**RE: FOCUSED TRAFFIC IMPACT ANALYSIS – AMETHYST CROSSING DEVELOPMENT –  
VICTORVILLE, CALIFORNIA**

Dear Mr. Younessi,

**David Evans and Associates, Inc.** is pleased to submit this Focused Traffic Impact Analysis Report (TIA) for your proposed Amethyst Crossing Development Project in the City of Victorville, California. The proposed project consists of a Shopping Center, Coffee/Donut Shop with Drive-Through Window, Drive-In Bank, and three Fast-Food Restaurants with Drive-Through Windows. The project is proposed at the southeast corner of Bear Valley Road and Amethyst Road in the City of Victorville, California.

The report examines the traffic impacts specifically for the project and presents recommended traffic improvements. The report also evaluates the impacts of overall growth within the area to assure that cumulative traffic mitigations can be addressed. The report has been prepared in coordination with the City of Victorville Engineering Department requirements and scope of work approved prior to this report.

We are pleased to have been of assistance to you in processing and obtaining approval for the project. If you have any questions or comments, please feel free to contact me at 909-912-7304.

Respectfully submitted,

**David Evans and Associates, Inc.**

A handwritten signature in blue ink, appearing to read 'Jim Daisa', is written over a faint circular stamp.

James M. Daisa, P.E.  
Senior Project Manager

## 1 EXECUTIVE SUMMARY

This executive summary presents the findings and recommendations of this study.

### 1.1 City of Victorville Level of Service Standard

The City's peak hour level of service standard is LOS D. An intersection found to operate at a LOS E with an Intersection Capacity Utilization (ICU) value greater than 0.95 or Highway Capacity Manual (HCM) delay worse than LOS D (i.e., LOS E or F) is considered deficient.

If a development project would worsen the peak hour level of service to a LOS E or LOS F, it is considered an impact that requires improvement to return the level of service to pre-project conditions. If a development project would worsen the level of service at an already deficient intersection by two percent or more, it is considered a significant impact that requires improvement to return the level of service to pre-project conditions.

### 1.2 Proposed Project-Specific Access, Roadway, and Off-Site Intersection Improvements

The project proposes to construct several roadway and intersection improvements on Bear Valley Road and Amethyst Road concurrent with the construction of the project site. These improvements include right-of-way dedication and widening of Bear Valley Road and Amethyst Road frontages to meet City cross-section standards for each road's functional classification and access driveways including turning lanes as needed to safely accommodate entering traffic.

The dedication of right-of-way and widening of Bear Valley Road and Amethyst Road along the project's frontages allows for additional lane addition improvements at the off-site intersection of these two roads and at the intersection of Bear Valley Road and Pluto Drive. Because the project would not be constructed without these proposed improvements, the analysis of project conditions includes the proposed improvements at off-site intersections and site access driveways.

The proposed project-specific access, roadway, and off-site intersection improvements are described in detail in Chapter 4, Section 4.1.

### 1.3 Level of Service Comparison With and Without the Proposed Project

#### 1.3.1 *Determination of Project-Specific Impacts*

A comparison of level of service between existing and existing plus project conditions is used to identify impacts that are solely caused by the project and for which the project is responsible for mitigating. These two scenarios exclude any estimated traffic from planned and approved, but not yet built, developments allowing for an unadulterated assessment of project impacts.

The comparison of existing and existing plus project conditions (see Chapters 3 and 4) identifies one intersection where the addition of the project causes the intersection level of service to change from a LOS B to a LOS F. Currently the intersection of Bear Valley Road and Pluto Drive is a "T" intersection with Pluto Drive controlled by a stop sign and no control on Bear Valley Road. This intersection allows all movements into and out of Pluto Drive.

#### 1.3.2 *Determination of Cumulative Impacts*

A comparison of level of service between background or future conditions and future plus project conditions is used to identify impacts that cumulative in nature due to the contribution of traffic from planned and approved, but not yet built, developments (see Chapters 5 through 8). A cumulative impact is typically

mitigated by developments sharing in the cost of the mitigation measure.

The comparison of background (2023) and background plus project conditions resulted in identifying the same impacted intersection of Bear Valley Road and Pluto Drive. Since this intersection is already considered a project-specific impact it is not a cumulative impact under future conditions. Similarly, the comparison of future (2033) and future plus project conditions resulted in the same impact.

### *1.3.3 Recommendations for Mitigating Level of Service Impacts*

The project proposes to modify the intersection of Bear Valley Road and Pluto Drive by adding a south leg (project driveway) and forming a four-leg intersection with both minor streets (Pluto Drive and project driveway) controlled by a stop sign. The level of service for this type of intersection (side-street stop controlled) is measured by the level of service for the worst side street movement. In this case (and all subsequent project scenarios), the movements experiencing the highest delay and worse level of service are the project's northbound through and left movement.

It is common for a minor stop-controlled street intersecting a multi-lane arterial to operate at a poor level of service during peak hours. Drivers exiting the minor street must identify adequate gaps in the traffic flow in both directions of the uncontrolled major street to complete their maneuver. Depending on the volume of traffic exiting the minor street and the existence of alternative exits, it may not be desirable to mitigate the level of service impact for the minor street. A common mitigation is to install a traffic signal but only if the intersection meets specific criteria or warrants. If warrants are not met, installation of a traffic signal causes more delays (and crashes) than if the intersection was left unmitigated.

The south leg of the Bear Valley Road and Pluto Drive intersection is a case where the exiting volumes are relatively low compared to the major street through traffic and the intersection does meet the planning warrant (Warrant 3 Peak Hour) as published in the California Manual on Uniform Traffic Control Devices (MUTCD). Although the intersection may meet other MUTCD warrants under existing plus project or future plus project conditions, the intersection would need to be monitored for signal warrants other than Warrant 3 over time to determine if a signal should be considered in the future.

**This study recommends maintaining the Bear Valley Road / Pluto Drive intersection as proposed by the project without mitigation. Feasible mitigation such as a traffic signal would cause substantial secondary impacts on the majority of vehicles using the intersection. Further, the project proposes multiple site access points giving drivers a choice of using an access driveway experience less delay.**

## 2 INTRODUCTION

This report identifies traffic impacts and recommends traffic mitigation for the proposed development project located at the southeast corner of Bear Valley Road and Amethyst Road in the City of Victorville, California. The project consists of a Shopping Center, Coffee/Donut Shop with Drive-Through Window, Drive-In Bank, and three Fast-Food Restaurants with Drive-Through Windows, located in the City of Victorville. **Figure 1** illustrates the vicinity map, and **Figure 2** illustrates the proposed project site plan.

The intent of this report is to evaluate potentially significant traffic impacts caused by the proposed development in accordance with the City of Victorville’s traffic impact study requirements and under the following scenarios as outlined in the traffic scope approved by the City’s Department of Public Works:

- Existing Conditions - **Chapter 3**
- Existing plus Project Conditions - **Chapter 4**
- Background Conditions (Year 2023) - **Chapter 5**
- Background plus Project Conditions- **Chapter 6**
- Future Conditions (Year 2033) - **Chapter 7**
- Future plus Project Conditions (Year 2033) - **Chapter 8**

### 2.1 Scenario Definitions

**Existing Conditions.** This scenario represents existing transportation conditions at the time this report was prepared. Data includes traffic counts collected in July 2021. This scenario is used as the baseline condition from which to measure project-specific impacts.

**Existing Plus Project Conditions.** This scenario represents transportation conditions as if the project were built and occupied today. This scenario is intended to identify potentially significant impact (requiring mitigation) when compared to existing conditions without any unrelated transportation system improvements or other development. Impacts identified in this scenario are considered “project-specific”—impacts that are the sole responsibility of the project to mitigate.

**Background Conditions (Year 2023).** This scenario represents conditions at the time the project is anticipated to be fully constructed and occupied (known as buildout year 2023) but without traffic generated by the project. This scenario is comprised of an ambient growth, a general rate of growth in traffic from overall regional growth but not specific to any nearby development (assumed to be 3.5% annually for this study).

**Project Conditions (Year 2023).** This scenario adds the project’s estimated traffic generation at buildout (2023) to the Background Conditions scenario described above. Impacts identified in this near-term scenario are considered “cumulative” impacts—impacts that the project contributes to, but does not solely cause, and may be responsible for a fair-share of the cost to implement any mitigation measures.

**Future Conditions (Year 2033).** This scenario represents conditions at the horizon year 2033 but without traffic generated by the project. This scenario is comprised of an ambient growth, a general rate of growth in traffic from overall regional growth but not specific to any nearby development (assumed to be 3.5% annually for this study).

**Future with Project Conditions (Year 2033).** This scenario adds the project’s estimated traffic generation to the Future Conditions scenario described above. Impacts identified in this scenario are considered “cumulative” impacts—impacts that the project contributes to, but does not solely cause, and may be responsible for a fair-share of the cost to implement any mitigation measures.

