Source Description
Source Description : The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
The RMP database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Source Description

Source Description :

DTSC EnviroStor is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

Site Details
Superfund Site : SAN FERNANDO VALLEY (AREA 4) LOS ANGELES, CA
Street Address : POLLOCK WELLFIELD LOS ANGELES, CA 90086

Site Status :

EPA did not select a remedy for the site because the Los Angeles Department of Water and Power (LADWP) planned to conduct a wellhead treatment project in the area. The project began in 1998. The water is treated to meet drinking water standards and returned to the LADWP's public water supply system. EPA is currently conducting remedial investigation to evaluate the project to determine whether conditions require additional actions.

Site Background :

The San Fernando Valley (Area 4) site is a 5,860-acre area of contaminated groundwater in Los Angeles, California. The site is one of four Superfund sites in the San Fernando Valley. Numerous potentially responsible parties (PRPs) contaminated groundwater in the region with volatile organic compounds (VOCs), including trichloroethylene (TCE) and perchloroethylene (PCE). Cleanup and investigative activities are ongoing.

Notes :

OBSERVATION: Current Financial responsibility documents were not found on site in the UST binder. Current financial responsibility documents are required to be submitted annually and maintained on site. MISSING: Proof of Insurance showing coverage. CORRECTIVE ACTION: Place current financial responsibility documents in the UST binder on site and submit this proof of insurance showing coverage on CERS to clear this violation.

Source : CERS

Violation Date : 2020-09-04

Citation : HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2

Description :

"Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Notes : OBSERVATION: Owner/Operator did not comply with one or more of the following: Maintain the spill bucket in good condition, containment free of debris/liquid, and/or to remove the contents of the spill bucket when a release/leak/spill was observed. Spill bucket failed to hold 5 gal min. CORRECTIVE ACTION: Pull a permit to replace the spill bucket that failed, retest and Submit verification.

Citation : 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)

Description : Failure to have an approved UST Monitoring Plan.

Notes : OBSERVATION: Facility does not have an approved Monitoring Plan. Ball Floats were removed from both tanks in 2019. Please change this information in CERS to reflect this change under the overfill protection equipment. CORRECTIVE ACTION: Maintain an Approved Monitoring Plan. Make these changes in CERS and submit.

Citation : HSC 6.7 25293 - California Health and Safety Code, Chapter 6.7, Section(s) 25293

Description : Failure to maintain UST records in sufficient detail to enable the UPA to determine whether the UST systems are in compliance.

Notes :

Returned to compliance on 09/04/2020. OBSERVATION: Owner/Operator did not maintain UST records in sufficient detail to enable the UPA to determine if UST systems are in compliance. The following records were not provided: Annual Compliance testing results for 2019 & 2018, Secondary Containment test results for 2020. CORRECTIVE ACTION: Place copies of these in the compliance folder on site to maintain records. CORRECTED ON SITE.

Activity ID : 3602305675
Final Ordr Iss/Final Order Enter Date: 09/30/2020
Final Order Name : Safety Kleen Systems

Settlement FRS ICIS Facility ID : 3600838363
Final Order FRS Name : SAFETY-KLEEN SYSTEMS, INC.

SEP Category : Pollution Prevention/Process-Procedure Modification

SEP Description :

The Delay in Performance/Stipulated Penalties provisions set forth in Section J of the Consent Agreement authorize EPA to assess stipulated penalties for failure to meet any requirement set forth in the Consent Agreement, accruing on the day after the penalty payment is due. The stipulated penalties accrue at a rate of $500 per day for the 1st to the 15th days of delay, and $1000 per day for the 16th to the 30th days of delay. Based on this stipulated scale, EPA is hereby demanding a stipulated penalty of $8,500.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Hazardous Waste Summary
Waste Code / Name :
134 - Aqueous solution with <10% total organic residues
222 - Oil/water separation sludge
223 - Unspecified oil-containing waste
331 - Off-specification, aged, or surplus organics
751 - Solids or sludge with halogenated organic comp. > 1000 mg/kg
D001 - IGNITABLE WASTE
D004 - ARSENIC
D005 - BARIUM
D006 - CADMIUM
D007 - CHROMIUM

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

LUST REG 7 - CA: Leaking underground storage tanks in Region 7: Imperial San Bernardino Riverside and San Diego counties.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

LUST REG 8 - CA: Leaking underground storage tanks in Region 8: Orange Riverside San Bernardino counties.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

LUST REG 9 - CA: Leaking underground storage tanks in Region 9: San Diego Imperial Riverside counties.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

LUST_HAZMAT_YOLO COUNTY - CA: Yolo county leaking underground storage tank sites listing

Agency Version Date: 02/05/2021
Agency Update Frequency: Varies
Planned Next Contact: 10/26/2021
Agency: Yolo County Environmental Health
Agency Contact: 530-666-8646
Most Recent Contact: 07/30/2021

LUST_KERN COUNTY - CA: Kern County leaking underground tank sites

Agency Version Date: 05/04/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/26/2021
Agency: CA Gov geotracker state water resources control bo
Agency Contact: 916-341-5791
Most Recent Contact: 07/30/2021

LUST_RIVERSIDE COUNTY - CA: Riverside county leaking underground storage tank sites

Agency Version Date: 05/04/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/26/2021
Agency: CA Gov geotracker state water resources control board
Agency Contact: 916-341-5791
Most Recent Contact: 07/30/2021

LUST_SAN FRANCISCO COUNTY - CA: A listing of leaking underground storage tank sites located in San Francisco county.

Agency Version Date: 05/04/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/26/2021
Agency: CA Gov geotracker state water resources control board
Agency Contact: 916-341-5791
Most Recent Contact: 07/30/2021

LUST_SAN MATEO COUNTY - CA: San Mateo county leaking underground storage tank listing

Agency Version Date: 05/04/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/26/2021
Agency: CA Gov geotracker state water resources control board
Agency Contact: 916-341-5791
Most Recent Contact: 07/30/2021

LUST_SOLANO COUNTY - CA: Solano county leaking underground storage tank listing

Agency Version Date: 05/04/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/26/2021
Agency: CA Gov geotracker state water resources control board
Agency Contact: 916-341-5791
Most Recent Contact: 07/30/2021

STATE, TRIBAL, AND FEDERAL LEAKING STORAGE TANK LISTS (cont.)

LUST_SONOMA COUNTY - CA: Sonoma county leaking underground storage tank sites listing

Agency Version Date: 05/04/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/26/2021
Agency: CA Gov geotracker state water resources control board
Agency Contact: 916-341-5791
Most Recent Contact: 07/30/2021

LUST_SUTTER COUNTY - CA: Sutter County Leaking Underground Storage Tanks

Agency Version Date: 05/04/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/26/2021
Agency: CA Gov geotracker state water resources control board
Agency Contact: 916-341-5791
Most Recent Contact: 07/30/2021

LUST_VENTURA COUNTY - CA: Ventura County leaking underground storage tank site listing

Agency Version Date: 05/04/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/26/2021
Agency: CA Gov geotracker state water resources control board
Agency Contact: 916-341-5791
Most Recent Contact: 07/30/2021

SLIC REG 1 - CA: List of Region 1 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

SLIC REG 2 - CA: List of Region 2 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

SLIC REG 3 - CA: List of Region 3 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

SLIC REG 4 - CA: List of Region 4 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

SLIC REG 5 - CA: List of Region 5 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

SLIC REG 6 - CA: List of Region 6 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database that is no longer in current agency list.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

SLIC REG 7 - CA: List of Region 7 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

STATE, TRIBAL, AND FEDERAL LEAKING STORAGE TANK LISTS (cont.)

SLIC REG 8 - CA: List of Region 8 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

SLIC REG 9 - CA: List of Region 9 sites from GeoTracker Site Cleanup Program (formerly known as SLIC) database that is no longer in current agency list.

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

SLIC_ALAMEDA COUNTY - CA: Listing of spills leaks investigation & cleanup sites

Agency Version Date: 01/16/2019
Agency Update Frequency: Quarterly
Planned Next Contact: 11/08/2021
Agency: Alameda County Environmental Health Services
Agency Contact: 510-567-6721
Most Recent Contact: 08/12/2021

FEDERAL ERNS LIST

ERNS: Emergency Response Notification System records of reported spills

Agency Version Date: 07/30/2021
Agency Update Frequency: Annually
Planned Next Contact: 10/26/2021
Agency: National Response Center United States Coast Guard
Agency Contact: N/R
Most Recent Contact: 07/30/2021

FEDERAL INSTITUTIONAL CONTROLS / ENGINEERING CONTROLS REGISTRIES

FED E C: Federal listing of remediation sites with engineering controls

Agency Version Date: 09/01/2021
Agency Update Frequency: Varies
Planned Next Contact: 11/26/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 09/01/2021

FED I C: Federal listing of remediation sites with institutional controls

Agency Version Date: 09/01/2021
Agency Update Frequency: Varies
Planned Next Contact: 11/26/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 09/01/2021

RCRA IC_EC: Sites with institutional or engineering controls related to Resource Conservation and Recovery Act

Agency Version Date: 05/18/2021
Agency Update Frequency: Varies
Planned Next Contact: 11/11/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 08/16/2021

FEDERAL RCRA GENERATORS LIST

HIST RCRA_CESQG: List of Resource Conservation and Recovery Act licensed conditionally exempt small quantity generators that are no longer in current agency list.

Agency Version Date: 10/12/2018
Agency Update Frequency: Annually
Planned Next Contact: 11/30/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 09/03/2021

FEDERAL RCRA GENERATORS LIST (cont.)

HIST RCRA_LQG: List of Resource Conservation and Recovery Act licensed large quantity generators that are no longer in current agency list.

Agency Version Date: 10/12/2018
Agency Update Frequency: Annually
Planned Next Contact: 11/30/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 09/03/2021

HIST RCRA_NONGEN: List of Resource Conservation and Recovery Act licensed non-generators that are no longer in current agency list.

Agency Version Date: 10/12/2018
Agency Update Frequency: Annually
Planned Next Contact: 11/30/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 09/03/2021

HIST RCRA_SQG: List of Resource Conservation and Recovery Act licensed small quantity generators that are no longer in current agency list.

Agency Version Date: 10/12/2018
Agency Update Frequency: Annually
Planned Next Contact: 11/30/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 09/03/2021

RCRA_LQG: Resource Conservation and Recovery Act listing of licensed large quantity generators

Agency Version Date: 07/09/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/05/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 07/09/2021

RCRA_NONGEN: Resource Conservation and Recovery Act listing of licensed non-generators

Agency Version Date: 07/09/2021
Agency Update Frequency: Varies
Planned Next Contact: 10/05/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 07/09/2021

RCRA_SQG: Resource Conservation and Recovery Act listing of licensed small quantity generators

Agency Version Date: 07/09/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/05/2021
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 07/09/2021

RCRA_VSQG: Resource Conservation and Recovery Act listing of licensed very small quantity generators.

Agency Version Date: 07/09/2021

Agency Contact: 408-280-6479
Most Recent Contact: 07/30/2021

MCS - CA: List of Military Cleanup Sites from Geotracker

Agency Version Date: 08/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/29/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5791
Most Recent Contact: 08/03/2021

MWMP - CA: Listing of treatment and transfer stations that properly handle and dispose of medical waste that are permitted and inspected by the Medical Waste Management Program

Agency Version Date: 08/06/2021
Agency Update Frequency: Varies
Planned Next Contact: 11/02/2021
Agency: California-Health Human Services Department of Public Health
Agency Contact: 916-449-5661
Most Recent Contact: 08/06/2021

MWMP 2 - CA: Listing of facilities that generate permitted medical waste and are inspected by the Medical Waste Management Program

Agency Version Date: 01/29/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 10/19/2021
Agency: California-Health Human Services Department of Public Health
Agency Contact: 916-449-5661
Most Recent Contact: 07/23/2021

NFA - CA: No further action cleanup sites listing

Agency Version Date: 07/01/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 09/28/2021
Agency: Department of Toxic Substances Control
Agency Contact: 916-322-2861
Most Recent Contact: 07/01/2021

NFE - CA: Unconfirmed contaminated properties listing

Agency Version Date: 06/29/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 09/24/2021
Agency: Department of Toxic Substances Control
Agency Contact: 916-322-2861
Most Recent Contact: 06/29/2021

NPDES - CA: Listing of facilities with wastewater and NPDES permits including stormwater

Agency Version Date: 09/03/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 11/30/2021
Agency: State Water Resources Control Board
Agency Contact: 916-341-5810
Most Recent Contact: 09/03/2021

PERCHLORATE 2 - CA: Listing of contaminated sites where the primary known chemical is perchlorate

Agency Version Date: 06/29/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 09/24/2021
Agency: Department of Toxic Substances Control
Agency Contact: 916-322-2861
Most Recent Contact: 06/29/2021

PROPOSITION 65 - CA: Listing of Proposition 65 enforcement reporting notice sites in accordance with "The Safe Drinking Water and Toxic Enforcement Act of 1986"

Agency Version Date: 06/11/2021
Agency Update Frequency: No update
Planned Next Contact: 12/03/2021
Agency: State of California Department of JusticeOffice of the Attorney General
Agency Contact: 510-873-6321
Most Recent Contact: 09/08/2021

OTHER ASCERTAINABLE RECORDS (cont.)

RFR - CA: State Water Resources Control Board Regulated Facility Report database listing which includes program agency type and their permit status

Agency Version Date: 06/15/2021
Agency Update Frequency: Varies
Planned Next Contact: 12/07/2021
Agency: CA State Water Resources Control Board
Agency Contact: 916-341-5810
Most Recent Contact: 09/10/2021

SITES INVENTORY_VENTURA COUNTY - CA: Listing of Ventura County inventory of closed illegal abandoned and inactive sites

Agency Version Date: 05/14/2021
Agency Update Frequency: Annually
Planned Next Contact: 11/05/2021
Agency: Environmental Health Division
Agency Contact: 805-654-2815
Most Recent Contact: 08/11/2021

SMU_SANTA BARBARA COUNTY - CA: Site Mitigation Unit site assessment and corrective actions at properties in Santa Barbara County

Agency Version Date: 07/12/2021
Agency Update Frequency: Varies
Planned Next Contact: 10/08/2021
Agency: Santa Barbara County APCD
Agency Contact: (805) 681-4900
Most Recent Contact: 07/12/2021

SWAT - CA: The SWAT Reports Summary Data and the Waste Management Unit Database were published by State Water Resources Control Board staff and the Regional Water Quality Control Boards for tracking and inventory of waste management units.

HIST PWS ENF
Historical Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
List of Safe Drinking Water Information Systems (SDWIS) with enforcement violations that are no longer in current agency list.

NWIS
National Water Information Systems
United States Geological Society
(703) 648-5953
Information on all water resources for the United States. This database contains all current and historical data for the nation.

PWS
Public Water Supply
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems

PWS ENF
Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems with enforcememnt violations

WELLS - GAMA - CA
California Groundwater Ambient Monitoring Assessment
State Water Resources Control Board
916-341-5791
Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

FLOOD Q3
Flood data
Environmental Protection Agency
(202) 566-1667
Q3 Flood Data

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI
National Wetland Inventory
U.S. Fish and Wildlife Service
(703) 358-2171
Wetland Inventory for the United States

(202) 690-4985
General Soil Data Map

USGS GEOLOGIC AGE
USGS Digital Data Series DDS
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
USGS Digital Data Series DDS: Geologic Age and Rock Stratigraphic Unit

DAMS - CA
California Dam Inundation Maps
Department of Water Resources
916-845-8275
Dam inundation maps show the maximum extent of damage of a flood wave from a dam failure

OIL & GAS WELLS - CA
Oil and Gas Well Data
State of California Department of Conservation
916-327-1042
Oil and gas well locations and detail for all 6 districts

RADON
National Radon Database
U.S. Environmental Protection Agency
215-814-2469
A study of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

RADON - CA
Radon tested locations in California
California Department of Health Services
(916) 449-5674
A table of long term and short term indoor radon measurments

RADON EPA
RADON EPA
U.S. Environmental Protection Agency
215-814-2469
EPA list of Radon zones

AIRPORT FACILITIES
Airport landing facilities
Federal Aviation Administration
(866) 835-5322
Airport landing facilities

BASINS
Better Assessment Science Integrating point & Non-point Sources
U.S. Environmental Protection Agency
855-246-3642
Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE
Obstacles of interest to aviation users
Federal Aviation Administration
855-379-6518
The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS
National Geographical Data Center
National Geographical Data Center
303-497-6826
List of recent and historic earthquakes and information.

FLOOD DFIRM
National Flood Hazard Layer Database
Federal Emergency Management Agency
The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

Historical Information Gatherers

This Research Summary identifies the products and services provided by Historical Information Gatherers, Inc. (HIG) for the above referenced site location. All products are provided as PDFs unless otherwise noted.

City Directory Pages/Abstracts

Research Methodology: A search was conducted for city directories that include coverage of the site area using HIG's City Directory Collection and other sources, if needed. Directories for the following years were identified for the site area. A comma between date ranges indicates a gap of 10 years or more in available city directories:

Los Angeles: (1901-1905, 1943-2019)

The above listed directories were reviewed at approximate 5 year intervals to determine if the street(s) specified in the order were included in the directories and had listings for the site area. HIG attempted to identify former street names and aliases and if identified, these were also included in the review.

Research Results: City directory information, when provided, was used to create a multi-page file(s) named CD- followed by the street name. When City Directory Pages are provided, the publication name and date are shown at the top of each page. When a City Directory abstract is provided, the first page of the abstract includes the relevant publication information. The years of coverage identified for each street and any identified historical street names are as follows:

West Silver Lake Drive: (1943-2019)

FIM+ Maps

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIMs), real estate atlases and similar maps for the site location and adjoining properties. These maps were used to create a multi-page file named FIM+Maps. The maps have title blocks that include the map publisher, year the map was created and, if applicable, the year the map was last updated. The years provided are:

1914, 1919, 1923, 1950, 1953, 1955, 1957, 1960, 1961, 1966, 1968, 1969, 1970

Disclaimer & Limitation of Liability

This Research Summary and the related documents and images provided by Historical Information Gatherers (hereafter referred to as the “Site Specific HIG Data”) contain information obtained from a variety of public and private sources. Additional information for the site and surrounding properties may exist. Accordingly, there can be no guaranty or warranty that the information provided is complete for its particular intended purpose. No warranty expressed or implied, is made whatsoever in connection with the Site Specific HIG Data. Historical Information Gatherers specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular purpose. Historical Information Gatherers, its officers, employees and independent contractors cannot be held liable to anyone for any loss or damage, whether arising out of errors or omissions, negligence, accident or any other cause, resulting directly or indirectly from any information provided or any information not provided in the Site Specific HIG Data. Any liability on the part of Historical Information Gatherers is strictly limited to a refund equal to the amount paid for the Site Specific HIG Data.

HIG Copyright Notice

This Research Summary and the selection, arrangement and compilation of Site Specific HIG Data are the property of Historical Information Gatherers. © Copyright 2021 by Historical Information Gatherers, Inc. All rights reserved. The person or entity that ordered and paid for the Site Specific HIG Data is granted a personal, non-assignable, limited license to reproduce the Site Specific HIG Data solely for purposes of providing supporting documentation for reports produced for the site location which is noted on page one of this Research Summary. Any other reproduction or other use of the Site Specific HIG Data in any media or format, in whole or in part, is expressly prohibited without prior written permission from Historical Information Gatherers, and the person or entity that ordered and paid for the Site Specific HIG Data assumes all liability for the making of any such reproductions.

Licensing Agreement

The licensing agreement between Historical Information Gatherers and infoGroup provides that Historical Information Gatherers may create photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright. The licensing agreement also permits the

person or entity that ordered and paid for the Site Specific HIG Data to include photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright as supporting documents for reports produced for the site which is the subject of the Site Specific HIG Data.

Historical Information Gatherers

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.

600 XXXX = Correct address only. No other information.

X Streetname = intersecting cross street

HIG Research Summary

Site Location
Silver Lake
1850 West Silver Lake Drive
Los Angeles, CA

Requested by
Envirosite Corporation
2 Corporate Drive, Suite 450
Shelton, CT

HIG Project #
2055261
Client Project #
60627
Date Created
09/22/2021

Historical Information Gatherers

This Research Summary identifies the products and services provided by Historical Information Gatherers, Inc. (HIG) for the above referenced site location. All products are provided as PDFs unless otherwise noted.

City Directory Pages/Abstracts

Research Methodology: A search was conducted for city directories that include coverage of the site area using HIG's City Directory Collection and other sources, if needed. Directories for the following years were identified for the site area. A comma between date ranges indicates a gap of 10 years or more in available city directories:

Los Angeles: (1901-1905, 1943-2019)

The above listed directories were reviewed at approximate 5 year intervals to determine if the street(s) specified in the order were included in the directories and had listings for the site area. HIG attempted to identify former street names and aliases and if identified, these were also included in the review.

Research Results: City directory information, when provided, was used to create a multi-page file(s) named CD- followed by the street name. When City Directory Pages are provided, the publication name and date are shown at the top of each page. When a City Directory abstract is provided, the first page of the abstract includes the relevant publication information. The years of coverage identified for each street and any identified historical street names are as follows:

West Silver Lake Drive: (1943-2019)

FIM+ Maps

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIMs), real estate atlases and similar maps for the site location and adjoining properties. These maps were used to create a multi-page file named FIM+Maps. The maps have title blocks that include the map publisher, year the map was created and, if applicable, the year the map was last updated. The years provided are:

1914, 1919, 1923, 1950, 1953, 1955, 1957, 1960, 1961, 1966, 1968, 1969, 1970

Disclaimer & Limitation of Liability

This Research Summary and the related documents and images provided by Historical Information Gatherers (hereafter referred to as the “Site Specific HIG Data”) contain information obtained from a variety of public and private sources. Additional information for the site and surrounding properties may exist. Accordingly, there can be no guaranty or warranty that the information provided is complete for its particular intended purpose. No warranty expressed or implied, is made whatsoever in connection with the Site Specific HIG Data. Historical Information Gatherers specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular purpose. Historical Information Gatherers, its officers, employees and independent contractors cannot be held liable to anyone for any loss or damage, whether arising out of errors or omissions, negligence, accident or any other cause, resulting directly or indirectly from any information provided or any information not provided in the Site Specific HIG Data. Any liability on the part of Historical Information Gatherers is strictly limited to a refund equal to the amount paid for the Site Specific HIG Data.

HIG Copyright Notice

This Research Summary and the selection, arrangement and compilation of Site Specific HIG Data are the property of Historical Information Gatherers. © Copyright 2021 by Historical Information Gatherers, Inc. All rights reserved. The person or entity that ordered and paid for the Site Specific HIG Data is granted a personal, non-assignable, limited license to reproduce the Site Specific HIG Data solely for purposes of providing supporting documentation for reports produced for the site location which is noted on page one of this Research Summary. Any other reproduction or other use of the Site Specific HIG Data in any media or format, in whole or in part, is expressly prohibited without prior written permission from Historical Information Gatherers, and the person or entity that ordered and paid for the Site Specific HIG Data assumes all liability for the making of any such reproductions.

Licensing Agreement

The licensing agreement between Historical Information Gatherers and infoGroup provides that Historical Information Gatherers may create photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright. The licensing agreement also permits the

person or entity that ordered and paid for the Site Specific HIG Data to include photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright as supporting documents for reports produced for the site which is the subject of the Site Specific HIG Data.

Methodology

Noise and Vibration Worksheets

Silver Lake Reservoir Complex Master Plan Project

1. Noise and Vibration Methodology

1. Introduction

ESA conducted a comprehensive noise and vibration impact analysis and report for the Silver Lake Reservoir Complex (SLRC) Master Plan Project (Project). Noise and vibration associated with construction and operation of the Project were quantified. This technical report describes the methodology used to measure the existing site's ambient noise levels and estimate noise and vibration from construction and operations of the Project.

Noise and Vibration Methodology

This section describes the methodology used to measure the existing site's noise environment and calculate noise and vibration resulting from Project construction and operational activities and to evaluate the associated impacts. Construction activities would generate noise from equipment usage and truck hauling. Long-term operational activities would generate emissions through vehicle trips (e.g. employees, visitors, waste disposal, and deliveries), stationary sources (e.g. generators, heating, ventilation, and cooling) and outdoor gathering areas used for special events. The methodologies described below were applied similarly to the Project and Project with Deck scenarios.

Noise

Noise Attenuation

When noise propagates over a distance, the noise level reduces with distance depending on the type of noise source and the propagation path. Noise from a localized source (i.e., point source) propagates uniformly outward in a spherical pattern, referred to as "spherical spreading." Stationary point sources of noise, including stationary mobile sources such as idling vehicles, attenuate (i.e., reduce) at a rate between 6 dBA for acoustically "hard" sites and 7.5 dBA for "soft" sites for each doubling of distance from the reference measurement, as their energy is continuously spread out over a spherical surface (e.g., for hard surfaces, 80 dBA at 50 feet attenuates to 74 dBA at 100 feet, 68 dBA at 200 feet, etc.). Hard sites are those with a reflective surface between the source and the receiver, such as asphalt or concrete surfaces or smooth bodies of water. No excess ground attenuation is assumed for hard sites, and the reduction in noise levels with distance (drop-off rate) is simply the geometric spreading of the noise from the source.

Soft sites have an absorptive ground surface, such as soft dirt, grass, or scattered bushes and trees, which in addition to geometric spreading, provides an excess ground attenuation value of 1.5 dBA (per doubling distance).[1]

Roadways and highways consist of several localized noise sources on a defined path, and hence are treated as "line" sources, which approximate the effect of several point sources. Noise from a line source propagates over a cylindrical surface, often referred to as "cylindrical spreading." Line sources (e.g., traffic noise from vehicles) attenuate at a rate between 3 dBA for hard sites and 4.5 dBA for soft sites for each doubling of distance from the reference measurement.[2] Therefore, noise due to a line source attenuates less with distance than that of a point source with increased distance.

Additionally, receptors located downwind from a noise source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Atmospheric temperature inversion (i.e., increasing temperature with elevation) can increase sound levels at long distances (e.g., more than 500 feet). Other factors such as air temperature, humidity, and turbulence can also have significant effects on noise levels.[3]

Foundations of Vibration

Vibration can be interpreted as energy transmitted in waves through the ground or man-made structures, which generally dissipate with distance from the vibration source. Because energy is lost during the transfer of energy from one particle to another, vibration becomes less perceptible with increasing distance from the source.

As described in the Federal Transit Administration's (FTA) Transit Noise and Vibration Impact Assessment, common sources of groundborne vibration are trains, heavy trucks traveling on rough roads, and construction activities, such as blasting, pile-driving, and operation of heavy earth-moving equipment.[4] The effects of groundborne vibration include movement of the building floors, rattling of windows, shaking of items on shelves or hanging on walls, and rumbling sounds. In extreme cases, the vibration can cause damage to buildings. Potential for building damage due to construction vibration is not a factor for most land use projects, although potential for damage is substantially increased when construction involves blasting and pile-driving and/or when construction is immediately adjacent to a fragile historic resource. Annoyance from vibration often occurs when the vibration levels exceed the threshold of perception by only a small margin. A vibration level that causes annoyance will be well below the damage threshold for normal buildings.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal in

1 Caltrans, *Technical Noise Supplement* (TeNS), Section 2.1.4.2, September 2013.
2 Caltrans, *Technical Noise Supplement* (TeNS), Section 2.1.4.1, September 2013.
3 Caltrans, *Technical Noise Supplement* (TeNS), Section 2.1.4.3 September 2013.
4 Caltrans, Transportation and Construction Vibration Guidance Manual, April 2020, p. 1.

inches per second (in/sec), and is most frequently used to describe vibration impacts to buildings. The root mean square (RMS) amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body. Decibel notation (VdB) is commonly used to measure RMS. The relationship of PPV to RMS velocity is expressed in terms of the "crest factor," defined as the ratio of the PPV amplitude to the RMS amplitude. The ratio of PPV to maximum rms amplitude is defined as the crest factor for the signal. The crest factor is typically greater than 1.41, although a crest factor of 8 or more is not unusual for impulsive signals.[5] The decibel notation VdB acts to compress the range of numbers required to describe vibration. Typically, groundborne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receptors for vibration include buildings where vibration would interfere with operations within the building or cause damage (especially historic buildings and older non-engineered timber and masonry structures), locations where people sleep, and locations with vibration sensitive equipment.[6]

Groundborne noise specifically refers to the rumbling noise emanating from the motion of building room surfaces due to the vibration of floors and walls; it is perceptible only inside buildings.[7] The relationship between groundborne vibration and groundborne noise depends on the frequency content of the vibration and the acoustical absorption characteristics of the receiving room. For typical buildings, groundborne vibration that causes low frequency noise (i.e., the vibration spectrum peak is less than 30 Hz) results in a groundborne noise level that is approximately 50 decibels lower than the velocity level. For groundborne vibration that causes mid-frequency noise (i.e., the vibration spectrum peak is between 30 and 60 Hz), the groundborne noise level will be approximately 35 decibels lower than the velocity level. For groundborne vibration that causes high-frequency noise (i.e., the vibration spectrum peak is greater than 60 Hz), the groundborne noise level will be approximately 20 decibels lower than the velocity level. [8] Therefore, for typical buildings, the groundborne noise decibel level is lower than the groundborne vibration velocity level at low frequencies. Groundborne noise is usually only perceptible inside buildings and is typically only an issue with subway or tunnel operations where there is no airborne noise path or for buildings with substantial sound insulation such as a recording studio.[9]

Existing Noise and Vibration Levels

Noise-Sensitive Receptor Locations

Some land uses are considered more sensitive to noise than others due to the types of activities typically involved at the receptor location, and the effect that noise can have on those activities and the persons engaged in them. The City of Los Angeles CEQA Thresholds Guide states that residences, schools, motels and hotels, libraries, religious institutions, hospitals, nursing homes, and parks are generally more sensitive to noise than commercial and industrial land uses.[10] Existing noise-sensitive uses, or receptors, within 500 feet of the Project Site are listed in **Table 1**, *Sensitive Receptor Locations*.

TABLE 1
SENSITIVE RECEPTOR LOCATIONS

Receptor Location	Land Use Type(s)	Closest Distance to Receptor	Description
R1	Single-family residential	45 feet	Located to the north, west, and northwest of the Project Site near the corner of West Silver Lake Drive and Tesla Avenue
R2	Single-family residential and educational	45 feet	Residential uses located to the north, east, and northeast of the Project Site and Neighborhood Nursery School at the corner of Armstrong Avenue and Tesla Avenue.
R3	Single-family residential	60 feet	Located to the east of the Project Site along Silver Lake Boulevard.
R4	Single-family residential	130 feet	Located to the southeast of the Project Site along Silver Lake Boulevard.
R5	Single- and multi-family residential	675 feet	Located to the southeast of the Project Site along Duane Street.
R6	Single-family residential	50 feet	Located to the south of the Project Site along Silver Lake Boulevard.
R7	Single-family residential	700 feet	Located to the west of the Project Site along Kenilworth Avenue.
R8	Single-family residential	60 feet	Located to the west of the Project Site along West Silver Lake Drive.

SOURCE: ESA 2022

The Project Site is bounded by the Silver Lake Boulevard and Armstrong Avenue to the east, Tesla Avenue to the north, West Silver Lake Drive to the west, and Van Pelt Place, West Silver Lake Drive, and Silver Lake Boulevard to the south. Receptors R5 and R7 represent sensitive receptors that are further from the site boundary but are at a higher elevation and therefore have a direct line of sight to the Project Site. All other noise-

[10] City of Los Angeles, L.A. CEQA Thresholds Guide, page I.1-3, 2006.

sensitive uses regulated by the City are located at greater distances from the Project Site and would experience lower noise levels from potential sources of noise on the Project Site due to distance loss.

Vibration-Sensitive Receptor Locations

Typically, groundborne vibration generated by man-made activities (i.e., rail and roadway traffic, operation of mechanical equipment and typical construction equipment) diminishes rapidly with distance from the vibration source. Construction activities, such as impact pile driving, would have the greatest effect on vibration sensitive land uses. Energy is lost during the transfer of energy from one particle to another and as a result, vibration becomes less perceptible with increasing distance from the source. Therefore, with respect to potential structural damage, structures in close proximity (adjacent) to the Project Site are considered vibration sensitive. As shown in **Table 2**, the structural building category and construction building type (i.e., reinforced-concrete, engineered concrete, non-engineered timber, and building susceptible to damage) determines the vibration damage criteria for a specific building or structure.[11]

TABLE 2
CONSTRUCTION VIBRATION DAMAGE CRITERIA

Building Category	PPV (in/sec)
I. Reinforced-concrete, steel, or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

SOURCE(S): FTA, *Transit Noise and Vibration Impact Assessment*, 2018.

With respect to human annoyance, sensitive land uses include buildings where use of vibration-sensitive equipment is used (e.g., hospitals, research, and manufacturing), residential land uses and buildings where people normally sleep, schools, churches, and doctor's offices. Industrial or commercial (including office) uses are not considered vibration-sensitive. Therefore, while all adjacent buildings have been considered vibration-sensitive for structural damage, industrial and commercial uses have not been considered for human annoyance. All of the off-site sensitive receptors listed above in Subsection IV.I.2(c)(1), *Noise-Sensitive Receptor Locations*, were analyzed for impacts related to vibration-related human annoyance.

[11] Where the structural category/type of a vibration-sensitive receptor is unclear, the analysis herein utilizes a conservative assumption. For example, although structures where industrial processes take place would generally be constructed of concrete, the threshold for non-engineered timber and masonry has been applied due to the uncertainty of building construction.

Existing vibration-sensitive uses include the following:

- Receptor Location V1: Single-family residential uses to the north, west, and northwest of the Project Site near the corner of West Silver Lake Drive and Tesla Avenue.
- Receptor Location V2: Single-family residential uses to the north, east, and northeast of the Project Site at the corner of Armstrong Avenue and Tesla Avenue.
- Receptor Location V3: Neighborhood Nursery School at the corner of Armstrong Avenue and Tesla Avenue.
- Receptor Location V4: Single-family residential uses to the east of the Project Site along Silver Lake Boulevard.
- Receptor Location V5: Single-family residential uses to the southeast of the Project Site along Silver Lake Boulevard.
- Receptor Location V6: Single-family residential uses to the south of the Project Site along Silver Lake Boulevard.
- Receptor Location V7: Single-family residential uses to the west of the Project Site along West Silver Lake Drive.
- Receptor Location V8: South Outlet Chlorination Station, Meter House, and air raid siren north of the existing Recreation Center

Ambient Noise Levels

The predominant existing noise source near the Project Site is roadway noise from Silver Lake Boulevard, West Silver Lake Drive, Armstrong Avenue, and Tesla Avenue. Other noise sources include general residential activities associated with refuse service activities. To establish baseline ambient noise levels, ambient noise measurements were conducted at eight locations corresponding to the following sensitive receptor locations in the Project vicinity:

- Measurement Location M1: Represents the noise environment at single-family residential uses to the north, west, and northwest of the Project Site near the corner of West Silver Lake Drive and Tesla Avenue (Receptor Location R1).
- Measurement Location M2: Represents the noise environment at single-family residential uses to the north, east, and northeast of the Project Site and Neighborhood Nursery School at the corner of Armstrong Avenue and Tesla Avenue (Receptor Location R2).
- Measurement Location M3: Represents the noise environment at single-family residential uses to the east of the Project Site along Silver Lake Boulevard (Receptor Location R3).
- Measurement Location M4: Represents the noise environment at single-family residential uses to the southeast of the Project Site along Silver Lake Boulevard (Receptor Location R4).

- Measurement Location M5: Represents the noise environment at single- and multi-family residential uses to the southeast of the Project Site along Duane Street (Receptor Location R5). M5 captures noise at residences that are further from the Project but at a higher elevation and have a direct line of sight to the Project Site.
- Measurement Location M6: Represents the noise environment at single-family residential uses to the south of the Project Site along Silver Lake Boulevard (Receptor Location R6).
- Measurement Location M7: Represents the noise environment at single-family residential uses to the west of the Project Site along Kenilworth Avenue (Receptor Location R7). M7 captures noise at residences that are further from the Project but at a higher elevation and have a direct line of sight to the Project Site.
- Measurement Location M8: Represents the noise environment at single-family residential uses to the west of the Project Site along West Silver Lake Drive (Receptor Location R8).

Ambient noise measurements representing weekday (defined as Monday through Thursday) and weekend (defined as Friday through Sunday) daytime (between 7:00 A.M. and 10:00 P.M.) and nighttime (between 10:00 P.M. and 7:00 A.M.) periods were conducted to characterize the existing noise environment at the Project Site and at representative off-site sensitive receptor locations. The City's standard for noise analysis is to compare Project-related noise levels to ambient noise measurements at representative sensitive receptor locations. Long-term noise measurements provide a larger data set from which to establish ambient conditions and would not be more or less accurate or conservative than short-term noise measurements. Where long-term noise measurements are taken, noise levels during the City's designated daytime and nighttime hours have been averaged to establish ambient daytime and nighttime noise level at that particular location. The measured noise levels are provided in **Table 3**, *Summary of Ambient Noise Measurements*. Noise levels representing the weekend are reported separately in order to characterize possible differences in ambient noise levels when people may be participating in after-work-week entertainment, recreational, or other activities in the vicinity.

TABLE 3
SUMMARY OF AMBIENT NOISE MEASUREMENTS

		Measured Ambient Noise Levels[a] (dBA)					
		Weekday			Weekend		
Measurement Location	Receptor Location	Daytime Hours (dBA L_{eq}) (7:00 A.M. – 10:00 P.M.)	Nighttime Hours (dBA L_{eq}) (10:00 P.M. – 7:00 A.M.)	24-hour Average (dBA CNEL)	Daytime Hours (dBA L_{eq}) (7:00 A.M. – 10:00 P.M.)	Nighttime Hours (dBA L_{eq}) (10:00 P.M. – 7:00 A.M.)	24-hour Average (dBA CNEL)
M1	R1	57.1	51.6	59.6	55.9	53.5	60.5
M2	R2	59.4	52.1	61.0	59.3	52.9	61.5
M3	R3	56.0	51.6	59.3	56.2	51.9	59.8
M4	R4	65.6	59.3	67.8	65.1	60.7	68.5
M5	R5	50.6	51.1	57.6	51.3	50.6	57.5
M6	R6	61.3	56.0	64.1	61.0	56.3	64.2
M7	R7	57.9	48.6	58.3	56.5	49.4	58.2
M8	R8	61.1	51.8	61.9	61.4	54.0	63.0

a Noise levels for locations M1 through M8 were taken over 24 hours (long-term) from secured locations and are based on daytime average noise levels from 7:00 A.M. to 10:00 P.M. and nighttime average noise levels from 10:00 P.M. to 7:00 A.M. Ambient noise measurement data are provided in Appendix I.

SOURCE: ESA, 2022.

(a) Existing Roadway Noise Levels

Existing roadway CNEL noise levels were calculated for roadway segments located within the study area, as defined by the MOU with LADOT and were based on vehicular turning movement data at intersections identified for the Project's Transportation Assessment.[12] Turning movements at each studied intersection were used to determine traffic volumes along 14 roadway segments within the Project vicinity. The roadway segments, when compared to roadways located farther away from the Project Site, would experience the greatest percentage increase in traffic generated by the Project (i.e., as distances are increased from the Project Site, traffic is spread out over a greater geographic area, and its effects are reduced).

12 Jano Baghdanian & Associates, Transportation Impact Assessment – Silver Lake Reservoir Complex Master Plan Environmental Impact Report, February 2022. The Transportation Assessment is provided in Appendix J of the Project's Draft EIR.

Existing roadway CNEL noise levels were calculated using the Federal Highway Administration's (FHWA's) Highway Traffic Noise Model (FHWA TNM) methodology[13] and traffic volumes at the study intersections reported in the TA. The TNM model methodology calculates the average noise level at specific locations based on traffic volumes, average speeds, and site environmental conditions.

(2) On-Site Construction

On-site construction noise impacts were evaluated by determining the noise levels generated by the different types of construction activity anticipated, calculating the construction-related noise level generated by the mix of equipment assumed for all construction activities at nearby sensitive receptor locations, and comparing these construction-related noise levels to existing ambient noise levels (i.e., noise levels without construction noise) at those receptors.

Project construction includes activities in seven different park zones which include The Meadow, The Knoll, Ivanhoe Overlook,[14] The Eucalyptus Grove, The East and West Narrows, The South Valley, and the Habitat Islands. The following construction phases could occur at any of the proposed park zones: (1) demolition, (2) site grubbing, (3) grading/excavation, (4) drainage/ utilities/ trenching, (5) foundation concrete pour, (5) building construction, (6) asphalt paving, (7) landscaping, (8) waterside pile installation, (9) waterside landscaping, and (10) offsite improvements which include: restriping West Silver Lake Drive, restriping Silver Lake Boulevard, and sidewalk construction along Silver Lake Boulevard. Since construction of the Project as a whole would last more than 10 days, based on the criteria provided in the 2006 L.A. CEQA Thresholds Guide, the construction noise significance threshold used in this analysis is an increase in the ambient exterior noise level of 5 dBA L_{eq} or more at a noise-sensitive use.

It should also be noted that the 2006 L.A. CEQA Thresholds Guide contains screening criteria, including (1) whether construction activities occur within 500 feet of a noise sensitive use; and (2) whether construction occurs between the hours of 9:00 P.M. and 7:00 A.M. Monday through Friday, before 8:00 A.M. or after 6:00 P.M. on Saturday, or anytime on Sunday. A "no" response to these questions indicates that construction would not occur between these hours and there would normally be no significant construction noise impacts from the project. The Project would occur within 500 feet of a noise sensitive use but would not include construction activity between the hours of 9:00 P.M. and 7:00 A.M. Monday through Friday, before 8:00 A.M. and after 6:00 P.M. on Saturday, or on Sunday. Construction noise levels have been compared against weekday daytime ambient noise levels at each of the representative sensitive receptor locations.

[13] The traffic noise model which was developed based on calculation methodologies provided in the Caltrans TeNS document and traffic data provided in the Project's Transportation Impact Assessment. This methodology, considered an industry standard, allows for the definition of roadway configurations, barrier information (if any), and receiver locations.

[14] The Ivanhoe Overlook includes the Ivanhoe Spillway and Promenade. For modeling purposes, the Ivanhoe Spillway and Promenade is analyzed as a separate zone.

(3) Off-Site Roadway Noise (Construction and Operation)

Roadway noise impacts were evaluated using the FHWA TNM based on the roadway traffic volume data provided in the TIA prepared for the Project and included in Appendix J of the Project's Draft EIR (Jano Baghdanian & Associates 2022). This method allows for the definition of roadway configurations, barrier information (if any), and receiver locations. Roadway noise attributable to Project development was calculated and compared to baseline noise levels that would occur under the "Without Project" condition. With respect to operational traffic noise, impacts are evaluated for the existing year and the earliest buildout year of 2030.

(4) On-Site Stationary Noise (Operation)

Operational noise sources for the proposed Project include active and passive recreational activities and informal gatherings, outdoor education classroom activities, special events with amplified sound, fixed mechanical equipment, refuse collection and grounds/landscaping maintenance activities, and on-site parking. Stationary noise impacts were evaluated by identifying the noise levels generated by outdoor stationary noise sources, such as open spaces, outdoor activities, rooftop mechanical equipment, and loading area activity, calculating the hourly L_{eq} noise level from each noise source at sensitive receptor property lines, and comparing such noise levels to existing ambient noise levels.

On-site operational noise was modeled using CadnaA noise propagation Project. CadnaA is a Windows-based software Project that predicts and assesses noise levels in the vicinity of noise sources based on International Organization for Standardization 9613-2 algorithms for noise propagation calculations. CadnaA considers environmental factors, such as topography, intervening structures, and distance (both horizontally and vertically) from a noise source. This is particularly relevant for projects containing outdoor meeting, performance, and gathering areas at varying elevations that would have amplified sound and could potentially affect surrounding land uses and receptors. Since the Project has various open-air areas that create a relatively complex soundscape, the CadnaA model was used to estimate the various noise sources and their effects on the ambient noise environment. The CadnaA modeling accounted for 14 receptor points surrounding the Project Site and are labeled modeling points A through N in the analysis below. Operational noise from the Project was evaluated at each modeling point and compared to the closest ambient noise levels measured at R1 through R8 for each respective modeling point.

For operational stationary noise, the operational stationary noise significance threshold used in this analysis is whether the project causes the ambient noise level measured at the property line of affected uses to increase by 5 dBA in accordance with Los Angeles Municipal Code (LAMC), Chapter XI, Section 112.02.

Stationary noise impacts were evaluated by identifying the noise levels generated by outdoor stationary noise sources, such as open spaces, outdoor activities, rooftop mechanical equipment, parking facilities, and loading area activity, calculating the hourly

L_{eq} noise level from each noise source at sensitive receptor property lines, and comparing such noise levels to existing ambient noise levels. Open spaces and outdoor activities may generate noise from people conversing/talking while engaging in activities such as picnicking, exercising, recreational sports (e.g., catch, frisbee, etc.) or other similar recreational activities. In addition, within the Meadow park zone, park users may apply for special evens permits, such as for outdoor concerts, movie nights, or luncheons, that could potentially be held within the Meadow outdoor open spaces and could utilize amplified speakers. The combined noise levels from each operational noise source were estimated to evaluate composite noise level impacts at the nearest sensitive receptor.

Assumptions for park zone attendance are shown in **Table 4** and are consistent with the Project's Transportation Assessment, which estimates peak occupancy based on peak vehicle trips to/from the various park zones. The vehicle occupancy rates were applied to the peak vehicle trips per park zone to calculate the increase in attendance. See Tables 19 through 22 of the TA for a detailed account of the increases in park attendance by park zone.[15]

TABLE 4
SILVER LAKE RESERVOIR COMPLEX ESTIMATED POTENTIAL WEEKEND VEHICLE TRIPS GENERATED BY EACH PARK USE

Park Zone	Increase in Park Attendance
The Meadow	130 people
The Knoll	25 people
Ivanhoe Overlook	n/a
Eucalyptus Grove	20 people
The East Narrows	30 people
The West Narrows	15 people
The South Valley	85 people
Silver Lake Perimeter	85 People

SOURCE: Jano Baghdanian & Associates, Transportation Impact Assessment – Silver Lake Reservoir Complex Master Plan Environmental Impact Report, February 2022. The Transportation Assessment is provided in Appendix J of the Project's Draft EIR

Noise from female adults, male adults, and children talking at a raised voice level is approximately 63 dBA, 65 dBA, and 65 dBA, respectively, at a distance of 3 feet.[16] It is assumed that each outdoor space would be at full capacity and that half of the visitors would be adults (half male and half female) and half would be children. Of the adults and

[15] Jano Baghdanian & Associates, Transportation Impact Assessment – Silver Lake Reservoir Complex Master Plan Environmental Impact Report, Tables 19 through 22. February 2022. The Transportation Assessment is provided in Appendix J of the Project's Draft EIR.

[16] American Journal of Audiology Vol.7 21-25 October 1998. doi:10.1044/1059-0889(1998/012).

children, half would be talking simultaneously (assuming approximately half of the occupants talking and the other half listening).

The Meadow, once completed, would feature two lawn areas that could host local events such as concerts and outdoor movie screenings; ornamental gardens; a picnic grove; wetland habitat terraces with walkways; floating wetland islands; and an observational platform. As such, The Meadow may include the use of an amplified sound system for purposes of this noise assessment, an amplified sound system is included as a noise source in The Meadow generating a sound level of up to 91 dBA L_{eq} at 25 feet from the sound system.[17]

(5) Groundborne Vibration (Construction/ Operation)

Groundborne vibration impacts were evaluated by identifying potential vibration sources, measuring the distance between vibration sources and surrounding structure locations, and making a determination based on the significance criteria described in the Vibration Impacts section.

The City currently does not have significance criteria to assess vibration impacts during construction or operations. Thus, FTA guidelines set forth in their 2018 Transit Noise and Vibration Assessment are used to evaluate potential impacts related to construction vibration for both potential building damage and human annoyance.[18] The FTA guidelines regarding construction vibration are the most current guidelines and are commonly used in evaluating vibration impacts. Based on the FTA guidance, groundborne vibration could result in building damage if any of the following were to occur:

- Project construction activities cause groundborne vibration levels to exceed 0.5 in/sec PPV at the nearest offsite reinforced-concrete, steel, or timber building.
- Project construction activities cause groundborne vibration levels to exceed 0.3 in/sec PPV at the nearest offsite engineered concrete and masonry building.
- Project construction activities cause groundborne vibration levels to exceed 0.2 in/sec PPV at the nearest offsite non-engineered timber building.
- Project construction activities cause groundborne vibration levels to exceed 0.12 in/sec PPV at buildings extremely susceptible to vibration damage, such as historic buildings.

[17] University of Michigan, Department of Environmental Health Science, August 22, 2016. *Noise Navigator Sound Level Database with Over 1700 Measurement Values*.

[18] FTA, Transit Noise and Vibration Impact Assessment, 2018

Based on FTA guidance, construction vibration could be perceived as annoying to humans if any of the following were to occur:

- Project construction activities cause groundborne vibration levels to exceed 72 VdB for frequent events (more than 70 events per day); 75 VdB for occasional events (30 to 70 events per day); or 80 VdB for infrequent events (fewer than 30 events per day) at the nearest residential buildings when people normally sleep.

The FTA guidance classifies the vibration levels above based on whether the vibration-producing events are frequent, occasional, or infrequent. “Frequent Events” is defined as more than 70 vibration events of the same source per day. “Occasional Events” is defined as between 30 and 70 vibration events of the same source per day. “Infrequent Events” is defined as fewer than 30 vibration events of the same kind per day. The values listed above are applicable to “Frequent Events.” For purposes of conservative analysis, the vibration analysis provided herein for potential human annoyance compares the estimated vibration levels generated during construction and operation of the Project to the 72 VdB significance threshold for off-site residential uses for “Frequent Event.” The vibration analysis for the Project conservatively used the closet distance to construction activity and the construction phase with the equipment mix that would result in the greatest potential vibration.

Project Design Features

The following PDFs would be implemented as part of the proposed Project.

PDF-NOISE-1: Haul Route. Prior to commencement of construction and operational maintenance activities, the City shall establish approved truck haul routes that avoid or minimize, to the extent feasible, unnecessary truck travel on local roadways through residential neighborhoods or adjacent to schools, and prioritize travel on collector and arterial streets.

PDF-NOISE-2: Construction Noticing and Community Liaison. Prior to commencement of construction activities, the City shall notify in writing adjacent residents and businesses along the Project route or worksite of proposed construction activities and the tentative schedule. The City shall require the construction contractor to designate a community liaison to respond to any issues and/or concerns related to construction activities, including any noise or vibration complaints. The community liaison shall maintain a log of communications and resolutions of issues or concerns and share the log with the City. Notices and construction signs will include a hotline and website address which will be updated quarterly and will include project-related information.

Noise and Vibration Results

On-Site Construction

On-site construction noise impacts were evaluated by 1) determining the noise levels generated by the different types of construction activity anticipated, 2) calculating the construction-related noise level generated by the mix of equipment assumed for all construction activities at nearby sensitive receptor locations, and 3) comparing these construction-related noise levels to the applicable thresholds of each jurisdiction in which Project construction would occur. Construction of the various park zones include 1) demolition, (2) site grubbing, (3) grading/excavation, (4) drainage/ utilities/ trenching, (5) foundation concrete pour, (5) building construction, (6) asphalt paving, (7) landscaping, (8) waterside pile installation, (9) waterside landscaping, and (10) offsite improvements which include: restriping West Silver Lake Drive, restriping Silver Lake Boulevard, and sidewalk construction along Silver Lake Boulevard.

Project construction consists of seven park zones which include The Meadow, The Knoll, Ivanhoe Overlook,[19] The Eucalyptus Grove, The East and West Narrows, The South Valley, and the Habitat Islands. Project construction would also include offsite improvements for restriping West Silver Lake Drive, restriping Silver Lake Boulevard, and sidewalk construction along Silver Lake Boulevard.

Construction of the proposed park zones may occur simultaneously or sequentially. Since construction sequence is currently unknown, for purposes of this environmental analysis, it is assumed that construction of certain park zones would need to occur before other park zones to maximize usage of the proposed Project site during construction. For example, the Ivanhoe Overlook and Eucalyptus Grove would need to be constructed before The East and West Narrows to avoid potential damage to any of the new facilities (e.g., new pathways). For the purposes of the environmental analysis, the following park zones are assumed to be constructed simultaneously within two groupings, where the second grouping would be construction sequentially after the first:

1. Ivanhoe Overlook, The Eucalyptus Grove, Habitat Islands, the Knoll, the Meadow (1st half)

2. The East and West Narrows, the South Valley, Ivanhoe Spillway and Promenade, the Meadow (2nd half), and offsite improvements.

Construction noise levels on the Project Site and at noise-sensitive receptors would fluctuate depending on the particular type, number, and duration of use of the various pieces of construction equipment. **Table 5**, *Construction Equipment Noise Levels*, summarizes noise levels from individual pieces of heavy-duty construction equipment that would be expected to be used for construction of the Project. As shown, the individual

[19] The Ivanhoe Overlook includes the Ivanhoe Spillway and Promenade. For modeling purposes, the Ivanhoe Spillway and Promenade is analyzed as a separate zone.

pieces of heavy-duty construction equipment would produce maximum noise levels ranging from 74 to 90 dBA L_{max} at a reference distance of 50 feet from the noise source, when operating at full power. Equipment do not operate continuously at full power. The estimated usage factor for the equipment are also shown in Table 5, which accounts for fluctuating equipment power and noise levels.

TABLE 5
CONSTRUCTION EQUIPMENT NOISE LEVELS

Construction Equipment	Noise Level (dBA L_{max}) at 50 Feet	Estimated Usage Factor, %
Bore/Drill Rig	79	20
Cement and Mortar Mixers	79	40
Compactor (ground)	83	20
Concrete Saw	90	20
Cranes	81	16

Water Trucks	80	10
Welders	74	40

SOURCE: FHWA, 2006.

Over the course of a construction day, the highest noise levels would be generated when multiple pieces of construction equipment are being operated concurrently. The Project's estimated construction noise levels were calculated for a scenario in which all pieces of construction equipment would operate simultaneously with the loudest type of equipment located at the construction area nearest to the affected receptors to present a conservative impact analysis. The remaining equipment was assumed to be located at the center of the Project Site. The estimated noise levels at the off-site sensitive receptors were calculated using equipment source noise levels identified in the FHWA's RCNM, and were based on a maximum concurrent operation of equipment, which is considered a worst-case evaluation because the Project would typically use less overall equipment on a daily basis, and as such would generate lower noise levels. In addition, the noise levels were estimated including the assumption that there would be some construction

phase overlap. **Table 6**, *Estimate of Construction Noise levels (L_{eq}) at Existing Off-Site Sensitive Receptor Locations (First Park Zone Grouping),* and **Table 7**, *Estimate of Construction Noise levels (L_{eq}) at Existing Off-Site Sensitive Receptor Locations (Second Park Zone Grouping),* show the estimated construction noise levels that would occur at the nearest off-site sensitive uses during a peak day of construction activity at the Project Site.

Off-Site Roadway Construction Noise

Vehicle trips attributed to Project construction activities would increase average daily traffic ("ADT") volumes along the major thoroughfares within the project vicinity. Typically, with everything else being the same, a doubling of traffic volumes increases the hourly equivalent sound level by 3 dBA.[20] The haul routes for outbound trips from the Project Site would be Silver Lake Boulevard; north on Glendale Boulevard; and northeast on Fletcher Drive towards the on-ramp to Interstate 5 (northbound) or State Route 2 (northbound), or northeast on Fletcher Drive, left on Riverside Drive towards the on-ramp to State Route 2 (southbound), or northeast on Fletcher Drive, left on Riverside Drive onto Stadium Way towards the on-ramp to Interstate 5 (southbound). The haul routes for inbound trips towards the Project Site generally follow the same routes as the outbound trips.

TABLE 8
OFF-SITE CONSTRUCTION TRAFFIC NOISE IMPACTS

		Calculated Traffic Noise Levels along adjacent Land Uses (dBA CNEL)				
Roadway Segment	**Existing Land Uses Located along Roadway Segment**	**Existing (A)**	**Existing with Project Construction (B)**	**Project Increment (B-A)**	**Threshold**	**Exceed Threshold?**

SOURCE: ESA, 2022

[20] Federal Transit Administration (FTA), 2018. Transit Noise and Vibration Impact Assessment. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/FTA_Noise_and_Vibration_Manual.pdf. Accessed June 2021.

Project construction activities would generate a maximum of up to 335 worker trips per day, and a maximum of up to 494 truck trips per day. These worker and truck trips would be distributed throughout the Project area at up to a maximum estimated 5 work sites assumed. It is anticipated that these trips would occur primarily on collector and arterial streets as well as freeways throughout the Project area and would constitute a small fraction of the existing daily vehicle and truck trips that already occur on the collector and arterial streets and freeways. As shown in **Table 8**, *Off-site Construction Noise Impacts,* noise levels resulting from Project off-site construction would result in a maximum increase of 2.4 dBA L_{eq} along Silver Lake Boulevard between Armstrong Avenue and Glendale Boulevard. Therefore, with implementation of PDF-NOISE-1, the proposed Project would not increase the roadway noise level sound level by 3 dBA CNEL.

Off-Site Roadway Noise – Operational

Operational Traffic Noise Compared to Existing Traffic Baseline Conditions

Existing roadway noise levels were calculated along various arterial segments adjacent to the Project Site. Roadway noise attributable to Project development was calculated using the traffic noise model previously described and was compared to baseline noise levels that would occur under the “No Project” condition.

Project impacts are shown in **Table 9**, *Off-Site Traffic Noise Impacts-Existing With Project Conditions*. As indicated, the maximum increase in Project-related traffic noise levels over existing traffic noise levels would be 0.3 dBA CNEL, which would occur along Silver Lake Drive, north of Tesla Avenue. This increase in sound level would be below the 3 dBA increase threshold, and the increase in sound level would be lower at the remaining roadway segments analyzed. The Project-related traffic noise increases would be less than significant, and no mitigation measures are required.

TABLE 9
OFF-SITE TRAFFIC NOISE IMPACTS – EXISTING WITH PROJECT CONDITIONS

Roadway Segment	Existing Land Uses Located along Roadway Segment	Calculated Traffic Noise Levels along adjacent Land Uses (dBA CNEL)				
		Existing (A)	Existing with Project (B)	Project Increment (B-A)	Threshold	Exceed Threshold?

Operational Traffic Noise Compared to Future (2030) Traffic Conditions

Future roadway noise levels were also calculated along various arterial segments adjacent to the Project as compared to 2021 baseline traffic noise levels that would occur with implementation of the Project. Project impacts are shown in **Table 10**, *Off-Site Traffic Noise Impacts – Future (2030) With Project Conditions*. As indicated, the maximum increase in Project-related traffic noise levels over existing traffic noise levels would be 0.3 dBA CNEL, which would occur along Silver Lake Drive, north of Tesla Avenue. This

increase in sound level would be below the 3 dBA increase threshold, and the increase in sound level would be lower at the remaining roadway segments analyzed. The Project-related traffic noise increases would be less than significant, and no mitigation measures are required.

On-Site Operational Noise

On-Site Fixed Mechanical Equipment Noise

The operation of mechanical equipment typical of developments like the Project, such as air conditioners, fans, and related equipment, may generate audible noise levels. The Project's mechanical equipment would be located on rooftops or within buildings, and would be shielded from nearby land uses to attenuate the noise they would generate and avoid conflicts with adjacent uses. Specifically, mechanical equipment would be located at the Multi-Purpose Facility and Recreation Center in the South Valley and at the Education Center in the Knoll. In addition, all mechanical equipment would be designed with appropriate noise control devices, such as sound attenuators, acoustics louvers, sound enclosures, and/or sound screen/parapet walls, to comply with the noise limitation requirements provided in Section 112.02 of the LAMC, which prohibits the noise from such equipment from causing an increase in the ambient noise level by more than five decibels. **Table 11,** *On-Site Fixed Mechanical Equipment Noise Levels*, shows the noise levels from HVAC equipment combined with ambient noise levels. As presented, HVAC equipment would not contribute to existing noise levels at any of the sensitive receptor locations, would not exceed the City's thresholds of significance, and impacts would be less than significant.

TABLE 11
ON-SITE FIXED MECHANICAL EQUIPMENT NOISE LEVELS

Loading Activities and Refuse Service Areas Noise

The Project require typical weekly refuse collection services with refuse trucks accessing the Project Site from Armstrong Avenue at the northeast of the Project Site boundary. The Project would not include an exterior loading dock. Loading activities would be minimal given the relatively small scale of the Project's land uses; thus a dedicated loading dock is not needed. Delivery truck idling that may periodically occur from loading would be restricted to no more than 5 consecutive minutes in the loading area pursuant to State regulation (Title 13 California Code of Regulations [CCR], Section 2485). Pursuant to Title 13 California Code of Regulations [CCR], Section 2485, signs would be posted in delivery loading areas specifying this idling restriction. Any periodic loading and refuse collection would occur at the Multi-Purpose Facility and Recreation Center in the South Valley. Refuse collection would be similar to activities already occurring at the existing recreation center and would occur in the same location as the existing collection. Therefore, refuse collection would not cause an increase in noise levels over existing conditions and impacts would be less than significant,

Parking Noise

The proposed Project would include the addition of parking along 2 different areas surrounding the SLRC. One area would include the addition of a parking lane on the west side of Silver Lake Boulevard, adjacent to the SLRC between Armstrong Avenue and Duane Street for a length of approximately 3,000 feet. The proposed parking lane would provide approximately 135 additional on-street parking spaces. In addition, the proposed Project would include the addition of 90-degree parking along the north side of West Silver Lake Drive, east of Redesdale Avenue along the park's grassy area. Currently, there are 10 parallel parking spaces along this segment of West Silver Lake Drive. By converting to 90-degree parking, a total of approximately 25 parking spaces would be added, resulting in a net increase in parking of 15 spaces at this location. Two of the new parking spaces would be dedicated to electric vehicle (EV) parking. Additionally, offsite improvements would occur along Silver Lake Boulevard, between Armstrong Avenue and Duane Street for a length of approximately 3,000 feet. Currently, there is only parking along the eastern side of Silver Lake Boulevard and the proposed design would add approximately 135 new parking spaces to the western side of the road.

Noise from vehicles utilizing the new on-street parking is included within the operational traffic noise assessments discussed above and provided in Table 9 and Table 10. A separate analysis is not required.

Increased Occupancy in Outdoor Spaces

As discussed in Chapter II, *Project Description*, of the Draft EIR, the Project would incorporate publicly accessible open space and amenities, available to the general public.

Special events, including outdoor concerts, movie nights, or luncheons could potentially be held at the outdoor open spaces and could require amplified sound.[21]

Listed below are the Project's proposed outdoor uses and the assumptions applied to the analysis. The potential for each space to be used during nighttime hours (between the hours of 10:00 P.M. and 7:00 A.M.) has been noted below. In addition to the active uses for specified spaces described below, these outdoor areas would support a variety of passive activities. **Table 12,** *Noise Levels from Increased Park Occupancy*, shows the noise contribution from increased occupancy at each park zone to ambient noise levels at each sensitive receptor. As shown, the increased occupancy at the park zones would contribute a maximum of 0.1 dBA L_{eq} to sensitive receptors, would not exceed the City's thresholds of significance, and impacts would be less than significant

[21] Under the Project, special events would occur within the outdoor spaces analyzed based on occupancy herein. Therefore, noise levels from special events under the Project have been encompassed in the analysis of individual open space areas.

The Meadow

The Meadow, which is a publicly accessible open space with lawn and shade trees. It is anticipated that most use of this area will be during the hours of 5:00 A.M. to 10:00 P.M. It is not anticipated that any people would congregate in the area during nighttime hours. The Meadow would be closest to sensitive receptor location R3. The area is approximately 7.5 acres, and completion of the Project would accommodate an increase of an estimated 130 people. Amplified noise would be permitted only during special events and is discussed in further detail below.

The Knoll

The Knoll would include nature trails connecting to the Meadow, Armstrong Avenue, and an approximately 1,200-square-foot shade pavilion and seating area that are integrated into the topography of the Knoll and oriented toward the water. The shade pavilion/seating area would be available to be used for educational purposes to host small groups of students. The Knoll would also include the Education Center, which would have small indoor and outdoor teaching and assembly spaces. It is anticipated that most use of this area will be during the hours of 5:00 A.M. to 10:00 P.M. The area is approximately 7.4 acres, and completion of the Project would accommodate an increase of an estimated 25 people. No amplified noise will be permitted in this area.

Ivanhoe Overlook

Ivanhoe Overlook would consist of the existing Ivanhoe Reservoir, dam, and proposed walking paths. The proposed design of the Ivanhoe Overlook zone would be focused along the northwestern corner of the reservoir and would include a new observation deck extending out over the new wetland terraces. The proposed Project would implement small footpaths through the proposed wetland terraces to observational platforms that would be used for ongoing monitoring and testing of habitat.

