Background Info:	The site may have been used as a metal plating shop since 1953, but this use was only documented since 1971. The sump area of the site was contaminated with trichloroethane, perchloroethylene, and trichloroethylene. In June 1987, the operators abandoned the site. In February 1989, 200 cubic yards of of contaminated soil and 215 cubic yards of contaminated building debris was excavated and disposed offsite. During this removal action, an earthen sump was uncovered and found to be a point source of groundwater contamination. The earthen sump measured 20 square feet and contained trichloroethylene contamination down to a depth of 9 feet. A Settlement Agreement with responsible parties was finalized in February 1992, and Satisfaction of Judgement was filed by the Attorney General's office in 1993. DTSC staff performed an annual cap inspection in July 2003, which found the cap to be in good condition. DTSC staff performed an annual cap inspection in June 2004, which found the cap to be in good condition.

CA BOND EXP. PLAN:

Reponsible Party:	DETAILED SITE EXPENDITURE PLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The responsible parties have been found to be in noncompliance with an order issued by the DHS. Therefore, it will be necessary to utilize Bond funds to remediate this site. DHS will undertake appropriate cost recovery actions.
Site Description:	A formulator of paint for the U.S. Navy previously operated at this site. An electroplating shop was also located at the site. The electroplating shop has since been abandoned.
Hazardous Waste Desc:	Approximately 200 cubic yards of soil have been contaminated with heavy metals. Soil contamination exists to a depth of at least five feet. The sump area contains high concentrations of trichloroethane (TCA), trichloroethylene (TCE) and tetrachloroethylene. Soil in the plant contains one to two precent cadmium and zinc oxide metals.
Threat To Public Health & Env:	The site is fenced to prevent access. Soil contaminants may migrate offsite via surface runoff, wind dispersion and ground water transport. This could result in possible human exposure from direct contact with contaminated soil or water.
Site Activity Status:	A remedial action order was issued in February, 1987. A final determination of noncompliance was issued in May, 1987. Emergency stabilization of the abandoned wastes was performed by the DHS emergency contractor in September, 1987. The illegal disposal of additional polyethylene drums was discovered in September, 1988 (the gate lock and fencing were cut and damaged). The abandoned polyethylene drums were leaking; the liquid had a pH of 14. Therefore, the leaking drums and affected soil had to be contained and overpacked by the DHS personnel and the contractor. DHS' contractor is scheduled to perform an interim remedial measure (IRM) to remove drums and other wastes in December, 1988. While undertaking the IRM, DHS will initiate the Phase IRI beginning in September, 1988.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2020
Date Data Arrived at EDR: 08/03/2020

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020

Next Scheduled EDR Contact: 10/12/2020
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/29/2020

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/29/2020

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/23/2020

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/23/2020

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

East Map:	5640624 RICHMOND, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

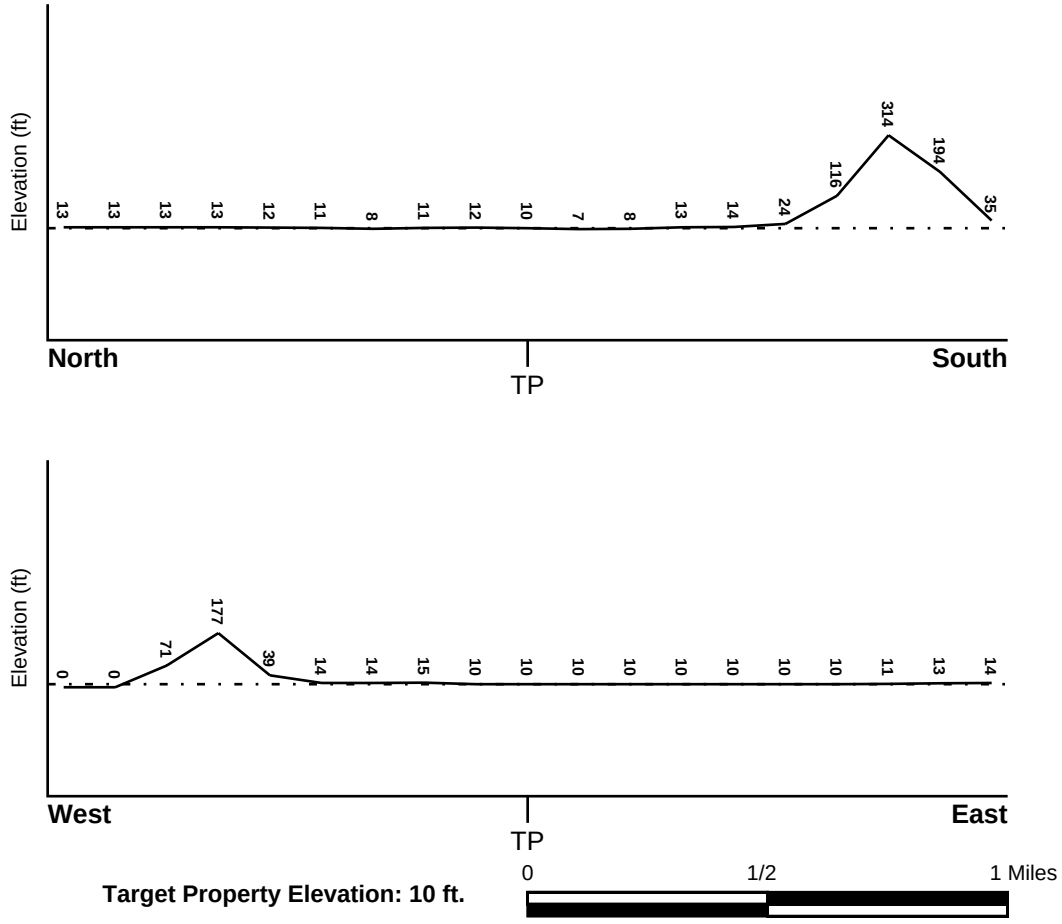
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 10 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06013C0217G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

SAN QUENTIN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile ESE
Site Name:	United Heckathorn Co
Site EPA ID Number:	CAD981436363
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	6 feet to 9 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifer(s) underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: URBAN LAND

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: CONEJO

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Re: Asbestos and Lead Sampling – Messer CO2 Plant, 731 West Cutting Boulevard, Richmond, California – BSI Project No. 806253

Dear Mr. Kotar:

At the request of Messer Americas (Messer), BSI EHS Services and Solutions (BSI) performed asbestos and lead sampling at 731 West Cutting Boulevard in Richmond, California. The asbestos and lead sampling was performed on June 19, 2020 by BSI Consulting Technician Ms. Mary Jane Riley, a State of California Certified Site Surveillance (CSST) #19-6585 and California Department of Public Health (CDPH) Lead Sampling Technician #LRC-00001206.

The purpose of this assessment was to evaluate for the presence and current conditions of suspect asbestos-containing materials (ACM) and lead-containing paint (LCP) in the eight (8) CO_2 Cylinders located on the east side of the property that are to be sold per Messer.

Following are BSI's findings and recommendations.

Sampling Methodology

Asbestos Bulk Sampling

The field investigation began with an initial walkthrough and identification of homogeneous materials suspected of containing asbestos and estimating the square footage or linear footage of the suspected materials.

After identifying those materials suspected of containing asbestos, BSI grouped the materials into homogeneous sampling areas. A homogeneous sampling area includes building materials that are uniform in texture and color and appear identical in every other respect. If there was a reason to suspect that materials may have been installed at different times or if the materials were located in separate functional spaces, even though they appear uniform, they were assigned to separate homogeneous sampling areas.

BSI collected a total of eight (8) bulk samples during the asbestos sampling. Materials sampled included yellow insulating foam, blue 9" flange gaskets, grey mastic, and black mastic. The number of samples collected was determined by field conditions and by following Asbestos Hazard Emergency Response Act

(AHERA) sampling protocols. The samples were taken from two cylinders that were in the most southwest corner of the eight cylinders. The samples were representative of all eight cylinders.

Suspect ACMs were collected using hand tools and wet methods. Each sample was labeled with a unique sample number and information regarding the sample was recorded on the chain-of-custody (COC) form, which was kept with the samples at all times until they were delivered to the analyzing laboratory. The locations of collected samples were recorded on the field drawings. The asbestos sample locations are denoted in the drawings included in Attachment 1.

Lead Bulk Sampling

Two (2) samples of suspect LCP were collected during this assessment. Samples were collected using a clean razor blade scraper to carefully remove all layers of paint, excluding the substrate. At the completion of the sampling, the paint chips were placed in plastic sampling bags, sealed, uniquely labeled, and forwarded under a completed chain-of-custody form to the laboratory for analysis.

The lead sample locations are denoted in the drawing included in Attachment 3.

Laboratory Analysis

Asbestos Bulk Samples

The collected bulk samples were analyzed for their asbestos content by Forensic Laboratories located in Carson, California. Forensic Laboratories is a State of California Department of Public Health (CDPH) certified laboratory for asbestos analysis (ELAP #1366) and is also accredited under the National Voluntary Laboratory Accreditation Program (NVLAP Lab Code 101459-1) and the American Industrial Hygiene Association (AIHA) Laboratory Accreditation Program (Laboratory ID #101629).

The samples were analyzed using polarized-light microscopy in accordance with the Environmental Protection Agency (EPA) method 600/R-93-116 and EPA method specified in Appendix E, Subpart E of Title 40 of the Code of Federal Regulations, Part 763. The phase abundances provided by this analysis were visually estimated and expressed as a percent area.

Copies of the laboratory analysis report and the chain of custody are included in Attachment 2.

Lead Bulk Samples

The collected paint chip samples were analyzed by Forensic Analytical Laboratories, Inc. (FALI) located in Carson, California. Forensic Analytical Laboratories, Inc. is accredited for lead analysis by the State of California Department of Public Health Environmental Laboratory Accreditation Program (ELAP #1366) and the American Industrial Hygiene Association Laboratory Accreditation Program (Laboratory ID #101629).

The samples were analyzed for total lead in accordance with EPA Method 3050B/7000B.

Copies of the laboratory analysis report and chain-of-custody form are included in Attachment 4.

Findings

Asbestos Results Summary

Asbestos was detected in the following material sampled by BSI:

- Black semi-fibrous tar patched areas located on pipe elbows of all 8 tanks – 3% Chrysotile asbestos

Pipe insulation was inaccessible for sampling as it was covered by metal jacketing. This pipe insulation should be assumed to be asbestos containing

Table 1 below summarizes BSI's findings.

Table 1: Summary of Asbestos Bulk Sample Results

Sample No.	Material Sampled	Sample Location	Condition	Friability	Asbestos Concentration (%)
061920-01A	White Paint Coating Yellow 6" foam	CO_2 Storage Tank Labelled "1" On Sampling Diagram	Good	Friable	ND
061920-02A	White Paint Coating Yellow 6" foam	CO_2 Storage Tank Labelled "2" On Sampling Diagram	Good	Friable	ND
061920-03B	Blue Gasket	9" Flange At CO_2 Storage Tank "1"	Good	Non-Friable	ND
061920-04B	Blue Gasket	9" Flange At CO_2 Storage Tank "2"	Good	Non-Friable	ND
061920-05C	Grey Mastic	South End Of CO_2 Storage Tank "1"	Good	Non-Friable	ND
061920-06C	Grey Mastic	South End Of CO_2 Storage Tank "1"	Good	Non-Friable	ND
061920-07D	Black Mastic	Elbow Of Tank 1	Damaged	Non-Friable	**3% Chrysotile**
061920-08D	Black Mastic	Elbow Of Tank 2	Good	Non-Friable	**Not analyzed due to prior positive result in series**

Limit of Quantification (LOQ) = 1%.
ND = None Detected

Lead Results Summary

Lead was detected in the following materials sampled by BSI:

- White paint/coating located on the exterior of the insulation on CO_2 storage tank "1" – 1.3% (lead percent by weight)
- Brown paint located below the insulation on the metal tank of CO_2 storage tank "1"- 0.25%

All sampled paint was found to be intact at the time of the survey.

Table 2 below summarizes BSI's findings.

Table 2: Summary of Lead Bulk Sample Results

Sample Number	Location	Color	Substrate	Condition	Lead Concentration (wt. %)
061920-09Pb	Exterior Of Insulation Of CO2 Storage Tank "1"	White	Foam	Intact	**1.3**
061920-10Pb	South West Exterior Wall Trim	Brown	Metal	Intact	**0.25**

ND = None Detected

Recommendations

Asbestos

The black mastic on pipe elbows attached to the CO_2 tanks is non-friable ACM and should be removed by a licensed and registered asbestos abatement contractor prior to any work that could disturb this material. The pipe elbows have approximately 2–3 square feet of black mastic per CO_2 tank and an approximate total quantity of 40 square feet.

If any untested materials are encountered during maintenance or renovation work, BSI recommends that Messer be notified immediately, and materials be sampled or assumed to be asbestos-containing material before any disturbance takes place. This includes any pipe insulation beneath metal jackets.

Lead

California Occupational Safety and Health (Cal/OSHA) regulations do not define a threshold limit for regulating paints and coatings, and instead regulate work impacting paints and coatings containing any detectable concentration of lead. Any work defined as "trigger tasks" which disturbs surfaces containing any detectable concentration of lead must be performed in accordance with Title 8 CCR 1532.1 (Construction) and Title 8 CCR 5198 (General Industry). This includes, but is not limited to, manual demolition, hot work, and abrasive blasting of the white paint on the tank exterior and the brown paint on the metal tank substrate that is beneath the insulation. Removal of lead-containing paint is not required so long as work is conducted in compliance with the Cal/OSHA standards and no lead dust hazard is created, as defined by California Code of Regulations Title 17, Division 1, Chapter 8.

Limitations of Bulk Sampling

Reasonable effort is made by BSI personnel to locate and sample suspect materials. However, for any facility, the existence of unique or concealed ACM, LBP, and associated debris is a possibility.

This report does not provide an evaluation of health risks to building occupants. BSI does not guarantee or warrant that the workplace is safe. Further, BSI's involvement in this property does not relieve the owner/operator of any continuing responsibility of providing a safe workplace.

Should you have any questions about these findings or our recommendations, please do not hesitate to call me at (949) 420-0655.

Thank you for allowing BSI this opportunity to provide our services to you.

Sincerely,

Prepared by:	Reviewed by:

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal *at least 60 days before* the expiration date shown on your card as required under Title 8 of the California Code of Regulations (T8 CCR) section 341.15(h)(1).

This office did not receive your application for renewal until 7 day(s) before the expiration of your certification card.

In the future, unless your application for renewal is received at least 60 days before the expiration date shown on your card, we cannot guarantee that your application can be processed before your certification expiration date. If your certification expires, you will have to re-apply for approval of your certification and pass the certification examination.

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification. Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.

Please contact our office at the above address or email with any changes in your contact/mailing information within 15 days of the change.

Sincerely,

Jeff Ferrell
Senior Safety Engineer

RE: NOTICE OF VIOLATIONS AND INTENT TO FILE SUIT UNDER THE FEDERAL WATER POLLUTION CONTROL ACT ("CLEAN WATER ACT") (33 U.S.C. §§ 1251 *et seq.*)

Dear Mr. Luehring and Mr. Obazee:

This firm represents The California Sportfishing Protection Association ("CSPA"), a California non-profit public benefit conservation and research organization, in regard to violations of the Clean Water Act ("CWA" or "the Act") occurring at Messer LLC industrial facility located at 731 W. Cutting Boulevard, Richmond, CA 94804 (the "Facility") with Waste Discharger Identification Number WDID 2 07I009863. The Facility primarily engages in industrial CO2 and helium transfilling. This letter is being sent to you as the responsible owners, officers, and/or operators of the Facility. Unless otherwise noted, Messer LLC, shall hereinafter be referred to as "Messer" and Jens Luehring and Daniel Ozabee shall collectively be referred to as the "Owners/Operators."

CSPA is a non-profit public benefit conservation and research organization dedicated to the preservation, protection, and defense of the environment, wildlife, and natural resources throughout the state of California. Members of CSPA reside in the communities adjacent to the San Francisco Bay (Receiving Waters) into which Messer discharges polluted storm water. As explained in detail below, Messer continuously discharges pollutants into the Receiving Waters, in violation of the Clean Water Act and the Storm Water Permit. CSPA members use the Receiving Waters to boat, fish, kayak, bird watch, view wildlife, and engage other recreational activities. Additionally, CSPA members use the Receiving Waters to engage in scientific study through pollution and

habitat monitoring to promote restoration activities. The unlawful discharge of pollutants from the Facility into the Receiving Waters impairs CSPA members' use and enjoyment of these waters. Thus, the interests of CSPA's members have been, are being, and will continue to be adversely affected by Messer's failure to comply with the Clean Water Act and the Storm Water Permit.