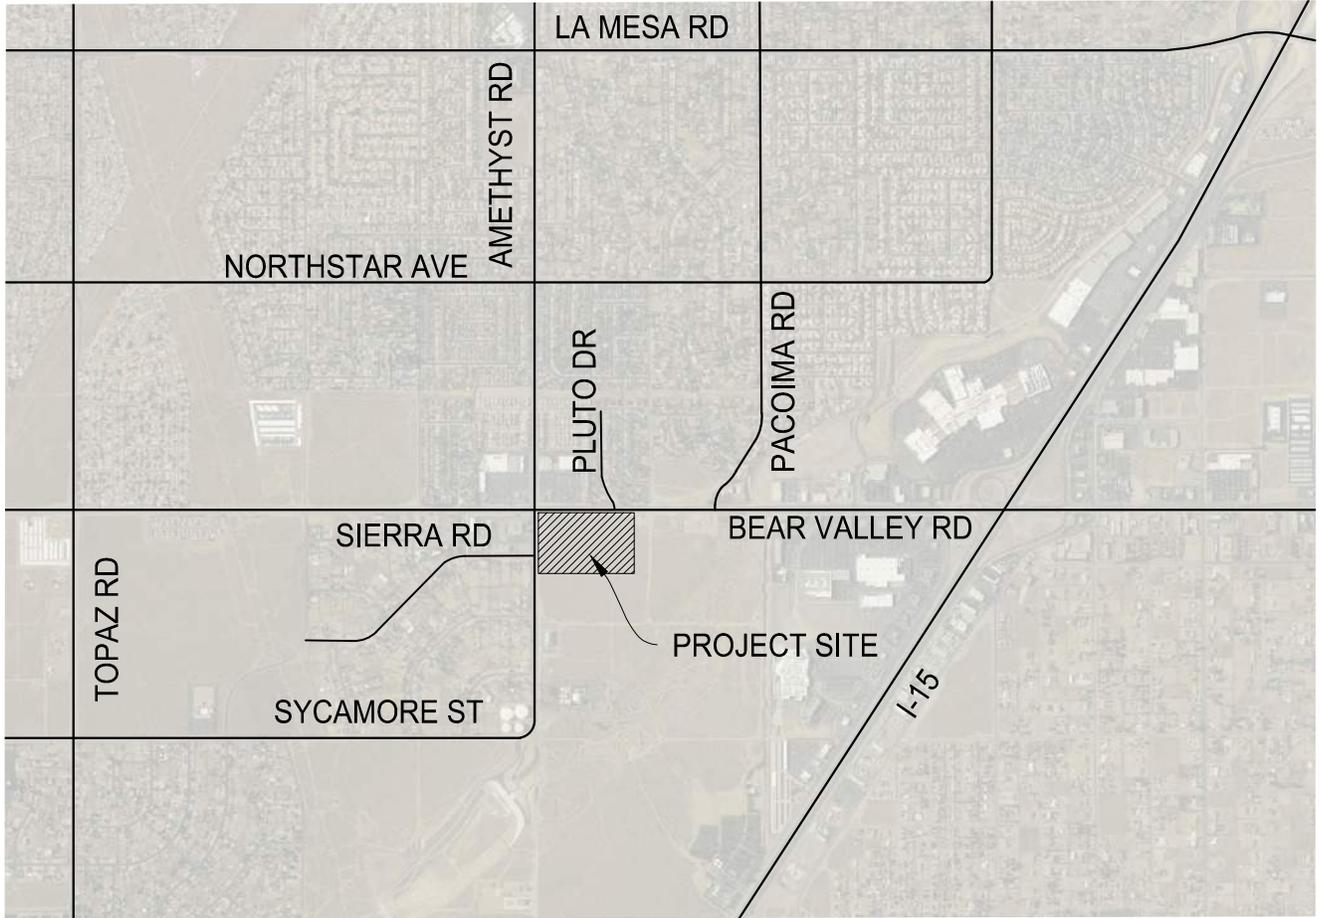

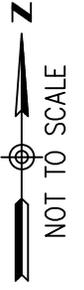

FIGURE 1: VICINITY MAP  
AMETHYST CROSSING  
VICTORVILLE, CALIFORNIA

### 3 EXISTING CONDITIONS

The project site is currently vacant and undeveloped property. It is bounded to the north by Bear Valley Road and commercial properties, to the south by vacant/undeveloped properties, to the west by Amethyst Road and commercial properties, and to the east by vacant/undeveloped properties

#### 3.1 Existing Street System

The following roadways provide local and regional access to the project within the study area:

**Bear Valley Road** is identified as a super arterial street on the City of Victorville circulation map. It is an east-west five-lane road (two in each direction, a continuous two-way-left-turn-lane (CTWLTL) and turn pockets at key intersections) in the project area study area. Posted speed limit of 50 mph in the project area study area.

**Amethyst Road** is identified as a super arterial street on the City of Victorville circulation map. It is a north-south four-lane road (two in each direction and turn pockets at key intersections) in the project area study area. Posted speed limit of 50 mph in the project area study area.

**Pacoima Road** is identified as a collector street on the City of Victorville circulation map. It is a north-south two-lane (one in each direction) street in the project area study area. Posted speed limit of 40 mph in the project area study area.

**Pluto Drive** is a local north-south two-lane (one in each direction) street. Pluto Drive will provide direct access to the project site. Posted speed limit of 25 mph in the project area study area.

**Sierra Road** is a local east-west two-lane (one in each direction) street. Sierra Road will provide direct access to the project site.

#### 3.2 Site Access and Study Intersections

Access to the site is proposed to at driveways along Amethyst Road, Bear Valley Road, and on an extension of Pluto Drive south of Bear Valley Road. The proposed Amethyst Road driveways include:

- A full access driveway is proposed at Project Driveway “A” on Amethyst Road. Project Driveway “A” is directly aligned with Sierra Road on the west side of Amethyst Road forming a four-leg intersection. The driveway centerline is located approximately 488 feet south of Bear Valley Road.

Proposed improvements to Amethyst Road include widening the east side of the road and restriping the lanes to provide a northbound left turn lane into Sierra Road and a continuous two-way center turn lane north of Sierra Road to accommodate southbound left turns into Project Driveways “A” and “B”.

- A full access driveway is proposed at Project Driveway “B” on Amethyst Road located about 320 feet south of Bear Valley Road at the midpoint between Sierra Road and a private driveway to the Shops at Bear Valley shopping center, about 100 feet north of Sierra Road and 100 feet south of the shopping center driveway.

Proposed improvements to Amethyst Road include widening the east side of the road to accommodate a northbound left turn lane into Sierra Road and continuous two-way center turn lane north of Sierra Road.

The proposed Bear Valley Road driveways include:

- Project Driveway “C” is proposed about 220 east of Amethyst Road. This driveway is proposed to restrict movements to right turn in / right turn out. enforced by a raised curb median on Bear Valley Road.

- Project Driveway “D” is proposed about 620 feet east of Amethyst Road. This driveway is also proposed to restrict movements to right turn in / right turn out enforced by a raised curb median on Bear Valley Road.
- The project proposes to extend Pluto Drive south of Bear Valley Road along the project’s eastern frontage and construct three driveway curb cuts accessing the site. Until the vacant property to the east develops, or Pluto Drive is extended further south to connect with other streets, the extension of Pluto Drive serves as an access driveway for the project where it intersects Bear Valley Road. The four-leg intersection created by the extension of Pluto Drive is proposed to provide full access to the project and the north side of Pluto Road.

Improvements to Bear Valley Road include widening the south side of the road to provide an eastbound right turn lane and a westbound left turn lane into Pluto Drive. The widening of Bear Valley Road along the project’s frontage provides width for eastbound right turn lanes at Project Driveways “C” and “D”

The study area for determining level of service impacts includes three existing intersections and four future project driveway intersections:

1. Bear Valley Road / Amethyst Road
2. Bear Valley Road / Pluto Drive
3. Bear Valley Rd / Pacoima Rd
4. Amethyst Road / Sierra Road/ Project Driveway “A”
5. Amethyst Road / Project Driveway “B”
6. Bear Valley Road / Project Driveway “C”
7. Bear Valley Road / Project Driveway “D”

The intersection of Amethyst Road at Bear Valley Road is signalized. The existing and future intersections of Amethyst Road at Pluto Drive, Bear Valley Rd at Pacoima Rd, and Amethyst Road at Sierra Road are side-street stop controlled.

### 3.3 Existing Traffic Volumes

Turn movement counts were conducted in July 2021 by Newport Traffic Studies, an independent traffic data collection company. These counts were collected during the AM (7:00-9:00 AM) and PM (4:00-6:00 PM) peak periods. The raw turning movement counts are included in **Appendix A** of this study. **Figure 3** illustrates the calibrated existing peak hour traffic volumes in the study area.

### 3.1 Capacity Analysis Methodology

Intersection capacity analyses were conducted using Synchro software<sup>1</sup>, which implements the methods of the Highway Capacity Manual, 6<sup>th</sup> Edition (HCM 6)<sup>2</sup> used in this report. The intersection capacity analyses utilize existing intersection geometrics and existing and forecasted traffic volumes in analyzing AM and PM peak hour intersection operating conditions. The traffic analysis methodology concepts presented in Chapters

---

1 Trafficware Ltd, Version 10.

2 Transportation Research Board, Washington D.C., 2010.

19 and 20 of the Highway Capacity Manual (HCM 6) were utilized to calculate intersection Level of Service (LOS) based on the average control delay (in seconds per vehicle) of vehicles utilizing the intersections.

The analysis determines a LOS that quantitatively describes the operating characteristics of signalized intersections. **Table 3-1** provides LOS thresholds for signalized intersections as provided in the HCM 6 Chapter 19.

Table 3-1: HCM 6 – LOS Criteria for Signalized Intersections

Control Delay (seconds /veh)	LOS by Volume-to-Capacity Ratio <sup>a</sup>	
	≤1.0	>1.0
≤ 10	A	F
> 10 - 20	B	F
> 20 - 35	C	F
> 35 - 55	D	F
> 55 - 80	E	F
> 80	F	F

Note: <sup>a</sup> For approach-based and intersection-wide assessments, LOS is defined solely by control delay.  
Source: Highway Capacity Manual 6<sup>th</sup> Edition, Exhibit 19-8.

The LOS for a Two-Way Stop Controlled (TWSC) intersection is determined by the computed or measured control delay. The LOS is determined for each minor street movement (or shared movement) by using the criteria provided in **Table 3-2** referenced from HCM 6 Chapter 20.

Table 3-2: HCM 6 – LOS Criteria for TWSC

Control Delay (seconds/vehicle)	LOS by Volume-to-Capacity Ratio	
	Volume / Capacity Ratio ≤ 0.99	Volume / Capacity Ratio < 1.0
0 - 10	A	F
> 10 - 15	B	F
> 15 - 25	C	F
> 25 - 35	D	F
> 35 - 50	E	F
> 50	F	F

Note: The LOS criteria apply to each lane on each approach of the stop-controlled minor street. LOS is not calculated for major-street approaches or for the intersection as a whole.  
Source: Highway Capacity Manual 6<sup>th</sup> Edition, Exhibit 20-2.

