Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: NOTE: Phone call with Ryan Piedot (Environmnetal Compliance Mgr.) on 6/9/17 and he indicated that Kohl's has a web based system that stores all initial and final manifests, and receipts. He also noted that the manifests are mailed to DTSC by the waste hauler. Visited the site on 6/12/17; site contacts had printed out all initial and final manifests from the web based system, along with receipts of u-waste pickups. Also, saw the postings of emergency contact list by phones.

CERS HAZ WASTE:
Name: CVS PHARMACY #9529
Address: 442 LAS GALLINAS AVENUE
City,State,Zip: SAN RAFAEL, CA 94903
Site ID: 23224
CERS ID: 10342819
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 23224
Site Name: CVS Pharmacy #9529
Violation Date: 12-22-2016
Citation: 22 CCR 12 66262.23(a)(4) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)(4)
Violation Description: Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.
Violation Notes: Returned to compliance on 01/04/2017. At time of inspection, facility was unsure if a copy of "Generator's Initial Copy" had been submitted to DTSC. It is believed that Stericycle has been doing this on behalf of CVS. However, facility is unsure. Please verify within 30 days, and provide proof of correction to Marin County CUPA.
Violation Division: Marin County Dept of Public Works, Waste Mgmt, CUP
Violation Program: HW
Violation Source: CERS

Site ID: 23224
Site Name: CVS Pharmacy #9529
Violation Date: 12-22-2016
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 01/31/2017. At time of inspection, facility had all past 3 years of manifests, however, there were some manifests where Stericycle didn't provide them with a "Generator's Initial Copy" and/or "Final Destination" copy. During inspection, the Store Manager wrote down all manifests that need to be requested from Corporate as they have these copies. Provide copies within 30 days, and provide proof of correction to Marin County CUPA.

Violation Source: CERS

Evaluation:

CVS PHARMACY #9529 (Continued) **S121753530**

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-12-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Not reported
Eval Division: Marin County Dept of Public Works, Waste Mgmt, CUP
Eval Program: HWLQG
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-22-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: NOTE: Indicated "Unobserved" as the RTC qualifier for the submission of initial manifest copies since it was a phone call confirmation with Chris Yerzy (EHS Specialist) from CVS Caremark. He confirmed that the facility submits a copy of the "Generator's Initial Copy" to DTSC, along with the final copy. For second violation, RTC date for submission of having all manifests onsite was on 1/31/17, which is past the 1/22/2017 due date- 5 day waiting window plus facility had already confirmed via phone call that the facility was in the process of getting all manifests onsite, but received final confirmation via email on 1/31/17 that it has been completed.

Violation Date: 12-22-2016
Citation: 22 CCR 12 66262.23(a)(4) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)(4)
Violation Description: Failure to send a legible copy of each hazardous waste manifest to the Department within 30 days of each shipment of hazardous waste.
Violation Notes: Returned to compliance on 01/04/2017. At time of inspection, facility was unsure if a copy of "Generator's Initial Copy" had been submitted to DTSC. It is believed that Stericycle has been doing this on behalf of CVS. However, facility is unsure. Please verify within 30 days, and provide proof of correction to Marin County CUPA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Name:	Fuel 24:7 @ Northgate
Violation Date:	01-06-2021
Citation:	HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description:	"Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes:	Returned to compliance on 01/06/2021. 89 Spill Bucket failed lake test. Corrected on site by cap replacement, and met lake test requirements, no further action required.

Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-28-2016
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	NOTE: Facility is a Conditionally Exempt Small Quantity Generator (CESQG); however, CERS did not have an option available to select "Conditionally Exempt Small Quantity Generator: Employee Training." Therefore, I instead selected "Small Quantity Generator: Employee Training" option.

Eval Program:	HW
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	01-06-2021
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	AMC, SB989, and OPE testing conducted during this inspection. EcoChek performed AMC/OPE, Old Service Station performed SB989. Thank you for your ongoing commitment to UST compliance, and contact Chris Rundell with any questions, to schedule reinspection, or to request additional time to correct violations: crundell@marincounty.org / 415-419-7730
Eval Division:	Marin County Dept of Public Works, Waste Mgmt, CUP
Eval Program:	UST
Eval Source:	CERS

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	01-08-2020
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	- Tester was Marc Alejos of Eco-Chek (ICC 4/27/21) (VR 6/19/21) (VMI 5/10/21) - All 4 tanks are single-walled which must be upgraded to double-walled VPH within 6 years or December 31, 2025. - There are duplicate uploads of the FR certification, CFO letter, and DO statement. Please remove the old forms and when you upload a new form please remove the old previously submitted forms. They can be found in previous submittals.

Citation: HSC 6.7 25290.1(c)(3),25290.2(c)(3) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c)(3),25290.2(c)(3)
Violation Description: Failure to keep water out of the secondary containment of UST systems installed on or after July 1, 2003.
Violation Notes: Liquid was observed in UDCs for pumps 3/4 and 6. Liquid was observed in diesel STP sump, a repeat violation from the 2020 AMC. All liquid removed by on site testers. The liquid in the diesel STP sump is a repeat violation form the 2020 AMC and thus need to be addressed. Please address this repeat violation by diagnosing and repairing the cause of the fuel leak. Provide a work order by a certified UST repair firm showing this has been addressed and provide a copy of the work order to the Marin CUPA for closure of this violation. Please contact Chris Rundell with any questions, 415-419-7730 / crundell@marincounty.org

Violations:
Site ID: 18364
Site Name: Chevron Station # 93553
Violation Date: 04-14-2016
Citation: 23 CCR 16 2638 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2638
Violation Description: Failure to test leak detection equipment as required every 12 months (VPH, sensor, LLD, ATG, etc.) and/or submit monitoring system certification to the CUPA within 30 days of completion of the test
Violation Notes: Returned to compliance on 04/14/2016. The 87-1 master regular STP sump sensor failed, was replaced, retested, and passed. No action required at this time.
Violation Division: Marin County Dept of Public Works, Waste Mgmt, CUP
Violation Program: UST
Violation Source: CERS

Site ID: 18364
Site Name: Chevron Station # 93553
Violation Date: 04-11-2018
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: Returned to compliance on 04/11/2018. At time of inspection, sump leak sensor 352 failed to turn off turbine for T2 (Regular). Veeder-Root

CHEVRON STATION # 93553 (Continued) **S121750556**

would go into alarm; however, turbine was not shutting down. Contractor replaced sensor with a new 352 sensor. SSS (Tech: Edy) was at the station for other maintenance purposes, he assisted Jesus with updating Veeder-Root system to reflect new sensor correctly. New sensor successfully passed. Issue was corrected onsite.

Violation Division: Marin County Dept of Public Works, Waste Mgmt, CUP
Violation Program: UST
Violation Source: CERS

Site ID: 18364
Site Name: Chevron Station # 93553
Violation Date: 04-27-2015
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow of product through the piping or trigger an alarm when a release occurs.
Violation Notes: Returned to compliance on 04/27/2015. The diesel LLD failed, the siphon jet was replaced, the LLD retested and passed. No action required at this time.
Violation Division: Marin County Dept of Public Works, Waste Mgmt, CUP
Violation Program: UST
Violation Source: CERS

Site ID: 18364
Site Name: Chevron Station # 93553
Violation Date: 04-09-2020
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 04/09/2020. Unleaded tank, ID #1 (T2), nearest Del Presidio Blvd, failed initial spill bucket vacuum tightness test and subsequent lake test. The UST tester determined a seal was missing, replaced the seal, and the spill bucket passed the vacuum retest.

Site ID: 18364
Site Name: Chevron Station # 93553
Violation Date: 04-12-2017
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements:Monitor at least

CHEVRON STATION # 93553 (Continued) **S121750556**

hourly.Be capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g. Restrict or shut off the flow of product through the piping when a leak is detected.

Violation Notes: Returned to compliance on 04/12/2017. At time of inspection, syphon jet for 87 was to be replaced; however, service techs will be coming back at the end of the day to replace syphon jet. If work is not complete, please tag out 87 for a failed syphon jet. If syphon jet is replaced, re-test in 72 hours, otherwise, 87 will be tagged out.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS ID: 10031824
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 45904
Site Name: Macy's Northgate
Violation Date: 03-15-2017
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 04/13/2017. At time of inspection, facility

MACY'S NORTHGATE (Continued) **S121786103**

verbally communicated that weekly inspections were not being completed. Weekly inspections are required; however, facility is not required to complete recordkeeping since facility is a conditionally exempt small quantity generator, just as long as visual inspections are being done. Facility has chosen to conduct recordkeeping; therefore, please provide copy to Marin County CUPA by 4/15/17.

Violation Division: Marin County Dept of Public Works, Waste Mgmt, CUP
Violation Program: HW
Violation Source: CERS

Site ID: 45904
Site Name: Macy's Northgate
Violation Date: 03-15-2017
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 04/12/2017. At time of inspection, facility did not have "Generator's Initial Copy" in the manifest binder, only the final copy was available. Please locate all initial copies for the past three years, and add it to the binder. Initial and final copies should both be available. Complete by 4/15/2017 and provide proof of correction to Marin County CUPA.
Violation Division: Marin County Dept of Public Works, Waste Mgmt, CUP
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection

Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-15-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: NOTE: Indicated "unobserved" for the hazardous waste manifest violation because it was an email communication with the facility indicating that the "Generator's Initial Copies" were being kept at the facility's dock and then given to the engineers. The facility communicated via email that they are aware now that it should all be kept in one location and will be going forward in the "Hazardous Waste Manifests" binder.

PACIFIC BELL (Continued) **1000250852**

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS HAZ WASTE:

Name:	KAISER PERMANENTE ONCOLOGY INFUSION CENTER
Address:	820 LAS GALLINAS AVE
City,State,Zip:	SAN RAFAEL, CA 94903
Site ID:	426019
CERS ID:	10743913
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	426019
Site Name:	Kaiser Permanente Oncology Infusion Center
Violation Date:	01-03-2018
Citation:	22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description:	Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes:	Returned to compliance on 02/20/2018. At time of inspection, federal EPA ID Number CAR000272872 was inactivated. Reactivate EPA ID Number within 30 days by completing form 8700-12. Provide proof of correction to Marin County CUPA. Submit documentation to the CUPA demonstrating that you have obtained an EPA ID number.
Violation Division:	Marin County Dept of Public Works, Waste Mgmt, CUP
Violation Program:	HW
Violation Source:	CERS

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	01-03-2018
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	At time of inspection, no hazardous waste had been picked up yet; therefore, no uniform hazardous waste manifests available for review.

KAISER PERMANENTE ONCOLOGY INFUSION CENTER (Continued) **S121782345**

Hence, indicated "Not Observed" for questions relating to manifests and shipping documents. Already emailed to the facility a hardcopy of inspection report (prior to DHD conversion); therefore, no signatures will be provided below.

Environmental Interest/Information System:
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:
Site ID: 32645
Site Name: Gateway Gas One
Violation Date: 03-26-2020
Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)
Violation Description: Failure to have an approved UST Monitoring Plan.
Violation Notes: Returned to compliance on 12/15/2020. This is a class II violation because it was observed in last year's inspection and not corrected - the information provided in the monitoring plans for both USTs in CERS is incorrect. Please refer to my email sent on 3/29/2019 and today 3/26/2020 to aleuzinger@yahoo.com which contained notes on the needed updates to the monitoring plans. Update the monitoring plan for both USTs and resubmit in CERS within 30 days.
Violation Division: Marin County Dept of Public Works, Waste Mgmt, CUP
Violation Program: UST
Violation Source: CERS

Site ID: 32645
Site Name: Gateway Gas One
Violation Date: 03-26-2020
Citation: 23 CCR 16 2712(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(f)
Violation Description: Failure to implement the corrections specified in the inspection report within 30 days of receiving an inspection report from either the UPA or special inspector.
Violation Notes: Returned to compliance on 12/15/2020. Discrepancies with the monitoring plans were not corrected last year and are still outstanding to date. A related violation was noted above. Correct your

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 02-14-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: After incident that occurred on 11/26/16 (pump malfunction), conducted a follow-up inspection to review the facility's hazardous waste program. Pumps were replaced and functioning normally. Reviewed the hazardous waste drum, and hazardous waste training log. Facility has a 3-page summary of the hazardous waste protocol on what to do in the event of a spill, leak alarm, and fire. Facility has trained employees on 12/21/16 on hazardous waste and UST system. Hazardous waste drum was not labeled during the inspection; therefore, corrected this issue onsite.

Eval General Type: Other/Unknown
Eval Date: 03-09-2018
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Conducted follow-up inspection per pump malfunction that occurred on 11/2016. With Sezen Bekce, reviewed training log. Four employees current in training, a copy of the training roster sheet is included in the site's CUPA file. Training is noted on the UST training record, which is used to meet HMBP, HWG and UST training requirements. Sezen noted that there have been no spills at the facility. 55 gallon drum containing oily water is at the facility, has not been needed to be picked up as it only has very small quantity of water. Once 27 gals has been reached, have it removed offsite within 90 days. Hazwaste label for the drum was beginning to come off, Sezen recreated the label and posted at time of inspection. Site has several spill buckets in the back room.

Eval Notes:	Conducted a second follow-up inspection per pump malfunction that occurred on 11/2016. Reviewed the hazardous waste drum, which was properly labeled. Facility also has a ~10 gallon steel drum in the bathroom shed closed with used spill kit material (small amount) and is properly labeled. Facility is up to date on training for hazardous waste, and aware about conditionally exempt small quantity generator requirements. Facility provided a copy of hazardous waste manifest pickup from 3/13/2017. Facility is following regulations as a hazardous waste generator.

Eval Date:	04-26-2018
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	NOTE: Site is a Conditionally Exempt Small Quantity Generator (CESQG); however, no inspection report available for CESQG. Uniform Hazardous Waste Manifest (3/30/17): 600 lbs (2 drums) of waste gasoline solution removed offsite. As of today's UST inspection, hazardous waste drum is now about half way full (from today's spill bucket water); therefore, the site has 90 days from today's date to have it removed. As a Conditionally Exempt Small Quantity Generator (CESQG), site is required to remove hazardous waste within 90 days from the day 27 gals is reached. Please Note: Per viewing the hazardous waste drum, discovered knozzles inside the drum mixed with oily water. Please note that once drum is removed offsite, site must segregate solids and liquids into their own drums. No mixing of physical states.

Eval Notes: UST Technician: Tracey Thompson (ICC #5260151, Exp. 5/23/19), (VMi #2347, Exp. 9/22/19), (Veeder-Root #A31557, Exp. 1/26/20). #48- Both regular and super were installed on 12/1/1999 (prior to July 1, 2008 free of water requirement). However, when lids were removed (i.e. fill sumps) no water was located. NOTE: Moving forward, whenever water is removed from sumps, please indicate on the DO monthly report that it has been completed. Two DO inspection reports indicated that water was found in sump, per discussion with Sezen- this has been completed and resolved.

Eval Notes: Conducted a third follow-up inspection per pump malfunction that occurred on 11/2016. With Sezen Becke (Manager), walked to the 55 gallon-drum and hazardous waste label is intact and complete per spill bucket water waste from UST inspection. In addition, no spills have occurred, therefore, kitty litter has not been utilized. Rocio is no longer with Gateway Gas One, and Sergio Lopez has filled in. He has been trained on UST and hazardous waste. NOTE- Observed a broken fluorescent light bulb in the shed area due to pedestrians leaving items behind unnoticeable (bulb is not from the gas station). Sezen stated that he does maintain clean housekeeping, and will be removing the light bulb ASAP.

Environmental Interest/Information System:
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

PACIFIC BELL (Continued) **1000250851**

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D011
Waste Description: SILVER

Waste Code: D013
Waste Description: LINDANE (1,2,3,4,5,6-HEXA-CHLOROCYCLOHEXANE, GAMMA ISOMER)

Waste Code: D018
Waste Description: BENZENE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D024
Waste Description: M-CRESOL

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P001
Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P012
Waste Description: ARSENIC OXIDE AS2O3 (OR) ARSENIC TRIOXIDE

Waste Code: P075
Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U010

KAISER PERMANENTE MEDICAL CENTER (Continued) **1000380355**

Waste Description: AZIRINO [2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE, 6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-METHOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA, 8AALPHA, 8BALPHA)]- (OR) MITOMYCIN C

Waste Code: U012
Waste Description: ANILINE (I,T) (OR) BENZENAMINE (I,T)

Waste Code: U035
Waste Description: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

Waste Code: U058
Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U059
Waste Description: 5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U150
Waste Description: L-PHENYLALANINE, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) MELPHALAN

Waste Code: U188
Waste Description: PHENOL

Waste Code: U206
Waste Description: D-GLUCOSE, 2-DEOXY-2-[[(METHYLNITROSOAMINO)-CARBONYL]AMINO]- (OR) GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROSOUREIDO)-,D- (OR) STREPTOZOTOCIN

Waste Code: U237
Waste Description: 2,4-(1H,3H)-PYRIMIDINEDIONE, 5-[BIS(2-CHLOROETHYL)AMINO]- (OR) URACIL MUSTARD

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Surface water
Potential Contaminants of Concern: Not reported
Site History: In 1960, Fairchild Semiconductor Corporation (Fairchild) constructed a semiconductor manufacturing facility at the Site. Fairchild occupied the property until 1988 when manufacturing operations at the Site were discontinued. In 1995, the facility was demolished and the Site remained unoccupied until 2004. In 2001, 4300 Redwood Road Venture, LLC (Redwood Venture) purchased the property. Redwood Venture began construction of new commercial buildings at the Site in 2003 and completed the redevelopment in 2005. The Site currently contains 16 commercial buildings for offices and warehouses. In 1982, Fairchild began soil and groundwater investigations at the Site and discovered that soil and groundwater at the Site were impacted by volatile organic compounds (VOCs). The primary VOCs found were trichloroethene, 1,2-dichloroethene, and vinyl chloride. In 1984, an underground slurry wall was constructed around the perimeter of the Site to contain the groundwater. Approximately 1,500 cubic yards of soil were excavated from the Site. In 1985, a groundwater extraction and treatment system (GWETS) was installed. In 1989, two groundwater extraction trenches and a new treatment system consisting of six granular activated carbon (GAC) vessels were installed. The new GWETS was put into operation in 1989 and has been in operation since then. A final remedial action plan (FRAP) for the Site was submitted to the

FORMER FAIRCHILD SEMICONDUCTOR (Continued) **S101481138**

Water Board in 2000. The Water Board approved the FRAP and issued Final Site Cleanup Requirements Order 00-122 in November 2000. Implementation of the final cleanup plan commenced in 2001 and was completed in March 2005 when the redevelopment of the Site was completed. Additional remedial measures that were implemented included shallow soil excavation and removal to a landfill, installation of drainage layers, installation of vapor barriers beneath all buildings, institutional control of property use (including land use restriction), installation of a sub-slab depressurization system and soil venting pipelines. Groundwater and air quality at the Site are monitored regularly. Based on these monitoring data, the Site cleanup programs are performing as designed. Human health and nearby Gallinas Creek the Site are not at risk.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2021
Date Data Arrived at EDR: 05/03/2021
Date Made Active in Reports: 05/19/2021
Number of Days to Update: 16

Source: EPA
Telephone: N/A
Last EDR Contact: 08/04/2021
Next Scheduled EDR Contact: 10/11/2021
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021
Date Data Arrived at EDR: 05/03/2021
Date Made Active in Reports: 05/19/2021

Telephone: N/A
Last EDR Contact: 08/04/2021
Next Scheduled EDR Contact: 10/11/2021
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Data Release Frequency: No Update Planned

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2021
Date Data Arrived at EDR: 05/03/2021

Last EDR Contact: 08/04/2021
Next Scheduled EDR Contact: 10/11/2021
Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 02/22/2021
Date Data Arrived at EDR: 03/30/2021
Date Made Active in Reports: 06/17/2021
Number of Days to Update: 79

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 03/24/2021
Date Data Arrived at EDR: 05/11/2021

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

South Map:	5640194 SAN RAFAEL, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

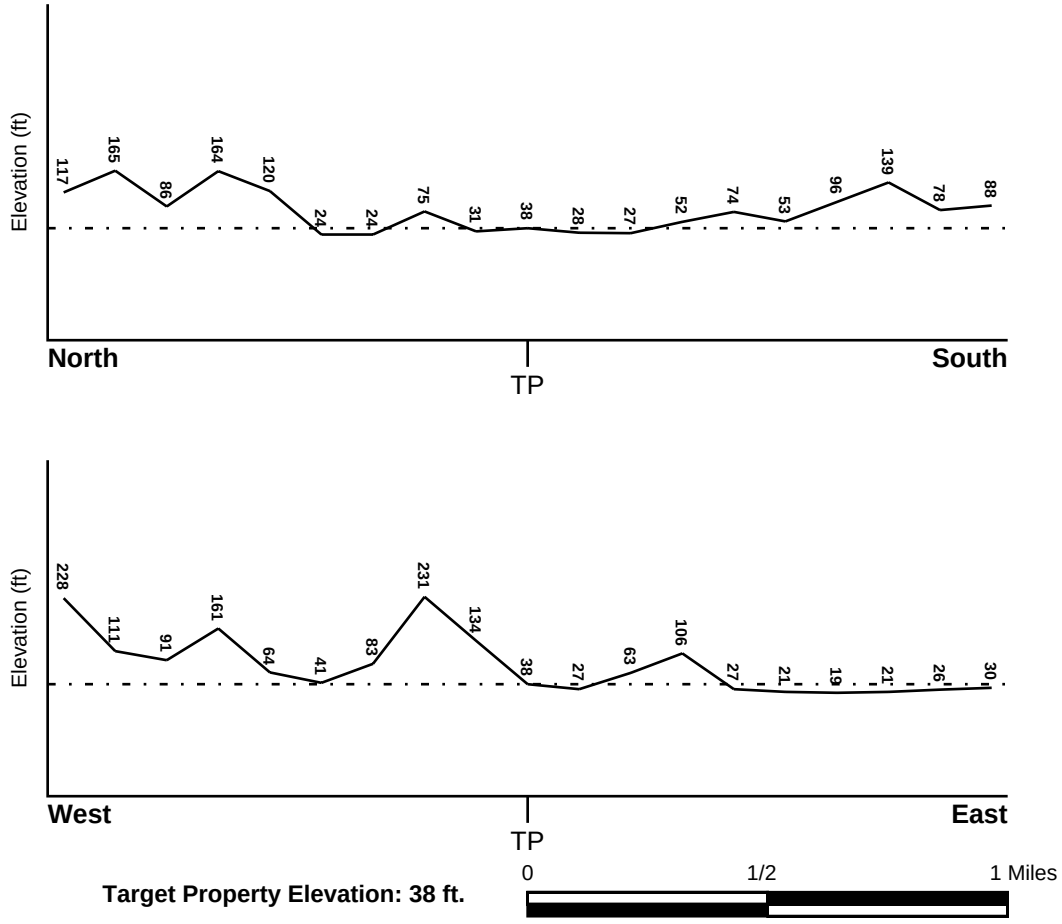
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 38 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06041C0293D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06041C0294D	FEMA FIRM Flood data

06041C0456E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOVATO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: URBAN LAND

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: SAURIN

Soil Surface Texture: clay loam

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: Min:	Max: Min:
2	9 inches	33 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: Min:	Max: Min:
3	33 inches	37 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: SAURIN

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Roux Associates Inc were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Roux Associates Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 76A8-4B54-B88D

Re: Records Request to the City of San Rafael

Dear Ms. Totsubo:

Your records request emailed to the City Clerk's Office on August 20, 2021, which was received the same day, has been referred to this office for a response. You asked for public records for the following addresses in San Rafael, and you stated you are interested in files available for the entire history of the address, particularly related to land use, hazardous waste, and environmental health (e.g. environmental site assessments, hazardous waste violations, documented releases, permits, etc.):

1. 1000 Northgate Drive,
2. 1500 Northgate Drive,
3. 5000 Northgate Drive,
4. 5010 Northgate Drive,
5. 5800 Northgate Drive,
6. 6000 Northgate Drive,
7. 7000 Northgate Drive,
8. 9000 Northgate Drive.

Enclosed are records responsive to Requests 1 through 4 as listed above. Also enclosed are a portion of the records in response to Request 5 above.

These records, including any building code violations, approved site plans, variances, special permits, and conditional/special use permits can be found on the City's eTrakit website at the following link:

http://epermits.cityofsanrafael.org/etrakit3/Search/permit.aspx.

Kate Colin, **Mayor** • Maribeth Bushey, **Vice Mayor** • Rachel Kertz, **Councilmember** • Maika Llorens Gulati, **Councilmember** • Eli Hill, **Councilmember**

Enter the address in the search by address box, or enter the APN without dashes in the search by parcel number box. Each epermit entry has data and attachments, including contact info, fees, plan check comments and inspections.

We are providing copies of the City's records located in connection with hazardous waste and environmental health; however, the City's Deputy Fire Chief advised for information on environmental reports and hazardous materials records, please contact the County of Marin Certified Unified Program Agency (CUPA) administrator at 415-473-6528.

Staff are compiling additional records in response to your requests, but due to time constraints staff will need additional time. We expect to provide those records to you no later than Friday, September 3, 2021 but will respond sooner if possible.

Very truly yours,

LISA A. GOLDFIEN
Assistant City Attorney

Re: Records Request to the City of San Rafael

Dear Ms. Totsubo:

This is in follow up to my August 30, 2021 letter to you regarding your records request to the City of San Rafael asking for public records for the addresses in San Rafael listed below. You stated you are interested in files available for the entire history of the address, particularly related to land use, hazardous waste, and environmental health (e.g. environmental site assessments, hazardous waste violations, documented releases, permits, etc.):

1. 1000 Northgate Drive,
2. 1500 Northgate Drive,
3. 5000 Northgate Drive,
4. 5010 Northgate Drive,
5. 5800 Northgate Drive,
6. 6000 Northgate Drive,
7. 7000 Northgate Drive,
8. 9000 Northgate Drive.

Enclosed are the reminder of records responsive to Request 5 in the folder entitled "5800 Northgate Drive No. 2". Also enclosed are a portion of the records in response to Request 6 in the folder entitled "6000 Northgate Drive". Responsive records may be accessed here.

These records, including any building code violations, approved site plans, variances, special permits, and conditional/special use permits can be found on the City's eTrakit website at the following link:

http://epermits.cityofsanrafael.org/etrakit3/Search/permit.aspx.

Kate Colin, **Mayor** • Maribeth Bushey, **Vice Mayor** • Rachel Kertz, **Councilmember** • Maika Llorens Gulati, **Councilmember** • Eli Hill, **Councilmember**

Enter the address in the search by address box, or enter the APN without dashes in the search by parcel number box. Each epermit entry has data and attachments, including contact info, fees, plan check comments and inspections.

As stated in my August 30 letter, we are providing copies of the City's records located in connection with hazardous waste and environmental health; however, the City's Deputy Fire Chief advised for information on environmental reports and hazardous materials records, please contact the County of Marin Certified Unified Program Agency (CUPA) administrator at 415-473-6528.

Staff are compiling additional records in response to your requests, but due to the volume of responsive records, staff will need additional time. We expect to provide those records to you by Friday, September 10, 2021.

Very truly yours,

LISA A. GOLDFIEN
Assistant City Attorney

Hello –

This is in follow up to Assistant City Attorney Lisa Goldfien's 9/3/21 letter to you regarding your 8/20/21 records request below. The remainder of records located for 6000 Northgate Drive and all records located for 9000 Northgate Drive have now been uploaded to the records portal and may be accessed here.

No records were located for 7000 Northgate Drive; however, the City's online records search portal at http://epermits.cityofsanrafael.org/etrakit3/Search/permit.aspx shows some activity at this parcel. Enter the address in the search by address box for more information.

Thank you.

Subject: Public Records Request

Hello,

Roux Associates will be conducting a Phase I ESA for Northgate Mall and would like to request public records for the following addresses in San Rafael:

1000 Northgate Dr
1500 Northgate Dr
5000 Northgate Dr
5010 Northgate Dr
5800 Northgate Dr
6000 Northgate Dr
7000 Northgate Dr
9000 Northgate Dr

We are interested in files available for the entire history of the address - particularly related to land use, hazardous waste, and environmental health (e.g. environmental site assessments, hazardous waste violations, documented releases, permits etc.).

Please reach out if you have any questions.

Thank you,
Emma

KLEINFELDER
An employee owned company

October 9, 2007
Kleinfelder Job No.: 86393

Mr. Phil Abell
The Macerich Company
401 Wilshire Blvd., Suite 700
Santa Monica, CA 90401

Subject: **Geotechnical Report**
Northgate Mall Improvements – Interior Floor Slab
5800 Northgate Mall
San Rafael, California

Dear Mr. Abell:

This letter report presents results of our geotechnical investigation regarding the interior floor slabs within the public access areas of the main mall structure. The floor slab area evaluation is in support of the preliminary design phases of a portion of the proposed Northgate Mall Improvements project.

The Northgate Mall is located at the referenced address, which is south of Las Gallinas Avenue and between Northgate Drive and Los Ranchitos Road, as shown on the Plate 1, Site Location. The mall consists of the main building and three outlying buildings and a parking structure with asphalt concrete-paved parking and driveway areas with some landscape areas covering the site. The main mall structure layout, including the covered public walkways, is shown on Plate 2, Site Plan.

The purpose of this geotechnical study was to obtain sample cores of the floor slabs and evaluate existing soil conditions immediately under various areas of the floor slabs to assist in the planning and design of improvements including possible rehabilitation or replacement of all or portions of the interior floor slabs.

AUTHORIZATION AND SCOPE OF SERVICES

This study was authorized by the Professional Services Agreement dated August 9, 2007, executed by Mr. Mark Klaver of Kleinfelder West, Inc. and Mr. Phil Abell of Macerich Property Management Company, LLC.

Our authorized scope of services relative to the floor slab investigation:

- Concrete coring, shallow exploration, and soil sampling at six (6) locations within the main mall structure to depths of between 1.4 and 2.1 feet.

© 2007 Kleinfelder
KLEINFELDER 2240 Northpoint Parkway, Santa Rosa, CA 95407-5009 (707) 571-1883 (707) 571-7813 fax

- Conduct laboratory testing on select samples including moisture content and dry density determination, Atterberg limits, particle size analysis, expansion index, and corrosivity as deemed appropriate.
- Conduct engineering analysis and develop conclusions and/or recommendations regarding:
  - Observations of the condition of the concrete cores
  - Site-specific geotechnical and groundwater conditions
- Preparation of this letter report.

FIELD INVESTIGATION

Our field exploration was performed on August 29, 2007, and consisted of six (6) concrete corings and exploratory borings (C-1 through C-6) at the approximate locations shown on Plate 2. Borings were located in the field by Kleinfelder by taping and pacing from nearby interior walls and building corners, and should be considered accurate to the degree implied by the method used. Before the exploration commenced, the existing parquet wood floor covering was removed, and was to be replaced later, by mall personnel.

The concrete floor slab corings were accomplished with a 4-inch-diameter core barrel. The concrete cores were retrieved and brought to the Kleinfelder laboratory for observation. The borings were advanced using a hand auger and a hand-driven sampling device. Materials encountered in each boring were visually classified in the field and a log was recorded. Samples obtained were removed, examined for logging, labeled, and sealed to preserve their natural moisture content for possible laboratory testing. Upon completion of our drilling and sampling program, the borings were backfilled with neat cement grout up to the top of the floor slab.

A representative of Kleinfelder observed the corings, performed the exploration, logged the conditions encountered and obtained select samples for visual classification and laboratory testing. Visual classifications were made in accordance with the Unified Soil Classification System presented on the Boring Log Legend, Plate A-1. The Log of Exploration Borings C-1 through C-6, showing soil classifications and sample depths, are attached to this report as Plates A-2 through A-7.

LABORATORY TESTING

Selected soil samples were tested in our laboratory to evaluate pertinent engineering and physical properties. The laboratory-testing program evaluated the natural moisture content, density, plasticity, particle size analysis, and expansion index of the soils encountered. Classifications made in the field were modified, as appropriate, based on the laboratory test results. Classifications presented on the test boring logs reflect modifications made as a result of laboratory tests. A summary of most laboratory test results is presented on the Log of Exploration Borings C-1 through C-6 (see Plates A-2 through A-7). The results of the laboratory tests for this investigation are presented on Plates B-1 through B-3. A separate soil sample was

© 2007 Kleinfelder

KLEINFELDER 2240 Northpoint Parkway, Santa Rosa, CA 95407-5009 (707) 571-1883 (707) 571-7813 fax

obtained from exploration outside the main mall structure for corrosivity potential of on-site shallow soils. The corrosion potential test results are included in Appendix B.

SITE CONDITIONS

The following summary of conditions encountered in the six test cores drilled for this investigation has been simplified for ease of report presentation. A more detailed description of the conditions encountered is presented on the Log of Exploration Borings (Plates A-2 through A-7).

Concrete Slab-On-Grade Floor Corings

- C-1: Concrete 8.5 inches thick; overlaid with 5.25 inches of red brick with mortar at top and bottom of brick; no steel; no visqueen; 5 inches of sandy gravel bedding; over sandy clay soil. Concrete is porous, weak.
- C-2: Concrete 5.5 to 6 inches thick; no steel; one visqueen membrane at base of concrete; 3 inches of sand bedding; over sandy clay soil. Concrete appears medium to poor quality.
- C-3: Concrete 4.75 inches thick; no steel; one visqueen membrane at base of concrete; no bedding; over sandy clay. Concrete appears medium to poor quality.
- C-4: Concrete 4 inches thick; with 0.25 to 0.5-inch of mortar (possibly used for leveling the surface) on top; with a vertical cold joint; no steel; no visqueen; 2.5 inches of sandy gravel bedding; over clayey sand soil. Concrete appears medium to poor quality.
- C-5: Concrete 3 inches thick; with 0.5-inch of mortar on top; no steel; no visqueen, 2.5 inches of sandy gravel bedding; over sandy clay soil. Concrete appears medium to poor quality.
- C-6: Concrete 2 inches thick; no steel, no visqueen; 2.5 inches of sandy gravel bedding; over clayey sand soil. Concrete appears medium to poor quality.

Subsurface Conditions

In general, based on our review of the recent borings as well as previous borings by others in 1986 and 2005, it appears that the top of the site bedrock, consisting of shale and sandstone, is present near the existing surface in the northwest portion of the property, extending from the vicinity of the north end of Mervyns to the north at the intersection of Northgate Drive and Los Ranchitos Road. The depth to the top of bedrock increases under the mall to the east and south, varying to approximately 13 feet under Macy's at the north end of the mall to an estimated 15 to 16 feet under Sears to the south end of the mall. From the surface (under slabs and pavement) to the top of the bedrock, the borings encountered varying depths of fill, consisting of medium dense to dense silty and clayey gravels and stiff to firm sandy clay, and alluvial soils, generally including medium dense clayey sand and stiff clay.

© 2007 Kleinfelder

KLEINFELDER 2240 Northpoint Parkway, Santa Rosa, CA 95407-5009 (707) 571-1883 (707) 571-7813 fax

The on-site subsurface conditions under the floor slab areas consist of medium stiff, moist to wet, sandy clay, sandy clay with gravel, and clayey sand with gravel to the termination depths of approximately 1.4 to 2.1 feet below top of floor slab. These upper soils may be native, particularly at C-1, C-2, C-5 and C-6, or fill constructed of similar soils. A previous boring (Kleinfelder, 1986) within the mall area near the location of C-5 encountered up to approximately 2 feet of "possible fill" over bedrock. The 1986 report included borings B-2 and B-2A where fill was encountered to depths of approximately 9 to 10 feet in the mall mid-way between C-3 and C-5. Another 1986 boring, located near C-4, encountered approximately 9 feet of fill underlain by native sandy clay to a depth of about 14 feet where the top of deeply weathered bedrock was identified.

Groundwater

Groundwater was not encountered in the recent shallow borings but was encountered in the 1986 borings at depths ranging between about 5 and 17 feet below the existing ground surface. The mall was not enclosed at the time of the 1986 borings. Groundwater levels are expected to vary seasonally and will be higher after periods of sustained rainfall. The shallower free water levels encountered are likely to be perched water accumulated in sandy layers in the fill or native soils and not representative of deeper groundwater conditions.

DISCUSSION AND RECOMMENDATIONS

As stated above, this letter report presents results of our geotechnical evaluation regarding the interior floor slabs within the public access areas of the main mall structure in support of the preliminary design phases of the proposed Northgate Mall Improvements project. Based on our observations and evaluation, we submit the following discussion and recommendations.

- At the time of the site visits to plan and perform this investigation, we observed several areas where the wood parquet floor levels were uneven, indicating localized shallow depressions and slightly varying floor levels. It appears that some of these depressions may correspond to the locations of utility trenches under the slab areas where some trench backfill settlement may have occurred.
- Other varying floor levels observed may be caused by differential settlement of adjacent or abutting (but not structurally connected) floor slabs. The existing slabs were likely originally constructed as exterior walkways and possibly landscaping pavements.
- Laboratory tests performed for this study included Expansion Index and Plasticity on samples obtained from under the existing mall floor slab at several locations. The Expansion Index of the tested sample was 26. The Plasticity Index tests indicated a PI ranging from 10 to 12 percent. These test results indicate that the soils tested are considered to have a low expansion potential.
- Other laboratory tests included moisture content and density and a particle size analysis for soil classification. There were no unusual moisture contents or densities that would indicate adverse conditions in the shallow soils under the floor slabs.

© 2007 Kleinfelder

KLEINFELDER 2240 Northpoint Parkway, Santa Rosa, CA 95407-5009 (707) 571-1883 (707) 571-7813 fax

- We observed that the quality of the concrete slabs, as cored, was generally medium to poor. The sample at C-1 was observed to be poor in quality, porous and weak in strength.