Messer is in ongoing violation of the substantive and procedural requirements of the CWA, 33 U.S.C. § 1251 *et seq.*; and California's General Industrial Storm Water Permit, National Pollution Discharge Elimination System ("NPDES") General Permit No. CAS000001 ("General Permit"), Water Quality Order No. 97-03-DWQ ("1997 General Permit"), as superseded by Order No. 2015-0057-DWQ ("2015 General Permit").[1]

The 1997 General Permit was in effect between 1997 and June 30, 2015, and the 2015 General Permit went into effect on July 1, 2015. As will be explained below, the 2015 General Permit includes many of the same fundamental requirements, and implements many of the same statutory requirements, as the 1997 General Permit. Violations of the General Permit constitute ongoing violations for purposes of CWA enforcement. 2015 General Permit, Finding A.6.

Pursuant to Section 309(d) of the Act (33 U.S.C. § 1319(d)) and the Adjustment of Civil Monetary Penalties for Inflation (40 C.F.R. § 19.4), each separate violation of the CWA occurring before November 2, 2015 commencing five years prior to the date of this Notice of Violation and Intent to File Suit subjects Messer to a penalty of up to $37,500 per day; violations occurring after November 2, 2015 and assessed on or after January 15, 2018 subjects Messer to a penalty of up to $53,484 per day. In addition to civil penalties, CSPA will seek injunctive relief preventing further violations of the Act pursuant to Sections 505(a) and (d) of the Act (33 U.S.C. §§ 1365(a), (d)) and such other relief as permitted by law. Lastly, Section 505(d) of the Act (33 U.S.C. § 1365(d)) permits prevailing parties to recover costs and fees, including attorneys' fees.

The CWA requires that sixty (60) days prior to the initiation of a citizen-enforcement action under Section 505(a) of the Act (33 U.S.C. § 1365(a)), a citizen enforcer must give notice of its intent to file suit. Notice must be given to the alleged violator, the U.S. Environmental Protection Agency, and the Chief Administrative Officer of the water pollution control agency for the State in which the violations occur. *See* 40 C.F.R. 135.2.

As required by the Act, this letter provides statutory notice of the violations that have occurred, and continue to occur, at the Facility. 40 C.F.R. § 135.3(a). At the expiration of sixty (60) days from the date of this letter, CSPA intends to file suit under

[1] Messer submitted its most recent Notice of Intent to comply with the General Permit for the Facility on or about November 1, 2019.

Section 505(a) of the Act (33 U.S.C. § 1365(a)) in federal court against Messer for violations of the Act and the General Permit.

I. Background

A. The Clean Water Act

Congress enacted the CWA in 1972 in order to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251. The Act prohibits the discharge of pollutants into United States waters except as authorized by the statute. 33 U.S.C. § 1311; *San Francisco Baykeeper, Inc. v. Tosco Corp.*, 309 F.3d 1153, 1156 (9th Cir. 2002). The Act is administered largely through the NPDES permit program. 33 U.S.C. § 1342. In 1987, the Act was amended to establish a framework for regulating storm water discharges through the NPDES system. Water Quality Act of 1987, Pub. L. 100-4, § 405, 101 Stat. 7, 69 (1987) (codified at 33 U.S.C. § 1342(p)); *see also Envtl. Def. Ctr., Inc. v. EPA*, 344 F.3d 832, 840-41 (9th Cir. 2003) (describing the problem of storm water runoff and summarizing the Clean Water Act's permitting scheme). The discharge of pollutants without an NPDES permit, or in violation of a NPDES permit, is illegal. *Ecological Rights Found. v. Pac. Lumber Co.*, 230 F.3d 1141, 1145 (9th Cir. 2000).

Much of the responsibility for administering the NPDES permitting system has been delegated to the states. *See* 33 U.S.C. § 1342(b); *see also* Cal. Water Code § 13370 (expressing California's intent to implement its own NPDES permit program). The CWA authorizes states with approved NPDES permit programs to regulate industrial storm water discharges through individual permits issued to dischargers, as well as through the issuance of a single, statewide general permit applicable to all industrial storm water dischargers. 33 U.S.C. § 1342(b). Pursuant to Section 402 of the Act, the Administrator of EPA has authorized California's State Board Water Resource Control Board ("State Board") to issue individual and general NPDES permits in California. 33 U.S.C. § 1342. The Board coordinates with the San Francisco Bay Regional Water Quality Control Board ("Regional Board"), which has shared jurisdiction over the Facility for state and federal water pollution control efforts.

B. California's General Permit for Storm Water Discharges Associated with Industrial Activities

Between 1997 and June 30, 2015, the General Permit in effect was Order No. 97-03-DWQ, which CSPA refers to as the "1997 General Permit." On July 1, 2015, pursuant to Order No. 2015-0057-DWQ, the General Permit was reissued, including many of the same fundamental terms as the prior permit. For the purposes of this notice letter, CSPA refers to the reissued permit as the "2015 General Permit." The 2015 General Permit rescinded in whole the 1997 General Permit, except for the expired

permit's requirement that annual reports be submitted by July 1, 2015, and for the purposes of CWA enforcement. 2015 General Permit, Finding A.6.

Facilities discharging, or having the potential to discharge, storm water associated with industrial activities that have not obtained an individual NPDES permit must apply for coverage under the General Permit by filing a Notice of Intent to Comply ("NOI"). 1997 General Permit, Provision E.1; 2015 General Permit, Standard Condition XXI.A. Facilities must file their NOIs before the initiation of industrial operations. *Id.*

Facilities must strictly comply with all of the terms and conditions of the General Permit. A violation of the General Permit is a violation of the CWA. The General Permit contains three primary and interrelated categories of requirements: (1) discharge prohibitions, receiving water limitations and effluent limitations; (2) Storm Water Pollution Prevention Plan ("SWPPP") requirements; and (3) self-monitoring and reporting requirements. Beginning under the 2015 General Permit Facilities must submit Exceedance Response Action Plans ("ERA Report") to the State Board outlining effective plans to reduce pollutants if a Facility reports a pollutant above the Numeric Action Level ("NAL"). An annual NAL exceedance occurs when the average of all the analytical results for a parameter from samples taken within a reporting year[2] exceeds the annual NAL value for that parameter. An instantaneous maximum NAL exceedance occurs when two (2) or more analytical results from samples taken for any single parameter within a reporting year exceed the instantaneous maximum NAL value or are outside of the instantaneous maximum NAL range for pH. 2015 General Permit XII.A.

C. Messer's Industrial Facility

Messer's Facility is located on 731 W. Cutting Boulevard in Richmond, Contra Costa County. The Facility primarily engages in receiving, storage, and distribution of CO2 and helium. Pursuant to the Facility's Notice of Intent to comply with the General Permit the Facility encompasses 8 acres, with all 8 acres exposed to storm water. Scheduled facility operating hours are Monday through Friday, 9:00 AM to 5:00 PM. The shortest distance from the Facility to surface water is 250 feet due south, across Cutting Boulevard, and down a boat ramp descending to the Inner Richmond Harbor and Marina, part of San Francisco Bay.

According to The Facility's Notice of Intent to Comply with the General Permit ("NOI") and Storm Water Pollution Prevention Plan ("SWPPP") Messer operates under Standard Industrial Classification (SIC) Code 2813, covering establishments primarily engaged in manufacturing industrial gases. Under this SIC Code 2813, the General Permit requires Messer to analyze storm water samples for pH, oil & grease, aluminum, iron, nitrate + nitrate nitrogen, and total suspended solids ("TSS"). Facilities must also sample and analyze for additional parameters identified on a facility specific basis to

[2] A reporting year under the General Permit is July 1 to June 30.

reflect pollutant a source assessment, due to receiving water impairments, or as required by the Regional Board. 1997 General Permit, Section B.5.c.i; 2015 General Permit, Section XI.B.6. The San Francisco Bay, Central is listed for impairments on the 2016 303(d) list of impaired waterbodies.

The Facility has eight buildings with eight main storage tanks and two storage sheds. Industrial activities at the Facility occur in the following industrial areas at the Facility among others: plant process area, machine shop, garage for vehicle and other maintenance, scrap metal and waste accumulation areas, cooling water tower and water treatment area, remainder of processing plant and piping, railcar handling area equipment lay down yard, truck/trailer and vehicle parking areas, loading, unloading and shipping and receiving areas, scale house, a liquid loads product line area, a fueling area, and general storage areas. An Airgas dry ice operation also exists at the facility, with an office, an ammonia storage and compressor area, and office and a loading and unloading area.

Industrial activities at the Facility include receiving liquid carbon dioxide by rail and storing it on site, receiving liquid helium by trucks and transfills into liquid dewars and gas tube trailers for delivery, vehicle maintenance, vehicle washing, vehicle fueling, and vehicle traffic. Diesel trucks may leak oil and other fluids and track pollutants on and off the Facility. Industrial processes for dry ice manufacture and distribution also occur on site.

Potential pollutants at the Facility include oil and grease, process chemicals, heat transfer fluid, glycol, liquid CO2, diesel fuel, solvents, paints, suspended solids from traffic and sediment accumulation, empty cannisters, dust and debris from industrial activities at the Facility, including vehicle traffic and dust from onsite and dust from the surrounding roadways migrating to the Facility.

Stormwater enters the Facility storm drain system via several storm drain drop-inlets located throughout the Facility, and flows to the City of Richmond Municipal Separate Storm Sewer System ("MS4"). Discharge Point 1 receives flow from the northern edge of the facility, including from several storage areas and laydown areas; Discharge Point 2 receives flow from the process area, the trailer loading area, and a trailer parking area; and Discharge Point 3 receives flow from vehicle parking, the maintenance garage area, and several buildings.

II. Messer's Violations of the Act and the General Permit

Based on its review of available public documents, CSPA is informed and believes that Messer is in ongoing violation of both the substantive and procedural requirements of the CWA, and the General Permit. These violations are ongoing and continuous. Consistent with the five-year statute of limitations applicable to citizen enforcement actions brought pursuant to the CWA, Messer is subject to penalties for

violations of the Act since May 21, 2015. CSPA expects to identify additional storm water discharges conveying pollutants to the Receiving Waters in violation of the CWA through further investigation of the Facility and as this matter progresses through the rainy season.

A. Messer Discharges Storm Water Containing Pollutants in Violation of the General Permit's Discharge Prohibitions, Receiving Water Limitations, and Effluent Limitations

Messer's storm water sampling results provide conclusive evidence of its failure to comply with the General Permit's discharge prohibitions, receiving water limitations and effluent limitations. Self-monitoring reports under the General Permit are deemed "conclusive evidence of an exceedance of a permit limitation." *Sierra Club v. Union Oil*, 813 F.2d 1480, 1493 (9th Cir. 1988).

1. Applicable Water Quality Standards

The General Permit requires that storm water discharges and authorized non-storm water discharges shall not cause or threaten to cause pollution, contamination, or nuisance. 1997 General Permit, Discharge Prohibition A.2; 2015 General Permit, Discharge Prohibition III.C. The General Permit also prohibits discharges that violate any discharge prohibition contained in the applicable Regional Board's Basin Plan or statewide water quality control plans and policies. 1997 General Permit, Receiving Water Limitation C.2; 2015 General Permit, Discharge Prohibition III.D. Furthermore, storm water discharges and authorized non-storm water discharges shall not adversely impact human health or the environment, and shall not cause or contribute to a violation of any water quality standards in any affected receiving water. 1997 General Permit, Receiving Water Limitations C.1, C.2; 2015 General Permit, Receiving Water Limitations VI.A, VI.B.

Dischargers are also required to prepare and submit documentation to the Regional Board upon determination that storm water discharges are in violation of the General Permit's Receiving Water Limitations. 1997 General Permit, p. VII; 2015 General Permit, Special Condition XX.B. The documentation must describe changes the discharger will make to its current storm water best management practices ("BMPs") in order to prevent or reduce any pollutant in its storm water discharges that is causing or contributing to an exceedance of water quality standards. *Id.*

The California Toxics Rule ("CTR") is an applicable water quality standard under the Permit, the violation of which is a violation of Permit conditions. Cal. Sportfishing Prot. Alliance v. Chico Scrap Metal, Inc., 2015 U.S. Dist. LEXIS 108314, *21 (E.D. Cal. 2015) CTR establishes numeric receiving water limits for toxic pollutants in California surface waters. 40 C.F.R. § 131.38. The CTR establishes a numeric limit for at least

one of the pollutants thought to be discharged by Messer, given the truck traffic and large roofing structures on site, Zinc—0.12 mg/L (maximum concentration).

The *Water Quality Control Plan for the San Francisco Bay Basin* ("Basin Plan") also sets forth water quality standards and prohibitions applicable to Messer's storm water discharges. The Basin Plan identifies existing and potential Beneficial Uses for water bodies in the San Francisco Bay Area, such as the San Francisco Bay, Central and Richmond Inner Harbor, such as contact and non-contact water recreation, wildlife habitat, estuarian habitat, spawning, and shell fish harvesting (Basin Plan, Table 2-1.)

As noted above, the San Francisco Bay, Central is impaired for chlordane, DDT, dieldrin, mercury, PCBs, selenium, dioxin compounds, furan compounds, and trash. The San Francisco Bay is a crucial California ecological resource.

2. Applicable Effluent Limitations

Dischargers are required to reduce or prevent pollutants in their storm water discharges through implementation of best available technology economically achievable ("BAT") for toxic and nonconventional pollutants and best conventional pollutant control technology ("BCT") for conventional pollutants. 1997 General Permit, Effluent Limitation B.3; 2015 General Permit, Effluent Limitation V.A. Conventional pollutants include Total Suspended Solids, Oil & Grease, pH, Biochemical Oxygen Demand and Fecal Coliform. 40 C.F.R. § 401.16. All other pollutants are either toxic or nonconventional. 40 C.F.R. §§ 401.15-16.

Under the General Permit, benchmark levels established by the EPA ("EPA benchmarks") serve as guidelines for determining whether a facility discharging industrial storm water has implemented the requisite BAT and BCT. *Santa Monica Baykeeper v. Kramer Metals,* 619 F.Supp.2d 914, 920, 923 (C.D. Cal 2009); 1997 General Permit, Effluent Limitations B.5-6; 2015 General Permit, Exceedance Response Action XII.A.

The following EPA benchmarks have been established for pollutants discharged by Messer: total suspended solids—100 mg/L; iron—1 mg/L; aluminum—0.75 mg/L; oil & grease—15 mg/L; nitrite + nitrate nitrogen—0.68 mg/L; and pH—6-9 s.u. The Basin Plan's Water Quality Standards require a narrower pH range of 6.5—8.5 s.u.

3. Messer's Storm Water Sample Results

As detailed above, Messer's SWPPP identifies three discharge points. Storm water from the discharge points, flows into storm drain inlets and then is conveyed to the City of Richmond storm drain system. The City of Richmond storm drain system flows to Inner Richmond Harbor and San Francisco Bay, Central. Inner Richmond Harbor, Central Bay, and the San Francisco Bay are waters of the United States.

Except as provided in Section XI.C.4 of the 2015 Permit, samples shall be collected from each drainage area at all discharge locations. The samples must be: a) Representative of storm water associated with industrial activities and any commingled authorized non-storm water discharges; or, b) Associated with the discharge of contained storm water.