An approximately 1,200-square-foot shade pavilion would be added to the northwester perimeter of the reservoir and protrude over the existing reservoir edge to provide a sheltered space for outdoor education or community gathering. The shade pavilion/outdoor education classroom would include signage to educate visitors about the operations of the wetlands. It is anticipated that most use of this area will be during the hours of 5:00 A.M. to 10:00 P.M. The area is approximately 5.7 acres, and completion of the Project would not result in an increase in people. No amplified noise will be permitted in this area.

The Eucalyptus Grove

The Eucalyptus Grove includes plans replant this zone over time to enhance and restore its upland habitat value. This area would include walkways throughout the Eucalyptus Grove, which would incorporate low-lying habitat fencing to protect habitat areas. The Eucalyptus Grove would implement a large overlook that extends out over the habitat terraces with posted educational signage. It is anticipated that most use of this area will

be during the hours of 5:00 A.M. to 10:00 P.M. The area is approximately 7.3 acres, and completion of the Project would accommodate an increase of an estimated 20 people. No amplified noise will be permitted in this area.

East and West Narrows

The proposed East and West Narrows zone would run along the south edges of the Silver Lake Reservoir embankment. The primary feature proposed for these linear corridors would be the implementation of additional promenades, which would include overlooks and seating terraces. Where the promenade widens along the East Narrows, a fitness circuit would be implemented. In addition, the proposed Project would include an elevated overlook bridge. The West Narrows would include seating terraces embedded into the embankment. It is anticipated that most use of this area will be during the hours of 5:00 A.M. to 10:00 P.M. The area is approximately 6.4 acres, and completion of the Project would accommodate an increase of an estimated 45 people. No amplified noise will be permitted in this area.

The South Valley

The South Valley would include a new Multi-Purpose Facility and would update the existing Recreation Center on the corner of Van Pelt Place and Silver Lake Boulevard. Minor reconfiguration improvements to the interior of the existing Recreation Center would be implemented to include a mezzanine, to provide additional office and storage space, and other improvements to create a more useable space. The existing dog play area would be expanded and renovated to include two separate spaces for both small and large dogs and would encompass approximately 56,400 sf of space. It is anticipated that most use of this area will be during the hours of 5:00 A.M. to 10:00 P.M. The area is approximately 4.2 acres, and completion of the Project would accommodate an increase of an estimated 85 people. No amplified noise will be permitted in this area.

Habitat Islands

Two floating habitat islands would be added to the Ivanhoe Reservoir, just southeast of the proposed wetland terraces and footpaths. Up to ten floating islands would be added to the Silver Lake Reservoir near the Eucalyptus Grove and the Meadow. Floating islands would vary in size and would add shallow wading areas to provide habitat for waterfowl. Habitat Islands would not be accessible to visitors and is not analyzed as a contributor to open space noise for the Project.

Special Events

Special events such as outdoor concerts, movie nights, or luncheons could potentially be held at the outdoor open spaces and could require amplified sound. Under the Project, special events would occur within The Meadow analyzed above based on provided maximum occupancy levels of 600 people. Noise levels from special events under the Project have been encompassed in the analyses of the individual open space areas and are shown in **Table 13**, *Special Event Noise Levels*.

Note: **Bold** values and shaded cells indicate an increase of 5 dBA or greater over ambient noise levels.

SOURCE: ESA, 2022.

On-Site Operational Composite Noise

As shown in **Table 14**, the combined noise levels from mechanical equipment, loading activities and refuse, and open spaces without amplified music would not exceed the significance threshold of 5 dBA over ambient noise levels at any of the receptor locations. As shown in **Table 15**, the combined noise levels from mechanical equipment, loading activities and refuse, and open spaces with amplified music from special events would exceed the significance threshold of 5 dBA over ambient noise levels at receptor locations R3 and R4. Therefore, impacts from on-site operational noise would be less than significant without amplified music and would be potentially significant with amplified music from special events.

Vibration Impacts

Construction

Structural Damage – On-Site Equipment

Construction activities at the Project Site have the potential to generate relatively low levels of groundborne vibration, as the operation of heavy equipment (e.g., vibratory pile driver, backhoe, dozer, excavators, drill rig, loader, scraper, and haul trucks) generates vibrations that propagate through the ground and diminish in intensity with distance from the source. Installation of piles for shoring and foundation would utilize drilling methods to minimize vibration generation.

Project construction would generate varying degrees of ground vibration, depending on the construction procedures and the construction equipment used. The PPV vibration velocities for several types of construction equipment measured at increasing distances are identified in **Table 16**, *Construction Vibration Impacts – Building Damage*. Table 16 provides the estimated vibration velocity levels at the nearest off-site structures to the Project Site, which include V1 (Single-family residential uses to the north, west, and northwest of the Project Site near the corner of West Silver Lake Drive and Tesla Avenue), V2 (Single-family residential uses to the north, east, and northeast of the Project Site at the corner of Armstrong Avenue and Tesla Avenue), V3 (Neighborhood Nursery School at the corner of Armstrong Avenue and Tesla Avenue), V4 (Single-family residential uses to the east of the Project Site along Silver Lake Boulevard, including the Neutra House), V5 (Single-family residential uses to the southeast of the Project Site along Silver Lake Boulevard), V6 (Single-family residential uses to the south of the Project Site along Silver Lake Boulevard),V7 (Single-family residential uses to the west of the Project Site along West Silver Lake Drive), and V8 (South Outlet Chlorination Station, Meter House, and air raid siren north of the existing Recreation Center). Note that receptors V1, V2, V5, V7, and V8 are conservatively assumed to be historic resources and use a significance threshold of 0.12 in/sec PPV. These receptors are assumed to be located within the Neutra Residential Historic District (V5),the Silver Lake Residential Historic District (V1, V2, and V7), or are historic resources located within the Project Site's South Valley (V8).[22] All other buildings in the area would be located at greater distances to the Project Site and would experience lower vibration velocities from on-site construction activity.

[B] Vibration level calculated based on FTA reference vibration level at 25-foot reference distance.

[C] FTA criteria for historic structures (0.12 in/sec PPV) and non-engineered timber building structures (0.2 in/sec PPV)

SOURCE(S): FTA, Transit Noise and Vibration Impact Assessment; ESA, 2022. Groundborne vibration modeling worksheets are provided in Exhibit D of this Technical Report.

As indicated in Table 16, the estimated vibration velocity levels from construction equipment would not exceed the significance thresholds of 0.12 in/sec PPV and 0.2 in/sec PPV at any of the sensitive receptors. Further, the existing South Outlet Chlorination Station, Meter House, and a historic air raid siren located on the southern edge of the Project Site are considered historic resources and Category IV building (buildings extremely susceptible to vibration damage) for potential structural damage impacts. South Valley construction activities, including construction of the new multi-purpose building, would occur in the vicinity of the historic resources. Potential vibration-generating equipment are shown in Table 16. Vibratory rollers would not be used in the immediate vicinity of the historic resources. However, other equipment, such as dozers or loaded trucks, may be used within approximately 15 feet of the buildings and vibration levels would be up to approximately 0.191 inches per second PPV, which would exceed the significance threshold of 0.12 inches per second PPV. **Therefore, vibration impacts associated with structural damage from on-site construction activities would be**

potentially significant at receptor V8 prior to implementation of mitigation measures.

Structural Damage – Off-Site Vehicles

On-road rubber-tired construction trucks would travel to and from the Project Site along the local roadway network. According to the FTA's *Transit Noise and Vibration Impact Assessment*, haul truck trips on roadways rarely create vibration levels that exceed 70 VdB, which would be equivalent to 0.012 in/sec PPV, would not exceed the significance threshold for building damage of 0.50 in/sec PPV.[23] Additionally, unusually uneven and rough road conditions could increase vibration levels by approximately 5 VdB.[24] There is no substantial evidence that roadways in the Project vicinity are unusually uneven or rough to the point that vibrations from a typical heavy-duty truck would reach 75 VdB. Therefore, construction trucks would not exceed threshold of 0.20 in/sec PPV. **Therefore, the potential vibration impacts for building damage due to off-site haul trucks would be less than significant, and no mitigation measures would be required.**

Human Annoyance – On-Site Equipment

With respect to human annoyance, the FTA's *Transit Noise and Vibration Impact Assessment* identifies residential buildings as sensitive receptors. As discussed above, per FTA guidance, the significance criteria for human annoyance is 72 VdB for sensitive uses, including residential uses, assuming a minimum of 70 vibration events occurring during a typical construction day. **Table 17**, *Construction Vibration Impacts – Human Annoyance*, provides the estimated vibration levels at the off-site sensitive uses due to construction equipment operation and compares the estimated vibration levels to the specified significance criteria for human annoyance. As indicated in Table 17, the estimated groundborne vibration levels from off-road construction equipment would exceed the significance criteria for human annoyance at the adjacent sensitive receptor locations V1, V2, and V4 through V7. **Therefore, potential vibration impacts with respect to human annoyance that would result from temporary vibration from off-road construction equipment would be significant prior to the implementation of mitigation measures at sensitive receptor location V1, V2, and V4 through V7.**

V7	60 feet	**75.5**	68.9	**74.2**	67.4	46.1	72	**Yes**

NOTE(S):

[a] Represents off-site building structures located nearest to the Project Site to the north, south, east, and west (V1, V2, and V4 through V7 represent residential uses). V3 is not a receptor where people would normally sleep and is not analyzed for human annoyance.

[b] Vibration level calculated based on FTA reference vibration level at 25-foot reference distance.

[b] Drill rigs used for piles would be used ear the edge of the reservoir boundary and further from sensitive receptors. Drill rigs are assumed to be at a distance of 100 feet from each receptor.

[d] FTA criteria for residences or buildings where people normally sleep (72 VdB).

[e] V3 was not analyzed because it does not represent a sensitive use for human annoyance under FTA criteria.

SOURCE(S): FTA, *Transit Noise and Vibration Impact Assessment*, 2018; ESA, 2022. Groundborne vibration modeling worksheets are provided in Exhibit D of this Technical Report.

Human Annoyance – Off-Site Vehicles

As described above, construction trucks would travel along the local roadway network. The vibration generated by a typical heavy-duty truck would be up to approximately 70 VdB or 75 VdB assuming unusually uneven and rough road conditions. There is no substantial evidence that roadways in the Project vicinity are unusually uneven or rough to the point that vibrations from a typical heavy-duty truck would reach 75 VdB. Therefore, heavy-duty construction trucks would not expose vibration sensitive uses to groundborne vibration above the 72 VdB human annoyance significance criteria. Additionally, it is noted that each individual haul truck would pass vibration sensitive receptors along the haul routes and generate vibrations for only a few seconds at a receptor location. **Therefore, potential vibration impacts with respect to human annoyance that would result from temporary and intermittent off-site vibration from construction trucks traveling along the local roadway network would be less than significant for residential uses.**

(a) Operation

The Project's day-to-day operations would include typical commercial-grade stationary mechanical and electrical equipment, such as air handling units, condenser units, and exhaust fans, which would produce vibration at low levels that would not cause damage or annoyance impacts to the Project buildings or on-site occupants and would not cause vibration impacts to the off-site environment. In addition, the primary sources of transient vibration would include passenger vehicle circulation within the proposed parking area. According to America Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE), pumps or compressor would generate groundborne vibration levels of 0.5 in/sec PPV at 1 foot.[25] It is anticipated that Project mechanical equipment, including air handling units, condenser units, and exhaust fans, would be located on building rooftops. Therefore, groundborne vibration from the operation of such mechanical equipment would not impact any of the off-site sensitive receptors. **Therefore, vibration impacts from the Project operation would be less than significant.**

Mitigation Measures

Construction Noise

Based on the modeled worst-case construction scenario presented in Table 6 and Table 7 above, the Project could potentially exceed applicable thresholds and impacts would be potentially significant. Therefore, mitigation measures are required. The following mitigation measures would reduce on-site construction-related noise levels:

> **NOISE-1: Equipment Controls.** Noise and vibration construction equipment whose specific location on the Project site may be flexible (e.g., compressors and generators) shall be located away from the nearest off-site noise-sensitive land uses (at least 100 feet away) if sufficient distance on the implementing Project site is available. If 100 feet is not feasible, the equipment shall have natural and/or manmade barriers (e.g., berms, intervening construction trailers, etc.) or a noise enclosure around the specific equipment location that screens the receptor from propagation of noise from such equipment. The barrier and/or enclosure shall block the line-of-site from the construction equipment to any similarly elevated noise-sensitive receptors. Noise enclosures shall provide sufficient space and gate access as needed for the safe operation of equipment, construction activities, material deliveries, and equipment access by construction personnel. A noise enclosure is not required if it would pose a safety risk or unreasonably prevent access to the construction equipment as deemed by the on-site construction manager such as in areas that have limited equipment maneuvering space or access. The contractor shall provide documentation verifying compliance with this measure.
>
> **NOISE-2**: **Mobile Noise Barriers.** For construction areas within 500 feet of a residential land use or other sensitive receptor, the contractor shall install temporary

[25] America Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., *Heating, Ventilating, and Air-Conditioning Applications*, 1999.

noise barriers between the active construction area and the off-site noise-sensitive receptors. The mobile noise barriers shall achieve sound level reductions of a minimum of 10 dBA between the Project construction sites and the sensitive receptor location. These temporary noise barriers shall be used to block the line-of-sight between the construction equipment and similarly elevated ground-level noise-sensitive receptors. The barriers should allow for repositioning in order to block the noise at the sensitive receptor as construction activities move along the Project boundary. A noise barrier is not required if it would pose a safety risk or unreasonably prevent access to the construction area as deemed by the on-site construction manager such as in areas that have limited equipment maneuvering space or access. Any barrier capable of a reduction greater than 10 dBA would require greater height and heavier noise insulation which would make mobility of the barrier infeasible and cause safety concerns related to barrier stability. Further, noise barriers would only be effective if they block the line-of-sight to sensitive receptors. The elevation of the surrounding area increases quickly and receptors within the vicinity of all identified sensitive receptors may still have a direct line-of-sight to the Project Site and may not benefit from the use of a mobile noise barrier. The contractor shall provide documentation verifying compliance with this measure.

NOISE-3: Construction Equipment Noise S**hielding and Muffling Devices.** Contractors shall ensure that all construction equipment, fixed or mobile, are equipped with properly operating and maintained noise shielding and muffling devices, consistent with manufacturers' standards. Prior to the issuance of demolition permits, certification of muffler installation shall be submitted to the applicable City for review. The construction contractor shall keep documentation onsite demonstrating that the equipment has been maintained in accordance with the manufacturers' specifications. The primary source of noise from construction equipment originates from the intake and exhaust portions of the engine cycle. According to FHWA, use of adequate mufflers systems can achieve reductions in noise levels of up to 10 dBA.[26] The contractor shall use muffler systems that provide a minimum reduction of 10 dBA compared to the same equipment without an installed muffler system, reducing maximum construction noise levels. Contractors shall include the muffler requirements in contract specifications. The contractor shall also keep documentation on-site prepared by a noise consultant verifying compliance with this measure. Mufflers providing a noise reduction greater than 10 dBA would be technically infeasible or cost prohibitive given the current best available technologies. Further, mufflers are only effective on equipment with internal combustion engines and would not result in noise reductions for hand tools and other light-duty construction equipment. Therefore, NOISE-3 incorporates muffling devices to the maximum extent feasible.

While implementation of mitigation measures would reduce noise level and associated impacts at noise-sensitive receptors, noise levels could still exceed local jurisdiction significance thresholds when taking into account the potential worst-case overlap of the

[26] FHWA, *Special Report – Measurement, Prediction, and Mitigation*, Chapter 4 Mitigation, https://www.fhwa.dot.gov/Environment/noise/construction_noise/special_report/hcn04.cfm. Accessed July 16, 2021.

various construction phases. **Table 18** and **Table 19** show the construction noise levels at each receptors after the implementation of mitigation measures NOISE-1. All receptors would experience as 10 dBA noise level reduction from implementation of muffling devices under mitigation measure NOISE-3. Noise barriers are assumed to reduce noise levels by 10 dBA at receptors where a noise barrier would block the line-of-sight between the receptor and the Project Site (e.g., R1 through R4, R6, and R8). However, the elevation of the surrounding residential areas increase moving away from the Project Site and elevated receptors within the vicinity of all identified sensitive receptors may still have a direct line-of-sight to the Project Site and may not benefit from the installation of a noise barrier. Noise barriers are not capable of blocking noise at noise-sensitive receptors that are elevated above a construction work site, such as residential units that are above grade of the Project Site. It is not feasible to install noise barriers with height sufficient block the line-of-sight for all noise-sensitive receptors located at higher elevation residential units due to barrier foundation and wind load restrictions. Because there could be receptors elevated above the construction work sites throughout the Project area within the upper levels of a noise-sensitive receptor building (receptor locations R1 through R8), construction noise would represent a temporary noise increase in excess of standards for receptors R1, R2, R3, R4, R6, and R8 and would be a potentially significant and unavoidable impact.

SOURCE: ESA 2022

Operational Noise

Based on the modeled worst-case operational scenario presented in Table 15 above, the Project could potentially exceed applicable thresholds and impacts would be potentially significant. Therefore, mitigation measures are required. The following mitigation measures would reduce on-site operational-related noise levels from the amplified speaker system:

> **NOISE-4:** Special Event Permit - Amplified Speaker System. The use of an amplified speaker system in The Meadow shall be prohibited from being placed

in the north Meadows with speakers facing south, in the south Meadows with speakers facing north, or on the bluff facing east to limit noise impacts at the nearby sensitive receptors Special event permits shall be issued prior to any special event with provisions related to speaker directionality, hours of operations, and noise level restrictions. Further, temporary noise barriers, blankets, or baffles may be required on either side of and behind speakers to limit the amount of excess noise reaching nearby sensitive receptors.

Construction Vibration

Based on the modeled worst-case structural damage scenario presented in Table 16 above, the Project could potentially exceed applicable thresholds and impacts would be potentially significant. Therefore, mitigation measures are required. The following mitigation measures would reduce on-site vibration impacts related to structural damage:

NOISE-5: Equipment Setbacks. The operation of construction equipment that generates high levels of vibration during any phase of construction occurring in the South Valley will be limited to setback distances from receptor V8. Receptor V8 includes the South Outlet Chlorination Station and Meter House. Setback distances apply in all directions surrounding the two buildings identified as V8. The following equipment shall be prohibited from operating within their respective setback distances:

- Large bulldozers shall be prohibited within 21 feet of receptor V8
- Loaded Trucks shall be prohibited within 19 feet of receptor V8
- Jackhammers shall be prohibited within 12 feet of receptor V8
- Small bulldozer shall be prohibited within 3 feet of receptor V8

The contractor(s) shall require and document compliance with the minimum allowable setbacks in a construction vibration management plan, which shall be provided to the City prior to issuance of a demolition permit. The construction vibration management plan shall detail the types of equipment to be used during demolition, grading, and building construction, estimated vibration velocities, and distance to vibration receptor V8. Equipment and or alternative construction techniques to be used within the required setbacks for large bulldozers, loaded trucks, jackhammers, and small bulldozers shall be identified to ensure that vibration velocities will not exceed thresholds for potential structural damage.

With implementation of Mitigation Measure NOISE- 5, potential structural vibration impacts on receptor V8 would be mitigated to less than significant. **Table 20** shows the estimated vibration levels at V8 with implementation of NOISE-5.

TABLE 20
MITIGATED CONSTRUCTION VIBRATION IMPACTS – STRUCTURAL DAMAGE

SOURCE(S): FTA, *Transit Noise and Vibration Impact Assessment*; ESA, 2022.

The Project could potentially exceed applicable thresholds for human annoyance. Vibration impacts regarding human annoyance at nearby sensitive receptors could exceed the significance thresholds (72 VdB at residential uses). Potential mitigation measures to reduce vibration impacts from on-site construction activities with respect to human annoyance include the installation of a wave barrier, which is typically a trench or a thin wall made of sheet piles installed in the ground (essentially a subterranean sound barrier to reduce noise). However, wave barriers must be very deep and long to be effective and are not considered feasible for temporary applications, such as Project construction.[27] Per the Caltrans Transportation and Construction Vibration Guidance Manual, the wave barrier would need to be at least two-thirds of the seismic wavelength and the length of the barrier must be at least one wavelength (typical wavelength can be up to 500 feet). In addition, constructing a wave barrier to reduce the Project's construction-related vibration impacts would, in and of itself, generate groundborne vibration from the excavation equipment. In addition, it is not possible to prohibit the use of construction equipment within certain distances of sensitive receptors as such equipment would be required to be used to construct the various Project components at the proposed locations. Thus, it is concluded that there are no feasible mitigation measures that could be implemented to reduce the temporary vibration impacts from on-site construction associated with human annoyance at the vibration-sensitive receptors. Therefore, Project vibration impacts from construction activities with respect to human annoyance would be significant and unavoidable.

[27] Caltrans, *Transportation and Construction Vibration Guidance Manual*, p. 41. September 2020.

Operational Vibration

Operations of the Project facilities would not generate perceptible levels of vibration capable of causing structural damage or human annoyance and impacts would be less than significant. Mitigation would not be required.

Source:

Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual,* 2018.

Notes:

* Values taken from Table 7-4.

** Based on the formula VdB = 20 x LOG10 (v/v_{ref}), where v_{ref} is equal to 1×10^{-6} in/sec (see page 111).
The approximate rms vibration velocity level (v) is calculated from PPV using a crest factor of 4 (see page 184).

*** Based on the formula $PPV(D) = PPV(25\text{ ft}) \times (25/D)^N$, where D is equal to the distance (see page 185).
N = soil type classification factor (typically ranges from 1 to 1.5)

Scenario Descriptions

No Event	Noise from 2 HVAC units and increased occupancy around the park
bluff-east	No Event + amplified speaker on The Meadows "bluff", facing east
bluff-west	No Event + amplified speaker on The Meadows "bluff", facing west
bluff-south	No Event + amplified speaker on The Meadows "bluff", facing south
bluff-north	No Event + amplified speaker on The Meadows "bluff", facing north
meadows-east	No Event + amplified speaker located in the east side of The Meadows, facing west
meadows-west	No Event + amplified speaker located in the west side of The Meadows, facing east
meadows-south	No Event + amplified speaker located in the south side of The Meadows, facing north
meadows-north	No Event + amplified speaker located in the north side of The Meadows, facing south

SECTION 1 – INTRODUCTION

1.1 – INTRODUCTION

This Transportation Impact Assessment (TIA) is consistent with the City of Los Angeles (City) Department of Transportation (LADOT), Transportation Assessment Guidelines (TAG), dated July 2020. This study evaluates the potential project-specific transportation effects of the proposed Project, which is described in further detail in **Section 1.3**. The analysis focuses on traditional mobility considerations as well as safety, sustainability, smart growth, and the reduction of greenhouse gas emissions.

The TAG conforms to the requirements of Senate Bill 743 (SB 743) and is consistent with the California Environmental Quality Act (CEQA), which requires the use of Vehicle Miles Traveled (VMT) as the primary metric for evaluating a project's transportation impacts. The California Environmental Quality Act (CEQA) Guidelines were revised in December 2018 in response to Senate Bill (SB 743), which was adopted in 2013 to change the way transportation impacts were considered. These revisions mandated the transition from Level-of-Service (LOS) to Vehicle Miles Travelled (VMT) as the primary metric for evaluating a project's transportation impacts. The TAG also requires the TIA to examine whether the proposed Project conflicts with the City's plans, programs, ordinances, and policies. In addition, Non-CEQA transportation analysis is also required to assess the Project's potential transportation effects on pedestrian, bicycle and transit facilities, project access, safety and circulation, project construction, and the potential for residential street intrusion.

1.2 - PROJECT LOCATION AND INFORMATION

The Project Area encompasses the Silver Lake Reservoir Complex (SLRC) within the Silver Lake community of the City of Los Angeles. A Project Vicinity Map is included in **Figure 1 – Vicinity Map**.

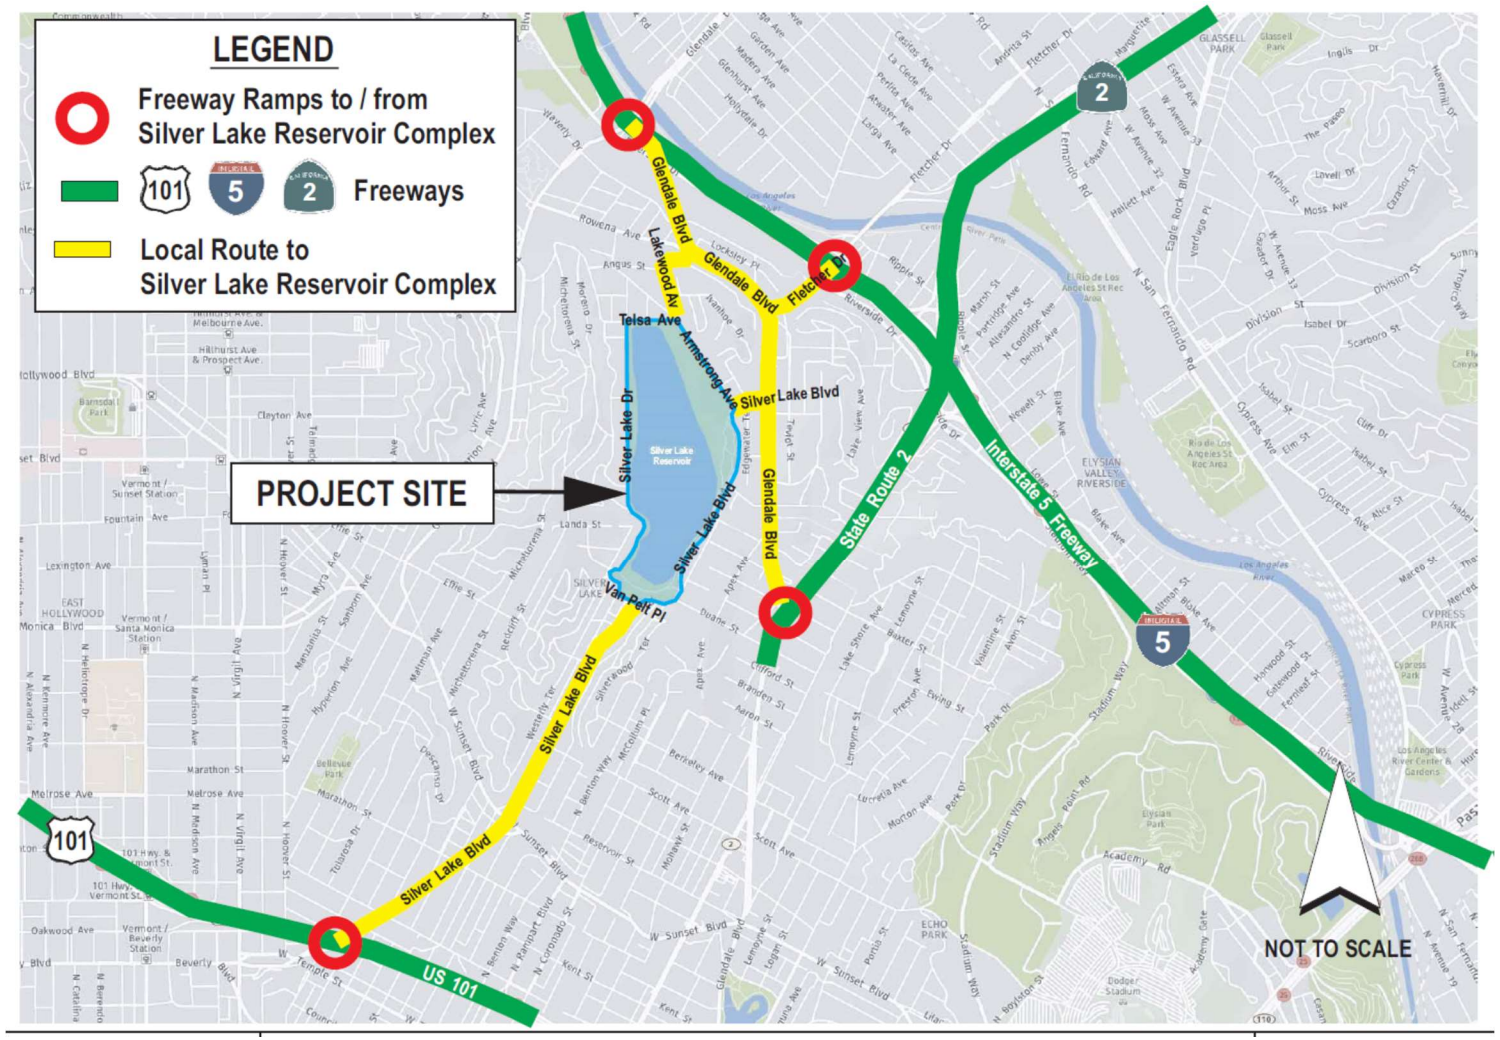

FIGURE 1 – VICINITY MAP

1.3 - PROJECT DESCRIPTION

The City of Los Angeles Bureau of Engineering as Lead Agency, in coordination with the Los Angeles Department of Water and Power, are proposing to implement the Silver Lake Reservoir Complex Master Plan (SLRCMP), referred to herein as the proposed Project. The proposed Project consists of redesigning approximately 116 acres of the existing 127-acre Silver Lake Reservoir Complex (SLRC) site with community park amenities. The proposed Project would include a contemporary design of park zones with hybrid infrastructure that blends vegetated areas with public spaces.

The SLRC is located in the Silver Lake neighborhood of the City of Los Angeles. The SLRC is bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, Van Pelt Place and West Silver Lake Drive on the south, and West Silver Lake Drive on the west.

The SLRCMP completed in 2021 envisioned a series of spaces (park zones) stitched together by a 2.5-mile, tree-lined promenade (refer to **Figure 3**). These zones include: the Meadow; the Knoll; Ivanhoe Overlook; Eucalyptus Grove; East and West Narrows; and South Valley. The Project would feature two flexible lawns with shade trees, a picnic grove and ornamental gardens with an informal play area, and an environmental education center along the east edge of Silver Lake Reservoir at the base of the Knoll. At the intersection between the lawns and water, stepped seating terraces would navigate to wetland terraces interwoven with small footpaths. Two existing areas of woodland, the Knoll and Eucalyptus Grove would be restored to increase their upland habitat value. A new ecosystem that reintroduces coastal scrub and wetland habitat to the SLRC in the form of habitat islands and terraces would extend from the shoreline embankments and within the reservoir bodies. **Table 1 – Proposed Project Information** shows the proposed Project's information.

Table 1 – Proposed Project Information	
Existing Land Use	Reservoir, park, Recreation Center, and continued use of Department of Water and Power on-site Facilities and Maintenance.
Proposed Land Uses	New wetlands habitat and educational centers. Renovated park, amenities, Recreation Center, and continued use of Department of Water and Power on-site Facilities and Maintenance.
Proposed Project Parking and Bicycle Spaces	Bicycle spaces will be designated in various locations throughout the SLRC. On-street vehicle parking will be provided along the west side of Silver Lake Boulevard and the north side of West Silver Lake Drive adjacent to the South Valley.
Department of City Planning Case Number	N/A
Project Location Site	Silver Lake Reservoir Complex (SLRC)

Table 2 – Proposed Project Information	
Assessor's Block Number	N/A
Assessor's Lot Number	PT LT A
Cross Street 1	Tesla Avenue
Cross Street 2	Van Pelt Place
City Council District	CD-4: Nithya Raman and CD-13: Mitch O'Farrell

As indicated previously, the SLRC will be divided into separate park zones. These park zones are described below:

- **The Meadow:** The existing Meadow area consists of open lawn with some shade trees and a mix of ornamental and native landscape with several walking paths. The proposed SLRCMP would reconfigure and expand the Meadow's existing 3.4 acres of open lawn and shade trees, into approximately 7.5 acres. There would be two lawn areas within the Meadow: the Silver Lake Lawn and the Great Lawn. This area would feature ornamental gardens and picnic areas.

- **The Knoll:** The existing Knoll area is a large hill comprising 8.3 acres of wooded area, approximately 45 feet high. The Knoll is currently restricted to LADWP access only and comprises a woodland mix of eucalyptus and pine species with a varied grass and shrub understory. A portion of the Knoll is currently used for material storage. The proposed SLRCMP would enhance the vegetated areas within the Knoll zone by implementing a replanting strategy over time. In addition, the proposed Project would add accessible nature trails connecting to the Meadow, Armstrong Avenue, and an approximately 1,200-square-foot shade pavilion and seating area that will be constructed in this area. The shade pavilion/seating area would be available to be used for educational purposes to host small groups of students. A small portion of the southern face of the Knoll would be regraded to accommodate small seating terraces facing the Meadow. The 3,760-square foot Education Center would be constructed within the Knoll landscape overlooking the reservoir. The proposed Education Center would be connected directly to the reservoir via an accessible pathway leading down to a floating dock. This area could provide educational opportunities and/or guided kayak or canoe tours by ecologists. The roof of the Education Center would be both a landing point along the path leading to the top of the Knoll, with a roof terrace overlooking the reservoirs and an extension of the landscape with a green roof connected to the Knoll's western slope. The proposed Education Center design would include small indoor and outdoor teaching and assembly spaces. The proposed Education Center would contain two interior classrooms. The large classroom would be approximately 1,400 square feet and would

accommodate approximately 50 people. A slightly smaller classroom would be approximately 1,000 square feet and would accommodate approximately 35 people. The proposed Education Center would contain approximately 380 square feet of office and storage space. Public restrooms would be included and would be directly accessible from the promenade to serve the Project area as a whole.

- **Ivanhoe Overlook:** The existing Ivanhoe Reservoir is the smaller of the two reservoirs in the SLRC and is bounded by a path along the top of its dam. Areas surrounding the reservoir are currently restricted to LADWP access except for a shared path on the west side that connects to a public sidewalk on West Silver Lake Drive. The proposed Ivanhoe Overlook zone would encompass approximately 5.7 acres and would consist of the existing Ivanhoe Reservoir, dam, and proposed walking paths. The proposed design of the Ivanhoe Overlook zone would be focused along the northwestern corner of the reservoir and would include a new observation deck extending out over the new wetland terraces. The proposed Project would implement small footpaths through the proposed wetland terraces to observational platforms that would be used for ongoing monitoring and testing of habitat. An approximately 1,200-square-foot shade pavilion would be added to the northwestern perimeter of the reservoir and protrude over the existing reservoir edge to provide a sheltered space for outdoor education or community gathering. The shade pavilion/outdoor education classroom would include signage to educate visitors about the operations of the wetlands. The existing Ivanhoe Tower located on Ivanhoe Dam (north side of the reservoir) would remain in place and operational.

- **Eucalyptus Grove:** The existing Eucalyptus Grove area is located along the western side of Silver Lake Reservoir and is a large, mostly-flat area dominated by non-native Eucalyptus trees. Access to the grove is currently restricted to LADWP. The proposed Eucalyptus Grove zone would encompass approximately 7.3 acres. The proposed Project would replant this zone over time to enhance and restore its upland habitat value. This area would include walkways throughout the Eucalyptus Grove, which would incorporate low-lying habitat fencing to protect habitat areas. The proposed Project would include the implementation of habitat terraces at the edge of the Eucalyptus Grove to extend beyond the existing embankment edge creating a gradient of upland, transition, and wetland ecologies. The proposed Project would implement a large overlook that extends out over the habitat terraces with posted educational signage. Within areas where the overlook projects out over Silver Lake Reservoir, guardrails

approximately 42 inches high would be installed according to current California Building Code regulations.

- **The East/West Narrows:** The existing east/west narrows area consists predominantly of a pathway that is currently restricted to LADWP access only. The proposed East and West Narrows zone would be approximately 6.4 acres in size and would extend along the south edges of the Silver Lake Reservoir embankment. The primary feature proposed for these linear corridors would be the implementation of additional promenades, which would include overlooks and seating terraces. Where the promenade widens along the East Narrows, a fitness circuit would be implemented, creating a connection to the existing Recreation Center and new improvements in the South Valley zone. In addition, the proposed Project would include an elevated overlook bridge. The West Narrows would include seating terraces embedded into the embankment and a line of trees along the promenade to provide shade and shelter.

- **The South Valley:** The South Valley encompasses the area located south of Silver Lake Dam and along the southern portion of the proposed Project area. This area includes an existing Recreation Center building with a small gym and support spaces, tot-lot, informal play field, basketball court, fenced Dog Park, open lawn, and picnic area. The Recreation Center is operated from 9:00 a.m. to 9:00 p.m. on weekdays and 9:00 a.m. to 5:00 p.m. on Saturdays and is closed on Sundays. At the top of the Silver Lake dam is a shared pathway that connects to sidewalks at West Silver Lake Drive and Silver Lake Boulevard. The proposed South Valley zone would encompass approximately 4.2 acres. The proposed Project would include a new Multi-Purpose Facility and would update the existing Recreation Center on the corner of Van Pelt Place and Silver Lake Boulevard. The new Multi-Purpose Facility would be approximately 5,800 square feet in size. The proposed Multi-Purpose Facility would house one indoor basketball court and provide an entrance off a new plaza along Van Pelt Place. To accommodate the new Multi-Purpose Facility, the existing basketball court and playfield would be relocated to the north. The existing picnic area would be relocated to the west sloping lawn and additional trees would be added to provide shade. Minor reconfiguration improvements to the interior of the existing Recreation Center would be implemented to include a mezzanine, to provide additional office and storage space, and other improvements to create a more useable space. Furthermore, the existing Dog Park would be expanded and renovated to include two separate spaces for both small and large dogs and would encompass approximately 56,400 square feet of space. This area would be regraded and surface materials would be updated from decomposed granite to synthetic turf.

Integrated seating, benches, and shade structures would be added to provide dog owners and visitors with seating areas.

- **Habitat Islands:** The proposed Project would include the addition of approximately 3.5 acres of habitat islands within both the existing Silver Lake and Ivanhoe Reservoirs to provide additional wildlife habitat areas. Floating islands would vary in size and would add shallow wading areas to provide habitat for waterfowl.

Figure 2 – Existing SLRC shows existing SLRC park zones and uses. **Figure 3 – Project Site Plan** shows the proposed Project Site Plan.

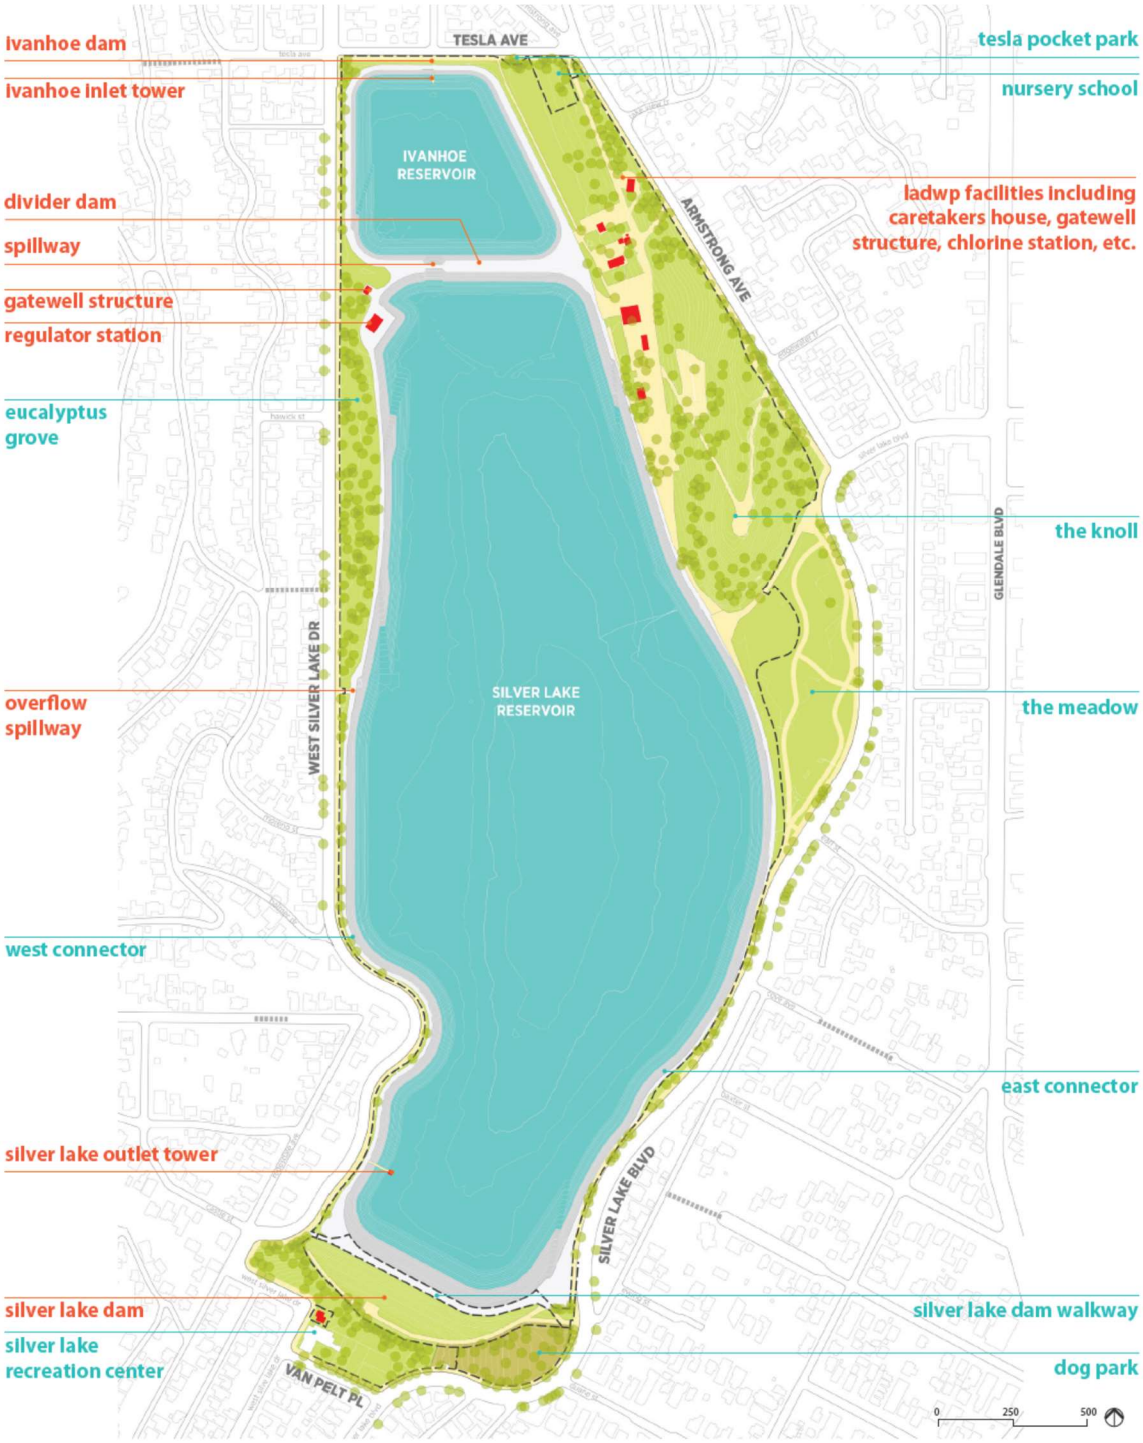

FIGURE 2 – EXISTING SLRC

FIGURE 3 – PROJECT SITE PLAN

THIS PAGE HAS BEEN INTENTIONALLY LEFT BLANK.

SECTION 2 – PROJECT CONTEXT

2.1 - PROJECT CONTEXT

A comprehensive analysis and an inventory of the existing transportation infrastructure and conditions within a 1/4-mile radius of the Project was collected. The collected data was analyzed to determine the street designations, classifications, and modal priorities as identified in the City's Mobility Plan 2035. The following Section describes the details of the transportation infrastructure in the vicinity of the Project.

2.2 - NON-VEHICULAR TRANSPORTATION SYSTEM

An illustration depicting the nearby non-vehicular transportation systems: pedestrian facilities, transit stops, and bicycle lanes is provided in **Figure 4 – Non-Vehicular Transportation System**.

2.2.1 - PEDESTRIAN FACILITIES

A review of the Project Area was conducted to evaluate the effects of the Project on pedestrian activity within a 1/4-mile radius of the Project. The pedestrian facilities are described in further detail in the following subsections.

2.2.2 - SIDEWALKS

An inventory of sidewalks within the vicinity of the Project was taken. The data collected for existing pedestrian sidewalks is listed in **Table 2 – Sidewalk Inventory** below.

Table 2 - Sidewalk Inventory

Street Name	From	To	Street Side	Sidewalk Width	Condition
Silver Lake Blvd	Armstrong Ave	Van Pelt Pl	East & West	22 feet 3 inches	Adequate
Silver Lake Dr	Armstrong Ave	Van Pelt Pl	East & West	The sidewalk width will vary. Additional walking paths will be along the west side of the lake.	Unpaved on east side.
Tesla Ave	Armstrong Ave	Silver Lake Dr	South	5 feet	Adequate
Armstrong Ave	Silver Lake Dr	Silver Lake Blvd	East & West	15 feet 3 inches	Unpaved on the west side of reservoir, paved north of Tesla Ave.
Van Pelt Pl	Silver Lake Dr	Silver Lake Blvd	North & South	5 feet	Adequate
Duane St	Silver Lake Blvd	Glendale Blvd	North & South	5 to 10 feet	Adequate

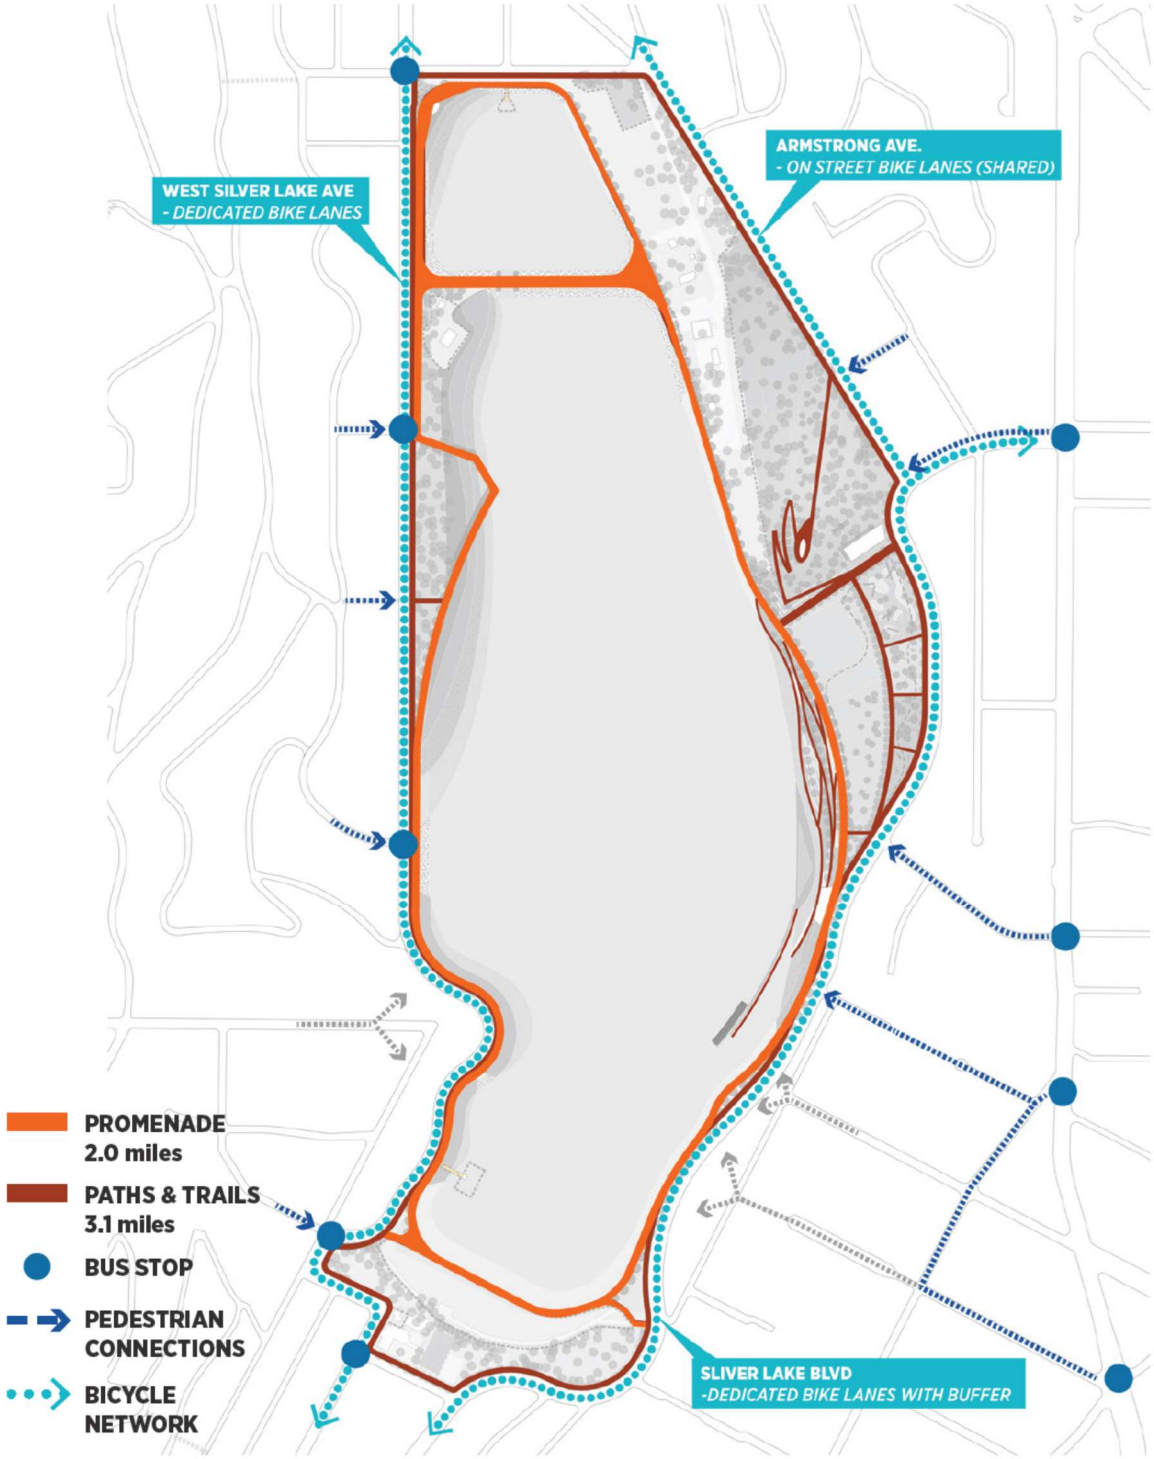

FIGURE 4 – NON-VEHICULAR TRANSPORTATION SYSTEM

2.2.3 - CROSSWALKS, CURB RAMPS, & PEDESTRIAN PUSH BUTTONS

An inventory of all pedestrian crosswalks, curb ramps, and pedestrian push buttons available in the vicinity of the Project is presented below in **Table 3 – Crosswalk, Curb Ramps & Pedestrian Push Buttons:**

Table 3 - Crosswalk, Curb Ramps & Pedestrian Push Buttons

Intersection Name		Signal Phasing	Ped Push Button	Crosswalk Type	Curb Ramp
Silver Lake Blvd	Van Pelt Pl	Flashing beacon signal	NW	North: Marked	NW
			NE	East: N/A	NE
			N/A	South: N/A	SW
			N/A	West: Marked	N/A
Silver Lake Blvd	Glendale Blvd	Signalized	NW	North: Marked	NW
			NE	East: Marked	NE
			SW	South: Marked	SW
			SE	West: Marked	SE
Silver Lake Blvd	Armstrong Ave	T-intersection, 1-way stop	N/A	Unmarked	N/A
			N/A		NE
			N/A		SW
			N/A		N/A
Silver Lake Blvd	Duane St	T-intersection	NW	North: Marked	NW
			NE	East: Marked	NE
			SW	South: Marked	N/A
			SE	West: N/A	SE
Silver Lake Blvd	Earl St Ped Crossing	Ped-activated signal	E	North: Marked	E
			W	South: Marked	W

Table 3 - Crosswalk, Curb Ramps & Pedestrian Push Buttons					
Intersection Name	**Signal Phasing**	**Ped Push Button**	**Crosswalk Type**	**Curb Ramp**	**Intersection Name**
Armstrong Ave	Tesla Ave	Non-signalized, 4-way stop	N/A	Un-marked	N/A
					NE
					N/A
					N/A
Tesla Ave/ Lakewood Ave	Silver Lake Dr	Non-signalized, 4-way stop	N/A	Un-marked	NW
					NE
					SW
					SE
Silver Lake Dr	Van Pelt Pl	T-intersection, 3-way stop	N/A	Un-marked	N/A
					NE
					N/A
					SW

2.2.4 - BICYCLE FACILITIES

There are bicycle facilities located within 1/4-mile of the Project Site. These bicycle facilities are shown in **Table 4 – Bicycle Facilities** below:

Table 4 – Bicycle Facilities		
Street Name	**Bicycle Facility**	**Condition**
Silver Lake Boulevard	Class 2	Adequate

2.2.5 - TRANSIT SERVICES

A map illustrating the locations of existing public transit routes is provided in **Figure 4 – Non-Vehicular Transportation System**. Given the frequency of buses travelling along Silver Lake Boulevard, a percentage of park visitors, including school children, will take public transit to the park. In addition, park guests will also use bicycles to travel to the Park.

2.3 - VEHICULAR TRANSPORTATION SYSTEM

An assessment of the roadway system within a 1/4-mile radius of the SLRC was conducted and is included in the following subsections. The assessment included the number and width of traffic lanes, direction of flow, and the presence of peak period tow-away lanes affecting roadway travel capacity, the presence of bicycle lanes, and any other significant street information.

2.3.1 - REGIONAL FREEWAY SYSTEM

The SLRC is served by the following freeways as shown in **Table 5 – Regional Freeway System** below:

Table 5 – Regional Freeway System

Freeway	Direction	Connecting Freeways	Lane Configuration	Ramps
US-101	N/S	I-405 & SR-170	5 in each direction	2
SR-2	N/S	I-210 & US-101	4 in each direction	2
I-5	N/S	SR-2 & US-101	5 in each direction	2

2.3.2 – PROJECT AREA STREET CLASSIFICATION

A review of the SLRC was conducted to evaluate the effects of the Project on the roadway system within a 1/4-mile radius of the project. The streets surrounding the SLRC are described below. **Table 6 – Project Area Street Classification** describes the Project area roadway system (classification, lane configuration, and parking). **Figure 5** – **Area Roadway System** shows the area roadway system, while **Figure 6 – Typical Street Cross Sections** shows the area roadway system's typical street cross section.

Table 6 - Project Area Street Classification

Roadway	Direction	Classification	Lane Configuration	Parking
Silver Lake Blvd	N/S	Avenue II	1 lane in each direction	On-street
Silver Lake Dr	N/S	Collector	1 lane in each direction	On-street
Armstrong Ave	N/S	Collector	1 lane in each direction	On-street (residential side only)
Tesla Ave	E/W	Local	1 lane in each direction	On-street
Lakewood Ave	N/S	Local	1 lane in each direction	On-street
Van Pelt Pl	E/W	Local	1 lane in each direction	On-street

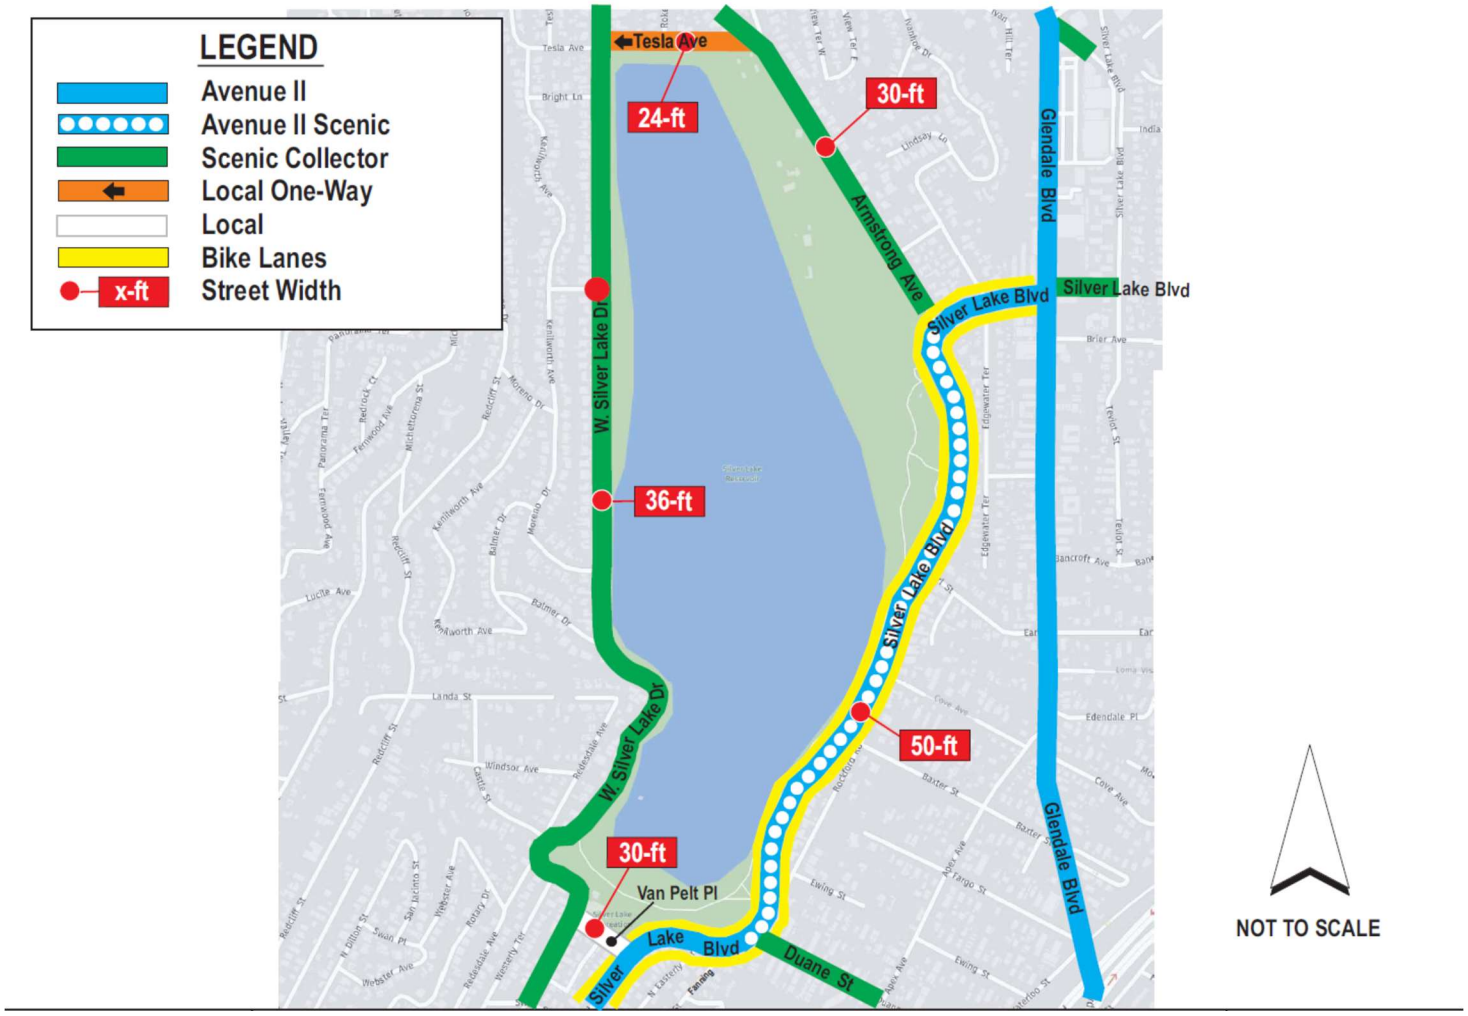

FIGURE 5 – AREA ROADWAY SYSTEM

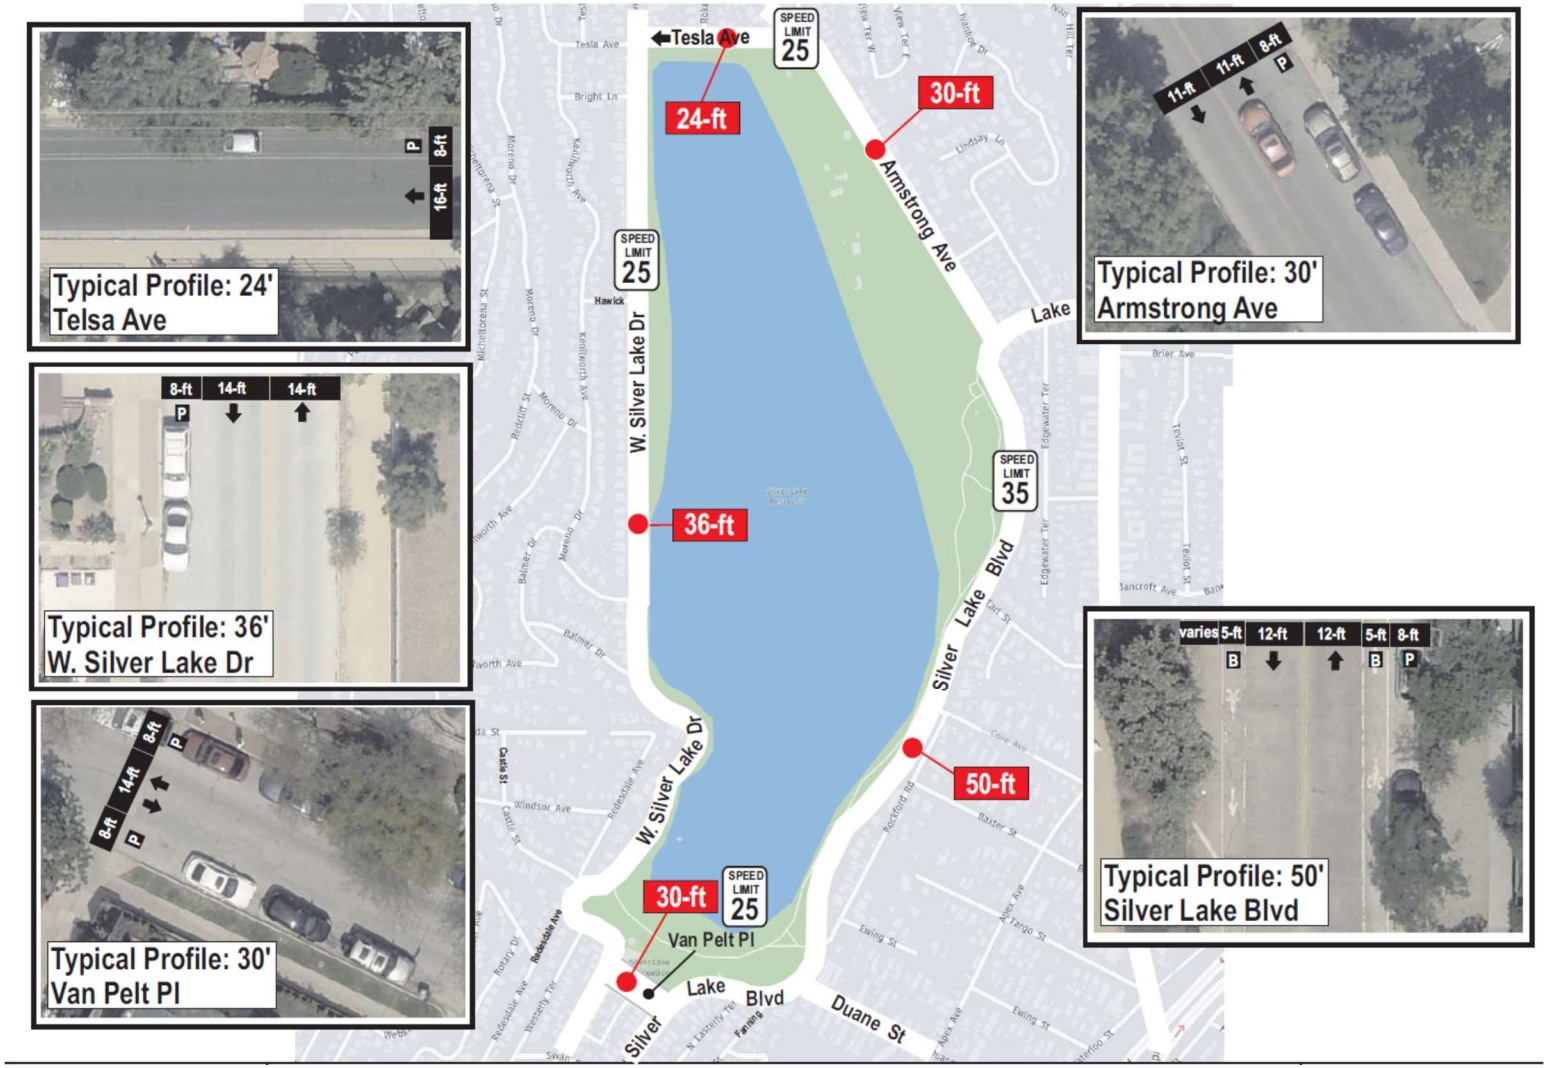

FIGURE 6 – TYPICAL STREET CROSS SECTIONS

The streets identified in **Table 6 – Project Area Street Classifications** are described in greater detail below:

- **Silver Lake Boulevard** is classified as an Avenue II with a roadway width of 50 feet. In the vicinity of the Project, Silver Lake Boulevard has 1 travel lane and a Class II bike lane for each direction separated by a double yellow centerline. A dirt trail with traffic barriers is provided on the east side of Silver Lake Boulevard adjacent to the reservoir and a concrete sidewalk is provided on the west side. Silver Lake Boulevard has a 35 mph speed limit.