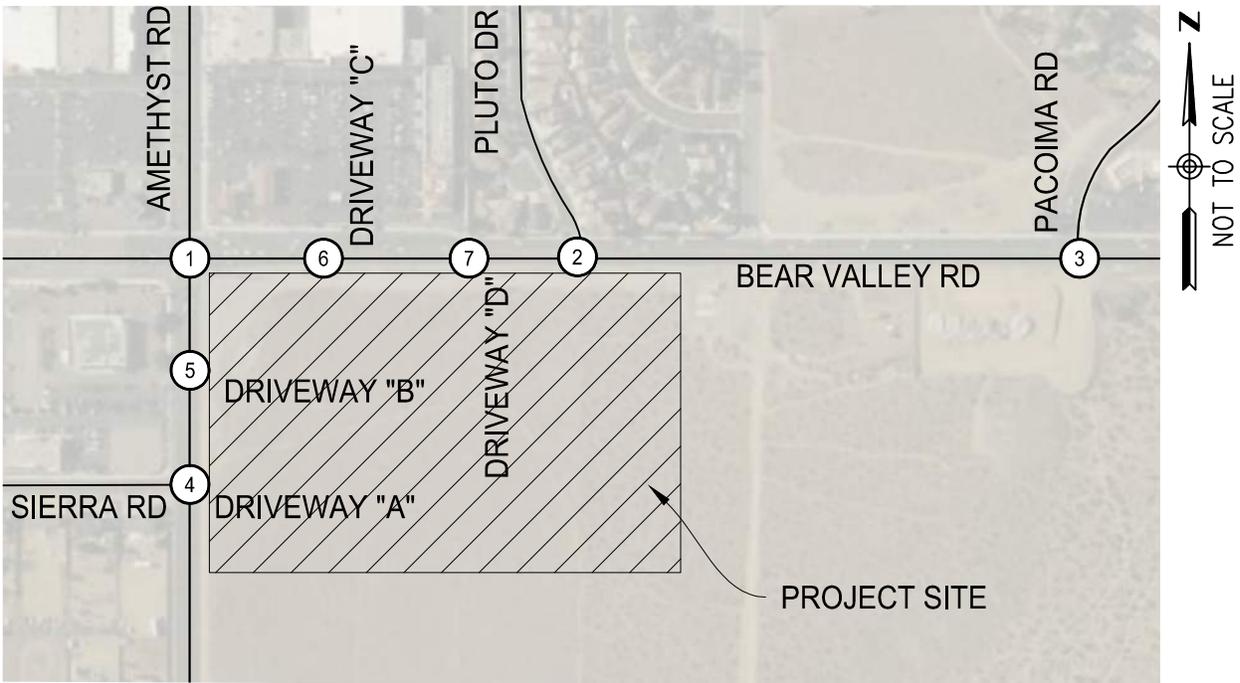

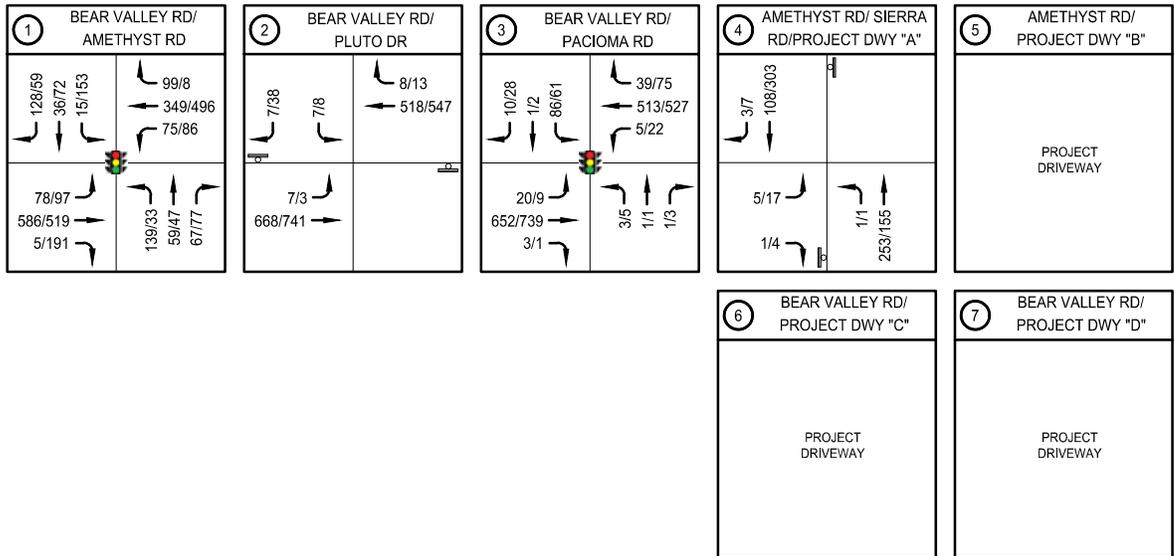

### Current City Policy on Intersection Performance

The City's peak hour level of service standard is LOS D. An intersection found to operate at a LOS E with an Intersection Capacity Utilization (ICU) value greater than 0.95 or Highway Capacity Manual (HCM) delay worse than LOS D (i.e., LOS E or F) is considered deficient.

If a development project would worsen an intersection peak hour LOS to E or worse, it is considered a significant impact that must be mitigated. If a development project would worsen an already deficient intersection by two percent or more, it is considered a significant impact that must be mitigated.

#### 3.1 Existing Traffic Analysis

Existing intersection capacity and LOS analyses are based on the existing intersection geometrics and the AM and PM peak hour traffic volumes discussed earlier. The results of the analysis are shown in **Table 3-3** and provided in **Appendix B**.

As shown in **Table 3-3** under existing conditions, the study intersections operate at LOS D or better with the existing geometrics illustrated in **Figure 4**.

### 3.2 Existing Traffic Signal Warrant Analysis

A traffic signal warrant analysis was completed for the side street stop-controlled intersection of Bear Valley Rd and Pluto Dr. This study reviewed Warrant 3 (Peak Hour) included in the most recent California Manual on Uniform Traffic Control Manual (CA MUTCD, 2014). The intersection of Bear Valley Rd and Pluto Dr does not meet the peak hour warrant for the installation of a traffic signal. The traffic signal warrant analysis is provided in **Appendix C**.

#### 4 EXISTING PLUS PROJECT CONDITIONS

Existing plus project conditions identifies impacts to the City’s level of service standards when compared to existing conditions without any unrelated transportation system improvements or other development. Impacts identified in this scenario are considered “project-specific”—impacts that are the sole responsibility of the project to mitigate.

##### 4.1 Site Access and Project-Specific Roadway Improvements

The analysis of intersection level of service in the future project scenarios includes site access and roadway and off-site intersection improvements as part of the project. These improvements are described in the following sections.

###### *Project Access*

Access to the site is proposed to at driveways along Amethyst Road, Bear Valley Road, and on an extension of Pluto Drive south of Bear Valley Road. The proposed Amethyst Road driveways include:

- A full access driveway is proposed at Project Driveway “A” on Amethyst Road. Project Driveway “A” is directly aligned with Sierra Road on the west side of Amethyst Road forming a four-leg intersection. The driveway centerline is located approximately 488 feet south of Bear Valley Road.

Proposed improvements to Amethyst Road include widening the east side of the road and restriping the lanes to provide a northbound left turn lane into Sierra Road and a continuous two-way center turn lane north of Sierra Road to accommodate southbound left turns into Project Driveways “A” and “B”.

- A full access driveway is proposed at Project Driveway “B” on Amethyst Road located about 320 feet south of Bear Valley Road at the midpoint between Sierra Road and a private driveway to the Shops at Bear Valley shopping center, about 100 feet north of Sierra Road and 100 feet south of the shopping center driveway.

Proposed improvements to Amethyst Road include widening the east side of the road to accommodate a northbound left turn lane into Sierra Road and continuous two-way center turn lane north of Sierra Road.

The proposed Bear Valley Road driveways include:

- Project Driveway “C” is proposed about 220 east of Amethyst Road. This driveway is proposed to restrict movements to right turn in / right turn out. enforced by a raised curb median on Bear Valley Road.
- Project Driveway “D” is proposed about 620 feet east of Amethyst Road. This driveway is also proposed to restrict movements to right turn in / right turn out enforced by a raised curb median on Bear Valley Road.
- The project proposes to extend Pluto Drive south of Bear Valley Road along the project’s eastern frontage and construct three driveway curb cuts accessing the site. Until the vacant property to the east develops, or Pluto Drive is extended further south to connect with other streets, the extension of Pluto Drive serves as an access driveway for the project where it intersects Bear Valley Road. The four-leg intersection created by the extension of Pluto Drive is proposed to provide full access to the project and the north side of Pluto Road.

Improvements to Bear Valley Road include widening the south side of the road to provide an eastbound right turn lane and a westbound left turn lane into Pluto Drive. The widening of Bear Valley Road along the project's frontage provides width for eastbound right turn lanes at Project Driveways "C" and "D".

#### *Project-Specific Roadway Improvements*

1. Frontage Improvements on Bear Valley Road. The project will be conditioned to improve its frontage along Bear Valley Road. The project proposes to dedicate the necessary right-of-way and construct the following improvements:
  - a. Dedicate the right-of-way to accommodate the half-width of the 124-foot right-of-way for a super arterial (62-feet) per the City's Circulation Map (February 2018).
  - b. Construct curb/gutter, sidewalk, and pavement along the project's frontage per City standards.
  - c. Construct a raised curbed median along Bear Valley Road from Amethyst Road east to Pluto Drive.
  - d. Stripe a 5-foot bike lane in the eastbound direction of Bear Valley Road.
2. Frontage Improvements on Amethyst Road. The project will be conditioned to improve its frontage along Amethyst Road. The project proposes to dedicate the necessary right-of-way and construct the following improvements:
  - a. Dedicate the right-of-way to accommodate the half-width of the 124-foot right-of-way for a super arterial (62-feet) per the City's Circulation Map (February 2018).
  - b. Construct curb/gutter, sidewalk, and pavement along the project's frontage per City standards.
  - c. Stripe a 5-foot bike lane in the northbound direction of Amethyst Road.
3. Extension of Pluto Drive South of Bear Valley Road. The project proposes to construct an extension of Pluto Drive from Bear Valley Road south to the southern edge of the project's property line where it will terminate as a stub for potential future extension by others. Within a 60-foot right-of-way, the project will construct curb, gutter and sidewalk per City standards on the west side and construct curb and gutter on the east side of Pluto Drive, and provide 40 feet of pavement for two-way traffic. Curb cuts on the extension of Pluto Drive provide access to the site.

#### *Project Access Intersection Improvements*

The project proposes to construct the following access intersections on the improved frontages of Bear Valley Road and Amethyst Road.

1. Project Driveway "A" on Amethyst Road at Sierra Road. The project proposes to construct the east leg of the Amethyst Road / Sierra Road intersection as a full access project driveway as described under Project Access.
  - a. Construct a dedicated northbound left turn lane into Sierra Rd.
  - b. Stripe a two way left turn lane on Amethyst Road north of Sierra Road.
2. Project Driveway "B" on Amethyst Road. The project proposes to construct a full access driveway on Amethyst Road as described under Project Access.

- a. Construct a northbound right turn lane into Project Driveway “B” which extends to Bear Valley Road.
- b. Stripe a two way left turn lane along Amethyst Rd between Bear Valley Road and Sierra Road.
3. Project Driveway “C” on Bear Valley Road. The project proposes to construct a right in/right out only driveway Bear Valley Road as described under Project Access.
  - a. Construct a dedicated eastbound right turn lane into Project Driveway “C”.
4. Project Driveway “D” on Bear Valley Road. The project proposes to construct a right in/right out only driveway on Bear Valley Road as described under Project Access.
  - a. Construct a dedicated eastbound right turn lane into Project Driveway “D”.

*Project-Specific Off-Site Intersection Improvements*

The dedication of right-of-way and widening of Bear Valley Road and Amethyst Road along the project’s frontage allows for improvements at the off-site intersection of these two roads and at the intersection of Bear Valley Road and Pluto Drive. Table 4-1 describes the lane geometry and traffic control improvements as used in the capacity analyses of project conditions.

Table 4-1: Proposed Project-Specific Off-Site Intersection Improvements

Intersection	Lane Geometry Improvements
Bear Valley Road / Amethyst Road	<p>The following lane additions can be implemented by revising the intersection’s pavement markings without land acquisition or widening of the roads outside of the project’s frontages:</p> <ul style="list-style-type: none"> <li>• Add a second eastbound left turn lane onto Amethyst Rd</li> <li>• Add a second westbound left turn lane onto Amethyst Rd</li> <li>• Add a second northbound left turn lane onto Bear Valley Rd</li> <li>• Add a northbound right turn lane onto Bear Valley Rd</li> <li>• Add a second southbound left turn lane onto Bear Valley Rd</li> <li>• Convert the existing north-south split phasing to provide protected left turn movements in the north-south direction</li> </ul>
Bear Valley Road / Pluto Drive	<ul style="list-style-type: none"> <li>• Construct a dedicated eastbound right turn lane into Pluto Drive from Bear Valley Road</li> <li>• Provide a westbound left turn lane into Pluto Drive from Bear Valley Road</li> <li>• Extend the existing eastbound left turn lane to a length of about 200 feet</li> </ul>

**4.2 Project Trip Generation**

The trip generation rates for the site were obtained from the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition. Land use categories for estimating trips include Shopping Center (ITE Land Use 820), Fast-Food Restaurant with Drive-Through Window (ITE Land Use 934), Coffee/Donut Shop with Drive-Through Window (ITE Land Use 937), and Drive-In Bank (ITE Land Use 912).

Pass-by factors for Shopping Center (ITE Land Use 820) and Fast-Food Restaurant with Drive-Through Window (ITE Land Use 934) were provided by the City of Victorville. Pass-by factors for Drive-In Bank (ITE Land Use 912) were obtained from the ITE Trip Generation Handbook 3<sup>rd</sup> Edition. **Table 4-2** summarizes the estimated trip generation for the project on an average weekday, and during the AM (7-9 AM) and PM (4-6 PM) peak hours.