The following discharges of pollutants from the Facility have violated the discharge prohibitions, receiving water limitations, and effluent limitations of the Permit.

a. Discharges of Storm Water Containing Aluminum (Al) at Concentrations in Excess of Applicable EPA Benchmark Value

Date	Discharge Point	Parameter	Concentration in Discharge (mg/L)	EPA Benchmark Value (mg/L)
2/4/2019	SD-3	Al	2.1	0.75
11/21/2018	SD-2	Al	1.2	0.75
3/13/2018	SD-2	Al	1.9	0.75
2/13/2019	SD-3	Al	2	0.75
2/26/2019	SD-3	Al	1.8	0.75
2/4/2019	SD-2	Al	2.4	0.75
3/13/2018	SD-3	Al	0.8	0.75
1/18/2017	SD-2	Al	0.78	0.75
1/3/2017	SD-1	Al	3	0.75
1/18/2017	SD-1	Al	2	0.75
12/8/2016	SD-3	Al	2.4	0.75
1/3/2017	SD-3	Al	3.3	0.75
12/21/2015	SD-3	Al	1.8	0.75
12/3/2015	SD-1	Al	16	0.75
12/3/2015	SD-2	Al	4.2	0.75

b. Discharges of Storm Water Containing Iron (Fe) at Concentrations in Excess of Applicable EPA Benchmark Value

Date	Discharge Point	Parameter	Concentration in Discharge (mg/L)	EPA Benchmark Value (mg/L)
2/4/2019	SD-3	Fe	2.6	1.0
11/21/2018	SD-2	Fe	1.9	1.0
3/13/2018	SD-2	Fe	1.8	1.0
2/13/2019	SD-3	Fe	2.3	1.0

Date	Discharge Point	Parameter	Concentration in Discharge (mg/L)	EPA Benchmark Value (mg/L)
2/26/2019	SD-3	Fe	2.6	1.0
2/4/2019	SD-2	Fe	2.4	1.0
1/3/2017	SD-1	Fe	3.5	1.0
1/18/2017	SD-1	Fe	2.3	1.0
12/8/2016	SD-3	Fe	2.1	1.0
1/3/2017	SD-3	Fe	3.7	1.0
12/21/2015	SD-3	Fe	2.1	1.0
12/3/2015	SD-1	Fe	17	1.0
12/3/2015	SD-2	Fe	4.6	1.0

a. Discharges of Storm Water Containing Zinc (Zn) at Concentrations in Excess of Applicable EPA Benchmark Value

Date	Discharge Point	Parameter	Concentration in Discharge (mg/L)	EPA Benchmark Value (mg/L)
12/3/2015	SD-2	Zn	0.29	0.12
12/3/2015	SD-1	Zn	3.7	0.12

b. Discharges of Storm Water Containing Total Suspended Solids (TSS) at Concentrations in Excess of Applicable EPA Benchmark Value

Date	Discharge Point	Parameter	Concentration in Discharge (mg/L)	EPA Benchmark Value (mg/L)
1/3/2017	SD-1	TSS	120	100
12/3/2015	SD-1	TSS	1500	100
12/3/2015	SD-2	TSS	280	100

c. Discharges of Storm Water Containing Nitrate + Nitrate Nitrogen (N+N) at Concentrations in Excess of Applicable EPA Benchmark Value

Date	Discharge Point	Parameter	Concentration in Discharge (mg/L)	EPA Benchmark Value (mg/L)
12/3/2015	SD-1	N+N	7.8	0.68
12/3/2015	SD-2	N+N	2.3	0.68
12/21/2015	SD-1	N+N	0.81	0.68

Date	Discharge Point	Parameter	Concentration in Discharge (mg/L)	EPA Benchmark Value (mg/L)
12/3/2015	SD-3	N+N	1.5	0.68
3/13/2018	SD-2	N+N	1.7	0.68
3/13/2018	SD-1	N+N	8	0.68
2/26/2019	SD-1	N+N	1.97	0.68
2/4/2019	SD-2	N+N	2.93	0.68
11/21/2018	SD-2	N+N	1.61	0.68
11/21/2018	SD-1	N+N	1.86	0.68
11/16/2017	SD-2	N+N	0.88	0.68
11/16/2017	SD-3	N+N	0.82	0.68
11/16/2017	SD-1	N+N	6.75	0.68
1/3/2017	SD-2	N+N	6.70	0.68
1/3/2017	SD-1	N+N	2.46	0.68
12/8/2016	SD-1	N+N	0.99	0.68
10/14/2016	SD-1	N+N	2.48	0.68
10/14/2016	SD-2	N+N	0.79	0.68

Messer's sample results demonstrate violations of the General Permit's discharge prohibitions, receiving water limitations, and effluent limitations set forth above. CSPA is informed and believes that the Messer has known that its storm water contains pollutants at levels exceeding General Permit standards since at least May 21, 2015.

CSPA alleges that such violations occur each time storm water or non-storm water discharges from the Facility. Attachment A hereto, sets forth the specific rain dates on which CSPA alleges that Messer has discharged storm water containing impermissible levels of impermissible levels of total suspended solids, pH, oil & grease, aluminum, iron, and nitrate + nitrate nitrogen in violation of the General Permit.1997 General Permit, Discharge Prohibition A.2, Receiving Water Limitations C.1 and C.2; 2015 General Permit, Discharge Prohibitions III.C and III.D, Receiving Water Limitations VI.A, VI.B.

Because Messer recorded averages of testing above Numeric Action Levels exceedances for total suspended solids and, aluminum, iron and nitrite + nitrate nitrogen during the 2015-2016 the Facility entered ERA Level 1 for those constituents for the 2016-2017 reporting year. Recorded averages for aluminum and iron in the 2015-2016 reporting year were both over three times the NAL. In the 2016-2017

reporting year Messer again reporting annual averages above the NAL for aluminum, iron and nitrite + nitrate nitrogen putting Messer into ERA Level 2 for those constituents. In the 2017-2018 reporting year, Messer began testing nitrate and nitrite separately and did not adjust those samples to nitrite + nitrate nitrogen and thus did not report the average of 2.2 mg/L which kept Messer in ERA Level 2 in nitrite + nitrate nitrogen though an ERA Report was not submitted to SMARTS for the 2017-2018 reporting year. However, Messer reported that the Facility was over the annual NAL in 2017-2018 for nitrite + nitrate nitrogen in its 2018-2019 ERA Report and also reported exceedances of the NAL for aluminum, iron, and again, nitrite + nitrate nitrogen for the 2018-2019 reporting year. Nitrite + nitrate nitrogen averaged 3.9 mg/L, over 5.5 times the NAL. Messer remains in Level 2 for those three constituents for this 2019-2020 reporting year.

4. Messer Has Failed to Implement BAT and BCT

Dischargers must implement adequate BMPs that fulfill the BAT/BCT requirements of the CWA and the General Permit to reduce or prevent discharges of pollutants in their storm water discharges. 1997 General Permit, Effluent Limitation B.3; 2015 General Permit, Effluent Limitation V.A. To meet the BAT/BCT standard, dischargers must implement minimum BMPs and any advanced BMPs set forth in the General Permit's SWPPP Requirements provisions where necessary to reduce or prevent pollutants in discharges. *See* 1997 General Permit, Sections A.8.a-b; 2015 General Permit, Sections X.H.1-2. Sampling results of orders of magnitude in excess of benchmark levels, as reported by Messer, are evidence that Messer does not have BMPs that achieve BAT/BCT (*Santa Monica Baykeeper v. Kramer Metals, Inc.* 619 F. Supp. 2d 914. 925 (C.D. Cal., 2009.)

Messer has failed to implement the minimum BMPs required by the General Permit, including good housekeeping requirements; preventive maintenance requirements; spill and leak prevention and response requirements; material handling and waste management requirements; erosion and sediment controls; employee training and quality assurance; and record keeping. 1997 General Permit, Sections A.8.a(i–x); 2015 General Permit, Sections X.H.1(a–g).

Messer has further failed to implement advanced BMPs necessary to reduce or prevent discharges of pollutants in its storm water sufficient to meet the BAT/BCT standards, including: exposure minimization BMPs; containment and discharge reduction BMPs; treatment control BMPs; or other advanced BMPs necessary to comply with the General Permit's effluent limitations. 1997 General Permit, Section A.8.b; 2015 General Permit, Sections X.H.2. There are yet to be sufficient advanced BMPs currently in use at the Facility.

Each day the Owners/Operators have failed to develop and implement BAT and BCT at the Facility in violation of the General Permit is a separate and distinct violation

of Section 301(a) of the CWA (33 U.S.C. § 1311(a)). The violations described above were at all times in violation of Section A of the 1997 General Permit, and Section X of the 2015 General Permit. Accordingly, the Owners/Operators have been in violation of the BAT and BCT requirements at the Facility every day since at least May 21, 2015.

5. Messer Has Failed to Develop and Implement an Adequate Storm Water Pollution Plan

The General Permit requires dischargers to develop and implement a site-specific SWPPP. 1997 General Permit, Section A.1; 2015 General Permit, Section X.A. The SWPPP must include, among other elements: (1) the facility name and contact information; (2) a site map; (3) a list of industrial materials; (4) a description of potential pollution sources; (5) an assessment of potential pollutant sources; (6) minimum BMPs; (7) advanced BMPs, if applicable; (8) a monitoring implementation plan; (9) annual comprehensive facility compliance evaluation; and (10) the date that the SWPPP was initially prepared and the date of each SWPPP amendment, if applicable. *See id.*

Dischargers must revise the Facility's SWPPP whenever necessary, and certify and submit SMARTS their SWPPP within 30 days whenever the SWPPP contains significant revisions(s); and, certify and submit via SMARTS any non-significant revisions not more than once every three (3) months in the reporting year. 2015 General Permit, Section X.B; see also 1997 General permit, Section A.

CSPA's investigation indicates that Messer has been operating with an inadequately developed or implemented SWPPP in violation of General Permit requirements since at least May 21, 2015. Messer has failed to evaluate the effectiveness of its BMPs and to revise its SWPPP as necessary, resulting in the Facility's unlawful effluent limitation violations. The Facility's 2019 SWPPP and most recent ERA Report list no substantive advanced BMPs, or plans for advanced BMPs, despite the Facility's multiple years in Level 2. Advanced BMPs are primarily structural BMPs consisting of treatment control BMPs, exposure reduction BMPs, and storm water containment and discharge reduction BMPs.

Last, the General Permit requires a permittee whose discharges violate the General Permit's Receiving Water Limitations to implement additional BMPs or other control measures, in order to attain compliance with the receiving water limitation identifying what additional BMPs will be implemented to achieve water quality standards, along with an implementation schedule. 2015 General Permit Section I.E, which would then be incorporated into the Facility SWPPP. Information available to CSPA indicates that the Facility Owners/Operators failed to implement any additional BMPs as required by the 2015 General Permit. As such, the Owners and/or Operators are in daily violation of this requirement of the General Permit.

Each day the Owners/Operators failed to develop and implement an adequate SWPPP is a violation of the General Permit. The SWPPP violations described above were at all times in violation of Section A of the 1997 General Permit, and Section X of the 2015 General Permit. The Owners/Operators have been in violation of these requirements at the Facility every day since at least May 21, 2015.

6. Messer has Failed to Develop, Implement, and/or Revise an Adequate Monitoring and Reporting Program

Section B(1) and Provision E(3) of the 1997 Permit required Facility Owners/Operators to develop and implement an adequate Monitoring and Reporting Program. Similarly, Section X.I of the 2015 General Permit requires Facility Owners/Operators to develop and implement a Monitoring Implementation Plan ("MIP"). The primary objective of the monitoring and reporting requirements is to detect and measure the concentrations of pollutants in a facility's discharge to ensure compliance with the Storm Water Permit's Discharge Prohibitions, Effluent Limitations, and Receiving Water Limitations. *See* 1997 General Permit, Section B(2); 2015 IGP Fact Sheet, Section II.J(1). Monitoring undertaken must therefore determine whether pollutants are being discharged, and whether response actions are necessary, and must evaluate the effectiveness of BMPs. *See* 2015 General Permit, Section I.J(56).

Sections B(5) and B(7) of the 1997 General Permit, and Section XI.A of the 2015 General Permit, require dischargers to visually observe and collect samples of storm water from all locations where storm water is discharged. Under XI.B of the 2015 General Permit, the Facility Owners/Operators are required to collect at least two (2) samples from each discharge location at their Facility during the first half of the reporting year, and then again during the second half of the reporting year. Storm water samples must be analyzed for total suspended solids, pH, oil & gas, and other pollutants that are likely to be present in the Facility's discharges in significant quantities, and as required under the General Permit pursuant to a Facility SIC Code. *See* 2015 General Permit, Section XI.B(6). For two recent sampling events the Facility Owners/Operators failed to sample and report storm water for iron in violation of the General Permit under the Facility SIC code.

The Facility Owners/Operators have been conducting operations at the Facility with an inadequately developed, implemented, and/or revised MIP. Upon information and belief, the Facility Owners/Operators only sampled storm water three times during the 2015-2016, 2017-2018 and 2018-2019 reporting years in violation of Section XI.B.5 of the General Permit, despite ample storm events in each of those years. *See* Attachment A.

The Facility Owners'/Operators' failure to conduct sampling and monitoring as required by the General Permit demonstrates that it has failed to develop, implement, and/or revise an MIP that complies with the requirements of Section B and Provision

E(3) of the 1997 General Permit and Section XI of the 2015 General Permit. Every day that the Facility Owners/Operators conduct operations in violation of the specific monitoring requirements of the 1997 Permit or the 2015 General Permit, or with an inadequately developed and/or implemented MIP, is a separate and distinct violation of the 1997 General Permit or the 2015 General Permit, and the Clean Water Act. The Facility Owners/Operators have been in daily and continuous violation of the General Permit's MIP requirements every day since at least May 21, 2015. These violations are ongoing, and CSPA will include additional violations when information becomes available, including specifically continuing violations of the 2015 General Permit monitoring requirements (*see* 2015 General Permit, Section XI.). The Facility Owners/Operators are subject to civil penalties for all violations of the Clean Water Act occurring since May 21, 2015.

7. Failure to Comply with the Storm Water Permit's Reporting Requirements

Section B(14) of the 1997 General Permit and Section XVI of the 2015 Permit requires a permittee to submit an Annual Report to the Regional Board by July 1 of each year. Section B(14) requires that the Annual Report include a summary of visual observations and sampling results, an evaluation of the visual observation and sampling results, the laboratory reports of sample analysis, the annual comprehensive site compliance evaluation report, an explanation of why a permittee did not implement any activities required, and other information specified in Section B(13). The 2015 General Permit includes the same general annual reporting requirement. *See* 2015 General Permit, Section XVI. The Facility operators must report any noncompliance with the General Permit at the time that the Annual Report is submitted, including 1) a description of the noncompliance and its cause, 2) the period of noncompliance, 3) if the noncompliance has not been corrected, the anticipated time it is expected to continue, and 4) steps taken or planned to reduce and prevent recurrence of the noncompliance. 1997 General Permit, Section C(11)(d). From information available on SMARTS, it appears that the Facility Owners/Operators have failed to submit an Annual Report for the 2018-2019 reporting year. The Facility Owners/Operators have submitted at least two previous annual reports late and received notices of non-compliance from the Regional Board in each instance but for the 2018-2019 reporting, thereby violating the procedural requirements of Section XVI of the 2015 General Permit.

Last, information available to CSPA indicates that the Facility Owners/Operators have failed to accurately report their non-compliance with the General Permit and correctly report storm water sampling analysis compliance in the Facility's Annual Reports. Further, the Facility ERA Reports resulting from samples recorded in the 2016-2017, 2017-2018 and 2018-2019 reporting years were insufficient, as evidenced by subsequent storm water sampling results. As such, the Owners/Operators are in daily violation of the General Permit. Every day the Facility Owners/Operators conduct operations at the Facility without reporting as required by the General Permit is a

separate and distinct violation of the General Permit and Section 301(a) of the Clean Water Act, 33 U.S.C. §1311(a). The Facility Owners/Operators have been in daily and continuous violation of the General Permit's reporting requirements every day since at least May 21, 2015. These violations are ongoing, and CSPA will include additional violations when information becomes available, including specifically violations of the 2015 General Permit reporting requirements (*see* 2015 General Permit, Section XVI.). The Facility Owners/Operators are subject to civil penalties for all violations of the Clean Water Act occurring since May 21, 2015.

III. Persons Responsible for the Violations

CSPA puts Messer on notice that it is the entity responsible for the violations described above. If additional persons are subsequently identified as also being responsible for the violations set forth above, CSPA puts Messer on formal notice that it intends to include those persons in this action. CSPA understands that California is under a limited shelter-in-place mandate by order of California Governor Newsom and commits to working with Messer under these trying circumstances.

IV. Name and Address of Noticing Party

The name, mailing address, and telephone number of the noticing party is as follows:

Bill Jennings, Executive Director
California Sportfishing Protection Alliance
3536 Rainier Ave,
Stockton, CA 95204
(209) 464-5067
www.calsport.org

V. Counsel

CSPA has retained legal counsel to represent it in this matter. Please direct all communications to:

Anthony M. Barnes
Aqua Terra Aeris Law Group
490 43rd Street, Suite 108
Oakland, CA 94609
(917) 371-8293
amb@atalawgroup.com

VI. Conclusion

CSPA believes this Notice of Violations and Intent to File Suit sufficiently states grounds for filing suit. CSPA intends to file a citizen suit under Section 505(a) of the CWA against Messer and its agents for the above-referenced violations upon the expiration of the 60-day notice period, unless Messer and CSPA agree to formally extend this notice period in light of the limited shelter-in-place order. Further, should Messer wish to pursue remedies in the absence of litigation, we suggest that Messer initiate those discussions within the next twenty-five (25) days so that they may be completed before the end of the notice period.

Sincerely,

Anthony M. Barnes

Subject: **Preliminary Subsurface Assessment**
BOC Gases Facility
731 West Cutting Boulevard, Richmond, CA.

Dear Mr. Sundareswaran:

EnviroSurvey, Inc. (ESI) is pleased to present this report documenting the results of the soil and groundwater assessment at the above subject property (Site) shown on Figure-1. Shallow soil and groundwater samples were obtained to (1) determine whether petroleum hydrocarbons have impacted soil and groundwater beneath the Site at former underground storage tank (UST) and the surrounding areas, and (2) to define the extent of contamination at the Site. The work performed is in accordance with an approved workplan by the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB), in a letter dated January 15, 1999.

ESI retained Vironex Environmental Field Services (VEFS) of Hayward, California for the subsurface exploration and sample collection. Soil and groundwater samples were submitted to Delta Environmental Laboratories (DEL) of Benicia, California for chemical analysis.

This report summarizes the field activities and observation, analytical results, and our recommendations.