Based on the above discussion, we anticipate three different approaches towards upgrading the interior floor slab areas as follows:

- Rehabilitation of the existing slabs by selective grinding and resurfacing of the floor slab to provide a level surface. One advantage to this approach is relatively low initial cost; however, a drawback is that occasional future maintenance and re-leveling may be needed over time due to continuing future settlement of utility trench fills or differential settlement of non-continuous slabs. Although the quality of existing concrete was found to be generally medium to poor and no reinforcement was observed, the slab may be marginally adequate for its present function as a walkway and replacement may not be warranted at this time.
- Partial removal and replacement of selected portions of the floor slab, along with selective grinding and resurfacing of other portions as needed. Only those areas identified to have significant settlement or depressions would be replaced. This approach would be more costly initially than the above approach but would reduce the potential for future maintenance and re-leveling costs.
- Complete removal and replacement of the floor slabs. This option would provide the most uniform slab conditions, and lower future maintenance costs compared to the other approaches but would be the most costly initially.

It was not within our scope of services to survey the floor levels, map, or delineate depressed areas. If portions of the existing floor slab are to be retained or rehabilitated, we recommend consideration of having a detailed floor level survey performed to delineate areas that may need specific releveling or rehabilitation measures.

In those areas where slab removal is desired, partially or in full, we recommend the following:

Site Preparation and Grading

All debris and unsuitable soils, and soils disturbed by construction, should be removed. We recommend removal, as much as practicable, of any loose or soft utility trench backfill encountered under the slabs and replacement with compacted fill, tamped sand and gravel, or cement-based low-density fill or lean concrete. Unless approved by Kleinfelder for adequate moisture content and firmness, the exposed subgrade soils should be re-compacted to the requirements presented in Table 1 below.

On-site soil or rock that is free of organic matter and deleterious materials and does not contain particle sizes over 4 inches in diameter will generally be satisfactory for re-use as general compacted fill. Imported fill, if needed, should be of low expansion potential and free of organic matter, and should conform to the following requirements.

© 2007 Kleinfelder

KLEINFELDER 2240 Northpoint Parkway, Santa Rosa, CA 95407-5009 (707) 571-1883 (707) 571-7813 fax

Plasticity Index	less than 15
Liquid Limit	less than 40
Maximum Aggregate Size	4 inches

All fill, approved on-site native or imported, should be placed in accordance with the requirements presented in Table 1 below.

TABLE 1 - SUMMARY OF COMPACTION REQUIREMENTS

Area	Compaction Requirements
Concrete Slab-On-Grade Floor Subgrade	Compact the top 8 inches of acceptable native subgrade soil to a minimum of 90 percent relative compaction at a minimum of 2 percent above optimum moisture content.
General Engineered Fill or Backfill (Native and/or Imported)	In lifts, a maximum of 8 inches loose thickness, compact to 90 percent relative compaction at a minimum of 2 percent above the optimum moisture content.

Planned soil subgrade should be finished to present a smooth, unyielding surface. The finished subgrade should be maintained at its moist or above optimum moisture content and be free of shrinkage cracks or disturbance until covered by permanent construction.

In general, site preparation and grading operations should be observed by a representative of Kleinfelder. This will allow us the opportunity to observe unforeseen conditions or detrimental materials that may be exposed by the construction equipment, and to modify our recommendations, as necessary.

Slab-On-Grade Walkways and Floors

We recommend that slabs-on-grade be a minimum of four-inches-thick for interior walkways and six-inches thick for floors or where heavy loads, storage, or traffic is anticipated, unless otherwise recommended by the project Structural Engineer. Also, concrete slabs should be reinforced according to the recommendations set forth by the Structural Engineer. During construction, care should be taken to check that reinforcement is placed at the slab mid-height, particularly when using welded-wire fabric. In addition, slabs should be scored for crack control as recommended by the Structural Engineer and/or project Architect.

Floor Moisture

Concrete slab-on-grade floors, where moisture propagation through the slab is of concern, should be supported on at least four inches of under-slab rock to provide a capillary moisture break. This rock should be graded so that 100 percent passes the one-inch sieve and no more than 5 percent passes the No. 4 sieve. If the subgrade soil dries out and cracks prior to concrete slab

© 2007 Kleinfelder

KLEINFELDER 2240 Northpoint Parkway, Santa Rosa, CA 95407-5009 (707) 571-1883 (707) 571-7813 fax

placement, this soil should be re-moisture conditioned to wet of optimum (and to close any shrinkage cracks) before concrete is placed.

Subsurface moisture and moisture vapor naturally migrate upward through soil and, where the soil is covered by a building, this subsurface moisture will collect. To reduce the impact of this subsurface moisture and the potential impact of moisture that could be introduced in the future (such as landscape irrigation, precipitation, or leaking pipes), the current industry standard is to provide a vapor retardant membrane. This membrane typically consists of visqueen or polyvinyl plastic sheeting at least 10-mil in thickness. Although vapor barrier systems are currently the industry standard, these systems may not be completely effective in preventing floor slab moisture problems. These systems typically will not necessarily assure that floor slab moisture transmission rates will meet floor-covering manufacturer standards and that indoor humidity levels will be appropriate to inhibit mold growth. The design and construction of such systems are totally dependent on the use of the proposed building; therefore, the building function should be considered in the final slab-on-grade floor design. For example, building design and construction may have a significant role in perceived moisture problems since sealed buildings or rooms, or inadequate ventilation may produce excessive moisture in a building and affect indoor air quality.

Various factors such as surface grades, adjacent planters, concrete slab quality, and the permeability of the on-site soils can affect slab moisture and control future floor slab and flooring performance. In many cases, floor moisture problems are the result of either improper curing of floor slabs or improper application of flooring adhesives. We suggest contacting a flooring consultant experienced in the area of concrete slab-on-grade floors for specific recommendations regarding proposed flooring applications for the project.

Special precautions should be taken during the placement and curing of concrete slabs. Excessive slump (high water-cement ratio) of the concrete and/or improper curing procedures used during either hot or cold weather conditions could lead to excessive shrinkage, cracking, or curling of the slabs. High water-cement ratio and/or improper curing also greatly increase the water vapor permeability of concrete. Therefore, concrete placement and curing operations should be performed in accordance with the guidelines of the American Concrete Institute (ACI) Manual.

Kleinfelder personnel are not moisture proofing experts for floors. We make no guarantee, nor provide any assurance, that use of the capillary break/vapor retardant system will reduce concrete slab-on-grade floor moisture penetration to any specific rate or level, particularly those required by floor covering manufacturers. The project Contractor and Architect should be responsible for acceptable slab moisture resistance during slab design and construction.

PRELIMINARY CORROSIVITY

One near-surface soil sample from boring K-1 (outside and east of the main mall building) was submitted to Environmental Technical Services (ETS) for preliminary corrosivity analysis. The results of their tests are presented in Appendix B. It should be noted that Kleinfelder does not

© 2007 Kleinfelder

KLEINFELDER 2240 Northpoint Parkway, Santa Rosa, CA 95407-5009 (707) 571-1883 (707) 571-7813 fax

practice corrosion engineering. As such, the corrosivity test results are presented for the preliminary use of our client and their design team. Our review of comments contained on the preliminary test results indicates that the soils are considered to be moderately alkaline.

ADDITIONAL SERVICES

The conclusions and recommendations contained in this report are based on six (6) soil test borings, laboratory testing, engineering analysis, and our experience in the project area. Additional information on subsurface conditions at the site will become available during subsequent project construction. As such, Kleinfelder's review of project plans and specifications, along with field observation and testing during project construction, are an integral part of the conclusions and recommendations made in this report. The recommended tests, observations, and consultation by Kleinfelder prior to and during construction include, but may not be limited to:

- Review of plans and specifications.
- Observation of site preparation.
- Observation and testing of engineered fill (or backfill) and finished subgrades.

The above additional services are not included as part of our agreement for this investigation but can be provided by our firm on a time-and-expense basis, when requested.

LIMITATIONS

This geotechnical report has been prepared by Kleinfelder for the exclusive use of The Macerich Company and their consultants for design of the Northgate Mall Improvements – Interior Floor Slab described in this report. In addition, a brochure prepared by ASFE (Association of Firms Practicing in the Geosciences) has been included in Appendix C of this report. We recommend that all individuals reading this report also read this attached brochure.

Our services consist of professional opinions and conclusions developed in accordance with generally accepted geotechnical engineering principles and practices. We provide no other warranty, either expressed or implied. The conclusions and recommendations contained in this report are based on six (6) exploratory borings, including six (6) concrete corings, hand sampling, laboratory testing, and engineering analysis. It is possible that subsurface conditions could vary between or beyond the points explored.

Site conditions and cultural features described in the text of this report are those existing at the time of our investigation and as encountered in our subsurface exploration for this study, and may not necessarily be the same or comparable at other times. The scope of our services did not include an environmental assessment or an investigation of the presence or absence of hazardous or toxic materials in the soil, surface water, groundwater or air on, below, or around this site.

© 2007 Kleinfelder

KLEINFELDER 2240 Northpoint Parkway, Santa Rosa, CA 95407-5009 (707) 571-1883 (707) 571-7813 fax

This report may be used only by The Macerich Company for the purposes stated, within a reasonable time from its issuance (24 months). Site conditions (both on- and off-site) or other factors may change over time, and additional work may be required. Any party other than the client who wishes to use this report shall notify Kleinfelder of such intended use. Non-compliance with any of these requirements by the client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any authorized party.

We trust this report provides the information required at this time. Should you have questions or need further services, please call.

COMMENTS

Resistivity is over 2,000 ohm-cm but is mediocre, and soil reaction (i.e., pH) is moderately alkaline which does help; both sulfate and chloride are low; and redox is mild. The CalTrans times to perforation for this soil are as follows: for 18 ga steel the time to perforation is 37 yrs, and for 12 ga it goes up to over 81 yrs. The average pitting rate determination for steel in this soil is 0.07 mm/yr, thus pitting to a depth of 2 mm would be ≈28.5 yrs, and to a 4 mm depth it would be ≈57 yrs. Chlorides are so low that there should be no significant corrosion impact on concrete steel reinforcement; and sulfates are also low thus no measureable adverse impact should occur to concrete, mortar, grout or cement. The redox value is mild enough that no significant added adverse impact on construction materials should be expected. As concerns buried metals, this soil would not benefit at all from alkaline treatment since it pH is already alkaline enough. To increase metals longevity any more in this soil would require further upgrading (i.e., heavier gauge or more resistant steel); and/or other actions could be taken (e.g. special engineering fill, special coatings, cathodic protection, plastic pipe, etc.). Last, standard concrete mixes and related materials should be fine in this soil based on these results.

\\\\NOTES: Methods are from following sources: extractions by Cal Trans protocols as per Cal Test 417 (SO4), 422 (Cl), and 532/643 (pH & resistivity); &/or by ASTM Vol. 4.08 & ASTM Vol. 11.01 (=EPA Methods of Chemical Analysis, or Standard Methods); pH - ASTM G 51; Spec. Cond. - ASTM D 1125; resistivity - ASTM G 57; redox - Pt probe/ISE; sulfate - extraction Title 22, detection ASTM D 516 (=EPA 375.4); chloride - extraction Title 22, detection ASTM D 512 (=EPA 325.3); sulfides - extraction by Title 22, and detection EPA 376.2 (= SMEWW 4500-S D); cyanides - extraction by Title 22, and detection by ASTM D 4374 (=EPA 335.2).

APPENDIX C

Important Information About Your

Geotechnical Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

The following information is provided to help you manage your risks.

Geotechnical Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical engineering study conducted for a civil engineer may not fulfill the needs of a construction contractor or even another civil engineer. Because each geotechnical engineering study is unique, each geotechnical engineering report is unique, prepared *solely* for the client. No one except you should rely on your geotechnical engineering report without first conferring with the geotechnical engineer who prepared it. *And no one — not even you —* should apply the report for any purpose or project except the one originally contemplated.

Read the Full Report

Serious problems have occurred because those relying on a geotechnical engineering report did not read it all. Do not rely on an executive summary. Do not read selected elements only.

A Geotechnical Engineering Report Is Based on A Unique Set of Project-Specific Factors

Geotechnical engineers consider a number of unique, project-specific factors when establishing the scope of a study. Typical factors include: the client's goals, objectives, and risk management preferences; the general nature of the structure involved, its size, and configuration; the location of the structure on the site; and other planned or existing site improvements, such as access roads, parking lots, and underground utilities. Unless the geotechnical engineer who conducted the study specifically indicates otherwise, do not rely on a geotechnical engineering report that was:

- not prepared for you,
- not prepared for your project,
- not prepared for the specific site explored, or
- completed before important project changes were made.

Typical changes that can erode the reliability of an existing geotechnical engineering report include those that affect:

- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light industrial plant to a refrigerated warehouse,
- elevation, configuration, location, orientation, or weight of the proposed structure,
- composition of the design team, or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes—even minor ones—and request an assessment of their impact. *Geotechnical engineers cannot accept responsibility or liability for problems that occur because their reports do not consider developments of which they were not informed.*

Subsurface Conditions Can Change

A geotechnical engineering report is based on conditions that existed at the time the study was performed. *Do not rely on a geotechnical engineering report* whose adequacy may have been affected by: the passage of time; by man-made events, such as construction on or adjacent to the site; or by natural events, such as floods, earthquakes, or groundwater fluctuations. *Always* contact the geotechnical engineer before applying the report to determine if it is still reliable. A minor amount of additional testing or analysis could prevent major problems.

Most Geotechnical Findings Are Professional Opinions

Site exploration identifies subsurface conditions only at those points where subsurface tests are conducted or samples are taken. Geotechnical engineers review field and laboratory data and then apply their professional judgment to render an opinion about subsurface conditions throughout the site. Actual subsurface conditions may differ—sometimes significantly—from those indicated in your report. Retaining the geotechnical engineer who developed your report to provide construction observation is the most effective method of managing the risks associated with unanticipated conditions.

A Report's Recommendations Are *Not* Final

Do not overrely on the construction recommendations included in your report. *Those recommendations are not final,* because geotechnical engineers develop them principally from judgment and opinion. Geotechnical engineers can finalize their recommendations only by observing actual

subsurface conditions revealed during construction. *The geotechnical engineer who developed your report cannot assume responsibility or liability for the report's recommendations if that engineer does not perform construction observation.*

A Geotechnical Engineering Report Is Subject to Misinterpretation

Other design team members' misinterpretation of geotechnical engineering reports has resulted in costly problems. Lower that risk by having your geotechnical engineer confer with appropriate members of the design team after submitting the report. Also retain your geotechnical engineer to review pertinent elements of the design team's plans and specifications. Contractors can also misinterpret a geotechnical engineering report. Reduce that risk by having your geotechnical engineer participate in prebid and preconstruction conferences, and by providing construction observation.

Do Not Redraw the Engineer's Logs

Geotechnical engineers prepare final boring and testing logs based upon their interpretation of field logs and laboratory data. To prevent errors or omissions, the logs included in a geotechnical engineering report should *never* be redrawn for inclusion in architectural or other design drawings. Only photographic or electronic reproduction is acceptable, *but recognize that separating logs from the report can elevate risk.*

Give Contractors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can make contractors liable for unanticipated subsurface conditions by limiting what they provide for bid preparation. To help prevent costly problems, give contractors the complete geotechnical engineering report, *but* preface it with a clearly written letter of transmittal. In that letter, advise contractors that the report was not prepared for purposes of bid development and that the report's accuracy is limited; encourage them to confer with the geotechnical engineer who prepared the report (a modest fee may be required) and/or to conduct additional study to obtain the specific types of information they need or prefer. A prebid conference can also be valuable. *Be sure contractors have sufficient time* to perform additional study. Only then might you be in a position to give contractors the best information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions.

Read Responsibility Provisions Closely

Some clients, design professionals, and contractors do not recognize that geotechnical engineering is far less exact than other engineering disciplines. This lack of understanding has created unrealistic expectations that have led to disappointments, claims, and disputes. To help reduce the risk of such outcomes, geotechnical engineers commonly include a variety of explanatory provisions in their reports. Sometimes labeled "limitations" many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The equipment, techniques, and personnel used to perform a *geoenvironmental* study differ significantly from those used to perform a *geotechnical* study. For that reason, a geotechnical engineering report does not usually relate any geoenvironmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated environmental problems have led to numerous project failures.* If you have not yet obtained your own geoenvironmental information, ask your geotechnical consultant for risk management guidance. *Do not rely on an environmental report prepared for someone else.*

Obtain Professional Assistance To Deal with Mold

Diverse strategies can be applied during building design, construction, operation, and maintenance to prevent significant amounts of mold from growing on indoor surfaces. To be effective, all such strategies should be devised for the *express purpose* of mold prevention, integrated into a comprehensive plan, and executed with diligent oversight by a professional mold prevention consultant. Because just a small amount of water or moisture can lead to the development of severe mold infestations, a number of mold prevention strategies focus on keeping building surfaces dry. While groundwater, water infiltration, and similar issues may have been addressed as part of the geotechnical engineering study whose findings are conveyed in this report, the geotechnical engineer in charge of this project is not a mold prevention consultant; ***none of the services performed in connection with the geotechnical engineer's study were designed or conducted for the purpose of mold prevention. Proper implementation of the recommendations conveyed in this report will not of itself be sufficient to prevent mold from growing in or on the structure involved.***

Rely, on Your ASFE-Member Geotechncial Engineer for Additional Assistance

Membership in ASFE/The Best People on Earth exposes geotechnical engineers to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a construction project. Confer with you ASFE-member geotechnical engineer for more information.

Subject: FW: Grease interceptors at Northgate Mall.

Bret, contact either Janice Mandler or Mark Williams at the sanitary district re. hook up to the public main for the interceptors.
Mandler's number is 472 1734 x 13
William's number is 472 1734 x 11.
Bob Adamson is correct in that Environmental Health is not looking at outside interceptors.
Thanks.

Subject: Grease interceptors at Northgate Mall.

David,

For the past year and a half I have been having discussions and reviewing plans to generate letters or e-mails with the "grease removal device requirements" for new food service establishments (FSEs) at the remodeled Northgate Mall. The letters for each restaurant were cc'd to Jennifer Snow. However, I realize that you and Jennifer may have been "out of the loop" regarding the discussions on the outside interceptors serving several FSEs. Based on a past discussion we had regarding the interceptor installation at Embassy Suites, I thought interceptors outside the kitchen were not subject to Restaurant Plan Review.

Below is a summary of the outside interceptors (what the UPC now calls "gravity interceptors") that I have approved as complying with Las Gallinas Valley Sanitary District's FOG Ordinance. Sizing is based on Table 10-3 in the 2007 California Plumbing Code and estimated total kitchen fixtures.

"Building 40" interceptor will serve 3 medium-sized FSEs and will be 2,000 gallons.

The "Food Court" interceptor will serve 10 small FSEs and will be 2,000 gallons.

In addition, BJ's Restaurant will have its own 1,500 gallon interceptor.

The Mall management wants the FSEs served by a common interceptor to have small grease traps on their 3-comp sink, scrap sink, and wok stoves, in order to protect the drain lines going to the interceptor. I

have been including this requirement in the grease removal device letters I have been generating and forwarding to Jennifer.

I am not sure which of the above interceptors they are submitting to you. Feel free to contact me if you have questions or need more info.

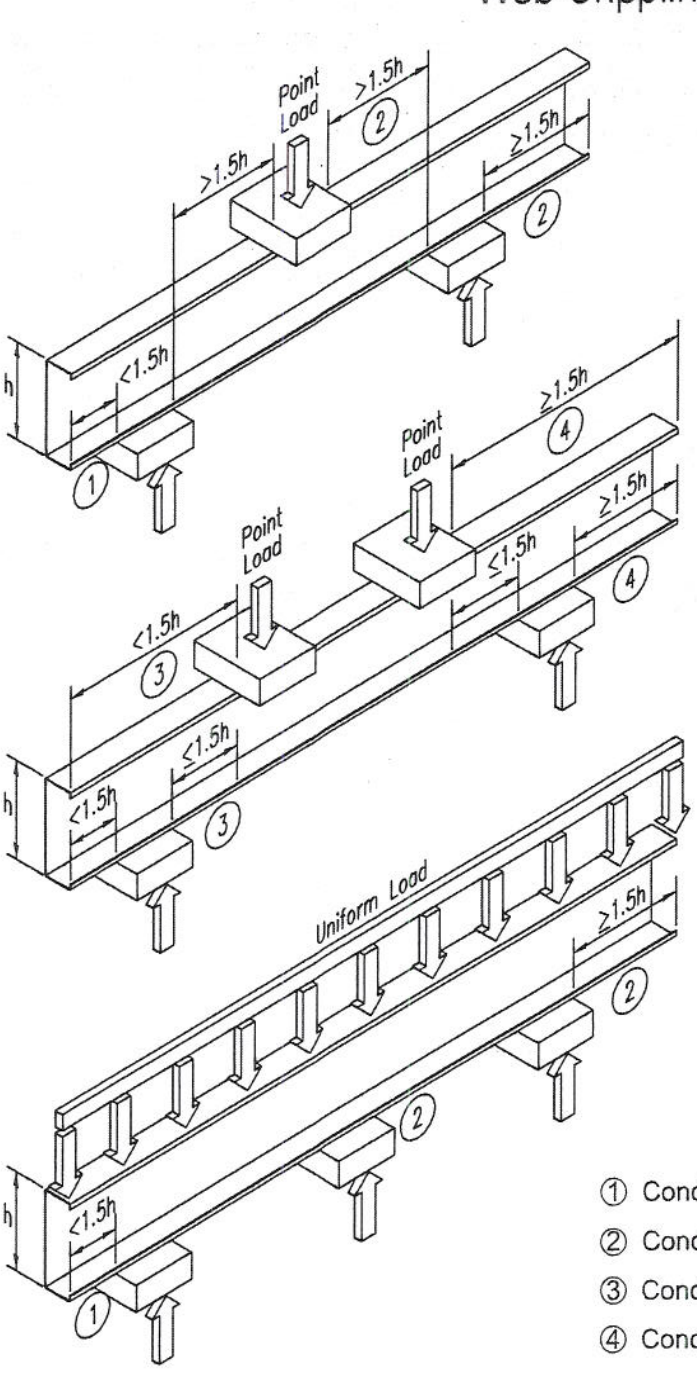
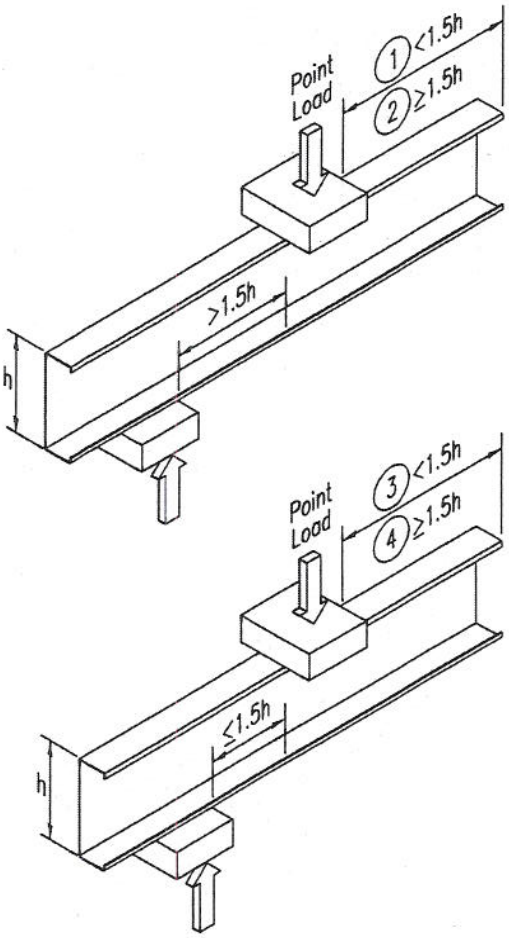
[1] Web-height to thickness ratio exceeds 200. Web stiffeners are required at all support points and concentrated loads



See Section Properties Table Notes on page 6.



Web Crippling Load Tables

Web Crippling Load Table Notes

1. Only members with stiffened flanges are considered.
2. For multiple members, multiply the listed capacity of a single member by the number of members in the assembly.
3. For back-to-back members table, listed web crippling values are for the total system of two members.
4. For back to back members, the distance between the web connectors and the flange shall be kept to a minimum.
5. Web punchouts were not considered for the web crippling tables. A web crippling reduction factor is to be applied for web punchouts, per ICBO Acceptance Criteria AC46, Appendix B.

Web Crippling Conditions

① Condition 1 - End Reaction - One Flange (Pt. Ld. > 1.5 h)

② Condition 2 - Interior Reaction - One Flange (Pt. Ld. > 1.5 h)

③ Condition 3 - End Reaction - Two Flange (Pt. Ld. ≤ 1.5 h)

④ Condition 4 - Interior Reaction - Two Flange (Pt. Ld. ≤ 1.5 h)

PANERA SAN RAFAEL	9-26-09
Subject: TRANSFORMER PLATFORM - SW DESIGN	By: JR

WALL (1)

Perforated SW analysis. H:W = 7':2' < 4:1 ok

Percent of full height SW = $\frac{2+2.5}{8} = 0.5625$

Maximum opening height ratio = $\frac{7'}{12'} = 0.5833$

from interpolation the shear resistace Adjustment factor Ca = 0.77

$V_{req'd} = \frac{182\,\#}{4.5'(0.77)} \times \frac{1}{2w/h} = 92\,plf$ (2w/h = .571) SW-1

Uplift $C = \frac{Vh}{Ca\,\Sigma L_i} = \frac{182\,\#(12')}{0.77(4.5)} = 630\,\#$

5/8"ϕ anchor
S/HDU4 6#14 stud
(2) 33mil stud
2320 #s

Strap over door

$C = \frac{182\,\#(7')}{0.77(4.5)} = 368\,\#$ LSTA9 w/ 8-#10

Wall (2)

w/h = 2.25:1 ∴ increase 2w/h.

L = 5'-4"
H = 12'-8"
F = 160 #s
$V = 160\,\#/5.3' \times \frac{1}{2(5.33)/12} = 34\,plf$ SW-1

$M_{OT} = 12'(160\,\#) = 1920\,\#\cdot ft$

$M_R = 10psf\,(12')(5.33)^2 \tfrac{1}{2} + \frac{835\,\#}{2}(2.5') = 2748\,\#\cdot ft$

$H_D = \frac{1920\,\#\cdot ft - 0.6(2748\,\#\cdot ft)}{5.33'} = -5.4\,\#$ ∴ no uplift.

in that segment are multiplied by 2w/h.

C3.2.4 Adjusted Shear Resistance

The *adjusted shear resistance* shall be calculated by multiplying the *unadjusted shear resistance* by the shear resistance adjustment factors of Table C3.2-1. For intermediate values of opening height ratio and percentages of full-height sheathing the shear resistance adjustment factors shall be permitted to be determined by interpolation.

Table C3.2-1
SHEAR RESISTANCE ADJUSTMENT FACTOR-C_a

Wall Height (h)	Maximum Opening Height Ratio [1] and Height				
	h/3	h/2	2h/3	5h/6	h

interpolate 0.77

C3.3 Anchorage and Load Path

Design of *Type II shear wall* anchorage and load path shall conform to the requirements of this section, or shall be calculated using principles of mechanics.

C3.3.1 Anchorage for In-Plane Shear

The unit shear force, *v*, transmitted into the top and out of the base of the *Type II shear wall* full-height sheathing segments, and into *collectors* (drag struts) connecting *Type II shear wall segments*, shall be calculated in accordance with the following:

$$v = \frac{V}{C_a \sum L_i} \qquad \text{(Eq. C3.3-1)}$$

where:

v	=	unit shear force (plf, kN/m)
V	=	shear force in *Type II shear wall* (lbs, kN)
C_a	=	shear resistance adjustment factor from Table C3-1
ΣLi	=	sum of widths of *Type II shear wall* segments (feet, mm/1000)

C3.3.2 Uplift Anchorage at Type II Shear Wall Ends

Anchorage for uplift forces due to overturning shall be provided at each end of the

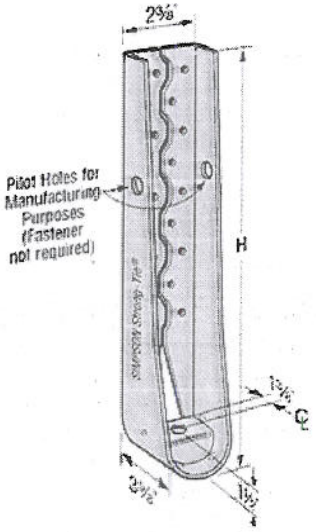
3) Where fully blocked gypsum board is applied to the opposite side of this assembly, per Table C2.1-2 with screw spacing at 7 inches (178 mm) o.c. edge and 7 inches (178 mm) o.c. field, these *nominal strengths* are permitted to be increased by 30%.
4) See Section C2.1 for requirements for sheathing applied to both sides of wall.
5) *Shear wall* height to width aspect ratio's (h/w) greater than 2:1, but not exceeding 4:1, are permitted provided the *nominal* shear strength is multiplied by 2w/h. See Section C2.1.
6) Shear values permitted for use in seismic design where the seismic response modification factor, R, is taken equal to or less than 3, subject to the limitations in Section C1.1.
7) For SI: 1" = 25.4 mm, 1 foot = 0.305 m, 1 lb = 4.45 N

TABLE C2.1-2
NOMINAL SHEAR STENGTH, (R_n), FOR WIND AND SEISMIC LOADS FOR SHEAR WALLS FACED WITH GYPSUM BOARD[1,2,3,4]
(Pounds Per Foot)

Wall Construction	Max. Aspect Ratio (h/w)	Orientation	Screw Spacing (inches o.c.)		Nominal Shear Strength (lb/ft)
			Edge	Field	
½" gypsum board on one side of wall; studs max. 24" o/c	2:1	Gypsum board applied perpendicular to framing with strap blocking behind the horizontal joint and with solid blocking between the first two end studs or applied vertically with all edges attached to framing members	7	7	290
			4	4	425
			4	12	295
			8	12	230

1. *Nominal* shear strengths shall be multiplied by the *resistance factor* (ϕ) to determine *design strength* or divided by the *safety factor* (Ω) to determine *allowable* shear strengths as set forth in Section C2.1.
2. See Section C2.1 for requirements for sheathing applied to both sides of wall.
3. Unblocked assemblies are permitted provided the *nominal* shear strength values above are multiplied by 0.35.
4. For SI: 1" = 25.4 mm, 1 foot = 0.305 m, 1 lb = 4.45 N

TABLE C2.1-3
NOMINAL SHEAR STRENGTH, (R_n), FOR SEISMIC LOADS FOR SHEAR WALLS [1,4,7]
(Pounds Per Foot)



Assembly Description	Max. Aspect Ratio (h/w)	Fastener Spacing at Panel Edges[2] (inches)				Designation Thickness[5,6] of Stud and Track (mils)	Required Sheathing Screw Size
		6	4	3	2		
15/32" Structural 1 sheathing (4-ply), one side	2:1[3]	780	990	-	-	33 or 43	8
	2:1	890	1330	1775	2190	43 or 54	8
7/16" OSB, one side	2:1[3]	700	915	-	-	33	8
	2:1[3]	825	1235	1545	2060	43 or 54	8
	2:1	940	1410	1760	2350	54	8
	2:1	1232	1848	2310	3080	68	10
0.018" steel sheet, one side	2:1	390	-	-	-	33 (min.)	8
0.027" steel sheet, one side	4:1	-	1000	1085	1170	33 (min.)	8

1 *Nominal* shear strength shall be multiplied by the *resistance factor* (ϕ) to determine *design strength* or divided by the *safety factor* (Ω) to determine *allowable* shear strength as set forth in Section C2.1.
2 Screws in the field of the panel shall be installed 12 inches (305 mm) o.c. unless otherwise shown.
3 *Shear wall* height to width aspect ratios (h/w) greater than 2:1, but not exceeding 4:1, are permitted provided the *nominal* shear strength are multiplied by 2w/h. See Section C2.1.
4 See Section C2.1 for requirements for sheathing applied to both sides of wall.

1. Heavy hex nut is required to achieve the table loads for S/HDU11.
2. Allowable tension loads for S/HDU11 with regular hex nut for 2-43 mil is 9595 lb. and for 2-54 mil is 9675 lb.
3. The Designer shall specify the anchor embedment and configuration. See SSTB Anchor Bolts.
4. Back-to-back stud members are required unless otherwise specified.
5. 1/4" self-drilling screws can be substituted for #14.
6. See Holdown and Post Base Anchor Solutions for anchor bolt retrofit.
7. Tabulated loads shown at (100) do not include steel stress increase. Tabulated loads shown at (133) include a 1/3 stress increase on the steel. Refer to Steel Stress Increase for additional information.
8. Deflection Load: The deflection of a holdown measured between the anchor bolt and the strap portion of the holdown when loaded to the highest load listed in the catalog table. This movement is strictly due to the holdown deformation under a static load test with attached to members listed in the table above.
9. Nominal Tension Load is based on the average peak load from tests. AISI Lateral Design standard requires holdown to have nominal strength to resist lesser of amplified seismic load or what the system can deliver.

4. Shear load

Proof	Load V_{ua} [lb]	Capacity ϕV_n [lb]	Utilization β_V [%] = $V_{ua}/\phi V_n$	Status
Steel Strength*	N/A	N/A	N/A	N/A
*Steel failure (with lever arm)**	N/A	N/A	N/A	N/A
Pryout Strength**	N/A	N/A	N/A	N/A
Concrete edge failure in direction**	N/A	N/A	N/A	N/A

* most unfavorable anchor **anchor group (relevant anchors)

5. Allowable Stress Design (Refer to ICC-ES Evaluation Service Report)

single anchor relevant (tension); relevant to a single anchor (shear)

	Tension [lb]		Shear [lb]	
Reference for load	including seismic	excluding seismic	including seismic	excluding seismic
ACI318 Section D.4.4	-	2028	-	0
ACI318 Section D.4.5	-	1014	-	0

$R_{n,ASD} = R_n / \alpha$

$T/T_{allow,ASD} + V/V_{allow,ASD} <= 1.2$

6. Proof of the transmission of the anchor loads to the supports

Transmission of the anchor loads into the concrete
Checking the transfer of loads into the base is required in accordance with ACI318!

Shear resistance of base material
Shear resistance of the base material must be checked according to relevant approval or standard!

7. Warnings

Condition A applies where the potential concrete failure surfaces are crossed by supplementary reinforcement proportioned to tie the potential concrete failure prism into the structural member. Condition B applies where such supplementary reinforcement is not provided, or where pullout or pryout strength governs.
Design Strengths of adhesive anchor systems are influenced by the cleaning method. Refer to the INSTRUCTIONS FOR USE given in the Evaluation Service Report for cleaning and installation instructions
The present version of the software does not account for special design provisions for overhead applications. Refer to related approval (e.g. section 4.1.1 of the ICC-ESR 2322) for details.
IBC 2006, Section 1908.1.16, requires that the governing design strength of an anchor or group of anchors be limited by ductile steel failure, if this is NOT the case, ACI 318-D Section D.3.3.5 requires that the attachment that the anchor is connecting to the structure shall be designed so that the attachment will undergo ductile yielding at a load level corresponding to anchor forces no greater than the design strength of anchors specified in ACI 318-D section D.3.3.3, or the minimum design strength of the anchors shall be at least 2.5 times the factored forces transmitted by the attachment.

Fastening meets the design criteria!

