alternatives we believe that only Heavy Rail Alternatives 5 and 6 accomplish this. Two attributes of Alternative 5 and Alternative 6 standout: 1) both alternatives run underground from end to end, which limits the negative impacts on surface street traffic, view corridors and noise pollution and 2) both alternatives have a campus station at UCLA with an easy, underground connection to the Purple Line at Westwood.

- **Valley Heavy Rail Alternative Must be Under Ground:** STC Alternative 4 proposes an above grade heavy rail system that will dramatically negatively affect our San Fernando properties and all of the commercial and residential properties on Sepulveda Boulevard north of Ventura Boulevard. These negative impacts include noise pollution, unsightly infrastructure, and increased traffic congestion, all of which reduce the quality of life for those near the rail. Metro built, and is building subways, not above-grade heavy rail, throughout West Los Angeles, Hollywood and Downtown, to avoid these negative impacts. Why is metro proposing that San Fernando Valley residents and property owners suffer hardships that Metro avoided elsewhere by putting the heavy rail underground? We recognize that

Douglas Emmett

1299 Ocean Avenue, Suite 1000
Santa Monica, California 90401
Telephone: (310) 255-7700

underground rail is more costly than above grade. However, this is an infrastructure investment with a 100+ year useful life so incremental costs need to be viewed within the proper contextual timeframe. Also, the long-term negative economic costs from noise pollution, neighborhood degradation and increased surfaced traffic must also be considered in any cost/benefit analysis.

- **UCLA Station:** UCLA is the largest employer located West of Downtown Los Angeles, educates over 47,000 graduate and undergraduate students annually, and the UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. By Metro's own estimates a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system. A direct, underground stop at UCLA linking to Westwood will provide accessibility to jobs, healthcare and education for Angelinos throughout Los Angeles. The monorail proposed in Alternatives 1, 2, and 3 has poor connectivity to UCLA and involves cumbersome transfers that will increase commute times, negatively impact neighborhoods and ultimately result in poor ridership. Any decreased ridership will increase the costs per passenger and decrease desired reductions in tailpipe emissions and automobile traffic.

To reiterate, we applaud Metro's effort to design a mass transit system linking the San Fernando Valley with the Westside and Downtown LA , support Heavy Rail Alternative 5 and Heavy Rail Alternative 6 and oppose Alternative 1, Alternative 2, Alternative 3, and Alternative 4.

Thank you for your consideration,

Kevin A, Crummy
Chief Investment Officer

Sepulveda Transit Corridor Project
Attention: Peter Carter, Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012
sepulvedatransit@metro.net

Subject: **Sepulveda Transit Corridor Project Public Scoping Comment**

Mr. Carter:

For the past three years the Bel-Air community has attempted to engage with Metro staff in an effort to gather information on the proposed Sepulveda Transit Corridor Project, hoping to understand Metro's methods and motives. This experience has been frustrating at best. The lack of insight and transparency has shown the disinterest Metro staff holds for those concerned about the deleterious effects the project would have on their communities.

Issues of project affordability and time of construction will affect our community similarly to all other communities in Los Angeles. However, Metro's proposal to place a subway tunnel under our homes, streets, and schools means the Bel-Air community will be disproportionately harmed by environmental damage, eminent domain/sub-surface easements, and geotechnical instability.

For these and many other reasons, the Bel-Air Association submits the following comments and questions for the Public Scoping associated with the Notice of Preparation for the Sepulveda Transit Corridor Project.

Outreach & Transparency

From the beginning Metro staff has shown little interest in non-subway alternatives for the Sepulveda Pass Project, and has routinely given arbitrary reasons as to why these alternatives would not be feasible for other modes or paths of travel. For example, three years ago Metro staff claimed their addition of a Toll Lane on the 405 Freeway precluded a monorail alternative along its median. Meaning, before any official proposals were made, Metro was claiming its own Toll Lane project would preclude a less expensive and faster to construct Transit Project.

Metro has created a process that is designed to favor a subway project. Four years ago, interested communities were under the impression that a subway piercing through Sherman Oaks and Bel-Air was the only way to achieve a dedicated stop at UCLA. Before this misconception could be addressed, Metro placed a muzzle on all companies who submitted proposals. This muzzle kept project applicants from speaking to anyone attempting to correct the misinformation that had spread.

Metro's muzzle effectively made Metro the ONLY source of information. However, we were told that once the Metro Board chose the two companies that would "compete" for the project, the community could once again speak to the project applicants. However, once the Metro Board chose the two competing companies, Metro refused to remove the muzzle for project applicants. This gave Metro a monopoly on controlling information, and further exasperated the frustration felt by many.

One of the largest discussion points associated with the Sepulveda Project has surrounded UCLA having its own on-campus Metro Station. Both project proposals have at least one plan with a dedicated stop on the UCLA campus. However, because of Metro's refusal to allow any of the project applicants to speak to confused groups or individuals, large segments of the community still believe the subway is the only opportunity to have a Metro Station at UCLA.

How will Metro address these shortfalls in transparency? How will Metro repair the damage caused by allowing misinformation to spread, then silencing the only people with a vested interest in making sure the community heard accurate and complete information?

The sad reality is those communities most impacted by the Sepulveda Transit Corridor Project have lost trust in the process, and the information being controlled by Metro staff. **Will Metro allow the project applicants to address questions and concerns the community may have about their specific proposals?**

Construction Conflicts & Eminent Domain

For the past decade the Los Angeles hillsides have seen an explosion in new construction projects. These projects vary greatly in size and often exceed the average square footage of a grocery store (40,000SF), many with questionable adherence to current building and planning codes. These hillside projects sit upon a wide range of topography, from nearly flat to sheer cliffs. In nearly every instance the projects are located on Substandard Limited Hillside Streets and require caissons and solder piles to be driven deep into the earth to provide structural integrity and combat high water-tables and liquefaction.

Subsurface construction is precarious on a good day, and deadly on a bad one. Metro's desire to build a tunnel under a westside hillside community seems to be a recipe for disaster. Nearly every project above the potential tunnel will need to construct caissons and pilings into bedrock to meet today's geo-technical and structural standards. However, many of those projects will not know the exact depth their caissons will need to go to hit bedrock. So, the depths of drilling are often unknown. Caissons reaching 80-100 feet in depth have occurred. **How will Metro address this**

issue and other geo-technical requirements for properties above their sub-surface easements? How will Metro enforce drilling limitations for the projects above them? What is the depth of the actual proposed tunnels and equipment that will be under the Bel-Air community? What subsurface limitations will Metro be placing on the properties above the tunnels?

Alternatives 4,5, and 6 propose a potential elevated heavy rail lines with mostly subterranean subway variations. In all instances, these Alternatives will be running beside, or below some of the most expensive real-estate in the County. Understanding the specific process and limitations of subsurface easement and how property owners are compensated is important. Additionally, Metro should provide analysis on the potential for loss of property value for those directly above, within the easement area, and within an area known to have a subway below.

A question that has been asked consistently for the past three years, but never answered, is: **What will be needed for the proposed subways in the form of surface vents, escape/access tunnels, and permanent surface installations? How will those properties that can no longer be built on or improved upon be compensated?**

The westside hills are a giant liquefaction zone with a very shallow water-table. In addition, natural springs and seasonal waterways are common throughout Bel-Air. Stone Canyon is notorious for its shallow water-table and crisscrossing "creek" that fills and empties water seasonally. How will Metro mitigate these liquefaction causing elements and ensure the integrity and stability of your tunnels?

The Bel-Air community is home to Lower Stone Canyon reservoir, a 117 acre open body of water. Built in 1924, the reservoir is an earth dam with little improvement completed on the down-stream (Stone Canyon facing) side. The prospect of a subsurface tunnel anywhere near this 100 year old earth-dam causes extreme concern. This is even a greater concern when you realize Stone Canyon Road is the spillway in the event of a failure. Should that failure be significant, the damage and loss of life would be nothing short of catastrophic. With nearly 3.5 billion gallons of water, the residents along Stone Canyon and its adjoining streets would be obliterated. The tidal wave wouldn't have an opportunity to dissipate until it reached UCLA, across Sunset Blvd. Much of the northern portion of UCLA and anyone unlucky enough to be there could be wiped-out as well.

It is critically important to understand the potential for damage to, and potential failure of the Lower Stone Canyon Reservoir. **What are the damage and death toll scenarios in the event a failure occurs? How will tunneling under Bel-Air generally, and near Stone Canyon Reservoir specifically, affect the stability of Lower Stone Canyon Reservoir?**

Cir. 1962 Aftermath of Bel-Air Fire. Construction of 405 in background.

Over the past four years, Bel-Air has experienced nearly 20 wild fires, with at least a dozen requiring airdrops of water from fire department helicopters. With Bel-Air considered a Very High Fire Severity Zone, many in the community are losing their fire insurance. We must understand what affects the venting systems will have on both the community and tunneling system. **Can a large-scale fire on the surface cause issues in the tunnels? Can a fire in the tunnels affect the community above? Will eminent domain occur to provide these vents and escape tunnels?**

Costs & Considerations

Angelenos need real and usable mass transportation from the Valley to the Westside, not decades of promises and slick concepts. Metro currently states that completion of this Valley/Westside project will not be completed until 2035 (13 years). It is hard to imagine the Sepulveda Corridor Transit Project will be the first Metro project to be completed on time and within budget. **With**

construction and litigation delays a near certainty, has Metro analyzed the likely completion date based on those factors? If so, what is the more accurate completion date?

The inclusion of a UCLA Metro station might be a wise decision in the abstract, but that single stop will increase the current project cost $2bn - $8.6bn, compared to the least expensive Alternative. With such a heavy financial cost, Metro must understand the following: **How many of UCLA's students, professors, and staff actually live in and around Van Nuys? How many of those students and professors do you estimate would use train? How does that compare to overall projected ridership? Since students often have class schedules outside of rush-hour time frames (the incentive to use the train), how does that factor into the analysis? How much time is added to a Valley to Westside trip when a UCLA stop is made? How many years are added to the overall project when there is a dedicated UCLA station? How does the increase in construction time and cost effect/delay the next phase of the Corridor Project that connect the Westside to LAX? What are the ridership numbers for those connecting to the Purple Line?**

Sepulveda Transit Corridor
Alternative 1 (Monorail)

ALTERNATIVE 1
Monorail along 405 with Electric Bus Connection to UCLA
LA SkyRail Express

Route: 15.3 miles along 405 median. East shoulder of 405 in Valley.

Stations: Eight aerial stations.
Four in Valley.
Four on Westside

.
UCLA Connection: 1.4 mile electric bus connection.

Affordability:
Cost of $6.9 billion. Therefore Affordable per Metro's $6.9 billion budget.

<u>Acceptable Alternative if Valley portion is moved from the shoulder of 405 and onto median.</u>

Sepulveda Transit Corridor
Alternative 2 (Monorail)

ALTERNATIVE 2
Monorail along 405 with Automated People Mover Connection to UCLA
LA SkyRail Express (Metro contractor).

Route: 15.8 miles along 405 but route is along 405 east shoulder in Valley.

UCLA Connection: 1.0-mile UCLA automated people mover

Affordability:
Cost of $7.0 billion

<u>Acceptable Alternative if Valley portion is moved from the shoulder of 405 and onto median. Possibly affordable per Metro's stated budget.</u>

Sepulveda Transit Corridor
Alternative 3 (Monorail)

ALTERNATIVE 3
Monorail along 405 with Tunnel Under UCLA
LA SkyRail Express

Route: 16.2 miles along 405

UCLA Connection: 3.3 mile tunnel under Bel Air community to on-campus station.

Affordability:
Cost of $8.9 billion in 2022 dollars (Reference 15).

<u>Acceptable Alternative if 1. Tunneling portion avoids residential communities and 2. Valley portion is moved from the shoulder of 405 and onto median. Likely unaffordable per Metro's stated budget.</u>

Sepulveda Transit Corridor
Alternative 4 (Heavy Rail)

ALTERNATIVE 4 – Heavy Rail Subway under Bel-Air. Elevated above Sepulveda Blvd. in Valley
Sepulveda Transit Corridor Partners Bechtel

Ridiculous proposal. An example of the contempt Metro has for the communities that will forever bear the impact of this project.

Tunnels under Bel-Air causing significant geological and property damage.

An elevated heavy rail line rumbling down Sepulveda Blvd. next to homes, businesses, and office buildings, is the height of hubris on Metro's part.

Twenty years ago the pride and connection our local leaders had for the valley would have quickly placed Alternative #4 on the burn pile. Since that local leadership is lacking, the Sherman Oaks community has organized to do it themselves. And we are happy to join that fight. **Not Acceptable.**

Sepulveda Transit Corridor
Alternative 5 (Heavy Rail)

ALTERNATIVE 5
Heavy Rail Subway under Westside, Pass, and Sepulveda Blvd in Valley
Sepulveda Transit Corridor Partners Bechtel

Route: 14.0 miles under Westside, Sepulveda Pass, and Sepulveda Blvd in Valley.

Affordability
Cost – $15.9 billion

Not Acceptable. Underground route damages Sherman Oaks and Bel Air communities.
Not Affordable.

ALTERNATIVE 6 – Heavy Rail Subway under Westside, Pass, and Van Nuys Blvd in Valley
HTA Partners

Route: 12.6 miles under Westside, Sepulveda Pass, and Van Nuys Blvd in Valley.

Affordability
Cost: $15.3 billion

Not Acceptable. Underground route damages Sherman Oaks and Bel Air communities.
Not Affordable.

The Bel-Air Beverly Crest Neighborhood Council has offered an environmentally superior and cost-effective alternative to the costly scenarios currently offered. Instead of the gimmick of adding a toll lane to the freeway, Metro could add an electric Bus Lane. The use of a dedicated bus lane on the 405 Freeway would create a dedicated and congestion free pathway at a fraction of the cost, and at a fraction of the construction time. **Has Metro considered such an alternative?**

Closing

With an unprecedented opportunity to reimagine the transportation potential of one of the most congested yet visionary cities in the world, Metro has chosen yet again, an 1850's technology that will financially burden the next two generations. It won't be built within most of our lifetimes and will be obsolete the day its finally completed. We look forward to your written and substantive responses to our specific questions and concerns.

Thank You,

Jamie Meyer

Regarding: Sepulveda Corridor Transit Pass Scoping Comment

Mr. Carter:

Brentwood Glen Association ("BGA") is a community of 500 families bounded on the West by the. Veterans Administration property, on the north by Sunset Boulevard, on the east by Church Lane, and on the South by Waterford Street. Our neighborhood straddles the I-405 freeway and will be significantly impacted by some of the proposed alternatives suggested during the scooping process for the Sepulveda Corridor Transit Pass Project.

We strongly support Alternative 5 or 6 because it has a direct stop at UCLA and the most direct route connecting with the Purple Line and Expo line.

Furthermore, combining the best aspects of Alternative 5 and 6 into one alternative, whether automated or manned, would ultimately ensure the shortest, seamless connection to the LAX, especially if the Expo line stop is at Sepulveda because the train would run parallel to the 405.

The Brentwood Glen Association has the following concerns we would like LA Metro to address in its full environmental review.

1. No Neighborhood Encroachment: While details were not provided as to how the options would be built with an aerial alignment along the I-405, it leaves on the table the possibility of land acquisition and further neighborhood encroachment into surrounding Brentwood Communities, such as Brentwood Glen. Given that land acquisition was presented as an option for the I-405 Sepulveda Pass ExpressLanes Project and previous land acquisition for the I-405 expansion in 2009, **We strongly oppose alternatives 1,2,3, and 4 with alignments and final designs that result in the possibility of property acquisition.**
    - How will the alternatives aligned with the I-405 coordinate with the Sepulveda Pass I-405 ExpressLanes final selection?
    - What existing right-of-way will the alternatives with aerial alignments along the I-405 use?

2. Provide a UCLA Stop: We support increased connectivity established under the Sepulveda Transit Corridor alignments. We strongly support any alignment that includes a direct stop at UCLA. Without this alignment, it places the burden on riders and may make taking transit a less desirable option.
    - A stop at UCLA ensures seamless transfer.
    - How will the alternatives without a stop at UCLA ensure seamless transfers and operate comparable travel times to UCLA similar to the alignments with a stop?
    - Will the transfers be free of charge?
    - Not having a Metro stop at UCLA would be a missed opportunity being UCLA is one of the largest employers in Los Angeles County.

BRENTWOOD GLEN
ASSOCIATION

3. Minimize Negative Impacts to Surrounding Neighborhoods: Between construction and operation of a new transit line, we urge LA Metro to consider the alternative that will result in the least negative impact to surrounding neighborhoods.

    - How will the alternatives mitigate disruption to residents and commuters during the construction phase, including detours, street/sidewalk closures, dust/particles, and noise?
    - What will the operational noise impacts be for alternatives with aerial alignments?

4. The alternative chosen must reflect the shortest distance, shortest ride, and a seamless connection between the San Fernando Valley, the Purple Line, and the Expo Line.

5. Alternatives 1, 2, 3, aerial alignments will cause considerable disruption to the freeway and surface streets during construction. Alternatives with above ground construction will cause an already congested 405 freeway through the Sepulveda pass and its surrounding surface streets to be far worse for the length of construction. In addition, air quality along the Sepulveda Pass for the length of the construction will be worse due to dust and dirt.

    - What is the noise and vibration impact of the monorail options?

6. Alternative 4 will cause considerable disruption at the intersection of Sepulveda and Ventura Blvd.

We look forward to working with L.A. Metro to create an equitable solution that does not negatively impact the surrounding community.

Sincerely,

Cori Solomon

Subject: Scoping Comments on Sepulveda Transit Corridor Project

Dear Mr. Carter,

The Sierra Club appreciates the opportunity to submit Scoping Comments to Metro for the Sepulveda Transit Corridor Project. We have long followed and supported this project concept in its earlier planning phases, and look forward to its construction and opening as an alternative to the traffic-jammed I-405 freeway. Following are our comments:

- Most important, this project *must directly serve the center of the UCLA campus*, for its 45,000 students and 30,000 staff members (data per Wikipedia, for 2019).
- Therefore, Monorail Alternatives 1 & 2 *must calculate the total trip time to the center of UCLA*, including time waiting for a transfer, and given those unavoidable delays these alternatives should be discarded from further consideration.
- Further, there is also no I-405 median space in the southbound direction south of Sunset Blvd. for monorail columns.
- The Sepulveda Pass has been periodically impacted by wildfires, including full closures of I-405. Impacts of closing an above-ground transit line must be considered, and continued operation of a tunnel during such an emergency noted as a benefit.
- Consider provision of a wildlife corridor crossing of I-405 for project mitigation.
- HRT Alternative 4's aerial structure above the middle of Sepulveda Blvd. *has no precedent in Los Angeles* and would become an Environmental Justice issue in Van Nuys.
- Consider phasing in the San Fernando Valley, initially only north to the Orange Line.
- Valley trip modeling is needed to determine whether to prefer Sepulveda or Van Nuys Blvd. and whether the Van Nuys Metrolink station still makes sense as the terminus.

- Where is the best location to intercept trips via express buses and automobiles from Santa Clarita and the northwest San Fernando Valley?
- HRT vehicle technology should be compatible with existing Metro HRT.
- Consider studying new alternatives from the Orange Line to the San Fernando Valley terminus, such as an interline to the Red Line in North Hollywood.
- Consider a monorail stop at Ventura & Sepulveda Boulevards.
- We oppose any platforms in the middle of a freeway, for pedestrian access and noise.
- Include adjacent areas in the project study area that have significant numbers of transit riders going to or through it, such as parts of Del Rey, Encino, Mar Vista, and Palms that are currently excluded. These areas have significant numbers of multifamily apartment buildings that generate above average transit ridership.
- Investigate soil liquefaction risk near the L.A. River.
- Study both Sepulveda and Bundy interim southern termini for the different alternatives.
- As a response to gentrification, seek a way to provide tenants' opportunities to purchase non-rent-controlled apartments near the project's stations.

Thank you,

Darrell Clarke
Sierra Club Angeles Chapter Transportation Chair

South Robertson People's Committee

Friday, February 11th, 2022
Dear Metro Planning Staff, and Sepulveda Transit Corridor Environmental Evaluation Team,

We the South Robertson (SORO) People's Committee represent a group of stakeholders in the South Robertson neighborhood of Los Angeles. Our community is bound by La Cienega and Robertson Boulevards, with a northern boundary of Beverly Hills and southern boundary of Culver City. Our stakeholders are regular transit users, with access to key current and future high quality transit corridors. Our organization is a strong supporter of Metro initiatives, including recent changes to the agency's Joint Development policy, the planned Bus Rapid Transit project on La Cienega Boulevard, and future connections to the eagerly awaited Purple (D) Line Extension through the northern segment of our community. Our residents are following the Sepulveda Transit Corridor Project closely, as we will be deeply impacted by the decisions Metro makes. Our community has been a longstanding stakeholder of this transit project, as we have been home to UCLA students commuting to campus by transit for years. Our community straddles both the Expo (E) Line and future Purple (D) Line extension, and the Sepulveda Transit Corridor will provide a much needed missing connection between the two.

As Metro continues its evaluation of this project through the conclusion of the scoping phase, we strongly request that Metro focus on the criteria that will benefit disadvantaged, marginalized, and transit-dependent communities. We urge the Metro Planning Department and consultants to focus on certain specific measurable qualities of this project. The key factors that should determine the alternative, route, and transit mode selected should ensure that this project serves the region for generations. These factors include ridership, the speed of travel from end to end, capacity, and the direct service of key locations. The Sepulveda Transit Corridor Project will revolutionize transportation for Los Angeles County, and travel between the Valley and Westside, as well as eventually LAX. Only alternatives with higher ridership should be moved forward, as well as alternatives with the capacity for higher future ridership as travel demand and populations grow over the coming decades, as well as the mode that ensures this capacity. This project will ensure much needed transit equity, and the people of Los Angeles deserve a project with the fast end to end travel time, and a mode that enables these higher speeds. This project has the ability to help connect largely underserved populations, and the people of Los Angeles County deserve direct transit connections to key transit destinations like the UCLA Campus. It is also important that Metro does not sacrifice these crucial criteria in exchange for a cheaper or more quickly delivered project. We strongly prefer that Metro eliminate alternatives and travel modes that perform lower on these measurements, even if that delays the project or results in increased costs. This project is simply too important for Metro to cut corners, and it is preferable that Metro get the project right. Quite frankly, Metro should not pursue a Public Private Partnership (P3) as a delivery tool unless it meets these preferred criteria, and should not rush to implement a project simply for the sake of delivering a project.

We strongly support Alternatives 4, 5, and 6, and prefer an Expo (E) Line connection at Sepulveda due to surrounding land use. We support both elevated and underground alignments, and believe a station located directly on UCLA's Main Campus to be crucial. We consider Heavy Rail to be a firm Red Line, and will strongly oppose any the project as a monorail of any alignment. We request the

evaluation team to further Alternatives 4, 5, and 6, to look into terminating at the Expo/Sepulveda Station for all alignments, for extended underground station lengths for all alignments, and to eliminate Alternatives 1, 2, and 3.
We look forward to engaging with Metro further on this project and others that impact the South Robertson area, and for continued support for Metro initiatives that serve disadvantaged and marginalized communities.

YOURS SINCERELY,
THE CONCERNED STAKEHOLDERS OF THE SOUTH ROBERTSON PEOPLE'S COMMITTEE

SORO
People's Committee

Re: Sepulveda Transit Corridor Project

Dear Mr. Carter:

These comments are submitted on behalf of the Center for Biological Diversity, in coordination with the Sierra Club Santa Monica Mountains Task Force, Brentwood Alliance of Canyons & Hillsides and the Brentwood Hills Homeowners Association (the "Coalition"), regarding the Sepulveda Transit Corridor Project (the "Project"). The Coalition has reviewed the proposal and provides these comments for consideration by the LA Metro. As outlined in further detail below, we urge LA Metro to fully consider and mitigate the impacts of the Project on mountain lions and wildlife connectivity, as required by the California Environmental Quality Act ("CEQA").

I. LA Metro Must Analyze and Mitigate Impacts of the RTP/ATP to Mountain Lions (*Puma concolor*).

LA Metro has an obligation under CEQA to provide decision-making bodies and the public with detailed information about the effect a proposed project is likely to have on the environment, to list ways in which the significant effects of a project might be minimized, and to indicate alternatives to the project. (Pub. Res. Code § 21061.) CEQA further requires a lead agency to mitigate to the extent feasible significant impacts. (CEQA Guidelines § 15064.4.) More specifically, CEQA requires a "mandatory finding of significance" if there is substantial evidence in the record that a proposed plan or project *may* cause a "wildlife *population* to drop below self-sustaining levels; threaten to eliminate a plant or animal community; substantially

reduce the number or restrict the range of an endangered, rare or threatened species . . . ." (CEQA Guidelines § 15065(a)(1); see also CEQA Guidelines Appendix G, §§ IV. (a), (d).)

The mountain lions in LA County are part of the "Central Coast South" population of mountain lions, which is provisionally listed under the California Endangered Species Act ("CESA"). In compliance with CESA, the project must therefore be designed to allow safe passage of mountain lions under or over components of the project that cross mountain lion movement corridors. (*Id.*) In addition, any structures adjacent to open space should include mitigation measures that reduce or eliminate mountain lion conflict (e.g., livestock should be kept in lion-proof enclosures at night), lighting should be turned away from open space, noise should be limited, pet cats and dogs should be kept indoors, and measures that reduce the risk of wildfire ignitions and/or spread should be required (e.g., avoiding new development in fire-prone areas and retrofitting existing communities with solar microgrids, ember-resistant vents and roofing, and 100-foot buffer immediately adjacent to structures with lightly irrigated native vegetation).

Here, any further impairment of connectivity or destruction of habitat has the potential to significantly impact local mountain lions and other wide-ranging species, like deer, bobcats, and coyotes. By way of background, there is ample scientific evidence that indicates that human activities and land use planning that does not integrate adequate habitat connectivity can have adverse impacts on mountain lions. Continued habitat loss and fragmentation has led to 10 genetically isolated populations within California. Several populations in Southern California are facing an extinction vortex due to high levels of inbreeding, low genetic diversity, and high human-caused mortality rates from car strikes on roads, depredation kills, rodenticide poisoning, poaching, disease, and increased human-caused wildfires (Ernest et al. 2003; Ernest et al. 2014; Riley et al. 2014; Vickers et al. 2015; Benson et al. 2016; Gustafson et al. 2018; Benson et al. 2019). This is detailed in the Center's petition to the California Fish and Game Commission to protect Southern California and Central Coast mountain lions under CESA (Yap et al. 2019).

The primary threat to the long-term survival of mountain lions is genetic isolation due to lack of connectivity caused by continuous development in mountain lion habitat with little regard of their movement needs. Thus, the persistence of the mountain lions within LA County relies heavily on being connected with mountain lions throughout the region. Mountain lions are wide ranging species that have home ranges of 75 to 200 mi^2; anthropogenic barriers like freeways and development that slice through their habitat will impede their movement, and over time careless land use could prevent adequate gene flow necessary for their long-term survival. Such dangerous patterns are being seen now in Southern and Central Coast California populations experiencing an extinction vortex (Ernest et al. 2003; Ernest et al. 2014; Riley et al. 2014; Vickers et al. 2015; Gustafson et al. 2018; Benson et al. 2019), and continuing business-as-usual will lead local mountain lions towards a similar fate. Yet the RTP/ATP will likely result in the allocation of funding for freeway and road expansions/widenings/construction without adequate preservation of existing connectivity areas and mitigation for wildlife connectivity (*e.g.*, wildlife crossings), which fragments the landscape more severely and propagates sprawl development further out into mountain lion habitat and movement areas. Such development without addressing wildlife connectivity issues and integrating wildlife movement needs into the design

could lead to significant impacts to local mountain lion populations and other sensitive species in LA County.

Mountain lions are the last remaining wide-ranging top predator in the region, and impacts to mountain lions in the LA County could therefore have severe ecological consequences; loss of the keystone species could have ripple effects on other plant and animal species, potentially leading to a decrease in biodiversity and diminished overall ecosystem function. In some ecosystems that lack mountain lions, increased deer populations can overgraze vegetation and cause stream banks to erode (Ripple and Beschta 2006; Ripple and Beschta 2008). Many scavengers, including foxes, raptors, and numerous insects, can lose a reliable food source without mountain lions (Ruth and Elbroch 2014; Barry et al. 2019). Fish, birds, amphibians, reptiles, rare native plants, and butterflies could diminish if this apex predator were lost (Ripple and Beschta 2006; Ripple and Beschta 2008; Ripple et al. 2014).

Given that mountain lions are specially protected mammals under Prop 117, **LA Metro must analyze and fully mitigate potential impacts on these populations.**

II. LA Metro Must Analyze and Mitigate Impacts of the Project on Wildlife Movement and Habitat Connectivity.

LA Metro must analyze the potential impacts of the Project on wildlife connectivity. Roads and development create barriers that lead to habitat loss and fragmentation, which harms native wildlife, plants, and people. As barriers to wildlife movement, poorly-planned development and roads can affect an animal's behavior, movement patterns, reproductive success, and physiological state, which can lead to significant impacts on individual wildlife, populations, communities, landscapes, and ecosystem function (Mitsch and Wilson 1996; Trombulak and Frissell 2000; van der Ree et al. 2011; Brehme et al. 2013; Haddad et al. 2015; Marsh and Jaeger 2015; Ceia-Hasse et al. 2018). For example, as noted above, habitat fragmentation from roads and development has been shown to cause mortalities and harmful genetic isolation in mountain lions in southern California (Ernest et al. 2014; Riley et al. 2014; Vickers et al. 2015), increase local extinction risk in amphibians and reptiles (Cushman 2006; Brehme et al. 2018), cause high levels of avoidance behavior and mortality in birds and insects (Benítez-López et al. 2010; Loss et al. 2014; Kantola et al. 2019), and alter pollinator behavior and degrade habitats (Trombulak and Frissell 2000; Goverde et al. 2002; Aguilar et al. 2008). Habitat fragmentation also severely impacts plant communities. An 18-year study found that reconnected landscapes had nearly 14% more plant species compared to fragmented habitats, and that number is likely to continue to rise as time passes (Damschen et al. 2019). The authors conclude that efforts to preserve and enhance connectivity will pay off over the long-term (Damschen et al. 2019). In addition, connectivity between high quality habitat areas in heterogeneous landscapes is important to allow for range shifts and species migrations as climate changes (Heller and Zavaleta 2009; Cushman et al. 2013; Krosby et al. 2018). Loss of wildlife connectivity decreases biodiversity and degrades ecosystems. It also prevents the reestablishment of native species, like wolves, as was seen with the dispersing wolf OR93 who traveled south

from Oregon and roamed California until it was killed by a vehicle strike in Kern County in less than a year.[1]

Edge effects of development in and adjacent to open space will likely impact key, wide-ranging predators, such as mountain lions and bobcats (Crooks 2002; Riley et al. 2006; Delaney et al. 2010; Lee et al. 2012; Smith et al. 2015; Vickers et al. 2015; Smith et al. 2017; Wang et al. 2017), as well as smaller species with poor dispersal abilities, such as song birds, small mammals, and herpetofauna (Cushman 2006; Slabbekoorn and Ripmeester 2008; Benítez-López et al. 2010; Kociolek et al. 2011). Limiting movement and dispersal can affect species' ability to find food, shelter, mates, and refugia after disturbances like fires or floods. Individuals can die off, populations can become isolated, sensitive species can become locally extinct, and important ecological processes like plant pollination and nutrient cycling can be lost. Negative edge effects from human activity, such as traffic, lighting, noise, domestic pets, pollutants, invasive weeds, and increased fire frequency, have been found to be biologically significant up to 300 meters (~1000 feet) away from anthropogenic features in terrestrial systems (Environmental Law Institute 2003)

LA Metro must also consider corridor redundancy (*i.e*. the availability of alternative pathways for movement) because it allows for improved functional connectivity and resilience. Compared to a single pathway, multiple connections between habitat patches increase the probability of movement across landscapes by a wider variety of species, and they provide more habitat for low-mobility species while still allowing for their dispersal (Mcrae et al., 2012; Olson & Burnett, 2008; Pinto & Keitt, 2008). In addition, corridor redundancy provides resilience to uncertainty, impacts of climate change, and extreme events, like flooding or wildfires, by providing alternate escape routes or refugia for animals seeking safety (Cushman et al., 2013; Mcrae et al., 2008; Mcrae et al., 2012; Olson & Burnett, 2008; Pinto & Keitt, 2008).

Corridor redundancy is critical when considering the impacts of climate change on wildlife movement and habitat connectivity. Climate change is increasing stress on species and ecosystems, causing changes in distribution, phenology, physiology, vital rates, genetics, ecosystem structure and processes, and increasing species extinction risk (Warren et al. 2011). A 2016 analysis found that climate-related local extinctions are already widespread and have occurred in hundreds of species, including almost half of the 976 species surveyed (Wiens 2016). A separate study estimated that nearly half of terrestrial non-flying threatened mammals and nearly one-quarter of threatened birds may have already been negatively impacted by climate change in at least part of their distribution (Pacifici et al. 2017). A 2016 meta-analysis reported that climate change is already impacting 82 percent of key ecological processes that form the foundation of healthy ecosystems and on which humans depend for basic needs (Scheffers et al. 2016). Genes are changing, species' physiology and physical features such as body size are changing, species are moving to try to keep pace with suitable climate space, species are shifting their timing of breeding and migration, and entire ecosystems are under stress (Parmesan and Yohe 2003; Root et al. 2003; Parmesan 2006; Chen et al. 2011; Maclean and Wilson 2011; Warren et al. 2011; Cahill et al. 2012).

[1] California Department of Fish and Wildlife. "Newsroom: OR93 Found Dead In Kern County." Accessed November 30, 2021. https://wildlife.ca.gov/News/or93-found-dead-in-kern-county

Given the potential for the Project to fragment and destroy important habitat, the Coalition urges LA Metro to avoid further fragmentation and degradation of existing, intact, heterogeneous habitats and incorporate into the environmental review process clear and enforceable wildlife connectivity mitigation measures that address the needs of target species. The Project should encourage the involvement of wildlife connectivity experts from CDFW and other agencies, organizations, academic institutions, communities, and local groups starting at the initial planning stage of development and transportation projects so that habitat connectivity can be strategically integrated into project design and appropriately considered in the project budget. The Project should require road and highway projects to avoid important connectivity areas and **include adequate wildlife crossing infrastructure with protected habitat on both sides** in order to reduce impacts to wildlife movement and habitat connectivity.

In developing and adopting such measures, it is important to consider that different species have different behaviors and needs that affect how they move. For example, smaller species with poor dispersal abilities, like rodents and herpetofauna, would require more frequent intervals of crossings compared to larger wide-ranging species, like mountain lions or coyotes, to increase their chances of finding a crossing. Gunson et al. (2016) recommend that crossing structures generally be spaced about 300m (~0.19mi) apart for small animals when transportation infrastructure bisects large expanses of continuous habitat, though they recognize that some amphibians may need more frequent crossings no more than 50m (~0.03mi) apart. And for many amphibian and reptile species, undercrossings should have grated tops so that the light and moisture inside the crossings are similar to that of the ambient environment. Brehme and Fisher (2020) and Langton and Clevenger (2021) also provide additional guidance regarding amphibian crossings. Therefore, multiple crossings designed for different target species may be required. In-depth analyses that include on-the-ground movement studies of which species are moving in the area and their home range area, habitat use, and patterns of movement are needed to determine how to best implement such crossings. In addition, associated crossing infrastructure (*e.g.*, exclusionary fencing appropriate for target species, berms to buffer crossings from sound and light) should be included to improve chances of wildlife using crossings, and such crossings and associated infrastructure should be designed and built in consultation with local and regional experts, including agency biologists. And to improve the effectiveness of any wildlife crossings, there should be protected habitat on both sides of the crossing; therefore, mitigation should also include acquiring unprotected lands on both sides of the roads where a wildlife crossing would be implemented, again, in consultation with local conservation organizations and stakeholders, and preserving and managing those lands in perpetuity to ensure that the wildlife crossings and associated infrastructure remain functional over time. Given that impacts of noise, light, and vibration can affect the use of wildlife crossings, even if crossings are designed with adequate parameters and fencing, the crossings should be built with wildlife responsive design; crossings should have sound and light berms to minimize light and sound at the entrance/exit as well as on/in/under the crossings structures, and they should be well-maintained on both sides of the crossing for animals to use them (Shilling 2020; Vickers 2020).

III. Conclusion

We strongly urge LA Metro to adopt our recommendations and include detailed analysis and mitigation measures that protect native species and promote habitat connectivity.

Thank you for the opportunity to submit comments. We look forward to working with LA Metro to foster land use policy and growth patterns that promote wildlife movement and habitat connectivity and facilitate public health and safety. Please do not hesitate to contact the Coalition with any questions at the email addresses listed below.

RE: Metro Sepulveda Transit Corridor Project – Project Design and Environmental Scoping Meeting Comments

Dear Mr. Carter:

The Westside Neighborhood Council of the City of Los Angeles serves approximately 80,000 Los Angeles residents and business stakeholders that have the potential to be affected by the proposed Metro Sepulveda Transit Corridor Project and the design alternative that is selected. Therefore, the Westside Neighborhood Council has a keen interest in the project's progress, the design alternative selected, and the ultimate outcome and success of this project.

Portions of five of the six project alternative alignments (Alternatives 1 through 5) and some of the proposed stops are located with the boundaries of the Westside Neighborhood Council area and the project alignment for Alternative 6 is located immediately adjacent to the western boundary of the Westside Neighborhood Council (WNC). The western boundary of the WNC is the I-405 freeway. The northern boundary is Santa Monica Boulevard and the southern boundary is National Boulevard and then generally following the I-10 freeway east of Overland Avenue. The Exposition Light Rail Line is located within the WNC boundaries with the Sepulveda and the Westwood stations located within the WNC boundaries and the Palms Station located at the southeast border of the WNC area.

Our comments address the following topics:

1) the six alternatives for the project design;
2) general environmental comments and environmental issues to be studied and addressed in the EIR analysis for the project in compliance with the requirements with the California Environmental Quality Act and other applicable environmental review processes;
3) and our general questions, comments and concerns that remain unanswered from the Scoping Meeting presentations held in December 2021 and January 2022.