1.0 SITE HISTORY

The BOC (AIRCO) Gases facility in Richmond, California had been operating a 10,000 gallon steel underground storage tank (UST), used for the storage of diesel fuel, since 1987. In October 1993, permits for the removal of the UST were obtained from the Bay Area Air Quality Management District (BAAQMD), the State Water Resources Control Board (CSWRB), the Contra Costa County Health Services Division (CCCHSD), and the Richmond Fire Department (RFD).

Prior to the tank excavation, Gibson Environmental removed 531 gallons of diesel fuel from the UST and transported the fuel to its recycling facility in Redwood City, California. The piping connecting the tank with the dispensing island was also drained of product and combined with the fuel removed from the tank.

In November 3, 1993, Gibson Environmental excavated and removed the 10,000-gallon UST from the Site. The tank was inspected upon removal, and no holes or damage were visible. The surface of the tank was cleaned of soil and placed on an Erickson, Inc. transport vehicle for disposal in Redwood City. The UST was removed under the general supervision of IT Corporation of San Jose California, and under the observation of Mr. Bruce Beneke of the CCCHSD and Mr. Jerry Pando of RFD.

Analyses of a representative soil sample obtained from the bottom of each end of the excavation indicated no detectable concentrations of TPH-Diesel or BTEX above the laboratory detection limit (Table A). Confirmation soil samples were also collected from the excavation soil stockpile. Results of analysis of the stockpile samples did not detect TPH-Diesel or BTEX above the laboratory detection limit (Table A).

Based on the results of analysis, the soil was managed as non-hazardous and used to backfill the excavation. Upon receipt and evaluation of the analytical results, the soil stockpile was placed back in the excavation and compacted. Approximately 50 cubic yards of class II baserock were used to restore the excavation to grade. The area was then covered with asphalt. Figure-2 shows the location of the former UST, soil samples location map, and other site features.

A report titled "Underground Storage Tank Closure AIRCO Gases Facility" dated January 1994, was prepared by IT Corporation, documenting all the above activities at the Site.

2.0 TOPOGRAPHY AND HYDROGEOLOGIC CONDITIONS

The Site is located near the East Side of San Francisco Bay in the City of Richmond. According to data from the recent soil borings, soil below the level of the tank excavation - 7 feet below ground surface (bgs) - consists of moist silty and clayey fine sand. The groundwater table is shallow, consistently occurring less than 4 feet bgs.

3.0 SCOPE OF WORK

ESI's scope of work included drilling five soil borings in the former tank excavation area to determine the extent of soil and groundwater contamination at the Site. Four borings were located within 10 feet of the perimeter of the former tank excavation area. The fifth boring was located directly at the center of the former location of the UST (Figure 3).

One soil sample was obtained for analysis from each of the borings at the soil/groundwater interface. One "grab" groundwater sample was also obtained from each of the borings for analysis. All soil and groundwater samples were submitted to the laboratory to be analyzed for TPHD; Methyl Tertiary Butyl Ether (MTBE), and Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX).

3.1 Pre-Field Activities

Prior to performing the field work, ESI reviewed the available environmental-related records, interviewed with the Site manager to determine location of the former USTs, and marked appropriate sampling locations (B1 through B5). ESI obtained applicable drilling permits from the Contra Costa County Health Services Division (CCHSD) and notified the County of the drilling schedule. The CCCEHD soil boring application permit is provided in Appendix A.

3.2 Soil Sampling

The sampling activities were performed on February 25, 1999. A GeoProbe™ rig was used to advance the borings and collect soil and groundwater samples. The GeoProbe™ consists of a hollow shaft, which is lined with a 2-foot long plastic (acetate) tube. The shaft is attached to a solid rod, and the tip of the shaft is plugged with a steel cone that is connected to the solid rod from the opposite end. A hydraulic hammer is used to drive the shaft into the ground. To collect a sample, the cone from the tip of the shaft can be detached at the desired depth and the shaft is pushed into the soil and then retracted.

Due to the uncertain depth to groundwater, soil samples from the first boring (B4) were collected continuously to determine the groundwater depth. In general, representative soil samples were collected from the borings at 4 feet and 7 feet below the ground surface. However, due to the shallow groundwater and the presence of loose sand and gravel (Backfill material) in the former UST excavation area, no soil recovery was obtained from Borings B5 and B3 in the first 4 feet. Soil samples from the remaining boreholes were collected at the groundwater interface at approximately 3' to 4' below the ground surface (bgs).

All soil samples were screened for volatile hydrocarbons with a photo-ionization detector, and all field observations and soil profile were recorded in the boring log for each boring using the Unified Soil Classification System (USCS), as shown in Appendix C. Sampling equipment was washed with LIQUI-NOX® (a detergent used in laboratories) and rinsed with clean water at each sampling interval. Under supervision of Ms. Agnes Vinluan of CCHSD, all borings were sealed with cement grout and asphalt patching.

3.3 Groundwater Sampling

Groundwater was encountered between 2 and 4 feet bgs. Groundwater samples were collected by using clean Teflon® tubes connected to a small pump or disposable bailer, and through a PVC slotted casing that was inserted into each boring to approximately 5 feet bgs. After collection, groundwater was transferred into appropriate containers, labeled, and placed on ice to be delivered to DEL with chain-of-custody documentation. During sampling of boring B3, a faint petroleum hydrocarbon odor was detected.

4.0 ANALYTICAL PROCEDURES

Soil and groundwater samples were submitted to Delta Environmental Laboratory (a state-certified laboratory) of Benicia California for analysis. As required by the San Francisco Bay Regional Water Quality Control Board, the soil and groundwater samples were analyzed for TPH-Diesel using EPA Method 8015/5030 and Methyl Tertiary Butyl Ether (MTBE), Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX).using EPA Method 8020.

5.0 ANALYTICAL RESULTS

5.1 Soil

After collection, ESI submitted soil samples B1-3.5', B2-3.5', B3-7.5, and B4-4' for analysis. TPH-diesel was detected in all the samples with a maximum concentration of 13 mg/kg in sample B3-7.5' (Table 1). No volatile aromatic compounds (BTEX) or MTBE were detected in any of the soil samples.

5.2 Groundwater

Analytical results for groundwater samples showed TPH-Diesel is present in the groundwater with a maximum concentration of 1.3 mg/l (1,300 ug/l) in the water sample collected from boring B3 (Table 2). No volatile aromatic compounds (BTEX) or MTBE were detected in any of the groundwater samples.

Chain-of-custody documentation and certified analytical reports of soil and groundwater samples are included in Appendix B.

6.0 CONCLUSIONS

The first purpose of this investigation, to determine whether soil and/or groundwater have been impacted by an unauthorized release of hydrocarbons, has been achieved. The results confirm indications of low concentrations of diesel contamination in the vicinity of the former UST, and demonstrate that diesel is present near the soil/groundwater interface over an area that is somewhat larger than previously anticipated. Neither MTBE nor BTEX are present in the soil or groundwater in the vicinity of the UST excavation.

6.1 Vertical Extent of Contamination

The vertical extent of contamination is at least 8 feet, as indicated by the detection of diesel in sample B3-7.5'. The maximum depth of diesel contamination was not determined; however, at many sites the vertical extent of contamination is related to the thickness and vertical permeability of the materials within the vadose zone above the water table. Because of the shallow groundwater level at this Site, the vadose zone is less than 5 feet thick and the UST was at least partially if not completely submerged below the static water level. Consequently, fuel released from the tank or piping would have been dissolved in the groundwater. Due to buoyancy of hydrocarbons in water, downward migration of the gasoline would then have been inhibited. Hence, the vertical extent of contamination is probably limited unless the static groundwater level was significantly deeper in the past.

6.2 Lateral Extent of Contamination

The results indicate that the lateral extent of contamination is greater than would have been expected based on the samples that were collected at the time of the UST removal, but the concentrations are low and suggest that diesel-range hydrocarbons do not extend a great distance from the UST location. The highest TPH-d concentrations in soil were detected north and south of the former UST, and the same is true for the groundwater samples. These results suggest that contamination is more extensive in the north-south direction than in the east-west direction.

Under normal conditions, horizontal migration of petroleum fuel in groundwater is directly related to the groundwater flow direction. Groundwater flow direction in the general area appears to be toward the San Francisco Bay. Based on the groundwater data collected in this investigation, it appears that contaminant migration has been northward, toward the Bay, as might be expected from the regional groundwater gradient. However, because of flat topography at the Site and its close proximity to hydrologic base level (sea level in the Bay), the water table is likely to be exceptionally flat, with little or no gradient (slope) toward the Bay. In this situation, site-specific conditions can combine to alter the expected migration direction.

Executive Summary

On November 3, 1993, one 10,000-gallon capacity underground storage tank (UST) used for the storage of diesel was removed from the Airco Gases site in Richmond, California and disposed at an appropriate facility. Soil samples collected from beneath the tank location and from the material surrounding the tank were analyzed for total petroleum hydrocarbons as diesel (TPH-D) and benzene, toluene, ethylbenzene, and total xylenes (BTEX). Laboratory analysis did not detect any analytes. The fill material was placed back into the tank excavation, along with clean fill. The former excavation was then capped with asphaltic concrete to match existing grade.

Based on analytical results, no further action is recommended for this site.

1.0 Background

The Airco Gases facility in Richmond, California (Figure 1) has been operating the 10,000 gallon steel underground storage tank (UST) since 1987. The tank was closed in November 1993 in accordance with all applicable guidelines. A summary of the closure activities is presented in this report.

2.0 Scope of Work

2.1 Notifications and Permits

Prior to mobilization, required notifications and permits were processed is accordance with state and local UST regulations. In October permits for UST removal were obtained from the Bay Area Air Quality Management District (BAAQMD), the State of California State Water Resources Control Board (CSWRCB), the Contra Costa County Health Services Division, Environmental Health Division (CCCHSD), and the Richmond Fire Department (RFD). The permits are included as Attachment A.

2.2 Excavation and Tank Removal

Excavation and removal of the UST was conducted by IT Corporation (IT). Prior to excavation Underground Service Alert (USA) was notified and a private utility locator was used to determine if there would be any underground interferences.

Approximately 531 gallons of fuel were removed from the UST by Gibson Environmental and transported to their recycling facility in Redwood City, California under hazardous waste manifest No. 92202629. A copy of this manifest is included in Attachment C. The piping connecting the tank with the dispensing island was drained of product and combined with the fuel removed from the tank.

Excavation and removal of the UST was performed on November 3, 1993 using a backhoe and a crane. The crane was supplied by Bragg Crane of Richmond, California. The concrete pad overlying the UST was removed and temporarily stored on site for disposal. The excavated soil

from around the tank was screened for volatile organic compounds (VOCs) using a HNu photoionization detector (PID) equiped with a 10.2 eV probe and visually inspected for staining.

During excavation, samples of soil for field screening were placed in plastic bags. The probe of the PID was then inserted into the headspace for measurement of VOCs. No VOC readings above background levels were recorded with the PID.

The UST was removed under the observation of Mr. Bruce Beneke of the CCCHSD and Mr. Jerry Pando of the RFD.

2.3 Site Conditions

The subsurface soils encountered during excavation consisted of moist silty and clayey fine sand to the total depth of the excavation of 13 feet below ground surface (bgs). Approximately 2 inches of groundwater accumulated in the lowest portion of the excavation and was not removed.

2.4 Tank Inspection

The tank was in good condition upon removal with no visible holes or damage. The surface of the tank was cleaned of soil and placed on an Erickson Inc. transport vehicle for disposal at their facility. A copy of the inspection and transportation document associated with the excavated UST is provided in Attachment C.

2.5 Soil Sampling

2.5.1 Confirmation Sampling

As required by California Leaking Underground Fuel Tank (LUFT) manual regulations, one soil sample was collected from native soil in the bottom of each end of the excavation. Soil samples 5-1 and 5-2 were collected from native soil from the backhoe bucket at locations shown on Figure 2. Samples were collected with a slide hammer in 6-inch by 2-inch brass sleeves. The sleeve ends were covered with teflon, capped with plastic end caps, labeled, wrapped in tape, and placed in an iced cooler under chain of custody documentation. The samples were analyzed by Superior Precision Analytical (a California-certified laboratory) of Martinez, California for:

Total petroleum hydrocarbons as diesel (TPH-D): Method 8015

Benzene, toluene, ethylbenzene, and xylene (BTEX): Method 8020

2.5.2 Chemical Profiling

Samples STK-1 through STK-4 were collected from the soil stockpile at locations shown on Figure 3. Samples were collected in 6-inch by 2-inch brass sleeves as described above. The samples were analyzed by Superior Precision Analytical for:

TPH-D: Method 8015

BTEX: Method 8020

3.0 Analytical Results

A copy of the analytical reports and chain of custody documentation are included in Attachment B.

3.1 Confirmation Soil Samples

Results of analysis of confirmation samples did not detect TPH-D or BTEX above laboratory detection limits. A summary of confirmation sample results is presented in Table 1 and illustrated in Figure 2.

3.2 Disposal Profile Samples

Results of analysis of profile samples did not detect TPH-D or BTEX above laboratory detection limits. A summary of confirmation sample results is presented in Table 1 and illustrated in Figure 3. Based on the results of analysis, the soil was managed as nonhazardous and used to backfill the excavation.

4.0 Site Restoration

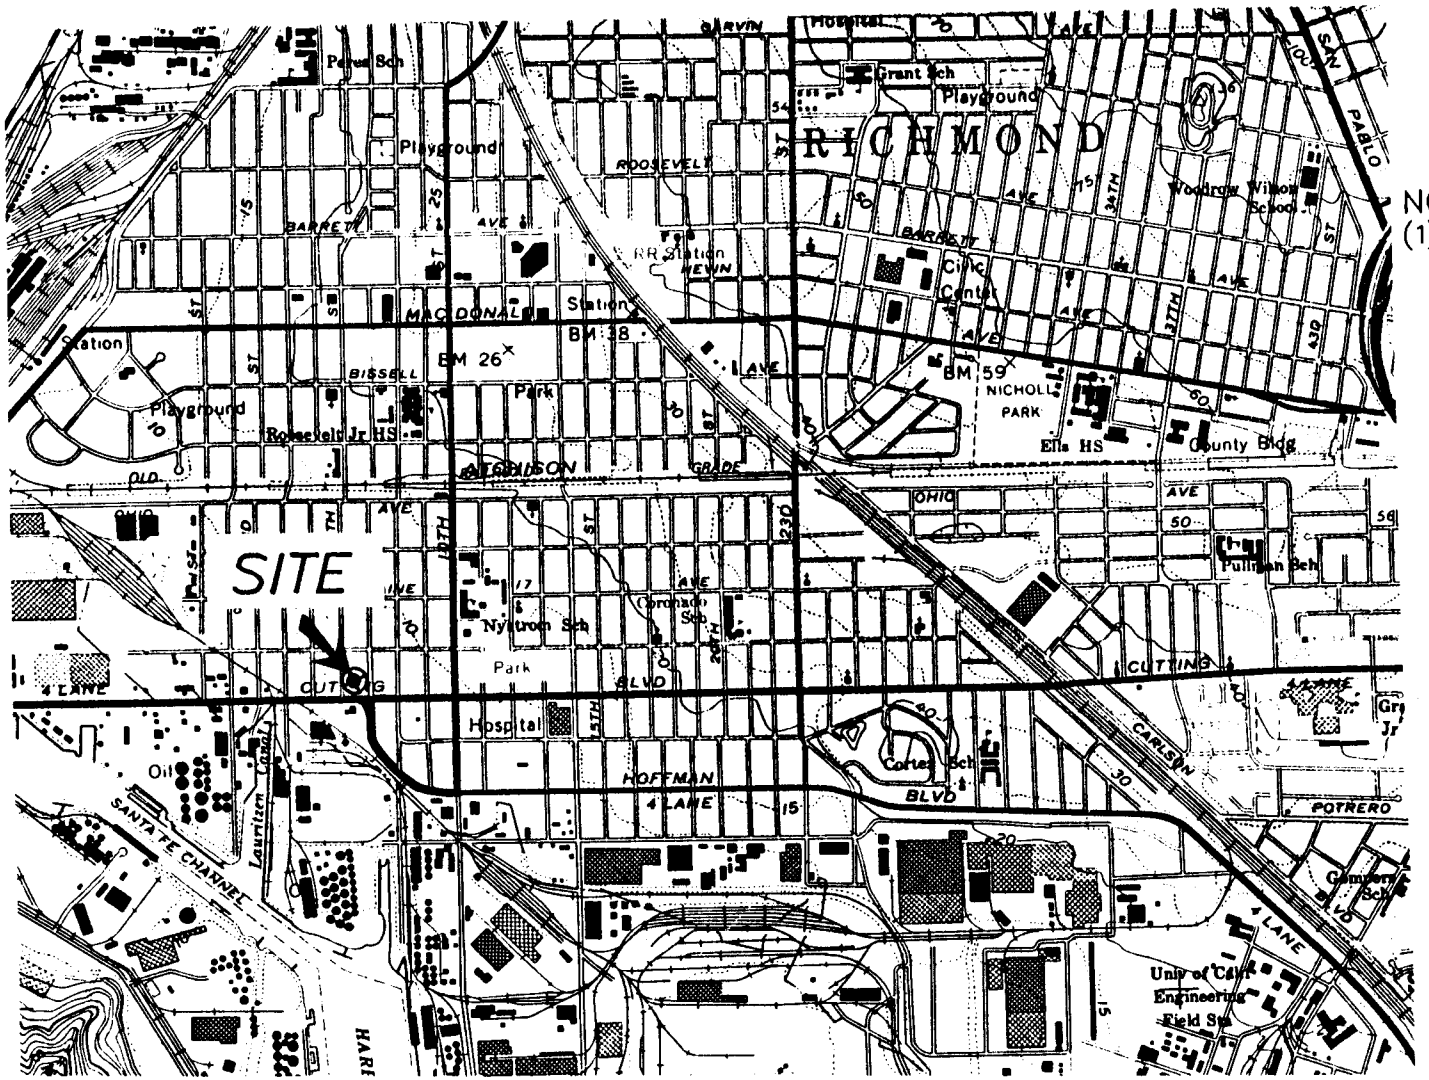
Upon receipt and evaluation of the analytical results, the stockpiled soil was placed back in the excavation and compacted with a backhoe and hand operated compactor. Approximately 50

cubic yards of class II baserock was used to restore the excavation to grade. The area was then covered with asphaltic concrete.