- **Armstrong Avenue** is a two-lane Collector. For the most part of Armstrong Avenue, the roadway width is 30 feet with the exception of a small portion just north of Edgewater Terrace, where the width increases to 35 feet. There is a double yellow centerline on the street. Armstrong Avenue has a concrete sidewalk on the residential (northeast) side and a dirt trail on the side adjacent to the project (southwest). Armstrong Avenue has a 25 mph speed limit.

- **Tesla Avenue** is a one-way westbound local street with 1 travel lane. The street width is 24 feet. There is a concrete sidewalk on the south side of the roadway adjacent to the reservoir and a discontinuous sidewalk on the north. Tesla Avenue has a 25 mph speed limit.

- **West Silver Lake Drive** is classified as a Collector. For the most part of West Silver Lake Boulevard adjacent to the reservoir, the roadway width is approximately 36 feet with one lane in each direction separated by a double yellow centerline. A concrete sidewalk is provided on the west side and a dirt trail is present on the east, adjacent to the reservoir. At the south end of the reservoir, where West Silver Lake Drive intersects Redesdale Avenue, the street width widens to approximately 50 feet. There are Metro Line 201 bus stops for north and southbound West Silver Lake Boulevard. Metro Line 201 provides services between the City of Glendale north of the SR 134 Freeway and Wilshire Boulevard in the Westlake North district of the City of Los Angeles. West Silver Lake Drive has a 25 mph speed limit.

- **Van Pelt Place** has a roadway classification of Local Street. The street is about 30 feet wide with one lane in each direction. Van Pelt Place has a 25 mph speed limit.

SECTION 3 – CEQA ANALYSIS OF TRANSPORTATION IMPACTS

In compliance with CEQA and/or in accordance with City regulations, LADOT may require applicants to analyze and assess project-specific transportation impacts based on the following criteria:

- If the Development Project is estimated to generate a net increase of 250 or more daily vehicle trips and requires discretionary action, a transportation assessment for a Development Project is required.
- A transportation assessment is required by City ordinance or regulation.

According to the TAG, the preparation of a transportation impact assessment requires analysis and prediction of impacts or deficiencies to the circulation system generated by Development or Transportation Projects as well as the identification of feasible measures or corrective conditions to offset any impacts or deficiencies identified through a transportation assessment. As required by LADOT TAG, a Memorandum of Understanding (MOU) was prepared and submitted to LADOT. A copy of the LADOT approved MOU is included in **Appendix A – Approved MOU**.

3.1 - PROJECT DAILY VEHICLE TRIP GENERATION

LADOT's VMT calculator, Version 1.3, is typically used to determine if the Project would exceed any of the Transportation Impact Assessment criteria which would require further transportation impact analysis. However, the Project land use (parks) is not available on the City's VMT calculator since park uses are typically considered to be local in nature. Considering that the Project is a master plan to be built over an estimated 10-year period, the Project's trip generation will be based on different park zones to be completed in various phases. Therefore, it is anticipated that the Project's daily trips will increase incrementally, but not exceed 250 trips per day on an annual basis. A detailed Project trip generation based on park zone attendance is presented in **Section 4.2.3.3**. The Project trip generation methodology was included as part of the approved Memorandum of Understanding (MOU) included in **Appendix A – Approved MOU**.

3.2 - ANALYSIS METHODOLOGY

There are two categories of transportation impact analysis required by the LADOT's TAG. The first category, in Section 2, relates to potential transportation impacts under the California Environmental Quality Act (CEQA). Should a project exceed thresholds identified in the TAG, its impact would be considered significant under CEQA and thus would require any feasible mitigation measures be implemented to reduce the impact below the threshold of significance, to the extent feasible. The CEQA thresholds identified in the TAG are consistent with City adopted thresholds and with State CEQA guidance.

The second category of analysis, non-CEQA transportation impact analysis found in Section 3 of the TAG, analyzes transportation issues relating to safety, access, and circulation as they may be the result of the construction or operation of a project. The TAG identifies specific screening criteria in Sections 2 and 3 to determine whether each type of CEQA and non-CEQA transportation analysis is required depending on the size, use and daily vehicular trip generation of the project.

3.3 - CITY OF LOS ANGELES CEQA THRESHOLDS

The City's TAG identifies three thresholds to assess the project's transportation impacts, as follows:

- **Threshold T-1:** Conflicting with Plans, Programs, Ordinances, or Policies
    - **Impact Criteria:** Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?
- **Threshold T-2:** Causing Substantial Vehicle Miles Traveled
    - **Impact Criteria:** Development Projects - The development project will have a potential impact if the project meets the following:
        - For residential projects, the project would generate household VMT per capita exceeding 15% below the existing average household VMT per capita for the Area Planning Commission (APC) area in which the project is located. (**Table 8 – VMT Impact Thresholds** in this report)
        - For office projects, the project would generate work VMT per employee exceeding 15% below the existing average work VMT per employee for the APC in which the project is located.
        - For regional serving retail projects, the project would result in a net increase in VMT.
        - For other land use types, measure VMT impacts for the work trip element using the criteria for office projects above.

Table 7 – VMT Impact Thresholds		
Table 2.2-1 of the TAG: VMT Impact Criteria (15% Below APC Average)		
Area Planning Commission	**Daily Household VMT per Capita**	**Daily Work VMT per Employee**
Central	6.0	7.6
East LA	7.2	12.7
Harbor	9.2	12.3
North Valley	9.2	15.0
South LA	6.0	11.6
South Valley	9.4	11.6
West LA	7.4	11.1

- **Threshold T-3:** Substantially Increasing Hazards Due to a Geometric Design Feature or Incompatible Use
    - **Impact Criteria:** Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

3.4 - THRESHOLD T-1: CONFLICT WITH PLANS, PROGRAMS, ORDINANCES, OR POLICIES

According to the City's TAG, the City has adopted programs, plans, ordinances, and policies that establish the transportation planning regulatory framework for all travel modes. The overall goals of these policies are to achieve a safe, accessible, and sustainable transportation system for all users.

3.4.1 - SCREENING CRITERIA FOR T-1

The City's TAG, Table 2.1-1, lists all policies that should be reviewed as part of the analysis to identify any potential conflicts with the proposed Project. **Table 8 – Screening Criteria Questions for T1** provides responses to the screening criteria questions for Threshold-T1 from Table 2.1-1 of the TAG:

Table 8 - Screening Criteria Questions for T1			
	Screening Criteria Questions	**Answer**	**Action**
1	Does the Project require discretionary action?	Yes	If answer is yes to 1, answer the next questions otherwise no further analysis
2	Does the Project require a discretionary action that requires the decision maker to find that the decision substantially conforms to the purpose, intent, and provisions of the General Plan?	No	
3	Is the Project known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety?	No	If the answer to 1 and 2 or 3 or (4a & 4b) or (5a & 5b) is Yes further analysis is required
4a	Is the Project **required** to make modifications to the public right-of-way (i.e., dedications and/or improvements in the right-of-way, reconfigurations of curb line, etc.)?	Yes	
4b	Is the modification along the project frontage on a roadway designated as an **Avenue** or a **Boulevard** in the Mobility Plan 2035?	Yes	
5a	Is the Project **proposing** to make any voluntary modifications to the public right-of-way (i.e., dedications and/or improvements in the right-of-way, reconfigurations of curb line, etc.)?	Yes	
5b	Is the modification along the project frontage on a roadway designated as an **Avenue** or a **Boulevard** in the Mobility Plan 2035?	Yes	

3.4.2. – CONSISTENCY ANALYSIS FOR T-1

The TAG requires the completion of the Plan Consistency Worksheet to determine whether the Project conflicts with any City circulation system policy. According to the TAG, a mere conflict with adopted transportation related policies, or standards that requires administrative relief or legislative change does not in itself constitute an impact. The Plan Consistency Worksheet is provided in **Table 9– TAG Table 2.1-2** on the following page.

Table 9 - TAG Table 2.1-2: Questions to Determine Project Applicability to Plans, Policies and Programs				
	Guiding Questions	**Relevant Plans, Policies, and Programs**	**Supporting/Complementary City Plans, Policies, and Programs to consult**	**Project**
EXISTING PLAN APPLICABILITY				
1	Does the Project include additions or new construction along a street designated as a Boulevard I, and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone? (screening question)	LAMC Section 12.37	LAMC Section 12.37	Yes
2	Is Project Site along any network identified in the City's Mobility Plan?	Mobility Plan 2035	MP 2035 – Neighborhood Enhanced Network; Bicycle Lane Network; Pedestrian Enhanced Districts.	Yes
3	Are dedications or improvements needed to serve long-term mobility needs identified in the Mobility Plan 2035?	Mobility Plan 2035	MP 2035 - 2.17 Street Widenings	No
4	Does the Project require placement of transit furniture in accordance with City's Coordinated Street Furniture and Bus Bench Program?	City Coordinated Street Furniture Program	City Coordinated Street Furniture Program	No
5	Is Project Site in an identified Transit Oriented Community (TOC)?	ZIMAS	ZIMAS	No
6	Is Project Site on a roadway identified in City's High Injury Network?	Vision Zero	Vision Zero - High Injury Network (HIN) Map	No
7	Does Project propose repurposing existing curb space? (Bike corral, car-sharing, parklet, electric vehicle charging, loading zone, curb extension, etc.)	Mobility Plan 2035	MP 2035 - 2.3 Pedestrian Infrastructure; MP 2035 - 2.4 Neighborhood Enhanced Network; MP 2035 - 5.1 Sustainable Transportation.	Yes

Table 9 - TAG Table 2.1-2: Questions to Determine Project Applicability to Plans, Policies and Programs				
	Guiding Questions	**Relevant Plans, Policies, and Programs**	**Supporting/Complementary City Plans, Policies, and Programs to consult**	**Project**
8	Does project propose narrowing or shifting existing sidewalk placement?	Mobility Plan 2035	Healthy LA; Vision Zero; Sustainability Plan	Yes
9	Does project propose paving, narrowing, shifting, or removing an existing parkway?	Mobility Plan 2035		No
10	Does project propose modifying, removing or otherwise affect existing bicycle infrastructure? (ex: driveway proposed along street with bicycle facility)	Mobility Plan 2035	Vision Zero; Complete Streets Design Guide – Section	No
11	Is project site adjacent to an alley? If yes, will project make use of, modify, or restrict alley access?	Mobility Plan 2035	Complete Streets Design Guide – Section 6.9: Driveways	No
12	Does project create a cul-de-sac or is project site located adjacent to existing cul-de-sac? If yes, is cul-de-sac consistent with design goal in Mobility Plan 2035 (maintain through bicycle and pedestrian access)?	Mobility Plan 2035	MP 2035 – 3.10 Cul-de-sacs	No
ACCESS: DRIVEWAY AND LOADING				
13	Does project site introduce a new driveway or loading access along an arterial (Avenue or Boulevard)?	Mobility Plan 2035	MP 2035 – 2.10 Loading Areas; Vision Zero	No
14	If yes to 13, Is a non-arterial frontage or alley access available to serve the driveway or loading access needs?	Mobility Plan 2035	MP 2035 – 2.10 Loading Areas; Vision Zero	No

Table 9 - TAG Table 2.1-2: Questions to Determine Project Applicability to Plans, Policies and Programs				
	Guiding Questions	**Relevant Plans, Policies, and Programs**	**Supporting/Complementary City Plans, Policies, and Programs to consult**	**Project**
15	Does project site include a corner lot? (avoid driveways too close to intersections)	CDG 4.1.01	Complete Streets Design Guide – Section 6.9 Driveways	No
16	Does project propose driveway width in excess of City standard?	MPP Sec. 321, LAMC 16.16.060	LAMC 16.16.060	No
17	Does project propose more driveways than required by City maximum standard?	MPP - Sec No. 321 Driveway Design	Vision Zero, MP, Healthy LA	No
18	Are loading zones proposed as a part of the project?	Mobility Plan 2035	MP 2035 – 2.10 Loading Areas	No
19	Does project include "drop-off" zones or areas? If yes, are such areas located to the side or rear of the building?	Mobility Plan 2035	MP 2035 – 2.10 Loading Areas	No
20	Does project propose modifying, limiting/ restricting, or removing public access to a public right-of-way (e.g., vacating public right-of-way?)	Mobility Plan 2035	MP 2035 – 3.9 Increased Neighborhood Access	No

As shown in **Table 9** above, the Project will be consistent with the above-mentioned polices, plans, and programs. The Project will include short- and long-term bicycle parking. In addition, the Project will provide internal pedestrian walkways. Therefore, the Project would not result in a significant impact under Threshold T-1 and no mitigation measures are required. Detailed access information is provided under the Threshold T-3 analysis.

3.4.3. – PROJECT SUMMARY WITH RESPECT TO THRESHOLD T-1: CONFLICT WITH PLANS, PROGRAMS, ORDINANCES, OR POLICIES

The analysis to determine Project's transportation related impacts with respect to Threshold T-1 were conducted according to the City's TAG. The analysis revealed that the Project does not conflict with any plans, programs, ordinances, or policies addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities. Therefore, the Project would not result in a significant impact under Threshold T-1 and no mitigation measures are required.

3.5 - THRESHOLD T-2: CAUSING SUBSTANTIAL VEHICLE MILES TRAVELED

LADOT created a VMT Calculator tool which is specifically designed and intended to be used to develop project specific daily household VMT per capita and daily work VMT per employee for land use development projects in the City. It implements the methodologies and significance thresholds described in Section 2.2 of the TAG for residential and employment projects. A proposed Project's daily trips should be estimated using the VMT Calculator tool or the most recent version of the ITE Trip Generation Manual (10th Edition) as described in the Section 2.2.4 of the Transportation Assessment Guidelines. TDM strategies should not be considered for the purpose of screening.

3.5.1 - SCREENING CRITERIA FOR T-2

According to City's TAG, if the Project requires a discretionary action, and the answer is no to either T-2.1-1 or T-2.1-2, further analysis will not be required for Threshold T-2.1, and a "no impact" determination can be made for that threshold:

- *T-2.1-1: Would the land use project generate a net increase of 250 or more daily vehicle trips?*
- *T-2.1-2: Would the project generate a net increase in daily VMT?*

3.5.2. – IMPACT ANALYSIS FOR T-2

The City of Los Angeles VMT Calculator Documentation Version 1.3 was consulted to evaluate the Project's VMT and compare it to the VMT impact criteria. The land use categories included in VMT Calculator tool are based on the land uses identified in the *ITE Trip Generation* manual (except where otherwise identified in Section 3.1 of the VMT Guidelines). Table 1 of the City of Los Angeles VMT Calculator does not have parks and recreational uses as a land use. In addition, the VMT Calculator is intended for evaluation of residential and office projects in accordance with the TAG and reports daily vehicle trips, daily VMT, daily household VMT per capita, and daily work VMT per employee.

As demonstrated in **Figures 7A and 7B – Parks and Recreational Facilities** there are four major parks and 13 smaller parks located within a 2-mile radius of the SLRC. These parks include Griffith Park, Elysian Park, Rio de Los Angeles State Park, and Echo Park, among others. As a result, the Project's VMT impacts will be less than significant due to the presence of nearby parks within a 2-mile radius and lack of regionally attracting amenities.

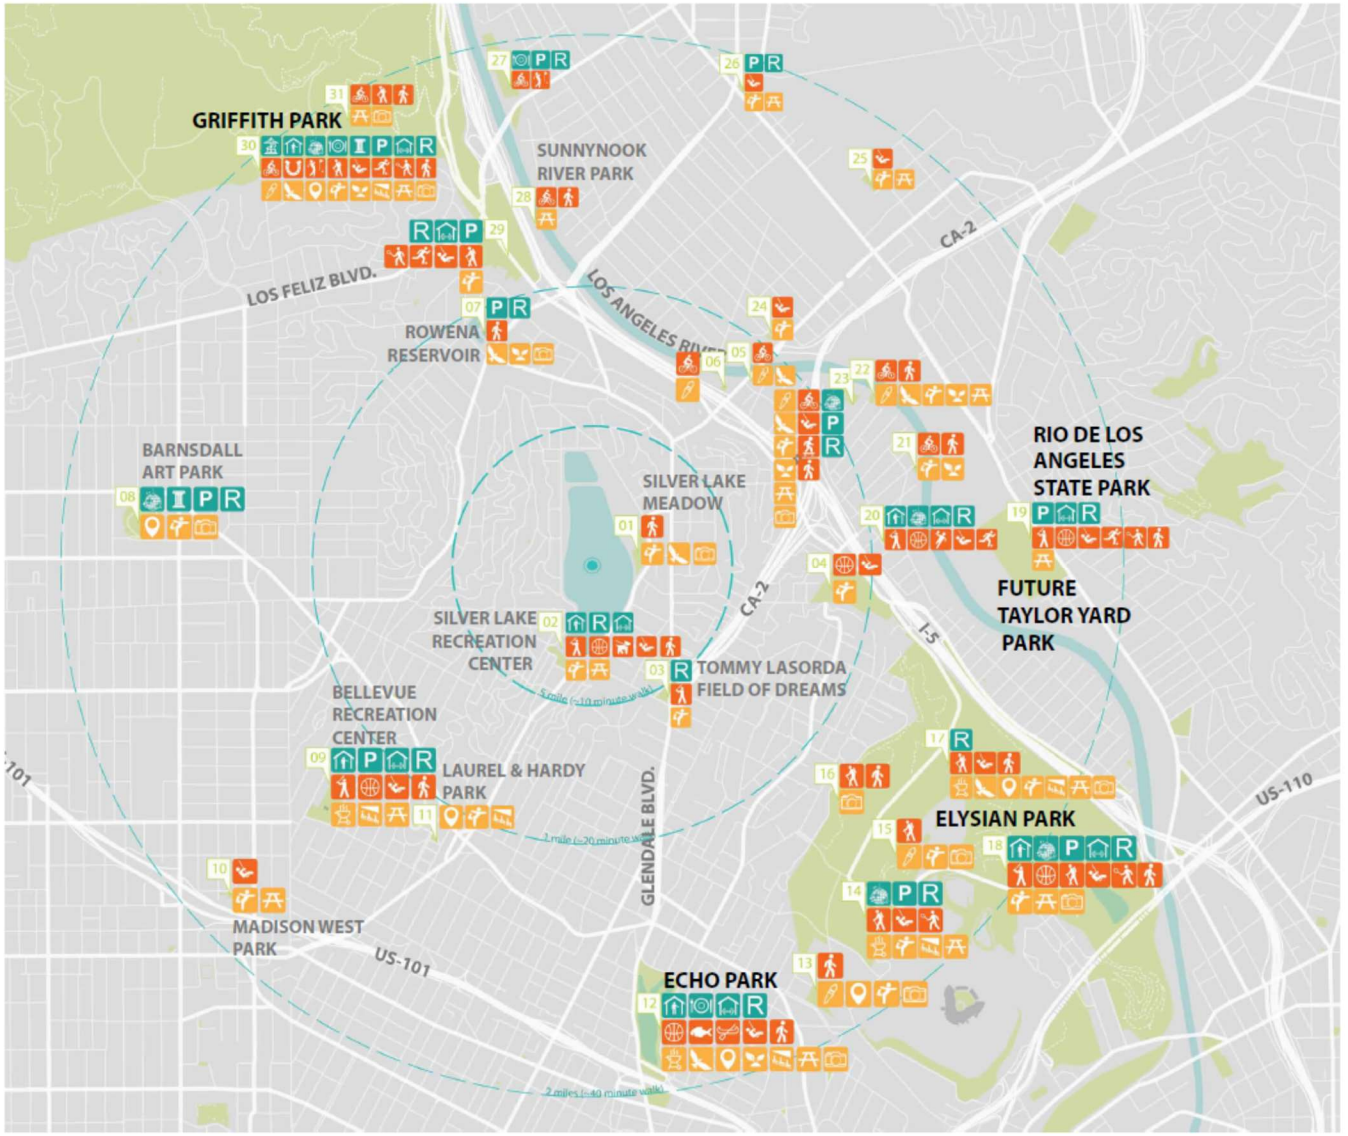

FIGURE 7A - PARKS AND RECREATIONAL FACILITIES LOCATED WITHIN 2-MILES OF THE SLRC

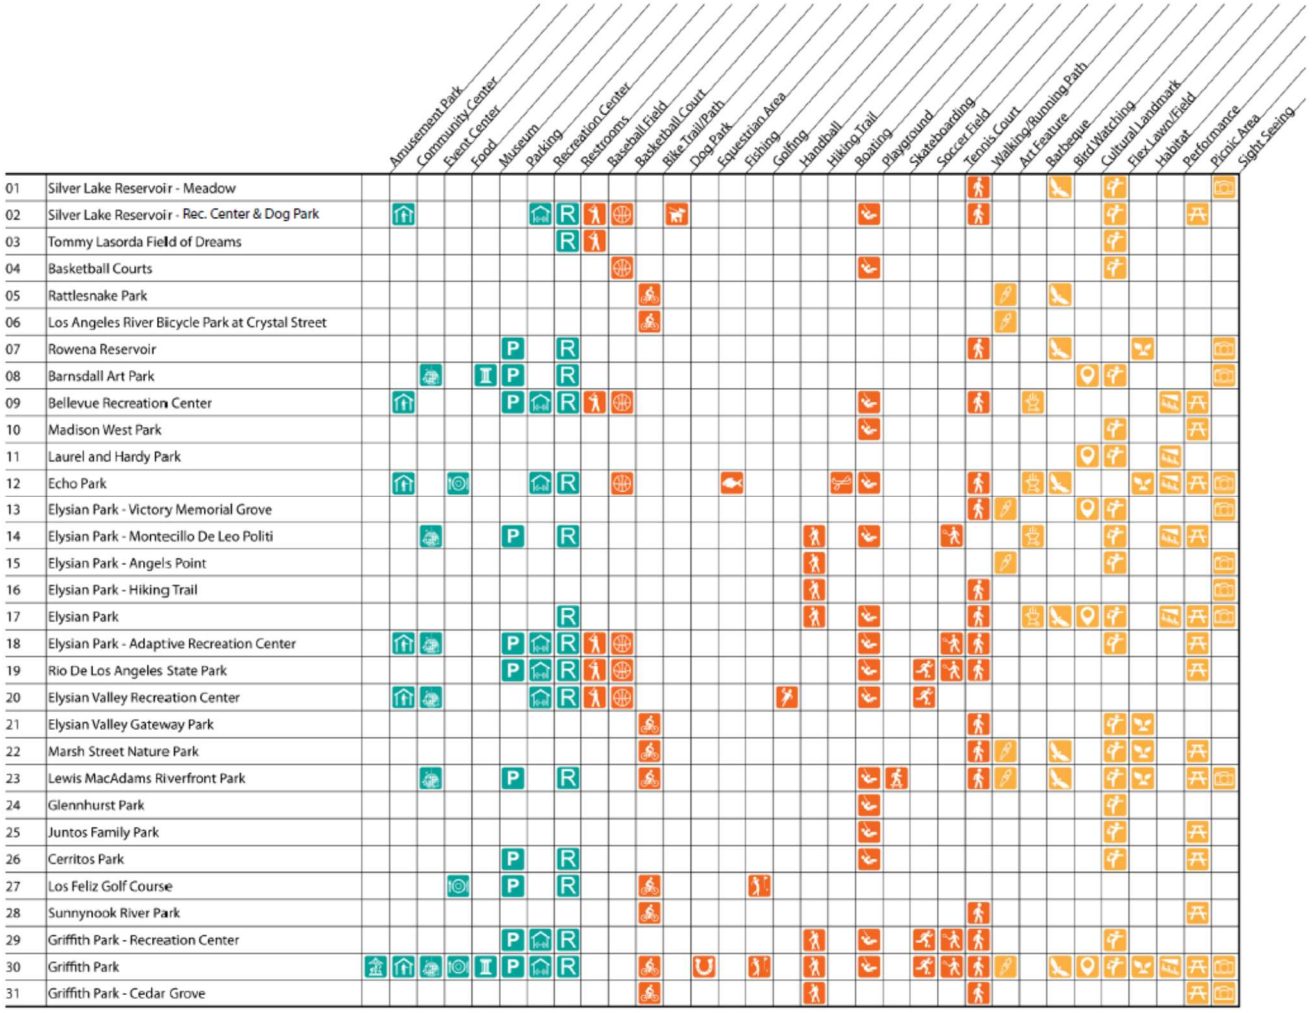

FIGURE 7B - PARKS AND RECREATIONAL FACILITIES LOCATED WITHIN 2-MILES OF THE SLRC

A total of five (5) community outreach meetings were held by members of the Project Team. The meetings were established to solicit input from the surrounding residents. Between 80 to 90% of the attendees/responders live within two (2) miles of the Project Site. In addition, 70% of attendee/responders indicated that they currently walk to get to the Park, while approximately 30% of attendees/responders indicated that they currently drive the get to the Park.

The Environmental Education Center and outdoor classroom could be considered as regional uses to serve as field trip destinations for schools. However, it is projected that a majority of trips to these facilities will be by school buses. In addition, many of the new or renovated amenities are local serving, such as the basketball court; meadows area; shade pavilions; and Recreation Center.

Based on the above, calculating the household VMT per capita and work VMT per employee is not applicable considering the Project's local serving nature as it will not generate additional vehicle miles. In addition, LADOT was consulted on the need for the VMT calculation and concurred that VMT calculation will not be applicable for this Project. Nevertheless, to address any potential impacts from Project trips, a detailed trip generation methodology was developed as presented in **Section 4.2.3.3** to determine Project impacts on local streets and intersections in the vicinity of the Project.

3.5.3 – PROJECT SUMMARY WITH RESPECT TO THRESHOLD T-2: CAUSING SUBSTANTIAL VEHICLE MILES TRAVELED

The Project is considered to be locally serving use since there are several nearby parks within a 2-mile radius; there is a lack of on-street and off-street parking; and there are no amenities planned such as golf courses, athletic fields (soccer fields and baseball diamonds), boating and fishing. Project would not result in a significant impact under Threshold T-2 and no mitigation measures are required. However, the SLRCMP includes extensive enhancements to the street infrastructure surrounding the SLRC including pedestrian paths and trails, protected bicycle lanes, improved intersections, marked crosswalks, flashing beacons, and traffic signals.

3.6 - THRESHOLD T-3: SUBSTANTIALLY INCREASING HAZARDS DUE TO A GEOMETRIC DESIGN FEATURE OR INCOMPATIBLE USE

The City's TAG indicates that impacts regarding the potential increase of hazards due to a geometric design feature generally relate to the design of access points to and from the Project Site, and may include safety, operational, or capacity impacts. Impacts can be related to vehicle/vehicle, vehicle/bicycle, or vehicle/pedestrian conflicts as well as to operational delays caused by vehicles slowing and/or queuing to access a project site. The analysis for T-3 should explore any potential conflicts that may be created by the driveway configuration or through the placement of Project driveway(s) in areas of inadequate visibility, adjacent to bicycle or pedestrian facilities, or too close to busy or congested intersections.

3.6.1 - SCREENING CRITERIA FOR T-3

According to the City's TAG, if the project requires a discretionary action, and the answer is "yes" to either of the following questions, further analysis will be required to assess whether the Project would result in impacts due to geometric design hazards or incompatible uses:

- *Is the project proposing new driveways, or introducing new vehicle access to the property from the public right-of-way?*
- *Is the project proposing to, or required to make any voluntary or required, modifications to the public right-of-way (i.e., street dedications, reconfigurations of curb line, etc.)?*

3.6.2 – QUALITATIVE REVIEW OF PEDESTRIAN AND VEHICULAR ACCESS

3.6.2.1 – EXISTING PEDESTRIAN AND VEHICULAR ACCESS POINTS

The existing access points will remain intact. Currently, the SLRC has 12 access points for vehicular and pedestrian traffic. The locations of these access points are shown with photographs in **Figure 8 and Figure 9 – Locations of Project Access** and are described below:

- A1 - on Silver Lake Boulevard at Rockford Road. Access for authorized vehicles only with gates and removable bollards.
- A2 - on Silver Lake Boulevard at Earl Street. Access for pedestrians only with permanent bollard. This access point connects to the Silver Lake Meadow.
- A3 - on Silver Lake Boulevard mid-block between Earl Street and Armstrong Avenue (2296 Silver Lake Boulevard). Access for pedestrians only and is controlled by a mid-block traffic signal. This access point also connects to the Silver Lake Meadow.

- A4 - on Silver Lake Boulevard across from 2360 Silver Lake Boulevard. Access for authorized vehicles only.
- A5 - on Armstrong Avenue across from 2542 Armstrong Avenue. Access for authorized vehicles only with gates.
- A6 - at the southwest corner of Armstrong Avenue and Tesla Avenue. Gated vehicle and pedestrian access to Neighborhood Nursery School and reservoir.
- A7 - on Tesla Avenue across from 2719 Tesla Avenue. Pedestrian access to Tesla Pocket Park.
- A8 - on West Silver Lake Drive across from Bright Lane. Pedestrian access to dirt path adjacent to reservoir.
- A9 - on West Silver Lake Drive across from 2141 W. Silver Lake Drive. Gated vehicle access for authorized vehicles only.
- A10 - on West Silver Lake Drive across from 1921 W. Silver Lake Drive. Access for authorized vehicles only with gates and removable bollard.
- A11 - on Silver Lake Boulevard at Easterly Terrace. Gated pedestrian access to Silver Lake Dog Park.
- A12 - on Silver Lake Boulevard across from 1896 Silver Lake Boulevard. Gated pedestrian access to Silver Lake Dog Park.

3.6.2.2 – EXISTING PEDESTRIAN CROSSINGS

Currently, the existing perimeter walkways allows for a continuous walking loop around the SLRC. The pedestrian access points along the SLRC's perimeter streets (A2, A3, A7, A8, A11, and A12) are listed below and are shown in **Figure 8** and **Figure 9 – Locations of Project Access**:

- At the intersection of Silver Lake Boulevard and Van Pelt Place with a pedestrian activated flashing beacon;
- At the intersection of Silver Lake Boulevard and Duane Street with a traffic signal;
- At Silver Lake Boulevard north of Earl Street with a mid-block pedestrian activated traffic signal;
- At the intersection of Armstrong Avenue, Tesla Avenue, and Lakewood Avenue with a multi-way stop control;
- At the intersection of Tesla Avenue and West Silver Lake Drive with a multi-way stop control;
- At West Silver Lake Drive at Hawick Street with a multi-way stop control; and,
- At the intersection of Van Pelt Place and West Silver Lake Drive with a multi-way stop.

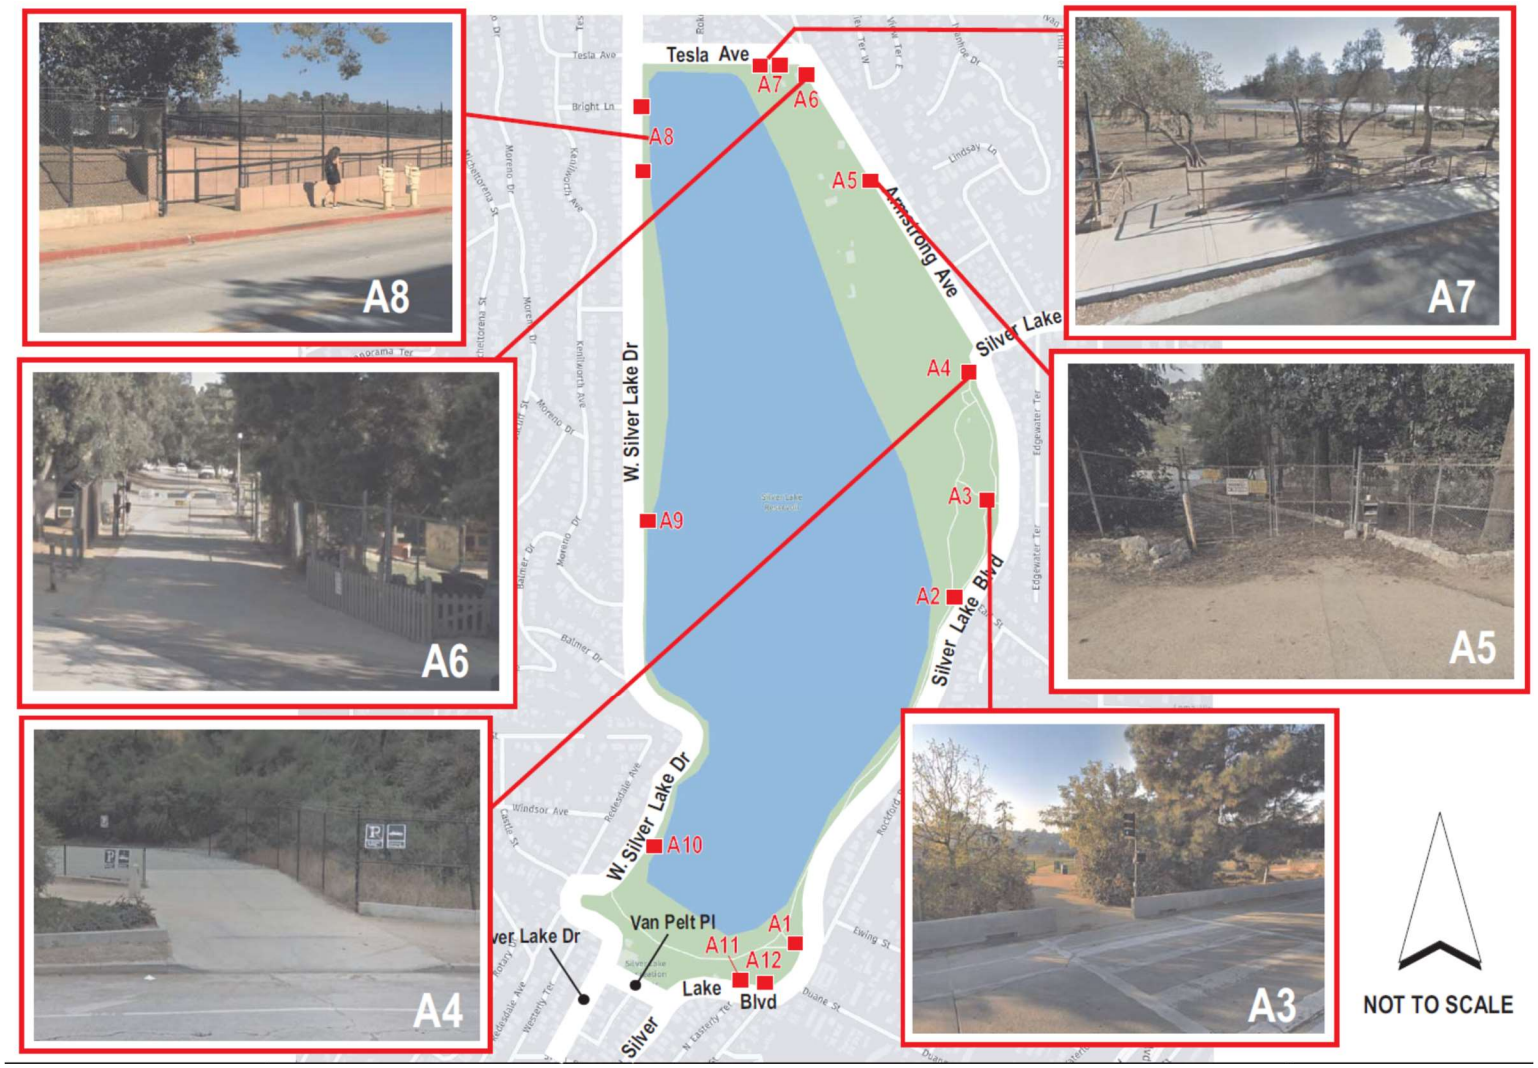

FIGURE 8 - LOCATIONS OF PROJECT ACCESS

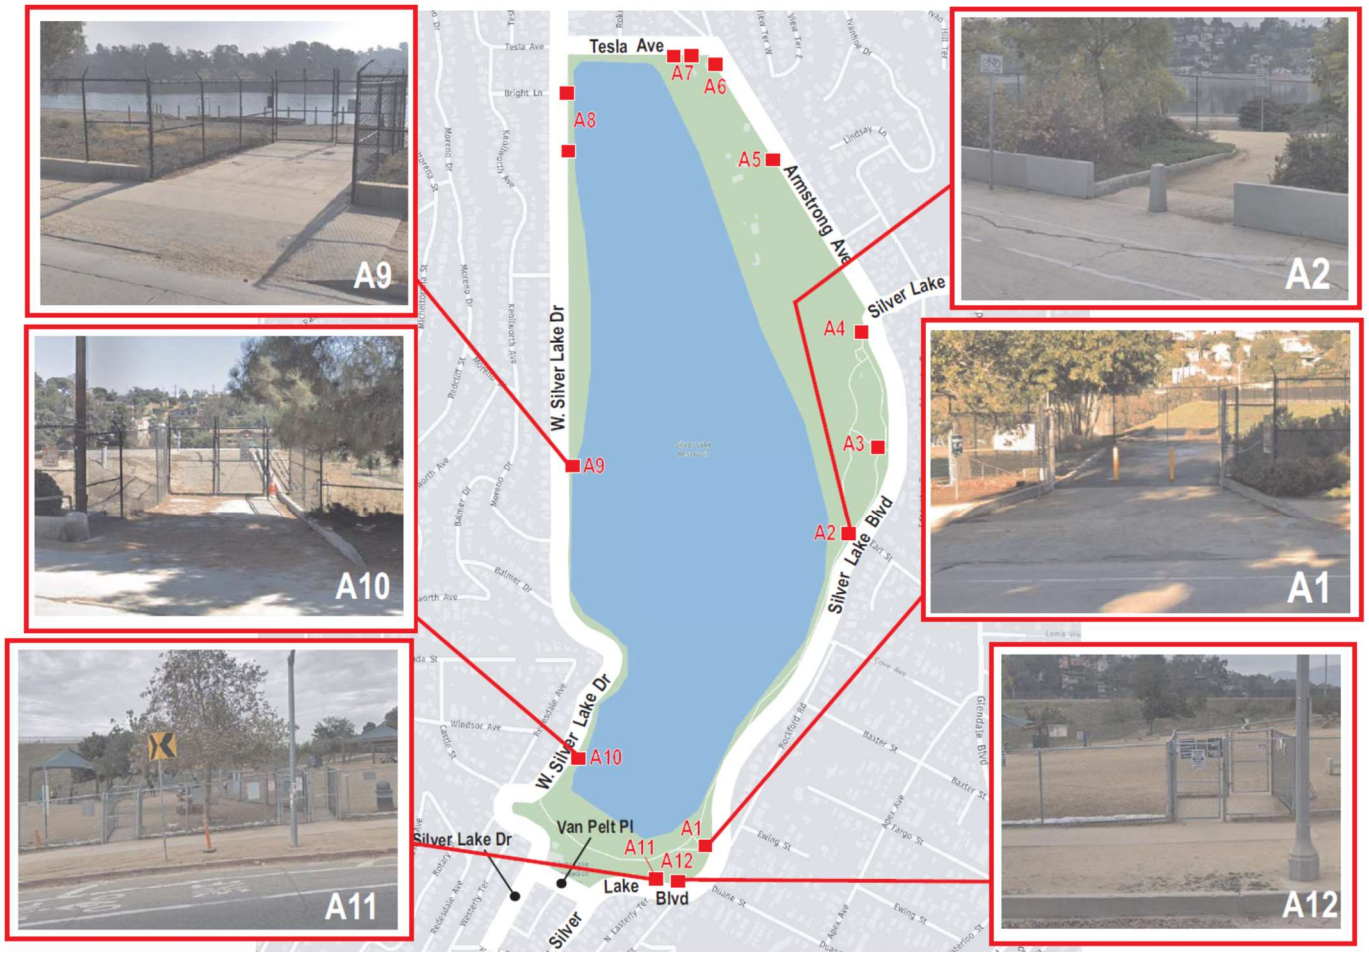

FIGURE 9– LOCATIONS OF PROJECT ACCESS

3.6.2.3 – EVALUATION OF EXISTING PEDESTRIAN ACCESS

The existing curbs, slopes, sidewalks, and walking trails around the perimeter of the SLRC are in fair conditions consisting of a combination of concrete sidewalks and dirt. There is a Class II bicycle facility located on Silver Lake Boulevard. The location intersections are controlled by stop signs and have handicap ramps. Section 3.6.3 – Project Summary with Respect to T-3 includes potential voluntary improvements that can be implemented with or without the proposed Project.

3.6.2.4 – EXISTING VEHICLE ACCESS

The existing LADWP maintenance and operation vehicular access driveways (A1, A4, A5, A6, A9, and A10)will remain to provide access to LADWP's facilities and structures. In addition, there are no additional vehicular access driveways planned in the SLRCMP.

The main vehicular access driveway to the SLRC is located at the intersection of Armstrong Avenue and Tesla Avenue. This driveway is currently being used by LADWP for maintenance of fleet vehicles. The intersection of Armstrong Avenue, Tesla Avenue, and Lakewood Avenue where this driveway is located will be modified in order to improve visibility of pedestrians and bicyclists crossing the driveways as presented in **Section 3.6.3.**

3.6.3 – PROJECT SUMMARY WITH RESPECT TO THRESHOLD T-3: SUBSTANTIALLY INCREASING HAZARDS DUE TO A GEOMETRIC DESIGN FEATURE OR INCOMPATIBLE USE

With respect to Threshold T-3, the Project does not increase hazards due to geometric design features as most of the Project improvements are on-site within the SLRC. Therefore, no off-site improvements are needed to reduce project hazards. The Project includes improvements to two pedestrian connections along the perimeter streets that occur at multi-way stops as shown on ***Figure 10 -Locations of Proposed SLRCMP Improvements****.*

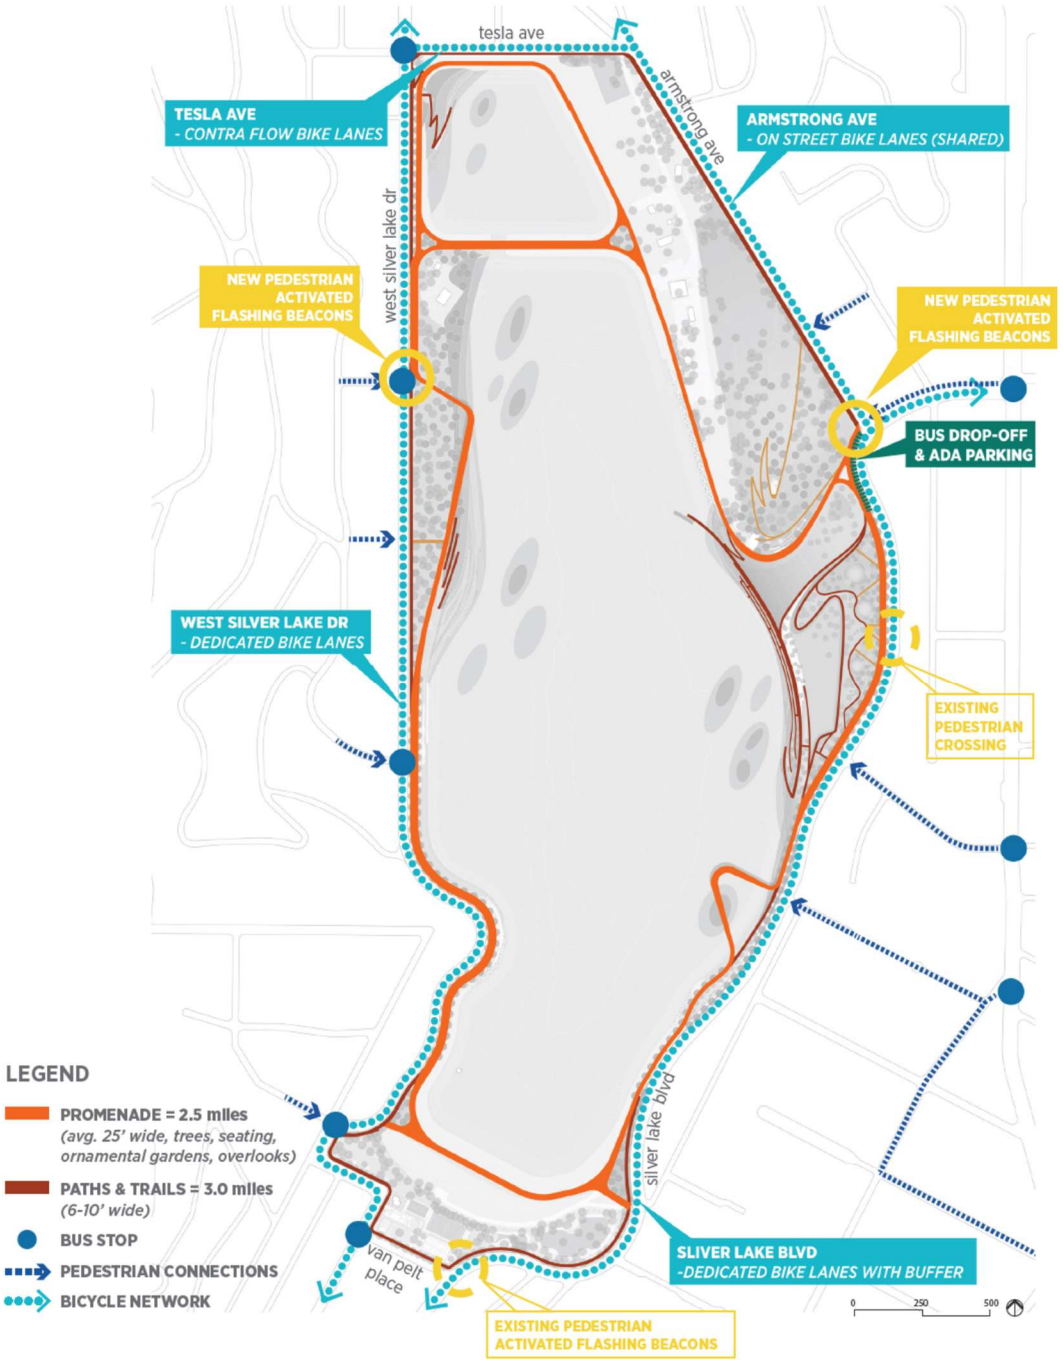

FIGURE 10 – LOCATIONS OF PROPOSED SLRCMP IMPROVEMENTS

The following are 3 recommended improvements to vehicular and pedestrian crossing locations that could be implemented to further reduce hazards compared with the existing condition.

3.6.3.1 - INTERSECTION OF SILVER LAKE BOULEVARD AND ARMSTRONG AVENUE

The Silver Lake Boulevard and Armstrong Avenue intersection is located on a horizontal curve with stop control for southbound Armstrong Avenue. It provides vehicular and pedestrian access to the reservoir. Due to the curvature in the roadway, driver's visibility of pedestrians and other vehicles traversing the intersection are restricted.

As a safety enhancement measure, it is recommended to install a traffic signal at the Silver Lake Boulevard and Armstrong Avenue intersection with high visibility pedestrian crosswalks. **Figure 11 - Proposed Silver Lake Boulevard and Armstrong Avenue Traffic Signal** *shows the preliminary design for the proposed traffic signal.*

FIGURE 11 – PROPOSED SILVER LAKE BOULEVARD AND ARMSTRONG AVENUE TRAFFIC SIGNAL

3.6.3.2 - INTERSECTION OF WEST SILVER LAKE DRIVE AND HAWICK STREET

The West Silver Lake Drive and Hawick Street is a 3-legged intersection with multi-way stop control. It also provides pedestrian access to the reservoir. It is recommended to enhance the multi-way stop control by installing flashing red beacons for all approaches at this intersection. High visibility crosswalk is also proposed for pedestrian crossing the south leg of West Silver Lake Drive. **Figure 12 – Red Flashing Beacons** *below shows the preliminary design for the proposed red flashing beacons.*

FIGURE 12 – RED FLASHING BEACONS

3.6.3.3 - INTERSECTION OF SILVER LAKE BOULEVARD AND VAN PELT PLACE

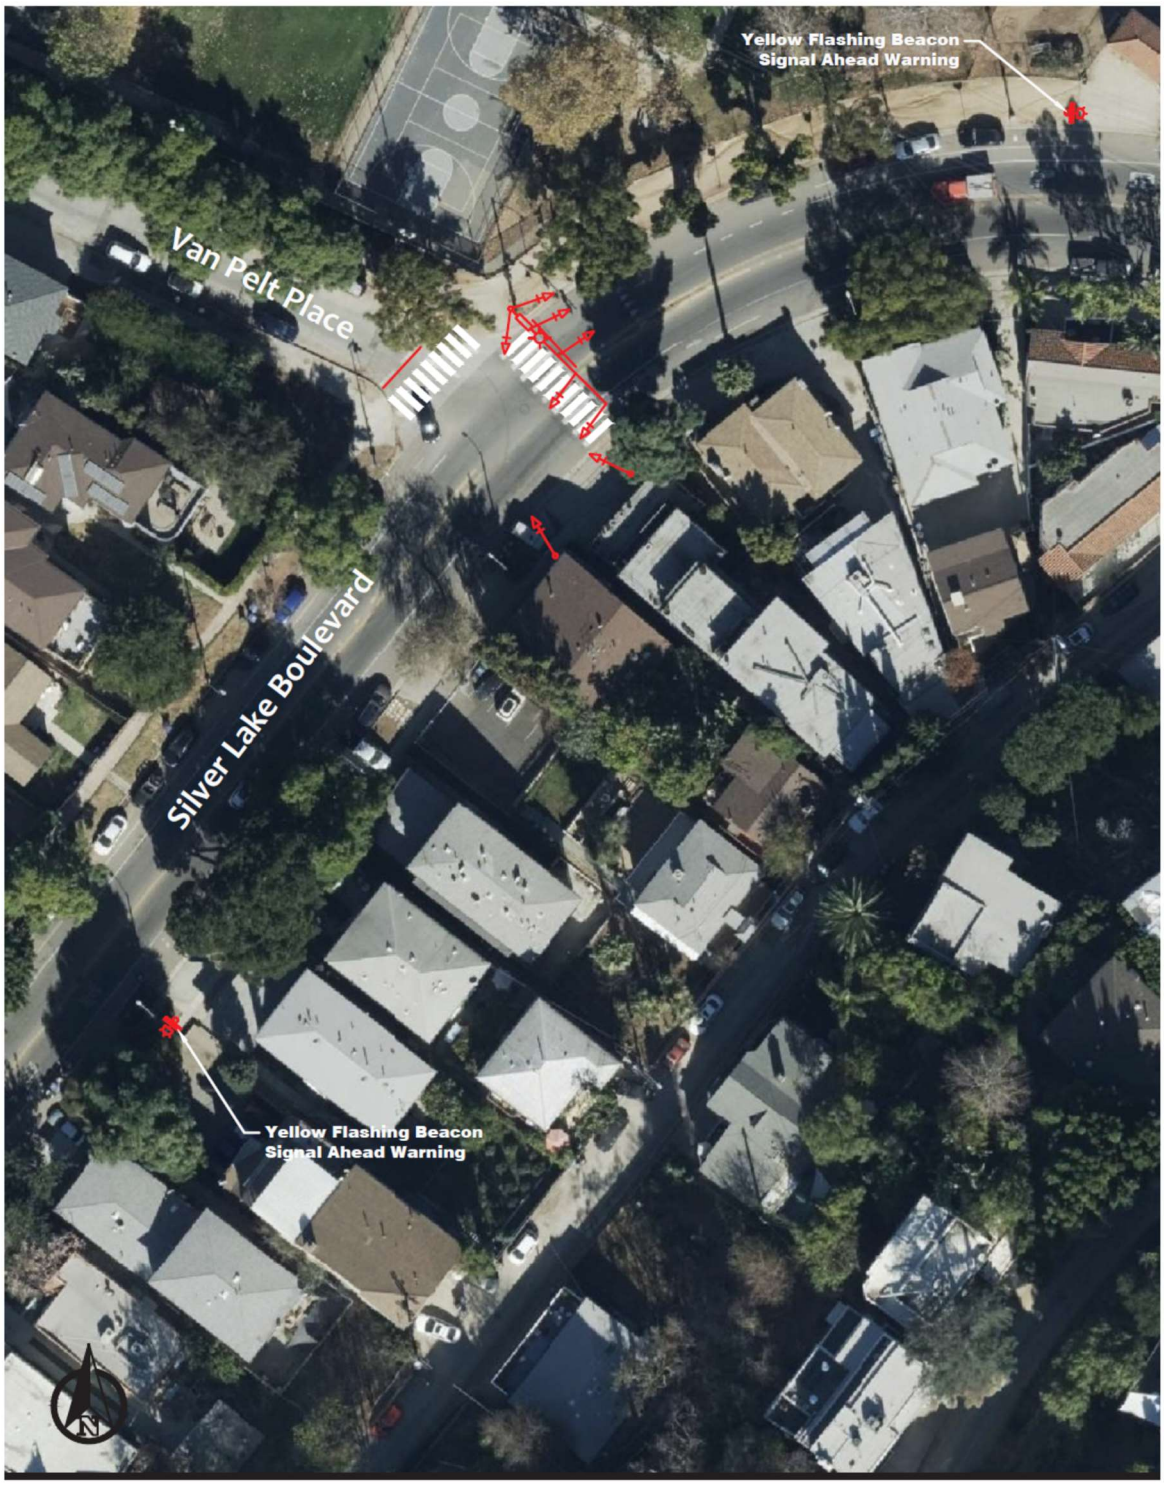
The Silver Lake Boulevard and Van Pelt Place intersection is located on a horizontal curve and is controlled by a flashing pedestrian activated beacon. It provides pedestrian access to the Dog Park and jogging trail around the reservoir. Due to multiple curvatures on Silver Lake Boulevard, driver's visibility of pedestrians and vehicles traversing the intersection are limited. In addition, based on the capacity calculations at this intersection using AM and PM existing traffic volumes, long delays are experienced by vehicles turning left from Van Pelt Place on to Silver Lake Boulevard.

By installation of a traffic signal, the operational efficiency of the Silver Lake Boulevard and Van Pelt Place intersection will be improved. Vehicles currently waiting on Van Pelt Place for a gap on Silver Lake Boulevard to turn left, can activate the traffic signal to provide adequate green time for this movement and reduce delay. Pedestrians crossing Silver Lake Boulevard will have the advantage of a signal-controlled crosswalk where traffic in both directions will be stopped, thereby increasing safety at this intersection. With the Project's planned improvements adjacent to this intersection (Multi-Purpose Facility and Dog Park) both pedestrian and vehicular access will be improved.

Figure 13 – Traffic Signal at Silver Lake Boulevard and Van Pelt Place *shows the preliminary design for the proposed traffic signal.*

3.6.3.4 - POTENTIAL STREET AND INTERSECTION IMPROVEMENTS

To further reduce hazards compared with the existing condition, several improvements that could be implemented have been identified. The SLRCMP Sections 3.8 and 5.6.2 (See **Appendix B – SLRCMP Chapter 3, Section 3.8 and Chapter 5, Section 5.6)***identified potential street, intersection, and bicycle lane improvements.** **Figure 14 – West Silver Lake Drive Existing Proposed Street Cross Sections; Figure 15 - Armstrong Avenue Existing Proposed Street Cross Sections; Figures 16A, 16B, and 16C - Silver Lake Boulevard Existing and Proposed Street Cross Sections, Silver Lake Boulevard Proposed Street Cross Sections (Design Alternatives I, II, III), and Silver Lake Boulevard Proposed Street Cross Sections (Design Alternatives IV, V, and VI); and Figure 17 – Tesla Avenue Existing Proposed Street Cross Sections** *show intersection, street, and bicycle lane improvements that can be implemented independent of the Project based on available funding in the future. These improvements are consistent with the* **City of Los Angeles Complete Streets Design Guide**. *The following Figures show potential street improvements:*



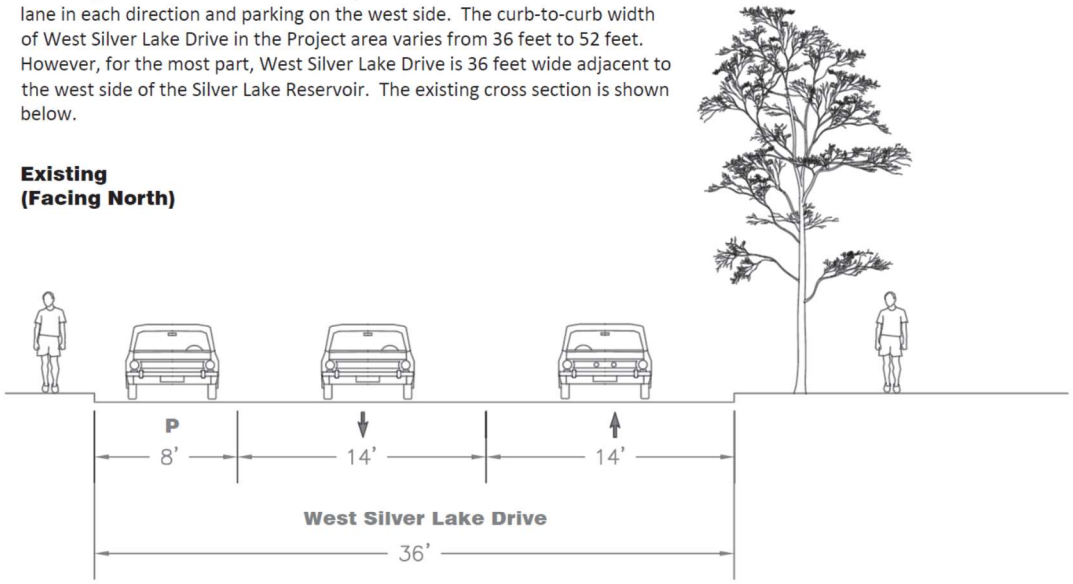


FIGURE 13 – TRAFFIC SIGNAL INSTALLATION AT THE INTERSECTION OF SILVER LAKE BOULEVARD AND VAN PELT PLACE

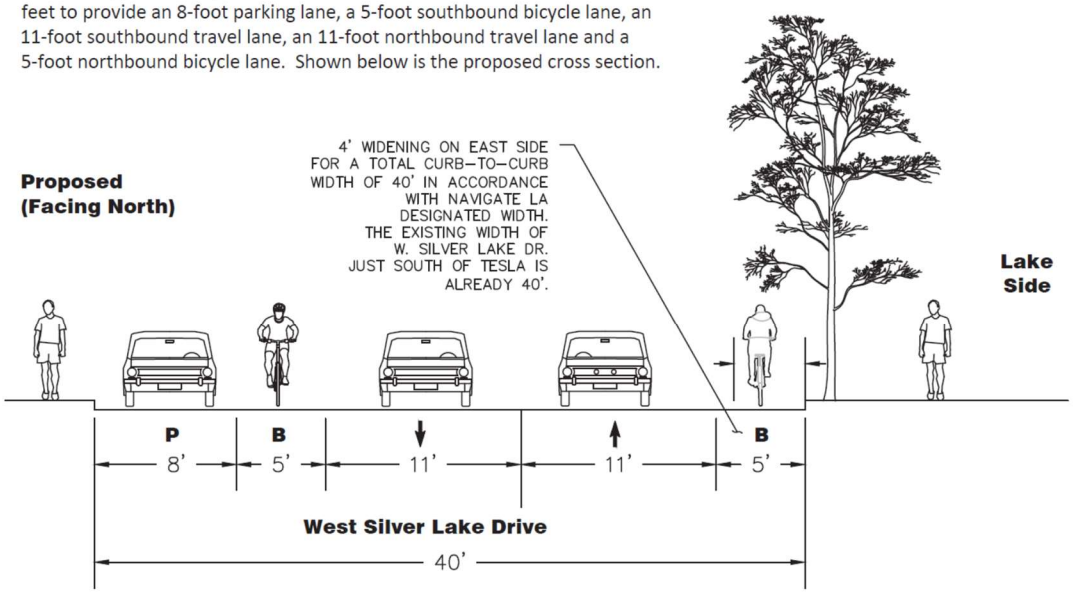
West Silver Lake Drive

Currently, West Silver Lake Drive is designated as Collector with one travel lane in each direction and parking on the west side. The curb-to-curb width of West Silver Lake Drive in the Project area varies from 36 feet to 52 feet. However, for the most part, West Silver Lake Drive is 36 feet wide adjacent to the west side of the Silver Lake Reservoir. The existing cross section is shown below.

Existing
(Facing North)

According to Mobility Plan 2035, West Silver Lake Drive has a designated roadway width of 40 feet. It is proposed that West Silver Lake Drive be widened approximately 4 feet on the east side for a curb-to-curb width of 40 feet to provide an 8-foot parking lane, a 5-foot southbound bicycle lane, an 11-foot southbound travel lane, an 11-foot northbound travel lane and a 5-foot northbound bicycle lane. Shown below is the proposed cross section.

Proposed
(Facing North)



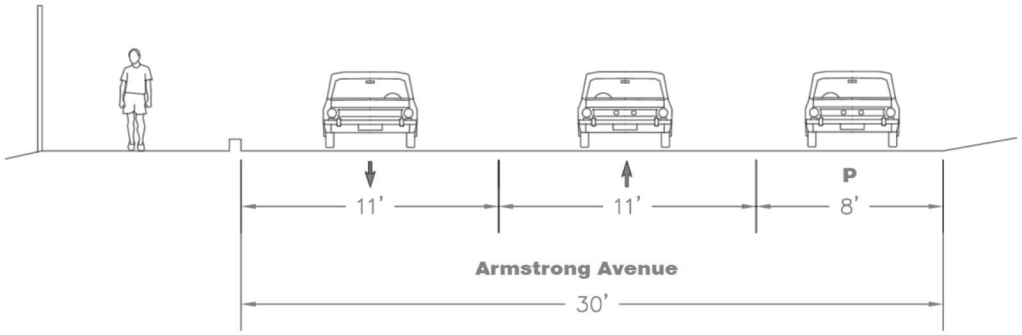


FIGURE 14 – WEST SILVER LAKE DRIVE EXISTING AND PROPOSED STREET CROSS SECTIONS

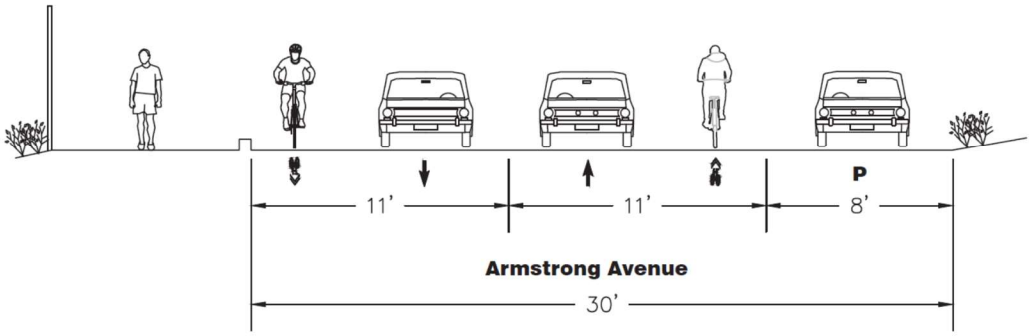
Armstrong Avenue

Armstrong Avenue has an existing roadway width of 30 feet and is designed as Collector. There is one travel lane in each direction with parking on the northeast side of the street. See below for the existing street cross section.

Existing
(Facing North)

It is proposed to install Sharrow pavement markings for both directions to accommodate bicycles. The proposed cross section is shown below.