Table 4-2: Project Trip Generation

Use	Size/ Quantity	Daily	AM			PM		
			In	Out	Total	In	Out	Total
<b>1 Shopping Center - Land Use Category (ITE 820) - 4 Buildings</b>

Source: "Trip Generation Manual, Institute of Transportation Engineers", 10<sup>th</sup> Edition

As presented in **Table 4-2** the project is estimated to generate 6,590 primary daily trips, 455 primary AM peak hour and 513 primary PM peak hour trips.

### 4.3 Project Trip Distribution and Assignment

The estimated project trips are distributed by direction and assigned to the local network of streets. **Figure 5** distribution of the project trips. **Figure 6** illustrates the assignment of primary project trips to study intersections. **Figure 7** illustrates the assignment of pass-by project trips to study intersections. **Figure 8** illustrates the assignment of total project trips to study intersections.

### 4.4 Existing Plus Project Traffic Analysis

The project trip generation, traffic distribution and assignment patterns were used in the intersection capacity analyses to assess potential project impacts to level of service. The project trips were added to existing traffic volumes to derive existing plus project conditions. This scenario's traffic volumes are illustrated in **Figure 9**. Intersection capacity analysis for the study intersections uses the existing lanes geometries and project access

driveway improvements. The results of the analysis are shown in **Table 4-3** and provided in **Appendix B**.

Table 4-3: Intersection Capacity Analysis – Existing Plus Project Conditions

Intersection	Intersection Control Type	Existing Condition				Existing + Project Condition			
		AM Peak		PM Peak		AM Peak		PM Peak	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. Bear Valley Rd / Amethyst Rd	TS	42.7	D	40.2	D	41.9	D	40.8	D
2. Bear Valley Rd / Pluto Dr	SSSC	12.3	B	12.6	B	32.5	D	99.9*	F
3. Bear Valley Rd / Pacoima Rd	SSSC	13.7	B	15.3	B	19.3	B	23.2	C
4. Amethyst Rd / Sierra Rd/ Project Dwy "A"	SSSC/Dwy	10.3	B	12.0	B	12.9	B	15.1	C
5. Amethyst Rd / Project Dwy "B"	SSSC/Dwy	N/A				12.2	B	13.0	B
6. Bear Valley Rd / Project Dwy "C"	SSSC/Dwy	N/A				12.0	B	12.8	B
7. Bear Valley Rd / Project Dwy "D"	SSSC/Dwy	N/A				11.1	B	12.9	B
Dwy – Driveway RI/RO – Right in / Right out only access TS – Traffic Signal Controlled Intersection SSSC – Side Street Stop Controlled Intersection Delay – seconds per vehicle LOS – Level of Service 99.9* - Delay exceeds LOS F									

As presented in **Table 4-3**, under existing plus project conditions, the study intersections would operate at LOS D or better except at Bear Valley Road and Pluto Drive. The construction of the south leg of the intersection and the addition of project traffic causes the PM peak hour to operate at LOS F for the worst movement from the stop-controlled side street. The existing and project geometrics are illustrated in **Figure 10**.

#### 4.5 Existing Plus Project Traffic Signal Warrant Analysis

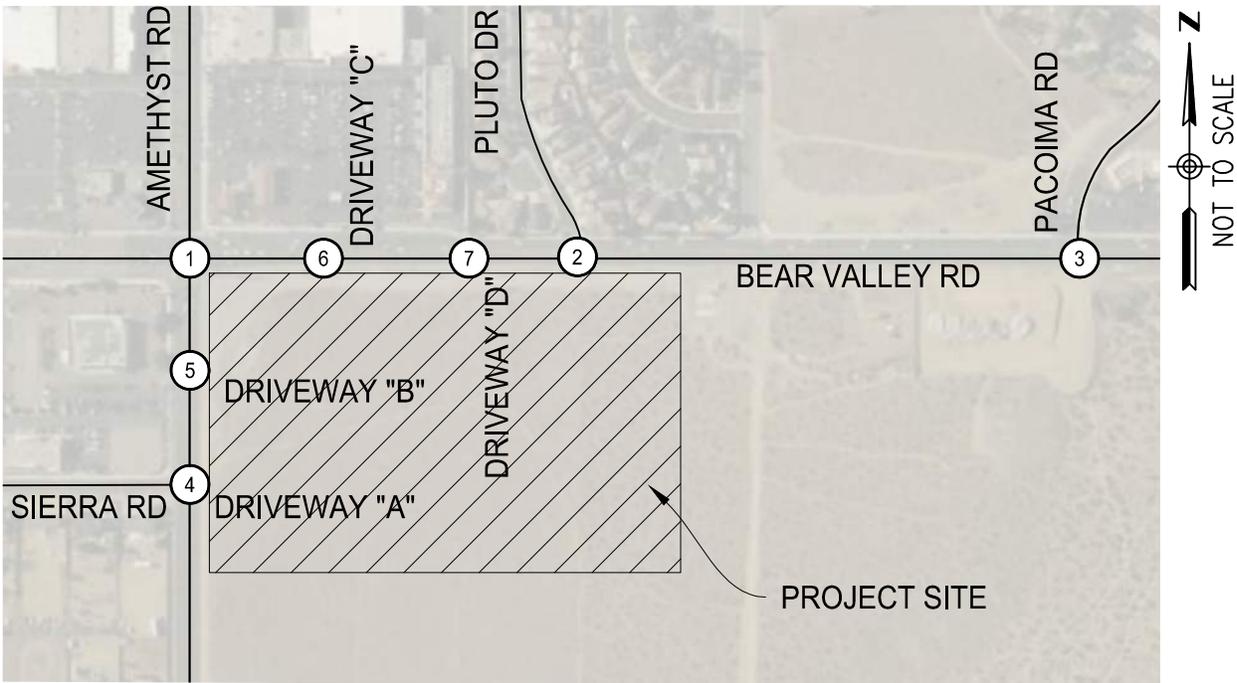

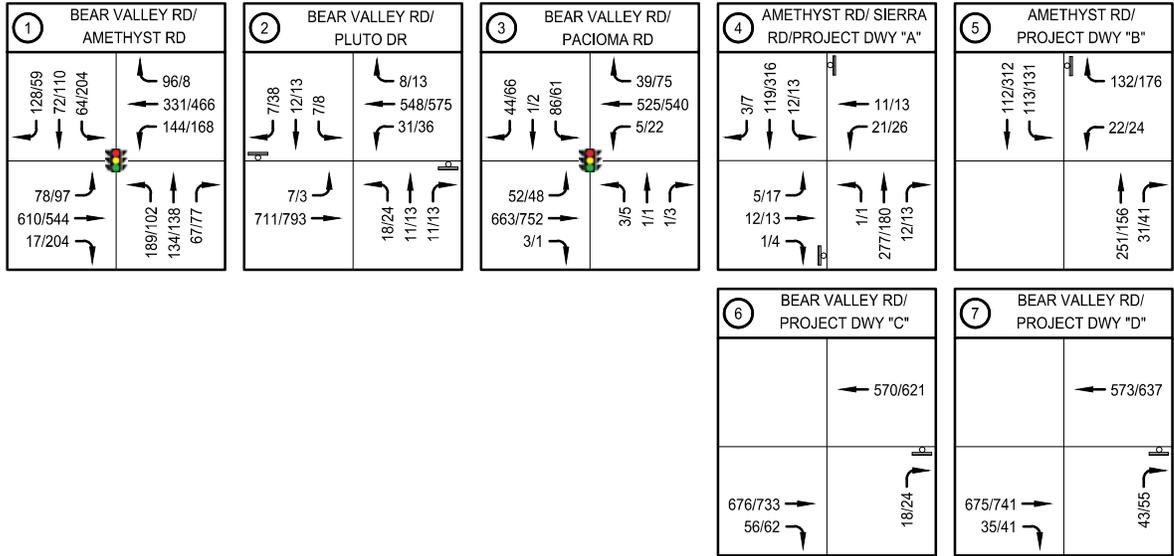

A traffic signal warrant analysis (Warrant 3 - Peak Hour) was completed for the side street stop-controlled intersection of Bear Valley Road and Pluto Drive. The intersection does not meet the peak hour warrant under the existing plus project conditions scenario. The traffic signal warrant analyses are provided in **Appendix C**.

## 5 BACKGROUND CONDITIONS (YEAR 2023)

This scenario represents conditions at the time the project is anticipated to be fully constructed and occupied (known as buildout which is the year 2023 for this project) but without traffic generated by the project. This scenario is comprised of Ambient growth—a general rate of growth in traffic from overall regional growth but not specific to any nearby development.

### 5.1 Ambient Growth Projections

The proposed project is anticipated to be constructed and occupied in the year 2023. As stated earlier in this report near-term growth in traffic is comprised of regional ambient growth and other area projects expected to be completed within the same timeframe. Ambient growth is estimated as a 3.5% annual increase.

### 5.2 Background Conditions (Year 2023) Traffic Analysis

The background condition traffic volumes are illustrated in **Figure 11**. Intersection capacity analysis for this scenario uses existing lanes geometries. The results of the analysis are shown in **Table 5-1** and provided in **Appendix B**.

Table 5-1: Intersection Capacity Analysis – Background Condition

Intersection	Intersection Control Type	AM Peak		PM Peak	
		Delay	LOS	Delay	LOS
1. Bear Valley Rd / Amethyst Rd	TS	43.8	D	41.1	D
2. Bear Valley Rd / Pluto Dr	SSSC	12.7	B	13.2	B
3. Bear Valley Rd / Pacoima Rd	SSSC	15.5	B	17.1	B
4. Amethysts Rd / Sierra Rd	SSSC/Dwy	10.4	B	12.4	B
5. Amethyst Rd / Project Dwy "B"	SSSC/Dwy	N/A			
6. Bear Valley Rd / Project Dwy "C"	SSSC/Dwy	N/A			
7. Bear Valley Rd / Project Dwy "D"	SSSC/Dwy	N/A			
Dwy – Driveway TS – Traffic Signal Controlled Intersection SSSC – Side Street Stop Controlled Intersection Delay – seconds per vehicle LOS – Level of Service 99.9* - Delay exceeds LOS F					

As presented in **Table 5-1**, under the Background Conditions, the study intersection is anticipated to continue to operate at LOS D or better.

### 5.3 Background Conditions Traffic Signal Warrant Analysis

A traffic signal warrant analysis (Warrant 3 - Peak Hour) was completed for the side street stop-controlled intersection of Bear Valley Road and Pluto Drive. The intersection does not meet the peak hour warrant under the background conditions scenario. The traffic signal warrant analyses are provided in **Appendix C**.

## 6 PROJECT TRAFFIC CONDITIONS

This scenario adds the project’s estimated traffic generation at buildout (2023) to the background conditions scenario described above. Level of service impacts identified in this scenario are considered “cumulative” impacts—impacts that the project contributes to, but does not solely cause, and may be responsible for a fair-share of the cost to implement any mitigation measures.

### 6.1 Project Traffic Analysis

The traffic volumes under this scenario are illustrated in **Figure 12**. Intersection capacity analysis for the study intersections uses existing lanes geometries and the proposed project-specific access, roadway, and off-site intersection improvements described earlier. The results of the analysis are shown in **Table 6-1** and provided in **Appendix B**.

