Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

BRENNTAG PACIFIC INC (Continued) **1000158759**

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 2566

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 12080.1

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
TSCA SUBMITTER
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and

it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring. SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-17-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The site is a bulk storage terminal for petroleum, wax, and other liquid materials. The site included tank farms, associated pipes and pumps, offices, marine loading/unloading docks, rail and truck loading and unloading areas, a stormwater collection and storage basin, and a wastewater treatment unit. The truck loading rack flowed to an underground spill containment tank. The tank farm containment walls extend six feet above ground and fourteen feet below ground. Stormwater flows to concrete basin that functions as a separator and holding tank. The collected stormwater is analyzed before discharge to the canal. The site appears to be in compliance with the Permit based on the site observations.

Biennial Reports:

Last Biennial Reporting Year: 2017

IMTT-RICHMOND-CA (Continued) **1000144863**

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 3748.6

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 14400.5

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 3748.6

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 14400.5

Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Diesel, Other Petroleum
Site History:	A surface manifestation of petroleum hydrocarbons in the former chemical storage area has been addressed by the installation of two extraction trenches in 2004 and 2006. There was also a pipeline release of bunker fuel in July 2003. The surrounding area was excavated and free product was recovered. The installation of a subsurface slurry wall was completed in 2007. A groundwater extraction system operates within the containment area using seven extraction wells to remove accumulated groundwater. A groundwater monitoring program is in place.

Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Diesel, Gasoline
Site History: The site is located at 520 Castro Street in a heavily industrialized portion of Richmond, California. The site is bordered by the Union Pacific (formerly known as Burlington Northern Santa Fe) rail yard on the east and south, by Castro Street and the General Chemical Plant (and Chevron Products) to the west, and by the SFPP underground pipeline corridor and Union Pacific Rail lines to the north. The site gathers refined petroleum products (e.g., gasoline, diesel, and jet fuel) from refineries located in the San Francisco Bay Area and pumps

the product to terminals throughout Northern California and Nevada via underground pipelines. In March and September 2002, two releases of refined petroleum hydrocarbons occurred within the manifold area at the site. Emergency response activities were implemented for both releases which included recovering product from the ground surface, the drainage ditch area, the storm drain, and Herman Slough using vacuum trucks; hand-bailing non- aqueous-phase hydrocarbons (NAPH) from recovery wells; and recovering product from Herman Slough using absorbent booms and pads. In addition to the product recovery efforts, assessment activities were performed in the manifold area, including the completion of 32 hand auger borings and associated soil sampling and analysis. Based on results of the assessment activities, petroleum-affected soils were excavated from within the manifold area in the vicinity of the releases. A total of approximately 668 cubic yards of petroleum hydrocarbon-impacted soil was excavated and removed from the site. During these product recovery and soil excavation activities, a total of approximately 19,100 to 35,220 pounds (approximately 2,940 to 5,420 gallons) of petroleum hydrocarbons were recovered.

Violation Description:	Failure to accumulate hazardous waste in a container that is in good condition.
Violation Notes:	OBSERVATION: Several leaking/failing hazardous waste containers were observed outside of and adjacent to the Hazardous Waste Storage Area containment berm. Staining was observed on the asphalt, and several metal 5-gallon and 1-gallon unlabeled containers showed advanced oxidation. Several small chemical containers stored outside at the Northeast side of the Control Room and Lab were observed within a blue shed in a compromised condition with evidence of staining on the asphalt. A box of G Expired ChemicalsG with several bottles stored at various angles was observed inside a green shed. See photo log. CORRECTIVE ACTION: All hazardous waste must be properly labeled, closed, and stored within appropriate containers upon re-inspection. All the lab chemicals need to be properly packaged, labeled, and the facility needs to work to have them manifested off site.

Citation:	22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)
Violation Description:	Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes:	OBSERVATION: The facility failed to complete hazardous waste tank assessments for the four on site treatment tanks. The facility provided CCHS-HMP with documentation of tank assessments performed by TRC on 10/14/16. TRC was unable to observe the interior of the tanks during these assessments. The tank assessment report had eight itemized recommendations, including conducting internal tank inspections, and submitting a self-reporting letter amendment within one year. The facility has not conducted/documented internal inspections on the four tanks. CORRECTIVE ACTION: Conduct an internal inspection of the four treatment tanks, and provide CCHS-HMP with a timeline for addressing the other issues noted in the 'Recommendations' section of the tank assessment report.