Proposed
(Facing North)



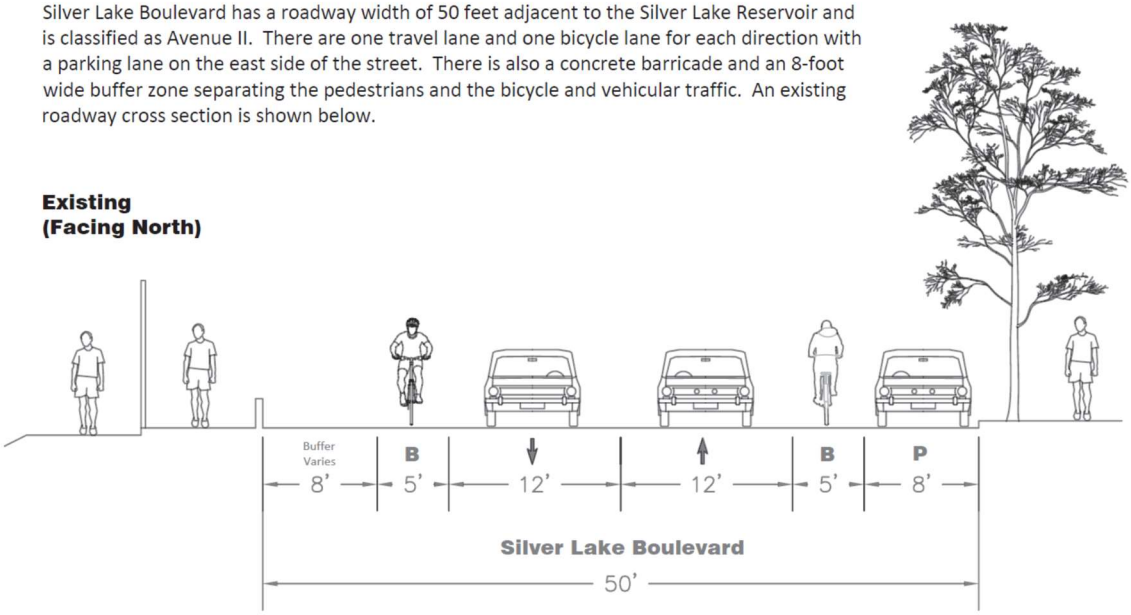


FIGURE 15 – ARMSTRONG AVENUE EXISTING AND PROPOSED STREET CROSS SECTIONS

Silver Lake Boulevard

Silver Lake Boulevard has a roadway width of 50 feet adjacent to the Silver Lake Reservoir and is classified as Avenue II. There are one travel lane and one bicycle lane for each direction with a parking lane on the east side of the street. There is also a concrete barricade and an 8-foot wide buffer zone separating the pedestrians and the bicycle and vehicular traffic. An existing roadway cross section is shown below.

Existing
(Facing North)

Due to a limited availability of on-street parking surrounding the Silver Lake Reservoir, it is proposed to utilize the existing buffer area to create a parking lane on the west side of Silver Lake Boulevard adjacent to the reservoir between Armstrong Avenue and Duane Street for about 3,000 feet. The new parking lane will provide approximately 135 additional on-street parking spaces. The parking lane will also serve as a buffer between pedestrians and the bicycle and vehicular traffic in the future. In addition, a 2-foot wide buffer zone will be provided between the bicycle lane and the travel lane for both north and southbound directions. The proposed cross section is shown below.

Proposed
(Facing North)

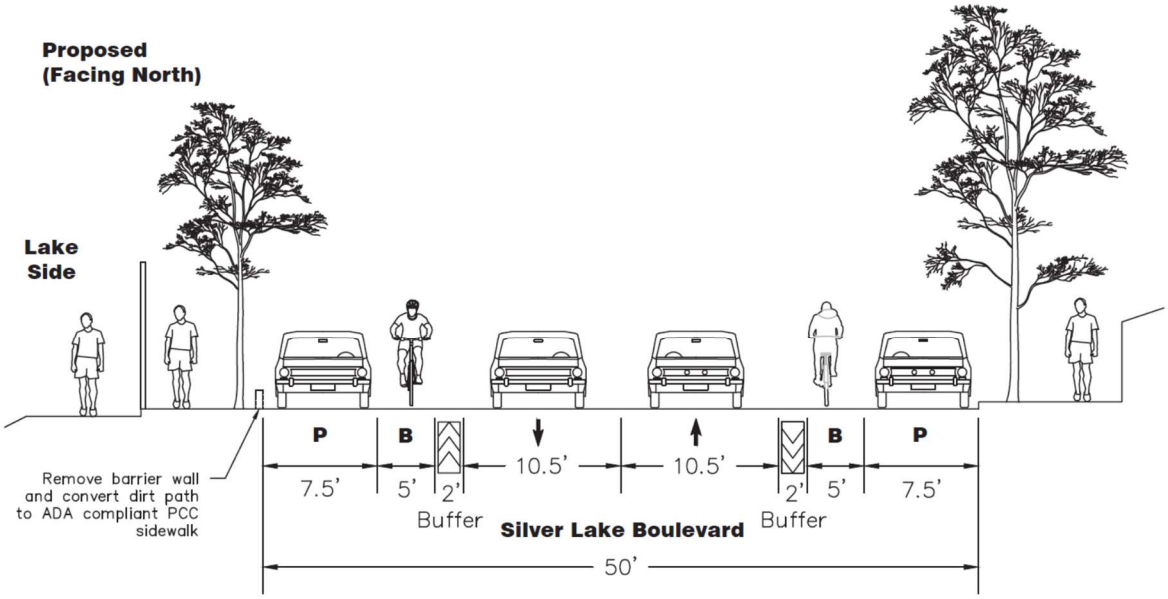

FIGURE 16A – SILVER LAKE BOULEVARD EXISTING AND PROPOSED STREET CROSS SECTIONS

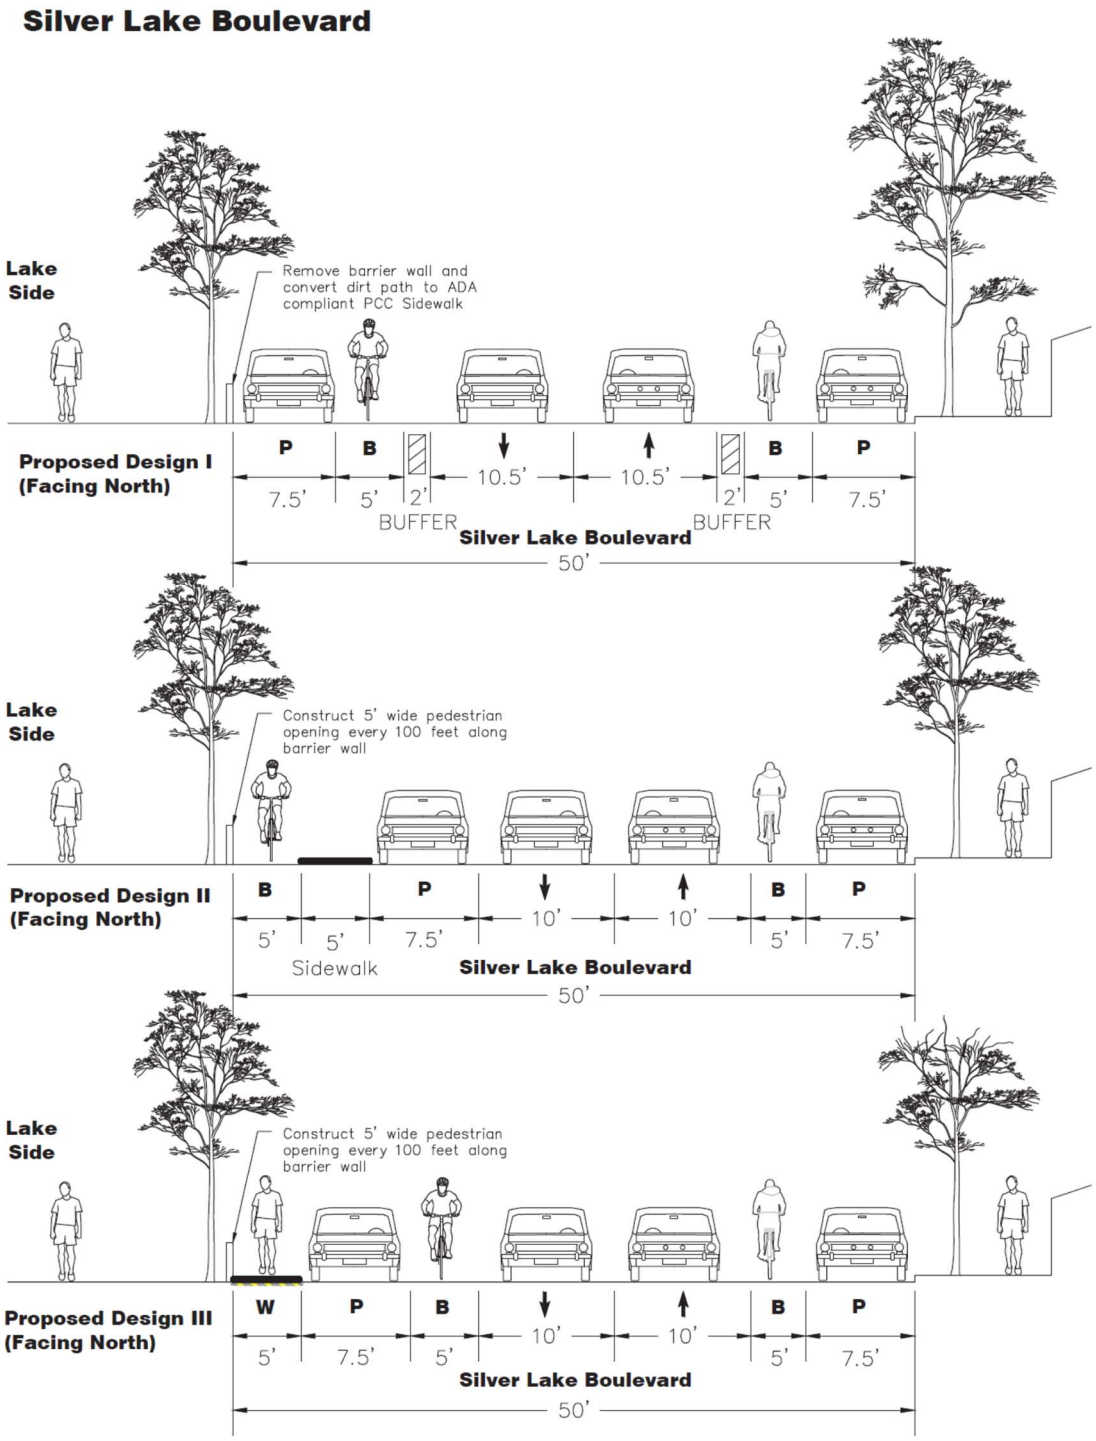

FIGURE 16B – SILVER LAKE BOULEVARD PROPOSED STREET CROSS SECTIONS (DESIGN ALTERNATIVES I, II, AND III)

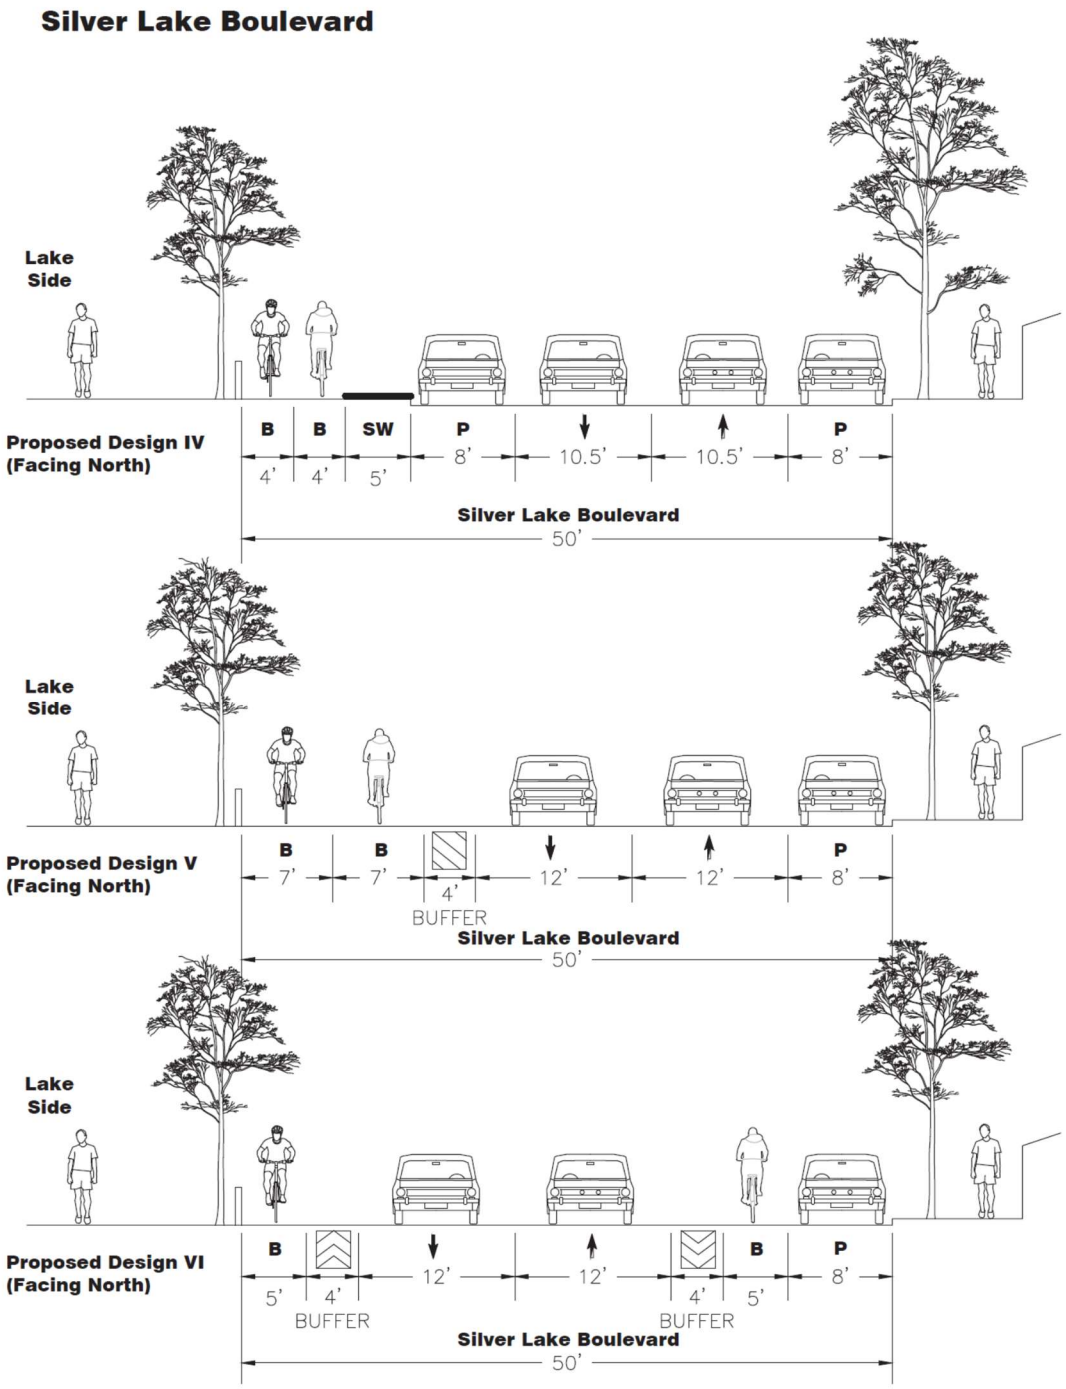

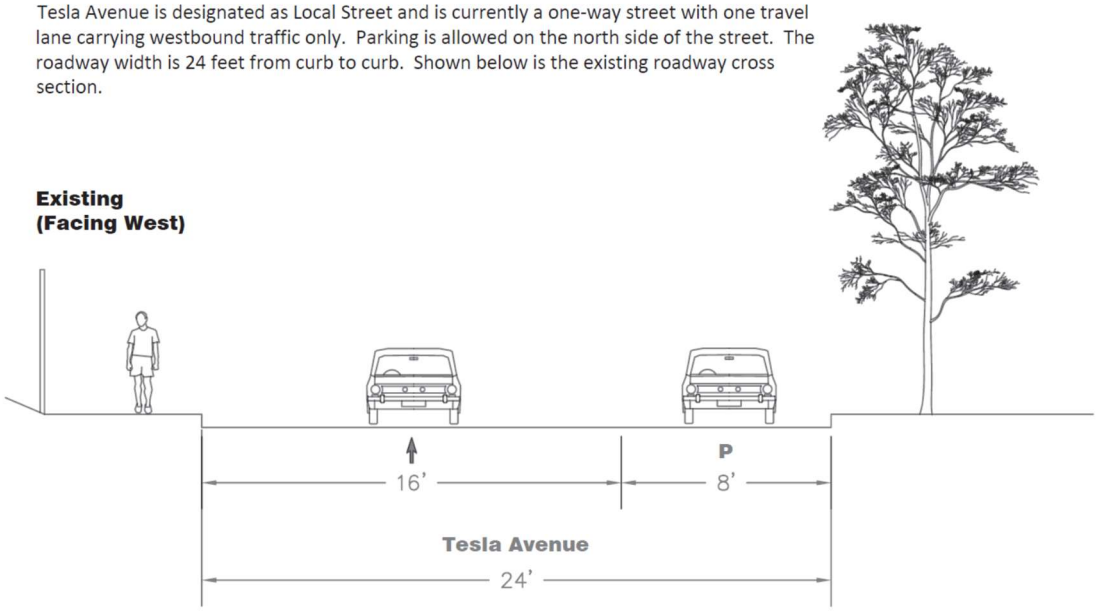

FIGURE 16C – SILVER LAKE BOULEVARD PROPOSED STREET CROSS SECTIONS (DESIGN ALTERNATIVES IV, V, AND VI)

Tesla Avenue

Tesla Avenue is designated as Local Street and is currently a one-way street with one travel lane carrying westbound traffic only. Parking is allowed on the north side of the street. The roadway width is 24 feet from curb to curb. Shown below is the existing roadway cross section.

To provide connectivity for bicycle traffic around the reservoir, it is proposed to install a contra-flow bicycle lane for the eastbound direction and Sharrow pavement markings for the westbound direction. There will be a 2-foot wide buffer area between the eastbound contra-flow bicycle lane and the westbound travel lane. See below for the proposed cross section.

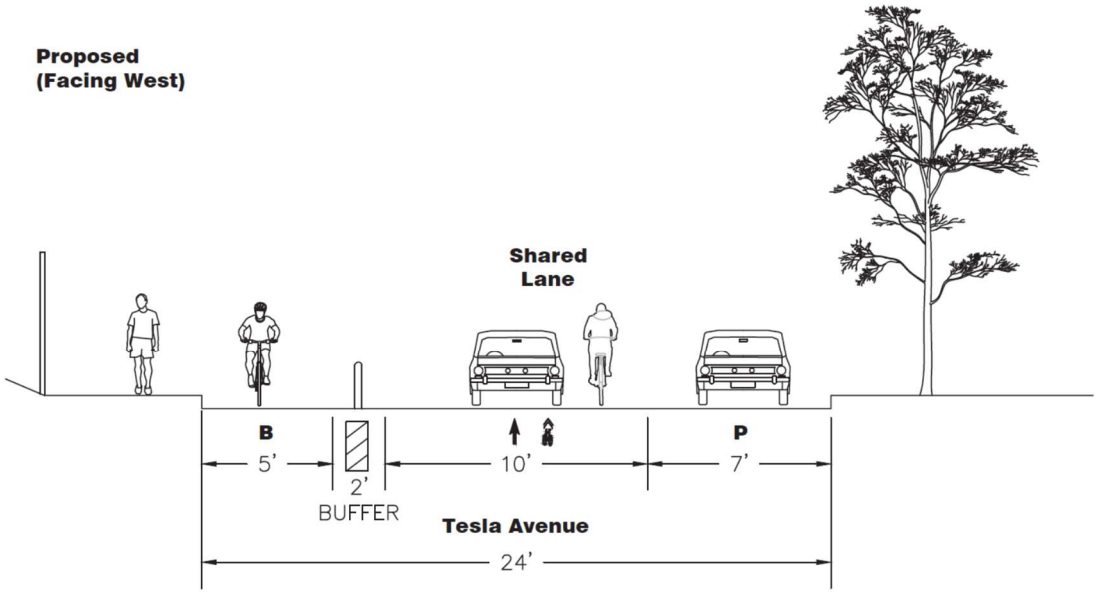

FIGURE 17 – TESLA AVENUE EXISTING AND PROPOSED STREET CROSS SECTIONS

The following are intersection improvements:

INTERSECTION OF WEST SILVER LAKE DRIVE AND TESLA AVENUE

The West Silver Lake Drive and Tesla Avenue intersection is controlled by multi-way stop. Currently, there is no sidewalk on the north side of Tesla Avenue at the intersection. At the northeast corner, curb ramps are only provided for pedestrians to cross the east leg of Tesla Avenue.

To facilitate safer pedestrian movements, it is recommended that high visibility crosswalks be provided at this intersection. In addition, a curb extension (bulb-out) is proposed at the northeast corner to allow for a new curb ramp that can accommodate the crosswalks crossing the north leg of West Silver Lake Boulevard and the east leg of Tesla Avenue. Two new curb ramps are also proposed at the southeast corner to minimize the pedestrian walking distances for crossing the east leg of Tesla Avenue and the south leg of West Silver Lake Drive. A preliminary design of this intersection is shown below in **Figure 18 - Tesla Avenue and West Silver Lake Drive Improvements**.

FIGURE 18 – TESLA AVENUE AND WEST SILVER LAKE DRIVE IMPROVEMENTS

INTERSECTION OF ARMSTRONG AVENUE, TESLA AVENUE, AND LAKEWOOD AVENUE

The Armstrong Avenue, Tesla Avenue and Lakewood Avenue intersection is a multi-way stop controlled intersection with three of the four legs intersect at acute angles. An LADWP access driveway is also located at the southwest corner of this intersection.

Given the unique layout of this intersection, when all approaches are occupied with vehicles and pedestrians, it is difficult to anticipate the direction of pedestrian, motorist, and bicycle movements at this intersection. Therefore, it is recommended to install a traffic circle at this intersection to reduce areas of conflict by separating or regulating traffic movements into definite paths of travel by the use of a circular raised island at the center of the intersection. It is also proposed that high visibility pedestrian crosswalks be provided. A preliminary layout of the design is shown in **Figure 19 – Armstrong Avenue, Tesla Avenue, and Lakewood Avenue Intersection Improvements** below.

FIGURE 19 – ARMSTRONG AVENUE, TESLA AVENUE, AND LAKEWOOD AVENUE INTERSECTION IMPROVEMENTS

SECTION 4 – NON-CEQA TRANSPORTATION ANALYSIS

The City of Los Angeles' police powers provides the authority to regulate the use of land. In certain applications, the City is required to make specific findings to exercise its discretionary authority to approve a land use development project. The City's Site Plan Review approval process establishes discretionary authority in Section 16.05 of the Los Angeles Municipal Code (LAMC) to review and correct for transportation deficiencies that may result from a development project. Therefore, the City is requiring non-CEQA transportation analysis and potentially requiring improvements to address identified transportation related deficiencies.

4.1 - PEDESTRIAN, BICYCLE, AND TRANSIT ACCESS ASSESSMENT

The pedestrian, bicycle, and transit facilities in the vicinity of the project were assessed to determine the potential effects of the project on these facilities. According to the TAG, the deficiencies could be physical (through removal, modification, or degradation of facilities) or demand-based (by adding pedestrian or bicycle demand to inadequate facilities).

4.1.1 - SCREENING CRITERIA

The TAG establishes three main screening criteria to determine whether further non-CEQA transportation analysis would be required to assess any potential project related effects and determine any possible adverse effect on existing pedestrian, bicycle, or transit facilities. The screening criteria is listed below in **Table 10 – Screening Criteria for Pedestrian, Bicycle & Transit Access Assessment.**

Table 10 - Screening Criteria for Pedestrian, Bicycle, and Transit Access Assessment

	Screening Criteria Questions	Answer	Action
1	Does the project require discretionary action?	Yes	If answer is yes to 1, 2 & 3 further analysis is required
2	Does the land use project include the construction, or addition of:	No	
	50 (or more) dwelling units or guest rooms or combination thereof, or		
	50,000 square feet (or more) of non-residential space?		
3	Would the project generate a net increase of 1,000 or more daily vehicle trips, or is the project's frontage along an Avenue, Boulevard, or Collector (as designated in the City's General Plan) 250 linear feet or more, or is the project's building frontage encompassing an entire block along an Avenue or Boulevard (as designated in the City's General Plan)?	Yes	

4.1.2 - EVALUATION CRITERIA

A complete inventory of pedestrian, bicycle and transit facilities, and potential pedestrian destinations within 1,320 feet of the edge of a project site was taken. The relevant information is included in this TIA under **Section 2.2 - Non-Vehicular Transportation System.** For purposes of evaluating the effects of the project on pedestrian, bicycle and transit facilities, several factors were taken into consideration in assessing the potential project effects, as required by the TAG. These factors are listed below **Table 11 – Evaluation of Pedestrian, Bicycle, & Transit Assessment** below.

Table 11 - Evaluation of Pedestrian, Bicycle, & Transit Assessment

Assessment Factors	Project Impact	Analysis of Impact
Removal or degradation of existing sidewalks, crosswalks, pedestrian refuge islands, and/or curb extensions/buildouts	No	Existing sidewalks, crosswalks, and trails will be improved.
Removal or degradation of existing bikeways and/or supporting facilities (e.g., bikeshare stations, on-street bike racks/parking, bike corrals, etc.)	No	Bicycle lanes and supporting facilities have been identified for future improvements.
Removal or degradation of existing transit and/or local circulator facilities including stop, bench, shelter, concrete pad, bus lane, or other amenities	No	The transit stops located along West Silver Lake Drive will be unaffected by the Project.
Removal of other existing transportation system elements supporting sustainable mobility	No	Pedestrian facility improvements will occur within the SLRC. Off-site improvements have been identified for the future.
Increase street crossing distance for pedestrians; increase in number of travel/turning lanes; increase in turning radius or turning speeds	No	No new lanes will be added. Pedestrian crossings will be improved.
Removal, degradation, or narrowing of an existing sidewalk, path, crossing, or pedestrian access way	No	The surrounding sidewalks will be improved. A 2.5-mile walking trail will be added as part of the Project.

Table 11 - Evaluation of Pedestrian, Bicycle, & Transit Assessment		
Assessment Factors	**Project Impact**	**Analysis of Impact**
Removal or narrowing of existing sidewalk-street buffering elements (e.g., curb extension, parkway, planting strip, street trees, etc.)	No	Potential curb extensions have been identified for potential improvements.
Increase in pedestrian or vehicle volume, and thereby increase the need or attraction to cross a street at unmarked pedestrian crossings or unsignalized or uncontrolled intersections where a crossing is not available without significant rerouting. Refer to the Guidelines for Marked Crosswalks Across Uncontrolled Locations, in LADOT's Manual of Policies and Procedures (MPP) Section 344, or Guidelines for Traffic Signals in MPP Section 353 to determine approval and warrant criteria for an additional crossing.	Yes	Additional pedestrian activated traffic signals and flashing red beacons are also recommended.
Increase transit demand at bus stops that lack marked crossings, with insufficient sidewalks, or are in isolated, unshaded, or unlit areas.	No	No impact.

4.1.3 – IMPACT ANALYSIS

4.1.3.1 - BICYCLE CONNECTIONS

There are two dedicated City bike lanes that currently provide access to the Complex, one on Silver Lake Boulevard adjacent to the Meadow and one on Rowena Avenue which connects to West Silver Lake Drive. Additionally, neighborhood traffic calming elements to improve safety and comfort for people walking and bicycling are also planned as part of the City's Mobility Plan 2035 on West Silver Lake Drive and Armstrong Avenue.

4.1.3.2 - PEDESTRIAN CONNECTIONS

Currently, a perimeter walkway allows for a continuous walking loop around the Complex. As shown in **Figure 10 - Locations of Proposed SLRCMP Improvements**, pedestrian crossings along the perimeter streets around the SLRC occur at multi-way stop signs at the intersections of Tesla Avenue and West Silver Lake Drive and Armstrong Avenue, as well as the intersections of West Silver Lake Drive and Hawick Street, Moreno Drive, and Van Pelt Place. Additionally, there are pedestrian-activated crossings at the intersection of Silver Lake Boulevard and Van Pelt Place, a traffic signal crossing at the intersection of Silver Lake Boulevard and Duane Street and along Silver Lake Boulevard at the Meadow.

4.1.3.3. - TRANSIT CONNECTIONS

The SLRC is connected to the County Metro bus system via lines #201 that runs West Silver Lake Drive with multiple stops adjacent to the Complex and #92 which runs on Glendale Boulevard with multiple stops which are a short walking distance from the Complex as shown in **Figure 10 - Locations of Proposed SLRCMP Improvements**.

4.1.4 – PROJECT SUMMARY WITH RESPECT TO PEDESTRIAN, BICYCLE, AND TRANSIT ACCESS ASSESSMENT

In reference to pedestrian, bicycle, and transit assessment, ***Section 3.6.3 -T-3*** *provides a detailed analysis and recommendations to enhance pedestrian, bicycle, and transit safety.*

4.2 - PROJECT ACCESS, SAFETY AND CIRCULATION EVALUATION

The TAG requires an evaluation of the project's access and circulation constraints. The evaluation may include operational, or capacity constraints. Constraints can be related to vehicular/vehicular, vehicular/bicycle, or vehicular/pedestrian constraints as well as to operational delays. A detailed review of the project access, safety and circulation was conducted to determine any project related adverse effects. The review analyzed the operation of vehicular traffic volumes as well as pedestrian and bicycle traffic.

4.2.1 - SCREENING CRITERIA

The TAG establishes two main screening criteria to determine whether further non-CEQA transportation analysis would be required to assess any potential project related effects and determine any possible adverse effect on access, safety, and circulation. The screening criteria is listed in **Table 12 – Screening Criteria for Access, Safety, and Circulation**.

Table 12 - Screening Criteria for Access, Safety and Circulation

	Screening Criteria Questions	Answer	Action
1	Does the project require discretionary action?	Yes	If answer is yes to 1 & 2 further analysis is required
2	Would the land use project generate a net increase of 250 or more daily vehicle trips?	Yes	

4.2.2 - EVALUATION CRITERIA

The TAG requires operational, safety and passenger loading evaluations of the project's effects on access, safety, and circulation. Project access is considered constrained if the project's traffic would contribute to unacceptable queuing on an Avenue or Boulevard (as designated in the Mobility Plan 2035) at project driveway(s) or would cause or substantially extend queuing at nearby signalized intersections. Unacceptable or extended queuing may be defined as; spill over from turn pockets into through lanes, block cross streets, or alleys, and contribute to "gridlock" congestion.

4.2.3 - OPERATIONAL EVALUATION

4.2.3.1 - STUDY INTERSECTIONS

In accordance with the approved Project MOU, the following intersections as shown in **Table 13 – List of Study Intersections** would be analyzed and evaluated for operational assessment:

Table 13 - List of Study Intersections

Intersection(s)	Configuration	Control
Silver Lake Blvd / Van Pelt Pl	3-way T-intersection	Flashing Beacon Signal
Silver Lake Blvd / Glendale Blvd	4-way intersection	Signal
Silver Lake Blvd / Armstrong Ave	3-way T-intersection	Stop Sign
Silver Lake Blvd / Duane St	3-way T-intersection	Signal
Armstrong Ave / Tesla Ave	5-way intersection	Stop Sign
West Silver Lake Dr / Tesla Ave	4-way intersection	Stop Sign

Refer to **Figure 20 – Lane Configuration** for the study intersections' traffic lane configurations:

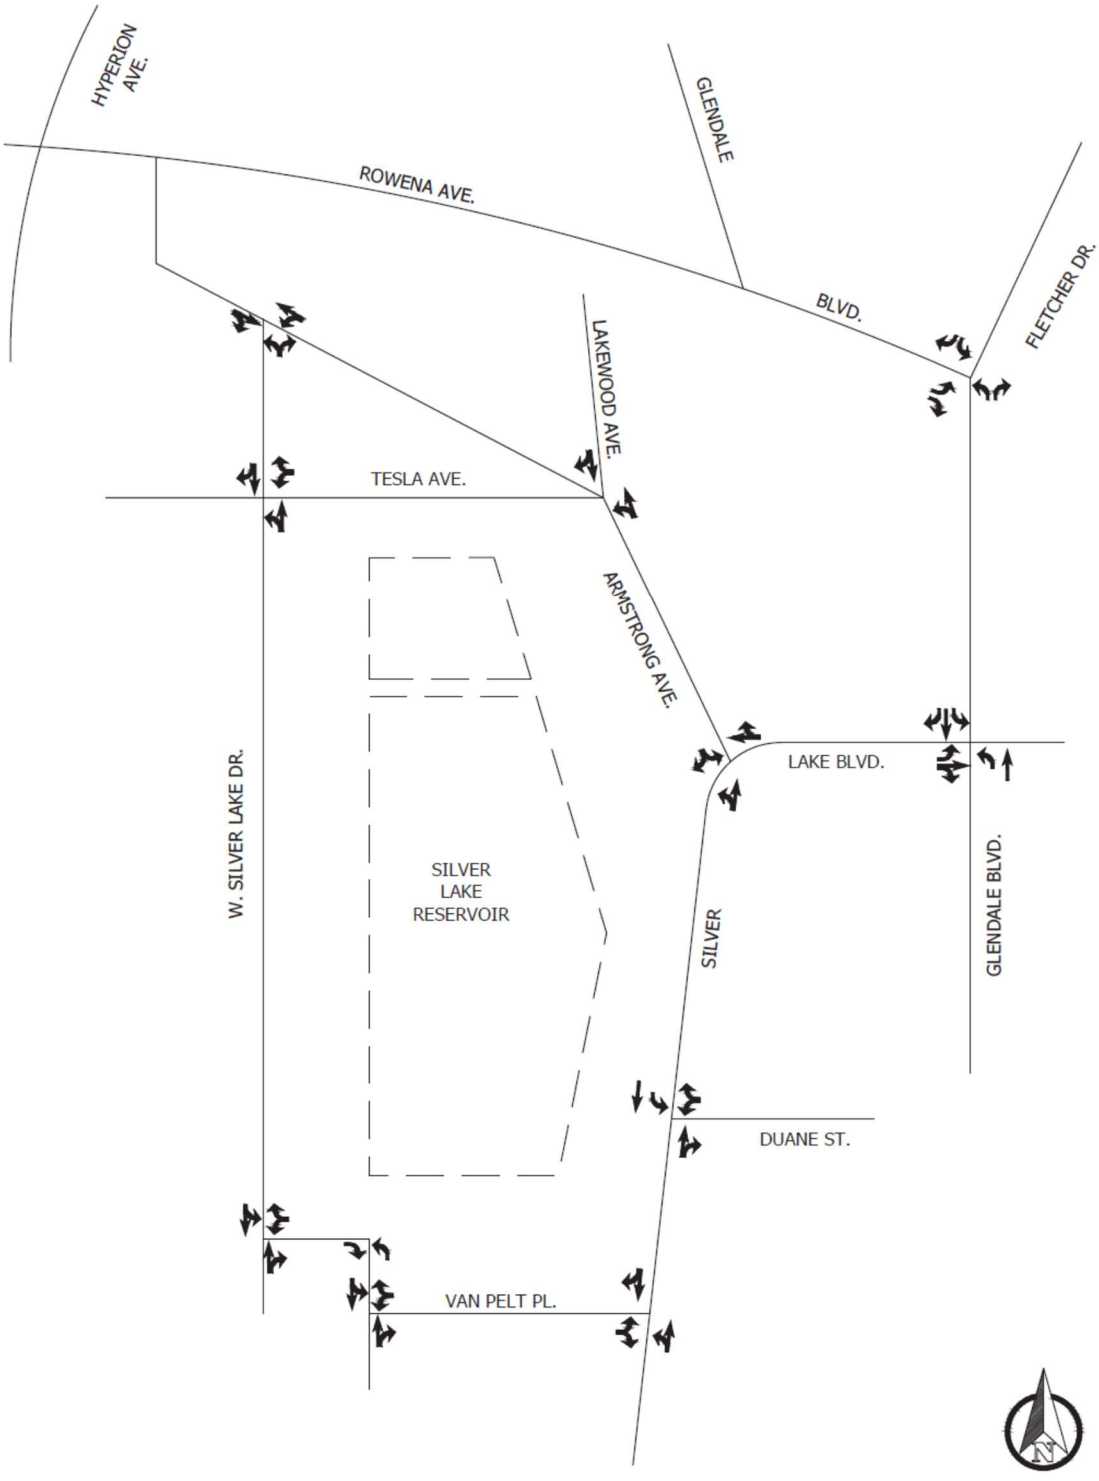

FIGURE 20 - LANE CONFIGURATION

4.2.3.2 - TRAFFIC COUNTS

Traffic counts were obtained for vehicular turning movements at the study intersections. The counts were conducted during two weekdays and two Saturdays to obtain existing traffic volumes. **Figure 21 – Existing Average Daily Traffic Volumes (Weekday)** shows the traffic volumes for existing traffic conditions for the study intersections during a typical weekday, while **Figure 22 – Existing Average Daily Traffic Volumes (Weekend)** shows the traffic volumes for the existing traffic conditions for the study intersections during a typical Saturday. All traffic counts are included in **Appendix C – Data Appendices.**

FIGURE 21 – EXISTING AVERAGE DAILY TRAFFIC VOLUMES (WEEKDAY)

FIGURE 22 – EXISTING AVERAGE DAILY TRAFFIC VOLUMES (WEEKEND)

4.2.3.3 – PROJECT TRIP GENERATION AND METHODOLOGY

The following is a description of the SLRCMP existing and future park zones. The park zones shown in **Figure 3 – SLRCMP Site Plan** are described below:

Ivanhoe Overlook

Ivanhoe Overlook encompasses the Ivanhoe Reservoir, which is the smaller of the two reservoirs and bounded by a path along the north side of its dam. The narrow lands around the water body are currently restricted to LADWP access with the exception of a shared path on the west side that connects to a public sidewalk on West Silver Lake Drive and which allows people to walk along the water's edge before being directed back to West Silver Lake Drive near the Spillway. Once complete, the Ivanhoe Overlook will feature new wetlands habitat, which will be the defining attractor for this park zone. This wetlands habitat will consist of floating islands and wetlands terraces. In addition, various amenities will be introduced to take advantage of the new habitat islands.

Eucalyptus Grove

Eucalyptus Grove is currently a wooded area predominantly occupied by numerous eucalyptus trees. This park zone also contains LADWP facilities. Once complete, the Eucalyptus Grove will feature abundant new landscaping throughout the upland areas. This park zone will also contain wetlands terraces, floating habitat islands, an overlook, seating and viewing terraces, and a promenade.

The West Narrows

The West Narrows consists of a narrow segment of land located north of the south valley; west of the main reservoir; east of West Silver Lake Drive; and south of the Eucalyptus Grove. This park zone is currently unoccupied. This park zone will be improved with a running/walking path, new seating terraces overlooking the reservoir, and a promenade.

The South Valley

The South Valley currently contains most of the SLRC's attractions, such as the Dog Park; Recreation Center; playground; plaza, and basketball courts. Once complete, the South Valley will feature relocated and resized basketball courts; a Renovated Recreation Center; new Multi-Purpose Facility; new plaza; renovated playground and picnic areas; relocated play field, and enhanced Dog Park. In addition, the Multi-Purpose Facility will host polling and community

events.

The East Narrows

The East Narrows consists of a narrow segment of land located north of the south valley; west of Silver Lake Boulevard; east of the main reservoir; and south of the Meadow. This park zone will be improved with a running/walking path; new seating terraces overlooking the reservoir; an overlook protruding into the reservoir; an outdoor fitness center; and a promenade.

The Meadow

The Meadow is referred to as the heart of the Silver Lake Reservoir Complex. This park zone contains vast lawn areas that are used by the public for resting/relaxing and picnicking. Once complete, the Meadow will feature two lawn areas that will host local events such as concerts and outdoor movie screenings; ornamental gardens; a picnic grove; wetland habitat terraces with walkways; floating wetland islands; and an observational platform.

The Knoll

The Knoll is a large hill located east of the main reservoir. This area is undeveloped and is occupied by unmaintained ruderal vegetation. In addition, LADWP facilities are located in this park zone. This Knoll increases in elevation by 45 feet, which provides visitors with ample views of the SLRC and surrounding area. Once complete, the Knoll will contain restored upland wooded habitat; a floating dock; an environmental education center; nature trails; seating terraces; and an overlook shade pavilion with outdoor classrooms.

TRIP GENERATION CALCULATION BASED ON ITE TRIP GENERATION MANUAL

In order to prepare the Project's trip generation, the Institute of Transportation Engineers (ITE) *Trip Generation Manual 11th Edition* was reviewed. According to the Institute of Transportation Engineers (ITE) Land Use Code 411, Public Parks can be defined as:

> *"Public parks are owned and operated by a municipal, county, state, or federal agency. The parks surveyed vary widely as to location, type, and number of facilities, including boating or swimming facilities, beaches, hiking trails, ball fields, soccer fields, campsites, and picnic facilities. Seasonal use of the individual sites differs widely as a result of the varying facilities and local conditions, such as weather. For example, some of the sites are used primarily for boating or swimming; others are used for softball games. Soccer complex (Land Use 488) is a related use.*

The percentage of the park area that is used most intensively varies considerably within the studies contained in this land use; therefore, caution should be used when using acres as an independent variable. Based on the Silver Lake Reservoir Complex Master Plan (SLRCMP) project description, and after consultation with LADOT staff, JBA has determined that the trip generation factors for Public Park (Land Use Code 411) are not suitable for this Project due to the following reasons:

- The ITE survey sites are not comparable to the Project. The SLRC Plan does not have the amenities described above, such as boating facilities, soccer fields, swimming areas, beaches, hiking trails, and campsites.
- The size of the parks included in the ITE Trip Generation surveys ranged between 290 acres and 612 acres. In comparison, the existing SLRC has 3.4 acres of lawn and shade areas, a Recreation Center, basketball court, Dog Park, and walking and jogging trails around the perimeter. As part of SLRCMP, the Project will expand the park to 10 acres for active and passive recreational activities. In addition, the ITE trip generation rates were based on a very limited number of studies. For example, there are only 2 studies for the weekend daily trips.
- There is a wide range in the ITE trip generation rates for this type of land use due to a small sample size (limited number of studies). For example, the weekday daily trip rates range from 0.55 to 34.00 trips per acre. For Saturdays and Sundays, the daily trip rates range from 1.88 to 22.75 and 2.12 to 19.50 trips per acre, respectively.

To illustrate the limitations of the ITE Land Use Code 411 (Public Park) trip generation factors, the Project's weekday and weekend trip generation were calculated using the ITE trip rates shown below in **Table 14 – ITE Trip Generation Rates for Public Parks (Land Use 411)**. It is also important to note that given the average ITE trip generation rates that are typically used are very low, the highest values within the ranges of the trip generation rates were used in this demonstration to be conservative.

Table 14 ITE Trip Generation Rates for Public Parks (Land Use 411)				
		ITE Ave. Trip Rate	Range of Trip Rates	**Trip Rate Used**
Weekday	Daily	0.78	0.55-34.00	**34.00**
	Am Peak	0.02	0.00-4.50	**4.50**
	PM Peak	0.11	0.05-3.50	**3.50**
Saturday	Daily	1.96	1.88-22.75	**22.75**
	Generator Peak	0.28	0.21-4.50	**4.50**
Sunday	Daily	2.19	2.12-19.50	**19.50**
	Generator Peak	0.31	0.21-5.00	**5.00**

In order to use the rates for the ITE Land Use Code 411 (Public Parks), the SLRCMP park zones (Ivanhoe Overlook, Eucalyptus Grove, the Knoll, the East/West Narrows, the Meadow, and the South Valley) were considered to be a single land use. In addition, the Environmental Education Center and Shade Pavilion/Outdoor Classrooms as well as the walking and jogging paths were also considered to be part of the ITE Land Use Code 411 because these facilities do not have comparable trip generation rates in the ITE Trip Generation Manual.

In addition, the SLRCMP is also proposed to include a Multi-Purpose Facility and a Renovated Recreational Center. The ITE Trip Generation Manual 11th edition has a Land Use Code 435 for Multi-purpose Recreational Facility. However, there are also limitations for this land use as follows:

- For weekdays, there are no trip rate values for AM peak hour and daily trips.
- For weekends, there are no trip rate values for peak hour of the generator and daily trips.

To demonstration the deficiencies of the ITE Trip Generation Rates, Project trip generation were calculated using the highest values of the trip generation rates from **Table 14**, for Land Use Code 411 (Public Park) and the available trips rates for Land Use Code 435 (Multi-purpose Recreational Facility). The results are shown in **Tables 15 – Trip Generation Using ITE Rates (Weekday), Table 16 – Trip Generation Using ITE Rates (Weekend-Saturday), and Table 17 – Trip Generation Using ITE Rates (Weekend-Sunday).**

Table 15 - Trip Generation Using ITE Rates (Weekday AM, PM, and Daily)

Land Use (ITE Code)	Size	Units	AM Peak Hour Trips				PM Peak Hour Trips				Daily Trips	
			Rate	Total	In	Out	Rate	Total	In	Out	Rate	Total
New Project Land Use Added												
Public Park (411)[2]	10	Acre	4.50	45	59% 27	41% 18	3.5	35	55% 19	45% 16	34.00	340
Renovated Recreational Center (435)	3.279	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	4.06	14	55% 8	45% 6	Not Available	Not Available
Multi-purpose Facility (435)	5.800	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	4.06	24	55% 13	45% 11	Not Available	Not Available
Total			Total daily and generator peak cannot be calculated due to the lack of available trip generation data.									

Table 16, shown below, shows the ITE trip generation rates for parks on weekends.

Table 16 - Trip Generation Using ITE Rates (Weekend – Saturday)

Land Use (ITE Code)	Size	Units	Generator Peak Hour Trips				Daily Trips	
			Rate	Total	In	Out	Rate	Total
New Project Land Use Added								
Public Park (411)[2]	10	Acre	4.50	45	55% 25	45% 20	22.75	228
Renovated Recreational Center (435)	3.279	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	Not Available	Not Available
Multi-Purpose Facility (435)		Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	Not Available	Not Available
Total			Total daily and generator peak cannot be calculated due to the lack of available trip generation data.					

Table 17 - Trip Generation Using ITE Rates (Weekend - Sunday)

Land Use (ITE Code)	Size	Units	Generator Peak Hour Trips				Daily Trips	
			Rate	Total	In	Out	Rate	Total
New Project Land Use Added								
Public Park (411)[2]	10	Acre	5.00	50	39% 20	61% 30	19.50	195
Renovated Recreational Center (435)	3.279	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	Not Available	Not Available
Multi-Purpose Facility (435)	5.800	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	Not Available	Not Available
Total			Total daily and generator peak cannot be calculated due to the lack of available trip generation data.					

In summary, the daily Project trips calculated using the ITE rates are as follows. These weekday and weekend daily trips do not include trips generated by the Renovated Recreation Center and Multi-Purpose Facility because the ITE Trip Generation Manual does not have daily rates for these uses:

- Weekday Daily Trips = 340;
- Weekend (Saturday) Daily Trips = 228; and
- Weekend (Sunday) Daily Trips = 195.

The purpose of calculating the Project's trip generation using the ITE trip generation rates for the Project was to demonstrate the deficiencies with the ITE rates. Moreover, the ITE manual also cautions the use of "acres" as an independent variable for trip generation. For this reason, JBA developed a trip generation methodology based on current park attendance. As demonstrated below, using the Current Park Attendance surveys conducted by JBA provides a more accurate estimation of the trip generation for the proposed Project.

Trip Generation Methodology Based on Current Park Attendance

JBA conducted surveys of the number of people that were using the various areas of the park on Saturday November 6, 2021. The survey data that was collected was used as a base to estimate the Project's future trip generation. The results of the aforementioned survey are as follows:

The Meadow – Silver Lake Lawn/Great Lawn

The number of people using the picnicking areas were counted between 9:00 AM and 4:00 PM. During the peak use of this area between 2:00 PM and 4:00 PM there were between 78 to 109 people in various groups picnicking. For the purposes of projecting future increase in attendance on weekdays and weekends, the following assumptions were made:

- For the weekends, a 50% increase was assumed based on a current peak park attendance of 100 people for this area.
- For the weekdays, a 25% increase was assumed based on a current peak park attendance of 100 people for this area.
- For the other park uses in the Meadow area, the increases in attendance for weekends and weekdays were estimated based on inputs from the SLRCMP Project Team using the size, functionality, and capacity of each respective park zone area.

The Knoll, Ivanhoe Overlook, Eucalyptus Grove, East/West Narrows

For these park uses, the increases in attendance for weekends and weekdays were estimated based on inputs from the SLRCMP Project Team using the size, functionality, and capacity of each respective park zone area.

The South Valley – Dog Park

The number of people using the Dog Park were counted between 9:00 AM and 4:00 PM. During the peak use of this area between 9:00 AM and 12:00 PM there were between 45 to 56 people in various groups using the park. For the purposes of projecting future increase in attendance on weekdays and weekends, the following assumptions were made:

- For the weekends, a 60% increase was assumed based on a current peak park attendance of 50 people for this area.
- For the weekdays, a 30% increase was assumed based on a current peak park attendance of 50 people for this area.

The South Valley – Renovated Recreation Center, Multi-Purpose Facility, Playground, Play Field, Renovated Plaza, and Picnic Grove

Based on observations, the number of people using the existing Recreation Center between 9:00 AM and 6:00 PM ranged between 20 to 30 people. Based on the proposed Renovation of the Recreation Center, an additional peak attendance of 30 people was assumed during weekdays and weekends.

Given that the existing basketball court will be relocated to a new location within the South Valley park zone, no change in the usage of the basketball court was assumed. Furthermore, there was no additional attendance assumed for the playground, renovated plaza, picnic grove, and play field.

Silver Lake Perimeter Walking & Jogging Paths

The perimeter of the SLRC has walkways that are used for walking and jogging purposes. In order to estimate the number of people that are walking and jogging, a count was conducted on November 6, 2021, from 9:00 AM to 4:00 PM. The following **Table 18 - Weekend Walker and Jogger Counts** shows the walker and jogger counts for a typical weekend during the highest three hours.

Table 18 - Weekend Walker and Jogger Counts

Average	**160**	**196**	**176**	**253**	**218**	**281**	**185**

Average number of walkers and joggers = (A+B+C+D+E+F+G)/ 7 = 1470/7 = 210

For the purposes of projecting future increases due to new walking and jogging paths internal to the reservoir area, the current peak attendance of 210 people was increased by 40% for weekends and 20% for weekdays as calculated below:

Assumed increase in walkers and joggers for the Weekend by 40% = 210 X 0.4 = 84

Assumed increase in walkers and joggers for the Weekday by 20% = 210 X 0.2 = 42

ESTIMATED POTENTIAL WEEKEND VEHICLE TRIPS GENERATED BY EACH PARK ZONE

To calculate project trip generation, the potential increase in attendance for each park use within each park zone on a typical weekday was first estimated, as shown in **Table 19 - Silver Lake Reservoir Complex Estimated Potential Weekend Vehicle Trips Generated by Each Park Use**. The estimated potential increase in park attendance was based on the uses in each park zone and inputs from the Project Team. The number of attendants for each park use was then converted to the number of vehicle trips associated with each peak park use by applying the following assumptions:

- 70% of all park visitors are local residents that would walk/jog/bike or take public transit to the park. This assumption is based on a survey of the SLRCMP community meeting participants that 70% of them walked to the SLRC (refer to **Figure 23 – Methods of Travel to the SLRC** shown on the following page).
- 25% internal capture among various park uses. Internal capture takes into consideration of those park visitors that drive to the park once but visit multiple areas in the park. For example, people who go to the Meadow for picnicking would also walk or jog to the Knoll area, fitness area, use the seating terraces in Eucalyptus Grove, or the West Narrows. For this study, the internal capture factor only applied to general park uses and it was not used for the recreation center, the outdoor basketball court, the multi-purpose facilities, the walking and jogging paths and trails, the education center, and classrooms, as well as any special events on weekdays and weekends.
- 40% increase in walkers and joggers around the existing paths and trails.
- Shade Pavilion/outdoor classroom in Ivanhoe Overlook and Environmental Education Center in the Knoll will be used on weekdays by students on field trips travelling by buses or passenger vans. No weekend trips were assumed for these park zones.
- There will be special events on weekdays at the existing Recreation Center and the Multi-Purpose Facility in the South Valley for community meetings and polling station with up to 50 people attending.
- There may be special events on weekends at Silver Lake Lawn in The Meadow for live performances and outdoor movie showings with an attendance of up to 600 people.

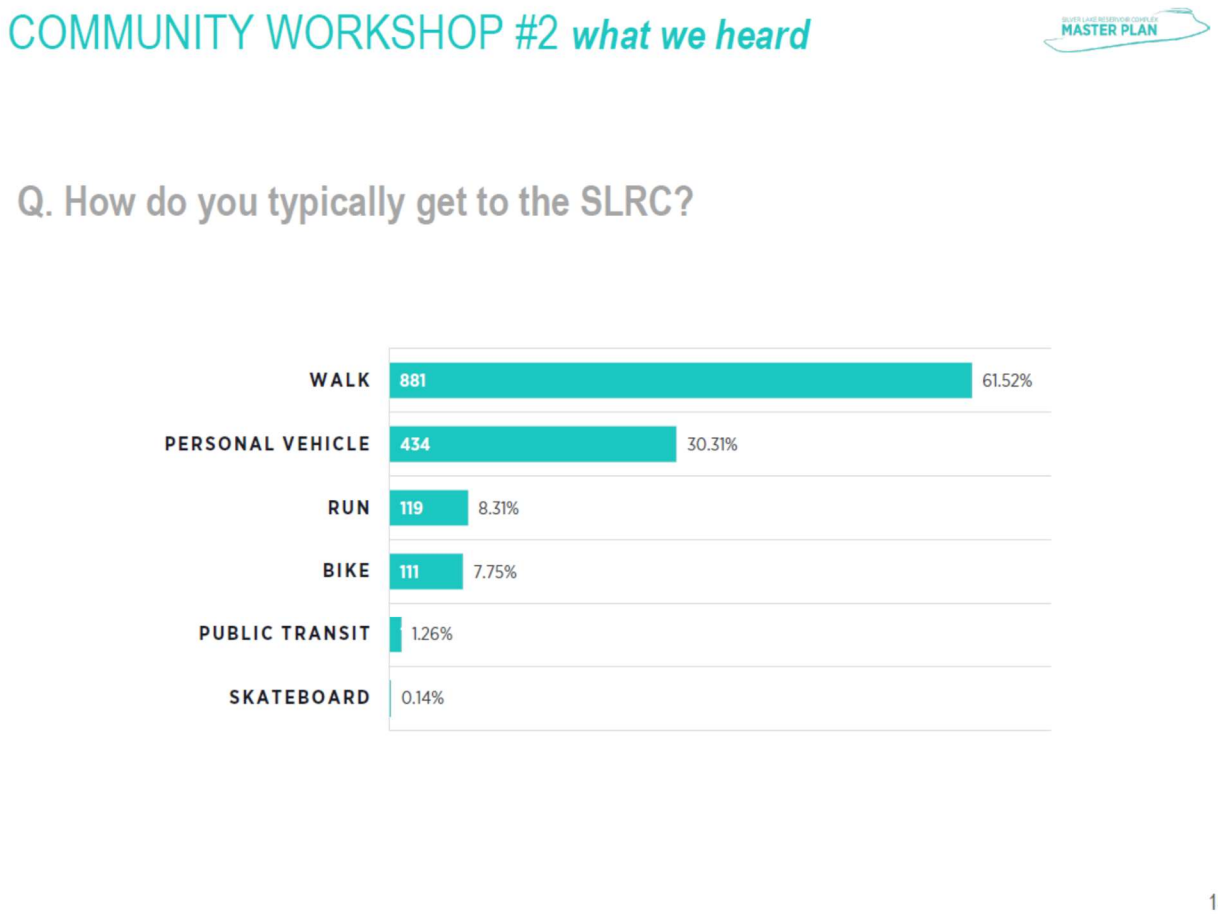

FIGURE 23 - METHODS OF TRAVEL TO THE SLRC

- The following vehicle occupancy rates were used to calculate vehicular trips for each park zone.
    - 1.8 passengers per vehicle for the existing and future Multi-Purpose Facility.
    - 1.5 passengers per vehicle for general park uses (The Meadows, Dog Park, Knoll, Ivanhoe Overlook, Eucalyptus Grove, and the East/West Narrows).
    - 1.2 passengers per vehicle for walking/jogging.
    - 1.5 passengers per vehicle for special events.
    - 25 students per bus with a passenger car equivalent of 3.0 vehicles per bus.
- It was assumed that the majority of students would travel to the Environmental Education Centers and the shade pavilions in buses or passenger vans.
- Increases in park zone attendance were calculated by the Project Team based on existing attendance and the capacity of the existing and proposed park amenities.

ESTIMATED PEAK USE VEHICLE TRIP GENERATION FOR EACH PARK ZONE

The above assumptions were made based on the inputs for the SLRC project team. The arrival, departure and total vehicle trips associated with each peak park use are shown in **Table 19 – Silver Lake Reservoir Complex Estimated Potential Weekend Vehicle Trips Generated by Each Park Use**. The calculations for the weekday and weekend trip generation for each park zone is included in **Appendix D – Trip Generation Calculations.** In addition, the potential increase in park attendance and the number of vehicle trips associated with each peak park use are also shown in the table provided on the following pages.

Table 19 - Silver Lake Reservoir Complex Estimated Potential Weekend Vehicle Trips Generated by Each Park Use

*=No internal capture

In addition, the Silver Lake Lawn in the Meadow would occasionally be utilized for special events on the weekends, such as live performances and outdoor movie showings. The estimated increase in attendance and the peak use vehicle trips are shown below in **Table 22 – Estimated Weekday Project Trip Generation During Special Events, Community Events, and Polling Station**.

Table 22 - Estimated Weekday Project Trip Generation During Special Events, Community Events, and Polling Station

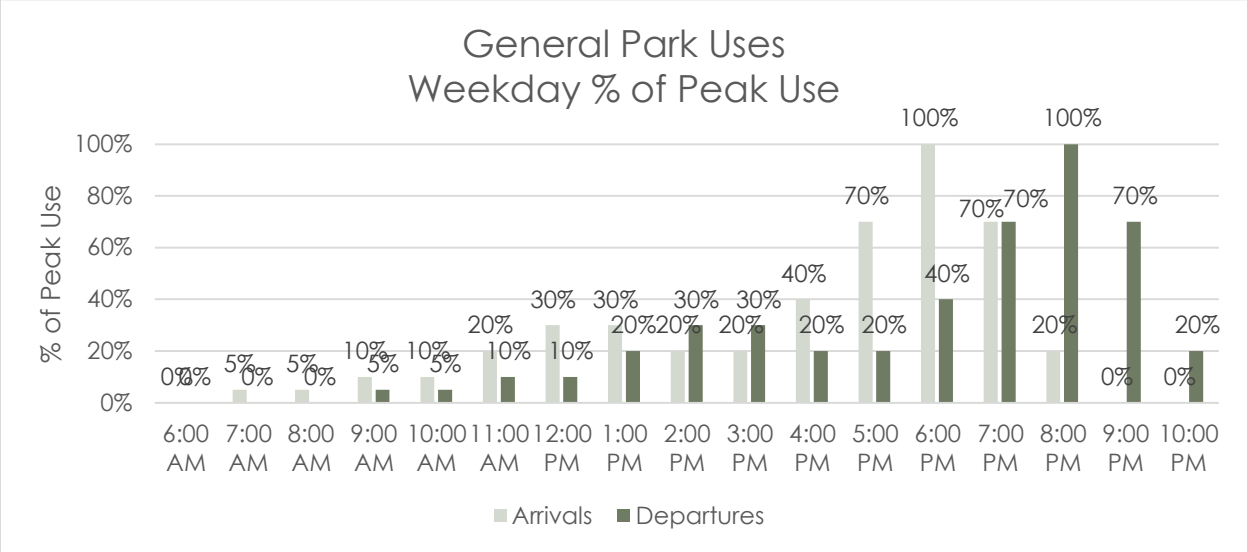
Park Zone	Possible Use/Function	Existing Area/Size	Proposed Area/Size	Increase in Visitor	Peak Hour Vehicle Trips		
					Arrive	Depart	Total
The South Valley	Multi-Purpose Facility /Indoor basketball Court*	N/A	5,800 sq. ft.	50 People	17	17	34

Tables 19 through **22** show the estimated maximum number of Project vehicle arrival and departure trips for each park zone. It is important to note that, each park use within a park zone will peak at different times of the day and will not occur at the same time. In addition, it is also assumed that all the SLRC park zones will be developed and operated simultaneously. However, in reality, based on available funding, the SLRC may be developed over a period of 10 years. Therefore, the estimated project trip generation for weekdays and weekends will occur incrementally over a period of 10 years.

Another important factor to be considered is the availability of on-street parking (which will be further discussed in the traffic analysis). With the limited on-street parking available on the adjacent streets, potentially, the number of estimated project vehicle trips will actually be lower. Nevertheless, to be conservative in estimating the traffic impacts at the study intersections, the peak hour weekday and weekend trip generation have been used for the intersection capacity analyses.

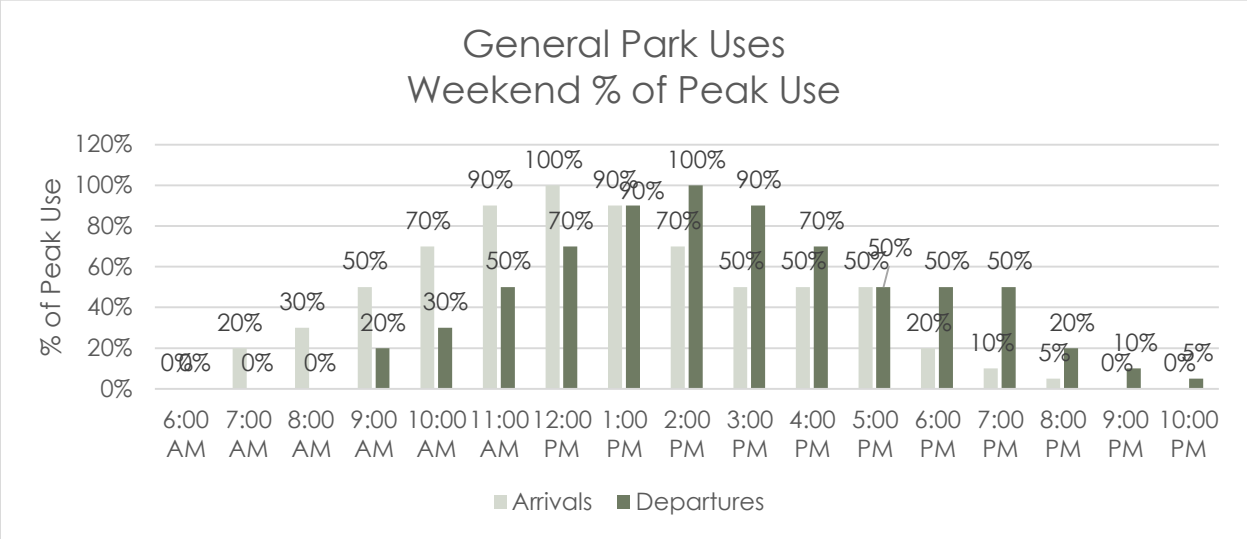
Estimated Hourly Distributions of Vehicle Trips for Park Uses

To calculate the daily, morning and afternoon commuter-peak-hour trip generation for a typical weekday and weekend, the hourly distribution of vehicle trips for various park uses were estimated. All of the park uses in the SLRC were grouped into the following 5 categories. Each park use category has its own unique hourly arrival and departure patterns:



1. General Park Uses—this includes the lawn areas, picnic areas, observation platform, gardens, seating and viewing terraces, promenade, fitness circuit, playground, and Dog Park.

2. Education Center and Classroom—this includes Environmental Education Center in The Knoll, Shadow Pavilion/Outdoor Classroom and Habitat Terrace in Ivanhoe Overlook.
3. Recreation Center—this includes the Renovated Recreation Center in The South Valley.
4. Basketball Court—this includes the relocated basketball court and the Multi-Purpose Facility /indoor basketball court in The South Valley
5. Silver Lake Perimeter Walking and Jogging Paths and Trails



The weekday and weekend hourly distributions of vehicle trips for each of the five park-use categories are shown in the following histograms as percentages of the peak use vehicle trips. It is assumed that on the average, a visitor will spend approximately 2 hours in the park. Therefore, the time lag between the arrival and departure is assumed to be 2 hours.

ESTIMATED PROJECT TRIP GENERATION

Using the peak use vehicle trips for each park use multiplied by the hourly percentages of peak uses shown in the histograms above, the estimated weekday and weekend arrival and departure vehicle trips generated by the project were calculated for every hour of the day when the SLRC is in operation. See **Table 23 – Estimated Project Trip Generation (Weekday)** and **Table 24 – Estimated Project Trip Generation (Weekend)** on the following pages.

*Percentage of Peak Use

Peak hour of generator

As shown in **Table 24 - Estimated Project Trip Generation (Weekend)**, on a typical weekend, the project is estimated to generate 112 trips during the mid-day peak hour of the adjacent streets and it also happens to be the peak hour of the generator. The project is also estimated to generate 972 daily trips on a typical Saturday.

