MEMORANDUM

Date: May 18, 2021

To: Robert Hines – Farella Braun + Martel

From: Matthew Nelson, PE & Mauricio H. Escobar, PG – Roux Associates, Inc.

Subject: **Supplemental Site Investigation Summary Memorandum**
Former Frito Lay Facility
650 North King Road, San Jose, California ("Site")

Roux Associates, Inc. (Roux) has prepared this Supplemental Site Investigation (SSI) Summary Memorandum (Memorandum), on behalf of BTC III San Jose Logistics Center LP (BTC III; Client), to present the findings of the SSI investigation conducted at the Former Frito Lay Facility, located at 650 North King Road, San Jose, California (Site, Figure 1). Roux understands that the Client acquired the Site in January 2021 for industrial redevelopment. Specifically, the Client proposes to demolish the existing buildings and develop the Site with a 208,000 square foot light industrial building.

Due diligence activities conducted before acquisition included a Phase I Environmental Site Assessment (ESA) and two rounds of site investigations from July through October 2020. The Phase I ESA and initial site investigations identified elevated metals concentrations in shallow soil along the former railroad right-of-way (RR ROW). Based on Roux's evaluation of the Phase I ESA and initial site investigations, arsenic and lead were identified as the chemicals of potential concern (COPCs) at the Site.

The sections below summarize the SSI investigation, including (1) pre-field activities, (2) field activities, (3) laboratory results, (4) a comparison to applicable regulatory screening levels. Conclusions and recommendations are provided at the end of this Memorandum. Field notes and laboratory reports are provided as Attachments 1 and 2.

SUMMARY OF SSI INVESTIGATION

From February through March 2021, Roux conducted an SSI, consisting of two separate Site mobilizations. The objective of Roux's SSI investigation was to screen for and delineate potential environmental impacts to shallow soils along the former RR ROW and railroad spur (Figures 2a through 2c).

Pre-Field Activities

Roux pre-marked the Site boundaries with white paint and notified Underground Service Alert (USA) of Northern California at least 72 hours in advance of each round of intrusive subsurface work (USA Ticket #'s X102700344 and X107803411).

A private geophysical services and utility locating firm, Ground Penetrating Radar Systems, LLC (GPRS) of San Jose, California, was contracted to evaluate the proposed soil sampling locations and to mitigate the risk of potentially encountering buried utility lines or other subsurface features before soil samples were collected. On February 2 and March 24, 2021, GPRS utilized a variety of tools, including mini ground penetrating radar, to clear sampling locations under the direction of Roux field staff. No subsurface utilities or structures identified during the geophysical survey interfered with the proposed sampling locations.

From February 3 through 9, 2021, Confluence Technical Services (Confluence) of Rio Linda, California, under the direction of Roux, advanced a total of 83 soil borings along the former RR ROW (Figures 2a through 2c). On March 24 and 25, 2021, Confluence advanced an additional 18 soil borings along the former RR ROW and rail spur (Figures 2a through 2c). According to the Site Investigation Report, prepared by Apex Companies, LLC, dated January 13, 2021, soil on Site generally consists of silt and gravel in the upper 5 feet, followed by clays with lenses of sand and gravel (Apex, 2021). This was confirmed during the SSI investigations in February and March 2021.

Soil samples were collected at depths ranging from 0.5 feet below ground surface (bgs) to 5 feet bgs using a clean hand auger and placed directly into laboratory supplied glass jars. After collection, soil samples were immediately sealed, labeled, placed into a cooler with ice, and held under chain of custody for transportation to Enthalpy Analytical, LLC (Enthalpy) of Berkeley, California, a California state-certified analytical laboratory. A total of 161 soil samples were analyzed for the following:

- 133 samples were analyzed for Title 22 Metals by USEPA Method 6010B;
- 86 samples were analyzed for gasoline range organics (GRO), diesel range organics (DRO), and oil range organics (ORO) by USEPA Method 8015M;
- 28 samples were analyzed for arsenic and lead by United States Environmental Protection Agency (USEPA) Method 6010B; and
- 12 samples were analyzed for:
    - Organochlorine pesticides (OCPs) by USEPA Method 8081A;
    - Polychlorinated biphenyls (PCBs) by USEPA Method 8082;
    - Semi-volatile organic compounds (SVOCs) by USEPA Method 8270E; and
    - Herbicides by USEPA Method 8151.

Soil Results

Analytical results were compared to the following:

- Dylan Jacques Duvergé, Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region (Duvergé, 2011);
- Kearney Foundation Special Report, Kearney Foundation of Soil Science, Division of Agriculture and Natural, Resources University of California, Background Concentrations of Trace and Major Elements in California Soil (Kearney, 1996);
- United States Environmental Protection Agency Regional Screening Levels (USEPA RSLs), dated November 2020 (USEPA, 2020);
- DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3 Screening Levels (DTSC SLs), dated June 2020 (DTSC, 2020); and
- San Francisco Bay Regional Water Quality Control Board (SF-RWQCB) Environmental Screening Levels (ESLs), dated January 2019 (SF-RWQCB, 2019).

A summary of metal exceedances from the SSI investigation is provided below. The full laboratory analytical reports are included in Attachment 2.

Summary of Soil Metals Data

Compound	Detection Range (mg/kg)[a]	Number of Detections Above Background	Number of Detections Above USEPA RSLs	Number of Detections Above DTSC SLs
Arsenic	**1.2 – 200**	68	152	158
Lead	3.5 – **1,500**	28	1	11

(a) mg/kg – milligrams per kilogram.
(b) Bold value indicates exceedance of at least one SL.