Although the Westside Neighborhood Council has not taken a position yet regarding selecting a specific preferred alternative, our comments do include discussion of preferred aspects of one or more of the alternatives subject to review and evaluation of the environmental analysis for each of the design alternatives and response to our questions and concerns.

We do agree that there is a definite need for transit service that connects the Westside and the Valley and that an ultimate connection south to LAX for a later phase of this project is definitely much needed as well. Additionally, we generally agree with the six project goals (and 17 associated objectives): 1) to improve mobility, 2) improve accessibility and promote equity; 3) support community and economic development; 4) protect environmental resources and support a sustainable transportation system; 5) provide a cost-effective solution and minimize risk; and 6) enhance resiliency.

As the design alternatives get finalized, we do want to emphasize that based upon our community's experience with the design, implementation, construction and operation of the Exposition Corridor Light Rail project we do not support at-grade transit projects and wish to continue to support the concept of grade separated transit for all design options whether they be monorail or heavy rail. We believe that while cost is an important consideration, it should not be the sole deciding factor and that the ultimate design must not negatively impact the communities that the transit line travels through. At a minimum, at-grade crossings create safety issues, traffic congestion and air quality/greenhouse gas emission impacts from vehicle idling waiting for trains to cross roadways, noise impacts that can be avoided such as bells, whistles and loudspeakers relating to crossing roadway. We will live with both the benefits and any impacts by not building the best possible project with the fewest environmental and community impacts for both our residents and our businesses.

Comments Regarding Project Alternatives

One of the considerations in project alternative selection should be the capacity of the system in terms of ridership and any flexibility to expand capacity in the future as the population of Los Angeles increases and demand for service increases. Additionally, as the planned future phase to connect to LAX is constructed and operational, it is logical to expect that ridership demand will increase because of the accessibility to LAX as well.

Descriptions of Alternatives 1, 2 and 3 that use the monorail mode of transportation indicates that the system will operate with 2-8 cars with 8 cars being the maximum and 6 cars anticipated for peak period operation (at least initially) With a capacity of 76-79 persons per car, the ridership capacity maximum is 632 persons.

Descriptions of Alternatives 4 and 5 that use the heavy rail mode of transportation indicate that the system will operate with 3 cars and the potential add a 4th car with 170 passengers each. This

means that the maximum capacity is 710 persons per train. Alternative 6 with 6 cars and 133 passengers per car provides the best capacity with 798 persons although its headways are not quite as frequent. All of the heavy rail options provide more ridership capacity which is preferable. The question is whether there is any difference in the maximum frequency of each mode of transit which would affect the overall ridership capacity in a given day or if the number of cars could be increased any more than what is proposed given the platform lengths for the monorail mode and the heavy rail mode and if they could be lengthened at a later time if ridership demand warranted it. We think this is especially critical given the projections for this line to have one of the highest level of ridership in both Metro's rail system and in the country. We would like an answer to these questions along with our other questions throughout this letter.

We support the addition of a stop at Santa Monica Boulevard in all the alignments and agree that a stop somewhere on the UCLA campus is needed. We believe that all options should have a direct connection to the subway on Wilshire.

We have concerns regarding the location of the Monorail station at Exposition Boulevard and its interface with the Expo Light Rail and surrounding community for Alternatives 1, 2 and 3. The NOP description and presentation did not specify exactly where the station, guideways and passenger platform is going to be located. Where will they be located? Will it require property acquisition? We would object to any location that would affect or cause elimination of the existing post office or affect any of the heavily trafficked surrounding streets (Exposition Boulevard, Sawtelle Boulevard, Pico Boulevard, and Sepulveda Boulevard) including any potential reduction in vehicle travel lanes or elimination of sidewalks.

The use of an electric bus shuttle in Alternative 1 seems like it would be less reliable in terms of schedule and connection with the monorail system as it has to interface with normal street traffic along Wilshire Boulevard and through Westwood Village to UCLA. This should be accounted for and discussed in the environmental analysis for the project.

It is unclear where the underground heavy rail stations at the Exposition Boulevard (Metro E Line) station would be located and how it would connect to the existing Metro E Line Station at Sepulveda and Exposition Boulevard. Would it require property acquisition? Where will it be located? There are certain uses in our community that are not easily replaceable such as the Anawalt Lumber business on the southeast corner of Pico and Sepulveda. We would not want to see station locations that caused the removal of this business or impeded any possible option to widen and improve Sepulveda Boulevard and the surrounding streets. Sepulveda Boulevard is not only a critical major north-south arterial corridor that carries a high level of traffic, it also is the corridor that is the alternate to the I-405 freeway should the freeway be damaged in an earthquake such as what happened to the I-10 freeway in the Northridge earthquake. It is already deficient in the number of lanes and carrying capacity especially between National Boulevard and Santa Monica Boulevard and it does not even have sidewalks on the west side of the street between Pico Boulevard and Olympic Boulevard and will be even less so with future development in the area.

Our primary concerns about Alternatives 4 and 5 primarily relate to any potential construction, land acquisition and environmental impacts discussed in the environmental comment section below.

Alternative 5 and 6 appear to be the most direct route between the Valley and the Westside of Los Angeles although they lose the benefit of a Getty Center stop. Alternative 6 is the shortest mileage wise and provides a station at the West LA Civic Center that could be very beneficial for access to business with government uses and services. We do not believe that Alternative 6 would have any

direct impact on any of our stakeholders because of its alignment. We believe that Alternative 6 is also desirable as it accommodates a ridership capacity of 798 passengers every 4 minutes.

General Environmental Comments and Environmental Issues to be Studied

There needs to be greater clarity regarding the environmental review process for this project. The presentation at the Scoping meetings indicated that money from Measure M would not cover all of the cost of the funding for the project and that the project may include pursuit of Federal funding from the recently passed Infrastructure bill/Build Back Better funding. Projects that involve Federal funding do require compliance with NEPA and environmental review subject to those regulations. Therefore, both an EIR and an EIS would need to be prepared.

The Notice of Preparation was written more like a description for a NEPA project and what would be required in an EIS as opposed to an EIR which is very confusing. It discusses purpose and need which are requirements for NEPA documents. The issue areas for study are not correct and are not consistent with the categories of study required pursuant to the CEQA Guidelines Appendix G checklist. If an EIR is being prepared, as is required, the topics of study need to be the same as those in CEQA Guidelines Appendix G. We believe that all environmental issues areas in the CEQA checklist must be fully evaluated. The categories of Public Services and Population/Housing were not listed at all as areas that will be studied. They must be included in the environmental analysis (irrespective of the impact level) since an initial study has not been prepared for the project. Topics that are not part of CEQA were listed (real estate and acquisition, community and neighborhood). Are these additional areas that will be analyzed in the EIR? We feel that all issue areas must be fully studied and not screened out from the review process. We have specific comments regarding a few of the issue areas below.

A few of the environmental topics that must be studied directly relate to the goal of resiliency. Geology relating to seismic safety issues will be a critical study area for all alternatives whether a monorail or heavy rail design is ultimately selected. We would like to know what levels of earthquake survivability are there for the two system modes (monorail vs. heavy rail) through the Santa Monica Mountains built to withstand. Is there a difference between the two systems?

Another critical area of study is wildfire. The environmental analysis should evaluate whether monorail systems or heavy rail systems have a greater risk of interruption of service from earthquakes and wildfires and this should be a critical component of the evaluation of alternatives. We presume that since all of the alternatives travel through or under the Santa Monica Mountains, at least a portion of each alternative is located in the City of Los Angeles' high fire severity zones so this is a critical component in the determination of a sustainable transportation system that meets the project objective to enhance resiliency and the objective to provide resilience to natural disasters and climate change.

The design option of using underground heavy rail appears it would have less impact in terms of not requiring very much acquisition of land and replacement of existing uses whether residential, commercial or industrial uses than the monorail design if the stations, guideways and passenger platforms for the monorail are to be located primarily adjacent to the freeway. It is unclear whether these facilities would be located within the property boundaries of the I-405 freeway property or on private properties adjacent to the freeway for each of the three monorail alternatives. Are there maps that have been developed with potential properties for acquisition for all six design options? If not, they must be developed and studied in the Environmental Impact Report for all relevant CEQA issue areas. When maps are developed of potential properties for acquisition for each of

the 6 design options they must be provided to the public for review and comment. When will maps be developed and provided to the public?

Impacts to wildlife, trees and conservation of ecosystems must be evaluated and impacts should be minimized. Loss of tree canopy in urban environments is an ongoing critical issue. Substantial loss of trees in our ecosystem contributes to the increases in greenhouse gases and impact to both humans and wildlife.

Alternative 4, 5 and 6 have potential impacts from tunneling that needs to be studied. Alternatives 4 and 5 appear to have an alignment along the east side of Sepulveda Boulevard between Santa Monica Boulevard and Exposition Boulevard where the rail would connect to the Metro E Line Exposition station. We have concerns regarding any impacts to our residences and businesses and request that this issue be thoroughly studied in terms of geologic/seismic, hydrologic, noise and other applicable potential impacts (including impacts from any needed land acquisition).

Construction impacts must be studied that include but are not limited to: air quality/GHG, noise. Fugitive dust, and traffic impacts from truck idling for import/export of earth during the grading process, excavation and shoring impacts, and other construction activity from construction vehicles, equipment, deliveries of equipment and supplies, construction worker parking. Locations for construction worker parking and truck haul routes must be identified and studied. Shuttle service must be provided for off-site locations. Protections must be put in place to ensure that construction vehicles, equipment, and worker vehicles are not permitted to impact businesses and the residential communities by parking in much needed street parking.

General Comments, Concerns, and Questions

Since questions from the public at the three scoping meetings were not answered we request that staff develop and distribute/post a Fact Sheet that answers comments and concerns from the public.

General questions and concerns that we would like answered in addition to our questions above are as follows.

1. There has been a lot of criticism of monorail as the transit mode type for several reasons that include: introducing a new mode of transportation that may not be as reliable as rail and where rail cars are not interchangeable with existing Metro rail system cars if there are system breakdowns or repairs needed. Has an evaluation been done or will one be done to address this concern?
2. Another criticism of monorail is the negative aspects of stations in the middle of freeways, in this case placement in the center of the I-405 freeway. Is there data and experience from other cities that shows there is a negative (or positive) impact on ridership and success of transit when stations are located on major highway/freeway center dividers? Has Metro explored why some locations have removed monorail installations?
3. Was a station stop on the monorail considered at Mullholland Drive where there are significant generators of traffic located (and facilities like the Skirball Center) and if not, why not? There are numerous educational, cultural (Skirball Center), and religious institutions located in the vicinity. Would there be a project loss of ridership without a stop there?
4. What kind of coordination is taking place between the Sepulveda Pass Transit project and the proposed toll lanes through the Sepulveda Pass? How can one project proceed on a separate timeline without more close coordination and joint assessments being done?

Should two toll or "hot" lanes be proposed, widening of the freeway is then being considered which could have impacts on the transit options involved?

5. Our understanding is that with the heavy rail systems that are proposed, the heavy rail cars can be interchanged with the red/purple lines. Is this correct? This seems to be advantageous in selecting heavy rail versus monorail alternatives for maintenance, cost and system reliability. Is this being considered in the cost analysis?
6. Automated train operators presumably are preferable as they eliminate issues with human operator error. However, what fail safe mechanisms are included in these rail systems for the equipment and that these systems once built are properly funded for regular maintenance and train/equipment replacement as needed?
7. We do not object to the decision to change the alignment to Bundy on Alternative 6 but is there an explanation for that decision? Does it relate to how the future extension of the line to LAX would be aligned and if so is there some tentative alignment options that can be shared with the public?
8. Are there significant differential between estimated construction costs versus operational costs for monorail versus heavy rail? Have there been estimates made for cost per trip/per rider over time? Construction cost per trip/rider? This should be included in the overall project analysis.
9. What security will be provided at platforms and in stations and along the line? It seems that Metro has reduced security for existing systems. This is a concern and would probably affect ridership especially for women, elderly, children and disabled populations which would be contrary to investing in communities with great mobility needs.

Please feel free to contact us with any questions.

Sincerely,

Kimberly Christensen, AICP

February 11, 2022

Dear Metro Board of Directors,

We, the undersigned organizations, call on Metro to follow the recommendations below for the scope of its environmental study of the Sepulveda Transit Corridor (STC) project, as an addendum to our previous letter.

Metro should study how to achieve zero long term displacement of renters from the project area as a result of rising rents, property values, and tear downs/rebuilds attributable to the Sepulveda Transit Corridor project: there should be an absolute right of return under all circumstances.

Metro should study how it can partner with other agencies to enable tenants to own their homes directly as cooperatives, even if a community opportunity to purchase/tenant opportunity to purchase (COPA/TOPA) right of first refusal is not yet established.

Metro's study should also track the loss of units and tenants covered under the City of Los Angeles Rent Stabilization Ordinance (RSO), in addition to those at risk of displacement because they are not covered by the RSO.

Metro should study how it can partner with other agencies to establish freezes on:

- Approvals of evictions under the Ellis Act
- Owner occupancy move-ins
- Resident manager move-ins
- Passing on capital improvement costs to tenants
- Capital improvement evictions

SAJE
STRATEGIC ACTIONS FOR A JUST ECONOMY

February 11, 2022

Dear Metro Board of Directors,

We, the undersigned organizations and individuals, call on Metro to follow the recommendations below for the scope of its environmental study of the Sepulveda Transit Corridor (STC) project.

HOUSING

The Draft Environmental Impact Report/Statement (DEIR/DEIS) must recommend that Metro select a Locally Preferred Alternative route only after (1) identifying and mapping specific locations of renters at risk of displacement due to rising rents, and (2) mitigation measures are studied and implemented that are consistent with the Metro Transit Oriented Communities Policy, Equity First Communities, and the Equity Platform to protect renters before real estate investors buy properties due to the LPA. Without considering the impact displacement would have on VMT, the DEIR would be inadequate. Studying mitigation measures will be crucial for both equity and environmental quality.

These mitigation measures could include, but are not limited to:

- A Community or Tenant Opportunity to Purchase (COPA/TOPA) program for rental apartments owned by corporations or LLCs, are enacted and funded to cover the project area so existing low income renters can be protected from displacement from apartment buildings that aren't covered by rent control
- A registry of rental apartments owned by corporations or LLCs (similar to AB 889, AB 1188, or SB 679)
- Inclusionary housing requirements for market rate developers to provide a portion of their units at rents that are affordable to households with very low and extremely low income relative to Area Median Income
- Housing projects on Metro and other government property in the project area with 100% of units affordable to households with very low and extremely low income relative to Area Median Income

- A mechanism to capture a portion of increased property values due to STC upon sale, to be used for housing affordable to households with very low and extremely low income relative to Area Median Income in the project area
- Permanent just cause eviction protections
- Demolition control guaranteeing that no unit of affordable housing will be knocked down without another going up in its place
- Protections for renters when owners convert apartments to condominiums
- A small site acquisition program similar to San Francisco's
- Affordable housing financing

Metro should provide resources to its Executive Officer on Race and Equity to participate in and review the environmental study of this project prior to publication of the DEIR/DEIS.

STATIONS

The project must serve the main UCLA campus directly, so Metro should eliminate the monorail Alternatives 1 and 2. To study either would waste taxpayer money.

Similarly, each alternative must have a station at Ventura Blvd. Currently, Alternative 3 has a station at a parking structure near the 101/405 interchange instead, which is unacceptable.

As the STC4All coalition said, the Sepulveda Line should have an integrated connection with the D Purple Line at Wilshire/Westwood. Currently, Alternative 3 has a station at Lot 32, a block away from the D Purple Line Station at Wilshire/Westwood, which is also unacceptable.

For each alternative Metro should study Phase 1 south termini at Expo/Bundy and Expo/Sepulveda to see which corridor to LAX would generate the greatest ridership in Phase 2.

No alternative should consider a station platform in the middle of a freeway, nor consider building motor vehicles parking for riders at stations.

TECHNOLOGY

The heavy rail option must have physical dimensions that are compatible with Metro's existing heavy rail lines to reduce future operations and procurement costs. Right now, Bechtel's heavy rail proposal uses narrower dimensions, so its cars would be incompatible with the Metro B Red Line and the Metro D Purple Line. This is reminiscent of how Bechtel saddled BART with wide gauge trains that are incompatible with other rail systems in the area.

Metro should study automated options for each heavy rail alternative that are compatible with the physical dimensions of its existing system.

Metro should study both single bore and dual bore tunnels for each underground alignment to provide comparable information.

ALIGNMENTS

Instead of studying elevated rail next to residential areas, study alternative alignments. For example, between Valley Vista Blvd. and Burbank Blvd., Sepulveda Blvd. has multistory apartment buildings. If Metro studies any elevated alternative in the San Fernando Valley, it would need to be an alignment similar to what the monorail team proposed in Alternative 3 along the east edge of the 405 Freeway between Valley Vista Blvd. and the Metro G Orange Line, BUT with a station portal at the intersection of Ventura Blvd. and Sepulveda Blvd., not at a parking structure at the 101/405 Fwy interchange.

As a substitute for Alternative 4 to going on Sepulveda north of the Metro G Orange Line, Metro should study interlining the Sepulveda Line with the Metro B Red Line, connecting them and the East San Fernando Valley Line via the Orange Line right of way and either Oxnard Blvd. or Cumpston St. To study this, Metro must make the heavy rail option match the specifications of the Red Line. Metro could use the Sepulveda Station parking lot for a rail yard, giving more flexibility to both the Sepulveda and Red Lines. There would be high ridership going both directions all day between Sepulveda and North Hollywood because both the Westside and Hollywood/Downtown are strong destinations. Most of the Orange Line ridership is in that segment already. Plus, the Orange Line is slated to be converted to rail.

Interlining would address another challenge for the Sepulveda project: the potential to overload the East San Fernando Valley (ESFV) Line near and at their connection point. By spreading ridership across stations at Sepulveda Blvd., Van Nuys Blvd., Valley College, and North Hollywood, interlining would relieve pressure on the ESFV Line, and without forcing riders in Van Nuys to either backtrack north to travel south on the Sepulveda Line, or to transfer twice from the ESFV Line to the G Orange Line and then to the Sepulveda Line. Currently, Metro anticipates that every alternative except #6 would require this. Savings from not having to extend the Sepulveda Line to Van Nuys Metrolink Station could be used to interline instead.

PROJECT AREA

The project area should include adjacent areas with significant numbers of transit riders going to or through the project study area, such as parts of Del Rey, Encino, Mar Vista, and Palms that are currently excluded. For example, the portion of Encino with the greatest number of multifamily residences and transit dependent riders is the area excluded from the project study area, so all of Encino should be included.

RE: Metro Sepulveda Transit Corridor Project – Project Design and Environmental Scoping Meeting Comments

Dear Mr. Carter:

The West of Westwood Homeowners Association located in the City of Los Angeles represents approximately 1,200 households. The area that we represent is adjacent to the Metro E Line Exposition station at the intersection with Sepulveda Boulevard. Therefore, our stakeholders will be affected by the proposed Metro Sepulveda Transit Corridor Project and the design alternative that is selected.

Five of the six project alternative alignments (Alternatives 1 through 5) that end with a stop at the Metro E Line Exposition station are immediately adjacent to our western boundary and our homes. West of Westwood Homeowners Association encompasses the area generally bounded by Pico Boulevard on the north, National Boulevard on the south, Sepulveda Boulevard on the west except for a pocket of homes south of Exposition Boulevard to the I-10 freeway that are also in our Association area, and generally to Overland Avenue to the east with an additional section of homes east of Overland north of Overland Avenue Elementary School.

We agree that we need direct transit service that connects the Westside and the Valley with a future second phase that connects to LAX. We agree with the goals and objectives of the project relating to improved mobility, accessibility, equity that is cost effective, enhances resiliency, protects environmental resources and supports a sustainable transportation system. Our Board has not taken a position yet regarding this project, however, Alternative 6 seems to meet the key goals and objectives of the project, have stops that will be heavily used which should promote high levels of ridership, meet our goals of no at-grade crossings regardless of transit mode, and it appears to not impact our neighborhood in a negative manner. Nonetheless, we will wait to review the results of the EIR before issuing an Alternative preference.

We agree with and support the comments of the Westside Neighborhood Council and would also like answers to the questions that they raise. We agree with the environmental concerns and issue areas that need study.

First, as the design alternatives get finalized, we do want to re-emphasize that based upon our community's experience with the design, implementation, construction and operation of the Exposition Corridor Light Rail project we do not support at-grade transit projects and wish to continue to support the concept of grade separated transit for all design options whether they be monorail or heavy rail. The West of Westwood Homeowners Association neighborhood along with Cheviot Hills was and still is among the most directly impacted neighborhoods along the Metro E line corridor with 3 at-grade rail crossings at Military Avenue, Westwood Boulevard, and Overland Avenue heading east from the Exposition Station at Sepulveda Boulevard.

Like the Westside Neighborhood Council, we believe that while cost is an important consideration, it should not be the sole deciding factor and that the ultimate design must not negatively impact the communities that the transit line travels through. At a minimum, at-grade crossings create safety issues, traffic congestion and air quality/greenhouse gas emission impacts from vehicle idling waiting for trains to cross roadways, noise impacts that can be avoided such as bells, whistles and loudspeakers relating to crossing roadway. We will live with both the benefits and any impacts by not building the best possible project with the fewest environmental and community impacts for both our residents and our surrounding businesses for decades to come.

Comments Regarding Project Alternatives

One of the considerations in project alternative selection should be the capacity of the system in terms of ridership and any flexibility to expand capacity in the future as the population of Los Angeles increases and demand for service increases. Additionally, as the planned future phase to connect to LAX is constructed and operational, it is logical to expect that ridership demand will increase because of the accessibility to LAX as well.

Descriptions of Alternatives 1, 2 and 3 that use the monorail mode of transportation indicates that the system will operate with 2-8 cars with 8 cars being the maximum and 6 cars anticipated for peak period operation (at least initially) With a capacity of 76-79 persons per car, the ridership capacity maximum is 632 persons.

Descriptions of Alternatives 4 and 5 that use the heavy rail mode of transportation indicate that the system will operate with 3 cars and the potential add a 4th car with 170 passengers each. This means that the maximum capacity is 710 persons per train. Alternative 6 with 6 cars and 133 passengers per car provides the best capacity with 798 persons although its headways are not quite as frequent. All of the heavy rail options provide more ridership capacity which is preferable. The question is whether there is any difference in the maximum frequency of each mode of transit which would affect the overall ridership capacity in a given day or if the number of cars could be increased any more than what is proposed given the platform lengths for the monorail mode and the heavy rail mode and if they could be lengthened at a later time if ridership demand warranted it. We think this is especially critical given the projections for this line to have one of the highest level of ridership in both Metro's rail system and in the country. We would like an answer to these questions along with our other questions throughout this letter.

We support the addition of a stop at Santa Monica Boulevard in all the alignments and agree that a stop somewhere on the UCLA campus is needed. We believe that all options should have a direct connection to the subway on Wilshire.

We have concerns regarding the location of the Monorail station at Exposition Boulevard and its interface with the Expo Light Rail and surrounding community for Alternatives 1, 2 and 3. The NOP description and presentation did not specify exactly where the station, guideways and passenger platform is going to be located. Where will they be located? Will it require property acquisition? We would object to any location that would affect or cause elimination of the existing post office or affect any of the heavily trafficked surrounding streets (Exposition Boulevard, Sawtelle Boulevard, Pico Boulevard, and Sepulveda Boulevard) including any potential reduction in vehicle travel lanes or elimination of sidewalks.

The use of an electric bus shuttle in Alternative 1 seems like it would be less reliable in terms of schedule and connection with the monorail system as it has to interface with normal street traffic along Wilshire Boulevard and through Westwood Village to UCLA. This should be accounted for and discussed in the environmental analysis for the project.

It is unclear where the underground heavy rail stations at the Exposition Boulevard (Metro E Line) station would be located and how it would connect to the existing Metro E Line Station at Sepulveda and Exposition Boulevard. Would it require property acquisition? Where will it be located? There are certain uses in our community that are not easily replaceable such as the Anawalt Lumber business on the southeast corner of Pico and Sepulveda. We would not want to see station locations that caused the removal of this business or impeded any possible option to widen and improve Sepulveda Boulevard and the surrounding streets. Sepulveda Boulevard is not only a critical major north-south arterial corridor that carries a high level of traffic, it also is the corridor that is the alternate to the I-405 freeway should the freeway be damaged in an earthquake such as what happened to the I-10 freeway in the Northridge earthquake. It is already deficient in the number of lanes and carrying capacity especially between National Boulevard and Santa Monica Boulevard and it does not even have sidewalks on the west side of the street between Pico Boulevard and Olympic Boulevard and will be even less so with future development in the area.

Our primary concerns about Alternatives 4 and 5 primarily relate to any potential construction, land acquisition and environmental impacts discussed in the environmental comment section below.

Alternative 5 and 6 appear to be the most direct route between the Valley and the Westside of Los Angeles although they lose the benefit of a Getty Center stop. Alternative 6 is the shortest mileage wise and provides a station at the West LA Civic Center that could be very beneficial for access to business with government uses and services. We do not believe that Alternative 6 would have any direct impact on any of our stakeholders because of its alignment. We believe that Alternative 6 is also desirable as it accommodates a ridership capacity of 798 passengers every 4 minutes.

General Environmental Comments and Environmental Issues to be Studied

There needs to be greater clarity regarding the environmental review process for this project. The presentation at the Scoping meetings indicated that money from Measure M would not cover all of the cost of the funding for the project and that the project may include pursuit of Federal funding from the recently passed Infrastructure bill/Build Back Better funding. Projects that involve Federal funding do require compliance with NEPA and environmental review subject to those regulations. Therefore, both an EIR and an EIS would need to be prepared.

The Notice of Preparation was written more like a description for a NEPA project and what would be required in an EIS as opposed to an EIR which is very confusing. It discusses purpose and need which are requirements for NEPA documents. The issue areas for study are not correct and are not consistent with the categories of study required pursuant to the CEQA Guidelines Appendix G checklist. If an EIR is being prepared, as is required, the topics of study need to be the same as those in CEQA Guidelines Appendix G. We believe that all environmental issues areas in the CEQA checklist must be fully evaluated. The categories of Public Services and Population/Housing were not listed at all as areas that will be studied. They must be included in the environmental analysis (irrespective of the impact level) since an initial study has not been prepared for the project. Topics that are not part of CEQA were listed (real estate and acquisition, community and neighborhood). Are these additional areas that will be analyzed in the EIR? We feel that all issue areas must be fully studied and not screened out from the review process. We have specific comments regarding a few of the issue areas below.

A few of the environmental topics that must be studied directly relate to the goal of resiliency. Geology relating to seismic safety issues will be a critical study area for all alternatives whether a monorail or heavy rail design is ultimately selected. We would like to know what levels of earthquake survivability are there for the two system modes (monorail vs. heavy rail) through the Santa Monica Mountains built to withstand. Is there a difference between the two systems?

Another critical area of study is wildfire. The environmental analysis should evaluate whether monorail systems or heavy rail systems have a greater risk of interruption of service from earthquakes and wildfires and this should be a critical component of the evaluation of alternatives. We presume that since all of the alternatives travel through or under the Santa Monica Mountains, at least a portion of each alternative is located in the City of Los Angeles' high fire severity zones so this is a critical component in the determination of a sustainable transportation system that meets the project objective to enhance resiliency and the objective to provide resilience to natural disasters and climate change.

The design option of using underground heavy rail appears it would have less impact in terms of not requiring very much acquisition of land and replacement of existing uses whether residential, commercial or industrial uses than the monorail design if the stations, guideways and passenger platforms for the monorail are to be located primarily adjacent to the freeway. It is unclear whether these facilities would be located within the property boundaries of the I-405 freeway property or on private properties adjacent to the freeway for each of the three monorail alternatives. Are there maps that have been developed with potential properties for acquisition for all six design options? If not, they must be developed and studied in the Environmental Impact Report for all relevant CEQA issue areas. When maps are developed of potential properties for acquisition for each of the 6 design options they must be provided to the public for review and comment. When will maps be developed and provided to the public?

Impacts to wildlife, trees and conservation of ecosystems must be evaluated and impacts should be minimized. Loss of tree canopy in urban environments is an ongoing critical issue. Substantial loss of trees in our ecosystem contributes to the increases in greenhouse gases and impact to both humans and wildlife.

Alternative 4, 5 and 6 have potential impacts from tunneling that needs to be studied. Alternatives 4 and 5 appear to have an alignment along the east side of Sepulveda Boulevard between Santa Monica Boulevard and Exposition Boulevard where the rail would connect to the Metro E Line Exposition station. We have concerns regarding any impacts to our residences and businesses and request that this issue be thoroughly studied in terms of geologic/seismic, hydrologic, noise and other applicable potential impacts (including impacts from any needed land acquisition).

Construction impacts must be studied that include but are not limited to: air quality/GHG, noise. Fugitive dust, and traffic impacts from truck idling for import/export of earth during the grading process, excavation and shoring impacts, and other construction activity from construction vehicles, equipment, deliveries of equipment and supplies, construction worker parking. Locations for construction worker parking and truck haul routes must be identified and studied. Shuttle service must be provided for off-site locations. Protections must be put in place to ensure that construction vehicles, equipment, and worker vehicles are not permitted to impact businesses and the residential communities by parking in much needed street parking.

Since questions from the public at the three scoping meetings were not answered we request that staff develop and distribute/post a Fact Sheet that answers comments and concerns from the public including questions raised by our Homeowners Association and the Westside Neighborhood Council.

Please feel free to contact us with any questions and please keep both of us on your interested parties list for notification of future meetings, notices of release of environmental documents for comment, and public hearing notices.

Sincerely,

Terri Tippit

Subject: Sepulveda Transit Corridor Project – Project Design & Scoping Comments

Dear Mr. Carter:

This letter is submitted in response to the request for comments regarding future evaluation of the six options presented to the public for comment in the scoping period for a proposed Sepulveda Transit Corridor Project. The Westwood South community represents approximately 3,600 households in the area between Santa Monica and Pico Blvds. on the north and south, and between Sepulveda and Beverly Glen Blvds. on the west and east. As such we are adjacent to the I-405 Freeway and have a number of major corridors that run through our community. Our organization supported the construction of the Exposition Light Rail Line and have a strong interest in the future outcome of this project. It is critical that it be an unquestionable success! We further hope that a southern extension to this route will bring public transportation directly to LAX en route to the South Bay.

The absence of a reliable fixed transit mode in the Sepulveda Pass that connects the San Fernando Valley and the areas of the City south of the Santa Monica Mountains has been an obvious and critical missing link in METRO's growing transportation network. It is extremely important that whatever route is chosen is built as efficiently and as quickly as possible with extensive planning on the front end to reduce as many unanticipated "surprises" along the way as possible. The selection of the appropriate mode and/or route should be done with full and adequate consideration of all the issues involved.

We trust that any environmental work on this project will be done without any foregone conclusions so that all project alternatives are thoroughly evaluated. There are many questions that must be answered in order for a sound decision to be made and, equally important, so that the public can feel that they have been heard and that the reasons for the decisions made can be clearly understood by all stakeholders.

Among the questions to be answered:

1. What will the magnitude and duration of impacts from each alternative be? What will the different impacts be during different phases of the project? During construction? During ongoing operation? In assessing costs, this should include the financial costs, the "costs" to adjacent property owners, the cost to system users, length of time of construction, etc.
2. For adjacent neighborhoods, what kinds of mitigations will be needed for each option and how will those mitigations be implemented initially and, if needed, over time?
3. What will the costs of obtaining needed rights of way for each alternative? (The public is much aware of the problems related to the High Speed Train in obtaining

needed rights of way.) What right-of-way acquisition will be needed for each alternative evaluated?

4. What will impacts be on the operation of the 405 freeway?
5. What are the threats to the area's wildlife during and after construction? How will the project impact the wildlife and native habitat in the Sepulveda Pass?
6. Will the different options present different levels of impact on the safety of the corridor in terms of fire safety, earthquake safety /geologic stability(both for users of the transit and for users of the freeway, and for residents of the hillside area). How might wildfires affect the operation of any of the modes/options under consideration?
7. Will the construction of any of these options serve to reduce response time for any public service responders?
8. What will the cost and need for utility relocation be? Are there known and unknown factors involved and, if so, how can they best be assessed (both for cost and for time associated with any needed relocations)? What is the state of knowledge of water tables in the areas where underground construction is contemplated?
9. What kinds of traffic disruptions can be expected for each of the proposed modes during construction? What might impacts be on businesses located on our western border on Sepulveda and within the industrially zoned area between Sepulveda and the I-405 freeway? Our community relies on many of those businesses for essential services. We also know that impacts on Sepulveda Blvd. could have serious negative impacts not only on our community should cut-through traffic seek ways to avoid any construction delays, but Sepulveda Blvd. is the designated I-405 Alternate Route. When things go very bad on the I-405 it is Sepulveda Blvd. that carries the freeway's traffic. It would not be safe to diminish the capacity of that street. Can construction for all options be done avoiding lane removals on Sepulveda?
10. What will the ultimate impacts be vis a vis the environmental factors examined in an EIR per CEQA Guidelines Appendix G including noise, air quality, traffic/mobility, public safety, etc. If this project seeks infrastructure measure funding to augment funds already allocated from Measure M, what kinds of additional review will be required and what impact will having to comply with Federal environmental review standards have on the project timeline and preparation of environmental clearance documents?
11. What will the impact on ridership be for having and not having the ability to make certain stops? (Why no stop at Mulholland for the monorail that would serve both the Skirball and nearby schools and religious institutions? What ridership estimates were done to determine where stops should be made?
12. Does / how does the emergence of the coronavirus impact the planning and/or operation of an above ground vs. below ground travel mode? Are there differences in air retention inside of a monorail car vs. heavy rail car while going through the Sepulveda Pass? Can windows be open on heavy rail while underground through the Pass?
13. How will currently defined limits on the numbers of cars affect the ability of the project to serve a potentially growing demand of riders? We learned that the EXPO line, for example, cannot add cars to the trains due to issues with shared tracks with the Blue Line. This is an unfortunate situation as we know that (pre-pandemic) there were people left standing at the station unable to enter cars during peak hours because they had reached capacity. What kinds of projections are being made for the various options and car capacities? Can they be expanded over time? How can stations be designed and / or constructed to allow for future growth?

In public meetings concerns have been raised about the operation of a monorail in the Sepulveda Pass. We would expect that review of project options answers all of the concerns related to performance on the steep hill (going up and going down). Questions have been raised as to whether there are similar installations in operation elsewhere in the world and whether their performance has been reviewed. Is the climb and descent any steeper for the heavy rail than that which is traveled by the Red Line near Universal City from Hollywood

What are the differences in travel time for a complete trip from the base of the Santa Monica Mountain in the north to the southern base?

How will the length of a monorail train of 2, 4, 6, or 8 cars affect the speed at which the monorail can travel, especially up a steep incline like the one over the I-405 in the Sepulveda Pass?

Does LA Skyrail's parent company BYD have any existing monorail systems currently operating in other cities? What is BYD's track record on delivering on promised projects and their electric buses? What are the nature of disruptions to service when occurring—cause(s), system impacts? What data exists on the reliability of the system?

How will a monorail down the middle of the I-405 with an aerial station at Wilshire, at Santa Monica, and at Exposition *(in Alternative #1, #2, & #3)* connect passengers to street level or other modes of transportation? The major boulevards: Wilshire, Santa Monica, and Exposition Blvds. are all underpasses under the I-405, which is an elevated freeway on the Westside.

How big a ground foot print will be needed to build the stairway, escalators and elevator needed to connect pedestrians to the aerial stations (two stories up)? What are the environmental impacts? How will these new stations affect local boulevard vehicle and pedestrian traffic? What is the cost of construction and operation of all the aerial stations? Where is there land to build a street level connection to an aerial station?

Will bridges need to be built to connect a monorail in the middle of the I-405 to a station at the edge of the freeway? What would be the cost associated with the construction of such structures?

Descriptions of Alternatives #1, #2, & #3 state "frequency of monorail trains will be every 2 minutes during peak periods". How many monorail trains can travel on the monorail above the I-405 and any one time? How many monorail cars will need to be purchased? What issues are there with needing to maintain a separate type of system different from heavy rail already in use on other lines? Likewise, what are the capacities of the heavy rail trains and frequency, train length options?

How long does each station have to be to accommodate a peak hour 6 or 8 car monorail trains? How will this affect the existing structures and congestion on the boulevards where stations are planned? How can stations be built with future possible expansion kept in mind as a future option?

How will pedestrians and/or handicapped people access the elevated stations at Wilshire Blvd.? At Santa Monica Blvd? At Expo "E" Line? At Getty Center? At US 101? At Metro G Line? At Sherman Way? At Van Nuys Metrolink Station? How do you get to the monorail station if it's built in the center of the freeway? Is there data that demonstrates whether the locating of stations in the center of a highway or freeway has a negative impact on ridership?

Will trees need to be removed to build the monorail and the aerial stations? Where will replacement trees be planted? Who will care for replacement trees while they get established? Will removal of trees have a negative impact on air quality and contribute to climate change? Will installation of tunneling for the heavy rail have any impact on the vegetation above the line in the hillsides?

Construction of a monorail in the middle of the I-405 may negatively affect commuter times during the construction period. How can the costs of any expected delays and disruption be calculated into the

construction cost of a monorail down the middle of the I-405? Or, for a monorail constructed along the edge of the I-405?

Are there any significant differences between the experience that METRO has in boring subway tunnels for the Purple Line/Wilshire Blvd. subway and other subway projects and a potential subway project through the Sepulveda Pass? If so, what differences are anticipated and how would METRO address those differences? Are there any added concerns regarding seismic incidents for a subway tunnel through the hillsides of the Sepulveda Pass?

We are aware of METRO's proposal to implement the *I-405 Sepulveda Pass Express Lanes Project* along the same stretch of I-405 freeway. Are there plans to implement two new plans simultaneously? What would be the impacts of doing so? How will two projects be built on the same strip of land without widening the I-405? How can you build pillars to support a monorail and also add express lanes?

As you are likely aware, the I-405 widening project was a long construction nightmare for many of the adjoining neighbors and communities along the route. It is our observation that METRO has used up any goodwill that it had with neighbors as a result of the experience with that project. While those neighbors will, no doubt, continue to be actively engaged in this process, it is unrealistic to expect them to accept any new I-405 widening projects, and particularly any projects (transit or express lanes) that require the taking of any residential lands adjacent to the freeway.