COMPARISON OF THE ITE TRIP GENERATION RATES AND CALCULATED TRIP RATES BASED ON EXISTING AND FUTURE ATTENDANCE

Using ITE Land Use Code 411 (Public Parks), the following weekday and weekend daily trips were calculated:

- Weekday Daily Trips = 340;
- Weekend (Saturday) Daily Trips = 228; and
- Weekend (Sunday) Daily Trips = 195.

Using the trip generation methodology based on current SLRC park attendance, the following weekday and weekend daily trips were calculated:

- Weekday Daily Trips = 722; and,
- Weekend (Saturday) Daily Trips = 972.

The estimated weekday daily trips using methodology based on current park attendance are more than double the trips using ITE trip generation rates (722 trips vs 340 trips), while the estimated weekend daily trips are more than quadruple the trips using ITE trip generation rates (972 trips vs 228 trips).

Therefore, the trip generation methodology based on current SLRC park attendance is a more conservative approach than using ITE trip generation rates.

4.2.3.4 – PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

VEHICLE TRIP DISTRIBUTION METHODOLOGY

Vehicle trip distribution assumptions are used to determine the origin and destination of new vehicle trips associated with the Project. The geographic distribution of Project trips is based on access to and from nearby freeways (Interstate 5 and State Route 2), the functional classification of streets in the vicinity (see **Table 6 – Project Area Street Classifications**), as well as local knowledge of the roadway network and travel patterns. The Regional Inbound and Outbound trip distribution for the Project is shown in **Figures 24 & 25 - Regional Project Trip Distribution (Inbound) and (Outbound)**, respectively.

The Project is unique as there are no on-site parking facilities and no Project access driveways for park visitors. Unlike any typical developments where all project trips will enter and exit the site via the project driveway(s), the vehicle trips for the park visitors were distributed based on the availability of on-street parking around the SLRC.

Currently, on-street parking around the SLRC is available on the following street segments:

- Both sides of Silver Lake Boulevard in front of the Dog Park;
- East side of Silver Lake Boulevard between Easterly Terrace and Armstrong Avenue;
- East side of Armstrong Avenue between Silver Lake Boulevard and Tesla Avenue;
- North side of Tesla Avenue between Armstrong Avenue and West Silver Lake Drive;
- West side of West Silver Lake Drive between Tesla Avenue and Redesdale Avenue;
- Both sides of West Silver Lake Drive between Redesdale Avenue and Van Pelt Place; and,
- Both sides of Van Pelt Place between West Silver Lake Drive and Silver Lake Boulevard.

In addition, on-street parking is also proposed at the following street segments:

- West side of Silver Lake Boulevard between Armstrong Avenue and Duane Street; and,
- North side of West Silver Lake Drive west of the existing Recreational Center.

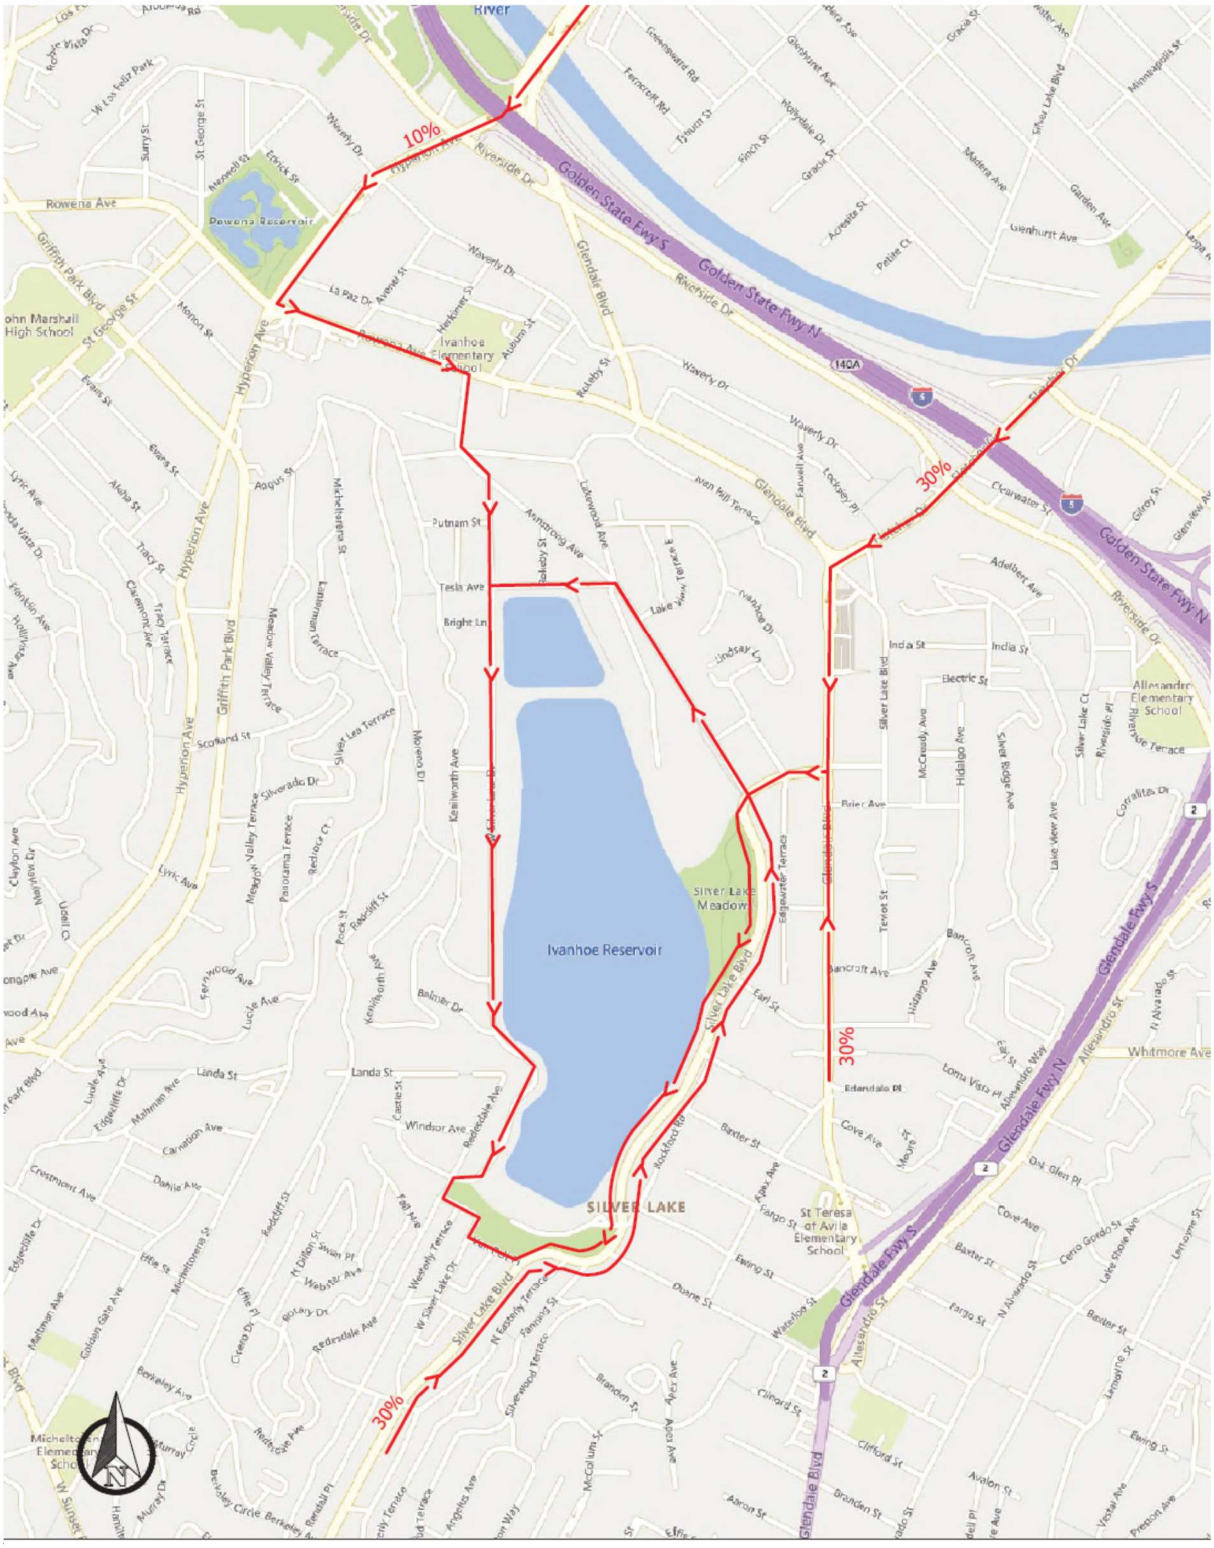

FIGURE 24 – REGIONAL PROJECT TRIP DISTRIBUTION (INBOUND)

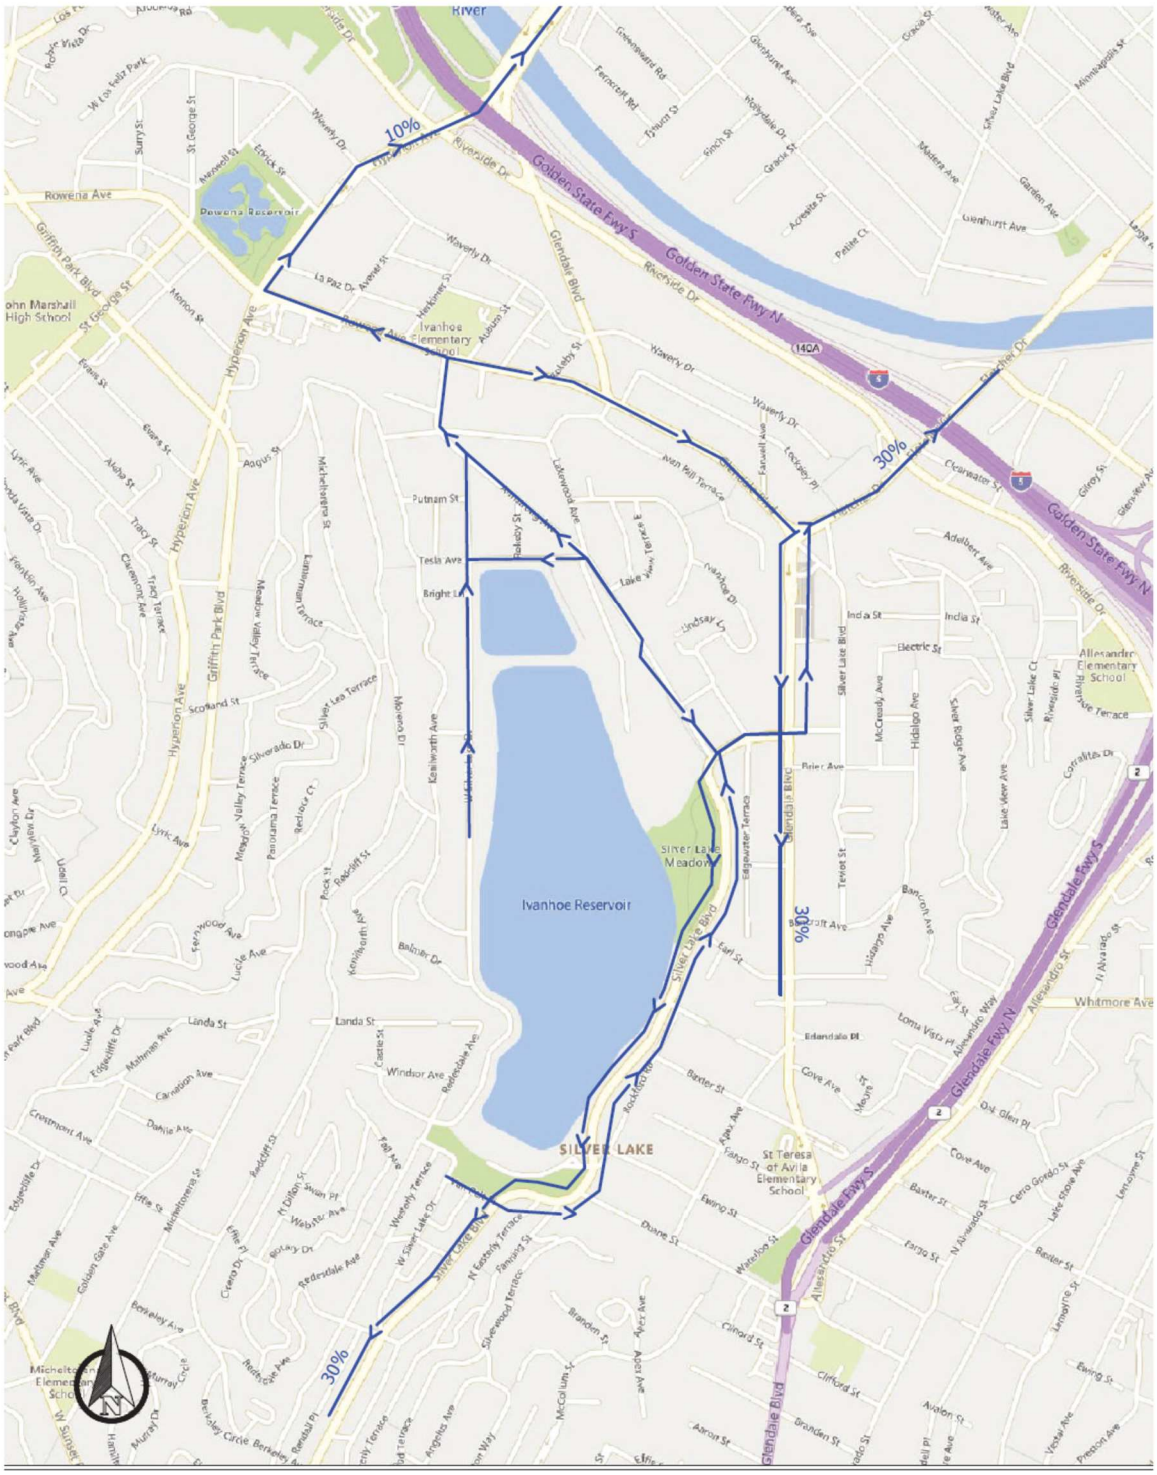

FIGURE 25 – REGIONAL PROJECT TRIP DISTRIBUTION (OUTBOUND)

Figure 26 - Existing and Proposed On-street Parking illustrates the existing and proposed on-street parking locations. Without the proposed on-street parking on Silver Lake Boulevard and West Silver Lake Drive, it is projected that Park visitors will drive through perimeter residential streets such as Lakewood Avenue, Tesla Avenue, Van Pelt Place, and West Silver Lake Drive to search for parking. As a result, additional trips will be diverted onto these streets. This potential for trip diversion to the residential streets can be alleviated with the proposed parking locations.

The Project trip distribution patterns on the street network within the proposed study area are shown in **Figure 27 - Project Trip Distribution at Study Intersections.** In addition, the estimated percentage of park visitors that would be able to utilize the existing and proposed on-street parking at each street segment is also shown in **Figure 27**. The percentage of existing on-street parking is estimated based on parking occupancy surveys conducted by JB & Associates (see **Section 4.5 – Parking Analysis**).

The following example illustrates the relationship between the Project's inbound trips and the availability of existing and proposed on-street parking (see **Figure 27)**:

- 60% of the inbound traffic arrives from westbound Silver Lake Boulevard at Armstrong Avenue;
- 15% of the inbound traffic turns right onto Armstrong Avenue, and 45% continues south on Silver Lake Boulevard. Based on the proposed on-street parking, it is projected that 35% of the inbound traffic will be able to park on the west side of Silver Lake Boulevard between Armstrong Avenue and Duane Street;
- Therefore, only 10% of the inbound traffic will continue southbound on Silver Lake Boulevard south of Duane Street. From this 10%, another 5% will be able to find parking between Duane Street and Van Pelt Place and 5% will continue to turn right onto Van Pelt Place to seek available parking.

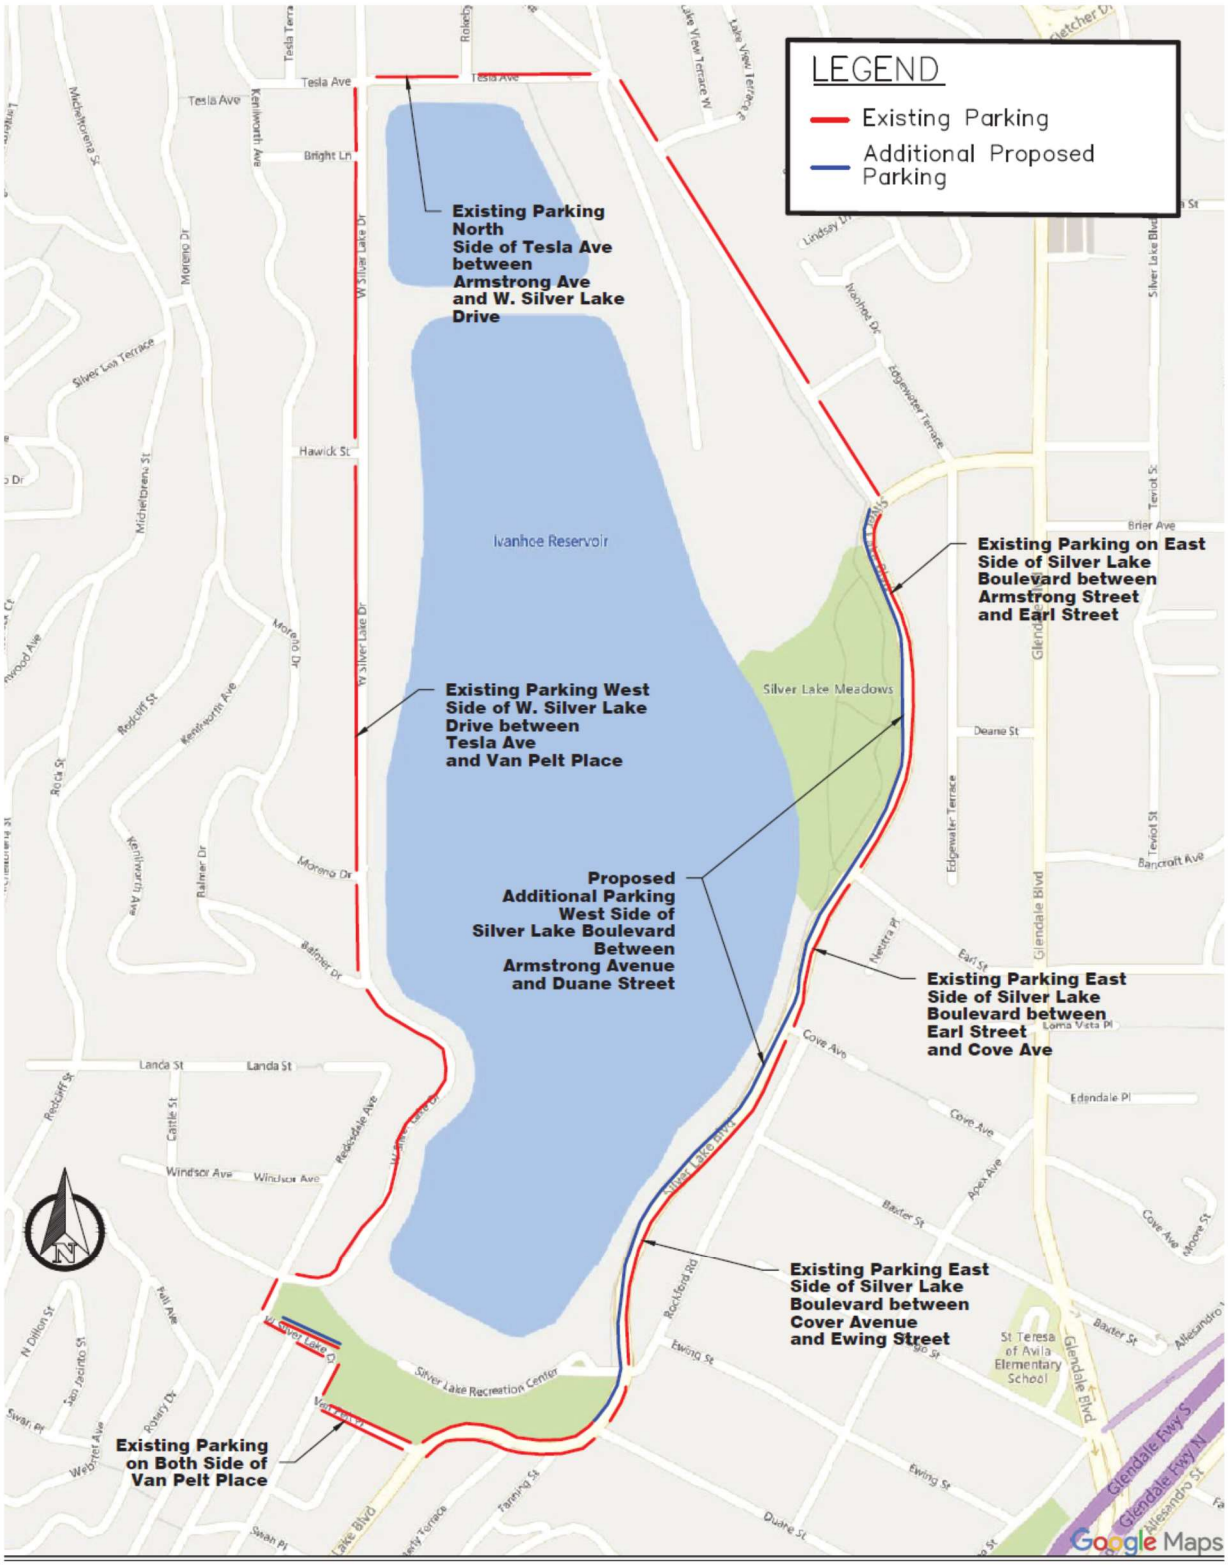

FIGURE 26 - EXISTING AND PROPOSED ON-STREET PARKING

PROJECT STUDY INTERSECTION TRIP ASSIGNMENT

The location and the number of the Project study intersections to be analyzed was reviewed and approved by LADOT staff as part of the MOU approval. **Figure 28 – Project Trip Assignment (Weekday AM peak hour)** illustrates the Project trip assignment during the AM peak hour on weekday. **Figure 29 - Project Trip Assignment (Weekday PM peak hour)** shows the Project trip assignment during the PM peak hour on weekday. Furthermore, the Project trip assignment during the mid-day peak hour on Weekends is shown in **Figure 30 - Project Trip Assignment (Weekend Mid-day peak hour)**.

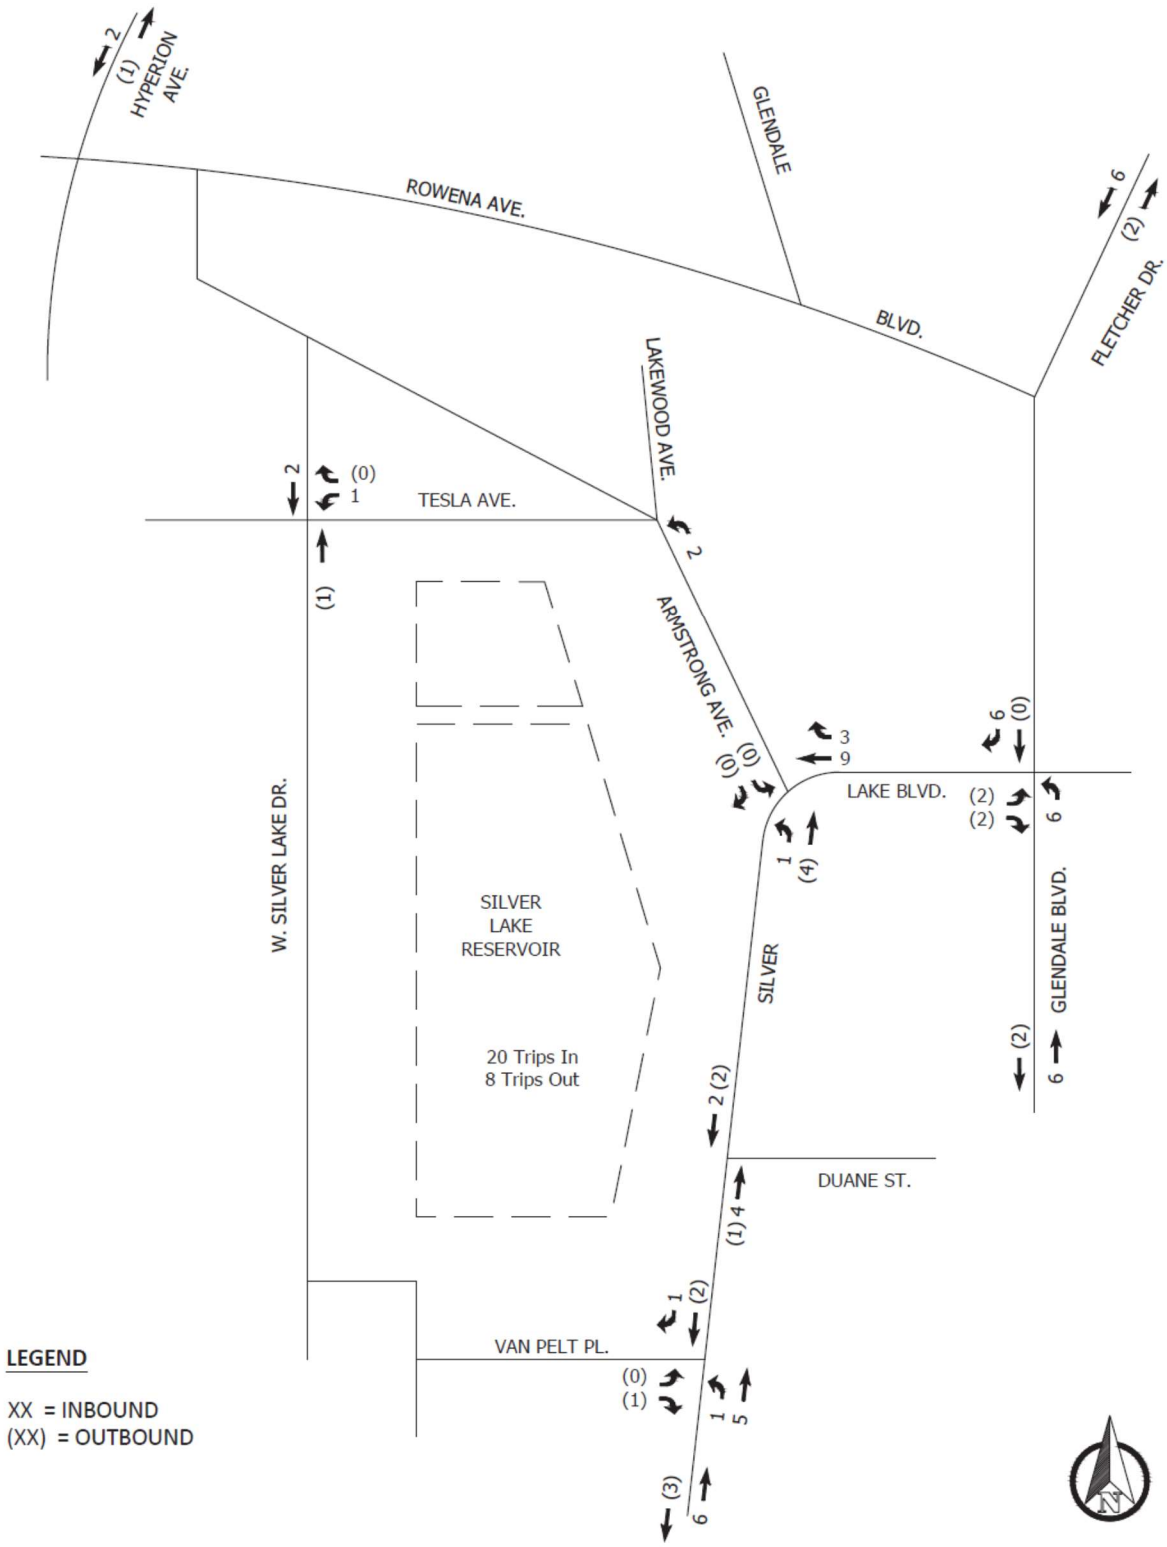

FIGURE 28 - PROJECT TRIP ASSIGNMENT (WEEKDAY AM PEAK HOUR)

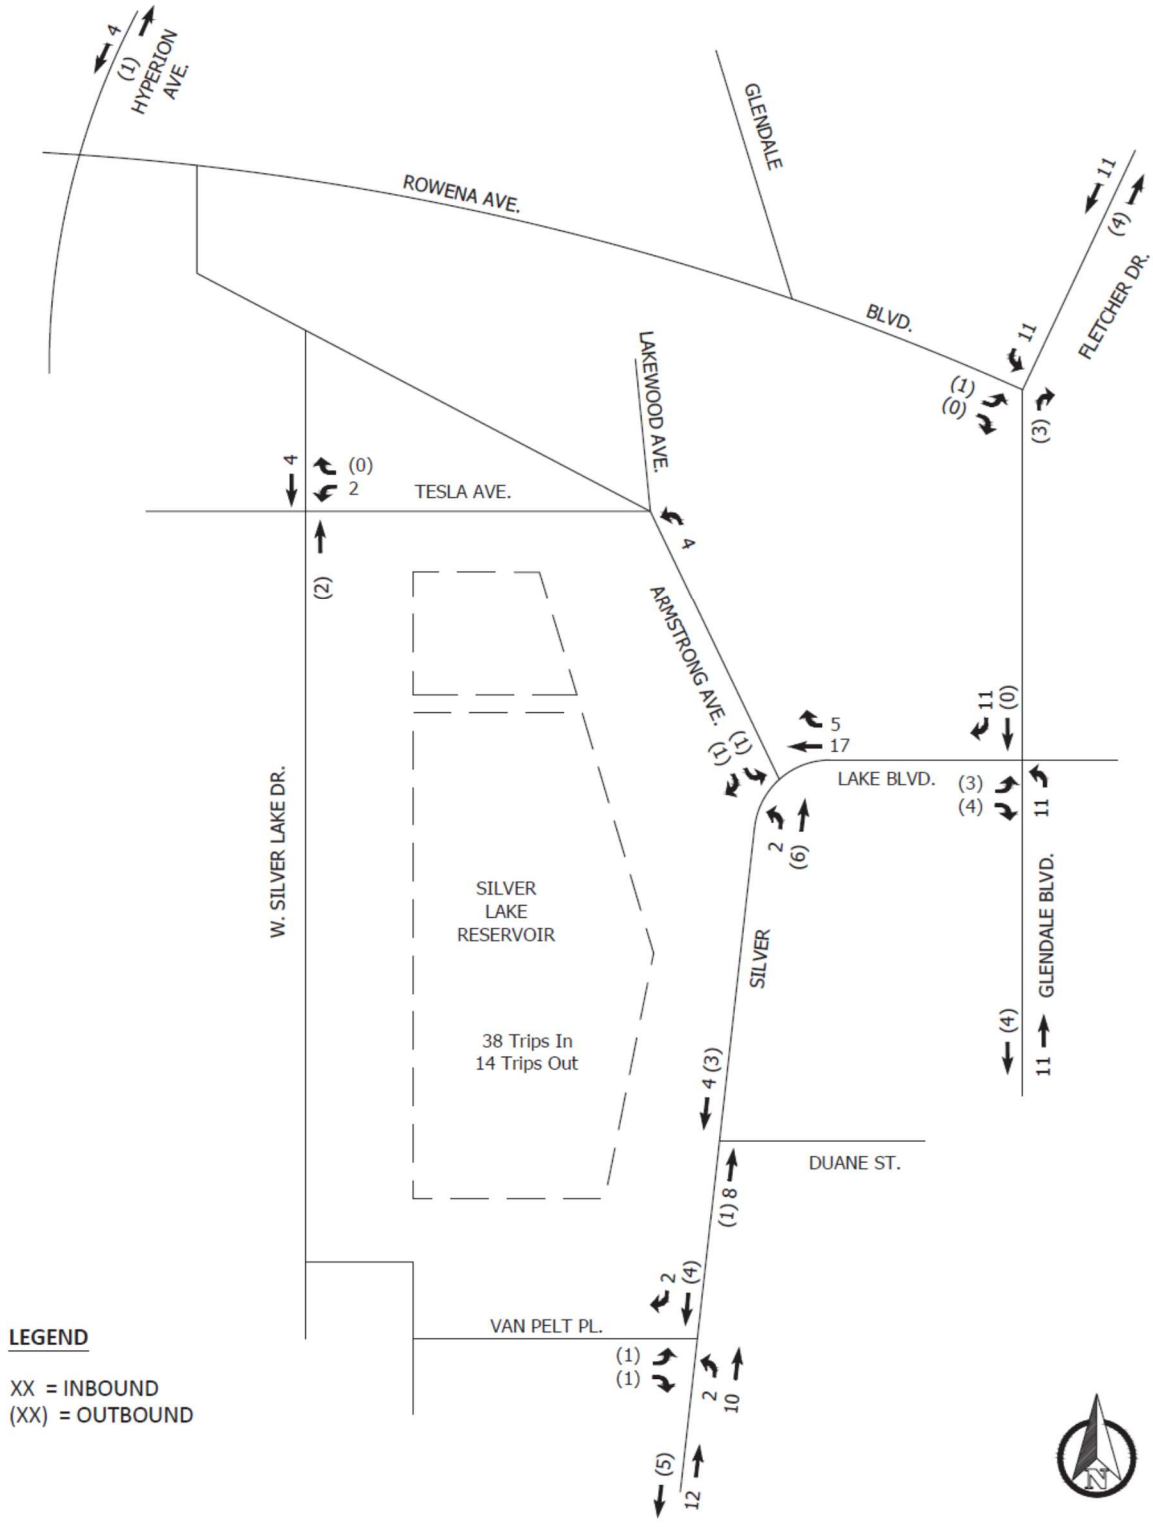

FIGURE 29 – PROJECT TRIP ASSIGNMENT (WEEKDAY PM PEAK HOUR)

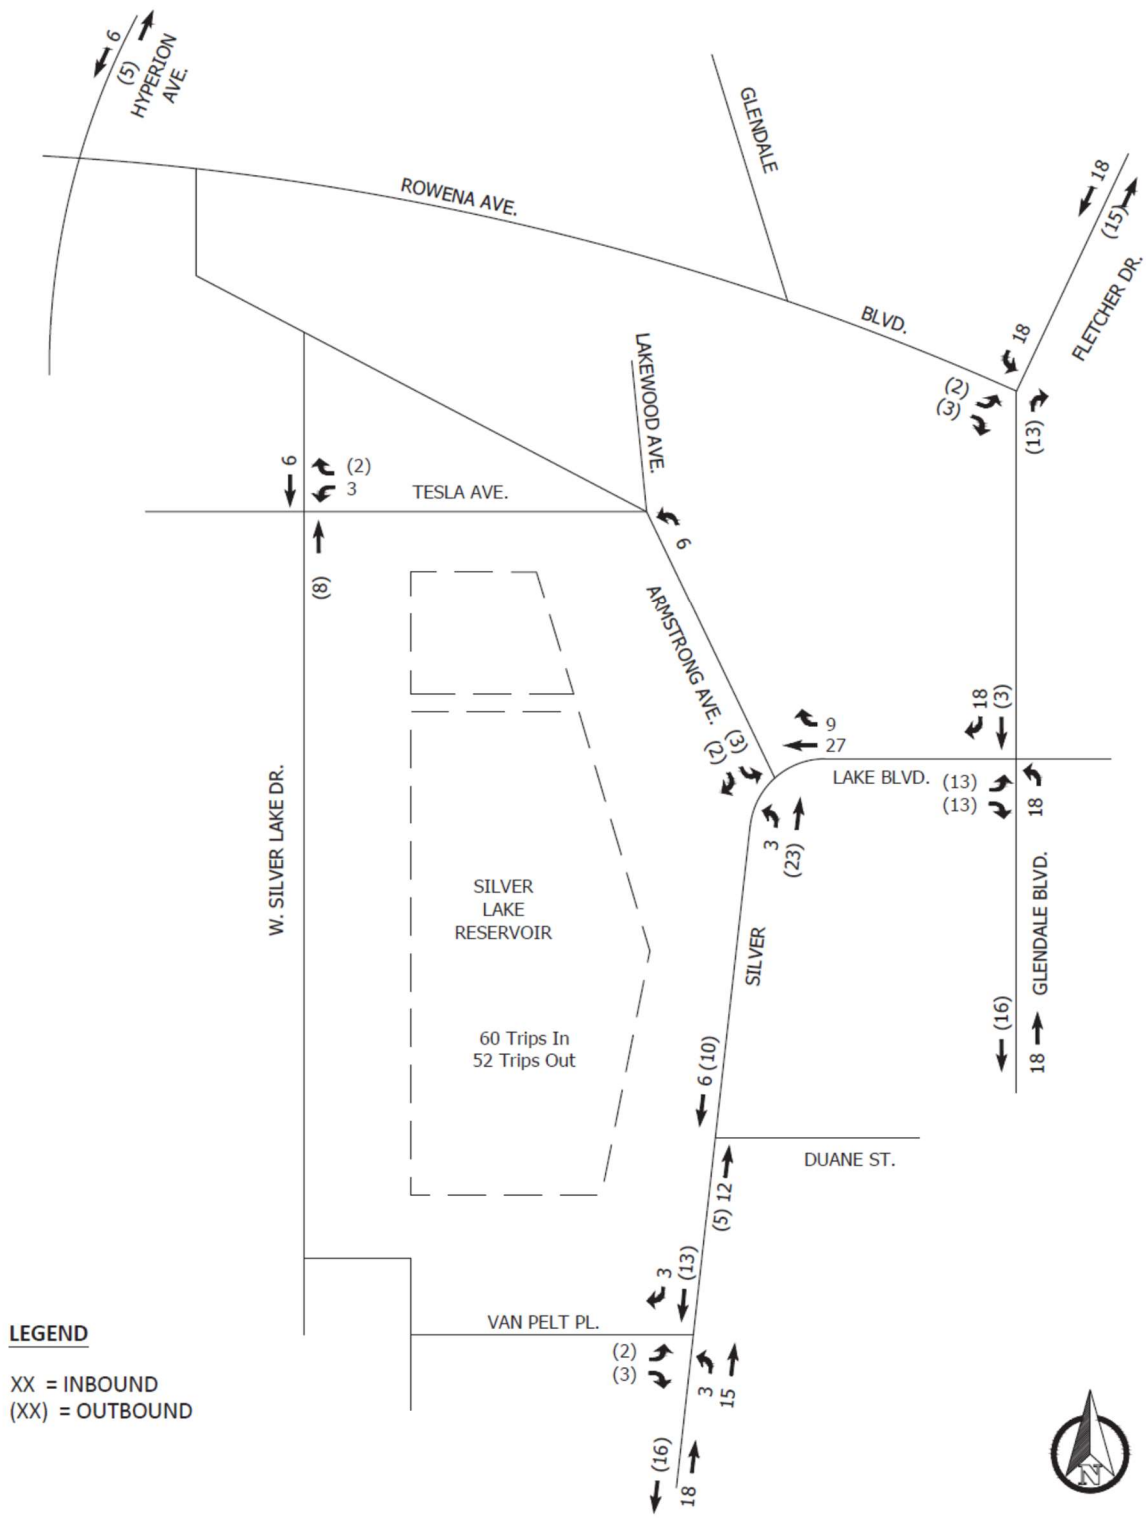

FIGURE 30 – PROJECT TRIP ASSIGNMENT (WEEKEND MID-DAY PEAK HOUR)

4.2.3.5 – TRAFFIC FORECAST

In general, future peak hour traffic projections for the study intersections are estimated to include future growth due to related projects in development and ambient traffic growth. To account for the future traffic growth from intensification of existing developments, and other projects that are located further than a half mile from the project site, the existing traffic volumes were increased by an ambient growth rate of 0.3% per year to the anticipated year of completion (2030).

RELATED PROJECTS

In general, future peak hour traffic projections for the study intersections are estimated to include future growth due to related projects within ¼ to ½ mile of the SLRC and ambient traffic growth.

To understand the relative traffic impacts for the projected year of completion, this TIA analyzed potential traffic trips due to the development of related projects in the area. A list of related projects was provided by the LADOT. The list of related projects is part of the approved Memorandum of Understanding (MOU) that is included in **Appendix A – Approved MOU**. A map of the locations of these related projects is shown in **Figure 31 – Related Projects Map**. Only those projects with potential impacts were included in the related projects list. Any other developing project trips that were considered small in nature were estimated as part of the area wide ambient growth. Based on the location of the related projects and access to area street network, the potential traffic trips generated from these projects will not impact the study intersections; therefore, they were not included in the capacity calculations.

Operational analyses of vehicle average control delays, levels of service, and queueing were conducted at the study intersections for the following conditions:

1) Existing Traffic Conditions (2021)
2) Future (2030) Without Project Traffic Conditions
3) Future (2030) With Project Traffic Conditions

FIGURE 31 – RELATED PROJECTS MAP

4.2.3.6 – Delay, Level of Service, and Queueing Analysis Methodology

Signalized Intersections

For signalized intersections, the City utilizes the Highway Capacity Manual (HCM) operations methodology for performing signalized intersection capacity analysis. This method relies on the determination of a delay or Level of Service (LOS) at each of the study intersection by first determining their corresponding average control delay per vehicle. Control delay includes initial deceleration delay, queue move-up time, stopped delay and final acceleration delay. It is a measure of driver discomfort, frustration, fuel consumption and lost travel time.

Level of Service varies from at best LOS A (free flow/excellent) to at worst LOS of F (stop-and-go/failure). **Table 25 – Level of Service Criteria for Signalized Intersections** below shows the LOS categories and their corresponding HCM average control delay ranges for signalized intersections.

Table 25 - Level of Service Criteria for Signalized Intersections

Level of Service	Average Control Delay per Vehicle (Sec/Veh)
A	0 to 10.00
B	10.01 to 20.00
C	20.01 to 35.00
D	35.01 to 55.00
E	55.01 to 80.00
F	Over 80.00

Unsignalized Intersections

For unsignalized intersections, the City utilizes the Highway Capacity Manual (HCM) methodologies for performing two-way stop-controlled (TWSC) and all-way Stop-controlled (AWTC) intersection capacity analyses. For TWSC intersection analysis, LOS is calculated for each movement of the intersection and the most critical LOS is the one that represents the effectiveness of that intersection. For AWSC intersection analysis, LOS is defined by the control delay of the entire intersection. The LOS thresholds for TWSC and AWSC intersections differ from those for signalized intersections to reflect different driver expectations. **Table 26 – Level of Service Criteria for Unsignalized Intersections** shows the LOS categories and their corresponding HCM average control delay ranges for TWSC and AWSC intersections.

Table 26 - Level of Service Criteria for Unsignalized Intersections	
Level of Service	**Average Control Delay per Vehicle (Sec/Veh)**
A	0 to 10.00
B	Over 10 to 15
C	Over 15 to 25
D	Over 25 to 35
E	Over 35 to 50
F	Over 50

4.2.3.7 – LEVEL OF SERVICE/QUEUEING ANALYSIS

The results of the operational analyses are summarized in **Table 27 – Summary of Delays, Level of Service, and Vehicle Queues** for the following conditions for the study intersections:

- Levels of Service, Delays and Queue Lengths for existing conditions (2021).
- Levels of Service, Delays and Queue Lengths for future without Project (2030).
- Levels of Service, Delays and Queue Lengths for future with Project conditions (2030).

The Highway Capacity Manual (HCM) methodology worksheets for the analyzed intersections are contained in **Appendix E – Intersection Capacity Calculations**.

Table 27 - Summary of Delays, Levels of Service, and Vehicle Queues

SUMMARY OF OPERATIONAL ANALYSIS FOR THE STUDY INTERSECTIONS:

Silver Lake Blvd / Glendale Blvd

This signalized intersection currently operates at a LOS D or better during each of the studied periods. While the intersection itself operates at an acceptable LOS, the analysis indicates that during the weekend (Saturday midday) peak hour period, delay for the eastbound Silver Lake Boulevard movement can extend to LOS F. This is observed for both the with and without Project conditions. Additionally, the Project related traffic does not contribute significantly to the anticipated queue lengths to these movements. In fact, the expected increase in the 95th percentile queues for these movements are less than one vehicle during each of the studied periods. Therefore, the Project does not create any operational concerns at this intersection, nor does it contribute significantly to the existing operational deficiency observed for the eastbound phase during the weekend peak period.

However, the analysis did reveal that the existing signal timing for this intersection during the weekend peak period runs a relatively low cycle length (60 seconds) and provides minimal time for the eastbound Silver Lake Boulevard phase. Therefore, it is recommended that the signal timing be updated for the weekend peak period to provide more green time/capacity for this movement.

Silver Lake Blvd / Armstrong Ave

Silver Lake Boulevard and Armstrong Avenue is an existing stop-controlled intersection (Armstrong Avenue) with free-flowing traffic on Silver Lake Boulevard. Because of the relatively high existing traffic volumes on Silver Lake Boulevard, it can be difficult for side street traffic to enter the roadway, resulting in excessive delays for this movement and poor levels of service. However, the Project related traffic does not contribute significantly to the anticipated queue lengths. In fact, the expected increase to the 95th percentile queues for the side street are less than one vehicle length during each of the studied periods. Therefore, the Project does not create any operational concerns at this intersection, nor does it contribute significantly to the existing operational deficiency related to the existing side street delays.

As shown in **Table 28 – Silver Lake Boulevard / Armstrong Avenue Level of Service** below there are the lengthy vehicular delays on Armstrong Avenue under Existing, Future without, and with Project Conditions. Specifically, a delay of 172 seconds in the weekday PM peak hour results in a Level of Service (LOS) F at this intersection in the Future without Project conditions. The installation of a traffic signal will reduce this delay to 31.6 seconds and a LOS Service C in the PM

peak hour for Future without Project conditions. The LOS will also improve to LOS C on weekday AM and weekend Peak hour under the Future + Project conditions.

Table 28 – Silver Lake Boulevard / Armstrong Avenue Level of Service

Intersection	Direction	Peak Hour	Future w/o Project			Future + Project			Future + Project + Signal		
			Delay (sec)	LOS	Queue (ft)	Delay (sec)	LOS	Queue (ft)	Delay (sec)	LOS	Queue (ft)
Silver Lake & Armstrong	EB	AM	30	D	32.5	30.8	D	35	30.7	C	35
		PM	148.1	F	185	171.6	F	200	31.6	C	60
		Weekend	37.3	E	57.5	46.6	E	72.5	30.7	C	51

Considering this intersection is located 160 feet from the northernly entrance of the Meadows and on a horizontal curve, driver's visibility of pedestrians and other vehicles traversing the intersection are restricted. Installation of a traffic signal at this location will provide a safer pedestrian crossing for Silver Lake Boulevard and Armstrong Avenue and reduce vehicle delays for the minor approach on Armstrong Avenue. See **Figure 19 – Armstrong Avenue, Tesla Avenue, and Lakewood Avenue Intersection Improvements**.

Silver Lake Blvd / Duane St

This signalized intersection would not experience significant increases to delays or queue lengths with the addition of Project traffic. Specifically, the maximum change in queue lengths for any movement under each of the analyzed scenarios would be less than one vehicle.

Silver Lake Blvd / Van Pelt Pl

Silver Lake Boulevard and Van Pelt Place is an existing stop-controlled intersection (Van Pelt) with an uncontrolled pedestrian crossing of Silver Lake Boulevard. The pedestrian crossing currently has advanced crossing features including high visibility crosswalks, advanced yield signs/markings, and a rectangular rapid flashing beacon. Because of the relatively high existing traffic volumes on Silver Lake Boulevard, it can be difficult for side street traffic to enter the roadway, resulting in excessive delays for this movement and poor levels of service. However, the Project related traffic does not contribute significantly to the anticipated queue lengths. In fact, the expected increase to the 95th percentile queues for the side street are less than one vehicle length during each of the studied periods. Therefore, the Project does not create any operational concerns at this intersection, nor does it contribute significantly to the existing operational deficiency related to the side street delays.

As shown in **Table 29 – Silver Lake Boulevard / Van Pelt Place Level of Service** below, there are lengthy vehicular delays on Van Pelt Place under Existing, Future without, and with Project Conditions. Specifically, a delay of 471 seconds in the weekday PM peak hour results in an LOS F at this intersection in the Future without Project conditions. The installation of a traffic signal will reduce this delay to 50.2 seconds and to a LOS Service D in the PM peak hour Future without Project conditions. The LOS will also improve to LOS D and C on weekday AM and Weekend Peak hours, respectively, under the Future + Project conditions.

Table 29 – Silver Lake Boulevard / Van Pelt Place Level of Service

Intersection	Direction	Peak Hour	Future w/o Project			Future + Project			Future + Project + Signal		
			Delay (sec)	LOS	Queue (ft)	Delay (sec)	LOS	Queue (ft)	Delay (sec)	LOS	Queue (ft)
Silver Lake & Van Pelt	EB	AM	44.6	E	27.5	44.6	E	27.5	38.1	D	35
		PM	424.2	F	180	471.5	F	190	50.2	D	88
		Weekend	101.5	F	100	123.7	F	115	21.2	C	41

The installation of a traffic signal will further enhance pedestrian safety and will reduce vehicle delays at this intersection because the existing Recreation Center is proposed for renovation, a new Multi-Purpose Facility is being added, and the Dog Park facility is being enhanced. As a result, it is projected that additional pedestrians and vehicles will be using the intersection of Silver Lake Boulevard and Van Pelt Place. See **Figure 13 – Traffic Signal Installation at the Intersection of Silver Lake Boulevard and Van Pelt Place** for the conceptual design of this intersection.

West Silver Lake Dr / Tesla Ave

This all-way stop controlled intersection would not experience significant increases to delays or queue lengths with the addition of Project traffic. Specifically, the maximum change in queue lengths for any movement under each of the analyzed scenarios would be less than one vehicle. See **Figure 18 – Tesla Avenue and West Silver Lake Drive Improvements** for proposed improvements at this intersection.

Armstrong Ave / Tesla Ave / Lakewood Ave

This all-way stop controlled intersection would not experience significant increases to delays or queue lengths with the addition of Project traffic. Specifically, the maximum change in queue lengths for any movement under each of the analyzed scenarios would be less than one vehicle.

See **Figure 19 – Armstrong Avenue, Tesla Avenue, and Lakewood Avenue Intersection Improvements** for proposed improvements at this intersection.

4.2.4 – SUMMARY OF PROJECT ACCESS, SAFETY, AND CIRCULATION

To determine Project access, safety, and circulation impacts, a specific trip generation methodology was developed for the Project based on existing park attendance data collected and future increase in park attendance.

*As presented in **Table 27** – **Summary of Delays, Level of Service, and Vehicle Queues**, the Project would not cause or substantially extend the vehicle queuing at the 6 study intersections.*

To improve safety and operational efficiency of the 6 signalized and unsignalized intersections, the following are specific improvements recommended:

- *Modification of traffic signal timing at the intersection of Silver Lake Boulevard and Glendale Boulevard;*
- *Installation of a traffic signal at Silver Lake Boulevard and Armstrong Avenue;*
- *Installation of a traffic signal at Silver Lake Boulevard and Van Pelt Place;*
- *Installation of a traffic circle and crosswalk markings at the intersection of Armstrong Avenue, Tesla Avenue, and Lakewood Avenue;*
- *Installation of curb extension and crosswalk markings at the intersection of West Silver Lake Drive and Tesla Avenue; and,*
- *Installation of a flashing red beacons and crosswalk markings at the intersection of West Silver Lake Drive and Hawick Street.*

4.3 - PROJECT CONSTRUCTION

This section evaluates the project construction transportation effects. The evaluation is related to the temporary construction related effects that may result from the construction activities of the project, which may include safety, operational, or delay impacts.

4.3.1 - SCREENING CRITERIA

The TAG establishes seven screening criteria to determine whether further non-CEQA transportation analysis is required to address any potential project construction transportation effects and determine any possible adverse effect on existing pedestrian, bicycle, or transit facilities. The screening criteria is listed on the following page in **Table 30 – Screening Criteria for Temporary Construction Effects**.

Table 30 - Screening Criteria for Temporary Project Construction Effects

	Screening Criteria Questions	Answer	Action
1	Would the project require construction activities to take place within the right-of-way of a Boulevard or Avenue (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than one day (including day and evening hours, and overnight closures if on a residential street)?	Yes	If answer is yes to any of these questions further analysis is required
2	Would the project require construction activities to take place within the right-of-way of a Collector or Local Street (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than seven days (including day and evening hours, and including overnight closures if on a residential street)?	Yes	
3	Would in-street construction activities result in the loss of regular vehicle, bicycle, or pedestrian access, including loss of bicycle parking to an existing land use for more than one day, including day and evening hours and overnight closures if access is lost to residential units?	No	
4	Would in-street construction activities result in the loss of regular ADA pedestrian access to an existing transit station, stop, or facility (e.g., layover zone) during revenue hours?	No	
5	Would in-street construction activities result in the temporary loss for more than one day of an existing bus stop or rerouting of a bus route that serves the project site?	No	
6	Would construction activities result in the temporary removal and/or loss of on-street metered parking for more than 30 days?	No	
7	Would the project involve a discretionary action to construct new buildings or additions of more than 1,000 square feet that require access for hauling construction materials and equipment from streets of less than 24-feet wide in a hillside area?	No	

4.3.2. - EVALUATION CRITERIA

The TAG establishes assessment factors to be considered in evaluating temporary construction related effects that may result from the construction activities of the project. These factors are listed in **Table 31 – Evaluation Criteria for Temporary Project Construction Effects** below.

Table 31 - Evaluation Criteria for Temporary Project Construction Effects

Assessment Factors	Answers
Temporary Transportation Constraints:	
The length of time of temporary street closures or closures of two or more travel lanes	Yes. The Project will be required to prepare a Construction Traffic Management Plan for all street closures.
The classification of the street (major arterial, state highway, substandard hillside local or collector, etc.) affected	Avenue II, Local, and Collector.
The existing congestion levels on the affected street segments and intersections	N/A
The operational constraints of substandard hillside streets needing to access construction sites	N/A.
Whether the affected street directly leads to a freeway on- or off-ramp or other state highway	N/A
Potential safety issues involved with street or lane closures	The Project will be required to prepare a Construction Traffic Management Plan for all street closures.
The presence of emergency services (fire, hospital, etc.) located nearby that regularly use the affected street	There is an LAFD Station (Station 56) located one-quarter of a mile northeast of the SLRC along Rowena Avenue. As part of the Construction Traffic Management Plan, all affected streets would be required to maintain access for emergency vehicles at all times.
Temporary loss of access:	
The length of time of any loss of pedestrian or bicycle circulation past a construction area	Duration will be determined as part of the Project's Construction Traffic Management Plan.
The length of time of any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area	Duration will be determined as part of the Project's Construction Traffic Management Plan.
The length of time of any loss or impedance of access by emergency vehicles or area residents to hillside properties	N/A.

Table 31 - Evaluation Criteria for Temporary Project Construction Effects	
Assessment Factors	**Answers**
The length of time of any loss of ADA pedestrian access to a transit station, stop, or facility	All ADA pedestrian access will be maintained during construction as part of the Project's Construction Traffic Management Plan.
The availability of nearby vehicular or pedestrian access within ¼ mile of the lost access	N/A.
The type of land uses affected, and related safety, convenience, and/or economic issues	N/A.
Temporary Loss of Bus Stops or Rerouting of Bus Lines:	
The length of time that an existing bus stop would be unavailable or that existing service would be interrupted	Any impacted bus stop will be relocated as part of the Project's Construction Traffic Control Plan.
The availability of a nearby location (within ¼ mile) to which the bus stop or route can be temporarily relocated	Any impacted bus stop will be relocated as part of the Project's Construction Traffic Control Plan.
The existence of other bus stops or routes with similar routes/destinations within a ¼-mile radius of the affected stops or routes	N/A.
Whether the interruption would occur on a weekday, weekend, or holiday, and whether the existing bus route typically provides service that/those day(s).	Any impacted bus stop will be relocated as part of the Project's Construction Traffic Control Plan.

4.3.3. – IMPACT ANALYSIS

Section 2.6. of the Draft Environmental Impact Report (DEIR) describes construction activities required for the proposed Project. These activities may occur concurrently or in succession within each proposed park zone: the Meadow; the Knoll; Ivanhoe Overlook; the Eucalyptus Grove; the East and West Narrows; the South Valley; and Habitat Islands. Construction activities will require the use of heavy-duty equipment and construction workers, which may be shared between different park zones if construction occurs at the same time.

4.3.3.1. - TRUCK AND WORKER COMMUTE TRIP ESTIMATES

While the proposed Project would be designed to balance the amount of earthwork material so that no off-haul or import of soil would be required, for the purpose of the environmental analysis, off-site hauling by trucks was evaluated in order to provide a conservative impact analysis should the export of earthwork material become necessary. Construction traffic to and

from the proposed Project area would consist of roundtrips by haul trucks and roundtrips by construction worker vehicles. Peak construction traffic would depend on the number of activities performed concurrently and the length of time construction materials would be delivered to the site(s). Based on **Table 2-2 - Total Construction Acreage and Duration by Park Zone**, **Table 2-3 - Construction Equipment**, and **Table 2-5 – Haul Truck Worker Trips and Haul Trucks**, a conservatively estimated maximum number of worker vehicle trips and truck trips was developed, assuming simultaneous construction of park zones, assuming demolition, site grubbing, grading and excavation, drainage and utilities trenching, foundations and concrete pad, facility construction, paving, architectural coating, and landscaping activities (see **Appendix F – Section 2.6 – Project Construction of the DEIR**). The number of construction worker trips reflects the assumption that the maximum number of workers required for each construction phase would be on-site each day. This conservative scenario is unlikely as the various construction activities would not all occur on the same day. Furthermore, workers would be encouraged to carpool when feasible. **Table 32 - Worker and Hauling/Delivery Truck Estimates by Construction Activities** shows the number of daily workers and trucks.

Table 30 - Worker and Hauling/Delivery Truck Estimates by Construction Activities

Gray Shaded areas assumed to share equipment & workers

4.3.3.2 – CONSTRUCTION TRIP GENERATION METHODOLOGY

To calculate the Project's construction trip generation based on **Table 32,** various park zone construction activities that will occur concurrently were grouped as follows:

- **Group A** - Eucalyptus Grove, Habitat Islands, Ivanhoe Overlook, The Knoll (Education Center), and The Meadow (north half); and,
- **Group B** - East & West Narrows, Ivanhoe Spillway & Promenade, South Valley-Silver Lake Recreation Center, The Meadow (south half).

To calculate the construction trip generation for workers and hauling/delivery truck trips, the following assumptions were made:

- Construction work hours from 6:30 AM to 3:30 PM;
- Assume a Vehicle Occupancy Rate of 2.0 persons per vehicles (PPV) for construction workers;
- Truck delivery and hauling activities from 7:00 AM to 2:00 PM; and,
- Conservatively assume that all trucks are 3-axle with a Passenger Car Equivalent (PCE) of 2.0 (one 3-axle truck is equal to 2 passenger vehicles).

Construction Trip Calculation

Using the worker and hauling/delivery truck estimates from **Table 32,** the Group A and Group B total daily vehicle trips (inbound and outbound) were calculated as follows:

- **Group A** – Total Daily Vehicle Trips:

  290 workers/2.0 passengers per vehicle = 145 inbound vehicle trips and 145 outbound vehicle trips

  247 3-axle trucks X 2.0 PCE = 494 inbound vehicle trips and 494 outbound vehicle trips

- **Group B** – Total Daily Vehicle Trips:

  335 workers /2.0 passengers per vehicle = 168 inbound vehicle trips and 168 outbound vehicle trips

227 3-axle trucks X 2.0 PCE = 454 inbound vehicle trips and 454 outbound vehicle trips.

Table 33 shows Group A's estimated construction trip generation.

Table 33 - Estimated Group A Construction Trip Generation

Afternoon commuter peak hour

*Percentage of daily trips

** PCE = Passenger Car Equivalent

As shown in **Table 33** above, **Group A** construction activity will generate:

- 157 trips (86 in and 71 out) during the morning commuter peak hour of 8:00 to 9:00 AM;
- 22 trips (0 in and 22 out) during the evening commuter peak hour of 5:00 to 6:00 PM; and,
- 1,278 daily trips (639 in and 639 out).

Table 34 shows the estimated Group B construction trip generation.

Table 34 - Estimated Group B Construction Trip Generation

Total		**168**		**168**		**454**		**454**	**622**	**622**	**1,244**

Morning commuter peak hour
Afternoon commuter peak hour

*Percentage of daily trips

** PCE = Passenger Car Equivalent

As shown in **Table 34** above, **Group B** construction activity will generate:

- 147 trips (82 in and 65 out) during the morning commuter peak hour of 8:00 to 9:00 AM;
- 25 trips (0 in and 25 out) during the evening commuter peak hour of 5:00 to 6:00 PM; and,
- 1,244 daily trips (622 in and 622 out).

Based on this analysis, Group A construction activities generates a greater number of daily trips in PCE.

4.3.3.3 - STAGING AND STOCKPILING ACTIVITIES

During construction, several staging areas would be located within the SLRC. Staging areas would be determined once the final design is completed but would likely be located within the larger open space areas, such as the Meadow, the Eucalyptus Grove, and the South Valley. Construction ingress and egress areas would be located along Silver Lake Boulevard/Armstrong Avenue between the Meadow and Knoll zones, and Silver Lake Boulevard/Duane Street along the eastern portion of the South Valley zone. Final ingress and egress locations would be determined once final design is completed.

Figure 32 – Construction Staging/Parking and Access shows 2 main construction worker and truck access points and the 3 construction staging/parking areas. It is assumed that all construction workers will park in the designated parking areas so that on-street parking on the SLRC perimeter streets will not be impacted.

Figure 33 – Construction Haul Route shows the haul routes for construction trucks to and from nearby freeways (I-5 and SR-2). As shown in **Figure 34 – Construction Site Internal Circulation,** once the construction workers and vehicles enter the Project Site, the internal roadways will be used to access various park zones to limit any impacts to the local streets.