With few exceptions, the SSI closed all data gaps for the Site. Arsenic concentrations were detected above the background concentration of 11 mg/kg (Kearney, 1996, and Duvergé, 2011) in five deeper soil samples at concentrations ranging from 12 to 41 mg/kg. Seven additional metals (antimony, cadmium, cobalt, copper, molybdenum, nickel, and zinc) exceeded their respective background concentrations, but were below their respective USEPA RSLs and DTSC SLs (Table 1). The only other soil exceedance was DRO, which was detected in seven samples at concentrations ranging from 310 to 620 mg/kg above the ESL of 260 mg/kg (Table 2). No other constituents were detected above background concentrations or regulatory screening levels (Tables 3 and 4). The full laboratory analytical reports are included in Attachment 2.

Conclusions and Recommendations

Conclusions and recommendations based on data collected during the SSI are provided in the Preliminary Environmental Assessment Equivalent (PEA-E) report to which this memorandum is appended.

Note:
SFBRWQCB ESLs = San Francisco Bay Regional Water Quality Control Board Tier 1 Environmental Screening Levels (January 2019)
<X = analyte not detected above laboratory RDL
Bgs = Below ground surface
NS = No standard established
Only analytes detected in at least one sample and major analytes are included in the table.
mg/kg = milligrams per kilogram
TPH = total petroleum hydrocarbons
B = Analyte detected above the RDL in method blank
Highlight indicates exceedance of SFBRWQC ESLs.

ROUX PERSONNEL ON-SITE: A. TRUONG	CONTRACTOR(S) ON-SITE: GPRS (Bryan Ellis)
	Pacific Cutting (Dave & Rick)
GENERAL WORK DESCRIPTION: Utility clearance (RR ROW), Bldg Survey, HVAC Evaluation & Bldg	

TIME	ACTIVITY - WORK PROGRESS
650	AT arrive onsite @ 650 N King RD. Park @ main lot.
705	GPRS (Bryan Ellis) arrive on site. Park @ main lot @ 650 N King RD. H&S tailgate: cold stress, transients, overgrown vegetation, exit points. GPRS says looks like nothing along RR ROW (electrical lighting / water lines look to be coming from bldgs, not under RR ROW). GPRS will use GPR & passive mode (wand). There are fences/gates along the RR ROW. One gate we can't pass from King RD. AT drive to Educational Park Drive to check access, no access b/c gate w/ 2 master locks, will ask Susan (prop. manager) for keys (Bryan has been to this site before.)
745	several cars parked in RR ROW spur (~10) but should be able to clear around them. GPRS identified subsurface object/ structure, potentially a switch for RR (approx. 2' deep), unable to trace towards RR b/c of puddle. GPRS report lot of random debris in soil under asphalt (metal?). AT calibrate PID PPB RAE (38256) zero: 0ppb, 10 ppm iso: 10.1 ppb
755	GPRS mark out RR ROW while AT meet w/ Susan & Pacific Cutting (Dave & Rick). GPRS reports GPR can only read 3 ft deep. there is debris under asphalt. ^ preliminary walk thru w/ Susan.
810	AT meet w/ Susan & Pacific Cutting. Start @ Guaranteed Express (meet w/ Carl Heiney (415-235-5767). He has ~10 core employees & drivers. The HVAC system doesn't heat or ventilate, only the fan works. Guaranteed Express doesn't store haz mat. (only lithium ion batteries) There's 1 floor & a mezzanine.
900	~~Bld~~ AT Building survey at US Food (used just as storage), met w/ ~~FHA~~ Mark Progressive (painting company). met w/ David. Safra (dry food), met w/ Khalid & Mr Ron (415-513-6312, 408-396-7699)
1100	GPRS finish clearing what we can. There is a blue mechanical gate (@ ~SB-31) that can't be moved. Bryan allows RR from Educational Park Drive. There is a chain link fence (@ ~SB-35) that he can't push w/ GPR. There's a lot of debris (wood pallets, asphalt, tree growth, brush). RR ROW core: 2004. GPRS begin cleaning sub/slab locations. AT conduct thorough bldg survey (see attached field notes). Susan will file.
1130	GPRS report the bldgs (2 & 4) will have ~5-8" concrete slab then wire mesh then soil. Bryan uses tape to mark out the interior locations. Some locations were omitted: @ SS-5: we moved the location to main office area (by lobby) based on tenant request (Guaranteed Express)

ROUX PERSONNEL ON-SITE: A. Trunk	CONTRACTOR(S) ON-SITE: GPRS, Pacific Cooling
GENERAL WORK DESCRIPTION: Utility clearance (ER Row), Bldg survey, HVAC evaluation & Bldg	

TIME	ACTIVITY - WORK PROGRESS
	@ SS-4 (Valiant): We moved the location to the main warehouse space.
	@ SS-3 (US Tsubaki): We moved the location to the office space in the back - more enclosed, office area (roll up door remains open in warehouse space).
	@ SS-2 (Air 1): We moved the location to the side/front of the office b/c there was equipment/obstructions.
	@SS-7 (printing - office): We moved the location to the front reception space based on tenant's request.
	@ SS-8 (printing - warehouse): We moved the location to a less active space (still close to previous investigation location based on map).
1145	GPRS used a mini GPR for all subsurface locations, which reads in inches (as opposed to standard GPR which reads in feet). We were unable to access Satra suite, where SS-1 is, so GPRS will come back tmrw @ 700. AT (all Satra tenant. They were unwilling to come back (they left @ 1100). He (Khalid) will be back tmrw. GPRS off site @ 1400
1200	~~GPRS (Bryan) off-site.~~ AT continue bldg survey. Crack/seam inspection: in the air filter bldg. There is a ~4" pipe penetration w/ broken concrete. In the Valiant suite, there is an open drain (no PID readings in either). During bldg inspection, there were no PID readings other than what is depicted in the attached figure. Pacific Cooling was not able to access the roof from w/in the bldg, but PCC used a ladder to get to the roof. Dave will provide HVAC information via email @ the end of the day. Pacific Cooling off site @ ~1130.
1330	AT walk RR Row to check what portion of RR was unable to be cleared w/ GPR. The mechanical blue gate could be moved (@ SB-31). AT access from Commercial Park drive, the chain link fence begins @ SB55, so GPRS couldn't clear from SB31 + SB55 w/ GPR. There is a mound of asphalt on the northern interval, as well as overgrown vegetation, burned (1 set), wood pallets, random debris. AT walked adjacent resident dumping a bucket of soil over the RR Row.
1430	Check out w/ MN. AT off site.

