1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	2.60	Acre	2.60	110,270.00	0
City Park	0.32	Acre	0.32	16,730.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	12			**Operational Year**	2028
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	691.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

SLRC - Eucalyptus + Ivanhoe Overlook
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)
k =	particle size multiplier
sL =	road surface silt loading (g/m^2)
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period
N =	the number of days in the annual averaging period (default = 365)

weighted average silt loading factor used

Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County

Emission Factor (grams per VMT)	PM10	PM2.5
k	1.0000	0.1500
sL	0.03892	0.03892
W	2.4	2.4
P	46	46
N	365	365
$EF_{Dust,P}$	0.1233	0.0185

Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9

Unpaved Road Dust Emission Factors (Assumes No Precipitation

0

Formula: $EF_{Dust,U} = (k\ (\ s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - Habitat Islands
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - The Knoll + Meadow (1st Half)
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - Meadow (2nd Half)
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

Emission Factor (grams per VMT)	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - Restriping + Sidewalk Construction
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	31.48	Acre	31.48	1,383,248.00	0
Other Asphalt Surfaces	11.50	Acre	11.50	489,492.00	0
Library	3.76	1000sqft	0.09	3,760.00	0
Racquet Club	5.80	1000sqft	0.13	5,800.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	12			**Operational Year**	2030
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	469.86	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor linearly adjusted to account for SB100 RPS by year 2030.

Land Use - see operational assumptions

Construction Phase -

Vehicle Trips - operational mobile emissions calculated outside of CalEEMod.

Energy Use - Parking lot lighting used to account for lighting in City Park and Other Asphalt Surface uses.

Waste Mitigation - City of Los Angeles, Bureau of Sanitation, Zero Waste Progress Report, (2013). Citywide 76% MSW diversion.

SLRC Operations - South Coast Air Basin, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	31.48	Acre	31.48	1,383,248.00	0
Other Asphalt Surfaces	11.50	Acre	11.50	489,492.00	0
Library	3.76	1000sqft	0.09	3,760.00	0
Racquet Club	5.80	1000sqft	0.13	5,800.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	12			**Operational Year**	2030
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	469.86	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor linearly adjusted to account for SB100 RPS by year 2030.

Land Use - see operational assumptions

Construction Phase -

Vehicle Trips - operational mobile emissions calculated outside of CalEEMod.

Energy Use - Parking lot lighting used to account for lighting in City Park and Other Asphalt Surface uses.

Waste Mitigation - City of Los Angeles, Bureau of Sanitation, Zero Waste Progress Report, (2013). Citywide 76% MSW diversion.

SLRC Operations - South Coast Air Basin, Winter

Sources:

Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod). Adjusted to RPS of year 2022.

Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. “Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

SLRC - Eucalyptus + Ivanhoe Overlook
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)
k =	particle size multiplier
sL =	road surface silt loading (g/m^2)
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period
N =	the number of days in the annual averaging period (default = 365)

weighted average silt loading factor used

Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County

Emission Factor (grams per VMT)	PM10	PM2.5
k	1.0000	0.1500
sL	0.03892	0.03892
W	2.4	2.4
P	46	46
N	365	365
$EF_{Dust,P}$	0.1233	0.0185

Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9

Unpaved Road Dust Emission Factors (Assumes No Precipitation

0

Formula: $EF_{Dust,U} = (k\ (\ s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - Habitat Islands
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - The Knoll + Meadow (1st Half)
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC-East&West Narrows
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - Ivanhoe Spillway
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - South Valley
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - Meadow (2nd Half)
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

Emission Factor (grams per VMT)	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

SLRC - Restriping + Sidewalk Construction
Road Dust

Paved Road Dust Emission Factors

County_Air District: Los Angeles SC UPDATE ME

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02}) \times (1-P/4N)$

Where:

$EF_{Dust,P}$ =	Paved Road Dust Emission Factor (having the same units as k)	
k =	particle size multiplier	
sL =	road surface silt loading (g/m^2)	weighted average silt loading factor used
W =	average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)	
P =	number of "wet" days, when at least one site per county received at least 0.01 inch of precipitation during the annual averaging period	Table 5 of CARB Miscellaneous Process Methodology 7.9 for Los Angeles County
N =	the number of days in the annual averaging period (default = 365)	

	Emission Factor (grams per VMT)		
	PM10	PM2.5	
k	1.0000	0.1500	
sL	0.03892	0.03892	
W	2.4	2.4	
P	46	46	Autoupdates for the appropriate County using Table 5 CARB Miscellaneous Process Methodology 7.9
N	365	365	
$EF_{Dust,P}$	0.1233	0.0185	

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

Emission Factor (grams per VMT)		
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

Total Parking Spaces

Land Use Type	Number of EVSE Charging Spaces	Average Charge (kWh/day) [a]	Days/Year	Electricity Demand (kWh/yr)	Electricity Demand (MWh/yr)
Total	**2**	**4.4**	**365**	3,212	3.21

Notes:

a. Estimated based on reference sources listed below.

b. Project would install EV charging spaces for 2 spaces for immediate use

c. Project would install pre-wiring for EV charging spaces for 30 percent of its parking capacity for future use (so 20% in addition to the immediate use).

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	31.48	Acre	31.48	1,383,248.00	0
Other Asphalt Surfaces	11.50	Acre	11.50	489,492.00	0
Library	3.76	1000sqft	0.09	3,760.00	0
Racquet Club	5.80	1000sqft	0.13	5,800.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	12			**Operational Year**	2030
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	469.86	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor linearly adjusted to account for SB100 RPS by year 2030.

Land Use - see operational assumptions

Construction Phase -

Vehicle Trips - operational mobile emissions calculated outside of CalEEMod.

Energy Use - Parking lot lighting used to account for lighting in City Park and Other Asphalt Surface uses.

Waste Mitigation - City of Los Angeles, Bureau of Sanitation, Zero Waste Progress Report, (2013). Citywide 76% MSW diversion.

SLRC Operations - South Coast Air Basin, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	31.48	Acre	31.48	1,383,248.00	0
Other Asphalt Surfaces	11.50	Acre	11.50	489,492.00	0
Library	3.76	1000sqft	0.09	3,760.00	0
Racquet Club	5.80	1000sqft	0.13	5,800.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	12			**Operational Year**	2030
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	693.04	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor linearly adjusted for year 2030 consistent with CARB’s Scoping Plan Statewide NAT forecast for the AB 32.

Land Use - see operational assumptions

Construction Phase -

Vehicle Trips - operational mobile emissions calculated outside of CalEEMod.

Energy Use - Parking lot lighting used to account for lighting in City Park and Other Asphalt Surface uses.

Waste Mitigation - City of Los Angeles, Bureau of Sanitation, Zero Waste Progress Report, (2013). Citywide 76% MSW diversion.

SLRC Operations - South Coast Air Basin, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

TABLE OF CONTENTS

Silver Lake Reservoir Complex Master Plan Project, Los Angeles, California Biological Technical Report

Executive Summary **ES-1**
- Project Summary ES-1
- Methodology ES-1
- Results ES-2

Chapter 1, Introduction **1**
- 1.1 Project Overview 1
- 1.2 Regional Setting 5
- 1.3 Local Setting 5

Chapter 2, Methodology **7**
- 2.1 Existing Literature and Database Review 7
- 2.2 Field Surveys 8

Chapter 3, Regulatory Framework **11**
- 3.1 Federal 11
- 3.2 State 12
- 3.3 Regional 15
- 3.4 Local 15

Chapter 4, Existing Conditions **19**
- 4.1 Topography and Watersheds 19
- 4.2 Soils 19
- 4.3 Natural Communities and Land Cover Types 20
- 4.4 General Plant Inventory 24
- 4.5 General Wildlife Species 24
- 4.6 Sensitive Biological Resources 25
- 4.7 Aquatic Resources 32
- 4.8 Wildlife Movement 33
- 4.9 Protected Trees 33

Chapter 5, Project Impacts and Avoidance, Minimization, and Mitigation **47**
- 5.1 Approach to the Analysis 47
- 5.2 Thresholds of Significance 48
- 5.3 Project Design Features 49
- 5.4 Analysis of Potential Project Impacts 51

Chapter 6, References Cited **65**

EXECUTIVE SUMMARY

Environmental Science Associates (ESA) has prepared this Biological Technical Report (BTR) for the City of Los Angeles (City) in support of the Silver Lake Reservoir Complex Master Plan Project (Project). The purpose of this BTR is to provide an inventory of biological resources occurring or potentially occurring within the Project area and to evaluate the relationship of those biological resources to the Project's construction and operational activities. This BTR describes the methodology of the study, existing conditions, potential impacts, and recommendations for avoidance, minimization, and mitigation.

Project Summary

The proposed Project would redesign approximately 116 acres of the 127-acre Silver Lake Reservoir Complex (SLRC) with community park amenities that would include a contemporary design of park zones with hybrid infrastructure that blends vegetated areas with public spaces. The proposed Project would be designed to enhance the visual and recreational quality of the area to be consistent with goals and objectives of the Silver Lake–Echo Park–Elysian Valley Community Plan and provide the opportunity for the public to connect with nature.

The proposed Project design includes areas with increased habitat values to support a diverse array of birds, fish, amphibians, invertebrates, and other aquatic species. To provide this biodiversity, the Project design will create new habitat for a total 23 acres of native vegetated areas. These proposed created native habitat areas will consist of 12 acres of upland vegetation (including trees), 5 acres of new transition (coastal scrub), and 6 acres of new wetland habitat.

Methodology

This BTR analyzes an approximately 274.65-acre biological study area (BSA) that includes the proposed approximately 116-acre Project footprint plus a 500-foot perimeter buffer. This BTR includes a review of existing literature, previous field studies, and field surveys with particular focus on areas within the BSA with the highest likelihood of supporting biological resources. Field surveys including vegetation mapping, habitat suitability assessments, and tree surveys. Protected tree surveys were conducted by certified arborists. Surveys were conducted by walking the entire Project site and recording all trees (native) with a trunk diameter of 4 inches or greater. Trees with the potential to be regulated by the City Bureau of Street Services (BSS) and the Department of Recreation and Parks (RAP) were also recorded. Additionally, noise analysis data used in this BTR was derived from the standalone report Noise and Vibration Technical Appendix.

No focused surveys for special-status species were conducted during these field surveys. The determination of the potential for special-status plant and wildlife species to occur within the BSA was based on observations of vegetation and habitat quality, topography, elevation, soils, surrounding land uses, habitat preference, geographic ranges, a review of databases with existing biological resources information, and previous biological reports for assessments conducted within the BSA.

Results

The primary land cover of the BSA is developed, consisting of residential development with no or very little habitat values. However, some areas within the BSA contain vegetation communities that provide suitable habitat for flora and fauna, including special-status plant and wildlife species. These vegetated areas contain naturalized habitats including non-native dominated semi-natural woodlands and ornamental landscapes. Native shrubs and trees commonly detected in these habitats were present and primarily consisted of Southern California black walnut (*Juglans californica*) and coast live oak (*Quercus agrifolia*). General wildlife observed or detected during the habitat assessment primarily include species that are adapted to urbanized environments.

One native, special-status species detected within the BSA during the field reconnaissance survey was the Southern California black walnut. However, the City's CEQA Thresholds, few CRPR List 4 plants meet the definition of the Native Plant Protection Act or Sections 2062 and 2067 of the California Department of Fish and Game Code and are not eligible for listing (City of LA 2006). The BSA does not support black walnut woodland and its occurrence onsite is not within typical habitat. Thus, we would not consider southern California black walnut a special-status species for the project site. Additionally, three special-status species including Nevin's barberry (*Berberis nevinii*), showy island snapdragon (*Gambelia speciosa*), and Coulter's matilija poppy (*Romneya coulteri*) were observed but occur as ornamental species. These three species have been planted and maintained in the Silver Lake Meadow Park within the BSA. No U.S. Fish and Wildlife Service (USFWS)-Designated Critical Habitat is present within the BSA. Additionally, there are no "sensitive" natural communities located within the BSA.

A total of 47 protected trees consisting of four species were recorded within the Project site. In addition, a total of 362 trees consisting of 50 species regulated by RAP and BSS were inventoried within the Project site.

Construction and operation of the proposed Project may result in the removal of protected trees such as Southern California black walnut, as well as RAP and BSS-regulated trees. In addition, construction may affect habitat supporting crotch's bumble bee and the monarch butterfly. Nesting birds and roosting bats may also be affected during construction. No other special-status species would be affected. It is anticipated that implementation of project design features and impact avoidance, minimization, and mitigation measures proposed within this BTR would reduce impacts below a level of significance for biological resources.

CHAPTER 1
Introduction

1.1 Project Overview

Environmental Science Associates (ESA) has prepared this Biological Technical Report (BTR) to address the potential impacts to biological resources associated with the construction and operation of the proposed Silver Lake Reservoir Complex Master Plan Project (Project). The proposed Project is located within the Silver Lake neighborhood of the City of Los Angeles (**Figure 1** and **Figure 2**) and would redesign approximately 116 acres of the 127-acre Silver Lake Reservoir Complex (SLRC) with community park amenities. The proposed Project would be designed to enhance the visual and recreational quality of the area to be consistent with goals and objectives of the Community Plan and provide the opportunity for the public to connect with nature. The Project design focuses on increasing habitat diversity and value to support a diverse array of birds, fish, amphibians, invertebrates, and other aquatic species. To provide this biodiversity, the Project design will create new habitat for a total 23 acres of native vegetated areas. These proposed created native habitat areas will consist of 12 acres of upland vegetation (including trees), 5 acres of new transition (coastal scrub), and 6 acres of new wetland habitat. Additionally, the 6 acres of new wetland habitat will include the installation of floating habitat islands. These habitat islands make up an approximately 3.5 acres if the new wetland habitat. The proposed habitat islands are located at a minimum distance of 50 feet from shore to protected nesting birds and their habitat as shown on **Figure 3**.

The biological resources and existing relevant conditions were inventoried within the biological study area (BSA), which consists of the proposed Project site and adjacent areas within 500 feet of the Project site. This BTR includes a description of the existing environmental setting to establish baseline conditions for biological resources; a summary of the regulations related to biological resources; and an evaluation of the proposed Project's potential effects on biological resources.

ESA

1.2 Regional Setting

The proposed Project site is located in the City of Los Angeles, California, in the Silver Lake neighborhood. Regional geographic features surrounding the area include Sliver Lake, Echo Park Lake, Griffith Park to the northwest and Dodger Stadium to the southeast. The proposed Project site is located in a densely urban area of Los Angeles (see Figure 2) with hilly terrain west of Elysian Heights and northwest of downtown. The Los Angeles River is the principal drainage for the region and is located 0.5 miles to the northeast of the proposed Project site; it should be noted the Project's water bodies do not drain into the Los Angeles River.

The climate in the region is Mediterranean and lies in the atmospheric high-pressure zone of the eastern Pacific, resulting in a mild climate with cool sea breezes and light average wind speeds. The climatological pattern is disrupted occasionally by periods of extremely hot weather, winter storms, or Santa Ana winds. The region experiences more days of sunlight than any other major urban area in the nation except the City of Phoenix in Arizona (SCAQMD 2012).

1.3 Local Setting

The BSA is currently developed and contains ornamental vegetation primarily consisting of non-native trees and maintained turf. The proposed Project site includes the existing Ivanhoe and Silver Lake Reservoirs, a dog park, and recreation center area to the south, Silver Lake Meadow Park to the east, a vegetated hillside which is inaccessible to the public to the north, and a pedestrian path that circumnavigates the SLRC.

The area is surrounded on all sides by steep terrain developed with residential properties, creating a valley in which the SLRC sits. The SLRC site elevation is approximately 460 feet above mean sea level (amsl). Silver Lake Boulevard is located to the east of the SLRC with residential streets leading up into the developed hillsides. Ornamental landscape vegetation including shrubs and trees is common throughout the BSA.

This page intentionally left blank

CHAPTER 2
Methodology

This analysis includes literature review and field surveys focusing on areas within the BSA that will be affected by the proposed Project with the highest likelihood of supporting biological resources. A description of the methodologies used is provided below.

2.1 Existing Literature and Database Review

A review of aerial maps and biological resource databases was conducted to identify biological resources potentially occurring within the BSA and broader vicinity of the proposed Project site. Aerial imagery (Google Earth 2022) as well as electronic Hollywood USGS 7.5-minute topographic quadrangle maps were reviewed to confirm the current locations of developed and undeveloped land, and unique landforms. Aerial photographs were also reviewed to identify potential natural drainage features and water bodies that may be under the jurisdiction of the United States Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB) and/or California Department of Fish and Wildlife (CDFW).

A list of sensitive plant and wildlife species and their habitats known to occur within the BSA was compiled primarily from the CDFW, California Natural Diversity Database (CNDDB) (2022), and California Native Plant Society (CNPS) (2022) Inventory of Rare and Endangered Plants. The CNDDB and CNPS records were queried for the following USGS 7.5-minute topographic quadrangle maps: Beverly Hills, Burbank, Hollywood, Inglewood, Los Angeles, Pasadena, South Gate, Van Nuys, and Venice. In addition, the United States Department of Agriculture Natural Resources Conservation Service (NRCS) soils mapping (USDA 2022), U.S. Fish and Wildlife Service (USFWS) critical habitat maps (USFWS 2022a), the Information for Planning and Consultation (IPaC) (USFWS 20212B), and the National Wetlands Inventory (NWI) (USFWS 2022c) were reviewed.

The *Silver Lake Reservoir Complex Master Plan Biological Resources Report* (GPA 2019; GPA 2019 report) served as a primary reference for this analysis. Also referenced is the *Silver Lake and Ivanhoe Reservoirs Aeration and Circulation System Project, Biological Resources Memorandum* (AECOM 2020); the area of analysis for both projects overlaps with the Project site. Since the reports were prepared previously, existing databases were queried to support this BTR and field surveys were conducted to accompany the analysis in the report as described below.

2.2 Field Surveys

The 2019 GPA report summarizes field surveys conducted from 2004 to 2018 as well as a 2019 biological reconnaissance survey. This information was referenced prior to conducting additional field surveys in 2021.

ESA biologist Amanda Brophy conducted a reconnaissance field survey on October 19, 2021 to inventory and categorize biological resources within the BSA. An additional field survey was conducted by ESA biologists Ryan Gilmore and Amanda Brophy on April 12, 2022 that included a jurisdictional delineation and tree survey. Protected tree surveys were conducted by certified arborists Ryan Gilmore and Douglas Gordon-Blackwood on the following dates: April 2, 5, 6, 8, 15, and 22, 2022. The survey efforts involved pedestrian access over the entire Project site. All species of plant and animals observed, including sign (e.g., presence of scat) as well as any audible detections, were noted during the site visit. Wildlife observations and other features were mapped utilizing Collector for ArcGIS and representative photographs were taken.

Vegetation mapping was conducted and notes were taken of vegetation communities observed. Vegetation communities noted were generally classified using *A Manual of California Vegetation, Second Edition* (Sawyer et al. 2009) as necessary to reflect the existing site conditions.

Plant communities and habitats within the BSA were characterized to determine the extent of habitats that could support sensitive species and listed plants. The potential for special-status species and other sensitive biological resources to occur was based on habitat suitability, such as soil type, vegetation, slope, aspect, hydrology, and the presence of any disturbances within or adjacent to the area. Representative photographs of habitats that occur within the BSA are included in **Appendix A**. No focused surveys for special-status species were conducted during these field surveys. A formal jurisdictional delineation to locate potential natural drainage features and water bodies that may be under the jurisdiction of USACE, RWQCB and/or CDFW was performed.

Aquatic resources within the entire BSA were delineated concurrently with the biological resources reconnaissance field survey. Surveys were conducted by walking throughout the BSA to selected areas where potential jurisdictional features were identified during the literature and aerial review. Additional data, such as landforms, vegetation, hydrology, and soils, were noted where these characteristics were pertinent to identification of features. Potential jurisdictional features were identified and delineated following current federal and state methodology and guidelines, including waters of the state.

Native trees and shrubs protected under the City of Los Angeles Protected Tree and Shrub Ordinance (City Tree Ordinance) were surveyed on April 2 and 8, 2022 by Mr. Douglas Gordon-Blackwood, who is an International Society of Arboriculture (ISA) certified arborist (WE-11726AU) and American Society of Consulting Arborists (ASCA) Registered Consulting Arborist (RCA #689). Protected tree surveys were conducted by walking the entire Project site and recording all native trees and shrubs covered by the City Tree Ordinance with a trunk

diameter of 4 inches or greater at standard height. Also, trees regulated by the City Bureau of Street Services (BSS) and the Department of Recreation and Parks (RAP) were also recorded. BSS and RAP tree inventories were conducted on April 8, 15, 22, and 26, 2022 by Mr. Gordon-Blackwood and Ryan Gilmore (WE-9009BM / RCA #769). Photographs of each protected/regulated tree and shrub were recorded. The trunk location for each tree/shrub was recorded with Collector for ArcGIS using an Arrow 100 Submeter GNSS Receiver and a smart phone. The following data was collected for each tree: trunk diameter, canopy spread, height, health, and structure.

This page intentionally left blank

CHAPTER 3
Regulatory Framework

3.1 Federal

3.1.1 Endangered Species Act (USC, Title 16, Sections 1531 through 1543)

The federal Endangered Species Act (FESA) and subsequent amendments provide for the conservation and protection of wildlife and plant species that are listed or proposed for listing as endangered or threatened species and the ecosystems upon which they depend. FESA also provides statutory framework for the conservation and recovery of threatened and endangered species as well as for the conservation of Designated Critical Habitat that the USFWS determines is required for the survival and recovery of these listed species.

FESA requires federal agencies to ensure that actions they authorize, fund, or carry out are not likely to jeopardize the continued existence of threatened or endangered species or result in the destruction or adverse modification of critical habitat for these species. Regulations governing federal interagency cooperation under Section 7 are found in CCR Title 50, Part 402. The opinion issued at the conclusion of a Section 7 consultation includes a statement authorizing "take" (to harass, harm, pursue, hunt, wound, kill, etc.) that may occur incidental to an otherwise legal activity. The consultation process leads to issuance of a Biological Opinion from USFWS. In most cases, a Biological Opinion addresses a Project's potential to result in "take" of listed species (as defined below) and includes mandatory conditions that would allow for limited incidental take to occur subject to prescribed conditions.

Section 10 provides a means whereby a non-federal action with the potential to result in take of a listed species can be allowed under an incidental take permit which may be issued once an HCP is approved. Application procedures are found at 50 CFR 13 and 17 for species under the jurisdiction of USFWS and 50 CFR 217, 220, and 222 for species under the jurisdiction of NMFS.

3.1.2 Migratory Bird Treaty Act (16 USC 703 through 711)

The Migratory Bird Treaty Act (MBTA) is the domestic law that affirms, or implements, a commitment by the U.S. to four international conventions (with Canada, Mexico, Japan, and Russia) for the protection of a shared migratory bird resource. The MBTA makes it unlawful at any time, by any means, or in any manner to pursue, hunt, take, capture, or kill migratory birds. "Migratory bird" means any bird protected by any of the treaties and currently includes 1,027 bird

species in the United States (50 CFR 10.13), regardless of whether the particular species actually migrates. The law also applies to the removal of nests occupied by migratory birds during the breeding season. The MBTA makes it unlawful to take, pursue, molest, or disturb these species, their nests, or their eggs anywhere in the United States.

3.1.3 Federal Clean Water Act (33 USC 1251 through 1376)

The United States Army Corps of Engineers (USACE) regulates "discharge of dredged or fill material" into "waters" of the United States, which includes tidal waters, interstate waters, and "all other waters, interstate lakes, rivers, streams (including ephemeral drainages), mud flats, sand flats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes or natural ponds, the use, degradation, or destruction of which could affect interstate or foreign commerce or which are tributaries to waters subject to the ebb and flow of the tide" (33 C.F.R. 328.3[a]), pursuant to provisions of Section 404 of the Clean Water Act (CWA). The CWA also excludes certain features from this regulation, including "wastewater recycling facility constructed on dry land" (see 33 CFR Section 230.3 [o][2][vii]). Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 423.11[m] which also meet the criteria of this definition) are not considered waters of the United States.

3.1.4 Fish and Wildlife Conservation Act

The Fish and Wildlife Conservation Act declares that fish and wildlife are of ecological, educational, esthetic, cultural, recreational, economic, and scientific value to the United States. The purposes of this Act are to encourage all federal departments and agencies to utilize their statutory and administrative authority, to the maximum extent practicable and consistent with each agency's statutory responsibilities, to conserve and to promote conservation of non-game fish and wildlife and their habitats. Another purpose is to provide financial and technical assistance to the states for the development, revision, and implementation of conservation plans and programs for nongame fish and wildlife.

3.2 State

3.2.1 California Endangered Species Act (California Fish and Game Code Section 2050 et seq.)

The California Endangered Species Act (CESA) establishes the policy of the state to conserve, protect, restore, and enhance threatened or endangered species and their habitats. The CESA mandates that state agencies should not approve projects that would jeopardize the continued existence of threatened or endangered species if reasonable and prudent alternatives are available that would avoid jeopardy.

Section 2080 of the California FGC states that "No person shall import into this state [California], export out of this state, or take, possess, purchase, or sell within this state, any species, or any part or product thereof, that the Commission [State Fish and Game Commission] determines to be an

endangered species or threatened species, or attempt any of those acts, except as otherwise provided in this chapter, or the Native Plant Protection Act, or the California Desert Native Plants Act." Pursuant to Section 2081, CDFW may authorize individuals or public agencies to import, export, take, or possess state-listed endangered, threatened, or candidate species. These otherwise prohibited acts may be authorized through Incidental Take permits or Memoranda of Understanding if the take is incidental to an otherwise lawful activity, impacts of the authorized take are minimized and fully mitigated, the permit is consistent with any regulations adopted pursuant to any recovery plan for the species, and the project operator ensures adequate funding to implement the measures required by CDFW, which makes this determination based on available scientific information and considers the ability of the species to survive and reproduce.

3.2.2 California Fish and Game Code Section 1600 et seq.

CDFW is responsible for protecting and conserving fish and wildlife resources, and the habitats upon which they depend. Under Section 1600 of the California FGC, CDFW administers the Lake and Streambed Alteration (LSA) Program and regulates all substantial diversions, obstructions, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake (which typically include reservoirs), which supports fish or wildlife.

Applicants proposing changes to such regulated water resources must submit a Lake or Streambed Alteration Notification to CDFW for such projects. CDFW will then determine if the proposed activity may substantially adversely affect an existing fish or wildlife resource and will issue a final agreement for the applicant's signature that includes reasonable measures necessary to protect the resource. Preliminary notification to CDFW, and project review by CDFW may occur during or after the California Environmental Quality Act (CEQA) environmental review process but prior to project implementation.

3.2.3 California Fish and Game Code Sections 3503, 3503.5, 3513, and 3800

Under these sections of the California FGC, a project operator is not allowed to conduct activities that would result in the taking, possessing, or destroying of any birds of prey; the taking or possessing of any migratory nongame bird as designated in the MBTA; the taking, possessing, or needlessly destroying of the nest or eggs of any raptors or nongame birds protected by the MBTA; or the taking of any nongame bird pursuant to California FGC Section 3800.

Section 3800 of the California FGC affords protection to all nongame birds, which are all birds occurring naturally in California that are not resident game birds, migratory game birds, or fully protected birds. Section 3513 of the California FGC upholds the MBTA by prohibiting any take or possession of birds that are designated by the MBTA as migratory nongame birds except as allowed by federal rules and regulations promulgated pursuant to the MBTA.

3.2.4 California Environmental Quality Act Guidelines Section 15380

Although threatened and endangered species are protected by specific federal and state statutes, California Environmental Quality Act (CEQA) Guidelines Section 15380(b) provides that a species not listed on the federal or state list of protected species may be considered rare or endangered if the species can be shown to meet certain specified criteria. These criteria have been modeled after the definition in FESA and the section of the California FGC dealing with rare or endangered plants or animals. This section is included in CEQA primarily to deal with situations in which a public agency is reviewing a project that may have a significant effect on, for example, a candidate species that has not been listed by either USFWS or CDFW. Thus, CEQA provides an agency with the ability to protect a species from the potential impacts of a project until the respective government agencies have an opportunity to designate the species as protected, if warranted. CEQA also calls for the protection of other locally or regionally significant resources, including natural communities. Although natural communities do not at present have legal protection of any kind, CEQA calls for an assessment of whether any such resources would be affected and requires findings of significance if there would be substantial losses. Natural communities listed by CNDDB as sensitive are considered by CDFW to be significant resources and fall under the State CEQA Guidelines for addressing impacts. Local planning documents such as General Plans often identify these resources as well.

3.2.5 California Water Quality Control Act (Porter-Cologne California Water Code Section 13260)

The State Water Resources Control Board and the RWQCB (together "Boards") are the principal state agencies with primary responsibility for the coordination and control of water quality. The Boards regulate activities pursuant to Section 401(a)(1) of the federal CWA as well as the Porter-Cologne Water Quality Control Act (Porter-Cologne) (Water Code Section 13260). Section 401 of the CWA specifies that certification from the State is required for any applicant requesting a federal license or permit to conduct any activity including but not limited to the construction or operation of facilities that may result in any discharge into navigable waters. The certification shall originate from the State in which the discharge originates or will originate, or, if appropriate, from the interstate water pollution control agency having jurisdiction over the navigable water at the point where the discharge originates or will originate. Any such discharge will comply with the applicable provisions of Sections 301, 302, 303, 306, and 307 of the CWA.

In Porter-Cologne, the Legislature declared that the "State must be prepared to exercise its full power and jurisdiction to protect the quality of the waters in the State from degradation..." (California Water Code Section 13000). Porter-Cologne grants the Boards the authority to implement and enforce the water quality laws, regulations, policies and plans to protect the groundwater and surface waters of the State. It is important to note that enforcement of the State's water quality requirements is not solely the purview of the Boards and their staff. Other agencies (e.g., CDFW) have the ability to enforce certain water quality provisions in state law.

The State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (procedures), adopted by the State Water Resources Control Board on April 2, 2019, became effective May 28, 2020. The Procedures include a definition for wetland waters of the state that include (1) all wetland waters of the U.S.; and (2) aquatic resources that meet both the soils and hydrology criteria for wetland waters of the U.S. but lack vegetation.

3.2.6 Native Plant Protection Act (California FGC Sections 1900 through 1913)

The California's Native Plant Protection Act requires all state agencies to use their authority to carry out programs to conserve endangered and rare native plants. Provisions of the Native Plant Protection Act prohibit the taking of listed plants from the wild and require notification of CDFW at least 10 days in advance of any change in land use. This allows CDFW to salvage listed plant species that would otherwise be destroyed. The project operator is required to conduct botanical inventories and consult with CDFW during project planning to comply with the provisions of this act and sections of CEQA that apply to rare or endangered plants.

3.3 Regional

3.3.1 Significant Ecological Areas

Los Angeles County adopted the Significant Ecological Areas (SEAs) Ordinance, effective on January 16, 2020. These are areas that are officially designated as containing irreplaceable biological resources under the SEA Program. The objective of the SEA Program is to conserve genetic and physical diversity within the County by designating resource areas that are capable of sustaining themselves into the future. SEAs are protected by Chapter 22.102 of the County's code of ordinances. The ordinance requires that a biological constraints analysis (BCA) report be prepared by a qualified biologist listed in the SEA Technical Advisory Committee (SEATAC) Certified Biologist List maintained by the Department of Regional Planning (Department) that assesses the biological resources on a project site and in the surrounding area. A comprehensive list of what shall be included in the BCA is found in the BCA Checklist maintained by the Department. The BCA requires at a minimum the inclusion of a map of a project site, a list of all SEA resources, project impacts, and required mitigation. However, there are no SEAs located within the BSA.

3.4 Local

3.4.1 City of Los Angeles

The City Tree Ordinance (City of Los Angeles Municipal Code [LAMC] Chapter IV, Article 6) regulates the relocation or removal of all Southern California native oak trees (*Quercus* sp.; excluding scrub oak), Southern California black walnut trees (*Juglans californica*), western sycamore (*Platanus racemosa*) trees, California bay trees (*Laurus nobilis*), Mexican elderberry (*Sambucus mexicana*), and toyon (*Heteromeles arbutifolia*) of at least 4 inches in diameter at breast height. These tree and shrub species are considered "protected" by the City of Los Angeles. Native trees and shrubs that have been planted as part of a tree planting program are

exempt from this ordinance and are not considered protected. The ordinance prohibits, without permit, the removal of any regulated protected tree, including "acts which inflict damage upon root systems or other parts of the tree …" and requires that all regulated protected trees that are removed be replaced on at least a 4:1 basis with trees and shrubs that are of a protected variety. The City requires that a report be prepared by a qualified tree expert discussing the subject tree(s), their preservation, effects of proposed construction, and mitigation measures pursuant to the removal or replacement thereof.

The City Department of Recreation and Parks (RAP) Tree Preservation Policy (Tree Policy) is a regulatory tool to provide protection of specified trees, protect their value, and avoid significant negative impacts to the ecosystem (City of Los Angeles 2022). The Policy regulates protection of trees in four categories:

- Native Trees as defined by the City Tree Ordinance as noted above.
- Heritage Trees are individual trees of any size or species that are specifically designated as heritage because of their historical, commemorative, or horticultural significance.
- Special Habitat Value Trees are native trees located on RAP managed lands.
- Common Park Trees are generally mature exotic trees that have value beyond the shade they provide to park users and are a scenic resource.

When a large number of trees are proposed for removal the notification protocol present in the RAP Tree Policy must be followed. The protocol assures that information is communicated to the public, City council offices, the Park Advisory Board, and to the department Divisions affected by the removal project. The protocol provides an opportunity for the public to become involved with forestry issues and for department coordination. Additionally, tree replacement is guided by the RAP Tree Policy and by the objectives and functions as defined by the Department. RAP trees are planted according to the RAP Reforestation Program. Sometimes when crowding or other physical constraints make it impossible to plant the same tree in the same place where it was removed, an alternate location is found. Undesirable tree species are not replaced.

The Bureau of Street Services (BSS), Urban Forestry Division (UFD), Department of Public Works manages street trees. A City Tree Removal Permit (Permit Application) is required to remove any street tree planted in the public right-of-way prior the start of construction. The UFD requires a 2:1 street tree replacement ratio.

Sections 6 and 12 of the City of Los Angeles Conservation Element (Conservation Element) of the General Plan require that if protected species, habitats, wildlife dispersal, and migration corridors are identified as having the potential to be impacted by a proposed development project, the developer is required by CEQA to provide protection of the species (City of Los Angeles 2001).

Open Space Goal 6 of the Silver Lake - Echo Park - Elysian Valley Community Plan has two main objectives (City of Los Angeles 2004):

Objective 5-1 Preserve existing and develop new open space resources.

Objective 5-2 Provide/ensure access to new recreational resources and open space developed throughout the Plan area, including trails and facilities along the Los Angeles River, and new parks.

This page intentionally left blank

CHAPTER 4
Existing Conditions

The primary land cover of the BSA is open water, developed, semi-natural woodlands, and ornamental; however, there are areas within the BSA that contain pockets of native vegetation communities and provide suitable habitat for special-status plant and wildlife species. Existing conditions in this chapter are discussed for the entirety of the BSA.

4.1 Topography and Watersheds

The BSA is relatively flat with the exception of the Knoll zone which rises gently on the eastern perimeter. The BSA is within the Los Angeles Basin and Los Angeles River watershed. Land use surrounding the BSA and the surrounding region primarily consists of extensive urban development with commercial and residential land uses. The Silver Lake and Ivanhoe Reservoirs drain to underground storm drains that lead to Ballona Creek and the Pacific Ocean at Marina Del Rey.

4.2 Soils

The BSA is underlain by native soils, fill material, and bedrock outcroppings. The following two soil types are mapped within the BSA (USDA 2021). The elevation within the BSA ranges from approximately 400 feet to approximately 510 feet.

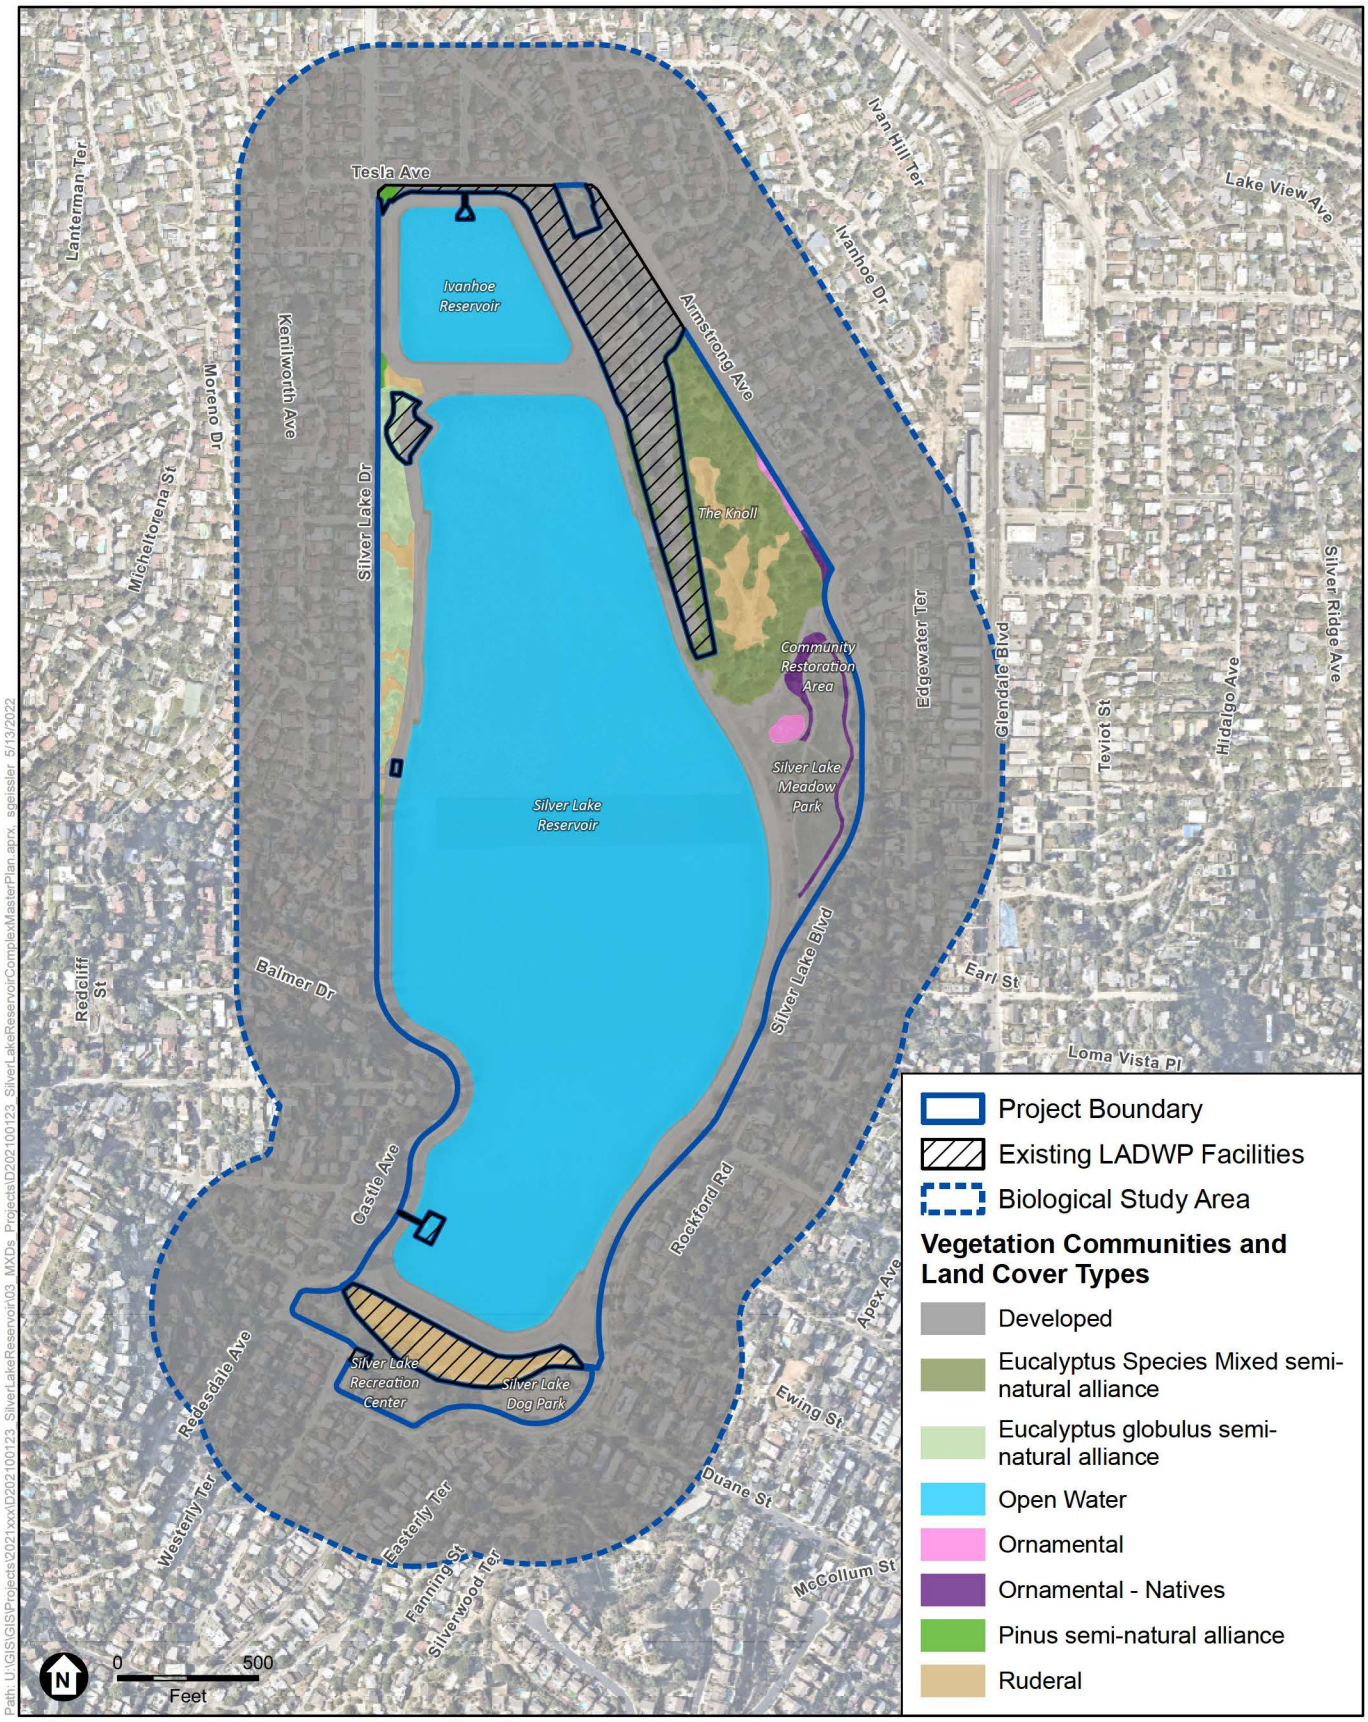
4.2.1 Urban Land-Ballona-Typic Xerorthents, Fine Substratum Complex, 0 to 5 Percent Slopes

This soil map unit contains soils resulting from discontinuous human-transported material over young alluvium derived from sedimentary rock. Urban land-Ballona-Typic Xerorthents soils have slopes of 0 to 5 percent. These soils are well-drained with moderately low to moderately high permeability and moderate to high (about 7.7 to 10.1 inches) water capacity.