We support the provision of a direct stop to the UCLA campus, the Wilshire subway line, Santa Monica Blvd. and the EXPO LINE. With its extremely high ridership potential, it would seem to be a priority to provide a direct stop on the campus. If for some reason it is not being seriously considered and an alternate connector proposed, it must provide a very frequent and near seamless connection that is attractive to campus employees and students. A surface transit shuttle is likely not going to be an acceptable option. An automated frequent people mover-type link as provided in many airports could be considered but its aesthetic impacts could be unacceptable and would need to be assessed. An underground connection could also be considered but would likely be costly and would likely significantly delay completion of the project. What kinds of projections can be made to show differences in ridership with a direct UCLA stop and one that requires a secondary connection?

We are aware that METRO is considering implementing the I-405 Sepulveda Pass Express Lanes Project at some future time in the Pass. While not the purpose of a scoping letter, we would like to go on record stating that we do not support the notion of implementing the I-405 Sepulveda Pass Express Lanes Project until the Sepulveda Transit Corridor Project has been completed. It is not reasonable to toll drivers who rely on the Pass when there is not a reasonable transit alternative. However, the possibility of both projects ultimately being implemented must be taken into account when planning for the project now under consideration. Many of us find it extremely unfortunate that planning for the Sepulveda Transit Corridor Project was not done at the same time as the widening of the I-405 through the Pass. While this may have delayed some aspects of the widening project it hopefully would have resulted in overall project and time savings and a reduction on adjacent neighbors.

We anticipate that the construction costs for a heavy rail project will exceed those estimated for an above-ground monorail. While we are not in the position to compare all the costs and benefits of the proposed options at this time, we would like to note from our past experience with the construction of the EXPOSITION LINE that it makes no sense to build a project "on the cheap." By this we mean that the Exposition Line was built with many at-grade crossings in our area that have created significant traffic and public safety issues. The community knew that, for example, that there should have been grade separation at the Overland Avenue crossing (which provides a route to a key onramp to the I-10 Freeway), but were told that doing so would be expensive as it would necessitate the relocation of a major sewage line. That was an error on the part of all involved; the communities throughout the area

as well as the many commuters who access the I-10 to come and go from Century City, Westwood Village, the UCLA Campus, VA campus, etc. know this was a mistake (and knew when it was proposed). METRO saved something on the order of $225,000 per the estimates we were given at the time. The value of the lost time for drivers stalled as a result of the crossing has likely passed that dollar figure -- to say nothing about the impact of stalled buses, cars and trucks spewing greenhouse gas/pollutants as they are waiting to pass. The message is clear to us: Build a system that works for users and those in the surrounding area where the system operates. The two cannot be separated. Any evaluation of potential options must look at all elements – not just the "bottom line."

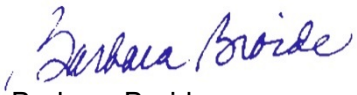
In order to get people out of single passenger vehicles, transit must be reliable and deliver a trip that does not add significant amount of travel time to a trip. Travel must be quick and as direct as possible. (For those accessing the route from a distance, METRO should also consider providing some convenient and reasonably priced vehicle parking lots as an aspect of the overall project.) Many live well beyond the "first mile/last mile" and would be happy to drive to a station in order to take transit if they knew that it would deliver them to their destination at a time certain for everyone knows that a trip through the I-405 is often met with significant delays and bumper-to-bumper traffic during peak hours.

Also, while not included as part of any past or current METRO projects, so far as we are aware, the provision of at least one public rest room along a major transportation route would vastly improve the route's attractiveness to riders. While recognizing the challenges faced in providing clean and safe public rest rooms, we do not believe that the system can continue to operate without recognizing the need to provide rest room facilities in key locations along the METRO system. The lack of such facilities creates a problem for many riders and especially for the elderly, those traveling with young children and for those taking longer trips. It is no longer possible to rely upon a nearby business to provide such amenities for riders. It is time that METRO take responsibility for planning for these essential facilities as part of the design of its major transit lines.

Operational costs are of great interest and must be fully examined in future evaluations of options. We would like to have an understanding of per trip/per rider costs for the various options. With the current labor shortage seen in METRO, what are the long-term projections for the agency being able to sustain a workforce capable of adequately staffing this new route and all others expected to come into service that require attendants/drivers?

We thank you for your consideration of our comments.

Yours sincerely,



Barbara Broide

RE: Scoping Comments on Sepulveda Transit Corridor Project
Via email: sepulvedatransit@metro.net

Dear Mr. Carter:

The Transit Coalition, a Southern California based nonprofit transit advocacy group, appreciates the opportunity to submit Scoping Comments related to the Sepulveda Pass Transit Corridor Project. The Coalition has been one of the original proponents of this critical non-automotive mobility alternative directly connecting West Los Angeles to the San Fernando Valley without the convoluted routing using the Sepulveda Pass.

The Coalition has always advocated a tunnel to connect the Van Nuys Boulevard pedestrian /transit corridor directly to the center of the UCLA campus and the Wilshire Boulevard subway with the most efficient walking and disabled connectivity, rather than long, inconvenient pedestrian hostile alignments involving the I-405 Freeway.

Based upon these basic urban transit connectivity principles, alternatives 1, 2 and 3 absolutely fail convenient walking and transfer timeframes and should be rejected.

Alternatives 4, 5 and 6 offer direct connections to UCLA, which is the fourth largest employer in Los Angeles County via bus, urban rail and other mobility options such as walking and biking, without undue delays to conveniently access the campus, while offering the best population, job and educational density. The San Fernando Valley end offers connections to the Metro Busway, numerous bus routes, Metrolink and Amtrak.

The issue of project cheapness gained by utilizing Options 1, 2 and 3 results in hideous pedestrian times, environmental duress and delay potential, such as Sepulveda Pass vehicle fires and wildfires plus traffic accidents, and inconvenient multiple transfer steps to access the UCLA/Westwood educational, employment and medical centers.

Sincerely,

Bart Reed
Executive Director

Westwood Community Council, Inc.

LA Metro Board of Directors
c/o Mr. Peter Carter, Project Manager
LA Metro
One Gateway Plaza, 99-22-6
Los Angeles, CA 90012

In Re: Sepulveda Transit Corridor Project – Scoping Public Comments

Dear LA Metro Board of Directors and Mr. Carter:

I am the Chair of the Westwood Community Council, Inc.* (WCC) writing in reference to the Metro proposal noted above, the Sepulveda Transit Corridor Project (SCTP), currently being analyzed.

Our WCC has long been on record supporting the position adopted by the Westside Regional Alliance of Councils (WRAC), of which we are a member, regarding the SCTP. We are also proud partners with the STCP4ALL Coalition. Specifically, our Council believes that a successful Sepulveda Transit Corridor alignment must include ALL of the following elements:

- An underground Station located directly on the main UCLA campus, at UCLA Gateway Plaza.

- A seamless connection to Westwood Village and the Westwood/UCLA Station of the Wilshire Purple "D" Line Subway currently under construction.

- A one-seat ride from the San Fernando Valley directly to UCLA and Westwood Village, continuing on to the Expo "E" Line Light Rail (and the same one-seat ride in reverse), thereby offering essential connectivity and continuity to major north-south and east-west transit lines.

Therefore, Alternatives 1 and 2 should be dismissed for, among other reasons, failing to provide an on-campus UCLA Station, and also failing to connect with the Wilshire Purple "D" Line Subway in Westwood. Similarly, Alternative 3 must be dismissed for failing to provide a direct connection with the Wilshire Purple "D" Line Westwood/UCLA Subway Station. All three of these monorail options also fail to provide adequate ridership capacity, are incompatible with Metro's existing transit systems

and rolling stock, and also would force transit riders to wait to board the monorail at stations that are dangerously perched above the pollution-ridden 405 Freeway. All of those facts are disqualifying.

Alternative 4 also fails the test of acceptable design by having an elevated Station in the Sherman Oaks area, which would force riders to board the train in a very awkward and convoluted manner, and also would have very significant negative environmental impacts on nearby properties and neighbors, not the least of which include noise, pollution, blight, and other significant impacts.

As I have commented several times during public testimony, given the fact that both the Red and Purple lines are, end-to-end, a heavy rail subway, based on the transit and ridership demands, this STCP also must be a heavy rail subway, end-to-end, especially considering the ridership projections for this line greatly exceed the ridership of these two existing transit lines which qualified for underground heavy rail.

Thus, given Metro's goals of improving mobility, accessibility, equity, and sustainability, only the heavy-rail Alternatives 5 and 6 can provide a solution to the issues of projected ridership capacity, traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region.

Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000, equivalent to that of a mid-sized city.

Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Alternatives 1 and 2 which rely on a shuttle transfer are destined to fail, and as noted above, they must be dismissed as entirely.

A Station on the UCLA campus and direct connection to Westwood Village and the Wilshire Purple "D" Line Subway is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the third largest employer in Los Angeles County. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Some 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes including many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has more than 2,300 businesses. Providing a Station directly on the UCLA campus is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region.

As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a Station located directly on the UCLA campus, as well as a direct connection to the Westwood/UCLA Station of the Purple "D" Line Subway will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates Alternatives 1 and 2. Alternative 3, while including a UCLA Station, lacks direct connectivity with a number of other Metro lines, including the Orange "G" Line, the Purple "D" Line, the Expo "E" Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Alternative 4 suffers from a very poor above ground station in Sherman Oaks.

Therefore, only Alternatives 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals?

The SCTP has the potential to dramatically change the way we view transit in the Westside. However, the monorail options without a UCLA Station, a direct connection to the Westwood Purple "D" Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate Alternatives 1, 2, 3, and 4.

As part of your scoping process, I ask that the following elements also be thoroughly studied and analyzed:

- Please consider and analyze an alternative to the proposed terminus of Alternative 6 by an "Alternative 6-B" terminating at the Sepulveda & Exposition Expo Station, in addition to currently proposed terminus at Bundy & Exposition.

- Please consider and analyze the possibility of using longer trains, consistent with the rolling stock currently used by both the Red "B" Line and the Purple "D" Line. This will necessitate larger (longer) stations, and such construction and maintenance costs must be thoroughly analyzed.

- Please consider and analyze the option of having Alternatives 5 and 6 using both AUTOMATED trains, as well as HUMAN-DRIVEN trains.

- Perhaps most importantly, please fully study and analyze the following key question: Whether a tunnel can be safely constructed and operated through the Santa Monica Mountains, connecting the San Fernando Valley to Westwood and the Westside. Such analysis must include, at a

minimum, considerations of Seismology, Geology, Hydrology, Biology, Ecology, Engineering, wildlife impacts, noise, vibration, erosion, pollution, and all other relevant environmental impacts.

If you have any questions about this matter, please do not hesitate to contact me. Thank you very much.

Sincerely,

Steven D. Sann

Los Angeles, CA 90012

RE: **Van Nuys Neighborhood Council Recommendation – Sepulveda Transit Corridor Project Environmental Study**

Dear Mr. Carter:

I write to inform you of the recommended action of the Van Nuys Neighborhood Council (VNNC), adopted at its regular meeting on Wednesday, February 9, 2022, regarding the LA Metro Sepulveda Transit Corridor Project.

The VNNC recommends, first, opposition to any proposal to implement that would place any part of the transit project above ground. Second, the VNNC supports Alternative 6 under consideration, providing for heavy rail entirely underground to run along Van Nuys Boulevard from the Northern Terminus at the Van Nuys Metrolink station to the Southern Terminus at the E Line Expo/Bundy station, **with amendment to add one additional stop at either Victory Boulevard or Burbank Boulevard**.

The Council wishes to express appreciation to LA Metro for presenting as part of its outreach on the project to the VNNC Planning and Land-Use Committee on January 27, 2022, all of the alternatives under its consideration. Should you have any questions or wish to further discuss, please feel free to contact VNNC Board Member Jeffrey Dunn at Jeffrey.dunn@vnnc.org.

Thank you for your consideration.

Sincerely,

Kathy Schreiner
Vice President, Van Nuys Neigborhood Council

International Monorail Association

Dear Mr. Carter and the Sepulveda Transit team,
Through our member companies, we have learned about the recent public hearing of your proposed Sepulveda Transit Corridor project. First, we would like to express that your open technology approach is very remarkable. This is not always the case with such challenging projects. Nevertheless, we can imagine that the 6 different alternatives will not be discussed without prejudice. The International Monorail Association is a non-for profit Members Association whose mission is to organize the mass transit global monorail sector, promote the application of monorail, publish information, and promote the establishment of performance standards. Currently our association has 37 member companies - spread around the globe. Our aim is to provide a platform for interaction between Public Authorities, the Monorail OEM Industry, the Monorail Operating and Maintenance Companies, Monorail Consulting Engineering Companies and Monorail System Builders, with the purpose to aid in the responsible and efficient use of Monorail for Public Mass Transit. In this respect, we would like to take the opportunity to enter into a dialog and share with you information on technology assessment. To this end, you will find enclosed three presentations that go into great detail about the various transport solutions and explain their advantages and disadvantages. For your Sepulveda Transit Corridor Project, we see several advantages with the use of a monorail system: In addition to the topographical requirements for routing,
which monorails can meet well with comparatively tight curve radii and larger inclines, the speedy project implementation is one of the most compelling arguments. The results are quickly visible and, above all, usable for the population. Other major advantages are comparatively low investment costs and low operating costs. Monorail systems are an easy fit to urban areas (unobtrusive track) and match for difficult terrain due to its simpler infrastructure. Consider this email as an invitation for further exchange. We would also be happy to discuss this matter in more depth with our experts from the member companies.

Appendix Q-3. Letters from Elected Officials

CITY HALL
LOS ANGELES, CALIFORNIA 90012

February 11th, 2022

Los Angeles County
Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

RE: Sepulveda Transit Corridor Project Scoping Period Letter

Dear Mr. Carter:

As elected representatives of the San Fernando Valley, we write today to share the values that we feel must guide Metro's Scoping process in selecting a Locally-Preferred Alternative for the Sepulveda Transit Corridor Project ("Project"). We share this letter now in the hopes that early collaboration will result in the best possible version of the Project for both the City of Los Angeles and the region.

The Project presents an enormous opportunity to improve land use, mobility, and equity in Los Angeles. With over 400,000 people traveling in private vehicles through the Sepulveda Pass every weekday, even a small shift to transit will have a massive impact on emissions—and we foresee a much larger transformation than that. By connecting to Metrolink, three Metro Rail lines, and numerous bus lines, the Project will allow riders to take reliable, fast, and safe transit between the Valley, UCLA, and after Phase 2 is complete, LAX. These enhancements will greatly improve the County's rail network, and provide a critical connection from the Valley to the jobs-rich Westside.

For working class communities in the San Fernando Valley, this Project will be particularly transformative. Many people in the Valley currently rely on transit and endure hour-plus commutes with multiple transfers and frequent delays to access the neighborhoods that will be serviced by the Project. By cutting the trip from Van Nuys to West Los Angeles to less than half an hour, the Project will create easy access to jobs, education, recreation, and cultural opportunities for these communities.

Our Values Related to the Project

In order to maximize the potential for the Sepulveda Transit Corridor to serve the needs of our Valley communities we are framing our decisions about the project around the following values and positions:

- Metro must prevent significant and extended construction impacts to Van Nuys Boulevard from the Metrolink right-of-way to the Orange (G) Line, or any other impacts that could otherwise result in any significant disruption of service on the East San Fernando Valley Light Rail Corridor regardless of which Project Alternative is selected.

- The Project must be based on principles of equity. Any alternative that calls for above ground facilities in the San Fernando Valley but not for other segments of the Project corridor, or that in any way disproportionately disadvantages the San Fernando Valley and its residents, is not based on fairness and therefore is not acceptable.

- Any Project Alternative must have a station on the UCLA Campus and direct transfers (co-located stations) to the Metrolink Ventura County Line, the East San Fernando Valley Transit Corridor, the Orange (G) Line, the Purple (D) Line, and the Expo (E) Line.

- The area surrounding the Van Nuys Metrolink Station ranks in the top 5% of most environmentally impacted CalEnviroscreen census tracts. This area is proposed as the location of a new rail yard for the East San Fernando Valley Light Rail Line in several alternatives. If another rail yard is placed in this area, Metro must mitigate the environmental impacts by funding initiatives similar to the Los Angeles Department of Water and Power's community emission-reduction grant programs and create publicly accessible park space to buffer the facility.

- Metro should include, for any alternative, the study of an additional station to fill the 1.75 to 2-mile gap between the Orange (G) Line and Ventura Blvd with a potential station at either Burbank Blvd or Magnolia Blvd.

- As part of the Sepulveda Transit Corridor Project, Metro should incorporate public restrooms in all stations, station plazas, and station portals in construction and should include restroom operations and maintenance as a part of the line's operations and maintenance program.

- The city is planning large investments at the Sepulveda Basin and Los Angeles River, which will enhance their status as regionally important recreational and open space destinations. Any Project Alternative should include active transportation connections to both of these areas, which should be built and complete in time for the opening of transit service.

- Any Project Alternative should include analysis of First-Last Mile options for accessing stations and should prioritize station placement with better existing and potential access. Any First-Last Mile features should be built and complete in time for the opening of transit service.

- Similar to how Metro worked with the City of Los Angeles to secure an FTA Planning Grant for the East San Fernando Valley Transit Corridor, Metro should partner with the City to pursue funding, develop, and advance equitable land use planning around stations areas to:

    - Encourage mixed income and mixed-use development;
    - Evaluate direct and indirect displacement risk and mitigation measures;
    - Affordable housing retention and production;
    - Design elements to maximize transit usage in new development.

- Metro should proactively identify and evaluate potential Joint-Development opportunities at and around future station locations and with any land acquired through property acquisition for the project for all alternatives.

The Sepulveda Pass is one of the most congested corridors in the nation. This Project represents an opportunity to invest in sustainable and reliable mass transit infrastructure that will fundamentally transform the travel and daily lives of millions of residents. It is imperative that Metro plan this project in a way that produces the greatest long-term benefits for transit riders and residents for decades to come—even if that requires more upfront investment.

We look forward to continuing to work with you to make this important project a reality.

Sincerely,

NURY MARTINEZ

Re: Sepulveda Pass Corridor Project

Dear Mr. Carter:

No infrastructure project is more critical to the transit needs of the San Fernando Valley than the completion of the Sepulveda Pass Corridor project. Linking the Valley to the Purple Line in West Los Angeles, with a future connection to LAX, provides the best opportunity to draw large numbers of commuters out of their cars and lessen traffic on the 405 freeway. For these reasons, I strongly supported Measure M and have consistently fought for federal funds for this project.

Unfortunately, the recent release of six alternatives under consideration, without the publication of cost, speed, parking, and ridership estimates (among other metrics critical to their evaluation) has given rise to confusion and alarm within the communities identified as possible hosts to the alignment routes. To ensure that the train and its construction meets commuter needs while protecting neighborhoods, Metro should commit to hosting town hall meetings with each of the relevant neighborhood councils and homeowner's associations to address their concerns.

Additionally, any alignment involving tunneling must prevent disturbances that could be experienced at ground-level. Metro should not even be considering an alignment which would place above-ground heavy-rail along Sepulveda Blvd. And each subterranean proposal should indicate depth, ventilation, and other aspects relevant to determining the effects to those living above.

Furthermore, as these trains are intended to move people as quickly as possible, each stop along the alignment should justify itself as a significant ridership entry and exit point. It makes little sense including stops that relatively few passengers will use. Any stop at the Getty Center needs to meet these criteria.

Before an alignment may be properly considered the "locally preferred" alternative, residents and commuters need sufficient information to express their preference and reservations. I look forward to the opportunity to address the technical details of these alternatives, their environmental implications, parking options, potential for legal challenge and delay, as well as their respective cost, speed, and ridership as soon as they become available.

Sincerely,

BRAD SHERMAN
Member of Congress

RECYCLED PAPER

Appendix R. Public Comment Coding Categories

Table R-1. Public Comment Coding Categories

Category	Description
Planning	
(P1) Project Objectives	Comments on the goals and objectives of the Project
(P2) ADA Accessibility	Comments on if/how the system (both vehicle and stations) can be easily accessible to mobility-impaired people
(P3) Equity	Comments on whether certain alignment routing, configuration, etc. is fair or equitable
(P4) System Integration/Connectivity	Generic comments that the Project should be planned as part of a network with convenient transfers to other transit services
(P5) Cost and Funding	Comments on capital and O&M costs, available funding sources
(P6) Overall Project Alignment	Comments on the Project routing and what destinations should be served
(P7) Public Input Solicitation and Incorporation	Comments on how public input will be considered and incorporated into the LPA selection process
(P8) CEQA Process	Comments on the CEQA process, including what environmental topics should be studied
(P9) PDA-Related Comments	Comments related to alternative delivery methods or the PDA teams
(P10) Alternatives Selection	Comments on how the alternatives were selected or how the LPA will be selected
(P11) Project Timeline	Comments on the completion date of the Project
(P12) LAX Extension	Comments emphasizing the need to extend to LAX
Design	
(D1) Alignment of Specific Alternative	Comments on the routing of a specific alignment
(D2) Profile	Comments on the vertical profile of an alignment or stations
(D3) Stations	Comments on specific station locations, number of stations, station placement, footprint, station access, station design, multimodal connectivity, etc.
(D4) Portal Locations	Comments on construction and station portal locations
(D5) Maintenance Needs and Facility	Comments regarding maintenance needs (skilled workers and facilities)
(D6) Supporting Facilities	Comments on supporting facilities such as TPSS, vent shafts, etc.
(D7) Construction Methods & Staging	Comments on construction methods or impacts
(D8) Operations	Comments related to operational details (including station to station travel time, frequency, overall travel time, etc.) and system/mode reliability
(D9) Carrying Capacity	Comments mentioning system capacity

Category	Description
(D10) UCLA Connection	Comments regarding specific connection method to UCLA
(D11) Parking	Comments mentioning parking needs around stations
(D12) Emergency Plans	Comments regarding emergency evacuation and repair plans
(D13) Vehicle Specifications	Comments related to the technical specifications, interoperability and performance of proposed transit technologies
(D14) Existing Rail Integration	Comments suggesting interlining or interoperating with existing and planned rail transit systems
Environmental	
(E1) Transportation/Traffic	Comments on traffic impacts
(E2) Land Use & Development	Comments on population and employment forecasts or land use plans
(E3) Real Estate and Acquisitions	Comments on property acquisition or property values
(E4) Community & Neighborhood Impacts	Comments on impacts to communities or neighborhoods
(E5) Visual & Aesthetic Impacts	Comments mentioning visual blight, etc.
(E6) Air Quality Impacts	Comments mentioning pollution
(E7) Climate Change and GHG	Comments mentioning the potential for the Project to contribute to climate change
(E8) Noise & Vibration	Comments mentioning the noise and vibration impacts to users and to neighborhoods
(E9) Ecosystems/Biological Resources	Comments on wildfire, wildlife crossing, etc.
(E10) Geotechnical/Subsurface/Seismic/Hazardous Materials	Comments on earthquakes and system durability amid natural disasters
(E11) Water Resources	Comments on water resources, including hydrology and flood plains
(E12) Energy	Comments suggesting use of alternative energy sources
(E13) Historic, Archeological & Paleontological Impacts	Comments on cultural/tribal resources and paleontology
(E14) Parks/Rec Facilities/Section 4F	Comments related to recreational facilities
(E15) Economic & Fiscal Impacts	Comments about impacts to business or tax receipts
(E16) Safety & Security	Comments on safety and security concerns
(E17) Construction Impacts	Comments regarding environmental concerns specifically during the construction period
(E18) Growth Inducing Impacts	Comments related to induced growth
(E19) Cumulative Impacts	Comments related to cumulative impacts
(E20) Environmental Justice	Comments about equity and environmental justice for both users and neighborhoods

Category	Description
Alternatives	
(A1) Support No Build	Comments supporting No Build alternative
(A2) Suggestion of New Alternative	Comments suggesting variations of current alternatives or new alternatives (including new modes)
(A3) Support Monorail	Comments supporting the monorail mode
(A4) Oppose Monorail	Comments opposing the monorail mode
(A5) Support Automated HRT	Comments supporting the automated heavy rail mode
(A6) Oppose Automated HRT	Comments opposing the automated heavy rail mode
(A7) Support Heavy Rail	Comments supporting the heavy rail mode (but did not specify automated or not)
(A8) Oppose Heavy Rail	Comments opposing the automated heavy rail mode (but did not specify automated or not)
(A9) Oppose Alt 1	Comments specifically opposing Alternative 1
(A10) Oppose Alt 2	Comments specifically opposing Alternative 2
(A11) Oppose Alt 3	Comments specifically opposing Alternative 3
(A12) Oppose Alt 4	Comments specifically opposing Alternative 4
(A13) Oppose Alt 5	Comments specifically opposing Alternative 5
(A14) Oppose Alt 6	Comments specifically opposing Alternative 6
(A15) Support Alt 1	Comments specifically supporting Alternative 1
(A16) Support Alt 2	Comments specifically supporting Alternative 2
(A17) Support Alt 3	Comments specifically supporting Alternative 3
(A18) Support Alt 4	Comments specifically supporting Alternative 4
(A19) Support Alt 5	Comments specifically supporting Alternative 5
(A20) Support Alt 6	Comments specifically supporting Alternative 6
Outreach	
(O1) E-mail Sign-up	Comments asking to receive Project updates
(O2) General Question and Comment	General comments not directly related to the Project and/or cannot be put under other specific categories
(O3) General Support	Comments supporting the Project without mentioning specific alternatives
(O4) General Opposition	Comments opposing the Project without mentioning preference for No Build
(O5) Outreach General	Comments about the purpose of and approach to outreach for the Project
(O6) Outreach Process	Comments about the outreach process and next steps

Subject: Notice of Preparation of a Draft Environmental Impact Report for the Metro Sepulveda Transit Corridor Project, SCH #2021110432, Los Angeles County Metropolitan Transportation Authority, Los Angeles County

Dear Mr. Carter:

The California Department of Fish and Wildlife (CDFW) has reviewed a Notice of Preparation (NOP) of Draft Environmental Impact Report (DEIR) from the Los Angeles County Metropolitan Transportation Authority (LACMTA) for the Metro Sepulveda Transit Corridor Project (Project). CDFW appreciates the opportunity to provide comments regarding aspects of the Project that could affect fish and wildlife resources and be subject to CDFW's regulatory authority under the Fish and Game Code.

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & G. Code, §§ 711.7, subdivision (a) & 1802; Pub. Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect State fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 *et seq.*). Likewise, to the extent implementation of the Project as proposed may result in "take", as defined by State law, of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 *et seq.*), or CESA-listed rare plant pursuant to the Native Plant Protection Act (NPPA; Fish & G. Code, § 1900 *et seq.*), CDFW recommends the Project proponent obtain appropriate authorization under the Fish and Game Code.

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

Project Description and Summary

Objective: The proposed Project would construct and provide a high-capacity fixed guideway public transportation line across the Santa Monica Mountains in the vicinity of the Sepulveda Pass to connect the San Fernando Valley and west side of Los Angeles. The Project proposes six build alternatives. All six alternatives would have a northern terminus with a connection to the Van Nuys Metrolink/Amtrak station and a southern terminus with a connection to the Metro E Line (Expo/Sepulveda). The DEIR will also include consideration of a "No Build" alternative that does not include the construction of a fixed guideway line.

- **Alternative 1: Monorail with aerial alignment in Interstate 405 (I-405) corridor and electric bus connection to University of California, Los Angeles (UCLA)** – Alternative 1 would utilize monorail technology with automated train operations and planned peak frequencies of 2 minutes. Trains would consist of two to eight cars and are expected to consist of six cars during peak periods. The length of the alignment between the terminus stations would be 15.3 miles. The monorail guideway would be entirely aerial and generally located within the Interstate I-405 right-of-way and then adjacent to the Metrolink Ventura County Line railroad tracks between I-405 and the Van Nuys Metrolink Station. In some areas, including all stations, the guideway and passenger platforms would be located on one side of the freeway. Alternative 1 would have eight aerial monorail stations at Exposition Boulevard (Metro E Line), Santa Monica Boulevard, Wilshire Boulevard (Metro D Line), the Getty Center, US-101, Metro G Line, Sherman Way and the Van Nuys Metrolink Station. At Wilshire Boulevard, an aerial station would be located on the west side of I-405 and an electric bus shuttle would provide service along a 1.4-mile route between the Metro D Line Westwood/VA Station and UCLA Gateway Plaza. A maintenance and storage facility for monorail vehicles would be located above the existing parking lot at the Metro G Line Sepulveda Station. Electric buses would be maintained within the existing UCLA BruinBus maintenance facility on Veteran Avenue north of Kinross Avenue.

- **Alternative 2: Monorail with aerial alignment in I-405 corridor and aerial automated people mover connection to UCLA** – Alternative 2 would utilize monorail technology along an alignment same as that of Alternative 1. Alternative 2 would have the same eight aerial monorail stations as Alternative 1. The length of the alignment between the terminus stations would be 15.8 miles. At Wilshire Boulevard, an aerial station would be located on the south side of the street along Veteran Ave. To provide a connection to the UCLA campus, a pedestrian bridge across Wilshire Boulevard would connect to an aerial Automated People Mover station on the north side of the street. From there, the Automated People Mover would travel on a 1-mile aerial guideway located primarily along Gayley Avenue to an aerial Automated People Mover station near the west end of Bruin Walk on the UCLA campus. Location of maintenance and storage facilities for monorail and Automated People Mover vehicles would be the same as that of Alternative 1.

- **Alternative 3: Monorail with aerial alignment in I-405 corridor and underground alignment between the Getty Center and Wilshire Boulevard –** Alternative 3 would utilize monorail technology along an alignment same as that of Alternative 1. The length of the alignment between the terminus stations would be 16.2 miles. The monorail guideway would be aerial for most of the alignment, with a 3.3-mile tunnel segment

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

between the Getty Center and Wilshire Boulevard. South of Santa Monica Boulevard and north of the Getty Center, the alignment of Alternative 3 would be the same as that of Alternatives 1 and 2. Just south of Wilshire Boulevard, the alignment would diverge from the I-405 median, transition to below grade north of Wilshire Boulevard, and travel underneath Westwood Village and UCLA, before returning to the I-405 corridor just south of the proposed Getty Center Station. Alternative 3 would have one underground monorail station at UCLA Gateway Plaza and eight aerial monorail stations same as that of Alternative 1. Location of maintenance and storage facilities for monorail vehicles would be the same as that of Alternative 1.

- **Alternative 4: Heavy rail with underground alignment south of Ventura Boulevard and aerial alignment generally along Sepulveda Boulevard in the San Fernando Valley** – Alternative 4 would utilize steel-wheel heavy rail transit trains with automated train operations and planned peak frequencies of 2.5 minutes. Trains would typically consist of three cars, with each car having a capacity of 170 passengers, but could be increased to four cars. The length of the alignment between the terminus stations would be approximately 14 miles. The alignment would be underground between the southern terminus and a portal south of Ventura Boulevard in the San Fernando Valley. Between this portal and Ventura Boulevard, the guideway would be aerial on the east side of I-405. North of Ventura Boulevard, the guideway would generally be located above Sepulveda Boulevard until curving southeast to parallel the Metrolink Ventura County Line railroad tracks. Alternative 4 would have four underground stations at Exposition Boulevard (Metro E Line), Santa Monica Boulevard, Wilshire Boulevard (Metro D Line) and UCLA Gateway Plaza, and four aerial stations at Ventura Boulevard, the Metro G Line, Sherman Way and the Van Nuys Metrolink Station. A maintenance and storage facility for heavy rail transit vehicles would be located west of Woodman Avenue south of the Metrolink Ventura County Line railroad tracks.

- **Alternative 5: Heavy rail with underground alignment including along Sepulveda Boulevard in the San Fernando Valley** – Alternative 5 would utilize steel-wheel heavy rail transit trains along an alignment same as that of Alternative 4. The length of the alignment between the terminus stations would be approximately 14 miles. The alignment would be the same as that of Alternative 4 but it would be underground between the southern terminus and a portal south of the Metrolink Ventura County Line railroad tracks. Near the northern terminus, the alignment would be aerial parallel to the Metrolink Ventura County Line railroad tracks. Alternative 5 would have seven underground stations at Exposition Boulevard (Metro E Line), Santa Monica Boulevard, Wilshire Boulevard (Metro D Line), UCLA Gateway Plaza, Ventura Boulevard, the Metro G Line and Sherman Way, and one aerial station at the Van Nuys Metrolink Station. Location of a maintenance and storage facility for heavy rail transit vehicles would be the same as that of Alternative 4.

- **Alternative 6: Heavy rail with entirely underground alignment including along Van Nuys Boulevard in the San Fernando Valley and southern terminus station on Bundy Drive –** Alternative 6 would utilize the same driver-operated steel-wheel heavy rail transit trains as used on the Metro B and D lines with planned peak frequencies of 4 minutes. Trains would consist of two, four, or six cars and are expected to consist of six cars during peak periods, with each car having a capacity of 133 passengers. The length of the alignment between the terminus stations would be 12.6 miles. The alignment

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

would be entirely underground, with the segment on the Westside running generally northeast between the Metro E Line Expo/Bundy Station and the UCLA campus, and the segment in the San Fernando Valley located along Van Nuys Boulevard. Alternative 6 would have seven underground stations at Olympic Boulevard (Metro E Line), Santa Monica Boulevard (West LA Civic Center), Wilshire Boulevard (Metro D Line), UCLA Gateway Plaza, Ventura Boulevard, the Metro G Line and the Van Nuys Metrolink Station. A maintenance and storage facility for heavy rail transit vehicles would be located east of Van Nuys Boulevard north of the Van Nuys Metrolink Station.

Location: The proposed Project would construct a public transportation line across the Santa Monica Mountains in the vicinity of the Sepulveda Pass/I-405 corridor.

Comments and Recommendations

CDFW offers the comments and recommendations below to assist LACMTA in adequately identifying, avoiding, and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources. The DEIR should provide adequate and complete disclosure of the Project's potential impacts on biological resources [Pub. Resources Code, § 21061; CEQA Guidelines, §§ 15003(i), 15151]. CDFW looks forward to commenting on the DEIR when it is available.

Specific Comments

1) Impacts on Mountain Lion (*Puma concolor*). The Sepulveda Pass/I-405 corridor has led to the following impacts on mountain lion: mortality due to vehicle strikes; extreme habitat fragmentation; and population isolation (Center for Biological Diversity 2019). Even though Sepulveda Pass/I-405 corridor is a barrier to mountain lion movement between the Santa Monica Mountains National Recreation Area/Eastern Santa Monica Mountains, mountain lion (most famously a male mountain lion P-22 tracked by the National Park Service) have successfully crossed this barrier. The Project (specifically Alternatives 1, 2, and 3) could introduce an additional barrier to mountain lion movement. The Project could therefore exacerbate the challenges faced by mountain lion in the Santa Monica Mountains.

   a) Protection Status: The mountain lion is a specially protected mammal in the State (Fish and G. Code, § 4800). In addition, on April 21, 2020, the California Fish and Game Commission accepted a petition to list the Southern California/Central Coast Evolutionary Significant Unit of mountain lion as threatened under CESA (CDFW 2020). As a CESA candidate species, the mountain lion in southern California is granted full protection of a threatened species under CESA. With respect to the Santa Monica Mountains subpopulation of mountain lion, with continued isolation, inbreeding, and loss of genetic diversity, there is increasing risk of inbreeding depression and extinction. With inbreeding depression, the probability of extinction for the Santa Monica Mountains subpopulation within 50 years is predicted to be 99.7 percent, with a median time to extinction of 15.1 years (Center for Biological Diversity 2019).

   b) Analysis and Disclosure: The DEIR should analyze and discuss the Project's potential impact and cumulative impact on mountain lion during both Project construction and for the Project's lifetime. Impacts on mountain lion behavior, reproductive viability, and overall survival success should be analyzed discussed for Alternatives 1 through 6. In

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

addition, the DEIR should analyze from the standpoint of the following impacts: 1) strikes from train cars; 2) introducing new/additional barriers to dispersal; 3) constraining wildlife corridors and pinch points leading to severed migration; 4) habitat loss, fragmentation, and encroachment; 5) increased human presence, noise, and lighting from train stations and along the proposed alignments; and 6) and use of herbicides, pesticides, and rodenticides. Such analysis should be informed by a study to assess mountain lion movement, territory size, and habitat use within and surrounding the Project vicinity. CDFW recommends using wildlife cameras to aid in identification of areas that may be important to wildlife movement between the Santa Monica Mountains National Recreation Area/Eastern Santa Monica Mountains.

In addition, the DEIR should discuss the Project's potential impacts on habitat blocks and wildlife corridors identified in the Eastern Santa Monica Mountains Habitat Linkage Planning Map (Santa Monica Mountains Conservancy 2020). "The habitat blocks designated on the Eastern Santa Monica Mountains Habitat Linkage Planning Map are critical, precisely-mapped environmental resources within the Santa Monica Mountains Zone (established in Section 33105, California Public Resources Code), and are therefore environmental resources of critical concern pursuant to CEQA Guidelines Section 15300.2(a)" (Santa Monica Mountains Conservancy 2021). Finally, the DEIR should discuss the Project's potential effect on any on-going or planned habitat recovery and restoration efforts for mountain lion.

c) Avoidance: CDFW recommends LACMTA consider a Project alternative that would fully avoid the Project's potentially significant impact on mountain lion. In addition, CDFW recommends the Project fully avoid impacts on habitat blocks and wildlife corridors designated on the Eastern Santa Monica Mountains Habitat Linkage Planning Map.

d) Compensatory Mitigation: CDFW recommends LACMTA minimize the Project's potential impacts on mountain lion through creation of wildlife crossings that would facilitate mountain lion movement and dispersal. If avoiding and minimizing impacts is not feasible, CDFW recommends the DEIR provide measures to mitigate for the Project's potentially significant impact on mountain lion. LACMTA should provide compensatory mitigation for loss of mountain lion habitat, corridors, and linkages. The DEIR should justify how the proposed compensatory mitigation would reduce impacts on mountain lion to less than significant. Appropriate mitigation may include obtaining appropriate take authorization under CESA (pursuant to Fish & Game Code, § 2080 et seq.).

e) CESA: Appropriate take authorization under CESA may include an Incidental Take Permit (ITP) among other options [Fish & G. Code, §§ 2080.1, 2081, subds. (b) and (c)]. To obtain appropriate take authorization under CESA, early consultation with CDFW is encouraged, as significant modification to a project and mitigation measures may be required to obtain a CESA permit. Revisions to the Fish and Game Code, effective January 1998, may require that CDFW issue a separate CEQA document for the issuance of an ITP unless the Project's CEQA document addresses all Project impacts on CESA-listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of an ITP. For these reasons, biological mitigation monitoring and reporting proposals should be of sufficient detail and resolution to satisfy the requirements for a CESA ITP.