730	there is a lot of gravel @ SB-21, will sample 6" after 2nd bucket.
745	sample SB-21-0.5 @ 745. still a lot of gravel. use breaker bar to get thru
810	sample SB-21-2 @ 810. mobilize to SB-22. Contivence will grout as we go to avoid having to walk back & forth. set up decon station.
825	sample SB-22-0.5 @ 825. Lot of gravel, breaker bar used, vacuum used to suck up broken pieces of gravel. sand @ ~1.5' bgs, clay @ 2'.
840	sample SB-22-2 @ 840. mobilize to SB-20. use breaker bar to get thru asphalt & vacuum for broken small gravel.
900	sample SB-20-0.5 @ 900. AT visit Air 1, but Issac is not in yet, his employee is. will stop by again later. SB-20 has thicker asphalt / gravel layer on top. 6" sample taken immediately after gravel top (~1 ft) soil drum is 3/4 full. breathing zone readings are ~151 ppb.
910	sample SB-20-2 @ 910. Contivence top off sunken borehole from yday w/ portland cement. mobilize to SB-18. it's in vegetation/grass, no gravel
920	sample SB-18-0.5 @ 920.

1015	sample SB-17-2 @ 1015. mobilize to SB-16
1020	sample SB-16-0.5 @ 1020. encountered gravel. use breaker bar.
1030	Contivence hit grey pvc pipe @ ~1 ft. about 1" crack. AT walk back to N King Rd & see electrical cap. all ~~AT~~ (AT) parking lights are off in. AT call NN. Contivence mobilize to SB-15.
1050	sample SB-15-0.5 @ 1050.
1055	Contivence carefully expose pvc pipe & see extent of crack w/ screwdriver per MN's request. There are 3 pvc pipes, 2 1" white pvc pipes & 1 bigger grey pipe. There are is nothing in the pipes as far as I can see, no water, no cables. AT let MN know. MN will contact property manager. we will stop out & collect the 2nd sample. 2 out of the 3 pipes were cracked (1" white, grey pipe). some cracks look old, some new.

(a) The number of sample bottles may be reduced as analyses may be combined, depending on the type of equipment used by the laboratory
(b) TBD - To be determined. Soil samples will be collected and placed on hold and will be analyzed based on data from 6-inch metals and TPH-cc results
(c) Equipment blank samples will be collected at a frequency of one per day where samples are collected. Equipment blank samples will be indicated on the chain-of-custody.

(a) The number of sample bottles may be reduced as analyses may be combined, depending on the type of equipment used by the laboratory
(b) TBD - To be determined. Soil samples will be collected and placed on hold and will be analyzed based on data from 6-inch metals and TPH-cc results
(c) Equipment blank samples will be collected at a frequency of one per day where samples are collected. Equipment blank samples will be indicated on the chain-of-custody

GENERAL WORK DESCRIPTION: Utility clearance (RR ROW), Bldg Survey, HVAC Evaluation & Bldg	

TIME	ACTIVITY - WORK PROGRESS
650	AT arrive onsite @ 650 N King RD. Park @ main lot.
705	GPRS (Bryan Ellis) arrive on site. Park @ main lot @ 650 N King RD. H&S tailgate: cold stress, transients, overgrown vegetation, exit points. GPRS says looks like nothing along RR ROW (electrical lighting / water lines look to be coming from bldgs, not under RR ROW). GPRS will use GPR & passive mode (wand). There are fences/gates along the RR ROW. One gate we can't pass from King RD. AT drive to Educational Park Drive to check access, no access b/c gate w/ 2 master locks, will ask Susan (prop. manager) for keys (Bryan has been to this site before.)
745	several cars parked in RR ROW spur (~10) but should be able to clear around them. GPRS identified subsurface object/ structure, potentially a switch for RR (approx. 2' deep), unable to trace towards RR b/c of puddle. GPRS report lot of random debris in soil under asphalt (metal?). AT calibrate PID PPB RAE (38256) zero: 0ppb, 10 ppm iso: 10.1 ppb
755	GPRS mark out RR ROW while AT meet w/ Susan & Pacific Cutting (Dave & Rick). GPRS reports GPR can only read 3 ft deep. there is debris under asphalt. ^ preliminary walk thru w/ Susan.
810	AT meet w/ Susan & Pacific Cutting. Start @ Guaranteed Express (meet w/ Carl Heiney (415-235-5767). He has ~10 core employees & drivers. The HVAC system doesn't heat or ventilate, only the fan works. Guaranteed Express doesn't store haz mat. (only lithium ion batteries) There's 1 floor & a mezzanine.
900	~~Bld~~ AT Building survey at US Food (used just as storage), met w/ ~~FHA~~ Mark Progressive (painting company). met w/ David. Safra (dry food), met w/ Khalid & Mr Ron (415-513-6312, 408-396-7699)
1100	GPRS finish clearing what we can. There is a blue mechanical gate (@ ~SB-31) that can't be moved. Bryan allows RR from Educational Park Drive. There is a chain link fence (@ ~SB-35) that he can't push w/ GPR. There's a lot of debris (wood pallets, asphalt, tree growth, brush). RR ROW core: 2004. GPRS begin cleaning sub/slab locations. AT conduct thorough bldg survey (see attached field notes). Susan will file.
1130	GPRS report the bldgs (2 & 4) will have ~5-8" concrete slab then wire mesh then soil. Bryan uses tape to mark out the interior locations. Some locations were omitted: @ SS-5: we moved the location to main office area (by lobby) based on tenant request (Guaranteed Express)