4.2.2 Urban Land-Dapplegray-Soper Complex, 20 to 55 Percent Slopes

This soil map unit contains soils resulting from human-transported material consisting mostly of colluvium and/or residuum weathered from sedimentary rock. Urban land-Dapplegray-Soper complex soils have slopes of 20 to 55 percent. These soils are well-drained with moderately low to moderately high permeability and high (9.5 inches) water capacity.

4.3 Natural Communities and Land Cover Types



Vegetation communities as described in the 2019 GPA report (GPA 2019) were reviewed and mapped in the field during the reconnaissance survey. The vegetation communities characterized within the BSA are discussed in detail below (**Figure 4,** *Vegetation Communities and Land Cover Types*). Representative photographs were taken during the field surveys and are included in Appendix A. **Table 1** indicates the acreages of the plant communities and land cover types observed within the BSA.

TABLE 1
NATURAL COMMUNITIES AND LAND COVER TYPES WITHIN THE BIOLOGICAL STUDY AREA

Natural Community/Land Cover Type	Project Site (acres)	500-Foot Buffer (acres)	Total (acres)
Aquatic/Riparian			
Open Water	76.75	0.19	76.93
Terrestrial			
Eucalyptus globulus Semi-Natural Woodland Stands	2.48	0.20	2.68
Eucalyptus Species Mixed Semi-Natural Woodland Stands	7.00	1.12	8.12
Pinus Species Semi-Natural Woodland Stands	0.23	0.09	0.32
Ornamental	0.40	—	0.40
Native Ornamental	0.79	—	0.85
Developed/Disturbed Land Cover Types			
Developed	25.76	154.43	180.20
Ruderal	2.87	2.32	5.2
TOTAL	**116.29**	**158.36**	**274.65**

4.3.1 *Eucalyptus globulus* Semi-Natural Woodland Stands

Eucalyptus globulus Semi-Natural Woodland Stands include blue gum (*Eucalyptus globulus*) as the dominant eucalyptus tree in the canopy. This community can have intermittent to continuous cover. The understory is sparse to intermittent. Eucalyptus species are typically planted for windbreaks and groves and are considered naturalized on uplands and along stream corridors. At least nine eucalyptus species are found in the BSA: red river gum (*Eucalyptus camaldulensis*), lemon scented gum (*Eucalyptus citriodora*), sugar gum (*Eucalyptus cladocalyx*), blue gum, silver dollar gum (*Eucalyptus polyanthemos*), money tree (*Eucalyptus pulverulenta*), red iron bark (*Eucalyptus sideroxylon*), forest red gum (*Eucalyptus tereticornis*), and manna gum (*Eucalyptus viminalis*). It should be noted that blue gum, red gum, and sugar gum are on the California Invasive Plant Council Invasive Plant Council (Cal-IPC 2022). Within the SLRC this community is located on the east and west sides of the Ivanhoe and Silver Lake Reservoirs along the pathway inside the perimeter fence. This vegetation community comprises 2.48 acres within the Project site and 0.20 acres within the 500-foot buffer of the BSA.

Path: U:\GIS\GIS\Projects\2021xxx\D202100123_SilverLakeReservoir\03_MXDs_Projects\D202100123_SilverLakeReservoirComplexMasterPlan.aprx, sgeissler, 5/13/2022

SOURCE: Nearmap, 2021; ESA, 2022

Silver Lake Reservoir Complex Master Plan Project

Figure 4
Vegetation Communities and Land Cover Types

ESA

4.3.2 *Eucalyptus* Species Mixed Semi-Natural Woodland Stands

Eucalyptus Species Mixed Semi-Natural Woodland Stands include several Eucalyptus species (those listed above) as the dominant trees in the canopy. Blue gum was not the dominant eucalyptus tree in canopy cover. This community is described in the same manner as above. Within the SLRC this community is located on the Knoll. Other non-native species associated within this community include Chilean pepper (*Schinus polygamus*), deodar cedar (*Cedrus deodar*), Aleppo pine (*Pinus halepensis*), silk oak (*Grevillea robusta*), olive (*Olea europaea*), and annual non-native grasses. It should be noted that the aforementioned eucalyptus species, silk oak, and olive are on the California Invasive Plant Council Invasive Plant Council (Cal-IPC 2022). Native species observed included toyon, Southern California black walnut, hollyleaf cherry (*Prunus ilicifolia* ssp. *ilicifolia*), Mexican elderberry, and coast live oak (*Quercus agrifolia*). This vegetation community comprises 7.00 acres within the Project site and 1.12 acres within the 500-foot buffer of the BSA.

Southern California black walnut is a CRPR 4.2 species that is present within the BSA, found interspersed within the Eucalyptus Species Mixed Semi-Natural Woodland Stands on the Knoll. However, it should be noted that per the City's CEQA Thresholds, few CRPR List 4 plants meet the definition of the Native Plant Protection Act or Sections 2062 and 2067 of the California Department of Fish and Game Code and are not eligible for listing (City of LA 2006). The BSA does not support black walnut woodland and its occurrence onsite is not within typical habitat. Thus, we would not consider southern California black walnut a special-status species for the project site.

However, southern California black walnut is a species that is regulated under local tree policies and ordinances. A total of 18 individuals were observed (see **Figure 5)** within the BSA, classifications in accordance with the three applicable tree ordinances (City Tree Ordinance, RAP, or BSS street trees) determined are summarized in **Table 2,** *Classifications of Southern California Black Walnut Within the Biological Study Area*. Of the 18 observed, eight trees are considered protected under the City Tree Ordinance, and an additional six are considered protected under the RAP Tree Policy. Four trees do not meet the classifications of the three applicable tree policies.

TABLE 2
CLASSIFICATIONS OF SOUTHERN CALIFORNIA BLACK WALNUT WITHIN THE BIOLOGICAL STUDY AREA

Classification	Tree Identification Numbers	Number of Trees
City Tree Ordinance	731, 732, 733, 738, 739, 740, 741	8
RAP	174, 754, 755, 756, 758, 759	6
BSS	NA	0
No Classification	NA	4
TOTAL	**—**	**18**

This species, in addition to other protected trees within the BSA, are further discussed in Section 4.9.

4.3.3 *Pinus* Species Semi-natural Woodland Stands

Pinus Species Semi-Natural Woodland Stands include Canary Island pine (*Pinus canariensis*), Aleppo pine, and stone pine (*Pinus pinea*) as the dominant trees in the canopy. This community can have intermittent to continuous cover. The understory is sparse to intermittent. Similar to the eucalyptus species these have been planted for windbreaks and groves and are considered naturalized. Within the SLRC this community is located on the west side of the Ivanhoe Reservoir along the pathway inside the perimeter fence. This vegetation community comprises 0.23 acres within the Project site and 0.90 acres within the 500-foot buffer of the BSA

4.3.4 Developed

Developed areas are associated with paved areas, buildings, bridges, and other structures. Within the SLRC, developed areas consist of the Recreation Center, Los Angeles Department of Water and Power facilities, dam infrastructure, the Neighborhood Nursery School, and the paved slopes of the reservoirs. Additionally, within these areas are scattered ornamental plantings. Within the 500-foot buffer surrounding the SLRC is residential development with associated ornamental plantings. Ornamental plantings within the developed areas can provide nesting bird and foraging habitat. This vegetation community comprises 25.76 acres within the Project site and 154.43 acres within the 500-foot buffer of the BSA.

4.3.5 Ornamental

Ornamental communities are dominated by non-native horticultural plants, including introduced trees, shrubs, and flowers. Within the SLRC, this community is found along the perimeter of Silver Lake Meadow Park, along the perimeter of the walking path to the south and surrounding the Recreation Center at the south end of the SLRC. Ornamental plantings landscapes can provide nesting bird and foraging habitat. This vegetation community comprises 0.40 acres within the Project site.

4.3.6 Native Ornamental

Native ornamental communities are dominated by native horticultural plants, including introduced trees, shrubs, and flowers. Within the SLRC, this community is found along the perimeter of Silver Lake Meadow Park and along the pathway at the intersection of Silver Lake Boulevard and Armstrong Avenue. These native plant installations have been referred to as the Community Restoration Area. Native plantings included a variety of species including California sagebrush (*Artemisia californica*), Saint Catherine's lace (*Eriogonum giganteum*), white sage (*Salvia apiana*), and hummingbird sage (*Salvia spathacea*). Additionally, three sensitive species Nevin's barberry (*Berberis nevinii*), showy island snapdragon (*Gambelia speciosa*), and Coulter's matilija poppy (*Romneya coulteri*). Overall, this vegetation community is not contiguous and is

broken up with areas of bare ground and non-native vegetation. This vegetation community comprises 0.79 acres within the Project site.

4.3.7 Ruderal

Ruderal communities are typical in early successional stages following extreme human disturbance, or recurrent natural disturbance. This vegetation community is dominated by annual and perennial, introduced/non-native, pioneering, herbaceous plants that readily colonize disturbed ground. Within the SLRC, this community is found sporadically within the SLRC with the largest occurrence observed at the dam face and interspersed within the semi-natural woodland stands. In the study area, this vegetation type is dominated by a sparse cover of some weedy species, such as short-podded mustard (*Hirschfeldia incana*), wild radish (*Raphanus sativus*), Russian thistle (*Salsola tragus*), and a multitude of non-native grasses. Non-native grasses observed included wild oat (*Avena fatua*), downy chess (*Bromus tectorum*) and blue foxtail (*Hordeum murinum*). Generally, these areas are considered to be of very low value to most wildlife. This vegetation community comprises 2.87 acres within the Project site and 2.32 acres within the 500-foot buffer of the BSA.

4.3.8 Open Water

Open water areas consist of land covered by water and contain less than 10 percent vegetation cover, and may support emergent or submerged vegetation. Within the SLRC these areas include the basins of Ivanhoe and Silver Lake Reservoirs. This land cover comprises 76.75 acres within the Project site and 0.19 acres within the 500-foot buffer of the BSA

4.4 General Plant Inventory

The plant communities discussed above are composed of a number of plant species. Observations regarding the plant species present were made during the field reconnaissance survey, and a list of all plant species observed is provided in **Appendix B**, *Floral and Faunal Compendium*.

4.5 General Wildlife Species

Wildlife observed or detected during the habitat assessment include species that are adapted to urban environments. A list of all wildlife species observed is provided in Appendix B, *Flora and Faunal Compendium*. Bird species observed during the assessment included: Cooper’s hawk (*Accipiter cooperii*), killdeer (*Charadrius vociferus*), American coot (*Fulica americana*), house finch (*Haemorhous mexicanus*), turkey vulture (*Cathartes aura*), western gull (*Larus occidentalis*), scaly-breasted munia (*Lonchura punctulata*), hooded merganser (*Lophodytes cucullatus*), song sparrow (*Melospiza melodia*), California towhee (*Melozone crissalis*), northern mockingbird (*Mimus polyglottos*), ruddy duck (*Oxyura jamaicensis*), bushtit (*Psaltriparus minimus*), black phoebe (*Sayornis nigricans*), Say's phoebe (*Sayornis saya*), cinnamon teal (*Spatula cyanoptera*), mourning dove (*Zenaida macroura*), and white-crowned sparrow (*Zonotrichia leucophrys*. Mammal species observed included coyote (*Canis latrans*) and desert cottontail (*Sylvilagus audubonii*). No reptile species were detected during the assessment.

4.6 Sensitive Biological Resources

4.6.1 Special-Status Plants

Special-status plants are defined as those plants that, because of their recognized rarity or vulnerability to various causes of habitat loss or population decline, are recognized by federal, state, or other agencies as under threat from human-associated developments. Some of these species receive specific protection that is defined by federal or state endangered species legislation. Others have been designated as special-status on the basis of adopted policies and expertise of state resource agencies or organizations with acknowledged expertise, or policies adopted by local governmental agencies such as counties, cities, and special districts to meet local conservation objectives. Special-status plants are defined as follows:

- Plants that are listed or proposed for listing as threatened or endangered, or are candidates for possible future listing as threatened or endangered, under the FESA or the CESA
- Plants that meet the definitions of rare or endangered under State CEQA Guidelines Section 15380
- Plants covered under an adopted Natural Community Conservation Plan (NCCP)/Habitat Conservation Plan (HCP)
- Plants considered by the CNPS to be rare, threatened, or endangered (California Rare Plant Rank [CRPR] 1A, 1B, 2A and 2B plants[1]) in California
- Plants listed as rare under the California Native Plant Protection Act (FGC 1900 et seq.)
- Trees protected under local policies or ordinances

The potential for special-status plant species to occur within the BSA was assessed by looking at on-site vegetation and habitat quality, topography, elevation, soils, surrounding land uses, habitat preferences and geographic ranges. A review of the CNDDB (CDFW 2022) and the CNPS Inventory of Rare and Endangered Plants (CNPS 2022) revealed that 20 special-status plant species have been recorded within the USGS nine-quadrangle search area that had the potential to occur within the BSA. However, based on the criteria listed below, it has been determined that these species do not have the potential to occur naturally within the BSA because they lack necessary habitat requirements. All 20 species are listed in **Appendix C** and have been omitted from further discussion in this report. The criteria for potential to occur include:

- **Present:** Species was observed or detected during Project-specific biological surveys.
- **High Potential:** Species identified in the literature search and/or known to occur in the region and suitable habitat is present on the Project site. These species are generally common and/or widespread in the Project area and vicinity.
- **Moderate Potential:** Species identified in the literature search and/or known to occur in the region and suitable habitat is present within the Project site. These species are generally less common and/or widespread than species considered to have "high" potential to occur.

[1] CRPR 1A: Plants presumed extirpated in California and either rare or extinct elsewhere; 1B: Plants rare, threatened, or endangered in California and elsewhere; 2A: Plants presumed extirpated in California but common elsewhere; 2B: Plants rare, threatened, or endangered in California but more common elsewhere.

- **Low Potential:** Species identified in the literature search or known to occur in the region, but the habitat on site is of low or marginal quality and/or the Project site occurs outside the species known geographic or elevational range. Distance to nearest known occurrence and the age of last reported local occurrence are also considered.
- **Not Expected:** Species identified in the literature search or known to occur in the region, but the habitat on site is not suitable for the species.

The 2019 GPA report states that habitat was present for two special-status species: Robinson's pepper grass (*Lepidium virginicum* var. *robinsonii*) and San Bernardino aster (*Symphyotrichum defoliatum*). However, the literature review and field reconnaissance visit determined suitable habitat for these species does not existing within the BSA.

There are three special-status species that have been planted intentionally in the Community Restoration Area within the Silver Lake Meadows. Those three species are Nevin's barberry, showy island snapdragon, and Coulter's matilija poppy (see **Figure 5,** *Biological Resources*). These four species are discussed further below.

Nevin's Barberry

Nevin's Barberry is a CRPR 1B.1 species that is federally and state endangered and has been planted in the Community Restoration Area within the Project site. The planted occurrence consists of a single specimen (see **Figure 5**). This species is a commonly used native plant in native gardens. There are three CNDDB records for this species within five miles of the BSA however all are for planted specimens and are not naturally occurring. In a horticultural setting this species is quite easily grown though dependent on irrigation.

Showy Island Snapdragon

Showy island snapdragon is a CRPR 1.B.2 species that has been planted in the Community Restoration Area within the Project site (see **Figure 5**). This species is a commonly used native plant in native gardens. There are no CNDDB records for this species within five miles of the BSA. In a horticultural setting this species is quite easily grown though highly dependent on irrigation.

Coulter's Matilija Poppy

Coulter's matilija poppy is a CRPR 4.2 species that has been widely planted in the Community Restoration Area and Silver Lake Meadow Park within the Project site (see **Figure 5**). This species is a commonly used native plant in native gardens. There are no CNDDB records for this species within five miles of the BSA. In a horticultural setting this species is quite easily grown though highly dependent on irrigation.

Biological Resources

ESA

4.6.2 Special-Status Wildlife

Special-status wildlife consists of those animals that because of their recognized rarity or vulnerability to habitat loss or population decline are considered by federal, state, or other agencies to be under threat from human-associated development. Some of these species receive specific protection that is defined by federal or state endangered species legislation and others have been designated as special-status on the basis of adopted local policies (i.e., city and county) or the educated opinion of respected resource interest groups (e.g., Western Bat Working Group). Special-status wildlife is defined as follows:

- Wildlife listed or proposed for listing as threatened or endangered, or are candidates for possible future listing as threatened or endangered, under the FESA or the CESA.
- Wildlife that meet the definitions of rare or endangered under California Environmental Quality Act (CEQA) Guidelines Section 15380.
- Wildlife covered under an adopted NCCP/HCP.
- Wildlife designated by CDFW as species of special concern, included on the Watch List or are considered Special Animals.
- Wildlife "fully protected" in California (FGC Sections 3511, 4700, and 5050).
- Bat species considered priority by the Western Bat Working Group (WBWG).

The potential for special-status wildlife species to occur within the BSA was assessed according to on-site vegetation and habitat quality, topography, elevation, soils, surrounding land uses, habitat preferences and geographic ranges. A review of the CNDDB (CDFW 2022) revealed that 21 special-status wildlife species have been recorded within five miles of the search area. The 2019 GPA report analyzed 20 special-status wildlife species. Based on the criteria listed below, it is determined that only five species have a potential to occur within the BSA (**Table 3,** *Special-Status Wildlife Species*). The other species lack the necessary habitat requirements or the species range does not overlap with the BSA. The 16 species that are not expected to occur within the BSA are further detailed in **Appendix D** and are omitted from further discussion here.

Of the 21 special-status wildlife species recorded within five miles, a total of five special-status wildlife species, Crotch's bumble bee (*Bombus crotchii*), western mastiff bat (*Eumops perotis californicus*), monarch butterfly (*Danaus plexippus*) hoary bat (*Lasiurus cinereus*), and western yellow bat (*Lasiurus xanthinus*), were identified as having a low potential to occur within the BSA, based on the criteria described below:

- **Present:** The species was observed within the study area during the site assessment or has been documented within or immediately adjacent to the BSA during recent surveys (with 2 years).
- **High Potential:** Species identified in the literature search and/or known to occur in the region and suitable habitat is present on the BSA. These species are generally common and/or widespread in the BSA and vicinity**.**
- **Moderate Potential:** Species identified in the literature search and/or known to occur in the region and suitable habitat is present within the BSA. These species are generally less common and/or widespread than species considered to have "high" potential to occur.

- **Low Potential:** Species identified in the literature search or known to occur in the region, but the habitat on site is of low or marginal quality and/or the proposed Project site occurs outside the species known geographic or elevational range. Distance to nearest known occurrence and the age of last reported local occurrence are also considered.

TABLE 3
SPECIAL-STATUS WILDLIFE SPECIES

Common Name *Scientific Name*	Sensitivity Status	Preferred Habitat/Known Elevational Range	Presence/Potential to Occur within the BSA
Invertebrates			
monarch butterfly – California overwintering population *Danaus plexippus pop. 1*		Wintering sites in California are associated with wind-protected groves of large trees (primarily eucalyptus or pine [*Pinus* spp.]) with nectar and water sources nearby that are generally near the coast.	**Low.** Large wind-protected trees occur within the BSA at various locations. Limited nectar plant food species available within BSA. BSA outside documented overwintering locations which are generally associated within areas in closer proximity to the coast. There are no CNDDB records within five miles of the BSA (CNDDB 2022).
Crotch bumble bee *Bombus crotchii*	—/SSC	Open grassland and scrub habitats that support potential nectar sources such as plants within the Fabaceae, Apocynaceae, Asteraceae, Lamiaceae, and Boraginaceae families.	**Low.** Limited suitable habitat present within the BSA. Six CNDDB records with the most recent dated 2020 located at Occidental College. (CNDDB 2022). Very limited sage plant species a primary food source for the species were observed within the proposed Project site during the site visit.
Mammals			
western mastiff bat *Eumops perotis californicus*	—/SSC/WBWG HIGH	Known to occur in habitat consisting of extensive open areas within dry desert washes, flood plains, chaparral, cismontane oak woodland, coastal scrub, open ponderosa pine forest, and grasslands. Roosts primarily in crevices in rock outcrops, buildings, tunnels, and trees.	**Low.** Large trees adjacent the basins provide potential roosting and foraging habitat for the species. The most recent detection was in 1991 the (CNDDB 2022).
Hoary bat *Lasiurus cinereus*	—/ WBWG MEDIUM	Habitats suitable for bearing young include all woodlands and forests with medium to large-size trees and dense foliage. Generally, roosts in dense foliage of medium to large trees and requires water.	**Low.** Large trees adjacent the basins provide potential roosting and foraging habitat for the species. There are four CNDDB records within five miles of the BSA (CNDDB 2022).
Western yellow bat *Lasiurus xanthinus*	—/SSC/WBWG HIGH	Found in valley foothill riparian, desert riparian, desert wash and palm oasis habitats. Roosts in trees, particularly palms, forages over water and among trees.	**Low.** Large trees, particularly palm trees adjacent the SLRC provide potential roosting habitat. The basins provide potential foraging habitat for the species. There are four CNDDB records within five miles of the BSA (CNDDB 2022).

SOURCE: CNDDB 2021

KEY:

SSC = Species of Special Concern (CDFW); WBWG (Western Bat Working Group) MEDIUM = Medium designation indicates a level of concern that should warrant closer evaluation, more research, and conservation actions; WBWG HIGH = High designation represents those species considered the highest priority for funding, planning, and conservation actions

One additional special-status wildlife species, mountain lion (*Puma concolor*), although not identified in CNDDB, CDFW or USFWS queries, has been identified as potentially occurring nearby based on data from National Park Service (NPS) (NPS 2022). The Southern California/Central Coast evolutionarily significant unit (ESU) has proposed the mountain lion as a threatened or endangered candidate species under CESA, as defined in Section 2068 of the FGC. This candidacy is under review by the CDFW. Mountain lion is well-documented within the Santa Monica Mountains, based on tracking studies conducted by the NPS. Mountain lion's primary prey is mule deer, and mountain lion seasonal movements often follow deer migration. Mule deer comprise up to 80% of a mountain lion's diet but other prey species may include coyotes, raccoons, rabbits, livestock or pets in urban areas. Mountain lions often make their dens for rearing young in natural cavities such as caves and sometimes in thickets. Mountain lions prefer vegetated ridgetops and stream courses as travel corridors and hunting routes. Mountain lions select habitats with dense understory vegetation, such as riparian woodlands and chaparral, and adequate stalking cover to allow for successful hunting. None of these habitats exist on the Project site. A single mountain lion has been documented numerous times since 2012 as living in Griffith Park which is located approximately 1.4 miles to the northwest of the Project site. Specifically, the mountain lion known as P-022 has made excursions within the urbanized residential areas surrounding Griffith Park. However, the species is not expected to occur within the Project site in spite of being documented within the Silver Lake area by the NPS (NPS 2022) due to the lack of the necessary habitat requirements for the species. In addition, the proposed Project is situated within a busy and established residential community. The site lacks suitable vegetation, stream courses or natural cavities to provide suitable foraging, den sites, or as a movement corridor. Due to the Project site's densely urbanized location, lack of suitable habitat and lack of viable wildlife corridor, it is not expected that the mountain lion would utilize the project site. However, occasional visitations do occur and some mountain lion sightings have been made in the vicinity in recent years.[2] No evidence of mountain lions, mule deer, or active or former mountain lion natal dens were observed during the general biological survey.

Crotch's Bumble Bee

Crotch's bumble bee is a state candidate endangered species. The species prefers grassland and sage shrubland habitats and relies on milkweeds (*Asclepias* sp.) and sages (*Salvia* sp.) for food. There are limited food source plants available within the Community Restoration Area. There are six CNDDB records with the most recent occurring in 2020 located at Occidental College approximately three miles east of the BSA. (CNDDB 2022).

Western Mastiff Bat

Western mastiff bat is a State species of special concern and a WBWG species ranked as High. WBWG ranked High species are those considered the highest priority for funding, planning, and conservation actions. Commonly associated vegetation includes large trees and palm tree species used for roosting. Suitable woodland habitat and palm trees are present within multiple portions

[2] https://www.latimes.com/california/story/2022-03-26/mountain-lion-believed-to-be-p-22-is-seen-roaming-in-silver-lake-neighborhood

of the BSA. There are four CNDDB records located within five miles of the BSA with the most recent being from over 30 years ago in 1991 (CNDDB 2022).

Hoary Bat

Hoary bat is a Western Bat Working Group (WBWG) species ranked as Medium. WBWG ranked Medium species are those that indicate a level of concern that should warrant closer evaluation and research. The species prefers medium to large-sized trees with dense foliage to roost in and nearby bodies of water to forage. Suitable woodland habitat is present within multiple portions of the BSA. There are four CNDDB records for the species within five miles of the BSA. The most recent CNDDB record is from 30 years ago in 1992, located 0.5 miles to the northwest of the BSA along Monon Street (CNDDB 2022).

Western Yellow Bat

Western yellow bat is a State species of special concern and a WBWG species ranked as High. WBWG ranked High species are those considered the highest priority for funding, planning, and conservation actions. Commonly associated vegetation includes large trees and palm tree species near bodies of water for foraging. Suitable woodland habitat and palm trees are present within multiple portions of the BSA. There is a single CNDDB record dated over 35 years ago in 1984, located within five miles of the BSA (CNDDB 2022).

Monarch Butterfly

Monarch butterfly is a State Rank S2S3 species. Commonly associated vegetation includes large wind-protected stands of non-native eucalyptus (*Eucalyptus* sp.) trees located near the California coastline. The species uses these stands of trees as over-wintering roost sites on their migration. They additionally will use other tree species including pine (*Pinus* sp.) and cypress (*Cupressus* sp.) trees. Within the BSA, suitable habitat exists within all of the semi-natural woodlands located at multiple locations within the SLRC. There are no CNDDB records within five miles of the BSA (CNDDB 2022).

4.6.3 Sensitive Natural Communities

Sensitive natural communities are those that are considered by the CDFW to be imperiled due to their decline in the region and/or their ability to support special-status plant and/or wildlife species. These communities include those that, if eliminated or substantially degraded, would sustain a significant adverse impact as defined under CEQA Section 15002(g). Sensitive natural communities are important ecologically because their degradation and destruction could threaten populations of dependent plant and wildlife species and significantly reduce the regional distribution and viability of the community. Loss of sensitive natural communities also can remove or reduce important ecosystem functions, such as water filtration by wetlands or bank stabilization by riparian woodlands.

The nine-quadrangle CNDDB search yielded eight sensitive natural communities: California Walnut Woodland, Riversidian Alluvial Fan Sage Scrub, Southern Coast Live Oak Riparian Forest, Southern Cottonwood Willow Riparian Forest, Southern Coastal Salt Marsh, Southern Dune Scrub, Sycamore Alder Riparian Woodland, and Walnut Forest. Consistent with the 2019 GPA report and the site visit that was conducted for the proposed Project, none of these natural communities occur within the BSA.

4.6.4 Critical Habitat

Under FESA the U.S. Fish and Wildlife Service (USFWS) and National Marine Fisheries Service (NMFS) are required to designate Critical Habitat for endangered and threatened species. Critical Habitat is defined as areas of land, water, and air space containing the physical and biological features essential for the survival and recovery of endangered and threatened species. Designated Critical Habitat includes sites for breeding and rearing, movement or migration, feeding, roosting, cover, and shelter. Designated Critical Habitats require special management and protection of existing resources, including water quality and quantity, host animals and plants, food availability, pollinators, sunlight, and specific soil types. Critical Habitat delineates all suitable habitat, occupied or not, essential to the survival and recovery of the species. No USFWS-Designated or NMFS Critical Habitat is located within 10 miles of the BSA.

4.7 Aquatic Resources

A formal jurisdictional waters delineation was conducted concurrently with the biological field assessment. All aquatic features within the aquatic resources study area (Project site and 100-foot buffer) were analyzed in the field to determine whether each may be considered wetland or non-wetland ("other") waters of the U.S., waters of the State, and/or FGC Section 1600 resources. Aquatic resources delineated within the survey area include the Ivanhoe Reservoir and Silver Lake Reservoir, which are described below, summarized in **Table 4,** *Aquatic Resources within the Survey Area*, and depicted as Open Water in **Figure 4**.

TABLE 4
AQUATIC RESOURCES WITHIN THE SURVEY AREA

Aquatic Feature	Cowardin Type	Dominant Vegetation/ Land Cover Type	OHWM (feet)	Linear Feet	Acres
Ivanhoe Reservoir	Lacustrine Permanently Flooded	Open Water	415–620	560	7.58
Silver Lake Reservoir	Lacustrine Permanently Flooded	Open Water	605–1,350	3,335	69.35
TOTAL ACREAGE					**76.93**

Ivanhoe Reservoir and Silver Lake Reservoir are both constructed, well-fed reservoirs with natural bottoms and concrete side slopes. NWI categorizes these reservoirs as permanently flooded lakes (USFWS 2022c). The reservoirs are connected by a spillway located on the south end of Ivanhoe Reservoir and north end of Silver Lake Reservoir. There is an overflow located on the west side of Silver Lake Reservoir that releases water to the City's stormwater system if the reservoirs reach 454 feet in elevation.

Based on the results of the aquatic resources delineation and the jurisdictional analysis, it was determined that both reservoir's 76.93 acres of open water are considered "other" (non-wetland) waters of the State and FGC 1600 resources. No waters of the U.S. were identified during the aquatic resources delineation.

4.8 Wildlife Movement

Effective wildlife movement is essential for dispersal, genetic exchange, migration, foraging, and breeding. Migration of wildlife either seasonally or in response to resource availability is vital for survival in virtually all ecosystems. Migration corridors are linkages between large open space areas. Top tier predators, mezzo predators, and prey species alike utilize migration corridors for travel and refuge between open space areas, as well as for wintering and breeding grounds. Some migration corridors are created naturally by topography and have been used by wildlife for hundreds or thousands of years, and some have been constructed by humans to mitigate for the loss of existing natural corridors, such as bridge crossings, underpasses, and culverts. Natural features commonly utilized for local wildlife movement and migration include creeks, rivers, canyons, and valleys, because these low-lying riparian areas are generally flat and include an over story of vegetation that provides shelter from predators. Functional wildlife movement corridors are especially important in highly fragmented habitat, such as urbanized areas. Wildlife movement corridors are generally used by terrestrial animals, although they may also be important for aquatic species and avian dispersal.

The BSA is located within the urbanized area of the Los Angeles Basin that is fully developed with only fragmented vegetated areas. The BSA primarily hosts urbanized wildlife though it does provide habitat for a variety of native birds, some migratory. However, the BSA does not serve as a contiguous regional corridor between two larger stands of habitat.

The BSA supports migratory birds that fly through the Los Angeles Basin. The Migratory Bird Treaty Act (MBTA) protects migratory birds including nests and foraging habitat. Many avian species that do not have any state of federal special status are still protected under the MBTA and the California Fish and Game Code.

4.9 Protected Trees

The BSA was surveyed for trees protected and/or managed under the City Tree Ordinance, RAP Tree Policy, and BSS; the tree survey area is depicted in **Figure 6**. This analysis related to tree and shrub impacts of this BTR is summarized from the *Silver Lake Reservoir Complex Master Plan Project, Protected Tree Report* included as **Appendix E,** the *Silver Lake Reservoir Complex Master Plan Project, Park and Street Tree Inventory Results Report* included as **Appendix F**.

CHAPTER 5
Project Impacts and Avoidance, Minimization, and Mitigation

An analysis of potential Project impacts to biological resources and corresponding recommendations for avoidance, minimization, and mitigation are discussed in this chapter. It should be noted that because the overall Project footprint is conceptual at this time (preliminary design), impacts may need to be confirmed upon completion of a more finalized Project design.

5.1 Approach to the Analysis

Generally, impacts may be defined as direct or indirect, and permanent or temporary. Definitions of these impact types are provided below.

- **Direct Impacts:** Any alteration, disturbance, or destruction of biological resources that would result from project-related activities is considered a direct impact. Examples include loss of individual species and/or their associated plant communities, diversion of surface water flows, and encroachment into wetlands. Under the FESA, direct impacts are defined as the immediate impacts of a project on a species or its habitat, including construction noise disturbance, sedimentation, or habitat loss.
- **Indirect Impacts:** As a result of project-related activities, biological resources may also be affected in an indirect manner. Under the FESA, indirect impacts are defined as those impacts that are caused by, or would result from, a proposed project but occur later in time and are reasonably certain to occur (50 CFR. Section 402-02). An example of indirect impacts may include irrigation runoff from a developed area into surrounding natural vegetation. Indirect impacts could also include increased wildfire frequency as a result of power line failures.
- **Temporary Impacts:** Any impacts to biological resources that are considered reversible can be viewed as temporary. Examples include the generation of fugitive dust during construction activities and temporary access or staging areas that will be returned to pre-project conditions.
- **Permanent Impacts:** All impacts that result in the irreversible removal of biological resources are considered permanent. Examples include constructing a building or permanent road on an area with native vegetation, such that the native vegetation is permanent removed and replaced with a developed structure.

5.2 Thresholds of Significance

The significance criteria used to evaluate the proposed Project impacts to biological resources are based on Appendix G of the CEQA Guidelines, along with the City of Los Angeles 2006 CEQA Thresholds. According to Appendix G of the CEQA Guidelines, the proposed Project would have a significant impact if it would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS.
- Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
- Conflict with provisions of an adopted HCP, Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan.

The City of Los Angeles 2006 CEQA Thresholds Guide holds that the determination of significance shall be made on a case-by-case basis after considering the following factors:

- The loss of individuals, or the reduction of existing habitat, of a state or federal listed endangered, threatened, rare, protected, or candidate species, or a Species of Special Concern or federally listed critical habitat;
- The loss of individuals or the reduction of existing habitat of a locally designated species or a reduction in a locally designated natural habitat or plant community;
- Interference with wildlife movement/migration corridors that may diminish the chances for long-term survival of a sensitive species;
- The alteration of an existing wetland habitat; or
- Interference with habitat such that normal species behaviors are disturbed (e.g., from the introduction of noise, light) to a degree that may diminish the chances for long-term survival of a sensitive species.

Therefore, each impact analysis is evaluated under both Appendix G and the 2006 City of Los Angeles CEQA Thresholds Guidelines, with the thresholds for the City of Los Angeles applied to the relevant Appendix G Thresholds.

5.3 Project Design Features

The following Project Design Features (PDF) would be implemented for the proposed Project.

PDF-BIO-1: Ornamental Native Plants. If the proposed Project impacts native planted species within the Community Restoration Area, including Nevin's barberry, showy island snapdragon, and Coulter's matilija poppy, these species will be replanted onsite at a 1:1 ratio.

PDF BIO-2: Nesting Birds. If construction and vegetation removal is proposed between February 1 and August 31, a qualified biologist shall conduct a pre-construction survey for breeding and nesting birds and raptors 30 days prior to the start of construction, and then weekly, within 300-feet of the construction limits (or to the outer limits of the park area bounded by West Silver Lake Drive, Van Pelt Place, and Silver Lake Boulevard) to determine and map the location and extent of breeding birds that could be affected by the Project. Nesting bird surveys shall be conducted at appropriate nesting times and concentrate on potential roosting or perch sites. Weekly surveys will take place with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work." If Project activities are delayed or suspended for more than 7 days after the last survey, surveys shall be repeated before work can resume.

If an active nest is located, clearing and construction within appropriate buffers as determined by a qualified biological monitor, shall be postponed until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. Due to the urbanized nature of the Project site, 300-feet for raptors and 150-feet for passerine birds could suffice for nesting bird buffers however it will be at the discretion of the qualified biologist. The buffer zone from the nest shall be established in the field with flagging and stakes. The qualified biologist shall retain the ability to increase buffers if needed to protect the nesting birds. Temporary fencing and signage shall be maintained for the duration of the Project. Construction personnel shall be instructed on the sensitivity of the area and be advised not to work, trespass, or engage in activities that would disturb nesting birds near or inside the buffer. On-site construction monitoring may also be required to ensure that no direct or indirect impacts occur to the active nest. Project activities may encroach into the buffer only at the discretion of the qualified biologist.

PDF-BIO-3: Wildlife Fencing Signage. Interpretive signage will be installed near all wildlife friendly fencing to educate the public on wildlife and habitat sensitivity, and to encourage the public to not enter the restricted areas.

PDF-BIO-4: **Tree Protection Fencing.** Establish tree protection fencing around the tree protection zone (TPZ). This area will be marked and avoided during all construction activities near the protected trees. This area will be kept clear of any construction material, debris, equipment, portable toilets, and foot or equipment traffic. Fencing will be installed prior to construction at the edge of the TPZ and remain in place until the entire project is complete. The fence will be chain link and a minimum of five feet in height.

PDF-BIO-5: **Grading/Trenching in TPZ.** Grading/trenching will be restricted to areas outside the TPZ of the trees. All grubbing and clearing within the TPZ of a tree will be done manually. All soil removal will be done with hand tools, using an air spade or

comparable equipment that will excavate soil without damaging the roots. Jack hammers will not be used to remove the soil. When a root is encountered, soil removal will be done without chipping, marring, or damaging the root bark in any way (damaging the root bark will open up the bark barrier so that disease can enter the tree, allowing rot to develop or fungus to take over, and can result in root death).

PDF-BIO-6: **Avoiding Root Damage.** If tree roots must be cut, cuts will be less than one inch. If any roots over one inch in diameter are damaged, they will be clean-cut with a sharp and sterilized hand tool. Any roots permanently exposed from grading or scraping of topsoil will be cleanly cut just below the new soil grade.

PDF-BIO-7: **Soil Grade.** Soil levels will be returned to the original grade, at which trees' roots were first established. Existing fill soil above that original grade will be removed to the extent possible; no additional fill soil will be placed over the original grade. If soil is filled back to the original grade, compaction will be done manually only (no equipment will be used). Compaction will be done in layers of three to six inches depending on soil structure. No gaps or pockets will remain in the soil.

PDF-BIO-8: **Irrigation.** During construction, trees will only be watered under the guidance of the project arborist. Where it is needed, temporary irrigation (drip, leaking tube, or other) will be installed at intervals throughout the fenced protection zone to allow periodic deep watering during construction. The entire TPZ of the trees will be watered to a soil depth of four feet. This may require slow irrigation for 8-24 hours or more, or may require repeat waterings of shorter duration to promote saturation. The soil will be allowed to dry out completely before watering is repeated. The period between waterings may be a month or more. The project arborist will monitor the protected trees and provide recommendations on the effectiveness and duration of temporary irrigation.

PDF-BIO-9: **Landscaping Around Native Trees.** Landscaping near protected trees will be drought-tolerant only unless trees are already accustomed to current landscape irrigation (to be confirmed by arborist). Irrigation overspray or runoff, as a result of lawn or ornamental irrigation, will be avoided in the TPZ of any protected tree with the noted exception above. All landscaping will be kept away from the trunk of any protected tree by a minimum of two feet.

PDF-BIO-10: **Tree Pest Inspection.** Prior to tree removal, the City will have a certified arborist evaluate the trees to ensure they are free of pests.

PDF-BIO-11: **Development of Pest Management Plan.** If the certified arborist determines trees are impacted by infectious pests or diseases, the City will work with the certified arborist to prepare an Infectious Tree Disease Management Plan or develop a detailed, robust, enforceable, and feasible list of preventative measures. A plan/list will provide measures relevant for each tree pest or disease observed. To avoid the spread of infectious tree pests and diseases, infected trees should not be transported from the Project site without first being treated using best available management practices described Infectious Tree Disease Management Plan or the list of preventative measures.

PDF-BIO-12: **Prevention of Pathogen Spread.** All tree material, especially infected tree material, will be left on site, chipping the material for use as ground cover or mulch. Cleaning and disinfecting pruning and power tools before use will be completed to prevent introducing pathogens from known infested areas, and after use to prevent spread of pathogens to new areas.

PDF-BIO-13: City Tree Ordinance. Any tree or shrub covered under the City Tree Ordinance which may be impacted by proposed Project construction, either through removal or encroachment within the TPZ, shall be replaced with nursery stock at a minimum 4:1 mitigation ratio of like species and 15-gallon in size. The City will work with a certified arborist and/or tree specialist to acquire appropriately sized, locally sourced trees from a local native plant nursery that implements Phytophthora/Clean Nursery Stock protocols. This may reduce the probability of introducing replacement trees contaminated with pests, diseases, and pathogens that could spread and infect native trees or habitats. A certified arborist and/or tree specialist should inspect and potentially quarantine nursery stock before bringing them into the Project site. Replacement tree plantings shall be located in areas protected by the habitat fencing to ensure their protection from the public.