TT

Load Table: See code report listings below

top

Punchout Width =	1.500	in	Punchout Length =	4.000	in

Wall Solver Design Data - Simple Span

Wall Height 12.00 ft
Lateral Pressure 5.00 psf
Stud Spacing 6.0 in
Deflection Limit L/180
Axial Load 230 lb

Check Flexure

Load Multiplier for Flexural Strength = 1.00
Input Flexural Bracing: None
Cb = 1.14
Me = 258 Ft-Lb My = 836 Ft-Lb Me <= 0.56 My
Mc = 258 Ft-Lb Sc/Sf = 0.97
Mmax = 45 Ft-Lb <= Ma = 150 Ft-Lb

Check Deflection

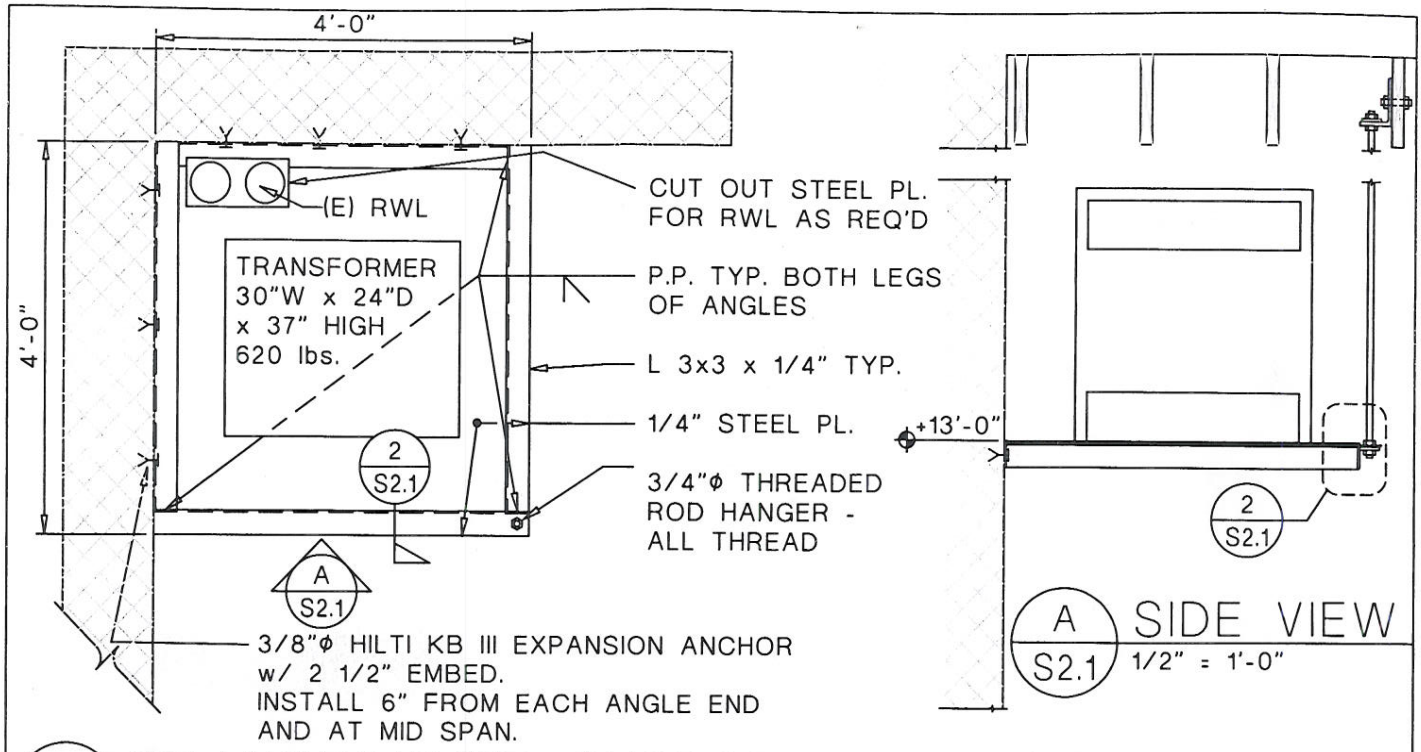
Deflection Limit: L/180
Load Multiplier for Deflection = 1.00
Maximum Deflection = 0.072 in Deflection Ratio = L/2007

Check Shear

Vmax = 15 lb (Including Flexural Load Multiplier)
Shear capacity not reduced for punchouts near ends of member
Va = 1024 lb >= Vmax

Check Web Crippling

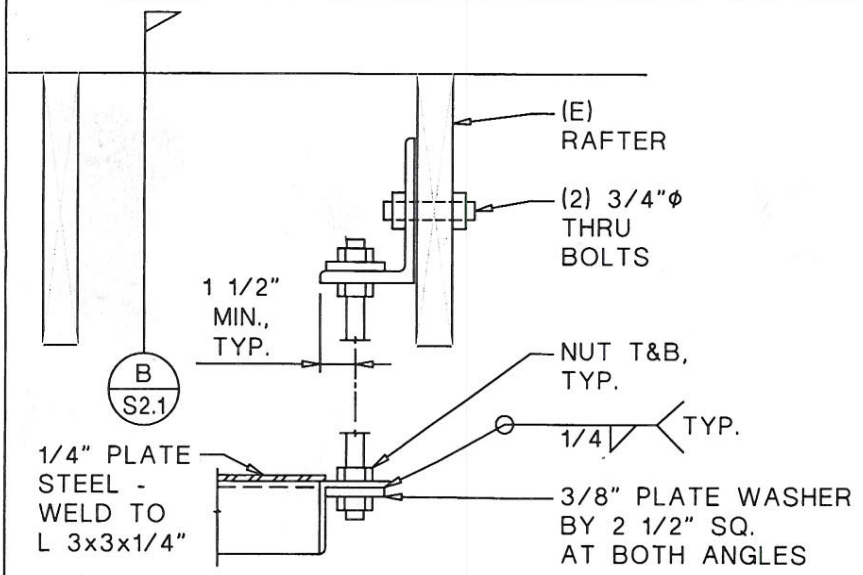
Rmax = 15 lb (Including Flexural Load Multiplier)
Web Crippling capacity not reduced for punchouts near ends of member
End Bearing Length = 1.00 in
Ra = 165 lb >= Rmax, stiffeners not required



Check Axial Interactions

P = 230 lb (Including Axial Load Multiplier)
Axial Loads Multiplied by 1.00 for Interaction Checks
Max unbraced length, KyLy and KtLt = 144.0 in **Max KL/r = 234**
Allowable Pure Axial Load, Pa = 452 lb : Axial Load Ratio, P/Pa = 0.509

Check Equation C5.2.1-1
Cmx = 1.00
Pcr = 7739 lb Alpha = 0.943
Equation C5.2.1-1 = 0.826



Check Equation C5.2.1-2
Pao = 3176 lb
Equation C5.2.1-2 = 0.372

Maximum Interaction = 0.826 <=1.0

PG&E Planned System Upgrade

Start: Tuesday, October 25, 2011
End: Monday, October 31, 2011

Service Interruption: 2:00AM - 6:00A
Service Interruption: 2:00AM - 6:00A

Work: Preventative upgrades to replace two sub-surface switches
Back-up generators will be running the duration of the outage

Mon.
10/24/11
9:00AM Generators (4) arrive at Northgate Mall to for staging

Tues.
10/25/11

2:00AM - 6:00AM Service interruption to connect generators

6:00AM customers will be powered by generators
Crews will wrap up work between 7-8AM
Crews will start work between 6-7PM

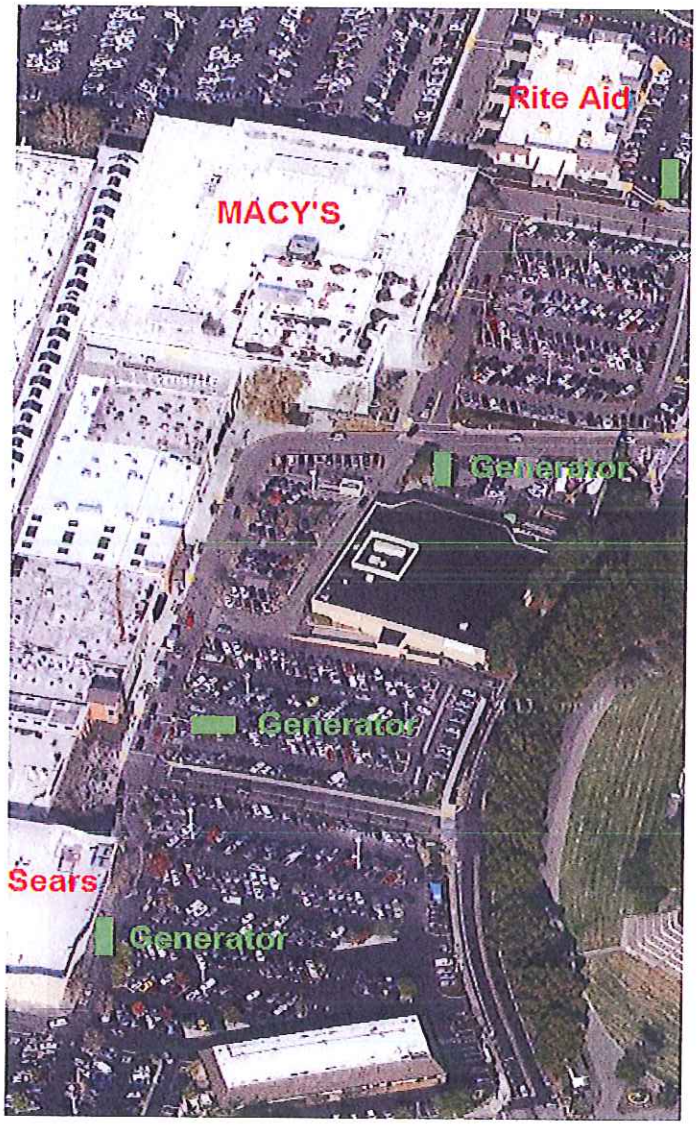
Wed.
10/26/11

Crews will wrap up work between 7-8AM
Crews will start work between 6-7PM

Thurs.
10/27/11

Crews will wrap up work between 7-8AM
Crews will start work between 6-7PM

Fri.
10/28/11



Crews will wrap up work between 7-8AM
Crews will start work between 6-7PM

Sat.
10/29/11

Crews will wrap up work between 7-8AM
Crews will start work between 6-7PM

Sun.
10/30/11

Crews will wrap up work between 7-8AM
Crews will start work between 6-7PM

Mon.
10/31/11

2:00AM - 6:00AM Service interruption to disconnect generators
6:00AM customers will be connected back to PG&E electric

Notices

This permit will expire if work authorized is not commenced within 180 days or if work is suspended or abandoned for more than 180 days.

Do not conceal or cover any construction until the work is inspected and the inspection recorded on the jobsite copy of the inspection record.

All work performed under this permit must conform to the plans and specifications approved by the City of San Rafael. This permit does not constitute an approval or waiver of any violation of the state law or local ordinance, regulation, or requirement.

Encroachment permit is required from San Rafael Public Works prior to any construction on any street or public right of way.

GRAND TOTAL: $187.50

Permit Issued By:

Applicant Certification

By my signature below, I certify to each of the following:

I am (_) a California licensed contractor
(X) the property owner*
(_) authorized to act on the property owner's behalf*

I have read this construction permit application and the information I have provided is correct.
I agree to comply with all applicable city and county ordinances and state laws relating to building construction.
I authorize representatives of this city or county to enter the above-identified property for inspection purposes.

Signature: _____

San Rafael, CA Fax: (415) 485-3184

CALIFORNIA LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business & Professions Code, and my license is in full force and effect.

Contractor Name and Address: _____

License Class and #. _____ Contractor Signature _____

OWNER-BUILDER'S DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business & Professions Code: Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business & Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars($500).):

(_) I, as owner of the property, or my employees with wages as their sole compensation, will do (_) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.).

(X) I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business & Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law.).

(_) I am exempt from licensure under the Contractors' State License Law for the following reason:

_____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business & Professions Code, is available upon request when this application is submitted or at the following Web site: http://www.leginfo.ca.gov/calaw.html.

Property Owner or Authorized Agent signature RH Date 06·26·18

PUBLIC RECORDS ACT REQUEST – PRA # 2-082021-03

Dear Ms. Totsubo:

On August 20, 2021, the Department of Toxic Substances Control (DTSC) received your Public Records Act request for records pertaining to the following property:

1500, 5010, & 5800 Northgate Drive
San Rafael, California 94903-3671

The search on the above address, conducted in DTSC's "Electronic Devices Online System - For Notification and Reporting Requirements," resulted in the enclosed information on **C&T Recycling & Attan Recycling Corporation**

that are associated with the property. Some additional information associated with the property is pending review and will be provided once the review is completed.

Should you have any questions regarding this matter, please feel free to contact me via electronicwaste@dtsc.ca.gov.

Sincerely,

Laura Helfrich

Public Records Request Number: 2-082021-03
Location(s): Northgate Mall, San Rafael, CA; 1000 Northgate Dr., 1500 Northgate Dr, 5000 Northgate Dr, 5010 Northgate Dr, 5800 Northgate Dr, 6000 Northgate Dr, 7000 Northgate Dr, & 9000 Northgate Dr. San Rafael, CA

Dear Ms. Totsubo,

We have received your Public Records Act Request at the Department of Toxic Substances Control (DTSC). Upon thorough review of our files, we found no records pertaining to the site(s) referenced above.

DTSC's E-Waste unit may also have records that pertain to this PRA request. ("E-Waste" pertains to any unwanted electronic device or Cathode Ray Tube {CRT}. You can contact them by email at electronicwastte@dtsc.ca.gov if you are interested in any pertinent information related to this site.

For information regarding public reports on hazardous waste shipments of generators, transporters, and TSDFs, you can access our Hazardous Waste Tracking System (HWTS) online at: https://hwts.dtsc.ca.gov/. Select the "Reports" tab for search options. If you are interested in retrieving detailed reports, please contact the HWTS unit via e-mail: hwtsreports@dtsc.ca.gov or phone: 1-800-618-6942. Customized reports may require a fee. For copies of manifests, please send an e-mail to mcr@dtsc.ca.gov.

In addition, the DTSC provides access to public records online via Envirostor; another data management system that tracks our efforts in cleanup, permitting, enforcement, and investigation of known/suspected hazardous waste sites and facilities. The available data is updated in real-time. You can access Envirostor online at www.envirostor.dtsc.ca.gov. Navigate the website easily by clicking the "How to Use Envirostor" tab, then selecting the option "Take a Tour".

If you have any questions or would like further information regarding your request, please contact me via phone: 510-540-3800 or e-mail: Berkeleyfileroom@dtsc.ca.gov.

Sincerely,

Christina de la Vega
Regional Records Coordinator

Re: Public Records Act Request dated August 20, 2021
File No. 21-477

Dear Ms. Totsubo,

My office represents the County of Marin. We are in receipt of your Public Records Act (PRA) request, dated August 20, 2021. Below is your request with a corresponding response.

Request: Roux Associates will be conducting a Phase I ESA for Northgate Mall and would like to request public records for the following addresses in San Rafael:
1000 Northgate Dr
1500 Northgate Dr
5000 Northgate Dr
5010 Northgate Dr
5800 Northgate Dr
6000 Northgate Dr
7000 Northgate Dr
9000 Northgate Dr
We are interested in files available for the entire history of the address - particularly related to land use, hazardous waste, and environmental health (e.g. environmental site assessments, hazardous waste violations, documented releases, permits etc.).

Response to Request: The County of Marin has no responsive records to your request. However, Marin County Certified Unified Programs Agency (CUPA) records can be accessed by completing the following form and submitting directly to CUPA. https://www.marincounty.org/-/media/files/departments/pw/forms/cupa_file_review_request.pdf?la=en.

If you need any further assistance, please do not hesitate to contact me directly.

Subject: RE: PRA 21-0142 Records Request

This message originated outside your organization. Please use caution!

Hello Emma,

The San Francisco Bay Regional Water Board received your August 20, 2021 file review request, which seeks records related to the addresses you described below. Based on a thorough search, it appears in Geotracker a non-case informational for the address at 9000 Northgate Drive, San Rafael, the site documents are available to access online.

It appears in SMARTS database a terminated construction NOI permit coverage, WDID number 21C351950 for the address at 5800 Northgate Drive, San Rafael, a document is available at this link:
https://smarts.waterboards.ca.gov/smarts/faces/PublicDataAccess/PublicNoiSearchResults.xhtml

I was unable to find any records information for the other addresses you requested.

I would recommend contacting the local agency, Marin County Health Department, LOP for any further information they may have.

Thank you,

Melinda Wong

Re: Sears
NORTHGATE MALL
San Rafael, California

Dear Sir/Madam:

It has come to our attention that Sears was the owner of two underground gasoline storage tanks and one underground waste oil tank on your premises and that those tanks had the potential for leaking toxic substances into the environment. It is our understanding that all of those tanks have been removed by Sears.

We hereby request that you provide the following information to the undersigned as soon as possible:

1) Results of all soil and groundwater tests already complete, if any.

2) What is the current status of the tanks? (It is our understanding that Sears removed two 12,000 gallon gasoline storage tanks and a waste oil tank). Please confirm that all tanks have been removed.

Since Sears has the responsibility to assure compliance with applicable environmental laws with regard to these tanks, including any removal or cleanup required, and since there is significant potential liability resulting from environmental damage, your response to the above referenced questions is requested as soon as possible.

Your cooperation is appreciated. If you have any questions, please feel free to contact me.

Sincerely,

THE MACERICH COMPANY

subj: Sears #1528 San Rafael, CA - UST Removal

Dear Bob,

In as much as Sears is currently in negotiation with MaceRich on several projects in California (i.e. Oxnard and Reno) and in that same spirit of cooperation, the following information about the Underground Storage Tanks that were removed in 1986 at our store in San Rafael is attached. You will note that the "Clearance" report from the Department of Health and Human Services (March 2, 1987) shows the samples at the site at a safe level or free from any residual product formerly stored. I know that this comes as good news and should help expedite your endeavors.

If I can answer any further questions Bob, don't hesitate to call.

Regards,

H.E. Schmalen
Director of Environmental Matters
Sears, Roebuck and Co.

re: Your letter of September 10, 1993
Our phone conversation this date

Dear Bob,

As I indicated in our phone conversation this afternoon, the attached invoices are the only "records" that we have of the tank pulls at this site. As you know, back in 1986 was not atypical for our individual regions at that time to take care of these UST's and complete records are usually not available here.

I hope that this helps with your lenders. If I can be of any further assistance Bob, don't hesitate to call.

EXECUTIVE SUMMARY

At the request of The MaceRich Company, ATC/Diagnostic Environmental Incorporated (ATC/DEI) performed an Environmental Site Assessment of the Northgate Mall, located at 5800 Northgate Drive, San Rafael, California (Project Area/Site). Sears Department Store and its facilities, which also lie within the Site Boundary, are not part of the Project Area. ATC/DEI initiated its services on July 30, 1993. The purpose of the Environmental Site Assessment was to establish a preliminary evaluation of the past and/or present existence, use and/or release of environmentally regulated materials or wastes. The Environmental Site Assessment included a review of Project Area operations, a review of immediately adjacent and surrounding property use, a review of available historical site data and government records, aerial photo study and a review of geological/hydrogeological existing conditions.

ATC/DEI visually reviewed the Project Area to determine the presence or possible presence of stored materials, process materials and wastes, site waste containment or deposits, materials used in construction, evidence of cesspools, evidence of above- or below-grade storage tanks, stressed vegetation and PCB-containing electrical equipment, including transformers, hydraulic lifts, compressors and fluorescent light ballasts. Neighboring properties were also reviewed to determine whether activities at adjacent properties were impacting the Project Area.

The survey was conducted by Mr. Wilson Wong and Ms. Lee Ann Norman of ATC/DEI's San Francisco office. The conditions presented are as observed and evaluated on the days of the Environmental Site Assessment.

The Project Area history indicates that the Project Area was developed in phases - with the facility construction beginning in 1963. Historical records indicate that the Project Area was unused land before the development of the mall. The evaluation of adjacent properties revealed four gasoline service stations located adjacent to the Project Area, but in a hydraulically cross-gradient location. One of the four gasoline stations was demolished in 1992 and another two, Shell and Exxon, are in the Leaking Underground Storage Tank (LUST) database. The fourth gasoline station, Chevron, revealed no evidence of serious

leakage. According to Mr. Joe Curley, Supervising Building Inspector for City of San Rafael, all three gasoline stations had undergone clean up. Based on the predicted regional hydrological conditions, the proximity of the sites to the Project Area and the reported site conditions/status of the aforementioned sites, the Project Area does not appear to be environmentally threatened.

The former Sears Automotive Operation and former gasoline station (currently Tim's Car Radio) was closed in 1986. No information regarding soil and/or groundwater quality for this site was available. The site is located at the downgradient boundary of the Project Area, and a petroleum release at this site would likely have minimal impact to the Project Area.

The current operations of the Project Area were reviewed - inclusive of tenants and facility management activities. ATC/DEI did not observe any findings presenting a significant Area of Concern.

Based upon the findings of the report, there are no open or pending environmental regulatory issues associated with The Mall at Northgate.

PHASE I
ENVIRONMENTAL SITE ASSESSMENT

At the request of The MaceRich Company, ATC/Diagnostic Environmental Incorporated, (ATC/DEI) performed a Phase I Environmental Site Assessment of the property with its principal address listed as 5800 Northgate Drive, San Rafael, California (Project Area/Site). The assessment was initiated on July 30, 1993. The Project Area is improved with one centralized multi-tenant retail structure, four smaller free-standing commercial/retail buildings and grade-level asphaltic concrete parking and a bi-level parking structure at the southwest corner of the Project Area, totaling approximately 45 acres of property. The Sears facilities, including land and buildings of the retail store, Automotive Center, Garden Center and Tim's Car Radio, are separate from the Northgate Mall and considered neighboring properties. The purpose of the Phase I Environmental Site Assessment was to establish a preliminary evaluation of the past and present existence, use or release of environmentally regulated or hazardous substances on or near the Project Area.

I. PROJECT AREA OVERVIEW

The Project Area is located at located at 5800 Northgate Drive, San Rafael, California (Project Area/Site). The Project Area is situated in the northern portion of San Rafael in Marin County, in a mixed commercial and residential area. A site location map detailing the Project Area is provided in Figure 1.

II. GEOLOGICAL/HYDROGEOLOGICAL DATA

ATC/DEI reviewed pertinent, available documents and maps regarding local geology, hydrogeology, and physiography in order to evaluate the potential migration of hazardous substances at or around the Project Area.

Geology and Physiography

The site is underlain by bedrock composed of sandstone and shale. The bedrock is less weathered and harder with increasing depth. Surficial soils consist generally of stiff to very stiff sandy and silty clays above the bedrock. Source: Sears TBA and Former Gas Station Soil Report, September 22, 1970 Woodward-Clyde Associates, San Francisco.

Hydrogeology

The water utility for the Northgate Mall is the Marin Municipal Water District, whose source is seven reservoirs/lakes that they own. According to Shelley Melville (Engineering Representative at Marin Municipal Water District), they do not have any wells on line. Groundwater in the general vicinity of the Project Area can be found at depths ranging from 7 to 10 feet below grade. The groundwater flows in an easterly direction toward the San Rafael Bay. Due to the proximity of the San Rafael Bay, the flow direction varies greatly, depending on the time of verification. Source: Ms. Shelley Melville, Marin Municipal Water District.

III. PROJECT AREA OBSERVATIONS

The Project Area is comprised of five structures - including the principal retail structure housing approximately 125 retail stores, 3 large department stores and related maintenance and security operations. The other structures are physically and structurally independent facilities located around the principal structure. Located to the east is the Pay Less Drug Store, in the southeast corner are the Sears Automotive Center and Tim's Car Radio (also owned by Sears), and in the southwest corner is the Sears Garden Center.

The principal structure was originally an outdoor shopping center which began in 1963 with an Emporium department store along with several retail stores. The Sears department store was added in 1971. The Mervyn's and Pay Less Drug Store were added in 1985. The facility was expanded and converted into a shopping mall in 1987. The mall now includes 125 small retail stores, and three anchor department stores (Sears, Mervyn's, and Emporium). Of the three department stores, Sears owns its own land and buildings - including the automotive center, garden center, and Tim's Car Radio (a former Sears Gasoline Station). Mervyn's and Emporium own their buildings but lease the land.

Pay Less Drug Store, located at the east end of the principal structure, leases both its building and land. ATC/DEI did not observe evidence of spills or illegal disposal of hazardous materials associated with this operation.

The retail tenants typically consist of the larger department stores, jewelry stores, men's and women's clothing stores, eating establishments, home furnishings stores, banks, a dry cleaner, and miscellaneous goods and services. At the time of the Project Area visit, ATC/DEI interviewed select retail establishments. Specifically, ATC/DEI focused on tenants most likely to handle, generate or otherwise use hazardous materials in their operations. ATC/DEI reviewed the tenant operations of Mervyn's, Emporium, Pay Less Drug Store, Hudson Goodman Jewelers, Kay Jewelers, Ritz Camera, Expressly Portrait, Glamour Shots, All American Printing, Pearle Vision Express, William M. Liebman, M.D., Inc., and Fairfax French Cleaners.

In general, ATC/DEI did not observe any indication of improper handling, including storage or disposal, of hazardous materials and wastes in the referenced locations that pose an environmental risk to the Project Area.

Both jewelry stores (Hudson Goodman Jewelers, and Kay Jewelers) do jewelry repairing off-site and only carry limited mild cleaning solutions for jewelry cleaning.

Pearle Vision Express corporate office is responsible for all hazardous material activities of the branch in the Project Area.

Ritz Camera develops color film (C-41 Process) and prints color photographs in-house; black and white processing is done off-site. A silver recovery unit is maintained on site. Recovered silver residue is collected and the waste water solution is disposed to the sanitary sewer.

Glamour Shot does not handle regulated materials on-site. All photos are sent to an off-site lab.

Expressly Portrait corporate office is responsible for all hazardous material activities of the branch in the Project Area.

Fairfax French Cleaners does no on-site dry cleaning. It only serves as a pick up and drop-off location.

All American Printing does not handle regulated materials on site.

William M. Liebman, M.D., Inc., generates small amounts of medical waste on-site. All waste is transported off-site for proper disposal.

Mervyn's hires outside maintenance personnel to service all elevators, escalators and HVAC units. A back-up generator with an aboveground 100-gallon diesel fuel tank (part of the generator) is maintained on-site. The Operations Manager stated that Mervyn's did not

carry or store hazardous materials except diesel fuel. Source: Karen Beam, Operations Manager, and Charlie Martin, Facility Manager.

Emporium employs in-house maintenance personnel to service all elevators, escalators, and HVAC units. All materials required for servicing are obtained by the maintenance personnel. A ventilated work area is used for painting and storage of small amounts of paint and empty paint cans. A back-up diesel generator is located in the boiler room along with two 55-gallon fuel storage drums. No other hazardous materials are stored on-site. Source: Marianne Porter, Assistant Store Manager, Operations, Emporium.

Pay Less Drug Store operates a silver recovery unit for its photo processing service but carries no other regulated materials in the store. The silver residue is transported off-site for refining and the waste solution is disposed to the sanitary sewer.

The mall maintenance staff uses small amounts of regulated materials, including paints, gasoline, diesel, and solvents that are used in general facility maintenance operations for touch-up and cleaning. Gasoline is used for operating leaf blowers and diesel is stored for a backup generator which is no longer in operation. Limited quantities of these materials are stored in within the maintenance and display preparation areas located in the parking structure. Minor oil stains were observed on the ground under the back-up generator. ATC/DEI did not observe other evidence of spills or illegal disposal of hazardous materials associated with these operations. Source: Henry Lichtman, Mall Manager.

Polychlorinated Biphenyls Survey

ATC/DEI identified 10 pad-mounted transformers within the Project Area boundaries. All electrical transformers were observed to be in good condition. According to Mr. Steve Woodward of Pacific Gas & Electric (PG&E), these transformers are owned and maintained by PG&E. Since 1983, PG&E has tested all the transformers and three were found to be PCB-containing (greater than 50 ppm PCBs); however, all three have been replaced with non-PCB containing transformers.

Fluorescent lights were observed throughout the facility. All fluorescent lights in the mall were installed in 1987 when the original outdoor shopping center was enclosed. The fluorescent lighting systems in the Mervyn's and Pay Less Drug Store were installed in 1984 when they were originally built. Since PCB-containing fluorescent light ballasts were phased out in the late 1970's, no further investigation is required for these systems. Emporium was unable to disclosed its maintenance records of the fluorescent lighting. ATC/DEI has requested this information from Emporium and will forward its findings when it is received.

The two outlying buildings belong to Sears and are not a part of the Project Site. Sears would not grant ATC/DEI an interview until a written notice of approval is issued by their Corporate office.

IV. NEIGHBORING PROPERTY OPERATIONS

The Project Area is located in a mixed commercial/residential area. Perimeter streets are Las Gallinas Avenue to the north, Los Ranchitos Road to the east, and Northgate Drive to the south and west. East of the project area on Las Gallinas Avenue is a cemetery and small strip mall. In the strip mall are various retail/service businesses, including a dry cleaner and a Goodyear Tire and Brake Auto Center. North of the project area are several medical/dental offices and gasoline stations. West on Northgate Drive is a mixed residential/commercial area. Southwest of the project area is residential and southeast is predominantly commercial. ATC/DEI identified five former or existing gasoline stations in the immediate area that are discussed in detail as follows:

Sears Automotive Facility - 9000 Northgate Drive

Located at 9000 Northgate Drive is Sears Automotive Center and Tim's Car Radio, a former Sears Gasoline Station. Both of these facilities and Sears department store lie within the Project Area boundary but are not part of the Project Area. Two underground gasoline storage tanks were removed from the site of the former Sears Automotive Gasoline Station during the installation of two above-ground storage tanks (one 550-gallon and one 300-gallon oil tank) in 1986. The battery storage area was in good condition but battery acid residue was observed on the cement floor and by the doorway. Old batteries are stored in a secondary containment area with a concrete berm and sand on the floor. Battery vendors transport the old batteries off-site for proper disposal upon delivery of new ones.

The waste oil storage area is located on the south side of the building. In the storage area, one empty anti-freeze container is no longer used but remains on site. Several drums of old rotors and oil filters were also stored in this area. The concrete floor in the storage area was observed to be in good condition with minor oil stains.

Located in the work area are fourteen subsurface hydraulic lifts; all were reported to be in good condition. There is one elevator on the premises which was in working order and observed to be in good condition. Two compressors located on the second floor were in fair

condition, with only minor oil/grease stains on the concrete floor beneath. An exterior three-stage clarifier was located to the north of the building. The clarifier is connected to the TBA and is used infrequently.

No further investigation was allowed in the Sears store until the Sears corporate office could be notified for access permission. ATC/DEI will forward its findings when access is permitted.

Former Unocal Gas Station - 929 Del Presidio Boulevard

A vacant lot to the north of the Project Area, located at 929 Del Presidio Boulevard, was a former Unocal Gasoline Station site. Four underground storage tanks (USTs) were removed in 1991. Contamination was discovered during removal of the tanks and four monitoring wells were installed to sample the extent of contamination. The source/cause of discharge was unknown. After removal, in July, 1992, a permit was granted to aerate 150 cubic yards of stockpiled soil. The average degree of total petroleum hydrocarbons (TPH) as gasoline was 446 parts per million (ppm); no organic lead was detected in the samples.

A Quarterly Monitoring Report by Kaprealian Engineering, dated April 7, 1993, reported that the four monitoring wells had been monitored three times, and sampled once, in the quarter. Prior to the sampling, the wells were checked for free product and sheen, and none was found. In a letter to Unocal on June 8, 1993, Deputy Fire Marshal Forrest Craig, of the San Rafael Fire Department, delayed a request for site closure due to the presence of methyl tertiary butyl ether (MTBE) in at least two groundwater monitoring wells (no concentrations reported) and the extent of contamination in both soil and groundwater had not yet been fully defined. A preliminary site assessment is currently under way.

Chevron Gas Station - 949 Del Presidio Boulevard

North of the vacant lot is a Chevron Gasoline Station, located at 949 Del Presidio, where there are three underground storage tanks. On July 27, 1987, a broken dispenser filter was discovered and reported. The filter was repaired and about 15 gallons of released product was abated. A 90-day inventory audit was ordered to determine product loss. The audit

showed no appreciable variation, and no further investigation was undertaken. The letter does not discuss the method of disposal of the 15 gallons of product

Shell Gas Station - 950 Del Presidio Boulevard

A waste oil tank was removed from the Shell Service Station at 950 Del Presidio Boulevard on November 5, 1987. At the time the tank was removed, T. Underwood, an inspector for the Marin County Environmental Health Services noted numerous holes in the tank greater than 1/4 inch, and that the tank seams were rusted out. Samples from the tank excavation were analyzed for high-boiling-point hydrocarbons (EPA Method 8015), gravimetric petroleum oil, and purgeable hydrocarbons (EPA Methods 8010 and 8020). A soil sample collected from the tank's excavation at nine feet below grade contained 96 parts per million (ppm) gravimetric petroleum oil. Stockpiled soil was found to contain 900 ppm of total oil and grease. This soil was reportedly disposed of at a Class I landfill.

In 1989, soil samples were collected to 10 feet below ground surface (BGS), and no concentrations of petroleum hydrocarbons were found greater than the method detection limits. Groundwater monitoring in one well indicated 0.07 milligrams per liter (mg/L) total petroleum hydrocarbons as diesel in March 1990. No volatile hydrocarbons were detected. No further activities were recorded through June, 1992.

Exxon Gas Station - 930 Del Presidio Boulevard

The Exxon Service Station (Exxon RS 7-7067) located at 930 Del Presidio Boulevard operates three currently existing USTs. Subsurface investigations have been conducted since 1987, when liquid-phase hydrocarbons (LPH) were observed in a repair excavation for the diesel tank turbine pump. A soil vapor survey was conducted. Results indicated the presence of petroleum hydrocarbons in soil underlying the site and the adjacent streets, Las Gallinas Avenue and Del Presidio Boulevard. Groundwater monitoring wells have been installed at the site and a groundwater monitoring program is in place. Concentrations of petroleum hydrocarbons vary seasonally, with the greatest concentrations found in samples collected in the vicinity of the tank field in 1989. Free phase petroleum product was present in an upgradient well onsite. Soil samples contained TPHG at concentrations up to 2,000 ppm.

In February, 1992, a groundwater treatment system was constructed and began operation in February, 1993. Groundwater concentrations of TPHG, TPHD, and benzene have been found at 30,000 microgram/liter (µg/L), and 3,800 microgram/liter (µg/L), respectively. Source: Report of Quarterly Sampling and Analysis, Exxon Retail Site 7-7067, 930 Del Presidio Boulevard, San Rafael, California, EA Engineering, Science, and Technology, May, 1993.

Marin County Office of Environmental Health Services reported a gas spill of 10 gallons on May 4, 1993. Source: San Rafael Fire Department, Records Review on August 4, 1993

Off-Site Sources of Potential Contamination

Leaking Underground Storage Tanks (LUSTs)

Five sites are currently listed under the LUST list as follows:

1. Exxon Service Station #7-7067
   930 Del Presidio/Las Gallinas
   San Rafael, California 94903
   1/4 mile north of Project Area
   Also on RCRIS

2. Shell Gasoline Station
   950 Del Presidio Boulevard
   San Rafael, California 94903
   1/4 mile north of Project Area
   Also on CORTESE

3. Pacific Bell
   7 Professional Center Parkway
   San Rafael, California 94903
   1/2 mile north-northeast of Project Area
   Also on RCRIS

4. Fairchild Semiconductor
   4300 Redwood Road
   Pittsburg, California 94565
   3/4 mile north-northeast of Project Area
   Also on CORTESE

5. Chevron Gasoline Station
   69 Mitchell Boulevard
   San Rafael, California 94903
   1 mile north-northeast of Project Area
   Also on CORTESE

None of these sites are located up-gradient of the Project Area.

Potentially Contaminated Sites

Two sites currently listed in the LUST database are also on the RCRIS database. They are the Exxon Service Station #7-7067, a small quantity generator, and Pacific Bell, a large quantity generator. The database lists properties that are generators of hazardous waste. Inclusion on this list is not indicative of an environmental problem.

Three sites currently listed under the LUST database are also in the CORTESE database. This database lists properties of leaking/contaminated sites. The three sites are the Shell Gasoline Station, Fairchild Semiconductor and the Chevron Gasoline Station.

ATC/DEI did not observe any immediate or impending environmental threat from observable neighboring property operations.

V. PUBLIC RECORDS AND HISTORICAL DOCUMENT REVIEW

The purpose of the historical/agency records review is to trace activities on the site to the original owner and/or to undeveloped virgin land, in order to identify the present and past existence, use or release of environmentally regulated or hazardous substances at the Project Area.

Sanborn Map Collection, Sanborn Mapping and Geographic Information Service

A search of the Chadwick-Healy collection for the years 1867 to 1970 failed to reveal any available Sanborn Maps for review.

Historical Aerial Photographs

ATC/DEI has completed a review of aerial photographs provided by Pacific Aerial Surveys, Oakland, California. Photographs covering the years 1986, 1980, 1975, 1970, 1963, and 1950 were reviewed. The following is a descriptive account of observations made of the Project Area and immediate surrounding areas from these photographs.

Year	Observations
1986	The Project Area and surrounding neighborhood appeared similar to the currently existing retail facilities. All four gasoline stations previously referenced to the north of the Project Area were observed in the photo.
1980	The Project Area showed an outdoor shopping plaza with similar structures but without the Mervyn's and Pay Less Drug Store. The surrounding properties appeared relatively unchanged from the observations mentioned in the previous photograph.
1975	No substantive changes from the earlier photograph were noted.

1970	The Sears facilities were not observed on the photograph. The part of the lot where Sears currently is located was graded.
1963	The Project Area appeared to be recently graded and was under construction.
1950	The Project Area appeared to be bare land scattered with several trees. There were no apparent stains or storage of materials that might suggest an environmental area of concern on or near the Project Site.

Title Report Review

ATC/DEI reviewed Title Report Order Number 191717, effective July 5, 1991, prepared by California Land Title Company of Marin, for purposes of noting land use, deed restrictions, liens or easements which may be indicative of current or former hazardous materials activities on the Project Area. Upon reviewing the report, ATC/DEI observed an indication of a battery store that was not found in the mall. The Mall Management Office informed ATC/DEI that the battery store decided not to open the store. ATC/DEI did not observe other potentially environmental hazardous activities besides that noted above.

San Rafael Building and Planning Department

The San Rafael Building and Planning Department is the local agency responsible for monitoring, approving and administering local building codes and regulations. ATC/DEI interviewed Mr. Joe Curley, Supervising Building Inspector, regarding hazardous material activities in the neighborhood and reviewed files and permits for the Project Site. No environmental issues were found.

San Rafael Fire Department - Fire Prevention Division

The San Rafael Fire Prevention Division of the Fire Department is the agency responsible for files regarding hazardous material activities in the Project Area. However, the Fire Department needed written approval from The MaceRich Company before ATC/DEI could access their files. ATC/DEI will forward its findings to MaceRich when the Project Area files are made accessible. Source: Forrest Craig, Deputy Fire Marshal, Hazardous Material Division, file review request made on August 4, 1993.

Marin County Environmental Health Services Department

Marin County Environmental Health Services Department is the agency responsible for regulating and documenting hazardous materials storage and hazardous material spill incidents, and enforcement of state and local waste management laws, regulations and ordinances for areas within the County. Elizabeth Irvine of the Health Department told ATC/DEI that all files concerning the Project Area were transferred to the Fire Department. Source: Ms. Elizabeth Irvine, telephone interview on July 29, 1993.

Marin Municipal Water District

Marin Municipal Water District is the lead agency responsible for maintaining and regulating water quality in the Project Area and for monitoring investigations for leaking underground storage tanks. Marin Municipal Water District had no records on file concerning contamination of water supply in the Project Area. Source: Ms. Shelley Melville, Engineering Representative, July 30, 1993.

State of California, California Environmental Protection Agency: CAL-SITES

The California Environmental Protection Agency, Department of Toxic Substances Control (CEPA-DTSC) is the lead agency in the State of California responsible for the promulgation and enforcement of state waste management laws and regulations. The CEPA-DTSC maintains a list (CAL-SITES) of potential and known hazardous waste sites listed by zip code. The CAL-SITES list contains potential hazardous waste sites identified by the

historical Abandoned Site Program and Information Survey (ASPIS) and the current Rural Site Evaluation Program; neither the Project Site nor neighboring sites within a 1/2-mile radius of the Project Site were identified . Source: CAL-SITES list updated to January, 1993; Environmental Data Resources Radius Map Report, Report Number 29597-5, generated on July 18, 1993.

United States Environmental Protection Agency (USEPA), National Priorities List

The National Priorities List (NPL) identifies hazardous waste sites that are scheduled for cleanup actions utilizing federal funds. A site can be included in the NPL if: (1) the Agency for Toxic Substances and Disease Registry (ATSDR) of the U.S. Center for Disease Control (CDC) has issued a health advisory that recommends removing people from the site; (2) the EPA determines the site poses a significant threat to public health; and, (3) the EPA anticipates it will be more cost-effective to use its remedial authority than to use its emergency removal authority to respond to this site. The Project Area is not listed in the National Priorities List; nor are any sites within a one mile radius. Source: National Priorities List, as of October 15, 1992, Title 40 Code of Federal Regulations, Part 300 et. seq.