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: OBSERVATION: Approximately 250 bags of an unknown white powder material stored outside on 5 pallets was observed just South of the Oxygen tank. The packaging for the material was weathered and degraded. The material was observed loose and on the soil. See photo log. The facility could not identify the material at time of inspection. CORRECTIVE ACTION: A hazardous waste determination needs to be made on the white powder material, and the material needs to be properly packaged to prevent release (HSC - 25124). Provide CCHS-HMP documentation of the facility determination, photographic evidence of the material cleanup, and manifest documentation if the waste white powder material is determined to be hazardous.

Violation Description: Failure to accumulate hazardous waste in a container that is in good condition.
Violation Notes: OBSERVATION: Nine bulk bags of waste MECS Series 1 Catalyst containing Divanadium Pentaoxide were observed stored on asphalt West of the sulfur pit. Two of the bulk bags were stacked on pallets at steep angles. At least one of the bags was observed ripped and the yellow catalyst pellets were observed spilled and crushed on the asphalt. Approximately half of the bulk bags had no hazardous waste labels. See photo log. CORRECTIVE ACTION: The waste catalyst material needs to be immediately properly containerized, labeled and stored in a manner to prevent release to the environment. Personnel performing this work need to be provided proper PPE to prevent exposure. The waste catalyst needs to be properly manifested offsite as soon as possible. Provide CCHS-HMP with photographic documentation that the waste catalyst has been cleaned up/repackaged, and provide a copy of a waste manifest upon shipment off site.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Completed Document Type: CEQA - Notice of Exemption
Completed Date: 11/28/2016
Comments: DTSC prepared the Notice of Exemption in conjunction with the Removal Action Workplan to comply with the California Environmental Quality Act. The selected removal action identified in the Removal Action Workplan is excavation and disposal of lead-contaminated soil at an off-site, permitted landfill. The selected removal action meets the criteria of the Class 30 categorical exemption, which is for minor actions to prevent, stabilize, minimize, mitigate, or eliminate the release or threat of release of hazardous wastes and substances. The Class 30 categorical exemption was cited as the basis for the Notice of Exemption.

Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The RPs have been found in noncompliance with an order issued by the Department. Therefore, it will be necessary to utilize Bond funds to remediate this site. DHS will undertake appropriate cost recovery actions.
Site Description: This site was a former shipyard, an agricultural chemical warehouse and formulating facility; and is presently a bulk loading and unloading facility for large ships.
Hazardous Waste Desc: Metals and pesticides, especially dichlorodiphenyl-trichloroethane (DDT), are present at this site. Chlorinated solvents, such as chlorobenzene have also been found in an isolated spot onsite.

LEVIN RICHMOND TERMINAL CORPOR (Continued) **S100833364**

Threat To Public Health & Env: The primary routes of exposure are direct contact to humans and surface runoff to San Francisco Bay. DDT has also been found in sediments and shellfish in the adjacent Lauritzen Canal. DDT metabolites DDE (dichlorodiphenyldichloroethylene) and DDD (dichlorodiphenyldichloroethene) have also been found in fish. This site has been posted with warning signs to discourage fishing by local fisherman.

Site Activity Status: A RAP submitted by RPs in November 1986 was found to be inadequate by DHS and RWQCB. On July 30, 1987 a remedial action order was issued to current site owners and an endangerment order was issued to former site owners and operators. Final determinations of noncompliance with these orders were made in September, 1987. A State contractor has begun to implement the RAO work plans which contain provisions for further investigation and design and implementation of an IRM.

Site History: A product extraction system was installed in 1995 to remove petroleum product from the subsurface. The TFR system extracted product and groundwater from 11 wells that historically contained SPH.

TIME OIL CO/RICHMOND TERM (Continued) **S100192083**

Curtailment of the TFR system was approved for a trial period of one year and was therefore shut off in January 2007. An additional two year trial curtailment period was approved in 2008. Groundwater is monitored quarterly to verify further remediation is not necessary.