PDF-BIO-14: RAP Tree Policy. Any tree or shrub covered under the RAP Tree Policy which may be impacted by the proposed Project construction, either through removal or encroachment within the TPZ, shall be replaced with nursery stock. The City at a minimum will be required to replace impacted trees at a 1:1 ratio for trunk diameter. The impacted trees' aggregate diameter, measured at DSH (multi-trunk trees are to be measured immediately below the lowest trunk) shall be replaced at an equal or greater rate of caliper of new trees. Each one-inch DSH of existing tree shall be replaced with a minimum one-inch caliper new tree.

5.4 Analysis of Potential Project Impacts

5.4.1 Species Impacts

Impact 3.4-1: Would the proposed Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS?

Construction

Special-Status Plants

Three special-status plant species have been ornamentally planted in the Community Restoration Area including Nevin's barberry, showy island snapdragon, and Coulter's matilija poppy. These species are common horticulturally used native plants in Southern California gardens. Mitigation is not typically required for impacts to these species as they are not naturally occurring. However, as outlined by **PDF-BIO-1**, these species will be planted in-kind at a 1:1 ratio within the Project site as appropriate with no loss of habitat value.

As no USFWS-Designated Critical Habitat for plants occurs within the Project site, no impacts to USFWS-Designated Critical Habitat for rare plants would occur. No other special-status plant species have the potential to naturally occur within Project site. Impacts to other special-status plants and critical habitat would be considered less than significant.

Special-Status Wildlife

A total of five special-status wildlife species, Crotch's bumble bee, monarch butterfly, hoary bat, western mastiff bat, and western yellow bat, were identified as having a low potential to occur within the BSA. Habitat for these species occurs primarily within the semi-natural woodlands located in the Knoll and Meadow areas.

Direct impacts to special-status species may occur from direct mortality due to construction activity (loss of individuals) and the removal of habitat. While the Project site is located outside of documented overwintering site for monarch butterfly, habitat for the species does occur at the Knoll zone and Eucalyptus Grove. Therefore, potential impacts to monarch butterfly could result from the removal of large eucalyptus and pine tree species. To minimize impacts to suitable habitat resulting from the removal of trees, the proposed Project would include the preparation of a Tree Succession Plan as outlined in Section 2, *Project Description*, to phase the removal of trees in a successional manner to allow for new tree and shrub plantings to mature and provide interim habitat value as the new vegetation designs are implemented over time. The Tree Succession Plan will incorporate native plants into the understory thus providing food sources and habitat for native wildlife including native sages (*Salvia* sp.) and milkweeds (*Asclepias* sp.) which are vital nectar sources for special-status species like Crotch's bumble bee and monarch butterfly respectively. This successional tree removal practice would ensure that nesting and foraging habitat would not be eliminated during the implementation and initial growth periods.

To minimize impacts to biological resources including special-status invertebrates **Mitigation Measure BIO-1** would be implemented to require a preconstruction training for all contractors to note sensitive biological resources on-site. To minimize impacts to special-status invertebrates, **Mitigation Measure BIO-2** would require pre-construction surveys be conducted for crotch's bumble bee and monarch butterfly. If these species are found on site during the surveys, best management practices as described in BIO-4 would be implemented, such as construction area delineation, construction worker speed reductions, and avoidance of host vegetation, to avoid impacts. With implementation of these mitigation measures, impacts to these special-status invertebrates would be reduced to a less than significant level.

Special-status bats including hoary bat, western mastiff bat, and western yellow bat may occur within large trees and skirted palm trees within the Project site. Bat colonies utilizing the site are adapted to living in an urbanized setting with the existing lighting on-site, including the adjacent residential areas and traffic along roads. However, removal of large trees or skirted palm trees, if required, may result in direct bat mortality or disturbance of maternity roosts, and would be considered a significant impact. Mature trees will be removed subject to the Tree Removal Successional Plan which will be implemented over a 15-year period, allowing time for new tree plantings to become established. Additionally, trees can be selectively identified for removal thus

avoiding trees with active roosts. As the new tree plantings mature new roosting habitat will be established over time.

Mitigation Measure BIO-3 would require a preconstruction survey of large trees and skirted palm trees by a qualified biologist, and the implementation of bat protection measures to avoid impacts to the species. With implementation of **Mitigation Measure BIO-3**, impacts to bats would be reduced to a less than significant level.

No USFWS-Designated Critical Habitat occurs within the BSA. No impacts would occur to USFWS-Designated Critical Habitat.

Nesting Birds

The proposed Project would be constructed within the semi-natural woodlands, ornamental landscapes, developed areas, and the open-water basins. These areas can provide suitable nesting habitat for birds, including great blue herons, great horned owls, red-tailed hawks, and red-shouldered hawks. Potential impacts to nesting birds may occur during the general avian nesting season from February 15 to August 31 for songbirds and January 15 to August 31 for raptors during construction. Impacts may include direct mortality to individuals, nests, or eggs, and loss of nesting habitat (i.e., tree removal). Indirect impacts to active nests may occur due to construction noise and vibration.

The proposed Project would not include nighttime construction. In addition, it can be assumed that nesting bird species utilizing the site, are already adapted to living in an urbanized setting with the existing lighting on-site, LADWP current operational activities, as well as from the adjacent residential areas and traffic along roads.

The creation of 23-acres of native habitat including coastal scrub (4-acres) and wetlands (7-acres) will result in a net gain of avian-supporting vegetation. The proposed diverse native habitat including floating islands, will particularly serve as a supportive habitat for many species of wading birds which often nest in woody vegetation that is either submerged or surrounded by water. The habitat islands would be varied in size and set-back from the shoreline approximately 50 feet or more, to offer a variety of protected foraging and nesting spaces for waterfowl and other aquatic species. Additionally, the created upland and coastal scrub areas within the Knoll and Meadow zones will provide foraging and nesting habitat for avian species. Overall, the net gain of the proposed native habitats to be created would outweigh the removal of non-native species and temporary construction activities. Nevertheless, during construction, nesting birds could be impacted if construction occurs during the nesting bird season. **PDF-BIO-2** would require pre-construction nesting bird surveys and the implementation of avoidance measures during construction if nests are found to be active within 300 feet of construction activities or to the outer limits of the park area bounded by West Silver Lake Drive, Van Pelt Place, and Silver Lake Boulevard. With implementation of **PDF-BIO-2**, impacts to nesting birds during construction would be considered less than significant.

Operation

Currently, public use of the proposed Project site occurs primarily within the South Valley, the Meadow and a walking path surrounding the SLRC. The rest of the proposed Project area is off-limits to the public and is part of the LADWP facility. The proposed Project would increase visitorship, including the potential for events that would attract larger groups of people at one time than currently visit the site. Although the proposed Project may attract a higher level of visitorship, operational noise levels and associated human activities would be similar to existing conditions and would not diminish wildlife use including nesting birds or roosting bat species, as the species utilizing the site are adapted to living in an urbanized setting, surrounded by a residential neighborhood. Nighttime events would increase noise, light and general disruption, but these events would be temporary, infrequent and would not result in degraded habitat values. These events would occur at the Meadow, which is an area currently in frequent use by the public. It is anticipated that wildlife utilizing the park would avoid the event areas, which would occur within the more developed portions of the SLRC (e.g., within the Meadow area, which is currently being frequently used by the public). Additionally, the noise analysis (see the **Noise and Vibration Technical Appendix**) found that anticipated amplified sound generated during nighttime events at the Meadow would not exceed recorded ambient noise levels within the rookery sites and nesting habitat located around study area. Ambient noise levels recorded at the southernmost rookery site located northwest and across the reservoir of the Meadow are 63 dBA for 24 hours and 54 dBA between the hours of 10pm to 7am. The analysis found that found that nighttime event amplified sound at the Meadow would be within the range of 47.0 to 48.0 dBA at the southernmost rookery site and decreasing with distance

The proposed Project would include the addition of lighting throughout the proposed Project area as shown on (see Figure 2-8 of the Project Description). New lighting would be added throughout the proposed Project area for safety and to allow the public to use the public park spaces after dark. High impact lighting would only be used at the park facilities in the South Valley, where such lighting already exists. New pathways and walking areas would have lighting to allow for nighttime recreational use and new low-level lighting or accent lighting would be added to the Meadow, Education Center, and the South Valley. The proposed Project was designed to limit lighting within areas with the most habitat value for wildlife species, therefore, no lighting is proposed for secondary paths within habitat areas or in areas such as the Knoll, Ivanhoe Outlook, and the Eucalyptus Grove. All lighting would be shielded and pointed away from the surrounding neighborhood and habitat areas. Therefore, indirect impacts from lighting, noise, and human activity during proposed Project operation would not impact or diminish long-term survival of wildlife species, including nesting birds or roosting bat species, and impacts would be considered less than significant. Additionally, nighttime event noise levels would not exceed recorded ambient noise levels.

The proposed Project would also allow for large, scheduled public events, including outdoor concerts, movie nights, or luncheons, and requiring amplified sound. It is anticipated that approximately 600 visitors would attend such events. These special events would be assumed to occur weekly during the three months of summer vacation (presumably June, July, and August). Allowable event hours would be from noon to 10:00 p.m. The L.A. City Municipal Code

prohibits the use of amplified sound within 500 feet of any residential zone from 10:00 p.m. to 7:00 a.m. (City of LA 2021). These events will be held within the Meadow. The Meadow is currently a high use park area. Nighttime events would increase noise (primarily localized within the Meadow), light and general disruption, but these events would be temporary, infrequent and would not result in degraded habitat values and would be considered less than significant.

A proposed Education Center would be constructed within the Knoll overlooking the Silver Lake Reservoir. The proposed Education Center would include small indoor and outdoor teaching and assembly spaces, including two interior classrooms. Accent lighting would be added to the proposed Education Center (see **Figure 2-8** of the Project Description). The proposed Education Center would be connected directly to the Silver Lake Reservoir via an accessible pathway leading down to a floating dock. This area could provide educational opportunities and/or guided kayak or canoe tours by ecologists. However, no public access to water activities would be allowed, except through guided kayak tours conducted by an ecologist for educational purposes. The impact of the proposed Education Center would be greatly outweighed by the creation of native upland and wetland habitat and would be considered less than significant. New native habitat would enhance habitat values for numerous wildlife species within the Knoll landscaped areas. Additionally, the kayak tour guided by trained ecologists would be temporary, infrequent and would not result in degraded habitat values and would be considered less than significant.

The proposed Project will install low-level habitat fencing to delineate public walkways from the created habitat (see **Figure 2-4** of the Project Description). The fencing would be designed to allow wildlife to jump over or crawl through easily without injury. Interpretive signage will be posted on the fencing to educate the public on the sensitively of wildlife (see **PDF-BIO-12**). Overall, the wildlife-friendly fencing will minimize impacts to habitat from human interference. Nonetheless, habitat areas would be shared with recreational visitors and would be affected by human presence and recreational usage. The SLRC would remain a recreational park within a densely developed urban area. However, as a fundamental project objective, the Project would be designed to substantially increase the acreage and diversity of native habitats within the SLRC in order to enhance wildlife occupation opportunities while minimizing the effect of visitorship on wildlife.

The perimeter chain-link fence which currently surrounds the SLRC, would be removed in phases as different park zones are constructed. Removal of the chain-link perimeter fence will eliminate barriers to wildlife and provide access for larger wildlife to access the water and wetlands areas. Areas with the most habitat value for wildlife such as the Knoll, will be closed at night and off limits to the public. No impacts to wildlife are anticipated from the installation of the proposed wildlife fencing or the removal of the perimeter fence. Overall, operational impacts of the proposed Project to wildlife are considered less than significant.

Mitigation Measures

BIO-1: Pre-Construction Training. Prior to construction, a worker environmental awareness program (WEAP) training will be provided by a qualified biologist/ISA certified arborist to describe biological resources (including protected trees) that could be impacted and summarize the construction BMPs and project design features to be

implemented. The WEAP will include all contractors (including grading, tree removal/pruning, and builders). The meeting shall include a focus on instructing the contractors on tree protection practices including information on the location and marking of protected trees, the necessity of preventing damage, and the discussion of work practices that shall accomplish these tasks. All equipment operators and spotters, assistants, or those directing operators from the ground shall provide written acknowledgement of receiving training.

BIO-2: Preconstruction Surveys and Mitigation for Crotch's Bumble Bee and Monarch Butterfly. Prior to the start of construction activities, the City shall conduct pre-construction surveys for special-status invertebrates, Crotch's bumble bee and monarch butterfly, within 100 feet of construction activities near host plant communities (including nectar plants for Crotch's bumble bee and mature eucalyptus and pines trees for monarch butterfly). The pre-construction surveys shall be conducted 7 days prior the start of construction activities. If any of these species are present or determined to be within 100 feet of construction areas, construction best management practices (BMPs) will be implemented and incorporation of information about these species will be incorporated into the WEAP training to avoid potential impacts to these species. BMPs shall include limiting construction vehicle speeds to 15 miles per hour when operating within 100 feet of the habitat areas, fencing habitat areas using temporary silt fencing, and cleaning up all trash and debris daily. In coordination with the CDFW, additional avoidance measures may be required that include establishing a buffer around the species host plants, large trees, and on-site monitoring dependent on distance from the work area. Construction personnel will be instructed to not directly harm any special-status species on-site by halting activities until the species can move to off-site areas or contact a qualified biologist to move the species out of harm's way.

BIO-3: Special-Status Bats. Prior to construction activities, bat surveys shall be conducted by a qualified bat biologist 7 days prior to the start of construction activities to determine if the special-status hoary bat, western mastiff bat, or western yellow bat could be impacted by proposed Project implementation. If special-status bat species are determined to be present within the proposed Project impact areas and if removal of roosting habitat (mature trees or palm trees) is required, a qualified biologist (a biologist with the ability to identify bat guano and assess habitat suitability) shall inspect the base of trees and palm skirts for guano prior to removal of skirted palm trees (i.e. palm trees with several layers of accumulated dead fronds).

If bats are detected, tree removal shall avoid the bat maternity season (April 1 through August 31). If tree removal cannot avoid the maternity season, bat protection protocols shall be identified and implemented by a qualified bat biologist and approved by CDFW. The protocols may require installation of bat exclusionary devices, followed by up to four weeks of nightly monitoring by a qualified biologist to confirm bats are being excluded without harm until it is determined bats are no longer present. Construction of substitute bat habitat (i.e., bat boxes, artificial tree structures) should take place one-month prior the start of bat exclusion activities. Substitute bat habitat should be in the vicinity of bat-occupied mature trees or palm trees that a qualified biologist has been confirmed that bats are using. Bat boxes manufactured by vendors such as Bat Conservation and Management should be used. The one-month window prior to the start of bat exclusion activities will allow bats sufficient time to acclimate to a new potential roost location. The bat boxes shall be installed in an area that is close to suitable foraging habitat as determined by a qualified bat biologist. Bat boxes should be located on poles 10 to 20

feet off the ground. Additionally, the bat boxes will be oriented to the south or southwest, and the area chosen for the bat boxes must receive sufficient sunlight (at least 6 hours daily) to allow the bat boxes to reach an optimum internal temperature (approximately 80-100°F).

At a minimum monitoring by qualified bat biologist should be required each month during construction and quarterly thereafter until it can be established that the bat box is being utilized. A determination needs to be made of what bat species are using the box. If the boxes are unsuccessful adaptive management measures should be developed in coordination with the CDFW.

Significance Determination

Less than Significant with Mitigation Measures Incorporated

5.4.2 Sensitive Natural Communities

Impact 3.4-2: Would the proposed Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or USFWS?

Construction

As noted above, the nine-quad CNDDB search yielded records for eight sensitive natural communities: California Walnut Woodland, Riversidian Alluvial Fan Sage Scrub, Southern Coast Live Oak Riparian Forest, Southern Cottonwood Willow Riparian Forest, Southern Coastal Salt Marsh, Southern Dune Scrub, Sycamore Alder Riparian Woodland, and Walnut Forest. Based on the site visit, none of these natural communities were observed to occur within the BSA. Additionally, the coast live oak and Southern California black walnut trees were observed to not meet the definition of sensitive natural communities listed above. Specifically, two tree species listed above need to be dominant or co-dominant in the tree canopy and attaining 30% to 50% relative cover. Neither of these species acquire that level of dominance or co-dominance as all woodlands present within the project site are dominated by non-native species. The western sycamores located near the Silver Lake Recreation Center do not meet the definition of a sensitive natural community. The western sycamores onsite are planted and share the location with a variety of non-native tree species. Overall, these three native tree species are dispersed throughout the project site and do not constitute native woodlands.

There are no sensitive natural communities located on or immediately adjacent to the proposed Project areas. No reduction in a locally designated natural habitat or plant community would occur. No impact would occur.

Operation

There are no sensitive natural communities located on or immediately adjacent to the proposed Project.

Mitigation Measures

None Required

Significance Determination

No Impact

5.4.3 Wetlands

Impact 3.4-3: Would the proposed Project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Construction

Based on the results of the field survey habitat assessment and a review of aerial photography (historic and current) and topographic maps, there are no natural drainage features or potentially jurisdictional resources located on or immediately adjacent to the BSA. Additionally, due to unsuitable soils and lack of surface hydrology, no wetlands including federally protected wetlands occur or have the potential to occur within the proposed Project site. Construction would not result in any impacts (including alteration) to State or federally protected waters or wetlands, or to any jurisdictional features that would require mitigation and permitting from USACE, CDFW, or RWQCB. No impact would occur.

Operation

There are no natural drainage features or potentially jurisdictional resources located on or immediately adjacent to the proposed Project therefore no impact would occur from operational use. The proposed Project would include the addition of wetland habitat along the perimeter of the reservoir and through the addition of habitat islands. New wetland habitat would enhance habitat values for numerous wildlife species including migratory avian species. The proposed Project would include the preparation of a Wetland Habitat Maintenance Plan to ensure that habitat values are maintained over time and in periods of drought. No adverse impacts to wetlands would occur.

Mitigation Measures

None Required

Significance Determination

No Impact

5.4.4 Migratory Wildlife Corridors

Impact 3.4-4: Would the proposed Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Construction/Operation

The proposed Project would be located within an urbanized area of the City of Los Angeles and is surrounded by residential development. The proposed Project site is located approximately 0.4 mile southwest of the Los Angeles River, a principal drainage that could be used as a wildlife corridor. The proposed Project site would be located approximately 1.4 miles southeast of the Santa Monica Mountains, which is the closest open space area. The proposed Project is not a designated wildlife movement corridor, would be isolated within a residential neighborhood, and would not function as a wildlife movement corridor within the region.

Ivanhoe and Silver Lake Reservoirs do serve as foraging habitat for migratory avian species including waterfowl and shoreline species. Construction activities to the reservoir would temporarily disrupt avian foraging opportunities. However, these interruptions would be temporary during construction activities associated with the reservoir improvement. In addition, there are two reservoirs located within less than 4 miles of the proposed Project site, Echo Park located less than 1.5 miles to the south and Hollywood Reservoir, located less than 4 miles to the northwest. In addition, once construction is completed, the Project will include creation of 7-acres of wetland habitat including floating islands. The floating islands and shoreline wetland habitat will create habitat underneath them within their below-the-water root zone which is a highly ecologically productive area that attracts fish (which will be introduced as a local prey source) and other aquatic species. These wetlands will provide a net gain in habitat values within the SLRC by increasing habitat diversity, providing predator protection, and providing increased foraging opportunities. Regionally, the created wetlands and the SLRC as a whole will serve as a great attractant and resource for migratory avian species (GPA 2020). The Project would result in less than significant impacts.

Mitigation Measures

None Required

Significance Determination

Less than Significant

5.4.5 Local Policies and Ordinances

Impact 3.4-5: Would the proposed Project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Construction/Operation

The proposed Project has the potential to result in direct impacts to native shrubs and trees regulated by the City Tree Ordinance, RAP Policy, and the BSS tree permit application. Direct impacts include tree removal and encroachment resulting in the decline and/or death of protected trees. Indirect impacts may result from dust, sedimentation, runoff, soil compaction, and failure to establish tree protection zones. Overall, impact totals presented are based on conceptual disturbance limits and site plans as of the date of this BTR. As such, the actual number of trees subject to direct and indirect impacts may change as the detailed site planning evolves. Indirect impacts may lead to the mortality of protected trees. Actual tree impact numbers may be lower than anticipated and as presented. In addition, the City will work with the design team to minimize tree removal and tree root/canopy encroachment where possible during final design development and during construction activities.

This section includes a discussion of impacts to trees protected under the City Tree Ordinance as well as RAP Tree Policy/BSS Trees per the current project design.

City Tree Ordinance Protected Trees

A total of 47 protected trees and shrubs covered by the City Tree Ordinance were mapped within the proposed Project site, four (including two Southern California black walnut trees and two toyons) of which will require removal to accommodate the currently proposed site plan. A total of approximately 43 protected trees will not be impacted and will be preserved in place (refer to **Figures 7a through 7c** of **Appendix BIO**). Avoiding any disturbance to the tree protection zone (TPZ) of all protected trees is recommended, including grading, trenching, filling (adding soils), or paving within and around the TPZ, and will have the least impact on the protected trees. The TPZ is defined as a zone underneath and immediately outside the canopy of a protected tree. Within the TPZ, construction is likely to affect a tree's health and must be carefully managed. Per City requirements, the TPZ of the trees addressed by this report is the area within fifteen feet of the trunk, or within the dripline and extending five feet beyond the dripline, whichever is greater.[3] The PDFs **PDF-BIO-4 through PDF-BIO-9** would be implemented to avoid/minimize impacts to the 43 trees. Implementation of **Mitigation Measure BIO-1** would include a preconstruction training to contractors noting the location of these 43 trees to be avoided.

Four City Tree Ordinance trees will be removed, including two Southern California black walnut (tree identification numbers 738 and 739 depicted on **Figure 7b**) and two toyons (tree identification numbers 742 and 743 depicted on **Figure 7b**). These four City Tree Ordinance trees are likely naturally occurring given their location within an unmaintained area. As described in **Mitigation Measure BIO-4**, a tree salvage and planting plan would be prepared According to the

[3] The dripline of a protected tree is a line which can be drawn around a tree under the tips of the outermost branches. It is the location where rainwater tends to drip from the tree.

City Tree Ordinance, removal of protected trees will require mitigation at a 4:1 ratio. Based on previous coordination with CDFW, the City understands that CDFW typically requires a higher mitigation rate for native oak trees. As such, the proposed Project **Mitigation Measures BIO-5** requires a higher replacement ratio for impacted native oak trees covered under the City Tree Ordinance and RAP Tree Policy as follows: protected native oak trees less than 12 inches DSH be replaced at 4:1; between 12 and 24 inches DSH be replaced at 5:1; and greater than 24 inches DSH be replaced at 10:1. However, no impacts to native oaks trees protected by the City Tree Ordinance are proposed at this time. A summary of City Tree Ordinance trees that will be impacted is provided in **Table 3.4-7**. To meet the minimal requirements of the City Tree Ordinance, 16 replacement trees would be required for the four that would be removed. Replacement mitigation tree plantings will be installed within the proposed Project site in the currently proposed native upland vegetation planting areas largely within the Knoll and Meadow zones, and along the Promenade. All replacement trees will come from nursery stock.

TABLE 3.4-7
CITY TREE ORDINANCE PROTECTED TREES TO BE REMOVED DURING CONSTRUCTION

Tree Identification Number	Tree Species	Trunk DSH	Cumulative Trunk Diameters	Number of Mitigation Trees
738	Southern California black walnut	3.1, 2.8, 1.7, 1.0	8.6	4
739	Southern California black walnut	4.3, 4.2, 4.2, 3.8, 3.2	19.7	4
742	toyon	4.1, 3.8, 3.1	11	4
743	toyon	2.3, 1.1, 1.0, 1.0, 1.0	6.4	4
TOTAL MITIGATION TREES				**16**

SOURCE: Protected Tree Report (Appendix E)

In order to avoid the spread of pests and diseases, the proposed Project would implement PDFs **PDF-BIO-6 through PDF-BIO-9 to** ensure trees are checked and treated prior to removal from the Project site**.**

RAP and BSS Trees

A total of 362 RAP and BSS street trees have been inventoried within and surrounding the Project site; 105 RAP trees may require removal to accommodate the currently proposed site plan and 149 RAP and 108 BSS trees will not be removed and will be preserved in place. No BSS trees are proposed for removal. The PDFs **PDF-BIO-4 through PDF-BIO-9** would be implemented to avoid/minimize impacts to the149 RAP and 108 BSS trees that will be preserved in place. Implementation of **Mitigation Measure BIO-1** would include a preconstruction training to contractors noting the location of these trees to be avoided.

RAP Tree Policy states that whenever trees are removed, the existing trees' aggregate diameter, measured at DSH (multi-trunk trees are to be measured immediately below the lowest trunk) shall be replaced at an equal or greater rate of caliper of new trees. Each one-inch DSH of existing tree shall be replaced with a minimum one-inch caliper new tree. Replacement trees shall have a minimum caliper of ¼-inch. For example, a single-trunk tree whose DSH is 9 inches may be

replaced with 36 trees of ¼-inch caliper, or with three trees of 3-inch caliper. This replacement ratio should represent a minimum. If the replacement ratio cannot be achieved on an individual project, it should be applied on an area-wide basis. All replacement trees shall be healthy and free of kinked, overgrown, or otherwise defective roots.

In summary, the City will be required to replace 105 trees protected by the RAP Tree Policy at a 1:1 ratio for trunk diameter. Actual number of trees planted for this replacement standard will need to have a sum total of 558 caliper inches to mitigate the removal 558 inches of measured trunk diameters. Of the 105 proposed removal trees protected by RAP Tree Policy, 11 are native species as defined by the City Tree Ordinance. A summary of the 11 native RAP trees that will be impacted and corresponding mitigation ratios is provided in **Table 3.4-8**. RAP Tree Policy requires at least a 4:1 ratio for native species regardless of the caliper requirements stated above. For compliance with the RAP Tree Policy a total of 558 inches of measured trunk diameter consisting of a minimum of 44 native trees would be planted to mitigate the 105 removals.

Additionally, as mentioned the CDFW has recommended higher mitigation ratios for impacted native oak trees with DSH larger than 12 inches to replace the habitat value of native oak tree removal (with mitigation ratios that vary from 4:1, 5:1, and 10:1 based on DSH of removed trees). However, the DSH for the single proposed native oak removal would require the 4:1 mitigation ratio consistent with RAP Tree Policy and would not change the minimum of 44 replacement trees. No larger DSH native oaks are proposed for removal at this time. Therefore, the mitigation shown in **Table 3.4-8** for the proposed removals would be required.

TABLE 3.4-8
NATIVE RAP TREES TO BE REMOVED DURING CONSTRUCTION

Tree Identification Number	Tree Species	Trunk DSH	Cumulative Trunk Diameters[1]	Number of Mitigation Trees
748	coast live oak	6.2	6.2	4
749	Mexican elderberry	3.9, 3.8, 2.6, 2.4, 1.0, 1.0	14.7	4
750	Mexican elderberry	3.1, 2.7, 2.1, 1.2, 1.0	10.1	4
751	toyon	1.9, 1.8, 1.6, 1.7, 1.0, 1.0	9	4
758	Southern California black walnut	9	9	4
759	Southern California black walnut	3.2, 3.1, 3.1, 2.8	12.2	4
766	western sycamore	21	21	4
767	western sycamore	10.9	10.9	4
768	western sycamore	5.2	5.2	4
773	western sycamore	24.7	24.7	4
774	western sycamore	28.5	28.5	4
TOTAL MITIGATION TREES				**44**

SOURCE: Park and Street Tree Inventory Results Report (Appendix F)

[1] Cumulative Trunk Diameters are provided for all trees but are only relevant for the impacted native oak tree (to support determination of the applicable CDFW Mitigation Ratio). All other native trees are not relevant but are provided informationally.

With implementation of **Mitigation Measures BIO-1, BIO-4, and BIO-5** the proposed Project would result in less than significant impacts related to conflicts with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance

Mitigation Measures

BIO-4: Tree Salvage and Replanting Plan. For impacts to trees protected under local policies and ordinances, the City shall prepare and implement a tree salvage and replanting plan. This salvage and replanting plan shall be prepared by a certified arborist familiar with the target species and in compliance with the specifications of the City Tree Ordinance or RAP Tree Policy (dependent on property location). The salvage and replanting plan shall include measures to salvage, replant, and monitor the new trees for a total of 10 years. The replanting plan will specify for planted trees to occur in the most naturalized habitat areas on-site (e.g., the Knoll) to maximize increasing habitat value and establishment success. The replanting plan shall also specify the appropriate spacing of planted trees to accommodate growth horizontally, vertically, and laterally below ground. The plan shall also specify recommended long-term monitoring, maintenance, and inspection until all planted trees survive to produce reproductive structures. Follow up inspections by the project arborist should be conducted after construction is completed for ten years. Preferably, follow up visits should be conducted quarterly during Years 1 and 2, biannually for Years 3 through 5, and annually for Years 6 through 10. More frequent monitoring and/or post-construction steps to improve any trees that are doing poorly should be carried out as recommended by the arborist. The plan will also include a measure to address if observations of stress or potential failure of planted trees occur (e.g., consulting with a certified arborist or tree specialist to provide recommendations so there is no net loss of trees). Any replacement trees that fail will be replaced at 1:1 with 15-gallon tree of like species.

BIO-5: Native Oak Trees. Native oak trees removed as a result of the Project with a trunk at DSH less than 12 inches shall be replaced at a 4:1 ratio, and if the diameter is between 12-24 inches at a 5:1 ratio, and greater than 24 inches at a 10:1 ratio.

Significance Determination

Less than Significant with Mitigation Measures Incorporated

5.4.6 HCP and NCCP

Issue 4: Would the proposed Project conflict with provisions of an adopted HCP, NCCP, or other approved local, regional, or state habitat conservation plan?

Construction/Operation

The proposed Project is not located within the boundaries of an adopted HCP, NCCP, or other approved local, regional, or state habitat conservation plan. No impact would occur from construction or operational use.

Mitigation Measures

None required

Significance Determination

No Impact

	Accipitridae	True Hawks	*Buteo jamaicensis*	red-tailed hawk	
	Aegithalidae	Bushtits	*Psaltriparus minimus*	bushtits	
	Anatidae	Ducks, Geese, and Waterfowl	*Anas platyrhynchos*	mallard	
	Anatidae	Ducks, Geese, and Waterfowl	*Branta canadensis*	Canada goose	
	Anatidae	Ducks, Geese, and Waterfowl	*Lophodytes cucullatus*	hooded merganser	
	Anatidae	Ducks, Geese, and Waterfowl	*Oxyura jamaicensis*	ruddy duck	
	Anatidae	Ducks, Geese, and Waterfowl	*Spatula cyanoptera*	cinnamon teal	
	Apodidae	Swifts	*Aeronautes saxatalis*	white-throated swift	
	Ardeidae	Herons	*Ardea herodias*	great blue heron	
	Cathartidae	New World Vultures	*Cathartes aura*	turkey vulture	
	Charadriidae	Plovers	*Charadrius vociferus*	killdeer	
	Columbidae	Doves	*Zenaida macroura*	mourning dove	
	Corvidae	Crows and Jays	*Aphelocoma californica*	western scrub-jay	
	Corvidae	Crows and Jays	*Corvus brachyrhynchos*	American crow	
	Estrildidae	Estrildid Finches	*Lonchura punctulata*	scaly-breasted munia	
	Falconidae	Falcons	*Falco sparverius*	American kestrel	
	Fringillidae	Finches and Allies	*Haemorhous mexicanus*	house finch	
	Fringillidae	Finches and Allies	*Spinus psaltria*	lesser goldfinch	
	Hirundinidae	Swallows and Swifts	*Hirundo rustica*	barn swallow	
	Hirundinidae	Swallows and Swifts	*Stelgidopteryx serripennis*	northern rough-winged swallow	
	Laridae	Gulls	*Larus californicus*	California gull	
	Laridae	Gulls	*Larus occidentalis*	western gull	
	Mimidae	Mockingbirds and Thrashers	*Mimus polyglotos*	northern mockingbird	
	Parulidae	New World Warblers	*Setophaga coronata*	yellow-rumped warbler	
	Passerellidae	New World Sparrows	*Melospiza melodia*	song sparrow	
	Passerellidae	New World Sparrows	*Melozone crissalis*	California towhee	
	Passerellidae	New World Sparrows	*Zonotrichia leucophrys*	white-crowned sparrow	

Class	Family	Family Common Name	Scientific Name	Common Name	Status
	Picidae	Woodpeckers	*Dryobates nuttallii*	Nuttall's woodpecker	
	Picidae	Woodpeckers	*Melanerpes formicivorus*	acorn woodpecker	
	Podicipedidae	Grebes	*Podilymbus podiceps*	pied-billed grebe	
	Rallidae	Coots	*Fulica americana*	American coot	
	Apodidae	Owls	*Bubo virginianus*	great-horned owl	
	Trochilidae	Hummingbirds	*Calypte anna*	Anna's hummingbird	
	Trochilidae	Hummingbirds	*Selasphorus sasin*	Allen's hummingbird	
	Troglodytidae	Wrens	*Thryomanes bewickii*	Bewick's wren	
	Tyrannidae	Tyrant Flycatchers	*Sayornis nigricans*	black phoebe	
	Tyrannidae	Tyrant Flycatchers	*Sayornis saya*	Say's phoebe	
	Tyrannidae	Tyrant Flycatchers	*Tyrannus vociferans*	Cassin's kingbird	
Mammals					
	Canidae	Wolves and Coyotes	*Canis latrans*	coyote	
	Leporidae	Rabbits	*Sylvilagus audubonii*	desert cottontail

Appendix C

Special-Status Plant Species Not Expected to Occur within the Biological Study Area

ESA

Common Name Scientific Name	Flowering Period	Sensitivity Status	Preferred Habitat/Known Elevational Range	Presence/Potential to Occur within Biological Study Area
Dicots				
Parish's brittlescale *Atriplex parishii*	June–October	--/--/1B.1	Alkali meadows, vernal pools, chenopod scrub, playas. Typically located on alkali flats with finely textured soils. Elevation range: 80 to 6160 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record exists within five miles of BSA with an unspecified date (CNDDB 2021).
Davidson's saltscale *Atriplex serenana* var. *davidsonii*	April–October	--/--/1B.2	Coastal bluff scrub, coastal scrub. Located on alkaline soils. Elevation range: 30 to 650 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record dated 1902 exists within five miles of BSA and classified as possibly extirpated (CNDDB 2021).
Nevin's barberry *Berberis nevinii*	February–June	FE/SE/1B.1	Chaparral, cismontane woodland, coastal scrub, riparian scrub. On steep, North facing slopes or in low grade sandy washes. Elevation range: 230 to 2,705 feet (CNPS 2022).	**Not Expected/Present.** Observed within the SLRC at the Community Restoration Area within the Silver Lake Meadow Park as a single planted ornamental specimen. Single plant dependent on park provided irrigation. However, no suitable habitat within the BSA that would allow for naturally self-sustaining occurrences of this species. Three CNDDB records from 2010 located within five-miles of the BSA (CNDDB 2021). All three records are for transplanted plants and are not naturally occurring.
Lucky morning-glory *Calystegia felix*	March–September	--/S1/1B.1	Meadows, seeps, and riparian scrub on alkaline soils (CNPS 20212).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record from 1899 located within one-mile of the BSA (CNDDB 2021).
Southern tarplant *Centromadia parryi* ssp. *australis*	May–November	--/S2/1B.1	Marshes and swamps margins, valley and foothill grassland. Often located on disturbed sites near the coast on alkali soils. Elevation range: 0 to 1,385 feet. (CNDDB 2021; CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record dated 1930 exists within five miles of BSA (CNDDB 2021).
Many-stemmed dudleya Dudleya multicaulis	April–July	--/S2/1B.2	Chaparral, coastal scrub, valley and foothill grassland. Located in heavy, often clay soils or grassy slopes. Elevation range: 45 to 2,560 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record dated 1925 exists within five miles of BSA and classified as possibly extirpated (CNDDB 2021).
Showy island snapdragon *Gambelia speciosa*	February–May	--/--/1B.2	Coastal scrub. Rocky micro habitats. Elevation range: 0 to 2,955 feet (CNPS 2022)	**Not Expected/Present.** Observed within the SLRC at the Community Restoration Area within the Silver Lake Meadow Park. Dependent on park provided irrigation. However, no suitable habitat within the BSA that would allow for naturally self-sustaining occurrences of this species. No CNDDB records located within five-miles of the BSA (CNDDB 2022).
Mesa horkelia *Horkelia cuneata* var. *puberula*	February–September	--/--/1B.1	Chaparral, cismontane woodland, coastal scrub. Located on sandy or gravelly sites. Elevation range: 225 to 2,625 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Four CNDDB records with the most recent dated 1918. All records located within five-miles of the BSA (CNDDB 2021). Three of the four records classified as extirpated or possibly extirpated.

Common Name Scientific Name	Flowering Period	Sensitivity Status	Preferred Habitat/Known Elevational Range	Presence/Potential to Occur within Biological Study Area
Robinson's pepper-grass *Lepidium virginicum* var. *robinsonii*	January–July	--/--/4.3	Coastal sage scrub and chaparral. Occurs usually in non-wetlands and occasionally in wetlands. Elevation range: 0 to 9,184 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. A single CNDDB record with the date 1950 located within five-miles of the BSA (CNDDB 2021).
Spreading navarretia *Navarretia fossalis*	April–June	FT CRPR 1B.1 S1	Vernal pools, chenopod scrub, marshes, swamps, and playas. Located on hardpan soils in swales, depressions, and pools. Elevation range: 95 to 4225 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Records was found with the CNPS 9-quad database search (CNPS 2021). No CNDDB records for this species within five-miles of the BSA.
Prostrate navarretia *Navarretia prostrata*	April–July	--/--/1B.1	Found in mesic conditions within coastal scrub, meadows and seeps, valley and foothill grassland (alkaline), and vernal pools. Elevation range: 45 to 2270 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Most recent CNDDB record for 1907 classified as possibly extirpated (CNDDB 2021).
White rabbit-tobacco *Pseudognaphalium leucocephalum*	July–December	--/--/2B.2	Riparian woodland, cismontane woodland, coastal scrub, chaparral. Elevation range: 0 to 6,825 feet (CNPS 2022).	**Not expected.** No suitable habitat present within the BSA. Most recent CNDDB record for 1907 located within five-miles of the BSA (CNDDB 2021).
Nuttall's scrub oak *Quercus dumosa*	February–April (May–August)	--/--/1B.1	This evergreen shrub blooms from February to August at elevations from 49 to 1,312 feet. It inhabits sandy soils and clay loam in coastal scrub, chaparral, and closed-cone coniferous forests. It can be found along the coasts of Santa Barbara, Orange, and San Diego counties. (CNPS 2022).	**Not expected.** No suitable habitat present within the BSA. Most recent CNDDB record for 1924 located within five-miles of the BSA (CNDDB 2021).
Parish's gooseberry *Ribes divaricatum* var. *parishii*	February–April	--/--/1A	Riparian woodlands. Elevation range: 213 to 984 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record dated 1893 exists within five miles of BSA and classified as possibly extirpated (CNDDB 2021).
Coulter's matilija poppy *Romneya coulteri*	March–July	--/S4/4.2	Coastal sage scrub and chaparral. Elevation range: 65 – 3,995 feet (CNPS 2022).	**Not Expected/Present.** Observed within the SLRC at the Community Restoration Area within the Meadow Park. Dependent on park provided irrigation. However, no suitable habitat within the BSA that would allow for naturally self-sustaining occurrences of this species. No CNDDB records located within five-miles of the BSA (CNDDB 2022).
Salt spring checkerbloom *Sidalcea neomexicana*	March–June	--/--/2B.2	Chaparral, coast scrub, lower montane coniferous forest, Mojavean desert scrub, and playas on alkaline mesic soils. Elevation range 50 to 5000 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record dated 1902 exists within five miles of BSA and classified as possibly extirpated (CNDDB 2021).

Common Name Scientific Name	Flowering Period	Sensitivity Status	Preferred Habitat/Known Elevational Range	Presence/Potential to Occur within Biological Study Area
San Bernardino Aster *Symphyotrichum defoliatum*	July–November	--/--/1B.2	Meadows and seeps, marshes and swamps, coastal scrub, cismontane woodland, lower montane coniferous forest, grassland. Located in mesic grassland near ditches, streams, and springs. Elevation range: 5 to 6,630 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record dated 1893 exists within five miles of BSA and classified as extirpated (CNDDB 2021).
Greata's aster *Symphyotrichum greatae*	June–October	--/--/1B.3	Chaparral, cismontane woodland, broadleafed upland forest, lower montane coniferous forest, riparian woodland. Mesic canyons. Elevation range 985 to 6,595 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Two CNDDB records with the most recent dated 1932. All records located within five-miles of the BSA (CNDDB 2021). Both records classified as possibly extirpated.
Monocots				
Slender mariposa-lily *Calochortus clavatus* var. *gracilis*	March–June	--/--/1B.2	Chaparral, coastal scrub, valley and foothill grassland. Shaded foothill canyons; often on grassy slopes within other habitat. Elevation range: 1,050 to 3,280 feet (CNPS 2022).	**Not expected.** No suitable habitat within the BSA. Single CNDDB record dated 2010 exists within five miles of BSA (CNDDB 2021).
Plummer's mariposa-lily *Calochortus plummerae*	May–July	--/--/4.2	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland, lower montane coniferous forest. Located on rocky and sandy sites derived from granitic or alluvial material; often occurs following fires. Elevation range: 320 to 5510 feet (CNPS 2022).	**Not expected**. No suitable habitat within the BSA. Three CNDDB records with the most recent dated 2008. All records located within five-miles of the BSA (CNDDB 2021). One of the three records classified as possibly extirpated.