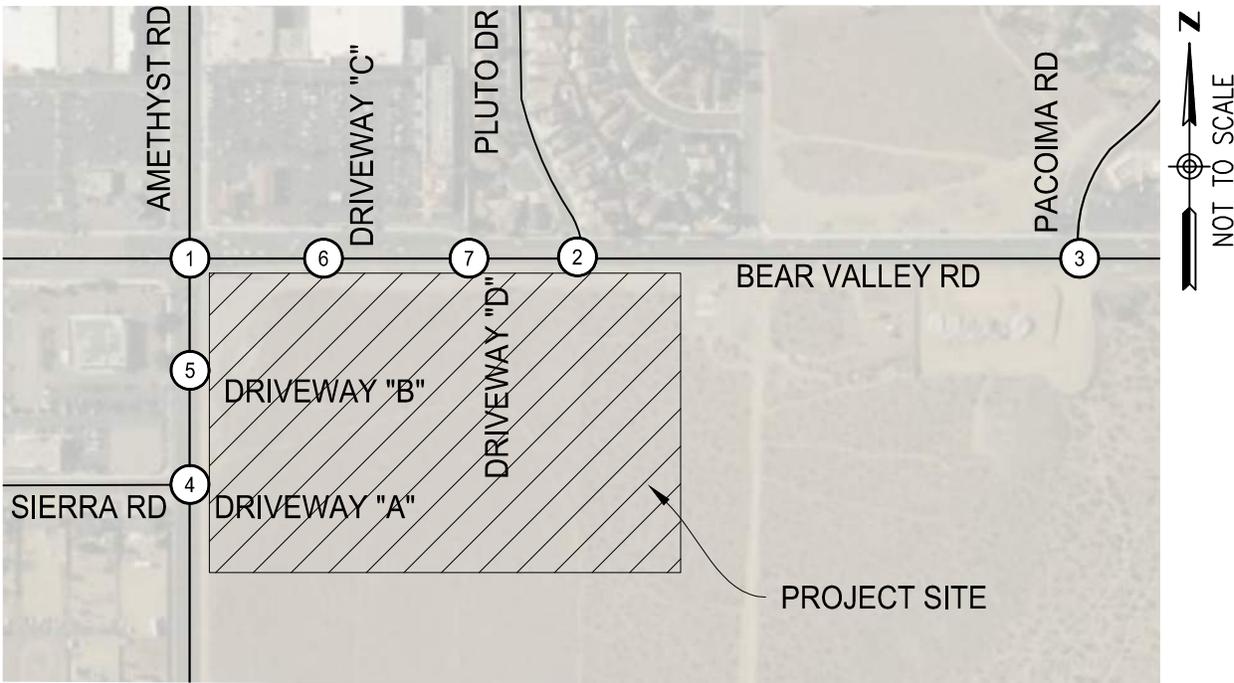

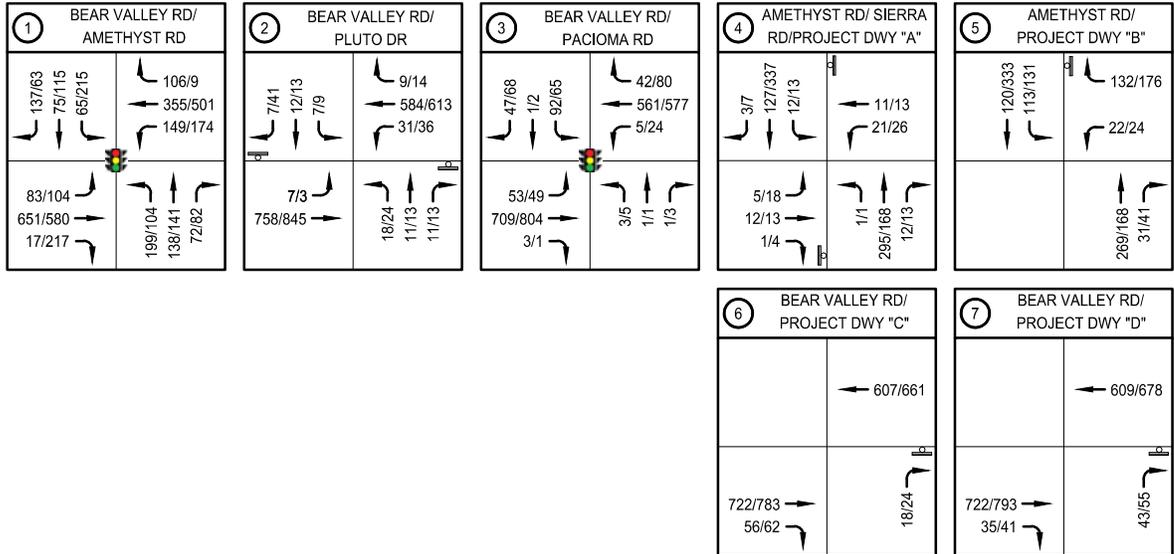

Table 6-1: Intersection Capacity Analysis – Project Conditions

Intersection	Intersection Control Type	Background Conditions				Project Condition			
		AM Peak		PM Peak		AM Peak		PM Peak	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. Bear Valley Rd / Amethyst Rd	TS	43.8	D	41.1	D	42.3	D	41.3	D
2. Bear Valley Rd / Pluto Dr	SSSC	12.7	B	13.2	B	37.4	E	99.9*	F
3. Bear Valley Rd / Pacoima Rd	SSSC	15.5	B	17.1	B	21.8	C	25.1	C
4. Amethyst Rd / Sierra Rd/ Project Dwy “A”	SSSC/Dwy	10.4	B	12.4	B	13.2	B	15.8	C
5. Amethyst Rd / Project Dwy “B”	SSSC/Dwy	N/A				12.4	B	13.2	B
6. Bear Valley Rd / Project Dwy “C”	SSSC/Dwy	N/A				12.3	B	13.2	B
7. Bear Valley Rd / Project Dwy “D”	SSSC/Dwy	N/A				11.3	B	13.4	B
Dwy – Driveway RI/RO – Right in / Right out only access TS – Traffic Signal Controlled Intersection SSSC – Side Street Stop Controlled Intersection Delay – seconds per vehicle LOS – Level of Service 99.9* - Delay exceeds LOS F									

As presented in **Table 6-1**, under the Project Conditions, the study intersections would operate at LOS D or better except at Bear Valley Road / Pluto Drive. The construction of the south leg of the intersection and the addition of project traffic causes the PM peak hour to operate at LOS F for the worst movement from the stop-controlled side street (northbound through and left).

### 6.2 Project Conditions Traffic Signal Warrant Analysis

A traffic signal warrant analysis (Warrant 3 - Peak Hour) was completed for the side street stop-controlled intersection of Bear Valley Road and Pluto Drive. The intersection does not meet the peak hour warrant under the background conditions scenario. The traffic signal warrant analyses are provided in **Appendix C**.

**FIGURE 12: PROJECT TRAFFIC VOLUMES  
AMETHYST CROSSING  
VICTORVILLE, CALIFORNIA**

## 7 FUTURE CONDITIONS (YEAR 2033)

The future conditions scenario represents conditions at the planning horizon year 2033 without traffic generated by the project. This scenario is comprised of an ambient growth—a general rate of growth in traffic reflecting regional growth but not specific to any nearby development (assumed to be 3.5% annually for this study).

### 7.1 Future Traffic Analysis

The future conditions (Year 2033) forecasted traffic volumes are illustrated in **Figure 13**. Intersection capacity analysis for the study intersections uses existing lanes geometries. The results of the analysis are shown in **Table 7-1** and provided in **Appendix B**.

Table 7-1: Intersection Capacity Analysis – Future Conditions (Year 2033)

Intersection	Intersection Control Type	AM Peak		PM Peak	
		Delay	LOS	Delay	LOS
1. Bear Valley Rd / Amethyst Rd	TS	44.2	D	41.4	D
2. Bear Valley Rd / Pluto Dr	SSSC	12.8	B	13.4	B
3. Bear Valley Rd / Pacoima Rd	SSSC	16.1	B	18.1	B
4. Amethysts Rd / Sierra Rd/ Project Dwy "A"	SSSC/Dwy	10.5	B	12.6	B
5. Amethyst Rd / Project Dwy "B"	SSSC/Dwy	N/A			
6. Bear Valley Rd / Project Dwy "C"	SSSC/Dwy	N/A			
7. Bear Valley Rd / Project Dwy "D"	SSSC/Dwy	N/A			
Dwy – Driveway TS – Traffic Signal Controlled Intersection SSSC – Side Street Stop Controlled Intersection Delay – seconds per vehicle LOS – Level of Service 99.9* - Delay exceeds LOS F					

As presented in under the **Table 7-1**, under the future conditions, the study intersections would operate at LOS D or better except Bear Valley Road and Pluto Drive.

### 7.2 Future Conditions Traffic Signal Warrant Analysis

A traffic signal warrant analysis was completed for the side street stop-controlled intersection of Bear Valley A traffic signal warrant analysis (Warrant 3 - Peak Hour) was completed for the side street stop-controlled intersection of Bear Valley Road and Pluto Drive. The intersection does not meet the peak hour warrant under the background conditions scenario. The traffic signal warrant analyses are provided in **Appendix C**.

## 8 FUTURE PLUS PROJECT CONDITIONS (YEAR 2033)

The future plus project conditions scenario adds the project’s estimated traffic generation to the future condition scenario described in **Chapter 7**. Impacts identified in this scenario are considered “cumulative” impacts—impacts that the project contributes to, but does not solely cause, and may be responsible for a fair-share of the cost to implement any mitigation measures.

### 8.1 Future Plus Project Traffic Analysis

The forecasted volumes for this scenario are illustrated in **Figure 14**. Intersection capacity analysis for the study intersections uses the existing lanes geometries and the proposed project-specific access, roadway, and off-site intersection improvements described earlier. Further, the analysis of this scenario assumes completion of a regional improvement to add an additional through lane on Bear Valley Road in each direction. This regional improvement is assumed to be implemented by others in the future but would not be possible without the right-of-way dedication and proposed widening of Bear Valley Road by the project. Therefore, this regional improvement is only assumed under future plus project conditions. **Figure 15** illustrates future plus project lane geometries used in the analysis. The results of the intersection capacity analysis are shown in **Table 8-1** and provided in **Appendix B**.