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

2) Open Space and Natural Habitats. According to the California Protected Areas Database Holdings (CPAD) dataset available in the California Natural Diversity Database in BIOS (CNDDB), the following protected areas are located adjacent to Sepulveda Pass/I-405 corridor: Getty View Park and Trailhead; Sepulveda Pass Open Space; and Mission Canyon Open Space. The Project may require encroachment or easements onto lands adjacent to the Sepulveda Pass/I-405 corridor (CDFW 2021a).

   a) Analysis and Disclosure. CDFW recommends the DEIR discuss the Project's potential impact on open space/natural habitats resulting from Project-related construction and activities, ground-disturbance activities (e.g., mobilization, parking, staging, and access), vegetation removal, fuel modification, herbicide application, spread of invasive species, altered hydrology, and altered habitat conditions (e.g., microclimate, soils, and slope). The DEIR should disclose the amount of open space/natural habitats impacted as a result of the proposed Project for Alternatives 1 through 6.

   b) Avoidance and Setback. CDFW recommends the Project fully avoid developing and encroaching onto open space/natural habitats. Encroachment onto open space/natural habitats creates an abrupt transition between two different land uses. Encroachment onto open space/natural habitats could affect environmental and biological conditions and increase the magnitude of edge effects on biological resources. CDFW recommends the DEIR consider a Project alternative that would not result in developing, encroaching onto, or converting open space/natural habitats. Where the Project may occur near but avoid impacts on open space/natural habitats, CDFW recommends the DEIR include effective unobstructed vegetated buffers and setbacks adjoining open space/natural habitats. The DEIR should provide justifications for the effectiveness of chosen buffer and setback distances to avoid impacts on open space/natural habitats.

3) Jurisdictional Waters. According to the U.S. Fish and Wildlife Service's (USFWS) National Wetland Inventory, watercourses occur on both the west and east side of Sepulveda Pass/I-405 corridor (USFWS 2021). Project construction and activities occurring adjacent to streams could impact the stream and associated vegetation. Streams could be channelized or diverted underground. The watercourse could become impaired because of streambank erosion due to Project-related activities. Vegetation along a stream could be removed or degraded through habitat modification (e.g., loss of water source, encroachment, and edge effects leading to introduction of non-native plants). In addition, tunneling through the Eastern Santa Monica Mountains could result in land subsidence or other physical changes, as well as potentially altering geology, leading to adverse impacts on streams and waterbodies.

   a) Stream Delineation and Impact Assessment. CDFW recommends the DEIR provide a stream delineation and analysis of impacts on any river, stream, or lake[1]. The delineation should be conducted pursuant to the USFWS wetland definition adopted by CDFW (Cowardin et al. 1979). Be advised that some wetland and riparian habitats subject to CDFW's authority may extend beyond the jurisdictional limits of the U.S. Army Corps of

[1] "Any river, stream, or lake" includes those that are dry for periods of time (ephemeral/episodic) as well as those that flow year-round (perennial). This includes ephemeral streams, desert washes, and watercourses with a subsurface flow. It may also apply to work undertaken within the flood plain of a water body.

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

Engineers' Section 404 permit and Regional Water Quality Control Board Section 401 Certification. The DEIR should disclose the linear feet and acres of streams and associated plant communities impacted by the Project for Alternatives 1 through 6. In addition, the DEIR should discuss whether the Project would require water diversion or dewatering during Project construction and for the Project's lifetime.

b) Avoidance and Setbacks. CDFW recommends the Project avoid impacts on streams and associated vegetation. Herbaceous vegetation adjacent to streams protects the physical and ecological integrity of these water features and maintains natural sedimentation processes. Where the Project may occur near a stream but avoids the watercourse and vegetation, CDFW recommends DEIR provide effective unobstructed vegetated buffers and setbacks adjoining streams and associated vegetation. The DEIR should provide justification for the effectiveness of chosen buffer and setback distances to avoid impacts on the stream and associated vegetation.

c) Compensatory Mitigation. If avoidance is not feasible, the DEIR should provide compensatory mitigation for impacts on streams and associated vegetation at no less than 2:1. LACMTA should provide higher mitigation for impacts on sensitive natural communities (see Comment #6) and presence of rare, sensitive, or special status flora and fauna.

d) Lake and Streambed Alteration (LSA) Agreement. CDFW exercises its regulatory authority as provided by Fish and Game Code section 1600 et seq. to conserve fish and wildlife resources which includes rivers, streams, or lakes and associated natural communities. As a Responsible Agency under CEQA, CDFW has authority over activities in streams and/or lakes that will divert or obstruct the natural flow, or change the bed, channel, or bank (including vegetation associated with the stream or lake) of a river or stream or use material from a streambed. For any such activities, the project applicant (or "entity") must notify CDFW[2]. Accordingly, the DEIR should include a measure whereby the LACMTA would notify CDFW pursuant to Fish and Game Code section 1602 prior to starting activities that may impact streams. Please visit CDFW's Lake and Streambed Alteration Program webpage for more information (CDFW 2021b).

4) Hydroacoustic Effects on Fish. Alternatives 4, 5 and 6 of the Project proposes an underground transit corridor through the Eastern Santa Monica Mountains. Accordingly, the Project may require substantial ground disturbance in the Eastern Santa Monica Mountains. Streams and waterbodies in the Eastern Santa Monica Mountains may support fish. Fish are susceptible to pressure-mediated (sound pressure and barotrauma) injury to the ears and general body tissues. Sound pressure caused by blasting, construction equipment, tunneling, and pile driving could result in altered behavior, tissue damage, injury, or mortality of fish; fish could be impacted both physiologically and physically (Popper et al. 2015; Popper et al. 2019). In addition to impacts on individual fish, the Project could adversely

[2] CDFW's issuance of a LSA Agreement for a project that is subject to CEQA will require CEQA compliance actions by CDFW as a Responsible Agency. As a Responsible Agency, CDFW may consider the environmental document of the local jurisdiction (lead agency) for the project. To minimize additional requirements by CDFW pursuant to section 1600 et seq. and/or under CEQA, the environmental document should fully identify the potential impacts to the stream or riparian resources and provide adequate avoidance, mitigation, monitoring, and reporting commitments for issuance of the LSA Agreement.

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

impact a population of fish if exposure to sound pressure has an impact on breeding or feeding success or alters migratory patterns. Widespread impaired hearing or sub-lethal injuries may result in impacts on populations. Effects could last from the immediate period of sound exposure to several weeks if fish are displaced from their preferred areas (Popper et al. 2015). In order for CDFW to comment on the Project's impact on fish, CDFW recommends the DEIR evaluate and discuss the following:

a) Species of native and non-native fish that are present or could be present in the Eastern Santa Monica Mountains, and for native fish species, whether the species is sensitive, special status under CESA and/or the Endangered Species Act, or may meet the CEQA definition of endangered, rare, or threatened (CEQA Guidelines, § 15380);
b) Project construction and activities that would result in sound pressure and ground vibrations such as blasting, tunneling, and pile driving;
c) Sound pressure sources and sound pressure levels (decibels) associated with each source, including peak sound pressure (Peak) and accumulative sound elevation level (SEL);
d) Frequency and duration of each sound pressure source;
e) Potential impacts on fish resulting from each sound pressure source; and,
f) Methods to attenuate sound pressure to avoid/minimize impacts on fish.

5) Rare Plants. Rare plant species may occur in open space/natural areas adjacent to the Sepulveda Pass/I-405 corridor. These include, but not limited to, species listed in Table 1.

Table 1. Rare plant species that may occur in the Project area.

Species	CRPR	Bloom Period
Mesa horkelia (*Horkelia cuneata* var. *puberula*)	1B.1	Feb - Jul
Southern tarplant (*Centromadia parryi* ssp. *australis*)	1B.1	May - Nov
Scrub oak (*Quercus dumosa*)	1B.1	Feb - Mar
Catalina mariposa lily (*Calochortus catalinae*)	4.2	Mar - Jun
Plummer's mariposa lily (*Calochortus plummerae*)	4.2	May - Jul
Hubby's phacelia (*Phacelia hubbyi*)	4.2	Apr - Jun
Southern California black walnut (*Juglans californica*)	4.2	Mar - Jun
Santa Barbara bedstraw (*Galium cliftonsmithii*)	4.3	May - Jul
Stiff lomatium (*Lomatium rigidum*)	4.3	Apr - May

California Rare Plant Rank (CRPR) and bloom period information from Calflora (2021)

a) Protection Status: Plants with a CRPR of 1B are rare throughout their range with most of them endemic to California. Most of the plants that are ranked 1B have declined significantly over the last century (CNPS 2021). Plants with a CRPR of 1B meet the definition of endangered, rare, or threatened species pursuant to CEQA Guidelines section 15380. Plants with a CRPR of 4 may meet the definition of endangered, rare, or threatened species.

b) Analysis of Impacts and Disclosure: LACMTA should retain a qualified biologist to conduct focused rare plant surveys in order to analyze the Project's impacts on rare

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

plants for Alternatives 1 through 6. The survey area should include all areas subject to Project-related ground-disturbance activities (e.g., mobilization, parking, staging, and access) and vegetation removal during Project construction and over the Project's lifetime. The survey area should also include areas subject to Project-related fuel modification, herbicide application, spread of invasive species, altered hydrology, and altered habitat conditions (e.g., microclimate, soils, slope, and pollinators) supporting rare plants which are habitat specialists. Per established protocol, botanical field surveys should be conducted in the field at the times of year when plants will be both evident and identifiable (see General Comment #3). Botanical field surveys should be spaced throughout the growing season (e.g., early, mid, and late season) to capture the floristic diversity at a level necessary to determine if special status plants are present (CDFW 2018).

c) Avoidance: CDFW recommends LACMTA avoid impacts on rare plants and habitat. CDFW recommends the LACMTA consider a Project alternative that may avoid or substantially lessen any of the Project's significant effects on rare plants and habitat. In addition, CDFW recommends DEIR provide appropriate species-specific buffer/setback from rare plants and habitat. An appropriate buffer/setback should avoid direct and indirect impacts on rare plants and habitat, allow for population connectivity and expansion, and protect processes supporting rare plants such as plant-pollinator relationship and hydrology. The DEIR should provide justification for the effectiveness of chosen buffer and setback distances to protect rare plants and habitat during Project construction and over the Project's lifetime.

d) Compensatory Mitigation: If avoidance is not feasible, CDFW recommends the DEIR provide compensatory mitigation for both the Project's direct and indirect impacts on rare plants and habitat. Mitigation should be higher for the Project's impacts on rare plant species with a CRPR of 1B.

6) Sensitive Natural Communities: California walnut groves (*Juglans californica* Woodland Alliance) and Oak woodland (*Quercus* genus Woodland Alliance). California walnut groves and oak woodland may occur on open space/natural areas around the Sepulveda Pass/I-405 corridor.

a) Protection Status:

i. California walnut groves is a sensitive natural community with a rarity ranking of S3.2 (CDFW 2021c; Sawyer et al. 2009). California walnut groves are only found in southern California where this natural community has been significantly reduced due to urban development, type conversion, and agriculture.
ii. Some oak woodland alliances have a rarity ranking of S1, S2, or S3. While the coast live oak (*Quercus agrifolia* Woodland Alliance) has a rarity ranking of S4, some associations are rare (S1, S2, or S3) (Sawyer et al. 2009). Oak woodlands serve several important ecological functions such as protecting soils from erosion and land sliding, regulating water flow in watersheds, and maintaining water quality in streams and rivers. Oak woodlands also have higher levels of biodiversity than any other terrestrial ecosystem in California. Over 330 species of birds, mammals, reptiles, and amphibians depend on oak woodlands in California at some stage in their life cycle (CalPIF 2002). Moreover, oak woodlands are protected by the Oak Woodlands

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

Conservation Act (pursuant under Fish and Game Code sections 1360-1372) and Public Resources Code section 21083.4 due to the historic and on-going loss of these resources. The percentage of oak woodlands that are developed in southern California is higher than in any other part of the State (Gaman and Firman 2006).

b) Analysis of Impacts and Disclosure: Natural communities with ranks of S1, S2, and S3 are considered Sensitive Natural Communities to be addressed in the environmental review processes of CEQA (CDFW 2021c). Accordingly, the DEIR should analyze and disclose the Project's impacts on natural communities for Alternatives 1 through 6, with a specific emphasis on sensitive natural communities including but not limited to California walnut groves and oak woodlands. To analyze the Project's impacts on natural communities, LACMTA should retain a qualified biologist identify and map natural communities in the Project. The qualified biologist should adhere to established protocols for mapping natural communities (see General Comment #3). Association-level mapping is recommended for California walnut groves and oak woodland alliances for CDFW to adequately comment on the Project's impact on these sensitive natural communities and mitigation measures for those impacts. Finally, southern California black walnuts can resprout after fire. Therefore, a California walnut grove should be mapped as such even if there are dead, drying, or disturbed trees.

c) Avoidance: CDFW recommends LACMTA avoid impacts on sensitive natural communities. CDFW recommends the LACMTA consider a Project alternative that may avoid or substantially lessen any of the Project's significant impacts on sensitive natural communities. In addition, CDFW recommends DEIR provide appropriate buffer/setback from sensitive natural communities. An appropriate buffer/setback should avoid direct and indirect impacts on sensitive natural communities, allow for population connectivity and expansion, and protect processes supporting sensitive natural communities such as hydrological processes in the case of California walnut groves. The DEIR should provide justification for the effectiveness of chosen buffer and setback distances to protect sensitive natural communities during Project construction and over the Project's lifetime.

d) Compensatory Mitigation: If avoidance is not feasible, CDFW recommends the DEIR provide compensatory mitigation for impacts on sensitive natural communities. Higher mitigation should be provided for impacts on S1 and S2 ranked sensitive natural communities. Impacts due to fuel modification or trimming should also be mitigated as these impacts would result in permanent loss and perpetual impacts on habitat function and quality. There should be no-net loss of individual trees and habitat acres for California walnut groves and oak woodland. Mitigation should be provided for both individual trees and habitat acres. The replacement of individual trees is inadequate to mitigate for the loss of habitat. LACMTA should provide higher mitigation for impacts on California walnut groves and oak woodland depending on factors such as extent of impacts, size of trees impacted, and presence of rare, sensitive, or special status flora and fauna.

7) Nesting Birds. There are multiple birding hotspots on both the west and east side of Sepulveda Pass/I-405 corridor (eBird 2021). Ground-disturbing activities and vegetation removal occurring during the bird and raptor breeding and nesting season could result in the incidental loss of fertile eggs or nestlings, or otherwise lead to nest abandonment.

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

a) Protection Status. Migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) of 1918 (Code of Federal Regulations, Title 50, § 10.13). Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory nongame birds (as listed under the Federal MBTA). It is unlawful to take, possess, or needlessly destroy the nest or eggs of any raptor.

b) Avoidance. CDFW recommends that measures be taken to avoid impacts on nesting birds and raptors. CDFW recommends the DEIR include a measure the Project avoids ground-disturbing activities (e.g., mobilizing, staging, drilling, and excavating) and vegetation removal during the avian breeding season which generally runs from February 15 through September 15 (as early as January 1 for some raptors) to avoid take of birds, raptors, or their eggs.

c) Minimizing Potential Impacts. If impacts on nesting birds and raptors cannot be avoided, CDFW recommends the DEIR include measures to minimize impacts on nesting birds and raptors. Prior to starting ground-disturbing activities and vegetation removal, CDFW recommends a qualified biologist conduct breeding bird and raptor surveys to identify nests occurring in the disturbance area and 100 feet from the disturbance area to the extent allowable and accessible. The qualified biologist should establish no-disturbance buffers to minimize impacts on those nests. CDFW recommends a minimum 300-foot no-disturbance buffer around active bird nests. For raptors, the no-disturbance buffer should be expanded to 500 feet and 0.5 mile for special status species, if feasible. Project personnel, including all contractors working on site, should be instructed on nesting birds, sensitivity of the area, and adherence to the no-disturbance buffers. Reductions in the buffer distance may be appropriate depending on the avian species involved, ambient levels of human activity, screening vegetation, or possibly other factors determined by a qualified biologist.

8) Loss of Bird and Raptor Nesting and Breeding Habitat. The Project may require easements onto or acquisition of land that provide habitat for nesting birds.

a) Analysis and Disclosure. CDFW recommends the DEIR analyze and discuss the Project's impact on bird and raptor nesting and breeding habitat for Alternatives 1 through 6. Edge effects should also be analyzed and discussed. The DEIR should disclose the acreage of bird and raptor nesting and breeding habitat that could be impacted and lost as a result of the proposed Project.

b) Avoidance and Compensatory Mitigation. CDFW recommends the Project avoid and minimize development and encroachment onto habitat for nesting birds. If avoidance is not feasible, CDFW recommends the DEIR provide compensatory mitigation for the loss of nesting bird habitat. Depending on the status of the bird or raptor species using the habitat that is impacted, compensatory mitigation should increase with the occurrence of a California Species of Special Concern (SSC). Replacement habitat acres should further increase with the occurrence of a CESA-listed threatened or endangered species.

9) Bats. Bats may forage and roost in open space/natural areas in the vicinity of the Project area. Ground-disturbing activities and vegetation removal could impact bats and roosts.

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

Extra noise, human activity, dust, ground vibrations, or the reconfiguration of large objects can disturb roosting bats which may have a negative impact on the animals.

a) Protection Status: Bats are considered non-game mammals and are afforded protection by State law from take and/or harassment (Fish & G. Code, § 4150; Cal. Code of Regs., § 251.1). In addition, some bats are considered SSC. CEQA provides protection not only for CESA-listed species, but for any species including but not limited to SSC which can be shown to meet the criteria for State listing. These SSC meet the CEQA definition of endangered, rare, or threatened species (CEQA Guidelines, § 15380). Take of SSC could require a mandatory finding of significance (CEQA Guidelines, § 15065).

b) Analysis and Disclosure: In preparation of the DEIR, CDFW recommends LACMTA retain a qualified bat specialist identify potential daytime, nighttime, wintering, and hibernation roost sites and conduct bat surveys within these areas (plus a 100-foot buffer as access allows) to identify roosting bats and any maternity roosts. CDFW recommends using acoustic recognition technology to maximize detection of bats.

c) Avoidance and Minimization. If the Project would impact bats, CDFW recommends the DEIR provide measures to avoid/minimize impacts on bats, roosts, and maternity roosts. The DEIR should incorporate mitigation measures in accordance with California Bat Mitigation Measures (Johnston et al. 2004).

General Comments

1) Disclosure. The DEIR should provide an adequate, complete, and detailed disclosure about the effect which a proposed project is likely to have on the environment (Pub. Resources Code, § 20161; CEQA Guidelines, § 15151). Adequate disclosure is necessary so CDFW may provide comments on the adequacy of proposed avoidance, minimization, or mitigation measures, as well as to assess the significance of the specific impact relative to plant and wildlife species impacted (e.g., current range, distribution, population trends, and connectivity).

2) Mitigation Measures. Public agencies have a duty under CEQA to prevent significant, avoidable damage to the environment by requiring changes in a project through the use of feasible alternatives or mitigation measures [CEQA Guidelines, §§ 15002(a)(3), 15021]. Pursuant to CEQA Guidelines section 15126.4, an environmental document "shall describe feasible measures which could mitigate for impacts below a significant level under CEQA."

a) Level of Detail. Mitigation measures must be feasible, effective, implemented, and fully enforceable/imposed by the lead agency through permit conditions, agreements, or other legally binding instruments (Pub. Resources Code, § 21081.6(b); CEQA Guidelines, § 15126.4). A public agency "shall provide the measures that are fully enforceable through permit conditions, agreements, or other measures" (Pub. Resources Code, § 21081.6). CDFW recommends LACMTA provide mitigation measures that are specific, detailed (i.e., responsible party, timing, specific actions, location), and clear in order for a measure to be fully enforceable and implemented successfully via a mitigation monitoring and/or reporting program (Pub. Resources Code, § 21081.6; CEQA Guidelines, § 15097).

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

b) Disclosure of Impacts. If a proposed mitigation measure would cause one or more significant effects, in addition to impacts caused by the proposed Project, the DEIR should include a discussion of the effects of proposed mitigation measures [CEQA Guidelines, § 15126.4(a)(1)]. In that regard, the DEIR should provide an adequate, complete, and detailed disclosure about the Project's proposed mitigation measure(s). Adequate disclosure is necessary so CDFW may assess the potential impacts of proposed mitigation measures.

3) Biological Baseline Assessment. An adequate biological resources assessment should provide a complete assessment and impact analysis of the flora and fauna within and adjacent to the Project area and where the Project may result in ground disturbance. The assessment and analysis should place emphasis on identifying endangered, threatened, rare, and sensitive species; regionally and locally unique species; and sensitive habitats. An impact analysis will aid in determining the Project's potential direct, indirect, and cumulative biological impacts, as well as specific mitigation or avoidance measures necessary to offset those impacts. CDFW also considers impacts to an SSC a significant direct and cumulative adverse effect without implementing appropriate avoidance and/or mitigation measures. The DEIR should include the following information:

a) Information on the regional setting that is critical to an assessment of environmental impacts, with special emphasis on resources that are rare or unique to the region [CEQA Guidelines, § 15125(c)]. The DEIR should include measures to fully avoid and otherwise protect Sensitive Natural Communities. CDFW considers Sensitive Natural Communities as threatened habitats having both regional and local significance. Natural communities, alliances, and associations with a State-wide rarity ranking of S1, S2, and S3 should be considered sensitive and declining at the local and regional level. These ranks can be obtained by visiting the Vegetation Classification and Mapping Program - Natural Communities webpage (CDFW 2021c);

b) A thorough, recent, floristic-based assessment of special status plants and natural communities following CDFW's Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018). Adjoining habitat areas should be included where the Project's construction and activities could lead to direct or indirect impacts off site;

c) Floristic alliance- and/or association-based mapping and vegetation impact assessments conducted in the Project area and within adjacent areas. The Manual of California Vegetation (MCV), second edition, should also be used to inform this mapping and assessment (Sawyer et al. 2009). Adjoining habitat areas should be included in this assessment where the Project's construction and activities could lead to direct or indirect impacts off site;

d) A complete and recent assessment of the biological resources associated with each habitat type in the Project area and within adjacent areas. CDFW's California Natural Diversity Database in Sacramento should be contacted to obtain current information on any previously reported sensitive species and habitat (CDFW 2021a). An assessment should include a nine-quadrangle search of the CNDDB to determine a list of species potentially present in the Project area. A lack of records in the CNDDB does not mean that rare, threatened, or endangered plants and wildlife do not occur. Field verification

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

for the presence or absence of sensitive species is necessary to provide a complete biological assessment for adequate CEQA review [CEQA Guidelines, § 15003(i)];

e) A complete, recent, assessment of endangered, rare, or threatened species and other sensitive species within the Project area and adjacent areas, including SSC and California Fully Protected Species (Fish & G. Code, §§ 3511, 4700, 5050, and 5515). Species to be addressed should include all those which meet the CEQA definition of endangered, rare, or threatened species (CEQA Guidelines, § 15380). Seasonal variations in use of the Project area should also be addressed such as wintering, roosting, nesting, and foraging habitat. Focused species-specific surveys, conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, may be required if suitable habitat is present. See CDFW's Survey and Monitoring Protocols and Guidelines for established survey protocol for select species (CDFW 2021d). Acceptable species-specific survey procedures may be developed in consultation with CDFW and USFWS; and,

f) A recent wildlife and rare plant survey. CDFW generally considers biological field assessments for wildlife to be valid for a one-year period, and assessments for rare plants may be considered valid for a period of up to three years. Some aspects of the proposed Project may warrant periodic updated surveys for certain sensitive taxa, particularly if Project implementation build out could occur over a protracted time frame or in phases.

4) Biological Direct, Indirect, and Cumulative Impacts. The DEIR should provide a thorough discussion of direct, indirect, and cumulative impacts expected to adversely affect biological resources with specific measures to offset such impacts. The DEIR should address the following:

a) A discussion regarding Project-related indirect impacts on biological resources, including resources in nearby public lands, open space, adjacent natural habitats, riparian ecosystems, and any designated and/or proposed or existing reserve lands [e.g., preserve lands associated with a Natural Community Conservation Plan (Fish & G. Code, § 2800 et. seq.)]. Impacts on, and maintenance of, wildlife corridor/movement areas, including access to undisturbed habitats in areas adjacent to the Project, should be fully analyzed and discussed in the DEIR;

b) A discussion of both the short-term and long-term effects of the Project on species population distribution and concentration, as well as alterations of the ecosystem supporting those species impacted [CEQA Guidelines, § 15126.2(a)];

c) A discussion of potential adverse impacts from lighting, noise, temporary and permanent human activity, and exotic species, and identification of any mitigation measures;

d) A discussion of post-Project fate of drainage patterns, surface flows, and soil erosion and/or sedimentation in streams and water bodies. The discussion should also address the potential water extraction activities and the potential resulting impacts on habitat (if any) supported by the groundwater. Measures to mitigate such impacts should be included;

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

e) An analysis of impacts from proposed changes to land use designations and zoning, and existing land use designation and zoning located nearby or adjacent to natural areas that may inadvertently contribute to wildlife-human interactions. A discussion of possible conflicts and mitigation measures to reduce these conflicts should be included in the DEIR; and,

f) A cumulative effects analysis as described under CEQA Guidelines section 15130. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant and wildlife species, habitat, and natural communities. If LACMTA determines that the Project would not have a cumulative impact, the DEIR should indicate why the cumulative impact is not significant. LACMTA's determination should be supported by facts and analyses [CEQA Guidelines, § 15130(a)(2)].

5) Project Description and Alternatives. To enable adequate review and comment on the proposed Project from the standpoint of the protection of fish, wildlife, and plants, CDFW recommends the following information be included in the DEIR:

a) A complete discussion of the purpose and need for, and description of the proposed Project;

b) Pursuant to CEQA Guidelines section 15126.6(a), an environmental document "shall describe a reasonable range of potentially feasible alternatives to the Project, or to the location of the Project, which would feasibly attain most of the basic objectives of the Project but would avoid or substantially lessen any of the significant effects of the Project." CEQA Guidelines section 15126.6(f)(2) states if the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion; and,

c) A range of feasible alternatives to the Project location to avoid or otherwise minimize direct and indirect impacts on sensitive biological resources and wildlife movement areas. CDFW recommends LACMTA select an alternative that would avoid or otherwise minimize direct and indirect impacts on biological resources. CDFW also recommends LACMTA consider establishing appropriate setbacks from sensitive and special status biological resources. Setbacks should not be impacted by ground disturbance or hydrological changes from any future Project-related construction, activities, maintenance, and development. As a general rule, CDFW recommends reducing or clustering a development footprint to retain unobstructed spaces for vegetation and wildlife and provide connections for wildlife between properties and minimize obstacles to open space.

Project alternatives should be thoroughly evaluated, even if an alternative would impede, to some degree, the attainment of the Project objectives or would be more costly (CEQA Guidelines, § 15126.6). The DEIR "shall" include sufficient information about each alternative to allow meaningful evaluation, public participation, analysis, and comparison with the proposed Project (CEQA Guidelines, § 15126.6).

d) Where the Project may impact aquatic and riparian resources, CDFW recommends the LACMTA select an alternative that would fully avoid impacts to such resources. CDFW

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

also recommends an alternative that would not impede, alter, or otherwise modify existing surface flow, watercourse and meander, and water-dependent ecosystems and natural communities. Project designs should consider elevated crossings to avoid channelizing or narrowing of watercourses. Any modifications to a river, creek, or stream may cause or magnify upstream bank erosion, channel incision, and drop in water level and cause the watercourse to alter its course of flow.

6) Data. CEQA requires that information developed in environmental impact reports be incorporated into a database which may be used to make subsequent or supplemental environmental determinations [Pub. Resources Code, § 21003, subd. (e)]. Accordingly, please report any special status species and natural communities detected by completing and submitting CNDDB Field Survey Forms (CDFW 2021e). To submit information on special status native plant populations and sensitive natural communities, the Combined Rapid Assessment and Releve Form should be completed and submitted to CDFW's Vegetation Classification and Mapping Program (CDFW 2021f). LACMTA should ensure data collected for the preparation of the DEIR be properly submitted, with all data fields applicable filled out. The data entry should also list development as a threat to those sensitive and special status species and natural communities identified.

7) Use of Native Plants and Trees. CDFW strongly recommends avoiding non-native, invasive plants for landscaping and restoration, particularly any species listed as 'Moderate' or 'High' by the California Invasive Plant Council (Cal-IPC 2021). CDFW supports the use of native species found in naturally occurring vegetation communities within or adjacent to the Project area. Where the Project may need to replant trees, CDFW supports planting species of trees and understory vegetation (e.g., ground cover, subshrubs, and shrubs) that create habitat and provide a food source for birds.

8) Translocation/Salvage of Plants and Animal Species. Translocation and transplantation is the process of removing plants and wildlife from one location and permanently moving it to a new location. CDFW generally does not support the use of translocation or transplantation as the primary mitigation strategy for unavoidable impacts to endangered, rare, or threatened plants and animals. Studies have shown that these efforts are experimental and the outcome unreliable. CDFW has found that permanent preservation and management of habitat capable of supporting these species is often a more effective long-term strategy for conserving plants and animals and their habitats.

9) Compensatory Mitigation. The DEIR should include compensatory mitigation measures for the Project's significant direct and indirect impacts to sensitive and special status plants, animals, and habitats. Mitigation measures should emphasize avoidance and minimization of Project-related impacts. For unavoidable impacts, on-site habitat restoration or enhancement should be discussed in detail. If on-site mitigation is not feasible or would not be biologically viable and therefore inadequate to mitigate the loss of biological functions and values, off-site mitigation through habitat creation and/or acquisition and preservation in perpetuity should be addressed. Areas proposed as mitigation lands should be protected in perpetuity with a conservation easement and financial assurance and dedicated to a qualified entity for long-term management and monitoring. Under Government Code, section 65967, the Lead Agency must exercise due diligence in reviewing the qualifications of a governmental entity, special district, or nonprofit organization to effectively manage and steward land, water, or natural resources on mitigation lands it approves.

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

10) Long-term Management of Mitigation Lands. For proposed preservation and/or restoration, the DEIR should include measures to protect the targeted habitat values from direct and indirect negative impacts in perpetuity. The objective should be to offset Project-induced qualitative and quantitative losses of wildlife habitat values. Issues that should be addressed include (but are not limited to) restrictions on access, proposed land dedications, monitoring and management programs, control of illegal dumping, water pollution, and increased human intrusion. An appropriate non-wasting endowment should be set aside to provide for long-term management of mitigation lands.

11) Wetland Resources. CDFW, as described in Fish and Game Code section 703(a), is guided by the Fish and Game Commission's (Commission) policies. The Wetlands Resources policy the Commission "…seek[s] to provide for the protection, preservation, restoration, enhancement and expansion of wetland habitat in California" (CFGC 2020). Further, it is the policy of the Fish and Game Commission to strongly discourage development in or conversion of wetlands. It opposes, consistent with its legal authority, any development or conversion that would result in a reduction of wetland acreage or wetland habitat values. To that end, the Commission opposes wetland development proposals unless, at a minimum, project mitigation assures there will be 'no net loss' of either wetland habitat values or acreage. The Commission strongly prefers mitigation which would achieve expansion of wetland acreage and enhancement of wetland habitat values."

    a) The Wetlands Resources policy provides a framework for maintaining wetland resources and establishes mitigation guidance. CDFW encourages avoidance of wetland resources as a primary mitigation measure and discourages the development or type conversion of wetlands to uplands. CDFW encourages activities that would avoid the reduction of wetland acreage, function, or habitat values. Once avoidance and minimization measures have been exhausted, a project should include mitigation measures to assure a "no net loss" of either wetland habitat values, or acreage, for unavoidable impacts to wetland resources. Conversions include, but are not limited to, conversion to subsurface drains, placement of fill or building of structures within the wetland, and channelization or removal of materials from the streambed. All wetlands and watercourses, whether ephemeral, intermittent, or perennial, should be retained and provided with substantial setbacks, which preserve the riparian and aquatic values and functions benefiting local and transient wildlife populations. CDFW recommends mitigation measures to compensate for unavoidable impacts be included in the DEIR and these measures should compensate for the loss of function and value.

    b) The Fish and Game Commission's Water policy guides CDFW on the quantity and quality of the waters of this State that should be apportioned and maintained respectively so as to produce and sustain maximum numbers of fish and wildlife; to provide maximum protection and enhancement of fish and wildlife and their habitat; encourage and support programs to maintain or restore a high quality of the waters of this State; prevent the degradation thereof caused by pollution and contamination; and, endeavor to keep as much water as possible open and accessible to the public for the use and enjoyment of fish and wildlife. CDFW recommends avoidance of water practices and structures that use excessive amounts of water, and minimization of impacts that negatively affect water quality, to the extent feasible (Fish & G. Code, § 5650).

DocuSign Envelope ID: 0AFE22E5-9452-496C-9177-6D9C6E7868C4

Conclusion

CDFW requests consultation with LACMTA before and during preparation of the DEIR to resolve potential concerns regarding impacts on biological resources [CEQA Guidelines, §§ 15006(g), 15083]. The consultation will assist in the preparation of a CEQA document that will meet CDFW's needs when we potentially need to exercise our regulatory authority as a Responsible Agency under lake and streambed alteration regulatory authority and/or authority under the California Endangered Species Act [Fish & G. Code, §§ 1600 et seq.; 2080.1; 2081 subds. (b) and (c)].

We appreciate the opportunity to comment on the NOP for the Metro Sepulveda Transit Corridor Project to assist the Los Angeles County Metropolitan Transportation Authority in identifying and mitigating Project impacts on biological resources. If you have any questions or comments regarding this letter, please contact Ruby Kwan-Davis, Senior Environmental Scientist (Specialist), at Ruby.Kwan-Davis@wildlife.ca.gov or (562) 619-2230.

Sincerely,

RE: Sepulveda Transit Corridor Project
Notice of Preparation of a Draft
Environmental Impact Report (NOP)
SCH# 2021110432
GTS# 07-LA-2021-03783
Vic. LA-101/ PM LA 16.619 – LA 17.762
Vic. LA-405/ PM LA 30.912 – LA 43.362

Dear Peter Carter:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The Proposed Project would construct a fixed guideway public transportation line across the Santa Monica Mountains in the vicinity of the Sepulveda Pass. Metro staff is initiating environmental review of six build alternatives informed by both the Sepulveda Transit Corridor Feasibility Study and concepts developed by Pre-Development Agreement (PDA) contractors. All of the alternatives described below would have a northern terminus station near the Van Nuys Metrolink/Amtrak Station and a southern terminus station near the Metro E Line (Expo) and include stations that provide connections to the Metrolink Ventura County Line, the East San Fernando Valley Transit Corridor, the Metro G Line (Orange), D Line (Purple) and E Line. The alternatives may be modified as a result of comments received or technical analysis conducted during the preparation of the Draft EIR, including public comments received during scoping. The Draft EIR will also include consideration of a "No Build" alternative that does not include the construction of a fixed guideway line. Figure 2 shows the general alignments of the proposed alternatives

Caltrans supports and strives to make public transportation a viable option for all. Caltrans supports transportation projects that bring all modes of transportation together to increase connectivity, expand the use of public transportation, and advance equity and livability in all communities. It is our goal to provide a safe, sustainable, integrated, and efficient transportation system to enhance California's economy and livability while maintaining the safety and integrity of the State's transportation system. After reviewing the Notice of Preparation of a Draft Environmental Impact Report (NOP), Caltrans has the following comments:

Depending on Project Alternative chosen, project approval could result in a direct adverse impact to the existing State transportation facilities. Alternatives 1 and 2 propose to use Interstate 405 (I-405) for entire project. Alternative 3 proposes to use less of Route 405, and Alternative 4 and

5 proposes less encroachment on the right-of-way of I-405. Any Alternatives on or adjacent to I-405, will require extensive dialogue, agreements, easement, permits, etc. Due to binding agreements between Caltrans, Caltrans may not be able to convey any rights in certain locations in I-405.

The Proposed Project would also intersect or be adjacent to US-101 and Interstate 10 (I-10). In order to fully assess impacts to the State Highway System, Caltrans looks forward to proceeding documents containing but not limited to, in-depth information regarding the proposed Alternatives, the chosen Alternative, and subsequent Environmental Impact Reports.

In the spirit of cooperation, Caltrans staff is available to work with your planners and traffic engineers for this project, if needed. If you have any questions, please contact project coordinator Mr. Carlo Ramirez, at carlo.ramirez@dot.ca.gov and refer to GTS# 07-LA-2021-03783.

.

Sincerely,

Miya Edmonson

MIYA EDMONSON
IGR/CEQA Branch Chief

Making Conservation a California Way of Life.

March 30, 2022

Mr. Peter Carter
Planning Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, MS 99-26-6
Los Angeles, CA 90012

Dear Mr. Carter:

Thank you for providing the Caltrans District 7, Division of Environmental Planning, with an opportunity to comment on the Notice of Preparation (NOP) for the Sepulveda Transit Corridor project (SCH # 2021110432). The project proposes to construct a high-capacity fixed guideway transit option between the San Fernando Valley and the Westside of Los Angeles. Monorail and heavy rail options are being considered for the project which would extend from the Van Nuys Metrolink/Amtrak station through the Sepulveda Pass to the Metro E Line (Expo).