5.0 Handling, Transport, and Disposal

The remains of concrete and asphalt were disposed at the BFI landfill in Livermore, California. Erickson Inc. transported the UST, under California Hazardous Waste Manifest No. 93132090 to their treatment facility in Richmond, California, where Erickson cleaned, cut up and rendered the tank carcass for scrap. A copy of the manifest documenting transportation and certificate of destruction of the UST is presented in Attachment C.

6.0 Conclusions and Recommendations



The 10,000-gallon UST located at the AIRCO Gases facility in Richmond, California, has been removed. Confirmation soil samples were collected to evaluate the need for additional excavation of soil. Since the samples contained no detectable concentrations of TPH-D or BTEX, no additional excavation was performed. Chemical profile samples were collected to evaluate the excavated soil for disposal. Because the samples contained no detectable concentrations of TPH-D or BTEX, the material was used as backfill. No further activity related to closure of the UST at the Richmond facility is required. A copy of this report should be forwarded to the appropriate agencies.

Tank Remover: IT corporation Phone: (408) 894-1200

Name of License Holder: IT Corporation License Type: A, HAZ # 137422

Please schedule an inspection appointment at least 2 days in advance. ALL inspections must be confirmed prior to 9:00 a.m. on the date of removal.

Number of tanks to be removed: 1 $280/1st tank $120/each add'l tank FEE= $ 280.00

All tanks must have all liquid product removed. All gasoline tanks must be rinsed until completely free of product and dry ice added. Waste oil tanks must be hauled as hazardous waste after pumpable material is removed. Copies of manifests for any hazardous waste generated on site during tank removal operations, including rinse water and tanks disposed of as hazardous waste, must be sent to Contra Costa County Health Services Department (CCCHSD).

Upon removal of tanks, soil samples must be taken by a sampler acceptable to CCCHSD. For tanks greater than 550 gallons, a minimum of two soil samples is required from directly beneath each end of the tank below fill material. Additional samples may be required. Water samples should not be taken until pit has recharged. A copy of the lab report, including plot plan and chain of custody must be sent to CCCHSD WITHIN 30 DAYS.

Samples to be taken by: IT Corporation ✓ International Technology analytical services

Samples to be analyzed by: [redacted] ITAS Cerritos CA

Provided no obvious contamination, tank pit may be backfilled prior to CCCHSD's receiving sample results only with CCCHSD approval. However, it may be necessary to re-excavate for additional sampling or soil removal.

Tank hauler: ERICKSON Inc Destination: 255 Parr Blvd Richmond

Will tanks be manifested? No___ Yes X Generator ID#: CAD043239409

PLEASE COMPLETE BOTH SIDES

Were tanks registered with State Water Quality Control Board? No____ Yes X
If yes, State Form B for each tank must accompany this application.

Tank No.	Capacity	Substance	Steel	Fiberglass	Date Last Used
1	10,000	Diesel	X		1993

Tank(s) to be replaced? No X Yes___ How many new tanks?_____ Plans submitted?_____
New tanks may not be installed in contaminated pit.

PLEASE NOTE: CCCHSD staff will inspect all tanks prior to removal from the site.

A permit from local Fire Protection District must be obtained prior to tank removal. Other agencies may require additional permits. The Uniform Fire Code requires removal of abandoned underground storage tanks.

All associated tank piping must be flushed, disconnected and removed; piping that may cause damage to structures if removed may be capped.

Anyone contracting to remove an underground tank must have the appropriate State contractor's license.

PERMIT CONDITIONS

The tank pit excavation must be fenced, backfilled (with CCCHSD approval) or covered with trench plates.

The tank remover must provide a combustible gas meter on site to monitor tank.

Whenever more than one inspection or two hours of on site time is required, a fee of $90/hour or fraction thereof, shall be charged.

Sampling results, plot plan, and chain-of-custody must be submitted to CCCHSD within 30 days.

TEST METHOD Visual Gastech/1314 SMPN LAST PRODUCT D

This is to certify that I have personally determined that this tank is in accordance with the American Petroleum Institute and have found the condition to be in accordance with its assigned designation. This certificate is based on conditions existing at the time the inspection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

TANK SIZE 10000 Gallon Tank CONDITION SAFE FOR FIRE

REMARKS: OXYGEN 20.9%
LOWER EXPLOSIVE LIMIT LESS THAN 0.1%

"ERICKSON INC. HEREBY CERTIFIES THAT THE ABOVE NUMBERED TANK HAS BEEN CUT OPEN, PROCESSED, AND THEREFORE DESTROYED AT OUR PERMITTED HAZARDOUS WASTE FACILITY."

In the event of any physical or atmospheric changes affecting the gas-free conditions of the above tanks, or if in any doubt, immediately stop all hot work and contact the undersigned. This permit is valid for 24 hours if no physical or atmospheric changes occur.

STANDARD SAFETY DESIGNATION

SAFE FOR MEN: Means that in the compartment or space so designated (a) The oxygen content of the atmosphere is at least 19.5 percent by volume; and that (b) Toxic materials in the atmosphere are within permissable concentrations; and (c) In the judgment of the Inspector, the residues are not capable of producing toxic materials under existing atmospheric conditions while maintained as directed on the Inspector's certificate.

SAFE FOR FIRE: Means that in the compartment so designated (a) The concentration of flammable materials in the atmosphere is below 10 percent of the lower explosive limit; and that (b) In the judgment of the Inspector, the residues are not capable of producing a higher concentration that permitted under existing atmospheric conditions in the presence of fire and while maintained as directed on the Inspector's certificate, and further, (c) All adjacent spaces have either been cleaned sufficiently to prevent the spread of fire, are satisfactorily inerted, or in the case of fuel tanks, have been treated as deemed necessary by the Inspector.

The undersigned representative acknowledges receipt of this certificate and understands the conditions and limitations under which it was issued.

BOC Gases (Air Reduction Company, Inc.)
Attn: Brian Crew
731 West Cutting Boulevard
Richmond, CA 94804

SUBJECT: Closure Letter - BOC Gases (Former AIRCO Carbon Dioxide) Facility, 731 Cutting Boulevard, Richmond, Contra Costa County

Dear Mr. Crew:

This letter confirms the completion of site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file, and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Please contact our office, if you have any questions regarding this matter.

Sincerely,

for Bruce H. Wolfe

Comments (Depth of Remediation, etc.):

[1] Results from soil sample collected at 8 feet bgs from boring B3-7.5' drilled on February 25, 1999, in the northern part of the former UST pit. Soil samples collected from the tank during tank removal activities on November 3, 1993, did not contain TPHd or BTEX.

[2] Results from grab groundwater sample collected from boring B3 drilled on February 25, 1999, in the northern part of the former UST pit. Groundwater samples were not collected during tank removal activities in November 1993.

[3] Results reported on URF dated July 19, 1988.

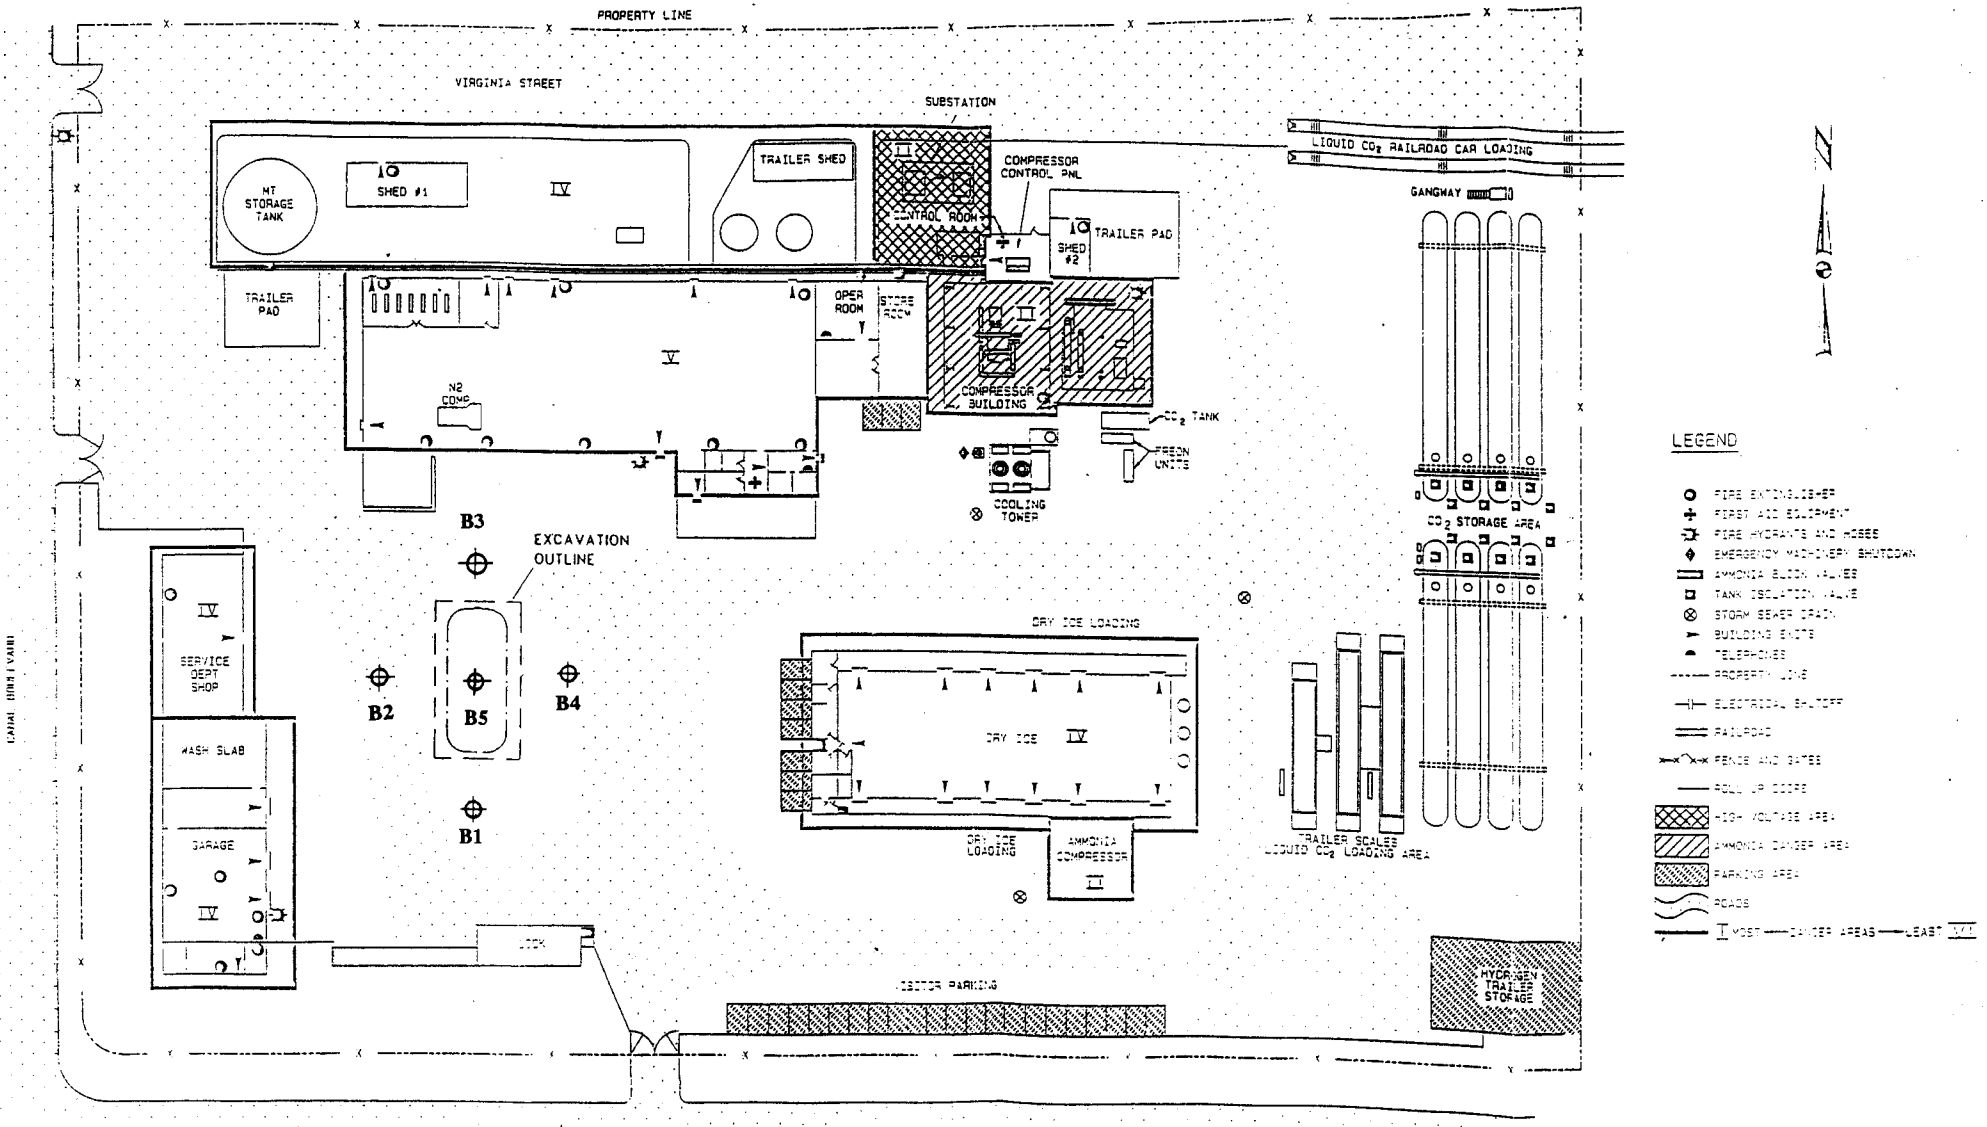
[4] Result from water sample collected on July 15, 1998, from Geoprobe boring located within the former UST pit.

NA Not analyzed.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Yes		
Site Management Requirements: Residual contamination in both soil and groundwater remains at the site that could pose an unacceptable risk under certain development activities such as site grading, excavation, or installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of a water well near the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. The County of Contra Costa Health Services Department, and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risks are expected to reduce with time.		
Monitoring Wells Decommissioned: NA	Number Decommissioned: NA	Number Retained: NA
List Enforcement Actions Taken: None		
List Enforcement Actions Rescinded: None		

V. ADDITIONAL COMMENTS, DATA, ETC.



The subject site is a large industrial facility used by BOC (AIRCO) Gases Inc. The site is located in the industrial part of Richmond. On May 11, 1988 two 10,000-gallon USTs containing gasoline and diesel were removed from the site. The tanks were in good condition. On July 19, 1988, an unauthorized UST leak report was filed indicating 710 ppb of TPHg present in water matrix. On November 3, 1993, one 10,000-gallon diesel UST and associated piping were removed from the site. Two soil samples collected from the diesel tank pit excavation did not contain TPHd or BTEX. A grab groundwater sample collected from a Geoprobe boring located within the former tank pit excavation on July 15, 1998, did not contain TPHg, TPHd, BTEX, or MtBE. On February 1999, five Geoprobe borings were drilled within or immediately adjacent to the former diesel UST pit. TPHd was detected at concentrations up to 13 ppb in soil and up to 1,300 ppb in grab groundwater samples collected from these borings. BTEX and MTBE were not detected in these samples. The nearest surface water, Lauritzen Canal, is located approximately 1/4 mile of the subject site, and is not likely to be affected by contamination present at the site.