CHEVRON PRODUCTS COMPANY (Continued) **1001205644**

Site History: Chevron Products Company, a subsidiary of Chevron U.S.A. Inc. owns and operates the Richmond Refinery. The refinery, built in 1902, produces a broad range of fuels, lubricants, asphalt and petrochemicals. The 2,900-acre refinery is located along the southern shore of San Pablo Bay in Contra Costa County. The City of Richmond lies to the east of the facility. To the east and within one mile from the facility is industrial, residential, commercial and agricultural land use. Certain wastes generated from the refinery's processes have historically been deposited at various locations within the refinery. The refinery has multiple waste disposal units and release areas; there is no one single plume or source area. Each sector has unique hydrogeology and varying degrees of environmental concern. Chevron has subdivided the facility into nine geographic sectors, plus the former Pollard Pond. The sectors are as follows: " Landfarms/Landfills Sector " Castro Sector " Main Yard Sector " North Yard Sector " Bayside Sector - North " Bayside Sector - South " Alkane Sector " Effluent Sector " Reclamation Sector " Former Pollard Pond The current waste discharge requirements can be found in Order No. 00-043, which replaced orders established during 1990 to 1993. See ECM and Fortis for more documents. According to Order No. 00-043: "Chevron has implemented a corrective action program described in the report "Groundwater Protection System (GPS) Engineering Report" dated December 20, 1991 for the interception of contaminated groundwater from the facility prior to entering San Pablo Bay. The GPS is intended to be a hydraulic control measure composed of a varying combination of slurry wall, extraction trench and/or extraction wells. Groundwater extraction through the trenches and/or wells establishes and maintains a contiguous capture zone which prevents migration of potentially contaminated A-Zone groundwater past the GPS alignment. The slurry wall was installed where thick and/or highly permeable intervals of A-Zone fill soils are encountered. A low permeability Bay Mud "floor" inhibits transport of A-Zone contaminants to the underlying C-Zone in the "Flats Zone" of the Refinery. The Board, in Waste Discharge Requirements Order 93-109, determined that the GPS is a satisfactory corrective action measure for the containment and removal of contaminated groundwater along the perimeter of the facility adjacent to San Pablo Bay. In addition, Chevron will remediate any contamination at discrete sites within the facility according to a Free-Phase Hydrocarbon Recovery Plan and a Soils Management Plan, both of which are to be submitted pursuant to Provisions C.5 & C.7 of this Order, thereby maximizing the efficiency of the GPS as a corrective action. Approximately 24,700 linear feet of extraction trench, 15,185 linear feet of barrier wall, 200 extraction locations, and one groundwater treatment plant have been installed and are operating as of the first quarter of 2000. The extracted groundwater is routed to the refinery s effluent treatment system and discharged in accordance with existing NPDES permit requirements."

Description:	They were starting up a sour water plant in the lube oil section of the refinery. During that time, they had the release system off the flare gas recovery compressor and going to the flare itself as opposed to recovering it thru the normal system. They exceeded the amount of time they should have and exceeded the reportable quantity for SO2. At 2045 it was returned to the recovery compressor.

Description:	The flare gas recovery compressor is shut down on high temperature valve due to high concentration of nitrogen in the system. The gasses in the relief system are being burnt at the flare and the product of that combustion has generated more than 10 pounds of NO, no impact on the public other than visual. Flare between 6-8'.

Description:	A significant flaring event is in progress due to an upset at a processing unit. The release may have exceeded the reportable quantity of sulfur dioxide and nitrous oxide. No evacuations at the facility were necessary and the refinery has continued to operate. On-site technicians are attempting to restart the unit which will stop the flaring. The facility issued a Community Warning Level 1 Notification. In addition, local agencies were contacted by phone and briefed. Downwind monitoring is being performed by the Chevron Fire Department. The results are pending.

Description:	R/P was cleaning out the Caustic plant with fresh water, it was contaminated in the plant with oils and petroleum products, the contaminated water was then flushed down the drain. Contaminants contained High-Benzine/Caustic. Caller says he refuses too turn valve back on, this has been ongoing for about 5 days. Also, states that there

were NO samples taken, but procedures state that samples should have be taken. Caller was in contact with their own water treatment facility of all of this and thefacility had no idea this was going on, says they are usually notified when something like this happens so they can prepare, and notify state agencies. Caller stated that his job will probably be in jeopardy for stopping the operation and reporting this against supervisors wishes, but found no samples were taken and knew this HAD to be reported. Also said that this was reported to the Water prevention hotline, and so far nothing has been done, operation was still ongoing.

Description:	RP states, Due to a mechanical malfunction on a fitting, is causing the release of Hydrogen Sulfide, but has the potential to reach the reportable quantity. Technical staff will arrive to test the samples to advise if they have reached the reportable quantity, due to the released material not all being Hydrogen Sulfide. Repairs are in progress, and if the repairs are unsuccessful, they will be shutting the unit down. The area is tapped off to prevent people from entering the area. The reporting party will provide a follow-up report if the actual amount of material has been determined to exceed the reportable quantity.

Description:	Chevron operates a Pump station for the City Of Richmond, pump station discharges via Richmond Refinery and discharges directly into San Pablo Bay. An refinery environmental employee noticed a sheen in the 38 Foot Channel that discharges into San Paablo Bay. Diesel could have come from any source that pumps into that pump station, from any storm drain in Richmond. 38 Foot Channel is being boomed-off.