United States Environmental Protection Agency (USEPA), Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

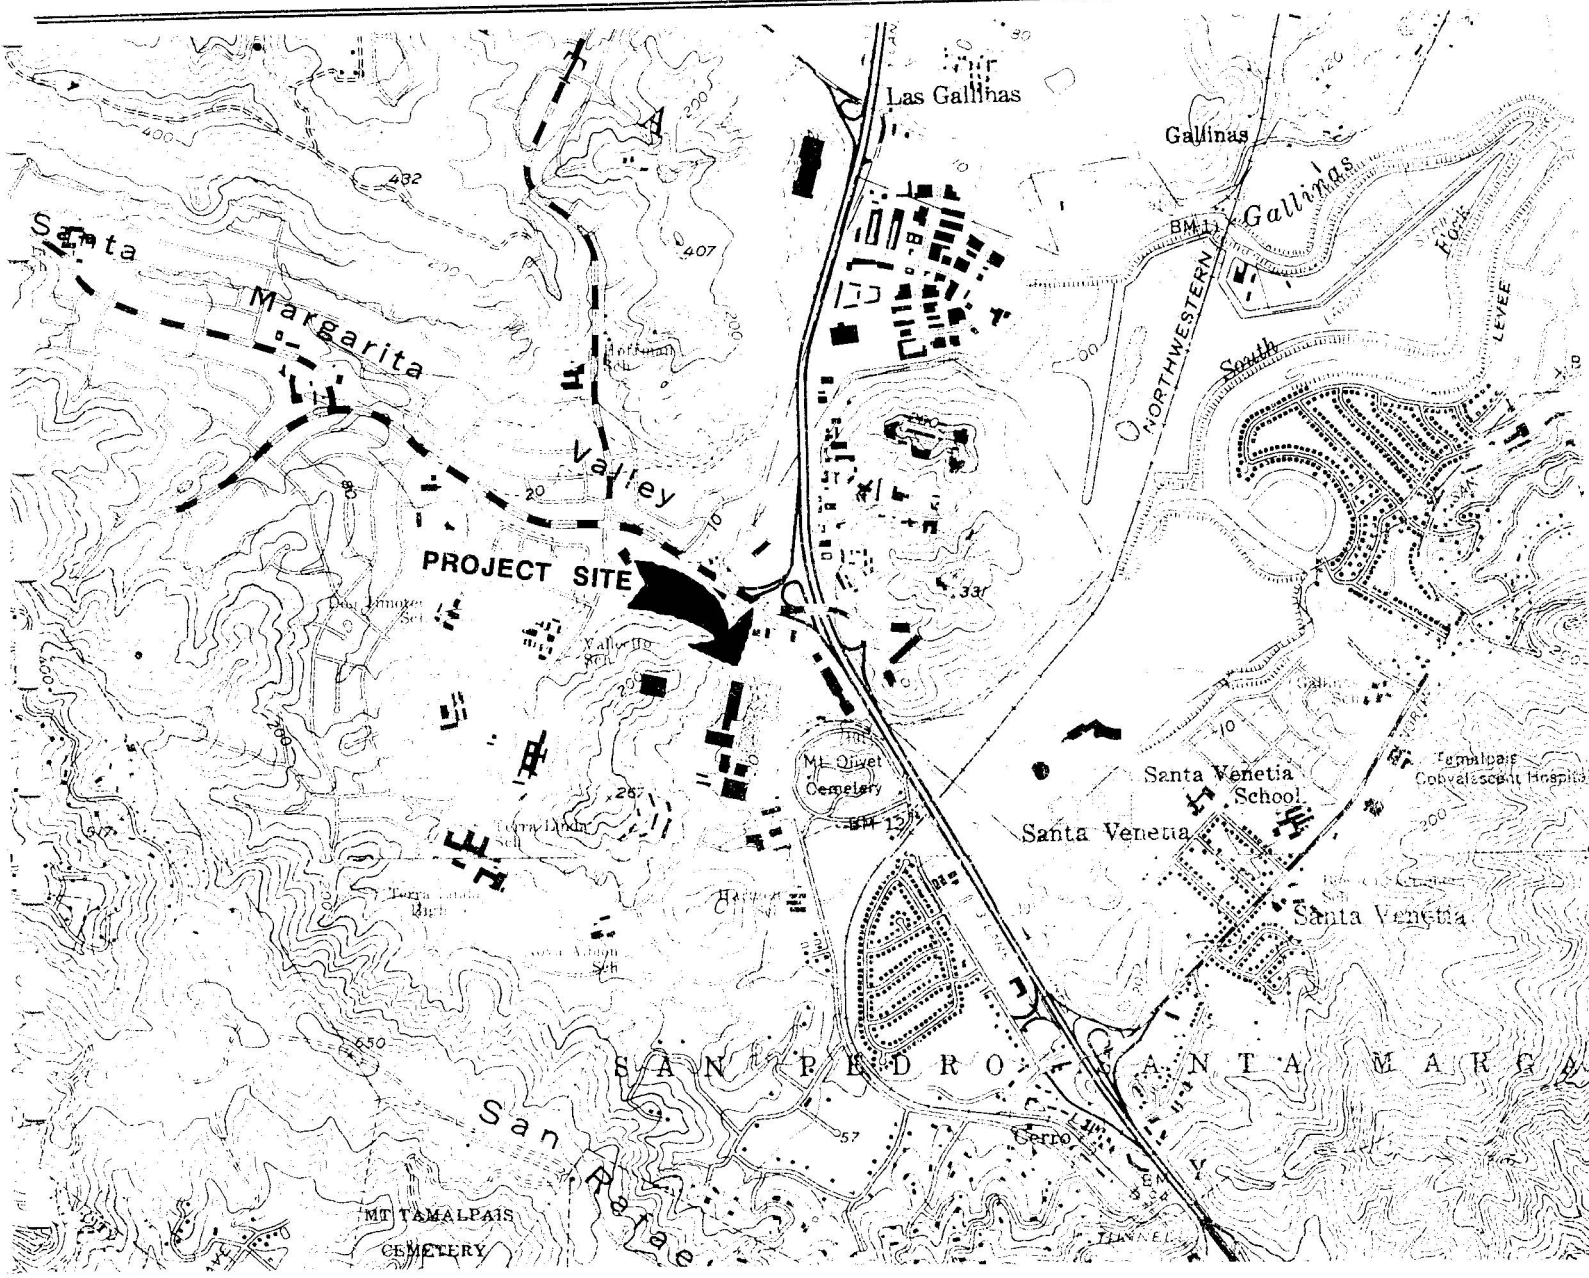
The Environmental Protection Agency (EPA) Region 9 is responsible for EPA programs in California. CERCLIS is a database utilized by the EPA to track activities conducted under the Federal Superfund Program. CERCLIS contains those potential hazardous waste sites which have been brought to the attention of the EPA. Potential hazardous waste sites other than those listed on the EPA CERCLIS list may exist. Sites on the CERCLIS list may include one or more of the following: 1) sites which may be potentially hazardous and requires further investigation, 2) sites which have been investigated and based on the investigation findings no further investigation or remedial action is planned under the Federal Superfund Program or 3) final and proposed National Priorities List (NPL) sites which have been investigated and EPA has determined the sites may represent a long-term threat to public health or the environment. Neither the Project Site nor neighboring sites within a 1/2-mile radius of the Project Site were identified on the CERCLIS. Source: United States

Environmental Protection Agency (USEPA), Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS), as of April, 1993, Data Resources Radius Map Report, Report Number 29597-5, generated on July 18, 1993.

VI. FINDINGS

1. Exxon Gasoline Station, Shell Gasoline Station and Former Unocal Gasoline Station

ATC/DEI identified that the Exxon Gasoline Station located at 930 Del Presidio Boulevard, Shell Gasoline Station located at 950 Del Presidio Boulevard, and former Unocal Gasoline Station located at 929 Del Presidio Boulevard have leaking tanks and soil contamination problems. All sites have undergone varying degrees of remediation; however, none of them has successfully eliminated the contamination.

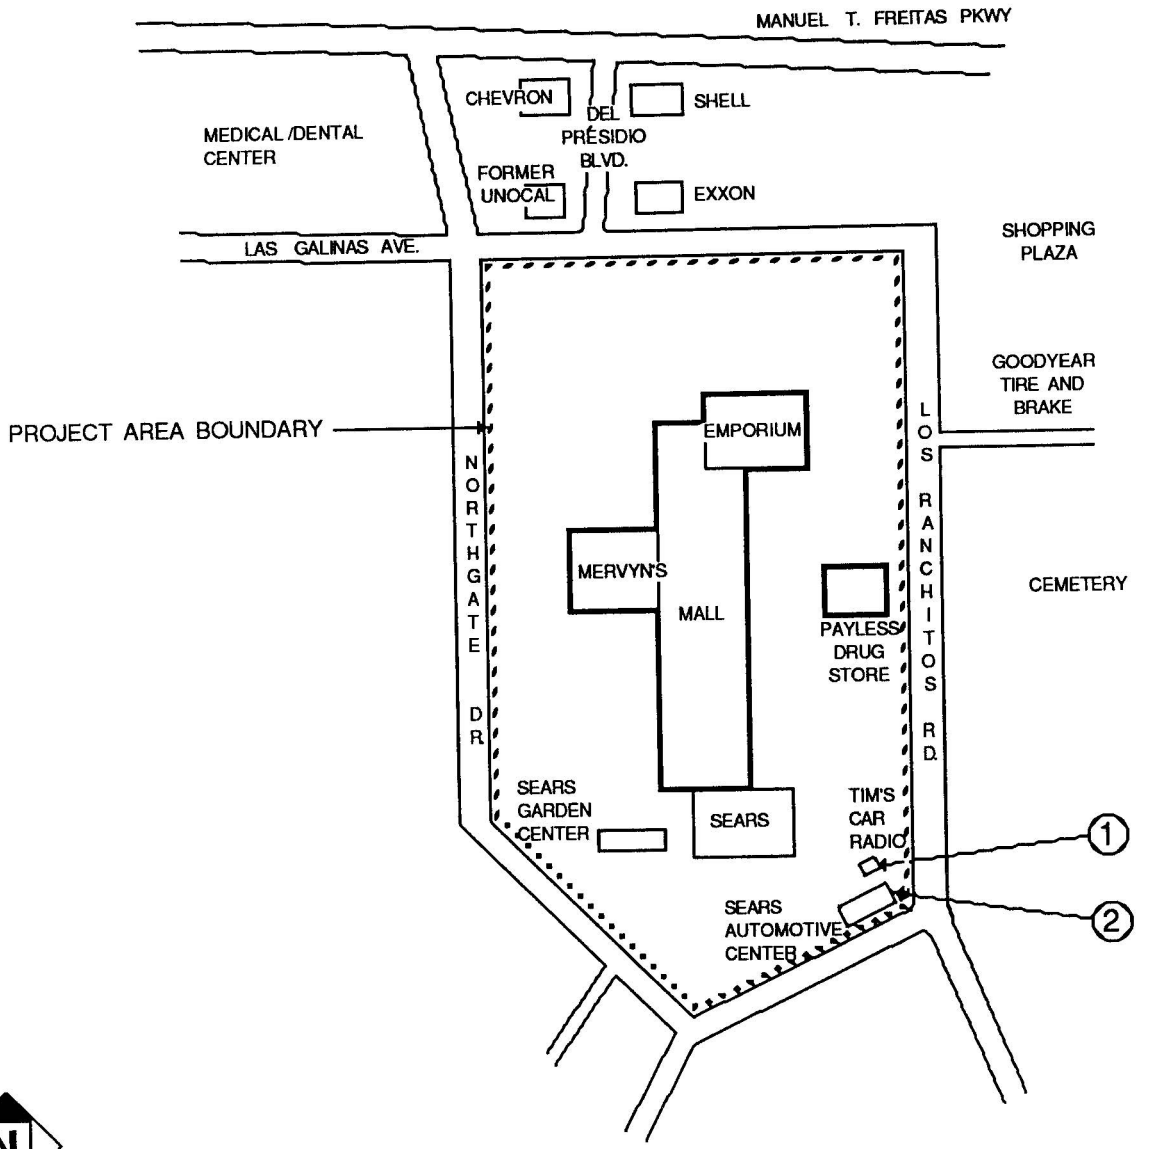


2. Sears Automotive Operations (Former Gasoline Station)

Sears formerly operated underground storage tanks at the facility from approximately 1971 to 1986. ATC/DEI interviewed various agencies and personnel familiar with the Project Area. To date, ATC/DEI does not have any information pertaining to the subsurface soils at, or immediately adjacent to, the former tank and piping zones. This site is located at the downgradient boundary of the Project Area and a petroleum release at the site would likely have a minimal impact to the Project Area.

VII. LIMITATIONS

ATC/DEI has prepared this Environmental Site Assessment using reasonable efforts in each phase of its work to estimate the liabilities associated with environmentally regulated substances in the Project Area. The performance of this Environmental Site Assessment was in accordance with current professional standards for environmental assessments. Findings within this report are based on information collected from on-site observations and from available information obtained from governing public agencies/sources. The information contained within this report is limited to provided data and available documents.



This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. This report is not intended to be a construction document and should not be used for construction purposes. ATC/DEI makes no representation or warranty on any environmental concerns at or near the Project Area that were not readily accessible at the time of the site visit or available in the reviewed public records. ATC/DEI makes no representation or warranty that the operations at the Project Area are or have been in compliance with all applicable federal, state, and local laws, regulations and codes.

1.0 INTRODUCTION

This report documents the removal of dispenser islands, gasoline product lines, vent lines, new oil supply lines, and used oil line from Sears Store 1528, located at 9000 Northgate Mall, San Rafael, California (figure 1). Removal activities were performed between November 29 and December 1, 1994. The demolition and removal activities were performed by Norm Wilson and Sons, Inc., Paramount, California. Fluor Daniel GTI collected soil samples during the excavation and removal activities to assess the soil conditions and characterize the stockpiled soil for disposal. Fluor Daniel GTI also coordinated soil disposal, and prepared this report. Submittal of this report was delayed due to internal reorganization at Sears.

2.0 SITE HISTORY AND USAGE

2.1 Summary of Previous Investigations

Information provided by Sears indicates that two underground storage tanks (USTs) containing gasoline, one UST containing used oil, an unknown number of new oil USTs, and the product dispensers were removed several years ago (figure 1). The exact dates of the UST removal is not known. Fluor Daniel GTI was not supplied with additional information relating to the UST removal and is not aware of any other subsurface investigations conducted at this site.

2.2 Adjacent Site Uses

Surrounding properties include Sears Retail Store and Northgate Mall parking to the north, Las Golinas Avenue and a cemetery to the east, Sears Auto Repair Center and parking to the south, and a parking lot and residential properties to the west.

2.3 Scope of Work

The scope of work included overseeing the dispenser island and product line removal activities, soil sampling, soil disposal coordination, and project reporting.

Individual grab soil samples were collected at locations beneath the dispenser islands and along the product line trenches. Soil sampling was performed by Fluor Daniel GTI and directed by Captain Forrest Craig of the City of San Rafael Fire Department (SRFD). The samples were collected to determine if hydrocarbons or lead were present in the soil. Composite soil samples were collected from the soil stock piles for soil characterization prior to transportation and treatment at a thermal treatment plant in Arizona.

3.0 FIELD INVESTIGATION

3.1 Site Safety

Fluor Daniel GTI developed a Site Safety Plan to provide a safe working environment and to comply with Occupational Safety and Health Administration Regulation 29 CFR 1910.120. The Health and Safety Plan for the site is on file at Fluor Daniel GTI in Martinez, California. The plan is required to be on site during field work. All Fluor Daniel GTI field personnel and subcontractors are required to sign and comply with the plan. The plan is designed to identify hazards associated with the scope of work including drilling, excavation, sample collection, and the related chemicals of concern, and action levels. The plan includes emergency data, hospital route, and contact numbers. Use of the plan is intended to prevent accidents and reduce the risk of exposure to chemicals.

3.2 Permitting

Permitting for the dispenser island and product line removal was performed by Norm Wilson and Sons Inc. Underground Service Alert (USA) was notified prior to excavation and an excavation permit was obtained by Norm Wilson and Sons from the local fire protection district.

3.3 Dispenser Island Removal and Soil Characterization

3.3.1 Dispenser Island and Product Line Removal

Initial demolition activities began on November 29, 1994, and were completed December 1, 1994. This work included demolition of the dispenser island canopy and the dispenser islands, and the removal of the product lines, vent lines and new and used oil lines.

Sears contractor Norm Wilson and Sons used a backhoe to uncover the product lines and remove the dispenser islands. The soil directly above the product lines was removed with a shovel to avoid damaging the lines. The excavated soil and pea gravel was stock-piled on site.

Product lines were oriented approximately north-south, parallel to the dispenser islands, and approximately east-west between the dispenser islands and the former gasoline USTs (figure 2). The oil supply lines and used oil line were oriented north-south, perpendicular to the Sears Auto Center building (figure 3). All piping was removed by Jim Thorpe Oil, Inc.

Residual gasoline, used oil and water were drained from the product lines prior to removal. The residual product was contained in DOT-approved 55-gallon drums. Removal of these drums was coordinated by Sears.

3.3.2 Soil Characterization

Fluor Daniel GTI personnel field screened excavated soil with a photoionization detector (PID) so the contractor could segregate clean soil from soil containing hydrocarbons. All soil was stockpiled on and covered with plastic sheeting as directed by Fluor Daniel GTI personnel. Soil was segregated based on visual observations and PID field screening results. Any soil releasing hydrocarbon vapor at concentrations above 10 parts per million on the PID or visually stained by hydrocarbons was stockpiled. Approximately 34 cubic yards of soil was sampled for disposal/treatment and securely covered with plastic. The soil stockpiles were transported from the site by Southwest Soil Remediation, Inc., and treated by thermal processing at Remat in Buckeye, Arizona. Disposal documentation is included in appendix A.

3.4 Soil Sampling

Fluor Daniel GTI sampling procedures and protocol are included in appendix B; samples were collected with SRFD oversight. Soil samples were field screened with a PID using headspace methodologies and were sent by overnight delivery to GTEL Environmental Laboratories in Concord, California, for analysis.

Seventeen soil samples were collected from underneath the dispenser islands, gasoline product lines and vent lines at depths of 2 to 4 feet beneath the piping (table 1, figure 2). The soil samples were analyzed for the following constituents:

- total petroleum hydrocarbons as gasoline (TPH-g) by EPA Method 8015 (modified)
- benzene, toluene, ethylbenzene, and total xylenes (BTEX) by EPA Method 8020
- total lead by EPA Method 6010

Five soil samples were collected from underneath the used oil line and oil supply lines at 2 to 5 feet below the piping (tables 2 and 3, figure 3). The soil samples were analyzed for the following constituents:

- TPH-g and total petroleum hydrocarbons as diesel (TPH-d) by EPA Method 8015 (modified)
- total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1
- volatile organics by EPA Method 8240
- California Assessment Metals (CAM metals) by EPA 6000/7000 series analyses.

4.0 FINDINGS

Soil analytical results are summarized in tables 1, 2 and 3, and figures 2 and 3. The analytical reports are included in appendixes B through H.

4.1 Soil Sample Results Island A

Six soil samples were collected at dispenser island A (table 1 and figure 2). None of the soil samples contained detectable concentrations of TPH-g or BTEX. Concentrations of total lead ranged from 6 milligrams per kilogram (mg/kg) in sample ATW-2/3 to 10 mg/kg in sample ATW-1/3.

4.2 Soil Sample Results Island B

Six soil samples were collected at dispenser island B (table 1 and figure 2). None of the soil samples contained detectable concentrations of TPH-g or BTEX. Concentrations of total lead ranged from 7 mg/kg in sample BTW-1/3 to 11 mg/kg in sample BTE-1/3.

4.3 Soil Sample Results Main Product Line Trench

Five soil samples were collected at the main trench between the dispenser islands and the former gasoline USTs (table 1 and figure 2). None of the soil samples contained detectable concentrations of TPH-g or BTEX. Concentrations of total lead ranged from below the detection limit of 5 mg/kg in sample MT-5/4 to 9 mg/kg in three of the other samples.

4.4 Soil Sample Results Used Oil line Trench

Two soil samples were collected along the used oil line excavation trench. No concentrations of TPH-g, TPH-d, or volatile organics were detected. Concentrations of TRPH were 7 mg/kg in sample WO-1/2 and 19 mg/kg in sample WO-2/4. CAM metals results for the used oil supply line samples are summarized in table 3.

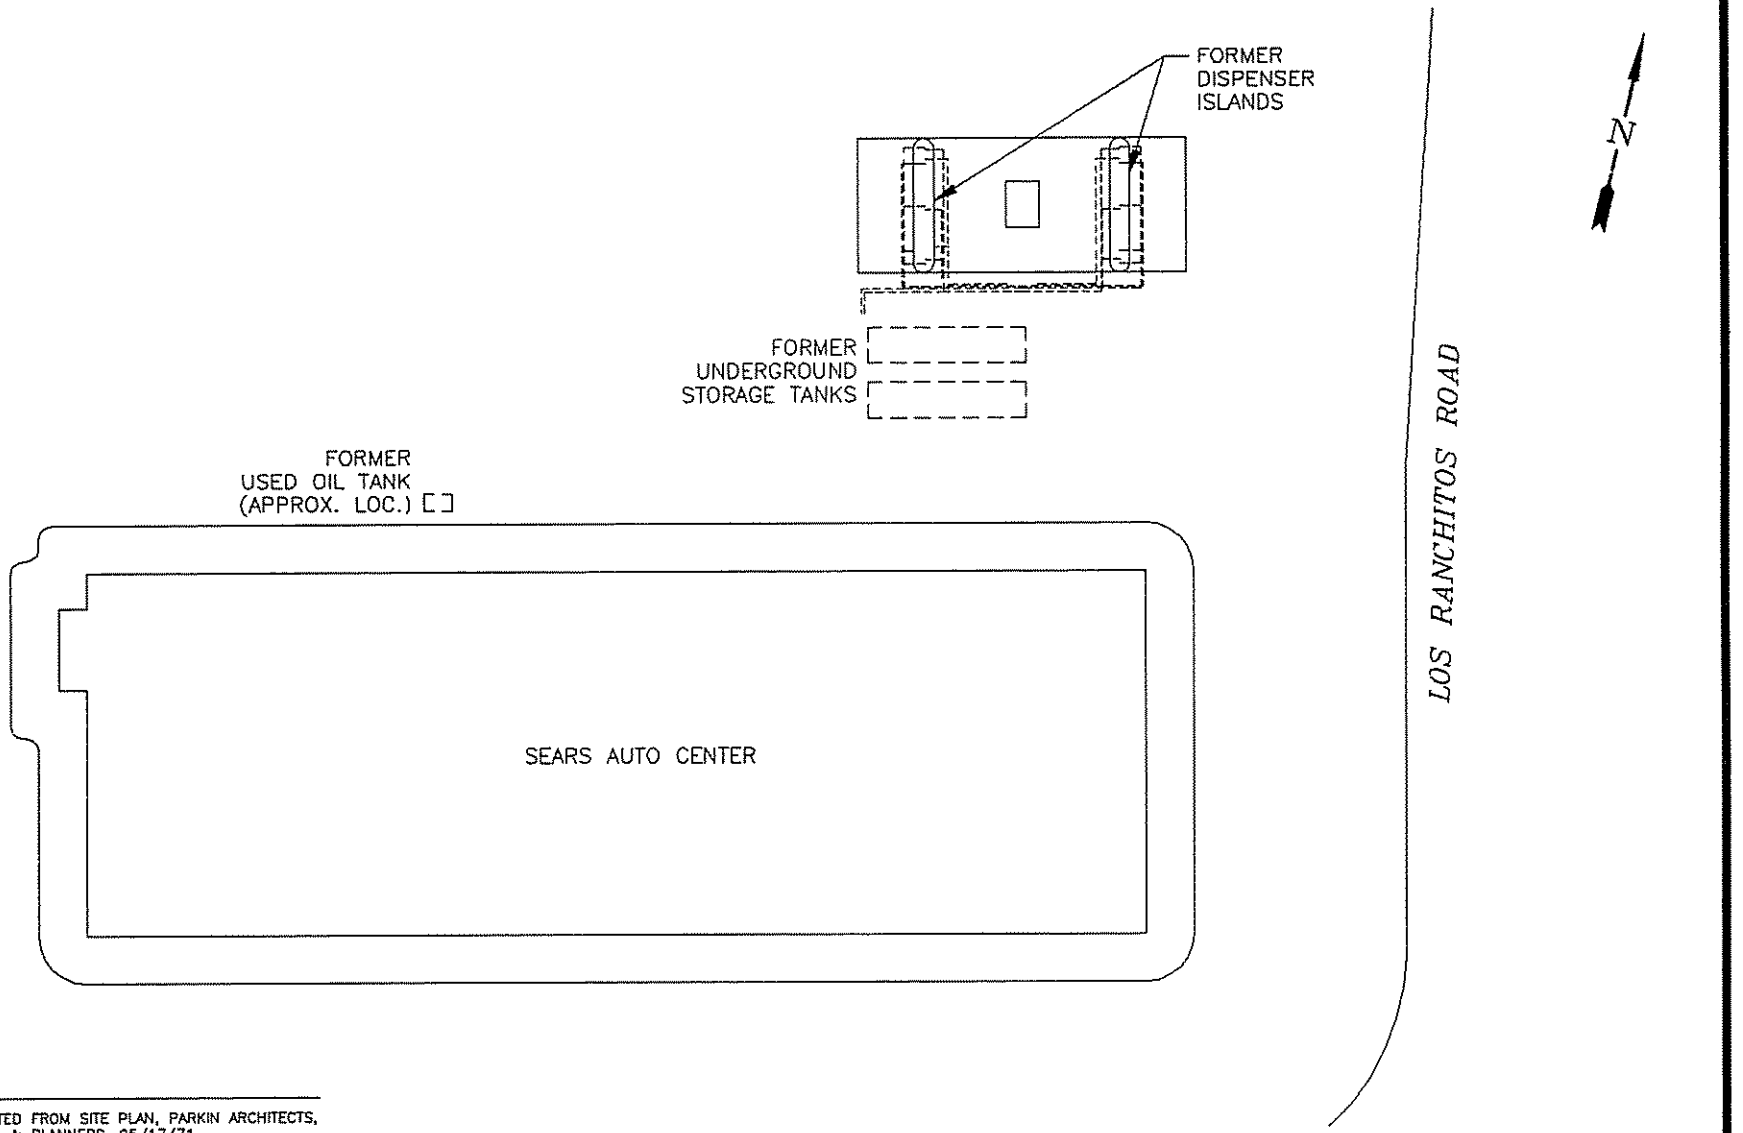
4.5 Soil Sample Results New Oil line Trench

Three soil samples were collected along the new oil line excavation trench. No concentrations of TPH-g, TPH-d, or volatile organics were detected. Concentrations of TRPH were below the detection limit in samples NO-1/2 and NO-3/5 and 11 mg/kg in sample NO-2/4. CAM metals results for the used oil line supply line samples are summarized in table 3.

5.0 ANALYTICAL REVIEW

Analytical results from the gasoline dispenser islands indicate gasoline hydrocarbons are not present in soil at the product line areas or the dispenser island areas.

Analytical results from the oil supply line and used oil UST areas indicate that very low levels of hydrocarbons are present in the soil in those two areas and that no volatile organics were present. Metals detected at concentrations above 100 mg/kg and below 211 mg/kg in the new and used oil product line areas include barium, total chromium and nickel.



6.0 PETROLEUM HYDROCARBON EXPOSURE CONCERNS

The common exposure routes of petroleum hydrocarbons in humans and animals are inhalation of vapors, ingestion of hydrocarbon-containing material, and skin or eye contact with hydrocarbons. Currently there are no excavations or construction projects that would expose soil containing hydrocarbons on site or adjacent to the site. The site is covered with asphalt and concrete and there does not appear to be any potential risk to the public of contacting soil that contains hydrocarbons.

Based upon the findings of this investigation, Fluor Daniel GTI, on behalf of Sears, Roebuck and Co. proposes no further action at Sears Store 1528 in San Rafael, California.

MT-6/3	12/01/94	<1	<0.005	<0.005	<0.005	<0.015	**9**

Notes:
1) All results expressed in milligrams per kilogram
2) Total lead analyzed using EPA Method 6010

TPH-g = total petroleum hydrocarbons as gasoline, B = benzene, T = toluene, E = ethylbenzene, X = total xylenes; analyzed using EPA Method 8020
< Number = below reported detection limits

TABLE 2
Former New and Used Oil Product Line Soil Analytical Results

Sears Store 1528, San Rafael, California
Sampled November 30, and December 1, 1994

Samples	Date	TRPH	TPH-g	TPH-d	Volatile Organics
Used Oil Supply Line Soil Samples					
WO-1/2	11/30/94	**7**	<1	<10	ND
WO-2/4	11/30/94	**19**	<1	<10	ND
New Oil Supply Line Soil Samples					
NO-1/2	11/30/94	<5	<1	<10	ND
NO-2/4	11/30/94	**11**	<1	<10	ND
NO-3/5	11/30/94	<5	<1	<10	ND

Notes:
1) All results expressed in milligrams per kilogram
2) Volatile organics analyzed using EPA Method 8240A

TRPH = total recoverable petroleum hydrocarbons; analyzed using EPA Method 3550/418.1
TPH-g = total petroleum hydrocarbons as gasoline, B = benzene, T = toluene, E = ethylbenzene, X = total xylenes; analyzed using EPA Method 8020
TPH-d = total petroleum hydrocarbons as diesel; analyzed using EPA Method Modified 8015
< Number = below reported detection limits
ND = not detected

TABLE 3
Former New and Used Oil Product Line Soil CAM Metal Analytical Results

Sears Store 1528, San Rafael, California
Sampled November 30, 1994

Used Oil/Oil Supply Samples						
Analyte	Date	WO-1/2	WO-2/4	NO-1/2	NO-2/4	NO-3/5
Antimony	11/30/94	<5	<5	<5	<5	<5

WASTE DISPOSAL QUESTIONNAIRE

REMAT WASTE ID NO. _____

GENERATOR INFORMATION:

1. NAME: Sears Roebuck & Company Store # 1528
2. ADDRESS: 333 Beverly Rd., Dept. 824C, Bldg A2-~~2B~~ 160B
3. CITY/STATE/ZIP: Hoffman Estates, IL 60179
4. CONTACT(S): Bernadine Palka 5. PHONE #: (708) 286-8864
6. GENERATOR'S STANDARD INDUSTRIAL CLASS CODE (SIC): #5311
7. FEDERAL/STATE EPA ID No. (If Hazardous): N/A
8. WASTE SITE LOCATION: 9000 Northgate Mall, San Rafael, CA

WASTE INFORMATION:

9. WASTE TYPE (common name by which waste is referred):
   Stockpiled Soil Containing Petroleum Hydrocarbons
10. ACCURATE DESCRIPTION OF THE PROCESS WHICH GENERATES THE WASTE:
    UST Removal activities
11. CONTAMINATION: (X) Gasoline ( ) Diesel Fuel ( ) Jet Fuel ( ) Fuel Oil #____
    ( ) Waste Oil ( ) Other
12. Is the waste hazardous under FEDERAL REGULATIONS? ( ) YES (X) NO
    If yes, is the waste ( ) LISTED or ( ) CHARACTERISTIC?
    What is the EPA HAZARDOUS WASTE NUMBER? N/A
13. Is the waste hazardous under STATE REGULATIONS? ( ) YES (X) NO If yes, EXPLAIN;

(INITIAL PAGE) BM

14. Is the waste regulated under the FEDERAL TOXIC SUBSTANCES CONTROL ACT (TOSCA)? ( )YES (X)NO

15. What is the physical state of the waste at room temperature?
(X) SOLID ( ) SEMISOLID (sludge) ( ) LIQUID

16. What will be the minimum percent of solids of the waste? 70 (%)

17. Is the waste (X) HOMOGENEOUS or ( ) STRATIFIED?

18. Will the waste contain any free standing liquids? ( ) YES ( ) NO

19. Is there any debris (i.e., WOOD, CONCRETE, BRICK, STEEL, PIPE, etc.) in the waste? ( )YES (X)NO If yes, what is the percentage?_____(%)

DESCRIPTION:_____

20. Will the waste be disposed of in (X)BULK( )DRUMS( )OTHER?_____

21. Is the disposal of the waste ( ) ONGOING or a (X) ONE-TIME clean-up?

22. What is the approximate volume of waste to be disposed? two (2)
( ) TONS (X) YARDS ( ) DRUMS per ( ) DAY ( ) WEEK ( ) MONTH ( ) YR

23. What volume of waste is currently stockpiled, if any? 2 yards

24. What is the maximum volume of waste which will be disposed in any one day? (Specify TONS, YARDS, DRUMS, etc.) 2 yards

TRANSPORTER INFORMATION:

25. NAME: Southwest Soil Remediation, Inc.
26. ADDRESS: 3951 E. Columbia Street
27. CITY/STATE/ZIP: Tucson, AZ
28. CONTACT(S): Bob Bonnert 29. PHONE NO. (602) 571-7174
30. FEDERAL/STATE EPA ID.NO.(If Applicable): 86066729

LABORATORY INFORMATION:

31. NAME: GTEL Environmental Laboratories
32. CONTACT(S): Don Rensner 33. PHONE NO. 800-633-7936
34. Is the laboratory certified by the (X)STATE or ( )EPA? (X)YES ( )NO.
35. Please attach a recent (within six months) copy of the analysis conducted from a representative sample of the waste in question.

CERTIFICATION:

I, THE UNDERSIGNED, UNDER PENALTY OF LAW, DO HEREBY CERTIFY THAT ALL THE INFORMATION ON THIS FORM (INCLUDING ATTACHED DOCUMENTATION AND ANALYTICAL DATA) IS COMPLETE AND FACTUAL AND IS AN ACCURATE REPRESENTATION OF THE WASTE TO BE DISPOSED.

Enclosed please find the analytical results for samples received by GTEL Environmental Laboratories, Inc. on 12/01/94, under chain of custody record 33582.

A formal Quality Assurance/Quality Control (QA/QC) program is maintained by GTEL, which is designed to meet or exceed the EPA requirements. Analytical work for this project met QA/QC criteria, unless otherwise stated in the footnotes. This report is to be reproduced only in full.

GTEL is certified by the California State Department of Health Services, Laboratory certification number E1075, to perform analyses for drinking water, wastewater, and hazardous waste materials according to EPA protocols.

If you have any questions concerning this analysis or if we can be of further assistance, please call our Customer Service Representative.

Sincerely,
GTEL Environmental Laboratories, Inc.

Notes:

Dilution Factor:

Dilution factor indicates the adjustments made for sample dilution.

EPA 8015:

"Test Methods for Evaluating Solid Waste, Physical/Chemical Methods". SW-646, Third Edition including promulgated Update 1. Modification for TPH as gasoline as per California State Water Resources Board LUFT Manual protocols, May 1988 revision. Acceptability limits for recovery in the Bromofluorobenzene (BFB) surrogate is 60-119%.

Salt Lake City, UT 84111

Enclosed please find the analytical results for samples received by GTEL Environmental Laboratories, Inc. on 12/01/94, under chain of custody record 33111 and 33113.

A formal Quality Assurance/Quality Control (QA/QC) program is maintained by GTEL, which is designed to meet or exceed the EPA requirements. Analytical work for this project met QA/QC criteria, unless otherwise stated in the footnotes. This report is to be reproduced only in full.

GTEL is certified by the California State Department of Health Services, Laboratory certification number E1075, to perform analyses for drinking water, wastewater, and hazardous waste materials according to EPA protocols.

If you have any questions concerning this analysis or if we can be of further assistance, please call our Customer Service Representative.

Sincerely,
GTEL Environmental Laboratories, Inc.

For
Rashmi Shah
Laboratory Director

APPENDIX B

SOIL SAMPLING TECHNIQUES - QUALITY ASSURANCE/QUALITY CONTROL, TPH-G AND BTEX, EPA METHOD 8020, LABORATORY REPORTS

SOIL SAMPLING TECHNIQUES
QUALITY ASSURANCE AND QUALITY CONTROL

To prevent cross contamination between samples, the sampler was washed prior to each sampling using the "three bucket" wash system. This system involves the following steps:

1. washing the split-spoon sampler in a detergent and water solution
2. rinsing the sampler in tap water
3. rinsing the sampler in distilled water

To maintain the integrity of the samples, all samples were collected using the following methods:

1. collected in 6-inch brass sample tubes
2. sealed with foil or Teflon caps
3. wrapped with duct tape
4. properly labeled and listed on completed custody forms
5. placed in plastic bags
6. placed in a cooler and chilled on ice
7. delivered to a State-certified laboratory

All soil samples were refrigerated and stored at the laboratory for 30 days in case subsequent analyses were required.

HYDRAULIC LIFT REMOVAL, ASSESSMENT, AND SITE REMEDIATION ACTIVITIES SEARS STORE #1528 9000 Northgate Drive San Rafael, California

Prepared For:
Sears, Roebuck and Co.
D&M Job No. 00188-166-043
February 7, 1997

1.0 INTRODUCTION

This report presents the results of Dames & Moore's environmental oversight related to the removal of three hydraulic lifts at the Automotive Center of Sears Store #1528 located at 9000 Northgate Drive in San Rafael, California (Figure 1). The environmental oversight was conducted for Sears, Roebuck and Co. (Sears) in accordance with Dames & Moore's Request for Authorization dated February 5, 1996. Lift removals were performed as part of a Site remodel. Field activities were performed on March 7, 1996. Following field and disposal activities, Dames & Moore prepared this report outlining the field procedures used, laboratory analytical results, and remedial measures performed at the Site.

2.0 SITE DESCRIPTION

2.1 SITE FEATURES

Sears Store #1528 is located at the southwestern end of the Northgate Mall in San Rafael, California. The Automotive Center (Site) is a two-story building that houses a service counter and display area, and a garage area on the first floor with 19 service bays for automotive service and maintenance. The second floor contains an employee break room, bathrooms and lockers, and a large storage area. For purposes of this remodel, Lifts 1, 2, and 3 needed to be removed. These bays were located in the southwest corner of the Automobile Center (Figure 2). Lifts 1, 2, and 3 were single-post lifts. Photographs of the field activities are provided in Appendix A.