Based on available information it appears that minor residual contamination related to the former USTs does not pose a significant risk to human health or the environment, and is expected to reduce with time. The site qualifies as a low risk case.

VI. TECHNICAL REPORTS, CORRESPONDENCE, ETC., THAT THIS CLOSURE RECOMMENDATION WAS BASED UPON

Title: Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report.	Date: 07/19/1988
Title: Underground Storage Tank Closure; IT Corporation.	Date: January 1994

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

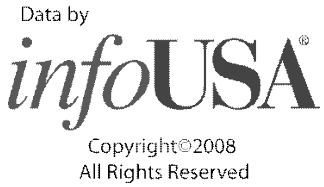
EXECUTIVE SUMMARY



DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by APEX Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of APEX Environmental on Sep 08, 2020.

TARGET PROPERTY

731 West Cutting Blvd.
Richmond, CA 94804

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

ADJOINING PROPERTY FINDINGS

ADJOINING PROPERTY DETAIL

The following Adjoining Property addresses were researched for this report. Detailed findings are provided for each address.

731B W CUTTING BLVD

731B W CUTTING BLVD

Date:	**3/14/2011**
Permit Type:	
Description:	**REPLACE EXISTING 1,000 AMP 480 VOLT SERVICE (RH) WITH NEW 1,600 AMP 277/480 VOLT 3-PHASE SERVICE. RE-FEED EXISTING 600 AMP COMPRESSOR**
Permit Description:	**ELC INDUSTRIAL**
Work Class:	SERVICE UPGRADE
Proposed Use:	
Permit Number:	11-00795
Status:	FINALED
Valuation:	$95,961.00
Contractor Company:	
Contractor Name:	GILL'S ELECTRIC

W CUTTING BLVD

211 W CUTTING BLVD

Date:	**11/28/2018**
Permit Type:	
Description:	**REPAIR METER SOCKET**
Permit Description:	**ELC INDUSTRIAL**
Work Class:	REWIRE/REPAIR
Proposed Use:	
Permit Number:	B18-03268
Status:	FINALED
Valuation:	$0.00
Contractor Company:	
Contractor Name:	

ADJOINING PROPERTY FINDINGS

Date: **1/3/2017**
Permit Type:
Description: **NUTIVA**

Permit Description: **PRETREATMENT PROGRAM**
Work Class: COMMERICAL
Proposed Use:
Permit Number: ID17-00044
Status: EXEMPT
Valuation: $0.00
Contractor Company:
Contractor Name:

Date: **12/15/2015**
Permit Type:
Description: **NON ILLUMINATED ALUMINUM MONUMENT SIGN SINGLE SIDED**

Permit Description: **BLD INDUSTRIAL**
Work Class: SIGN
Proposed Use:
Permit Number: B15-12208
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name: T BENNETT SERVICES INC

Date: **10/14/2015**
Permit Type:
Description: **CUT GAS SRVC LINES AT FLANGES CONNECTING**

Permit Description: **PLM COMMERCIAL**
Work Class: GAS PIPE REPAIR
Proposed Use:
Permit Number: B15-11517
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name: GUERRA BROS. PLUMBING INC

ADJOINING PROPERTY FINDINGS

Date: **9/3/2015**
Permit Type:
Description: **RELOCATE RECEPTACLES AND REPLACE LIGHT**

Permit Description: **ELC COMMERCIAL**
Work Class: EQUIP UPGRADE
Proposed Use:
Permit Number: B15-11104
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name: RODDA ELECTRIC INC

Date: **5/4/2015**
Permit Type:
Description: **NEW 7' FENCE, LOT LIGHTING, REPLACE EXISTING BLDG. STAIRS,**

Permit Description: **BLD INDUSTRIAL**
Work Class: REMODEL/REPAIR
Proposed Use:
Permit Number: B15-00777
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name: MARKETONE BUILDERS INC

Date: **2/23/2015**
Permit Type:
Description: **T.I. - UPGRADING OF WAREHOUSE OFFICE BATHROOM TO BE**

Permit Description: **BLD INDUSTRIAL**
Work Class: TENANT-IMP
Proposed Use:
Permit Number: B14-10096
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name: BRYSON BURNS CONSTRUCTION

ADJOINING PROPERTY FINDINGS

Date: **12/19/2014**
Permit Type:
Description: **INSTALL NEW 75 GALLON WATER HEATER IN PLACE OF**

Permit Description: **PLM COMMERCIAL**
Work Class: WATER HEATER
Proposed Use:
Permit Number: B14-10190
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name: GUERRA BROS. PLUMBING INC

Date: **1/31/2014**
Permit Type:
Description: **T.I. - INSTALL MODULAR OFFICES (800 SQ. FT.) IN AN (AA)EXISTING WAREHOUSE.**

Permit Description: **BLD INDUSTRIAL**
Work Class: TENANT-IMP
Proposed Use:
Permit Number: 13-03605
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name:

Date: **9/6/2012**
Permit Type:
Description: **INSTALL 18' TALL PALLET RACKS STORAGE FIXTURES.**

Permit Description: **BLD COMMERCIAL**
Work Class: EQUIP NEW
Proposed Use:
Permit Number: 12-03913
Status: APPLIED
Valuation: $0.00
Contractor Company:
Contractor Name:

ADJOINING PROPERTY FINDINGS

Date: **8/31/2012**
Permit Type:
Description: **T.I. WAREHOUSE IMPROVEMENTS: QC, JANITORIAL & (AA)LOCKER ROOMS (SPRINKLER MODIFICATION PALLET RACKING -DEFERRED SUBMITTAL)**

Permit Description: **BLD INDUSTRIAL**
Work Class: TENANT-IMP
Proposed Use:
Permit Number: 12-03685
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name:

Date: **7/16/2012**
Permit Type:
Description: **NEW T.I. "NUTIVA" WITH ACCESSEBILITY UPGRADES**

Permit Description: **BLD COMMERCIAL**
Work Class: TENANT-IMP
Proposed Use:
Permit Number: 12-02872
Status: FINALED
Valuation: $0.00
Contractor Company:
Contractor Name:

Date: **7/6/2009**
Permit Type:
Description: **VOLUNTARY SEISMIC BOLTING OF TILTUP PANEL WALLS TO ROOF**

Permit Description: **BLD COMMERCIAL**
Work Class: REMODEL/REPAIR
Proposed Use:
Permit Number: 09-02988
Status: FINALED
Valuation: $55,000.00
Contractor Company:
Contractor Name: MOUNTAIN BAY CONSTRUCTION

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

1.0 INTRODUCTION

On behalf of Duke Realty (Duke), Apex Companies, LLC (Apex) has completed a Phase II environmental site investigation at the property located at 731 West Cutting Boulevard, Richmond, California (Site or Subject Property), as shown on Figure 1. Apex prepared a Phase I Environmental Site Assessment (Phase I ESA) for the Site. Apex identified the former underground storage tanks as a recognized environmental conditions (REC). Apex also identified the potential for vapors emanating from historically impacted groundwater and migrating to indoor air of a future building as a business environmental risk (BER). Based on the identification of the HREC and BER, Apex recommended conducting a Phase II investigation. This report summarizes the work performed and results of the investigation.

Duke has indicated that they plan to redevelop the Site in the future. Redevelopment activities may include reworking and compaction of the approximately upper 10 feet of soil. The purpose of this Phase II investigation was to assess the potential presence of impacted soil, groundwater and/or soil vapor beneath the Site to evaluate risks to future construction or trench workers handling soil during redevelopment, and to evaluate future vapor intrusion risks.

2.0 BACKGROUND

The Subject Property is located south of Interstate 580 and east of Canal Blvd. in Richmond, Contra Costa County, California (**Figure 1**). The Subject Property is approximately 7.943 acres and comprises one parcel identified as Los Angeles County Assessor's Parcel Number (APN) 550-030-007 (**Figure 2**). The Subject Property is addressed as 731 West Cutting Boulevard, Richmond, California. The Subject Property was developed in 1960. Since its initial construction, the Subject Property was used as a gas manufacturing plant for helium and carbon dioxide from 1960 to 2020. Dry ice was also manufactured from 1982 to 2020. Historical businesses that occupied the buildings on the Subject Property include Air Reduction Pacific Co., AirCo Industrial Gases, NorCal Dry Ice, BOC Gases, Airgas Dry Ice, Linde LLC, and Messer, LLC. Currently the Subject Property is unoccupied, having received facility closure status in Summer/Fall of 2020. The CO_2 plant ceased operations in February 2019, and the truck service garage and shop ceased operations in June 2020. The Site is paved with asphalt and concrete and was undergoing decommission during Apex's site investigation activities.

2.1 Topography

The site is located near the east side of the San Francisco Bay in the City of Richmond. The Subject Property is approximately 100 feet above mean sea level.

2.2 Geology and Soils

The Subject Property is located on the east side and boarder of the San Francisco Bay. Bay Mud deposits and imported fill materials underlie the project site. The Site is overlain by unconsolidated sediments consisting of clays, silts, and sands, with a thickness ranging up to 1,000 feet or more. These sediments are semi-continuous throughout the Bay and are usually referred to as "Old Bay Mud." Younger, fine-grained alluvial and estuarine deposits (Young Bay Mud) overlay the Old Bay Mud. The younger, fine grained alluvium is typically a mixture of interbedded stiff clays, silts, gravel, and sands derived from the hills or deposited during the formation of the Bay. Differential settlement (settlement that occurs to a greater extent in one area than settling that would be observed in another area) results from variations in thickness of the unconsolidated materials. Relatively speaking, the Bay Muds and fill materials are geologically young and relatively noncompacted, which may lead to consolidation and differential settlement. The shoreline areas at the project site are susceptible to this differential settlement because of variations in thickness of Bay Mud and historical tidal flat deposits.

According to the United States Department of Agriculture Natural Resources Conservation Service's Web Soil Survey, the soil type on the Subject Property is classified as urban land (Ub) and a clay loam called CONEJO. This classification consists of areas that are filled with crushed rock or other material resistant to weathering. Such areas are usually adjacent to the Bay and are used for railroad yards and docks. Also included in the Urban classification are areas covered by blacktop material to reduce the hazard of fire after grading and shaping for industrial structures. Thickness of this fill

material varies from 18 to 57 feet. The fill materials are highly variable, consisting of poorly sorted gravel, silt, sandy silt, sandy clay, and bedrock fragments. These fill materials have been placed over Bay Mud and marsh deposits in areas adjacent to the shoreline, which is the case for the Subject Property. The clay loam hydrologic group is Class C with slow infiltration rates, and more than 35 percent of the soil passes number 200 sieve for a clayey soil.

2.3 Hydrology and Hydrogeology

The Subject Property does not have surface bodies of water immediately within the property limits. The closest surface water is the San Francisco Bay located approximately 0.5 miles south of the Subject Property. Groundwater is generally 4 to 6 feet-bgs and flows beneath the Subject Property is towards the south which was determined using several sources on the California Water Resources Control Board's GeoTracker database.

3.0 PRE-FIELD ACTIVITIES

Prior to commencing field work on September 21-24, 2020 and November 6 and 9-10, 2020:

- The Site- and task-specific Health and Safety Plan (HASP) was prepared that complied with Federal (29 CFR, Section 1910.120) and State (8 CCR, Section 5192) requirements. The Health and Safety Plan presents a review of the planned activities and the safety precautions required to ensure the safety of workers, the public, and the environment;
- The drilling area was demarcated with white paint, and Underground Service Alert of Northern3 California was contacted at least 48 hours prior to drilling (Ticket Nos. X026000828 & X030802721). The tickets can be found in **Appendix A**;
- Site visits were performed by Apex personnel to mark the proposed soil boring locations; and
- A private utility locator was contracted to mark the positions of the proposed boring locations and clear the locations of potential unmarked utilities.
- Drilling permits were obtained from Contra Costa County Environmental Health Division for soil borings and soil vapor probe installations for both field events. Copies can be reviewed in **Appendix B**.

4.0 PHASE II INVESTIGATION METHODOLOGY

4.1 Soil Sampling Methods

On September 21-24, 2020, eight soil borings (B-1 through B-8) were advanced across the Site property (**Figure 3**). Eight additional soil borings (B-9 through B-16) were advanced across the Site on November 6th and 9th, 2020. All soil boring locations were hand cleared with a 3.25-inch-diameter hand auger to a depth of 5 feet below the ground surface (bgs) to clear any potential subsurface utilities or using a spike. Environmental Control Associates of Aptos, California, a licensed driller used a Geoprobe® direct-push drill rig to advance the soil borings to a maximum of 20 feet bgs using 2.25" diameter drive rods lined with 1.375" diameter continuous core sleeves. Soil recovered from the hand auger and cores were logged in the field in general accordance with ASTM method D-4288 and field-screened for volatile organic compounds (VOCs) using a hand-held photo-ionization detector (PID). Soil boring logs can be found in **Appendix C**.

A total of 33 soil samples were collected at various depths from the 16 borings and placed into laboratory supplied sample containers. Soil samples for VOC analysis were collected using Terracore® samplers and placed into 40 milliliter vials of methanol (2) and sodium bisulfate (1) in accordance with EPA Method 5035.

Once collected, soil samples were immediately labeled, logged onto a chain-of-custody manifest and placed on ice in an insulated cooler. The samples were transported to Pace Analytical, a State of California-certified analytical laboratory located in Juliet, Tennessee and analyzed for one or more of the following:

- VOCs and total petroleum hydrocarbons (TPH) as gasoline (TPHg) by EPA Method 8260B;
- Diesel (TPHd) and motor oil (TPHmo) by EPA Method 8015; and
- Metals by EPA Method 6010B/7471A.

4.2 Soil Gas Sampling Methods

All soil gas probes were installed accordance with the July 2015 Active Soil Gas Advisory published by California Environmental Protection Agency (Soil Gas Advisory; CalEPA 2015). Seven soil gas probes (SV-1 to SV-7) were installed across the Site on September 22nd, 2020 and sampled on September 24, 2020 (**Figure 3**). Soil gas probes SV-1A, SV-4A, SV-4B, and SV-8 to SV-11 were installed on November 6th and 9th, 2020 and sampled on November 10th, 2020. The soil probes consisted of sampling points surrounded by a sand pack approximately 1.0-foot-thick, connected to Nylaflow® tubing that extends to the surface. Six inches of dry granular bentonite was placed atop the sand pack followed by hydrated bentonite up to the surface. One sample, VP-1, was a subslab vapor point that was installed immediately inside a building to the east of SV-1. This point was installed using a roto hammer, and a Vapor Pin® was installed inside the hole.

Soil gas samples were collected at least 24-hours after probe construction was completed, using one-liter SUMMA® cannisters and a sampling manifold consisting of a flow regulator and vacuum

gauges. Prior to purging or sampling, a shut-in test was performed to confirm that the above-ground lines and three-way valves were properly sealed at each location. As a secondary test, a leak test was performed during all soil gas sample collection procedures. Tracer compound, 2-propanol/isopropyl alcohol was used to evaluate potential leaks of ambient air into the sampling train. In accordance with the Soil Gas Advisory, three purge volumes were extracted from the tubing and sand pack prior to sampling. Sampling was conducted at approximately the same rate of purging, at 150-200 milliliters per minute (ml/min). All samples were analyzed for VOCs using EPA Method TO-15.

4.3 Grab Groundwater Sampling Methods

On September 21-24, 2020, five grab groundwater samples were collected from five borings (B-1 through B-5) around the former UST area. Samples were collected using 1-inch PVC casing and a 0.010 slotted screen. Teflon tubing and a Geo-Peristaltic pump were used to collect water samples in lab preserved vials. Samples were transported to Pace Analytical, a State of California-certified analytical laboratory located in Juliet, Tennessee and analyzed for the following:

- VOCs and TPHg by EPA Method 8260B; and
- TPHd and TPHmo by EPA Method 8015

On November 6th and 9th 2020, four grab groundwater samples were collected from four borings across the site (B-11, B-12, B-13, and B-15). Samples were collected using 1-inch PVC casing and a 0.010 slotted screen. Teflon tubing and a Geo-Peristaltic pump were to collect water samples in lab preserved vials. Samples were transported to Pace Analytical, a State of California-certified analytical laboratory located in Juliet, Tennessee and analyzed for the following:

- VOCs and TPHg by EPA Method 8260B

4.4 Borehole Abandonment

At the conclusion of sampling activities, all soil borings were backfilled to the surface with neat cement grout and asphalt cold patch to match the existing surface. Soil gas probes were abandoned by removing the sample tubing, backfilling with void space with hydrated bentonite, and finishing with concrete patch to match the surrounding surface.

4.5 Investigation Derived Waste

Investigation-derived waste (IDW) generated onsite included soil cuttings from the borings. IDW was placed into a 55-gallon steel drum, labelled, and stored at the Site pending disposal.

5.0 PHASE II INVESTIGATION RESULTS

Laboratory analytical results are summarized in **Tables 1** through **6** with copies of the laboratory reports included as **Appendix D** and **Appendix E**. The results were compared to the San Francisco Regional Water Quality Control Board environmental screening levels (SFRWQCB ESLs).