Table 8-1: Intersection Capacity Analysis – Future Plus Project Conditions (Year 2033)

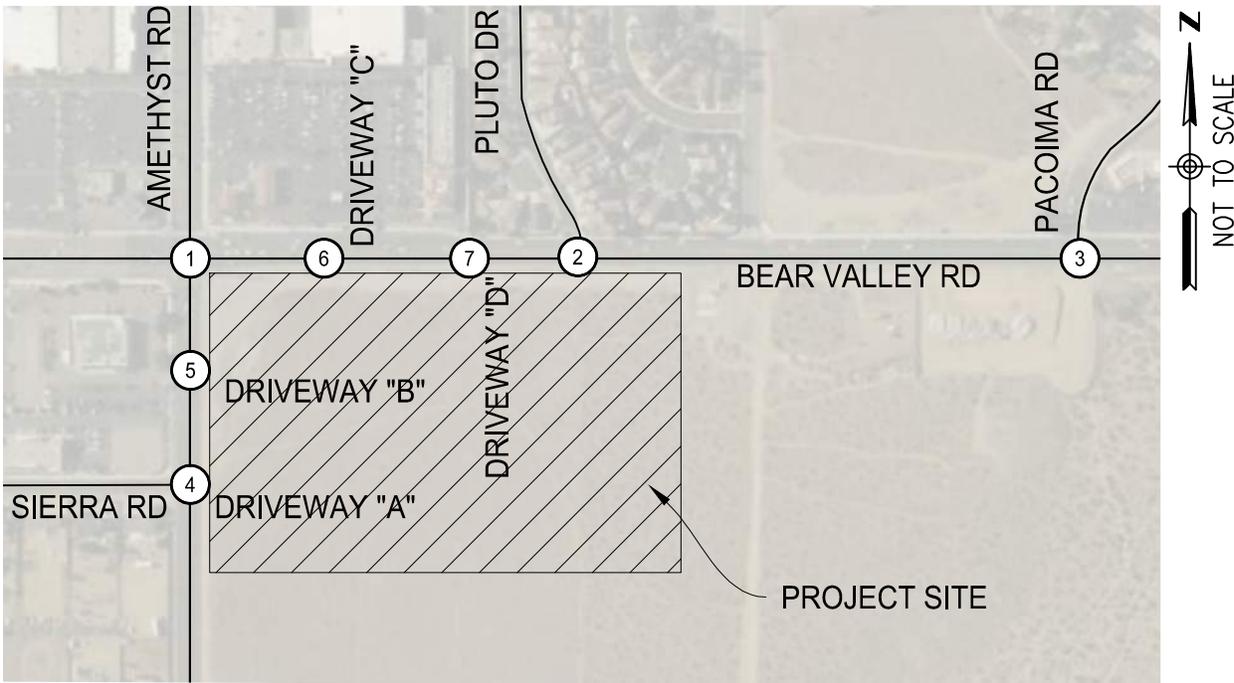

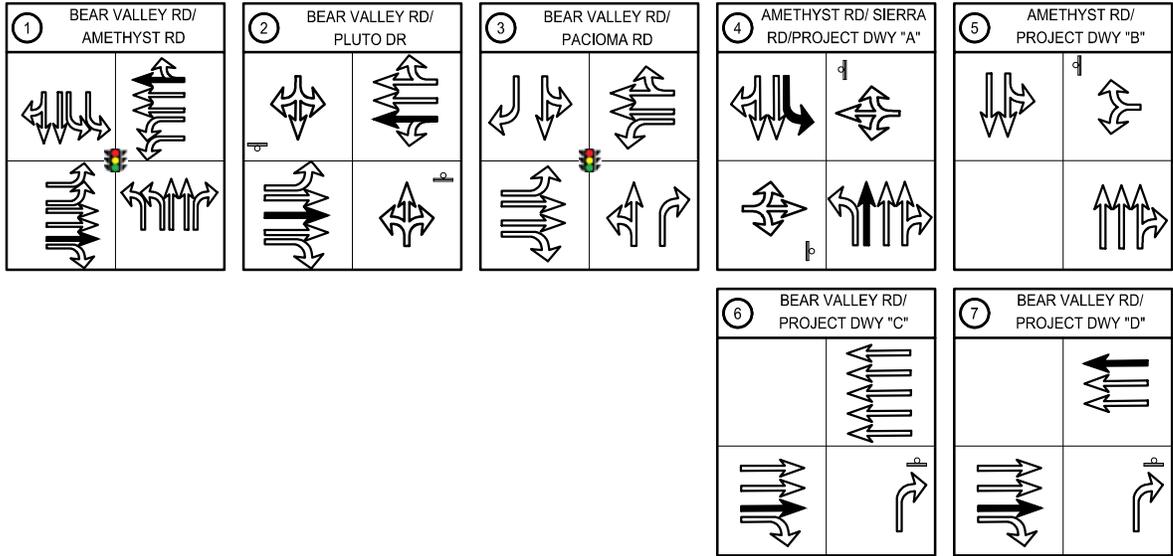

Intersection	Intersection Control Type	Future Condition				Future + Project Condition			
		AM Peak		PM Peak		AM Peak		PM Peak	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1. Bear Valley Rd / Amethyst Rd	TS	44.2	D	41.4	D	41.1	D	40.2	D
2. Bear Valley Rd / Pluto Dr	SSSC	12.8	B	13.4	B	33.8	D	99.99*	F
3. Bear Valley Rd / Pacoima Rd	SSSC	16.1	B	18.1	B	22.7	C	25.9	C
4. Amethyst Rd / Sierra Rd / Driveway “A”	SSSC/Driveway	10.5	B	12.6	B	13.2	B	15.4	C
5. Amethyst Rd / Driveway “B”	SSSC/Driveway	N/A				12.4	B	13.3	B
6. Bear Valley Rd / Driveway “C”	SSSC/Driveway	N/A				11.3	B	12.1	B
7. Bear Valley Rd / Driveway “D”	SSSC/Driveway	N/A				12.6	B	15.3	C
TS – Traffic Signal Controlled Intersection SSSC – Side Street Stop Controlled Intersection N/A – Not Applicable Future Intersection. Delay – seconds per vehicle LOS – Level of Service 99.99* - Delay exceeds LOS F									

As presented in **Table 8-1**, under future plus project conditions, the study intersections would operate at LOS D or better except Bear Valley Road and Pluto Drive. The construction of the south leg of the intersection and the addition of project traffic causes the PM peak hour to operate at LOS F for the worst movement from the stop-controlled side street (northbound through and left).

### 8.2 Future Plus Project Conditions Traffic Signal Warrant Analysis

A traffic signal warrant analysis was completed for the side street stop-controlled intersection of Bear Valley Road and Pluto Drive. A traffic signal warrant analysis (Warrant 3 - Peak Hour) was completed for the side street stop-controlled intersection of Bear Valley Road and Pluto Drive. The intersection does not meet the peak hour warrant under the background conditions scenario. The traffic signal warrant analyses are provided in **Appendix C**.

TWO CONDITIONS SATISFIED 80%	A. MINIMUM VEHICULAR VOLUME		Yes <input type="checkbox"/> No <input type="checkbox"/>
	AND, B. INTERRUPTION OF CONTINUOUS TRAFFIC		
AND, AN ADEQUATE TRIAL OF OTHER ALTERNATIVES THAT COULD CAUSE LESS DELAY AND INCONVENIENCE TO TRAFFIC HAS FAILED TO SOLVE THE TRAFFIC PROBLEMS			Yes <input type="checkbox"/> No <input type="checkbox"/>

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

**Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 2 of 5)**

**WARRANT 2 - Four Hour Vehicular Volume**

**SATISFIED\*** YES  NO  N/A

Record hourly vehicular volumes for any four hours of an average day.

APPROACH LANES			Hour		
	One	2 or More			
Both Approaches - Major Street					
Higher Approach - Minor Street					

*All plotted points fall above the applicable curve in Figure 4C-1. (URBAN AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , All plotted points fall above the applicable curve in Figure 4C-2. (RURAL AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>

**WARRANT 3 - Peak Hour  
 (Part A or Part B must be satisfied)**

**SATISFIED** YES  NO

**PART A**

**SATISFIED** YES  NO

(All parts 1, 2, and 3 below must be satisfied for the same one hour, for any four consecutive 15-minute periods)

1. The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach, or five vehicle-hours for a two-lane approach; <u>AND</u>	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
2. The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; <u>AND</u>	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more approaches or 650 vph for intersections with three approaches.	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>

**PART B**

**SATISFIED** YES  NO

APPROACH LANES			5-6 PM
	One	2 or More	Hour
Both Approaches - Major Street		X	1,304
Higher Approach - Minor Street	X		46

The plotted point falls above the applicable curve in Figure 4C-3. (URBAN AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , The plotted point falls above the applicable curve in Figure 4C-4. (RURAL AREAS)	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

**Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 3 of 5)**

**WARRANT 4 - Pedestrian Volume  
 (Parts 1 and 2 Must Be Satisfied)**

SATISFIED YES  NO

N/A

**Part 1 (Parts A or B must be satisfied)**

Hours -->

A.	Vehicles per hour for any 4 hours				
	Pedestrians per hour for any 4 hours				

Figure 4C-5 or Figure 4C-6  
 SATISFIED YES  NO

Hours -->

B.	Vehicles per hour for any 1 hour				
	Pedestrians per hour for any 1 hour				

Figure 4C-7 or Figure 4C-8  
 SATISFIED YES  NO

**Part 2**

SATISFIED YES  NO

<u>AND</u> , The distance to the nearest traffic signal along the major street is greater than 300 ft	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , The proposed traffic signal will not restrict progressive traffic flow along the major street.	Yes <input type="checkbox"/>	No <input type="checkbox"/>

**WARRANT 5 - School Crossing  
 (Parts A and B Must Be Satisfied)**

SATISFIED YES  NO

N/A

**Part A  
 Gap/Minutes and # of Children**

SATISFIED YES  NO

Gaps vs Minutes	Minutes Children Using Crossing		Hour
	Number of Adequate Gaps		
School Age Pedestrians Crossing Street / hr			

Gaps < Minutes YES  NO   
AND Children > 20/hr YES  NO

<u>AND</u> , Consideration has been given to less restrictive remedial measures.	Yes <input type="checkbox"/>	No <input type="checkbox"/>
--	------------------------------	-----------------------------

**Part B**

SATISFIED YES  NO

The distance to the nearest traffic signal along the major street is greater than 300 ft	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , The proposed signal will not restrict the progressive movement of traffic.	Yes <input type="checkbox"/>	No <input type="checkbox"/>

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

**Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 4 of 5)**

**WARRANT 6 - Coordinated Signal System  
 (All Parts Must Be Satisfied)**

**SATISFIED YES  NO  N/A**

MINIMUM REQUIREMENTS	DISTANCE TO NEAREST SIGNAL	
≥ 1000 ft	N _____ ft, S _____ ft, E _____ ft, W _____ ft	Yes <input type="checkbox"/> No <input type="checkbox"/>
On a one-way street or a street that has traffic predominantly in one direction, the adjacent traffic control signals are so far apart that they do not provide the necessary degree of vehicular platooning.		Yes <input type="checkbox"/> No <input type="checkbox"/>
OR, On a two-way street, adjacent traffic control signals do not provide the necessary degree of platooning and the proposed and adjacent traffic control signals will collectively provide a progressive operation.		