2.2 LOCAL HYDROGEOLOGY

The assumed local groundwater flow direction, based on surface topography, is to the north towards Santa Margarita Valley. Regionally, groundwater is assumed to flow northeast toward Gallinas Creek and San Francisco Bay. United States Geologic Survey Professional Paper 943, titled Flatland Deposits-Their Geology and Engineering Importance to Comprehensive Planning (Halley and LaJoie, 1979), indicates that the Site is underlain by bedrock. Bedrock in the San Rafael area consists of a complex assemblage of sedimentary, igneous, and metamorphic rocks of Jurassic and Cretaceous age.

3.0 FIELD ACTIVITIES

3.1 WORK PARAMETERS DETERMINATION

In accordance with California State Senate Bill SB 1191, hydraulic lift tanks are exempt from underground storage tank regulations with regards to operating permits and associated reporting requirements. Any releases to the environment, however, must be remediated to the extent that there is no significant adverse effect to human health or the environment. Currently, the State of California does not have strict cleanup standards for hydraulic oils in soil. Cleanup guidance criteria are normally provided by the Regional Water Quality Control Boards (RWQCB) and/or local oversight agencies. The RWQCB-recommended cleanup criteria for petroleum hydrocarbons in soil is generally 100 milligrams per kilogram (mg/kg) for total petroleum hydrocarbons (TPH) as gasoline and 1,000 mg/kg for TPH as oil. Active cleanup is typically required of soils impacted by volatile and semi-volatile hydrocarbon compounds if concentrations exceed about 10 times the equivalent Maximum Contaminant Level (MCL) concentrations for drinking water listed in Title 22 of the California Code of Regulations. Additional guidance for cleanup criteria of individual hydrocarbon compounds is provided by the US EPA Region 9 Preliminary Remedial Goals (PRGs) and Soil Screening Levels.

In accordance with the above criteria, Dames & Moore collected samples for hydrocarbon analysis during the lift removal process. Soil samples were initially analyzed for TPH by a Hydrocarbon Semi-Quantitative Fuel Scan [C4-C12 (gasoline range), C13-C22 (diesel range), and C23+(oil range)] using modified EPA Method 8015. If concentrations exceeded 100 mg/kg, then the soil sample with the highest TPH value was also analyzed for semi-volatile organic compounds (SVOCs) by EPA Method 8270, volatile organic compounds (VOCs) by EPA Method 8240, and polychlorinated biphenyls (PCBs) by EPA Method 8080. Remedial excavation would be implemented if concentrations exceeded the guidance criteria stated above.

3.2 INITIAL SOILS ASSESSMENT

As part of the field activities, Dames & Moore field personnel were required to review and sign a Health and Safety Plan (HSP) that was prepared for the Site. The HSP was prepared to aid in the safe handling of materials potentially containing elevated levels of chemicals. During the investigation, requirements of the HSP were met, including daily site safety briefings.

Prior to the startup of Dames & Moore's field activities, Walker Hydraulic (Contractor) cut and removed the concrete slab around each of the lifts. The lifts did not have associated hydraulic lines. Following removal of the concrete slabs and hydraulic lifts, Dames & Moore personnel collected soil samples from three locations at the lift cylinders: one at the surface, one at three feet below ground surface (bgs), and one at the base of the post (approximately seven feet bgs). However, a sample was not collected at the 3-foot depth at Lift 1.

All samples up to 7 feet bgs were collected using a hand auger. Sample material was placed into 4-ounce jars supplied by the analytical laboratory and sealed with Teflon-lined lids. Sample collection was performed following strict environmental protocol to avoid cross-contamination. Soils observed during sample collection consisted of sandy fill materials immediately around the lifts. Native soils beyond the fill material are primarily silt and clay.

Soil samples were submitted to an onsite mobile laboratory and analyzed for total petroleum hydrocarbons as gasoline (TPH-g; C4-C12), as diesel (TPH-d; C13-C22), and as hydraulic oil (TPH-h; C23+) by modified EPA Method 8015. The samples collected from three feet bgs were held pending analysis of surface samples. Results of the sample analyses indicated the following:

- TPH-g and TPH-d were not detected in any of the samples.

Lift 1:

- TPH-h was detected at 87 mg/kg in the surface sample at Lift 1 and at 320 mg/kg in the 7-foot sample.

Lift 2:

- TPH-h was detected at 5,500 mg/kg in the surface sample at Lift 2, at 270 mg/kg in the 3-foot sample, and at 220 mg/kg in the 7-foot sample.

Lift 3:

- TPH-d was detected at 11,000 mg/kg in the surface sample at Lift 3, at 43 mg/kg in the 3-foot sample, and at 830 mg/kg in the 7-foot sample.

In general accordance with the Work Parameters Determination (Section 3.1), one of the samples with the highest concentration of hydraulic oil, in this case the surface sample from Lift 2 (5,500 mg/kg TPH-h), was also analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and polychlorinated biphenyls (PCBs), by EPA Methods 8240, 8270, and 8080, respectively. Analytical results showed no detectable VOCs, but did indicate detection of 0.48 mg/kg PCB aroclor 1260 and 2.5 mg/kg of the SVOC bis (2-ethylhexyl) phthalate. Results of soil sample analyses are listed in Table 1, and laboratory reports are included as Appendix B.

In summary, results of the initial soils assessment indicated that a number of soil samples exceeded the cleanup guidance criteria for hydraulic oil (1,000 mg/kg) as outlined in the Work Parameters Determination (Section 3.1). These sample areas included the Lift 2 and 3 cylinder areas.

3.3 HYDRAULIC LIFT REMOVAL AND REMEDIAL ACTION

Following the initial soils assessment, the hydraulic lifts were removed and a remedial excavation was performed in areas where hydrocarbon concentrations exceeded the cleanup criteria. The cylinders from Lifts 1, 2, and 3 were completely removed on March 7, 1996, prior to the remedial excavation. Impacted soils were excavated on March 7, 1996. Soils containing concentrations of hydraulic oil above 1,000 mg/kg were excavated from around Lifts 2 and 3. Because analytical results from the 3-foot samples at Lifts 2 and 3 were below cleanup guidance levels, additional confirmatory samples were not collected by Dames & Moore from the excavation.

A summary of remediation activities by lift is provided below.

Lift 2

The Lift 2 cylinder area was excavated to a depth of 3 feet bgs. TPH-h was detected at 270 mg/kg (below the 1,000 mg/kg cleanup guidance) in the 3-foot sample collected during the prior soils assessment at Lift 2.

Lift 3

The Lift 3 cylinder area was excavated to a depth of 3 feet bgs. TPH-h was detected at 43 mg/kg (below the 1,000 mg/kg cleanup guidance) in the 3-foot sample collected during the prior soils assessment at Lift 2.

Excavated soil was stored on, and covered by, plastic sheeting in the Sears Automotive Center parking lot. Following excavation activities, the areas were backfilled with clean, imported soil and resurfaced with concrete.

3.4 WASTE MANAGEMENT

Excavated material from Lifts 1, 2, and 3 were stored on, and covered by, plastic sheeting in the Sears Automotive Center parking lot. One small stockpile was created during the soil excavation. On March 7, 1996, a Dames & Moore representative collected four soil samples from the stockpile. The four samples were composited by the onsite mobile laboratory and the four-point composite sample was analyzed for total recoverable petroleum hydrocarbons (TRPH) by EPA Method 418.1, and for metals by EPA Method 6010. Analytical results indicated 1,500 mg/kg of TRPH, 43 mg/kg of chromium, 57 mg/kg of nickel, and 33 mg/kg of zinc. On the basis of these results, the soil (approximately one cubic yard) was transported as non-hazardous waste to Remedial Environmental Marketing Company (REMCO) in Richmond, California, for thermal treatment and recycling as road base. A copy of the Non-Hazardous Waste Manifest is included in Appendix C.

Hydraulic oil associated with the lifts was drained from the equipment and stored in 55-gallon drums. The hydraulic oil was managed as recyclable waste by Sears Automotive Center personnel.

4.0 SUMMARY AND CONCLUSIONS

A total of three hydraulic lifts (Lifts 1, 2, and 3) were removed from the Automotive Center at Sears Store #1528. The three lifts were single-post lifts. Results of an initial soils assessment indicated that hydraulic oil concentrations exceeded cleanup guidance criteria (1,000 mg/kg) within certain areas. On the basis of these results, soils beneath Lifts 2 and 3 were overexcavated to a depth of 3 feet bgs.

Surface piping, supports, and associated equipment were removed from each of the three lifts. Hydraulic oil associated with the lifts was drained from the equipment and stored in 55-gallon drums.

Soil surrounding the lifts was excavated as needed to remove the lifts and stockpiled on site. The casings and surrounding excavations were backfilled with imported fill and resurfaced with concrete.

Approximately one cubic yard of excavated soil impacted with petroleum hydrocarbons were transported as non-hazardous waste to Remedial Environmental Marketing Company (REMCO) in Richmond, California, for thermal treatment and recycling as road base. The hydraulic oil was managed as recyclable waste by Sears Automotive Center personnel.

On the basis of State and Federal regulations governing hydraulic oil contamination in soils, it is Dames & Moore's opinion that subsurface soils surrounding the former Lifts 1, 2, and 3 (removed during this remodel) have been remediated to environmentally acceptable conditions.

5.0 LIMITATIONS

The conclusions presented in this report are professional opinions based solely upon visual observations of the Site and our interpretation of the analytical data obtained. They are intended for the purpose outlined herein and at the Site location and project indicated. This report is for the sole use of Sears. The scope of the services performed in the execution of this investigation may not be appropriate to satisfy the needs of other users, and any re-use of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of the said user.

It should be recognized that this study was not intended to be a definitive investigation of contamination of the subject property, but is limited to the scope of hydraulic lift removal stated in this report. Opinions and conclusions presented herein apply to Site conditions existing at the time of the investigation. They cannot necessarily apply to changes at the Site of which this office is not aware and has not had the opportunity to evaluate. This report is intended for the use in its entirety; no excerpt may be taken to be representative of the findings of this investigation.

RE: ***Las Gallinas & Northgate Drive, San Rafael, CA/Proposed RA#5958-relo Lease dated February 23, 1984 as amended (the "Lease") for premises located at 1500 Northgate Mall, San Rafael, CA (the "Premises")***

Gentlemen:

Pursuant to Paragraph 44(g) of that certain Lease Amendment Agreement dated December 29, 1997 regarding the New Premises, please find a copy of a Geotechnical Investigation Report prepared by Tong & Chang Consultants, Inc. dated August 4, 1998 and an Environmental Site Assessment Report prepared by Faultline Associates, Inc. dated August 4, 1998 (the "Environmental Report").

The Environmental Report recommends further subsurface investigation to determine whether the off-site sources of Hazardous Materials have migrated to the Land. For this reason, we are requesting your approval to conduct a limited Phase II assessment. However, due to the fact that the Land Approval Period expires 60 days from receipt of Landlord's Notice of Relocation of Premises, which is dated June 18, 1998, we are obliged to preserve our rights under the Lease as amended and accordingly, this will serve as our Notice of Disapproval of the environmental condition of the Land.

We would like to extend the Land Approval Period for a short period to conduct a limited Phase II assessment of the condition identified herein. Upon your receipt and review of the enclosures, please contact the undersigned to discuss our request further. This will serve to confirm our telephone conversation this afternoon with Chet Cramin of the Macerich Company wherein he agreed that our Federal Express mailing satisfies the notice requirements under the Lease with regard to the foregoing.

Sincerely,
Thrifty PayLess, Inc.

Dear Mr. Aquino:

Pursuant to your request, FAULTLINE Associates, Inc., is pleased to submit for your review and consideration, the attached Phase I Site Assessment Report for the Rite Aid, San Rafael site.

The attached report presents the activities performed and includes data pertaining to on-site inspection and evaluation activities, regulatory file review, and conclusions and recommendations.

Please contact us at your earliest convenience if you have any questions concerning the information provided or if you require any additional assistance.

Sincerely,

David C. Solis, J.D., P.E.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

RITE AID STORE SITE

LAS GALLINAS @ NORTHGATE

SAN RAFAEL, CALIFORNIA

I. INTRODUCTION AND PURPOSE

This report presents the results of a Phase I Environmental Site Assessment conducted at the above mentioned site near the intersection of Northgate Drive and Las Gallinas Avenue, San Rafael, California. At the request of Tait & Associates, Inc., the subject site is covered in this Phase I Environmental Site Assessment and will be referred to as (the subject site).

FAULTLINE Associates, Inc. (FAI) has prepared this Phase I Environmental Site Assessment (PI-ESA), as authorized by Tait & Associates, Inc., in accordance with the current standard environmental assessment practices in the region.

The purpose of the ESA is to identify the potential presence of hazardous wastes or substances and/or related present or past activities which might be a source of contamination on the subject site or in the site vicinity.

II. SCOPE OF WORK

In accordance with our proposal dated June 29, 1998, this PI-ESA consists of the following tasks:

1. Provide a site overview to include location, description of adjacent properties, and a general description of the subject site.

2. Provide available data on the history and operations of the subject site.

3. Present reference data on the environmental setting including general information on surface topography, soil conditions, groundwater conditions, and any pertinent data from third party consultants or agencies.

4. Provide results of the following investigation activities:

    a. Investigate waste site database (VISTA) or other published information regarding waste sites in the area of the subject site.

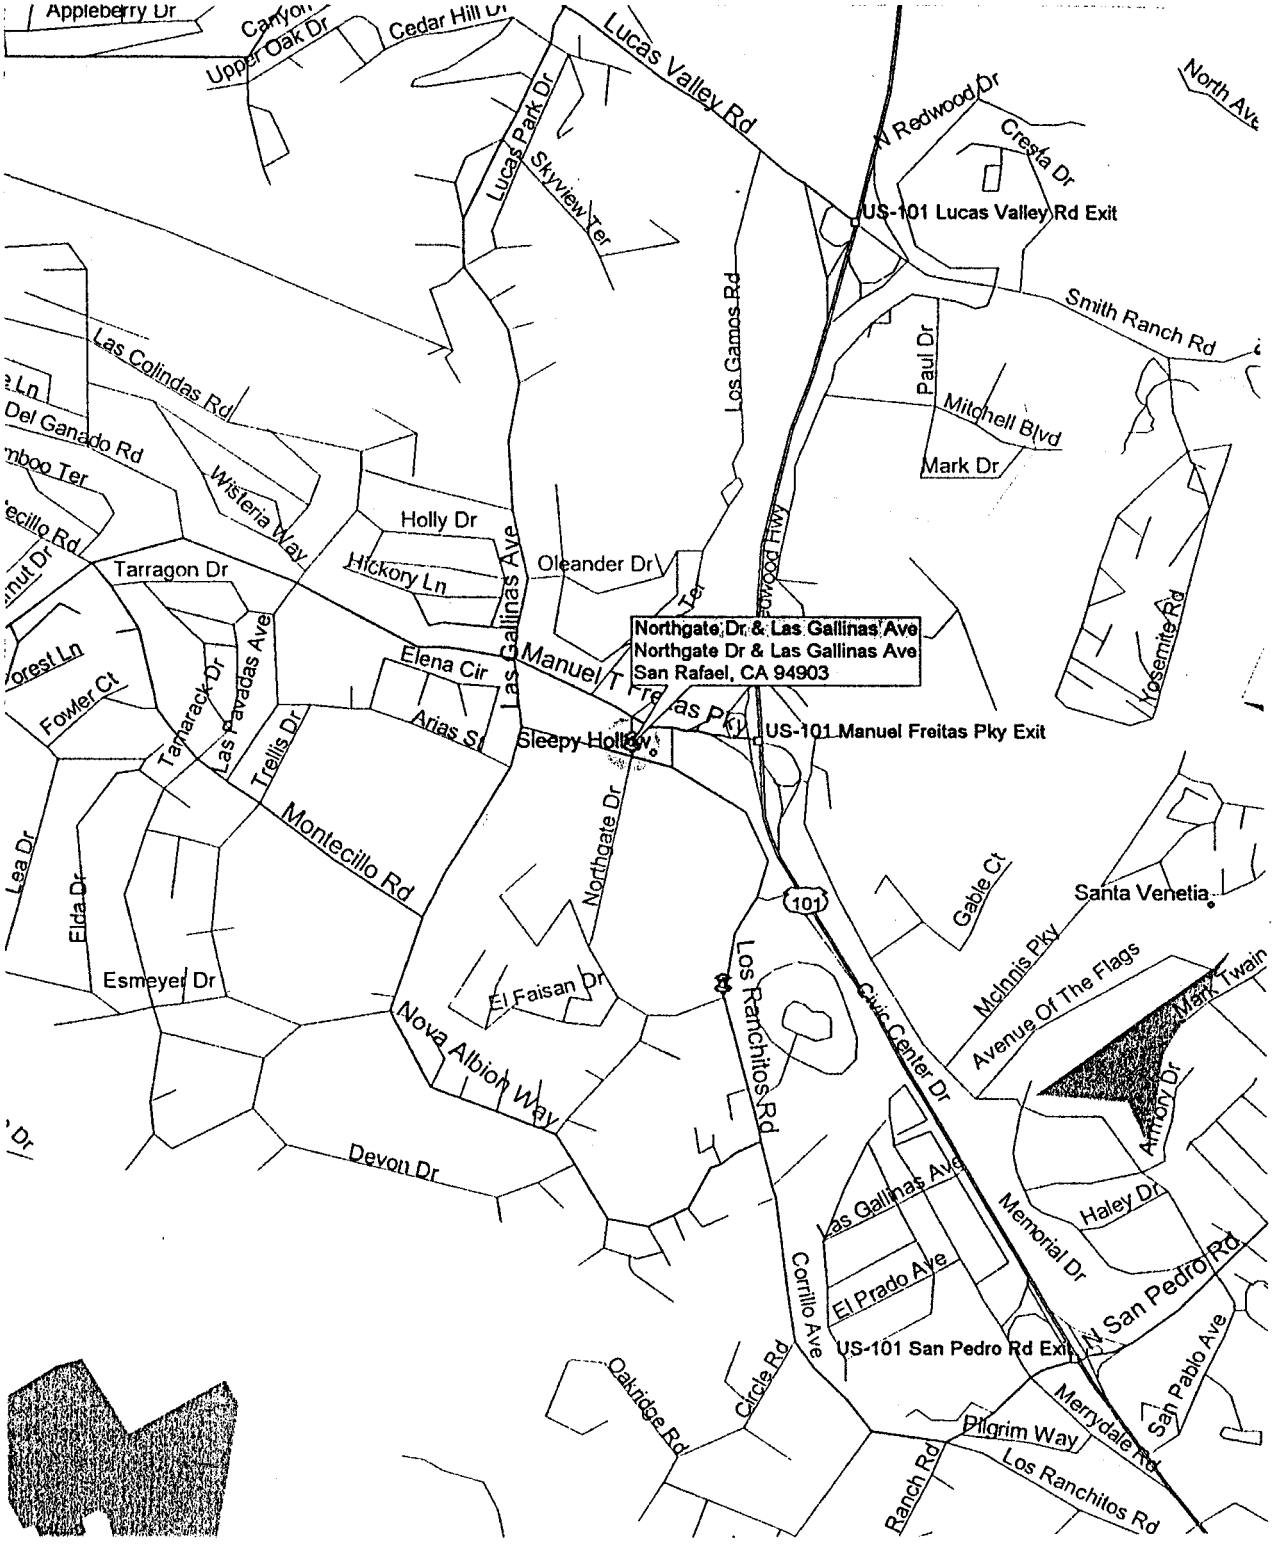
    b. Perform reconnaissance and traverses of the parcels and the surrounding areas.

Observe site conditions for evidence of past activities which suggest the handling of hazardous wastes or hazardous substances.

c. Review available aerial photographs of the site over the past history of site activity.

d. Contact regulatory agencies and other parties with knowledge of past site and site area activities. Review agency files as appropriate.

5. Prepare a discussion focusing on potential pollutant sources and hazardous material/waste activities on or near the project site.



6. Prepare this report upon the completion of the five previous tasks and include our findings and conclusions regarding the potential for contamination of each site and/or site area from the information collected.

III. SITE OVERVIEW

A. Location and Description

The subject site is located approximately 0.25- miles east of US 101 and 0.1-miles south of Freitas Parkway at the southwestern fringe of the Tera Linda district of San Rafael in Marin County California. The site, located at the intersection of Northgate Dr. and Las Gallinas Ave. consists of a rectangular shaped parcel totaling approximately 50,000 square feet. The site rests at an elevation of approximately 70-feet above mean sea level (U.S. Geological Survey, 1978). Development in the direct vicinity of the subject site vary from residential to commercial buildings, however, the predominant local development is commercial. The subject site is bounded to the north by Las Gallinas Ave., the south by Northgate Mall, the east by surplus mall parking, and the west by Northgate Dr. There are no current structures maintained on the subject parcel.

Surface water at the site drains into several catch basins located throughout the parcel. The catch basins are drained by several storm drains located on both Northgate Dr. and Las Gallinas Ave. and eventually to the San Pablo Bay. The topography of the site is relatively flat with a slight grade toward the north.

FAULTLINE Associates, Inc. 1630 N. Main St., Walnut Creek, CA 94596	Project Name: Northgate @ Las Galinas, San Rafael, CA		FIGURE:1 SITE LOCATION MAP
	Project Number: SF075-050	Date: AUG 4, 1998	
	Drawn By: TLJ	Reviewed By:	

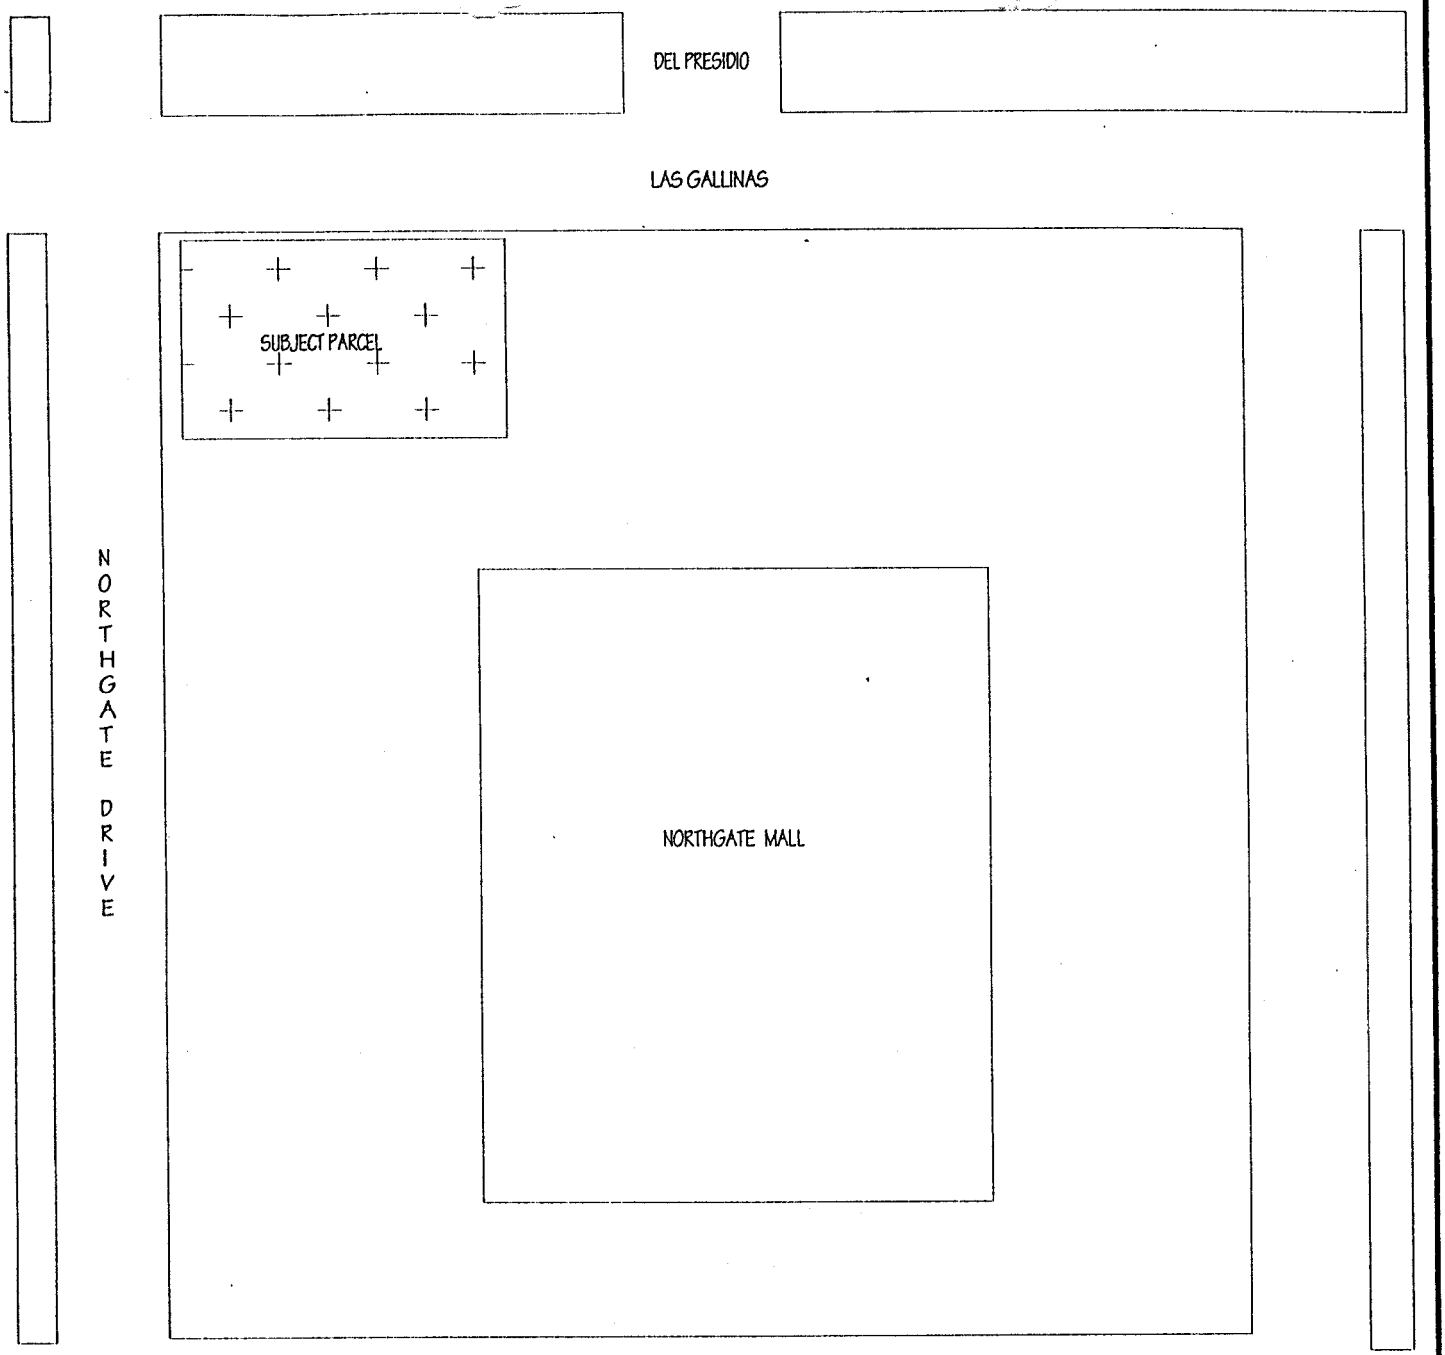
B. Project Area History

This area of north-central Marin County had been primarily agricultural of an unknown nature and residential from the late 1800's to the late 1960's. Both residential and commercial development in the general vicinity has rapidly accelerated since the early1970's. The subject site was initially developed sometime between 1963 and 1970 to be, and has remained as, the northwest parking area for the Northgate Mall.

C. Regional Geologic Setting

The general Tera Linda and San Rafael area lie on the east side of the San Andreas Fault and rests between Big Rock Ridge to the northwest, Mt. Tamalpias to the southwest and the San Francisco Bay to the east. It is situated upon the Franciscan assemblage which underlies a large portion of Marin County. The Franciscan assemblage is a heterogeneous assemblage of rocks including graywacke, arkoxic sandstone, shale, altered volcanics, chert, and serpentinite that are sheared and intermixed to various degrees. The rocks are considered sedimentary, metamorphic and igneous.

Subsurface soils within the area have been characterized as deposits of sand, sandstone, greenstone, and serpentine.



D. Site Hydrologic Setting

The subject site rests at an elevation of approximately 70-feet above mean sea level. The site was observed to be generally flat with a slight grade to the north. Surface runoff and storm water on the site in the general community drains into several catch basins located on the subject property and surrounding thoroughfares. The catch basins and storm drains are drained to the San Pablo Bay. Local waterways or tributaries in the area are the Miller Creek, located approximately 1.5-miles north of the site and the south fork of the Gallinas Creek, located .75-miles east of the subject site.

Available data pertaining to the groundwater conditions in the immediate area of the subject site indicate a depth to the first groundwater table of approximately 24 to 30- feet below ground surface Regional groundwater flow direction is assumed to be toward the south/southeast.

E. Environmental Setting

The subject site is located in a mixed commercial/residential area. The site is relatively level with a slight grade toward the north. The site is predominantly surrounded by commercial buildings. The site is completely paved with asphaltic materials. Sporadic vegetation in the form of trees planted in planter type boxes are found throughout the site.

IV. RESULTS OF FIELD INVESTIGATIONS

A. Site Reconnaissance

Reconnaissance of the subject site was conducted on July 17, 1998. Inspection of the subject site was conducted by site reconnaissance and aerial photograph review. The subject site consists of a single rectangular parcel totaling approximately 50,000 square feet. This Phase I Environmental Site Assessment did not include soil, water, or Asbestos Containing Materials (ACM) sampling.

B. Site Audit/Inspection Findings

Potential environmental risk observations were made during the site inspection that took place on July 17, 1998. The following is a list of environmental hazards that are commonly addressed in a Phase I Environmental Site Assessment. Their presence in this section does not necessarily imply their presence on the subject site unless otherwise noted.

Asbestos

Any structure built before 1978 has the potential to contain asbestos as an insulating component. No structures were encountered at the subject site.

PCB's

Electrical transformer boxes are the primary source of PCB's as a contaminant source. No overhead electrical lines with electrical transformer boxes or underground transformer vaults were observed at or near the subject site.

Underground Structures

No historical usage of any subsurface structures such as underground tanks (UST) or sumps was revealed during the site historical use review. Additionally, no evidence of fill pipes, vent lines or other apparatus which may be associated with the usage of UST or sumps was observed or noted during site inspection activities.

Groundwater Wells

No groundwater wells either domestic or industrial were observed at the subject site. However, several environmental groundwater monitoring wells were observed at several sites located within 500 feet of the subject parcel.

Spills

No signs of surface spills or stressed vegetation were noted during the site inspection.

Air Emissions

No obvious environmentally hazardous air emitters were noted near the subject site during the site inspection. No evidence of documented fugitive air emission violations was found during file research activities.

Water Supplies

Water is currently supplied by the Marin Municipal Water District

Hazardous Materials

A visual inspection of the subject site did not discover any signs of stressed vegetation related to hazardous material exposure. No indications of hazardous material storage was noted during the site inspection.

Radon

Radon is a radioactive gas released during the decay of uranium. It can build up in homes and other structures underlain by uranium-bearing rocks. These rocks are commonly associated with granitic plutons such as the Sierra Nevada Batholith. Occurrences in a sedimentary basin such as the San Rafael area have not been identified and the risk is therefore minimal. There has been uranite found in gold-bearing sedimentary deposits, although it is not common.

Lead

Any structure built before 1978 has the potential to contain lead based paint. No structures were encountered at the subject site.

Formaldehyde

There was no evidence of the use or storage of any formaldehyde containing materials at the subject sites.

Pesticides

The site does have known historical agricultural usage prior to 1960. Although application of both pesticide and herbicidal chemicals was common practice during this era, it is highly unlikely that residual concentrations of these chemicals which would present a human health risk would be encountered at the site. Further assessment of the native soils would be required to confirm any potential impact to the subsurface soils and/or groundwater by pesticides.

Sewer System

Sanitary sewage services are supplied to the site by the Marin County Sanitary District.

Surface Drainage

Surface runoff and storm water on the site in the general community drains into several catch basins and storm drains located on the subject property and surrounding thoroughfares. The catch basins and storm drains are drained eventually to the San Pablo Bay.

V. REGULATORY AGENCY CONTACTS, LIST AND FILE REVIEW

Agency contacts were made and available lists of known active and abandoned hazardous waste/material sites were reviewed in order to compile a list of potential sources of contamination in the vicinity of the sites. The lists reviewed and sites identified within one mile of the subject sites are in the VISTA database report presented in Appendix A. In addition to the VISTA database search, we reviewed site area files and lists at the Marin Fire District Headquarters. This section presents information gathered as a result of the list review and file inspection.

A. List Review

The following are the lists reviewed during this phase of investigation and the corresponding sites within approximately one mile of the subject site.

CERCLIS	Contaminated sites under CERCLA (1980)
NPL	Federal Superfund Sites List
TSD	Facilities that treat, store, or dispose of hazardous waste
CORRACTS	Facilities under RCRA corrective actions
SPL	Sites prioritized by the State for cleanup
SCL	Sites under review by the State
SWLF	Sites permitted as solid waste landfills, incinerators, or transfer stations
TOXIC PITS	Toxic Pits cleanup list
TRIS	Facilities with toxic chemical releases, and inventories
UST/AST	Sites with registered underground or aboveground storage tanks
CORTESE	Hazardous Waste and Substances Site List
ERNS	Sites with previous hazardous materials spills
GNRTR	Sites that generate large or small quantities of hazardous waste
LUST	Leaking Underground Storage Tanks - SF Bay Region 1, Leaking Underground Tank List
LUFT	Leaking Underground Fuel Tank List, Marin Fire District

B. Regulatory and Public Entity Contacts

Review of the Vista Data Base which identifies several Leaking Underground Storage Tank (LUST) sites within the general community of the subject site and evaluation of the relationship to the location of the subject site to the LUST sites, indicates that a majority of the listed LUST sites are either up or cross-gradient from the subject site. This would indicate that the subject site may be considered a moderate risk as a recipient of migratory contamination from any of the nearby impacted facilities. Although this claim is substantiated by regional groundwater flow data, for purposes of validation, several contacts were made to locate past records and information, and to determine the current status of the closest **active** impacted sites shown on the hazardous waste materials site lists described above. Selected regulatory files were reviewed and are discussed below.

Site & Distance from subject site	UST Removed	Type of Contaminant	Site Investigation	Site Remedial Status	Closure
4244 Redwood, 037-miles, NE	UST removed 9-95	Gas, diesel	Complete 4-96	Remediation by excavation complete 5-96.	10-96
99 Monticello, 0.40- miles, E	UST removed 11-97	Diesel	No impact identified.		NA
1005 Northgate, 0.01- miles, N	UST removed 7-96	Waste Oil	Complete 3-97. Monitoring is on-going.		
949 Del Presidio, 0.01- miles, N	Tanks installed 1983	Gas, diesel	Wells installed 5-98. Monitoring is on-going.		
930 Del Presidio, 0.01- miles, N	1990	Gas, diesel	NA	Active groundwater remediation has been on-going since 1992.	
4300 Redwood, 0.00-miles, NE	NA	Solvents	Complete 1983	Active groundwater remediation has been on-going since 1984.	
950 Del Presidio, 0.01-miles, N	NA	Gas, diesel	Wells installed 1997. Monitoring is on-going.		
929 Del Presidio, 0.01-miles, N	UST removed 1991	Gas, diesel	Complete 1991	Remediation by excavation complete 5-91.	4-96

VI. AERIAL PHOTOGRAPH REVIEW

Aerial photographs taken in 1950, 1963, 1970, 1980, 1990, and 1996 were reviewed at Pacific Aerial Survey in Oakland, California. The following section summarizes the pertinent details of site and adjacent area activities as they appeared on these photographs.

1950, October 10, Photo ID #AV41-03-06

The subject site is undeveloped as is the surrounding community. The general vicinity is comprised primarily of agricultural fields and farm houses. The Old Redwood Hwy is the main thoroughfare in the area.

1963, July 9, Photo ID #AV550-03-14

The subject site is undeveloped as are the adjacent commercial sites. Residential development in the general vicinity is expanding, however sparse. No significant industrial development is identified.

1970, July 2, Photo ID #AV957-04-19

The subject site has been developed as a large complex and is modified slightly from it's current state. Del Presidio Ave. which currently dead ends at the mall parking lot extends through the lot and proceeds to the mall. The development in the area is still predominantly residential although commercial construction is visible. Residential and commercial development in the general community has increased at an accelerated rate. Several gas stations have been constructed on Del Presidio Ave. at the north side of the subject site. No other significant industrial development in the general vicinity is identified.

1980, July 17, Photo ID #AV1840-05-18, (1:12,000)

The subject site appears as it does today. Commercial and residential development in the general community is continuing to expand. All previously identified gas stations are intact and appear to be operational. No significant industrial development in the general vicinity is identified.

1990, March 15, Photo ID #AV3766-10-53, (1:12,000)

The subject site appears as it does today. All previously identified gas stations are intact and appear to be operational. No significant industrial development in the general vicinity is identified.

1996, March 15, Photo ID #KAV5132-112-12, (1:24,000)

The site and adjacent lots appear as they do today. The UNOCAL station located on the north side of the site is under renovation. The gas station located on the north side of Freitas Pkwy has been abandoned. No significant industrial development in the general vicinity is identified.

VII. CONCLUSIONS AND RECOMMENDATIONS

The summary and conclusions presented in this section are based on observations, field investigation descriptions, analytical results, and interpretations delineated and developed in the body of this report. The following are key conclusions for the site inspection activities performed:

- ❑ The record search from local, state, and federal agencies revealed no indications of fuel or hazardous material spills, leaks, or disposal on the subject site.