TIME	ACTIVITY - WORK PROGRESS
	@ SS-4 (Valiant): We moved the location to the main warehouse space.
	@ SS-3 (US Tsubaki): We moved the location to the office space in the back - more enclosed, office area (roll up door remains open in warehouse space).
	@ SS-2 (Air 1): We moved the location to the side/front of the office b/c there was equipment/obstructions.
	@SS-7 (printing - office): We moved the location to the front reception space based on tenant's request.
	@ SS-8 (printing - warehouse): We moved the location to a less active space (still close to previous investigation location based on map).
1145	GPRS used a mini GPR for all subsurface locations, which reads in inches (as opposed to standard GPR which reads in feet). We were unable to access Satra suite, where SS-1 is, so GPRS will come back tmrw @ 700. AT (all Satra tenant. They were unwilling to come back (they left @ 1100). He (Khalid) will be back tmrw. GPRS off site @ 1400
1200	~~GPRS (Bryan) off-site.~~ AT continue bldg survey. Crack/seam inspection: in the air filter bldg. There is a ~4" pipe penetration w/ broken concrete. In the Valiant suite, there is an open drain (no PID readings in either). During bldg inspection, there were no PID readings other than what is depicted in the attached figure. Pacific Cooling was not able to access the roof from w/in the bldg, but PCC used a ladder to get to the roof. Dave will provide HVAC information via email @ the end of the day. Pacific Cooling off site @ ~1130.
1330	AT walk RR Row to check what portion of RR was unable to be cleared w/ GPR. The mechanical blue gate could be moved (@ SB-31). AT access from Commercial Park drive, the chain link fence begins @ SB55, so GPRS couldn't clear from SB31 + SB55 w/ GPR. There is a mound of asphalt on the northern interval, as well as overgrown vegetation, burned (1 set), wood pallets, random debris. AT walked adjacent resident dumping a bucket of soil over the RR Row.
1430	Check out w/ MN. AT off site.

Case Narrative

Roux Associates, Inc. 5150 E. Pacific Coast Hwy. Suite 450 Long Beach, CA 90804 Matthew Nelson	Lab Job Number: 440387 Project No: 3662.0001L000 Location: BCG San Jose Date Received: 02/03/21

This data package contains sample and QC results for fourteen soil samples, requested for the above referenced project on 02/03/21. The samples were received cold and intact. This report was revised and reissued on 02/13/21 to include gasoline range organics (GRO).

TPH-Extractables by GC (EPA 8015M):

Low recoveries were observed for diesel C10-C28 in the MS/MSD of SB-1-0.5 (lab # 440387-001); the LCS was within limits, the associated RPD was within limits, and these low recoveries were not associated with any reported results. High surrogate recovery was observed for n-triacontane in SB-10-0.5 (lab # 440387-021). ORO C28-C44 was detected above the RL in the method blank for batch 260953. Many samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for antimony in the MS/MSD of SB-1-0.5 (lab # 440387-001); the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for many analytes; the LCS was within limits. High RPD was observed for copper. No other analytical problems were encountered.

Hi John,

If you haven't ran these two samples (440387-003 [SB-1-5] &440467-019 [SB-26-5]) yet, can you please analyze for just **arsenic and lead**?

I would also like to add one more sample:

Lab report 440387

- 440387-006 (SB-2-5) – analyze for arsenic and lead

Can all three be on 48-hour rush TAT?

As a reminder from my earlier email, we are still waiting for the helium results for sub-slab and all herbicide results for soil. Let me know if you have any questions.

Thanks,

This data package contains sample and QC results for twenty four soil samples, requested for the above referenced project on 02/17/21. The samples were received cold and intact.

Semivolatile Organics by GC/MS (EPA 8270C):
A number of samples were diluted due to the dark color of the sample extracts. SB-22-0.5 (lab # 441037-014) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Pesticides (EPA 8081A):
Low recovery was observed for endrin ketone in the MS of SB-1-0.5 (lab # 441037-001); the LCS was within limits, and the associated RPD was within limits. High RPD was observed for 4,4'-DDD, dieldrin, and endrin aldehyde in the MS/MSD of SB-1-0.5 (lab # 441037-001); these analytes were not detected at or above the RL in the associated samples. Many samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for nickel and antimony in the MS/MSD of SB-1-2 (lab # 441037-002); the LCS was within limits, and the associated RPDs were within limits. High recoveries were observed for barium and lead in the MS of SB-1-2 (lab # 441037-002); the LCS was within limits. High RPD was observed for barium, lead, and zinc in the MS/MSD of SB-1-2 (lab # 441037-002). No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):
Eurofins CalScience in Garden Grove, CA performed the analysis (NELAP certified). Please see the Eurofins CalScience case narrative.

Receipt
The samples were received on 3/16/2021 5:32 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.0º C.

GC Semi VOA
Method 8151A: The continuing calibration verification (CCV) associated with 570-137539 recovered outside the control limits for MCPP on one column. Results are confirmed on both columns and reported from the passing column.

Method 8151A: The continuing calibration verification (CCV) associated with 570-137539 recovered outside the control limits for MCPA on one column. Results are confirmed on both columns and reported from the passing column.

Method 8151A: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 570-136915 and analytical batch 570-137539 recovered outside control limits for the following analyte(s): Dinoseb. Dinoseb has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8151A: The matrix spike/matrix spike duplicate (MS/MSD) for preparation batch 570-136915 and analytical batch 570-137539 exceeded control limits for the following analyte(s): Dinoseb, Note that this analyte is a known poor performer when analyzed using this method.