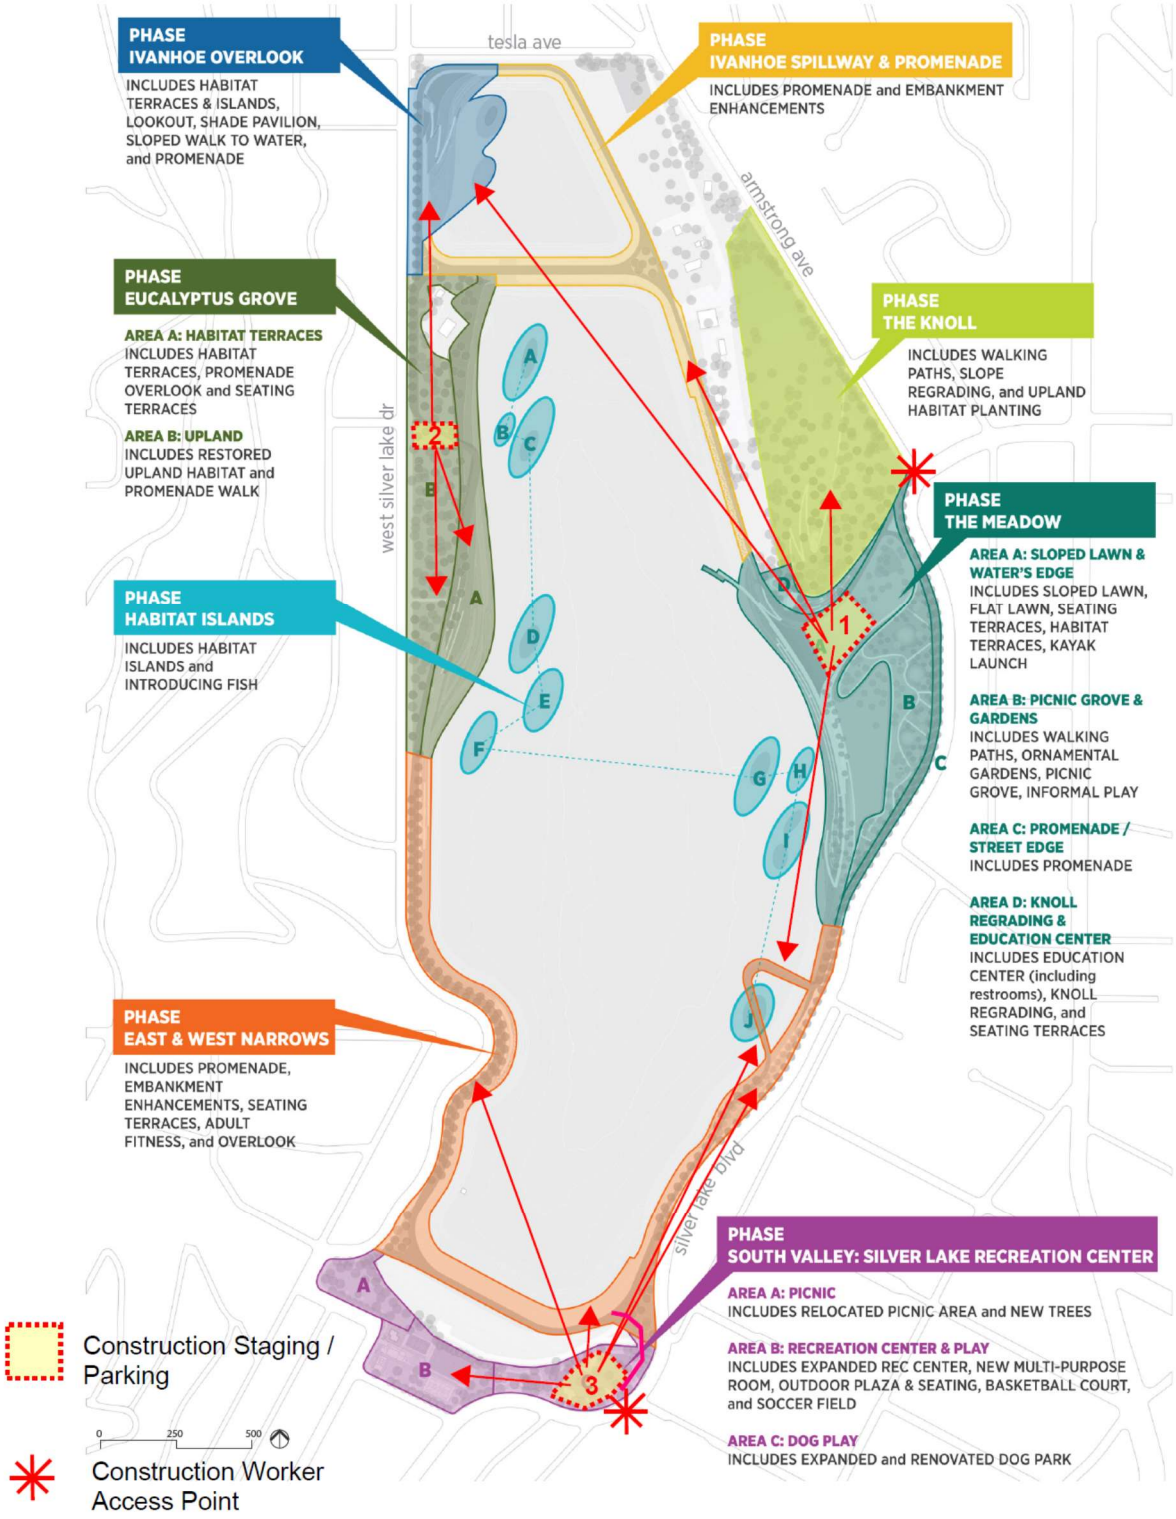

FIGURE 32 – CONSTRUCTION STAGING/PARKING AND ACCESS

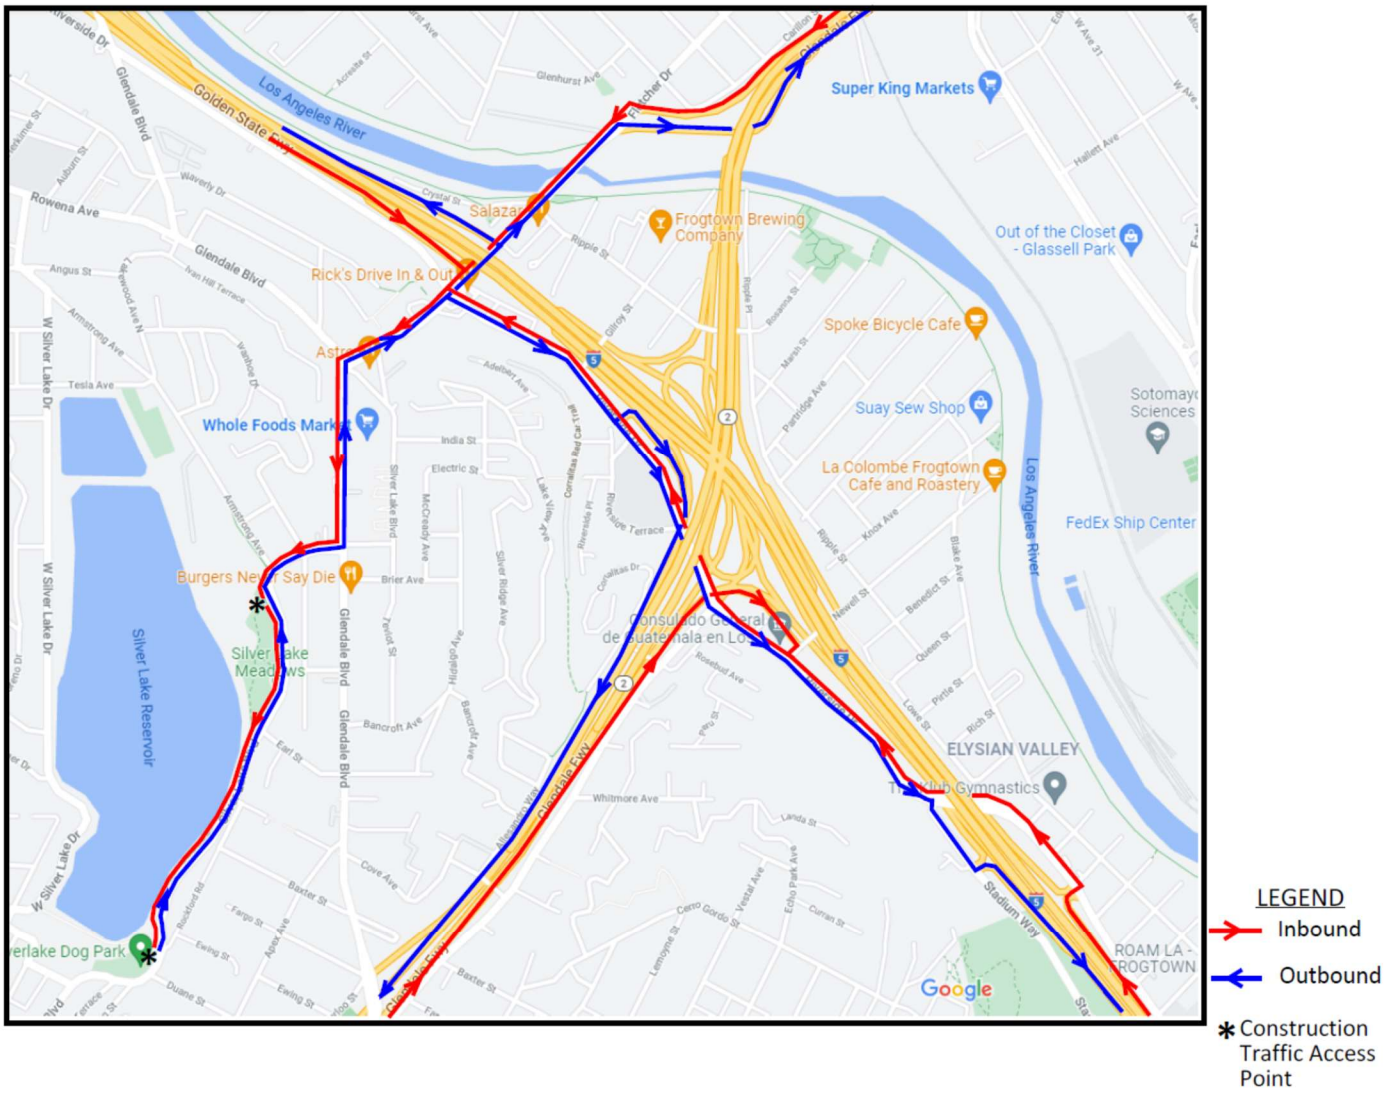

FIGURE 33 – CONSTRUCTION HAUL ROUTE

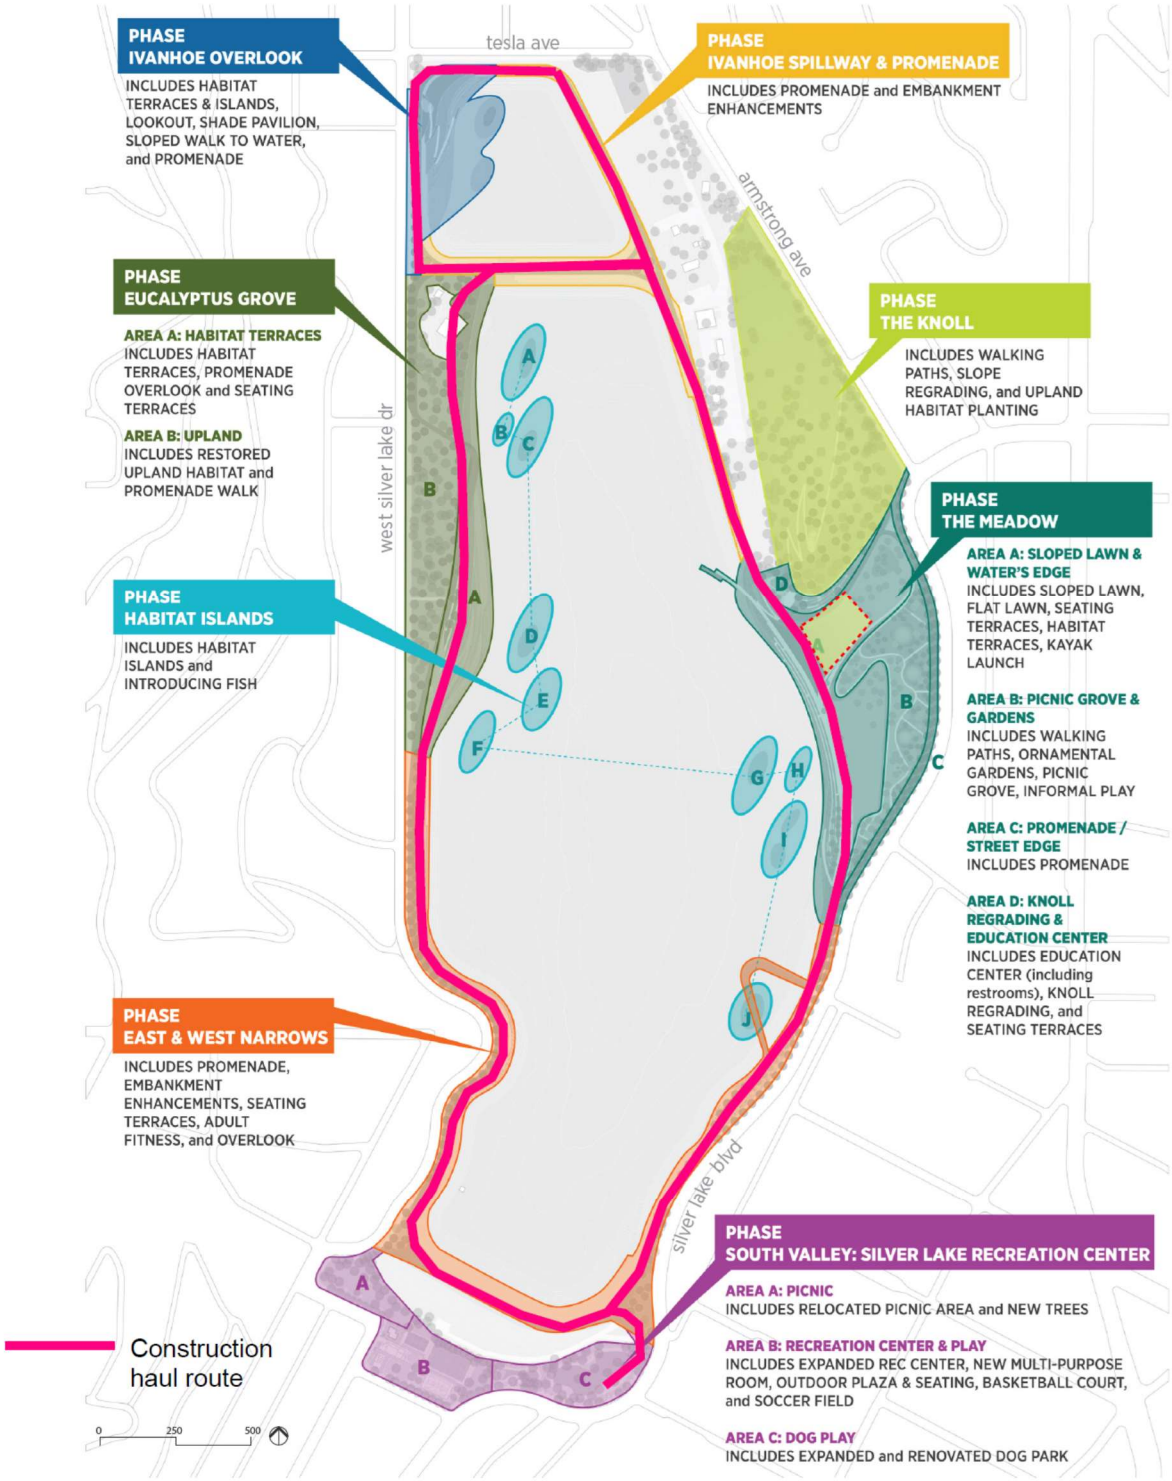

FIGURE 34 – CONSTRUCTION SITE INTERNAL CIRCULATION

4.3.4 – PROJECT CONSTRUCTION SUMMARY AND RECOMMENDED ACTIONS

The Project's construction activities have variable characteristics and needs that will be dependent on the construction phasing of each park zone. As outlined in the previous sections, construction activities were analyzed in Group A and Group B to determine the worst case worker and truck trip generation. Based on this analysis, Group A construction activities generates a greater number of daily trips in Passenger Car Equivalent (PCE).

It is important to note that, typically, construction activities begin at 6:30 AM and continue until 3:30 PM. Therefore, most construction workers will arrive before the morning commuter peak hour and depart before the evening commuter peak hour. As a result, it is projected that the construction traffic will not impact the local intersections during the AM and PM peak hours.

The identified construction Project access points along Silver Lake Boulevard, the provision of internal roadways for construction traffic circulation, and planned on-site parking for construction workers will limit the construction traffic impacts on local residential streets.

Considering that Project construction is planned to commence in year 2025 and be completed by the year 2030, a detailed ***Construction Traffic Management Plan (CTMP)*** *is recommended for the various phases of the Project consistent with LADOT Construction Traffic Control Guidelines. This CTMP will address the planned Project construction phasing, sequence of construction activities, access, and circulation.*

4.4 - RESIDENTIAL STREET CUT-THROUGH ANALYSIS

Development and transportation projects may be required to conduct a Local Residential Street Cut-Through Analysis. The objective of this analysis is to determine potential increases in average daily traffic (ADT) volumes on designated Local Streets near a project that can be classified as cut-through trips generated by the project, and that can adversely affect the character and function of those streets. Cut-through trips are defined as those which feature travel along a street classified as a Local Street in the City's General Plan, with residential land-use frontage, as an alternative to a higher classification street segment (e.g., Collector, Avenue, or Boulevard as designated in the City's General Plan) to access a destination that is not within the neighborhood within which the Local Street is located.

Cut-through traffic can be exacerbated by development projects that add vehicle trips to congested arterial street segments, or by transportation projects that reduce vehicular capacity on arterial street segments. To mitigate potential adverse impacts of cut-through traffic (e.g., congestion, access issues, and speeding on Local Streets), traffic calming and diverting features should be considered and, if deemed necessary by LADOT, implemented to offset any anticipated cut-through traffic.

4.4.1. - SCREENING CRITERIA

The TAG establishes the criteria to determine whether further analysis would be required to determine potential cut-through traffic increase because of the project. In addition to the two criteria, a net increase of 250 or more daily vehicle trips and the Project being subject to a discretionary action that would be under review by the Department, the project would be subject to the following criteria presented in the **Table 35 – Screening Criteria for Residential Street Cut-through Traffic**.

Table 35 - Screening Criteria for Residential Street Cut-Through Traffic		
Screening Criteria	**Answer**	
The project is located along a currently congested Boulevard or Avenue and adds trips that may lead to trip diversion to parallel routes along residential Local Streets. The congestion level of the Boulevard or Avenue can be determined based on the estimated peak hour LOS under project conditions of the study intersection(s) (as determined in Section 3.3). LOS E and F are considered to represent congested conditions.	No	If answer is yes to 1, 2 & 3 further analysis is required
The project is projected to add a substantial amount of automobile traffic to the congested Boulevard(s), Avenue(s), or Collector(s) that could potentially cause a shift to alternative route(s);	No.	
LADOT has discretion to define which routes are viable alternative routes, based on, but not limited to, features such as geography and presence of existing traffic control devices, etc.	N/A.	

4.4.2 - EVALUATION CRITERIA

In accordance with TAG, a proposed project's daily vehicle trips should be estimated using the VMT Calculator tool or the ITE Trip Generation Manual *(11th Edition).* Based on the Project trip generation and trip distribution, an increase in Project related ADT needs to fall below the Project related thresholds shown in the Residential Street Diversion Criteria table presented in **Table 36 – Substantial Residential Local Street Diversion Criteria** below.

Table 36 – Substantial Residential Local Street Diversion Criteria	
Projected ADT with Project (Final ADT)	**Project-Related Increase in ADT**
1 to 999	120 or more
1,000 to 1,999	12 percent or more of final ADT
2,000 to 2,999	10 percent or more of final ADT
3,000 or more	8 percent or more of final ADT

4.4.3 - RESIDENTIAL CUT THROUGH TRAFFIC ANALYSIS

Based on the street classifications shown in **Table 37 – Project Area Street Classification**, Lakewood Avenue, Tesla Avenue, and Van Pelt Place are local residential streets subject to the residential cut-through traffic analysis based.

Table 37 – Project Area Street Classification

Project Area Street Segment	Street Classification
Lakewood Ave	Local
Tesla Ave to Angus St.	
Silver Lake Blvd	Avenue II
Van Pelt Pl to Glendale Blvd.	
Armstrong Ave	Collector
Silver Lake Blvd to West Silver Lake Dr.	
Tesla Ave	Local
Armstrong Ave to West Silver Lake Dr.	
West Silver Lake Dr	Collector
Armstrong Ave to Van Pelt Pl.	
Van Pelt Pl	Local
West Silver Lake Dr. to Silver Lake Blvd.	

By definition of the Traffic Assessment Guidelines:

> *"Cut-through trips are defined as those which feature travel along a street classified as a Local Street in the City's General Plan, with residential land-use frontage, as an alternative to a higher classification street segment (e.g., Collector, Avenue, or Boulevard as designated in the City's General Plan) to access a destination that is not within the neighborhood within which the Local Street is located."*

As previously addressed in Section 4.2.3.4, Project Trip Distribution and Assignment, the majority (90%) of the Project trips are expected to use Silver Lake Boulevard, and the remaining 10% on West Silver Lake Drive (see **Figure 27 – Project Trip Distribution)**. Considering that the local streets within the Project area (Lakewood Avenue, Tesla Avenue, and Van Pelt Place) are not parallel to Silver Lake Boulevard and West Silver Lake Drive, it is not anticipated that Project traffic will shift to these streets to bypass Silver Lake Boulevard and West Silver Lake Drive as alternative routes.

4.4.4 – RESIDENTIAL CUT-THROUGH TRAFFIC ANALYSIS CONCLUSION

In summary, the local residential streets within the Project area will not have residential cut-through traffic impacts. Considering that the Project is expected to be completed by the year 2030, traffic conditions on local residential streets can be evaluated after the Project is completed to determine if there are any traffic impacts. A residential traffic management plan can be developed to address any potential impacts in accordance with City of Los Angeles Residential Neighborhood Traffic Management Guidelines.

4.5 – PARKING INVENTORY AND DEMAND ANALYSIS

4.5.1 - EVALUATION CRITERIA

Any corrective condition or mitigation of a land use development project, or a transportation project that involve roadway reconfigurations and require the loss of on-street parking, the Transportation Assessment should include an on-street parking utilization study at the intersections and/or along the roadway where the potential improvements were identified. The study results should be presented in a parking inventory and demand analysis that summarizes that area's parking demand and supply and informs LADOT on the secondary impacts that may result from the loss of parking. This analysis should include proposed measures to address neighborhood access constraints as a result of the parking loss to the extent feasible. The scope of the parking utilization study, including study area and survey hours, must be approved by the appropriate LADOT staff prior to commencing the survey.

4.5.2 - PARKING INVENTORY AND DEMAND ANALYSIS

4.5.2.1 – PARKING INVENTORY

For the parking inventory and occupancy survey, the Project area was divided into 5 subareas as listed below:

1. Silver Lake Meadows Park Subarea – Silver Lake Boulevard from Armstrong Avenue to Cove Street;
2. Dog Park Subarea – Silver Lake Boulevard from Cove Street to Van Pelt Place;
3. South Valley Subarea – Van Pelt Place from Silver Lake Boulevard to West Silver Lake Drive;
4. West Subarea – West Silver Lake Drive from Redesdale Avenue to Tesla Avenue;
5. North Subarea – Tesla Avenue between West Silver Lake Drive and Armstrong Avenue.

Table 38 shows the on-street parking capacity in each subarea on streets surrounding the SLRC:

Table 38 – On-street Parking Capacity in each Sub Area

Street Segments	Subarea 1 - Silver Lake Meadow Park							Subarea 2 - Dog Park							Subarea 3 - South Valley							Subarea 4 - West								Subarea 5 - North	
	Armstrong Ave - btw Tesla Ave & Lake View Terrace	Armstrong Ave - btw Lake View Terrace & Edge Water Terrace	Armstrong Ave - btw Edge Water Terrace & Silver Lake Blvd	Silver Lake Blvd - btw Armstrong Ave & Earl Ave	Silver Lake Blvd - btw Earl St & Cove St	Total Occupancy	Total Availability	Silver Lake Blvd - btw Cove St & Rockford Rd	Silver Lake Blvd - btw Rockford Rd & Durant St	Silver Lake Blvd - btw Durant St & Fanning St	Silver Lake Blvd - btw Easterly St & Van Pelt Place		Total Occupancy	Total Availability	Van Pelt Pl - btw Silver Lake Blvd & Silver Lake Drive		Silver Lake Drive - btw Van Pelt Place & Silver Lake Drive	Silver Lake Drive - btw Silver Lake Drive & Redesdale Ave		Total Occupancy	Total Availability	Silver Lake Drive - btw Redesdale Ave & Castile St	Silver Lake Drive - btw Castile St & Belmer Drive	Silver Lake Drive - btw Belmer Drive & Moreno Drive	Silver Lake Drive - btw Moreno Drive & Hawick Drive	Silver Lake Drive - btw Hawick Drive & Bright Lane	Silver Lake Drive - btw Bright Lane & Tesla Ave	Total Occupancy	Total Availability	Tesla Ave - btw Silver Lake Drive & Armstrong Ave	Total Availability
Street Side	s	East	East	East	East	106		East	East	East	East	West	79		North	South	East	North	South	44		West	West	West	West	West	West	132		North	19
Capacity	6	27	10	43	20			56	7	4	6	6			12	10	5	10	7			3	37	9	58	27	1			19	

Per initial field observations, it was determined that Thursdays, Fridays, and Saturdays have the highest parking occupancies compared to the other days of the week. JBA conducted parking occupancy surveys in the streets in each Subarea on Thursday October 21, 2021 (4 pm to 7 pm), Friday October 22, 2021 (8 am to 4 pm) and Saturday November 6th, 2021 (8 am to 4 pm).

To determine the on-street parking availability, the number of vacant on-street parking spaces in each Subarea was recorded on an hourly basis on the survey dates. The results of the parking survey are included in **Appendix C – Data Appendices.** From the parking occupancy surveys, **Figure 35** - **On-street Parking Availability in each Subarea** below shows the range of available on-street parking spaces in each subarea (the lowest and the highest number of spaces) based on the survey data.

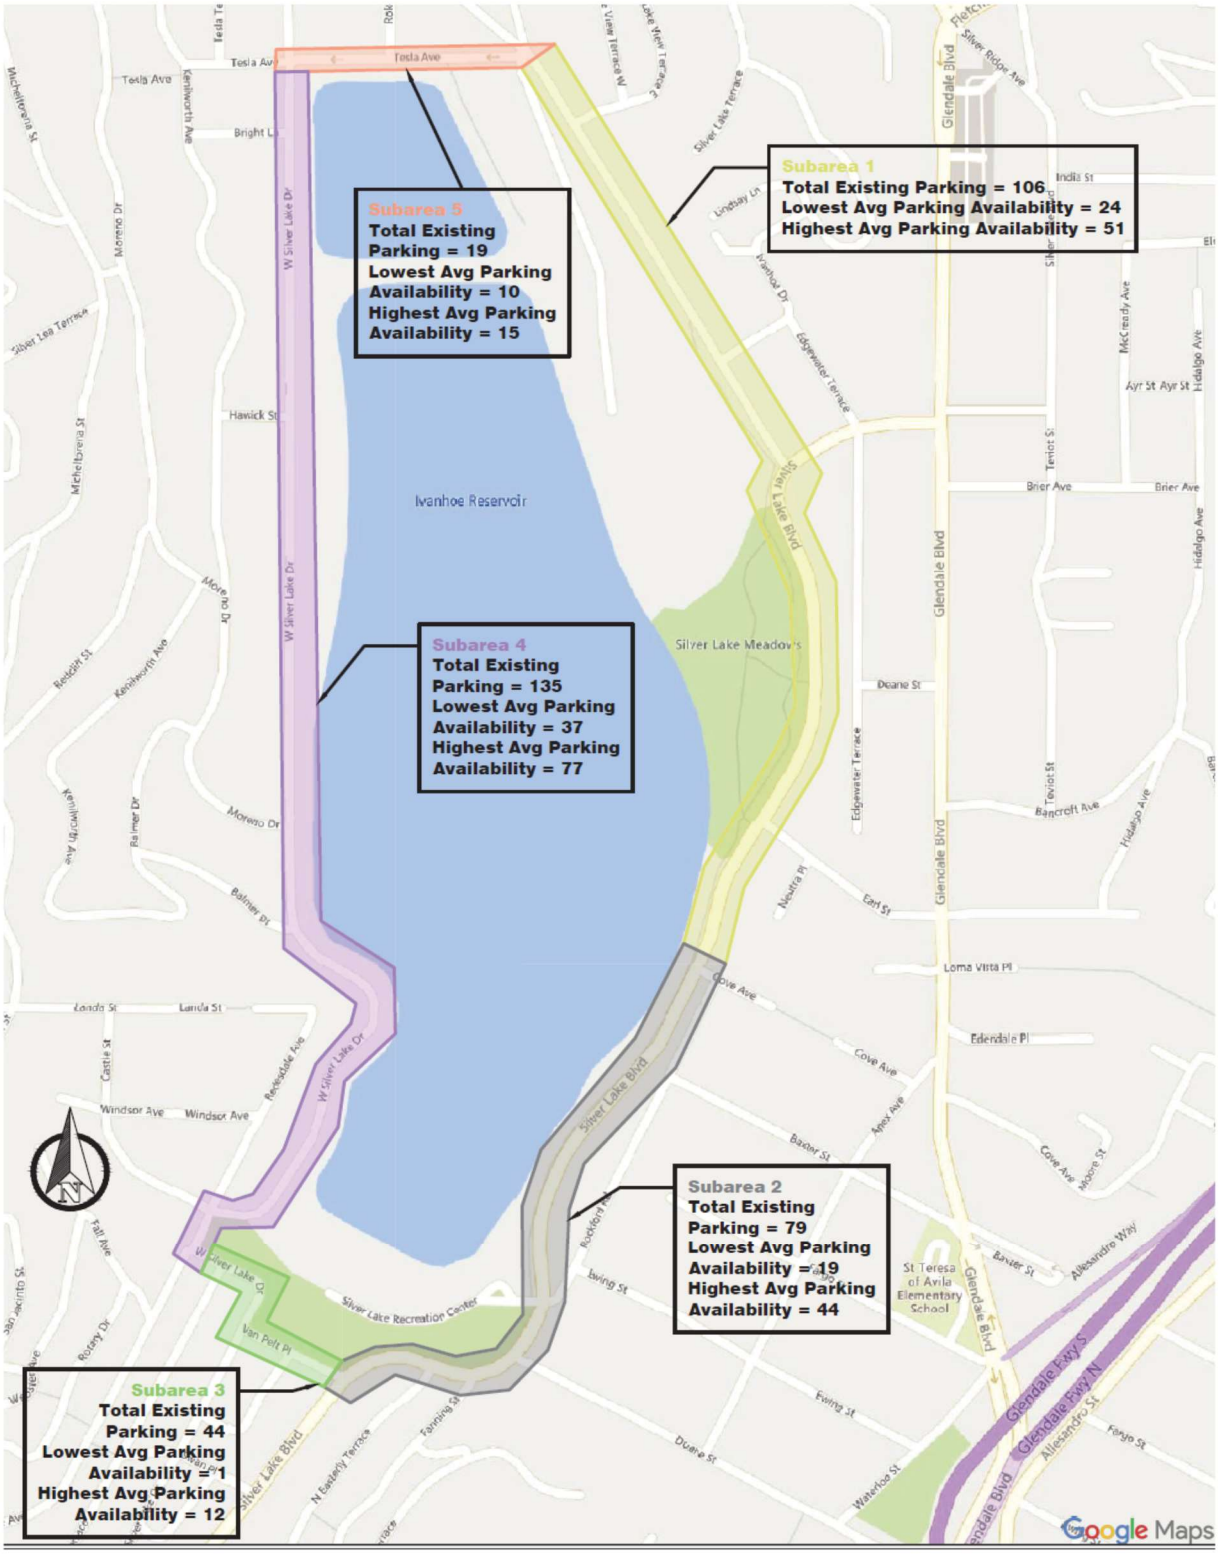

FIGURE 35 – ON-STREET PARKING AVAILABILITY IN EACH SUBAREA

The following key observations were made from the parking occupancy surveys based on **Figure 35:**

- **Subarea 1 – Silver Lake Meadow Park.** There are a total of 106 on-street parking spaces in this Subarea on this segment of Silver Lake Boulevard. The parking in this Subarea is located along the east side of Silver Lake Boulevard and it is used for park visitors going to the Meadows to picnic or to walk and/or jog. The lowest number of spaces that was available was 24 spaces on a Thursday and the highest number of spaces that was available was 51 spaces on a Friday.

- **Subarea 2 – Silver Lake Dog Park.** There are a total of 79 on-street parking spaces in this Subarea on this segment of Silver Lake Boulevard. The parking in this Subarea is located along the east side of Silver Lake Boulevard and is used primarily by Dog Park patrons. The lowest number of spaces that was available was 19 spaces on a Saturday and the highest number of spaces that was available was 44 spaces on a Thursday.

- **Subarea 3 – South Valley.** There are a total of 44 on-street parking spaces in this Subarea on a segment of West Silver Lake Drive and Van Pelt Place. Generally, parking in this Subarea is very limited on weekdays and weekends. The on-street parking spaces are primarily used by residents (numerous multi-and single-family units) and by visitors to the recreation center, basketball court, children's play area, and small grassy area. The lowest number of spaces that was available was 1 space on a Saturday and the highest number of spaces that was available was 12 spaces on a Thursday.

- **Subarea 4 – West.** There are a total of 132 on-street parking spaces in this Subarea on West Silver Lake Drive. These parking spaces are primarily used by residents and visitors of the SLRC who walk and jog. Generally, parking in this Subarea is more available compared to the other four Subareas surveyed. The lowest number of spaces that was available was 37 spaces on a Thursday and the highest number of spaces that was available was 77 spaces on a Friday.

- **Subarea 5 – North.** There are a total of 19 on-street parking spaces in this Subarea on Tesla Avenue. These parking spaces are primarily used by residents with limited availability for visitor parking. The lowest number of spaces that was available was 10 spaces on a Saturday and the highest number of spaces that was available was 15 spaces on a Friday.

4.5.2.2 – PARKING DEMAND ANALYSIS

The estimated potential increase in park attendance was based on the uses in each park zone and inputs from the Project Team.

The Meadow – Silver Lake Lawn/Great Lawn:

- For the weekends, a 50% increase was assumed based on a current peak park attendance of 100 people for this area.
- For the weekdays, a 25% increase was assumed based on a current peak park attendance of 100 people for this area.
- For the other park uses in the Meadow area, the increases in attendance for weekends and weekdays were estimated based on inputs from the SLRCMP Project Team using the size, functionality, and capacity of each respective park zone area.
- The Meadow for live performances and outdoor movie showings with an attendance of up to 600 people.

The South Valley – Dog Park

- For the weekends, a 60% increase was assumed based on current peak Dog Park attendance of 50 people for this area.
- For the weekdays, a 30% increase was assumed based on current peak park Dog Park attendance of 50 people for this area.

The South Valley – Renovated Recreation Center, Multi-purpose Facility, Playground, Play Field, Renovated Plaza, and Picnic Grove

- For the renovation of the existing recreation center, an additional peak attendance of 30 people was assumed during weekdays and weekends.
- For the new Multi-Purpose Facility, a peak attendance of 25 was assumed.
- Given that the existing basketball court will be relocated to a new location within the South Valley park zone, no change in usage of the basketball court was assumed. Furthermore, there was no additional attendance assumed for the playground, renovated plaza, picnic grove, and play field.

Silver Lake Perimeter Walking & Jogging Paths

- For the purposes of projecting future increases in walking and jogging, a current peak attendance of 210 people was assumed for the walking and jogging paths. A 20% increase was assumed during peak hours that represent 42 and 84 additional walkers and joggers on weekdays and weekends, respectively.

As part of the trip generation analysis, it was assumed that 70% of the existing and future park users are local residents that would walk, jog, cycle, or take public transportation to the SLRC. Therefore, the remaining 30% of the existing and future park uses will drive to SLRC. Based on the parking inventory and occupancy analysis presented above, the existing on-street parking in the 5 subareas could potentially be impacted in the future during the peak usage of the park areas as follows:

- **Sub-area 1 and 2 (the Meadows and the Dog Park)**: During peak hours, the majority of the existing on-street parking spaces along the east side of Silver Lake Boulevard will be occupied. This increase in parking will be exacerbated with potential special events with a large number of attendees.

- **Sub-area 3 (South Valley):** With the renovation of the existing Recreation Center and the addition of a new Multi-Purpose Facility, parking in this area will be impacted the most given the limited existing parking available on Van Pelt Place and the southern segment of West Silver Lake Drive. Per Title 22 – Planning and Zoning, Division 6 – Development Standards, Chapter 22.112 – Parking and loading spaces are required for new development as shown in the table below:

TABLE 22.112.070-A: MINIMUM REQUIRED PARKING SPACES		
Use		**Number of Spaces**
Private and public parks[7]		
	Private and public parks, up to 50 acres	1 space per 45 square feet in the largest public assembly area in each building excluding gymnasiums; 1 space per 100 square feet of the largest room in each gymnasium; 1 space per 400 square feet in the remaining area of each building in the park, excluding parking structures, maintenance, and utility buildings, and other structures not open to the public; 1 space per half-acre of developed park up to 15 acres and 1 space per acre of developed park in excess of 15 acres.
7. In addition to Section 22.112.020.B (Reduction of Required Parking and Loading Spaces), the Review Authority shall consider additional findings: a. That the Director of Parks and Recreation has determined that due to location, size or other factors, anticipated client usage would indicate that a lesser parking requirement is adequate and so recommends; and b. Sufficient land area is reserved to ensure that the parking requirements of this Section may be complied with should such additional parking be required in the future due to changes in client usage.		

Based on the 5,800 square feet Multi-Purpose Facility and a parking ratio of 1 space per 100 square feet, a total of 58 parking spaces will be required for this facility in accordance with the City's parking code requirements as shown in the above table. It is assumed that no additional parking will be required for the Renovated Recreation Center. With the assumption that 70% of the visitors are local residents that walk to the SLRC and the Recreation Center, the code parking requirement can be reduced by 70% as this is a public facility. Therefore, the following number of spaces can be considered for the Multi-Purpose Facility:

58 parking spaces required X 0.70 = 17 spaces

In addition, based on the above table, a parking ratio of one space per half acre of developed park, a total of 20 spaces will be required using the Project's proposed 10 acres of active and passive recreation space. Based on the Project's proposed 10 acres of active and passive recreation park areas, a total of 20 spaces will be required (1 space per half-acre of developed park).

- **Sub-area 4 (West):** This area has the highest on-street parking availability that can be used for park visitors. The on-street parking in this sub-area is located on the west side of West Silver Lake Drive in front of the residential units. However, if parking demand increase in Sub-area 1 and 2, this segment of West Silver Lake Drive could be impacted because of visitors looking for parking.

- **Sub-area 5 (North)**: This area has limited on-street parking availability for residents. The on-street parking in this sub-area is located on the north side of Tesla Avenue in front of the residential units. However, if parking demand increase in Sub-area 1 and 2, this segment of Tesla Avenue could be impacted because of visitors looking for parking.

4.5.3. – SUMMARY AND RECOMMENDED ACTIONS

Based on the parking occupancy surveys conducted, there is limited parking within the street segments located in the 5 Subareas. The proposed SLRCMP did not envision off-street parking as part of the Project other than parking in the LADWP facilities area. In addition, the adjacent residential street network also has limited parking for residents only that are not as accessible due to the narrowness of the streets and the steep grades. Therefore, the following parking improvements have been developed to address Project parking demand. **Figure 36 - Location of Proposed On-street Parking on the West Side of Silver Lake Boulevard** *shows the location of the proposed on-street parking spaces.*

FIGURE 36 - LOCATION OF PROPOSED ON-STREET PARKING ON THE WEST SIDE OF SILVER LAKE BOULEVARD

The following describes the proposed on-street parking improvements:

- ***West side of Silver Lake Boulevard****: It is proposed to utilize the existing buffer area to create a parking lane on the west side of Silver Lake Boulevard adjacent to the reservoir between Armstrong Avenue and Duane Street for about 3,000 feet. The new parking lane will provide approximately 135 additional on-street parking spaces. In addition, a 2-foot wide buffer zone will be provided between the bicycle lane and the travel lane for both north and southbound directions. The location of the proposed on-street parking spaces on Silver Lake Boulevard is shown in* ***Figure 37*** *below.* ***Figure 37*** *shows the proposed Silver Lake Boulevard cross section with the proposed on-street parking:*

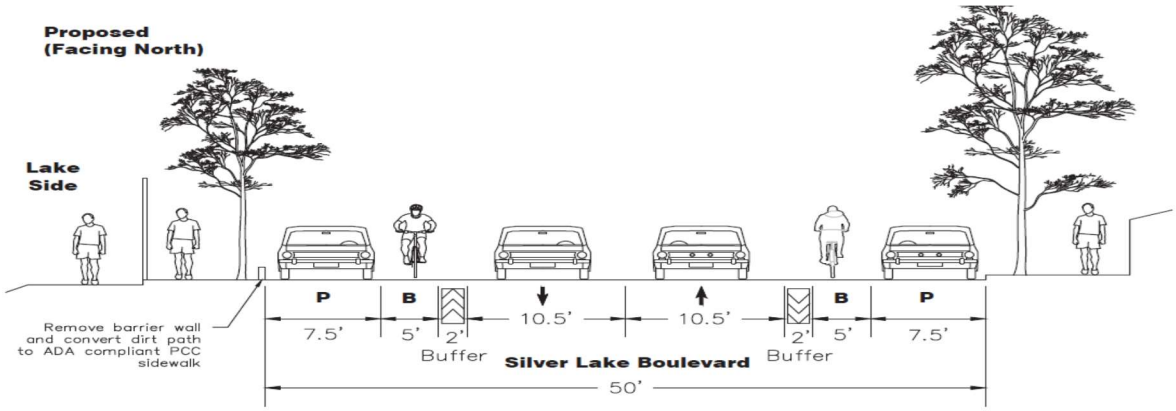

FIGURE 37 - SILVER LAKE BOULEVARD STREET CROSS SECTION WITH PROPOSED ON-STREET PARKING ON THE WEST SIDE

- **West Silver Lake Drive**: *It is proposed to add 90 degree parking along the north side of West Silver Lake Drive east of Redesdale Avenue along the park's grassy area. Currently, there are 10 parallel parking spaces along this segment of West Silver Lake Drive. By converting to 90 degree parking, a total of 27 parking spaces can be added that results in a net increase in parking of 17 spaces. The existing 7 parking spaces along the south side of West Silver Lake Drive can be maintained.* ***Figure 38 - Location of Proposed On-street Parking on West Silver Lake Drive*** shows the location of the proposed on-street parking spaces. ***Figure 39 - Proposed On-street Parking Design*** *below shows the proposed on-street parking design. In addition, it is proposed to change the street cross section of West Silver Lake Drive to a uniform 40 foot cross section. A 12-foot sidewalk is also recommended that will connect to the existing sidewalks on West Silver Lake Drive.* ***Figure 40*** *and* ***Figure 41 – Existing and Proposed Cross Sections*** *shows the proposed street cross section of West Silver Lake Drive:*

FIGURE 38 - LOCATION OF PROPOSED ON-STREET PARKING DESIGN ON WEST SILVER LAKE DRIVE

3

FIGURE 39 - PROPOSED ON-STREET PARKING DESIGN ON WEST SILVER LAKE DRIVE

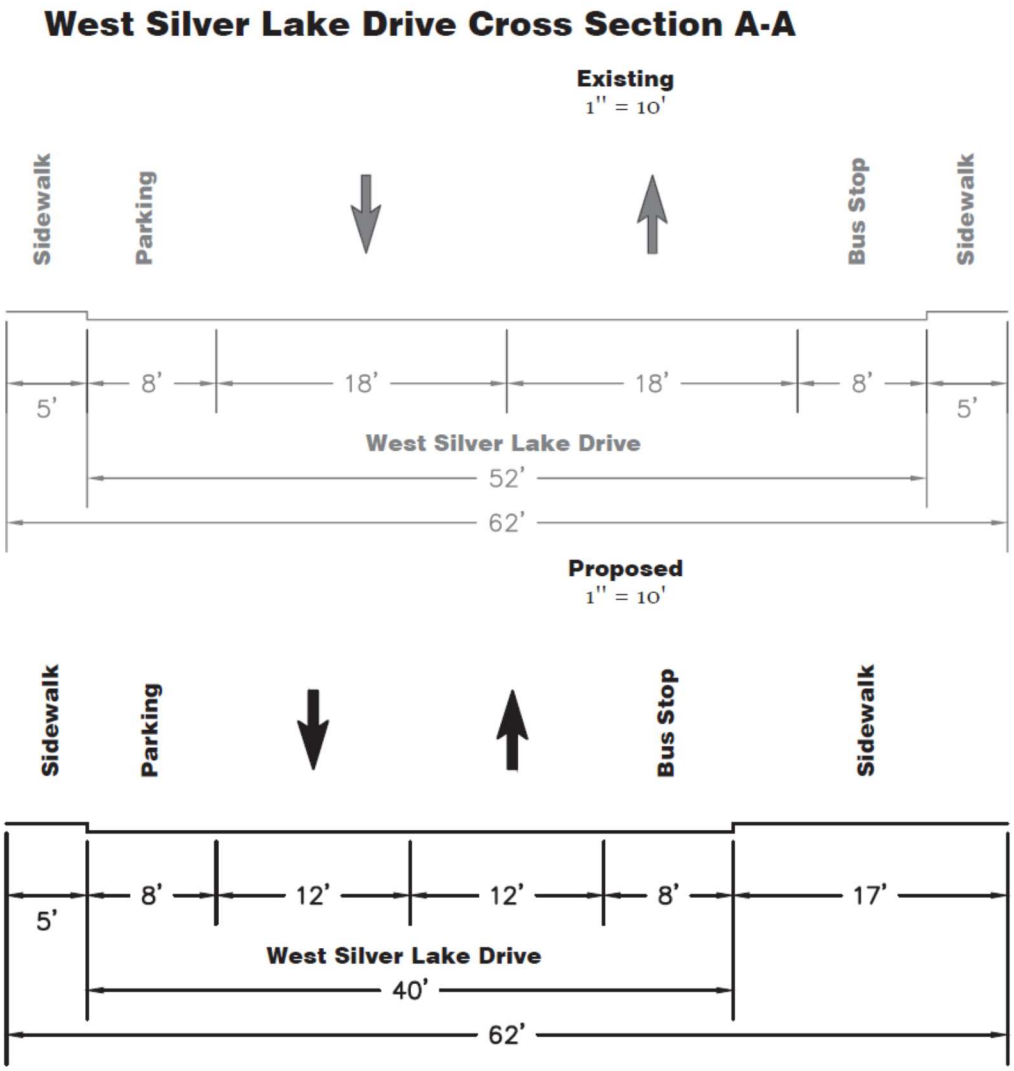

FIGURE 40 - EXISTING AND PROPOSED STREET CROSS SECTIONS ON WEST SILVER LAKE DRIVE

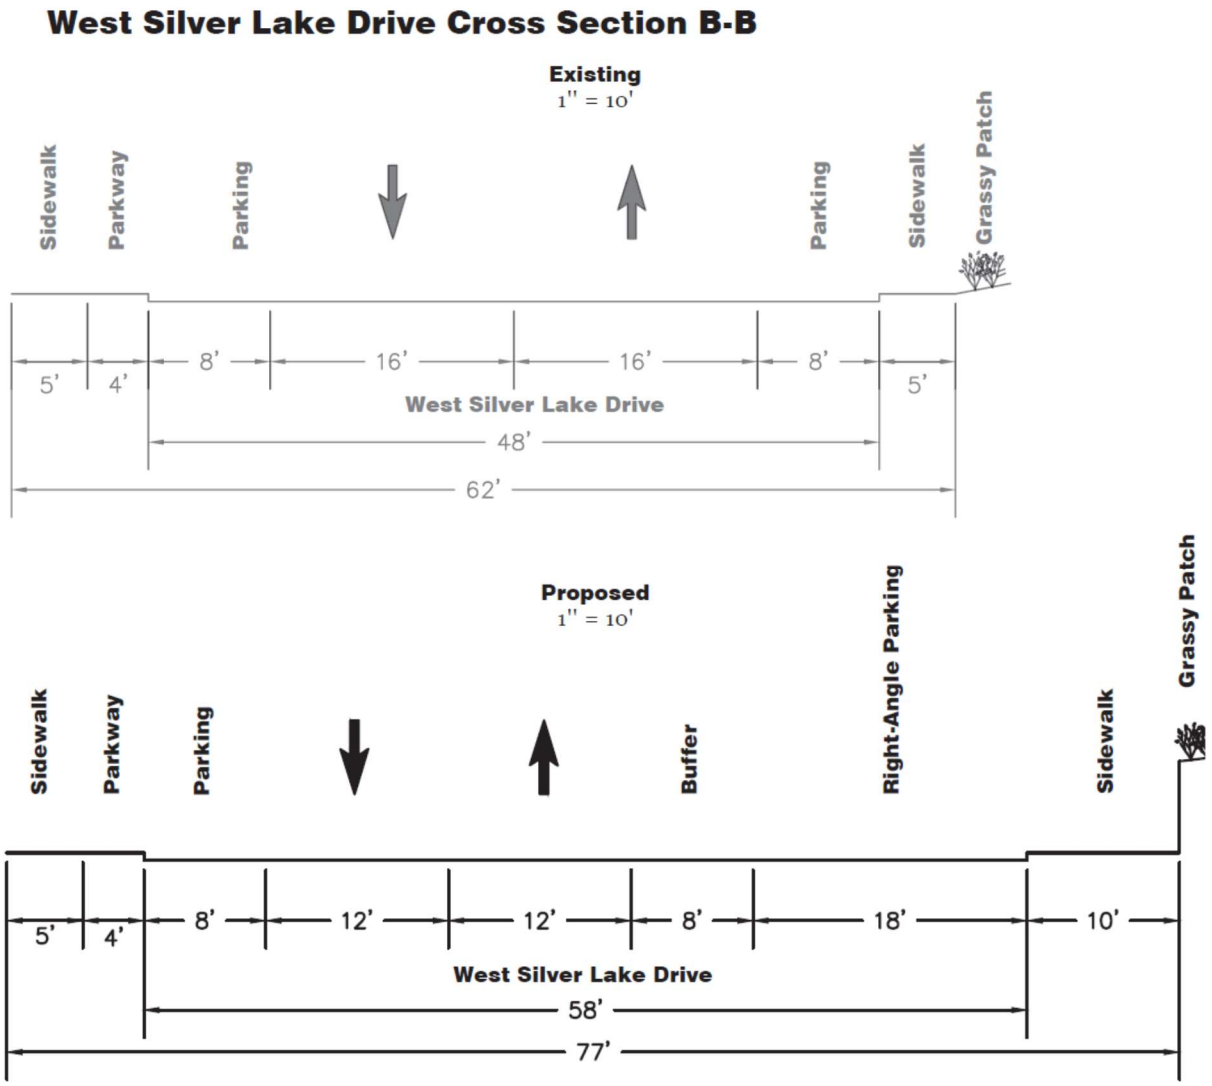

FIGURE 41 - EXISTING AND PROPOSED STREET CROSS SECTIONS ON WEST SILVER LAKE DRIVE WITH RIGHT-ANGLE PARKING

In summary, the proposed 135 on-street parking spaces on the west side of Silver Lake Boulevard will be more accessible and convenient for the park users as they can park and walk to the Meadows area and to the Dog Park. This parking will also reduce the need for pedestrians to cross the heavily travelled Silver Lake Boulevard. In addition, similar to overnight parking restrictions on West Silver Lake Drive, on-street parking can be restricted from 2:00 AM to 6:00 AM on this segment of Silver Lake Boulevard to prevent overnight parking. The addition of 135 on-street parking spaces will meet City's parking code requirements (20 spaces) for public parks.

The additional 17 on-street parking spaces on West Silver Lake Drive adjacent to the renovated Recreation Center and proposed Multi-Purpose Facility will provide convenient and accessible parking for these facilities. The addition of these 17 spaces can meet the City's parking code requirements for these facilities.

It is also important to note that the addition of these on-street parking spaces will reduce the potential diversion of park visitors to the residential streets such as West Silver Lake Drive, Tesla Avenue, and Armstrong Avenue.

SECTION 5 – SUMMARY AND CONCLUSIONS

5.1 – PROJECT SUMMARY

The proposed Project and scope of the TIA is summarized below:

- **Project Description:** The proposed Project consists of redesigning approximately 116 acres of the existing 127-acre Silver Lake Reservoir Complex (SLRC) site with community park amenities. The proposed Project would include a contemporary design of 7 park zones with hybrid infrastructure that blends vegetated areas with public spaces. New amenities such as environmental education centers, shade pavilions, walking and jogging paths will be provided, while the existing amenities such as the dog park will be enhanced. In addition, improvements to the surrounding streets are also proposed, such as the addition of bicycle lanes and buffer zones, on-street parking, the installation of new flashing beacon signals, and the installation of new curb ramps. Lastly, portions of the SLRC will continue to be used by the Department of Water and Power for maintenance.

- **Study Scope:** This TIA was prepared consistent with the most recent Los Angeles Department of Transportation (LADOT) Transportation Assessment Guidelines (TAG). The Transportation Impact Assessment (TIA) is divided into 2 sections: the CEQA and non-CEQA analysis. The CEQA analysis considered the Project's impacts to 3 thresholds as required by the LADOT. These 3 thresholds are **Threshold T-1:** Conflicting with Plans, Programs, Ordinances, or Policies, **Threshold T-2:** Causing Substantial Vehicle Miles Traveled, and **Threshold T-3:** Substantially Increasing Hazards Due to a Geometric Design Feature or Incompatible Use. The non-CEQA analysis considered the Project's impacts to bicycle, pedestrian, and transit facilities. In addition, the Project's Level of Service impacts were quantified. The non-CEQA section also includes an analysis of Project construction impacts, residential street cut through impacts, and a parking demand analysis.

5.2 - CONCLUSIONS

5.2.1 – CEQA ANALYSIS

- **Threshold T-1:** The analysis to determine Project's transportation related impacts with respect to Threshold T-1 were conducted according to the City's TAG. The analysis revealed that the Project does not conflict with any plans, programs, ordinances, or policies addressing the circulation system, including transit, roadways, bicycle, and

pedestrian facilities. Therefore, the Project would not result in a significant impact under Threshold T-1 and no mitigation measures are required.

- **Threshold T-2:** The Project is considered to be locally serving use since there are several nearby parks within a 2-mile radius; there is a lack of on-street and off-street parking; there will be no amenities such as golf courses, athletic fields (soccer fields and baseball diamonds), boating and fishing. Project would not result in a significant impact under Threshold T-2 and no mitigation measures are required. However, the SLRCMP includes extensive enhancements to the street infrastructure surrounding the SLRC including pedestrian paths and trails, protected bicycle lanes, improved intersections, marked crosswalks, flashing beacons, and traffic signals.

- **Threshold T-3:** With respect to Threshold T-3, the Project does not increase hazards due to geometric design features. The Project identifies intersection improvements to enhance pedestrian connections along the perimeter streets that occur at multi-way stops. **Figure 10 - Locations of Proposed SLRCMP Improvements** shows the proposed locations of the pedestrian connections and bicycle network.

5.2.2 – NON-CEQA ANALYSIS

- **Pedestrian, Bicycle, and Transit Access Assessment:** In reference to pedestrian, bicycle, and transit assessment, **Section 3.6.3 - T-3** provides a detailed analysis and recommendations to enhance pedestrian, bicycle, and transit safety.

- **Project Trip Generation:** As shown in **Table 23 - Estimated Project Trip Generation (Weekday)**, on a typical weekday, the project is estimated to generate 28 vehicle trips during the morning peak hour of the adjacent streets, 52 vehicle trips during the afternoon peak hour of the adjacent streets, 74 vehicle trips during the peak hour of the generator, and 722 daily trips on a weekday. As shown in **Table 24 - Estimated Project Trip Generation (Weekend)**, on a typical weekend, the project is estimated to generate 112 trips during the mid-day peak hour of the adjacent streets and it also happens to be the peak hour of the generator. The project is also estimated to generate 972 daily trips on a typical Saturday.

- **Comparison of the ITE Trip Generation Rates and Calculated Trip Rates Based on Existing and Future Attendance:** Using ITE Land Use Code 411 (Public Parks), the following weekday and weekend daily trips were calculated:

- Weekday Daily Trips = 340;
- Weekend (Saturday) Daily Trips = 228; and
- Weekend (Sunday) Daily Trips = 195.

Using the trip generation methodology based on current SLRC park attendance, the following weekday and weekend daily trips were calculated:

- Weekday Daily Trips = 722; and,
- Weekend (Saturday) Daily Trips = 972.

The estimated weekday daily trips using methodology based on current park attendance are more than double the trips using ITE trip generation rates (722 trips vs 340 trips), while the estimated weekend daily trips are more than quadruple the trips using ITE trip generation rates (972 trips vs 228 trips). Therefore, the trip generation methodology based on current SLRC park attendance is a more conservative approach than using ITE trip generation rates.

- **Summary of Delays, Level of Service, and Vehicle Queues:** As presented in **Table 27** – **Summary of Delays, Level of Service, and Vehicle Queues**, the Project would not cause or substantially extend the vehicle queuing at the 6 study intersections. These 6 study intersections are listed below:
  - Silver Lake Boulevard and Van Pelt Place;
  - Silver Lake Boulevard and Glendale Boulevard;
  - Silver Lake Boulevard and Armstrong Avenue;
  - Silver Lake Boulevard and Duane Street;
  - Armstrong Avenue and Tesla Avenue; and,
  - West Silver Lake Drive and Tesla Avenue.

  To improve safety and operational efficiency of the 6 signalized and unsignalized intersections, the following are specific improvements recommended:
  - Modification of traffic signal timing at the intersection of Silver Lake Boulevard and Glendale Boulevard;

- Installation of a traffic signal at Silver Lake Boulevard and Armstrong Avenue;
- Installation of a traffic signal at Silver Lake Boulevard and Van Pelt Place;
- Installation of a traffic circle and crosswalk markings at the intersection of Armstrong Avenue, Tesla Avenue, and Lakewood Avenue;
- Installation of curb extension and crosswalk markings at the intersection of West Silver Lake Drive and Tesla Avenue; and,
- Installation of a flashing red beacons and crosswalk markings at the intersection of West Silver Lake Drive and Hawick Street.

- **Project Construction:** It is important to note that, typically, construction activities begin at 6:30 AM and continue until 3:30 PM. Therefore, most construction workers will arrive before the morning commuter peak hour and depart before the evening commuter peak hour. As a result, it is projected that the construction traffic will not impact the local intersections during the AM and PM peak hours. The identified construction Project access points along Silver Lake Boulevard, the provision of internal roadways for construction traffic circulation, and planned on-site parking for construction workers will limit the construction traffic impacts on local residential streets. Considering that Project construction is planned to commence in year 2025 and be completed by the year 2030, a detailed **Construction Traffic Management Plan (CTMP)** is recommended for the various phases of the Project consistent with LADOT Construction Traffic Control Guidelines. This CTMP will address the planned Project construction phasing, sequence of construction activities, access, and circulation.

- **Residential Street Cut-through Traffic Analysis:** The majority (90%) of the Project trips are expected to use Silver Lake Boulevard, and the remaining 10% on West Silver Lake Drive (see **Figure 27 – Project Trip Distribution)**. Considering that the local streets within the Project area (Lakewood Avenue, Tesla Avenue, and Van Pelt Place) are not parallel to Silver Lake Boulevard and West Silver Lake Drive, it is not anticipated that Project traffic will shift to these streets to bypass Silver Lake Boulevard and West Silver Lake Drive as alternative routes. In summary, the local residential streets within the Project area will not have residential cut-through traffic impacts. Considering that the Project is expected to be completed by the year 2030, traffic conditions on local residential streets can be evaluated after the Project is completed to determine if there are any traffic impacts. A residential traffic management plan can be developed to address any potential impacts

in accordance with City of Los Angeles Residential Neighborhood Traffic Management Guidelines.

- **Parking Demand Analysis:** Based on the parking occupancy surveys conducted, there is limited parking within the street segments located in the 5 Subareas. The proposed SLRCMP did not envision off-street parking as part of the Project other than parking in the LADWP facilities area. In addition, the adjacent residential street network also has limited parking for residents only that are not as accessible due to the narrowness of the streets and the steep grades. Therefore, parking improvements have been developed for West Silver Lake Drive and Silver Lake Boulevard to address Project parking demand. These improvements include 135 on-street parking spaces on the west side of Silver Lake Boulevard and 17 on-street parking spaces on West Silver Lake Drive adjacent to the renovated Recreation Center and proposed Multi-Purpose Facility. The addition of 135 on-street parking spaces will meet City's parking code requirements (20 spaces) for public parks, while the addition of 17 on-street parking spaces on West Silver Lake Drive adjacent to the renovated Recreation Center and proposed Multi-Purpose Facility can meet the City's parking code requirements for these facilities. It is also important to note that the addition of these on-street parking spaces will reduce the potential diversion of park visitors to the residential streets such as West Silver Lake Drive, Tesla Avenue, and Armstrong Avenue.

THIS PAGE HAS BEEN INTENTIONALLY LEFT BLANK.

APPENDIX A – APPROVED MOU

LADOT

Attachment C

Transportation Assessment Memorandum of Understanding (MOU)

This MOU acknowledges that the Transportation Assessment for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Assessment Guidelines:

I. PROJECT INFORMATION

Project Name: Silver Lake Reservoir Master Plan Environmental Impact Report/Transportation Impact Assessment.

Project Address: Silver Lake Reservoir

Project Description: See Attachment 1 - Project Description.

LADOT Project Case Number: _____ Project Site Plan attached? *(Required)* ☑ Yes ☐ No

II. TRANSPORTATION DEMAND MANAGEMENT (TDM) MEASURES

Select any of the following TDM measures, which may be eligible as a Project Design Feature[1], that are being considered for this project:

✓	Reduced Parking Supply[2]	✓	Bicycle Parking and Amenities		Parking Cash Out

List any other TDM measures (e.g. bike share kiosks, unbundled parking, microtransit service, etc.) below that are also being considered and would require LADOT staff's determination of its eligibility as a TDM measure. LADOT staff will make the final determination of the TDM measure's eligibility for this project.

1 _____ 4 _____

2 _____ 5 _____

3 _____ 6 _____

III. TRIP GENERATION

Trip Generation Rate(s) Source: ITE 10th Edition / Other ITE 11th Edition and special trip generation estimates. See Attachment 2.

Trip Generation Adjustment *(Exact amount of credit subject to approval by LADOT)*	**Yes**	**No**
Transit Usage	☐	☑
Existing Active or Previous Land Use	☑	☐
Internal Trip	☑	☐
Pass-By Trip	☐	☑
Transportation Demand Management (See above)	☐	☑

Trip generation table including a description of the existing and proposed land uses, rates, estimated morning and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc. attached? *(Required)* ☑ Yes ☐ No

	Weekday IN	Weekday OUT	Weekday TOTAL
AM Trips	10	5	15
PM Trips	38	14	52
	Weekend		
Mid-day Trips	60	52	112

Weekend NET Daily Vehicle Trips

972 ADT

[1] At this time Project Design Features are only those measures that are also shown to be needed to comply with a local ordinance, affordable housing incentive program, or State law.

[2] Select if reduced parking supply is pursued as a result of a parking incentive as permitted by the City's Bicycle Parking Ordinance, State Density Bonus Law, or the City's Transit Oriented Community Guidelines.

IV. STUDY AREA AND ASSUMPTIONS

Project Buildout Year: 2030 Ambient Growth Rate: 0.2 % Per Yr.

Related Projects List, researched by the consultant and approved by LADOT, attached? *(Required)* ☒ Yes ☐ No

STUDY INTERSECTIONS and/or STREET SEGMENTS:
(May be subject to LADOT revision after access, safety, and circulation evaluation.)

1 Silver Lake Blvd / Van Pelt Pl
2 Silver Lake Blvd / Glendale Blvd
3 Silver Lake Blvd / Armstrong Ave
4 Silver Lake Blvd / Duane St
5 Armstrong Ave / Tesla Ave / Lakewood Ave
6 West Silver Lake Dr / Tesla Ave

Provide a separate list if more than six study intersections and/or street segments. Refer to Attachment 3.

Is this Project located on a street within the High Injury Network? ☐ Yes ☒ No

If a study intersection is located within a ¼-mile of an adjacent municipality's jurisdiction, signature approval from said municipality is required prior to MOU approval.

V. ACCESS ASSESSMENT

a. Does the project exceed 1,000 net DVT? ☐ Yes ☒ No
b. Is the project's frontage 250 linear feet or more along an Avenue or Boulevard as classified by the City's General Plan? ☒ Yes ☐ No
c. Is the project's building frontage encompassing an entire block along an Avenue or Boulevard as classified by the City's General Plan? ☐ Yes ☒ No Not applicable for the Project.

VI. ACCESS ASSESSMENT CRITERIA

If Yes to any of the above questions a., b., or c., complete **Attachment C.1: Access Assessment Criteria**.

VII. SITE PLAN AND MAP OF STUDY AREA

Please note that the site plan should also be submitted to the Department of City Planning for cursory review.

Does the attached site plan and/or map of study area show	Yes	No	Not Applicable
Each study intersection and/or street segment	☐	☒	☐
*Project Vehicle Peak Hour trips at each study intersection	☐	☒	☐
*Project Vehicle Peak Hour trips at each project access point	☐	☒	☐
*Project trip distribution percentages (SEE ATTACHMENT 4)	☒	☐	☐
Project driveways designed per LADOT MPP 321 (show widths and directions or lane assignment)	☐	☒	☐
Pedestrian access points and any pedestrian paths	☒	☐	☐
Pedestrian loading zones	☐	☒	☐
Delivery loading zone or area	☐	☒	☐
Bicycle parking onsite	☒	☐	☐
Bicycle parking offsite (in public right-of-way)	☐	☒	☐

*For mixed-use projects, also show the project trips and project trip distribution by land use category.

VIII. FREEWAY SAFETY ANALYSIS SCREENING

Will the project add 25 or more trips to any freeway off-ramp in either the AM or PM peak hour? ☐ **YES** ☒ **NO**

Provide a brief explanation or graphic identifying the number of project trips expected to be added to the nearby freeway off-ramps serving the project site. If Yes to the question above, a freeway ramp analysis is required.

Interstate 5, State Route 2, and US Highway 101 intersection off-ramps are not part of the study intersections. Based on the Project's trip distribution and assignment, there are no trips assigned to the freeway off-ramps. The Project does not add more than 25 trips to any off-ramp during the morning or evening peak hours.

Attachment 1 – Project Description

The City of Los Angeles, Bureau of Engineering (City) as Lead Agency, in coordination with the Los Angeles Department of Water and Power are proposing to implement the Silver Lake Reservoir Complex (SLRC) Master Plan Project (proposed Project). The proposed Project would redesign the existing 116-acre SLRC site with community park amenities.