- ❑ Our site survey detected no visual or olfactory evidence of hazardous material/waste disposal to the surfaces of the subject site.

- ❑ Review and evaluation of identified neighboring impacted sites indicates a potential risk, although minimal, of contaminant migration to the subject site.

Definitive conclusions regarding the subsurface conditions related to environmental concerns at the subject sites are beyond the scope of this project as no soil or water sampling was included in this scope of work.

RECOMMENDATIONS

The following recommendations are made based upon review and evaluation of the above-discussed conclusions:

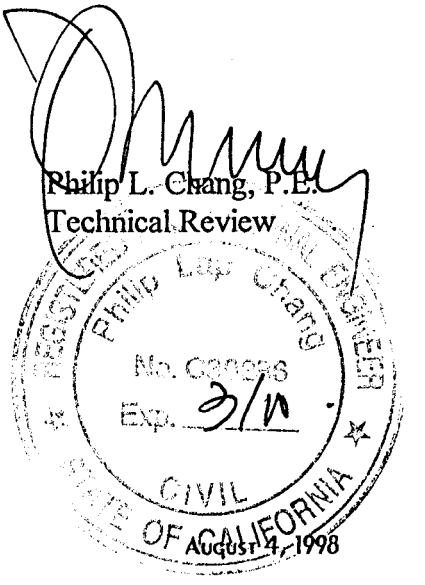
- ✔ As three up-gradient sites which are in close proximity to the subject site have been identified to have impact to the localized groundwater by petroleum hydrocarbons, consideration should be given to the collection of water samples to validate the water quality at the subject parcel.

VIII. REPORT LIMITATIONS

This report has been prepared for the exclusive use of Rite Aid Corporation and Tait & Associates, Inc. with specific application to the subject site in San Rafael, California. The use of this report, its contents, or any part of it, or its agents, other than the ones for whom this report is prepared, is herewith disallowed.

In part, these findings, conclusions, and recommendations are based on the best available information known or made available by regulators, other consultants, or other sources. Over time, the surficial evidence of some activities are obscured or obliterated entirely. It is possible that certain adverse conditions could exist at the sites which were not detected in this evaluation.

The services provided under this contract as described in this report include professional opinions and judgements based on data collected. These services have been performed according to generally accepted assessment practices. The opinions and conclusions contained in this report are typically based on information obtained from:



1. Observations and measurements by field staff
2. Contacts and discussions with regulatory agencies and others
3. Review of available hazardous substance or solid waste site lists
4. Opinions and judgements of our personnel based on available information.

The Client has retained FAI for the sole purpose of assisting the Client in evaluating the environmental liability associated with the project site. It is recognized and agreed that FAI has assumed responsibility only for performing this investigation and presenting this report and conclusions to the Client. The responsibility for making any further evaluation, disclosure, or report to any third party or for the taking of corrective, remedial, and/or mitigative action shall be solely that of the Client. The Client agrees to hold FAI harmless from any and all liability, damage, loss, cost, or expense, including attorney fees, in any way arising from the claim of any third party. FAI agrees not to make, except at the clients request, any report to any third party not legally required of it.

Respectfully Submitted,
FAULTLINE ASSOCIATES, INC.

SITE ASSESSMENT PLUS REPORT

DESCRIPTION OF DATABASES SEARCHED

A) DATABASES SEARCHED TO 1 MILE

NPL
SRC#: 4584

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for NPL was April, 1998.

The National Priorities List (NPL) is the EPA's database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program. A site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the US Dept of Health and Human Services and the US EPA in order to become an NPL site.

SPL
SRC#: 4544

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for Calsites Database: Annual Workplan Sites was January, 1998.

This database is provided by the Cal. Environmental Protection Agency, Dept. of Toxic Substances Control. The agency may be contacted at: 916-323-3400.

CORRACTS
SRC#: 4467

VISTA conducts a database search to identify all sites within 1 mile of your property.
The agency release date for HWDMS/RCRIS was February, 1998.

The EPA maintains this database of RCRA facilities which are undergoing "corrective action". A "corrective action order" is issued pursuant to RCRA Section 3008 (h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.

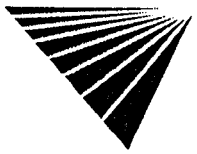
B) DATABASES SEARCHED TO 1/2 MILE

CERCLIS
SRC#: 4465

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for CERCLIS was February, 1998.

The CERCLIS List contains sites which are either proposed to or on the National Priorities List(NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL. The information on each site includes a history of all pre-remedial, remedial, removal and community relations activiies or events at the site, financial funding information for the events, and unrestricted enforcement activities.

Cal Cerclis
SRC#: 2462



VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Ca Cerclis w/Regional Utility Description was June, 1995.

This database is provided by the U.S. Environmental Protection Agency, Region 9. The agency may be contacted at: . These are regional utility descriptions for California CERCLIS sites.

NFRAP
SRC#: 4466

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for CERCLIS-NFRAP was February, 1998.

NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

SCL
SRC#: 4543

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Calsites Database: All Sites except Annual Workplan Sites (incl. ASPIS) was January, 1998.

This database is provided by the Department of Toxic Substances Control. The agency may be contacted at: .

The CalSites database includes both known and potential sites. Two- thirds of these sites have been classified, based on available information, as needing "No Further Action" (NFA) by the Department of Toxic Substances Control. The remaining sites are in various stages of review and remediation to determine if a problem exists at the site. Several hundred sites have been remediated and are considered certified. Some of these sites may be in long term operation and maintenance.

RCRA-TSD
SRC#: 4467

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for HWDMS/RCRIS was February, 1998.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA TSDs are facilities which treat, store and/or dispose of hazardous waste.

SWLF
SRC#: 4705

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Ca Solid Waste Information System (SWIS) was April, 1998.

This database is provided by the Integrated Waste Management Board. The agency may be contacted at: 916-255-4021.

The California Solid Waste Information System (SWIS) database consists of both open as well as closed and inactive solid waste disposal facilities and transfer stations pursuant to the Solid Waste Management and Resource Recovery Act of 1972, Government Code Section 2.66790(b). Generally, the California Integrated Waste Management Board learns of locations of disposal facilities through permit applications and from local enforcement agencies.

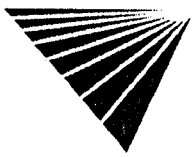
WMUDS
SRC#: 3938

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Waste Management Unit Database System (WMUDS) was May, 1997.

This database is provided by the State Water Resources Control Board. The agency may be contacted at: 916-892-0323. This is used for program tracking and inventory of waste management units. This system contains information from the following eight main databases: Facility, Waste Management Unit, SWAT Program Information, SWAT Report Summary Information, Chapter 15 (formerly Subchapter 15), TPCA Program Information, RCRA Program Information, Closure Information; also some information from the WDS (Waste Discharge System). This database con

The WMUDS system also accesses information from the following databases from the Waste Discharger System (WDS): Inspections, Violations, and Enforcements. The sites contained in these databases are subject to the California Code of Regulations - Title 23. Waters.

LUST
SRC#: 4548



VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Lust Information System (LUSTIS) was February, 1998.

This database is provided by the California Environmental Protection Agency. The agency may be contacted at: 916-445-6532.

LUST
SRC#: 4579

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Region #2-North and South Bay SLIC Report was January, 1998.

This database is provided by the Regional Water Quality Control Board, Region #2. The agency may be contacted at: 510-286-0838.

LUST RG2
SRC#: 4440

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Region #2-San Francisco Bay Fuel Leaks List was December, 1997.

This database is provided by the Regional Water Quality Control Board, Region #2. The agency may be contacted at: 510-286-0838.

CORTESE
SRC#: 2298

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Cortese List-Hazardous Waste Substance Site List was February, 1995.

This database is provided by the Office of Environmental Protection, Office of Hazardous Materials. The agency may be contacted at: 916-445-6532.

The California Governor's Office of Planning and Research annually publishes a listing of potential and confirmed hazardous waste sites throughout the State of California under Government Code Section 65962.5. This database (CORTESE) is based on input from the following: (1)CALSITES-Department of Toxic Substances Control, Abandoned Sites Program Information Systems; (2)SARA Title III Section III Toxic Chemicals Release Inventory for 1987, 1988, 1989, and 1990; (3)FINDS; (4)HWIS-Department of Toxic Substances Control, Hazardous Waste Information System. Vista has not included one time generator facilities from Cortese in our database.; (5)SWRCB-State Water Resources Control Board; (6)SWIS-Integrated Waste Management Control Board (solid waste facilities); (7)AGT25-Air Resources Board, dischargers of greater than 25 tons of criteria pollutants to the air; (8)A1025-Air Resources Board, dischargers of greater than 10 and less than 25 tons of criteria pollutants to the air; (9)LTANK-SWRCB Leaking Underground Storage Tanks; (10)UTANK-SWRCB Underground tanks reported to the SWEEPS systems; (11)IUR-Inventory Update Rule (Chemical Manufacturers); (12)WB-LF- Waste Board - Leaking Facility, site has known migration; (13)WDSE-Waste Discharge System - Enforcement Action; (14)DTSCD-Department of Toxic Substance Control Docket.

Deed Restrictions
SRC#: 1703

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Deed Restriction Properties Report was April, 1994.

This database is provided by the Department of Health Services-Land Use and Air Assessment. The agency may be contacted at: 916-323-3376. These are voluntary deed restriction agreements with owners of property who propose building residences, schools, hospitals, or day care centers on property that is "on or within 2,000 feet of a significant disposal of hazardous waste".

California has a statutory and administrative procedure under which the California Department of Health Services (DHS) may designate real property as either a "Hazardous Waste Property" or a "Border Zone Property" pursuant to California Health Safety Code Sections 25220-25241. Hazardous Waste Property is land at which hazardous waste has been deposited, creating a significant existing or potential hazard to public health and safety. A Border Zone Property is one within 2,000 feet of a hazardous waste deposit. Property within either category is restricted in use, unless a written variance is obtained from DHS. A Hazardous Waste Property designation results in a prohibition of new uses, other than a modification or expansion of an industrial or manufacturing facility on land previously owned by the facility prior to January 1, 1981. A Border Zone Property designation results in prohibition of a variety of uses involving human habitation, hospitals, schools and day care center.

Toxic Pits
SRC#: 2229

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for Summary of Toxic Pits Cleanup Facilities was February, 1995.

This database is provided by the Water Quality Control Board, Division of Loans Grants. The agency may be contacted at: 916-227-4396.

North Bay
SRC#: 1718

VISTA conducts a database search to identify all sites within 1/2 mile of your property.
The agency release date for North Bay County Toxic List-Region #2 Surface Spills was April, 1994.

This database is provided by the Regional Water Quality Control Board, Region #2. The agency may be contacted at: .

C) DATABASES SEARCHED TO 1/4 MILE

RCRA-Viols/Enf VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for HWDMS/RCRIS was February, 1998.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Violators are facilities which have been cited for RCRA Violations at least once since 1980. RCRA Enforcements are enforcement actions taken against RCRA violators.

UST's
SRC#: 1612

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Underground Storage Tank Registrations Database was January, 1994.

This database is provided by the State Water Resources Control Board, Office of Underground Storage Tanks. The agency may be contacted at: 916-227-4337; Caution-Many states do not require registration of heating oil tanks, especially those used for residential purposes.

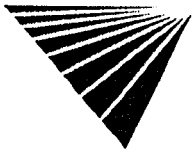
AST's
SRC#: 4320

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for Aboveground Storage Tank Database was December, 1997.

This database is provided by the State Water Resources Control Board. The agency may be contacted at: 916-227-4364.

TRIS
SRC#: 3716

VISTA conducts a database search to identify all sites within 1/4 mile of your property.
The agency release date for TRIS was December, 1996.



Section 313 of the Emergency Planning and Community Right-to-Know Act (also known as SARA Title III) of 1986 requires the EPA to establish an inventory of Toxic Chemicals emissions from certain facilities(Toxic Release Inventory System). Facilities subject to this reporting are required to complete a Toxic Chemical Release Form(Form R) for specified chemicals.

D) DATABASES SEARCHED TO 1/8 MILE

ERNS
SRC#: 4583

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for was January, 1998.

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil and hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the US Coast Guard, the National Response Center and the Department of transportation. A search of the database records for the period October 1986 through January 1998 revealed information regarding reported spills of oil or hazardous substances in the stated area.

RCRA-LgGen
SRC#: 4467

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for HWDMS/RCRIS was February, 1998.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Large Generators are facilities which generate at least 1000 kg./month of non-acutely hazardous waste (or 1 kg./month of acutely hazardous waste).

RCRA-SmGen
SRC#: 4467

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for HWDMS/RCRIS was February, 1998.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA Small and Very Small generators are facilities which generate less than 1000 kg./month of non-acutely hazardous waste.

SPILL
SRC#: 161

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for California Hazardous Materials Incident Report was December, 1990.

This database is provided by the Office of Emergency Services. The agency may be contacted at: .

SPILL
SRC#: 4642

VISTA conducts a database search to identify all sites within 1/8 mile of your property.
The agency release date for Region #1-Active Toxic Site Investigations-Spills was March, 1998.

This database is provided by the Regional Water Quality Control Board, Region #1 (North Coast Region). The agency may be contacted at: 707-576-2220.

March 23, 1999

Captain Bradley Mark
City of San Rafael Fire Department
Hazardous Materials Division
1039 C Street
San Rafael, CA 94901

Subject: Request for Closure
Sears, Roebuck and Co. Automotive Center No. 1528
9000 Northgate Mall
San Rafael, California

Dear Captain Mark:

IT Corporation (formerly Fluor Daniel GTI), on behalf of Sears, Roebuck and Co. (Sears), submits this information to substantiate no further action at the subject site. See attachment 1, figure 1 for the site location, figure 2 for a plot plan showing existing site features, figures 3 and 4 for soil analytical results and their respective locations. Analytical results are provided in attachment 2, and include tables 1, 2, and 3, with laboratory data. Analytical laboratory results are provided in attachment 3. The Underground Storage Tank Closure Review Form is provided in attachment 4, and waste removal documentation is provided in attachment 5.

Closure is requested on the basis of:

- Hydrocarbon source removal completed four years ago: several underground storage tanks (USTs) removed containing gasoline, used-oil, and motor oil. Product lines and fuel dispenser islands were removed between November 29, and December 1,1994 as described in the *Dispenser Island and Product Line Removal Report* for Sears Store 1528, dated July 1, 1996 (Fluor Daniel GTI, 1996).
- Approximately 32 cubic yards of hydrocarbon-impacted, soil was removed from the site in May 1995.
- Original concentrations of compounds detected at a maximum depth of 4 feet below grade (bg).
- Highest concentrations of compounds originally reported in excavated soil removed from site.
- Impacted soil is within the upper 3 to 4 feet of the subsurface and attenuates with increased depths.

- Site remains covered with asphalt, which prevents surface infiltration and flushing of hydrocarbons in soil into groundwater.

Based on available site information, IT Corporation proposes that this site meets State Water Resources Control Board criteria for closure as low-risk. Site closure concurrence is therefore requested of the San Rafael Fire Department. Attached please find a UST closure request form (based on Environmental Protection Agency [EPA] format).

GEOLOGY AND HYDROGEOLOGY

According to the visual observations during excavation, soil types at the site consist primarily of 4 to 6 inches of gravels over a gravelly, moist clay mixture, to a depth of 4 feet, the maximum depth explored. IT Corporation encountered non-native sands in pipe trenches and immediately beneath fuel islands. Site-specific lithology cannot be determined as the maximum depth explored was 4 feet below grade. Groundwater was not encountered during excavation.

CLOSURE GOALS

In alignment with current State UST Reimbursement Fund policies, the goals of hydrocarbon remediation at this site include: 1) removal of the primary source of the hydrocarbon-impaction (USTs), removal of product lines, motor and used oil lines, and fuel dispensers. 2) overexcavation and removal of impacted soil to off-site facility for thermal treatment. 3) Delineation of plume migration.

Hydrocarbon Source Removal

Information provided by Sears indicates two USTs containing gasoline, one UST containing used-oil, an unknown number of motor oil USTs and the product dispensers were removed during demolition activity prior to 1994. The exact dates of the UST removal are not known. IT Corporation was not supplied with additional information relating to the UST removal and is not aware of any other subsurface investigations, current or other conducted at this site.

Demolition and removal of the dispenser islands and product lines took place between November 29, and December 1, 1994 (Fluor Daniel GTI, July 1996). The dispenser islands, gasoline product lines, vent lines, motor oil supply lines, and used-oil lines were removed by Norm Wilson and Sons, Inc., Paramount, California. Soil samples were collected beneath the dispenser islands, along the product

line trenches and lateral and vertical extent of the excavation to characterize the stockpiled soil for disposal under the direction of the San Rafael Fire Department (SRFD) in San Rafael California.

A total of 17 soil samples were collected from underneath the dispenser islands, gasoline product lines, vent lines, and the lateral and vertical extent of the excavation at depths of 2 to 4 feet beneath the piping on November 29,1994. Soil samples collected were analyzed for:

- total petroleum hydrocarbons as gasoline, TPH-g; (EPA Method 8015 Modified)
- benzene, toluene, ethylbenzene, and total xylenes, BTEX; (EPA Method 8020)
- total lead, (EPA Method 6010)

Five soil samples were collected from underneath the used-oil lines, oil supply lines, and motor oil supply lines at 5 feet below the piping. The soil samples were analyzed for:

- total petroleum hydrocarbons as gasoline, TPH-g; (EPA Method 8015 Modified)
- total petroleum hydrocarbons as diesel, TPH-d; (EPA Method 8015 Modified)
- total recoverable petroleum hydrocarbons, TRPH; (EPA Method 418.1)
- volatile organic compounds, VOCs; (EPA Methods 8240)
- California Assessment Manual (CAM) for metals; (EPA 6000/7000 series analysis)

Concentrations of hydrocarbons were not detected in any of the soil samples from the dispenser island, product line and main trench areas. Concentrations of total lead were detected in 16 of the 17 soil samples from the dispenser island and product line and main trench areas, with a maximum of 11 milligrams per kilogram (mg/kg) total lead reported in sample number BTE-1/3 from fuel island B at 3 feet bg.

No concentrations of hydrocarbons or VOCs were reported in the samples collected from the dispenser Island area (table 1). Concentrations of TRPH were detected in three of the five soil samples from the motor and used oil product line areas, with a maximum of 19 mg/kg in sample WO-2/4, at 4 feet bg from the used oil supply line area. CAM metals results indicated maximum concentrations of 210 mg/kg for total chromium in sample NO-3/5 at 2 feet bg from the motor oil supply line area.

Reduction of Residual Hydrocarbons

Currently there are no open excavations or construction projects at the site that would expose soil containing hydrocarbons. The site is covered with asphalt and concrete and there does not appear to be any potential risk of exposing the public to soil containing hydrocarbons.

REQUEST FOR CLOSURE

In alignment with current SRFD policies, site closure is requested at this site. No additional work is planned at this site pending agency response to this request for closure.

Please contact Melissa Gossell at (925) 370-3990, extension 266 if you have questions or comments about this correspondence.

Sincerely,

IT CORPORATION

Enclosed please find the analytical results for samples received by GTEL Environmental Laboratories, Inc. on 11/30/94, under chain of custody records 30200 and 33586.

A formal Quality Assurance/Quality Control (QA/QC) program is maintained by GTEL, which is designed to meet or exceed the EPA requirements. Analytical work for this project met QA/QC criteria, unless otherwise stated in the footnotes. This report is to be reproduced only in full.

GTEL is certified by the California State Department of Health Services, Laboratory certification number E1075, to perform analyses for drinking water, wastewater, and hazardous waste materials according to EPA protocols.

If you have any questions concerning this analysis or if we can be of further assistance, please call our Customer Service Representative.

Sincerely,
GTEL Environmental Laboratories, Inc.

---

Dear Eileen Brennan:

Enclosed please find the analytical results for the samples received by GTEL Environmental Laboratories, Inc. on 12/01/94 under Chain-of-Custody Number(s) 33582.

A formal Quality Assurance/Quality Control (QA/QC) program is maintained by GTEL, which is designed to meet or exceed the EPA requirements. Analytical work for this project met QA/QC criteria unless otherwise stated in the footnotes.

GTEL is certified by the Department of Health Service under Certification Number E1075.

If you have any questions regarding this analysis, or if we can be of further assistance, please call our Customer Service Representative.

Sincerely,
GTEL Environmental Laboratories, Inc.

Rashmi Shah
Laboratory Director

275 South Temple, Suite 321
Salt Lake City, UT 84111

Enclosed please find the analytical results for samples received by GTEL Environmental Laboratories, Inc. on 12/01/94, under chain of custody record 33111 and 33113.

A formal Quality Assurance/Quality Control (QA/QC) program is maintained by GTEL, which is designed to meet or exceed the EPA requirements. Analytical work for this project met QA/QC criteria, unless otherwise stated in the footnotes. This report is to be reproduced only in full.

GTEL is certified by the California State Department of Health Services, Laboratory certification number E1075, to perform analyses for drinking water, wastewater, and hazardous waste materials according to EPA protocols.

If you have any questions concerning this analysis or if we can be of further assistance, please call our Customer Service Representative.

Sincerely,
GTEL Environmental Laboratories, Inc.

for
Rashmi Shah
Laboratory Director

Underground Storage Tank Closure Review Form

State of California
Environmental Protection Agency

UNDERGROUND STORAGE TANK CLOSURE REVIEW FORM

San Rafael
Fire Department

Date: 10/1/98	LUSTIS file no.:	Case reviewer:	
Site Name/Address: Sears No. 1528 9000 Northgate Mall Road San Rafael, CA	Responsible parties: Sears Roebuck & Co	Address: c/o 3333 Beverly Rd. Hoffman Estates,Il 60179	Phone no.: 847-286-5530

I. CASE INFORMATION (N/A = Not Applicable)

Tank No.	Size in Gallons	Contents	Closed in-place/Removed?	Date
Tanks 1,2	Unknown	Gasoline	Removed	Prior to 1994
Tank 3	Unknown	Used Oil	Removed	Prior to 1994
Unknown	Unknown	Motor Oil	Removed	Prior to 1994

II. SITE CHARACTERIZATION INFORMATION (GW = groundwater)

GW basin: Marin County	Beneficial uses: N/A	Depth to drinking water aquifer: Unknown	
Distance to nearest municipal supply well: Unknown		Distance between known shallow GW contamination and aquifer: N/A	
Site GW highest depth: N/A	Site GW lowest depth: N/A	Shallow water-bearing zone well screen interval: N/A	Flow direction: N/A
Soil Type: mainly silts, sands & clays (low-permeability)		Maximum depth sampled: 6 feet	

III. MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS - Initial and Latest — = Not Reported, ND = Non-detect

Contaminant	Soil (mg/kg)		Water (µg/L)		Contaminant	Soil (mg/kg)		Water (µg/L)	
	Initial (1994)	Latest	—	—		Initial (1994)	Latest	Initial (Year)	Latest (Year)
TPH-g	<1 (12/94)	—	—	—	Xylene	<0.005 (11/94)	—	—	—
VOC/8240	N/D	—	—	—	Total Lead	11	—	—	—
Benzene	<0.005 (11/94)	—	—	—	TRPH	19 (11/94)	—	—	—
Toluene	<0.005 (11/94)	—	—	—	TPH-d	<10	—	—	—
Ethylbenzene	<0.005 (11/94)	—	—	—					

V. SOIL REMEDIATION

Method: UST removal (date unknown) intrinsic biodegradation 1994 - 1998	Duration of remediation: Indefinite

VI. GROUNDWATER REMEDIATION

Method: N/A	Duration of remediation: N/A

VI. FREE PRODUCT:

Was free product encountered? No	Has free product been totally recovered? N/A
When was free product recovery project completed? N/A	

VII. RECOMMENDED ACTION:

Soil closure only: Not applicable	Case Closure: Yes	Solvent Case? No
Additional Action Required (i.e.: additional site assessment, remediation, monitoring): None		

VIII. JUSTIFICATION FOR RECOMMENDED ACTION:

1) Source removed by UST removal (prior to 1994), product line and impacted soil removal May 1995. 2) No phase-separated liquid hydrocarbons.

3) No waste oil storage at site since at least 1994, impacted soil at site not in communication w/drinking water or public contact.

5) Ongoing biodegradation/attenuation in soil, likely to continue. 6) Asphalt cap prevents surface infiltration and flushing of hydrocarbons in soil into groundwater.

Re: Request for Site Closure; Sears, Roebuck and Co. #1528, 9000 Northgate Mall, San Rafael

Dear Ms. Gossell:

This department has received your request for site closure at the above referenced location. To adequately assess your site and complete our review, we are requesting submittal of the following missing documentation:

- Laboratory analytical reports of all soil sampling performed in conjunction with the Underground Storage Tank excavations by Blaine Tech Services on March 7, 1985. (IT Stoner Laboratory Nos. 26326, 26327 and 26328);
- Laboratory analytical reports for aerated soil stockpile samples collected by Blaine Tech Services on March 25, 1985.
- Documentation of the 1987 removal of one 1,000-gallon waste oil underground storage tank and two 530-gallon bulk oil underground storage tanks.
- Laboratory analytical reports for underground storage tank closure samples collected in 1987.
- Manifests and/or facility weight tags for the transportation of 34 cubic yards of soil by Southwest Soil Remediation, Inc. to the Remat thermal processing facility in Buckeye, Arizona in 1995.

As your company seems to be acting as the responsible party for this site at this time, enclosed please find Deed Notification forms which must be completed and returned to this Department before we can continue with the site assessment.

Ms. Melissa Gossell

Following the Regional Water Quality Control Board and legislative directives, this Department will require a boring to obtain a soil and water sample for MTBE testing.

In addition, a Sensitive Receptor Review report will be needed prior to completing a site closure.

Should you have any questions, please call me at (415) 485-3308.

Sincerely,

BRADLEY R. MARK
Hazardous Materials Coordinator

Re: New Landowner Notification and Participation Requirements for Sears, Roebuck & Co. #1528, 9000 Northgate Mall, San Rafael

This letter is to inform you of new legislative requirements pertaining to cleanup and closure of sites where an unauthorized release of hazardous substance, including petroleum, has occurred from an underground storage tank (UST). Section 25297.15(a) of Ch. 6.7 of the Health & Safety Code requires the primary or active responsible party to notify all current record owners of fee title to the site of: 1) a site cleanup proposal; 2) a site closure proposal; 3) a local agency intention to make a determination that no further action is required; and 4) a local agency intention to issue a closure letter. Section 25297.15(b) requires the local agency to take all reasonable steps to accommodate responsible landowners' participation in the cleanup or site closure process and to consider their input and recommendations.

For purposes of implementing these sections, you have been identified as the primary or active responsible party. Please provide to this agency, within twenty calendar days of receipt of this notice, a complete mailing list of all current record owners of fee title to the site. You may use the enclosed list of landowners form (sample letter 2) to comply with this requirement. If the list of current record owners of fee title to the site changes, you must notify the local agency of the change within 20 calendar days from when you are notified of the change.

If you are the sole landowner, please indicate that on the landowner list form. The following notice requirements do not apply to responsible parties who are the sole landowner for the site.

In accordance with Section 25297.15(a) of Ch. 6.7 of the Health & Safety Code, you must certify to the local agency that all current record owners of fee title to the site have been informed of the proposed action before the local agency may do any of the following:

1) consider a cleanup proposal (corrective action plan);
2) consider a site closure proposal;
3) make a determination that no further action is required;
4) issue a closure letter.

You may use the enclosed notice of proposed action form (sample letter 3) to comply with this requirement. Before approving a cleanup proposal or site closure proposal, determining that no further action is required, or issuing a closure letter, the local agency will take all reasonable steps necessary to accommodate responsible landowner participation in the cleanup and site closure process and will consider all input and recommendations from any responsible landowner.

Sincerely,

BRADLEY R. MARK
Deputy Fire Marshal

Re: Review for Closure
Sears, Roebuck & Co. Automotive Center No. 1528
9000 Northgate Mall, San Rafael, California

Dear Ms. Gossell:

The City of San Rafael Fire Department (SRFD) is in the process of reviewing IT Corporation's Request for Closure, Sears, Roebuck and Co. Automotive Center No. 1528, 9000 Northgate Mall, San Rafael, California dated March 23, 1999. The IT Corporation report appears to adequately document the site investigation and remediation activities associated with the removal of the dispenser islands and product lines conducted between November 1994 and May 1995. However, the SRFD file for the subject site is lacking documentation for the site investigation and remediation activities associated with the removal of eight underground storage tanks (USTs) conducted in 1985 and 1987. A list of all documents contained in the SRFD file for the subject site is attached.

The SRFD requests the submittal of missing documentation so that the review for closure can be completed. In particular, submittal of the following documentation is requested:

* Laboratory analytical reports for three soil samples collected from UST excavations by Blaine Tech Services on March 7, 1985 (IT Stoner Laboratory Nos. 26326, 26327 and 26328);
* Laboratory analytical reports for samples collected by Blaine Tech Services from aerated soil stockpiles on March 25, 1985 (IT Stone Laboratory Nos. unknown);
* Documentation of the 1987 removal of one 1,000-gallon waste oil UST and two 530-gallon bulk oil USTs;
* Laboratory analytical reports for UST closure samples collected in 1987 (laboratory unknown); and

* Manifests and/or facility weight tags for the transportation of 34 cubic yards of soil by Southwest Soil Remediation, Inc. to the Remat thermal processing facility in Buckeye, Arizona in 1995.

⇒ Before this department can proceed any further with the site closure, the Deed Notification Forms sent to you previously must be completed and reviewed.

Following Regional Water Quality Control Board and Legislative directives, borings will be required to obtain soil and water samples which will then be tested for MTBE. This is now a requirement for site closure.

In addition, a sensitive Recaptor Report will be needed prior to a site closure being completed.

Should you have any questions, please call me at 415-485-3308.

Sincerely,

BRADLEY R. MARK
Hazardous Material Coordinator

List of documents contained in San Rafael Fire Department file for
Sears, Roebuck & Co. Automotive Center No. 1528
9000 Northgate Mall, San Rafael, California
(listed in chronological order)

Blaine Tech Services, 1985a, *Soil Sampling at Sears Automotive Center, Northgate Shopping Center, Northgate & Los Ranchos, San Rafael, California, on March 7, 1985*: March 12;

Blaine Tech Services, 1985b, *Resampling of Aerated Soil at Sears Automotive Center, Northgate Shopping Center, Northgate & Los Ranchos, San Rafael, California, on March 25, 1985*: April 8;

Marin County Environmental Health Services, undated, Application for Temporary Tank Closure (form) submitted to Sears, Roebuck & Co.;

Sears, Roebuck & Co., 1986a, letter to Marin County Environmental Health Services regarding removal of three remaining USTs: February 20;

Sears, Roebuck & Co., 1986b, completed Marin County Environmental Health Services application form to remove three USTs, August 4;

Marin County Environmental Health Services, 1986, Permit to Remove three USTs, August 5;

Sears, Roebuck & Co., 1986c, letter to Marin County Environmental Health Services requesting an extension of the September 1, 1986 deadline to remove remaining three USTs, August 25;

URS

October 15, 2002

Captain Bradley R. Mark, Deputy Fire Marshal
City of San Rafael Fire Department
1039 C Street
San Rafael, California 94901

Subject: Sears, Roebuck and Co. Automotive Center No. 1528
9000 Northgate Mall
San Rafael, California

Dear Captain Mark:

On behalf of Sears, Roebuck and Co. (Sears), URS Corporation (URS) is responding to comments made regarding the subject site in correspondence from the San Rafael Fire Department (SRFD) dated November 16, 1999. The letter requested that Sears submit specific historical site documents so that the review for site closure could be completed by the SRFD. Copies of the following documents are attached for your files (the SRFD document request is in bold type, the URS comment follows in italics):

- **Documentation of the 1987 removal of one 1,000-gallon waste oil UST and two 530-gallon bulk oil USTs**

  A copy of the document is presented in Attachment 1. (Note: the two smaller bulk oil USTs were 500-gallons capacity rather than 530-gallon capacity.)

- **Laboratory analytical reports for UST closure samples collected in 1987 (laboratory unknown)**

  A copy of the laboratory analytical report was not found. However, a copy of the Clearance document from the Department of Health and Human Services, Environmental Health Services, County of Marin, dated March 2, 1987, is presented in Attachment 2.

- **Manifests and/or facility weight tags for the transportation of 34 cubic yards of soil by Southwest Soil Remediation, Inc. to Remat thermal processing facility in Buckeye, Arizona in 1995.**

  A copy of the Waste Manifest document, dated August 1995, is presented in Attachment 3.

As per our telephone discussion on August 14, 2002, Sears has checked their files for the remaining two historical site documents requested in the SRFD letter (laboratory analytical reports dated March 7, 1985 and March 25, 1985) and have not located them. To date, Sears has researched its files and has found what it could to respond to all requests made by the SRFD for additional historical information regarding the 1985 and 1987 removal activities conducted at the subject site. It must be understood that there was no requirement for Sears to retain historical documents for these removal activities since Sears had received site closure for these activities from the County of Marin.

The November 16, 1999 SRFD letter also requested that Sears provide a sensitive receptor report for the subject site as an additional requirement for site closure. A copy of the EDR – Offsite Receptor Report for the subject site, dated November 12, 1999, is provided in Attachment 4

URS Corporation
500 12th Street, Suite 200
Oakland, CA 94607-4014
Tel: 510 893 3600
Fax: 510 874 3268

URS

Please note that in the first paragraph of the November 16, 1999 SRFD letter it states that " . remediation activities associated with the removal of eight underground storage tanks (USTs). ." For the record, there were a total of five (5) underground storage tanks located at the subject site: two (2) gasoline tanks, one (1) waste oil tank, and two (2) bulk motor oil tanks.

Please provide a copy of the Deed Notification Form so that Sears can complete and return them. It is understood that this form must be completed prior to obtaining site closure.

As requested by the SRFD, a Work Plan is presently being written which will address the requirement of additional soil and groundwater sampling and analysis for Methyl tertiary butyl ether (MTBE) at the subject site. Please note that URS is the new consultant of record for Sears regarding this site. If you have any questions, please do not hesitate to contact me at 510-874-3101.

Sincerely,
URS CORPORATION

David A. Bero, P.G., R.G.
Senior Geologist

EXECUTIVE SUMMARY

Mr. Aladdin Ghafari, Assistant Vice President, Environmental Affairs, MACERICH MANAGEMENT COMPANY (MACERICH), retained Bureau Veritas North America, Inc. to conduct a Phase I Environmental Site Assessment of the Mervyn's department store located at 5010 Northgate Mall, The Mall at Northgate, San Rafael, Marin County, California (the "subject property"). The objective of the assessment was to provide an independent, professional opinion regarding recognized environmental conditions (REC), as defined by ASTM, associated with the subject property. This assessment was requested in association with a real estate transaction.

This assessment was performed in accordance with ASTM E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Any exceptions to these guidelines, and/or limitations of the assessment, are described in Section 1.3.

The subject property is a Mervyn's retail department store, located on about 1 acre in a retail setting within the Mall at Northgate shopping center. Mervyn's is one, two-story building that is attached to the larger Mall at Northgate Shopping Center. Other anchor tenants at the shopping center (not part of the subject property) include Macy's, Sears, and Century Theatres. The building at the subject property was constructed during 1985. It is Bureau Veritas' understanding that Mervyn's will cease operations and vacate the subject property in the December 2008 timeframe.

Bureau Veritas identified obvious subject property uses from the present back to 1914. The subject property was undeveloped land until developed by the Northgate Shopping Center into a parking lot about 1965. The current subject property building was reportedly built in 1985 as a Mervyn's Department store. The surrounding area was also being residentially and commercially developed during that time.

This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property.

1.0 INTRODUCTION

Mr. Aladdin Ghafari, Assistant Vice President, Environmental Affairs, MACERICH MANAGEMENT COMPANY (MACERICH), retained Bureau Veritas North America, Inc. to conduct a Phase I Environmental Site Assessment of the Mervyn's department store located at 5010 Northgate Mall, The Mall at Northgate, Marin County, San Rafael, California (the "subject property"). The objective of the assessment was to provide an independent, professional opinion regarding recognized environmental conditions (REC), as defined by ASTM, associated with the subject property. This assessment was requested in association with a real estate transaction.

1.1 PURPOSE

Good commercial and customary practice for conducting environmental site assessments has the goal of providing an independent, professional opinion regarding *recognized environmental conditions*, as defined by ASTM, associated with the subject property. The term *recognized environmental conditions* (RECs) is defined as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs.

1.2 METHODOLOGY

This assessment was performed in accordance with ASTM E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Any exceptions to these guidelines, and/or limitations of the assessment, are described in Section 1.3.

The assessment included the following components:

- A site walkthrough inspection of the property for visual evidence of potential environmental concerns including existing or potential soil and groundwater contamination, as evidenced by soil or pavement staining or discoloration, stressed vegetation; indications of waste dumping or burial, pits, ponds, or lagoons; containers of hazardous substances or petroleum products; electrical and hydraulic equipment that may contain polychlorinated biphenyls (PCBs), such as electrical transformers and hydraulic hoists; and underground and aboveground storage tanks.

- An investigation of historical use of the subject property through reasonably ascertainable ASTM Standard Historical Sources (e.g., aerial photographs, fire insurance maps, city directories,) for evidence of prior land use that could have led to *recognized environmental conditions*.

- A review of information available on general geology and topography of the subject property, local groundwater conditions, sources of water, power, and sewer, and proximity to ecologically sensitive receptors, such as streams, that might be impacted by *recognized environmental conditions* and environmental issues.

- A review of environmental records available from MACERICH, property owner or site contact including regulatory agency reports, permits, registrations, and consultants' reports for evidence of *recognized environmental conditions* and activity and use limitations (AULs).

- A site property line visual assessment of adjacent properties for evidence of potential offsite environmental conditions that may affect the subject property.

- A review of a commercial database summary of federal, state and tribal regulatory agency records pertinent to the subject property and offsite facilities located within ASTM-specified search distances from the subject property.

- Interviews with the subject property owner or their designated *Key Site Manager*, *Occupants and State/Local Government Officials*, regarding current and previous uses of the property, particularly activities involving hazardous substances and petroleum products. Past owners, operators and occupants were also interviewed to the extent they were identified and their information was not likely to be duplicative.