It is likely that each of the six build alternatives would encroach upon Caltrans right-of-way where the project crosses US-101, runs parallel to I-405, and terminates near I-10. As the state agency responsible for constructing, operating, and managing the state highway system, Caltrans has discretionary review and approval authority over any such encroachment. In accordance with CEQA Guidelines (14 CCR § 15381), Caltrans will act as a Responsible Agency regarding any direct or indirect environmental effects on the state highway system.

The proposed project is complex, with multiple build alternatives. To assist in evaluating and comparing the alternatives, I am attaching sample alternatives evaluation matrices that I have used on previous Caltrans projects; I have found these to be a beneficial tool on similarly complex projects and hope they can provide a useful guide in the preparation of your own scoring comparison matrix when the time comes to evaluate the alternatives against each other.

I appreciate the opportunity to comment on the NOP and look forward to future coordination on this exciting project as it moves through the environmental process. If you have any questions, please contact Karl Price in the District 7 Division of Environmental Planning, at 213-266-3822 or karl.price@dot.ca.gov.

Sincerely,

Ron Kosinski
Deputy District Director
Division of Environmental Planning

Attach:
1. I-110 Transitway Alternatives Evaluation Criteria Matrix
2. High Desert Corridor Screening Matrix

Table III-2

EVALUATION CRITERIA

Stage I/Tier I Analysis

Responsiveness to Transit Needs

A. Serves transit dependent
B. Minimizes the needs for new right-of-way
C. Relieves traffic congestion in the corridor
D. Consistent with RTDP, corridor studies, and 105 Consent Decree; contributes to urban revitalization
- Energy conservation (see Item P below)

Design Feasibility

E. Impact on the I-110 freeway design
F. Profile uniformity; vertical and horizontal clearances

Construction Impacts

G. Length of time required for construction
H. Safety for workers and the public during construction
I. Traffic detour flexibility on I-110 and city streets

Project Cost

J. Cost to construct the physical project (double weighted)

Operational Criteria

K. Station access, vertical and horizontal walking distance
L. Transit7 and freeway operations
M. Maintenance operations on the completed facility
N. Security and emergency vehicle access

Environmental Impacts

O. Air and Noise Impacts
P. Energy Conservation
Q. Aesthetic impacts and impact on privacy
R. Displacement of residential units and businesses
S. Community Disruption (Short term and Long Term)

Table III-3 Major Evaluation Criteria Used To Select Alternatives (STAGE I)

High Desert Corridor Screening Matrix								
	Alternatives							
Screening Criteria	**No-Build**	**TSM/TDM**	**Freeway/ Expressway**	**Freeway/ Tollway**	**Corridor Improvements**	**Freeway/ Expressway w/ HSR**	**Freeway/ Tollway w/ HSR**	**Hybrid Corridor**
Purpose and Need criteria								
Support east-west mobility	**(-) Poor** Would not provide a major new east-west route. Planned future projects would likely provide some minor improvement to traffic flow.	**(o) Fair** Would enhance existing routes but provide no new options for east-west movement.	**(+) Good** Would provide a major new east-west corridor to enhance mobility.	**(+) Good** Would provide a major new east-west corridor to enhance mobility.	**(o) Fair** Would enhance existing routes but provide no new options for east-west movement.	**(+) Good** Would provide a major new east-west corridor plus a potential rail option to enhance mobility.	**(+) Good** Would provide a major new east-west corridor plus a potential rail option to enhance mobility.	**(+) Good** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to support east-west mobility.
Support goods movement	**(-) Poor** Would not provide a major new route suitable for goods movement. Planned future projects would likely provide some minor improvement to traffic flow on existing goods movement corridors.	**(o) Fair** Would enhance existing routes but provide no new options for goods movement.	**(+) Good** Would provide an alternate route for truck traffic, thereby enhancing opportunities for goods movement.	**(+) Good** Would provide an alternate route for truck traffic, thereby enhancing opportunities for goods movement.	**(o) Fair** Would enhance existing routes but provide no new options for goods movement.	**(+) Good** Would provide an alternate route for truck traffic, thereby enhancing opportunities for goods movement.	**(+) Good** Would provide an alternate route for truck traffic, thereby enhancing opportunities for goods movement.	**(+) Good** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to support goods movement.

Table 1.

High Desert Corridor Screening Matrix								
	Alternatives							
Screening Criteria	**No-Build**	**TSM/TDM**	**Freeway/ Expressway**	**Freeway/ Tollway**	**Corridor Improvements**	**Freeway/ Expressway w/ HSR**	**Freeway/ Tollway w/ HSR**	**Hybrid Corridor**
Improve service to airports	**(-) Poor** Planned future projects may provide some minimal improvement to airport access. However, no new major east-west corridor would be built.	**(o) Fair** Enhancing existing routes would provide localized improvements to traffic flow. Improvements to airport access are likely to be slightly better than the no-build condition.	**(+) Good** Proximity to regional airports would improve access.	**(+) Good** Proximity to regional airports would improve access.	**(o) Fair** Enhancing the existing major east-west route would provide some improvements in traffic flow and may improve travel time to/from airports. Benefits are expected to be minimal.	**(+) Good** Proximity to regional airports would improve access. HSR would provide additional service option.	**(+) Good** Proximity to regional airports would improve access. HSR would provide additional service option.	**(+) Good** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to improve service to airports.
Improve emergency access	**(-) Poor** Planned future projects would likely provide some improvement to traffic flow with minimal improvement to emergency access.	**(o) Fair** Enhancing existing routes would provide localized improvements to traffic flow. There may be some minimal improvement near the airports.	**(+) Good** Would provide an alternate route for emergency vehicles/personnel and would improve access to the under-served areas along the corridor. Reduced traffic congestion would also speed access.	**(+) Good** Would provide an alternate route for emergency vehicles/personnel and would improve access to the under-served areas along the corridor. Reduced traffic congestion would also speed access.	**(o) Fair** Enhancing the existing major east-west route would provide some improvements in traffic flow and may provide some minor improvement in emergency access along those routes. Benefits are expected to be minimal.	**(+) Good** Would provide an alternate route for emergency vehicles/personnel and would improve access to the under-served areas along the corridor. Reduced traffic congestion would also speed access.	**(+) Good** Would provide an alternate route for emergency vehicles/personnel and would improve access to the under-served areas along the corridor. Reduced traffic congestion would also speed access.	**(+) Good** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to improve emergency access.

Table 1.

High Desert Corridor Screening Matrix								
	Alternatives							
Screening Criteria	**No-Build**	**TSM/TDM**	**Freeway/ Expressway**	**Freeway/ Tollway**	**Corridor Improvements**	**Freeway/ Expressway w/ HSR**	**Freeway/ Tollway w/ HSR**	**Hybrid Corridor**
Environmental criteria								
Minimize traffic congestion	**(o) Fair** Planned future projects would likely provide some improvement to traffic flow and reduce traffic congestion.	**(o) Fair** Enhancing existing routes would provide some improvement to traffic flow and reduce traffic congestion.	**(+) Good** An alternate route for east-west travel would reduce traffic on the heavily congested SR-138 and SR-18. In the developed cities on the eastern and western ends of the corridor, the new route would reduce traffic on local streets.	**(+) Good** An alternate route for east-west travel would reduce traffic on the heavily congested SR-138 and SR-18. In the developed cities on the eastern and western ends of the corridor, the new route would reduce traffic on local streets.	**(+) Good** Enhancing the existing major east-west route would improve traffic flow and would provide some congestion relief.	**(+) Good** An alternate route for east-west travel would reduce traffic on the heavily congested SR-138 and SR-18. In the developed cities on the eastern and western ends of the corridor, the new route would reduce traffic on local streets. HSR would likely provide additional benefits for long-distance east-west travel.	**(+) Good** An alternate route for east-west travel would reduce traffic on the heavily congested SR-138 and SR-18. In the developed cities on the eastern and western ends of the corridor, the new route would reduce traffic on local streets. HSR would likely provide additional benefits for long-distance east-west travel.	**(+) Good** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to reduce traffic congestion.
Minimize business/residential relocation	**(+) Good** Planned future projects may require some business/residential relocation. These are expected to be minimal.	**(+) Good** Minor widening and other improvements may require some business/residential relocation. These are expected to be minimal.	**(o) Fair** Would require full or partial acquisition of hundreds of parcels. However, most of those properties are undeveloped; relatively few occupied residences and business would have to be relocated.	**(o) Fair** Would require full or partial acquisition of hundreds of parcels. However, most of those properties are undeveloped; relatively few occupied residences and business would have to be relocated.	**(o) Fair** A major widening of the existing routes would require some right-of-way acquisition and relocations.	**(o) Fair** Would require full or partial acquisition of hundreds of parcels. However, most of those properties are undeveloped; relatively few occupied residences and business would have to be relocated.	**(o) Fair** Would require full or partial acquisition of hundreds of parcels. However, most of those properties are undeveloped; relatively few occupied residences and business would have to be relocated.	**(o) Fair** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to minimize relocations.

Table 1.

High Desert Corridor Screening Matrix								
	Alternatives							
Screening Criteria	**No-Build**	**TSM/TDM**	**Freeway/ Expressway**	**Freeway/ Tollway**	**Corridor Improvements**	**Freeway/ Expressway w/ HSR**	**Freeway/ Tollway w/ HSR**	**Hybrid Corridor**
Minimize biological impacts	**(+) Good** Due to their relatively small scope, planned future projects are expected to have minimal impact on biological resources.	**(+) Good** Due to their relatively small scope, minor widening and other improvements are expected to have minimal Impact on biological resources.	**(-) Poor** Would traverse 3 major drainages and impact Mohave ground squirrel and desert tortoise habitat. Joshua tree woodland would also be affected. May seriously impact wildlife movement.	**(-) Poor** Would traverse 3 major drainages and impact Mohave ground squirrel and desert tortoise habitat. Joshua tree woodland would also be affected. May impact wildlife movement.	**(o) Fair** Would traverse 2 major drainages. Would also have fairly minor impacts to "less sensitive" Mohave ground squirrel, desert tortoise and Joshua tree habitat. May impact wildlife movement.	**(-) Poor** Would traverse 3 major drainages and impact Mohave ground squirrel and desert tortoise habitat. Joshua tree woodland would also be affected. May impact wildlife movement.	**(-) Poor** Would traverse 3 major drainages and impact Mohave ground squirrel and desert tortoise habitat. Joshua tree woodland would also be affected. May impact wildlife movement.	**(-) Poor** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to minimize biological impacts.
Minimize water quality/ hydrology impacts	**(+) Good** Due to their relatively small scope, planned future projects are expected to have minimal impact on water quality and hydrology.	**(+) Good** Due to their relatively small scope, minor widening and other improvements are expected to have minimal Impact on water and hydrology.	**(-) Poor** Would traverse 3 major drainages and numerous smaller channels. Potential impacts to water and sediment transport. Potential impacts to water quality due to increase in impervious surface, highway runoff and litter.	**(-) Poor** Would traverse 3 major drainages and numerous smaller channels. Potential impacts to water and sediment transport. Potential impacts to water quality due to increase in impervious surface, highway runoff and litter.	**(-) Poor** Would traverse 2 major drainages and numerous smaller channels. Potential impacts to water and sediment transport. Potential impacts to water quality due to increase in impervious surface, highway runoff and litter.	**(-) Poor** Would traverse 3 major drainages and numerous smaller channels. Potential impacts to water and sediment transport. Potential impacts to water quality due to increase in impervious surface, highway runoff and litter.	**(-) Poor** Would traverse 3 major drainages and numerous smaller channels. Potential impacts to water and sediment transport. Potential impacts to water quality due to increase in impervious surface, highway runoff and litter.	**(-) Poor** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to minimize water quality/hydrology impacts.

Table 1.

High Desert Corridor Screening Matrix								
	Alternatives							
Screening Criteria	**No-Build**	**TSM/TDM**	**Freeway/ Expressway**	**Freeway/ Tollway**	**Corridor Improvements**	**Freeway/ Expressway w/ HSR**	**Freeway/ Tollway w/ HSR**	**Hybrid Corridor**
Minimize construction Impacts	**(+) Good** Due to their relatively small scope, planned future projects are expected to have minimal construction-related impact. (+)	**(+) Good** Due to their relatively small scope, minor widening and other improvements are expected to have minimal construction-related impact.	**(-) Poor** Major construction activities would result in temporary traffic, noise and air quality impacts spread out over a multi-year construction period.	**(-) Poor** Major construction activities would result in temporary traffic, noise and air quality impacts spread out over a multi-year construction period.	**(-) Poor** Major construction activities would result in temporary traffic, noise and air quality impacts spread out over a multi-year construction period.	**(-) Poor** Major construction activities would result in temporary traffic, noise and air quality impacts spread out over a multi-year construction period.	**(-) Poor** Major construction activities would result in temporary traffic, noise and air quality impacts spread out over a multi-year construction period.	**(-) Poor** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to minimize construction impacts.
Project Cost criteria								
Cost effectiveness	**(-) Poor** There are no costs, but there are also no solutions to the transportation problems (benefits). The lack of improvements will result in a long-term economic cost to the region.	**(o) Fair** Anticipated low cost makes this a favorable option, but benefits not seen as very meaningful.	**(+) Good** Would provide a full solution to the transportation problems. Costs are yet to be determined but are expected to be commensurate with the benefits.	**(+) Good** Would provide a full solution to the transportation problems. Costs are yet to be determined but are expected to be commensurate with the benefits.	**(-) Poor** This is the longest route and would cost the most. It fails to adequately meet purpose and need while having fairly high impacts.	**(+) Good** Would provide a full solution to the transportation problems. Costs are yet to be determined but are expected to be commensurate with the benefits. HSR costs to be provided by others.	**(+) Good** Would provide a full solution to the transportation problems. Costs are yet to be determined but are expected to be commensurate with the benefits. HSR costs to be provided by others.	**(+) Good** The intent is to use the most appropriate elements of the other alternatives to meet the needs of the project and mininmize impacts. It is presumed to be cost effective.

Subject: Sepulveda Transit Corridor Project Environmental Impact; SCH# 2021110432

Dear Mr. Carter,

After thorough review of the draft Environmental Impact Report for the Sepulveda Transit Corridor Project, I would like to share the following concerns on behalf of the California Highway Patrol (CHP) Southern Division. For background purposes, my responsibilities include oversight of all State and County roadways within Los Angeles County, as it relates to traffic safety, congestion relief and enforcement of the California Penal Code and Vehicle Code. Our mission as an agency is to prevent and minimize the loss of life, injuries and property damage. As such, I have identified significant potential impact to public safety based on proposed projects:

Alternative 1, 2 and 3 – Monorail with aerial alignment in Interstate 405 (I-405) corridor.

With all the alternative proposals listed above, the monorail guideways are described as being "entirely aerial and generally located within the I-405 right of way." Such projects that would be expected to last several years, from start to finish, will without a doubt pose a tremendous visual hazard, reduce traffic lanes/traffic flow capabilities and impose numerous changes to the known traffic pattern in the area. Currently, the Sepulveda corridor already experiences some of the heaviest traffic flow and congestion related traffic incidents in L.A. County. Such a significant project would intensify commute times, contribute to higher collision counts and more importantly, impact the motoring public's safety.

Additionally, the proposal to place all stations, the guideway and passenger platforms along the side of the 405 freeway would aggravate current challenging traffic conditions throughout the entire corridor. Notable contributors for my concerns are that the Sepulveda corridor consists of significant roadway curvature, changes in traffic patterns and elevation changes simultaneously. Distraction of existing high-profile visual hazards such as the Federal Building, The Getty Center/Monorail and L.A. National Cemetery, for example, challenge motorists that much more.

Please note this feedback is only a simple overview of the CHP's concerns, based solely on the condensed project summaries. My staff and I can provide more detailed established data if you require additional information.

Thank you for allowing us the opportunity to share public safety concerns. Feel free to contact my Administrative Assistant, Lieutenant José Nuñez, for any further information.

Sincerely,

C. MARGARIS, Chief
Southern Division

NATIVE AMERICAN HERITAGE COMMISSION

STATE CLEARING HOUSE

December 6, 2021

Peter Carter
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, CA 90012

Re: 2021110432, Sepulveda Transit Corridor Project, Los Angeles County

Dear Mr. Carter:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).

2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.

3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).

4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:

- **a.** The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
- **b.** Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:

- **a.** If part or all of the APE has been previously surveyed for cultural resources.
- **b.** If any known cultural resources have already been recorded on or adjacent to the APE.
- **c.** If the probability is low, moderate, or high that cultural resources are located in the APE.
- **d.** If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.

- **a.** The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
- **b.** The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

PUBLIC UTILITIES COMMISSION
320 W. 4TH STREET, SUITE 500
LOS ANGELES, CA 90013

(Electronically Transmitted – No hard copy will follow)

February 14, 2022

Peter Carter
Project Manager
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, California 90012

SUBJECT: SCH# 2021110432; LACMTA, Metro Sepulveda Transit Corridor Project Draft Environmental Impact Report, Notice of Preparation

Dear Mr. Carter,

The California Public Utilities Commission (Commission) has jurisdiction over the safety of highway-rail crossings (crossings) and rail transit projects in California. All rail fixed guideway systems are subject to the Commission's Safety Oversight Program requirements. Safety Certification Plan (SCP) approval and Safety Certification Verification Report (SCVR) approval from the Commission are required for rail transit projects to be placed in revenue service. In addition, the California Public Utilities Code requires Commission approval for construction or alteration of crossings and grants the Commission exclusive power on design, alteration, and/or closure of crossings in California. The Commission's Rail Transit Safety Branch (RTSB) will review rail transit project matters and the Rail Crossings and Engineering Branch (RCEB) will review crossing matters. The Commission has received a copy of the *Notice of Preparation (NOP)* from Los Angeles County Metropolitan Transportation Authority (LACMTA or Metro), who is the lead agency for the proposed Metro Sepulveda Transit Corridor Project.

According to the NOP, the Sepulveda Transit Corridor Project is a proposed high-capacity fixed guideway transit option between the San Fernando Valley and the Westside of Los Angeles. The fixed guideway public transportation line would be constructed across the Santa Monica Mountains in the vicinity of the Sepulveda Pass. Six build alternatives will be carried into the Draft Environmental Impact Report for further analysis. All six build alternatives would have a northern terminus station near the Van Nuys Metrolink/Amtrak station and a southern terminus near the Metro E Line (formerly Expo), and would include stations with connections to the Metrolink Ventura County Line, the planned East San Fernando Valley Light Rail Transit Project, the Metro G Line (formerly Orange), the D Line (formerly Purple), and the E Line (formerly Expo). Three build alternatives would be monorail with aerial alignments, two alternatives would be heavy rail with a mixture of underground and aerial alignments, and one alternative would be heavy rail with entirely underground alignment. The Sepulveda Transit Corridor Project would provide local and regional connections to existing and future LACMTA rail and bus lines, and would improve access to major employment, educational and cultural centers in greater Los Angeles.

All six build alternatives described in the NOP will be subject to several rules and regulations involving the Commission. These may include, but are not limited to:

- California Public Utilities Code, Sections 1201 et al, which requires Commission authority to construct rail crossings,
- California Public Utilities Code, Sections 2111, 2112, 99152; rail transit safety, and
- Commission's Rules of Practice and Procedure, which details the Formal Application process for construction or modification of public crossings.

The design criteria of the proposed project must comply with Commission General Orders (GOs), such as:

- GO 26-D, Clearances on railroads and street railroads as to side and overhead structures, parallel tracks and crossings,
- GO 72-B, Construction and maintenance of crossings – standard types of pavement construction at railroad grade crossings (if any),
- GO 75-D, Warning devices for at-grade railroad crossings (if any),
- GO 95, Overhead electric line construction (if any),
- GO 128, Construction of Underground Electric Supply and Communication Systems,
- GO 143-B, Design, Construction and Operation Safety Rules and Regulations Governing Light-Rail Transit, and
- GO 164-E, Rules and Regulations Governing State Safety Oversight of Rail Fixed Guideway Systems

The project must ensure compliance with federal regulations including:

- 49 CFR Part 674, Rail Fixed Guideway Systems: State Safety Oversight

The following link provides resources on the Commission's rules and regulations regarding rail safety:

http://www.cpuc.ca.gov/PUC/safety/Rail/

The proposed project options may disrupt the heavily used roadway network in the surrounding communities. The potential impacts should be identified, discussed, and evaluated for necessary safety improvements and mitigations at each proposed construction stage. This includes considering traffic circulation and queuing, level of service, emergency service response, and compliance with the Americans with Disabilities Act.

For those build alternatives that contain elevated guideway, Commission authorization is required to construct the grade-separated crossings above streets and intersections. LACMTA will have to apply to the Commission for approval of its crossing designs and authorization to construct those crossings. Applications to the Commission must include a copy of the environmental analysis undertaken by the applicant. We encourage early coordination with Commission staff in order to provide consultation

on proposed design and engineering of the Sepulveda Transit Corridor Project prior to filing applications seeking Commission authorization to construct.

Additionally, careful consideration should be given to station configurations, including pedestrian paths of travel through the stations as patrons move between LACMTA trains and the other modes of transportation at the station locations. Pedestrian paths of travel should avoid crossing the tracks at grade to access or depart from the station platforms, where feasible.

The Commission appreciates the opportunity to provide comments on the project described in the NOP. Please feel free to contact me at (916) 928-6858 or daren.gilbert@cpuc.ca.gov or contact our lead staff on this project: Ainsley Kung at (213) 330-9496 or ainsley.kung@cpuc.ca.gov for transit safety matters and Jose Pereyra at (213) 576-7083 or jose.pereyra@cpuc.ca.gov for crossing matters.

Sincerely,

Daren Gilbert, Manager

SEPULVEDA TRANSIT CORRIDOR PROJECT SCOPING COMMENTS FOR DRAFT ENVIRONMENTAL IMPACT REPORT

Dear Mr. Carter:

Thank you for including the Bureau of Engineering (BOE) in the environmental review process for the proposed Sepulveda Transit Corridor Project (Project). BOE staff attended the Project scoping meeting held for agencies on December 6, 2021. The BOE has performed a preliminary review of the six conceptual alignment alternatives for the Project and does not have a preferred alignment alternative. The BOE supports the Project and its goals to create new mobility options and improve quality of life consistent with the City of Los Angeles' Mobility Plan 2035.

As potential route options are explored, it is important to consider the Project's construction and operation environmental impacts, as well as potential coordination needs with other projects in the vicinity of the Project. The BOE has identified various current and future BOE projects that may require coordination with Project Alternatives 1 through 6 (see attachments). BOE staff is available to discuss these projects so that they are fully considered prior to Metro's recommendation of Locally Preferred Alternative. These projects can be found on BOE's website at http://eng2.lacity.org/iuprs/. The BOE recommends that your team periodically check the website for the latest project updates.

As a reminder, any Project elements within the City's public right-of-way will require review and approval by the BOE. The BOE looks forward to the opportunity to comment on the Draft EIR when it becomes available and looks forward to working with Metro to deliver the Project.

If you have any questions about these comments, please contact Curtis Tran either by email at Curtis.Tran@lacity.org or by phone at (213) 485-4505.

Sincerely,

Larry Hsu, PE
Principal Civil Engineer
Metro Transit Division

Southern terminus: E Line's Expo/Sepulveda Station.

Northern terminus: Van Nuys Metrolink Station.

Frequency: every two minutes during peak periods.

Train length/capacity: two to eight cars with an expected six cars during peak periods. Each car could carry up to 76 to 79 passengers

Route notes: 15.3 miles along the 405 corridor and Metrolink's Ventura County Line tracks.

Southern terminus: E Line Expo/Bundy Station.

Northern terminus: Van Nuys Metrolink Station.

Frequency: Planned peak hour frequencies of four minutes.

Train length capacity/length: would consist of two, four or six cars and are expected to consist of six cars during peak periods, with each car having a capacity of 133 passengers.

Subject: **Notice of Preparation of a Draft Environmental Impact Report for the Metro Sepulveda Transit Corridor Project**

Dear Mr. Carter,

The Los Angeles Departments of City Planning (LACP) and Transportation (LADOT) appreciate the opportunity to submit comments on the Notice of Preparation (NOP) for the Sepulveda Transit Corridor Project. The City appreciates Metro's leadership in advancing this critically important improvement that will connect more communities to high quality transit options, would improve quality of life for millions who travel on this corridor, and will increase ridership and access to opportunity. The City's Mobility Plan 2035 highlights the Sepulveda Corridor as a vital connection between the San Fernando Valley and the Westside of Los Angeles that improves transit access and service to major regional destinations, job centers, and intermodal facilities. The Plan identifies the need for both short-term and long-term transit options to provide drivers with an alternative to driving.

Based on the description provided in the NOP, we understand the current project proposal consists of a fixed guideway public transportation line across the Santa Monica Mountains in the vicinity of the Sepulveda Pass. The environmental review will include six build alternatives informed by both the Sepulveda Transit Corridor Feasibility Study and concepts developed by Pre-Development Agreement (PDA) contractors. All of the alternatives would have a northern terminus station near the Van Nuys Metrolink/Amtrak Station and a southern terminus station near the Metro E Line (Expo Line). The NOP notes that the alternatives may be modified based on public comments received during scoping or on the technical analyses conducted during the preparation of the Draft Environmental Impact Report. LACP and LADOT submit the following comments for your consideration.

1. ASSESSMENT

The scoping period comes at an important transition in LADOT's transportation impact study review process. In 2019, the City of Los Angeles revised its review procedures to comply with changes to the California Environmental Quality Act (CEQA) Guidelines pursuant to Senate Bill 743, further described below. LADOT relies on comprehensive performance metrics that align with the City's Mobility Plan 2035 to ensure that important safety and accessibility needs are met in addition to the

environmental goals captured in the new CEQA emphasis on vehicle miles traveled (VMT). To reflect the procedures adopted by the Los Angeles City Council in 2019, LADOT published the Transportation Assessment Guidelines, which aims to provide clarity on methodologies, and distinction between impact categories that are required by CEQA and the (non-CEQA) analyses applied to address access, circulation, and safety concerns. To ensure that the Sepulveda Transit Corridor Project analysis aligns with these new guidelines, we offer the following comments:

- **CEQA Analysis**

  Mobility Plan 2035
  The transportation analysis in the Draft Environmental Impact Report (EIR) should evaluate whether the Project conflicts with or is inconsistent with local plans or policies. A conflict or inconsistency could result if the Project proposes features that would obstruct the ability of the City to implement the Mobility Plan policies and programs, which include implementing designated modal priority networks (shown on the Mobility Plan's *Network Concept Maps* and often referred to as "Enhanced Networks"). As an example, if the project includes a corridor that is designated along a bicycle network, the analysis should reference Policy 2.9 (Multiple Networks) to evaluate if the project includes features that either prohibit or permit the City to achieve multiple network priorities that address the safety and comfort of vulnerable road users.

  The Mobility Plan consistency analysis may also trigger additional processes. For example, Policy 4.15 requires a public hearing if the project requires the removal of an existing bicycle lane. If needed, this meeting would ideally be scheduled once the alternative(s) are selected and the environmental analysis is ready for public review. If an existing bicycle lane is to be removed, the consistency analysis should reference Policy 2.9 and address how bicycle user experience will be supported, and not hindered, by the project, and ideally identify project features that facilitate bicycle travel along the corridor, or along a close parallel facility. Replacement facilities should offer a comparable or improved user experience for people of all ages. Section 2.1 of the Transportation Assessment Guidelines describes methods to evaluate policy consistency.

  Vehicle Miles Traveled
  Upon adopting SB 743 into law in 2013, the California legislature and Governor directed the Office of Planning and Research (OPR) to replace delay and capacity-based metrics such as level of service (LOS) when evaluating transportation impacts under CEQA. The legislature further found that new transportation analysis under CEQA was needed to promote the state's goals of reducing greenhouse gas (GHG) emissions and traffic-related air pollution, promote the development of a multimodal transportation system (including transit lanes), and provide clean, efficient access to destinations. The California Natural Resources Agency certified and adopted the CEQA Guidelines in December of 2018, and required all State agencies to comply by July 2020. On July 30, 2019, the Los Angeles City Council adopted VMT as the CEQA transportation impact criteria for Los Angeles applicable to all land use and transportation projects.

  In their 'Technical Advisory on Evaluating Transportation Impacts in CEQA,' OPR indicated transportation projects that include the addition of new lane(s) permanently restricted to transit vehicle use (i.e., dedicated bus lanes), or that reduce the number of through lanes should generally not induce vehicle travel that would lead to a significant VMT impact under CEQA. We suggest Metro review the Project in light of recent changes to the CEQA Guidelines to either affirm that the Project is consistent with the qualifying conditions OPR established to conclude a

transportation project would not induce substantial vehicle travel demand and, therefore, not result in a significant VMT impact, or if further VMT analysis is required, include that analysis in the Draft EIR. Section 2.3 of the LADOT Transportation Assessment Guidelines provides guidance consistent with OPR's Technical Advisory regarding circumstances in which a transportation project would need to evaluate potential impacts due to induced travel and VMT. The Draft EIR should evaluate the potential increase in VMT for any Alternative that includes adding new multi-purpose lanes if the analysis finds that those features were not already adequately evaluated at a programmatic level, such as in the EIR prepared for the Southern California Association of Government's (SCAG) most recent Regional Transportation Plan (RTP).

As mentioned above, the City's Guidelines distinguish analyses that are necessary to comply with CEQA from the additional analyses LADOT requires to address outstanding access, circulation, and safety concerns that involve City streets and rights-of-way. While not required by CEQA, the evaluation of the conditions described below ensure that Metro and the City are addressing comprehensive mobility needs and challenges that could result from the Project.

- **Non-CEQA Analysis**

  Mobility Plan 2035 Required Evaluation

  The adoption of the Mobility Plan 2035 committed the City to continue to communicate to the public the consequences of any major proposed changes to the City's right-of-way that carries out the Plan's vision. This practice relies on evaluating the potential delay, in addition to other metrics, where general purpose lanes are to be reduced along streets within the selected alignment. Where general purpose lanes would be reduced by the Project, streets that are expected to accommodate more than 750 vehicles per lane per hour (vplph) for two consecutive hours after the Project is completed require further analysis.

  In the event the Project exceeds the 750 vplph screening criteria, Metro would need to work with LADOT to implement an outreach and evaluation plan for the Project. The outreach and evaluation plan would require, at minimum, evaluating and disclosing potential changes to operating travel speed along the roadway as a result of the Project. The outreach and evaluation plan, if required, would include identifying evaluation metrics that would assess project performance and commit Metro to evaluating project performance. If required, Metro should work with LADOT to establish the performance metrics, which could include:

  - Collisions
  - Vehicle, bicycle, and pedestrian volumes
  - Vehicle travel time
  - Vehicle speed
  - LAFD response times (at the fire station areas)

  The outreach and evaluation plan may also need to disclose if the Project requires the removal of a substantial amount of on-street parking spaces. Metro should conduct a parking demand and inventory study if the Project would result in substantial parking loss, and provide notices for meetings held as part of the outreach and evaluation plan to businesses and property owners that may be directly affected.

  Metro should consult LADOT if an outreach and evaluation plan would require Metro to host public meetings in addition to those already planned as part of Metro's planning and decision-

making process. Section 3.3 of the LADOT Transportation Assessment Guidelines provides guidance on evaluating access, delay, and safety of transportation projects in accordance with the City's review procedures.

2. ALTERNATIVES

Transit Alignments

The City of Los Angeles is supportive of the Sepulveda Transit Corridor Project and looks forward to collaborating with Metro to advance this critical project that would improve quality of life for millions who travel on this corridor. Investment in any of the six alternatives would expand quality transit options that reduce travel times, provide more dignified transportation solutions for all, and increase ridership and access to opportunity. To realize this vision of the City's Mobility Plan 2035 goal of "Improving Access for all Angelenos," we support further study of all alignments, especially the Sepulveda Transit Corridor alternatives 4, 5, and 6. These alternatives are entirely underground within the Westside subregion and include a station at UCLA. Additionally, alternatives 5 and 6 are primarily or entirely underground within the Valley subregion, and would run along Sepulveda Boulevard or Van Nuys Boulevard. As outlined in Metro's documents, heavy rail trains that are automated or include a driver carry more capacity than above-ground monorail options. Alignments such as alternatives 4, 5, and 6 ensure transit passengers can avoid traversing the I-405 freeway to access stations all along the route. Transit stations located in the middle of freeways pose a multitude of challenges in accessing transit—both in terms of personal safety and traffic safety resulting from an inhospitable built environment for walking and bicycling. Additionally, passengers waiting for their train along a freeway are exposed to air and noise pollution and other potentially unsafe conditions.

The Mobility Plan further calls for improving transit access and service to major regional destinations, job centers, and intermodal facilities. A direct connection to UCLA supports existing transit riders and attracts a built in transit rider base of students, staff, and faculty by reducing the need to transfer—a key recommendation of Metro's Transfers Design Guide. In the San Fernando Valley, the proposed location of the northern terminus adjacent to the Van Nuys Metrolink station is an active transportation node on which many transportation options converge. Underground stations at this location as well as at the other two or three Valley stations can reduce strain on the public right of way and provide riders with low stress transit and first/last mile solutions, and would ensure that aerial stations and tracks do not introduce physical barriers.

Roadway Network

Given the general description of the Project alternatives currently under consideration, it is not clear at this juncture to what extent re-designing the operation of streets and intersections may be required. Potential impacts of final designs should be fully analyzed by LADOT and partner agencies prior to final alignment determination. In addition, reconfigurations of streets during the construction period, and any reconstructions of the public right-of-way required at the conclusion of construction, should be examined for opportunities to implement permanent first/last mile and Mobility Plan network improvements as an integrated part of the Project.

Continued Analysis of Alternatives

LADOT offers to continue collaborating with Metro staff in the next stages of Project development to assess benefits of the proposed alternatives using LADOT's Connectivity Platform tool. LADOT's Connectivity Platform measures changes to opportunity as a result of land use and mobility investment decisions. The Connectivity Platform compares door-to-door travel times by various modes of transportation to reach destinations, such as employment sites, schools, grocery stores,

and medical centers. Measuring connectivity is aligned with the goals of Senate Bill 743 to maximize people's access while minimizing overall VMT or driving.

City Land Use and Planning Efforts

As Metro considers consistency with the City's General Plan, potential ridership of different alignments, and opportunities for coordination with the City, please note that the City is currently drafting or updating a number of land use plans, policy documents, and zoning ordinances within the Sepulveda Transit Corridor Project's Proposed Study Area, including Community Plans that comprise the Land Use Element of the City's General Plan. Current work programs of LA City Planning include:

- Southwest Valley Community Plans update (Encino–Tarzana and Reseda–West Van Nuys within the study area, and Canoga Park–Winnetka–Woodland Hills–West Hills outside of the study area)
- Southeast Valley Community Plans update (Sherman Oaks–Studio City–Toluca Lake–Cahuenga Pass and Van Nuys–North Sherman Oaks within the study area, and North Hollywood–Valley Village outside of the study area)
- Westside Community Plans update (West Los Angeles and Palms–Mar Vista–Del Rey within the study area, and Venice and Westchester–Playa del Rey outside of the study area)
- Orange Line Transit Neighborhood Plan
- Ventura-Cahuenga Boulevard Corridor Specific Plan amendment
- Westwood Village Specific Plan amendment
- Wildlife Ordinance District within the Wildlife Pilot Study area

Transit Oriented Development Opportunities

In addition to providing needed transit connections between the Valley and the Westside, the Sepulveda Transit Corridor Project will create opportunities for transit-oriented development and offer new zoning and land use possibilities for the City. Some of these opportunities will result from the activation of new or higher-level affordable housing incentive program (TOC) tiers that are triggered by proximity to rail lines, others will result from the current land use planning efforts listed above. The City encourages Metro to consider how different alignments, station locations, infrastructure types (aerial, underground), and related land acquisitions may promote or hinder a safe, active, pedestrian- and transit-oriented district at each station.

In the Valley, alternatives 4 and 5 propose locating the corridor along Sepulveda Boulevard, which currently has a number of employment uses and is well positioned to accommodate future growth and development. Alternative 6 along Van Nuys Boulevard would similarly support future transit oriented development. Such development opportunities will be difficult to realize under the 405 freeway alignment proposed by alternatives 1, 2, and 3. In the Westside subregion, alternative 6 proposes a station near the West LA Civic Center, where redevelopment is being planned, and a southern terminus adjacent to the E Line Expo/Bundy station, which is currently experiencing a trend of large scale multifamily developments and pedestrian oriented development. A terminus at this location would contribute to a more complete neighborhood.

Although the current Project scope will not directly impact the Venice or Westchester–Playa Del Rey Community Plan Areas, the aspirational long term goal of extending the Sepulveda Transit Corridor line to LAX has future implications for the transportation network and land use planning. LA City Planning is currently in the process of updating these Community Plans and is proposing concentrating growth along major corridors and transit areas. Metro should ensure that the chosen

southern terminus of the current Project (at the E Line) will facilitate a potential extension to the south in the future.

Maintenance and Storage Facilities

The City also encourages Metro to consider TOD potential when determining where to site the Train Maintenance and Storage Facility (MSF). Alternatives 1, 2, and 3 propose locating the storage facility near the G Line Sepulveda Station. LACP is currently developing the Orange Line Transit Neighborhood Plan, which is a Metro administered grant that funds long range planning around three G Line stations, to foster more employment and residential uses around the Sepulveda Station. Metro should be mindful of the potential for the location of the storage facility above the existing park and ride lot to limit future housing and employment development and inhibit creation of a pedestrian-friendly station area with a density of active uses.

The MSF location proposed for Alternatives 4 and 5, west of Woodman Avenue and south of the Metrolink Ventura County Line railroad tracks, is in an existing industrial area and would have less effect on future housing and commercial development. However, Metro should be mindful of this location's proximity to residential uses and consider appropriate transitional buffers and noise barriers.

Alternative 6 proposes placing the MSF east of Van Nuys Boulevard north of the Metrolink/Amtrak station and tracks, in an area currently zoned industrial and developed with large retail stores. The Mission Hills–Panorama City–North Hills Community Plan, where the MSF would be located, is not currently being updated, however, the convergence of the Metrolink/Amtrak, Sepulveda Corridor, and East San Fernando Valley Corridor transit lines will make this a well-served transit hub. The land use, accessibility, and ridership tradeoffs of locating the maintenance and storage facility versus transit-oriented development very close to the station should be seriously considered.