The proposed Project would be located in the Silver Lake neighborhood of the City of Los Angeles which primarily consists of residential uses with some smaller commercial areas and some existing public access in and around the SLRC that allows park uses. The Project area is bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, Van Pelt Place, and Silver Lake Boulevard on the south, and West Silver Lake Drive on the west in the City and County of Los Angeles. The Project would be located within the United States Geological Survey (USGS) Topographic Series, Hollywood California Quadrangle, Section 8, Township 1 South, Range 13 West.

The proposed Project consists of a series of spaces (park zones) stitched together by a 2.5-mile, tree-lined promenade (Figure 4-32 in Attachment 2). These zones include: the Meadow; the Knoll; Ivanhoe Overlook; Eucalyptus Grove; East and West Narrows; and South Valley. The Project would feature two flexible lawns with shade trees, a picnic grove and ornamental gardens with an informal play area, and an environmental education center along the east edge of Silver Lake Reservoir at the base of the Knoll. At the intersection between the lawns and water, stepped seating terraces would navigate to wetland terraces interwoven with small footpaths. Two existing areas of woodland, the Knoll and Eucalyptus Grove would be restored to increase their upland habitat value. A new ecosystem that reintroduces coastal scrub and wetland habitat to the SLRC in the form of habitat islands and terraces would extend from the shoreline embankments and within the reservoir bodies.

Attachment 2 – Trip Generation Methodology

Description of SLRCMP Park Zones

The following is a description of the SLRCMP existing and future park zones that were used to calculate the Project's trip generation rates for Project traffic analysis impacts. The park zones shown in **Figure 1 – SLRCMP Site Plan** are described below:

Ivanhoe Overlook

Ivanhoe Overlook encompasses the Ivanhoe Reservoir, which is the smaller of the two reservoirs and bounded by a path along the north side of its dam. The narrow lands around the water body are currently restricted to LADWP access with the exception of a shared path on the west side that connects to a public sidewalk on West Silver Lake Drive and which allows people to walk along the water's edge before being directed back to West Silver Lake Drive near the Spillway. Once complete, the Ivanhoe Overlook will feature new wetlands habitat, which will be the defining attractor for this park zone. This wetlands habitat will consist of floating islands and wetlands terraces. In addition, various amenities will be introduced to take advantage of the new habitat islands.

Eucalyptus Grove

Eucalyptus Grove is currently a wooded area predominantly occupied by numerous eucalyptus trees. This park zone also contains LADWP facilities. Once complete, the Eucalyptus Grove will feature abundant new landscaping throughout the upland areas. This park zone will also contain wetlands terraces, floating habitat islands, an overlook, seating and viewing terraces, and a promenade.

The West Narrows

The West Narrows consists of a narrow segment of land located north of the south valley; west of the main reservoir; east of West Silver Lake Drive; and south of the Eucalyptus Grove. This park zone is currently unoccupied. This park zone will be improved with a running/walking path, new seating terraces overlooking the reservoir, and a promenade.

The South Valley

The South Valley currently contains most of the SLRC's attractions, such as the dog park; community center; playground; plaza, and basketball courts. Once complete, the South Valley will feature relocated and resized basketball courts; a renovated recreation center; new multi-purpose facility; new plaza; renovated playground and picnic areas; relocated play field, and enhanced dog park. In addition, the multi-purpose facility will host polling and community events.

Figure 1: SLRCMP Site Plan

The East Narrows

The East Narrows consists of a narrow segment of land located north of the south valley; west of Silver Lake Boulevard; east of the main reservoir; and south of the Meadow. This park zone will be improved with a running/walking path; new seating terraces overlooking the reservoir; an overlook protruding into the reservoir; an outdoor fitness center; and a promenade.

The Meadow

The Meadow is referred to as the heart of the Silver Lake Reservoir Complex. This park zone contains vast lawn areas that are used by the public for resting/relaxing and picnicking. Once complete, the Meadow will feature two lawn areas that will host local events such as concerts and outdoor movie screenings; ornamental gardens; a picnic grove; wetland habitat terraces with walkways; floating wetland islands; and an observational platform.

The Knoll

The Knoll is a large hill located east of the main reservoir. This area is undeveloped and is occupied by unmaintained ruderal vegetation. In addition, LADWP facilities are located in this park zone. This Knoll increases in elevation by 45 feet, which provides visitors with ample views of the SLRC and surrounding area. Once complete, the Knoll will contain restored upland wooded habitat; a floating dock; an environmental education center; nature trails; seating terraces; and an overlook shade pavilion with outdoor classrooms.

Trip Generation Calculation Based on ITE Trip Generation Manual

In order to prepare the Project's trip generation, the Institute of Transportation Engineers (ITE) *Trip Generation Manual 11th Edition* was reviewed. According to the Institute of Transportation Engineers (ITE) Land Use Code 411, parks can be defined as:

> *"Public parks are owned and operated by a municipal, county, state, or federal agency. The parks surveyed vary widely as to location, type, and number of facilities, including boating or swimming facilities, beaches, hiking trails, ball fields, soccer fields, campsites, and picnic facilities. Seasonal use of the individual sites differs widely as a result of the varying facilities and local conditions, such as weather. For example, some of the sites are used primarily for boating or swimming; others are used for softball games. Soccer complex (Land Use 488) is a related use.*
>
> *The percentage of the park area that is used most intensively varies considerably within the studies contained in this land use; therefore, caution should be used when using acres as an independent variable.*

Time-of-day distribution data for this land use are presented in Appendix A. For the three sites with data, the overall highest vehicle volumes during both a Saturday and Sunday were counted between 10:30 and 11:30 a.m.

The sites were surveyed in the 1980's, the 1990's, the 2000's, and the 2010's in Arizona, California, New Jersey, New York, North Carolina, and Oregon".

Based on the Silver Lake Reservoir Complex Master Plan (SLRCMP) project description, and after consultation with LADOT staff, JBA has determined that the trip generation factors for Public Park (Land Use Code 411) are not suitable for this Project due to the following factors:

- The ITE survey sites are not comparable to the Project. The SLRC Plan does not have the amenities described above, such as boating facilities, soccer fields, swimming areas, beaches, hiking trails, and campsites.
- The size of the parks studied in acres ranged between 290 and 612. In comparison, the existing SLRC has 3.4 acres of lawn and shade areas, a community center, basketball court, dog park, and walking and jogging trails around the perimeter. As part of SLRCMP, the Project will expand the park to 10 acres for active and passive recreational activities. The ITE trip generation rates were based on a limited number of studies. For example, there are only 2 studies for the weekend daily trips.
- There is a wide range in the trip rates for this type of type of land use due to a small sample size (limited number of studies). For example, the weekday daily trip rates range from 0.55 to 34.00 trips per acre. For Saturdays and Sundays, the trip daily trip rates range from 1.88 to 22.75 and 2.12 to 19.50 trips per acre, respectively.

To illustrate the limitations of the ITE Land Use Code 411 (Public Park) trip generation factors, the Project's weekday and weekend trip generation were calculated using the ITE trip rates shown below in **Table 1 – ITE Trip Generation Rates for Public Parks (Land Use 411)**. It is also important to note that given the average ITE trip generation rates that are typically used are very low, to be conservative, the highest values of the trip generation ranges for weekday and weekend were used as follows:

Table 1
ITE Trip Generation Rates for Public Parks (Land Use 411)

		ITE Ave. Trip Rate	Range of Trip Rates	**Trip Rate Used**
Weekday	Daily	0.78	0.55-34.00	**34.00**
	Am Peak	0.02	0.00-4.50	**4.50**
	PM Peak	0.11	0.05-3.50	**3.50**
Saturday	Daily	1.96	1.88-22.75	**22.75**
	Generator Peak	0.28	0.21-4.50	**4.50**
Sunday	Daily	2.19	2.12-19.50	**19.50**
	Generator Peak	0.31	0.21-5.00	**5.00**

The ITE Trip Generation Manual 11th edition also has Land Use Code 435 for the Multi-purpose Recreational Facility that is included in the SLRCMP. However, ITE Land Use Code 435 is not suitable for this study due to the following factors:

- For weekdays, there are no trip rate values for AM peak hour and daily trips.
- For weekends, there are no trip rate values for peak hour of the generator and daily trips.

To calculate the weekday and weekend AM and PM peak hour and daily trips using the ITE Land Use Code 411 (Public Parks), the SLRCMP park zones (Ivanhoe Overlook, Eucalyptus Grove, the Knoll, the East/West Narrows, the Meadow, and the South Valley) were considered to be a single land use. In addition, the Environmental Education Center and Shade Pavilion/Outdoor Classrooms were also considered to be part of the ITE Land Use Code 411 because these facilities do not have comparable trip generation rates in the ITE Trip Generation Manual. All walking and jogging activities are also considered to be included in the Public Park trip generation rates.

Using the highest values of the trip generation rates from **Table 1**, the SLRCMP weekday PM peak hour and daily trips for weekends (Saturday and Sunday) were calculated as shown in **Tables 2**, **3**, and **4 – Trip Generation Using ITE Rates** below:

Table 2 - Trip Generation Using ITE Rates (Weekday AM, PM, and Daily)

Land Use (ITE Code)	Size	Units	AM Peak Hour Trips				PM Peak Hour Trips				Daily Trips	
			Rate	Total	In	Out	Rate	Total	In	Out	Rate	Total
New Project Land Use Added												
Public Park (411)[2]	10	Acre	4.50	45	59% 27	41% 18	3.5	35	55% 19	45% 16	34.00	340
Renovated Recreational Center (435)	3.279	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	4.06	14	55% 8	45% 6	Not Available	Not Available
Multi-purpose Facility (435)	5.800	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	4.06	24	55% 13	45% 11	Not Available	Not Available
		Total	Total daily and generator peak cannot be calculated due to the lack of available trip generation data.									

The weekend (Saturday) calculation is shown in **Table 3**.

Table 3 - Trip Generation Using ITE Rates (Weekend – Saturday)

Land Use (ITE Code)	Size	Units	Generator Peak Hour Trips				Daily Trips	
			Rate	Total	In	Out	Rate	Total
New Project Land Use Added

		Total	Total daily and generator peak cannot be calculated due to the lack of available trip generation data.					

The weekend (Sunday) calculation is shown in **Table 4**.

Table 4 - Trip Generation Using ITE Rates (Weekend - Sunday)

Land Use (ITE Code)	Size	Units	Generator Peak Hour Trips				Daily Trips	
			Rate	Total	In	Out	Rate	Total
New Project Land Use Added								
Public Park (411)[2]	10	Acre	5.00	50	39% 20	61% 30	19.50	195
Renovated Recreational Center (435)	3.279	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	Not Available	Not Available
Multi-purpose Facility (435)	5.800	Tsf	Not Available	Not Available	Not Available Not Available	Not Available Not Available	Not Available	Not Available
Total			Total daily and generator peak cannot be calculated due to the lack of available trip generation data.					

In summary, using the highest values of the trip generation rates from **Table 1**, the daily trips calculated using the ITE Land Use Code 411 shows the following number of daily trips for the proposed park zones in the SLRCMP:

- Weekday Daily Trips = 340;
- Weekend (Saturday) Daily Trips = 228; and
- Weekend (Sunday) Daily Trips = 195.

The purpose of calculating the Project's trip generation using the ITE trip generation rates for the Project was to demonstrate the deficiencies with the ITE rates for Public Parks. The ITE manual also cautions the use of "acres" as an independent variable for trip generation. For this reason, JBA developed a trip generation methodology based on current park attendance.

Trip Generation Methodology Based on Current Park Attendance

JBA conducted surveys of the number of people that were using the various areas of the park on Saturday November 6, 2021. The survey data that was collected was used as a database to project the future trip generation for the Project. In addition, to verify the data collected on Saturday November 6th, a similar survey was conducted on December 18th, 2021 and the results were consistent with the original survey. The results of the aforementioned survey are as follows:

The Meadow – Silver Lake Lawn/Great Lawn

The number of people using the picnicking areas were counted between 9:00 AM and 4:00 PM. During the peak use of this area between 2:00 PM and 4:00 PM there were between 78 to 109 people in various groups picnicking. For the purposes of projecting future increase in attendance on weekdays and weekends, the following assumptions were made:

- For the weekends, a 50% increase was assumed based on a current peak park attendance of 100 people for this area.
- For the weekdays, a 25% increase was assumed based on a current peak park attendance of 100 people for this area.
- For the other park uses in the Meadow area, the increases in attendance for weekends and weekdays were estimated based on inputs from the SLRCMP Project Team using the size, functionality, and capacity of each respective park zone area.

The Knoll, Ivanhoe Overlook, Eucalyptus Grove, East/West Narrows

For these park uses, the increases in attendance for weekends and weekdays were estimated based on inputs from the SLRCMP Project Team using the size, functionality, and capacity of each respective park zone area.

The South Valley – Dog Park

The number of people using the dog park were counted between 9:00 AM and 4:00 PM. During the peak use of this area between 9:00 AM and 12:00 PM there were between 45 to 56 people in various groups using the park. For the purposes of projecting future increase in attendance on weekdays and weekends, the following assumptions were made:

- For the weekends, a 60% increase was assumed based on a current peak park attendance of 50 people for this area.
- For the weekdays, a 30% increase was assumed based on a current peak park attendance of 50 people for this area.

The South Valley – Renovated Recreation Center, Multi-purpose Facility, Playground, Play Field, Renovated Plaza, and Picnic Grove

Based on observations, the number of people using the existing Recreation Center between 9:00 AM and 6:00 PM ranged between 20 to 30 people. Based on the proposed Renovation of the Recreation Center, an additional peak attendance of 30 people was assumed during weekdays and weekends.

Given that the existing basketball court will be relocated to a new location within the South Valley park zone, no change in usage of the basketball court was assumed. Furthermore, there was no additional attendance assumed for the playground, renovated plaza, picnic grove, and play field.

Silver Lake Perimeter Walking & Jogging Paths

The perimeter of the SLRC has walkways that are used for walking and jogging purposes. In order to estimate the number of people that are walking and jogging, a count was conducted on November 6, 2021, from 9:00 AM to 4:00 PM. For the purposes of projecting future increases in walking and jogging, the following table shows the average of the highest three hour pedestrian and jogger counts. **Table 5 - Weekend Walker and Jogger Counts** shows the walker and jogger counts for a typical weekend during the highest three hours.

Table 5 - Weekend Walker and Jogger Counts

	Locations						
	A	**B**	**C**	**D**	**E**	**F**	**G**
Time	**Silver Lake Blvd. North of Duane**	**Silver Lake Blvd. Mid-block Ped Xing**	**Silver Lake Blvd. South of Armstrong**	**Armstrong at Tesla & Lakewood**	**West Silver Lake Dr. at Tesla**	**West Silver Lake Dr. north of Redesdale**	**Armstrong at Silver Lake Blvd.**
9 am - 10 am	174	240	231	267	245	338	210
10 am -11 am	152	160	166	244	194	252	179
11 am - 12 pm	155	189	132	247	214	254	166
Average	**160**	**196**	**176**	**253**	**218**	**281**	**185**

Average number of walkers and joggers = A+B+C+D+E+F+G = 1470/7 = 210
Assumed increase in walkers and joggers for the Weekend by 40% = 84
Assumed increase in walkers and joggers for the Weekday by 20% = 42

For the purposes of projecting future increases in this area, a current peak attendance of 210 people was assumed for the walking and jogging paths.

Estimated Potential Weekday Vehicle Trips Generated by Each Park Zone

To calculate project trip generation, the potential increase in attendance for each park use within each park zone on a typical weekday was first estimated, as shown in **Table 6**. The estimated potential increase in park attendance was based on the uses in each park zone and inputs from the Project Team. The number of attendants for each park use was then converted to the number of vehicle trips associated with each peak park use by applying the following assumptions:

- 70% of all park visitors are local residents that would walk/jog/bike or take public transit to the park. This assumption is based on a survey of the SLRCMP community meeting participants that 70% of them walked to the SLRC (refer to **Figure 2 – Methods of Travel to the SLRC** shown on the following page).

COMMUNITY WORKSHOP #2 *what we heard*

Q. How do you typically get to the SLRC?

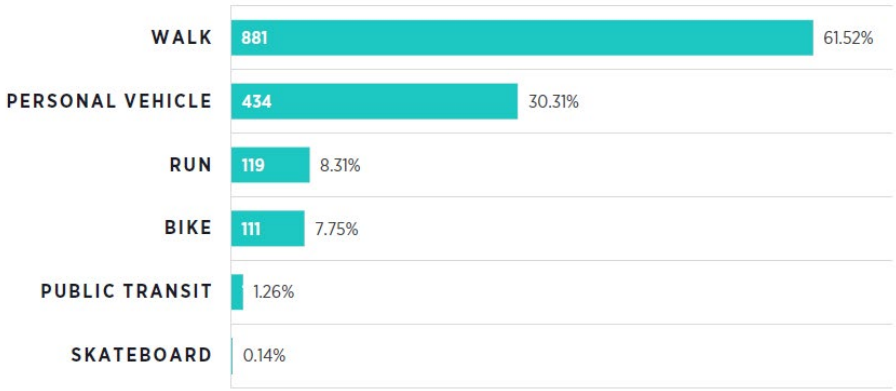

Figure 2: Methods of Travel to the SLRC

- 25% internal capture among various park uses. Internal capture takes into consideration of those park visitors that drive to the park once but visit multiple uses in the park. For example, people who go to the Meadow for picnicking would also walk or jog to the Knoll area, fitness area, use the seating terraces in Eucalyptus Grove, or the West Narrows. For this study, the internal capture factor only applied to general park uses and it was not used for the recreation center, the outdoor basketball court, the multi-purpose facilities, the walking and jogging paths and trails, the education center and classrooms, as well as any special events on weekdays and weekends.
- 40% increase in walkers and joggers around the existing paths and trails.
- Shadow Pavilion/outdoor classroom in Ivanhoe Overlook park zone and Environmental Education Center in the Knoll will be used on weekdays only by students on field trips travelling by buses. No weekend trips were assumed for these park zone.
- There will be special events on weekdays at the existing community center and the multi-purpose facility in The South Valley for community meetings and polling station with up to 50 people attending.
- There will be special events on weekends at Silver Lake Lawn in The Meadow for live performances and outdoor movie showings with an attendance of up to 600 people.
- The following vehicle occupancy rates were used to calculate vehicular trips for each park zone.
    - 1.8 passengers per vehicle for the existing and future multi-purpose facility.
    - 1.5 passengers per vehicle for general park uses (The Meadows, dog park, Knoll, Ivanhoe Overlook, Eucalyptus Grove, and the East/West Narrows).
    - 1.2 passengers per vehicle for walking/jogging.
    - 1.5 passengers per vehicle for special events.
    - 25 students per bus with a passenger car equivalent of 3.0 vehicles per bus.
- It was assumed that students would travel to the Environmental Education Centers and shadow pavilions in buses.
- Increases in park zone attendance were calculated by the Project Team based on existing attendance and the capacity of the existing and proposed park amenities.

Estimated Peak Use Vehicle Trip Generation for each Park Zone

The above assumptions were made based on the inputs for the SLRC project team. The arrival, departure and total vehicle trips associated with each peak park use are shown in **Table 6 – Silver Lake Reservoir Complex Estimated Potential Weekend Vehicle Trips Generated by Each Park Use**. In addition, the potential increase in park attendance and the number of vehicle trips associated with each peak park use are also shown in the table provided on the following pages.

Table 6 - Silver Lake Reservoir Complex
Estimated Potential Weekend Vehicle Trips Generated by Each Park Use

Park Zone	Park Use	Existing Area/Size	Proposed Area/Size	Increase in Park Attendance	Peak Use Vehicle Trips		
					Arrive	Depart	Total
The Meadow

*No internal capture

In addition, the Silver Lake Lawn in the Meadow would occasionally be utilized for special events on the weekends, such as live performances and outdoor movie showings. The estimated increase in attendance and the peak use vehicle trips are shown in **Table 7 – Estimated Weekend Project Trip Generation During Special Events/Live Performance**.

Table 7 - Estimated Weekend Project Trip Generation During Special Events/Live Performance

Park Zone	Possible Use/Function	Existing Area/Size	Proposed Area/Size	Increase in Visitor	Peak Hour Vehicle Trips		
					Arrive	Depart	Total
The Meadow	Silver Lake Lawn/Great Lawn	87,120 sq. ft.	Enhanced	600 People	134	134	268

Estimated Potential Weekday Vehicle Trips Generated by Each Park Use

Using the same methodology and assumptions, the potential increase in park attendance and the number of vehicle trips associated with each peak park use on a typical weekday are shown in **Table 8** - **Silver Lake Reservoir Complex Estimated Potential Weekday Vehicle Trips Generated by Each Park Use** provided below.

Table 8 - Silver Lake Reservoir Complex
Estimated Potential Weekday Vehicle Trips Generated by Each Park Use

*=No internal capture

In addition, the Silver Lake Lawn in the Meadow would occasionally be utilized for special events on the weekends, such as live performances and outdoor movie showings. The estimated increase in attendance and the peak use vehicle trips are shown below in **Table 9 – Estimated Weekday Project Trip Generation During Special Events, Community Events, and Polling Station**.

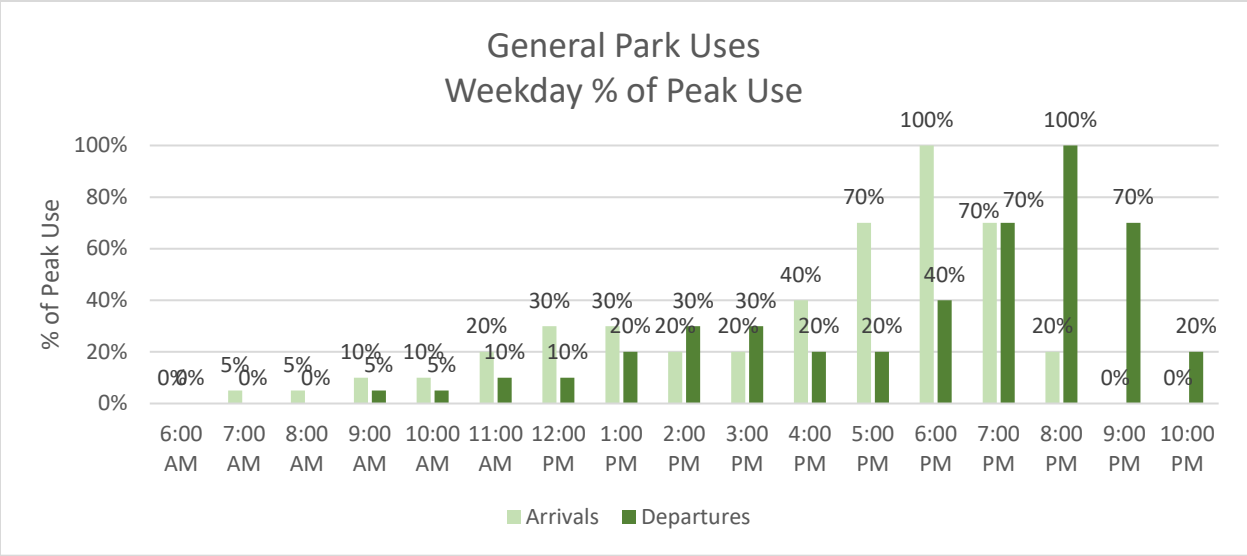
Table 9 - Estimated Weekday Project Trip Generation During Special Events, Community Events, and Polling Station

Park Zone	Possible Use/Function	Existing Area/Size	Proposed Area/Size	Increase in Visitor	Peak Hour Vehicle Trips		
					Arrive	Depart	Total
The South Valley	Multi-purpose Facility/Indoor basketball Court*	N/A	5,800 sq. ft.	50 People	17	17	34

Tables 6 through 9 show the estimated maximum number of Project vehicle arrival and departure trips for each park zone. It is important to note that, each park use within a park zone will peak at different times of the day and will not occur at the same time. In addition, it is also assumed that all the SLRC park zones will be developed and operated simultaneously. However, in reality, based on available funding, the SLRC may be developed over a period of 10 years. Therefore, the estimated project trip generation for weekdays and weekends will occur incrementally over a period of 10 years.

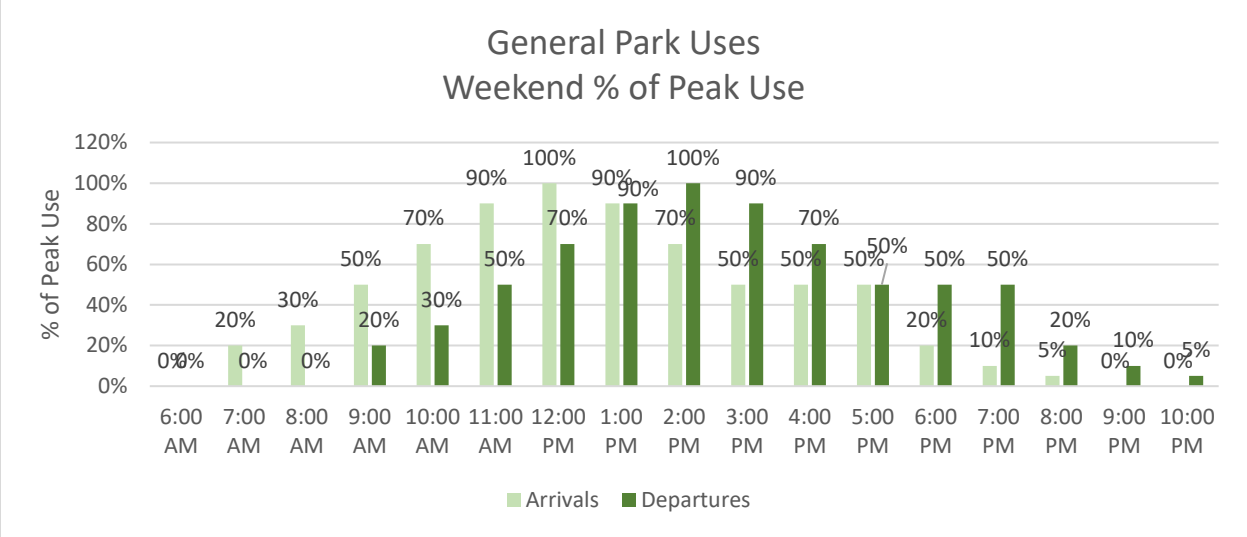
Another important factor to be considered is the availability of on-street parking (which will be further discussed in the traffic analysis). With the limited on-street parking available on the adjacent streets, it is believed that the number of estimated project vehicle trips will actually be lower. Nevertheless, to estimate the traffic impacts at the study intersections, the peak hour weekday and weekend trip generation have been used for the intersection capacity analyses as a conservation measure.

Estimated Hourly Distributions of Vehicle Trips for Park Uses



To calculate the daily, morning and afternoon commuter-peak-hour trip generation for a typical weekday and weekend, the hourly distribution of vehicle trips for various park uses were estimated. All of the park uses in the SLRC were grouped into the following 5 categories. Each park use category has its own unique hourly arrival and departure patterns:

1. General Park Uses—this includes the lawn areas, picnic areas, observation platform, gardens, seating and viewing terraces, promenade, fitness circuit, playground, and dog park.
2. Education Center and Classroom—this includes Environmental Education Center in The Knoll, Shadow Pavilion/Outdoor Classroom and Habitat Terrace in Ivanhoe Overlook.
3. Recreation Center—this includes the renovated recreation center in The South Valley.
4. Basketball Court—this includes the relocated basketball court and the multi-purpose facility/indoor basketball court in The South Valley
5. Silver Lake Perimeter Walking and Jogging Paths and Trails



The weekday and weekend hourly distributions of vehicle trips for each of the five park-use categories are shown in the following histograms as percentages of the peak use vehicle trips. It is assumed that on the average, a visitor will spend approximately 2 hours in the park. Therefore, the time lag between the arrival and departure is assumed to be 2 hours.

Estimated Project Trip Generation

Using the peak use vehicle trips for each park use multiplied by the hourly percentages of peak uses shown in the histograms above, the estimated weekday and weekend arrival and departure vehicle trips generated by the project were calculated for every hour of the day when the SLRC is in operation. See **Table 10 – Estimated Project Trip Generation (Weekday)** and **Table 11 – Estimated Project Trip Generation (Weekend)** on the following pages.

Table 10 - Estimated Project Trip Generation (Weekday)

Total		**259**		**259**		**0**		**0**		**30**		**30**		**24**		**24**		**173**		**173**	**486**	**486**	**972**

As shown in **Table 10**, on a typical weekday, the project is estimated to generate 10 vehicle trips during the morning peak hour of the adjacent streets, 49 vehicle trips during the afternoon peak hour of the adjacent streets, 72 vehicle trips during the peak hour of the generator, and 722 daily trips on a weekday.

As shown in **Table 11**, on a typical weekend, the project is estimated to generate 114 trips during the mid-day peak hour of the adjacent streets and it also happens to be the peak hour of the generator. The project is also estimated to generate 972 daily trips on a typical Saturday.

Comparison of the ITE Trip Generation Rates and Calculated Trip Rates Based on Existing and Future Attendance

Using ITE Land Use Code 411 (Public Parks), the following weekday and weekend daily trips were calculated:

- Weekday Daily Trips = 340;
- Weekend (Saturday) Daily Trips = 228; and
- Weekend (Sunday) Daily Trips = 195.

Using the trip generation methodology based on current SLRC park attendance, the following weekday and weekend daily trips were calculated:

- Weekday Daily Trips = 722; and,
- Weekend (Saturday) Daily Trips = 972.

The following is a comparison of the calculated daily trip rates versus the ITE trip generation rates:

- The calculated weekday daily trips are more than double the ITE daily trip generation (722 trips vs 340 trips); and,
- The calculated weekend daily trips are more than quadruple the ITE daily trip generation (972 trips vs 228 trips).

LADOT Trip Generation Calculation Review and Approval

Based on the ITE Trip Generation Rates and the calculated Daily, AM, and PM trip rate methodologies presented above, LADOT's approval of either rate methodology is requested. In addition, review and approval of the Regional Trip Distribution (inbound and outbound) percentages as shown in Attachment 4 is requested.

Attachment C1 – Access Assessment Criteria

Access Assessment Criteria

This Criteria acknowledges that the Transportation Assessment for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Assessment Guidelines:

I. PROJECT INFORMATION

Project Name: Silver Lake Reservoir Complex Master Plan Environmental Impact Report/Transportation Impact Assessment.

Project Address: Silver Lake Reservoir

Project Description: See attached for project description.

LADOT Project Case Number: _____

II. PEDESTRIAN/ PERSON TRIP GENERATION

Source of Pedestrian/Person Trip Generation Rate(s)? ☐ VMT Calculator ☑ ITE 10th Edition ☑ Other:

	Land Use	Size/Unit	Daily Person Trips
Proposed	See attached project trip generation Table 1 and 2.		
	Total new trips:		

Pedestrian/Person trip generation table including a description of the proposed land uses, trip credits, person trip assumptions, comparison studies used for reference, etc. attached? ☐ Yes ☐ No

III. PEDESTRIAN ATTRACTORS INVENTORY

Attach Pedestrian Map for the area (1,320-foot radius from edge of the project site) depicting:

- site pedestrian entrance(s) refer to Figure 5-1 and 5-2 of the Traffic & Circulation Report and Page 149 (Figure 5-2) of the MP.
- Existing or proposed passenger loading zones N/A
- pedestrian generation/distribution values
  - Geographic Distribution: N 10 % S 30 % E 40 % W 20 %
- transit boarding and alighting of transit stops (should include Metro rail stations; Metro, DASH, and other municipal bus stops) Refer to Figure 3.
- Key pedestrian destinations with hours of operation:
  - schools (school times)
  - government offices with a public counter or meeting room
  - senior citizen centers
  - recreation centers or playgrounds
  - public libraries
  - medical centers or clinics
  - child care facilities
  - post offices

- places of worship
- grocery stores
- other facilities that attract pedestrian trips

- pedestrian walking routes to key destinations from project site

Note: Pedestrian Count Summary, Bicycle Count Summary, Manual Traffic Count Summary will need to be attached to the Transportation Assessment To be provided as part of the traffic analysis.

IV. FACILITIES INVENTORY

Is a High Injury Network street located within 1,320-foot radius from the edge of the project site? ☐ Yes ☑ No
If yes, list streets and include distance from the project:

_____ at _____(feet)

_____ at _____(feet)

_____ at _____(feet)

_____ at _____(feet)

Attach Radius Map for the area (1,320 foot radius from edge of the project site) depicting the following existing and proposed facilities:

- transit stops
- bike facilities
- traffic control devices for controlled crossings
- uncontrolled crosswalks
- location of any missing, damaged or substandard sidewalks

For a reference of planned facilities, see the Transportation Assessment Support Map
Attach Figure 1, Figure 2.1, Figure 2.2, Figure 3, Figure 5.1, Figure 5.2, Figure 7

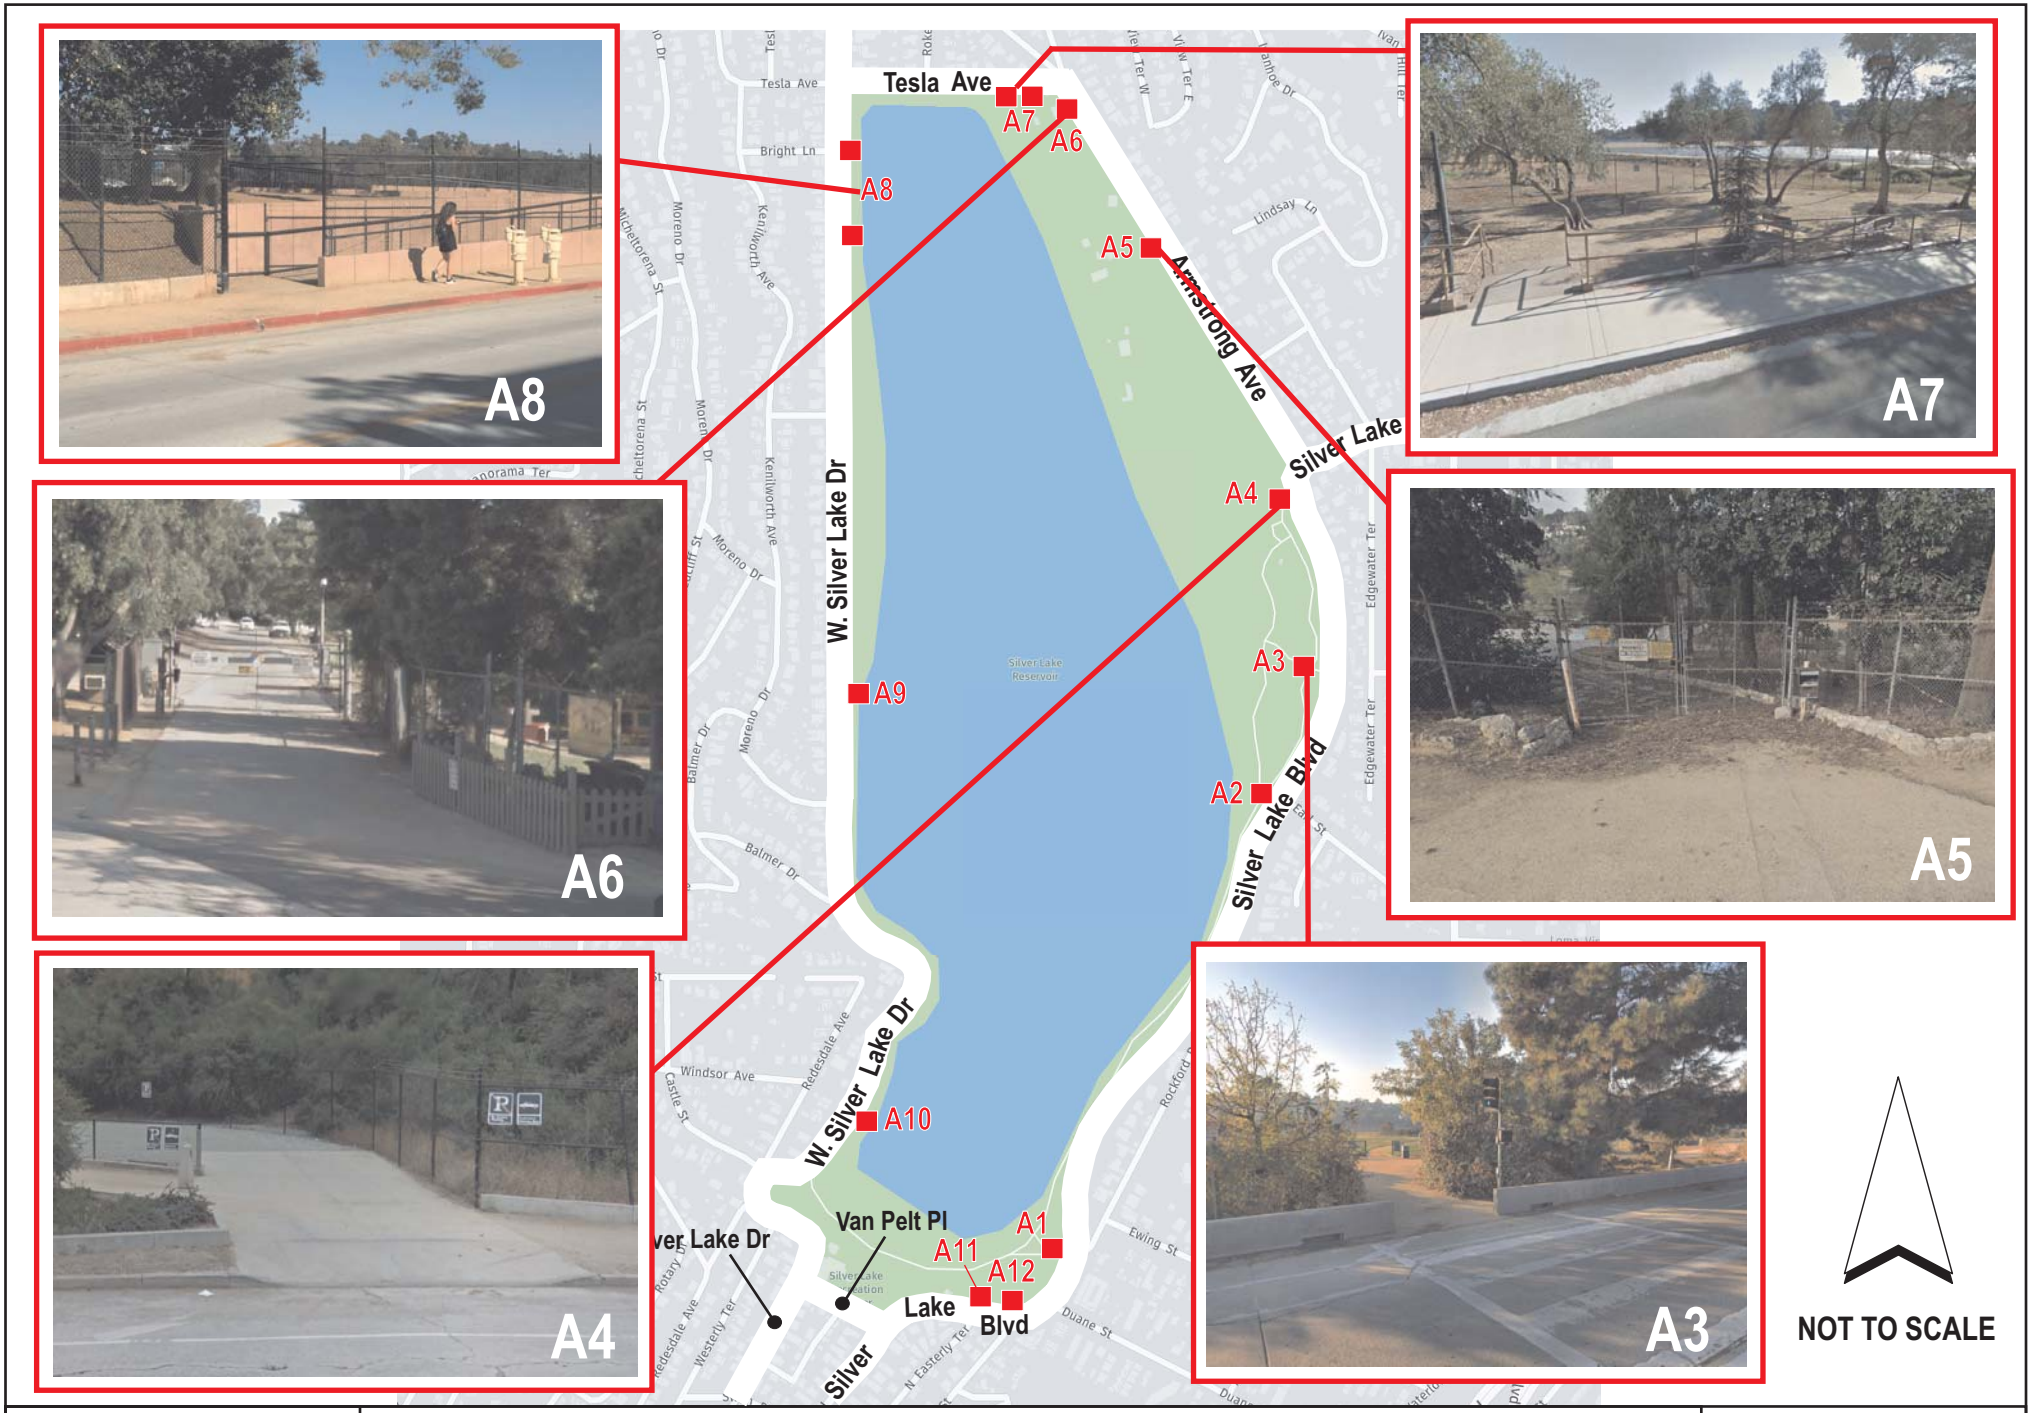
Crossing Distances

Does the project property have frontage along an arterial street (designated as either an Avenue or Boulevard?)

☑ Yes ☐ No

If yes, provide the distance between the crossing control devices (e.g. signalized crosswalk, or controlled mid-block crossing) along any arterial within 1,320 feet of the property.

_____(feet) at _____ _____(feet) at _____
_____(feet) at _____ _____(feet) at _____
_____(feet) at _____ _____(feet) at _____
_____(feet) at _____ _____(feet) at _____
_____(feet) at _____ _____(feet) at _____
_____(feet) at _____ _____(feet) at _____



V. Project Construction

Will the project require any construction activity within the city right-of-way? ☑ Yes ☐ No

Various phases of the Project may require temporary closures of sidewalks, bike lanes, and parking lane. A specific construction area traffic plan will be developed based on each phase of the Silver Lake Reservoir Complex Master Plan Development.

If yes, will the project require temporary closure of any of the following city facilities?

- sidewalk
- bike lane
- parking lane
- travel lane
- bus stop
- bicycle parking (racks or corrals)
- bike share or other micro-mobility station
- car share station
- parklet
- other: _____

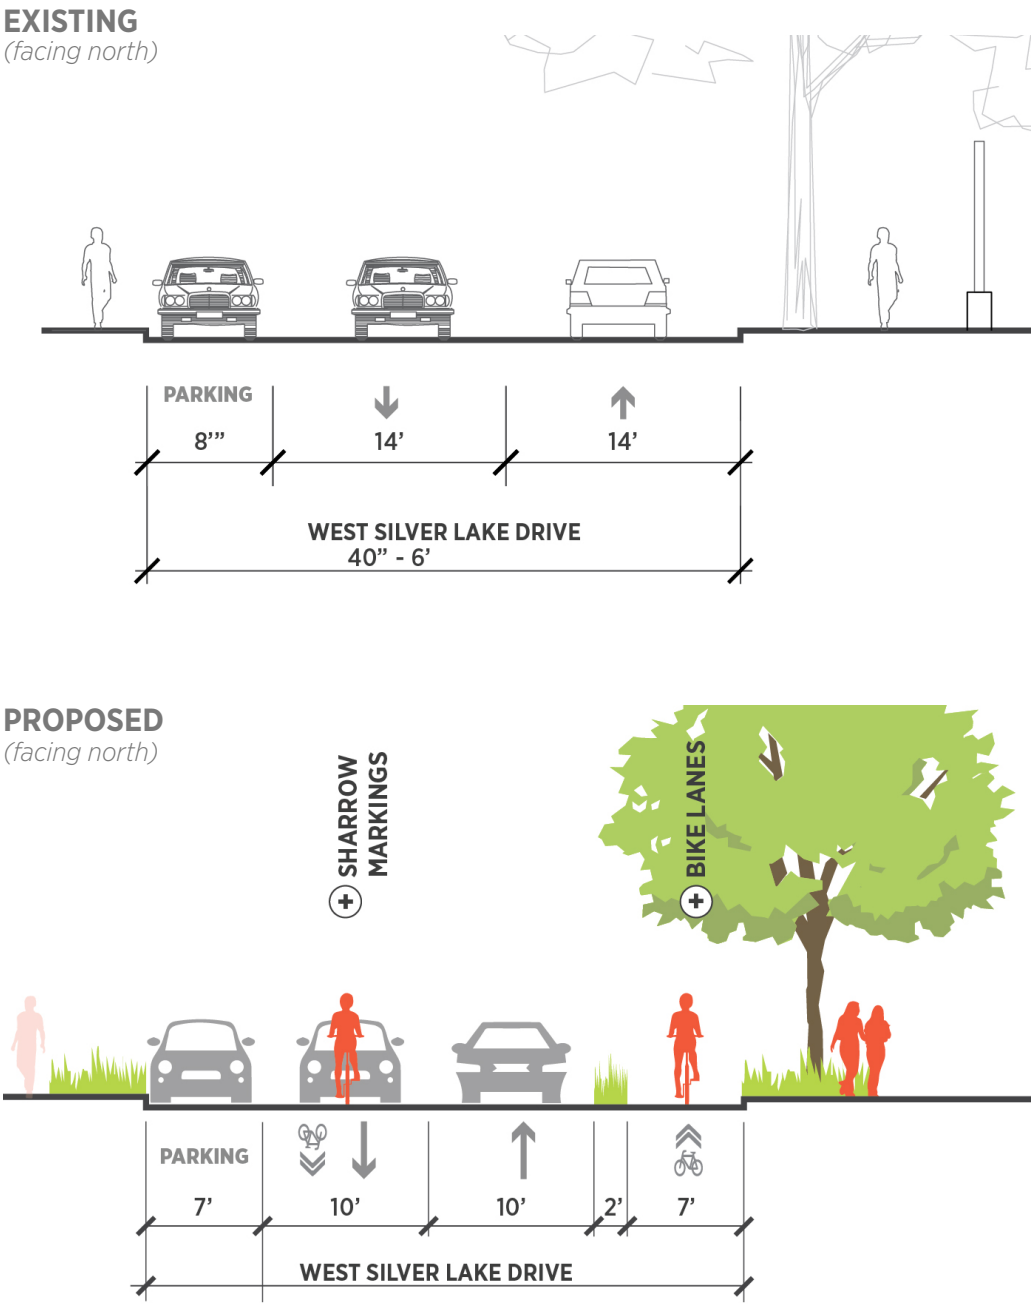
APPENDIX B – SLRCMP CHAPTER 3, SECTION 3.8 AND CHAPTER 5, SECTION 5.6

WEST SILVER LAKE DRIVE

Within the existing ROW of West Silver Lake Drive, parking and drive aisles can be reduced to accommodate a dedicated, 7-foot bike lane heading north, and the inclusion of sharrow markings heading south.



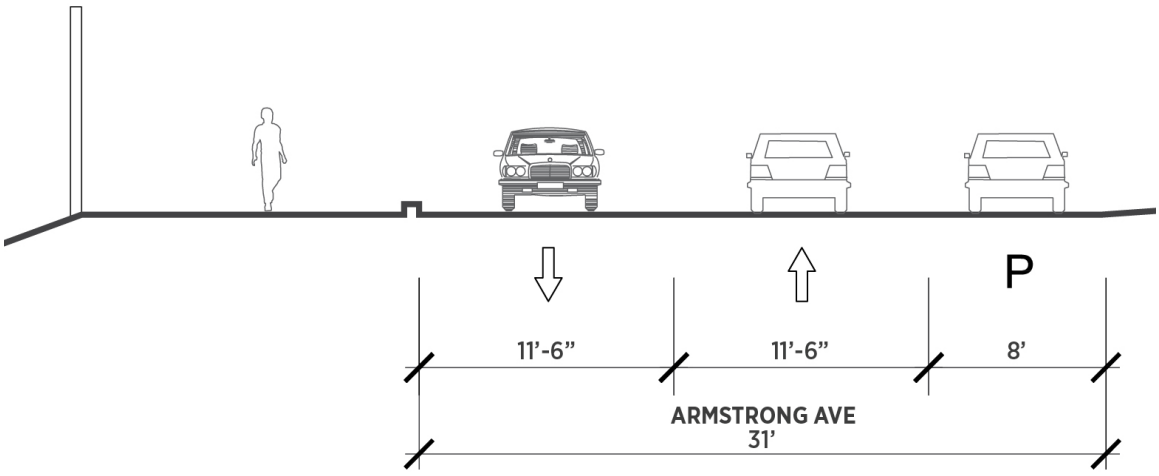


Figure 3-32 Existing & proposed section through West Silver Lake Dr.
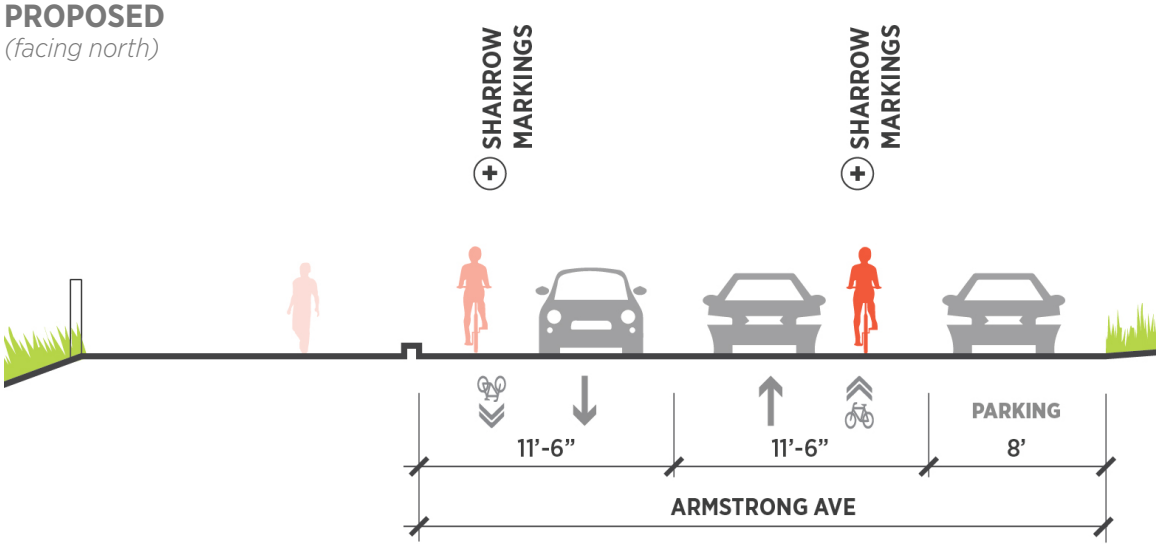
Note: all proposed changes in these studies are conceptual and subject to final DOT approval.

ARMSTRONG AVE

Armstrong Avenue is too narrow to accommodate dedicated bike lanes, however this street can accommodate sharrow markings in each direction.

EXISTING
(facing north)

PROPOSED
(facing north)



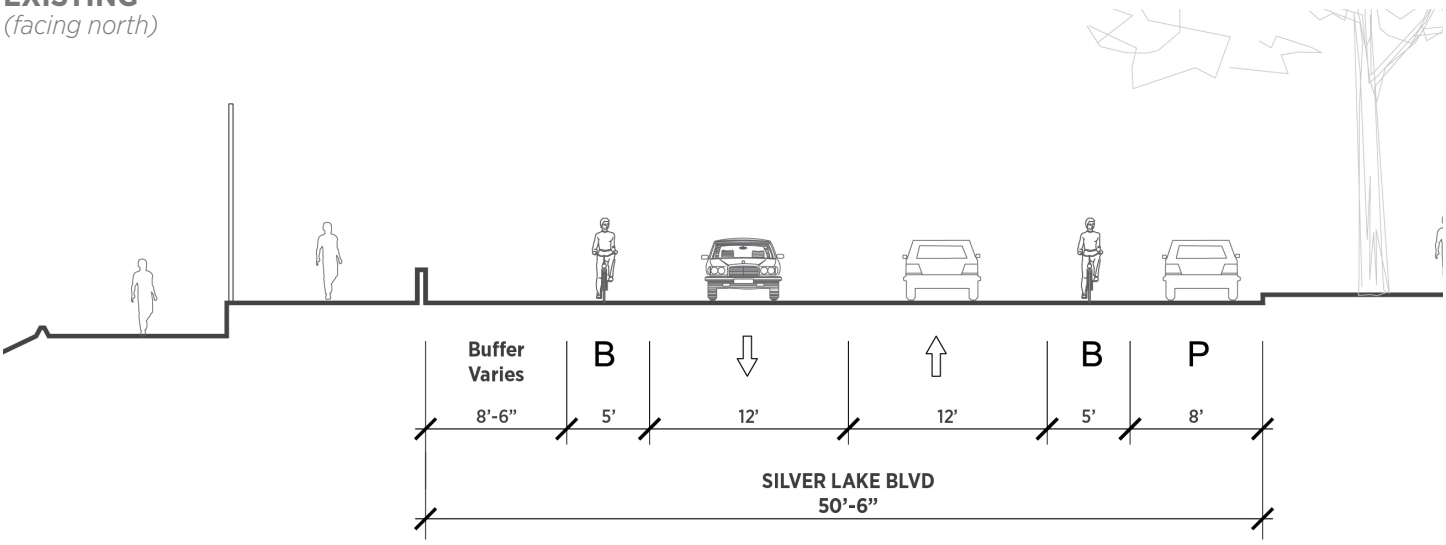


Figure 3-33 Existing & proposed section through Armstrong Ave.
Note: all proposed changes in these studies are conceptual and subject to final DOT approval.

SILVER LAKE BOULEVARD

Drive lanes, buffers, and bike lanes can be reconfigured along Silver Lake Boulevard to accommodate a safer and more pleasant bike route. Drive lanes and parking lanes are narrowed to allow for bi-directional bike traffic along the sidewalk. A large, vegetated buffer is placed between bikers and automobiles.

EXISTING
(facing north)

PROPOSED
(facing north)

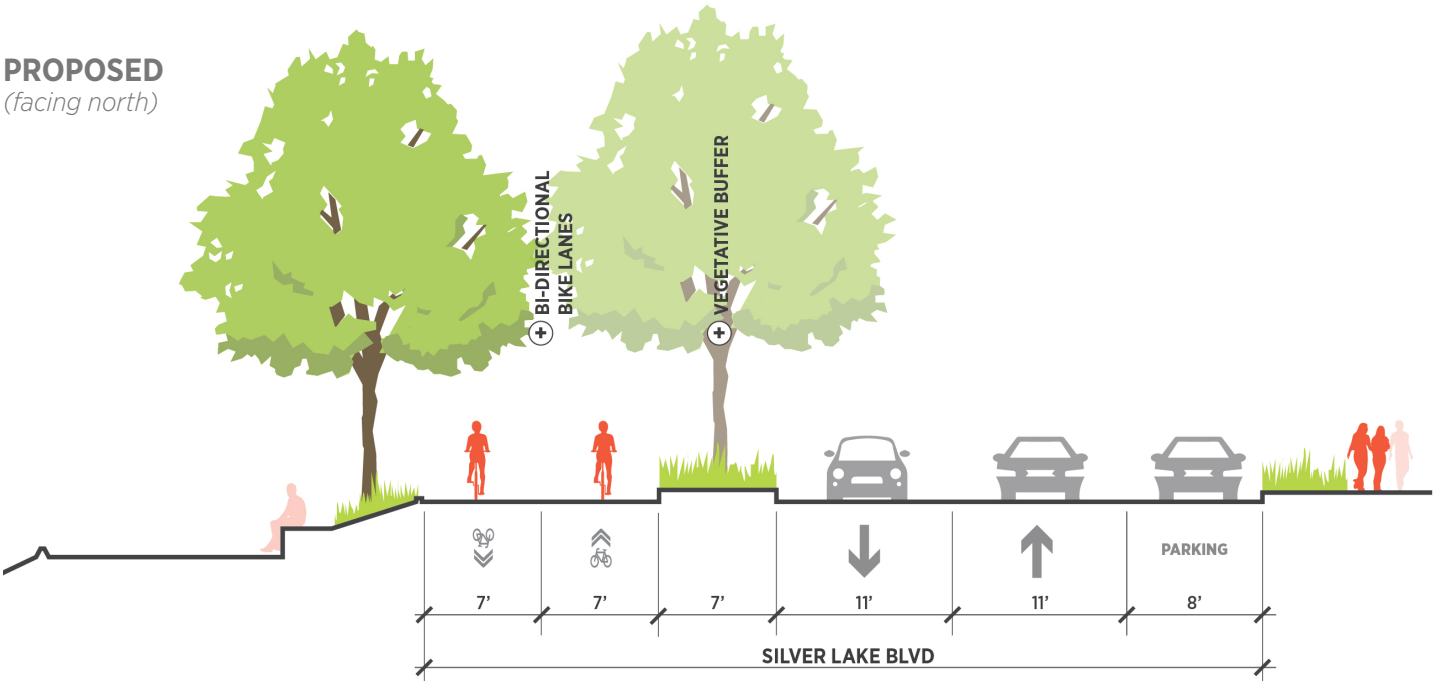

Figure 3-34 Existing & proposed sections through Silver Lake Blvd.
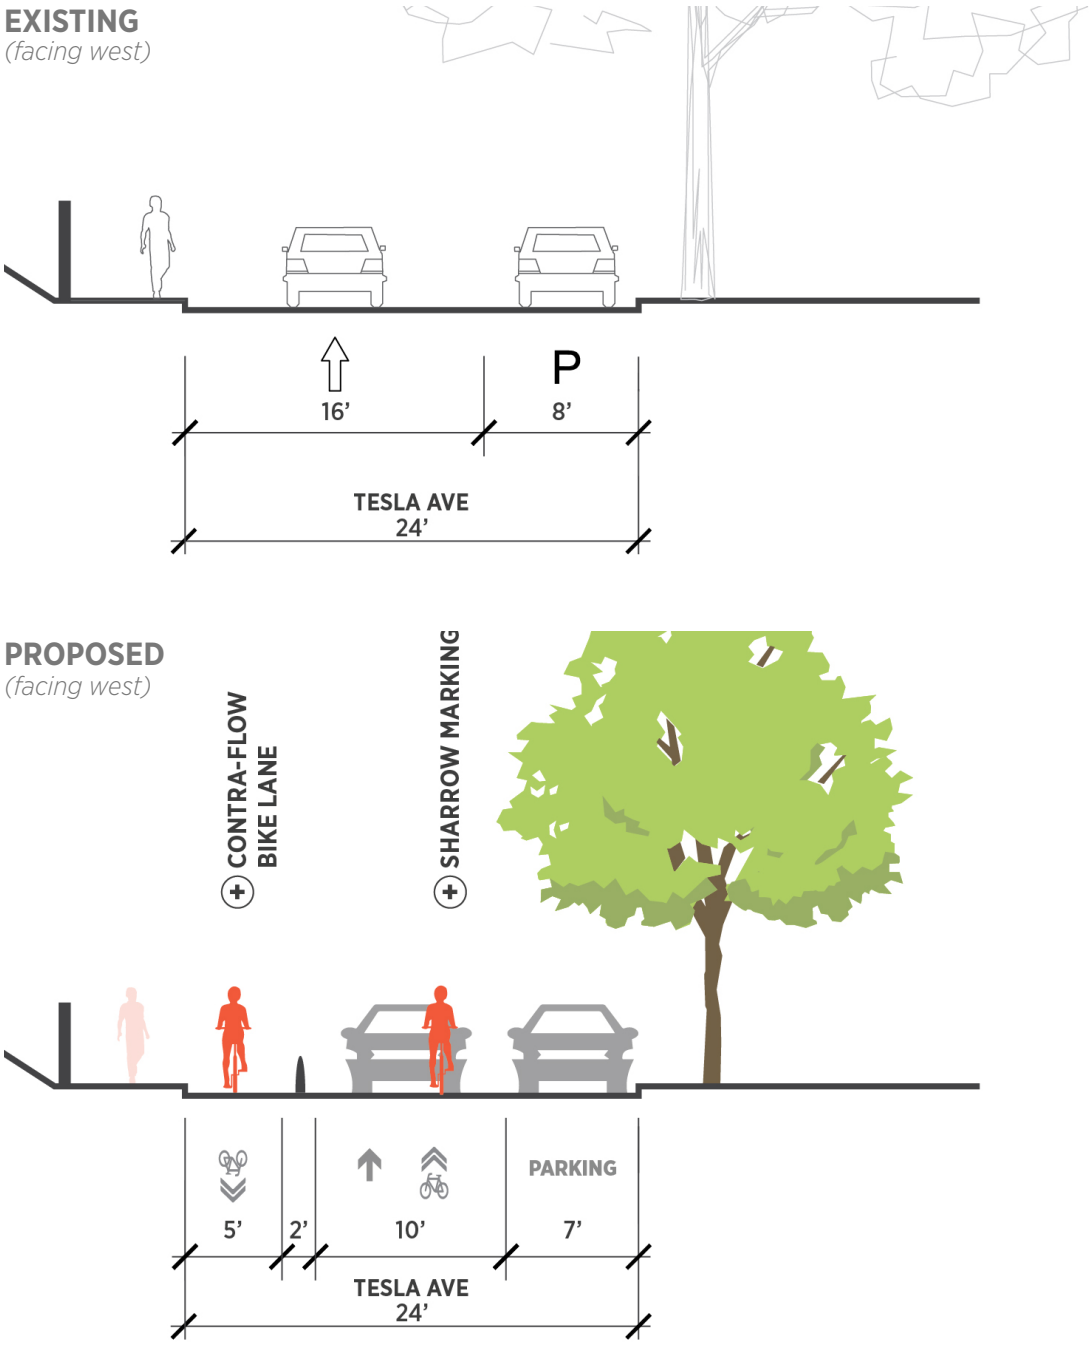
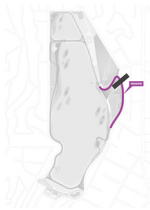
Note: all proposed changes in these studies are conceptual and subject to final DOT approval.

TESLA AVE

Tesla Avenue is a one-way street heading westbound. The drive lane is proposed to be narrowed to allow for a contra-flow bike lane heading east, and sharrow markings are added in the westbound direction.





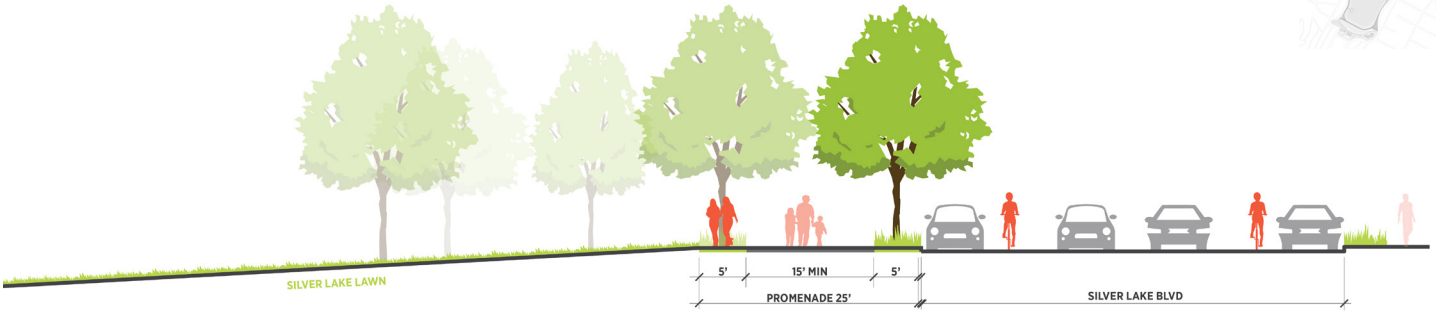


Figure 3-35 Existing & proposed sections through Tesla Ave.
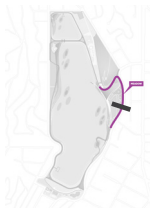
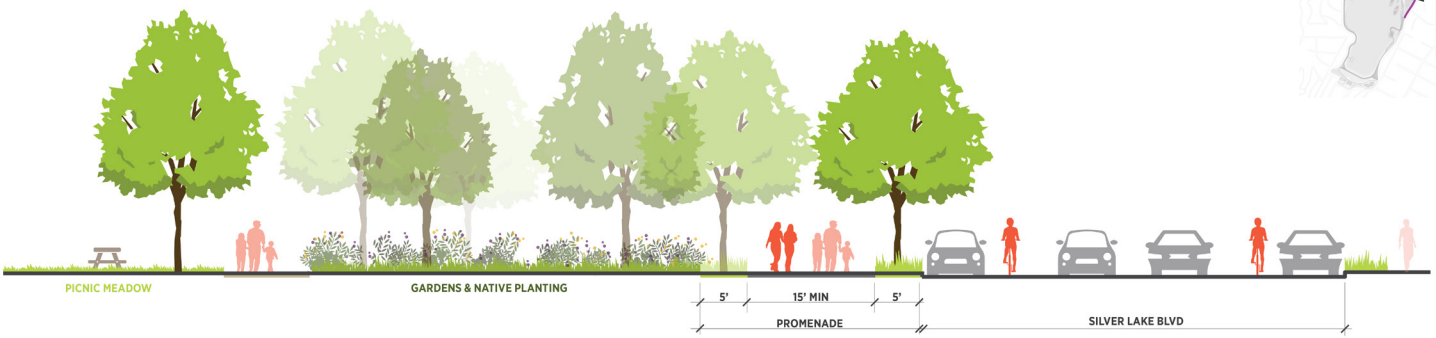
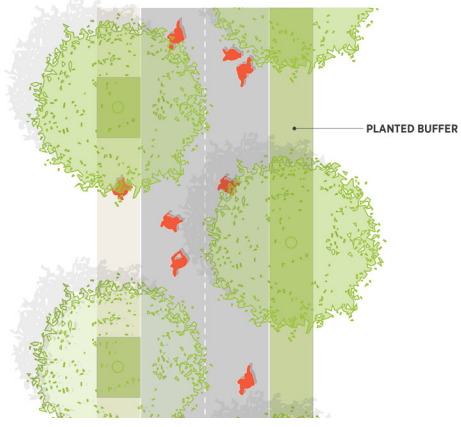
Note: all proposed changes in these studies are conceptual and subject to final DOT approval.