Method 8151A: The closing continuing calibration verification (CCVC) associated with batch 570-137539 recovered above the upper control limit for 2,4-D. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8151A: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 570-136915 and analytical batch 570-137539 recovered outside control limits for the following analytes: 2,4-DB

Method 8151A: The following samples were received outside of holding time: SB-1-0.5 (570-54019-1), SB-2-0.5 (570-54019-2), SB-5-0.5 (570-54019-3), SB-22-0.5 (570-54019-4), SB-25-0.5 (570-54019-5), SB-31-0.5 (570-54019-6) and SB-41-0.5 (570-54019-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

This data package contains sample and QC results for twelve soil samples and two water samples, requested for the above referenced project on 02/04/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:
Low recoveries were observed for diesel C10-C28 in the MS/MSD of SB-21-0.5 (lab # 440467-002); the LCS was within limits, the associated RPD was within limits, and these low recoveries were not associated with any reported results. Many samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

Pesticides (EPA 8081A):
No analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
High response was observed for mercury in the ICV analyzed 02/09/21 14:09; affected data was qualified with "b". No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD for batch 260971; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):
Eurofins CalScience in Garden Grove, CA performed the analysis.

This data package contains sample and QC results for eighteen soil samples and one water sample, requested for the above referenced project on 02/05/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:
Low recoveries were observed for diesel C10-C28 in the MS/MSD of SB-28-0.5 (lab # 440524-001); the LCS was within limits, the associated RPD was within limits, and these low recoveries were not associated with any reported results. Many samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

Pesticides (EPA 8081A):
No analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
High response was observed for zinc in the CCV analyzed 02/10/21 14:19; affected data was qualified with "b". No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD of SB-28-0.5 (lab # 440524-001); the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for a number of analytes; the LCS was within limits. High RPD was observed for molybdenum and zinc. No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):
Eurofins CalScience in Garden Grove, CA performed the analysis.

This data package contains sample and QC results for two soil samples, requested for the above referenced project on 02/25/21.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for antimony in the MS/MSD for batch 262227; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for lead and zinc; the LCS was within limits, and the associated RPDs were within limits. No other analytical problems were encountered.

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:
No analytical problems were encountered.

Pesticides (EPA 8081A):
No analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for barium and antimony in the MS/MSD of SB-69-0.5 (lab # 440586-050); the LCS was within limits. High recoveries were observed for a number of analytes; the LCS was within limits. High RPD was observed for barium and copper. Low recoveries were observed for antimony and zinc in the MS/MSD of SB-48-1 (lab # 440586-006); the LCS was within limits. High RPD was observed for zinc. Low recoveries were observed for antimony in the MS/MSD for batch 261419; the parent sample was not a project sample, and the associated RPD was within limits. High RPD was observed for mercury in the MS/MSD of SB-69-0.5 (lab # 440586-050); this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):

GC Semi VOA
Method 8151A: The closing continuing calibration verification (CCVC) associated with batch 570-129696 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 8151A: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 570-128947.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Semivolatile Organics by GC/MS (EPA 8270C):
No analytical problems were encountered.

Pesticides (EPA 8081A):
Low recoveries were observed for 4,4'-DDD and 4,4'-DDE in the MS/MSD of SB-48-1 (lab # 441161-002); the LCS was within limits. High RPD was observed for 4,4'-DDD, 4,4'-DDT, and methoxychlor. No other analytical problems were encountered.

PCBs (EPA 8082):
High RPD was observed for Aroclor-1260 in the MS/MSD of SB-48-1 (lab # 441161-002); this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low response was observed for copper in the CCV analyzed 02/24/21 21:44; affected data was qualified with "b". Low recoveries were observed for antimony in the MS/MSD for batch 261897; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. High recovery was observed for barium in the MS for batch 261897; the LCS was within limits, and the associated RPD was within limits. Low recoveries were observed for antimony in the MS/MSD of SB-70-0.5 (lab # 441161-020); the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for barium and molybdenum; the LCS was within limits. High RPD was observed for barium. No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):
Eurofins CalScience in Garden Grove, CA performed the analysis (NELAP certified). Please see the Eurofins CalScience case narrative.

Receipt
The samples were received on 2/26/2021 4:06 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.7º C.

Receipt Exceptions

The following samples were received outside of holding time: SB-48-1 (570-52297-1), SB-53-0.5 (570-52297-2), SB-62-2 (570-52297-3), SB-67-0.5 (570-52297-4) and SB-74-0.5 (570-52297-5).

GC Semi VOA
Method 8151A: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 570-133148 and analytical batch 570-133664 recovered outside control limits for the following analyte(s): Dinoseb. Dinoseb has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8151A: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 570-133148 and analytical batch 570-133664 recovered outside control limits for the following analytes: 2,4-DB and MCPP.

Method 8151A: The matrix spike/matrix spike duplicate (MS/MSD) for preparation batch 570-133148 and analytical batch 570-133664 exceeded control limits for the following analyte(s): Dinoseb, Note that this analyte is a known poor performer when analyzed using this method.

Method 8151A: The following samples were received outside of holding time: SB-48-1 (570-52297-1), SB-53-0.5 (570-52297-2), SB-62-2 (570-52297-3), SB-67-0.5 (570-52297-4) and SB-74-0.5 (570-52297-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The sample was received on 2/10/2021 6:35 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.7º C.

GC Semi VOA
Method 8151A: The closing continuing calibration verification (CCVC) associated with batch 570-129696 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 8151A: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 570-128947.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

This data package contains sample and QC results for nineteen soil samples and two water samples, requested for the above referenced project on 03/25/21. The samples were received cold and intact. This report was reissued on 04/14/21 to revise certain sample IDs.