5.1 Soil Sampling Results

A total of 33 soil samples were collected from 16 borehole locations and analyzed for total petroleum hydrocarbons (TPH), VOCs, and metals. Two soil samples were collected at various depths from each boring. Results were compared against SFRWQCB ESLs risk-based screening levels for direct exposure of a construction worker under any depth or any land use scenario. Results were also compared against the screening levels for direct exposure in a commercial land use scenario. Soil sample analytical results are summarized in **Tables 1** through **3,** and laboratory analytical reports are included as **Appendix D**.

5.1.1 Total Petroleum Hydrocarbons (TPH) in Soil

Total petroleum hydrocarbons are defined as carbon chains in the range of C4 to C40. For the purpose of this report, the TPH range is divided into the following ranges:

- Gasoline range (TPHg): C4-C12
- Diesel Range (TPHd): C10-C28
- Motor Oil Range (TPHmo): C29-C40

Total petroleum hydrocarbons were not detected in any soil samples above the SFRWQCB ESLs. The reported TPH concentrations are presented in **Table 1**.

5.1.2 Volatile Organic Compounds (VOCs) in Soil

VOCs were detected in 27 of the 33 soil samples at concentrations below the SFRWQCB ESLs. Analytical results for VOCs detected in soil are presented in **Table 2**.

5.1.3 Metals in Soil

Metals were detected in all 33 soil samples. Arsenic, cobalt, lead, and nickel were detected above the SFRWQCB ESLs for a construction worker receptor scenario. Analytical results for metals detected in soil are presented in **Table 3**. Below is a summary of the detections:

- Arsenic was detected in all samples at concentrations ranging from 1.07 mg/kg to 15.9 mg/kg. Six samples detected arsenic above the established average regional background concentration of 11 mg/kg; however, concentrations were within the range of background concentrations for arsenic.

- Cobalt was detected in all samples at concentrations ranging from 2.78 mg/kg to 44.6 mg/kg. Cobalt was detected at a concentration of 44.6 mg/kg in B-15-4, above the SFRWQCB ESL of 28 mg/kg.
- Lead was detected in all samples at concentrations ranging from 6.51 mg/kg to 244 mg/kg. Lead was detected at a concentration of 244 mg/kg in B-12-5-12, above the SFRWQCB ESL of 160 mg/kg. This sample was a composite sample between 5 and 12 feet-bgs.
- Nickel was detected was detected in all samples at concentrations ranging from 11.5 mg/kg to 99.5 mg/kg. Nickel was detected above the SFRWQCB ESL of 86 mg/kg in samples B-4-7 and B-8-10 at concentrations of 99.5 mg/kg and 86.7 mg/kg, respectively.

5.2 Groundwater Sampling Results

Groundwater results for TPH analysis are presented in **Table 4**. TPH was not detected above the SFRWQCB ESL for saltwater ecotoxicity; however, TPHd was detected in three samples above the California Maximum Contaminant Level (MCL) for drinking water of 200 micrograms per liter (µg/L). TPHd was detected in samples B-1, B-3, and B-4 at concentrations of 320 µg/L, 439 µg/L, and 271 µg/L, respectively.

Table 5 presents the groundwater results for VOCs. Two samples had detections slightly above the SFRWQCB ESL for groundwater vapor intrusion for benzene and 1,1-dichloroethane. 1,1-dichloroethane was detected in sample B-9 at a concentration of 36.9 µg/L, which is slightly above the ESL of 33 µg/L for groundwater vapor intrusion. Benzene was detected in sample B-12 at a concentration of 2.51 µg/L, which is slightly above the ESL of 1.8 µg/L.

Groundwater sample laboratory analytical reports are included as **Appendix D**.

5.3 Soil Gas Sampling Results

Soil gas samples were collected from various depths at 14 locations across the Site. Sample SV-5 was not collected due to water entering the sample tubing during purging. Eight samples (SV-1, VP-1, SV-3, SV-4, SV-6 through SV-9) contained VOCs at concentrations the SFRWQCB ESL for sub-slab/soil gas vapor intrusion based on an attenuation factor of 0.03. Results are summarized in **Table 6** and on **Figure 4** and laboratory analytical reports are included as **Appendix E. Table 6** also presents a recommended soil vapor screening level based on an attenuation factor of 0.005, which is more representative new commercial construction conditions. Significant detections are discussed below:

- Tetrachloroethane (PCE) was detected in nine of 14 samples at concentrations ranging from 3.29 micrograms per cubic meter (µg/m^3) to 17.4 µg/m^3. All were below the ESL of 67 µg/m^3.
- Trichloroethane (TCE) was detected in five samples at concentrations ranging from 1.69 µg/m^3 to 922 µg/m^3. TCE was detected in sample SV-8 at a concentration of 922 µg/m^3, which is above the ESL of 100 µg/m^3 and the short-term action level of 270 µg/m^3, but below the recommended screening level of 1,600 µg/m^3.

- Cis-1,2-dichloroethene (DCE) was detected in nine samples at concentrations ranging from 1.97 µg/m^3 to 4,200 µg/m^3. Cis-1,2-DCE was detected in sample SV-8 at a concentration of 4,200 µg/m^3, which is above the ESL of 1,200 µg/m^3, but below the recommended screening level of 7,000 µg/m^3.
- 1,2-Dichloroethane (DCA) was detected in four samples at concentrations ranging from 0.838 µg/m^3 to 267 µg/m^3. 1,2-DCA was detected in sample SV-8 at a concentration of 267 µg/m^3, which is above the ESL of 16 µg/m^3 and the recommended screening level of 94 µg/m^3.
- 1,1-DCA was detected in 10 samples at concentrations ranging from 3.03 µg/m^3 to 8,100 µg/m^3. 1,1-DCA was detected in sample SV-8 at a concentration of 8,100 µg/m^3, which is above the ESL of 260 µg/m^3 and the recommended screening level of 1,540 µg/m^3.
- Vinyl chloride was detected in six samples at concentrations ranging from 0.567 µg/m^3 to 849 µg/m^3. Vinyl chloride was detected in four samples (SV-3, SV-4, SV-8, and SV-9) at concentrations above the ESL of 5.2 µg/m^3. In addition, vinyl chloride was detected in three samples (SV-4, SV-8, and SV-9) at concentrations above the recommended screening level of 32 µg/m^3.
- Benzene was detected in all samples at concentrations ranging from 2.24 µg/m^3 to 63.2 µg/m^3. Benzene was detected in seven samples at concentrations above the ESL of 14 µg/m^3, but below the recommended screening level of 84 µg/m^3.
- 1,4-Dioxane was detected in seven samples at concentrations ranging from 1.97 µg/m^3 to 257 µg/m^3. 1,4-Dioxane was detected in samples SV-1 and SV-8 at concentrations of 257 µg/m^3 and 173 µg/m^3, respectively, which are above the ESL of 53 µg/m^3, but below the recommended screening level of 320 µg/m^3.

The leak check compound, 2-propanol, was detected in samples SV-1, SV-1A, SV-3, and SV-8 through SV-10. This was likely due to the shallow probe depth where the bentonite seal could have leaked. As a result, the vapor results of these probes may be biased low.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon a review of previous information available for the Site, and the data collected during the investigation, and given the proposed industrial/commercial use of the Site, Apex would not expect a regulatory agency to open a cleanup case.

While VOC concentrations in soil vapor are slightly elevated at many sampling locations across the Site, VOCs in soil vapor at concentrations greater than the recommended screening levels using a conservative attenuation factor of 0.005 were only detected at sample locations SV-4, SV-8 and SV-9. Subsequent sampling at locations SV-4A and SV-4B did not confirm the elevated vinyl chloride concentrations detected at SV-4.

Sample locations SV-8 and SV-9 are located adjacent to numerous public utility easements. As the VOCs detected in soil vapor at sample locations SV-8 and SV-9 were not detected at elevated concentrations in soil in paired borings, it is presumed that the impacted vapors are migrating on Site within the utility backfill.

Based on the results presented herein, Apex has the following recommendations for this Site.

- Due to the low-level impacts found in soil and groundwater Apex recommends a Site Management Plan (SMP) be prepared prior to future earthwork. The SMP would outline precautionary steps to be taken to mitigate risks to future construction workers from identified chemicals during redevelopment and/or intrusive activities at the Site. Intrusive activities include soil grading, excavation, trenching and backfilling activities, and utility repair. An SMP would also cover groundwater management should redevelopment activities require dewatering or excavations below the water table.
- Due to the presence of VOCs in soil vapor beneath the Site, Apex recommends the installation of a vapor intrusion mitigation system beneath any future building constructed on the Subject Property.