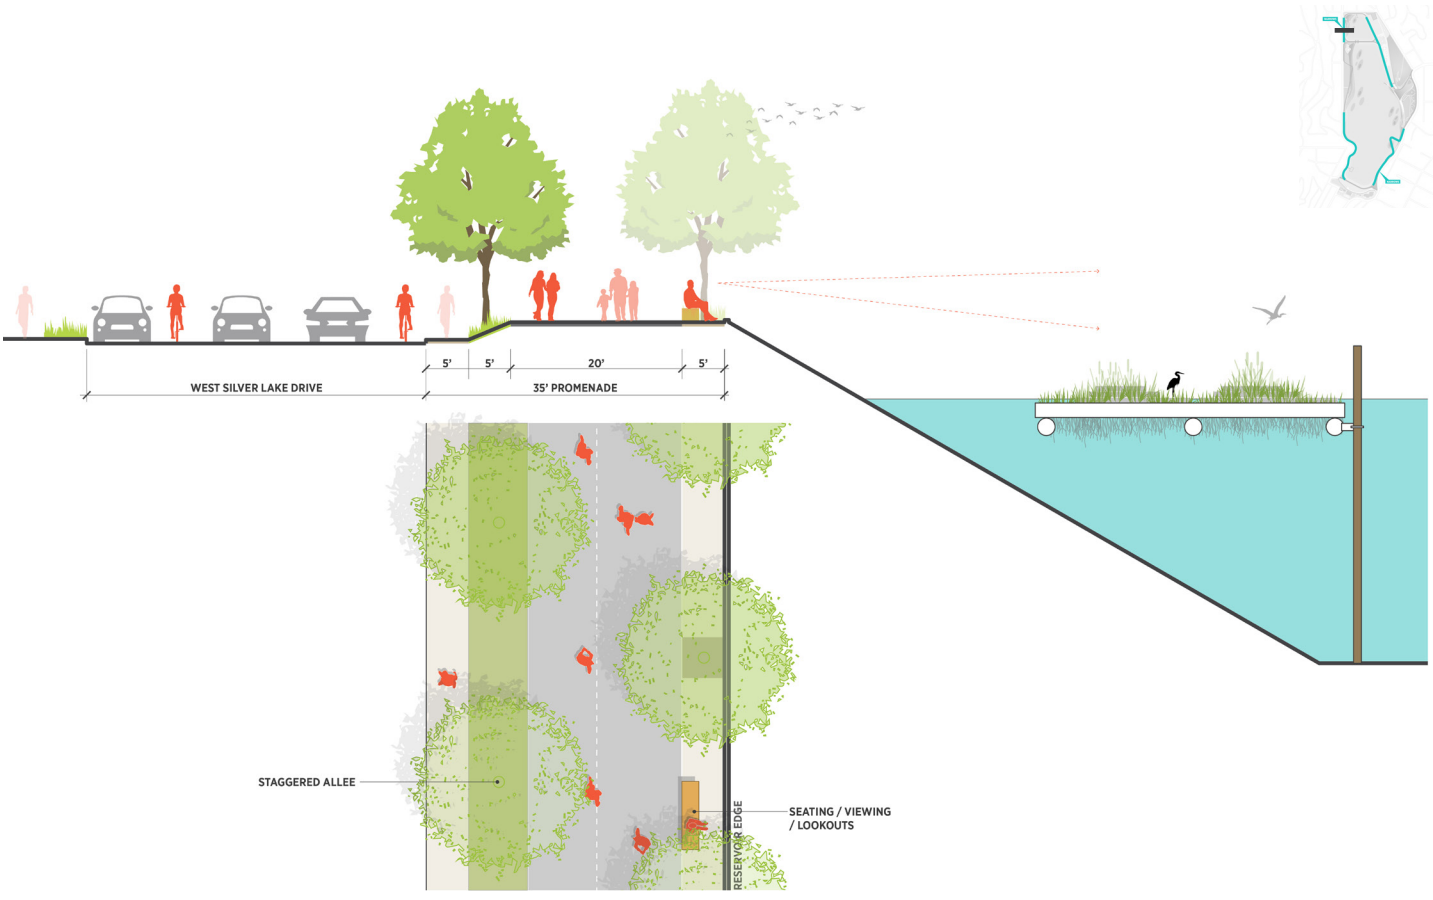


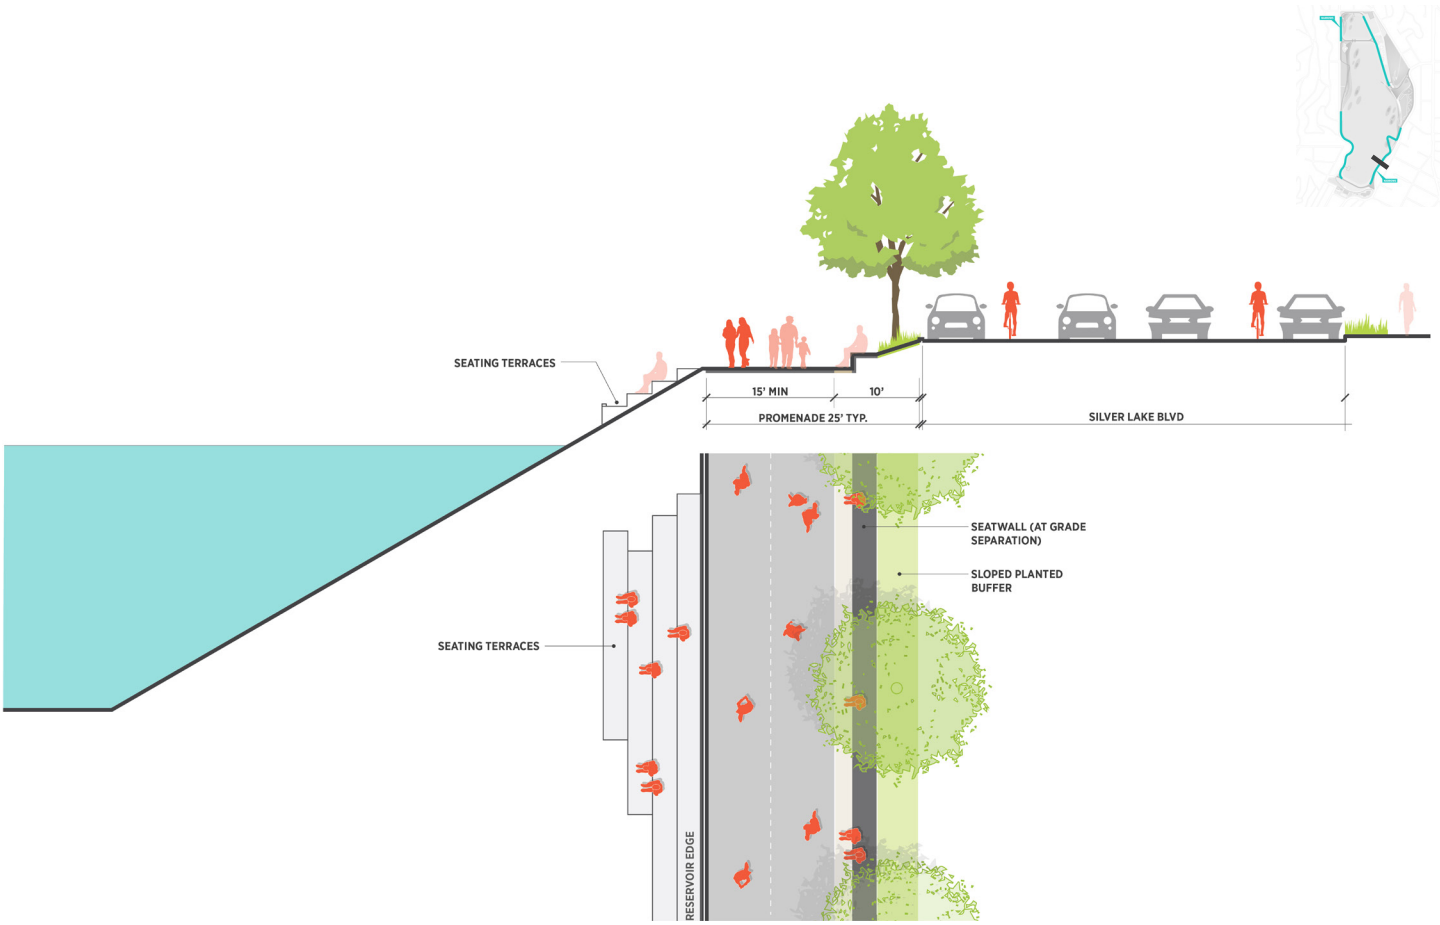
WITHIN THE MEADOW

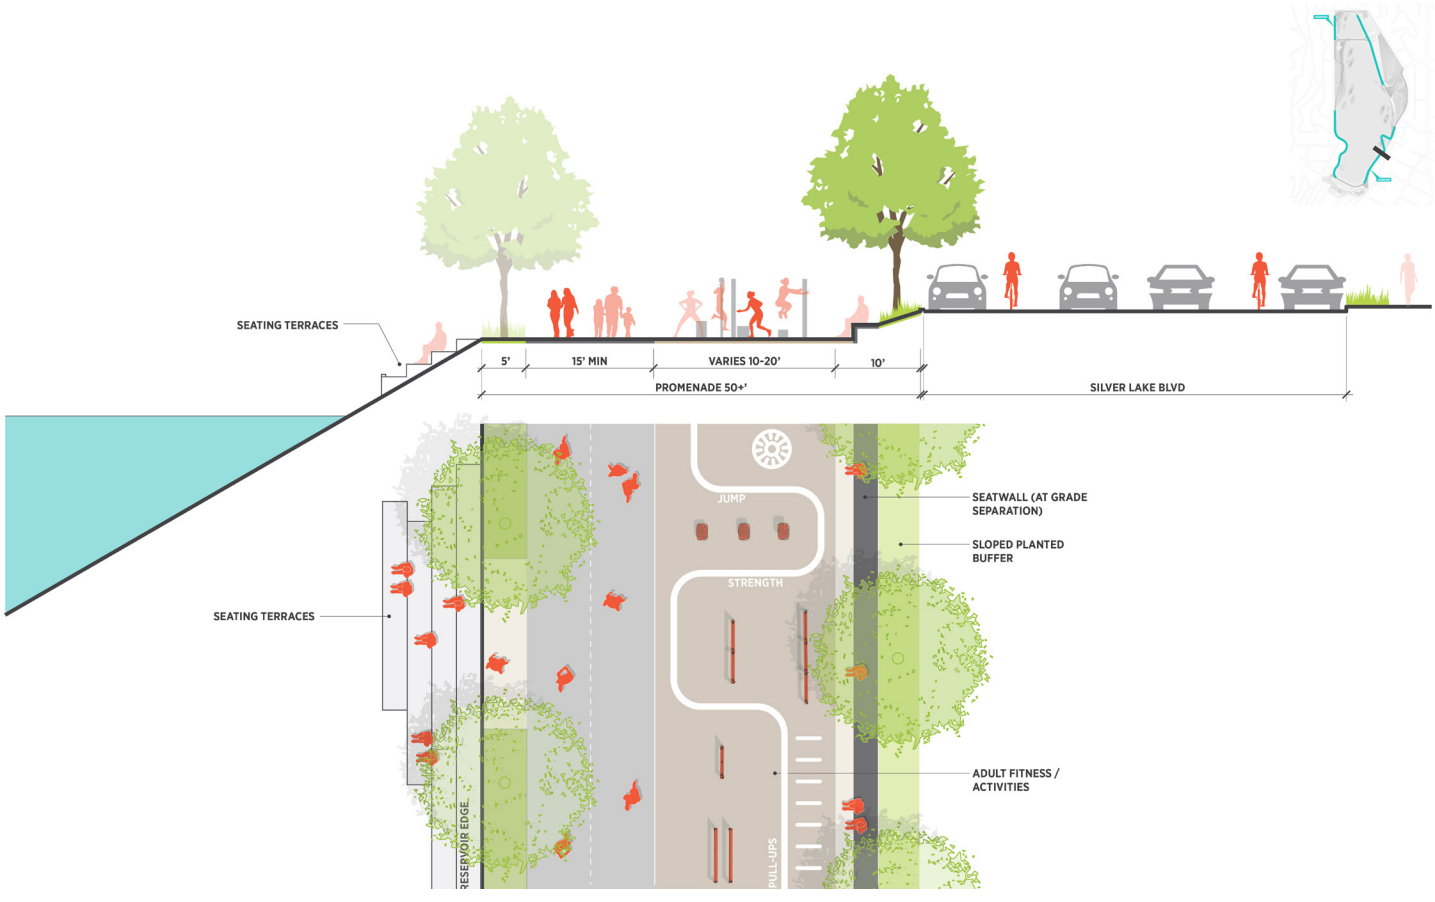


At the Meadow, the Promenade runs along Silver Lake Boulevard before turning west to follow the base of The Knoll. The clear path remains consistent at 15-feet with 5-foot bioswale buffers on either side. An allée of trees planted within the bioswales line both sides of the promenade.









WITHIN THE NARROWS

At the narrowest locations within the site, the Promenade emphasizes inward views of the water and makes space for small overlooks and terraced seating. On the southwest end, a grade change between Silver Lake Boulevard and the reservoir allows for a small seat wall to be integrated acting as a buffer between the Promenade and the road. Where it widens, a small exercise circuit is incorporated. The clear path is 15-feet at its narrowest and 20-feet at its widest in this section.

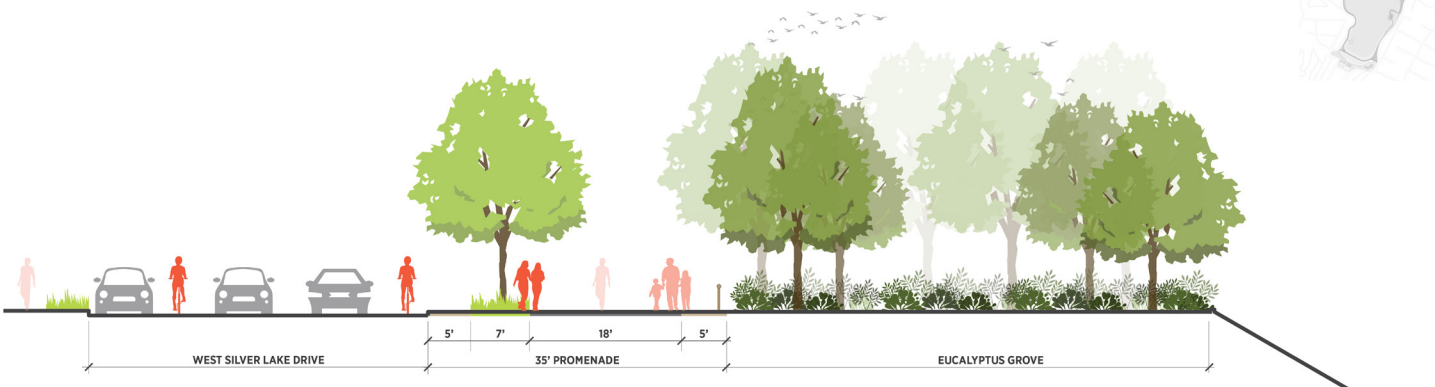
WITHIN THE EUCALYPTUS GROVE



Within the Eucalyptus Grove, the Promenade is designed to have minimal impact on the restored habitat. At the south end of the Eucalyptus Grove, the Promenade leaves the road and follows the embankment edge to an overlook. Here it is 25-feet wide with a seating band which provides a buffer between the Promenade and habitat area. As it returns to the road from the overlook, crossing through the Eucalyptus Grove, it narrows to 15-feet wide with habitat fences on either side to provide maximum protected habitat. At the north end of the Eucalyptus Grove, a 7-foot bioswale planting strip and trees buffer pedestrians from the street.

HCM 6th LOS	B	

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Jairo Avila
1019 Second St., Suite 1
San Fernando, CA 91340

Subject: AB 52 Project Notification and Notice to Request to Consult for the Silver Lake Reservoir Complex Master Plan Project, Los Angeles, California

Dear Mr. Avila:

Pursuant to California Assembly Bill (AB) 52, the City of Los Angeles (City) as Lead Agency, is providing you with notification that the City of Los Angeles Bureau of Engineering (BOE), is proposing to implement the Silver Lake Reservoir Complex (SLRC) Master Plan Project (Project). The proposed Project would redesign the existing 116-acre SLRC site with community park amenities.

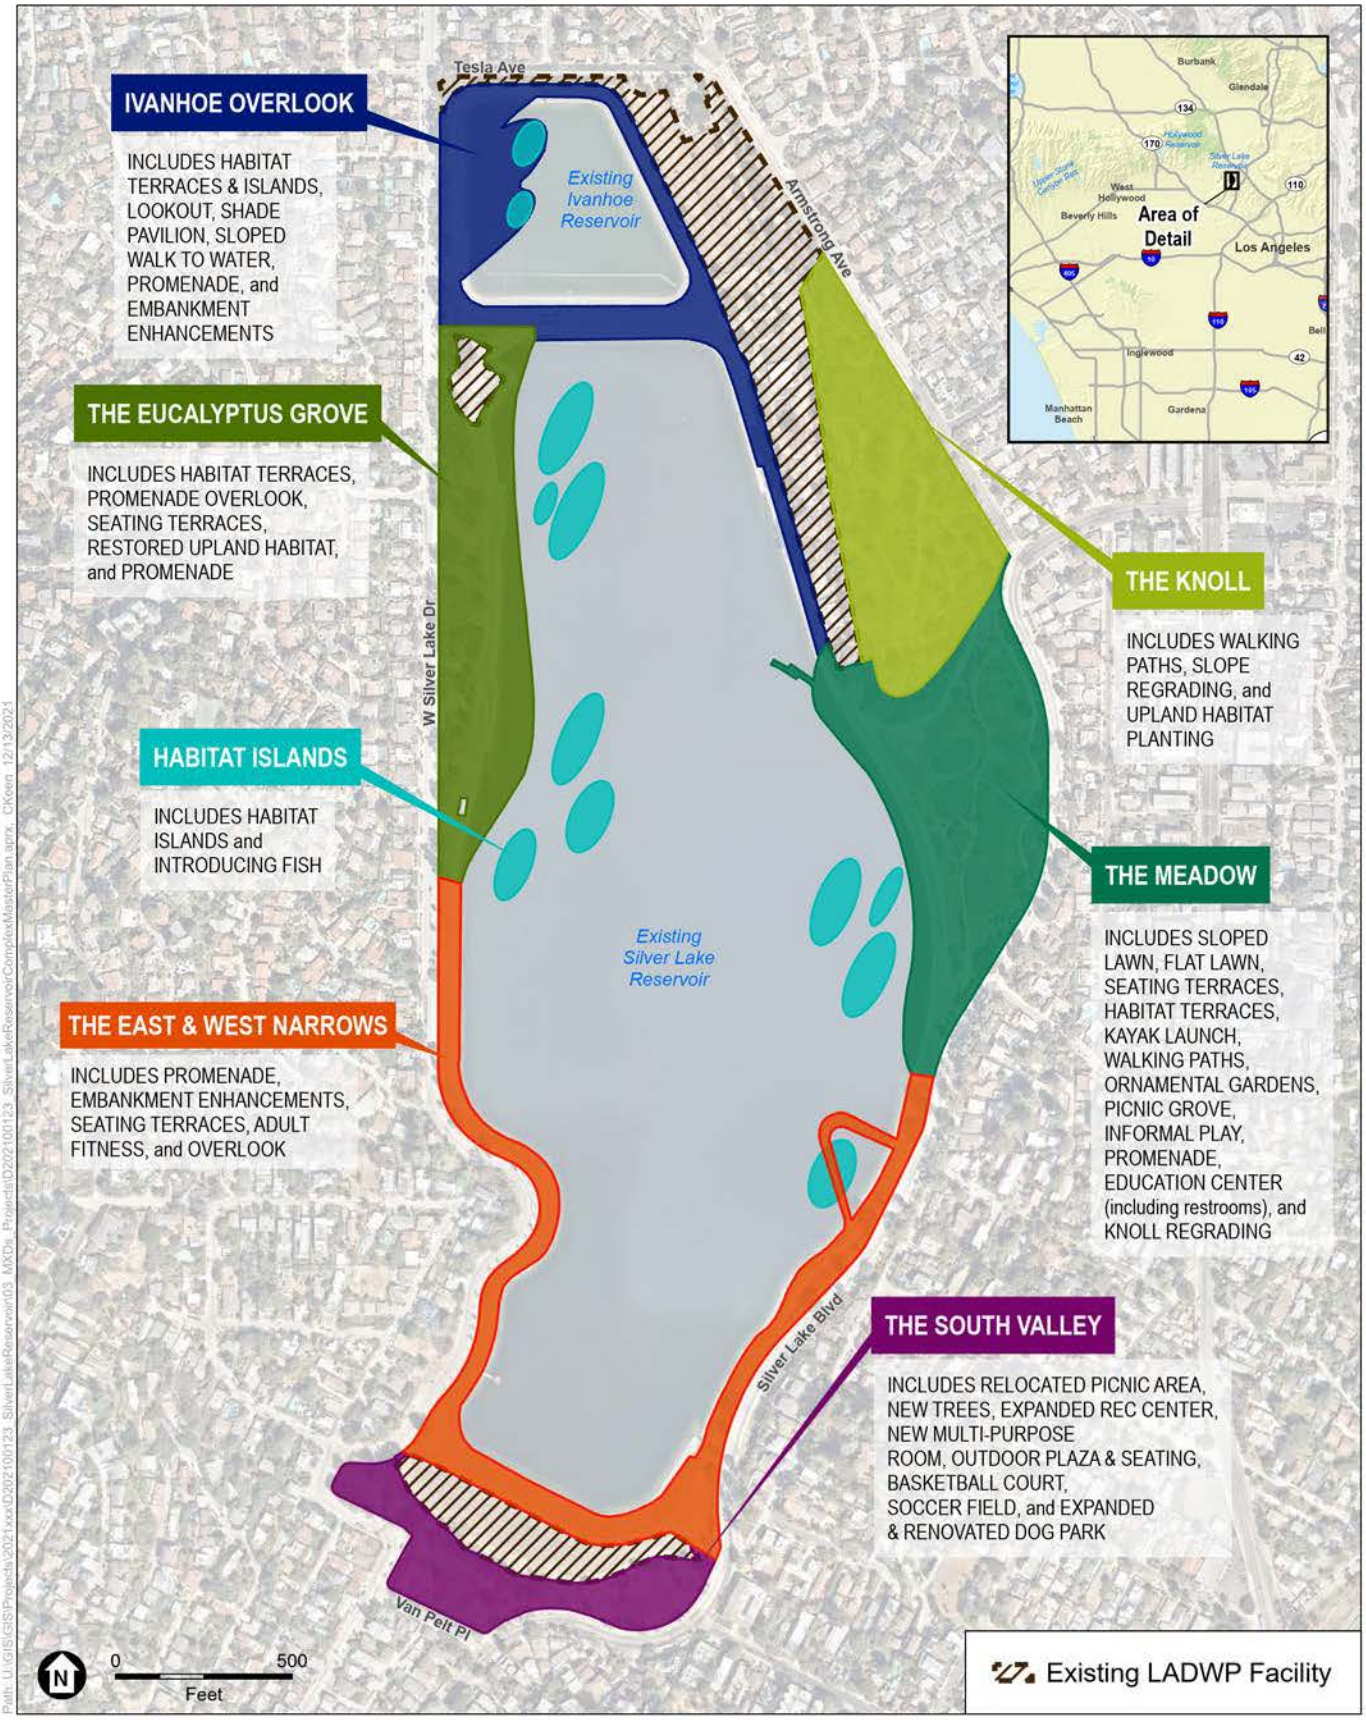
The proposed Project would be located in the Silver Lake neighborhood of the City of Los Angeles which primarily consists of residential uses with some smaller commercial areas and some existing public access in and around the SLRC that allows park uses. The Project area is bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, Van Pelt Place, and Silver Lake Boulevard on the south, and West Silver Lake Drive on the west in the City and County of Los Angeles. The Project would be located within the United States Geological Survey (USGS) Topographic Series, Hollywood California Quadrangle, Section 8, Township 1 South, Range 13 West. (Figures 1 and 2)

The proposed Project consists of a series of spaces (park zones) stitched together by a 2.5-mile, tree-lined promenade. These zones include: the Meadow; the Knoll; Ivanhoe Overlook; Eucalyptus Grove; East and West Narrows; South Valley; and Habitat Islands. The Project would feature two flexible lawns with shade trees, a picnic grove and ornamental gardens with an informal play area, and an environmental education center along the east edge of Silver Lake Reservoir at the base of the Knoll. At the intersection between the lawns and water, stepped seating terraces would navigate to wetland terraces interwoven with small footpaths. Two existing areas of woodland, the Knoll and Eucalyptus Grove would be restored to increase their upland habitat value. A new ecosystem that reintroduces coastal scrub and wetland habitat to

the SLRC in the form of habitat islands and terraces would extend from the shoreline embankments and within the reservoir bodies.

The proposed Project must comply with California Public Resources Code Section 21080.3.1 (AB 52 of 2014), which requires local governments to conduct meaningful consultation with California Native American tribes that have requested to be notified by lead agencies of proposed projects in the geographic area with which the tribe is traditionally and culturally affiliated, and that have responded, in writing, within 30 days of receipt of the notification, and requested consultation. An archaeological assessment for the Project is currently underway and will include a context of the Project site, a cultural resources records search, survey of the Project site, Geoarchaeological study, and land use history.

Consistent with Public Resources Code Section 21080.3.1 (AB 52), your tribe has 30 days from receipt of this formal notice to request consultation on the proposed Project by mailing a written request with your designated lead contact's information attention to the Project Manager at BOE, Wendy Delgado at wendy.delgado@lacity.org or at the following address:



City of Los Angeles Department of Public Works, Bureau of Engineering
c/o ESA- Nicolle Steiner
626 Wilshire Boulevard, Suite 1100
Los Angeles, CA 90017

More information on the proposed Project can also be found on the City website at https://eng.lacity.org/silver-lake-reservoir-complex-master-plan.

Sincerely,

Wendy Delgado.

Andrew Salas
P.O. Box 393
Covina, CA 91723

Subject: AB 52 Project Notification and Notice to Request to Consult for the Silver Lake Reservoir Complex Master Plan Project, Los Angeles, California

Dear Mr. Salas:

Pursuant to California Assembly Bill (AB) 52, the City of Los Angeles (City) as Lead Agency, is providing you with notification that the City of Los Angeles Bureau of Engineering (BOE), is proposing to implement the Silver Lake Reservoir Complex (SLRC) Master Plan Project (Project). The proposed Project would redesign the existing 116-acre SLRC site with community park amenities.

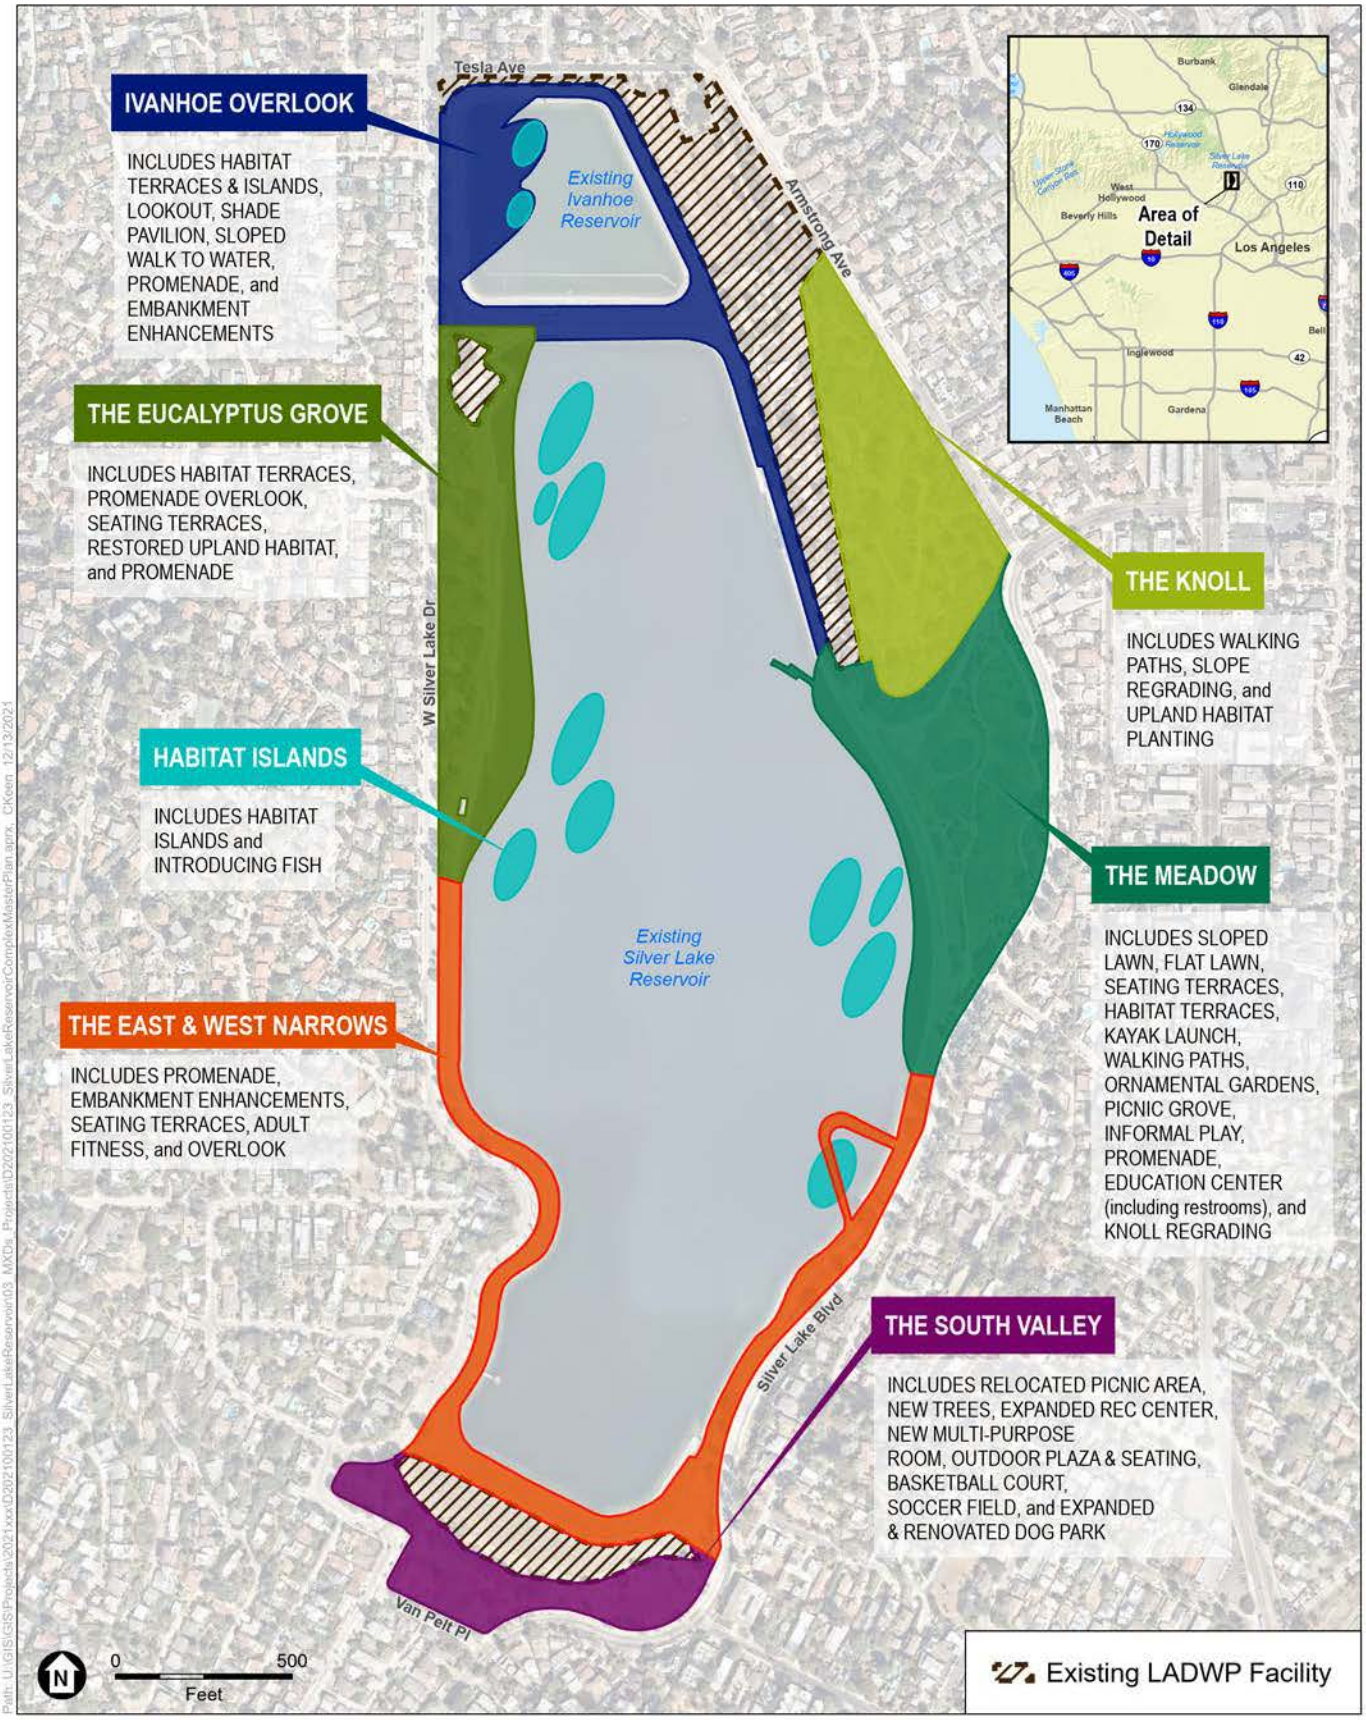
The proposed Project would be located in the Silver Lake neighborhood of the City of Los Angeles which primarily consists of residential uses with some smaller commercial areas and some existing public access in and around the SLRC that allows park uses. The Project area is bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, Van Pelt Place, and Silver Lake Boulevard on the south, and West Silver Lake Drive on the west in the City and County of Los Angeles. The Project would be located within the United States Geological Survey (USGS) Topographic Series, Hollywood California Quadrangle, Section 8, Township 1 South, Range 13 West. (Figures 1 and 2)

The proposed Project consists of a series of spaces (park zones) stitched together by a 2.5-mile, tree-lined promenade. These zones include: the Meadow; the Knoll; Ivanhoe Overlook; Eucalyptus Grove; East and West Narrows; South Valley; and Habitat Islands. The Project would feature two flexible lawns with shade trees, a picnic grove and ornamental gardens with an informal play area, and an environmental education center along the east edge of Silver Lake Reservoir at the base of the Knoll. At the intersection between the lawns and water, stepped seating terraces would navigate to wetland terraces interwoven with small footpaths. Two existing areas of woodland, the Knoll and Eucalyptus Grove would be restored to increase their upland habitat value. A new ecosystem that reintroduces coastal scrub and wetland habitat to

the SLRC in the form of habitat islands and terraces would extend from the shoreline embankments and within the reservoir bodies.

The proposed Project must comply with California Public Resources Code Section 21080.3.1 (AB 52 of 2014), which requires local governments to conduct meaningful consultation with California Native American tribes that have requested to be notified by lead agencies of proposed projects in the geographic area with which the tribe is traditionally and culturally affiliated, and that have responded, in writing, within 30 days of receipt of the notification, and requested consultation. An archaeological assessment for the Project is currently underway and will include a context of the Project site, a cultural resources records search, survey of the Project site, Geoarchaeological study, and land use history.

Consistent with Public Resources Code Section 21080.3.1 (AB 52), your tribe has 30 days from receipt of this formal notice to request consultation on the proposed Project by mailing a written request with your designated lead contact's information attention to the Project Manager at BOE, Wendy Delgado at wendy.delgado@lacity.org or at the following address:



City of Los Angeles Department of Public Works, Bureau of Engineering

106 1/2 Judge John Aiso St., #231
Los Angeles, CA 90012

Subject: AB 52 Project Notification and Notice to Request to Consult for the Silver Lake Reservoir Complex Master Plan Project, Los Angeles, California

Dear Ms. Goad:

Pursuant to California Assembly Bill (AB) 52, the City of Los Angeles (City) as Lead Agency, is providing you with notification that the City of Los Angeles Bureau of Engineering (BOE), is proposing to implement the Silver Lake Reservoir Complex (SLRC) Master Plan Project (Project). The proposed Project would redesign the existing 116-acre SLRC site with community park amenities.

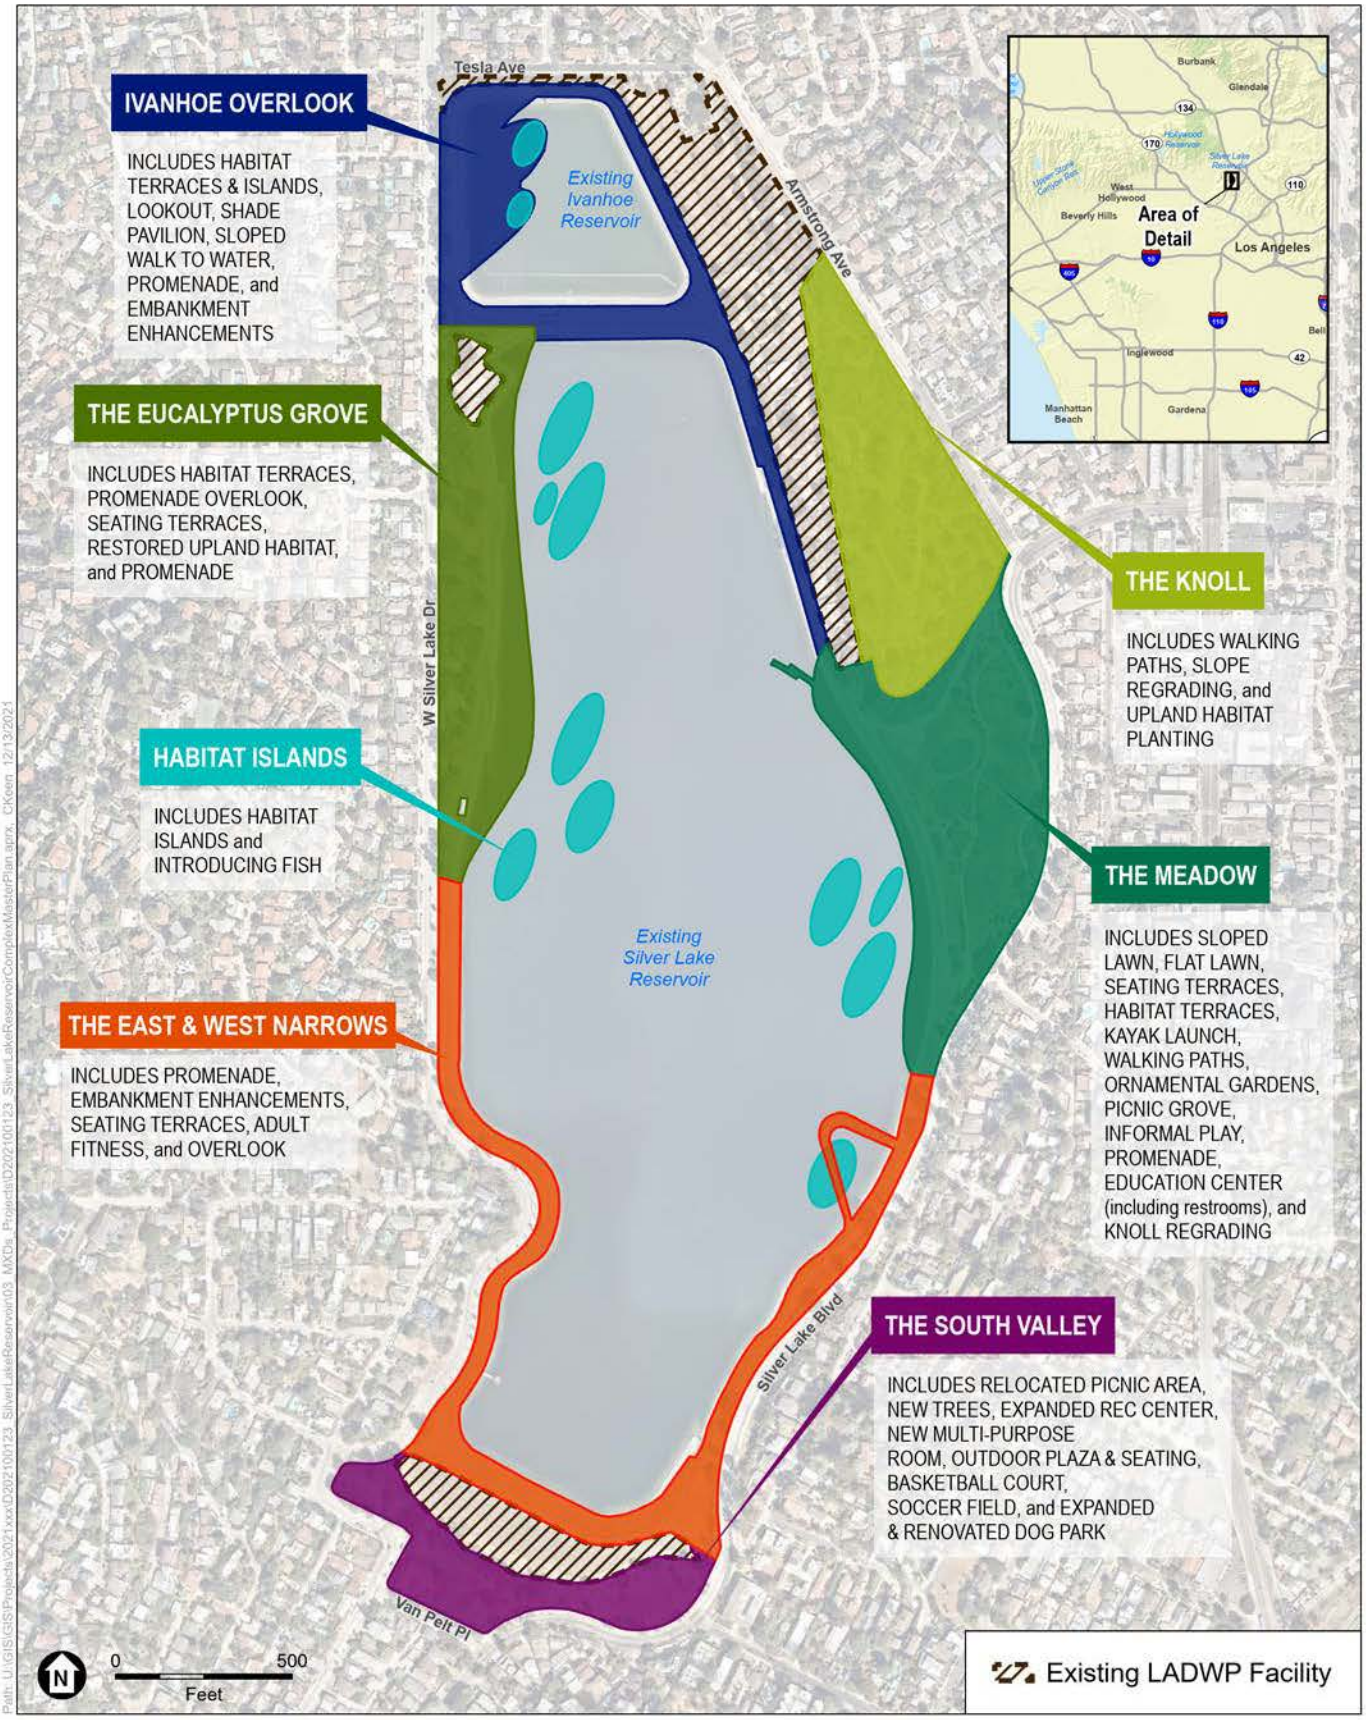
The proposed Project would be located in the Silver Lake neighborhood of the City of Los Angeles which primarily consists of residential uses with some smaller commercial areas and some existing public access in and around the SLRC that allows park uses. The Project area is bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, Van Pelt Place, and Silver Lake Boulevard on the south, and West Silver Lake Drive on the west in the City and County of Los Angeles. The Project would be located within the United States Geological Survey (USGS) Topographic Series, Hollywood California Quadrangle, Section 8, Township 1 South, Range 13 West. (Figures 1 and 2)

The proposed Project consists of a series of spaces (park zones) stitched together by a 2.5-mile, tree-lined promenade. These zones include: the Meadow; the Knoll; Ivanhoe Overlook; Eucalyptus Grove; East and West Narrows; South Valley; and Habitat Islands. The Project would feature two flexible lawns with shade trees, a picnic grove and ornamental gardens with an informal play area, and an environmental education center along the east edge of Silver Lake Reservoir at the base of the Knoll. At the intersection between the lawns and water, stepped seating terraces would navigate to wetland terraces interwoven with small footpaths. Two existing areas of woodland, the Knoll and Eucalyptus Grove would be restored to increase their upland habitat value. A new ecosystem that reintroduces coastal scrub and wetland habitat to

the SLRC in the form of habitat islands and terraces would extend from the shoreline embankments and within the reservoir bodies.

The proposed Project must comply with California Public Resources Code Section 21080.3.1 (AB 52 of 2014), which requires local governments to conduct meaningful consultation with California Native American tribes that have requested to be notified by lead agencies of proposed projects in the geographic area with which the tribe is traditionally and culturally affiliated, and that have responded, in writing, within 30 days of receipt of the notification, and requested consultation. An archaeological assessment for the Project is currently underway and will include a context of the Project site, a cultural resources records search, survey of the Project site, Geoarchaeological study, and land use history.

Consistent with Public Resources Code Section 21080.3.1 (AB 52), your tribe has 30 days from receipt of this formal notice to request consultation on the proposed Project by mailing a written request with your designated lead contact's information attention to the Project Manager at BOE, Wendy Delgado at wendy.delgado@lacity.org or at the following address:



City of Los Angeles Department of Public Works, Bureau of Engineering
c/o ESA- Nicolle Steiner
626 Wilshire Boulevard, Suite 1100
Los Angeles, CA 90017

More information on the proposed Project can also be found on the City website at https://eng.lacity.org/silver-lake-reservoir-complex-master-plan.

Sincerely,

Wendy Delgado.

Subject: AB 52 Project Notification and Notice to Request to Consult for the Silver Lake Reservoir Complex Master Plan Project, Los Angeles, California

Dear Mr. Alvarez:

Pursuant to California Assembly Bill (AB) 52, the City of Los Angeles (City) as Lead Agency, is providing you with notification that the City of Los Angeles Bureau of Engineering (BOE), is proposing to implement the Silver Lake Reservoir Complex (SLRC) Master Plan Project (Project). The proposed Project would redesign the existing 116-acre SLRC site with community park amenities.

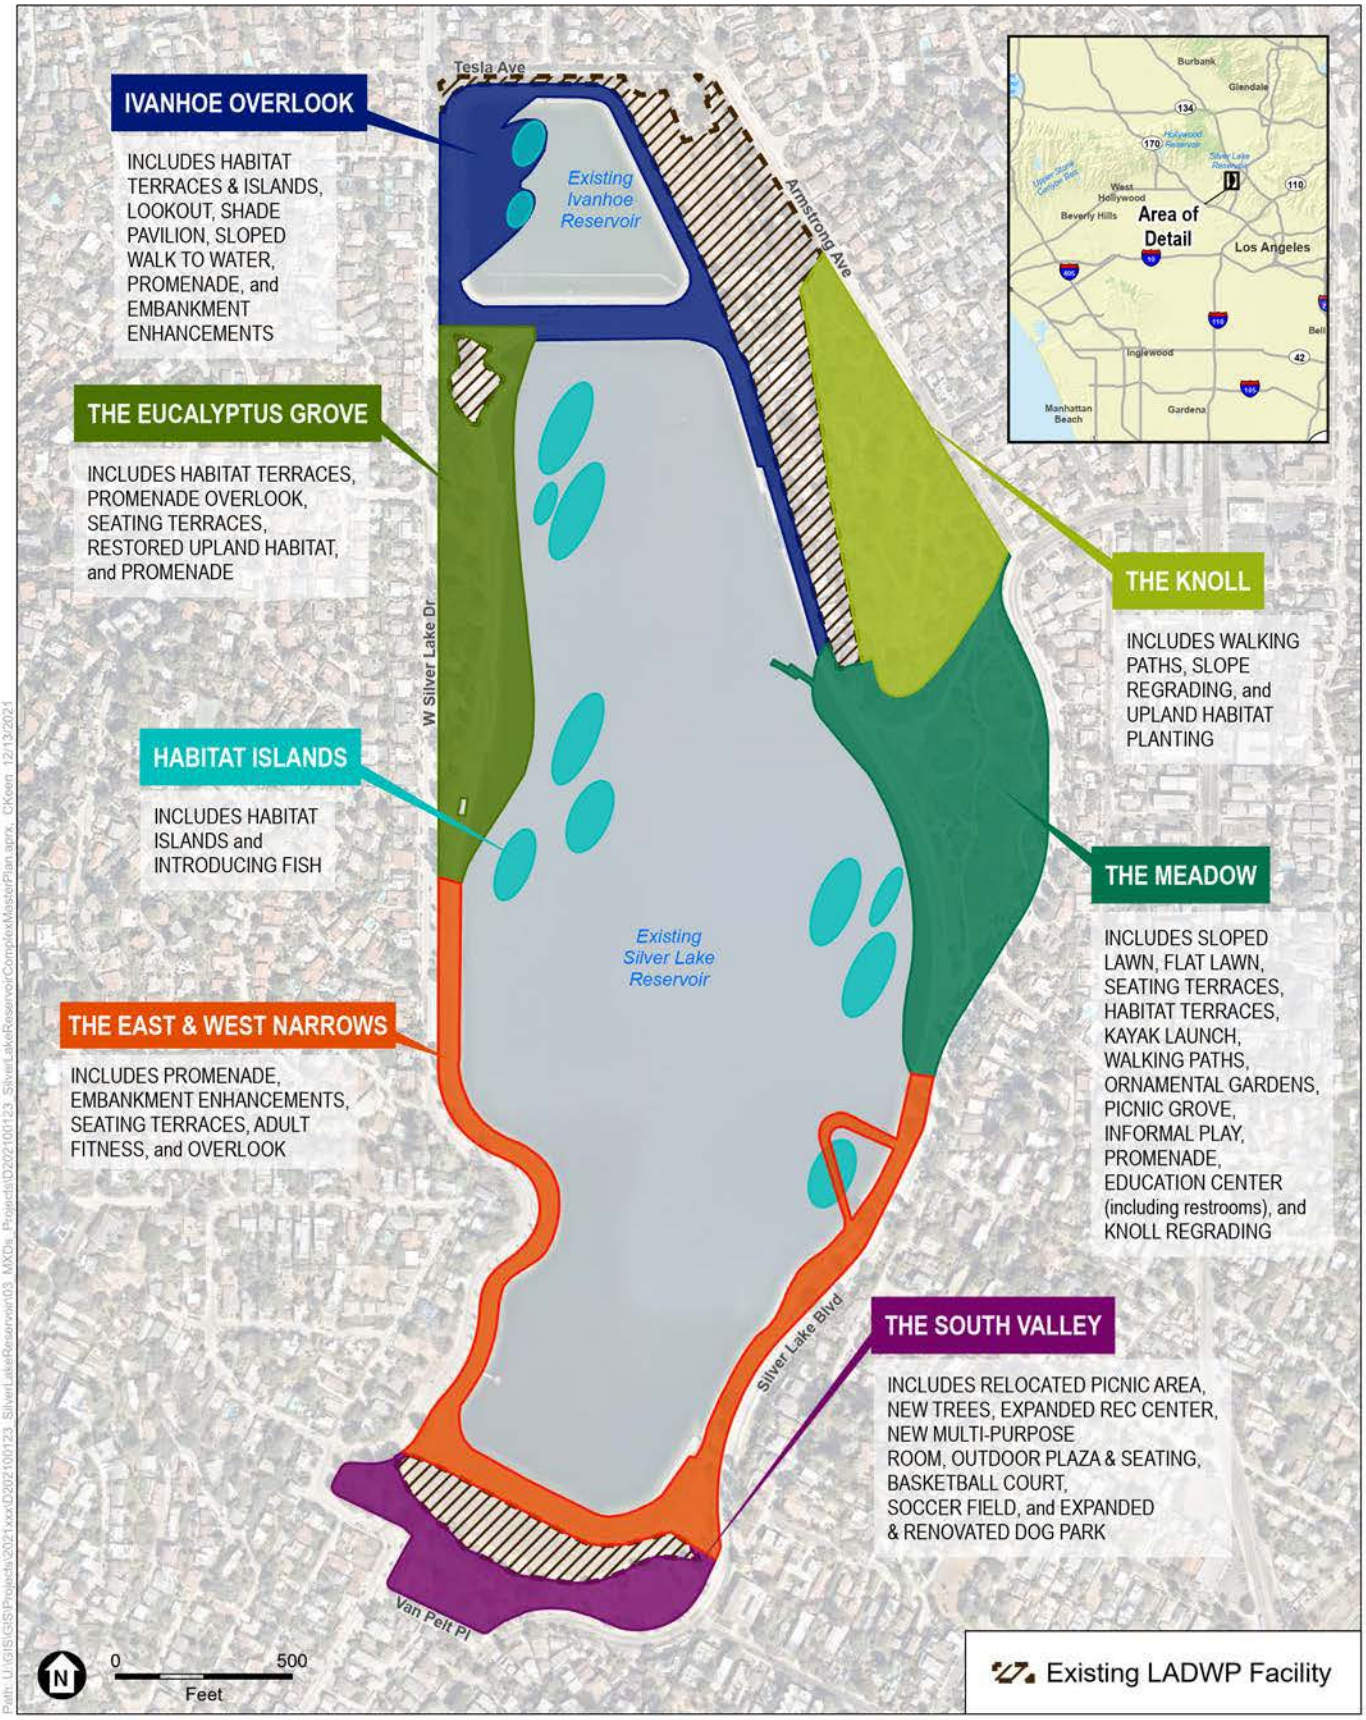
The proposed Project would be located in the Silver Lake neighborhood of the City of Los Angeles which primarily consists of residential uses with some smaller commercial areas and some existing public access in and around the SLRC that allows park uses. The Project area is bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, Van Pelt Place, and Silver Lake Boulevard on the south, and West Silver Lake Drive on the west in the City and County of Los Angeles. The Project would be located within the United States Geological Survey (USGS) Topographic Series, Hollywood California Quadrangle, Section 8, Township 1 South, Range 13 West. (Figures 1 and 2)

The proposed Project consists of a series of spaces (park zones) stitched together by a 2.5-mile, tree-lined promenade. These zones include: the Meadow; the Knoll; Ivanhoe Overlook; Eucalyptus Grove; East and West Narrows; South Valley; and Habitat Islands. The Project would feature two flexible lawns with shade trees, a picnic grove and ornamental gardens with an informal play area, and an environmental education center along the east edge of Silver Lake Reservoir at the base of the Knoll. At the intersection between the lawns and water, stepped seating terraces would navigate to wetland terraces interwoven with small footpaths. Two existing areas of woodland, the Knoll and Eucalyptus Grove would be restored to increase their upland habitat value. A new ecosystem that reintroduces coastal scrub and wetland habitat to

the SLRC in the form of habitat islands and terraces would extend from the shoreline embankments and within the reservoir bodies.

The proposed Project must comply with California Public Resources Code Section 21080.3.1 (AB 52 of 2014), which requires local governments to conduct meaningful consultation with California Native American tribes that have requested to be notified by lead agencies of proposed projects in the geographic area with which the tribe is traditionally and culturally affiliated, and that have responded, in writing, within 30 days of receipt of the notification, and requested consultation. An archaeological assessment for the Project is currently underway and will include a context of the Project site, a cultural resources records search, survey of the Project site, Geoarchaeological study, and land use history.

Consistent with Public Resources Code Section 21080.3.1 (AB 52), your tribe has 30 days from receipt of this formal notice to request consultation on the proposed Project by mailing a written request with your designated lead contact's information attention to the Project Manager at BOE, Wendy Delgado at wendy.delgado@lacity.org or at the following address:



City of Los Angeles Department of Public Works, Bureau of Engineering

Re: Silver Lake Reservoir Complex Master Plan Project, Los Angeles County

Dear Ms. Dietler:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Gabrieleno Band of Mission Indians – Kizh Nation on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

CONFIDENTIAL- AB52 TRIBAL CONSULTATION

September 19, 2022

Christina Conley, Cultural Resource Administrator
Gabrielino Tongva Indians of California Tribal Council
P.O. Box 941078
Simi Valley, CA 93094

ASSEMBLY BILL 52 —CONSULTATION FOR THE PROPOSED SILVER LAKE RESERVOIR COMPLEX MASTER PLAN PROJECT

Pursuant to the provisions of Assembly Bill 52 (AB 52) and PRC § 21080.3.1 (b), as the lead agency under the California Environmental Quality Act (CEQA), the City of Los Angeles Bureau of Engineering (BOE) sent a letter formally requesting to consult on the CEQA review of the proposed Silver Lake Reservoir Complex Master Plan Project with the Gabrielino Tongva Indians of California Tribal Council on December 13, 2021.

Thank you for your consultation on this project. BOE provided Gabrielino Tongva Indians of California Tribal Council with the proposed Tribal Cultural Resources Mitigation Measure (MM-TCR-1) as well as additional historic disturbance information for the Project on July 13, 2022.

This letter is to inform Gabrielino Tongva Indians of California Tribal Council that the mitigation measures previously provided have been revised due to continued consultation with other tribes involved. Please see Attachment 1 for the revised mitigation measure (MM-TCR-1).

As we have not received further comments on this information and mitigation measure, this letter is to notify Gabrielino Tongva Indians of California Tribal Council that the BOE is formally closing the period of consultation, prior to the release of the Draft Environmental Impact Report (EIR). Project construction is estimated to start in 2025 but may commence at a later date.

We have appreciated your input on this project and look forward to continuing to build upon our relationship with the Gabrielino Tongva Indians of California Tribal Council. The Gabrielino Tongva Indians of California Tribal Council will receive a Notice of Availability of the Draft EIR in the mail notifying Gabrielino Tongva Indians of California Tribal Council of the public review and comment period, public meeting, and reviewing locations.

Sincerely,

Chris Adams

Attachment 1

MM-TCR-1: Native American Monitoring. Prior to the commencement of any ground disturbing activity at the project site, the City shall reach out to retain a Native American Monitor from both the Gabrieleno Band of Mission Indians-Kizh Nation and the Gabrielino Tongva Indians of California Tribal Council to provide a Native American monitor. Should neither Tribe be available to monitor during ground disturbance, work may continue but should Tribal Cultural Resources be encountered work will stop and both Tribes will be immediately notified. The Tribal monitors will only be present on-site during the construction phases that involve ground-disturbing activity in areas of quaternary alluvium within the Knoll, and will not be necessary in portions of the Knoll where the Puente Sandstone bedrock formation is present either at depth or at the surface. In addition, any ground disturbance required in the Eucalyptus Grove will be subject to Tribal monitoring. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing, or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching within the areas above. The on-site Tribal monitoring shall end when all ground-disturbing activities within the Knoll and the Eucalyptus Grove are completed, or when

the Tribal representatives and Tribal Monitors have indicated that the project site has little to no potential for impacting Tribal Cultural Resources.,

In the event that cultural resources of Native American origin are identified during construction, the City will coordinate with the qualified archaeologist (who meets the Secretary of the Interior's Professional Qualifications Standards), and both tribes that participated in consultation. If the City, in consultation with the Gabrieleno Band of Mission Indians-Kizh Nation and the Gabrielino Tongva Indians of California Tribal Council, determines that the resource is a Tribal Cultural Resource and thus significant under CEQA, a treatment plan shall be prepared and implemented in accordance with state guidelines and in consultation with the two Native American tribes. The treatment plan may include, but would not be limited to, avoidance, capping in place, excavation and removal of the resource, interpretive displays, sensitive area signage, or other mutually agreed upon measure.

CONFIDENTIAL- AB52 TRIBAL CONSULTATION

September 20, 2022

Andrew Salas, Chairperson
Gabrieleño Band of Mission Indians – Kizh Nation
P.O. Box 393
Covina, CA 91723

ASSEMBLY BILL 52 —CONSULTATION FOR THE PROPOSED SILVER LAKE RESERVOIR COMPLEX MASTER PLAN PROJECT

Pursuant to the provisions of Assembly Bill 52 (AB 52) and PRC § 21080.3.1 (b), as the lead agency under the California Environmental Quality Act (CEQA), the City of Los Angeles Bureau of Engineering (BOE) sent a letter formally requesting to consult on the CEQA review of the proposed Silver Lake Reservoir Complex Master Plan Project with the Gabrieleño Band of Mission Indians – Kizh Nation on December 13, 2021.

Thank you for your consultation on this project. BOE provided Gabrieleño Band of Mission Indians – Kizh Nation with proposed Tribal Cultural Resources Mitigation Measures as well as additional historic disturbance information for the Project on May 31, 2022. On August 23, 2022 BOE met with the Kizh Nation again to address concerns about the original proposed mitigation measures. Based on the feedback we received at this second meeting, BOE has amended the original mitigation measures to a final form labeled MM-TCR-1 (attached). Thus, BOE is formally closing the period of consultation, prior to the release of the Draft Environmental Impact Report (EIR). We anticipate construction on the project to start in 2025.

We have appreciated your input on this project and look forward to continuing to build upon our relationship with the Gabrieleño Band of Mission Indians – Kizh Nation. The Tribe will receive a Notice of Availability of the Draft EIR in the mail notifying Gabrieleño Band of Mission Indians – Kizh Nation of the public review and comment period, public meeting, and reviewing locations.

Sincerely,

Chris Adams

The Tribal monitors will only be present on-site during the construction phases that involve ground-disturbing activity in areas of quaternary alluvium within the Knoll, and will not be necessary in portions of the Knoll where the Puente Sandstone bedrock formation is present either at depth or at the surface. In addition, any ground disturbance required in the Eucalyptus Grove will be subject to Tribal monitoring. Ground disturbing activities are defined by the Tribe as activities that may include, but are not limited to, pavement removal, potholing, or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching within the areas above. The on-site Tribal monitoring shall end when all ground-disturbing activities within the Knoll and the Eucalyptus Grove are completed, or when the Tribal representatives and Tribal Monitors have indicated that the project site has little to no potential for impacting Tribal Cultural Resources.,

In the event that cultural resources of Native American origin are identified during construction, the City will coordinate with the qualified archaeologist (who meets the Secretary of the Interior's Professional Qualifications Standards), and both trl.ibes that participated in consultation. If the City, in consultation with the Gabrieleno Band of Mission Indians-Kizh Nation and the Gabrielino Tongva Indians of California Tribal Council, determines that the resource is a Tribal Cultural Resource and thus significant under CEQA, a treatment plan shall be prepared and implemented in accordance with

state guidelines and in consultation with the two Native American tribes. The treatment plan may include, but would not be limited to, avoidance, capping in place, excavation and removal of the resource, interpretive displays, sensitive area signage, or other mutually agreed upon measure.