TPH-Extractables by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:
SB-86-6" (lab # 443051-030) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
High responses were observed for arsenic and antimony in various CCVs; affected data was qualified with "b". High response was observed for antimony in the CCV analyzed 03/27/21 22:27; affected data was qualified with "b". High responses were observed for arsenic and antimony in the CCV analyzed 03/27/21 21:49; affected data was qualified with "b". High responses were observed for arsenic and antimony in the CCV analyzed 03/27/21 23:41; affected data was qualified with "b". High recoveries were observed for a number of analytes in the MS/MSD for batch 264128; the parent sample was not a project sample, the LCS was within limits, the associated RPDs were within limits, and these analytes were not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD for batch 264108; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. Low recoveries were observed for a number of analytes in the MS/MSD of SB-86-6" (lab # 443051-030); the LCS was within limits. High recoveries were observed for chromium, copper, and nickel in the MS of SB-86-6" (lab # 443051-030); the LCS was within limits. High RPD was also observed for chromium, copper, and nickel in the MS/MSD of SB-86-6" (lab # 443051-030). No other analytical problems were encountered.

This data package contains sample and QC results for fourteen soil samples, requested for the above referenced project on 02/03/21. The samples were received cold and intact. This report was revised and reissued on 02/13/21 to include gasoline range organics (GRO).

TPH-Extractables by GC (EPA 8015M):
Low recoveries were observed for diesel C10-C28 in the MS/MSD of SB-1-0.5 (lab # 440387-001); the LCS was within limits, the associated RPD was within limits, and these low recoveries were not associated with any reported results. High surrogate recovery was observed for n-triacontane in SB-10-0.5 (lab # 440387-021). ORO C28-C44 was detected above the RL in the method blank for batch 260953. Many samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for antimony in the MS/MSD of SB-1-0.5 (lab # 440387-001); the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for many analytes; the LCS was within limits. High RPD was observed for copper. No other analytical problems were encountered.

Hi John,

If you haven't ran these two samples (440387-003 [SB-1-5] &440467-019 [SB-26-5]) yet, can you please analyze for just **arsenic and lead**?

I would also like to add one more sample:

Lab report 440387

- 440387-006 (SB-2-5) – analyze for arsenic and lead

Can all three be on 48-hour rush TAT?

As a reminder from my earlier email, we are still waiting for the helium results for sub-slab and all herbicide results for soil. Let me know if you have any questions.

Thanks,

Roux Associates, Inc. 5150 E. Pacific Coast Hwy. Suite 450 Long Beach, CA 90804 Matthew Nelson	Lab Job Number: 441037 Project No: 3662.0001L000 Location: BCG San Jose Dates Received: 02/03/21, 02/04/21, 02/05/21

This data package contains sample and QC results for twenty four soil samples, requested for the above referenced project on 02/17/21. The samples were received cold and intact.

Semivolatile Organics by GC/MS (EPA 8270C):
A number of samples were diluted due to the dark color of the sample extracts. SB-22-0.5 (lab # 441037-014) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Pesticides (EPA 8081A):
Low recovery was observed for endrin ketone in the MS of SB-1-0.5 (lab # 441037-001); the LCS was within limits, and the associated RPD was within limits. High RPD was observed for 4,4'-DDD, dieldrin, and endrin aldehyde in the MS/MSD of SB-1-0.5 (lab # 441037-001); these analytes were not detected at or above the RL in the associated samples. Many samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for nickel and antimony in the MS/MSD of SB-1-2 (lab # 441037-002); the LCS was within limits, and the associated RPDs were within limits. High recoveries were observed for barium and lead in the MS of SB-1-2 (lab # 441037-002); the LCS was within limits. High RPD was observed for barium, lead, and zinc in the MS/MSD of SB-1-2 (lab # 441037-002). No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):
Eurofins CalScience in Garden Grove, CA performed the analysis (NELAP certified). Please see the Eurofins CalScience case narrative.

Receipt
The samples were received on 3/16/2021 5:32 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.0º C.

GC Semi VOA
Method 8151A: The continuing calibration verification (CCV) associated with 570-137539 recovered outside the control limits for MCPP on one column. Results are confirmed on both columns and reported from the passing column.

Method 8151A: The continuing calibration verification (CCV) associated with 570-137539 recovered outside the control limits for MCPA on one column. Results are confirmed on both columns and reported from the passing column.

Method 8151A: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 570-136915 and analytical batch 570-137539 recovered outside control limits for the following analyte(s): Dinoseb. Dinoseb has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8151A: The matrix spike/matrix spike duplicate (MS/MSD) for preparation batch 570-136915 and analytical batch 570-137539 exceeded control limits for the following analyte(s): Dinoseb, Note that this analyte is a known poor performer when analyzed using this method.

Method 8151A: The closing continuing calibration verification (CCVC) associated with batch 570-137539 recovered above the upper control limit for 2,4-D. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8151A: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 570-136915 and analytical batch 570-137539 recovered outside control limits for the following analytes: 2,4-DB

Method 8151A: The following samples were received outside of holding time: SB-1-0.5 (570-54019-1), SB-2-0.5 (570-54019-2), SB-5-0.5 (570-54019-3), SB-22-0.5 (570-54019-4), SB-25-0.5 (570-54019-5), SB-31-0.5 (570-54019-6) and SB-41-0.5 (570-54019-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Lab Job Number: 440467
Project No: 3662.0001L000
Location: BCG San Jose
Date Received: 02/04/21

This data package contains sample and QC results for twelve soil samples and two water samples, requested for the above referenced project on 02/04/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:
Low recoveries were observed for diesel C10-C28 in the MS/MSD of SB-21-0.5 (lab # 440467-002); the LCS was within limits, the associated RPD was within limits, and these low recoveries were not associated with any reported results. Many samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

Pesticides (EPA 8081A):
No analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
High response was observed for mercury in the ICV analyzed 02/09/21 14:09; affected data was qualified with "b". No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD for batch 260971; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):
Eurofins CalScience in Garden Grove, CA performed the analysis.