Appendix D

Special-Status Wildlife Species Not Expected to Occur within the Biological Study Area

ESA

Common Name Scientific Name	Sensitivity Status	Preferred Habitat/Known Elevational Range	Presence/Potential to Occur within Biological Study Area
Amphibians			
western spadefoot *Spea hammondii*	--/SSC	Mixed woodland, grasslands, chaparral, sandy washes, lowlands, river floodplains, alluvial fans, playas, alkali flats, foothills, and mountains. Prefers washes and other sandy areas with patches of brush and rocks. Rain pools or shallow temporary pools, which do not contain bullfrogs, fish, or crayfish are necessary for breeding. Perennial plants necessary for its major food-termites.	**Not expected.** No suitable habitat present within the BSA. There are two CNDDB records dated from 1921 with one classified as possibly extirpated.
Reptiles			
legless lizards *Anniella* spp.	--/SSC	Frequents sparse vegetation of beaches, chaparral, pine-oak woodland, and streamside growth of sycamores, cottonwoods, and oaks. Needs loose soil for burrowing, moisture, warmth, and plant cover. Moisture is essential.	**Not Expected.** No suitable habitat present within the BSA. The most recent detection was made in 2011 within five-miles of the BSA (CNDDB 2021).
Southern California legless lizard *Anniella stebbinsi*	--/SSC	Found in broadleaved upland forest, chaparral, coastal dunes, and coastal scrub habitats, and generally found under sparse vegetation in sandy or loose loamy soils with a high moisture content.	**Not Expected.** No suitable habitat present within the BSA. There are 11 CNDDB records within five-miles of the BSA (CNDDB 2021).
coast horned lizard *Phrynosoma blainvillii*	--/SSC	Prefers sandy riparian and sage scrub habitats but also occurs in valley-foothill hardwood, conifer, pine-cypress, juniper and annual grassland habitats below 6,000 feet, open country, especially sandy areas, washes, flood plains, and windblown deposits. Requires open areas for sunning, bushes and loose soil for cover and abundant supply of harvester ants.	**Not expected**. Limited suitable habitat located within the BSA. The most recent CNDDB record is from 1931 within five-miles of BSA (CNSSB 2021).
Birds			
southern California rufous-crowned sparrow *Aimophila ruficeps canescens*	--/WL	Known to frequent relatively steep, often rocky hillsides with grass and forb species. Resident in Southern California coastal sage scrub and mixed chaparral habitats.	**Not expected.** No suitable habitat located within the BSA. There is a single CNDDB record from 2014 (CNDDB 2021).
burrowing owl *Athene cunicularia*	BCC/SSC	Inhabits coastal prairie, coastal scrub, Great Basin scrub, Mojavean desert scrub, Sonoran desert scrub, annual and perennial grasslands, bare ground, and disturbed habitats characterized by low-growing vegetation. A subterranean nester dependent upon burrowing mammals, particularly the California ground squirrel.	**Not expected.** No suitable habitat located within the BSA. There is a single CNDDB record from 1921 (CNDDB 2021)
yellow rail *Coturnicops noveboracensis*	BCC/SSC	Known to occur within freshwater marshlands, meadows, and seeps.	**Not expected.** No suitable habitat located within the BSA. There is a single CNDDB record from 1952 (CNDDB 2021).

Common Name Scientific Name	Sensitivity Status	Preferred Habitat/Known Elevational Range	Presence/Potential to Occur within Biological Study Area
southwestern willow flycatcher *Empidonax traillii extimus*	FE/SE	For nesting, species requires dense riparian habitats (cottonwood/willow and tamarisk vegetation) with microclimatic conditions dictated by the local surroundings. Saturated soils, standing water, or nearby streams, pools, or cienegas are a component of nesting habitat that also influences the microclimate and density vegetation component. Habitat not suitable for nesting may be used for migration and foraging. Recurrent flooding and a natural hydrograph are important to withstand invading exotic species (tamarisk).	**Not expected.** No suitable habitat within the BSA. There are two CNDDB records dated 1894 and 1906 within five-miles of the site (CNDDB 2021).
peregrine falcon *Falco peregrinus*	FD/ SD; FP	Known to occur near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	**Not expected.** Limited suitable habitat located within the BSA. There is a single CNDDB record from 2005 within five-miles of the BSA (CNDDB 2021).
coastal California gnatcatcher *Polioptila californica californica*	FT/ST	Species is an obligate, permanent resident of coastal sage scrub habitats dominated by California sagebrush and flat-topped buckwheat, mainly on cismontane slopes below 1,500 feet in elevation. Low coastal sage scrub in arid washes, on mesas and slopes.	**Not Expected.** No suitable habitat located within the BSA. There is a single CNDDB record from 1904 classified at extirpated (CNDDB 2021).
Bank swallow *Riparia riparia*	--/ST	Colonial nester; nests primarily in riparian and other lowland habitats west of the desert. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean to dig nesting hole.	**Not Expected.** No suitable habitat located within the BSA. There is a single CNDDB record from 1894.classified at extirpated (CNDDB 2021).
least Bell's vireo *Vireo bellii pusillus*	FE/FE	Known to occur in riparian forest, scrub, and woodland habitats. Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2,000 feet. Highly territorial and nests primarily in willow, mule fat, or mesquite habitats.	**Not expected.** No suitable habitat within the BSA. All seven CNDDB records within five-miles of the site are classified as possibly extirpated (CNDDB 2021).
Mammals			
pallid bat *Antrozous pallidus*	--/SSC	Occurs in a wide variety of habitats including chaparral, coastal scrub, desert wash, Great Basin grassland, Great Basin scrub, Mojavean desert scrub, riparian woodland, Sonoran desert scrub, upper montane coniferous forest, valley and foothill grasslands. Most common in open, dry habitats with rocky areas for roosting. For roosting, prefers rocky outcrops, cliffs and crevices with access to open habitats for foraging. Roosts must protect species from high temperatures. Very sensitive to disturbance of roosting sites.	**Not expected**. No suitable habitat within the BSA. No CNDDB records within 5 miles of the site (CNDDB 2021).
San Diego desert woodrat *Neotoma lepida intermedia*	--/SSC	Found in a variety of coastal scrub, desert scrub, chaparral, cactus, and rocky habitats. Nests primarily against rock outcroppings, boulders, cacti, or areas of dense undergrowth.	**Not expected.** No suitable habitat within the BSA. There are two CNDDB records from 2006 (CNDDB 2021).
big free-tailed bat *Nyctinomops macrotis*	--/SSC	Low-lying arid areas in Southern California within habitats such as desert shrub, woodlands, and evergreen forests. Need high cliffs or rugged, rocky outcrops or canyons for roosting sites. Feeds principally on large moths.	**Not expected.** No suitable habitat within the BSA. There is a single CNDDB record from 1985. (CNDDB 2021).

Common Name Scientific Name	Sensitivity Status	Preferred Habitat/Known Elevational Range	Presence/Potential to Occur within Biological Study Area
American badger *Taxidea taxus*	--/SSC	Found in a variety of habitats, including alkali marsh, desert wash, Great Basin scrub, marsh and swamp, meadow and seep, Mojavean desert scrub, riparian scrub, riparian woodland, valley and foothill grassland. Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs sufficient food, friable soils, and open, uncultivated ground to dig burrows. Preys on burrowing rodents.	**Not expected.** No suitable habitat located within the BSA. Single CNDDB record with an unspecified date located within five-miles of the BSA (CNDDB 2021).

SILVER LAKE RESERVOIR COMPLEX MASTER PLAN PROJECT

Protected Tree Report

Summary

Environmental Science Associates (ESA) has prepared this Protected Tree Report (PTR) for the following assessor parcel numbers (APNs) 5439-032-900, 5439-033-900, and 5439-033-901 located at Silver Lake Reservoir Complex (SLRC), in the City of Los Angeles (City) for the proposed SLRC Master Plan Project (Project). This report documents an inventory of all protected trees and shrubs (herein referred to as protected trees) that are located on the Project site including potential impacts to arboricultural resources as a consequence of Project implementation. The City Protected Tree and Shrub Ordinance (Ordinance; Ordinance No. 186873) regulates the relocation or removal of all Southern California native oak trees (*Quercus* sp.; excluding scrub oak), California black walnut trees (*Juglans californica*), western sycamore trees (*Platanus racemosa*), California bay trees (*Umbellularia californica*), Mexican elderberry (*Sambucus mexicana*), and toyon (*Heteromeles arbutifolia*) of at least four inches or more in cumulative diameter as measured 4.5 feet above the mean natural grade (diameter at standard height [DSH]). These tree and shrub species are considered "protected" by the City.

A total of 47 protected trees were recorded within the property. Of the 47 protected trees recorded a total of four will be removed as a result of the project design. All protected trees proposed for removal will require mitigation at 4:1 with a minimum 15-gallon replacement tree of like species. Replacement plantings will be installed within the SLRC in currently proposed native upland vegetation planting areas. A total of 43 protected trees will be preserved in place.

If tree protection measures included in the Avoidance and Minimization measures section of this report are carefully followed, the 43 protected trees identified to be preserved in place should survive construction of the Project. These tree protection measures include avoidance of the protection zone, installation of tree protective fencing (chain-link), manual grading/trenching within the protection zone, avoidance of root damage, corrections for proper soil grade, recommendations for irrigation, use of native drought tolerant landscaping around the protected trees, post construction monitoring, and mitigation for any lost trees. The goal of the recommendations is to prevent construction from causing unnecessary damage to these protected trees.

Project Location

The Project site is comprised of APNs 5439-032-900, 5439-033-900, and 5439-033-901 for an approximate total of 127-acres shown in **Figure 1**, Regional Location. Specifically, the Project site is located on U.S. Geological Survey (USGS) 7.5' Hollywood topographic quadrangle map (**Figure 2**, Project Vicinity). The proposed Project site includes Ivanhoe and Silver Lake Reservoirs, a dog park and recreation center area to the south, Silver Lake Meadow Park and the knoll to the east, and a pedestrian path that circumnavigates the SLRC. The Project site is bounded by Silver Lake Boulevard to the southeast and east, Armstrong Avenue to the northeast, Tesla Avenue to the north, West Silver Lake Drive to the west, and Van Pelt Place to the south.

Project Description

The preliminary project design proposes to redesign approximately 116-acres of the 127-acre SLRC with community park amenities. The proposed Project would include a contemporary design of park zones with hybrid infrastructure that blends vegetated areas with public spaces. The proposed Project would be designed to enhance the visual and recreational quality of the area to be consistent with goals and objectives of the Silver Lake - Echo Park - Elysian Valley Community Plan and provide the opportunity for the public to connect with nature.

The project design focuses on increasing habitat diversity and value to support a diverse array of birds, fish, amphibians, invertebrates, and other aquatic species. To provide this biodiversity, the project design will create new habitat for a total 23 acres of native vegetated areas. These proposed created native habitat areas will consist of 12 acres of upland vegetation (including trees), 5 acres of new transitional habitat (coastal scrub), and 6-acres of new wetland habitat.

Methodology

Field Surveys

All native trees with a trunk diameter of 4 inches or greater within the Project site were surveyed on April 2 and 8, 2022 by Mr. Douglas Gordon-Blackwood, who is an ASCA Registered Consulting Arborist (#689). The site visits were conducted under clear weather daylight conditions and access was not restricted for any trees that were evaluated. Photographs of the site and each tree are presented in **Appendix A**, Site Photographs. Survey data for each tree is provided in **Appendix B**, Protected Tree Inventory. For each tree, the trunk location was recorded with Collector for ArcGIS using an Arrow 100 Submeter GNSS Receiver and a smart phone. The physical characteristics and physical condition for each tree was collected as described below.

Project Vicinity

ESA

Physical Characteristics

- DSH – diameter at standard height (DSH) measured from the base of the tree using a forester's diameter-equivalent tape.
- Canopy spread: The canopy spread from the trunk to the dripline in eight (8) directions (N, NE, E, SE, S, SW, W, NW). Canopy distance was measured using a laser rangefinder when possible. Canopy distance was estimated for trees off property, or where access was restricted.
- Height – Measured with a Nikon Forestry Pro Laser Rangefinder/Hypsometer at an appropriate distance from the tree. For those trees obscured by vegetation or other trees, height was estimated.

Physical Condition

- Identification of damage caused by pathogens or insect pests, by natural causes such as lightning, or by human activity (such as utility line clearance).
- Evaluation of vigor based on such parameters as amount of new growth, leaf color, abnormal bark, dead wood, evidence of wilt, excessive necrosis or leaf chlorosis, thinning of crown, etc.
- Assessment of the overall health of the tree based on the evaluation of overall structure, presence of damage, and comparison to the typical archetype tree of the same species.

All surveyed trees were subsequently mapped in Collector for ArcGIS over the Project's Site Plan to determine which trees would be avoided, encroached or may need removal by the proposed project design. Encroachment is defined as construction taking place within the protected zone (i.e., area within and five feet outside of the dripline or 15 feet from the trunk of the tree, whichever distance is greater). The trunk location within the figure is based on the GPS waypoint location that was recorded from one-side of the tree's trunk by the arborist. Canopy spreads were based on approximated measurements taken in the field that were later digitized in ArcGIS.

Existing Conditions

A protected tree survey was conducted that includes recording of any City regulated trees species with trunks exceeding four inches or more in cumulative diameter. A total of 47 protected trees consisting of four species were recorded within the Project site (see **Table 1**).

TABLE 1
PROTECTED TREES OBSERVED

Protected Tree Species	Number of Protected Trees Observed
Toyon (Heteromeles arbutifolia)	10
Southern California black walnut (Juglans californica)	8
Coast live oak (Quercus agrifolia)	23
Mexican elderberry (Sambucus mexicana)	6
TOTAL PROTECTED TREES	**47**

A depiction of protected trees on the Project site is included on **Figures 3a–3c**, Tree Plot Plan. Representative photographs of the site and each tree are included in Appendix A, Site Photographs. Trees recorded within Los Angeles Recreation and Parks (RAP) properties and Street trees recorded along sidewalks and street rights-of-way along Silver Lake Boulevard have been included in a separate report (*Silver Lake Reservoir Complex Master Plan Project – Park and Street Tree Inventory Results Report* [ESA 2022]).

Discussion of Impacts

Pursuant to the City's Ordinance, removal of or damage to any native oak (*Quercus* species), southern California black walnut, western sycamore (*Platanus racemosa*), California bay (*Umbellularia californica*), Mexican elderberry (*Sambucus mexicana*) or toyon (*Heteromeles arbutifolia*) tree that is at least 4 inches or more in cumulative diameter as measured 4.5 feet above the mean natural grade (diameter at standard height [DSH]), shall be prohibited except where no other feasible alternative exists. If impacts to protected trees cannot be avoided, a permit and corresponding mitigation is required for native tree removal or the loss of or worsened health of native trees resulting from encroachment into the protective zone[1] of a given tree. Recommendations made in the section below, *Avoidance, Minimization and Mitigation*, would minimize impacts to protected trees on site.

A total of four protected trees will be removed as a result of the preliminary project design (see **Table 2**). Protected tree removals will primarily be the result of proposed grading and installation of new landscaping. The remaining 43 protected trees will be preserved in place.

TABLE 2
PROTECTED TREES IMPACTS

Protected Tree Species	Removal	Encroached	Preserve in Place
Toyon (*Heteromeles arbutifolia*)	2	—	8
Southern California black walnut (*Juglans californica*)	2	—	6
Coast live oak (*Quercus agrifolia*)	—	—	23
Mexican elderberry (*Sambucus mexicana*)	—	—	6
TOTAL PROTECTED TREES	**4**	**—**	**43**

A depiction of protected trees and their removal status is included on Figures 3a–3c. Proposed tree removals are based on preliminary site plans and may not reflect final tree impacts once plans are finalized.

[1] The area within the dripline of a protected tree and extending to a point at least 5 feet outside the dripline, or 15 feet from the trunk[s] of a tree, whichever distance is greater.

INTENTIONALLY BLANK

Avoidance, Minimization, and Mitigation

As depicted in Figures 3a–3c, a total of four protected trees will be removed as a result of proposed project design or associated construction activities. The removed trees will require mitigation at 4:1 with 15-gallon box trees of like species. For compliance with the Ordinance a total of 16 replacement trees will be required to mitigate the removal of the four trees (see **Table 3**).

TABLE 3
PROTECTED TREE MITIGATION

Protected Tree Species	Removal	Number of Replacement Trees
Toyon (*Heteromeles arbutifolia*)	2	8
Southern California black walnut (*Juglans californica*)	2	8
TOTAL PROTECTED TREES	**4**	**16**

All mitigation tree plantings will be installed within the SLRC in the currently proposed native upland vegetation planting areas as depicted in **Figure 4**, Proposed Planting Diagram.

A total of 43 protected trees will not be impacted and will be preserved in place. Avoiding any disturbance to the protected zone of all protected trees is recommended, including grading, trenching, filling (adding soils), or paving within and around the protected zone, and will have the least impact on the protected trees. The protected zone is defined as a zone underneath and immediately outside the canopy of a protected tree. Within this zone, construction is likely to affect a tree's health and must be carefully managed. Per City requirements, the tree protection zone (TPZ) of the trees addressed by this report is the area within fifteen feet of the trunk, or within the dripline and extending 5 feet beyond the dripline, whichever is greater.[2] The following minimization measures are recommended to be incorporated as project design features or mitigation, as appropriate.

- **Tree Protection Fencing.** Establish tree protection fencing around the TPZ. This area must be observed and respected during all construction activities near the protected trees. This will ensure preservation of the trees. This area is to be clean and clear of any construction material, debris, equipment, portable toilets, and foot or equipment traffic. Fencing shall be installed prior to construction at the edge of the protection zone and remain in place until the entire project is complete. The fence shall be chain link and a minimum of 5 feet in height.

- **Grading/Trenching in TPZ.** Where possible, grading/trenching should be restricted to areas outside the TPZ of the trees. All grubbing and clearing within the TPZ of a tree shall be done manually. All soil removal must be done with hand tools (shovels, picks, hand trowels, and similar equipment). The tool of choice is an air spade. The air spade excavates soil without damaging the roots. Jack hammers should not be used to remove the soil. When a root is encountered, soil removal is to be done without chipping, marring, or damaging the root bark in any way. Damaging the root bark will open up the bark barrier so that disease can enter the tree. This will allow rot to develop or fungus to take over and can result in root death.

[2] The dripline of a protected tree is a line which can be drawn around a tree under the tips of the outermost branches. It is the location where rainwater tends to drip from the tree.

SOURCE: Hargreaves Jones Landscape Architects, 2020

Silver Lake Reservoir Complex Master Plan Project

Figure 4
Proposed Planting Diagram

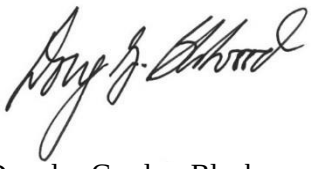
ESA

- **Avoiding Root Damage.** It is not recommended to cut roots larger than 1 inch. If any roots over one inch in diameter are damaged, they must be clean-cut with a sharp and sterilized hand tool. Any roots permanently exposed from grading or scraping of topsoil should be cleanly cut just below the new soil grade.

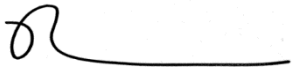
- **Soil Grade.** Soil levels must be returned to the original grade, at which trees' roots were first established. Existing fill soil above that original grade shall be removed to the extent possible; no additional fill soil shall be placed over the original grade. If soil is filled back to the original grade, compaction shall be done manually only (no equipment shall be used). Compaction shall be done in layers of 3 to 6 inches depending on soil structure. No gaps or pockets shall remain in the soil.

- **Irrigation.** During construction, trees shall only be watered under the guidance of the project arborist. Where it is needed, temporary irrigation (drip, leaking tube, or other) shall be installed at intervals throughout the fenced protection zone to allow periodic deep watering during construction. The entire protected zone of the trees should be watered to a soil depth of four feet. This may require slow irrigation for 8 to 24 hours or more or may require repeat waterings of shorter duration to promote saturation. The soil should be allowed to dry out completely before watering is repeated. The period between waterings may be a month or more. The project arborist should monitor the protected trees and provide recommendations on the effectiveness and duration of temporary irrigation.

- **Landscaping Around Native Trees.** Landscaping near protected trees shall be drought tolerant only unless already accustomed to current landscape irrigation. Irrigation overspray or runoff, as a result of lawn or ornamental irrigation, shall be avoided in the TPZ of any protected tree with the noted exception above. All landscaping shall be kept away from the trunk of any protected tree by a minimum of 2 feet.



- **Post-Construction Monitoring.** Follow up inspections by the project arborist should be conducted after construction is completed for ten years. Preferably, follow up visits should be conducted quarterly during Years 1 and 2, biannually for Years 3 through 5, and annually for Years 6 through 10. More frequent monitoring and/or post-construction steps to improve any trees that are doing poorly should be carried out as recommended by the arborist. Additionally, any replacement trees that fail will be replaced at 1:1 with 15-gallon tree of like species.



Loss of any preserved protected tree within 10 years of construction activities shall be lessened with the onsite planting of replacement trees at 4:1 mitigation rate, included within the definition set forth in the Ordinance. The size of each replacement tree of like species shall be a 15-gallon, or larger, specimen, measuring one inch or more in diameter at a point one foot above the base, and not less than 7 feet in height, measured from the best. Any deviations from these required replacement trees sizes will need to be approved by the City Urban Forestry Division. New trees that are planted as directed by the City should be evaluated immediately following installation, then monitored every three months during the first two years after planting. Monitoring will continue biannually for Years 3 through 5 and then annually through Year 10 for a total of ten years post-construction monitoring. All monitoring should be done by the project arborist, who should submit an annual written report of the observations and recommendations as needed to the applicant for submission to the applicable agencies. More-frequent monitoring and/or post-

construction steps to improve any trees that are doing poorly should be carried out as recommended by the arborist.

Please contact Ryan Gilmore (RGilmore@ESAssoc.com) or Douglas Gordon-Blackwood (DGordon-Blackwood@ESAssoc.com) if you have any questions.

Sincerely,

Douglas Gordon-Blackwood Ryan Gilmore

Certification of Performance

I, Douglas Gordon-Blackwood, certify:

- That I have personally inspected the tree(s) and/or the property referred to in this report, and have stated my findings accurately. The extent of the evaluation and appraisal is stated in the attached report and the Terms of Assignment;
- That I have no current or prospective interest in the vegetation or the property that is the subject of this report and have no personal interest or bias with respect to the parties involved;
- That the analysis, opinions, and conclusions stated herein are my own;
- That my analysis, opinions, and conclusions were developed and this report has been prepared according to commonly accepted arboricultural practices;
- That no one provided significant professional assistance to the consultant, except as indicated within the report; and
- That my compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client or any other party.

I further certify that I am a member of the American Society of Consulting Arborists, Registered Consulting Arborist #689, and acknowledge, accept, and adhere to the ASCA Standards of Professional Practice. I am an International Society of Arboriculture Certified Arborist and have been involved in the practice of arboriculture and the study of trees for over 15 years.

Signed:

SILVER LAKE RESERVOIR COMPLEX MASTER PLAN PROJECT

Park and Street Tree Inventory Results Report

Introduction

The purpose of this Park and Street Tree Inventory Results Report (Report) is to document all park and street tree plantings that could be impacted by the Silver Lake Reservoir Complex Master Plan Project (Project). The Project site consists of 116-acres of the 127-acre Silver Lake Reservoir Complex (SLRC) located within the City of Los Angeles (City). The purpose of this tree inventory is to provide baseline tree data for the use in the preliminary planning process for the Project.

The park trees are managed by the City Department of Recreation and Parks (RAP). The RAP Tree Preservation Policy (RAP Policy) provides protection of specified trees, protects their value, and avoids significant negative impacts to the ecosystem (City of Los Angeles 2004). The Policy regulates protection of trees in four categories:

- Protected Trees are certain species of native trees and shrubs as described in the Protected Tree and Shrub Ordinance.
- Heritage Trees are individual trees of any size or species that are specifically designated as heritage because of their historical, commemorative, or horticultural significance.
- Special Habitat Value Trees are native trees located on RAP managed lands.
- Common Park Trees are generally mature exotic trees that have value beyond the shade they provide to park users and are a scenic resource.

When a large number of trees are proposed for removal the notification protocol presented in Appendix K of the RAP Policy must be followed. The protocol assures that information is communicated to the public, City council offices, the Park Advisory Board, and to the department Divisions affected by the removal project. The protocol provides an opportunity for the public to become involved with forestry issues and for department coordination. Additionally, tree replacement is guided by the RAP Policy and by the objectives and functions as defined by the Department. RAP trees are planted according to the RAP Reforestation Program. RAP Policy requires each one-inch diameter at standard height (trunk diameter measured at 4.5 feet above soil line; DSH) of existing tree shall be replaced with a minimum 1-inch caliper new tree. When crowding or other physical constraints make it impossible to plant the same tree in the same place where it was removed, an alternate location is found. Undesirable tree species are not replaced.

The Bureau of Street Services (BSS), Urban Forestry Division (UFD), Department of Public Works manages street trees. A City Tree Removal Permit (Permit Application) is required to remove any street tree planted in the public right-of-way prior the start of construction. The UFD requires a 2:1 street tree replacement ratio.

Background and Assignment

The proposed Project site is located within the SLRC on APNs 5439-032-900 and 5439-033-901 shown in **Figure 1**, Regional Location. Specifically, the Project site is located on U.S. Geological Survey 7.5-minute Hollywood topographic quadrangle map (**Figure 2**, Project Vicinity). The proposed Project site includes Ivanhoe and Silver Lake Reservoirs, a dog park and Silver Lake Recreation Center area to the south, Silver Lake Meadow Park and Los Angeles Department of Water and Power property to the east, and a pedestrian path that circumnavigates the SLRC. The Project site is bounded by Silver Lake Boulevard to the southeast and east, Armstrong Avenue to the northeast, Tesla Avenue to the north, West Silver Lake Drive to the west, and Van Pelt Place to the south.

Project Description

The preliminary Project design proposes to redesign approximately 116 acres of the 127-acre SLRC with community park amenities. The proposed Project would include a contemporary design of park zones with hybrid infrastructure that blends vegetated areas with public spaces. The proposed Project would be designed to enhance the visual and recreational quality of the area to be consistent with goals and objectives of the Silver Lake – Echo Park – Elysian Valley Community Plan and provide the opportunity for the public to connect with nature.

The project design focuses on increasing habitat diversity and value to support a diverse array of birds, fish, amphibians, invertebrates, and other aquatic species. To provide this biodiversity, the project design will create new habitat for a total 23 acres of native vegetated areas. These proposed created native habitat areas will consist of 12 acres of upland vegetation (including trees), 5-acres of new transition (coastal scrub), and 6 acres of new wetland habitat. Extensive plantings of native trees and shrubs will be part of these new habitat areas.

The proposed Project will potentially impact park and street trees to accommodate construction. Facilities located within the Project area that are owned or maintained by RAP include the Silver Lake Meadow Park and the Silver Lake Recreation Center along the south of the SLRC. Street trees are located around the perimeter of the SLRC within the sidewalk. These areas may be impacted during Project construction.

Methodology

Field Surveys

All RAP and BSS trees located within the Project site were surveyed on April 2, 8, 15, 22, and 26, 2022 by Environmental Science Associates (ESA) International Society of Arboriculture (ISA) Certified Arborists and American Society of Consulting Arborist (ASCA) Registered Consulting Arborists (RCA) Ryan Gilmore (WE-9009BM/RCA #769) and Douglas Gordon-Blackwood (WE-11726AU/RCA #689). The site visits were conducted under clear weather daylight conditions and access was not restricted for any trees that were evaluated. Survey data for each tree is provided in **Appendix A,** Tree Inventory Matrix. For each tree, the trunk location was recorded with Collector for ArcGIS using an Arrow 100 Submeter GNSS Receiver and a smart phone. The physical characteristics and physical condition for each tree was collected as described below.

Physical Characteristics

Physical characteristics recorded for each tree included the following:

- Diameter at Stand Height – measured from the base of the tree using a forester's diameter-equivalent tape.
- Canopy spread – visually estimated.
- Height – visually estimated.

Physical Condition

Physical conditions recorded for each tree included the following:

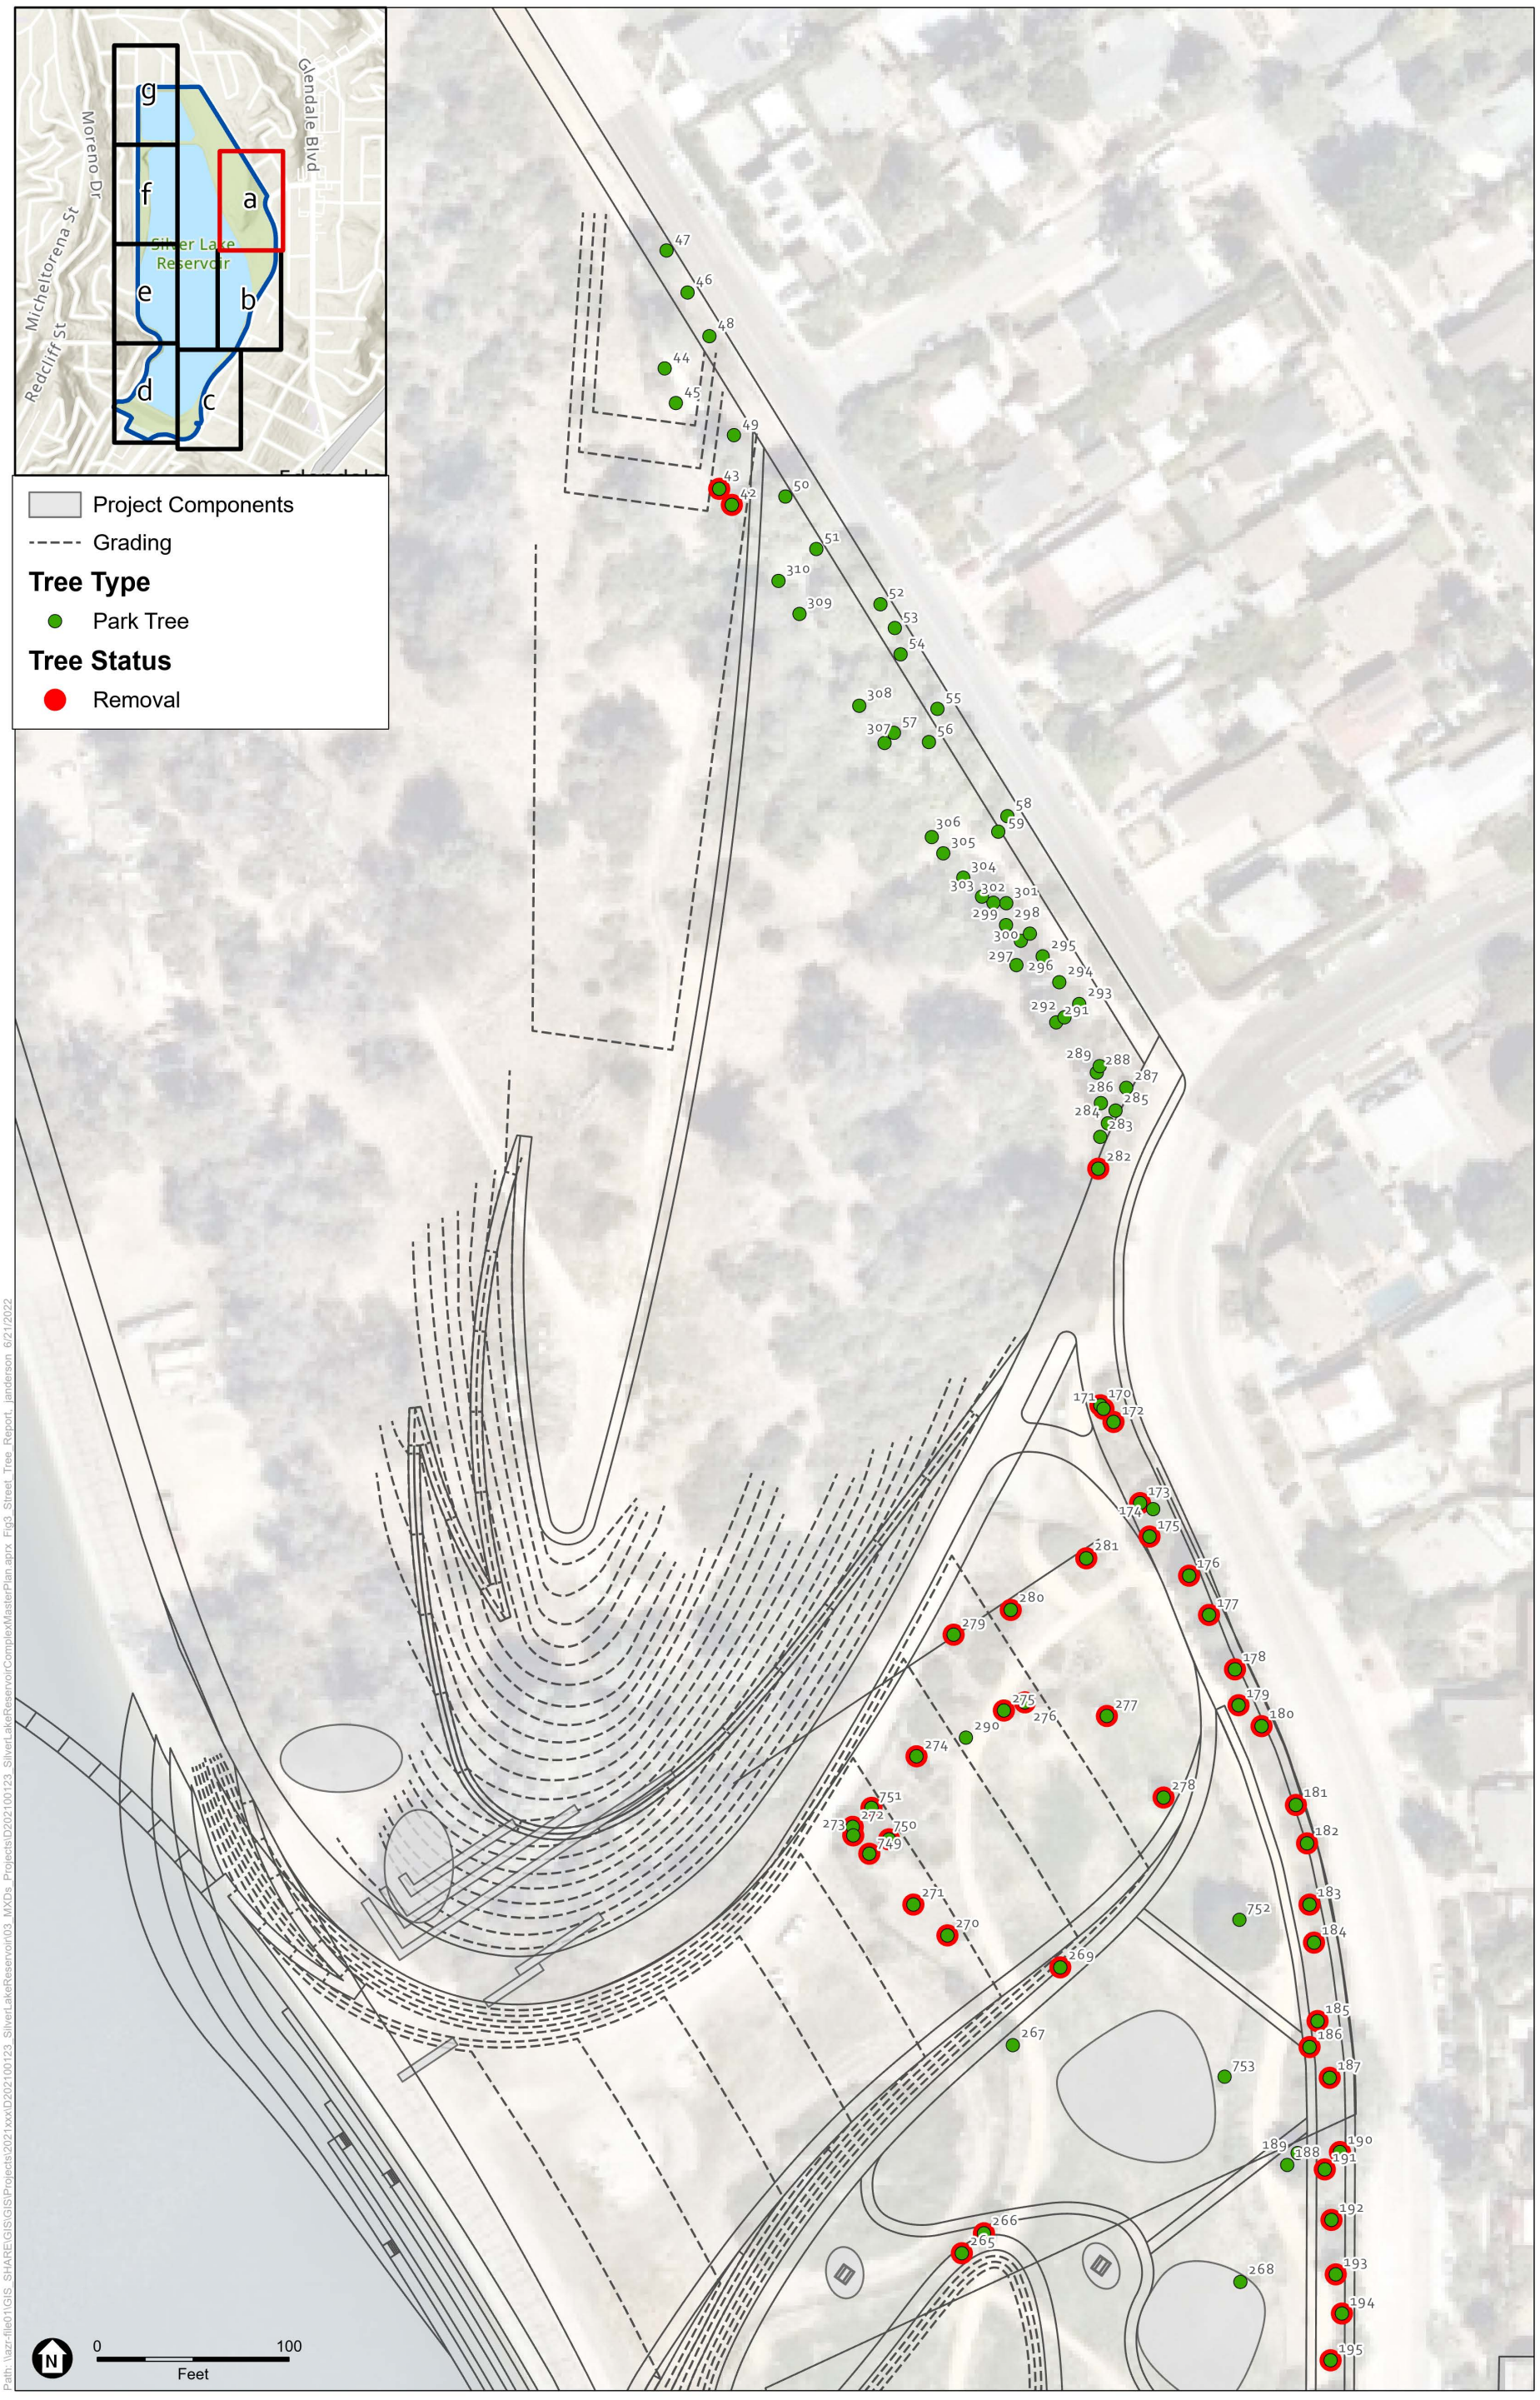
- Identification of damage caused by pathogens or insect pests, by natural causes such as lightning, or by human activity.
- Evaluation of vigor based on such parameters as amount of new growth, leaf color, abnormal bark, dead wood, evidence of wilt, excessive necrosis or leaf chlorosis, thinning of crown, etc.
- Assessment of the overall health of the tree based on the evaluation of vigor, presence of damage, and comparison to the typical archetype tree of the same species.
- Evaluation of vigor based on such parameters as amount of new growth, leaf color, abnormal bark, dead wood, evidence of wilt, excessive necrosis or leaf chlorosis, thinning of crown, etc.
- Notes about damage caused by pathogens or insect pests, by natural causes such as lightning, or by human activity. Assessment of the overall health of the tree based on the evaluation of vigor, presence of damage, and comparison to the typical archetype tree of the same species.

Rating

For each tree, a subjective alphabetical rank of "A" through "F" was assigned for health, vigor, balance, and aesthetic. Ranks were based on the criteria described below:

- "A" = Very Healthy/Excellent: A healthy and vigorous tree characteristic of its species and reasonably free of any visible signs of stress, disease, or pest infestation. With regards to balance and aesthetics, trunks are straight and canopies well balanced and the tree exemplifies the ideal archetype for the species.
- "B" = Healthy/Good: A healthy and vigorous tree with minor visible signs of stress, disease, and/or pest infestation. Some maintenance measures may need to be implemented, such as pruning of dead wood or broken branches. Tree may lean slightly, canopies may not be evenly balanced, or the tree may otherwise be marginally challenged aesthetically.
- "C" = Average Health/Fair: Although healthy in overall appearance, there is abnormal amount of stress or disease/insect infestation, and a substantial amount of maintenance may be needed. The trunk may be growing at a more substantial angle or the canopy may have "holes" or be further out of balance.
- "D" = Dying/Poor: A tree that may be exhibiting substantially more stress, disease, or insect damage than what is expected for the species. The tree may be in a state of rapid decline, and may show various signs of dieback, necrosis, or other symptoms caused by pathogens or insect pests. The tree may lean significantly and the canopy is far out of balance.
- "F" = Dead/Very Poor: This tree has no foliage and exhibits no sign of life or vigor. Tree may be prone on the ground or otherwise severely aesthetically compromised.

Survey data for each tree is included in Appendix A, Tree Inventory Matrix, as a separate table. Representative photographs of the site and trees are presented in **Appendix B**, Representative Photographs.



Results

A total of 362 RAP and BSS trees consisting of 50 species were observed within the Project site. There are 108 BSS and 254 RAP trees (see **Table 1** and **Figures 3a–3g**). A list of the trees on the Project site is provided in Appendix A, Tree Inventory Matrix.

INTENTIONALLY BLANK

Impacts

A total of 105 RAP trees will require removal due to Project implementation. No BSS trees are proposed for removal. A total of 149 RAP trees and 108 BSS trees will be preserved in place. A tree impact summary is presented in **Table 2**.