- Evaluation of information gathered and development of this report

This assessment did not include sampling or analysis of soil, groundwater or other materials.

Mr. Richard Fehler from Bureau Veritas' San Francisco Regional Office, an Environmental Professional as defined in §312.10 of 40 CFR 312; conducted the site walkthrough portion of the assessment on December 18, 2008, accompanied by Mr. Anthony Edwards, Operations Manager for Northgate. Mr. Edwards has been associated with the subject property for about a year and a half. Resumes for environmental professionals involved in this assessment are included in Appendix A. Photographs taken at the time of the assessment are included behind the *Photographs* Tab.

1.3 EXCEPTIONS AND LIMITING CONDITIONS OF ASSESSMENT

Information for the assessment was obtained from sources listed in Appendix B. This information, to the extent it was relied on to form our opinion, is assumed to be correct and complete. Bureau Veritas is not responsible for the quality or content of information from these sources.

At the time of this assessment, the following documents regarding the subject property were requested, but were not made available for review:

- Documents from the San Rafael building Department

Bureau Veritas has not received a response to the above noted request as of the date of this report. If later findings materially affect the conclusions and recommendations in this report, Bureau Veritas will contact MACERICH.

Lack of Access

Access was not provided to the following areas of the subject property

- Elevator pits. The elevator equipment room was available for inspection, but the elevator pits were inaccessible.

No opinion regarding environmental conditions in areas that were not inspected can be formed. Lack of access to the area(s) listed above did not impede an evaluation of the subject property with respect to *recognized environmental conditions*.

Data Gaps

Historical subject property ownership and/or use information was obtained for the time period, 1914 to present. Bureau Veritas has established the history of previous uses at subject property use since 1940 or first development. No significant data gaps were encountered during this assessment.

1.4 RELIANCE

Bureau Veritas understands that MACERICH and its affiliates, investors, lenders, assignees, designees, successors, and assigns intend to rely upon this report as an evaluation of the environmental conditions at the Property for the purpose of deciding whether and under what conditions to proceed with the real estate transaction involving the Property. The work was performed with sufficient detail and scope to meet the standard diligence practices for an environmental assessment for an institutional investor of real estate in the current marketplace. Bureau Veritas understands that the intent is to complete an investigation which will help satisfy one of the requirements to qualify MACERICH and its affiliates, investors, lenders, assignees, designees, successors, and assigns for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitation on CERCLA liability and that MACERICH and its affiliates, investors, lenders, assignees, designees, successors, and assigns may rely upon the work for the above purpose.

Bureau Veritas will not distribute or publish this report without consent except as required by law or court order. The information and opinions expressed in this report are given in response to a limited assignment and should be considered and implemented only in light of that assignment. The services provided by Bureau Veritas in completing this project were consistent with normal standards of the profession. No other warranty, expressed or implied, is made.

2.0 USER PROVIDED INFORMATION

ASTM E 1527 defines “user” as the party seeking to use Practice E 1527 to complete an environmental site assessment of the subject property, and in this case, the user is MACERICH. ASTM E 1527 specifies that certain tasks associated with identifying potential RECs at the subject property should be performed by the user and provided to the environmental professional. This section documents the information obtained from the user.

Recorded Land Title Records

Obtaining recorded land title records and lien records that are filed under federal, state, tribal, or local law for information concerning environmental liens or Activity and Use Limitations (AULs) associated with the subject property was not part of this assessment. Lack of this information did not affect Bureau Veritas’ ability to identify RECs. It should be noted that based on the “User Questionnaire” provided by MACERICH, there are no known Environmental Liens or AULs associated with the subject property.

Specialized Knowledge

MACERICH indicated that it has no specialized knowledge or experience of environmental issues of concern associated with the subject property.

Commonly Known or Reasonably Ascertainable Information

MACERICH representative, Mr. Aladdin Ghafari, was asked if he was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.	Yes	**XX** No
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.	Yes	**XX** No
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	Yes	**XX** No

MACERICH indicated that it is unaware of any commonly known or reasonably ascertainable information within the local community about the subject property that is material to identifying environmental issues of concern associated with the subject property.

Valuation Reduction for Environmental Issues

The current real estate transaction concerning the subject property is a potential sale, rather than a purchase. However, MACERICH does not anticipate discounting the offering price of the subject property for environmental reasons.

Owner, Property Manager, and Occupant Information

MACERICH indicated that it has no specific information from subject property occupants that is material to identifying environmental issues of concern associated with the subject property.

Reason for Performing Phase I

MACERICH indicated that this assessment was requested in association with a property transaction.

3.0 ENVIRONMENTAL ASSESSMENT FINDINGS

Property Name:	Mervyn's Department Store
Site Address:	5010 Northgate Mall, The Mall at Northgate, Marin County, San Rafael, California
Owner:	Macerich

3.1 CURRENT SITE INFORMATION

Property Type:	Retail
Date of Site Inspection:	December 19, 2008
Property Size:	Approximately 1 acre
Number and Size of Buildings Onsite:	Mervyn's is one, two-story building that is attached to the larger Mall at Northgate Shopping Center. Other anchor tenants at the shopping center (not part of the subject property) include Macy's, Sears, and Century Theatres. The store contains approximately 81,617 square feet.
Construction Date:	1985
Current Site Usage:	The subject property is currently developed as a Mervyn's retail department store.
Tenants:	Mervyn's. It is Bureau Veritas' understanding that Mervyn's will vacate the subject property around December 2008.
, Areas Inspected:	All interior and exterior areas were inspected on foot. Bureau Veritas did not have access to the roof.

Physical Setting

Estimated Depth to Groundwater:	Depth to groundwater ranges from ~ 5 feet below grade to ~15 feet below grade.
Gradient Direction:	At nearby gas stations (Section 3.9), gradients are generally west to north-north west, but may also have smaller southwest components.

Geology: At nearby gas stations (Section 3.9), soils consist of silt, gravelly silt, clayey sand, clayey sand with gravel, and sandy clay to depths exceeding 25 feet below grade.

3.2 PRIOR USE INFORMATION

Summary of Prior Uses/Dates

The historical research presented in this assessment has established the use of the subject property since 1914. The subject property was undeveloped land until developed by the Northgate Shopping Center into a parking lot about 1965. The current subject property building was reportedly built in 1985 as a Mervyn's Department store. The surrounding area was also being residentially and commercially developed.

City Directory Review

City Directories were requested from EDR. Historical city directories were provided for the period between 1972 and 2008 (Appendix F). A summary of the listings for the subject and adjoining properties is shown below.

Address	Year/Date Range	Listing(s)
Subject Property:		
5010 Northgate Mall	1972, 1976, 1981, 1985	No listings found
	1995, 2000, 2008	Mervyn's
Adjoining/Nearby Properties:		
Various addresses	1972, 1976, 1981, 1985	Street not listed
	1995, 2000, 2008	Northgate Mall and other retail listings that appear to be associated with the mall.

Aerial Photograph Review

Historical aerial photographs were requested from EDR. Historical aerial photographs were provided for the period between 1946 and 2005 (Appendix C). Photographs reviewed are summarized as follows:

Date	Scale	Comments
1946	655'	The subject property and surrounding areas are primarily vacant, undeveloped land. The alignment of I-101 is present, running generally from the north to the southeast. A small road following the alignment of the present day Los Ranchitos Road is also present.
1952	555'	No significant changes were depicted with respect to the 1946 photograph, except that some residential development is now seen to

Date	Scale	Comments
		the southeast of the subject property.
1965	333’	Buildings (not including Mervyn’s) and parking lots of Northgate Mall are now present. The subject property, Mervyn’s, is shown as a parking lot. The perimeter roads that encircle the present day shopping center are present, but the southern part of the area is not yet developed and appears graded. The existing shopping center buildings appear to be free-standing and not enclosed as today. Additional commercial and residential development is present and roads and I-101 appear as they do now. It appears that three of the four gas stations located north of the subject property on Del Presidio Blvd. are present.
1982	690’	The subject property is still a parking lot within the shopping center. The shopping center has been further developed and considerable commercial and residential development is shown in the surrounding areas.
1993	666	The Mervyn’s building is now present at the west side of the shopping center. The parking structure to the south of Mervyn’s is also now present. The surrounding areas are substantially the same as shown in the 1982 photo.
1998	666’	No significant changes were depicted with respect to the 1993 photograph.
2005	484’	No significant changes were depicted with respect to the 1998 photograph.

Historical Topographic Map Review

Historical topographic maps were requested from EDR. Historical topographic maps were provided for the period between 1914 and 1980 (Appendix D). The maps depicted the following:

Date	Comments
1914	The subject property is depicted as vacant, undeveloped land.
1954	No significant changes were depicted with respect to the 1914 map, except, I-101 is shown running north to south and some residential development shown to the southwest.
1980	The Northgate Mall is shown, but the Mervyn’s building does not appear to be present. The surrounding areas show considerable commercial and residential development.

Fire Insurance Map Review

Sanborn Fire Insurance Maps were requested from EDR. Fire insurance maps were not available according to EDR. The "No Coverage" notice is provided in Appendix E.

3.3 CITY/COUNTY FILE REVIEW/INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

Agency: **Marin County Assessors Office**

Permits/Comments: The Marin County Assessors Office was contacted on November 19, 2008. The Assessors office confirmed that the Parcel number is 175-060-60.

Agency: **San Rafael Fire Department**

Permits/Comments: The San Rafael Fire Department (SRFD) was contacted on November 19, 2008 to obtain information regarding violations, releases, or environmental concerns regarding the subject property. Fire Department representatives indicated that the SRFD does not maintain records related to hazardous materials, spills, etc.

Agency: **Department of Toxic Substances Control**

Permits/Comments: The Department of Toxic Substances Control (DTSC) was contacted on November 19, 2008 to obtain information regarding violations, releases, or environmental concerns regarding the subject property. According to DTSC staff, there are no records on file for the subject property

Agency: **Regional Water Quality Control Board**

Permits/Comments: The Regional Water Quality Control Board (RWQCB) was contacted on November 19, 2008 to obtain information regarding violations, releases, or environmental concerns regarding the subject property. According to Melinda Wong, the records they have are available for review on the GeoTracker web site (see section 3.9).

Agency: **San Rafael Building Department**

Permits/Comments: The San Rafael Building department was visited on December 19, 2008 to obtain information regarding violations, releases, or environmental concerns regarding the subject property. The Building Department was not able to provide documentation related to original construction dates. Building department staff did not have any knowledge regarding the past history of use or any potential *recognized environmental conditions* associated with the subject property.

3.4 PREVIOUS REPORTS

No previous reports were available for review during this assessment.

3.5 GENERAL OBSERVATIONS

At the time of the walkthrough, the areas associated with the subject property was developed as a retail department store, consisting of one, two-story building of concrete block construction. The subject building is located within the larger The Mall at Northgate Shopping Center, and is "attached" on the east side to the interior of the mall. A loading dock is located at the south side of the subject building, and contains a hydraulic trash compactor. On the west side of the building is a diesel-powered emergency generator, within a chain link enclosure. A utility-owned pad-mounted transformer is located beside the generator enclosure. Landscaping is present in islands throughout the parking areas and sidewalks.

Most of the interior areas of the subject building are developed as retail space, containing clothing, jewelry, bedding, and other housewares. Retail areas are finished with ceramic and/or vinyl floor tile, carpet, painted drywall, and suspended acoustical ceiling tiles. Warehouse areas are primarily located along the west side of the building behind the loading dock. Finishings in warehouse areas consist mostly of exposed concrete and ceiling, and drywall. Office areas were generally finished with vinyl floor tile and suspended acoustical ceiling tiles. There is one set of escalators between the first and second floor shopping areas, and there are two hydraulic elevators (one freight elevator in the warehouse area and one passenger elevator in the main shopping area). The elevator equipment room was inspected and no spills or leaks were noted. The elevator pits themselves were inaccessible.

Interior and exterior areas of the subject property appeared to be in good condition.

3.6 INTERVIEWS

Bureau Veritas Interviewed the subject property owner and site manager as noted in the sections below.

Interview with Owner

See section 2.0 for additional information provided by the site owner.

Interview with Site Manager (or other site access contact/occupant)

Mr. Anthony Edwards was contacted in person on December 18, 2008. Mr. Edwards was forthcoming with information for which he had knowledge. Mr. Edwards has been associated with the subject property for approximately a year and a half. Mr. Edwards provided general information regarding historic and current operations at the subject property. Mr. Edwards` is unaware of any environmental issues of concern associated with the subject property, and stated that he was unaware of any USTs or ASTs historically or currently located on the subject property. Mr. Edwards indicated that the mall was built in 1965, and at that time the buildings were "free-standing" and not enclosed in a mall. He indicated that the Mervyn's building was built in 1985 (as a free-standing building), at which time the entire mall was "enclosed."

Mr. Edwards was asked if he was aware of any of the following:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property. ____ Yes **XX** No

Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property. ____ Yes **XX** No

Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products. ____ Yes **XX** No

Interviews with Others

No other interviews were conducted.

3.7 CURRENT SITE CONDITIONS

Stained Soil **Yes** _____ **No** XX

Distressed Vegetation **Yes** _____ **No** XX

Chemical/Hazardous Materials Storage **Yes** _____ **No** XX

Comments (types, amount, location): None

Sumps/Pits/Floor Drains Yes _____ No XX

Comments (types, amount, location): A storm drain is located at the base of the loading dock.

Leachfields/Septic Tank Yes _____ No XX

Comments (location, condition): The subject property has been connected to the municipal sewer since initial construction

Source of Fuel for Heating: Natural gas

Wells Yes ____ No XX

Waste Handling and Disposal:

Comments (types, amount, location):

Non-hazardous solid waste is collected into dumpsters and a trash compactor, located in the loading dock of the subject building, and is picked up on a regular basis.

Potential PCB-Containing Equipment Yes ____ No XX

Type	Ownership	Condition / Comments
A pad-mounted transformer is located at the west side of the building in a landscaped area.	Utility-owned (PG&E)	Good
Hydraulic Trash Compactor	Mervyn's	The compactor appeared to be in good condition and no leaking in the vicinity of the compactor was observed.

Aboveground Storage Tanks (ASTs) Yes ____ No XX

Comments: The subject property has a diesel-fired backup generator equipped with an approximately 85-gallon belly tank. The tank is enclosed within the generator, which would contain any leaks from the tank. Diesel staining was observed on the concrete pad, the apparent result of overfills (see photos). The minor spillage is considered to be *de minimis.*

Underground Storage Tanks (USTs) Yes No XX

3.8 ADJACENT SITE LAND USES

North	A large parking lot, followed by Las Galinas Avenue, across which are four gas on Del Presidio.	Comments	The four gas stations all have active groundwater monitoring programs (see Section 3.9)

East	The Mall at Northgate, parking lots, Rite Aid, followed by Los Ranchitos Road.	Comments	
South	A large parking structure, followed by parking lots and Northgate Drive, followed by residential development.	Comments	
West	Parking lot followed by Northgate Drive with a vegetated hill beyond.	Comments	

3.9 REGULATORY SEARCH (ADJACENT OR UPGRADIENT SITES WITHIN ¼ MILE OF SUBJECT PROPERTY)

The subject property was identified in the EMI (Emissions Inventory Database) database. This listing reflects the emergency generator and does not represent a release.

The database review identified twelve different locations within 1/8-mile from the subject property. A complete listing of these sites is included in Appendix I. Most of the sites present no environmental concern to the subject property because they only hold an operating permit (which does not imply a release), require no further action, reflect RCRA "small quantity generator" status, or based upon Bureau Veritas' review, are too distant and/or topographically down-gradient or cross-gradient relative to the subject property to reasonably affect it.

The computer database review identified the following selected facilities, generally within 1/8 mile from the subject property, for additional discussion.

Facility	Database	Orientation from Subject Site (miles)	Environmental Concern/Reason
Goodyear Tire and Rubber Ca. 496 Las Gallinas Avenue	HIST UST	<1/8 mile, east across shopping center and across street; cross-down gradient	No; distance and gradient

Facility	Database	Orientation from Subject Site (miles)	Environmental Concern/Reason
Sears/Jiffy Lube/Sears Auto Ctr 9000 Northgate	RCRA-SQG, FINDS, HAZNET,AST, HIST UST	<1/8 mile; at far edge of shopping center; up- to cross-gradient	No; no indication of a release and distance
Kerns and Walker Cleaners 412 Las Gallinas Avenue	RCRA-SQG, FINDS, HAZNET	<1/8 mile, east across shopping center and across street; cross-down gradient	No; no indication of a release, distance and gradient
Four Gasoline Service Station Locations, all on Del Presidio Boulevard	Multiple (see below)	<1/8 mile, north, across large parking lot, across Las Gallinas Avenue; down- to cross-gradient	See below

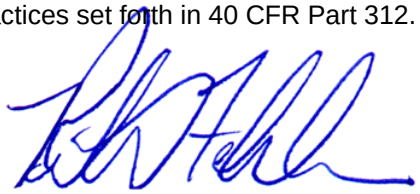
The following sites that may pose an environmental concern to the subject property were evaluated in more detail:

- There are multiple listings with different names for these four sites. Currently, they are: 921 Del Presidio (76 Service Station No. 4774), 930 Del Presidio (Valero), 949 Del Presidio (Chevron Service Station #90166), and 950 Del Presidio (Shell). There are multiple database listings for these sites including, RCRA-SQG, UST, LUST, CHMIRS, Cortese, CA FID UST, HIST UST, SWEEPS UST, RCRA-LQG, and HAZNET. All four sites have active monitoring programs in place and selected sections of current monitoring reports are included in Appendix H. According to information contained in these reports, soils consist of silt, gravelly silt, clayey sand, clayey sand with gravel, and sandy clay to depths exceeding 25 feet below grade. Depth to groundwater ranges from ~ 5 feet below grade to ~15~ below grade, with a general west to north-north west gradient, which is cross- to down-gradient from the subject property. Based on gradient and distance, these sites pose low concern to the subject property.

Unmappable sites are sites that cannot be plotted with confidence, but can be located by zip code or city name. In general, a site cannot be geocoded due to inaccurate or missing information in the environmental database record provided by its applicable agency. Cross referencing addresses and site names, as well as a visual reconnaissance of surrounding properties, has been completed for the unmappable facility sites in the database report. The subject and adjacent properties were not identified

on the unmappable sites listing in the environmental database report. No unmappable sites were identified with the potential to impact the subject property.

4.0 FINDINGS, OPINIONS, AND CONCLUSIONS



We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E 1527-05 of the Mervyn's department store located at 5010 Northgate Mall, The Mall at Northgate, Marin County, San Rafael, California the subject property. Any exceptions to or deletions from this practice are described in Section 1.3.

This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property.

Certification of both Environmental Professionals signing below:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

APPENDIX A

RESUMES OF ENVIRONMENTAL PROFESSIONALS

Richard D. Fehler, QEP, REA

Vice President, Director, National Accounts, Environmental Services

B.S., Zoology, 1974
University of California, Davis, California

OSHA 8-Hour Refresher Training, Annual

OSHA 40-Hour Hazardous Waste Operations and Emergency Response Training

Qualified Environmental Professional (QEP), No. 09950062

Registered Environmental Assessor (REA), State of California, (No. 00616)

Richard D. Fehler has more than 20 years of experience in environmental management, addressing a wide spectrum of complex environmental issues and providing assistance to the real estate and investment industry; the manufacturing, chemical, and mining and mineral processing industries; law firms; and state and local governments. Mr. Fehler specializes in environmental due diligence, regulatory compliance and negotiations, hazardous waste management, and environmental management and consulting.

Currently, Mr. Fehler is responsible for managing nationwide Phase I, Phase II, and Phase III projects for large national accounts and for assuring these clients of uniformly high quality service throughout the country. Mr. Fehler also directs and develops Clayton's Real Estate and Financial Services practice area, which includes developing internal training programs and procedures for conducting due diligence projects and for coordinating the development of Clayton standards.

Mr. Fehler has represented industry in sensitive discussions and negotiations with the United States Environmental Protection Agency (USEPA) and state agencies concerning many complex issues. These issues include hazardous waste classification, minimization, and management; Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and Superfund Amendments and Reauthorization Act (SARA) concerns; Clean Air, Clean Water, and Toxic Substances Control Act matters; and the settlement of compliance issues. He has managed complicated permitting, investigation, remediation, underground storage tank (UST), and real estate transfer projects, with contract values up to several million dollars.

Richard D. Fehler, QEP, REA

Project Experience

Phase I and II Environmental Site Assessments (ESAs)

Real Estate and Financial Services Industries

Mr. Fehler manages all environmental services nationally for several major commercial mortgage loan and real estate investment management companies. These services include peer reviews and desktop reviews, environmental assessments for single assets, and detailed reviews and recommendations for large portfolios. Mr. Fehler personally reviews several hundred due diligence reports per year. He manages a range of Phase II investigations to quantify contamination from dry cleaners, USTs, or other industrial sources and represents the client with regulators to negotiate site closure or remediation issues and to develop effective remediation strategies and budgets. Mr. Fehler's services are usually conducted under tight time frames where accuracy and timeliness are essential. Mr. Fehler is responsible for coordinating and reviewing all work to ensure uniform, high quality throughout the country, allowing clients to make important decisions and complete transactions with the best possible information.

No Further Action

Real Estate and Financial Services Industry

A major aerospace company ceased operations at a large industrial facility in Southern California and conducted a substantial investigation to evaluate hydrocarbon and chlorinated solvent contamination. Several USTs, sumps, and considerable soils were removed in an effort to obtain "clean closure" for the facility. Because of disputes with the regulatory agency, closure was never granted, and the site was sold without regulatory closure at reduced cost. The subsequent property owner planned to redevelop the property into an upscale light industrial facility and retained Clayton to obtain a No Further Action letter from the regulatory agency to increase the property's value. Mr. Fehler successfully negotiated with the Regional Water Quality Control Board (RWQCB) to assume regulatory management of the site and developed detailed briefing documents that consolidated data from previous work by other consultants. Mr. Fehler then used RWQCB guidelines for solvent cleanup to calculate allowable levels in site soils and, after discovering and correcting errors by previous consultants, submitted a final document to the RWQCB. As a result of these efforts, the RWQCB issued a No Further Action letter, greatly increasing the site's value for redevelopment.

Fungal Evaluation and Remediation Oversight Consulting Services

Real Estate and Financial Services Industry

During the early construction stages of two high-quality, six-story office buildings, rainwater entered a partially completed roof and damaged the buildings. The rainwater wetted gypsum board in the core section and on perimeter walls of each floor in both buildings, creating extensive, visible mold contamination and potentially catastrophic delays to building construction and commissioning schedules. Mr. Fehler managed Clayton's efforts to identify moldy construction and finishing materials and to oversee remediation during the removal of these materials. Because the financial impacts of delay equaled $250,000 per week, the work was "fast tracked," yet Clayton was able to provide full documentation and ensure thorough remediation. Project activities included walkthrough and "destructive" inspections, development of a scope of work for remediation, and remediation oversight. The final step in Fungal Evaluation and Remediation Oversight Consulting Services the oversight process was validation air sampling for fungi after the commissioning of the heating, ventilation, and air conditioning (HVAC) systems. Clayton's timely efforts effectively mitigated mold-related impact to the office towers, halted financial losses to the building owners, and allowed the buildings to be completed and occupied as scheduled.

Richard D. Fehler, QEP, REA

Real Estate Portfolio

Real Estate and Financial Services Industry

Mr. Fehler managed the development of Phase I reports for 24 industrial properties in Southern California. The due diligence period was 30 days, and many of the properties had significant issues relating to past industrial use, USTs, sumps, and previous investigations. Frequent contact with the client allowed early decisions about discovered issues, including removing high-risk sites from the portfolio and verifying necessary indemnifications. Working with legal counsel, Mr. Fehler submitted final reports to the selected lender on time. Mr. Fehler also coordinated responses to the few questions from the lender's third-party consultant, and the high-value portfolio was successfully funded.

Comprehensive Environmental Services

Financial Institution

Mr. Fehler has managed a variety of as-needed environmental consulting services for a large California bank, primarily in association with real estate transactions, including buying, selling, refinancing, and foreclosing on properties. Projects have included Phase I, Phase II, and Phase III activities, sampling and classifying waste, developing and implementing site closure plans, negotiating with regulators, providing third-party review of other consultants' reports, and coordinating appropriate waste disposal. Mr. Fehler has managed projects at more than 100 site locations for this client, frequently on an expedited or short schedule, allowing the client to complete these property transactions within the scheduled time frames.

Environmental Documentation

Utility Industry

Mr. Fehler managed the development of environmental documentation needed for the Public Utilities Commission (PUC) to certify a proposed site for construction of a new power plant. The proposed site was located on a historic landfill at the edge of San Francisco Bay, known to contain various contaminants. He developed and submitted a Remedial Action Work Plan (RAW) to the California Department of Toxic Substances Control (DTSC) for adoption. The RAW included a human health risk assessment and an ecological risk assessment, addressing issues concerning methane, soil and groundwater contaminants, and exposure pathways. The RAW, which was presented at a public meeting, was adopted by DTSC, and the preferred remedial action, specified by the RAW, was the most favorable to the client and allowed the PUC to certify the site.

Site Assessment and Remediation

Real Estate Industry – Commercial and Industrial

Mr. Fehler designed and managed projects to assess and remediate two large industrial sites in San Francisco to allow property development of the high-value land. He managed all phases of assessments, decontamination, and remediation. He addressed issues concerning worker health and safety, environmental compliance construction deadlines, and significant legal issues. Mr. Fehler successfully negotiated with principals and regulators to allow the multimillion-dollar projects to proceed.

Comprehensive Environmental Services

Transportation Industry – Metropolitan Port Authority

Mr. Fehler managed a large, as-needed environmental services contract for the extensive and diverse properties owned and operated by this metropolitan Port Authority. He directed Phase I ESAs at more than 40 locations; the hazardous materials investigation plan; sampling and analysis of soil, groundwater, wastes, and air at more than 15 locations; the health and safety plans; development and presentation of training courses in various aspects of safety and hazardous materials management; and the characterization of waste waters. In addition to his direction and management of these services, Mr. Fehler provided regulatory interpretation, helped develop environmental impact reports and

environmental impact statements (EIR/EIS) for large projects, and provided services for other tasks as needed. These activities have allowed the Port to effectively manage its extremely large and diverse real estate holdings.

Regulatory Negotiation

Chemical Industry

A serious incident at this chemical plant involved the accidental release and subsequent fire of petroleum refinery byproducts and resulted in the death of a plant employee. Mr. Fehler served on a crisis management team as a primary contact between the client and regulatory agencies. He also supervised site cleanup activities conducted under the onsite presence of the USEPA, the California Environmental Protection Agency (CalEPA), the Occupational Safety and Health Administration (OSHA), and the California Occupational Safety and Health Administration (CalOSHA). Ultimately, more than 2,500 cubic yards of solids and more than 800,000 gallons of acidic liquids were recovered for proper disposal at a cleanup cost of about $3 million. Mr. Fehler also helped establish a successful Community Advisory Panel with the local community to resolve issues and concerns.

Regulatory and City Government Negotiation

Chemical Industry

The City of Portland, Oregon condemned part of a chemical manufacturing site in association with construction of a significant roadway project. The property facing condemnation contained a waste management unit as well as historic, documented disposal pits that contained pesticide formulation residues. Mr. Fehler managed this project, successfully negotiating with both the City and the Oregon Department of Environmental Quality. Careful review of work performed by the City's consultants allowed the property transfer to take place in a way that allowed the City to proceed with the roadway project while providing the landowner with maximum value and flexibility for the condemned property.

Site Assessment and Remediation

Chemical Industry

The Port of Tacoma planned to purchase a $4.5 million industrial property. Prior to the purchase, Mr. Fehler managed a site assessment followed by an "independent remedial action" under the State of Washington's Model Toxics Cleanup Act. The project included soil and groundwater sampling, cleaning and decontaminating the industrial equipment, and characterizing and properly disposing of 15,000 cubic yards of industrial waste material. The project was successfully concluded on an extremely tight time frame, allowing the multimillion-dollar transaction to proceed on schedule.

Site Cleanup and Decontamination

Chemical Industry

A chemical manufacturing site in the Los Angeles area was slated for demolition and eventual sale. Mr. Fehler managed the site cleanup and decontamination, which included asbestos assessment and abatement; hazardous waste characterization and disposal; the decontamination and demolition of numerous tanks and process vessels; soil sampling; the design and installation of a soil vapor extraction system to remediate a leaking UST; and negotiations with regulatory agencies. Mr. Fehler’s services allowed the site to be successfully remediated and sold as planned.

Regulatory and City Government Negotiation

Chemical Industry

Mr. Fehler managed a $1.5 million project to permit and install a new waste water outfall in the San Francisco Bay Delta. He also negotiated an acceptable National Pollution Discharge Elimination System (NPDES) permit to allow the new outfall to be used. The permitting strategy required a detailed initial

study, and this study allowed the lead state agency to issue a negative declaration, eliminating the need for a full environmental impact report, which would have caused significant delays. Special problems included excessive sodium sulfate in the wastewater, requiring evaluation of its ecological toxicity. The waste water outfall was successfully installed and has solved a variety of waste water discharge compliance issues.

Environmental, Health, and Safety Audits
Chemical Industry

Mr. Fehler conducted comprehensive environmental, health, and safety audits of basic and specialty chemicals manufacturing plants, some with significant Resource Conservation and Recovery Act (RCRA) permitting issues. He audited commercial hazardous waste incinerators, landfills, and treatment and storage facilities to verify compliance and to minimize potential liability to the waste generator. Mr. Fehler also served as the technical representative on the steering committee in a Superfund Potentially Responsible Party (PRP) action. These services allowed the chemical company to meet its regulatory obligations in an extremely complex environment.

Risk Management and Prevention Plans
Chemical Industry

Mr. Fehler supervised the preparation of risk management and prevention plans (RMPPs) at two large chemical manufacturing sites in California. The plans included process safety programs, hazard and operability (HAZOP) analysis, and analyses of the offsite consequences of several chemical-release scenarios. Mr. Fehler presented the results of the site analysis to the public at a County-required public meeting, and the RMPPs were accepted by the regulatory agency.

UST Compliance
City and County Government

Mr. Fehler successfully managed a $2.3 million UST compliance project involving several hundred USTs for the City and County of San Francisco. In addition to routine tank testing, monitoring, and closure activities, the project included significant soil and groundwater investigation and remediation. As a result of Mr. Fehler's services, the City's USTs were brought into compliance with state regulations.

Regulatory Negotiation
Mining and Mineral Processing Industry

Mr. Fehler successfully negotiated with the state of Montana to ensure that certain large-volume waste streams generated by an elemental phosphorous production facility were exempt from listed federal mining and mineral processing wastes. Mr. Fehler's successful negotiation was the result of careful analysis and statistical evaluation of waste material characteristics as well as thorough analysis of applicable laws and regulations.

Employment History

Clayton Group Services, Inc. *A Bureau Veritas Company* – Pleasanton, California
Vice President, Director, National Accounts
2005 to Present

Clayton Group Services, Inc. – Pleasanton, California

Trevor A. Donaghu, REA

Manager, National Accounts, National Programs

B.S., Environmental Planning and Management, 1993
University of California at Davis, Davis, California

California Registered Environmental Assessor (REA)

OSHA 40-hour Certification in Hazardous Waste Operations

AHERA 24-hour Accreditation, Building Inspector

Trevor A. Donaghu has more than 16 years of experience in the field of environmental consulting, with demonstrated results in project planning and management. His responsibilities include project design and budgeting, project scheduling and tracking, senior technical review and quality assurance/quality control (QA/QC), negotiation with regulators, and client communication. For various national clients, he is responsible for managing all projects nationwide, including Phase I and Phase II environmental site assessments (ESAs), site investigations, and regulatory closures.

Trevor A. Donaghu, REA

Project Experience

Due Diligence

Real Estate and Financial Services Industry

Mr. Donaghu managed numerous due diligence projects in Northern California (San Francisco Bay Area, Sacramento, Redding), several of which also required additional Phase II investigation, which had to be coordinated to meet client-specific deadlines. He managed full-time and flex-time professional staff, reviewed project design and budgeting, and prepared proposals. Mr. Donaghu provided technical review and QA/QC, coordinated and scheduled projects, and maintained client contacts. Some projects have included property condition assessments, and/or seismic reports for multi-property portfolios.

Due Diligence

Real Estate and Financial Services Industry

Mr. Donaghu has personally conducted hundreds of Phase I ESAs throughout the United States for the real estate and banking industries. He is familiar with the rules and laws that establish standards and regulatory requirements within the environmental industry, and has conducted regulatory compliance auditing as well as hazardous waste management and removal activities. He reviewed project design, project budgeting, and proposals. He also reviewed the final reports completed by other professional staff.

Subsurface Investigation

Various Industries

Mr. Donaghu has conducted Phase II and III Assessments to characterize the extent of soil and groundwater contamination. He is experienced in a variety of assessment techniques, including geophysical surveys, soil boring and monitoring-well installation, soil and groundwater sampling, and storm drain discharge assessment.

Underground Storage Tanks Management

Various Industries

Mr. Donaghu has managed and conducted oversight for the removal and closure of underground storage tanks (USTs), clarifiers, and other subsurface structures at numerous facilities, such as gas stations, chemical companies, and manufacturing facilities. He oversaw the removal of 22 USTs from a former chemical company facility, and emergency removal of two USTs discovered during grading activities at a new construction site. Mr. Donaghu has provided site-closure related services such as project design and budgeting; coordination of staff, subcontractors, and regulators; remediation of impacted soil; and obtaining final agency approval.

Information Technology

Database Development

Mr. Donaghu has over eight years of database development experience, and has developed databases for numerous applications, using dBase, Paradox, and Access. For one project, he developed a database for large, multi-unit complex site inspections for indoor environmental quality (IEQ) issues, including mold. The database included modules for sample and analytical data, inspector notes, and reporting (reports for individual tenants, summary reports, and abatement cost projection). Mr. Donaghu also developed Clayton's Real Estate and Financial Services Project Management Database, which is used for startup, assignment, tracking, and managing all due diligence projects. Application-specific requirements have included the ability to handle projects with an unlimited number of sites, modules for date and budget calculations, form generation, and periodic reporting. Mr. Donaghu has also developed databases for marketing/contact management of 50,000+ records.

Trevor A. Donaghu, REA

Information Technology

Web Development

Mr. Donaghu has over three years experience providing Internet consulting and Web site/application development services for clients in various industries. His expertise includes the use of Hyper-Text Markup Language (HTML), JavaScript, PERL, and CGI. Specific projects include development of web sites and Intranets for consulting, retail, manufacturing, and environmental firms.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

Total Maps: 0

Limited Permission To Make Copies

Bureau Veritas North America, Inc. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.

APPENDIX G

USER QUESTIONNAIRE

ASTM PRACTICE E 1527-05 USER/CLIENT QUESTIONNAIRE
To be returned to Bureau Veritas with the authorized proposal

Providing the following information (if available) to the *environmental professional* (Bureau Veritas) is one of the requirements to qualify for one of the *Landowner Liability Protections* offered under CERCLA. Missing or incomplete information could result in a determination that "*all appropriate inquiry*" is not complete.

GENERAL INFORMATION

User/Client Name(s): MACERICH

Property Name and Address: Mervyns Portfolio

Property Type: Retail

Type of Property Transaction: Real Estate

Reason Phase I is Required: R.E. transaction

Site Contact(s): provided via spreadsheet

REQUIRED INFORMATION

The citation at the end of each item (e.g., 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).
Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law?

NO

BUREAU VERITAS

ASTM PRACTICE E 1527-05 USER/CLIENT QUESTIONNAIRE

To be returned to Bureau Veritas with the authorized proposal

2. Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

NO

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

NO

ASTM PRACTICE E 1527-05 USER/CLIENT QUESTIONNAIRE

To be returned to Bureau Veritas with the authorized proposal

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

YES

NO

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*,

(a.) Do you know the past uses of the *property*? NO

(b.) Do you know of specific chemicals that are present or once were present at the *property*? NO

(c.) Do you know of spills or other chemical releases that have taken place at the *property*? NO

(d.) Do you know of any environmental cleanups that have taken place at the *property*? NO

ASTM PRACTICE E 1527-05 USER/CLIENT QUESTIONNAIRE
To be returned to Bureau Veritas with the authorized proposal

6. The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

NO

7. Proceedings involving the *property* (ASTM E 1527-05 § 10.9).
Are you aware of any of the following:
(a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property? NO
(b.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property? NO
(c.) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? NO

ASTM PRACTICE E 1527-05 USER/CLIENT QUESTIONNAIRE

To be returned to Bureau Veritas with the authorized proposal

SIGNATURE

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Bureau Veritas will evaluate and rely on this information in the development of the final Phase I ESA report.

QUARTERLY SUMMARY REPORT
Third Quarter 2008
76 Service Station No. 4774
921 Del Presidio Boulevard
San Rafael, California

SITE DESCRIPTION

The site is located at the northwest corner of Del Presidio Boulevard and Las Gallinas Avenue in San Rafael, California. Two gasoline underground storage tanks (USTs) are present in the south central portion of the site and two dispenser islands are present adjacent to the USTs. A station building with a carwash facility is present along the northwest portion of the site. Properties in the immediate vicinity of the site are utilized for commercial and residential purposes.

PREVIOUS ASSESSMENT

September 2007 – Five borings were advanced by ATC. Soil samples were collected from borings B-2 and B-5. Total petroleum hydrocarbons as gasoline (TPHg) were present at concentrations of 0.3 milligrams per kilogram (mg/kg) and 6.1 mg/kg at 10 feet below ground surface (bgs) in borings B-2 and B-5, respectively. Total petroleum hydrocarbons as diesel (TPHd) was present at a concentration of 5.2 mg/kg at 10 feet bgs in boring B-2. Benzene, toluene, ethyl-benzene, and total xylenes (BTEX) were present at concentrations of 0.002 mg/kg, 0.001 mg/kg, 0.003 mg/kg, and 0.018 mg/kg, respectively at 10 feet bgs in boring B-5. The benzene, toluene, and ethyl-benzene values were estimated.