3. **ASSESSMENT OF OTHER CONSIDERATIONS**

Wildlife Corridors

The Project's proximity to the Santa Monica Mountains highlights the need to protect natural resources that contribute to the City's wildlife diversity and biodiversity. With regard to alternatives with above-ground infrastructure in the Sepulveda Pass (Alternatives 1-3), Metro should be mindful of interference with wildlife movement and migration corridors. Metro should also consider the impact of Project construction and operation on wildlife species that belong to the endangered or protected species list. City Planning is currently developing a wildlife pilot study area ordinance with the goal of regulating development in the hillsides, particularly in ecologically sensitive areas. In addition, the Santa Monica Mountains Conservancy (SMMC) recently adopted the Eastern Santa Monica Mountains Natural Resource Protection Plan which identifies a habitat boundary encompassing the Santa Monica Mountain range and seeks to preserve habitat pathways between the 405 and South and Southeast Valley communities. The SMMC plan is currently being reviewed by the City. Metro should address potential biological and wildlife connectivity impacts within proximity to the Sepulveda Pass and Santa Monica Mountains Zone. The City's General Plan Conservation and Framework Elements also contain relevant policies related to wildlife preservation and impacts to wildlife corridors. Metro should also note the listing of the California Puma as a candidate species, which may affect analysis in the Project area.

Tree Preservation

In addition to the preservation of wildlife habitat and wildlife corridors, the City has an interest in protecting and maintaining tree coverage throughout the City, particularly in areas that lack open

space and experience the effects of urban heat island effect. The recently updated 2020 Protected Tree Ordinance identifies native tree and shrub species that require a permit from the City of Los Angeles Department of Public Works to remove. Some protected trees may have associated vegetative communities that are separately protected under the California Endangered Species Act. Independent of protected trees, the City strives to preserve all trees located in the public right-of-way. The removal of any such tree during Project construction must be coordinated with the Bureau of Public Works Streets Services Department and may trigger replacement requirements. The Department of Recreation and Parks also maintains a list of heritage trees that have historical, commemorative, or horticultural significance.

Urban Air Mobility

City Planning is currently in conversation with other City Departments, government institutions, and private industry regarding the emergence of urban air mobility (UAM). While these discussions are preliminary, the City is in the early stages of understanding and evaluating UAM options in the city, which includes goods movement and passenger service. The City is exploring the feasibility of directing such activities above existing roadway and freeway routes, in part to minimize noise impacts on communities. This strategy is being considered alongside the inclusion of offsets to minimize impacts to neighborhoods that experience environmental burden as a result of freeway proximity. Metro should consider the potential future implementations of aerial mobility when evaluating any alternative with above-ground infrastructure located in the I-405 right-of-way (Alternatives 1-3). The City welcomes further consultation on this as it is an evolving topic.

LADOT and LACP would like to work with Metro as early as possible in the environmental review process to ensure areas of interest for the City are appropriately considered in the project design and to avoid potential conflicts with City plans such as the Mobility Plan 2035, LA's Green New Deal, Vision Zero, and other relevant City policies, plans, and projects.

If you have any questions regarding our response to the Notice of Preparation, please contact Eddie Guerrero at eddie.guerrero@lacity.org. The City looks forward to working with Metro on this critical regional project that will help connect communities to jobs and opportunities.

Sincerely,

Eddie Guerrero

Dear Mr. Peter Carter:

Subject: Comment Letter Regarding the Notice of Preparation of a Draft Environmental Impact Report for the Sepulveda Transit Corridor Project

The Los Angeles Department of Water and Power (LADWP) appreciates the opportunity to provide comments on the proposed Sepulveda Transit Corridor Project (Project). The mission of LADWP is to provide clean, reliable water and power to the City of Los Angeles. Based on our review of the Initial Study prepared for the Project, we respectfully submit the comment below.

Water System Comments:

1. LADWP is considering stormwater capture improvements at Van Nuys Recreation Center and would like to be updated on the finalized alignment for impacts to the proposed Project.
2. LADWP recommends a groundwater assessment in tunneled portions of the alignment or any portion of the alignment where groundwater dewatering is necessary to monitor the effects of the Project on local groundwater supply prior to and post construction.
3. LADWP requests to be notified when the Draft Environmental Impact Report becomes available.

For any questions regarding the above comment, please contact Mr. Marshall Styers of my staff at (213) 367-3541 or marshall.styers@ladwp.com.

Sincerely,

Nadia Parker Digitally signed by Nadia Parker

City of San Fernando

The City of San Fernando would like to see strong connectivity to the proposed Sepulveda Pass Transit Corridor for San Fernando and Northeast San Fernando Valley community members, especially with phase 2 of the East San Fernando Valley Light Rail Transit project. The City suggests multiple modes of connection, including, but not limited to, light rail, rapid bus service, micro-transit service, and safe and protected bike/pedestrian paths that are easy to use and accessible for San Fernando residents. Strong connectively will increase utilization by Northeast San Fernando Valley users by providing multiple ways to get to the proposed project.

February 11, 2022

To the LA Metro Board of Directors with regards to the Sepulveda Transit Corridor Project;

I am writing to you to express my strong belief that a successful Sepulveda Transit Corridor alignment must include the following: a direct stop at UCLA, a direct stop at Westwood Village and connection to the Purple/D Line, and connectivity and continuity with the communities which it serves. With Metro's goals of improving mobility, accessibility, equity, and sustainability in mind, only the heavy-rail alternatives 4, 5, and 6 can provide a solution to the issues of traffic, pollution, and lack of connectivity that plague those living, working, and visiting the Westside region.

Investing resources in a project as large as the Sepulveda Transit Corridor should result in a system that enhances connectivity by taking people directly to the places they want to go. By Metro's own estimates, a UCLA stop is projected to be the most trafficked non-transfer stop in the entire Metro system, with a daytime population of over 84,000 equivalent to that of a mid-sized city. Alternatives 1 and 2's closest stops are 1.5 - 2 miles away from UCLA's campus, posing extreme first-last mile challenges for anyone trying to connect with UCLA and Westwood Village. This would dramatically decrease ridership to and from both UCLA and the Village as it could add upwards of 30 minutes of travel time, not to mention posing additional accessibility issues for pedestrians, wheelchair/assistive device users, and bikers. Any alternative (such as 1 or 2) that relies on a shuttle transfer is destined to fail.

A direct stop at UCLA and Westwood Village is not just an issue of connectivity. It's an issue of equity and accessibility to jobs, healthcare, education, and services around Los Angeles. UCLA, including its hospital and medical center, is the largest employer west of Downtown Los Angeles. The UCLA Ronald Reagan Hospital and Medical Center serves hundreds of thousands of patients each year. Over 47,000 undergraduate and graduate students attend UCLA, with over 20% of these students commuting each day from across Los Angeles. Due to extreme commutes, many along the Sepulveda Transit Corridor, up to 1 in 7 students experience housing and food insecurity. Westwood Village has over 2,300 businesses. Providing a direct stop at UCLA is an issue of equity in ensuring that all Angelenos have access to housing, employment, education, and healthcare in the Westside region.

Office (213) 891-2201

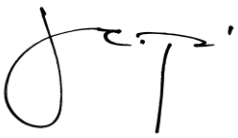
laccd.edu

770 Wilshire Blvd.
Los Angeles, CA 90017

As part of the environmental review process, it is important to consider impacts on traffic, emissions, and pollution. Not providing a direct stop in Westwood and UCLA will negatively impact Metro's environmental goals by decreasing overall ridership, as multiple transfer points increase travel time, decreasing the benefit of using a Metro system over driving. This eliminates alternatives 1 and 2. Alternative 3, while including a direct UCLA stop, lacks direct connectivity with a number of other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, plus Metrolink lines that connect to these Metro lines. Therefore, only Alternatives 4, 5, and 6 will ultimately contribute towards Metro's sustainability and VMT reduction goals, not to mention the environmental justice and public health issues associated with the monorail alignments running along the polluted 405 freeway. While these monorail options might be less expensive, is it worth investing any money at all in a system that won't achieve its goals?

The Sepulveda Transit Corridor Project has the potential to dramatically change the way we view transit in the Westside of Los Angeles. However, the monorail options without a direct stop at UCLA, a direct connection to the Westwood Purple/D Line, and direct connectivity to other Metro lines, will ultimately fail in achieving high ridership and access to key resources such as healthcare, employment, and education. Based on these criteria, as well as considerations of sustainability and environmental justice, I call upon the Metro board to eliminate or immediately adjust Alternatives 1, 2, and 3.

Sincerely,



Francisco C. Rodriguez, Ph.D.
Chancellor
Los Angeles Community College District

Mr. Peter Carter
Project Manager
LA Metro
One Gateway Plaza, 99-22-6
Los Angeles, CA 90012

RE: Sepulveda Transit Corridor Project – EIR Scoping Comments

Dear Mr. Carter:

Los Angeles World Airports (LAWA) submits these comments for consideration as part of the Sepulveda Transit Corridor Project (Proposed Project) Environmental Impact Report (EIR) scoping process.

LAWA has reviewed the proposed project's six build alternatives which would construct a fixed guideway public transportation line across the Santa Monica Mountains within the vicinity of the Sepulveda Pass. While LAWA does not have a preference at this time, we generally desire a project alignment that maximizes passenger capacity with the most direct route, minimal transfers, and time certainty. We recognize the challenges posed by the physical and environmental constraints that the Sepulveda Pass and I-405 freeway pose for each of the concepts, and at this time LAWA prefers the type of transit technology that ensures a seamless connection to Los Angeles International Airport (LAX).

Travel along this pivotal north-south corridor is vital. The Transit Corridor Project would connect Los Angeles International Airport (LAX) and the San Fernando Valley by providing a mass transit alternative to the heavily congested I-405 freeway system. The possibility of providing a single-seat public transit between LAX and the San Fernando Valley could ensure arrival time reliability to the thousands of passengers, employees and others who access the LAX area daily via this corridor.

We understand that at this time LA Metro is looking at six project alternatives that would provide a fixed guideway transit option between the San Fernando Valley and the Westside of Los Angeles with a southern terminus connection to the Metro E Line (EXPO) using either monorail or heavy rail technology for portions of the line along with aerial automated people mover or electric bus connections for the University of California Los Angeles (UCLA).

LAX

Van Nuys

City of Los Angeles

Board of Airport Commissioners

Beatrice C. Hsu
President

Valeria C. Velasco
Vice President

Sean O. Burton
Gabriel L. Eshaghian
Nicholas P. Roxborough
Belinda M. Vega
Karim Webb

Justin Erbacci
Chief Executive Officer

We would like to emphasize that any of these six project alternatives should not preclude future Westside to LAX alignments that would provide a single-seat ride from the northern leg of the San Fernando Valley to LAX. The single-seat or one-seat ride experience will make this proposed line a true, seamless connection between the Sepulveda Corridor and LAX.

In addition, LAWA may be impacted by construction of the project along the I-405 freeway and the adjacent freeway corridor. These potential construction impacts could cause vehicular traffic impacts and traffic management issues due to lane closures and detours that would require extensive planning and implementation of temporary traffic management measures in order to minimize traffic flow interruptions on the I-405 freeway. Early planning for such measures could reduce impacts to those traveling to and from LAX.

As a final note, LAWA supports any consideration of accelerating the southern portion of the project to LAX. LAX is a crucial destination and employment center and serves as an economic powerhouse for the region and the country. A San Fernando Valley to LAX public transportation option is needed much sooner than the 2050 date anticipated for the completion of the southern segment.

LAWA thanks LA Metro for the continued partnership and looks forward to working with you on issues related to our airports, transportation and local communities as it relates to this project.

Thank you in advance for your consideration of our comments.

Sincerely,

David Reich,
Deputy Executive Director, Mobility Planning and Strategy

Jolene Ditmar

Hello,
Please see the attached comment letter from the Metropolitan Water District of Southern California on the Notice of Preparation for the Sepulveda Transit Corridor Project. We appreciate the opportunity to provide input to your planning process and we look forward to receiving future documentation and plans for this project. Thank you for your time.

OF SOUTHERN CALIFORNIA

Office of the General Manager

December 9, 2021 **Via Electronic Mail**

Peter Carter, Project Manager
Metro
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, CA 90012

Dear Mr. Carter:

Notice of Preparation for the Sepulveda Transit Corridor Project

The Metropolitan Water District of Southern California (Metropolitan) reviewed the Notice of Preparation for the Sepulveda Transit Corridor Project (Project). Los Angeles County Metropolitan Transportation Authority is acting as the Lead Agency under the California Environmental Quality Act (CEQA). The Project proposes to construct and provide a fixed, high capacity transit option through the I-405 corridor to better connect the San Fernando Valley to West Los Angeles, specifically, major employment, educational and cultural centers. This letter contains Metropolitan's response to the public notice as a potentially affected public agency.

Metropolitan is a public agency and regional water wholesaler. It is comprised of 26 member public agencies, serving approximately 19 million people in portions of six counties in Southern California, including Orange County. Metropolitan's mission is to provide its 5,200 square mile service area with adequate and reliable supplies of high-quality water to meet present and future needs in an environmentally and economically responsible way.

Our review of the notice indicates that Metropolitan owns and operates the Sepulveda Feeder and Santa Monica Feeder Pipelines and appurtenant facilities within the Project's proximity. The aforementioned pipelines and appurtenant facilities distribute treated water (drinking water) from the Joseph Jensen Treatment Plant to Los Angeles County. Metropolitan is concerned with potential impacts to the pipelines and appurtenant facilities that may result from the construction and implementation of the proposed Project. The enclosed map shows Metropolitan facilities in relation to the proposed project. It will be necessary for Caltrans to consider these facilities in its project planning.

Metropolitan must be allowed to maintain its rights-of-way and requires unobstructed access to its facilities in order to maintain and repair its system. In order to avoid potential conflicts with Metropolitan's facilities and rights-of-way, we require that any design plans for any activity in the area of Metropolitan's pipelines or facilities be submitted for our review and written approval. Metropolitan will not permit procedures that could subject the pipeline to excessive vehicle, impact or vibratory loads. Any future design plans associated with this project should be submitted to Metropolitan's Substructures Team. Approval of the project should be contingent on Metropolitan's approval of design plans for portions of the proposed project that could impact its facilities.

Detailed prints of drawings of Metropolitan's pipelines and rights-of-way may be obtained by calling Metropolitan's Substructures Information Line at (213) 217-7663 or via email at EngineeringSubstructures@mwdh2o.com. To assist the applicant in preparing plans that are compatible with Metropolitan's facilities and easements, attached are the "Guidelines for Improvements and Construction Projects Proposed in the Area of Metropolitan's Facilities and Rights-of-Way". Please note that all submitted designs or plans must clearly identify Metropolitan's facilities and rights-of-way.

Additionally, Metropolitan encourages projects within its service area to include water conservation measures. Water conservation, reclaimed water use, and groundwater recharge programs are integral components to regional water supply planning. Metropolitan supports mitigation measures such as using water efficient fixtures, drought-tolerant landscaping, and reclaimed water to offset any increase in water use associated with the proposed project.

We appreciate the opportunity to provide input to your planning process and we look forward to receiving future documentation and plans for this project. For further assistance, please contact Ms. Jolene Ditmar at (213) 217-6184 or jditmar@mwdh2o.com.

Very truly yours,

1.0 GENERAL INFORMATION

Note: Underground Service Alert at 811 must be notified at least two working days before excavating in proximity to Metropolitan's facilities.

1.1 Introduction

These guidelines provide minimum design and construction requirements for any utilities, facilities, developments, and improvements, or any other projects or activities, proposed in or near Metropolitan Water District of Southern California (Metropolitan) facilities and rights-of-way. Additional conditions and stipulations may also be required depending on project and site specific conditions. Any adverse impacts to Metropolitan's conveyance system, as determined by Metropolitan, will need to be mitigated to its satisfaction.

All improvements and activities must be designed so as to allow for removal or relocation at builder or developer expense, as set forth in the paramount rights provisions of Section 20.0. Metropolitan shall not be responsible for repair or replacement of improvements, landscaping or vegetation in the event Metropolitan exercises its paramount rights powers.

1.2 Submittal and Review of Project Plans/Utilities and Maps

Metropolitan requires project plans/utilities be submitted for all proposed activities that may impact Metropolitan's facilities or rights-of-way. Project plans shall include copies of all pertinent utilities, sewer line, storm drain, street improvement, grading, site development, landscaping, irrigation and other plans, all tract and parcel maps, and all necessary state and federal environmental documentation. Metropolitan will review the project plans and provide written approval, as it pertains to Metropolitan's facilities and rights-of-way. Written approval from Metropolitan must be obtained, prior to the start of any activity or construction in the area of Metropolitan's facilities or rights-of-way. Once complete project plans and supporting documents are submitted to Metropolitan, it generally takes 30 days to review and to prepare a detailed written response. Complex engineering plans that have the potential for significant impacts on Metropolitan's facilities or rights-of-way may require a longer review time.

Project plans, maps, or any other information should be submitted to Metropolitan's Substructures Team at the following mailing address:

Attn: Substructures Team
The Metropolitan Water District of Southern California
700 North Alameda St.
Los Angeles, CA 90012

General Mailing Address: P.O. Box 54153
Los Angeles, CA 90054-0153

Email: EngineeringSubstructures@mwdh2o.com

For additional information, or to request prints of detailed drawings for Metropolitan's facilities and rights-of-way, please contact Metropolitan's Substructures Team at 213-217-7663 or EngineeringSubstructures@mwdh2o.com.

1.3 Identification of Metropolitan's Facilities and Rights-of-Way

Metropolitan's facilities and rights-of-way must be fully shown and identified as Metropolitan's, with official recording data, on the following:

A. All applicable plans

B. All applicable tract and parcel maps

Metropolitan's rights-of-ways and existing survey monuments must be tied dimensionally to the tract or parcel boundaries. Metropolitan's Records of Survey must be referenced on the tract and parcel maps with the appropriate Book and Page.

2.0 General Requirements

2.1 Vehicular Access

Metropolitan must have vehicular access along its rights-of-way at all times for routine inspection, patrolling, operations, and maintenance of its facilities and construction activities. All proposed improvements and activities must be designed so as to accommodate such vehicular access.

2.2 Fences

Fences installed across Metropolitan's rights-of-way must include a 16-foot-wide gate to accommodate vehicular access by Metropolitan. Additionally, gates may be required at other specified locations to prevent unauthorized entry into Metropolitan's rights-of-way.

All gates must accommodate a Metropolitan lock or Knox-Box with override switch to allow Metropolitan unrestricted access. There should be a minimum 20-foot setback for gates from the street at the driveway approach. The setback is necessary to allow Metropolitan vehicles to safely pull off the road prior to opening the gate.

2.3 Driveways and Ramps

Construction of 16-foot-wide commercial-type driveway approaches is required on both sides of all streets that cross Metropolitan's rights-of-way. Access ramps, if necessary, must be a minimum of 16 feet wide.

There should be a minimum 20-foot setback for gates from the street at the driveway approach. Grades of ramps and access roads must not exceed 10 percent; if the slope of an access ramp or road must exceed 10 percent due to topography, then the ramp or road must be paved.

2.4 Walks, Bike Paths, and Trails

All walkways, bike paths, and trails along Metropolitan's rights-of-way must be a minimum 12-foot wide and have a 50-foot or greater radius on all horizontal curves if also used as Metropolitan's access roads. Metropolitan's access routes, including all walks and drainage facilities crossing the access routes, must be constructed to American Association of State Highway and Transportation Officials (AASHTO) H-20 loading standards (see Figure 1). Additional requirements will be placed on equestrian trails to protect the water quality of Metropolitan's pipelines and facilities.

2.5 Clear Zones

A 20-foot-wide clear zone is required to be maintained around Metropolitan's manholes and other above-ground facilities to accommodate vehicular access and maintenance. The clear zone should slope away from Metropolitan's facilities on a grade not to exceed 2 percent.

2.6 Slopes

Cut or fill slopes proposed within Metropolitan's rights-of-way must not exceed 10 percent. The proposed grade must not worsen the existing condition. This restriction is required to facilitate Metropolitan use of construction and maintenance equipment and allow uninhibited access to above-ground and below-ground facilities.

2.7 Structures

Construction of structures of any type is not allowed within the limits of Metropolitan's rights-of-way to avoid interference with the operation and maintenance of Metropolitan's facilities and possible construction of future facilities.

Footings and roof eaves of any proposed buildings adjacent to Metropolitan's rights-of-way must meet the following criteria:

A. Footings and roof eaves must not encroach onto Metropolitan's rights-of-way.

B. Footings must not impose any additional loading on Metropolitan's facilities.

C. Roof eaves must not overhang onto Metropolitan's rights-of-way.

Detailed plans of footings and roof eaves adjacent to Metropolitan's rights-of-way must be submitted for Metropolitan's review and written approval, as pertains to Metropolitan's facilities.

2.8 Protection of Metropolitan Facilities

Metropolitan facilities within its rights-of-way, including pipelines, structures, manholes, survey monuments, etc., must be protected from damage by the project proponent or property owner, at no expense to Metropolitan. The exact location, description and method of protection must be shown on the project plans.

2.9 Potholing of Metropolitan Pipelines

Metropolitan's pipelines must be potholed in advance, if the vertical clearance between a proposed utility and Metropolitan's pipeline is indicated to be 4 feet or less. A Metropolitan representative must be present during the potholing operation and will assist in locating the pipeline. Notice is required, a minimum of three working days, prior to any potholing activity.

2.10 Jacked Casings or Tunnels

A. General Requirements

Utility crossings installed by jacking, or in a jacked casing or tunnel under/over a Metropolitan pipeline, must have at least 3 feet of vertical clearance between the outside diameter of the pipelines and the jacked pipe, casing, or tunnel. The actual

cover over Metropolitan's pipeline shall be determined by potholing, under Metropolitan's supervision.

Utilities installed in a jacked casing or tunnel must have the annular space between the utility and the jacked casing or tunnel filled with grout. Provisions must be made for grouting any voids around the exterior of the jacked pipe, casing, or tunnel.

B. Jacking or Tunneling Procedures

Detailed jacking, tunneling, or directional boring procedures must be submitted to Metropolitan for review and approval. The procedures must cover all aspects of operation, including, but not limited to, dewatering, ground control, alignment control, and grouting pressure. The submittal must also include procedures to be used to control sloughing, running, or wet ground, if encountered. A minimum 10-foot clearance must be maintained between the face of the tunneling or receiving pits and outside edges of Metropolitan's facility.

C. Shoring

Detailed drawings of shoring for jacking or receiving pits must be submitted to Metropolitan for review and written-approval. (See Section 10 for shoring requirements).

D. Temporary Support

Temporary support of Metropolitan's pipelines may be required when a utility crosses under a Metropolitan pipeline and is installed by means of an open trench. Plans for temporary support must be reviewed and approved in writing by Metropolitan. (See Section 11, Supports of Metropolitan Facilities).

3.0 Landscaping

3.1 Plans

All landscape plans must show the location and limits of Metropolitan's right-of-way and the location and size of Metropolitan's pipeline and related facilities therein. All landscaping and vegetation shall be subject to removal without notice, as may be required by Metropolitan for ongoing maintenance, access, repair, and construction activities. Metropolitan will not be financially responsible for the removal of any landscaping and vegetation.

3.2 Drought-Tolerant Native and California Friendly Plants

Metropolitan recommends use of drought-tolerant native and California Friendly® plants (excluding sensitive plants) on proposed projects. For more information regarding California Friendly® plants refer to www.bewaterwise.com.

3.3 Trees

Trees are generally prohibited within Metropolitan's rights-of-way as they restrict Metropolitan's ability to operate, maintain and/or install new pipeline(s) located within these rights-of-way. Metropolitan will not be financially responsible for the removal and replacement of any existing trees should they interfere with access and any current or future Metropolitan project located within the right-of-way.

3.4 Other Vegetation

Shrubs, bushes, vines, and groundcover are generally allowed within Metropolitan's rights-of-way. Larger shrubs are not allowed on Metropolitan fee properties; however, they may be allowed within its easements if planted no closer than 15 feet from the outside edges of existing or future Metropolitan facilities. Only groundcover is allowed to be planted directly over Metropolitan pipeline, turf blocks or similar is recommended to accommodate our utility vehicle access. Metropolitan will not be financially responsible for the removal and replacement of the vegetation should it interfere with access and any current or future Metropolitan project.

3.5 Irrigation

Irrigation systems are acceptable within Metropolitan's rights-of-way, provided valves and controllers are located near the edges of the right-of-way and do not interfere with Metropolitan vehicular access. A shutoff valve should also be located along the edge of the right-of-way that will allow the shutdown of the system within the right-of-way should Metropolitan need to do any excavation. No pooling or saturation of water above Metropolitan's pipeline and right-of-way is allowed. Additional restrictions apply to non-potable water such as Recycled Water and are covered on Table 3 of Page 20.

3.6 Metropolitan Vehicular Access

Landscape plans must show Metropolitan vehicular access to Metropolitan's facilities and rights-of-way and must be maintained by the property owner or manager or homeowners association at all times. Walkways, bike paths, and trails within Metropolitan's rights-of-way may be used as Metropolitan access routes. (See Section 2.4, Walks, Bike Paths, and Trails).

4.0 General Utilities

Note: For non-potable piping like sewer, hazardous fluid, storm drain, disinfected tertiary recycled water and recycled water irrigation see Table 1 through Table 3.

4.1 Utility Structures

Permanent utility structures (e.g., manholes, power poles, pull boxes, electrical vaults, etc.) are not allowed within Metropolitan's rights-of-way. Metropolitan requests that all permanent utility structures within public streets be placed as far from its pipelines and facilities as practical, but not closer than 5 feet from the outside edges of Metropolitan facilities.

Note: Non-potable utility pipelines are an exception to the 5-foot minimum clearance. Non-potable utility pipelines should have 10 feet of separation.

4.2 Utility Crossings

Metropolitan requests a minimum of 1 foot of vertical clearance between Metropolitan's pipeline and any utility crossing the pipeline. Utility lines crossing Metropolitan's pipelines must be as perpendicular to the pipeline as possible. Cross-section drawings, showing proposed locations and elevations of utility lines and locations of Metropolitan's pipelines and limits of rights-of-way, must be submitted with utility plans, for all

crossings. Metropolitan's pipeline must be potholed under Metropolitan's supervision at the crossings (See Section 2.9).

4.3 Longitudinal Utilities

Installation of longitudinal utilities is generally not allowed along Metropolitan's rights-of-way. Within public streets, Metropolitan requests that all utilities parallel to Metropolitan's pipelines and appurtenant structures (facilities) be located as far from the facilities as possible, with a minimum clearance of 5 feet from the outside edges of the pipeline.

Note: Non-potable utility pipelines are an exception to the 5-foot minimum clearance. Non-potable utility pipelines should have 10 feet of separation (for more information See Table 1 on Page 18).

4.4 Underground Electrical Lines

Underground electrical conduits (110 volts or greater) which cross a Metropolitan's pipeline must have a minimum of 1 foot of vertical clearance between Metropolitan's pipeline and the electrical lines. Longitudinal electrical lines, including pull boxes and vaults, in public streets should have a minimum separation of 5 feet from the edge of a Metropolitan pipeline or structures.

4.5 Fiber Optic Lines

Fiber optic lines installed by directional boring require a minimum of 3 feet of vertical clearance when boring is over Metropolitan's pipelines and a minimum of 5 feet of vertical clearance when boring is under Metropolitan's pipelines. Longitudinal fiber optic lines, including pull boxes, in public streets should have a minimum separation of 5 feet from the edge of a Metropolitan pipelines or structures. Potholing must be performed, under Metropolitan's supervision, to verify the vertical clearances are maintained.

4.6 Overhead Electrical and Telephone Lines

Overhead electrical and telephone lines, where they cross Metropolitan's rights-of-way, must have a minimum 35 feet of clearance, as measured from the ground to the lowest point of the overhead line. Overhead electrical lines poles must be located at least 30 feet laterally from the edges of Metropolitan's facilities or outside Metropolitan's right-of-way, whichever is greater.

Longitudinal overhead electrical and or telephone lines in public streets should have a minimum separation of 10 feet from the edge of a Metropolitan pipelines or structures where possible.

4.7 Sewage Disposal Systems

Sewage disposal systems, including leach lines and septic tanks, must be a minimum of 100 feet from the outside limits of Metropolitan's rights-of-way or the edge of its facilities, whichever is greater. If soil conditions are poor, or other adverse site-specific conditions exist, a minimum distance of 150 feet is required. They must also comply with local and state health code requirements as they relate to sewage disposal systems in proximity to major drinking water supply pipelines.

4.8 Underground Tanks

Underground tanks containing hazardous materials must be a minimum of 100 feet from the outside limits of Metropolitan's rights-of-way or edge of its facilities, whichever is greater. In addition, groundwater flow should be considered with the placement of underground tanks down-gradient of Metropolitan's facilities.

5.0 Specific Utilities: Non-Potable Utility Pipelines

In addition to Metropolitan's general requirements, installation of non-potable utility pipelines (e.g., storm drains, sewers, and hazardous fluids pipelines) in Metropolitan's rights-of-way and public street rights-of-way must also conform to the State Water Resources Control Board's Division of Drinking Water (DDW) regulation (Waterworks Standards) and guidance for separation of water mains and non-potable pipelines and to applicable local county health code requirements. Written approval is required from DDW for the implementation of alternatives to the Waterworks Standards and, effective December 14, 2017, requests for alternatives to the Waterworks Standards must include information consistent with: DDW's Waterworks Standards Main Separation Alternative Request Checklist.

In addition to the following general guidelines, further review of the proposed project must be evaluated by Metropolitan and requirements may vary based on site specific conditions.

A. Sanitary Sewer and Hazardous Fluids (General Guideline See Table 1 on Page 18)

B. Storm Drain and Recycled Water (General Guideline See Table 2 on Page 19)

C. Irrigation with Recycled Water (General Guideline See Table 3 on Page 20)

D. Metropolitan generally does not allow Irrigation with recycled water to be applied directly above its treated water pipelines

E. Metropolitan requests copies of project correspondence with regulating agencies (e.g., Regional Water Quality Control Board, DDW); regarding the application of recycled water for all projects located on Metropolitan's rights-of-way

6.0 Cathodic Protection/Electrolysis Test Stations

6.1 Metropolitan Cathodic Protection

Metropolitan's existing cathodic protection facilities in the vicinity of any proposed work must be identified prior to any grading or excavation. The exact location, description, and type of protection must be shown on all project plans. Please contact Metropolitan for the location of its cathodic protection stations.

6.2 Review of Cathodic Protection Systems

Metropolitan must review any proposed installation of impressed-current cathodic protection systems on pipelines crossing or paralleling Metropolitan's pipelines to determine any potential conflicts with Metropolitan's existing cathodic protection system.

7.0 Drainage

7.1 Drainage Changes Affecting Metropolitan Rights-of-Way

Changes to existing drainage that could affect Metropolitan's rights-of-way require Metropolitan's approval. The project proponent must provide acceptable solutions to ensure Metropolitan's rights-of-way are not negatively affected by changes in the drainage conditions. Plans showing the changes, with a copy of a supporting hydrology report and hydraulic calculations, must be submitted to Metropolitan for review and approval. Long term maintenance of any proposed drainage facilities must be the responsibility of the project proponent, City, County, homeowner's association, etc., with a clear understanding of where this responsibility lies. If drainage must be discharged across Metropolitan's rights-of-way, it must be carried across by closed conduit or lined open channel and must be shown on the plans.

7.2 Metropolitan's Blowoff and Pumpwell Structures

Any changes to the existing local watercourse systems will need to be designed to accommodate Metropolitan's blowoff and pumpwell structures, which periodically convey discharged water from Metropolitan's blowoff and pumping well structures during pipeline dewatering. The project proponents' plans should include details of how these discharges are accommodated within the proposed development and must be submitted to Metropolitan for review and approval. Any blowoff discharge lines impacted must be modified accordingly at the expense of the project proponent.

8.0 Grading and Settlement

8.1 Changes in Cover over Metropolitan Pipelines

The existing cover over Metropolitan's pipelines must be maintained unless Metropolitan determines that proposed changes in grade and cover do not pose a hazard to the integrity of the pipeline or an impediment to its maintenance capability. Load and settlement or rebound due to change in cover over a Metropolitan pipeline or ground in the area of Metropolitan's rights-of-way will be factors considered by Metropolitan during project review.

In general, the minimum cover over a Metropolitan pipeline is 4 feet and the maximum cover varies per different pipeline. Any changes to the existing grade may require that Metropolitan's pipeline be potholed under Metropolitan's supervision to verify the existing cover.

8.2 Settlement

Any changes to the existing topography in the area of Metropolitan's pipeline or right-of-way that result in significant settlement or lateral displacement of Metropolitan's pipelines are not acceptable. Metropolitan may require submittal of a soils report showing the predicted settlement of the pipeline at 10-foot intervals for review. The data must be carried past the point of zero change in each direction and the actual size and varying depth of the fill must be considered when determining the settlement. Possible settlement due to soil collapse, rebound and lateral displacement must also be included.

In general, the typical maximum allowed deflection for Metropolitan's pipelines must not exceed a deflection of 1/4-inch for every 100 feet of pipe length. Metropolitan may require additional information per its Geotechnical Guidelines. Please contact Metropolitan's Substructures Team for a copy of the Geotechnical Guidelines.

9.0 Construction Equipment

9.1 Review of Proposed Equipment

Use of equipment across or adjacent to Metropolitan's facilities is subject to prior review and written approval by Metropolitan. Excavation, backfill, and other work in the vicinity of Metropolitan's facilities must be performed only by methods and with equipment approved by Metropolitan. A list of all equipment to be used must be submitted to Metropolitan a minimum of 30 days before the start of work.

A. For equipment operating within paved public roadways, equipment that imposes loads not greater than that of an AASHTO H-20 vehicle (see Figure 1 on Page 21) may operate across or adjacent to Metropolitan's pipelines provided the equipment operates in non-vibratory mode and the road remains continuously paved.

B. For equipment operating within unpaved public roadways, when the total cover over Metropolitan's pipeline is 10 feet or greater, equipment imposing loads no greater than those imposed by an AASHTO H-20 vehicle may operate over or adjacent to the pipeline provided the equipment is operated in non-vibratory mode. For crossings, vehicle path shall be maintained in a smooth condition, with no breaks in grade for 3 vehicle lengths on each side of the pipeline.

9.2 Equipment Restrictions

In general, no equipment may be used closer than 20 feet from all Metropolitan above-ground structures. The area around the structures should be flagged to prevent equipment encroaching into this zone.

9.3 Vibratory Compaction Equipment

Vibratory compaction equipment may not be used in vibratory mode within 20 feet of the edge of Metropolitan's pipelines.

9.4 Equipment Descriptions

The following information/specifications for each piece of equipment should be included on the list:

A. A description of the equipment, including the type, manufacturer, model year, and model number. For example, wheel tractor-scraper, 1990 Caterpillar 627E.

B. The empty and loaded total weight and the corresponding weight distribution. If equipment will be used empty only, it should be clearly stated.

C. The wheel base (for each axle), tread width (for each axle), and tire footprint (width and length) or the track ground contact (width and length), and track gauge (center to center of track).

10.0 Excavations Close to Metropolitan Facilities

10.1 Shoring Design Submittal

Excavation that impacts Metropolitan's facilities requires that the contractor submit an engineered shoring design to Metropolitan for review and acceptance a minimum of 30 days before the scheduled start of excavation. Excavation may not begin until the shoring design is accepted in writing by Metropolitan.

Shoring design submittals must include all required trenches, pits, and tunnel or jacking operations and related calculations. Before starting the shoring design, the design engineer should consult with Metropolitan regarding Metropolitan's requirements, particularly as to any special procedures that may be required.

10.2 Shoring Design Requirements

Shoring design submittals must be stamped and signed by a California registered civil or structural engineer. The following requirements apply:

A. The submitted shoring must provide appropriate support for soil adjacent to and under Metropolitan's facilities.

B. Shoring submittals must include detailed procedures for the installation and removal of the shoring.

C. Design calculations must follow the Title 8, Chapter 4, Article 6 of the California Code of Regulations (CCR) guidelines. Accepted methods of analysis must be used.

D. Loads must be in accordance with the CCR guidelines or a soils report by a geotechnical consultant.

E. All members must be secured to prevent sliding, falling, or kickouts.

Metropolitan's pipelines must be located by potholing under Metropolitan's supervision before the beginning construction. Use of driven piles within 20 feet of the centerline of Metropolitan's pipeline is not allowed. Piles installed in drilled holes must have a minimum 2-foot clearance between Metropolitan's pipeline and the edge of the drilled hole, and a minimum of 1-foot clearance between any part of the shoring and Metropolitan's pipeline.

11.0 Support of Metropolitan Facilities

11.1 Support Design Submittal

If temporary support of a Metropolitan facility is required, the contractor shall submit a support design plan to Metropolitan for review and approval a minimum of 30 days before the scheduled start of work. Work may not begin until the support design is approved in writing by Metropolitan. Before starting design, the design engineer should consult with Metropolitan regarding Metropolitan's requirements.

11.2 Support Design Requirements

Support design submittals must be prepared, stamped, and signed by a California registered civil or structural engineer. The following requirements apply:

A. Support drawings must include detailed procedures for the installation and removal of the support system.

B. Design calculations must follow accepted practices, and accepted methods of analysis must be used.

C. Support designs must show uniform support of Metropolitan's facilities with minimal deflection.

D. The total weight of the facility must be transferred to the support system before supporting soil is fully excavated.

E. All members must be secured to prevent sliding, falling, or kickouts.

12.0 Backfill

12.1 Metropolitan Pipeline Not Supported

In areas where a portion of Metropolitan pipeline is not supported during construction, the backfill under and to an elevation of 6 inches above the top of the pipeline must be one-sack minimum cement sand slurry. To prevent adhesion of the slurry to Metropolitan's pipeline, a minimum 6-mil-thick layer of polyethylene sheeting or similar approved sheeting must be placed between the concrete support and the pipeline.

12.2 Metropolitan Pipeline Partially Exposed

In areas where a Metropolitan pipeline is partially exposed during construction, the backfill must be a minimum of 6 inches above the top of the pipeline with sand compacted to minimum 90 percent compaction.