TABLE 2
SUMMARY OF RAP AND BSS TREE IMPACTS

Tree Classification	Total Removals	Total Preserved	Overall Total
BSS Trees	—	108	108
RAP Trees	105	149	254
Total Trees	**105**	**257**	**362**

Required Replacement

The following is a summary of replacement standards as required by the RAP Policy and the UFD. Applicable tree replacement standards are as follows:

- The RAP Policy tree replacement requires at a minimum each one-inch DSH of existing tree shall be replaced with a minimum one-inch caliper new tree.
- The BSS requires a 2:1 street tree replacement ratio.

In summary, the City will replace 105 trees protected by the RAP Policy at a 1:1 ratio for trunk diameter. Actual number of trees planted for this replacement standard will need to have a sum total of 558 caliper inches to mitigate the removal 558 inches of measured trunk diameters.

Specifically, RAP policy states that whenever trees are removed, the existing trees' aggregate diameter, measured at DSH (multi-trunk trees are to be measured immediately below the lowest trunk) shall be replaced at an equal or greater rate of caliper of new trees. Each one-inch DSH of existing tree shall be replaced with a minimum one-inch caliper new tree. Replacement trees shall have a minimum caliper of ¼-inch. For example, a single-trunk tree whose DSH is 9 inches may be replaced with 36 trees of ¼-inch caliper, or with 3 trees of 3-inch caliper. This replacement ratio should represent a minimum. If the replacement ratio cannot be achieved on an individual project, it should be applied on an area-wide basis. All replacement trees shall be healthy and free of kinked, overgrown, or otherwise defective roots.

Additionally, of the 105 proposed removal trees protected by RAP policy 11 are native species as defined by the City Tree Ordinance though not regulated by that ordinance. RAP policy requires at least a 4:1 ratio for native species regardless of the caliper requirements stated above. Therefore, the required replacement of 558 inches of measured trunk diameter will need to incorporate and consist of a 4:1 ratio for the 11 proposed native tree removals for a total of 44 native trees replaced. For compliance with the RAP policy a total of 558 inches of measured trunk diameter consisting of a minimum of 44 native trees would be required to mitigate the 105 removals.

No BSS trees are proposed for removal and no BSS tree replacement mitigation is required at this time.

At this time all RAP replacement trees will be planted within the proposed Project impact areas as determined in coordination with RAP.

Certification of Performance

I, Ryan Gilmore, certify:

- That I have personally inspected the tree(s) and/or the property referred to in this report and have stated my findings accurately. The extent of the evaluation and appraisal is stated in the attached report and the Terms of Assignment;
- That I have no current or prospective interest in the vegetation or the property that is the subject of this report and have no personal interest or bias with respect to the parties involved;
- That the analysis, opinions, and conclusions stated herein are my own;
- That my analysis, opinions, and conclusions were developed and this report has been prepared according to commonly accepted arboricultural practices;
- That the no one provided significant professional assistance to the consultant, except as indicated within the report;
- That my compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client or any other party.

I further certify that I am a member of the American Society of Consulting Arborists (ASCA), Registered Consulting Arborist #769, and acknowledge, accept, and adhere to the ASCA Standards of Professional Practice. I am an International Society of Arboriculture (ISA) Board Certified Master Arborist and have been involved in the practice of arboriculture and the study of trees for over 23 years. *Signed*:

Date: July 12, 2022

Ryan Gilmore
ASCA Registered Consulting Arborist #769
ISA Board Certified Master Arborist WE-9009BM

This report comprises a total of 58 pages with figures. Unauthorized separation or removal of any portion of this report deems it invalid as a whole.

Conditions represented in this report are limited to the inventory date and time. Rating for health and structure do not constitute a health or structural guarantee beyond that date. Risk assessments were not performed for the purposes of this report.

Arborist Disclosure Statement

Arborists are tree specialists who use their education, knowledge, training, and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning, and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

Formal risk assessments were not requested or performed on the trees in this report.

OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

SILVER LAKE RESERVOIR COMPLEX MASTER PLAN

Supplemental Historical Report and Impacts Analysis

Introduction

Executive Summary

Environmental Science Associates (ESA) was retained to prepare a supplemental historical report and CEQA impacts analysis for the Silver Lake Reservoir Complex (SLRC; Project Site) in response to the proposed redevelopment of the Project Site within the context of a master plan. The SLRC is in the Silver Lake neighborhood of Los Angeles and is composed of the Ivanhoe Reservoir and the Silver Lake Reservoir, as well as an associated recreation center and park, adjacent landscapes, and ancillary structures (see "Project Location" and "Project Description" below for additional details on the site). The SLRC is a designated Los Angeles Historic Cultural Monument (LAHCM) and is a historical resource under the California Environmental Quality Act (CEQA), and this report was prepared to comply with CEQA.

The preparation of this report involved the review of previous evaluations of the Silver Lake Reservoir Complex, including the 1989 Los Angeles historic Cultural Monument Nomination; the 2004 Greenwood & Associates report; the 2019 GPA Consulting report; and a 2020 GPA memorandum evaluating the proposed Project under the Secretary of the Interior's Standards.[1]

ESA was retained to supplement the 2019 GPA report and 2020 memo by conducting an impacts analysis of direct, indirect, and cumulative impacts that may occur to the SLRC itself under the proposed Project. ESA conducted an archival records search of previously identified historic resources within 0.25-miles of the Project Site to obtain data on known historical resources in the vicinity to inform the indirect impacts analysis. ESA also conducted additional contextual research on the development of the Project Site to supplement the construction chronology developed in GPA's report through an analysis and presentation of historical aerial photographs, as well as a pedestrian survey to verify the character-defining features identified by GPA.

[1] Greenwood & Associates, "Cultural Resources Assessment Report: Silver Lake Reservoir Complex Storage Replacement Project," prepared for CH2MHILL, August 2004.; GPA Consulting, "Silver Lake Reservoir Complex Master Plan: Research & Analysis, Historical Resources," September 13, 2019.; Teresa Grimes and Emily Rinaldi of GPA Consulting, "Silver Lake Reservoir Complex Master Plan, Secretary of the Interior's Standards for the Treatment of Historic Properties Analysis Memorandum," prepared for Hargreaves Jones, May 11, 2020.

This Report includes a discussion of the survey methods used, a brief historic context on the Silver Lake neighborhood and reservoir, a discussion of the evolution of the Project Site, the identification of all previously recorded historical resources within 0.25-miles of the Project Site, and an impacts analysis to address potential direct, indirect, and cumulative impacts of the proposed Project.

As a result of these investigations, ESA found that the proposed project would not result in an adverse impact on the SLRC or any adjacent resources. Changes to the SLRC would not substantially affect the Complex's character-defining features or its eligibility as a historic resource. Therefore, the Project is considered to have a less than significant impact to historical resources pursuant to CEQA. The Project may have minor indirect visual impacts to the setting and view shed of the VDL Research House that are less than significant, the overall integrity of all historical resources in the Project vicinity would not be affected, and cumulative impacts would not be cumulatively considerable. Therefore, the Project would have a less than significant impact on historical resources under CEQA.

Project Location

The proposed Project is in the Silver Lake neighborhood in the City of Los Angeles, as seen in ***Figure 1***. *Regional and Project Vicinity Map*. The Silver Lake neighborhood is primarily residential in nature, with a handful of smaller commercial and recreational areas, including land adjacent to the SLRC that has been previously developed for public use. The Project area is defined by the outer boundary of the SLRC, including existing recreational facilities, but excluding the existing Los Angeles Department of Water and Power (LADWP) facilities, as seen in ***Figure 2.*** *Aerial Photograph of the Project Site*. The proposed Project area would be bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, Van Pelt Place and Silver Lake Boulevard on the south, and West Silver Lake Drive on the west. Much of the Project area is zoned as Open Space (OS) and is contained within two Los Angeles civic jurisdictions, Council Districts 4 and 13.

The SLRC is located on a 127-acre site and includes two reservoirs, three dams, water and stormwater infrastructure, a variety of ancillary buildings and structures, interior thoroughfares, and public recreational facilities. The City of Los Angeles Recreation and Parks Department (RAP) currently operates and maintain approximately three acres within the SLRC, known as "The Meadow", an open grassy area along the eastern side of the SLRC currently open to public access from dawn till dusk. Additionally, approximately four acres are owned and operated by RAP for the existing Silver Lake Recreation Center at the south end of SLRC. In the northeastern corner of the Project area is the Neighborhood Nursery School and associated playground. Currently, there are public pathways that run along the east and west sides of the reservoirs and along the top of Silver Lake Dam. Approximately four acres of existing paved surfaces around the reservoirs' perimeters are available for shared public use with LADWP. The entire SLRC is enclosed by a perimeter chain-link fence varying in height from 6 to 12 feet.

Silver Lake Reservoir Complex Master Plan Project

Figure 2
Aerial Photograph of Project Site

ESA

The Silver Lake and Ivanhoe Reservoirs are bound by three dams, which are managed by LADWP: one dam is located on the north side of Ivanhoe Reservoir; another on the south side of Silver Lake Reservoir; and the last dam separates Silver Lake and Ivanhoe Reservoirs and contains a spillway. The embankment around the reservoirs have changed significantly over time from unpaved earthen slopes to steeper paved surfaces. Ivanhoe Reservoir was resurfaced with concrete 25 to 29 years ago. The edges are smooth, beige in color, and have a small curb at the edge of the embankment. Silver Lake Reservoir is paved with 3-inch asphalt. Around the reservoir, large cracks have been filled in and repaired over time and sporadic vegetation emerges from within the voids. An inconsistent 6-inch curb runs along parts of the embankment edge.

Access gates managed by LADWP are dispersed throughout the SLRC, and public access to the reservoirs themselves is restricted. Existing LADWP facilities cover approximately 11 acres of land within the SLRC and would remain fenced and inaccessible to the public after the implementation of the Project.

Project Description

The Project is designed to enhance the visual and recreational quality of the area to be consistent with goals and objectives of the Silver Lake – Echo Park -Elysian Valley Community Plan, including a need for parkland and open space for a variety of uses, including passive and active recreation. It includes contemporary design of park zones with hybrid infrastructure that blends urban wilderness with human uses. The Project proposes to implement freshwater wetlands and aquatic habitat for the first time in over 100 years, an ecology that has become more limited over the years in order to meet the demands of the growing city. The Project design would restore woodland habitat from the foothills of the Santa Monica Mountains and provide the opportunity for the public to connect with nature.

Proposed Park Zones

The proposed Project design consists of a series of seven park zones connected by a tree-lined promenade. These zones are predominantly based on the existing layout and use of the SLRC and include: the Meadow; the Knoll; the Ivanhoe Overlook; the Eucalyptus Grove; the East and West Narrows; and the South Valley.

The Meadow

The Project proposes to reconfigure and expand the Meadow's existing open lawn and shade trees. To enhance scenic views of the reservoirs, several elevation changes are incorporated in the new design. In the northern half of the Meadow, the "Silver Lake Lawn" will gently slope approximately nine feet from Silver Lake Boulevard on the east down to the water's edge. The lawn will terminate at a series of walkways interwoven within wetland terraces. Floating wetland islands will be located offshore, supplementing the wetland terraces with protected habitat for waterfowl.

Along Silver Lake Boulevard, a wide, tree-lined promenade would connect to the "Ornamental Gardens" that include a mix of native and regionally adapted, drought-tolerant plants with an emphasis on pollinator species. Within the gardens, a series of depressions in the ground will

function as rain gardens during winter months. Adjacent to the gardens will be an expansive picnic grove and play-walk lined with design elements that offer passive spaces for gathering and play.

The "Great Lawn" will be a second, flat open area on the south side of the Meadow, five feet below the proposed picnic grove. Additional terraces with shade trees make cover the additional land between the Great Lawn and the water's edge. The proposed terraces will provide shaded seating with panoramic views of the reservoir and intersect with habitat-terraces to the south and a small footpath leading to a new observation platform. This elevated design of the Meadow is proposed to balance the amount of earthwork material in the area so that no off-haul or import of soil is required.

The Knoll

The existing Knoll is a large hill comprised of 8.3 acres of woodlands. The Project proposes to enhance its upland, wooded character by implementing a replanting strategy over time, to increase species diversity and improve overall habitat value.

The Knoll contains an elevation change of 45 feet and offers expansive views of the reservoirs. The Project design proposes the implementation of accessible nature trails to navigate to the Meadow, Armstrong Ave, and a small shade pavilion/seating area. The shade pavilion/seating area can be used for educational purposes to host small groups of students. To protect wildlife and keep people out of sensitive areas, habitat fences are proposed along all nature trails. All sensitive habitat areas will be closed at night.

A small portion of the southern face of the Knoll will be regraded to heighten its form and accommodate small seating terraces facing the Meadow. The proposed Promenade will wrap around its base, connecting the Meadow to the proposed Environmental Education Center along its western edge. The Environmental Education Center will be implemented within the Knoll landscape overlooking the reservoir. The proposed Education Center will be connected directly to the reservoir via an accessible pathway leading down to a floating dock. This area can provide educational opportunities and/or guided kayak or canoe tours by ecologists. The proposed Knoll is also designed to balance the amount of earthwork material so that no off-haul or import of soil is required.

The Ivanhoe Overlook

The proposed design of the Ivanhoe Overlook will provide open views to the south of the Ivanhoe Reservoir with a new observation deck extending out over wetland terraces. The Project would implement small footpaths through the proposed wetland terraces to observational platforms that can be used for on-going monitoring and testing of habitat. Two floating wetland islands are proposed southeast of the wetland terraces and footpaths.

A small shade pavilion is proposed, which will provide a sheltered space for outdoor education or community gathering. The shade pavilion/outdoor education classroom will include signage to educate visitors about the operations of the wetlands. The existing Ivanhoe Tower located on Ivanhoe Dam will remain in place and operational. Project work within the Division of Safety of Dams (DSOD) boundary will require additional review and approval.

The Eucalyptus Grove

The Eucalyptus Grove is currently a wooded area predominantly planted with Eucalyptus trees. The Project proposes to replant this zone over time to enhance and restore its upland habitat value. The Project proposes walkways throughout the Eucalyptus Grove which will include low-lying habitat fencing to protect sensitive habitat areas.

The proposed Project design includes the implementation of habitat terraces at the edge of the Eucalyptus Grove to extend beyond the existing embankment edge creating a gradient of upland, transition, and wetland ecologies. The Project would implement a large overlook that extends out over the habitat terraces. At the overlook, educational signage is proposed. Further, floating islands will be added adjacent to the Eucalyptus Grove to further enhance this area's biodiversity and provide protected habitat for foraging and nesting.

The zone is designed to balance a portion of earthen material required to create the habitat terraces, supplemented by pile supported landscape structures. Within the DSOD area, fill may be required to build the habitat terraces.

The East and West Narrows

The East and West Narrows are the narrowest sections of the Project area and run along the south edges of the Silver Lake Reservoir embankment. The primary feature proposed for these linear corridors is the implementation of additional promenades which will include overlooks and seating terraces to maximize views out and across the reservoir or to habitat islands.

On the East Narrows along Silver Lake Boulevard, a varying 3- to 4-foot grade separation from the road to the top of the embankment is proposed to allow for a continuous seat-wall to be added to the promenades. There are low, historic concrete walls along these road edges which will be incorporated into the promenades' designs. Where the promenade widens along the East Narrows, a fitness circuit is proposed, creating a connection to the proposed Recreation Center in the south Valley (see the South Valley Zone below). To amplify views across Silver Lake Reservoir to the San Gabriel Mountains in the distance, an elevated overlook bridge is proposed. The West Narrows will include seating terraces embedded into the embankment and an allée of trees along the promenade to provide shade and shelter.

The South Valley

The Project proposes the implementation of a new Multi-Purpose Facility/Recreation Center on the corner of Van Pelt Place and Silver Lake Boulevard. The proposed Multi-Purpose Facility will house one indoor basketball court and provide an entrance to an improved Recreation and Parks area. This facility can act as a community center as well. To accommodate the new Multi-Purpose Facility, the existing basketball court and playfield will be relocated to the north. The existing picnic area will be relocated to the west sloping lawn and additional trees will be incorporated to provide shade. Minor reconfiguration improvements to the Recreation Center will be included to provide additional office and storage space.

The existing dog play area will be expanded and renovated to include two separate spaces for both small and large dogs. The area will be re-graded and surface materials will be updated from decomposed granite to synthetic turf, which is more durable. Integrated seating, benches and shade structures will provide dog owners with a place to sit and relax.

Proposed Buildings and Structures

As mentioned above, four new structures will be constructed with proposed Project implementation. These proposed structures will complement daily activities of the park zones with an emphasis on environmental education. The Environmental Education Center will be implemented within the Knoll landscape and a small shade pavilion/seating area will be situated near the nature trails. A shade pavilion/outdoor education classroom is proposed for the Ivanhoe Overlook. In the South Valley, a new Multi-Purpose Facility/Recreation Center (building) will be implemented to expand the existing Silver Lake Recreation Center and meet Community recreational objectives.

Architecture Concept

The proposed Environmental Education Center and two Shade Pavilions will be designed as an architectural ensemble that relate in form to the proposed floating habitat islands and the mid-century modern architecture of the Silver Lake neighborhood. The scale of these proposed structures will be consistent with the residential character of the surrounding neighborhood. The proposed structures will rely on natural materials to blend into the surrounding landscape. As an ensemble, these three proposed structures will add consistency in the design of the Project Area. In order to meet objectives of the proposed Project, these structures will be built using sustainable strategies.

Education Center

The proposed Environmental Education Center will be constructed at the base of the Knoll, overlooking Silver Lake Reservoir. The proposed Environmental Education Center will consist of a residential-scale building and seating terraces that are integrated in the topography of the Knoll and oriented to embrace views of the water.

The proposed Environmental Education Center design includes small indoor and outdoor teaching and assembly spaces. This design is meant to complement the educational space that is the proposed Project itself, a place where people can gather at the start and end of their visit, including school children on a field trip as part their environmental curriculum. The proposed Environmental Education Center will contain two interior classrooms with a view of the water through a partially glazed, operable facade that open the teaching spaces to the exterior. The large classroom will be a little over 1,400 sf and can sit 50 people. A slightly smaller classroom will be approximately 1,000 sf with a capacity of 35 people. The proposed Environmental Education Center will contain a 180-sf office for staff, and storage rooms of 195 and 100 sf adjacent to each classroom. Public restrooms will be directly accessible from the promenade and will serve the Project area as a whole.

The roof of the Environmental Education Center will be both a landing point along the path leading to the top of the Knoll, with a roof terrace overlooking the reservoirs and an extension of the landscape with a green roof connected to the Knoll's western slope. The Knoll will envelope the building, sliding through an opening between the two classrooms, creating a small, shaded amphitheater at the center of the facility.

A shade canopy will protect the amphitheater and extend over a plaza fronting the proposed Environmental Education Center. The landscape of the Knoll will spill onto the plaza in the form of a berm planted with native woodland trees. As an education tool and demonstration feature, it is important that the new Environmental Education Center is built to be environmentally sustainable. The building will be made of recycled wood, and optimize natural ventilation, daylight, and rainwater harvesting while minimizing heat-island effects with shade trees.

Shade Pavilions

At the top of the Knoll, a small shade pavilion/seating area is proposed. This pavilion will be an amenity for all visitors climbing to the top of the Knoll, the highest point of the Project area. It is also proposed as an extension of the Environmental Education Center for outdoor classroom space for a group of 20 to 30. A second shade pavilion/outdoor education classroom is proposed at the Ivanhoe Overlook, another opportune place for visitors and students to gather. The pavilion will be designed and positioned as a gateway to footpaths that descend through proposed wetland terraces and down to the Ivanhoe Reservoir where visitors will be able to touch the water and observe the flora and fauna up-close. The oval forms and materials of the proposed shade pavilions will be consistent with the architecture of the proposed Environmental Education Center).

Multi-Purpose Facility

During Project planning, a need for expanded facilities at the Silver Lake Recreation Center were identified in order to better meet the needs of the community. A central piece of the proposed Recreation Center expansion is the addition of the new Multi-Purpose Facility to replace the existing undersized gymnasium, which will be retained to become dance and art studios.

The proposed Multi-Purpose Facility will be 5,800 sf in size and will be located southeast of the existing recreation center, nearby but separated by the new basketball court and play field. The design of the Multi-Purpose Facility will include large windows facing the street. The Multi-Purpose Facility can be entered from the east and the west through wide, glass roll-up doors that can remain open on most days of the year.

The proposed architecture is designed to be consistent with the existing recreation center in traditional Spanish style. The new building will have a gabled weathering steel roof with a rust color similar to the clay tiles of the existing building. The facade will be built in wood and the underside of the timber roof structure will be exposed inside and outside. The proposed building design will be environmentally sustainable by using recycled, renewable, and local materials and optimize natural ventilation and daylighting.

The building will be sized to support a variety of programming amenities including an elementary school basketball court of 74 feet by 42 feet. The north side of the court will be lined with three rows of seating risers. Its built-in sports equipment will include retractable basketball hoops, a volleyball net on removable posts doweled into the floor, demountable indoor soccer nets and an electronic scoreboard. In addition to housing youth sports activities, the Multi-Purpose Facility can be used as an assembly space for various community events and as a polling station.

Existing Recreation Center Upgrades

The existing Silver Lake Recreation Center requires an expansion and remodel to respond to the increasing neighborhood demand for youth activities. The exterior of the existing building will be preserved and repainted while its interior will be remodeled to create new spaces. The windows and doors may have to be replaced to meet current energy code requirements, and the building structure may have to be upgraded to meet current seismic code. Four glass skylights, approximately 4 feet by 8 feet, will be added to the roof of the existing gymnasium in order to be repurposed.

The south wing of the building will be devoted to administrative functions and services. It already contains restrooms, which will be upgraded, and the existing meeting room will be used for staff offices. The north wing will be almost entirely devoted to new and improved activities. With the addition of the larger Multi-Purpose Facility, the existing gymnasium will be transformed into a series of activity spaces. A mezzanine will be added, served by a new exterior stair and elevator, to house a new Art Studio which will overlook a new two-story tall Dance Studio below, with resilient wood flooring, mirrors and ballet bars. The kitchen will be relocated under the mezzanine and improved with new counters, cabinets and equipment. Next to the kitchen will be a new Game Room. The space vacated by the kitchen will be converted into a storage room.

Research and Field Methodology

This Report was prepared by ESA's architectural historians, including the following: Margarita Jerabek-Bray, Ph.D., Director of Historical Resources; Shannon Papin, M.A., Senior Architectural Historian; and Claire Cancilla, M.S., Architectural Historian. These ESA staff meet and exceed the *Secretary of the Interior's Professional Qualification Standards* in history and architectural history. Professional qualifications are provided in **Appendix H**.

In preparation for this study, ESA reviewed previous studies of the SLRC for background and to verify accuracy of information. The first was the Los Angeles Historic Cultural Monument nomination for the Complex, completed in 1989.[2] ESA also reviewed a report entitled "Cultural Resources Assessment Report: Silver Lake Reservoir Complex Storage Replacement Project," completed by Greenwood & Associates in 2004 as part of the *Silver Lake Reservoir Complex Storage Replacement Environmental Impact Report.* In this report, the SLRC was evaluated as eligible for listing as a historic district in the California Register of Historical Resources.[3] ESA

[2] Diane Kanner, "Silver Lake Reservoir Historic-Cultural Monument Application," prepared for the City of Los Angeles Department of Planning, January 9, 1989.

[3] Greenwood & Associates, "Cultural Resources Assessment Report: Silver Lake Reservoir Complex Storage Replacement Project," prepared for CH2MHILL, August 2004

also reviewed a report entitled "Research & Analysis: Historical Resources Report" by GPA Consulting from September 2019.[4] This document provided a description of the Site, a summary of its development and history, an illustrated inventory of landscape characteristics and character-defining features of the SLRC, and an analysis of its status as a historical resource. The report further included challenges and opportunities for the Silver Lake Reservoir Complex Master Plan and identified potential funding sources. Finally, ESA reviewed a 2020 memorandum prepared by GPA Consulting evaluating the proposed Project under the Secretary of the Interior's Standards.[5] These reports are included in **Appendices D-G**.

The preparation of this Report also involved an archival records review of the National Register and its annual updates, the California Register, the California Built Environment Resources Directory (BERD), SurveyLA findings, and the City of Los Angeles's inventory of historic properties. A record search of the California Historic Resources Information System was conducted at the South Central Coastal Information Center (SCCIC) at the California State University in Fullerton to identify any previously recorded properties within 0.25-mile or near the Project Site.

In addition, the following tasks were performed for the study:

- Intensive pedestrian field survey to document the existing conditions of the Project Site and its associated features utilizing the survey methodology of the OHP on February 9th, 2022. The survey included photography of the Project Site and associated landscape features.
- Review of the character-defining features and construction history from the 2019 GPA Consulting report.
- Windshield and pedestrian survey of potential direct and indirect views from previously identified historic resources located within 0.25-mile of the perimeter of the Project Site on January 26, 2022, supplemented by view shed studies for adjacent resources via Google Earth and Google Maps.
- Windshield examination of other properties in the vicinity that exhibited potential architectural and/or historical associations.
- Limited site-specific research on the Project Site utilizing historical aerial photographs and previous literature.
- Review and analysis of pertinent ordinances, statutes, regulations, bulletins, and technical materials relating to federal, state, and local historic preservation, designation assessment processes, and related programs.
- Analysis of the proposed Project's direct, indirect, and cumulative impacts on surrounding historical resources outside of the Project Site and on contributing historic features on the Project Site under section15064.5 of the CEQA Guidelines.

---

5 Teresa Grimes and Emily Rinaldi of GPA Consulting, "Silver Lake Reservoir Complex Master Plan, Secretary of the Interior's Standards for the Treatment of Historic Properties Analysis Memorandum," prepared for Hargreaves Jones, May 11, 2020, https://planning.lacity.org/odocument/f4dd1f42-ae5e-4951-8342-a317e30f50d8/Silver_Lake_Master_Plan_Final_(8-20).pd

Identification of Potential Historical Resources within the Subject Property and Surrounding Area

Previous Evaluations of the Project Site

The SLRC was first nominated in 1989 and designated a Los Angeles Historic Cultural Monument (#422). The SLRC has also been previously recorded by SurveyLA with a status code of 5S1, meaning that it is a designated LAHCM. The nomination is available in **Appendix G**.

The SLRC was revaluated in 2004 by Greenwood & Associates as part of the *Silver Lake Reservoir Complex Storage Replacement Project Environmental Impact Report* and was recommended as eligible for listing as a historic district in the California Register of Historical Resources (California Register). The Status Codes recommended for the Silver Lake and Ivanhoe Reservoir Complex were 5S1, an individual property that is listed or designated locally, and 3CB, appears eligible both individually and as a contributor to a district for listing in the California Register through survey evaluation. The report is available in **Appendix F**.

The SLRC was also identified in the SCCIC and BERD record searches. In the SCCIC search, it was identified as the Silver Lake Reservoir Complex Historic District (P-19-192627; 3CD). In the BERD, the Silver Lake Recreation Center (1850 Silver Lake Boulevard; P19-175302; surveyed in 1994) was identified with a status code of 2D, that it is a contributor to a multi-component resource/district determined eligible for NR by the Keeper and listed in the California Register. However, the Recreation Center was not included in the Los Angeles Historic-Cultural Monument nomination form for the Silver Lake Reservoir Complex Historic District. Additionally, the date of construction for the Recreation Center does not fall within the period of significance for the SLRC Historic District. Therefore, we believe this status code was attributed in error. The correct status for this resource is 6Z: found ineligible for NR, CR or local designation through survey evaluation.

In addition, two other reports documented the SLRC, as previously discussed in this report:

- GPA Consulting, "Silver Lake Reservoir Complex Master Plan: Research & Analysis, Historical Resources," 2019.
- GPA Consulting, "Silver Lake Reservoir Complex Master Plan, Secretary of the Interior's Standards for the Treatment of Historic Properties Analysis Memorandum," 2020.

Archival Research Methods

ESA also conducted archival research to identify previously recorded resources adjacent to the SLRC for the purposes of the indirect and cumulative impacts analyses. Archival research for the project included a review of the National Register and its annual updates, the California Register, the Built Environment Resource Directory (BERD) database maintained by the State Office of Historic Preservation (OHP), and SurveyLA findings. The area surrounding the Project Site is densely developed primarily with single- and multi-family residential buildings. The extant buildings in the area are generally one and two stories in height. Due to the density of the existing development in the area, a search for previously identified historical resources was limited to a

0.25-mile radius of the Project Site (study area). This study area is where the Project has the greatest potential for indirect impacts to adversely affect the eligibility of nearby historical resources. The SLCR is a multi-component historic district that is both the focal point and historic setting of the surrounding residential area. As such, the Project has a potential to impact historical resources in the immediate surroundings through changes to the historic setting.

A records search for the Project was conducted by ESA personnel on December 2, 2021, at the SCCIC housed at California State University, Fullerton. The records search included a review of all previously documented historic architectural resources and studies within a 0.5-mile radius of the Project Site and archaeological resources within or immediately adjacent to the Project Site. Although the SCCIC search uses a standard 0.50-mile radius for its search, ESA's documentation of historical resources surrounding the Project Sit is limited to 0.25-mile due to the size of the site and the density of the surrounding area. ESA personnel also conducted a review of documented resources in the project vicinity through the BERD on December 28, 2021, to identify any previously recorded resources within 0.25-mile of the Project Site.

In addition, ESA reviewed the results of SurveyLA and the corresponding database HistoricPlacesLA to identify any previously recorded historical resources on the Project Site or in the vicinity. The SurveyLA search included any recorded resources within 0.25-mile of the perimeter of the Silver Lake Reservoir complex.

Record Search Results Outside of the Project Site

The records search resulted in a total of 650 previously recorded historic resources within a 0.25-mile radius of the perimeter of Project Site, as well as two historic districts. The majority of these resources are contributors to the Silver Lake Residential Historic District, discussed below. **Table 3**, which includes all 650 identified resources is included in **Appendix A** of this report. These resources included:

- 10 designated Los Angeles Historic Cultural Monuments (all are listed below, by repository)
- 3 resources listed on the National Register of Historic Places (One is the Garbutt Estate, discussed below; the other two, the VDL House and the Neutra Office Building, are also LAHCMs and are discussed below)
- 47 resources listed as potentially eligible at the City, State, and/or Federal level
- 9 public staircases recommended potentially eligible at the City level
- 7 resources identified as needing more research as they were not visible from the public right of way by SurveyLA
- 1 resource identified with status code 7R ("Identified in Reconnaissance Level Survey or in an Area of Potential Effect (APE): Not evaluated")
- 1 resource identified with code 2D2 ("Contributor to a multi-component resource determined eligible for NR by consensus through Section 106 process. Listed in the CR."). Note that this resource is the Silver Lake Recreation Building, part of the Project Site. The correct status for this resource is 6Z: found ineligible for NR, CR or local designation through survey evaluation.

- 2 historic districts: Silver Lake Residential Historic District and the Neutra Colony Residential Historic District, discussed below. The remaining resources are contributors to these districts.

Due to the high number of previously identified historic resources, ESA further analyzed only those resources that have views of the SLRC and consequently may experience an impact to their setting as a result of the proposed Project. There are 103 previously recorded resources within 0.25-mile of the SLRC that have either direct or indirect views of the Project Site. Direct views are defined as views of the open water from the resource's primary elevation from the public right-of-way. Indirect views are defined as watershed views that are partially obscured by other residences or foliage, or that have a direct view of the perimeter or parks around the complex but not of the water. These resources are broken down by repository below. A full table with all 103 resources is available in **Table 4** in **Appendix B.**

SCCIC

The SCCIC search identified 15 historical resources within 0.50-mile of the Project Site. These included the Project Site (Silver Lake Reservoir Complex Historic District; P-19-192627; 3CD; designated LAHCM). For the purposes of this historic report, ESA only included those located within 0.25-mile of the Project Site. There were four resources within 0.25-mile of the Project Site. All four were also identified by SurveyLA and two were also recorded in the BERD.

Two of these resources have views of the SLRC and are included in the impacts analysis:

- **Richard and Dion Neutra VDL Research House and Landscape** (2300 N Silver Lake Boulevard; P-19-188871): Designated LAHCM and is a National Historic Landmark with a status code of 5S1 and 1S. This resource has direct views of the Project Site and is analyzed in the impacts analysis. Also identified in SurveyLA with status codes of 5S and 1S.
- **Landa Street-Redesdale Avenue Public Stairway**: This resource was assigned a code of 6Z from the SCCIC report, meaning it appears ineligible as a historical resource through survey evaluation. Through SurveyLA, however, the resource was assigned a status code of 5S3, meaning that it appears eligible for local designation. This resource has views of the Project Site and is analyzed in the impacts analysis. The other two resources do not have views of the SLRC from the public right-of-way and are not included in the impacts analysis because they would not be impacted by the Project:
- **Neutra Office Building** (2379 N Glendale Boulevard; P-19-187000): Designated LAHCM and listed on the National Register with status code of 5S1 and 1S. This resource does not have views of the Project Site and is not analyzed in the impacts analysis. It is far enough away from the SLRC that it will not experience impacts as a result of the Project. Identified in both BERD and SurveyLA.
- **Garbutt House** (1809 Apex Avenue; P-19-166820): Listed on the National Register with a status code of 1S. This resource does not have views of the Project Site from the public right-of-way and is not analyzed in the impacts analysis. Identified in both BERD and SurveyLA.

BERD

The Built Environment Resources Database (BERD) search resulted in seven previously recorded resources within 0.25-mile of the reservoir. Two of these resources were also recorded by SurveyLA and the SCCIC; three were also recorded in SurveyLA; and two were only recorded in

the BERD. The two resources also identified in the SCCIC search are the Neutra Office Building and the Garbutt House and are consequently not included in the below list as they are discussed above. See the "SCCIC" section above for additional details on these resources.

One resource, 1850 Silver Lake Boulevard (P19-175302), has a status code of 2D, meaning that it is a contributor to a multi-component resource determined eligible for the National Register by the Keeper. This address is referring to the Silver Lake Recreation Center. This is not a contributor to the SLRC Historic District. Although this resource has been identified with a status code of 2D, in a 1994 report, it is not individually listed in the California Register or the National Register, it is not an LA HCM nor is it a part of the SLRC Historic District. The correct status for this resource is 6Z: found ineligible for NR, CR or local designation through survey evaluation.

The remaining BERD resources are as follows. They do not have views of the SLRC and are located far enough away from the Project Site that other impacts such and noise and vibration will not be an issue. They are not included in the impacts analysis:

- **Tierman House** (2323 Micheltorena Street; P19-167080): Designated LAHCM with a status code of 5S1. This resource does not have views of the Project Site and is not analyzed in the impacts analysis. It is located 822 feet west of the SLRC.
- **Lautner Residence** (2007 N Micheltorena Street; no associated Primary Number recorded): Status codes of 3CS, 5S3, 3S, meaning that it appears eligible for local, state, and federal listing based on survey evaluation. This resource does not have views of the Project Site and is not analyzed in the impacts analysis. It is located 1,275 feet west of the SLRC.
- **2443 N Moreno Drive** (no associated Primary Number): A single-family residence identified also identified in SurveyLA. The BERD notes this resource with a status code of 6U, meaning it was determined ineligible for the National Register pursuant to Section 106 without review by the Office of Historic Preservation. SurveyLA assigned the resource a status code of 5D3, meaning that it appears to be a contributor to a multi-component resource that appears eligible for local listing. This code is referring to the Silver Lake Residential Historic District, of which the property is a listed contributor. This resource does not have views of the Project Site and is not analyzed in the impacts analysis. It is located 947 feet northwest of the SLRC.
- **1841 Redcliff Street** (P19-167485): A single family residence only identified in BERD. The building was given a status code of 7R, meaning that it was identified in a reconnaissance level survey or in an Area of Potential Effect. This resource was not identified in SurveyLA. This resource does not have views of the Project Site and is not analyzed in the impacts analysis. It is located 1,270 feet southwest of the SLRC.

SurveyLA/HistoricPlacesLA

In addition to the LAHCMs identified by BERD and SCCIC (VDL Research House; Neutra Office Building; and the Tierman House), SurveyLA also identified seven additional LAHCMs. The following LAHCMs have a view of the SLRC and will be included in the impacts analysis:

- **O'Neil Duplex No. 1** (2342 W Cove Avenue): Mid-century modern residence designed by Rodney Walker. It has direct views of the SLRC and is located 380 feet west of the SLRC.

- **Edward Tink Adams House** (2331 W Cove Avenue): Mid-century Modern residence designed by Albert Cooling and James De Long. It has direct views of the SLRC and is located 550 feet east of the SLRC.

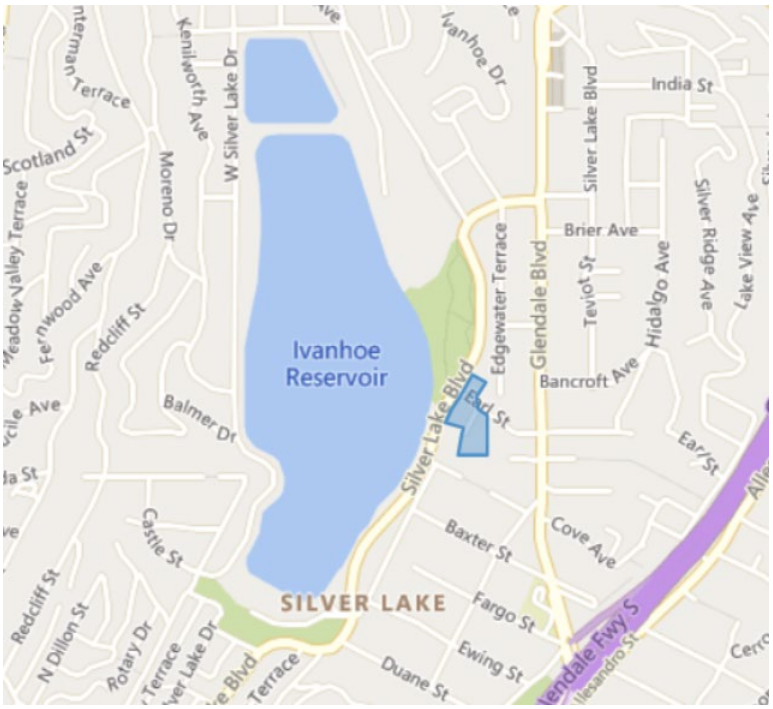
The remaining LAHCMs do not have view of the SLRC and are located far enough away from the Project Site that other impacts such and noise and vibration will not be an issue. They are not included in the impacts analysis:

- **Engine Company No. 56** (2838 W Rowena Avenue): Spanish Colonial Revival fire station. It is located 1,214 feet north of the SLRC.
- **Nin Pole Residence** (2335 N Hidalgo Avenue): 5S1. International style residence designed by Eric Lloyd Wright. It is located 1,113 feet east of the SLRC.
- **Droste House** (2025 N Kenilworth Avenue): International style residence designed by R.M. Schindler. It is located 431 feet west of the SLRC.
- **Lipetz House** (1843 N Dillon Street): First residential commission designed by Raphael Soriano. It is located 1,094 feet southwest of the SLRC.
- **Wilson House** (2090 N Redcliff Street): International style residence designed by R.M Schindler. It is located 950 feet west of the SLRC.

SurveyLA further identified the Garbutt House, which is listed on the National Register and discussed in the SCCIC section above. SurveyLA also identified 47 resources listed as potentially eligible at the City, State, and/or Federal level; 9 public staircases recommended potentially eligible at the City level; 7 resources identified as needing more research as they were not visible from the public right of way. Details on all of these resources is included in **Table 3** in **Appendix A**.

SurveyLA also identified two historic districts located within 0.25-miles of the Project Site: The Neutra Colony Residential Historic District Historic District and the Silver Lake Residential Historic District, both of which are described below. Both of these historic districts are discussed in the impacts analysis.

Neutra Colony Residential Historic District



The Neutra Colony Residential Historic District (**Figure 3**) is located on the eastern side of the SLRC and is composed of Mid-Century or Late Modern residences. SurveyLA describes the district as follows:

> *The Neutra Colony Residential Historic District is located in the eastern portion of the Silver Lake neighborhood, directly east of the Silver Lake Reservoir. The district consists of ten architect-designed Mid-Century Modern or Late Modern residences concentrated near the intersection of Silver Lake Boulevard and Earl Street. All of the properties are contributors to the district. The district has a generally level grade and is divided into moderately sized rectangular lots, aside from one flag lot. The lots have dense vegetation, sometimes partially obscuring the residences from view. The residences are consistent in massing and scale; they are primarily two stories in height and are made up of rectangular volumes accented by ribbons of windows. Most of the residences have attached garages,*

generally to the rear of their respective parcels, a perimeter fence or hedge, and a deep setback from the street.[6]

The significance statement for this district from SurveyLA is as follows:

Excellent and cohesive collection of Mid-Century Modern residences designed by notable architects Richard and Dion Neutra.[7]

Silver Lake Reservoir Complex Master Plan / D202100123.00

SOURCE: HistoricPlacesLA, "Neutra Residential Historic District," http://historicplacesla.org/reports/807bdf03-da10-4258-a941-3fd56e4d45f5.

Figure 3
Map showing the location of the Neutra Residential Historic District (off of Silver Lake Boulevard on the east side of the SLRC, outlined in blue).

Silver Lake Residential Historic District

The majority of the identified resources were contributing buildings to the Silver Lake Residential Historic District (**Figure 4**), a winding and expansive district that extends from the western side of the Project Site to its northern end. The description of the district from SurveyLA is as follows:

The Silver Lake Residential Historic District is located in the western section of Silver Lake, in the hills that lie to the west and northeast of the Silver Lake and Ivanhoe reservoirs. Large in size and irregular in shape, the district wraps around the west and north ends of the reservoirs and is approximately bounded

6 HistoricPlacesLA, "Neutra Colony Residential Historic District," evaluated May 2, 2014, http://historicplacesla.org/reports/807bdf03-da10-4258-a941-3fd56e4d45f5.