Groundwater samples were collected from all five borings. TPHg was present in samples collected from borings B-1, B-4, and B-5 at concentrations of 69 micrograms per liter (µg/L), 4,600 µg/L, and 970 µg/L, respectively. TPHd was present in samples collected from borings B-1, B-2, B-3, B-4, and B-5 at concentrations of 4,900 µg/L, 1,800 µg/L, 7,400 µg/L, 12,000 µg/L, and 9,200 µg/L, respectively. Benzene was present in samples collected from borings B-4 and B-5 at concentrations of 20 µg/L and 18 µg/L, respectively. Methyl tertiary butyl ether (MTBE) was present in samples collected from borings B-1, B-2, B-4, and B-5 at concentrations of 2 µg/L, 3 µg/L, 250 µg/L, and 18 µg/L, respectively.

March 2008 – Three monitoring wells (MW-1 through MW-3) were installed at the site. volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and poly chlorinated biphenyl's (PCBs) were below the laboratory's indicated reporting limits in the soil samples collected from boring MW-1 at depths of 5.5 feet bgs and 10 feet bgs. Metals were reported in the soil samples collected from boring MW-1; however, the concentrations appeared consistent with background levels.

Total oil and grease (TOG) was reported in the soil samples collected from boring MW-1 at concentrations of 12,000 mg/kg at 5.5 feet bgs and 58 mg/kg at 10 feet bgs. TPHd was reported in the soil samples collected from boring MW-1 at concentrations of 39 mg/kg at 5.5 feet bgs and 2.2 mg/kg at 10 feet bgs; boring MW-2 at a concentration of 10 mg/kg at 10 feet bgs: and boring MW-3 at a concentrations of 34 mg/kg at 5.5 feet bgs. Total purgeable petroleum hydrocarbons (TPPH), toluene, and total xylenes were reported at concentrations of 0.21 mg/kg, 0.0064 mg/kg, and 0.014 mg/kg, respectively, in the soil sample collected from boring MW-3 at a depth of 5.5 feet bgs.

TPPH and tertiary butyl alcohol (TBA) were reported at concentrations of 0.35 mg/kg and 0.29 mg/kg, respectively, in the soil sample collected from boring MW-2 at a depth of 5 feet bgs. All other constituents analyzed in the soil samples submitted for analysis from the three borings were below the laboratory's indicated reporting limits.

SENSITIVE RECEPTORS

A sensitive receptor survey is currently being conducted for this site.

SITE GEOLOGY AND HYDROGEOLOGY

The subject site is located in the San Francisco Bay region in the north-central Coast Range and is underlain by interbedded Holocene age alluvial fan deposits. These deposits are composed of unconsolidated deposits of sand and silt in a clay matrix with some fine-gravels.

Data from the previous investigations indicate the static depth to groundwater on-site varies from approximately 3 to 11 feet bgs. The groundwater flow direction as indicated from data collected during quarterly sampling conducted by TRC ranges from north to the northwest.

MONITORING AND SAMPLING

Quarterly monitoring began at the site in March 2008. Groundwater samples are collected from monitoring wells MW-1 through MW-3 and analyzed for TPHd by Environmental Protection Agency (EPA) Method 8015M, TPPH, BTEX, MTBE, di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), TBA, 1,2-dichloroethane (1,2-DCA), ethylene di-bromide (EDB), and ethanol - (8 oxygenates) by EPA Method 8260. Groundwater samples are additionally collected from monitoring well MW-1 and analyzed for total oil and grease (TOG) by EPA Method 1664, VOCs by EPA Method 8260, SVOCs by EPA Method 8270C, PCBs by EPA Method 8082, and CAM 17 Metals.

TRC has been contracted to perform the monitoring and sampling at the site. A copy of TRC's *Quarterly Monitoring Report-July through September 2008*, dated October 3, 2008, has been forwarded with this report. Groundwater elevation data from the neighboring Chevron and Shell service station are also included in the attached TRC report.

THIRD QUARTER 2008 MONITORING AND SAMPLING RESULTS

The third quarter 2008 monitoring and sampling event was performed by TRC on September 3, 2008. All three monitoring wells associated with the site were monitored and sampled. The groundwater elevation in site monitoring wells decreased an average of 1.19 feet from the June 2008 sampling event. Depth to groundwater in site monitoring wells ranged from 7.60 feet (MW-2) to 11.28 feet (MW-1) below top of casing (TOC). The groundwater flow direction and gradient were interpreted to be to the northwest at 0.03 foot per foot (ft/ft), compared with 0.04 ft/ft to the northwest during the June 2008 sampling event. A rose diagram presenting historic groundwater flow directions is presented as Attachment A.

Contaminants of Concern:

- **TPPH:** TPPH was above the laboratory's indicated reporting limit in the groundwater sample collected from monitoring well MW-2 at a concentration of 150 µg/L.

- **TPHd:** TPHd was above the laboratory's indicated reporting limit in the groundwater sample collected from monitoring wells MW-1 and MW-2 at concentrations of 98 µg/L and 70 µg/L, respectively.

- **Benzene:** Benzene was below the laboratory's indicated reporting limit in each of the groundwater samples collected from the three site monitoring wells.

- **MTBE:** MTBE was above the laboratory's indicated reporting limit in the groundwater samples collected from monitoring wells MW-1, MW-2, and MW-3 at concentrations of 14 µg/L, 6.8 µg/L, and 4.6 µg/L, respectively.

- **TBA:** TBA was above the laboratory's indicated reporting limit in the groundwater sample collected from monitoring well MW-2 at a concentration of 240 µg/L.

Analytical results from the additional groundwater samples collected for analysis from monitoring well MW-1 indicate that PCBs, TOG, SVOCs, and with the exception of the VOCs discussed above are not present above the laboratory's indicated reporting limits. In addition, metals, barium (43 µg/L) and nickel (12 µg/L) were reported in the groundwater samples submitted for analysis. All other constituents tested were below the laboratory's indicated reporting limits.

REMEDIATION STATUS

Active remediation is currently not being conducted at this site.

CHARACTERIZATION STATUS

Based on historical soil sampling analytical results the extent of the petroleum hydrocarbon impacted soil appears to have been delineated.

Based on the groundwater monitoring results, only low concentrations of TPHd, TPHg, and MTBE remain in groundwater beneath the site and based on this data the extent of the petroleum hydrocarbon impact beneath the site has been delineated.

However, the groundwater sample from boring B-4, during the due diligence investigation, was collected from shallow groundwater encountered at a depth of 5 feet bgs and contained TPHg and TPHd at concentrations of 4,600 µg/L and 12,000 µg/L, respectively. Groundwater samples collected from monitoring well MW-2 located approximately 8 feet northeast of boring B-4 contained maximum TPHg and TPHd concentrations of 180 µg/L and 76 µg/L, respectively.

Therefore, Delta in the site conceptual model submitted on October 10, 2008 recommended additional investigation to fill in data gaps in the existing data.

DISCUSSION
COP is currently attempting to obtain ownership of monitoring well EA-11 from Valero.

RECENT CORRESPONDENCE

On July 21, 2008 the Regional Water Quality Control Board (RWQCB) submitted a letter to COP requesting that a site conceptual model (SCM) be prepared for the site.

THIRD QUARTER 2008 ACTIVITIES

1. TRC performed quarterly groundwater monitoring and sampling on September 3, 2008.
2. Delta on behalf of COP submitted a site conceptual model describing known site conditions and recommending additional investigation to fill in data gaps.

FOURTH QUARTER 2008 ACTIVITIES

1. TRC to perform quarterly monitoring and sampling activities.

RE: Quarterly Monitoring Report – Second Quarter 2008
Valero Station #13781
930 Del Presidio Blvd,
San Rafael, California

Dear Mr. Lambert:

Groundwater & Environmental Services, Inc. (GES) has been retained by Valero Marketing and Supply Company (Valero) to perform groundwater monitoring of the above site. This report summarizes quarterly groundwater data collected June 10, 2008 and June 11, 2008, in accordance with reporting requirements of the Regional Water Quality Control Board. Historical monitoring data from the site has been incorporated into this report.

If you have any questions or concerns regarding this report, please contact the undersigned at (925) 825-1440.

Sincerely,
Groundwater & Environmental Services, Inc.

Mark C. Peterson, CEG #2085
Principal Hydrogeologist

		REGULATORY CONTACT:	Ralph Lambert
		REGULATORY CASE #:	21-0048
REMEDIATION SYSTEM:	Inactive	**LOCAL OVERSIGHT:**	Las Gallinas Valley Sanitary Sewer District Mark Williams
VALERO CONTACT:	Robert Ehlers	**GEOTRACKER GLOBAL ID:**	T0604100047

GAUGING DATE:	June 10, 2008
SAMPLING DATE:	June 10-11, 2008
REPORT DATE:	August 19, 2008
CURRENT SITE STATUS:	Active Valero-branded service station
MONITORING PERIOD:	Second Quarter 2008

WORK PERFORMED:
Groundwater wells were gauged, sampled and analyzed for total petroleum hydrocarbons as gasoline (TPH-g), total petroleum hydrocarbons as diesel (TPH-d), methyl tert-butyl ether (MTBE), benzene, toluene, ethylbenzene, and total xylenes (BTEX), and tert-butyl alcohol (TBA).

GROUNDWATER MONITORING:

Number of Wells:	15
Liquid Phase Hydrocarbons (LPH):	None observed
Gauging Frequency:	All wells Quarterly
Sampling Frequency:	10 Wells Quarterly, 5 Wells Annually
Groundwater Depth:	Between 2 and 7 feet below ground surface
Groundwater Flow:	Southwest
Hydraulic Gradient:	0.027 ft/ft

CURRENT STATUS/PLANS/RECOMMENDATIONS
All groundwater monitoring wells were gauged and fourteen wells were sampled; well EA4 was not sampled this quarter. Benzene was detected in four wells with a maximum concentration of 200 micrograms per liter (µg/L) in well EA7. TPH-g was detected in six wells, with a maximum concentration of 2,100 µg/L in well EA7. MTBE was detected in ten wells with a maximum detected concentration of 140 µg/L in well EA7. TBA was detected in eight wells with a maximum concentration of 1,500 µg/L in well EA1.

The site has been recommended for closure and California Regional Water Quality Control Board personnel has approved well destructions. Wells EA1, EA2, EA3, EA4, EA5, EA7, EA8, EA10, EA12, EA13, EA14, and EA15 will be destroyed in accordance with well destruction permits by either grouting in place or drilling out. The wells will be destroyed upon receipt of well destruction permits.

Ownership of wells EA9, EA11, and EA16 will be transferred to other companies for continued monitoring.

SITE SPECIFIC GEOLOGY/HYDROGEOLOGY:

This site is located in the San Rafael Groundwater Basin. Sediments beneath the site are composed of discontinuous layers of gravels, sands and clays over poorly cemented mudstone bedrock. Regionally, groundwater flows southeast towards San Francisco Bay. The site is approximately 25 feet above sea level.

POTENTIAL SENSITIVE RECEPTORS:

According to an archive search of Department of Water Resources, there are no wells within 1,000 feet of this site.

BACKGROUND

This site has been in use as a service station since 1963. In 1987, when four steel, single-walled underground storage tanks (USTs) were removed, a hole in one of the tanks was observed, with product in the excavated tank pit. The steel tanks were replaced by three single-walled fiberglass gasoline USTs, one single-walled fiberglass diesel UST, and one single-walled fiberglass used oil tank UST. At this time four monitoring wells were installed, with the additional wells being added in 1988, 1991, and 1995. In 1993 a groundwater extraction and treatment system was installed.

REMEDIATION SYSTEM SUMMARY:

The current groundwater extraction system consists of one 6-inch groundwater extraction well (EA5), a pneumatic extraction pump, and three 1,000-pound aqueous-phase granular activated carbon canisters.

GES took over remedial operations from Environmental Resolutions, Inc. in January 2007, and applied for system discharge permits from Las Gallinas Valley Sanitary District. The remediation system was non-operational in the first quarter of 2007. The remediation system was started May 23, 2007. Since that time, the system has maintained a 100% uptime. The system was shut down on March 20, 2008 due to low hydrocarbon concentrations in the influent and on site. During the life of the treatment system a total of 860,294 gallons of water was recovered, treated, and discharged. Of that total, 113,684 gallons of water was treated and discharged while GES operated the system. The approximate total hydrocarbon mass recovery by the treatment system during this period of time was 0.27 pounds.

Re: **Second Quarter 2008 Groundwater Monitoring Report**
Chevron Service Station #9-3553
949 Del Presidio Boulevard
San Rafael, California
RWQCB File #21-0166

Dear Mr. Lambert:

On behalf of Chevron Environmental Management Company (Chevron), Conestoga-Rovers & Associates (CRA) is submitting this *Second Quarter 2008 Groundwater Monitoring Report* for the referenced site. Groundwater monitoring data was collected on June 10, 2008 by Gettler-Ryan Inc. (G-R) of Dublin, California. As requested in RWQCB *Minimum Reporting Requirement* memorandum dated March 26, 2007, detailed below are a brief site history and background, a description of current quarterly monitoring activities, conclusions and anticipated future activities.

SITE BACKGROUND

Site Description

The site is currently operated as an active Chevron service station, owned by Chevron USA, located on the southwest corner of the intersection of Del Presidio Boulevard and Freitas Parkway in San Rafael, California (Figure 1). Site facilities include a kiosk, five dispenser islands and four 10,000-gallon underground storage tanks (USTs) dispensing multi-grade gasoline and diesel. According to Chevron's records, in 1983 the station was constructed in its current configuration with three 10,000-gallon USTs. No records of site development prior to 1983 are available. One additional 10,000-gallon UST was installed in 1987. The site is bordered by commercial properties, including a Union 76-branded service station to the southwest, a Shell service station to the east, a Valero service station (formerly Exxon) to the south/southeast and a commercial building above an open air parking garage to the northwest. Freitas Parkway is immediately north of the site (Figure 2). The Shell and Union 76 stations have open and active RWQCB cases. In May 2008, site closure was requested at the Valero Station by Groundwater & Environmental Services, Inc. of Concord, California. Valero wells are no longer being sampled.

Equal
Employment
Opportunity Employer

Site Geology and Hydrogeology

Soils beneath the site consist primarily of silt, gravelly silt, clayey sand, clayey sand with gravel and sandy clay to the total explored depth of 25 feet below grade (fbg). Depth to groundwater beneath the site has ranged from 5.3 fbg to approximately 12 fbg since monitoring began in 1998. Groundwater elevations measured in on-site wells have produced a calculated gradient varying from north-northwest to west. Groundwater elevation data from adjacent properties indicate a westerly to south-westerly gradient, with a groundwater elevation high at the Shell station (CRA Figure 3).

Investigation Summary

1997 Unauthorized Release: In September 1997, in preparation for installation of site upgrades, Chevron collected a groundwater sample from a tankfield backfill well piezometer. The groundwater sample contained concentrations of 560 micrograms per liter (µg/L) benzene and 100,000 µg/L methyl-tert butyl ether (MTBE). Details are reported in the *Unauthorized Release – Follow-up, Form Submittal* submitted to the San Rafael Fire Department on September 18, 1997.

1997 Pump Island and Piping Removal, Replacement and Limited Excavation: In October 1997, on behalf of Chevron, Town and Country Contractors of Sacramento conducted fuel dispenser upgrade activities including dispenser and associated product piping removal and replacement and the excavation of approximately 75-cubic yards of soil and pea gravel. Compliance soil samples collected by Touchstone Developments (Touchstone) during excavation activities contained only minor concentrations of petroleum hydrocarbons. The excavated soil was disposed of at Redwood Landfill in Novato, California. Details of these activities are reported in Touchstone Development's October 31, 1997 *Product Piping/Dispenser Replacement and Sampling Report.*

1998 Monitoring Well Installation and Limited Subsurface Investigation: In March 1998, on behalf of Chevron, Gettler-Ryan (G-R) of Dublin, California advanced soil borings MW-1 through MW-4 to 19 fbg and boring B1 to 15 fbg, converting borings MW-1 through MW-4 into groundwater monitoring wells. Soil samples collected contained maximum concentrations of 91 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as diesel (TPHd) in MW-4 at 15.5 fbg, 3.8 mg/kg total petroleum hydrocarbons as gasoline (TPHg) in MW-3 at 9 fbg, 0.15 mg/kg benzene and 0.57 mg/kg MTBE in MW-3 at 4.5 fbg, and 100 mg/kg chromium at 5 fbg in boring B-1. TPHg was detected groundwater samples from MW-2 at a maximum concentration of 3,700 µg/L. TPHd was detected in all wells at concentrations ranging from 1,200 to 2,800 µg/L. Benzene and MTBE were detected in all wells at maximum concentrations of 510 µg/L and 33,000 µg/L, respectively. Details of these activities are reported in Gettler-Ryan's August 6, 1998 *Limited Subsurface Investigation Report.*

2007 Monitoring Well Installation and Subsurface Investigation: In August 2007, on behalf of Chevron, CRA advanced on-site borings MW-5 and MW-6 to 20 fbg and SB-1 through SB-3 to a maximum depth of 25 fbg,

converting borings MW-5 and MW-6 into groundwater monitoring wells. SB-3 was advanced near boring B-1 (1998) at the location of the former used-oil tank pit. Soil samples collected contained maximum concentrations of 480 mg/kg TPHg in SB-1 at 11 fbg and 73 mg/kg TPHd in SB-3 at 10 fbg. Chromium was detected in SB-3 at a concentration of 146 mg/kg at 5 fbg in soil and at a concentration of 8,330 µg/L in groundwater. Grab-groundwater samples collected from SB-3 contained the highest detections of hydrocarbon concentrations: 21,000 µg/L TPHg, 250,000 µg/L TPHd, 730 µg/L benzene and 1,300 µg/L MTBE. TBA was reported up to 1,300 µg/L in a grab-groundwater sample from SB-2. CRA recommended the installation of an off-site down-gradient well and continued quarterly monitoring and sampling of the newly installed monitoring wells. More information is available in CRA's September 13, 2007 *Subsurface Investigation Report.*

2008 Monitoring Well Installation and Subsurface Investigation: In April 2008, in response to RWQCB requests, CRA, on behalf of Chevron, installed on-site monitoring well MW-7 to 21.5 fbg. Maximum hydrocarbon concentrations detected in soil were 200 mg/kg TPHg and 190 mg/kg TPHd. Hydrocarbon concentrations reported in grab-groundwater samples from well MW-7 included 4,800 µg/L TPHg, 2,300 µg/L TPHd, 170 ug/L benzene, 160 ug/L MTBE, and 33.5 ug/L chromium. CRA recommended scheduling of concurrent groundwater monitoring at the nearby Shell, Valero and Union 76 stations. A complete description of findings is available in CRA's May 16, 2008 *Well Installation and First Quarter 2008 Groundwater Monitoring Report.*

CURRENT QUARTER ACTIVITIES

Groundwater Monitoring and Sampling Results

Groundwater Monitoring: G-R gauged and sampled Chevron wells MW-1 though MW-7 on June 10, 2008. Concurrent groundwater gauging data was collected from the Shell, Valero, and 76 stations on June 10, 2008. On-site groundwater elevations ranged from 16.26 ft above mean sea level (msl) in MW-6 to 21.04 ft above msl in MW-5. Well construction details and groundwater elevation are presented in Attachment A. Comparing the groundwater elevations of all sites, the elevation ranged from 16.26 ft above msl at Chevron well MW-6 to 27.86 ft above msl in Shell well MW-4. Using site groundwater monitoring data from all four sites, groundwater flow direction on-site was calculated towards the northwest at a gradient varying from 0.01 to 0.07 feet per feet (ft/ft) (June 10, 2008). GR's *Groundwater Monitoring and Sampling Report – Second Quarter Event of June 10, 2008* is presented as Attachment B. Results of groundwater sampling are presented below.

TPHg Analytical Results: TPHg was detected in all site wells at concentrations ranging from 61 µg/L in well MW-5 to 6,000 µg/L in MW-3. TPHg concentrations generally decreased in wells MW-1, MW-3 and MW-4 in comparison to the previous quarter and are generally consistent with previous results in the other site wells. The observed concentrations are within historical ranges and are consistent with seasonal fluctuations.

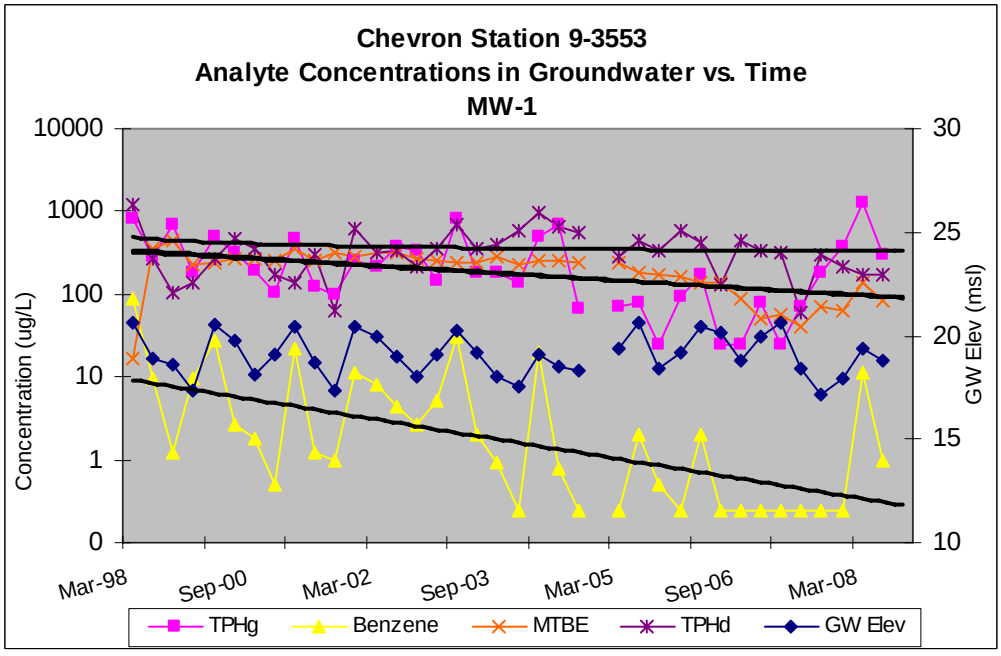
TPHd Analytical Results: TPHd was detected in all site wells at concentrations ranging from 63 µg/L in well MW-5 to 2,000 µg/L in MW-3. TPHd concentrations are generally consistent with the previous quarter results and were within historical ranges.

Benzene Analytical Results: No benzene concentrations were detected during this sampling event in wells MW-4, MW-5, and MW-6. Benzene was detected in wells MW-1, MW-2, MW-3 and MW-7 at concentrations ranging from 1 µg/L in MW-1 to 330 µg/L in well MW-3. These concentrations are within historical ranges and are consistent with seasonal fluctuations.

Oxygenate Analytical Results: MTBE was detected in all site wells at concentrations ranging from 5 µg/L in well MW-5 to 560 µg/L in well MW-3. TBA was detected in all site wells at concentrations ranging from 130 µg/L in well MW-5 to 6,900 µg/L in MW-3. The concentrations of TBA and MTBE are within historical ranges and are consistent with seasonal fluctuations

Conclusions of Quarterly Activities

Plume definition: The extent of dissolved hydrocarbons, whether originating from Chevron, Shell, Valero, Union 76 or a commingling of all four, has been defined to relatively low concentrations to the north by MW-5 and MW-6, except for MTBE, to the east by boring SB-1, to the southeast and south by Valero wells EA-9 and EA-10, to the southwest by Valero wells EA-9 and EA-11, and to the west by MW-1. The site is not fully defined to the northwest of the Chevron site (CRA Figure 4). Isoconcentration maps are presented as G-R Figures 2 through 4 in Attachment B.



Environmental Screening Levels: CRA compared hydrocarbon concentrations in groundwater with ESLs where groundwater is a potential source of drinking water for commercial/industrial land use[1]. The following table compares hydrocarbon concentrations where groundwater is a current or potential source of drinking water to dissolved phase concentrations from this event.

1 ESL from Table F-1a: ESLs – Water is a current or potential source of drinking water, Chapter 4 of *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater* prepared by the California Regional Water Quality Control Board San Francisco Bay Region, Interim final dated November 2007 (revised May 2008).

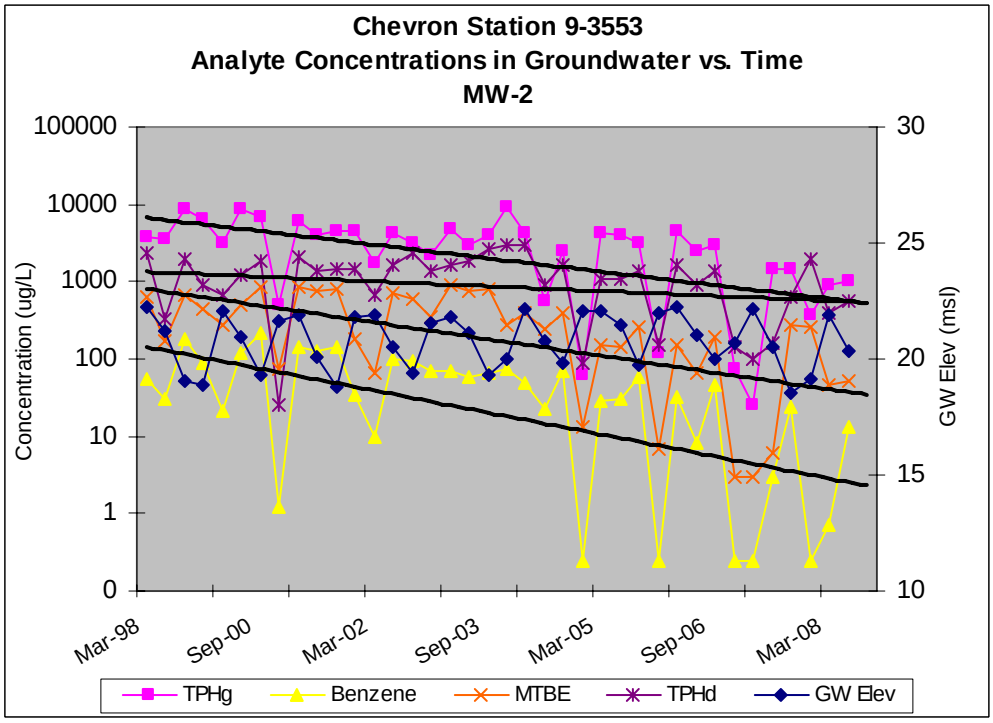


Table A: Summary of Environmental Screening Levels Groundwater IS a Current or Potential Source of Drinking Water Commercial/Industrial Land Use								
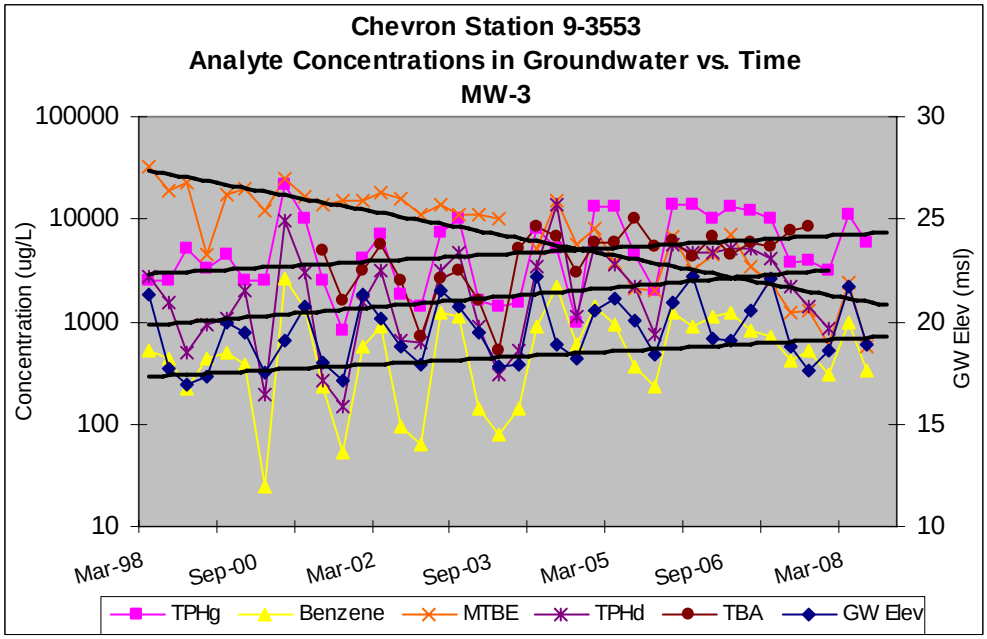
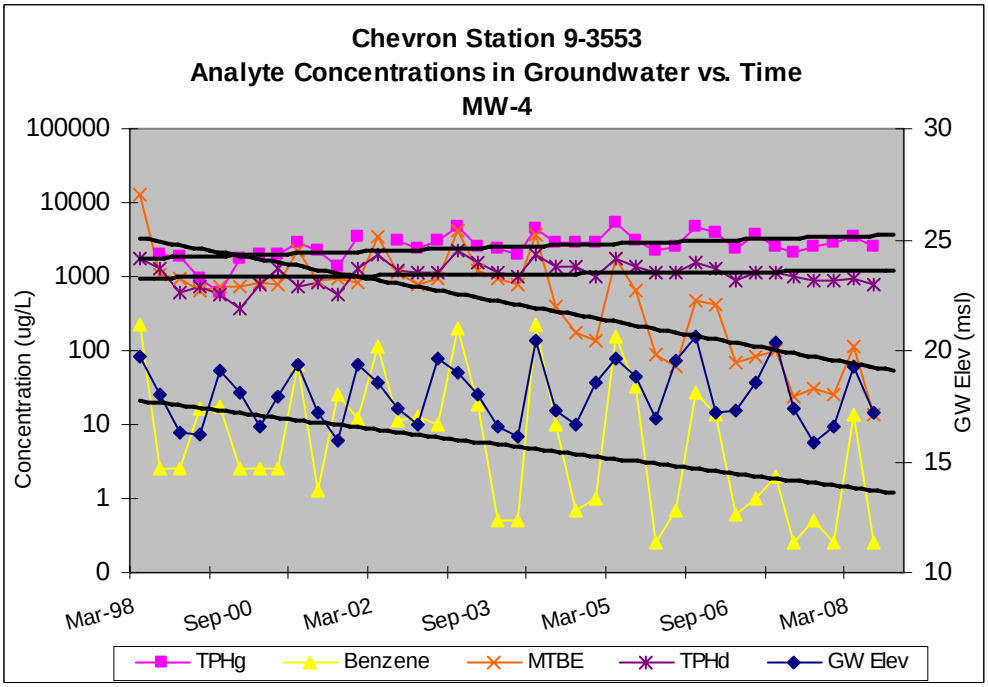
	TPHd	TPHg	Benzene	Toluene	Ethyl-benzene	Xylenes	MTBE	TBA
MW-1	**170**	**300**	**1**	.25	<0.5	<0.5	**82**	**200**
MW-2	**550**	**1,000**	**13**	3	2	3	**53**	**180**
MW-3	**2,000**	**6,000**	**330**	3	**76**	11	**560**	**6,900**
MW-4	**800**	**2,600**	<0.5	1	<0.5	0.8	**14**	**470**
MW-5	63	61	<0.5	<0.5	<0.5	<0.5	**5**	**130**
MW-6	77	68	<0.5	<0.5	<0.5	<0.5	**550**	**570**
MW-7	**1,400**	**3,200**	**200**	3	**130**	11	**330**	**210**
ESLs for Ground water (µg/l)	**100**	**100**	**1.0**	**40**	**30**	**20**	**5**	**--**

TPHd and TPHg concentrations are defined by wells MW-5 and MW-6 to the north, but remain at concentrations above ESLs in wells MW-2, MW-3, MW-4 and MW-7. MTBE is highest in source area well MW-3 and cross-gradient well MW-6.



Concentration Trends: Historical and current concentration trends for TPHd, TPHg, benzene and MTBE in groundwater versus time are shown for MW-1, MW-2, MW-3, and MW-4 on the graphs below. The trend graph for MW-3 also includes tertiary butyl alcohol (TBA), a degradation product of MTBE. Seasonal groundwater fluctuations continue to affect concentrations in groundwater on-site; however, overall a decreasing trend in each of these wells is evident.



Concentrations in MW-1 show overall stable to decreasing trends. Fluctuations in concentrations are mainly attributed to seasonal changes in groundwater elevation. TPHg in MW-1 increased by one order of magnitude during the previous quarterly event; however, during this quarter, concentrations decreased to the normal range associated with fluctuating groundwater concentrations. Well MW-1 appears to be down-gradient of the adjacent Union 76 station.

Concentrations in MW-2 also exhibit decreasing trends. Fluctuations correlate with seasonal changes in groundwater elevation. MW-2 is an up-gradient well on the Chevron site but appears to be down-gradient of the Shell station.

TPHg, benzene, TPHd and TBA concentrations are increasing slightly in well MW-3; however, are within historical ranges. MTBE concentrations are decreasing in MW-3. TBA/MTBE ratios have been useful in interpreting biodegradation of MTBE. Although more information is necessary to determine if this is occurring, trends suggest that a favourable environment for natural attenuation may exist in the subsurface. MW-7, located near the former used-oil tank, will help to further define on-site conditions as trends are established.

MTBE and benzene concentrations in MW-4 indicate decreasing trends. TPHg and TPHd concentrations are relatively stable, and correlation with seasonal changes in groundwater elevations is evident.

RECOMMENDATIONS AND ANTICIPATED FUTURE ACTIVITIES

Offsite Investigation: Upon completion access agreement negotiations with the adjacent property to the northwest, CRA will conduct an offsite investigation to determine the extent, if any, of hydrocarbon impact. CRA will inform the RWQCB when agreement negotiations are finalized and when field work is scheduled.

Groundwater Monitoring: CRA recommends continuing quarterly groundwater monitoring and sampling at this site. G-R will continue to gauge and sample site wells during a joint monitoring event with the Shell, Union-76, and Valero stations. G-R will prepare a monitoring and sampling report upon completion. CRA will prepare a summary of site conditions and submit the sampling report with additional recommendations within 60 days of the sampling date.

CLOSING

Please contact Ryan Sparrow at (510) 420-3332 or via email at rsparrow@craworld.com if you have any questions or comments.

Sincerely,
Conestoga-Rovers & Associates

Christine Orlowski

APPENDIX A	BLAINE TECH SERVICES, INC. – GROUNDWATER MONITORING REPORT

1.0 INTRODUCTION

Conestoga-Rovers & Associates (CRA) prepared this report on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell) in accordance with the quarterly reporting requirements of 23 CCR 2652d.

1.1 SITE INFORMATION

Site Address	950 Del Presidio Boulevard, San Rafael
Site Use	Shell-branded Service Station
Shell Project Manager	Denis Brown
CRA Project Manager	Tom Sparrowe
Lead Agency and Contact	RWQCB, Ralph Lambert
Agency Case No.	21-0133 (REL)
Shell SAP Code	136047
Shell Incident No.	97707843

Date of most recent agency correspondence was May 7, 2008 (electronic).

2.0 SITE ACTIVITIES, FINDINGS, AND DISCUSSION

2.1 CURRENT QUARTER'S ACTIVITIES

Blaine Tech Services, Inc. (Blaine) gauged and sampled the wells according to the modified monitoring program for this site, as approved by the Regional Water Quality Control Board (RWQCB) in their May 7, 2008 electronic correspondence. All site wells, including the tank backfill well TB-1, were gauged this quarter, but only well MW-2 was sampled and analyzed for total petroleum hydrocarbons as diesel (TPHd), total petroleum as gasoline (TPHg), and benzene, toluene, ethylbenzene, and xylenes (BTEX). Wells MW-1, MW-3, MW-4, and TB-1 are sampled in the second and fourth quarters.

CRA prepared a vicinity map (Figure 1) and a groundwater contour and chemical concentration map (Figure 2). Blaine's report, presenting the analytical data, is included in Appendix A.

2.2 CURRENT QUARTER'S FINDINGS

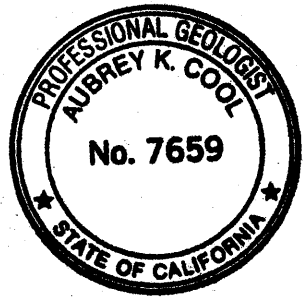
Groundwater Flow Direction	Southwesterly
Hydraulic Gradient	0.02
Depth to Water	4.60 to 6.10 feet below top of well casing

2.3 PROPOSED ACTIVITIES FOR NEXT QUARTER

Blaine will gauge and sample wells according to the modified monitoring program for this site.

Shell is negotiating an ownership transfer of monitoring wells EA9 (on Del Presidio Boulevard) and EA16 (located at 930 Del Presidio Boulevard) from Valero.

2.4 DISCUSSION



The groundwater flow direction this quarter is southwesterly with a gradient of 0.02, and is consistent with historical groundwater flow direction previously observed at this site.

All site wells, including the tank backfill well TB-1, were gauged this quarter, but only well MW-2 was sampled and analyzed for TPHd, TPHg, and BTEX. Wells MW-1, MW-3, MW-4, and TB-1 are sampled in the second and fourth quarters. The sample from well MW-2 contained 79 micrograms per liter (µg/L) TPHd, 5,400 µg/L TPHg, and 42 µg/L benzene. The concentrations of TPHg and BTEX reported in well MW-2 this quarter were similar to that reported last quarter; however, the TPHd concentration decreased by two orders of magnitude, from 1,600 to 79 µg/L.

All of Which is Respectfully Submitted,
CONESTOGA-ROVERS & ASSOCIATES

Thomas A. Sparrowe, PG
Project Manager

Aubrey K. Cool, PG
Professional Geologist

EXPLANATION

- **MW-1** Monitoring well location (Shell)
- **B-1** Soil boring location (Shell)
- **TB-1** Observation well location (Shell) (not used in contouring)
- Soil sample location (Shell)
- **EA1** Monitoring well location (Valero)
- Groundwater flow direction and gradient
- XX.XX Groundwater elevation contour, in feet above mean sea level (msl)
- Well designation
- ELEV Groundwater elevation, in feet above msl
- TPHg / Benzene TPHg and benzene concentrations are in micrograms per liter

Notes:
NS = Not sampled

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.