This data package contains sample and QC results for eighteen soil samples and one water sample, requested for the above referenced project on 02/05/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:
Low recoveries were observed for diesel C10-C28 in the MS/MSD of SB-28-0.5 (lab # 440524-001); the LCS was within limits, the associated RPD was within limits, and these low recoveries were not associated with any reported results. Many samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

Pesticides (EPA 8081A):
No analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
High response was observed for zinc in the CCV analyzed 02/10/21 14:19; affected data was qualified with "b". No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD of SB-28-0.5 (lab # 440524-001); the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for a number of analytes; the LCS was within limits. High RPD was observed for molybdenum and zinc. No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):
Eurofins CalScience in Garden Grove, CA performed the analysis.

This data package contains sample and QC results for two soil samples, requested for the above referenced project on 02/25/21.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for antimony in the MS/MSD for batch 262227; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for lead and zinc; the LCS was within limits, and the associated RPDs were within limits. No other analytical problems were encountered.

Receipt
The sample was received on 2/10/2021 6:35 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.7º C.

GC Semi VOA
Method 8151A: The closing continuing calibration verification (CCVC) associated with batch 570-129696 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 8151A: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 570-128947.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

This data package contains sample and QC results for thirty one soil samples, requested for the above referenced project on 02/19/21.

Semivolatile Organics by GC/MS (EPA 8270C):
No analytical problems were encountered.

Pesticides (EPA 8081A):
Low recoveries were observed for 4,4'-DDD and 4,4'-DDE in the MS/MSD of SB-48-1 (lab # 441161-002); the LCS was within limits. High RPD was observed for 4,4'-DDD, 4,4'-DDT, and methoxychlor. No other analytical problems were encountered.

PCBs (EPA 8082):
High RPD was observed for Aroclor-1260 in the MS/MSD of SB-48-1 (lab # 441161-002); this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low response was observed for copper in the CCV analyzed 02/24/21 21:44; affected data was qualified with "b". Low recoveries were observed for antimony in the MS/MSD for batch 261897; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. High recovery was observed for barium in the MS for batch 261897; the LCS was within limits, and the associated RPD was within limits. Low recoveries were observed for antimony in the MS/MSD of SB-70-0.5 (lab # 441161-020); the LCS was within limits, and the associated RPD was within limits. High recoveries were observed for barium and molybdenum; the LCS was within limits. High RPD was observed for barium. No other analytical problems were encountered.

8151A Chlorinated Herbicides (EPA 8151A):
Eurofins CalScience in Garden Grove, CA performed the analysis (NELAP certified). Please see the Eurofins CalScience case narrative.

Receipt Exceptions

The following samples were received outside of holding time: SB-48-1 (570-52297-1), SB-53-0.5 (570-52297-2), SB-62-2 (570-52297-3), SB-67-0.5 (570-52297-4) and SB-74-0.5 (570-52297-5).

GC Semi VOA
Method 8151A: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 570-133148 and analytical batch 570-133664 recovered outside control limits for the following analyte(s): Dinoseb. Dinoseb has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for these analyte(s). These results have been reported and qualified.

Method 8151A: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 570-133148 and analytical batch 570-133664 recovered outside control limits for the following analytes: 2,4-DB and MCPP.

Method 8151A: The matrix spike/matrix spike duplicate (MS/MSD) for preparation batch 570-133148 and analytical batch 570-133664 exceeded control limits for the following analyte(s): Dinoseb, Note that this analyte is a known poor performer when analyzed using this method.

Receipt
The sample was received on 2/10/2021 6:35 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.7º C.

GC Semi VOA
Method 8151A: The closing continuing calibration verification (CCVC) associated with batch 570-129696 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 8151A: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 570-128947.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

This data package contains sample and QC results for one soil sample, requested for the above referenced project on 02/12/21. The sample was received cold and intact. This report was revised and reissued on 02/26/21 to include leachable metals results.

TPH-Extractables by GC (EPA 8015M):
IDW-S (lab # 440615-001) was diluted due to the dark color of the sample extract. No other analytical problems were encountered.

Pesticides (EPA 8081A):
Low recoveries were observed for 4,4'-DDE, 4,4'-DDT, and methoxychlor in the MS/MSD of IDW-S (lab # 440615-001); the LCS was within limits, and the associated RPDs were within limits. High RPD was observed for beta-BHC; this analyte was not detected at or above the RL in the associated sample. IDW-S (lab # 440615-001) was diluted due to the dark color of the sample extract. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD for batch 261415; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Metals (EPA 6010B) TCLP Leachate:
No analytical problems were encountered.

Metals (EPA 6010B) WET Leachate:
No analytical problems were encountered.

This data package contains sample and QC results for nineteen soil samples and two water samples, requested for the above referenced project on 03/25/21. The samples were received cold and intact. This report was reissued on 04/14/21 to revise certain sample IDs.

TPH-Extractables by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:
SB-86-6" (lab # 443051-030) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
High responses were observed for arsenic and antimony in various CCVs; affected data was qualified with "b". High response was observed for antimony in the CCV analyzed 03/27/21 22:27; affected data was qualified with "b". High responses were observed for arsenic and antimony in the CCV analyzed 03/27/21 21:49; affected data was qualified with "b". High responses were observed for arsenic and antimony in the CCV analyzed 03/27/21 23:41; affected data was qualified with "b". High recoveries were observed for a number of analytes in the MS/MSD for batch 264128; the parent sample was not a project sample, the LCS was within limits, the associated RPDs were within limits, and these analytes were not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD for batch 264108; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. Low recoveries were observed for a number of analytes in the MS/MSD of SB-86-6" (lab # 443051-030); the LCS was within limits. High recoveries were observed for chromium, copper, and nickel in the MS of SB-86-6" (lab # 443051-030); the LCS was within limits. High RPD was also observed for chromium, copper, and nickel in the MS/MSD of SB-86-6" (lab # 443051-030). No other analytical problems were encountered.