12.3 Metropolitan Cut and Cover Conduit on Colorado River Aqueduct (CRA)

In areas where a Metropolitan cut and cover conduit is exposed, the following guidelines apply:

A. No vehicle or equipment shall operate over or cross the conduit when the cover is less than 3 feet.

B. Track-type dozer with a gross vehicle weight of 12,000 lbs or less may be used over the conduit when the cover is a minimum of 3 feet.

C. Wheeled vehicles with a gross vehicle weight of 8,000 lbs or less may operate over the conduit when the cover is a minimum of 4 feet.

D. Tracked dozer or wheeled vehicle should be used to push material over the conduit from the side.

E. Tracked dozer or wheeled vehicle should gradually increase cover on one side of the conduit and then cross the conduit and increase cover on the other side of the conduit. The cover should be increased on one side of the conduit until a maximum of 2 feet of fill has been placed. The cover over the conduit is not allowed to be more than 2 feet higher on one side of the conduit than on the other side.

F. The cover should be gradually increased over the conduit until the grade elevations have been restored.

13.0 Piles

13.1 Impacts on Metropolitan Pipelines

Pile support for structures could impose lateral, vertical and seismic loads on Metropolitan's pipelines. Since the installation of piles could also cause settlement of Metropolitan pipelines, a settlement and/or lateral deformation study may be required for pile installations within 50 feet of Metropolitan's pipelines. Metropolitan may require additional information per its Geo-technical Guidelines for pile installation. Please contact Metropolitan's Substructures Team for a copy of the Geotechnical Guidelines.

13.2 Permanent Cast-in-place Piles

Permanent cast-in-place piles must be constructed so that down drag forces of the pile do not act on Metropolitan's pipeline. The pile must be designed so that down drag forces are not developed from the ground surface to springline of Metropolitan's pipeline.

Permanent cast-in-place piles shall not be placed closer than 5 feet from the edge of Metropolitan's pipeline. Metropolitan may require additional information per its Geo-technical Guidelines for pile installation. Please contact Metropolitan's Substructures Team for a copy of the Geotechnical Guidelines.

14.0 Protective Slabs for Road Crossings Over Metropolitan Pipelines

Protective slabs must be permanent cast-in-place concrete protective slabs configured in accordance with Drawing SK-1 (See Figure 2 on Page 22).

The moments and shear for the protective slab may be derived from the American Association of State Highway and Transportation Officials (AASHTO). The following requirements apply:

A. The concrete must be designed to meet the requirements of AASHTO

B. Load and impact factors must be in accordance with AASHTO. Accepted methods of analysis must be used.

C. The protective slab design must be stamped and signed by a California registered civil or structural engineer and submitted to Metropolitan with supporting calculations for review and approval.

Existing protective slabs that need to be lengthened can be lengthened without modification, provided the cover and other loading have not been increased.

15.0 Blasting

At least 90 days prior to the start of any drilling for rock excavation blasting, or any blasting in the vicinity of Metropolitan's facilities, a site-specific blasting plan must be submitted to Metropolitan for review and approval. The plan must consist of, but not be limited to, hole diameters, timing sequences, explosive weights, peak particle velocities (PPV) at Metropolitan pipelines/structures, and their distances to blast locations. The PPV must be estimated based on a site-specific power law equation. The power law equation provides the peak particle velocity versus the scaled distance and must be calibrated based on measured values at the site.

16.0 Metropolitan Plan Review Costs, Construction Costs and Billing

16.1 Plan Review Costs

Metropolitan plan reviews requiring 8 labor hours or less are generally performed at no cost to the project proponent. Metropolitan plan reviews requiring more than 8 labor hours must be paid by the project proponent, unless the project proponent has superior rights at the project area. The plan review will include a written response detailing Metropolitan's comments, requirements, and/or approval.

A deposit of funds in the amount of the estimated cost and a signed letter agreement will be required from the project proponent before Metropolitan begins or continues a detailed engineering plan review that exceeds 8 labor hours.

16.2 Cost of Modification of Facilities Performed by Metropolitan

Cost of modification work conducted by Metropolitan will be borne by the project proponent, when Metropolitan has paramount/prior rights at the subject location.

Metropolitan will transmit a cost estimate for the modification work to be performed (when it has paramount/prior rights) and will require that a deposit, in the amount of the estimate, be received before the work will be performed.

16.3 Final Billing

Final billing will be based on the actual costs incurred, including engineering plan review, inspection, materials, construction, and administrative overhead charges calculated in accordance with Metropolitan's standard accounting practices. If the total cost is less than the deposit, a refund will be made; however, if the cost exceeds the deposit, an invoice for the additional amount will be forwarded for payment.

17.0 Street Vacations and Reservation of Easements for Metropolitan

A reservation of an easement is required when all or a portion of a public street where Metropolitan facilities are located is to be vacated. The easement must be equal to the street width being vacated or a minimum 40 feet. The reservation must identify Metropolitan as a "public entity" and not a "public utility," prior to recordation of the vacation or tract map. The reservation of an easement must be submitted to Metropolitan for review prior to final approval.

18.0 Metropolitan Land Use Guidelines

If you are interested in obtaining permission to use Metropolitan land (temporary or long term), a Land Use Form must be completed and submitted to Metropolitan for review and consideration. A nonrefundable processing fee is required to cover Metropolitan's costs for reviewing your request. Land Use Request Forms can be found at:

http://mwdh2o.com/PDF_Doing_Your_Business/4.7.1_Land_Use_Request_form_revised.pdf

The request should be emailed to RealEstateServices@mwdh2o.com,or contact the Real Property Development and Management (RPDM) Group at (213) 217-7750.

After the initial application form has been submitted, Metropolitan may require the following in order to process your request:

A. A map indicating the location(s) where access is needed, and the location & size (height, width and depth) of any invasive subsurface activity (boreholes, trenches, etc.).

B. The California Environmental Quality Act (CEQA) document(s) or studies that have been prepared for the project (e.g., initial study, notice of exemption, Environmental Impact Report (EIR), Mitigated Negative Declaration (MND), etc.).

C. A copy of an ACORD insurance certification naming Metropolitan as an additional insured, or a current copy of a statement of self-insurance.

D. Confirmation of the legal name of the person(s) or entity(ies) that are to be named as the permittee(s) in the entry permit.

E. Confirmation of the purpose of the land use.

F. The name of the person(s) with the authority to sign the documents and any specific signature title block requirements for that person or any other persons required to sign the document (i.e., legal counsel, Board Secretary/Clerk, etc.).

G. A description of any vehicles that will have access to the property. The exact make or model information is not necessary; however, the general vehicle type, expected maximum dimensions (height, length, width), and a specific maximum weight must be provided.

Land use applications and proposed use of the property must be compatible with Metropolitan's present and/or future use of the property. Any preliminary review of your request by Metropolitan shall not be construed as a promise to grant any property rights for the use of Metropolitan's property.

19.0 Compliance with Environmental Laws and Regulations

As a public agency, Metropolitan is required to comply with all applicable environmental laws and regulations related to the activities it carries out or approves. Consequently, project plans, maps, and other information must be reviewed to determine Metropolitan's obligations pursuant to state and federal environmental laws and regulations, including, but not limited to:

A. California Environmental Quality Act (CEQA) (Public Resources Code 21000-21177) and the State CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3, Sections 1500-15387)

B. Federal Endangered Species Act (ESA) of 1973, 16 U.S.C. §§ 1531, et seq.

C. California Fish and Game Code Sections 2050-2069 (California ESA)

D. California Fish and Game Code Section 1602

E. California Fish and Game Code Sections 3511, 4700, 5050 and 5515 (California fully protected species)

F. Federal Migratory Bird Treaty Act (MBTA), 16 U.S.C. §§ 703-712

G. Federal Clean Water Act (including but not limited to Sections 404 and 401) 33 U.S.C. §§ 1342, 1344)

H. Porter Cologne Water Quality Control Act of 1969, California Water Code §§ 13000-14076.

I. Title 22, California Code of Regulations, Chapter 16 (California Waterworks Standards), Section 64572 (Water Main Separation)

Metropolitan may require the project applicant to pay for any environmental review, compliance and/or mitigation costs incurred to satisfy such legal obligations.

20.0 Paramount Rights / Metropolitan's Rights within Existing Rights-of-Way

Facilities constructed within Metropolitan's rights-of-way shall be subject to the paramount right of Metropolitan to use its rights-of-way for the purpose for which they were acquired. If at any time Metropolitan or its assigns should, in the exercise of their rights, find it necessary to remove or relocate any facilities from its rights-of-way, such removal and replacement or relocation shall be at the expense of the owner of the facility.

21.0 Disclaimer and Information Accuracy

Metropolitan assumes no responsibility for the accuracy of the substructure information herein provided. The user assumes responsibility for verifying substructure locations before excavating and assumes all liability for damage to Metropolitan's facilities as a result of such excavation. Additionally, the user is cautioned to conduct surveys and other field investigations as you may deem prudent, to assure that your project plans are correct. The relevant representative from Metropolitan must be called at least two working days, before any work activity in proximity to Metropolitan's facilities.

It generally takes 30 days to review project plans and provide written responses. Metropolitan reserves the right to modify requirements based on case-specific issues and regulatory developments.

Table 1: General Guidelines for Pipeline Separation between Metropolitan's Pipeline[1] and Sanitary Sewer[2] or Hazardous Fluid Pipeline[3]

Pipeline Crossings	Metropolitan requires that sanitary sewer and hazardous fluid pipelines that cross Metropolitan's pipelines have special pipe construction (no joints) **and** secondary containment[4]. This is required for the full width of Metropolitan's rights-of-way or within 10 feet tangent to the outer edges of Metropolitan's pipeline within public streets. Additionally, sanitary sewer and hazardous fluid pipelines crossing Metropolitan's pipelines must be perpendicular and maintain a minimum 1-foot vertical clearance between the top and the bottom of Metropolitan's pipeline and the pipe casing. These requirements apply to all sanitary sewer crossings regardless if the sanitary sewer main is located below or above Metropolitan's pipeline.
Parallel Pipeline	Metropolitan generally does not permit the installation of longitudinal pipelines along its rights-of-way. Within public streets, Metropolitan requires that all parallel sanitary sewer, hazardous fluid pipelines and/or non-potable utilities be located a minimum of 10 feet from the outside edges of Metropolitan's pipelines. When 10-foot horizontal separation criteria cannot be met, longitudinal pipelines require special pipe construction (no joints) **and** secondary containment[4].
Sewer Manhole	Sanitary sewer manholes are not allowed within Metropolitan's rights-of-way. Within public streets, Metropolitan requests manholes parallel to its pipeline be located a minimum of 10 feet from the outside edges of its pipelines. When 10 foot horizontal separation criteria cannot be met, the structure must have secondary containment[5].

Notes:

[1] *Separation distances are measured from the outer edges of each pipe.*

[2] *Sanitary sewer requirements apply to all recycled water treated to less than disinfected tertiary recycled water (disinfected secondary recycled water or less).* Recycled water definitions are included in Title 22, California Code of Regulations, Chapter 3 (Water Recycling Criteria), Section 60301.

[3] *Hazardous fluids include e.g., oil, fuels, chemicals, industrial wastes, wastewater sludge, etc.*

[4] *Secondary Containment for Pipeline - Secondary containment consists of a continuous pipeline sleeve (no joints). Examples acceptable to Metropolitan include welded steel pipe with grout in annular space and cathodic protection (unless coated with non-conductive material) and High Density Polyethylene (HDPE) pipe with fusion-welded joints.*

[5] *Secondary Containment for Structures – Secondary containment consists of external HDPE liner or other approved method.*

Table 2: General Guidelines for Pipeline Separation between Metropolitan's Pipeline[1] and Storm Drain and/or Disinfected Tertiary Recycled Water[2]

Pipeline Crossings	Metropolitan requires crossing pipelines to be special pipe construction (no joints) or have secondary containment[3] within 10-feet tangent to the outer edges of Metropolitan's pipeline. Additionally, pipelines crossing Metropolitan's pipelines must be perpendicular and maintain a minimum 1-foot vertical clearance.
Parallel Pipeline	Metropolitan generally does not permit the installation of longitudinal pipelines along its rights-of-way. Within public streets, Metropolitan requests that all parallel pipelines be located a minimum of 10 feet from the outside edges of Metropolitan's pipelines. When 10-foot horizontal separation criteria cannot be met, special pipe construction (no joints) or secondary containment[3] are required.
Storm Drain Manhole	Permanent utility structures (e.g., manhole. catch basin, inlets) are not allowed within Metropolitan's rights-of-way. Within public streets, Metropolitan requests all structures parallel to its pipeline be located a minimum of 10 feet from the outside edges of its pipelines. When 10 foot horizontal separation criteria cannot be met, the structure must have secondary containment[4].

Notes:

[1] *Separation distances are measured from the outer edges of each pipe.*

[2] *Disinfected tertiary recycled water as defined* in Title 22, California Code of Regulations, Chapter 3 (*Water Recycling Criteria*), Section 60301.

[3] *Secondary Containment for Pipeline - Secondary containment consists of a continuous pipeline sleeve (no joints). Examples acceptable to Metropolitan include welded steel pipe with grout in annular space and cathodic protection (unless coated with non-conductive material) and High Density Polyethylene (HDPE) pipe with fusion-welded joints.*

[4] *Secondary Containment for Structures – Secondary containment consists of external HDPE liner or other approved method.*

Table 3: General Guidelines for Pipeline Separation[1] between Metropolitan's Pipeline and Recycled Water[2,4] Irrigations

Pressurized recycled irrigation mainlines	• Crossings - must be perpendicular and maintain a minimum 1-foot vertical clearance. Crossing pressurized recycled irrigation mainlines must be special pipe construction (no joints) or have secondary containment[3] within 10-feet tangent to the outer edges of Metropolitan's pipeline. • Longitudinal - must maintain a minimum 10-foot horizontal separation and route along the perimeter of Metropolitan's rights-of-way where possible.
Intermittently Energized Recycled Water Irrigation System Components	• Crossings - must be perpendicular and maintain a minimum 1-foot vertical clearance. Crossing irrigation laterals within 5-feet tangent to the outer edges of Metropolitan's pipeline must be special pipe construction (no joints) or have secondary containment[3]. • Longitudinal – must maintain a minimum 5-foot horizontal separation between all intermittently energized recycled water irrigation system components (e.g. irrigation lateral lines, control valves, rotors) and the outer edges of Metropolitan's pipeline. Longitudinal irrigation laterals within 5-feet tangent to the outer edges of Metropolitan's pipeline must be special pipe construction (no joints) or have secondary containment[3].
Irrigation Structures	Irrigation structures such as meters, pumps, control valves, etc. must be located outside of Metropolitan's rights-of-way.
Irrigation spray rotors near Metropolitan's aboveground facilities	Irrigation spray rotors must be located a minimum of 20-foot from any Metropolitan above ground structures with the spray direction away from these structures. These rotors should be routinely maintained and adjusted as necessary to ensure no over-spray into 20-foot clear zones.
Irrigations near open canals and aqueducts	Irrigation with recycled water near open canals and aqueducts will require a setback distance to be determined based on site-specific conditions. Runoff of recycled water must be contained within an approved use area and not impact Metropolitan facilities. Appropriate setbacks must also be in place to prevent overspray of recycled water impacting Metropolitan's facilities.

Notes:

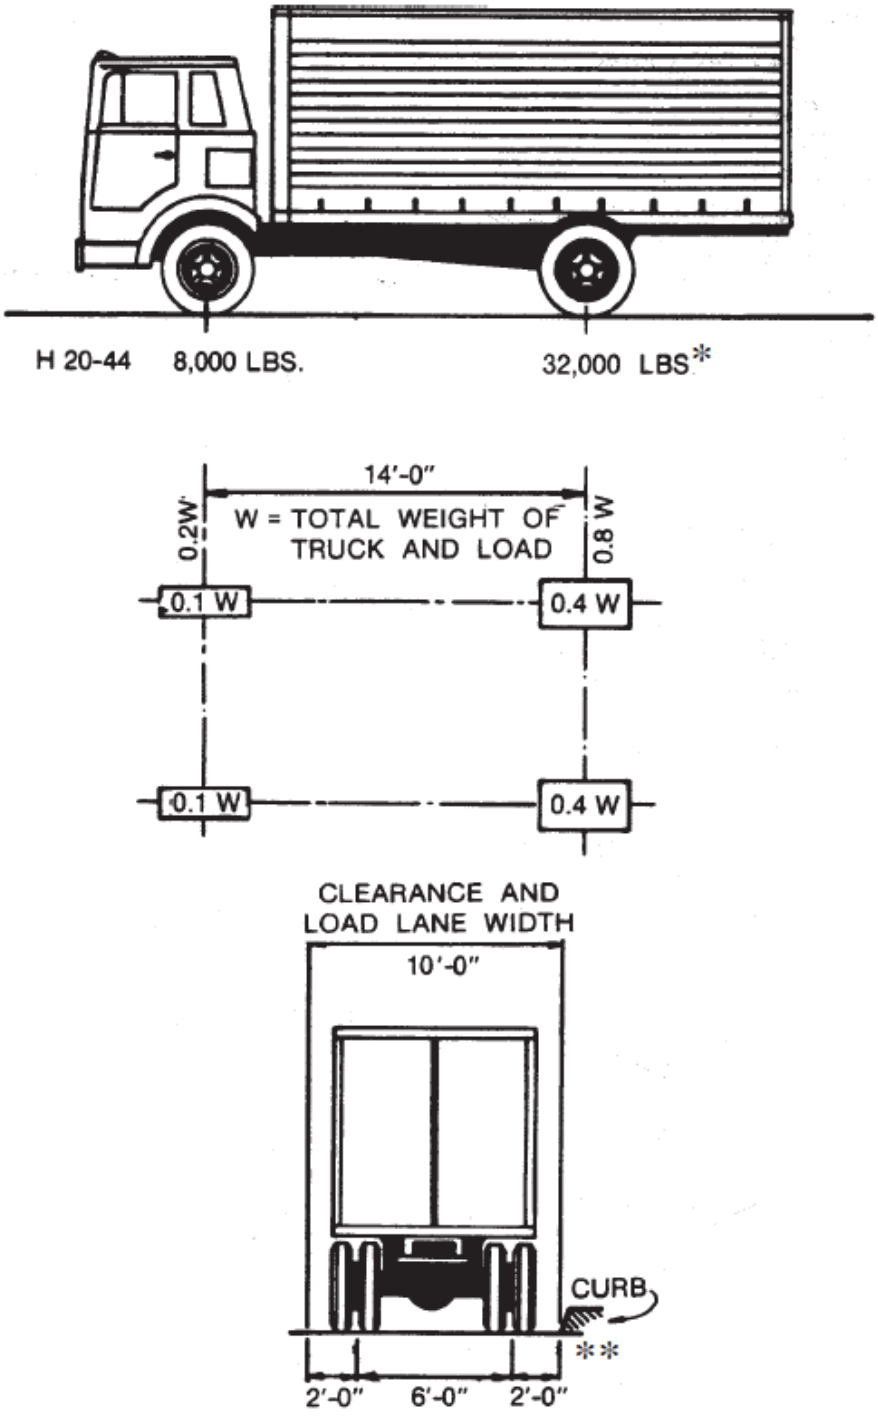
[1] *Separation distances are measured from the outer edges of each pipe.*

[2] *Requirements for recycled water irrigation apply to all levels of treatment of recycled water for non-potable uses.* Recycled water definitions are included in Title 22, California Code of Regulations, Chapter 3 (*Water Recycling Criteria*), Section 60301.

[3] *Secondary Containment for Pipeline - Secondary containment consists of a continuous pipeline sleeve (no joints). Examples acceptable to Metropolitan include welded steel pipe with grout in annular space and cathodic protection (unless coated with non-conductive material) and High Density Polyethylene (HDPE) pipe with fusion-welded joints.*

[4] *Irrigation with recycled water shall not be applied directly above Metropolitan's treated water pipelines.*

Figure 1: AASHTO H-20 Loading



Note: The H loadings consist of a two-axle truck or the corresponding lane loadings as illustrated above. The H loadings are designated "H" followed by a number indicating the gross weight in tons of the standard truck.

February 7, 2022

RE: Sepulveda Transit Corridor Connection to Santa Monica Airport

To whom it may concern:

Santa Monica College is supportive of the Sepulveda Transit Corridor project as it will provide a fast and reliable alternative to traffic on the I-405. Regardless of the mode or alignment selected, to enhance the utility of this project now and in the future, we would like to see this project extended to include a southern terminus station at the site of the Santa Monica Airport.

The airport area contains a mix of uses including the Santa Monica College Bundy Campus. SMC serves about 30,000 students each semester, and more than half of them rely on public transit to arrive on campus. The Bundy Campus supports about fifteen percent of SMC's class offerings at present. Additional future use of the campus site is currently under study to accommodate housing for students who are homeless or at risk of homelessness.

Of great interest is the opportunity for a direct connection between UCLA and the Bundy Campus. One in thirteen of upper division UCLA students are transfers from Santa Monica College. This transit project would be quite beneficial for SMC students and staff.

We also note that in the future, when the Santa Monica Airport closes in 2028, the Airport site is envisioned to be transformed into a large regional park, with the potential for some associated development if approved by the community. This new park will represent a strong regional draw, especially when coupled with the existing land uses.

If not feasible to accommodate this station at the present, we hope that future extensions of this project will include the requested station.

Please let me know if I can provide any further information.

Sincerely,

Don Girard

Notice of Preparation Comments – Sepulveda Transit Corridor Project

Dear Mr. Carter:

The Santa Monica Mountains Conservancy (Conservancy) has reviewed the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the Metro Sepulveda Transit Corridor Project (Project) proposed by the Los Angeles County Metropolitan Transportation Authority (LACMTA).

The Conservancy was established in 1980 by the California State Legislature (Public Resources Code § 33200 *et seq.*), and in 2021 the California Attorney General recognized the Conservancy as a Trustee Agency under the California Environmental Quality Act (CEQA) with jurisdiction over natural resources throughout the Santa Monica Mountains Zone.

The proposed Project would construct and operate a fixed guideway public transportation line from a station near the Van Nuys Metrolink/Amtrak Station southerly across the Santa Monica Mountains to a connection with LACMTA's Metro E Line. This proposed Project currently has six alternatives, not including the "No Build" alternative, that site the public transportation line in the vicinity of the Sepulveda Pass/Interstate 405 (I-405) corridor.

The Sepulveda Pass/I-405 corridor divides the Santa Monica Mountains into western and eastern sections and represents the largest barrier to wildlife movement between these divided sections. Because the Project (specifically Alternatives 1, 2, and 3) would introduce additional barriers to mountain lion (*Puma concolor*) and other mammal species movement in the Sepulveda Pass/I-405 corridor, the Project would decrease the viability of large mammal sub-populations on both sides of the freeway.

The California Fish and Game Commission is currently reviewing a petition to list Southern California/Central Coast Evolutionary Significant Unit of mountain lion as threatened under the California Endangered Species Act (CESA). While under review, mountain lions in the Project's Study Area are granted full protection of a threatened species under CESA.

Thus, the Conservancy recommends LACMTA incorporate a wildlife crossing structure over the 405 freeway and Sepulveda Boulevard into the analysis for all proposed Alternatives. For Alternatives 1, 2, and 3, a wildlife crossing structure would help minimize adverse Project impacts to habitat connectivity in the Santa Monica Mountains. For Alternatives 4, 5, and 6, a wildlife crossing structure would help mitigate for the existing intra-mountain range movement barriers posed by the freeway and Sepulveda Boulevard.

The DEIR must also analyze how the Project alternatives would affect the existing wildlife freeway crossings at the Center Drive Bridge (including consideration of adding a Sepulveda Boulevard overpass), the Sepulveda Boulevard underpass, the Bel Air Crest Road underpass, and the Mulholland Drive overpass. Because future transportation projects may further degrade habitat connectivity, the only permanent solution to habitat connectivity on both sides of the 405 freeway is a dedicated wildlife crossing structure over the both the freeway and Sepulveda Boulevard. The Mountains Recreation and Conservation Authority holds a large open space easement on the west side of the freeway. Where this easement contacts Sepulveda Boulevard, directly across the freeway is a large open space holding owned by the Santa Monica Mountains Conservancy. This open space contact zone currently appears to be the consensus area for a new wildlife overpass.

To further minimize impacts to natural resources of the Santa Monica Mountains, the Conservancy also recommends LACMTA prepare a monorail Alternative that results in no net expansion of the Sepulveda Pass/I-405 corridor. This Alternative may require the conversion of motor vehicle lanes to public transportation; however, this outcome would further all goals and objectives outlined in Table 1 of the NOP and should be presented as the most socially, economically, and environmentally responsible alternative.

The Conservancy appreciates the opportunity to provide early comments for this Project and looks forward to further consultation. If you have any questions or concerns

regarding this letter, please contact Paul Edelman, Deputy Director, at edelman@smmc.ca.gov, (310) 589-3200 ext. 128, or at the above letterhead address.

Sincerely,

Linda Parks

Notice of Preparation of an Environmental Impact Report for the Sepulveda Transit Corridor Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Environmental Impact Report (EIR). Please send a copy of the EIR upon its completion and public release directly to South Coast AQMD as copies of the EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website[1] as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod[2] land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds[3] and localized significance thresholds (LSTs)[4] to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road

[1] South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook.
[2] CalEEMod is available free of charge at: www.caleemod.com.
[3] South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.
[4] South Coast AQMD's guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA ***operational*** thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment[5].

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook[1], South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2016 Air Quality Management Plan[6], and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy[7].

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at lsun@aqmd.gov.

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Sepulveda Transit Corridor Project [SCAG NO. IGR10533]

Dear Mr. Carter,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Sepulveda Transit Corridor Project ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is responsible for providing informational resources to regionally significant plans, projects, and programs per the California Environmental Quality Act (CEQA) to facilitate the consistency of these projects with SCAG's adopted regional plans, to be determined by the lead agencies.[1]

Pursuant to Senate Bill (SB) 375, SCAG is the designated Regional Transportation Planning Agency under state law and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS). SCAG's feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) goals and align with RTP/SCS policies. Finally, SCAG is also the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Sepulveda Transit Corridor in Los Angeles County. The proposed project includes the construction of a high-capacity fixed guideway transit option between the Van Nuys Metrolink/Amtrak Station to the Metro E Line (Expo) and involves six build alternatives with variations of aerial monorail and partially- and fully-underground heavy rail with different general alignments.

When available, please email environmental documentation to *IGR@scag.ca.gov* providing, at a minimum, the full public comment period for review.

If you have any questions regarding the attached comments, please contact the Intergovernmental Review (IGR) Program, attn.: Anita Au, Senior Regional Planner, at (213) 236-1874 or IGR@scag.ca.gov. Thank you.

Sincerely,

Frank Wen, Ph.D.
Manager, Planning Strategy Department

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2020 RTP/SCS (Connect SoCal) for the purpose of determining consistency for CEQA.

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE SEPULVEDA TRANSIT CORRIDOR PROJECT [SCAG NO. IGR10533]

CONSISTENCY WITH CONNECT SOCAL

SCAG provides informational resources to facilitate the consistency of the proposed project with the adopted 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with Connect SoCal.

For regionally significant transportation projects, should major project changes (i.e. change in scope, completion year, and/or costs) take place as a result of the environmental review process that are not consistent with the latest RTP/SCS, project sponsors/lead agency should consult with their County Transportation Commission (CTC) to request for SCAG to amend the RTP/SCS to include the latest project information.

The proposed project is currently included in Connect SoCal [RTP ID 1160001]. LA Metro should coordinate with SCAG on any updates to the project scope in the RTP/SCS.

CONNECT SOCAL GOALS

The SCAG Regional Council fully adopted Connect SoCal in September 2020. Connect SoCal, also known as the 2020 – 2045 RTP/SCS, builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health. The goals included in Connect SoCal may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project. Among the relevant goals of Connect SoCal are the following:

SCAG CONNECT SOCAL GOALS	
Goal #1:	*Encourage regional economic prosperity and global competitiveness*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*
Goal #3:	*Enhance the preservation, security, and resilience of the regional transportation system*
Goal #4:	*Increase person and goods movement and travel choices within the transportation system*
Goal #5:	*Reduce greenhouse gas emissions and improve air quality*
Goal #6:	*Support healthy and equitable communities*
Goal #7:	*Adapt to a changing climate and support an integrated regional development pattern and transportation network*
Goal #8:	*Leverage new transportation technologies and data-driven solutions that result in more efficient travel*
Goal #9:	*Encourage development of diverse housing types in areas that are supported by multiple transportation options*
Goal #10:	*Promote conservation of natural and agricultural lands and restoration of habitats*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG CONNECT SOCAL GOALS		
	Goal	Analysis
Goal #1:	*Encourage regional economic prosperity and global competitiveness*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
Goal #2:	*Improve mobility, accessibility, reliability and travel safety for people and goods*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
etc.		etc.

Connect SoCal Strategies

To achieve the goals of Connect SoCal, a wide range of land use and transportation strategies are included in the accompanying twenty (20) technical reports. Of particular note are multiple strategies included in Chapter 3 of Connect SoCal intended to support implementation of the regional Sustainable Communities Strategy (SCS) framed within the context of focusing growth near destinations and mobility options; promoting diverse housing choices; leveraging technology innovations; supporting implementation of sustainability policies; and promoting a Green Region. To view Connect SoCal and the accompanying technical reports, please visit the Connect SoCal webpage. Connect SoCal builds upon the progress from previous RTP/SCS cycles and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that helps the SCAG region strive towards a more sustainable region, while meeting statutory requirements pertinent to RTP/SCSs. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

DEMOGRAPHICS AND GROWTH FORECASTS

A key, formative step in projecting future population, households, and employment through 2045 for Connect SoCal was the generation of a forecast of regional and county level growth in collaboration with expert demographers and economists on Southern California. From there, jurisdictional level forecasts were ground-truthed by subregions and local agencies, which helped SCAG identify opportunities and barriers to future development. This forecast helps the region understand, in a very general sense, where we are expected to grow, and allows SCAG to focus attention on areas that are experiencing change and may have increased transportation needs. After a year-long engagement effort with all 197 jurisdictions one-on-one, 82 percent of SCAG's 197 jurisdictions provided feedback on the forecast of future growth for Connect SoCal. SCAG also sought feedback on potential sustainable growth strategies from a broad range of stakeholder groups – including local jurisdictions, county transportation commissions, other partner agencies, industry groups, community-based organizations, and the general public. Connect SoCal utilizes a bottom-up approach in that total projected growth for each jurisdiction reflects feedback received from jurisdiction staff, including city managers, community development/planning directors, and local staff. Growth at the neighborhood level (i.e., transportation analysis zone (TAZ) reflects entitled projects and adheres to current general and specific plan maximum densities as conveyed by jurisdictions (except in cases where entitled projects and development agreements exceed these capacities as calculated by SCAG). Neighborhood level growth projections also feature strategies that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve

Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Connect SoCal's Forecasted Development Pattern is utilized for long range modeling purposes and does not supersede actions taken by elected bodies on future development, including entitlements and development agreements. SCAG does not have the authority to implement the plan -- neither through decisions about what type of development is built where, nor what transportation projects are ultimately built, as Connect SoCal is adopted at the jurisdictional level. Achieving a sustained regional outcome depends upon informed and intentional local action. To access jurisdictional level growth estimates and forecasts for years 2016 and 2045, please refer to the Connect SoCal Demographics and Growth Forecast Technical Report. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts				Adopted County of Los Angeles Forecasts			
	Year 2020	**Year 2030**	**Year 2035**	**Year 2045**	**Year 2020**	**Year 2030**	**Year 2035**	**Year 2045**
Population	19,517,731	20,821,171	21,443,006	22,503,899	10,407,326	10,899,849	11,173,987	11,673,987
Households	6,333,458	6,902,821	7,170,110	7,633,451	3,471,759	3,749,346	3,884,871	4,119,336

MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for Connect SoCal for guidance, as appropriate. SCAG's Regional Council certified the PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on May 7, 2020 and also adopted a PEIR Addendum and amended the MMRP on September 3, 2020 (please see the PEIR webpage and scroll to the bottom of the page for the PEIR Addendum). The PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

RE: Comments on Sepulveda Transit Corridor Project Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR)

Dear Mr. Carter:

The Southern California Regional Rail Authority (SCRRA) has received and reviewed the Notice of Preparation for Metro Sepulveda Transit Corridor Project Notice of Preparation of a Draft Environmental Impact Report (DEIR). We appreciate the opportunity to share the issues of concern to SCRRA that will need to be explored in the DEIR. SCRRA will continue to work collaboratively with Metro to ensure our areas of concern are adequately addressed for this and all subsequent EIR documents.

We support the potential for the concepts you are studying to link Metro and Metrolink systems to major employment centers and destinations, providing more incentives for travelers to use public transit. Our comments are intended to encourage deeper integration and connectivity between the Metro and Metrolink systems, particularly at the Metrolink Van Nuys Station.

SCRRA is a regional transportation provider and is very supportive of projects in the region that provide connectivity between Metrolink rail lines and other modes of transportation. We commend the inclusion of connections to Metrolink Van Nuys Station in the route concepts for the proposed Sepulveda Transit Corridor Project. The Metrolink station would link the proposed routes, whether it be monorail or HRT, to Metro train lines, and providing connections to the many cultural, entertainment, shopping, and employment centers in Westwood/UCLA, Santa Monica, and Culver City.

Part of the Metro Sepulveda Transit Corridor alignments being considered parallel the Metrolink Ventura County Line near the Van Nuys Station. As a result, SCRRA has identified the following areas and resources that need to be addressed in the analysis in the DEIR.

1. Traffic Circulation at Metrolink Van Nuys Station — With the north terminus station of the corridor adjacent to Metrolink Van Nuys Station, the DEIR should

study all potential options for parking and how that affects traffic circulation near the Metrolink Van Nuys Station.

2. Impacts to Existing Transit Operations – Metro rail Alternatives 1 to 5 call for a portion of the corridor's north segment to run parallel to Metrolink Ventura County Line (VCL) tracks. The DEIR should clearly state the alignment/design of the corridor and provide a comparison on how the alternatives are able to minimize interference with Metrolink's operation and constraint on future VCL track expansion.

   Furthermore, Alternatives 4, 5, and 6, Metro Maintenance and Service Facility (MSF) HRT vehicles are being considered to be located near the Metrolink VCL track, east of the Van Nuys Metrolink Station. The DEIR should clearly evaluate the location and the design of the MSF such that any MSF proposal will not interfere with Metrolink's operation and/or impact future VCL track and capacity expansion

3. Pedestrian Circulation, both in terms of safety and service effectiveness – The DEIR should provide clear state what provisions for passenger transferring between Metrolink and Metro stations.

Thank you again for providing us with the opportunity to comment on the NOP of DEIR. We look forward to our continued participation in this important transportation project that will provide many regional benefits. Should you have any questions, please feel free to contact Roderick Diaz at (213) 452-0455 or via e-mail at DiazR@scrra.net.

Sincerely,

Arnold Hackett

RE: UCLA Formal Comments on the Sepulveda Transit Corridor Project during Public Scoping Period

Dear Mr. Carter:

The University of California, Los Angeles (UCLA) appreciates the opportunity to provide comments on Metro's Sepulveda Transit Corridor (STC) project under the current scoping process. As a Trustee Agency for the STC project, the University actively participates in Metro's planning process. While other UCLA entities and stakeholders may submit separate feedback, this correspondence represents UCLA's formal comments under the STC scoping process.

UCLA ardently supports smart construction of the STC to better connect the Westside and the San Fernando Valley as well as other Metro lines across the metropolitan area. The completion of this critical project will improve quality of life throughout the L.A. region. Proper construction of the STC will provide much-needed and improved transit options to ensure Angelenos can access major employment, educational and cultural centers across Los Angeles. Therefore, UCLA strongly opposes Alternatives 1 and 2, and has grave concerns about Alternative 3 as currently presented. Alternatives 4, 5, and 6 are each significantly better for the Los Angeles region as a whole.

The STC not only will be one of the largest and most significant public works projects in the history of Los Angeles – and the nation – it is a once-in-a-lifetime opportunity to dramatically improve one of the worst traffic bottlenecks in the world. Therefore, we must get it right.

UCLA PREFERENCES AND CONCERNS REGARDING THE SIX PROJECT ALTERNATIVES

In reviewing Metro's six project alternatives, UCLA has outlined below preferences as well as concerns for several of the options. These comments focus less on the technology or mode (i.e.,

monorail versus heavy rail transit) and rather on how the alternatives are designed and expected to perform. UCLA's comments are guided by the following principle:

> Investing resources in a project as significant as the Sepulveda Transit Corridor must result in a system that enhances equity by transporting people directly to the places they need to go and that connects as seamlessly as possible with the existing rapid transit network, and does this while minimizing the impacts of operations on the neighborhoods through which it runs.

Building on our guiding principle, UCLA firmly believes that a successful Sepulveda Transit Corridor Metro line must include a station on the UCLA campus and a seamless connection to the Wilshire/Westwood Purple/D Line station. UCLA must be more readily and easily accessible to our Los Angeles community. As the region's premier public research university, including an exceptional medical center and the number one rated hospital in California, UCLA is also the third largest employer in L.A. County with a daytime population of over 84,000 students, faculty, staff, patients, and visitors. The campus is similar in size to the central business district of large U.S. cities. As a much-desired destination for the tens of thousands of Angelenos who are students, employees, patients and others, the university warrants an on-campus Metro station. Any STC proposal (such as Alternative 1 or 2) that relies on a shuttle to reach the campus would not attract maximum ridership potential and is destined to fail.