**WARRANT 7 - Crash Experience Warrant  
 (All Parts Must Be Satisfied)**

**SATISFIED YES  NO**

Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce the crash frequency.		Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
REQUIREMENTS	Number of crashes reported within a 12 month period susceptible to correction by a traffic signal, and involving injury or damage exceeding the requirements for a reportable crash.	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
5 OR MORE		
REQUIREMENTS	CONDITIONS	✓
ONE CONDITION SATISFIED 80%	Warrant 1, Condition A - Minimum Vehicular Volume	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
	OR, Warrant 1, Condition B - Interruption of Continuous Traffic	
	OR, Warrant 4, Pedestrian Volume Condition Ped Vol ≥ 80% of Figure 4C-5 through Figure 4C-8	

**WARRANT 8 - Roadway Network  
 (All Parts Must Be Satisfied)**

**SATISFIED YES  NO  N/A**

MINIMUM VOLUME REQUIREMENTS	ENTERING VOLUMES - ALL APPROACHES	✓	FULFILLED
1000 Veh/Hr	During Typical Weekday Peak Hour _____ Veh/Hr and has 5-year projected traffic volumes that meet one or more of Warrants 1, 2, and 3 during an average weekday.		Yes <input type="checkbox"/> No <input type="checkbox"/>
	OR During Each of Any 5 Hrs. of a Sat. or Sun _____ Veh/Hr		
CHARACTERISTICS OF MAJOR ROUTES		MAJOR ROUTE A	MAJOR ROUTE B
Hwy. System Serving as Principal Network for Through Traffic			
Rural or Suburban Highway Outside Of, Entering, or Traversing a City			
Appears as Major Route on an Official Plan			
Any Major Route Characteristics Met, Both Streets		Yes <input type="checkbox"/> No <input type="checkbox"/>	

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

**Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 5 of 5)**

**WARRANT 9 - Intersection Near a Grade Crossing  
 (Both Parts A and B Must Be Satisfied)**

**SATISFIED YES  NO  N/A**

<p><b><u>PART A</u></b></p> <p>A grade crossing exists on an approach controlled by a STOP or YIELD sign and the center of the track nearest to the intersection is within 140 feet of the stop line or yield line on the approach. Track Center Line to Limit Line _____ ft</p>	Yes <input type="checkbox"/> No <input type="checkbox"/>
<p><b><u>PART B</u></b></p> <p><b>There is one minor street approach lane at the track crossing</b> - During the highest traffic volume hour during which rail traffic uses the crossing, the plotted point falls above the applicable curve in Figure 4C-9.</p> <p>Major Street - Total of both approaches: _____ VPH                  Minor Street - Crosses the track (one direction only, approaching the intersection): _____ VPH X AF (Use Tables 4C-2, 3, &amp; 4 below to calculate AF) = _____ VPH</p> <hr style="border-top: 1px dashed black;"/> <p><b>OR, There are two or more minor street approach lanes at the track crossing</b> - During the highest traffic volume hour during which rail traffic uses the crossing, the plotted point falls above the applicable curve in Figure 4C-10.</p> <p>Major Street - Total of both approaches : _____ VPH                  Minor Street - Crosses the track (one direction only, approaching the intersection): _____ VPH X AF (Use Tables 4C-2, 3, &amp; 4 below to calculate AF) = _____ VPH</p>	Yes <input type="checkbox"/> No <input type="checkbox"/>

The minor street approach volume may be multiplied by up to three following adjustment factors (AF) as described in Section 4C.10.

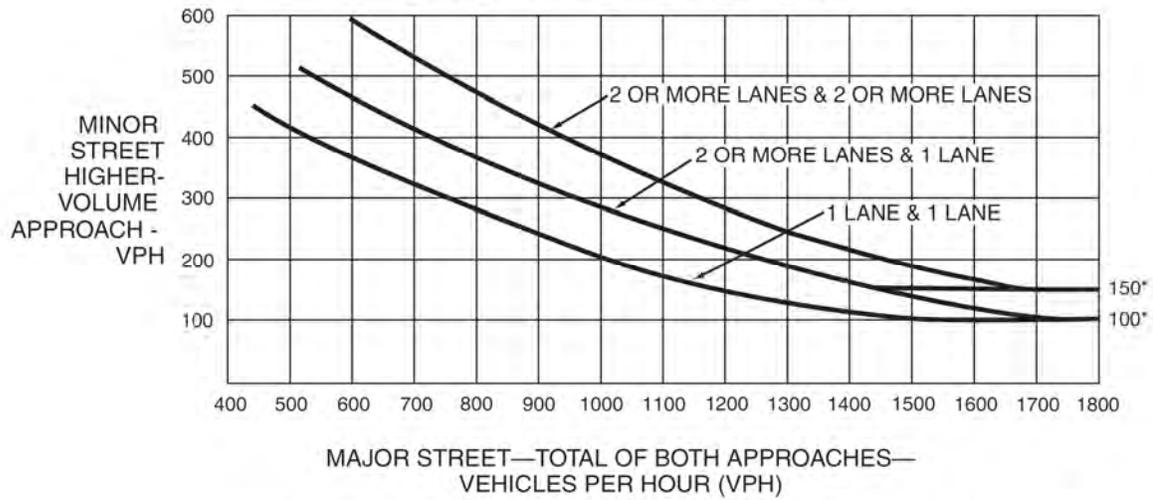

1- Number of Rail Traffic per Day \_\_\_\_\_ Adjustment factor from table 4C-2 \_\_\_\_\_

2- Percentage of High-Occupancy Buses on Minor Street Approach \_\_\_\_\_ Adjustment factor from table 4C-3 \_\_\_\_\_

3- Percentage of Tractor-Trailer Trucks on Minor Street Approach \_\_\_\_\_ Adjustment factor from table 4C-4 \_\_\_\_\_

NOTE: If no data is available or known, then use AF = 1 (no adjustment)

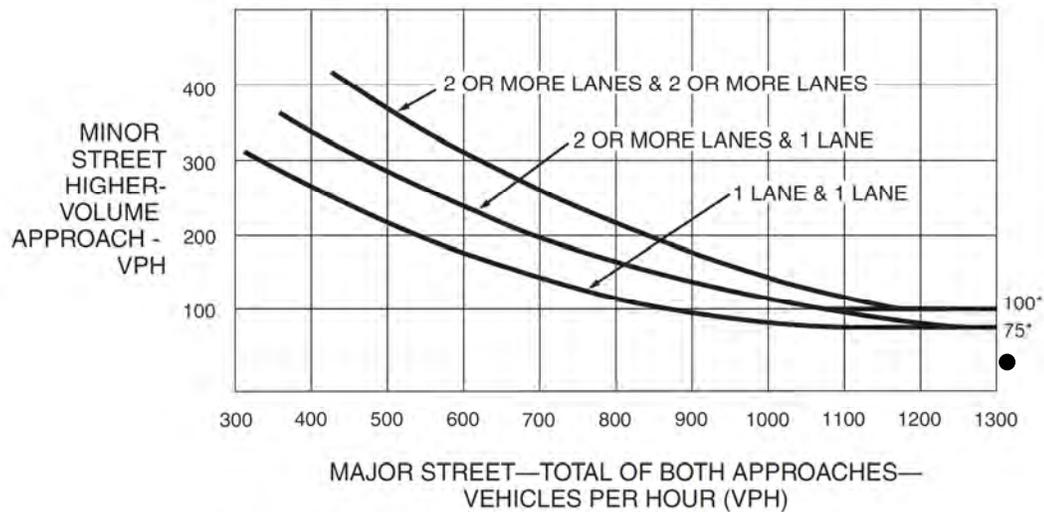

**Figure 4C-3. Warrant 3, Peak Hour**

\*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

**Figure 4C-4. Warrant 3, Peak Hour (70% Factor)**

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 40 MPH ON MAJOR STREET)

\*Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 2 of 5)

**WARRANT 2 - Four Hour Vehicular Volume**

SATISFIED\* YES  NO  N/A

Record hourly vehicular volumes for any four hours of an average day.

APPROACH LANES			Hour		
	One	2 or More			
Both Approaches - Major Street					
Higher Approach - Minor Street					

*All plotted points fall above the applicable curve in Figure 4C-1. (URBAN AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , All plotted points fall above the applicable curve in Figure 4C-2. (RURAL AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>

**WARRANT 3 - Peak Hour**  
 (Part A or Part B must be satisfied)

SATISFIED YES  NO

**PART A**

SATISFIED YES  NO

(All parts 1, 2, and 3 below must be satisfied for the same one hour, for any four consecutive 15-minute periods)

1. The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach, or five vehicle-hours for a two-lane approach; <u>AND</u>	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
2. The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; <u>AND</u>	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more approaches or 650 vph for intersections with three approaches.	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>

**PART B**

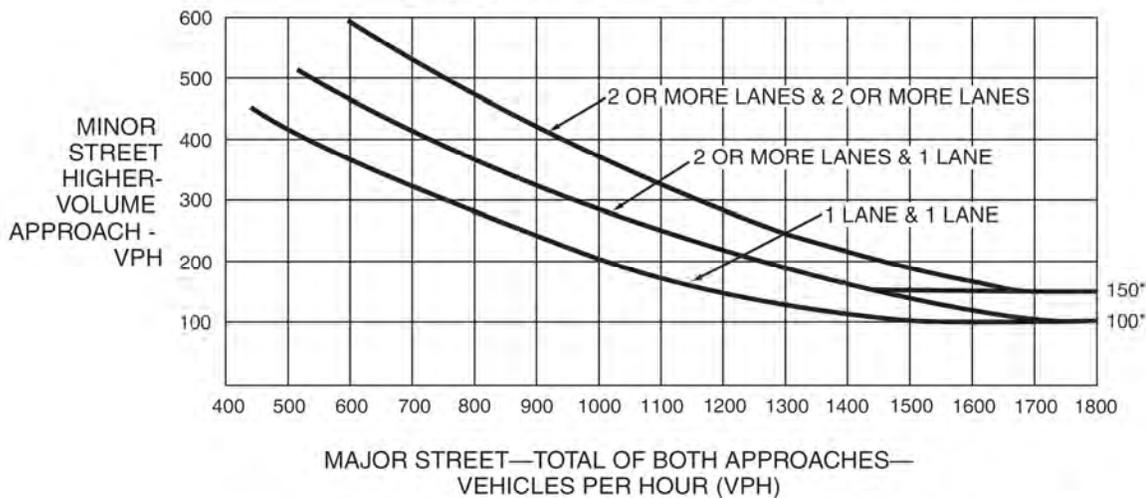

SATISFIED YES  NO

APPROACH LANES			5-6 PM
	One	2 or More	Hour
Both Approaches - Major Street		X	1,420
Higher Approach - Minor Street	X		59

The plotted point falls above the applicable curve in Figure 4C-3. (URBAN AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , The plotted point falls above the applicable curve in Figure 4C-4. (RURAL AREAS)	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

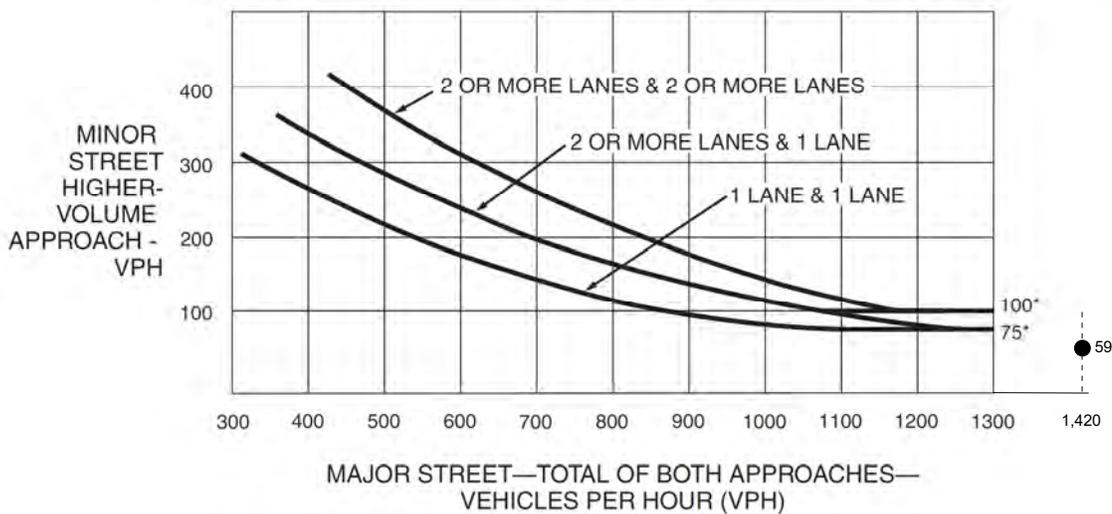

**Figure 4C-3. Warrant 3, Peak Hour**

\*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

**Figure 4C-4. Warrant 3, Peak Hour (70% Factor)**

**Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 2 of 5)**

**WARRANT 2 - Four Hour Vehicular Volume**

**SATISFIED\*** YES  NO  N/A

Record hourly vehicular volumes for any four hours of an average day.