7 Ibid.

> *by Angus Street and Ivan Hill Terrace on the north; Landa Street, Kenilworth Avenue, and Tesla Avenue on the south; Griffith Park Boulevard on the west; and Silver Lake Drive and Armstrong Avenue on the east. In total, the historic district contains 1,171 properties, of which approximately 60% are contributors. Non-contributors were identified as such primarily because they post-date the period of significance or have been dramatically altered. Common alterations include window, door, and cladding replacement as well as additions to primary facades and upper stories. The district is composed primarily of one and two-story single family residences, most of which are sited on hillside parcels. A small number of multifamily duplexes and triplexes are also located within the district boundaries. Given the area's varied topography, the size and shape of individual parcels within the district vary considerably. District contributors were constructed on an incremental basis between 1925 and 1970, and thus embody a variety of architectural styles that correspond to their respective period of development. A small handful of residences predate the period of significance, but most of these earlier homes embody historical architectural styles and are established visual features of the neighborhood. Most residences within the district are designed in the Mid-Century Modern, Minimal Traditional, or one of several Period Revival styles, including primarily Tudor Revival and Spanish Colonial Revival. A total of 32 properties within the district boundaries were also identified as individually eligible resources. Vehicular circulation is provided by a network of curvilinear streets, all of which conform to the contour of the rolling hills that define the area's topography. Streets within the district are paved with concrete, feature concrete curbs, and are lined with single-post metal street lights accented by ornamental bases. Seven public staircases supplement the street network by facilitating pedestrian circulation throughout the district. Most houses within the district feature minimal setback and are landscaped with grass or ivy, shrubs, and mature trees of various species. Perimeter walls, fences, and hedges surround many parcels and hinder access and visibility from the public right-of-way.*[8]

The significance statement for this district from SurveyLA is as follows:

> *Excellent example of an early automobile-oriented residential neighborhood, exhibiting distinctive site planning and tract features to accommodate the automobile. Due to a relatively high percentage of non-contributors, may not retain sufficient integrity for the National Register.*[9]

8 HistoricPlacesLA, "Silver Lake Residential Historic District," evaluated May 13, 2014, http://historicplacesla.org/reports/081681c9-d102-4331-b49c-4a82034d4949.

Historical Background

History of Silver Lake

Lots in Silver Lake first when up for sale beginning in 1887, with the arrival of the railroad to Los Angeles and the ensuing real estate boom. The population continued to increase after the Pacific Electric railroad provided commuter access to the Silver Lake area from downtown Los Angeles in 1904. As a result, tracts were subdivided at this time on either side of Sunset Boulevard, which at the time was part of the streetcar line.[10] Many of these early tracts featured public stairways for the residents to navigate the hilly landscape. Nine of these early staircases are still extant and functional and are included in **Table 3** in **Appendix A.** Glendale and Los Angeles were connected in 1915 by the completion of Glendale Boulevard which encouraged further development in the Silver Lake area.[11] The community is named for the Silver Lake Reservoir (Project Site) that sits in the middle of the neighborhood. The reservoir was designed by William

[10] *Historic Resources Survey Report: Silver Lake-Echo Park-Elysian Valley Community Plan Area*, City of Los Angeles, 11.

[11] Jenifer Palmer-Lacy, "Silver Lake History," *Silver Lake Neighborhood Council*, by SLNC History Collective, accessed May 11, 2018, http://silverlakenc.org/silver-lake-history/.

Mulholland in 1907 and named after Herman Silver, a City Councilman. The upper Reservoir is called the Ivanhoe Reservoir, named after the novel by Sir Walter Scott.[12]

Actor Antonio Moreno and his wife, Daisy Canfield were two early residents of Silver Lake, and helped promote and develop the neighborhood. After building the Canfield-Moreno Estate in 1923, the adjacent land was subdivided and developed in 1926 and named "Moreno Highlands," one of the largest tracts developed in Silver Lake.[13] Construction proliferated rapidly and by 1930, there were 193 homes on the tract. Eight years later, in 1938, the number of homes had ballooned to 313 with plans for an additional 300 homes underway.[14]

The rapid construction of single-family and multi-family residences was spurred by commuters who used the Sunset Boulevard streetcar line to commute to downtown Los Angeles for work. As automobile use became more widespread in the 1920s, corresponding infrastructure, such as nearby U.S. Highway 101, was constructed. Silver Lake reflected this trend toward private automobile travel versus public transportation and was an important hub of automobile-age architecture, including Streamline Moderne and Modern styles. Streamline Moderne and Modernist architects responded to the rise of the automobile and its attendant commercial development in Silver Lake and the City more broadly with designs intended to echo the horizontality of the new fast-paced, car-oriented culture. Many famous modern architects constructed buildings in Silver Lake, including Rudolph Schindler, Richard Neutra, Raphael Soriano, John Lautner, Gregory Ain, Harwell Hamilton Harris, and J.R. Davidson. Many of these avant-garde architects opened offices and made Silver Lake their home, including Richard Neutra, John Lautner, and A. E. Morris.[15]

During the period of residential development in the Silver Lake neighborhood, associated commercial, religious, and educational buildings were also constructed in the area. There was a small, automobile-oriented commercial district on Silver Lake Boulevard in the 1920s, which would later include several gas/service stations as automobile use became more popular. Most of the commercial development, however, was built along Glendale Boulevard, Sunset Boulevard, Rowena Avenue, and Hyperion Avenue.[16]

Construction History

ESA reviewed GPA's 2019 report "Silver Lake Reservoir Complex Master Plan: Research & Analysis Historical Resources Report," which included a chronological table indicating construction dates and alteration history of the SLRC. This is included as **Table 1** below for reference purposes.

12 Nathan Masters, "How Mulholland Made Ivanhoe Canyon into Silver Lake," *Lost LA*, June 10, 2016, https://www.kcet.org/shows/lost-la/how-mulholland-made-ivanhoe-canyon-into-silver-lake.

TABLE 1
CONSTRUCTION CHRONOLOGY OF THE SILVER LAKE AND IVANHOE RESERVOIR COMPLEX COMPILED BY GPA CONSULTING, 2019.[17]

Date	Feature	Chronology
1906	Ivanhoe Reservoir	Constructed.
1907	Silver Lake Reservoir	Constructed.
c.1906–10	Caretaker's House	Constructed.
c.1906–10	Stone Retaining Wall	Constructed.
c. 1906–30	Bathroom Building	Constructed.
c. 1906–30	Landscape Building	Constructed.
c. 1906–30	Shed	Constructed.
1920	Silver Lake Reservoir	Shore line excavated, altering slope of embankments; increased reservoir depth by 20 feet; portions of the embankments likely covered with paving at this time to prevent erosion.
1920	Silver Lake Dam	Possibly raised by approximately five feet.
1927	Silver Lake Meter House	Constructed
c. 1927	Chemical/Chlorine Plant	Constructed.
c. 1930	Ivanhoe Reservoir	Wood cover removed.
1937	Silver Lake Outlet Tower	Constructed.
c. 1937	Ivanhoe Chlorination Station	Constructed.
1942	Ivanhoe Inlet Tower	Original inlet tower removed and replaced with a reinforced concrete tower and box inlet conduit through the Ivanhoe Dam.
1944	Ivanhoe Dam Spillway	Constructed.
1947	Silver Lake South Outlet Chlorination Station	Constructed.
1951–53	East Cove	New embankment constructed along east bank at location of East Cove and lagoon infilled with dirt.
1951–53	Ivanhoe Reservoir	Reservoir reshaped and depth increased by 10 feet; piers removed that originally supported wood cover; embankments and basin paved with asphaltic lining.
1951–53	Silver Lake Reservoir	Embankments heightened and paved; depth of reservoir increased; and reservoir reshaped by infilling of East Cove.
1951–53	Silver Lake Dam	Excavation of the reservoir-facing side down to bedrock and reconstruction using new earthen fill.
1954	Concrete Curb Wall	Constructed.
1954	Main Access Road	Paved.
1955	Laboratory Building (now known as Water Quality Office)	Constructed.
1968	Silver Lake Chlorinating Station	Constructed.
1975-76	Silver Lake Outlet Tower	Extensively altered.
1975–76	Silver Lake Dam	Reconstructed.
1975–76	Silver Lake Reservoir	Reservoir reshaped by reconstruction of the Silver Lake Dam.
1983	Silver Lake Reservoir	Concrete curb constructed along reservoir on east side of periphery road.

[17] GPA compiled this construction history using Greenwood & Associates, "Cultural Resources Assessment Report: Silver Lake Reservoir Complex Storage Replacement Project," prepared for CH2MHILL, August 2004; and Los Angeles Department of Water and Power (LADWP), History of the Silver Lake Reservoir Complex, unpublished manuscript on file at LADWP, Los Angeles.

Date	Feature	Chronology
1993–94	Ivanhoe Reservoir	Embankments repaved and new bypass line installed.
1995	Silver Lake Dog Park	Constructed.
2011	East Cove	Three-acre passive park known as Silver Lake Meadow constructed.
2011–17	Silver Lake Reservoir	Bypass line constructed.
2018	Silver Lake Dam	Pedestrian walkway constructed.
2018	Ivanhoe Reservoir	Pedestrian walkway constructed.

In 2020, GPA Consulting also created a narrative form of this construction chronology in a memorandum. The full GPA memorandum is included in **Appendix E** and the full 2019 report is included in **Appendix C**. ESA has compiled and summarized the most salient parts of this narrative from both the 2020 memorandum and the 2019 report below. In addition to this summarization, ESA compiled aerial photographs of the SLRC from 1927 to 2016 and has included further analysis of character-defining features that were not addressed in previous reports. Selected relevant historical photographs are referenced in-text below and the complete chronological progression of images is included thereafter.

The Silver Lake and Ivanhoe Reservoir Complex (complex) is situated in the Silver Lake-Echo Park-Elysian Valley Community Plan area. The complex encompasses approximately 127 acres and is made up of the Silver Lake and Ivanhoe Reservoirs, three dams, ancillary buildings and structures associated with LADWP's maintenance and operation, as well as landscape features such as stone and concrete retaining walls, trees, and shrubs.[18]

The Ivanhoe Reservoir, which is trapezoidal in shape with rounded corners, and features sloped concrete embankments, is situated to the north of the Silver Lake Reservoir and covers approximately 7.84 acres. The Ivanhoe Dam and a reinforced concrete spillway separate the Silver Lake Reservoir from the Ivanhoe Reservoir. The Silver Lake Reservoir, which is irregularly shaped, and features sloped embankments covered in an asphaltic cement paving, encompasses approximately 78.2 acres. The Silver Lake Dam is a reinforced earthen dam, located south of the Silver Lake Reservoir.[19] The Ivanhoe and Silver Lake reservoirs were designed and constructed by William Mullholland, the former Los Angeles Department of Water Superintendent in 1906 and 1907.

In 1903, the City of Los Angeles acquired the land on which the SLRC is now located. Prior to this acquisition, the land was marshy swampland. Originally proposed in 1903, both reservoirs were planned to hold one billion gallons of extra water collected during wet months. Excavation for the Ivanhoe Reservoir began in November of 1905 and completed in May 1906. Work at Silver Lake Reservoir began in August of 1906 using an innovative hydraulic sluicing

[18] GPA Consulting, "Silver Lake Reservoir Complex Master Plan: Research & Analysis, Historical Resources," September 13, 2019.

[19] GPA Consulting, "Silver Lake Reservoir Complex Master Plan: Research & Analysis, Historical Resources," September 13, 2019.

technique.[20] In its early years, the Silver Lake Reservoir was utilized as a source of water for irrigation. The Ivanhoe Reservoir functioned as a source of domestic drinking water. The complex has experienced many alterations over the years to better serve its function and the community.

In 1911, the Water Department built a wooden roof over the newly constructed Ivanhoe Reservoir to decrease evaporation; however, it was removed in 1938 due to health and maintenance reasons (1938 aerial photograph in **Figure 7**). Major alterations occurred to the Complex in 1920, when the reservoirs were altered so that both the Ivanhoe Reservoir and the Silver Lake Reservoir could be used for domestic water supply. To accommodate this change, the embankments of the Silver Lake Reservoir were altered to have a steeper slope and consequently increase the depth of the reservoir. Parts of the embankments were also covered in a paving material. In 1922, fences were placed around the reservoirs to keep out violators attempting to go fishing, bathing, boating and hunting. A diversion ditch (which received drainage from the surrounding hills) was also constructed in the same year around Silver Lake Reservoir (photos showing the configuration of the SLRC from 1927 is visible in **Figure 6**).

By 1944, the new River Supply Conduit (composed of 41,260 feet of reinforced concrete pipe) was built to deliver aqueduct water from the North Hollywood Pumping Plant to the Silver Lake Reservoir. In 1945, the reservoirs were drained, the Ivanhoe Inlet Tower was constructed, and the earth-filled dams improved (image of the reservoir from 1948 shows these changes in **Figure 8**).

Between 1950 and 1953, major improvements were undertaken at both reservoirs, including draining, regrading, resurfacing. Additionally, the dams were raised by two feet, a 60-inch bypass pipeline was placed on the bottom of the reservoirs, a new 66-inch outlet line was constructed from the Silver Lake dam south and along West Silver Lake Drive, and a portion of Silver Lake Reservoir was filled in. Both reservoirs were refilled and were back in service by December of 1953. These renovations included a significant alteration to the Silver Lake Reservoir: a lagoon known as the East Cove on the eastern shoreline was filled in, constructing the area now referred to as “the Meadow”. Ivanhoe was also deepened, and basin embankments paved with asphalt. All of these changes are visible in **Figure 9**, an aerial photo from 1952.[21]

In the 1970s, the SLRC underwent additional changes that included the reconstruction of the Silver Lake Dam due to seismic issues (1975 – 1976). The Silver Lake outlet tower was also renovated at this time and a 72-inch bypass pipe was installed. Additionally, the southeastern corner of the Silver Lake Reservoir was infilled with the dirt, reclaiming a small portion of land and reshaping the reservoir into its current configuration. These changes are evident in **Figures 12** and **13** from 1976 and 1977 respectively, when the reservoir was drained, and 1977, when this work was complete.

[20] GPA Consulting, "Silver Lake Reservoir Complex Master Plan: Research & Analysis, Historical Resources," September 13, 2019.

[21] GPA Consulting, "Silver Lake Reservoir Complex Master Plan: Research & Analysis, Historical Resources," September 13, 2019.

In 2008, the SLRC was taken out of service due to high levels of toxic contamination and they were drained and refilled (aerial photograph from 2009 in **Figure 19**). The reservoirs were drained again in 2016 (**Figure 21**) to construct a bypass project and were refilled in 2017. The Ivanhoe Reservoir was removed from the distribution system in 2017.[22] The present configuration of the SLRC is visible in a 2022 aerial photograph (**Figure 22**).

Additionally, a handful of the character-defining features outlined in the previous reports, including the Knoll, the Meadow, and the Eucalyptus, were not addressed in the "construction chronology" sections. An examination of changes to these features and their integrity, is below.

The Knoll

Topographic maps from 1896 to 2018 were examined to ascertain the elevation of the Knoll to identify potential changes in grade over time. This analysis shows that the Knoll appears to be a naturally occurring feature visible on maps as early as 1896, with a consistent grade that does not change in almost 120 years. While there are minor changes to the foliage that populates the Knoll, it is consistent with the evolution of a natural landscape with minimal human intervention, i.e. the coverage becomes more substantial with time. The Knoll appears to retain its original character throughout the development of the SLRC.

Meadow

The Meadow dates to circa 1952, when an area referred to as the "East Cove" was significantly infilled to create this landscape feature (**Figure 9**). While it is mostly barren open space in the early years, by 1964 there are clusters of trees at the south, northeast, and west sides of the meadow (**Figure 10**). The remainder of the meadow appears to be grass at this point. The meadow's shape, configuration, and concentrations of greenery remained visually consistent for decades, albeit with increased growth and consequent densification of planted trees. A path was added through the trees at the south end of the Meadow between 2002 and 2009 (**Figure 18** and **Figure 19**). The Meadow again experienced change between 2009 and 2012 (**Figure 20**), when walking paths were added in the meadow area as well as dirt open areas that were planted with various foliage that densified over the years. This is the current configuration of the meadow and none of these alterations are significant enough to affect its status as a primary character defining feature of the SLRC.

Eucalyptus Grove

The 1923 aerial photograph (**Figure 5**) shows the original trees that were planted in the Eucalyptus Grove, an arrangement that still resembles the present-day configuration. Over time, the density of the trees varies slightly but overall the alignment remains consistent, as seen in aerial photographs from 1938 (**Figure 7**); 1969 **(Figure 9**); 1977 (**Figure 11**); 1989 (**Figure 14**); 2002 (**Figure 16);** and 2016 (**Figure 19**). This variation in density is possibly due to some of the trees dying over time, or because the aerial photographs were taken at different times of the year.

[22] The written narrative was compiled and summarized from the following report; Teresa Grimes and Emily Rinaldi of GPA Consulting, "Silver Lake Reservoir Complex Master Plan, Secretary of the Interior's Standards for the Treatment of Historic Properties Analysis Memorandum," prepared for Hargreaves Jones, May 11, 2020, https://planning.lacity.org/odocument/f4dd1f42-ae5e-4951-8342-a317e30f50d8/Silver_Lake_Master_Plan_Final_(8-20).pdf, 2-3 and GPA Consulting, "Silver Lake Reservoir Complex Master Plan: Research & Analysis, Historical Resources," September 13, 2019.

The Eucalyptus Grove has retained its essential form, design and use over a hundred-year period, and its status as a primary character defining feature of the SLRC is confirmed.

Survey Results: Significance of the SLRC

The SLRC is a designated Los Angeles Historic Cultural Monument. The 1989 Los Angeles Historic Cultural Monument nomination does not explicitly provide a statement of significance. SurveyLA provides the following significance statement for the SLRC:

> The property meets the criteria for HCM designation because it "reflects the broad cultural, economic, or social history of the nation, state, or community." Both sites are identified with the construction of the Los Angeles Aqueduct system and William Mulholland. They form the chronological beginning and the geographic end of the project.[23]

Additionally, the 2004 Greenwood & Associates evaluation stated that the SLRC is eligible for the California Register as a historic district under Criterion 1, for its significant association with the development of the Silver Lake neighborhood; Criterion 2 for its association with William Mulholland; and Criterion 3; as an early and important example of a hydraulically sluiced reservoir.[24] ESA concurs with these eligibility findings as well as the statements of significance.

The period of significance for the Silver Lake and Ivanhoe Reservoir Complex Historic District was identified as 1906 to 1953 in the 2004 Greenwood & Associates report. These dates were likely chosen to include the original date of construction (1906) as well as the alteration that filled in the East Cove and created the Meadow (1953) which has attained historic significance. This period of significance was also used in the GPA Consulting report from 2019. The LAHCM nomination did not specify a period of significance for the complex.[25] ESA concurs with this 1906-1953 period of significance.

Noteworthy alterations after the period of significance include the construction of the Recreation Center circa 1970, the reconstruction of the Silver Lake Dam in 1976, the reshaping of the southeast corner of the Silver Lake Reservoir to reclaim land for the eventual construction of the Dog Park circa 1976, the alteration/reconstruction of the Silver Lake Outlet Tower in 1976, and the construction of a bypass line circa 2017. Minor alterations after the period of significance include the construction of a concrete curb along east side of the reservoirs on the periphery road in 1983, repaving of the Ivanhoe embankments in 1994, the construction of the Dog Park in 1995, the official transformation of the Meadow into a three-acre passive park in 2011, and the construction of additional pedestrian walkways around both Reservoirs in 2018.

25 Diane Kanner, "Silver Lake Reservoir Historic-Cultural Monument Application," prepared for the City of Los Angeles Department of Planning, January 9, 1989.; Greenwood & Associates, "Cultural Resources Assessment Report: Silver Lake Reservoir Complex Storage Replacement Project," prepared for CH2MHILL, August 2004GPA Consulting, "Silver Lake Reservoir Complex Master Plan: Research & Analysis Historical Resources Report," September 13, 2019, 5-6.

Community Center

The Silver Lake Recreation and Community Center was constructed between 1964 and 1972. It is not mentioned in the 2014 LAHCM nomination form for the Silver Lake Reservoir Complex, which does not specify boundaries for the SLRC nor delineate individual contributing features. The 2004 Greenwood & Associates report does not address the Silver Lake Recreation and Community Center, likely because it was constructed outside the period of significance as defined in the report (1906-1953). The 2019 GPA report also does not include the Silver Lake Recreation Center in the character-defining features analysis or report, for the same reason.

A 1994 report by HRG gives the Silver Lake Recreation Center a status code of 2D, meaning it is a contributor to a multi-component resource listed in the California Register and determined eligible for the National Register by the Keeper, a status code that was likely attributed in error.

The Silver Lake Recreation Center falls outside of the period of significance for the district and is therefore a non-contributing resource. While it likely has some significance under criterion A/1, it does not rise to the level to warrant an individual listing as a LAHCM, or in the California or National Register. Additionally, the building has been altered many times over the years and no longer retains integrity. Therefore, it is ineligible as an individual resource and is not a historical resource under CEQA and impacts of the Project on this resource do not need to be evaluated further. The correct status for this resource is 6Z: found ineligible for NR, CR or local designation through survey evaluation.

Survey Results: Character Defining Features of the SLRC

Character-defining features are defined by the National Park Service as the "visual aspects and physical features that comprise the appearance of every historic building. Character-defining elements include the overall shape of the building, its materials, craftsmanship, decorative details, interior spaces and features, as well as the various aspects of its site and environment."[26]

Primary character-defining features are highly significant in determining the integrity and eligibility of a historical resource. If primary character-defining features on a resource are removed or damaged, the eligibility of a resource can be affected. Contributing character-defining features are secondary features that taken together with the primary features convey a property's significance as a historical resource. Non-contributing features are later additions or alterations that do not add or detract from the integrity or significance of a resource. When establishing character-defining features for a resource, historic photographs, plans, images, or drawings are consulted and compared with similar views from the present day to confirm that they were constructed within the period of significance for the resource and have not been significantly altered over the years.

[26] Lee H. Nelson, Preservation Brief 17: Architectural Character—Identifying the Visual Aspects of Historic Buildings as an Aid to Preserving their Character, National Park Service, September 1988, http://www.nps.gov/tps/how-to-preserve/briefs/17-architectural-character.htm, accessed 6/04/2013.

The following **Table 2** was compiled by GPA consulting in 2019, based off a previous report by Greenwood & Associates from 2004.[27] The GPA report expanded on the Greenwood report by adding significant landscape features to the analysis. An illustrated identification matrix of all character defining features of each contributing resource compiled by GPA is available in **Appendix C**. The character-defining features discussed in the matrix are generally numbered north to south and east to west. Only the character-defining features contributing features are analyzed; non-contributing resources such as the Silver Lake Inlet Tower are not character defining. The table below shows contributing and non-contributing, the visual breakdown of these features included in **Appendix C** break down these features further by primary, secondary, and non-contributing character-defining features. Character-defining features are defined as primary, secondary, or non-contributing, based on the criteria below.[28]

Primary

- Dates to period of significance
- Directly related to the original use, type, and style
- Retains integrity with no or only minor alterations
- Displays craftsmanship
- Highly visible

Secondary

- Dates from the period of significance
- May have been altered, but retains overall integrity
- May be less visible and/or purely functional to the maintenance and operation of the site

Non-contributing

- Pre-dates or post-dates the period of significance
- Has been substantially altered

ESA verified the accuracy of this list of character-defining features on a site visit on February 9, 2021. While ESA concurs with the GPA list of character-defining features, ESA also identified several previously undocumented features that were not included in GPA's report. Three of them were found by ESA to be non-contributing features; one of them is a secondary character-defining feature of the SLRC. These features include:

- Inactive reservoir equipment relocated to LADWP lands to the northeast of the SLRC, immediately west/southwest of the Tesla Pocket Park (**Figure 23**; secondary). While the equipment dates to the period of significance, it is no longer in use as part of the reservoir and therefore is a secondary character-defining object. Its date of decommissioning and relocation is unknown.
- Culvert located at the west side of the Silver Lake Reservoir. It is marked with a 1977 date of construction; therefore, it falls outside the period of significance and is an ineligible non-contributing feature. (**Figure 24**)
- Wood bulletin board west side of the Silver Lake Reservoir in the Eucalyptus Groves. Date of construction is unknown but likely not older than 30-40 years due to condition of wood. Therefore, it falls outside the period of significance and is an ineligible non-contributing feature. (**Figure 25**)
- Fenced off reservoir equipment located on the west side of the SLRC, near the concrete path separating the Silver Lake and Ivanhoe Reservoirs. It is possible this equipment originally dates to the period of significance; however, it has multiple modern alterations. Therefore, while it may be significant to the history of the SLRC, it does not retain integrity and is an ineligible non-contributing feature. **(Figure 26**)

Figure 26
Fenced off reservoir equipment located on the west side of the SLRC, near the concrete path separating the Silver Lake and Ivanhoe Reservoirs (not a character defining feature; it has been altered and does not retain integrity and is therefore ineligible). View to the north.

While ESA strongly concurs that the Silver Lake Reservoir is a primary character-defining feature of the SLRC, the previous reports fail to address an alteration to its configuration that occurred circa 1977. The southeast corner of the reservoir was infilled to create a wider embankment and additional space between the shore of the Reservoir and Silver Lake Boulevard. The space created by this alteration is the present-day location of the Silver Lake Dog Park.

While this modification is a design change that occurred outside of the period of significance, it does not rise to a level that threatens the eligibility of the Reservoir or its status as a primary character defining feature. It is also not significant enough to warrant an extension of the period of significance. It is, however, important to include this alteration in the construction history and state that while the "general" configuration of the Reservoir is a primary CDF that should be maintained, the "exact" configuration has been slightly changed in the southeast corner since the end of the period of significance.

CEQA Impacts Analysis

Identified below are the thresholds for determining the significance of environmental effects on historical resources are derived from the CEQA Guidelines as defined in Section 15064.5 and the 2006 L.A. CEQA Thresholds Guide. Pursuant to this guidance, a project that would physically detract, either directly or indirectly, from the integrity and significance of the historical resource such that its eligibility for listing in the National Register, California Register, or as a City Historic Cultural Monument (LAHCM) would no longer be maintained, is considered a project that would result in a significant impact on the historical resource. Adverse impacts, that may or may not rise to a level of significance, result when one or more of the following occurs to a historical resource: demolition, relocation, conversion, rehabilitation, or alteration, or new construction on the site or in the vicinity.[29]

CEQA Guidelines

According to the CEQA Guidelines, Section 15064.5(b) a project involves a "substantial adverse change" in the significance of the resource when one or more of the following occurs:

- Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.
- The significance of a historical resource is materially impaired when a project:
  A. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in, the California Register of Historical Resources; or
  B. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the PRC or its identification in a historical resources survey meeting the requirements of Section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
  C. Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

Under CEQA, a proposed development must be evaluated to determine how it may impact the eligibility of a district, structure(s) or a site for designation as a historic resource. The Secretary of the Interior's Standards were developed to evaluate and approve work for federal grants for historic buildings and then for the federal rehabilitation tax credit (see 36 Code of Federal Regulations ("CFR") Section 67.7). Similarly, the Los Angeles Cultural Heritage Ordinance provides that compliance with the Standards is part of the process for review and approval by the Cultural Heritage Commission of proposed alterations to City Historic-Cultural Monuments (see Los Angeles Administrative Code Section 22.171.14.a.1). Similarly, CEQA recognizes the value

[29] L.A. CEQA Thresholds Guide, Section D.3. Historical Resources, City of Los Angeles, 2006, p. D.3-1

of the Standards by using them to demonstrate that a project may be approved without an EIR if a project complies with the Standards. In effect, CEQA has a "safe harbor" by providing either a categorical exemption or a negative declaration for a project which meets the Standards (see CEQA Guidelines Section 15331 and 15064.5(b)(3)). Alternatively, however, if a project does not strictly comply with the Standards, an EIR may not be necessary because CEQA impacts to historic resources could still be less than significant.

Thresholds of Significance

In accordance with Appendix G of the CEQA Guidelines, a project would have a significant impact related to historical resources if it would:

Threshold: Cause a substantial adverse change in the significance of an historical resource pursuant to Section 15064.5

In assessing the Project's potential impacts related to historical resources in this section, the City has determined to use Appendix G of the CEQA Guidelines as its thresholds of significance. The factors below from the 2006 L.A. CEQA Thresholds Guide (Thresholds Guide) will be used where applicable and relevant to assist in analyzing the Appendix G question:

- Demolition of a significant resource;
- Relocation that does not maintain the integrity and significance of a significant resource;
- Conversion, rehabilitation, or alteration of a significant resource which does not conform to the *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings*; or
- Construction that reduces the integrity or significance of important resources on the site or in the vicinity.

Secretary of the Interior's Standards

Under CEQA, a project that follows the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing, Historic Buildings* or the *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* (1995), Weeks and Grimmer,[30] shall be considered as mitigated to a level of less than a significant impact on the Historical Resource.[31]

1. A property shall be used for its historic purpose or be placed in a new use that requires minimal change to the defining characteristics of the building and its site and environment.
2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.

[30] *The Secretary of the Interior's Standards for Rehabilitation & Illustrated Guidelines for Applying the Standards* (1995) re-configured expressly for web users by Kay Weeks, Office of the Chief, HPS, and Anne Grimmer, TPS. https://www.nps.gov/tps/standards/rehabilitation/rehab/credits.htm

[31] California Environmental Quality Act, 15064.5 (b)(3).

3. Each property shall be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other buildings, shall not be undertaken.
4. Most properties change over time; those changes that have acquired historic significance in their own right shall be retained and preserved.
5. Distinctive features, finishes, and construction techniques or examples of craftsmanship that characterize a property shall be preserved.
6. Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.
7. Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means possible.
8. Significant archeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken.
9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.
10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.[32]

Methodology

A project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment. In general, a significant effect under CEQA would occur if a project results in a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5(a). Substantial adverse change is defined in CEQA Guidelines Section 15064.5(b)(1) as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired."[33] In addition, while assessing the project's impacts under CEQA, it is important to consider the ability of the historical resources to retain their integrity. The seven aspects of integrity as defined by the National Park Service are location, design, setting, workmanship, materials, feeling, association.[34] A project that diminishes the integrity of a resource such that the significance of a historical resource is materially impaired is a project that would result in a significant impact on the environment under CEQA.

[33] CEQA Guidelines Section 15064.5(b)(1)

[34] "Integrity of a Property" in National Register Bulletin 15, How to Apply the National Register Criteria for Evaluation, (National Park Service, revised for internet 1995), pages 44-46.

Project Description

A general project description is included in the Introduction of the report on pages 6-11. Below are specifics for implementation of the master plan, as well as a breakdown of any proposed changes or alterations to the SLRC. They are organized by geographic zones, as defined in the master plan document.

The Meadow

- Reconfigure and expand the Meadow's existing open lawn and shade trees;
- Re-grading and changes to elevation (sloping towards reservoir);
- Addition of habitat islands;
- Creation of ornamental gardens and dells;
- Creation of picnic grove with an informal play walk with interpretive signage;
- Delineation of a "great lawn", located 5 feet below the picnic grove;
- Construction of terraces with shade trees between this and the water's edge with seating;
- Small footpath leading to an observation platform located at the south end of the Knoll, on the embankment of the Silver Lake Reservoir;
- Construction of a series of walkways within the wetland terraces;
- Tree-lined promenade along Silver Lake Boulevard that connects to ornamental gardens;
- Construction of entry/overlook plaza near intersection of Silver Lake Boulevard and Earl Street.

The Knoll

- Replanting within existing area to increase species diversity;
- Create universally accessible nature trails to lead from the Meadow and Armstrong Avenue;
- Construct habitat fences along the nature trails;
- Re-grading of a small portion of the southern end to be higher than existing grade to accommodate the construction of a small seating terrace;
- Construct an Environmental Education Center along the southern edge of the Knoll. The education center will be tucked into the Knoll landscape and overlook the reservoir.
- Construction of a new pathway to connect the Environmental Education Center with the reservoir;
- Construction of a floating dock on the reservoir that will be accessible via the new pathway from the education center;
- Environmental Education Center to match the residential scale of the surrounding area in a contemporary design using natural materials to blend into the surrounding landscape;
- Restored upland habitat on Environmental Education Center roof that extends the natural landscape onto a roof terrace and outdoor classroom;

- Environmental Education Center to be integrated into the topography of the Knoll and oriented to face water;
- Construct a small shade pavilion and seating area that is an extension of the design of the Environmental Education Center– oval in form and same natural materials as the Environmental Education Center.

Ivanhoe Overlook

- Construction of an observation deck extending out over wetland terraces;
- Construction of small footpaths through wetland terraces;
- Construction of observational platforms accessible via the small footpaths;
- Addition of two floating wetland islands;
- Construction of small shade pavilion with integrated seating that will be the same design as the shade pavilion located at the Knoll (oval form and same natural materials as Environmental Education Center);
- Installation of interpretive signage;
- Existing inlet tower on Ivanhoe Dam will remain in place and operational.

Eucalyptus Grove

- Replant zone to restore upland habitat value;
- Construct walkways with low habitat fencing to protect sensitive areas;
- Creation of habitat terraces stretching beyond existing embankment edge;
- Construction of an overlook with installation of interpretive signage;
- Addition of floating islands;
- Fill may be required to build habitat terraces;
- Construction of seating and viewing terraces / platform.

East and West Narrows

East narrows

- 3 to 4-foot grade separation from the road to the top of the embankment to allow for continuous seat wall to be added;
- Low historic concrete walls along these road edges will be recognized and incorporated into the Promenade design (some cuts will need to be made into the wall);
- Construct a fitness circuit;
- Construction of elevated bridge that swings over the water;
- Addition of a habitat island.

West narrows

- Construction of seating terraces embedded into the embankment.

- Planting of trees for shade and shelter.

The South Valley: The Silver Lake Recreation Center

- Minor reconfiguration of the existing recreation center to provide office and storage space.
  - Exterior will be preserved and repainted
  - Interior will be remodeled to create new spaces
  - windows and doors may be replaced to meet current energy code requirements
  - Building may undergo seismic upgrade
  - Four glass skylights, 4 by 8 feet, will be added to the roof of the existing gym
  - Restrooms on south wing will be upgraded and existing meeting roof will be converted to staff offices
  - North wing will have new activities. Existing high-bay gymnasium will be transformed into activity spaces
  - Mezzanine will be added, served by a new exterior stair and elevator to house a new art studio.
  - Kitchen will be relocated under the mezzanine
  - New game room next to the kitchen
  - Space vacated by kitchen will become a storage room
- Construct new multipurpose building / community center with indoor basketball court
  - 5,800 sf facility
  - Simple style designed to be different from but compatible with existing recreation center's traditional Spanish Colonial style
  - New building has abled weathering steel roof with a rust color similar to the clay tiles of the existing building
  - Facade is clad in wood and underside of timer roof is exposed inside and outside as it cantilevers over the entry plaza
- Creation of an outdoor plaza with shade trees and integrated and movable seating that connections the existing recreation center to the new facility
- Existing basketball court and playfield to be relocated to the north of the multi-purpose facility
- Existing picnic area relocated to the west sloping lawn
- Planting of additional trees
- Dog park expansion and renovation. Creating two separate spaces for small and large dogs. Area will be regraded. Materials updated from decomposed granite to synthetic turf. Integrated seating, benches, and shade structures.

Analysis of the Project

Direct Impacts

Under CEQA Guidelines Section 15064.5 (b), the changes to a resource and its setting would only cause a substantial adverse change if they would detract from the integrity (location, design, setting, materials, workmanship, feeling, association) of the historical resource such that the historical resource's ability to convey its significance would be materially impaired to the degree that it would no longer be eligible as a historical resource pursuant to CEQA Guidelines Section 15064.5 (b). What follows is an analysis of the potential impacts of the proposed Project to determine whether the integrity of the historical resources would be retained under the Project and its eligibility as a significant historical resource would be retained, or if the proposed Project would alter the resource such that its significance would be materially impaired, and it would no longer be eligible as a historical resource.

The proposed Project would represent a natural evolution of the SLRC and its uses. Over time, the SLRC has changed to accommodate practical needs, such as being converted to a solely domestic water supply, and community needs, such as the development of outdoor space like the recreation center and associated facilities for community use. As the SLRC is now decommissioned, the proposed Project is a continuation of the SLRC's historical progression and adaptation to the changing needs to the community over time.

The complex's footprint and shape will remain intact; its significant landscape features (Knoll and the Eucalyptus Grove) will be preserved; and no significant view sheds will be detrimentally affected as a result of the proposed Project's new construction or alterations. While there will be some changes to the grading and orientation of these open spaces, the overall footprint, feeling, and setting will remain intact. These spaces will remain green open spaces for passive recreation. The existing mature trees and plants will remain, and the overall footprint of these open spaces will not change. Further, the open water views of both Reservoirs will remain intact.

Four new structures will be constructed as a result of the Project. The first is a new Environmental Education Center located within the Knoll landscape. This building will be one-story, an appropriate scale for the surrounding residential neighborhood, and it will be built into the topography of the Knoll. It will be designed with natural materials. Its roof will be an extension of the habitat of the Knoll and there will be outdoor classrooms. The Environmental Education Center is designed to be integrated into the Knoll's landscape and would not result in a substantial visual change to the historic Knoll landscape. Character-defining features of the Knoll including its elevation and its wooded nature will not be harmed or destroyed as a result of the new construction. Due to the topography of the Knoll and the SLRC at large, and the intentional integration of the design of the Environmental Education Center into the Knoll's existing topography, the new construction would largely be obscured from view from most vantage points. It will be, for all intents and purposes, a "hidden" building that will not substantially affect the SLRC's character defining features and major view sheds. Although the Knoll has historically not had structures on it, the construction of this facility will be a minor alternation with minimal visual impact and the rest of the Knoll will retain its topographical features and

wooded character. As shown in aerial photographs showing the SLRC from 1923 to 2016 (referenced in the "Construction History" section above), the Knoll has been an open area with trees and foliage for decades; the proposed alterations to the Knoll will largely retain this use, albeit with new infrastructure to support passive recreation. However, these changes will not adversely affect the character-defining features of the Knoll.

Two shade pavilions will also be constructed, one in the Knoll and one at the northwest corner of the Ivanhoe Reservoir. These shade pavilions will be constructed with the same oval footprints as the Environmental Education Center and will be designed in compatible, sustainable, and natural materials. The shade pavilions will be low-rise, matching the character of the surrounding area, and will not obscure major views. The construction of the low scale and sensitively designed shade pavilions will not adversely affect the character-defining features of the Knoll or Ivanhoe Reservoir or the larger SLRC and would retain and preserve their integrity.

The final new building is the new 5,800 sf Multi-Purpose Facility/Recreation Center, located at the South Valley. The new facility will provide a needed increase in square footage to accommodate community use. It will be designed in a style that is differentiated but compatible with the existing Spanish Colonial Revival recreation center, although that is not required as the current center is a non-contributing resource. The new recreation center will have a gabled roof of weathered steel in a rust color similar to the existing building's clay tile roof. The façade of the new structure will be clad in wood. This new construction would not visually detract from the existing structure and would be compatible with the existing recreation center infrastructure.

Additional changes to the SLRC include the construction of various footpaths and trails to provide more efficient circulation around the SLRC and increased accessibility. New pedestrian paths and trails will be added to the Ivanhoe Reservoir area, the Knoll on the west side of the Reservoir, the East and West Narrows, and the Eucalyptus Grove area. While the paths of the Complex will be altered as a result of the Project, the overall shape of the reservoirs will be retained, and the overall perimeter paths of both the Silver Lake Reservoir and the Ivanhoe Reservoir, which are character-defining features, will remain largely intact. On the East Narrows, the low historic concrete walls along the road edges, a character-defining feature of the Complex, will be recognized and incorporated into the Promenade design. While a handful of cuts will be made in these walls to allow for pedestrian ingress and egress, these minor modifications are in line with previous similar alterations to the wall over the lifetime of the reservoir and will not negatively impact this feature. Further, the perimeter paths will mostly be retained and preserved. Aerial photographs of the Complex indicate that paths have previously been changed and altered over the years. For example, walking paths were added when the Meadow became a passive recreation space in 2011. The alterations and additions to this path system represent a continuation of this historical development. Further, the walking paths' pavement is non-original. As a result, alterations to the pathways represent a progression of these developments and will only minimally affect the character of the walkways.

Further changes include the alteration of embankment edges of the Complex, which will be changed in order to construct habitat terraces, seating terraces, and habitat islands. When the reservoirs were first constructed, the embankments were unpaved earthen slopes. Over time, they

were altered to become paved surfaces, once in 1920 as well as in subsequent years, notably in the 1951-1953 alterations to the Complex. The embankment around the Ivanhoe Reservoir was resurfaced approximately 25 years ago with concrete paving. The Silver Lake Reservoir's embankment is paved with asphalt and cracks have been infilled and repaired over time. The paving of the embankment of the Silver Lake Reservoir is a character-defining feature, but changes to this paving will not affect the overall eligibility of the Reservoir. Further, some of the paving will remain in place. The changes to the embankment represent another iteration of the Complex's evolution. Although the embankments will be changed, their inherent configuration, shape, and orientation will remain.

Habitat islands will also be added to both the Ivanhoe and Silver Lake Reservoirs. The construction of these habitat island will not affect any character defining features and the open water views for both reservoirs will remain. Additional changes will include the construction of outlooks at various points around the reservoir, as well as the addition of outdoor seating, new plants and trees, and a fitness facility on the East Narrows. The addition of these features will not affect any character-defining features of the SLRC district and are indicative of the evolution of the Complex into a passive recreation area. Both reservoirs will remain intact and eligible as resources after the completion of these changes.

Contributing features that will experience no adverse effect to their character-defining features at the conclusion of the Project include: the North Ivanhoe Dam; the Ivanhoe Reservoir (overall shape, embankment configuration, and water level will be retained); the South Ivanhoe Dam; the Ivanhoe Inlet Tower which will remain in place; the Ivanhoe Reservoir Chlorination Station which will remain intact; the Caretaker's House (Sunshine House), garage, shed (old caretaker's house), landscape building and bathroom building, located on the east side of the SLRC, which will all remain intact; stone retaining walls; the Chlorine Plant, which will remain in place and intact; the main entrance and access road which will retain their configuration and asphalt paving; Armstrong secondary entrance; the West landscaped area, which will retain its mature trees and will undergo additional planting and seating on the embankment; and the grassy patch, which will retain its mature trees.