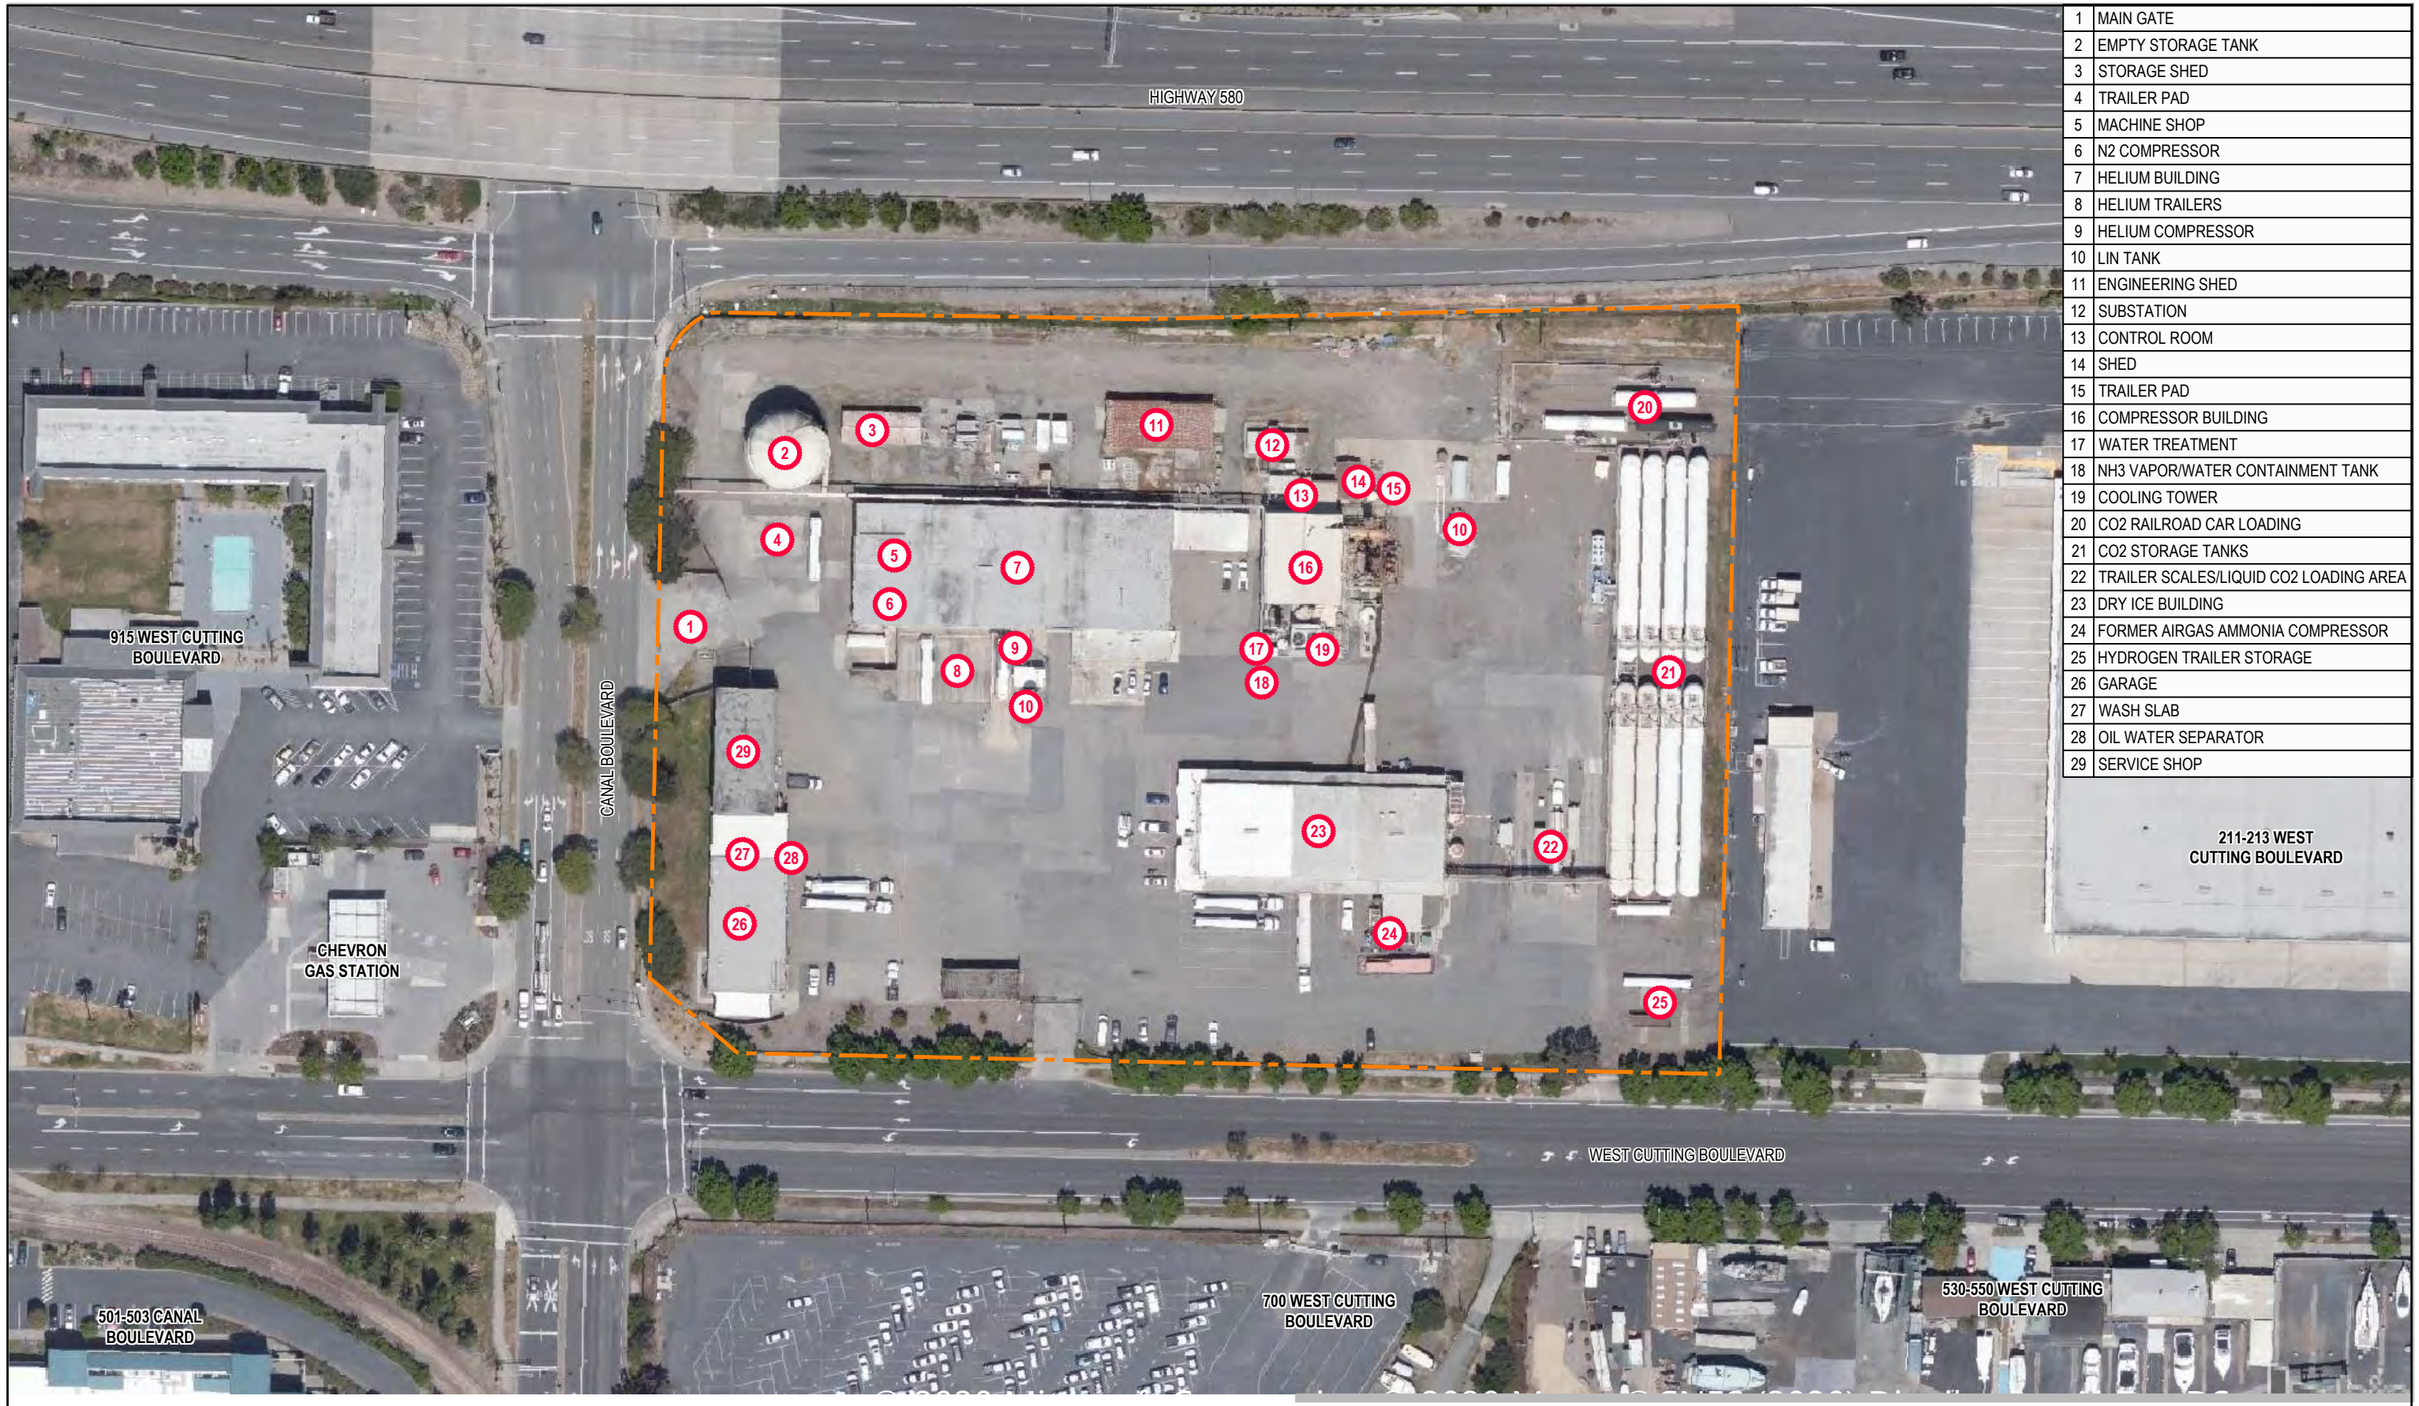
8.0 LIMITATIONS

This document has been prepared for the exclusive use of Duke Realty, and their representatives as it pertains to the affected property as described above. Any interpretation of the data represents our professional opinions and is based in part on information supplied by the client. These opinions and information are based on currently available data and are arrived at in accordance with currently accepted hydrogeologic and engineering practices at this time and location.



The data presented in this transmittal are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such. The data reported are limited by the scope of the work as defined by the request of the client, the time, availability of access to the site, and information passed to Apex.

There are no representations or guarantees that the sampling points are representative of the entire site. Data collected in response to this work may reflect the conditions at specific locations at a specific point in time and does not reflect subsurface variations that may exist between sampling points. These variations cannot be anticipated, nor can they be entirely accounted for even with exhaustive additional testing. No other interpretations, warranties, guarantees, expressed or implied, are included or intended in the contents of this transmittal.

Notes:
Bold font indicates concentration above laboratory reporting limit
mg/kg = milligrams per kilogram
bgs = below ground surface
NV = No value established
B = The same analyte is found in the associated blank.
J = The identification of the analyte is acceptable; the reported value is an estimate.
<0.001 = Not detected above indicated laboratory reporting limit
SFRWQCB = San Francisco Bay Regional Water Quality Control Board
USEPA = United States Environmental Protection Agency

Notes:
Bold font indicates concentration above laboratory reporting limit
Shaded values are above their respective SFRWQCB ESL (SFRWQCB 2019a).
bgs = below ground surface
mg/kg = milligrams per kilogram
NV = No value established
<5.0 = less than the laboratory reporting Limit listed
J = The identification of the analyte is acceptable; the reported value is an estimate.
B = The same analyte is found in the associated blank.
O1 = The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
SFRWQCB = San Francisco Bay Regional Water Quality Control Board

Notes:

bgs = below ground surface.

µg/m^3 = Microgram per cubic meter.

SFRWQCB = San Francisco Bay Regional Water Quality Control Board.

ESL = Environmental Screening Level.

NV = No value published.

J3 = The associated batch QC was outside the established quality control range for precision.

J4 = The associated batch QC was outside the established quality control range for accuracy.

B = The same analyte is found in the associated blank.

E = The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).

<x.xx = Analyte not detected at or above the laboratory reporting limit.

Bold values were reported above laboratory detection limits.

* = This value is the short-term commercial action level for TCE for subslab and soil gas (SFRWQCB 2019b).

Shaded cells contain values above their respective SFRWQCB ESL (SFRWQCB 2019a).

Shaded and outlined cells contain values above their respective recommended screening level future construction.

Covid-19 Coronavirus Utility Response Information
Please be aware that due to emergency safety precautions around the covid-19 coronavirus some utility owners may experience interruptions in resource availability and therefore may provide a delayed response to tickets at this time. If a utility member intends to not respond to your request they will advise you of this information directly. Please make sure you make every effort to communicate with the utility owners and ensure you receive a positive response to your request before proceeding with your work. Utility members may respond to you by marking the site, sending an email, or contacting you by phone. You should also check the electronic positive response system for information from the utility member for your request. You can check the responses to your ticket using your ticket number here: https://usanorth811.herokuapp.com/positive_responses/new . Any further questions about utility member response need to be directed to the utility member(s) themselves at this time.

Legal Start Information:
You cannot begin digging until each facility owner has responded to your request and it has passed the legal start date and time on your request. If you wish to begin sooner than the legal date and time indicated on your ticket, you must contact each facility operator individually to request that they respond sooner. You must begin digging no later than 14 calendar days after your ticket was created. Phone numbers for the relevant facility operators are listed at the bottom of your ticket.

Missing a Response from a Utility Member?:
If the legal start date and time has passed and a facility operator has not marked an underground facility at the dig site, state law requires that you process a No Response notice to your ticket. This can be done online through the E-Ticket program at www.usanorth811.org or by calling 811.

Your Ticket Is Only Valid for 28 Calendar Days:
Your ticket will automatically expire 28 calendar days after the date of creation. If you need to continue digging beyond that date, state law requires that you renew your ticket before the expiration date. If the utility markings at your site are no longer clearly visible, you must request a re-mark. Re-mark requests must be submitted at least two working days, not counting the day of submission, before the expiration date of your ticket. You can renew or re-mark your ticket online through the E-Ticket program at usanorth811.org or by calling 811.

Maintaining Utility Markings and Requesting Re-Marks at your Worksite:
It is your responsibility to respect and protect the utility markings. If the markings become disturbed and are no longer clearly visible, state law requires that you stop excavation and have the area in which the markings have been disturbed re-marked by the appropriate facility operators. Re-mark requests must be submitted at least two working days, not counting the day of submission, before the expiration date of your ticket. You can submit a re-mark request on your ticket online through the E-Ticket program at usanorth811.org or by calling 811.

What Are Private Lines and How Do I Request Locates for Them?:

Utility members are only responsible to locate facilities that they own and maintain. Any other facilities, commonly called private lines, that were installed by a home builder, contractor, or the homeowner themselves, can be located by a private locator. Common private lines are water lines from the water meter to a home, irrigation or sprinkler lines, gas line feeding a back yard barbeque or fire pit, or an electrical line that powers a detached shed. You can find more information about private locators by visiting usanorth811.org or by searching online for â€œprivate utility locators.â€

Non-member Facility Owners:
The vast majority, but not all, owners of underground facilities are members of the USA North 811 nonprofitassociation of utility owners. Non-member entities include California and Nevada departments of transportation, railroads, military, tribal, and a few other entities. Non-pressurized sewer and drain line owners are also exempt from participating in California. Please review the list of utility owners on your ticket and contact any other affected entities directly.

Tolerance Zone and Hand Digging Requirements:
When digging near underground facilities, state law requires that you use only hand tools to expose lines in conflict with your excavation. Hand tools must be used within 24 inches of the outside edge of all utility markings. You may use vacuum equipment only if indicated on your ticket and with the approval of the facility operator whose line will be exposed.

Damaged, Nicked, Scraped, or Dented an Underground Facility?:
If you discover or cause damage, nicks, scrapes, dents, or any other disturbance to a marked or unmarked underground facility, state law requires that you immediately report the damage to the facility owner. You can contact the facility operator directly using the phone number listed at the bottom of your ticket, or you may contact USA North 811 to process a Damage/Exposed ticket. This can be done online through the E-Ticket program at usanorth811.org or by calling 811. You must also contact 911 if you discover or cause damage to a natural gas line, high-voltage power cable, high-pressure or hazardous materials pipeline, or any other high-priority facility. Make sure to evacuate the area before calling 911.

Delineating or Pre-marking Your Work Site:
State law requires that you mark out the dimensions of your project by delineating or pre-marking with something white, such as spray paint, chalk, flags, or stakes to show the utility companies where you plan to dig before you submit your locate ticket. If you have yet to pre-mark your dig site, please do so as soon as possible. You may start digging after the two working day minimum notice or the starting date and time you provided, whichever is later, has passed and every utility operator that was notified on your ticket has responded by either marking their underground facilities at the dig site, letting you know their facilities are not in conflict with your project, or making other arrangements with you.

Additional Site Information:
When submitting your locate ticket, you should have provided all necessary information about the site including special circumstances such as site access instructions, locked gate information, dogs in the yard or on the property, or any other information that would help assist the locators before arriving to your site. If you forgot to add information like this, you can submit a ticket amendment and add this necessary information to your existing locate ticket. You can submit an amendment online through the E-Ticket program at usanorth811.org or by calling 811.

E-Tickets:
80% of the contractors and excavators submitting tickets today are doing so online through our E-Tickets platform. It not only is saving them time and money, but allows us to keep our 811 phone lines open for damages, emergencies, curious homeowners, and new contractors who need help with the system. With your E-Ticket account you can submit any ticket you have, submit Renew or Re-mark requests, and have access to a stellar team of Web Operations Specialists who are available to help walk you through any questions or

issues you might have. For more information on E-Tickets visit usanorth811.org and click the orange â€œGet Startedâ€ button on the top right corner of the page.

You must begin digging no later than 14 calendar days after your ticket was created. Phone numbers for the relevant facility operators are listed at the bottom of your ticket.

Missing a Response from a Utility Member?:
If the legal start date and time has passed and a facility operator has not marked an underground facility at the dig site, state law requires that you process a No Response notice to your ticket. This can be done online through the E-Ticket program at www.usanorth811.org or by calling 811.

Your Ticket Is Only Valid for 28 Calendar Days:
Your ticket will automatically expire 28 calendar days after the date of creation. If you need to continue digging beyond that date, state law requires that you renew your ticket before the expiration date. If the utility markings at your site are no longer clearly visible, you must request a re-mark. Re-mark requests must be submitted at least two working days, not counting the day of submission, before the expiration date of your ticket. You can renew or re-mark your ticket online through the E-Ticket program at usanorth811.org or by calling 811.

Maintaining Utility Markings and Requesting Re-Marks at your Worksite:
It is your responsibility to respect and protect the utility markings. If the markings become disturbed and are no longer clearly visible, state law requires that you stop excavation and have the area in which the markings have been disturbed re-marked by the appropriate facility operators. Re-mark requests must be submitted at least two working days, not counting the day of submission, before the expiration date of your ticket. You can submit a re-mark request on your ticket online through the E-Ticket program at usanorth811.org or by calling 811.

What Are Private Lines and How Do I Request Locates for Them?:
Utility members are only responsible to locate facilities that they own and maintain. Any other facilities, commonly called private lines, that were installed by a home builder, contractor, or the homeowner themselves, can be located by a private locator. Common private lines are water lines from the water meter to a home, irrigation or sprinkler lines, gas line feeding a back yard barbeque or fire pit, or an electrical line that powers a detached shed. You can find more information about private locators by visiting usanorth811.org or by searching online for â€œprivate utility locators.â€

Non-member Facility Owners:
The vast majority, but not all, owners of underground facilities are members of the USA North 811 nonprofitassociation of utility owners. Non-member entities include California and Nevada departments of transportation, railroads, military, tribal, and a few other entities. Non-pressurized sewer and drain line owners are also exempt from participating in California. Please review the list of utility owners on your ticket and contact any other affected entities directly.

Tolerance Zone and Hand Digging Requirements:
When digging near underground facilities, state law requires that you use only hand tools to expose lines in conflict with your excavation. Hand tools must be used within 24 inches of the outside edge of all utility markings. You may use vacuum equipment only if indicated on your ticket and with the approval of the facility operator whose line will be exposed.

Damaged, Nicked, Scraped, or Dented an Underground Facility?:
If you discover or cause damage, nicks, scrapes, dents, or any other disturbance to a marked or unmarked underground facility, state law requires that you immediately report the damage to the facility owner. You can contact the facility operator directly using the phone number listed at the bottom of your ticket, or you may contact USA North 811 to process a Damage/Exposed ticket. This can be done online through the E-Ticket program at usanorth811.org or by calling 811. You must also contact 911 if you discover or cause damage to a natural gas line, high-voltage power cable, high-pressure or hazardous materials pipeline, or any other high-priority facility. Make sure to evacuate the area before calling 911.

Delineating or Pre-marking Your Work Site:
State law requires that you mark out the dimensions of your project by delineating or pre-marking with something white, such as spray paint, chalk, flags, or stakes to show the utility companies where you plan to dig before you

submit your locate ticket. If you have yet to pre-mark your dig site, please do so as soon as possible. You may start digging after the two working day minimum notice or the starting date and time you provided, whichever is later, has passed and every utility operator that was notified on your ticket has responded by either marking their underground facilities at the dig site, letting you know their facilities are not in conflict with your project, or making other arrangements with you.

Additional Site Information:
When submitting your locate ticket, you should have provided all necessary information about the site including special circumstances such as site access instructions, locked gate information, dogs in the yard or on the property, or any other information that would help assist the locators before arriving to your site. If you forgot to add information like this, you can submit a ticket amendment and add this necessary information to your existing locate ticket. You can submit an amendment online through the E-Ticket program at usanorth811.org or by calling 811.

E-Tickets:
80% of the contractors and excavators submitting tickets today are doing so online through our E-Tickets platform. It not only is saving them time and money, but allows us to keep our 811 phone lines open for damages, emergencies, curious homeowners, and new contractors who need help with the system. With your E-Ticket account you can submit any ticket you have, submit Renew or Re-mark requests, and have access to a stellar team of Web Operations Specialists who are available to help walk you through any questions or issues you might have. For more information on E-Tickets visit usanorth811.org and click the orange â€œGet Startedâ€ button on the top right corner of the page.

PERMITS

CONTRA COSTA
ENVIRONMENTAL HEALTH DIVISION

2120 DIAMOND BLVD. SUITE 100. CONCORD. CA 94520-5704
(925) 608-5500 FAX (925) 608-5502 www.cchealth.org/eh/

Soil Boring Permit

Permit Number:	0027535	PE Number:	4301
Date Received:	September 10, 2020	WP Number:	WP0027535

Issued By: JOLICER MEDRANO Date Issued: 15-Sep-2020 Date Expires: 16-Mar-2021

Intended Use: SOIL BORING # of Borings or Well ID: 8 BORINGS

The issuance of this permit by Contra Costa County Environmental Health Division does not guarantee a satisfactory and an indefinite operation of any well. Permit expires in 180 calendar days from date of approval. Permits are non-transferable, and can be suspended or revoked. If more time is required for the project, a time extension may be granted if reasons warrant it in writing.

Project Site Information

LABORATORY ANALYTICAL REPORTS – SOIL AND GROUNDWATER

Pace Analytical®
National Center for Testing & Innovation

ANALYTICAL REPORT

October 04, 2020

Apex Companies LLC - Pleasant Hill, CA

Sample Delivery Group:	L1266441
Samples Received:	09/25/2020
Project Number:	093-DUKE-044
Description:	Cutting

Report To:

Katelyn Lazar
3478 Buskirk Avenue
Suite 100
Pleasant Hill, CA 94523

Entire Report Reviewed By:

Brian Ford
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1	The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

ANALYTICAL REPORT

November 18, 2020

Revised Report

Apex Companies LLC - Pleasant Hill, CA

Sample Delivery Group:	L1283583
Samples Received:	11/10/2020
Project Number:	093-DUKE-044
Description:	Cutting

Report To: Katelyn Lazar
3478 Buskirk Avenue
Suite 100
Pleasant Hill, CA 94523

Entire Report Reviewed By:

Brian Ford
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Erica McNeese
Project Manager

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.