APPROACH LANES			Hour			
	One	2 or More				
Both Approaches - Major Street						
Higher Approach - Minor Street						

*All plotted points fall above the applicable curve in Figure 4C-1. (URBAN AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , All plotted points fall above the applicable curve in Figure 4C-2. (RURAL AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>

**WARRANT 3 - Peak Hour  
 (Part A or Part B must be satisfied)**

**SATISFIED** YES  NO

**PART A**

**SATISFIED** YES  NO

(All parts 1, 2, and 3 below must be satisfied for the same one hour, for any four consecutive 15-minute periods)

1. The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach, or five vehicle-hours for a two-lane approach; <u>AND</u>	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
2. The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; <u>AND</u>	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more approaches or 650 vph for intersections with three approaches.	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>

**PART B**

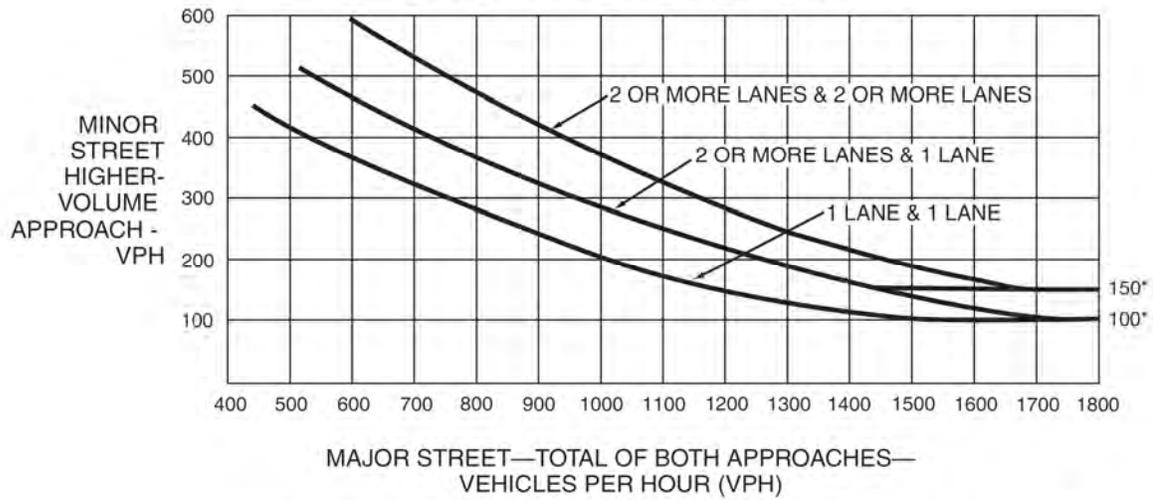

**SATISFIED** YES  NO

APPROACH LANES			5-6 PM
	One	2 or More	Hour
Both Approaches - Major Street		X	1,511
Higher Approach - Minor Street	X		63

The plotted point falls above the applicable curve in Figure 4C-3. (URBAN AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , The plotted point falls above the applicable curve in Figure 4C-4. (RURAL AREAS)	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

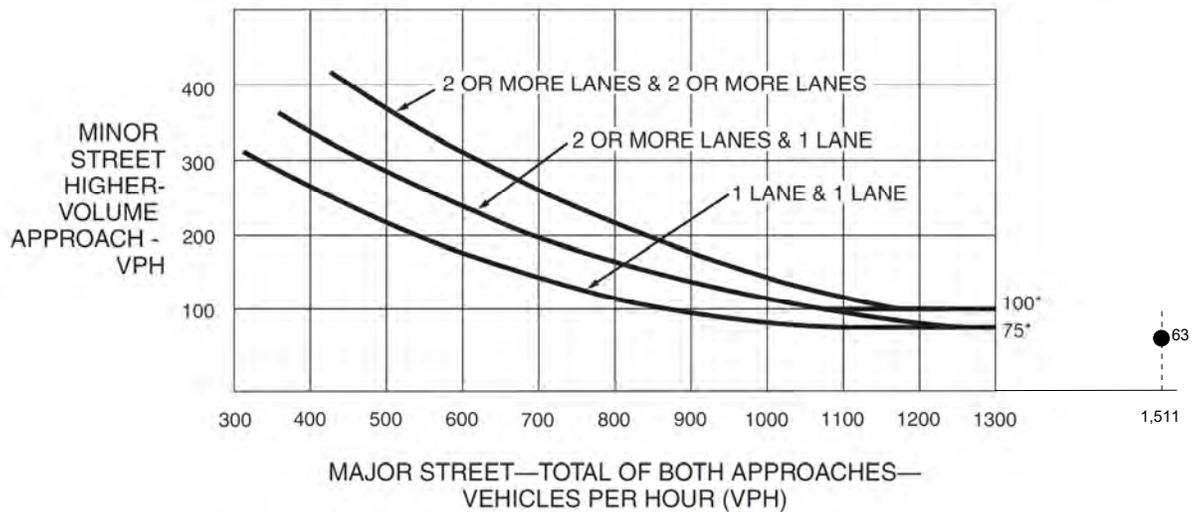

**Figure 4C-3. Warrant 3, Peak Hour**

\*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.

**Figure 4C-4. Warrant 3, Peak Hour (70% Factor)**

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 40 MPH ON MAJOR STREET)

\*Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

**Figure 4C-101 (CA). Traffic Signal Warrants Worksheet (Sheet 2 of 5)**

**WARRANT 2 - Four Hour Vehicular Volume**

**SATISFIED\*** YES  NO  N/A

Record hourly vehicular volumes for any four hours of an average day.

APPROACH LANES			Hour		
	One	2 or More			
Both Approaches - Major Street					
Higher Approach - Minor Street					

*All plotted points fall above the applicable curve in Figure 4C-1. (URBAN AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , All plotted points fall above the applicable curve in Figure 4C-2. (RURAL AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>

**WARRANT 3 - Peak Hour  
 (Part A or Part B must be satisfied)**

**SATISFIED** YES  NO

**PART A**

**SATISFIED** YES  NO

(All parts 1, 2, and 3 below must be satisfied for the same one hour, for any four consecutive 15-minute periods)

1. The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach, or five vehicle-hours for a two-lane approach; <u>AND</u>	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
2. The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; <u>AND</u>	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more approaches or 650 vph for intersections with three approaches.	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>

**PART B**

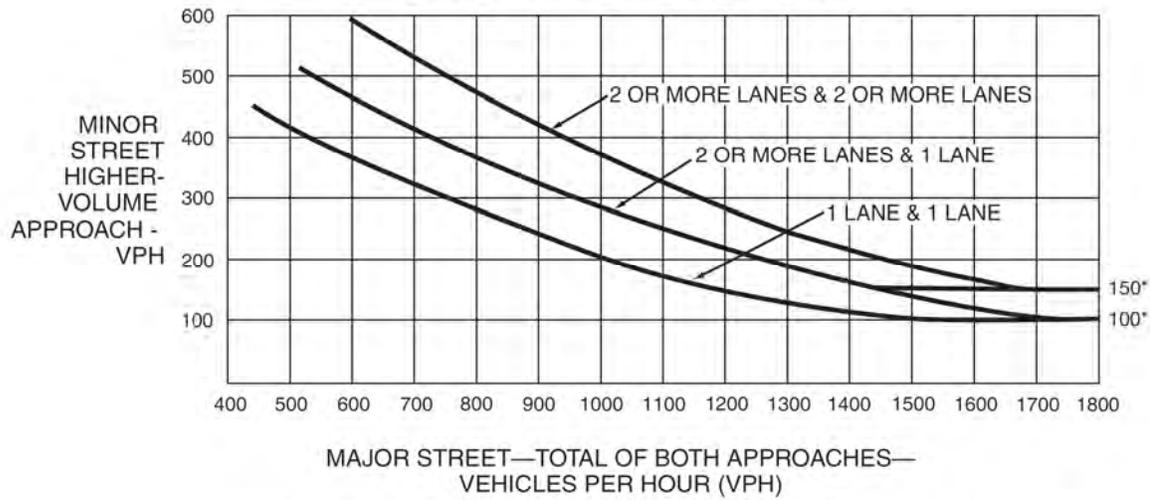

**SATISFIED** YES  NO

APPROACH LANES			5-6 PM
	One	2 or More	Hour
Both Approaches - Major Street		X	1,426
Higher Approach - Minor Street	X		51

The plotted point falls above the applicable curve in Figure 4C-3. (URBAN AREAS)	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<u>OR</u> , The plotted point falls above the applicable curve in Figure 4C-4. (RURAL AREAS)	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

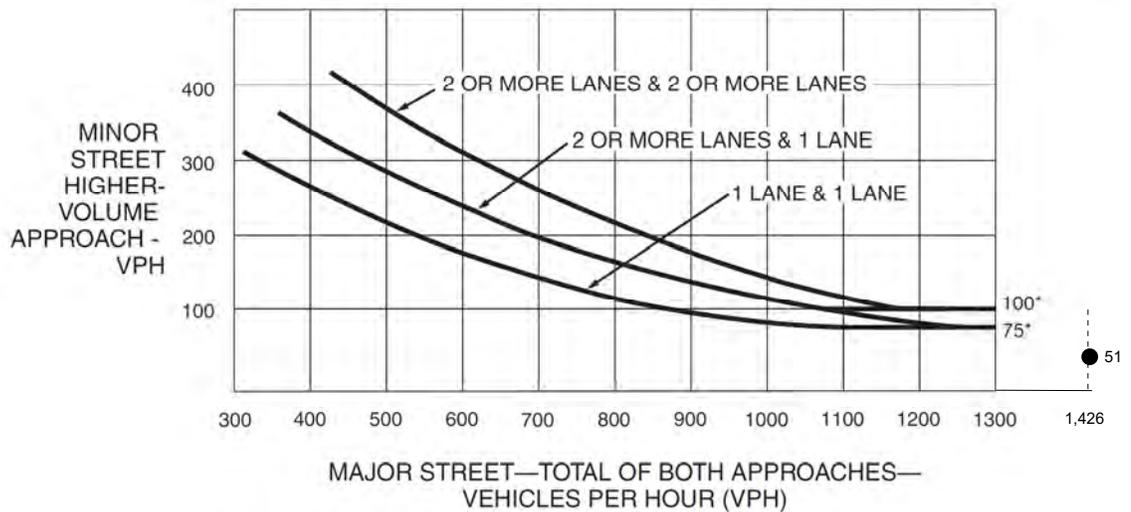

**Figure 4C-3. Warrant 3, Peak Hour**

\*Note: 150 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 100 vph applies as the lower threshold volume for a minor-street approach with one lane.