The Silver Lake Reservoir will also retain its shape, boat launches, embankment configuration, and water level. While changes will occur to the embankment paving and appearance as a result of new park infrastructure, these changes would not detrimentally affect the eligibility of the resources. Further, embankment changes have occurred over time. As such, the Silver Lake Reservoir will remain eligible despite minimal changes to its embankment paving.

The Knoll will also undergo changes, but these changes will not affect the overall shape or feeling of the Knoll. The character-defining features of mature trees and the Knoll's grading will remain intact. New construction will be sensitively and compatibly designed, as described above, and will not adversely affect the Knoll's eligibility as a resource and will have a less than significant impact.

However, construction activities at the Project Site have the potential to generate groundborne vibration that could damage character-defining features of the SLRC, as the operation of heavy

equipment (e.g., vibratory pile driver, backhoe, dozer, excavators, drill rig, loader, scraper, and haul trucks) generates vibrations that propagate through the ground. Depending on the construction procedures and the equipment used, Project construction would generate varying degrees of ground vibration that could cause damage to historic structures. The PPV vibration velocities for several types of construction equipment measured at increasing distances are identified in **Table 3.12-23**, *Construction Vibration Impacts – Building Damage*. This table includes the estimated vibration velocity levels at the South Outlet Chlorination Station and the Meter House (V8), both considered historic resources and Category IV building (buildings extremely susceptible to vibration damage). South Valley construction activities, including construction of the new multi-purpose building, would occur in the vicinity of these historic resources, including dozers or loaded trucks within approximately 15 feet of these buildings. Vibration levels from these activities would be up to approximately 0.191 inches per second PPV, which would exceed the significance threshold of 0.12 inches per second PPV. **Therefore, vibration impacts associated with structural damage from on-site construction activities would be potentially significant at the SLRC prior to implementation of mitigation measures.**

Mitigation Measures:

NOISE-5: Equipment Setbacks. The operation of construction equipment that generates high levels of vibration during any phase of construction occurring in the South Valley will be limited to setback distances from receptor V8. Receptor V8 includes the South Outlet Chlorination Station and Meter House. Setback distances apply in all directions surrounding the two buildings identified as V8. The following equipment shall be prohibited from operating within their respective setback distances:

- Large bulldozers shall be prohibited within 21 feet of receptor V8
- Loaded Trucks shall be prohibited within 19 feet of receptor V8
- Jackhammers shall be prohibited within 12 feet of receptor V8
- Small bulldozer shall be prohibited within 3 feet of receptor V8

The contractor(s) shall require and document compliance with the minimum allowable setbacks in a construction vibration management plan, which shall be provided to the City prior to issuance of a demolition permit. The construction vibration management plan shall detail the types of equipment to be used during demolition, grading, and building construction, estimated vibration velocities, and distance to vibration receptor V8. Equipment and or alternative construction techniques to be used within the required setbacks for large bulldozers, loaded trucks, jackhammers, and small bulldozers shall be identified to ensure that vibration velocities will not exceed thresholds for potential structural damage.

Therefore, after mitigation measures are implemented, potential impacts are less than significant because the Project would not materially impair the SLRC in a manner that would adversely affect the ability of the SLRC to convey its significance. At the conclusion of the Project, the significance and integrity of the SLRC would remain intact.

Indirect Impacts

Indirect impacts were analyzed to determine if the Project would result in a substantial material change to the integrity of historical resources within the Project vicinity, as well as their immediate surroundings, that would detract from their ability to convey their significance.

There are a total of 650 previously recorded historical recourses (Table 3 in Appendix A). Due to the high volume of previously identified resources within 0.25-mile of the SLRC, the impacts analysis is limited to only those resources that have views of the Project Site. Direct views are defined as views of the open water from the resource's primary elevation from the public right-of-way. Indirect views are defined as watershed views that are partially obscured by other residences or foliage, or that have a direct view of the perimeter or parks around the complex but not of the water. These 103 resources that have views of the Project Site and/or the SLRC are listed in **Table 4** of **Appendix B**. For the purposes of this analysis, resources are analyzed by the type of potential impact.

Potential Adverse Impact

Richard and Dion Neutra VDL Research House and Landscape (2300 N Silver Lake Boulevard; P-19-188871)

The VDL Research House and Landscape, designed by master modern architect Richard Neutra and his son Dion Neutra, is a designated LAHCM and a National Historic Landmark. It is located approximately 85 feet east of the SLRC on a sloping hillside amongst other residential resources. Originally, there was another house on the site constructed in 1932 that burnt down in a fire in March 1963. Dion Neutra, along with his father, rebuilt the house with the original footprint, albeit with changes. The house was Neutra's residence as well as a professional hub where many modern architects like Gregory Ain, Harwell Harris, and Raphael Soriano started their careers. Over decades, hundreds of Neutra’s projects were designed at the VDL House.

The VDL Research House and Landscape is located on the east side of the complex, on West Silver Lake Boulevard, and overlooks the Silver Lake Meadows and the Silver Lake Reservoir. The view from the VDL House celebrates the expansive meadow, trees, and the open water of the Silver Lake Reservoir. The VDL House was explicitly designed to incorporate water views of the Silver Lake Reservoir, as demonstrated by a small reflecting pond on the second-floor level that was designed to serve as an infinity pool with the open water views of the Reservoir in the background.

Changes to the SLRC under the Project that would be visible from the VDL House would result from the reconfiguration of the existing open space of the Meadow, including slight elevation changes, a picnic grove, the addition of footpaths and informal play paths, and an ornamental garden. However, these changes would be consistent with the current character of the Meadow. The ornamental garden and picnic grove appear to be graded so that they will be minimally

visible from the VDL House. While walking paths and an informal play area will be added, there are already walking paths in this part of the Meadow and this change would not introduce a visually obtrusive or new design element to the view shed from the VDL House. While these alterations would minimally change the view from the VDL House, the overall views of open grass and open water would not be substantially changed and would not adversely affect the design intent of the VDL House or the character of its intended views of the surrounding setting.

Another change to this area is the construction of an entry and overlook plaza near the intersection of Silver Lake Boulevard and Earl Street. The VDL House is a block north of this intersection, and multiple houses and trees separate the house from the new plaza. As a result, this new construction would not adversely affect the VDL House.

There would also be habitat islands added to the Silver Lake Reservoir under the Project that would likely be visible from the VDL House. The open water of the reservoir, however, would still be visible upon completion of the Project. Further, the views from the VDL House have changed over the years as a result of the changing setting and the alterations to the reservoir. The addition of habitat islands would not substantially impact or change the character of the views from the VDL House and would continue the evolution of the use and views of the reservoir.

Shade trees would be planted and a promenade along Silver Lake Boulevard would be created with additional trees planted along the promenade. Although there are currently trees in this area, the new plantings would actually be less obtrusive and the original view from the VDL House, which has been partially obstructed due to plantings and a traffic light, would be somewhat restored. The VDL House would not be physical or materially impaired as a result of the Project, and the visual connection of the VDL infinity pool to the Reservoir would be partially reestablished. All its physical character-defining features would remain intact at the conclusion of the Project. While the design intent of the VDL House regarding its view shed and associated setting would be affected by changes under the Project, the proposed changes would minimally detract from the integrity of the resource and would not substantially detract from the setting, feeling, and association of the VDL Research House and Landscape. The VDL House and Landscape is eligible under criterion C/3 for its design and association with Richard and Dion Neutra as well as an example of mid-century modern architecture. Its integrity of design, workmanship, materials, and location would remain intact at the conclusion of the Project.

Therefore, potential indirect impacts of the Project are less than significant to the VDL Research House and Landscape because the Project would not materially impair this resource or interrupt primary views in a manner that would adversely affect the ability of the historical resource to convey its significance. At the conclusion of the Project, the significance and integrity of the resources would remain intact.

No Adverse Impact

The remaining 102 resources, listed by address in **Appendix B**, have views of the SLRC that may be slightly altered as a result of the Project. All of these resources are residential buildings, most of which are contributors to the Silver Lake Residential Historic District. The residences are designed in a variety of styles, including Period Revival styles like Spanish Colonial, American Colonial Revival, and Tudor Revival, and date from 1915_to 1979. Many of the later resources

were constructed in the Mid-Century Modern and International styles, including designs by such notable architects as Rodney Walker, Eugene Choy, Harwell Hamilton Harris, and Richard and Dion Neutra. Because the SLRC is expansive and the Silver Lake Residential Historic District extends from the west side of the Complex to the north with varied topography that affect individual resources' view of the Complex, contributors to the district have very different views of the SLRC. As a result, they have been pulled out separately for analysis based on views. A more general analysis of both the Silver Lake Residential Historic District and the Neutra Colony Residential Historic District are provided after this analysis.

The resources are all located in residential neighborhoods that have been consistently residential since their earliest development. The Project would not introduce a new use or typology to the area and all the adjacent neighborhoods would remain residential in nature. The use of the SLRC will be passive recreation, consistent with how much of the SLRC is already used, and the overall footprint and size of the complex would remain the same. The Project would not introduce a substantial new scale or massing to the existing setting, nor would it physically impact or materially impair the adjacent resources.

The integrity of setting for these resource would be slightly changed as result of the Project, but these changes do not significantly detract from the neighborhood setting. The SLRC is not being demolished or removed; it would remain extant with its character-defining features intact. As a result of proposed alterations, residences would experience some change in view – for example, those resources that are located on the West side of the SLRC may see changes to their view as a result of the planting of additional trees and vegetation in the Eucalyptus Grove, but these changes in settings and view are minor. New construction at the SLRC would be minimal and is limited to small-scale sensitively designed construction that is the same scale as the surrounding neighborhood.

Although there would be slight view changes for some of these residences which may marginally affect their integrity of setting, the setting would largely remain intact. The resources would all still be located in a residential neighborhood around the Reservoir, which would remain a neighborhood nucleus. The layout of the streets is not changing as a result of the Project, nor is the topography or scale. The residences would still have views of the SLRC. The changes would not affect the eligibility of individual resources or historic districts.

Consequently, the minor change in views and setting would not detract from these resource's ability to convey their significance. No character-defining features of these resources would be changed or impacted at the conclusion of the Project. The Project would not have a physical or material effect on any of these resources. At the conclusion of the Project, the resources' integrity of location, design, materials, workmanship, setting, feeling, and association would remain intact, and these resources would not experience a substantial material change.

Therefore, indirect impacts of the Project to historical resources in the surrounding vicinity (0.25-mile radius) are less than significant because the Project would not materially impair these resources or their setting or interrupt primary views in a manner that would adversely affect the ability of these historical resources to convey their significance. At the conclusion of the Project, the significance and integrity of these resources would remain intact.

Silver Lake Residential Historic District

The Silver Lake Residential Historic District includes 1,171 residential properties with a period of significance that spans from 1925 – 1970. The homes are located in a large area to the west and north of the Reservoirs and 60% of the properties are district contributors. Those contributing resources that have a view of the SLRC are included in the analysis above and in the table in **Appendix B**; all contributing resources are recoded in the table in **Appendix A**.

While the Project would affect the view sheds of several of the contributing resources, included in the analysis above, it would not result in a material change to any of these resources that would affect their eligibility as contributors to the district. The proposed Project would not introduce a substantial new scale or massing to the existing setting, nor would it physically impact or materially impair the district and, therefore, would have no impact to the integrity of location, design, workmanship, or materials of the resources. While the view from some individual residences would be considered a character-defining feature of their setting and part of their design intent, far more of these resources currently have no views of the SLRC at all. More importantly, the specific views of the SLRC from individual resources is not a character defining for the district as a whole. Therefore, the potential impact of these changes to the setting and views as a result of the project would be minimal and only effect a small percentage of contributing resources.

The orientation and spatial relationship of these residences to the SLRC would remain intact. At the conclusion of the Project, all resources would remain eligible as district contributors and the district as a whole would remain eligible. The district would still remain an example of early automobile-oriented residential neighborhood, exhibiting distinctive site planning and tract features to accommodate the automobile.

Therefore, the Project would not materially impair the significance of these contributing resources or the historic district as a whole. As such, indirect impacts are less than significant. At the conclusion of the Project, the significance and integrity of these resources and historic district would remain intact.

Neutra Colony Residential Historic District

The Neutra Colony Residential Historic District is a small district located on the eastern side of the SLRC. It contains ten Mid-Century Modern or Late Modern residences designed by Richard and Dion Neutra that are concentrated near the intersection of Silver Lake Boulevard and Earl Street. While most of these resources were specifically designed to incorporate views of the Silver Lake Reservoir, some do not have views of the SLRC from the public right-of-way. Six residences have direct views of the SLRC and four have no views of the SLRC from the public right-of-way. For the purposes of CEQA, only views from the public-right-of-way are considered. Therefore, of the

setting of those resources with existing views from the public right of way would not change substantially as a result of the proposed project. More importantly, any small change to the setting and views would not affect the integrity of any of these resources. The feeling, association, workmanship, design, materials, and location would all remain intact. The setting would change slightly with the proposed alterations to the Meadow, which most of these resources face, but this alteration would be minimal. The spatial relationship between these residences and the SLRC would remain intact and the character of the neighborhood as a whole would remain unchanged. There would be no introduction of a new scale or massing as a result of the Project. At the conclusion of the Project, the individual resources within the District and the District as whole would remain intact and eligible as an excellent and cohesive example of a collection of Modern residences designed by Richard and Dion Neutra.

Therefore, the Project would not materially impair the significance of these contributing resources or the historic district as a whole. As such, indirect impacts are less than significant. At the conclusion of the Project, the significance and integrity of these resources and historic district would remain intact.

Cumulative Impacts

Construction impacts to historical resources, both direct and indirect, tend to be site specific. However, cumulative impacts can occur if a project and other related projects in the adjacent area would together cumulatively affect in an adverse manner the eligibility of a historical resource and/or resources. A significant impact would occur if the related project(s) would adversely affect the integrity and render a historical resource(s) or district(s) as no longer eligible for listing and the Project's contribution to adverse impacts would also detract from the integrity of a historical resource(s) or district(s). In this case, potential cumulative impacts would be cumulatively considerable.

In assessing cumulative impacts on historical resources, the focus is on related projects that are located in the immediate vicinity of the Project that have the potential to contribute to changes in the setting of identified historical resources on the Project Site and in the vicinity, including historic districts. A list of thirteen related projects that are planned or under construction in the immediate vicinity of the Project Site was compiled to support the analysis of cumulative impacts for the Project:

- Related Project 1: 1629 North Griffith Park Boulevard, planned conversion of a historic (1932) church into a 26-room hotel with associated pool, restaurant, and lounge, located approximately 3,200 feet from the Project Site.

- Related Project 2: 1750 North Glendale Boulevard, a 5-story apartment building with 70 units totaling 61,000 square feet, located approximately 2,200 feet from the Project Site.

- Related Project 3: 2828 North Glendale Boulevard, planned conversion of a three-story church and an adjacent three-bedroom house into a childcare center for up to 175 kids. The project is located approximately 1,400 feet from Project Site.

- Related Project 4: 2280 North Glendale, residential development of six condominium units across three lots, located approximately 2,200 feet from the project site.

- Related Project 5: 3301 West Sunset Boulevard, a mixed-use project that includes apartments, commercial and retail space located 3,100 feet from the project site.

- Related Project 6: 3225 West Sunset Boulevard, a mixed-use development including 82 apartments, 2,500 square feet of retail space, 4,600 square feet of office space and a 2,900 square foot restaurant, located approximately 3,200 feet from the Project Site.

- Related Project 7: 2600 West Riverside Drive, a residential building to include 120 condo units, located approximately 4,400 feet from the Project Site.

- Related Project 8: 3012 West Sunset Boulevard, a residential building to include 74 apartment units, located approximately 4,000 feet from the Project Site.

- Related Project 9: 2225 West Sunset Boulevard, demolition of existing residential and commercial buildings and construction of a new multi-family residential building with 176 units, located approximately 5,000 feet from the Project Site.

- Related Project 10: 4311 West Sunset Boulevard, a mixed-use development including 108 residential units, 1,000 sf of restaurant space and a 4,500-sf fitness center, located approximately 5,000 feet from the Project Site.

- Related Project 11: 4100 West Sunset Boulevard, a mixed-use development including 91 residential units, and 10,000 sf of commercial/retail space, located approximately 4,300 feet from the Project Site.

- Related Project 12: LADWP Aeration and Recirculation System Project: includes installation of a bubble plume aeration system and a recirculation pipe system to ensure oxygenation and destratification of the reservoirs, located within the Project Site.

    - Related Project 13: Sidewalk Repair Program: includes sidewalk repairs south of the Silver Lake recreation Center, adjacent to West Silverlake Drive, Van Pelt Place, Silverlake Boulevard, and at the intersection of Duane Street and Silverlake

Related projects 1,5,6, 7, 8, 9, 10 and 11 are located over a half a mile from the Project Site and will in no way alter the setting or views of the Project Site or any of the adjacent historical resources. While the structure associated with Related Project 1 is likely a historical resource, it is a church and is in no way a similar type or style of historic resource as the SLRC.

Related projects 2 and 4 include the development of multi-family residential buildings, up to a height of 5-stories. While there is a possibility for views of these projects from the SLRC, they would not alter the setting of the resource or any of the adjacent resources. Modern infill and multi-family residential are already present within the immediate setting of the SLRC as well as the setting of nearly all the adjacent resources. While the majority of the structures in the

immediate vicinity of the SLRC are single-family residential, and the majority of the adjacent resources are also single-family residential, the addition of a three-story or five-story apartments building to the viewscape of any of these resources is not unusual. Modern infill and multi-family residential already exist within their immediate setting and neither contributes to nor detracts from their historic setting. The addition of this modern infill and multi-family residential structures will not alter the neighborhood surrounding the SLRC, or the residential neighborhood of the adjacent resources.

Related project 3 also would not alter the setting or character of the SLRC or any of the adjacent resource. The structures that presently exist on the site will simply be converted in use, and there will be very little actual alterations to the buildings and their current appearance. Additionally, there is a childcare center located on the Project Site, so there will no introduction of a new use to the setting of the SLRC or to the setting of any of the adjacent resources.

Additionally, while there is potential for these related projects to be under construction at the same time as the Project, all of them are located at least .15 miles from the Project Site and there is no potential for damage to this historical resource due to construction-related vibration and settlement.

Related Projects 12 and 13 are City infrastructure projects that are currently in progress. While they are located within (12) or immediately adjacent (13) to the Project Site, both related projects are expected to be completed before the commencement of construction of the Project and, therefore, would not contribute to cumulative noise or vibration impacts.

For these reasons, the Project, considered together with the related projects, would not contribute considerably to a cumulatively significant impact on historical resources.

Conclusion

The Project would involve the construction of four new structures, the reconfiguration of paths, the planting of trees and foliage, the addition of habitat islands, and other changes to the Silver Lake Reservoir Complex. These changes would not substantially affect the SLRC's character-defining features or its eligibility as a historic resource. Therefore, the Project is considered to have a less than significant impact to historical resources pursuant to CEQA, because the SLRC will continue to be eligible as a historical resource and continue to be a listed LAHCM after the implementation of the Project. Furthermore, while the Project may have minor indirect visual impacts to the setting and view shed of the VDL Research House that are less than significant, the overall integrity of all historical resources in the Project vicinity would not be affected, and cumulative impacts would not be cumulatively considerable. **Therefore, the Project would have a less than significant impact on historical resources under CEQA.**

ESA

TABLE 3

All Previously Recorded Cultural Resources, SCCIC, BERD, and HistoricPlaces LA Within 0.25-mile of the Project Site

Resource number	P Number	Name/Address	Resource Description	Status Code	Construction Year(s)	Approximate Distance from Project Site	View	Data Source
1	N/A	Nin-Pole Residence 2335 N Hidalgo Avenue	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of International style residential architecture. The property was the first commission of architect Eric Lloyd Wright (born 1929) and built for Wright's brother Rupert Pole (1919-2006). Wright is the grandson of the famed architect Frank Lloyd Wright (1867-1959) and son of master architect Lloyd Wright (1890-1978). The HCM nomination lists the property's architectural style as International; however it appears to more closely exemplify Mid-Century Modern architecture, exhibiting many of the style's character-defining features.	5S1; resource is designated LAHCM #896	1960	1,113 feet E	None	SURVEYLA
2	P-19-187000	Neutra Office Building 2379 N Glendale Boulevard	The property meets the criteria for HCM designation because it is identified with "historic personages, as the office of renowned Modernist architect Richard Neutra. It served as the office and studio for Neutra's firm, Neutra & Alexander, between 1950 and 1960.	5S1; 1S; designated LAHCM #676	1950	380 feet E	None	SURVEYLA; SCCIC; BERD
3	P-19-188871	Richard and Dion Neutra VDL Research House and Landscape 2300 N Silver Lake Boulevard	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of International architecture. It is also associated with the "notable work of a master builder, designer, or architect," as a seminal work by master architect Richard Neutra. The original house, financed by Dutch philanthropist C.H. Van der Leeuw, was built in 1933 but destroyed by fire in 1963. Rebuilt in 1964, the extant house incorporates some new design elements but preserves the footprint of the original. It reflects the evolution of Neutra's career and the birtSurveyLAce of his iconic style. The property meets Criterion C for National Register designation for similar reasons.	5S1; 1S; designated LAHCM #640	1964	85 feet E	Direct	SURVEYLA; SCCIC
4	N/A	O'Neill Duplex No. 1 2342 W Cove Avenue	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of Mid-Century Modern architecture. It is also associated with the "notable work of a master builder, designer, or architect," as a work by master architect Rodney A. Walker, who was responsible for the design of several Case Study Houses. The HCM designation report lists the property's architectural style as International; however the property appears to more closely exemplify Mid-Century Modern architecture, exhibiting many of the style's character-defining features.	5S1; designated LAHCM #868	1953	380 feet E	Direct	SURVEYLA
5	N/A	Droste House 2025 N Kenilworth Avenue	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of International style residential	5S1; designated LAHCM #837	1940	431 feet W	None	SURVEYLA

			architecture. It is also associated with the "notable work of a master builder, designer, or architect," as a work by master architect Rudolph M. Schindler (1887-1953). Schindler was one of the early modern masters who helped shape the twentieth-century residential landscape in Los Angeles.					
6	N/A	Lipetz House 1843 N Dillion Street	None provided; Residence designed by Raphael Soriano; his first residential commission.	5S1; Designated LAHCM #967	1936	1,094 feet SW	None	SURVEYLA
7	N/A	Wilson House 2090 N Redcliff Street	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of International architecture. It is also associated with the "notable work of a master builder, designer, or architect," as a work by master architect R.M. Schindler.	5S1; Designated LAHCM #965	1938	950 feet W	None	SURVEYLA
8	N/A	Edward A. "Tink" Adams House 2331 W Cove Avenue	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of Mid-Century Modern architecture. Design construction was carried out in phases by architects A. Albert Cooling and James De Long over the span of more than 15 years. The HCM designation report lists the property's architectural style as International; however, it appears to more closely exemplify Mid-Century Modern architecture, exhibiting many of the style's character-defining features. The property's original owner, E.A. Adams, founded the nationally prestigious Art Center College of Design in 1931.	5S1; designated LAHCM #922	1966	550 feet E	Direct	SURVEYLA
9	N/A	Engine Company No. 56 2838 W Rowena Avenue	he property meets the criteria for HCM designation because it embodies the distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of Spanish Colonial Revival architecture with Neoclassical influences.	5S1; Designated LAHCM #337	1924	1,214 feet N	None	SURVEYLA
10	P19-167080	Tierman House 2323 Micheltorena Street	Modern residence designed by Gregory Ain.	5S1; Designated LAHCM #124	1938	822 feet W	None	SURVEYLA; BERD

Appendix B

Table 4. Previously Recorded Cultural Resources with Views of the SLRC within 0.25-Mile of the Project Site, Evaluated for Direct and Indirect Impacts

ESA

TABLE 4

PREVIOUSLY RECORDED CULTURAL RESOURCES WITH VIEWS OF THE SLRC SCCIC, BERD, AND SURVEYLA WITHIN 0.25-MILE OF THE PROJECT SITE, EVALUATED FOR DIRECT AND INDIRECT IMPACTS

Resource number	P Number	Name/Address	Resource Description	Status Code	Construction Year(s)	Approximate Distance from Project Site	View	Data Source	Impact Type
1	P-19-188871	Richard and Dion Neutra VDL Research House and Landscape 2300 N Silver Lake Boulevard	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of International architecture. It is also associated with the "notable work of a master builder, designer, or architect," as a seminal work by master architect Richard Neutra. The original house, financed by Dutch philanthropist C.H. Van der Leeuw, was built in 1933 but destroyed by fire in 1963. Rebuilt in 1964, the extant house incorporates some new design elements but preserves the footprint of the original. It reflects the evolution of Neutra's career and the birtSurveyLAce of his iconic style. The property meets Criterion C for National Register designation for similar reasons.	5S1; 1S; designated LAHCM #640	1964	85 feet E	Direct	SURVEYLA; SCCIC	Adverse
2	N/A	O'Neill Duplex No. 1 2342 W Cove Avenue	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of Mid-Century Modern architecture. It is also associated with the "notable work of a master builder, designer, or architect," as a work by master architect Rodney A. Walker, who was responsible for the design of several Case Study Houses. The HCM designation report lists the property's architectural style as International; however the property appears to more closely exemplify Mid-Century Modern architecture, exhibiting many of the style's character-defining features.	5S1; designated LAHCM #868	1953	380 feet E	Direct	SURVEYLA	No adverse impact (EN)
3	N/A	Edward A. "Tink" Adams House 2331 W Cove Avenue	The property meets the criteria for HCM designation because it embodies the "distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction," as an example of Mid-Century Modern architecture. Design construction was carried out in phases by architects A. Albert Cooling and James De Long over the span of more than 15 years. The HCM designation report lists the property's architectural style as International; however, it appears to more closely exemplify Mid-Century Modern architecture, exhibiting many of the style's character-defining features. The property's original owner, E.A. Adams, founded the nationally prestigious Art Center College of Design in 1931.	5S1; designated LAHCM #922	1966	550 feet E	Direct	SURVEYLA	No adverse impact (EN)
4	N/A	Harry Hay Residence 2334 W Cove Avenue	Research indicates this residence was the home of Harry Hay, co-founder of the Mattachine Society, a gay rights advocacy group. However, it could not be evaluated for lack of visibility from the public right-of-way.	More research needed	1905	590 feet E	Direct	SURVEYLA	No adverse impact (EN)
5	N/A	2348 W Cove Avenue	This Mid-Century Modern residence was designed by Rodney Walker. However, it could not be evaluated due to limited visibility from the public right-of-way.	More research needed	1953	350 feet E	Direct	SURVEYLA	No adverse impact (EN)

6	N/A	Villa Capistrano 2328 W Baxter Street	This was the home of stage and screen actor Julian Eltinge. However, it could not be evaluated for lack of visibility from the public right-of-way. Eltinge achieved fame as a female impersonator.	More research needed	1918	573 feet E	Direct	SURVEYLA	No adverse impact (EN)
7	N/A	2348 W Fargo Street	Excellent example of Spanish Colonial Revival architecture exhibiting high quality of design.	3CS; 5S3; 3S	1929	424 feet E	Indirect	SURVEYLA	No adverse impact
8	N/A	2333 W Duane Street	Research indicates this residence was designed by Rodney Walker. However, it could not be evaluated for lack of visibility from the public right-of-way.	More research needed	1962	402 feet SE	Direct	SURVEYLA	No adverse impact (SV-E)
9	N/A	2352 W Duane Street	Excellent example of a dingbat apartment building featuring the distinguishing characteristics of the property type and designed by Eugene Choy.	3CS; 5S3; 3S	1957	220 feet SE	Indirect	SURVEYLA	No adverse impact (SV-E)
10	N/A	2356 W Duane Street	Excellent example of a dingbat apartment building featuring the distinguishing characteristics of the property type and designed by Eugene Choy.	3CS; 5S3; 3S	1957	180 feet SE	Indirect	SURVEYLA	No adverse impact (SV-E)
11	N/A	1864 N Easterly Terrace	Excellent, intact example of a Tudor Revival apartment building. Conveys high quality of design and craftsmanship.	3CS; 5S3; 3S	1938	130 feet S	Direct	SURVEYLA	No adverse impact (SV)
12	N/A	2083 N Kenilworth Avenue	Excellent example of a Mid-Century Modern residence. Exhibits high quality of design.	3CS; 5S3; 3S	1962	848 feet W	Indirect	SURVEYLA	No adverse impact (K)
13	N/A	2514 N Armstrong Avenue	Excellent example of a Mid-Century Modern residence. Exhibits high quality of design.	3CS; 5S3; 3S	1962	400 feet E	Indirect	SURVEYLA	No adverse impact (K)
14	N/A	2522 N Armstrong Avenue	Excellent example of a Mid-Century Modern residence with post and beam construction. Exhibits high quality of design.	3CS; 5S3; 3S	1963	400 feet E	Indirect	SURVEYLA	No adverse impact (K)
15	N/A	2526 N Armstrong Avenue	Excellent example of a Mid-Century Modern residence. Exhibits high quality of design. However, it is ineligible for listing on the National Register because it is less than 50 years of age and not of exceptional importance.	5S3; 3CS	1968	400 feet E	Indirect	SURVEYLA	No adverse impact (K)
16	N/A	Hansen Residence 2305 West Silver Lake Drive	Excellent example of a Mid-Century Modern residence designed by Harwell Hamilton Harris. Exhibits high quality of design. Silver Lake Residential Historic District - Contributor	3S; 3CS; 5S3	1951	150 feet W	Direct	SURVEYLA	No adverse impact (EG)
17	N/A	Yew Residence 2226 N Silver Lake Boulevard	Excellent example of a Mid-Century Modern residence by master architect Richard Neutra. Neutra Colony Residential Historic District - Contributor	3CS; 5S3; 3S	1956	167 feet E	Direct	SURVEYLA	No adverse impact (EN)
18	N/A	Kambara Residence 2232 N Silver Lake Boulevard	Excellent example of a Mid-Century Modern residence by master architect Richard Neutra. Neutra Colony Residential Historic District - Contributor	3CS; 5S3; 3S	1960	140 feet E	Direct	SURVEYLA	No adverse impact (EN)
19	N/A	Inadomi Residence 2238 N Silver Lake Boulevard	Excellent example of a Mid-Century Modern residence by noted architects Richard Neutra and Dion Neutra. Neutra Colony Residential Historic District - Contributor	3CS; 5S3; 3S	1960	160 feet E	Direct	SURVEYLA	No adverse impact (EN)
20	N/A	Sokol Residence 2242 N Silver Lake Boulevard	Excellent example of a Mid-Century Modern residence by master architect Richard Neutra. Due to window replacement, may not retain sufficient integrity for National Register eligibility. Neutra Colony Residential Historic District - Contributor	3CS; 5S3	1948	156 feet E	Direct	SURVEYLA	No adverse impact (EN & M)
21	N/A	Treweek Residence 2258 N Silver Lake Boulevard	Excellent example of a Mid-Century Modern residence by master architect Richard Neutra. Due to window replacement, may not retain sufficient integrity for National Register eligibility.	3CS; 5S3	1948	70 feet E	Direct	SURVEYLA	No adverse impact (EN & M)

4 North Ivanhoe Dam

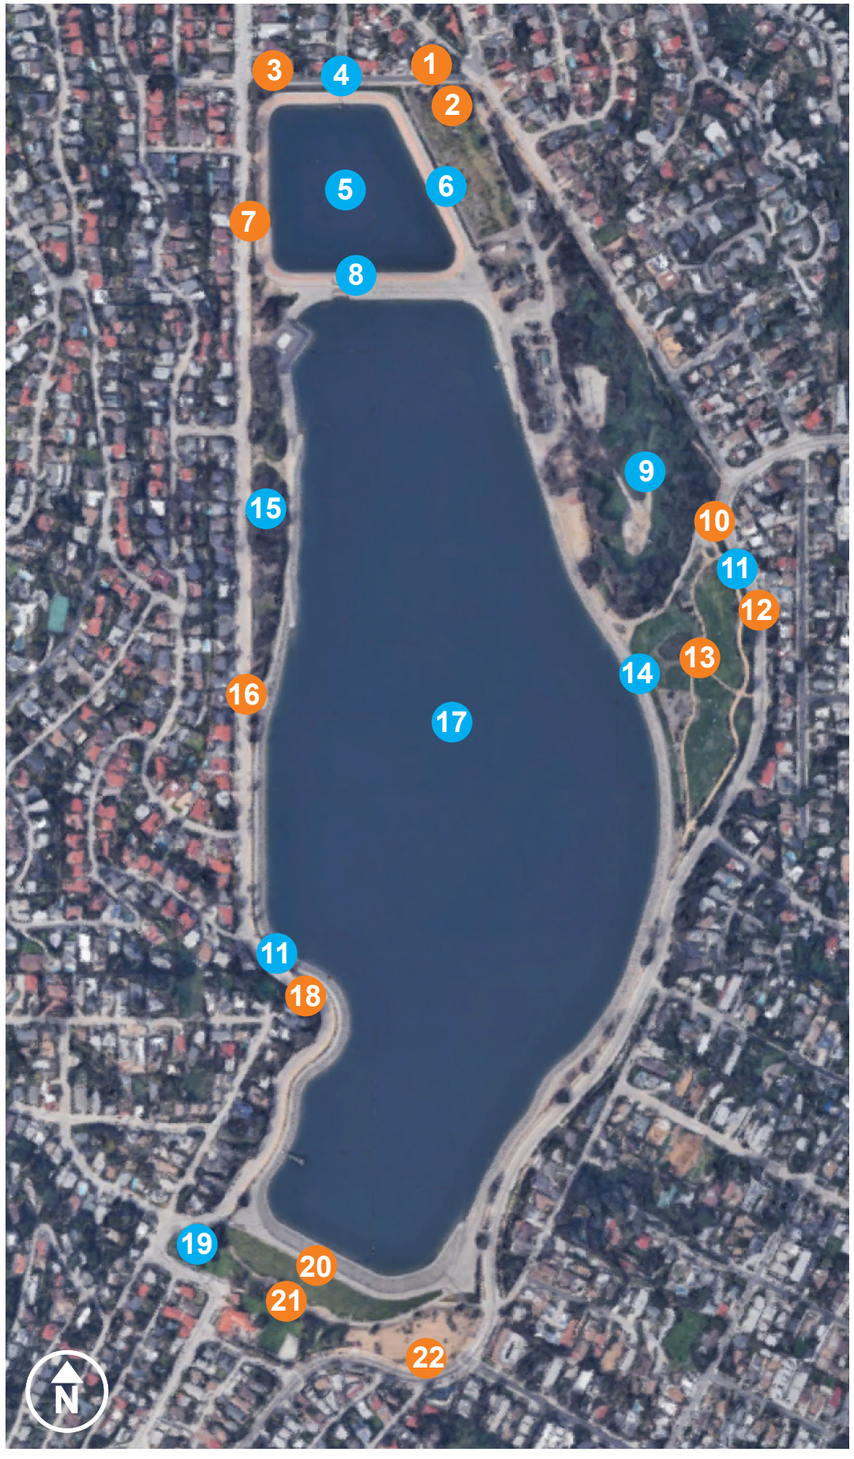
Character-Defining Features
- Primary
- Secondary
- Not

A
Feature: Shape
Reason: Dates from the period of significance, highly visible, and retains integrity



B
Feature: Height
Reason: Dates from the period of significance, highly visible, and retains integrity

C
Feature: Earthfill
Reason: Dates from the period of significance and retains integrity, but not highly visible

D
Feature: Landscaping
Reason: Post dates period of significance

E
Feature: Drainage Ditch
Reason: Post dates period of significance

Silver Lake and Ivanhoe Reservoir Complex Historic District

5 Ivanhoe Reservoir

Chronology: Constructed 1906; altered c. 1930, 1951-53, 1993-94

6 Ivanhoe Reservoir Perimeter Path

Chronology: Constructed c. 1950

7 Ivanhoe Path, Landscaping, & Fencing

Chronology: Constructed 2018

8 South Ivanhoe Dam

Chronology: Constructed 1907; altered 1920, 1951-53, 2011-17

Legend

5 Ivanhoe Reservoir

Character-Defining Features

- Primary
- Secondary
- Not

A

Feature: Reservoir Shape

Reason: Dates from the period of significance, highly visible, and retains integrity

B

Feature: Reservoir Depth

Reason: Dates from the period of significance and retains integrity, but not highly visible

C

Feature: Embankment Configuration

Reason: Dates from the period of significance, highly visible, and retains integrity

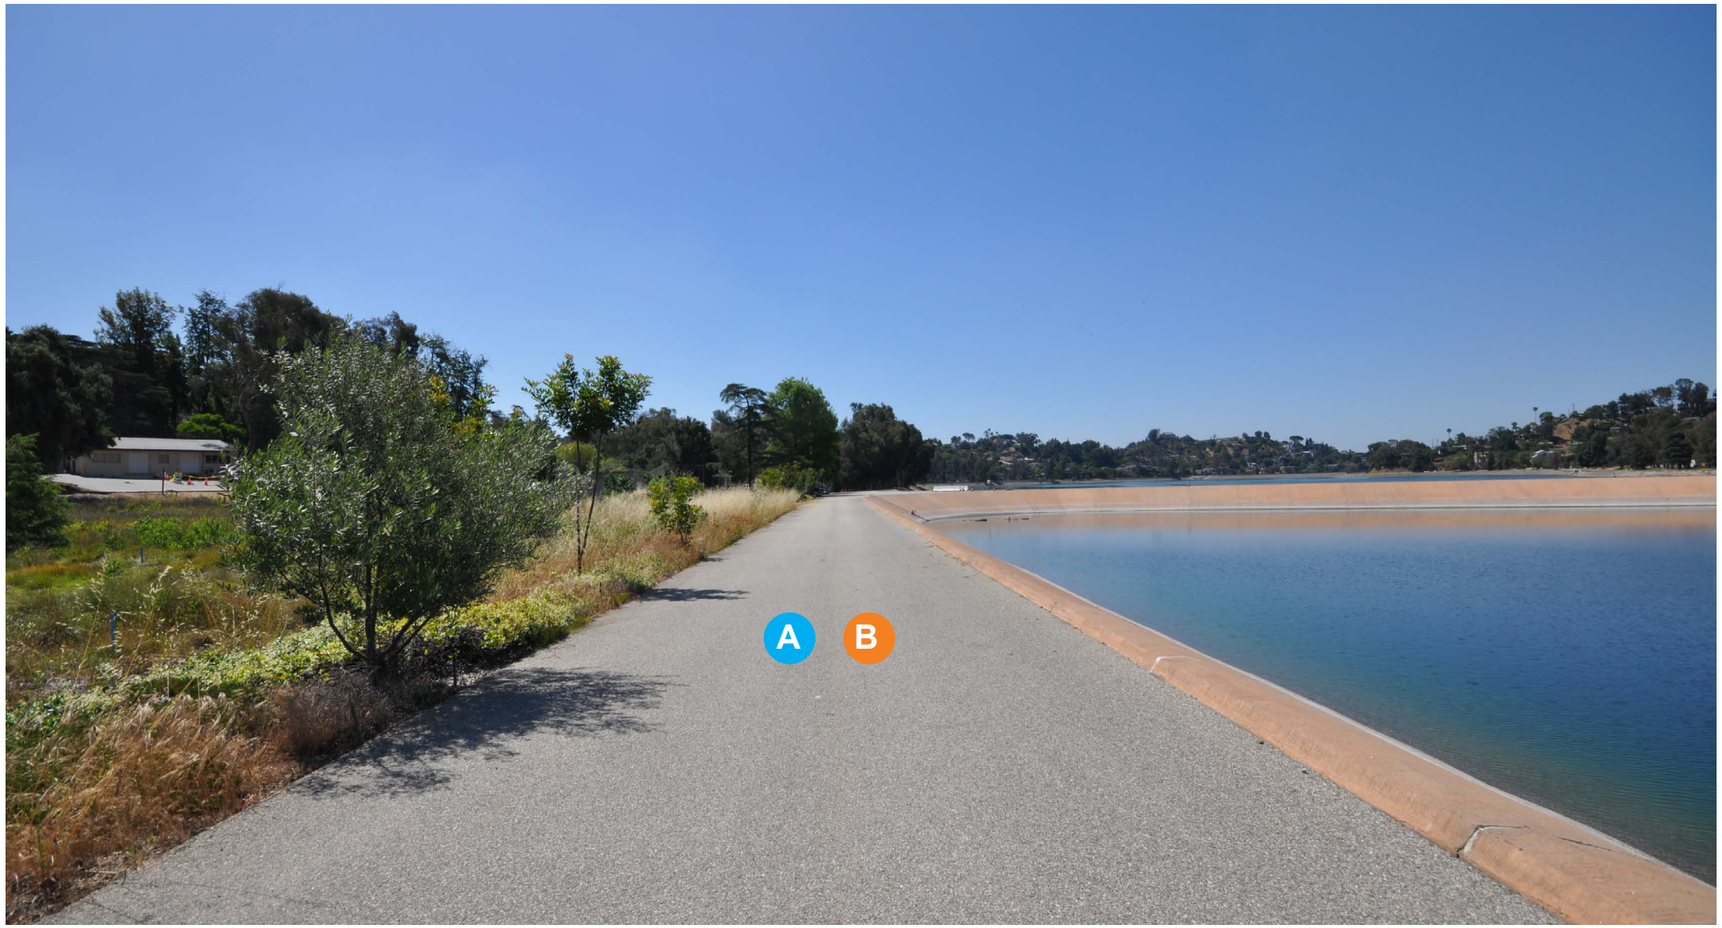
D

Feature: Embankment Paving

Reason: Post dates period of significance

E

Feature: Curb



Reason: Post dates period of significance

F

Feature: Water Level

Reason: Dates from the period of significance, highly visible, and retains integrity

6 Ivanhoe Reservoir Perimeter Path

Character-Defining Features

- Primary
- Secondary
- Not

A

Feature: Path Plan

Reason: Dates from the period of significance, highly visible, and retains integrity