Alternative 1, which would create a monorail station on the west side of the 405 freeway and then connect to UCLA via a surface street shuttle bus, would so substantially increase the time it would take to travel from Van Nuys to campus that it would significantly decrease the incentive to use this transit option. As anyone who travels the streets of Westwood during rush hour knows, surface transportation is extremely slow. Taking a shuttle bus in mixed flow traffic could add 20 to 30 minutes (including transfers) to the time it would take to get from the Valley. Additionally, Alternative 1 does not provide a connection to the Wilshire/Westwood Purple/D Line station. **UCLA strongly opposes Alternative 1.**

Alternative 2, which would create a monorail station on the south side of Wilshire Boulevard at Veteran Avenue from which riders would cross a pedestrian bridge to connect to UCLA via an above-ground people mover, presents both similar and additional negative issues. While an above-ground people mover would, in theory, reduce the amount of time to get from the Wilshire station to campus, it still would add at least 10 to 15 minutes to travel time, reducing incentive to use it. Even worse, many stakeholders (including UCLA) would strongly oppose the construction, operational, and aesthetic impacts that such a people mover would have on the local community. Further, Alternative 2 assumes use of UCLA property for the automated people mover station, access to federal land on the south side of Wilshire, and the placement of a maintenance station in the vicinity. These presumptions have not been vetted or cleared

and are potentially insurmountable. Alternative 2 also fails to provide a seamless connection to the Wilshire/Westwood Purple/D Line station. **UCLA strongly opposes Alternative 2.**

Alternative 3 would tunnel from the proposed Getty Center station to a UCLA station, then surface south of campus and proceed via an aerial route to the corner of Wilshire and Veteran before crossing Wilshire and making its way back to the 405. While UCLA appreciates the effort to create an underground station on campus, Alternative 3 in its current form is also unacceptable.

First, the aerial portion of the route assumes that UCLA's Lot 36 at the corner of Wilshire and Veteran would be available for a large, above-ground monorail station. Such a station is in fact incompatible with UCLA's plans for the site. Second, the location of the station prevents a direct connection to the Purple/D Line Westwood Station and would require riders to exit one station, walk some distance along Westwood Blvd, and enter another station to connect from the STC Line to the Purple/D Line and vice versa. It is also unclear if the proposed aerial routes across Wilshire, through the Federal Building property, and back up to the 405 right-of-way would be viable and permissible. **Unless Alternative 3 is significantly amended** so that the route runs underground all the way from the Getty Center through UCLA and back to the 405 *and* provides a direct connection to the Purple/D Line Westwood station, **UCLA would oppose this option**.

The Alternatives 1-3 have other issues of concern not directly related to UCLA. These include stations that do not directly connect with other Metro rapid transit stations, the questionable policy of building another freeway-running transit line, and whether it is even safe to build and run such a line along the highly congested 405 corridor through the Sepulveda Pass.
As for Alternatives 4, 5, and 6, UCLA considers these to be consistent with its guiding principle. These three alternatives all provide an on-campus UCLA station as well as a direct connection to the Purple/D Line Wilshire/Westwood station and other rapid transit lines. They provide a one-seat ride to UCLA.

Accordingly, Alternatives 4, 5, and 6 have the greatest potential to attract riders from automobiles to rapid transit. By connecting riders seamlessly to other Metro lines, including the Orange/G Line, the Purple/D Line, the Expo/E Line, and the future East San Fernando Valley Light Rail, in addition to Metrolink lines that connect to these Metro lines, these alternatives would provide easier and faster access to UCLA for Angelenos from areas far beyond the Westwood and West Los Angeles communities surrounding the campus and resolve current shortcomings of those lines with indirect access to UCLA.

Additionally, Alternatives 5 and 6 would especially minimize impacts on the communities through which they run.

ISSUES THAT METRO MUST ADDRESS DURING THE SCOPING PROCESS

Metro's goals and objectives for the STC are sound and UCLA addresses them throughout this comment letter. To highlight some specific alignments with Metro's goals and objectives for the STC, UCLA strongly recommends that Metro incorporate in its Environmental Impact Report (EIR) a rigorous accounting for the following topics.

1. **Equity and Access (STC Goal "Improve Accessibility and Promote Equity")**

   Approximately 30% of UCLA students are the first in their families to attend college, and almost 50% of UCLA undergraduate students are on some form of financial aid, qualifying based on household income level. For a variety of reasons, many of these students do not live on the Westside and must commute to UCLA for their classes and other activities.
   In addition to educating a diverse student population, UCLA is the third largest employer in L.A. County, providing tens of thousands of high-quality job opportunities. The university employs not only researchers, doctors, and professors, but also groundskeepers, electricians, food service workers, custodians, administrative staff, bus drivers and others, many of whom live some distance from campus, including in the San Fernando Valley, or the eastern portions of Los Angeles County, and beyond. For many employees in the service sector, mobility costs—both time and money—are a major barrier.

   UCLA requests that Metro analyze transit equity for each alternative: How will each alternative make it easier for as many people as possible to work and be a student at UCLA? How will each alternative impact prospective students from traditionally underserved communities and households?

   There is a deficit of housing equity in Los Angeles, and it is crucial to analyze how the greatest number of Angelenos may benefit or not benefit from whichever alternative is selected. Further, what reparative value does each alternative offer regarding mobility assistance to traditionally underserved employees and students, and their homes? The STC project offers substantial opportunity to remediate some of the past transgressions regarding mobility infrastructure investments. UCLA perceives there to be significant benefit to underserved populations via the provision of a rail connection between the San Fernando Valley and the Westside, and believes that Metro must study the equity impacts thoughtfully and comprehensively. Such analysis is critical and necessary.

   An additional equity matter for Metro to consider is how the different alternatives propose to impact various neighborhoods.

2. **Interconnectivity (STC Goal "Improve Mobility")**

Travel times are a primary metric for travelers and commuters. UCLA requests that Metro analyze ridership estimates and travel time differences between the six alternatives. This analysis should be both broad and granular. It should be broad in the sense that there will be network effects across the county and likely the region. For example, UCLA has conducted travel time analyses of trips originating at each Metro rail station in the system, comparing driving travel times to transit travel times, and found notable impacts deep into the San Gabriel Valley. The granularity comes within the local environs of Westwood, as the substitution of transit for previous driving trips partly depends on travel time, and there are differences in mode choice depending upon the type of connection from the Purple/D Line station that will be at Wilshire/Westwood up to the UCLA main campus. If there is a direct rail connection, ridership from the east will be much higher than if a commuter is required to surface and switch modes to reach UCLA. The STC project should not be studied as a stand-alone investment; interconnectivity to existing transit assets will ensure maximum return on investment (ROI) of the STC project, and Metro's analysis should measure such ROI.

3. **Operational Cost Additions and Other Cost/Benefit Analyses (STC Goal "Provide a Cost-Effective Solution and Minimize Risk")**

Metro should not only calculate or study the cost of the rail line itself, it should also study the cost of providing mobility from the San Fernando Valley to UCLA. For example, for Alternative 1 this involves operational costs related to the bus shuttle operation. These future operational plans were noted by one P3 submittal to include UCLA's BruinBus service as the shuttle provider; UCLA has neither agreed to, nor is in the fiscal position to, provide such service. Any operational cost for the shuttle should be added to the alternative's cost figures for the life of the project whether that be 50 or 100 years, and not assume that a third party would or could cover those costs. Including the capital and operational costs of the shuttle into the alternative's cost structure provides an honest and apples-to-apples comparison to the alternatives which already provide a direct connection to the center of the UCLA campus. Real cost calculations for each alternative must be inclusive of the complete transit promises each alternative proposes.

Additionally, beyond purely monetary concerns, broader societal benefits and costs should be calculated and factored into the EIR. How many riders would use each alternative over the life of the project? Under each alternative, how much time would all projected riders save and how can that be quantified (i.e., human productivity metrics, quality of life)? Broader sustainability benefits and costs, including the benefits and costs to human health, should also be taken into consideration and incorporated

into the EIR.

4. **<u>GHG Reductions (STC Goal "Protect Environmental Resources and Support a Sustainable Transportation System")</u>**

   The state of California has greenhouse gas emission (GHG) reduction goals, as do UCLA, Metro, and L.A. County. Reducing GHG emissions means replacing driving trips with transit trips, and analyses should be undertaken to ascertain which alternative would remove the most metric tons of GHG emissions. To properly complete these calculations, the effort should utilize the most up-to-date data sets for number of employees, students, patients and special generators within the model that will be used to estimate emission reductions. UCLA requests that all GHG emission reduction calculations be transparent and explicit regarding methodology and data sources. UCLA has interest in reviewing all portions of this effort as well as the other metrics and analyses that Metro undertakes as it evaluates the various alternatives.

Besides these recommended, specific analyses for the environmental studies, it is imperative that any related benefit-cost analysis (BCA) determine how to integrate a calculation of transportation insecurity (e.g. via a transportation security index) into the BCA. Too often, social exclusion risk factors disenable travel by low-income individuals, who forego medical appointments and other important services. In general, the University recommends a holistic, modernized approach to the BCA so that all community and regional benefits are captured.

CONCLUSION

In summary, UCLA strongly opposes Alternatives 1 and 2 for the Sepulveda Transit Corridor because they do not include a direct on-campus UCLA station or a direct connection to the Wilshire/Westwood Purple/D Line. Without these two significant elements, the project will not meet its most important objectives. Without a UCLA station, the project will fail to attract its potential ridership or reduce the number of vehicles that could be diverted from local freeways and surface streets. Additionally, without a UCLA station and connection to the Purple Line, the project will fall short of its equity, diversity, and inclusion objectives by significantly increasing travel times to the heart of campus.

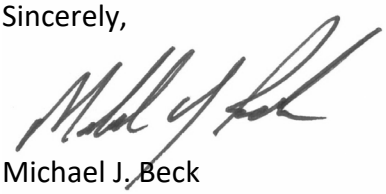
Alternatives 4, 5, and 6, by connecting directly from the San Fernando Valley to the Purple/D Line station at Wilshire and Westwood, would provide optimal levels of connectivity to the most important and busiest activity center along the entire project study area, that is, the UCLA campus. Such connectivity will not only dramatically reduce traffic on local surface streets and freeways, it will improve mobility and accessibility across the greater Los Angeles region. Alternatives 4, 5, and 6 would also significantly increase equity by providing fast and convenient access to UCLA from less affluent areas in L.A. County and beyond for students, employees,

patients, and visitors from such areas. UCLA not only provides the finest public university education in the nation, but its payroll includes high-quality positions at every level.

Finally, Alternative 3, which does provide a direct on-campus station, is problematic in that it does not include a seamless connection to the Wilshire/Westwood Purple/D Line station, assumes use of UCLA property to which the University has not agreed, and may face significant opposition from our neighbors in Westwood Village and the federal government in connection with its elevated portions. UCLA could support Alternative 3 if these issues are resolved.

In sum, the Sepulveda Transit Corridor project presents Metro with a golden opportunity to truly impact congestion in a significant positive way and improve the quality of life for residents of Southern California. But to realize this opportunity, Metro must build a project that maintains its long-term congestion reduction objectives, improvements in equity and access, and minimal operational impacts on neighborhoods. Only the alternatives including an on-campus UCLA station and seamless connection to the Purple/D Line at Wilshire and Westwood can realize this opportunity and meet Metro's own objectives. Los Angeles and her people deserve nothing less. We cannot squander this momentous opportunity. Let's get it right and build a Sepulveda Transit Corridor that works for all of Los Angeles.

Sincerely,



Michael J. Beck
Administrative Vice Chancellor

LOS ANGELES, CALIFORNIA 90017-3401

February 9, 2022

SUBJECT: USACE Feedback Related to the Proposed Contents of the Upcoming Draft EIR and Issues of Concern for the Sepulveda Transit Corridor Project.

Peter Carter
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza, Mail Stop 99-22-6
Los Angeles, California 90012

Dear Mr. Carter:

Thank you for the opportunity to comment on the proposed contents of the upcoming Draft EIR and issues of concern for the Sepulveda Transit Corridor Project. Our comments represent the Los Angeles District of the U.S. Army Corps of Engineers ("Corps") Regulatory Division's and Engineering Divisions' interest in the project. This is pursuant to our regulatory authority promulgated under Section 404 of the Clean Water Act (33 U.S.C. 1344, hereafter Section 404) and Section 14 of the Rivers and Harbors Act (33 U.S.C. 408; hereafter Section 408) and in light of our potential future National Environmental Policy Act (NEPA) and Section 106 of the National Historic Preservation Act (NHPA) responsibilities.

Comment 1. Issues of Concern regarding the Sepulveda Dam: All the proposed alternatives except Alternative 6 have the potential to affect the Sepulveda Dam. Sepulveda Dam was built by the Corps to provide flood protection. The Corps owns the property. We reserve some of it for operation of the dam, and lease 1,526.8 acres to the City of Los Angeles for recreational use. Any alignment that intersects with Corps-owned property would likely require an out-grant from our Real Estate Division. Any alignment that has the potential to affect a Corps built facility would likely require permission under Section 408.

Comment 2. Issues of Concern regarding the Los Angeles River Crossing: All the proposed alternatives appear to involve a crossing (aerial or below ground) of the Los Angeles River (LAR). Alternatives 1-3 propose aerial crossings near I-405 at the LAR. Alternative 4 proposes an aerial crossing near Sepulveda Blvd. at the LAR. Alternative 5 proposes a below grade crossing near Sepulveda Blvd. at the LAR. Alternative 6 proposes a below grade crossing near Van Nuys Blvd. at the LAR. The LAR Flood Control Channel was constructed by the Corps and is owned by Los Angeles County, the City of Los Angeles, and private landowners. The section of the LAR upstream from Sepulveda Blvd. (through Sepulveda Basin) was constructed by the Corps more than 50

years ago and is operated and maintained by the Corps. The section between Sepulveda Blvd. and Lankershim Blvd. was constructed by the Corps more than 50 years ago and is operated and maintained by the City of Los Angeles. This LAR from San Pedro Bay to the confluence with Arroyo Calabasas is also a traditionally navigable water under Section 404. Any alternative which has the potential to affect the Corps built channel of LAR (under, over, or through), would likely require permission under Section 408. In addition, any alternative which would involve temporary or permanent discharge of dredged or fill material into the Los Angeles River would likely require a Section 404 permit. Activities which are typically considered a discharge of dredged or fill material include, but are not limited to, temporary construction access ramps, temporary water diversions, trenching, and support piers. Finally, please be aware that the LAR is eligible for listing on the National Register of Historic Places (NRHP) as a linear district.

Comment 3. Issues of Concern regarding the Sepulveda Channel Crossing: All the proposed alternatives appear to involve a crossing (aerial or below ground) of the Sepulveda Channel. Sepulveda Channel was constructed by the Corps and is of historic age. As with the LAR crossings, any alteration which has the potential to affect the Corps built channel, would likely require permission under Section 408.

Comment 4: Proposed Contents of the Upcoming Draft EIR – Waters of the U.S.: To facilitate review of the likely future request for federal action under Section 404, the Corps recommends the LACMTA evaluate the following topics in the Draft EIR as part of the Impact Analysis for each alternative:

1) The nature and degree of effect that the proposed discharge of dredged or fill material will have, individually and cumulatively, on the characteristics of the substrate at the proposed discharge site within waters of the U.S.
2) The nature and degree of effect that the proposed discharge of dredged or fill material into waters of the U.S. will have individually and cumulatively on water, current patterns, circulation including downstream flows, normal water fluctuation, and water chemistry.
3) The nature and degree of effect that the proposed discharge of dredged or fill material will have, individually and cumulatively, in terms of potential changes in the kinds and concentrations of suspended particulate/turbidity in the vicinity of the discharge site within waters of the U.S.

4) The degree to which the material proposed for discharge into waters of the U.S. will introduce, relocate, or increase contaminants.
5) The nature and degree of effect that the proposed discharge of dredged or fill material into waters of the U.S. will have, both individually and cumulatively, on the structure and function of the aquatic ecosystem and organisms.

The Corps encourages LACMTA to coordinate with the Corps early in the process to evaluate the alternatives for potential effects to water resources so we can help identify ways to avoid and minimize, to the maximum extent possible, impacts to waters of the U.S.

Comment 6: Proposed Contents of the Upcoming Draft EIR – Completed Corps Projects: To facilitate review of the likely future request for federal action under Section 408, the Corps recommends the LACMTA evaluate the nature and degree to which each alternative would affect the flood control facilities in the Draft EIR as part of the Impact Analysis. The Corps recommends that such analysis specifically identifies the completed Corps projects as Section 408 facilities, discusses impacts to each such Section 408 facility due to the proposed project, and proposes mitigation measures related to those specific Section 408 facilities. The Corps encourages LACMTA to coordinate with the Corps early in the process with regard to alterations to completed Corps Projects or Corps lands.

Comment 7: Proposed Contents of the Upcoming Draft EIR – Historic Resources: If the Sepulveda Transit Corridor project requires authorization by the Corps, the Corps will be required to comply with federal environmental statutes including NEPA, Section 106 of the NHPA, Section 7 of the Endangered Species Act. To facilitate the environmental review for the likely future federal action, the Corps recommends the LACMTA describe the following topics in the upcoming Draft EIR as part of the environmental setting:

1) The level of significance in American history, architecture, archeology, engineering, and culture of Sepulveda Channel and Sepulveda Dam.
2) The integrity of location, design, setting, materials, workmanship, feeling, and association of Sepulveda Channel and Sepulveda Dam
3) Any association of Sepulveda Channel or Sepulveda Dam with events that have made a significant contribution to the broad patterns of American history, or the lives of persons significant in our past
4) Whether Sepulveda Channel or Sepulveda Dam embody the distinctive characteristics of a type, period, or method of construction, or represent the work of a master, or possess high artistic values, or represent a significant and distinguishable entity whose components may lack individual distinction.

5) Whether Sepulveda Channel or Sepulveda Dam have yielded, or may be likely to yield, information important in prehistory or history.

The Corps also recommends the LACMTA evaluate the following topics in the upcoming Draft EIR as part of the Impact Analysis for each alternative:

1) How each alternative would alter the characteristics of the Los Angeles River which qualify it as eligible for listing on the NRHP.
2) If Sepulveda Channel or Sepulveda Dam are found to have characteristics which qualify them as eligible for listing on the NRHP, how each alternative would alter the characteristics of the Sepulveda Channel or Sepulveda Dam which qualify it as eligible for listing on the NRHP.

Comment 8: Future Federal Action: If another federal agency is to have a role in funding, approval, or design of the entire project, it would be appropriate for that agency to act as the federal lead agency under NEPA and for the purposes of compliance with Section 106 of the NHPA and Section 7 of the Endangered Species Act. In this event, the Corps should be invited to be a cooperating agency under 40 C.F.R. Part 1501, 50 C.F.R. 401 and 36 C.F.R. 800.2(a)(2). The resource agencies with whom the lead federal agency consults and seeks concurrence, should be informed that the consultations are inclusive of the Corps' federal actions/undertakings and are being carried out by the lead federal agency on our behalf. If the lead federal agency consults under a Memorandum of Agreement (MOA) with SHPO and other parties for NHPA Section 106, then the Corps should be a signatory to the MOA. In addition, the Corps should be given the opportunity to review pertinent biological and cultural resources documents, including draft biological opinions and draft MOAs.

We look forward to continued dialogue and coordination with the Los Angeles County Metropolitan Transportation Authority on this project. If you have any Regulatory-related questions, please contact Lia Protopapadakis at (213) 452-3372 or via email at Lia.Protopapadakis@usace.army.mil; and for any Section 408-related questions, please contact Rafiqual Talukder at (213) 452-3745 or via email at Rafiqul.I.Talukder@usace.army.mil. Once a preferred alternative has been selected, we recommend filling out the permitting inquiries checklist (https://www.spl.usace.army.mil/Missions/Permitting/) to determine the specific permitting requirements of that alternative. Please refer to this letter and Corps File Number SPL-2021-00650-LPF in any correspondence with the Corps regarding the Sepulveda Transit Corridor project.

Sincerely,

Aaron O. Allen, PhD
Chief, North Coast Branch
Regulatory Division

RE: Proposed Sepulveda Transit Corridor Project, Scoping Comments

Dear Mr. Carter,

The U.S. Department of Veterans Affairs (VA) appreciates the opportunity to comment on the scoping of the proposed Sepulveda Transit Corridor Project. To minimize/mitigate potential impacts to VA facilities, operations, and Veteran services, VA requests coordination at the planning stage regarding exact locations proposed for new structures/facilities and locations that would be affected by construction activities. VA facilities that are on or near the Sepulveda Transit Corridor study area include:

- West Los Angeles VA Medical Center, 11301 Wilshire Blvd., Los Angeles, CA 90073
- Sepulveda VA Medical Center, 16111 Plummer Street, Sepulveda, CA 91343
- Los Angeles National Cemetery, 950 S. Sepulveda Blvd., Los Angeles, CA 90049
- VA Los Angeles Regional Office, 11000 Wilshire Blvd., Los Angeles, CA 90024

Specific impacts of interest/concern to VA from construction and operation of the Sepulveda Transit Corridor include:

- Adverse impacts to VA operations during construction phases to all resources, particularly those related to local air quality, noise, site access (traffic and parking), utilities service, and historic resources
- Beneficial impacts from transit project operations due to improved access to VA facilities.

VA is interested in remaining engaged and providing input for future California Environmental Quality Act (CEQA) documents associated with this project. Please reach out to me (Alan Trinh, alan.trinh@va.gov, 562-481-5283) for any future coordination or requests for review.

Sincerely,

Alan D. Trinh

Subject: Notice of Preparation for the Environmental Impact Report for the Sepulveda Transit Corridor Project, Los Angeles County, California

Dear Peter Carter and Ted Matley:

The U.S. Environmental Protection Agency has reviewed the November 30, 2021 notice requesting scoping comments on the Los Angeles Metropolitan Transportation Authority decision to prepare an Environmental Impact Report to comply with the California Environmental Quality Act process for the Sepulveda Transit Corridor project along Interstate 405. The EPA has been informed that the Federal Transit Administration will address the potential need to comply with National Environmental Policy Act, and associated preparation of an Environmental Impact Statement, at some point in the future. Our scoping comments at this time are intended to encourage Metro to incorporate our recommendations at this stage in the environmental planning process to reduce the potential for project delays once the NEPA process is initiated. Our comments are provided pursuant to the National Environmental Policy Act, Council on Environmental Quality regulations (40 CFR Parts 1500-1508) and Section 309 of the Clean Air Act.

Synchronizing NEPA and CEQA

A joint federal and state environmental review process integrating the requirements of the National Environmental Policy Act and the California Environmental Quality Act can avoid redundancy, improve efficiency and interagency cooperation, and be easier for citizens and applicants. The EPA strongly recommends that all NEPA considerations be integrated with the CEQA analysis being initiated regardless of the decision to defer publication of the Notice of Intent to initiate NEPA, especially for a project of this magnitude that is likely to be constructed with some portion of federal funding. The EPA recommends consulting the 2014 Handbook: NEPA and CEQA: Integrating Federal and State Environmental Reviews (2014) [1], developed by the State of California Office of Planning and Research in coordination with the Council on Environmental Quality. While NEPA and CEQA largely follow the same process for determining the need for an Environmental Impact Statement/Environmental Impact Report, or Environmental Assessment/Initial Study, it is recommended that state and federal agencies synchronize the processes so that the public is not presented with multiple commenting periods, and

[1]NEPA and CEQA: Integrating Federal and State Environmental Reviews
https://opr.ca.gov/docs/NEPA_CEQA_Handbook_Feb2014.pdf

decisionmakers have the maximum suite of potential alternatives and project design options to consider without revisiting decisions or eliminated alternatives from completed NEPA or CEQA processes.

We encourage Metro to consider pursuing synchronized CEQA and NEPA processes for the remainder of the environmental analysis process as there is still adequate time to prepare a joint environmental document satisfying both legal requirements. If a joint document cannot be prepared, we strongly recommend Metro and Federal Transit Administration promptly initiate a Planning and Environmental Linkages process (https://www.planning.dot.gov/planning/topic_pel.aspx) to better insure that materials developed for the Draft EIR meet required conditions to be integrated into the subsequent NEPA analyses.

Integration Other Planned Projects

We note the alternatives under consideration include varying means of connecting the University of California, Los Angeles campus to the proposed transit corridor, and there are further concepts about a future connection to Los Angeles Airport. We recommend that the environmental document clearly demonstrate the independent utility of the proposed project within its current geographic limits as it relates to the project's need. If the proposed project's need cannot be met without other planned projects, we recommend that the scope of the analysis be expanded accordingly, so that a full understanding of the environmental impacts of all connected actions is presented in the environmental document (40 CFR 1501.9(e)(1)).

In addition to the Sepulveda Transit Corridor project, Metro is working with Caltrans to modify the I-405 to convert some of the existing general purpose lanes into express lanes. We encourage Metro to consider and explain how any of these modification to the I-405 may inform the Sepulveda Transit Corridor alternatives being considered for the same general project footprint. Consistent with 40 CFR 1502.15, other planned actions should be identified. Describe impacts that could occur later in time or at a distance from the project site and have a reasonably close causal relationship to the proposed action or alternatives, such as any long-term impacts to ecological resources in the project area. Discuss trends and other reasonably foreseeable impacts to resources and values that would potentially be affected by the project. Analyze and disclose the potential for declining trends or other impacts that may be exacerbated by effects from the project and describe their significance. Include a detailed discussion in the environmental document of nearby projects in planning and development for the Sepulveda Corridor.

The EPA recommends that Metro fully analyze the environmental and health impacts related to the siting of maintenance and storage facilities, including noise and air quality impacts. Consider analyzing several optional locations and incorporating community feedback prior to finalizing the siting location.

Air Quality

The project area is currently in nonattainment for ozone and particulate matter with a diameter of 2.5 microns or less ($PM_{2.5}$). Because of the air basin's nonattainment status, it is important to reduce emissions of ozone precursors and particulate matter from this project to the maximum extent possible. Additionally, Executive Order 13990, *Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crises* (2021), declares that it is essential that agencies capture the full costs of greenhouse gas emissions as accurately as possible, including taking global damages into account. The EPA recommends that the environmental document include the following:

- Provide a detailed discussion of National Ambient Air Quality Standards, ambient air conditions (baseline or existing conditions), and reasonably foreseeable environmental trends and planned actions in the area(s) (40 CFR 1502.15).
- Describe the potential indirect air quality impacts of the project, including effects that are later in time or farther removed in distance from the proposed action or alternatives (40 CFR 1508.1(g)). Include an analysis of potential impacts from the construction of the proposed project, particularly for proposed alternatives that concurrently align with the I-405. Include monitoring data, any anticipated exceedances of NAAQS, and estimates of all criteria pollutant emissions.
- We note that this planning phase of the proposed transit project would be exempt from Conformity requirements under 40 CFR 93.126, but we encourage Metro and FTA to actively work with the South Coast Air Quality Management District to identify and document air impacts from the proposed transit project, and mitigation measures Metro will commit to.
- There may be a future need to demonstrate emissions from both construction and operational phases of the project conform to the State Implementation Plan and do not cause or contribute to violations of the NAAQS. Continue to coordinate with resource agencies to make that determination as early as possible to alleviate future project delays during the subsequent NEPA process.
- Disclose the health risks associated with construction emissions, sensitive receptors in the vicinity of the project area, and how the proposed project will affect current emissions levels.
- Identify any specific actions proposed by Metro to reduce greenhouse gas emissions from the project, including industrial materials re-use, use of low or zero-emissions construction equipment, and station area planning considerations.
- Identify how each alternative has been designed to incorporate zero-emission and electric vehicle technology, alternative fuels, and other clean technology opportunities.
- Include an estimate of the air quality benefits and reduced adverse health effects that would result from each mitigation measure proposed. Identify any specific mitigation measures considered for sensitive populations (e.g., schools, daycare facilities, hospitals, senior centers, etc.).

Construction Emissions

Include in the environmental document a list of all mitigation measures to be implemented as part of the construction emissions mitigation plan developed for the project. We understand that Metro adopted a Green Construction Policy in 2011 to reduce diesel emissions from on- and off-road equipment during construction and development. We encourage Metro to identify construction commitments to meet the objectives of the 2011 Green Construction Policy and any other clean technology commitments and best practices that have been adopted by Metro. In addition to measures necessary to meet all applicable local, state, and federal requirements, the EPA recommends considering the following measures and working with South Coast Air Quality Management District to identify other appropriate mitigation measures to be included in the Construction Emissions Mitigation Plan:

<u>Fugitive Dust Source Controls</u>

- Stabilize open storage piles and disturbed areas by covering and/or applying water or chemical/organic dust palliative where appropriate. This applies to both active and inactive sites during workdays, weekends, holidays, and windy conditions.
- Install wind fencing and phase grading operations where appropriate and operate water trucks for stabilization of surfaces under windy conditions.

- When hauling material and operating non-earthmoving equipment, prevent spillage and limit speeds to 15 miles per hour. Limit speed of earth-moving equipment to 10 mph.

Mobile and Stationary Source Controls

- Lease or buy newer, cleaner equipment using the best available emissions control technologies.
    - Use lower-emitting engines and fuels, including electric, liquified gas, hydrogen fuel cells, and/or alternative diesel formulations if feasible.
- Prohibit unnecessary idling from heavy equipment.
- Prohibit engine tampering to increase horsepower, except when meeting manufacturer's recommendations.
- Avoid routing truck traffic near sensitive land uses to the fullest extent feasible.

Administrative Controls

- Locate diesel engines, motors, and equipment staging areas as far as possible from residential areas and other sensitive receptors (e.g., schools, daycare centers, hospitals, retirement communities, etc.).
- Consider using lighter-colored pavement where feasible.
- Recycle construction debris to the maximum extent feasible.
- Consider the reuse of industrial materials, where appropriate, in cement and concrete, and warm-mix asphalt paving techniques where feasible.
- Identify all commitments to reduce construction emissions and quantify air quality improvements that would result from adopting specific air quality measures.
- Identify where implementation of mitigation measures is rejected based on economic infeasibility.
- Prepare an inventory of all equipment prior to construction and identify the suitability of add-on emission controls for each piece of equipment before groundbreaking.[2]
- Reduce construction-related trips of workers and equipment, including trucks.
- Develop a construction traffic and parking management plan that minimizes traffic interference and maintains traffic flow.

Environmental Justice

The EPA recommends that the environmental document identify whether the proposed project may disproportionately and adversely affect low income or minority populations in the surrounding area and discuss appropriate mitigation measures for any adverse impacts. Executive Order 12898, *Federal Actions to Address Environmental Justice in Minority Populations and Low Income Populations* (1994), directs federal agencies to pursue environmental justice to the greatest extent possible by identifying and addressing any disproportionately high and adverse human health or environmental effects that the agency's programs, policies, or activities may have on minority and low-income populations.

Executive Order 14008, *Tackling the Climate Crisis at Home and Abroad* (2021), recognizes the climate crisis is profound and directs the federal government to drive assessment, disclosure, and mitigation of climate pollution and climate-related risks. The EO also directs federal agencies to achieve environmental justice as a part of their missions by developing programs, policies, and activities to

[2] Suitability of control devices is based on: whether there is reduced normal availability of the construction equipment due to increased downtime and/or power output, whether there may be significant damage caused to the construction equipment engine, or whether there may be a significant risk to nearby workers or the public.

address the disproportionately high and adverse impacts on human health, environmental, climate-related, and other cumulative impacts on these communities, as well as the accompanying economic challenges of such impacts.

The EPA recommends using screening tools, such as EJSCREEN and CalEnviroScreen, to identify potential communities with environmental justice concerns for further focused attention and analysis regarding impacts from the proposed project. We note that environmental justice mapping and screening tools provide consistent datasets and an approach for viewing environmental and demographic indicators in a project location. For example, An EJSCREEN assessment for the proposed project area identified low-income and linguistically-isolated census tracts in the proposed project area, particularly in Panorama City, Van Nuys, the Veterans Affairs Medical Center West Los Angeles, and parts of Palms near Culver City. These locations correlate to environmental indicators such as traffic proximity, and associated diesel emissions and health risks. EPA recommends the following for development of the EJ analysis:

- Consider *Promising Practices for EJ Methodologies in NEPA Reviews* when developing the EJ section of the EIS. *Promising Practices for Environmental Justice Methodologies in NEPA Reviews* (https://www.epa.gov/environmentaljustice /ej-iwg-promising-practices-ej-methodologies-nepa-reviews) is a compilation of methodologies from current agency practices identified by the NEPA Committee of the Federal Interagency Working Group on Environmental Justice. The document focuses on the interface of environmental justice considerations through NEPA processes and provides recommendations on applying EJ methodologies that have been established in federal NEPA practice.
- Include a description of the area of potential impact used for the environmental justice impact analysis and provide the source of demographic information.
- Disclose whether the project will result in a disproportionate and adverse impact on minority or low-income populations.
- Discuss potential mitigation measures for any anticipated adverse impacts to community members that could result from the project.
- Include opportunities for incorporating public input to promote context sensitive design, especially in minority and low-income communities.
- Document the process used for community involvement and communication, including all measures to specifically outreach to low-income and minority communities. Include an analysis of results achieved by reaching out to these populations.
- Ensure community engagement for the proposed project is meaningful, particularly for vulnerable communities, and document how community input was integrated into decisionmaking.

Tunneling Impacts

Tunneling has the potential to avoid or minimize significant impacts to habitat, wildlife corridors, surface waters, parklands, and many other resources. The EPA appreciates Metro analysis of potential impact avoidance via tunneling. However, it is critical to ensure that a full suite of resources are evaluated in the analyses of tunnel alternatives, including short and long term impacts to biological species and groundwater. Depending on the height of the water table and the depth of the tunnel, tunneling could potentially require long term pumping at a rate that significantly harms groundwater resources. Drawdown of groundwater resources could then adversely impact surface waters protected under Clean Water Act Section 404. It is critical that such impacts are fully assessed and compared between alternatives. Impacts from the disposal of fill, including transportation hauling and the air

quality impacts, are also important to evaluate when comparing alternatives. The EPA recommends consideration of the following as the analysis advances:

- Discuss the potential impacts of tunneling on hydrology, including the maintenance of stream flows and groundwater. Address the potential for tunneling to affect riparian habitat, direction of lateral movement of water through the soil profile, and recharge of shallow, unconfined aquifers.
- Describe the proposed methodology for tunneling. Include the type of equipment, plans for transportation of tunneling equipment, and plans for storage, transport, and disposal of fill material. Quantify the amount of fill material that would be removed per mile of tunnel and the ultimate disposition of removed fill material.
- Estimate the miles of temporary and permanent access roads for safety and maintenance, as well as the acreages and locations of staging areas, power stations, and supporting features.
- Describe plans for removal and re-vegetation of temporary roads and staging areas.
- Describe the maximum length of tunnels allowed, and ensure that consistent standards are used throughout the HSR system.
- Include an analysis of cost, logistics, and technology for tunneling.

Aquatic Resources

While Metro is not seeking Clean Water Act permitting at this stage in the analysis, it is critical that considerations for future CWA permitting, if applicable, be included in the Draft EIR and analysis of alternatives so that future delays related to CWA considerations can be avoided. The purpose of CWA Section 404 is to restore and maintain the chemical, physical, and biological integrity of the nation's waters by prohibiting avoidable discharges of dredged or fill material, or discharges that would result in significant adverse impacts on the aquatic environment. Fundamental to the CWA Section 404(b)(1) Guidelines is the principle that dredged or fill material cannot be discharged into aquatic ecosystems, unless it can be demonstrated that no other less environmentally damaging practicable alternatives can achieve the applicant's project purpose. We encourage Metro to demonstrate in the Draft EIR, if applicable, that impacts to Waters of the U.S. have been avoided and minimized to the greatest extent possible within all alternatives being analyzed.

- Analyze a range of alternatives that fulfills the requirements of the CWA Section 404(b)(1) Guidelines.
- Assess the permanent and temporary impacts on Waters of the U.S. from all construction-related as well as operations-related activities, and incorporate design measures and modifications to avoid and minimize impacts to water resources.
- Quantify the avoidance benefits achieved by each alternative studied, for example, number of stream crossings avoided, acres of Waters of the U.S. avoided, etc.
- Quantify indirect impacts of all proposed alternatives.
- Demonstrate that all potential impacts to Waters of the U.S. have been avoided and minimized to the maximum extent practicable. If these resources cannot be avoided, the analyses should clearly demonstrate how cost, logistical, or technological constraints preclude avoidance and minimization of impacts.
- Identify all protected resources with special designations and all special aquatic sites and waters within state, local, and federal protected lands.
- Confirm that no alternatives will further impair water quality.

Habitat Connectivity, Wildlife Movement, and Biological Resources

In the environmental document, analyze the proposed project's impacts to habitat connectivity in the surrounding project area and discuss measures that could mitigate any identified impacts. This is critical given the project location adjacent to the Santa Monica Mountains National Recreation Area. Such measures may include appropriate infrastructure to facilitate wildlife movement across the project area, given the history of known wildlife/transportation conflicts in recent past (mountain lion P-22, tracked by National Park Service).

- If appropriate, include design commitments that: 1) remove barriers to safe wildlife passage; 2) enhance use of identified wildlife corridors; and 3) provide crossings with suitable habitat and topography to accommodate multiple species.
- Include project design commitments to enable wildlife connectively, including types of features and approximate locations.
- Clearly indicate how such commitments will be integrated into project designs and who will have responsibility for building and monitoring crossing structures if built.
- Avoid or minimize impacts to sensitive areas and associated species and evaluate all temporary and permanent impacts from creating new transportation infrastructure, such as potential fragmentation, associated loss of wildlife connectivity, and all effects that may be a result of noise, light, and overhead electrification cables.
- Identify and evaluate where species ranges may be bisected by the transit infrastructure.
- Disclose how fencing the transit route in any part of the new corridor could potentially affect wildlife movement and discuss how fencing for safety purposes will be integrated with proposed wildlife passages, such as culverts, bridges, viaducts, underpasses, and overpasses.
- Identify the connections that would likely remain after construction of the transit infrastructure and highlight these areas as "connectivity zones" for protection and preservation. Identify specific commitments for preservation of these corridors through mitigation measures and cooperative agreements.
- Work in close coordination with U.S. Fish and Wildlife Service and California Department of Fish and Wildlife to develop appropriate measures to avoid and minimize impacts to all species of special concern. Consider coordination with local experts to explore specific locations in order to ensure a full analysis of sensitive habitat and open space concerns.

Emergency Evacuations

The EPA appreciates the need to plan for potential mass evacuation events in the region surrounding the proposed project corridor. The 2019 Getty Fire is a recent example of a brush fire in the area which prompted evacuations along the 405 freeway. Include in the environmental document details of how the project fits into the larger emergency evacuation plans for the community which resides near or uses the I-405 and how the Transit Corridor operation might be modified during an emergency evacuation.

The EPA appreciates the opportunity to comment on preparation of the EIR and encourage consideration of the above comments in both future EIRs and EISs. it is released for public review, please provide an

electronic copy to me. If you have any questions, please feel free to contact me at (415) 972-3321 or appleton.zac@epa.gov.

Sincerely,