Violation Description:	Failure to maintain secondary containment (e.g., failure of secondary containment testing).
Violation Notes:	Returned to compliance on 07/18/2019. OBSERVATION: The 4/9/19 secondary containment test and the 6/7/19 re-test results indicate a failure of the STP Sump. All secondary containment for the UST system must be tight. The failure appears to involve the two electronic conduit penetrations. CORRECTIVE ACTION: Immediately have a properly licensed, trained, and certified contractor repair or replace the failed component, and provide CCHS-HMP with documentation of a passing re-test.

Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	"Failure to test or inspect each aboveground container for integrity based on industry standards as discussed in the SPCC Plan: 1. On a regular schedule. 2. After making material repairs. 3. Use non-destructive testing. 4. Inspect each containerG s supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas."
Violation Notes:	Returned to compliance on 05/08/2019. OBSERVATION: There were tanks observed that the industry standard most applicable is STI SP001. The monthly inspections of these various tanks varied to checking just the liquid level to checking conditions of the tank. Not all inspections were substantially equivalent to the STI SP001 checklist. Additionally, the STI SP001 has an annual inspection which the Facility is not conducting. CORRECTIVE ACTION: By April 12, 2019, include the appropriate industry standard for these tanks and implement inspections that satisfy the selected industry standard requirements. Provide this information to CCHSHMP.

Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to include in the SPCC Plan an adequate facility diagram, or no facility diagram included. The facility diagram is not required on a Tier I qualified facility SPCC Plan.
Violation Notes:	Returned to compliance on 05/08/2019. OBSERVATION: CCHSHMP observed tanks storing diesel associated with pumps for floating roof tanks that were not documented on the site diagram. Tank T-3000 was not observed on SPCC Plan diagrams. CCHSHMP asked field staff how long these tanks had been in the location and each was at the currently location for longer than 6 months. Furthermore, the areas identified in the SPCC Plan are not consistent with the areas labeled on the facility diagrams. CORRECTIVE ACTION: By April 12, 2019, update the facility diagram to show the oils in each fixed container.

Comments: No separate Remedial Investigation Report will be submitted. A summary of the results of the 2008 site characterization investigation is included in Draft Removal Action Workplan. Site characterization has been completed and impacts to on-site soil have been sufficiently delineated. The site characterization results indicate that further actions are necessary to address soil with elevated concentrations of chemicals. Therefore, a Removal Action Workplan has been prepared to propose a cleanup plan for these soils.

Comments: As a result of concerns of volatile organic compounds migrating to residences offsite, responsible party's consultant prepared a soil vapor sampling workplan which was approved February 23, 2015. This report documents the results of the sampling activities.
Tetrachloroethene was detected above residential screening levels in soil gas on the eastern border of the site, adjacent to the street.
The soil vapor well across the street adjacent to residences could not be sampled due to water infiltration.

Completed Date: 06/05/2017
Comments: DTSC received a response to comments (RTC) from Apex-SGI for the Phase II Report originally from Cornerstone. The RTC also includes a work plan to install one shallow groundwater monitoring well, four deep groundwater monitoring well, three soil vapor probes and vapor pins in response to previous DTSC comments. Additionally, procedures for groundwater sampling and soil gas/subslab soil vapor sampling was provided.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/17/2017
Comments: DTSC had a meeting with APEX and 1 Barrett LLC on 4/17/17 and discussed that DTSC has received the soil gas summary report. However, the report is informational and DTSC will not comment on it.

Completed Document Type: Correspondence
Completed Date: 05/25/2017
Comments: DTSC response letter to One Barrett LLC’s request to use the site as a corporate yard by the City of Richmond. DTSC does not object to the request as the risk is 3.7x10-5, calculated from the current soil vapor data. DTSC suggested performing indoor air sampling to confirm the estimated risk. Additionally, DTSC invites One Barrett LLC to enter into a new VCA given the need for additional response actions.

Completed Document Type: Site Screening
Completed Date: 02/06/2013
Comments: Site screening used a records review and drive-by site inspection to determine if further investigation at the site is needed. Records review done in course of site screening found evidence that tetrachloroethene was detected in groundwater in concentrations as high as 68,000 ug/l. Residential properties were found adjacent to the site. A Preliminary Endangerment Assessment was recommended.

Completed Document Type: Technical Workplan
Completed Date: 05/30/2013
Comments: Workplan submitted to DTSC by property owner's consultant describing soil vapor sampling activities to be performed near the former Sim's Bucket and Drum Company parcels.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/26/2013
Comments: Consultants installed 9 soil vapor sampling wells on the site at depths of 4-5 feet below ground surface. Preliminary data suggest that additional wells on the sidewalk on 2nd Street are not necessary at this time to evaluate immediate health concerns.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