Data Validation Memorandum

MEMORANDUM

Date: **May 18, 2020**

To: Matthew Nelson, Roux Associates, Inc.

From: Josh Cope, Roux Associates, Inc.

Subject: Data Validation Summary Report for BCG – San Jose, 850 North King Road, San Jose California

Enthalpy Analytical Job Numbers: 440387; 440467; 440524; 440586; 440614; 440615; 440864; 441037; 441161; 441393; 442005; 443051; and 440957.

Roux Associates, Inc. (Roux) performed data review for the data packages generated by Enthalpy Analytical (Job Numbers: 440387; 440467; 440524; 440586; 440614; 440615; 440864; 441037; 441161; 441393; 442005; 443051; and 440957). Enthalpy Analytical subcontracted the herbicides analyses to Eurofins Calscience LLC in Garden Grove, California. Analytical data for soil and air samples collected by Roux during February 2021 through March 2021 are discussed in this data validation summary report. Laboratory analyses of these samples were performed using USEPA methods.

Analytical data of the samples were validated using Stage 2A data validation as defined in USEPA Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use, OSWER No. 9200.1-85, January 2009. The Stage 2A validation entails verification and validation based on completeness and compliance checks of sample receipt conditions and both sample-related and instrument-related QC results. The Stage 2A data validation was performed in accordance with the guidelines presented in the following USEPA documents:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review, OLEM 9355.0-136, EPA-540-R-2017-002, January 2017.

- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, OLEM 9355.0-135, EPA-540-R-2017-001, January 2017.

A narrative of the review results for the analytical reports can be found below. Only issues potentially affecting data usability are discussed in this report.

It should be noted that samples used for the matrix spike and matrix spike duplicate (MS/MSD) may not be from the Site. The QC results for such non-project samples are not discussed below because these QC results do not impact the usability of the site-specific data. In addition, laboratory control spike (LCS) recoveries were sometimes high when there was not an associated positive result in the site-specific samples. In this case, the QC results for such biased high indicators are not discussed below because these QC results do not impact the usability of the site-specific data. Likewise, exceedance of control limits the relative percent difference for duplicate results does not impact the usability of non-detect results.

Data Deliverable Completeness

Level 2 data packages were provided. The Level 2 data package includes sample and QC reporting forms that are sufficient for the Stage 2A data validation.

Sample Receipt/Holding Times

Samples were received by the laboratories generally intact and under proper COCs. Samples were prepared and analyzed within the required holding times except as noted below.

TPH-Extractables by GC (USEPA Method 8015M)

Low recoveries were observed for diesel C10-C28 in the MS/MSD of samples 440387-001, 440467-002, and 440524-001. The results for this analyte in the parent samples are estimated.

One surrogate recovery for sample 440387-021 is above criteria. The TPH results for this sample are potentially biased high.

ORO C28-C44 was detected above the RL in the method blank at 12 mg/kg. Associated sample results less than ten times the method blank concentration should be qualified "B" due to potential blank contamination.

Semivolatile Organics by GC/MS (EPA 8270C)

The analytical QC met criteria.

Pesticides (EPA 8081A)

The following MS/MSD recoveries are below criteria:

- 4,4'-DDE, 4,4'-DDT, and methoxychlor in sample 440615-001;
- Endrin ketone in sample 441037-001; and
- 4'-DDE and 4,4'-DDT in sample 441161-002.

The results for these analytes in the parent samples are estimated.

The following MS/MSD RPDs are below criteria: methoxychlor in sample 441161-002. The results for this analyte in the parent sample are estimated.

PCBs (EPA 8082)

The analytical QC met criteria.

Metals (EPA 6010B and EPA 7471A)

The following MS/MSD recoveries are below criteria:

- Antimony in samples 440387-001, 440524-001, 441161-020;
- Barium and antimony in samples 440586-050 and 443051-030;
- Antimony and zinc in sample 440586-006; and
- Nickel and antimony in sample 441037-002.

The results for these analytes in the parent samples are estimated.

The following MS/MSD recoveries are above criteria:

- Barium, copper, lead, molybdenum, nickel, and zinc in sample 440387-001;
- Copper, lead, molybdenum, and zinc in sample 440524-001;

- Copper, lead, and zinc in sample 440586-050;
- Barium and lead in sample 441037-002; and
- Barium and molybdenum in sample 441161-020.

The results for these analytes in the parent samples are estimated.

The following duplicate RPDs are outside criteria:

- Zinc in sample 441037-002; and
- Chromium, copper, and nickel in sample 443051-030.

The results for these analytes in the parent samples are estimated.

The following initial calibration verification are outside criteria:

- Mercury for Job Number 440467;
- Zinc for Job Number 440524;
- Mercury for Job Number 440864; and
- Copper for Job Number 441161.

The associated sample results qualified with “b” in the laboratory data, which indicates that the results are estimated.

The interference check standard for lead is outside criteria for Job Number 443257. The associated sample results qualified with “b” in the laboratory data, which indicates that the results are estimated.

Chlorinated Herbicides (EPA 8151A)

The following LCS/LCSD RPDs are outside criteria:

- 2,4-DB for Job Numbers 440467, 440524, 441037; and

The associated sample results for these analytes are estimated.

The following LCS/LCSD recoveries are outside criteria: dinoseb for Job Numbers 441037, 441161. The associated sample results for this analyte are potentially biased low.

The samples for Job Numbers 441037, 441161 were extracted outside holding time for chlorinated herbicides. The chlorinated herbicides results for these Job Numbers may be biased low.