B

Feature: Asphalt Paving

Reason: Post dates period of significance

8 South Ivanhoe Dam

Character-Defining Features

- Primary
- Secondary
- Not

A

Feature: Shape
Reason: Dates from the period of significance, highly visible, and retains integrity

B

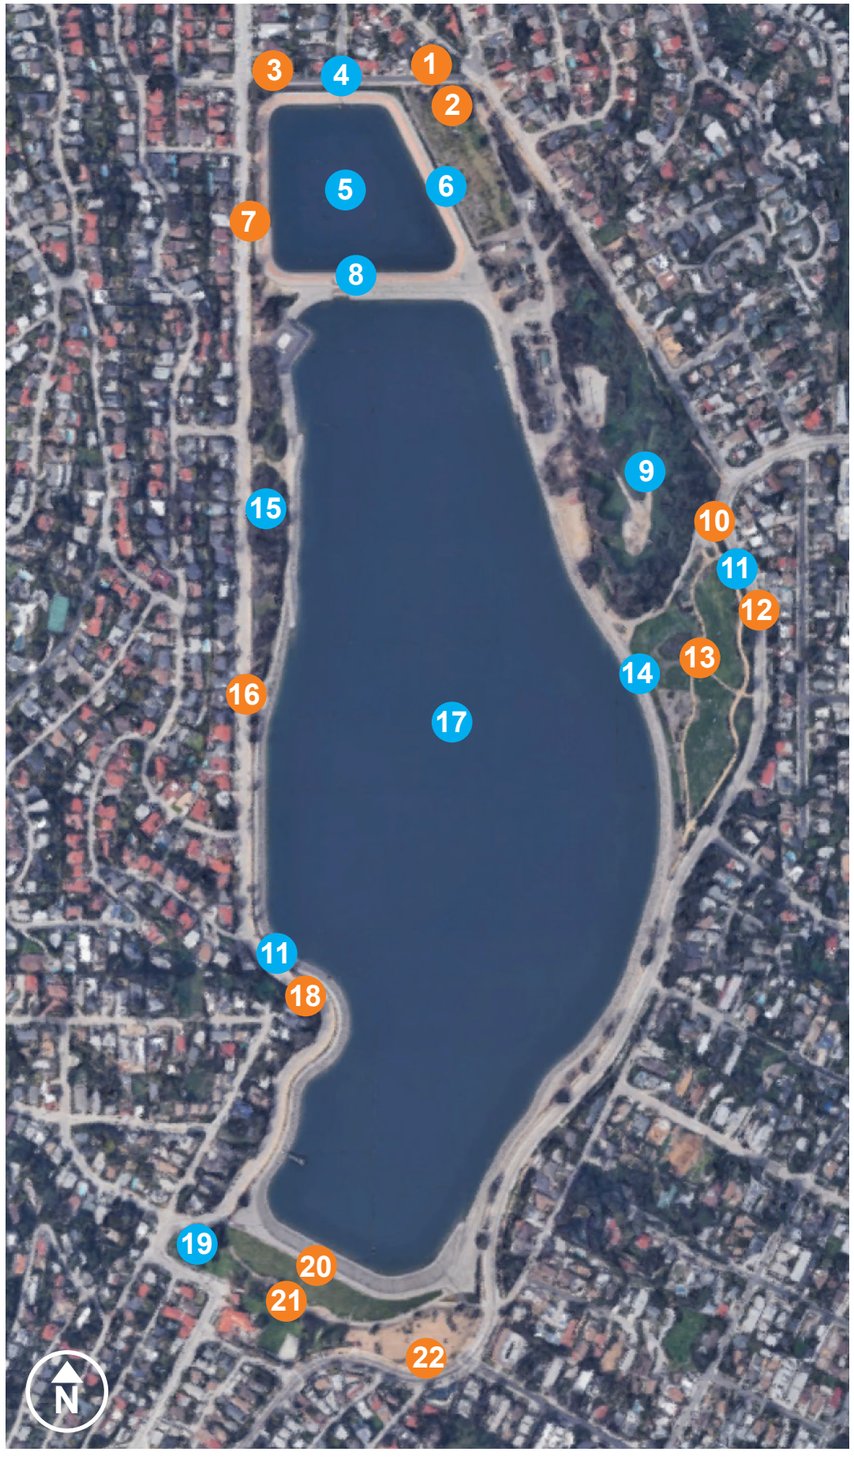
Feature: Height
Reason: Dates from the period of significance, highly visible, and retains integrity

C

Feature: Drain
Reason: Likely dates from the period of significance and retains integrity, but purely functional

D

Feature: Platform & Ladder
Reason: Likely post dates the period of significance



E

Feature: Pipe Railing
Reason: Likely post dates the period of significance

F

Feature: Spillway
Reason: Dates from the period of significance, highly visible, and retains integrity

Silver Lake and Ivanhoe Reservoir Complex Historic District

9 The Knoll
Chronology: Natural feature; altered c. 1971 and c. 2010

11 Concrete Perimeter Wall
Chronology: Constructed c. 1930

10 Silver Lake Blvd Secondary Entrance
Chronology: c.1975-76; substantially altered 2018

12 East Pedestrian Path, Landscaping, & Fencing
Chronology: Constructed 2008

Legend

- Non-Contributing

9 The Knoll

Character-Defining Features

- Primary
- Secondary
- Not

A

Feature: Mature Trees

Reason: Dates from the period of significance, highly visible, and retains integrity

B

Feature: Slope

Reason: Dates from the period of significance, highly visible, and retains integrity

C

Feature: Gravel Paths

Reason: Post dates period of significance

D

Feature: Grasses & Small Plants

Reason: Post dates period of significance

E

Feature: Wood Retaining Wall

Reason: Post dates period of significance

9 The Knoll

Character-Defining Features

- Primary
- Secondary
- Not

F

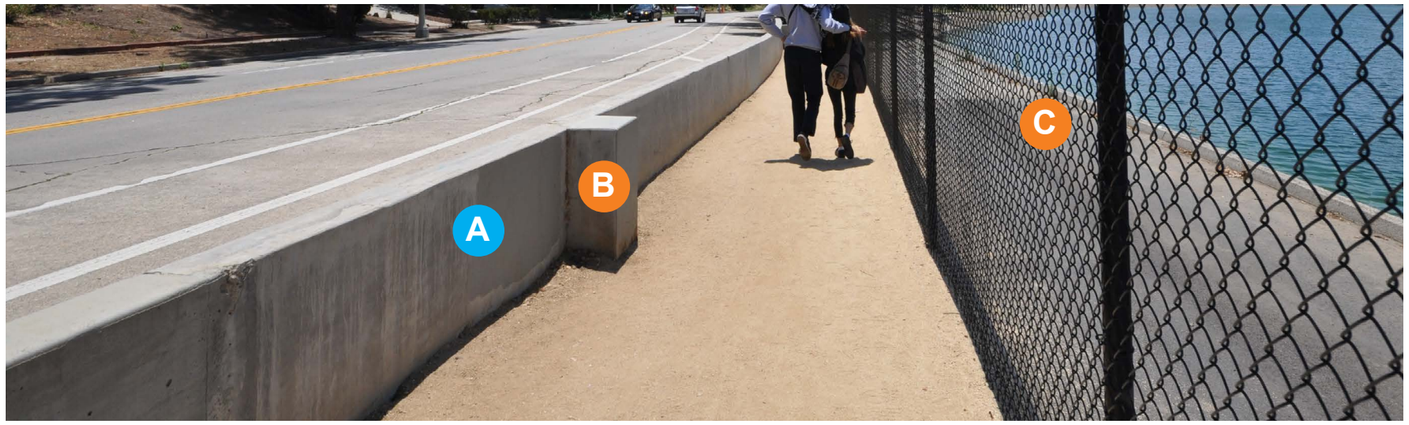
Feature: Street Lights
Reason: Post dates period of significance

G

Feature: Fence
Reason: Post dates period of significance

H

Feature: Pedestrian Path
Reason: Post dates period of significance



I

Feature: Concrete Paving
Reason: Post dates period of significance

11 Concrete Perimeter Wall

Character-Defining Features

- Primary
- Secondary
- Not

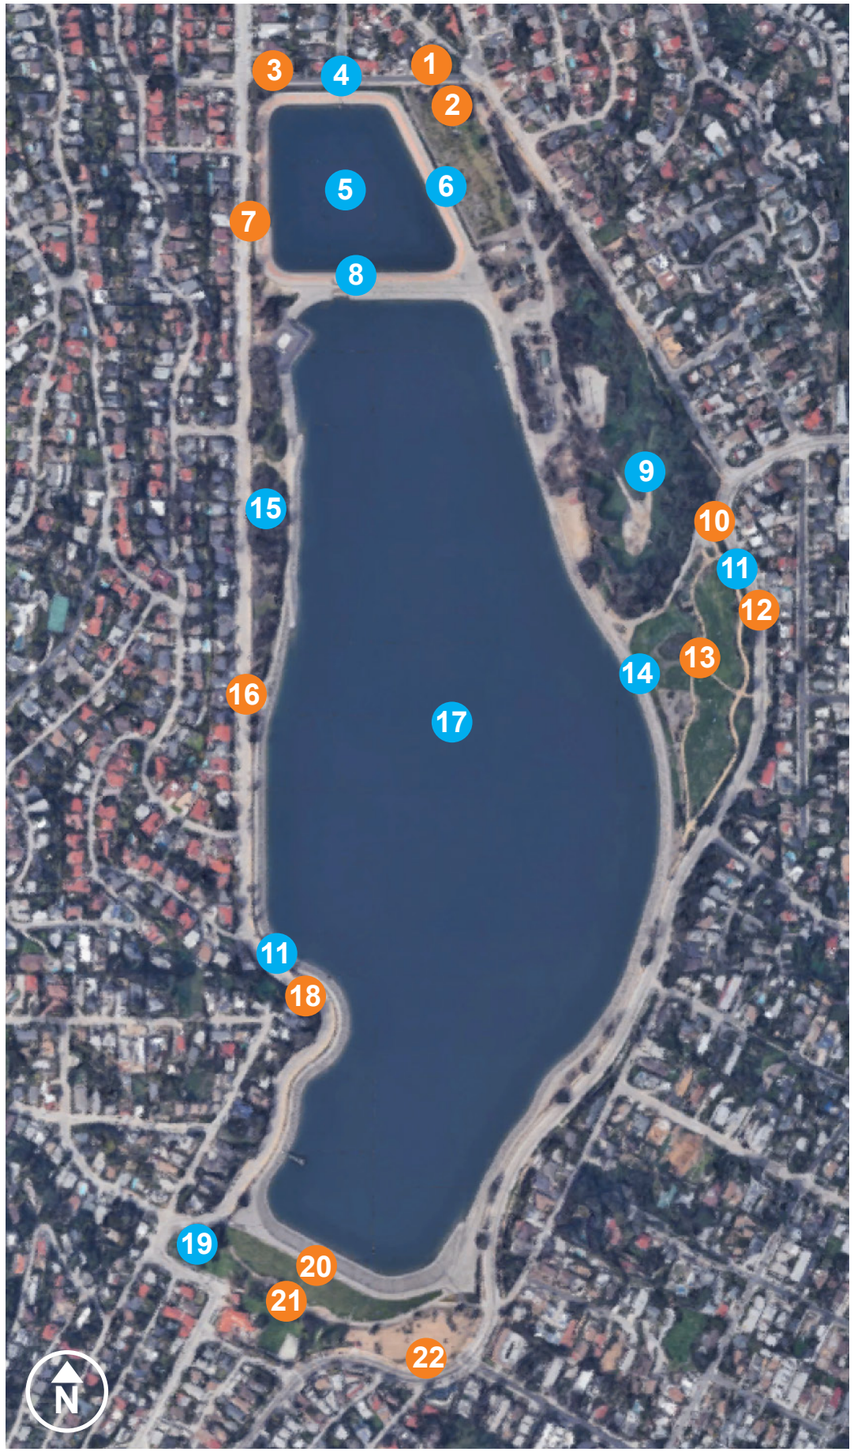
A

Feature: Configuration

Reason: Dates from the period of significance, highly visible, and retains integrity

B

Feature: Posts



Reason: Post dates period of significance

C

Feature: Fence

Reason: Post dates period of significance

Silver Lake and Ivanhoe Reservoir Complex Historic District

13 Silver Lake Meadow
Chronology: East Cove infilled 1953; park constructed 2011

15 West Landscaped Area
Chronology: Constructed c. 1920; altered 1951-53

14 Silver Lake Reservoir Perimeter Path
Chronology: Constructed c.1950

16 Silver Lake Dr. Secondary Entrance
Chronology: Constructed c.1970

14 Silver Lake Reservoir Perimeter Path

Character-Defining Features

- Primary
- Secondary
- Not

A

Feature: Path Plan

Reason: Dates from the period of significance, highly visible, and retains integrity

B

Feature: Asphalt Paving

Reason: Post dates period of significance

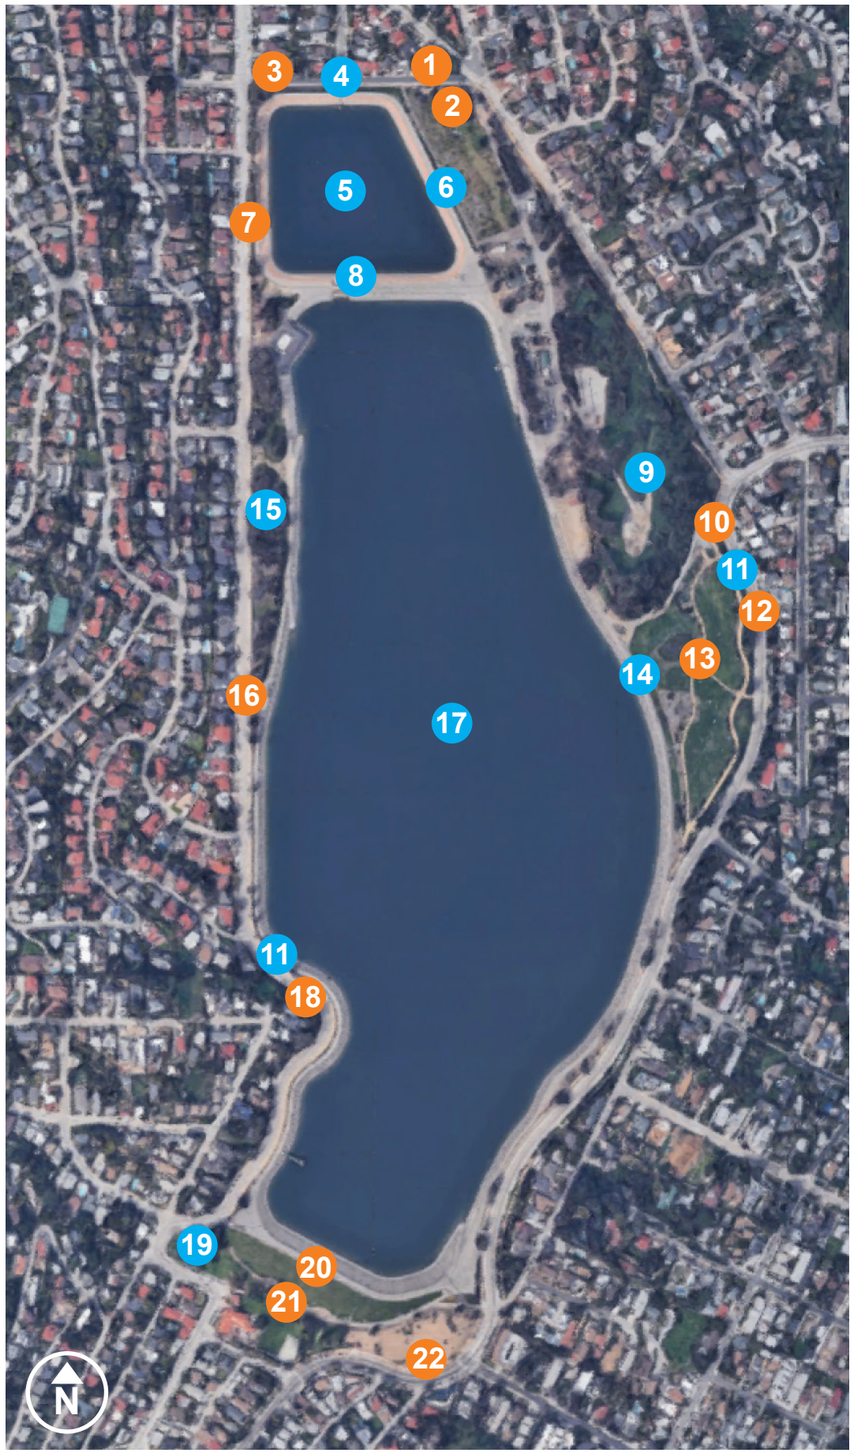
15 West Landscaped Area

Character-Defining Features

- Primary
- Secondary
- Not

A

Feature: Mature Trees



Reason: Dates from the period of significance, highly visible, and retains integrity

B

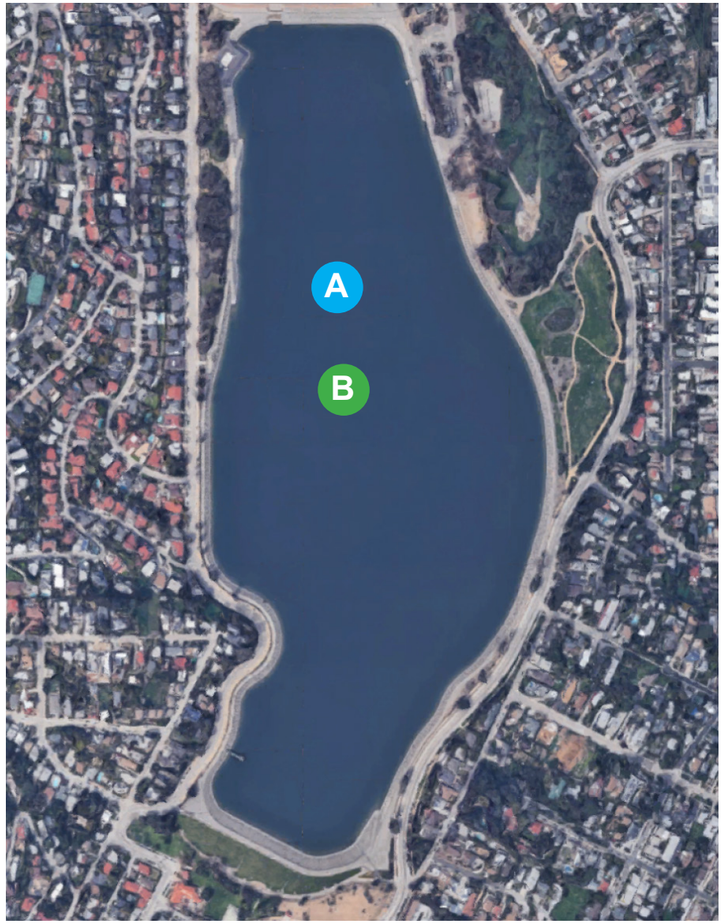
Feature: Grasses & Small Plants

Reason: Post dates period of significance

Silver Lake and Ivanhoe Reservoir Complex Historic District

17 Silver Lake Reservoir
Chronology: Constructed 1907; altered c.1920, 1951-53, 2011-17

18 West Pedestrian Path, Landscaping, Fencing
Chronology: Constructed 2005



19 Grassy Patch
Chronology: Constructed c.1920

20 Silver Lake Dam
Chronology: Constructed 1907; reconstructed 1975-76

17 Silver Lake Reservoir

Character-Defining Features

- Primary
- Secondary
- Not

A

Feature: Reservoir Shape

Reason: Dates from the period of significance, highly visible, and retains integrity

B

Feature: Reservoir Depth

Reason: Dates from the period of significance and retains integrity, but not highly visible

C

Feature: Embankment Configuration

Reason: Dates from the period of significance, highly visible, and retains integrity

D

Feature: Embankment Paving

Reason: Dates from the period of significance, highly visible, and retains integrity

E

Feature: Curb

Reason: Post dates period of significance

F

Feature: Water Level

Reason: Dates from the period of significance, highly visible, and retains integrity

17 Silver Lake Reservoir

Character-Defining Features

- Primary
- Secondary
- Not

G

Feature: Lowerator
Reason: Dates from the period of significance, highly visible, and retains integrity

H

Feature: Bypass Line
Reason: Post dates period of significance

I

Feature: Reservoir Equipment
Reason: Dates from the period of significance and retains integrity, but purely functional

J

Feature: Street Lights
Reason: Post dates period of significance

K

Feature: Reservoir Equipment
Reason: Dates from the period of significance and retains integrity, but purely functional

L

Feature: Boat Launches
Reason: Dates from the period of significance, highly visible, and retains integrity

19 Grassy Patch

Character-Defining Features

- Primary
- Secondary
- Not

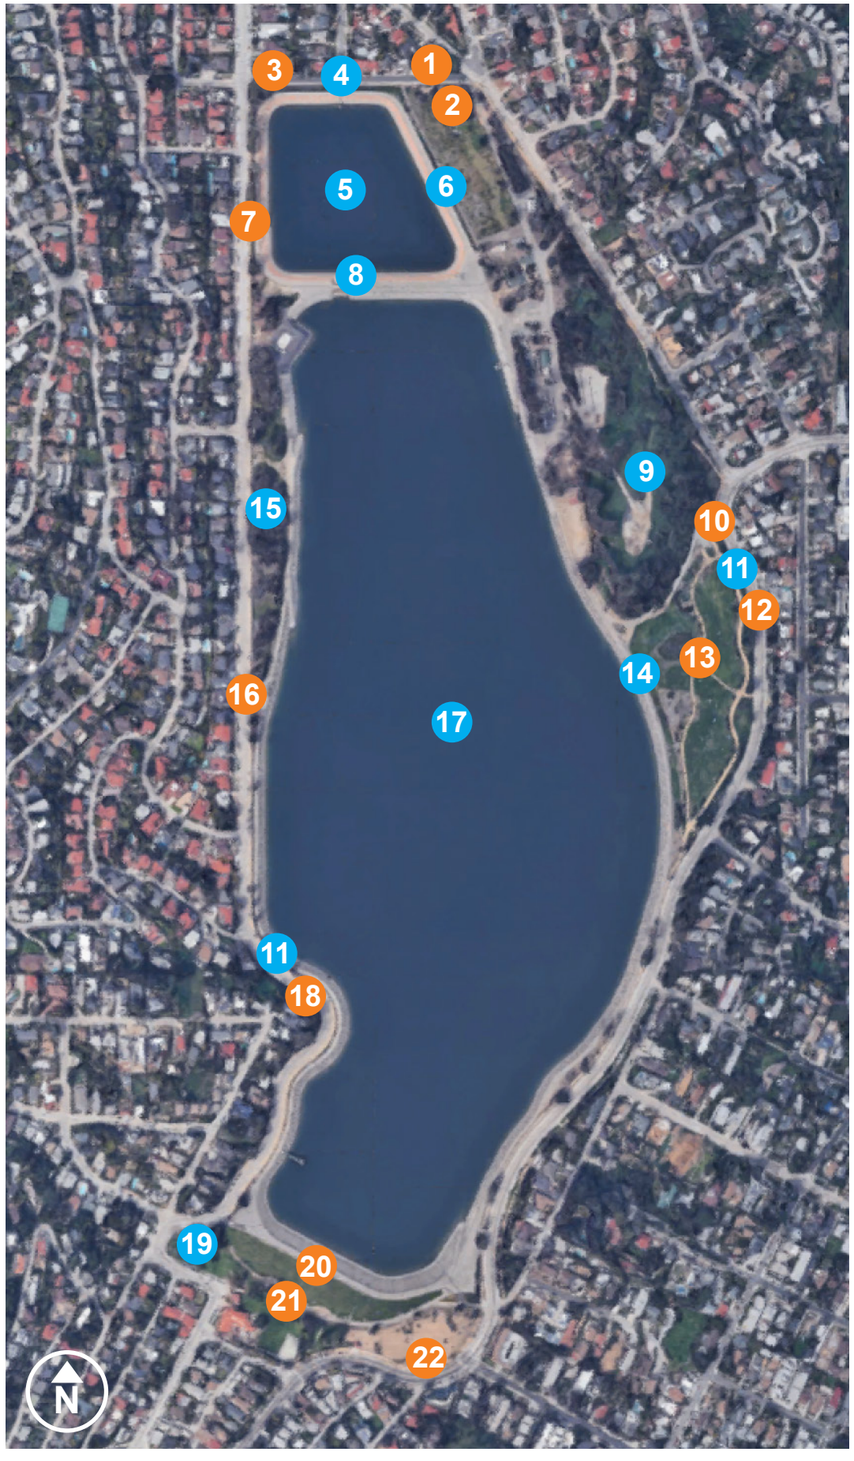
A

Feature: Non-Mature Trees

Reason: Post dates period of significance

B

Feature: Picnic Table (Not Pictured)



Reason: Post dates period of significance

C

Feature: Mature Trees

Reason: Dates from the period of significance, highly visible, and retains integrity

SILVER LAKE RESERVOIR COMPLEX
MASTER PLAN

TASK II: RESEARCH & ANALYSIS HISTORICAL RESOURCES REPORT

Written by: GPA Consulting

SILVER LAKE RESERVOIR COMPLEX
MASTER PLAN PROJECT

September 13, 2019

EXECUTIVE SUMMARY

The Silver Lake and Ivanhoe Reservoir Complex is located in the Silver Lake–Echo Park–Elysian Valley Community Plan Area of the City of Los Angeles. The irregularly-shaped complex is approximately 127 acres in size and roughly bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, W. Silver Lake Drive, Van Pelt Place, and Silver Lake Boulevard on the south, and W. Silver Lake Drive on the west. It is owned and operated by the City of Los Angeles and the Los Angeles Department of Water and Power (LADWP). The complex was originally constructed in 1906–1907 and is composed of the Silver Lake and Ivanhoe Reservoirs and Dams, several ancillary buildings and structures related to LAWP's maintenance and operation, as well as landscape features such as stone and concrete retaining walls, trees, shrubs, and other vegetation.

The Silver Lake and Ivanhoe Reservoir Complex is a designated Los Angeles Historic-Cultural Monument (HCM No. 422). Therefore, it is a historical resource as defined by the California Environmental Quality Act (CEQA). It was also previously evaluated by Greenwood & Associates in 2004 as part of the *Silver Lake Reservoir Complex Storage Replacement Project Environmental Impact Report*. The complex was evaluated as eligible for listing as a historic district in the California Register of Historical Resources (California Register). The Status Codes for the Silver Lake and Ivanhoe Reservoir Complex is 5S1, an individual property that is listed or designated locally, and 3CB, appears eligible for listing in the California Register through survey evaluation.

A Master Plan was completed in 2000 to provide possible mitigation measures for proposed water quality improvement projects and guide long-range planning goals for the Silver Lake community and for LADWP. The site was later decommissioned and removed from the city domestic water distribution system in 2011–2017. A new Master Plan is therefore being drafted to guide future improvements now that the site is no longer used for the storage and treatment of drinking water. The Silver Lake Reservoir Complex Master Plan (SLRCMP) proposes to repurpose approximately 116 acres of the site as a community gathering space, while also balancing LADWP's continual maintenance and operational needs on the remaining 11 acres. LADWP's active uses are located at the northeast portion of the site, North Ivanhoe Dam, Ivanhoe Inlet Tower, as well as the Silver Lake Reservoir bypass line, dam, outlet tower, and boat launches.

As a designated HCM, the Silver Lake and Ivanhoe Reservoir Complex is subject to the Los Angeles Cultural Heritage Ordinance. The Ordinance stipulates that the Cultural Heritage Commission (CHC) and Office of Historic Resources (OHR) are responsible for reviewing alterations to historical resources listed under national, state, and local landmark programs. Alterations are reviewed by the CHC and OHR for compliance with the *Secretary of Interior's Standards for the Treatment of Historic Properties* (Standards). [1] GPA Consulting (GPA) was retained to prepare this report to help guide the reuse of the Silver Lake and Ivanhoe Reservoir Complex in compliance with the Standards. It includes a summary description of the site, its historical status, as well as an illustrated inventory of landscape characteristics and character-defining features. Challenges and opportunities of the SLRCMP are also identified as well as potential funding sources.

[1] Los Angeles Administrative Code, §22.171.14, of Article 1, Chapter 9, Division 22.

1 METHODOLOGY

To identify the character-defining features of the Silver Lake and Ivanhoe Reservoir Complex and make recommendations for treatment, GPA performed the following tasks:

1. Reviewed existing information and conducted additional research into the history of the complex and the buildings and structures thereon. A variety of resources were consulted, including:

    - City of Los Angeles Office of Historic Resources HCM file
    - City of Los Angeles Department of Building and Safety building permit records
    - Los Angeles Department of Water and Power records
    - Previous environmental assessment reports
    - 2000 Silver Lake Master Plan
    - Historic maps
    - Historic photographs
    - Historic aerial photographs
    - Newspaper articles

    The building permit record for the Silver Lake and Ivanhoe Reservoir Complex is incomplete, and many of the alterations made to the site over time are largely undocumented in materials and resources available to the project team. As a result, it was at times difficult to determine exactly when a building or structure on the site was constructed or when an existing building or structure was altered. When possible, historic aerial photographs were used in order to determine an approximate date of construction or alteration. For select features, the project team exercised professional judgement in order to make a determination as to whether a feature was character defining.

2. Conducted an intensive field inspection of the site on May 24, 2019 to identify character-defining features. Digital photographs were taken during this field inspection.

3. Consulted relevant references and source materials regarding the Standards, including the *Secretary of the Interior's Guidelines for Preserving, Rehabilitating, Restoring & Reconstructing Historic Buildings, Secretary of the Interior's Guidelines for the Treatment of Cultural Landscapes,* and various National Park Service Technical Briefs, among others.

Teresa Grimes and Emily Rinaldi were responsible for the preparation of this report. They fulfill the qualifications for historic preservation professionals outlined in Title 36 of the Code of Federal Regulations, Part 61.

2 SUMMARY DESCRIPTION & HISTORY

The Silver Lake and Ivanhoe Reservoir Complex is located in the Silver Lake–Echo Park–Elysian Valley Community Plan Area of the City of Los Angeles. The irregularly-shaped site is approximately 127 acres in size and roughly bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, W. Silver Lake Drive, Van Pelt Place, and Silver Lake Boulevard on the south, and W. Silver Lake Drive on the west.

The site is composed of the Silver Lake and Ivanhoe Reservoirs and Dams, several ancillary buildings and structures related to the LADWP's maintenance and operation, as well as landscape features such as stone and concrete retaining walls, trees, shrubs, and other vegetation. It is primarily accessed via the main access road that extends from the corner of

Armstrong and Tesla Avenues to just north of the Silver Lake Meadow. A second vehicular entrance is located on Armstrong Avenue almost at the mid-point of the main access road. A third vehicle entrance is located on Silver Lake Boulevard, just to the north of the Silver Lake Meadow. The Armstrong access road is bordered in part by a low stone retaining wall. There are also two entrances for pedestrian access, one running north-south along the west side of the Ivanhoe Reservoir and one running east-west atop the Silver Lake Dam to the south. The western boundary of the site is generally bordered by a low concrete retaining wall topped by a metal chain link fence, while the eastern portion of the site is bordered by a metal chain link fence.

The Ivanhoe Reservoir is located to the north of the Silver Lake Reservoir. It is smaller in size, covering approximately 7.84 acres, trapezoidal in shape with rounded corners, and features sloped concrete embankments. It is separated from the Silver Lake Reservoir by the Ivanhoe Dam and a reinforced concrete spillway. The Silver Lake Reservoir covers approximately 78.2 acres, is irregularly shaped, and features sloped embankments covered in an asphaltic cement paving. To the south is the Silver Lake Dam, which is a reinforced earthen dam constructed on compacted earthfill. Paved paths and landscaped areas border the Ivanhoe and Silver Lake Reservoirs on all sides.

Ancillary buildings located to the northeast of the Silver Lake and Ivanhoe Reservoirs include the Caretaker's House (now known as the Sunshine House) and garage, Ivanhoe Chlorine Station, Silver Lake Reservoir Chlorination Station, Water Quality Office, Landscape Office, and several temporary maintenance sheds. A new modular office building is also planned for this area of the site. It will be constructed just north of the Landscape Office. To the south of the reservoir is the South Chlorine Plant, Meter House, and Silver Lake Outlet Chlorination Station.

The Ivanhoe Reservoir was completed in 1906 and the Silver Lake Reservoir was completed the following year as part of Los Angeles' emergency municipal water system. Both were designed by William Mullholland, who served as the superintendent of what was then known as the Los Angeles Water Department, and constructed using a modified method of hydraulic sluicing. The reservoirs were formed by two reinforced earthen dams, the Silver Lake and Ivanhoe Dams, and originally featured unpaved earthen embankments. The Silver Lake Reservoir was likely initially used as a source of water for irrigation, while the Ivanhoe Reservoir was possibly originally designed to provide domestic drinking water. As a result of rapid population growth and development in the Los Angeles area in the 1910s, the Silver Lake and Ivanhoe Reservoir Complex was later modified in 1920 to supply domestic water to the City's drinking water system, which it continued to supply until work was completed to decommission the reservoirs in 2017.

Since its completion in 1906–1907, the Silver Lake and Ivanhoe Reservoir Complex has been altered over time. Notable alterations include those undertaken in 1920, 1951–1953, 1975–1976, and 2011–2017. In 1920 when the reservoirs were modified for domestic use, the embankments of the Silver Lake Reservoir were altered with a steeper slope, increasing the depth of the reservoir. Portions of the embankments were also likely covered in a paving material at this time to prevent erosion. In 1951–1953, both reservoirs underwent extensive improvements. The Silver Lake Reservoir was re-shaped and deepened and its embankments paved in asphalt. A new embankment was constructed along the reservoir's east shore and a lagoon known as the East Cove was infilled with earth. The Ivanhoe Reservoir was also deepened at this time and its basin and embankments were paved with asphalt. The reservoir facing side of the Silver Lake Dam was also stripped to bedrock and rebuilt with new earthen fill. In 1975–1976, the Silver Lake Dam was reconstructed to comply with revised California regulations for dam earthquake safety. As a result, the southern end of the Silver Lake Reservoir was reshaped to its current configuration. Finally, in 2011–2017, the Silver Lake and Ivanhoe Reservoir Complex was decommissioned, and a bypass line installed along the

bottom of the Silver Lake Reservoir basin. Please see Appendix A for a summary of the construction history of the Silver Lake and Ivanhoe Reservoir Complex.

3 SUMMARY OF HISTORICAL RESOURCE STATUS

The Silver Lake and Ivanhoe Reservoir Complex is a designated Los Angeles Historic-Cultural Monument (HCM No. 422). Therefore, it is a historical resource as defined by the California Environmental Quality Act. To determine the significance and boundaries of this HCM, GPA consulted the Silver Lake and Ivanhoe Reservoir HCM file maintained by OHR. The HCM nomination dated January 9, 1989 does not detail how the significance of this HCM relates to the criteria for designation as specified in the Los Angeles Cultural Heritage Ordinance. It also does not detail the HCM boundaries beyond describing the resource's location as "between West Silver Lake Drive and Silver Lake Boulevard."[2]

The Silver Lake and Ivanhoe Reservoir Complex was evaluated by Greenwood & Associates in 2004 as part of the *Silver Lake Reservoir Complex Storage Replacement Project Environmental Impact Report* (see Appendix B for the full Greenwood Report).[3] It was evaluated as eligible for listing as a historic district in the California Register of Historical Resources (California Register). The district boundaries are described as "all facilities associated with the historic functioning of the site and the surrounding landscaped property owned by the City/Los Angeles Department of Water and Power (LADWP) and confined by the city street grid established after the completion of the reservoirs by the 1920s."[4] It was evaluated as eligible under Criterion 1 for its significant association with the development of the Silver Lake neighborhood. It was also evaluated as eligible under Criterion 2 for its association with William Mulholland, who headed the Department of Water and Power at the time of the reservoirs construction and was responsible for their design. Finally, it was evaluated as eligible under Criterion 3 as an early and important example of a hydraulically sluiced reservoir. The period of significance was identified as 1906 to 1953, representing the date of the reservoir complex's original construction through the improvement program of the early 1950s.

The Status Codes for the Silver Lake and Ivanhoe Reservoir Complex are 5S1, an individual property that is listed or designated locally, and 3S, appears eligible for listing in the California Register through survey evaluation.[5]

Because the Silver Lake and Ivanhoe Reservoir Complex is already a designated HCM and has been previously evaluated for listing in the California Register as a historic district, GPA did not re-evaluate it for listing under nation, state, or local landmark or historic district programs. GPA also did not re-evaluate the site as a cultural landscape. A cultural landscape is defined by the National Park Service as "a geographic area (including both cultural and natural resources and the wildlife or domestic animals therein), associated with a historic

[2] "Historic-Cultural Monument Nomination: Silver Lake and Ivanhoe Reservoirs," January 9, 1989.
[3] CH2MHILL, *Silver Lake Reservoir Complex Storage Replacement Project Environmental Impact Report* (City of Los Angeles Department of Water and Power, July 2005).
[4] Greenwood & Associates, *Cultural Resources Assessment Report: Silver Lake Reservoir Complex Storage Replacement Project* (Santa Ana: CH2MHILL, August 2004), 36-37.
[5] The evaluation instructions and classification system prescribed by the SHPO in its *Instructions for Recording Historical Resources* provide a Status Code for use in classifying potential historical resources. In 2003, the Status Codes were revised to address the California Register. These Status Codes are used statewide in the preparation of historic resource surveys and evaluation reports.

event, activity, or person or exhibiting other cultural or aesthetic values."[6] There are four types of cultural landscapes: historic sites, historic designed landscapes, historic vernacular landscapes, and ethnographic landscapes. As a landscape engineered by William Mulholland and the LADWP, the Silver Lake and Ivanhoe Reservoir Complex would be considered a historic designed landscape. Typically, designed historic landscapes are evaluated for listing in the National Register as a historic district.[7]

Landscape characteristics of the Silver Lake and Ivanhoe Reservoir Complex are identified in Appendix C of this report. Landscape characteristics are physical expressions of both tangible and intangible aspects of a place that have either influenced the history of a cultural landscape's development or are products of its development.[8] There are thirteen landscape characteristics, six intangible and seven tangible. The six intangible landscape characteristics are: natural systems & features, spatial organization, circulation, land use, cluster arrangements, and cultural traditions. The seven tangible characteristics are: topography, buildings and structures, vegetation, constructed water features, archaeological resources, views and vistas, and small-scale features. Not all of the above characteristics are present at the site; therefore, only those that are existing were identified in Appendix C.

4 CHARACTER-DEFINING FEATURES

Character-defining features are the architectural components that contribute to a building's sense of time and place. *Preservation Brief #17: Identifying the Visual Aspects of Historic Buildings as an Aid to Preserving Their Character* notes:

A complete understanding of any property may require documentary research about its style, construction, function, its furnishings or contents; knowledge about the original builder, owners, and later occupants; and knowledge about the evolutionary history of the building. Even though buildings may be of historic, rather than architectural significance, it is their tangible elements that embody its significance for association with specific events or persons and it is those tangible elements both on the exterior and interior that should be preserved.[9]

The character-defining features of historical resources can be generally grouped into three categories: the overall visual character, the exterior materials and craftsmanship, and the interior spaces, features, and finishes. The relative importance of character-defining features depends on the level of craftsmanship, visibility, and integrity. In addition, some character-defining features are more important than others in conveying the significance of the building. Primary character-defining features are considered the most important elements contributing to the significance of the building, while secondary features are considered less important.

As previously stated, the Silver Lake and Ivanhoe Reservoir Complex was previously evaluated as a historic district in the 2004 Greenwood Report. Greenwood identified the complex as historically significant for its association with the development of the Silver Lake neighborhood and William Mulholland. The complex was also identified as significant as an early and important example of a hydraulically sluiced reservoir. As such, those distinctive

[9] Lee H. Nelson, "Preservation Brief #17: Architectural Character: Identifying the Visual Aspects of Historic Buildings as an Aid to Preserving Their Character," U.S. Department of the Interior, National Park Service, Cultural Resources, 1.

structures, buildings, features, and materials that are key to the feeling and function of the reservoir complex are character defining.

The period of significance for the Silver Lake and Ivanhoe Historic District was identified as 1906 to 1953. A historical resource's period of significance is defined as the "length of time when a property was associated with important events, activities, or persons, or attained characteristics which qualify it for the National Register listing."[10] Greenwood appears to have identified the end date of the period of significance to correspond to the National Register of Historic Places 50-year rule that stipulates properties must generally be 50 years or older in order to be eligible for listing.

The contributing and non-contributing features of the Silver Lake and Ivanhoe Reservoir Complex are noted in Table 1 below and are based on the Greenwood Report (see Appendix B, page 38). However, the contributing and non-contributing features have been revised to reflect changes made to the site since the completion of the report. Specifically, Greenwood did not denote individual landscape features as either contributing or non-contributing. Therefore, landscape features have been further defined in order to clarify which landscape features date from the period of significance and are therefore contributing features versus landscape features added after the end of the period of significance and are therefore non-contributing features. Landscape features are indicated with an asterisk below.

Additionally, Greenwood identified the Silver Lake Dam as a contributing feature to the historic district; however, the Silver Lake Dam was reconstructed in 1975-1976. Because the Dam was substantially altered after the end of the period of the significance, it was been reclassified as a non-contributing feature for the purposes of this report.

42.	South Outlet Chlorination Station	X		3CD
43.	Chlorine Plant	X		3CD

The character-defining features of the Silver Lake and Ivanhoe Reservoir Complex are identified and illustrated in Appendix D of this report. The character-defining features are generally numbered north-to-south and east-to-west. Only the character-defining features of contributing buildings, structures, or landscape features are analyzed. The character-defining features of non-contributing buildings, structures, or landscape features are not analyzed as they do not contribute to the significance of the site. The location of primary and secondary character-defining and non-character-defining features are mapped for each contributing building, structure, or landscape feature, and a representative photograph is included. Every instance of every feature was not photographed or included in this report. Although practices within the field vary, for this report the three categories of character-defining features are defined as follows:

Primary

- It dates from the period of significance
- It directly relates to the original use, type, and style
- It retains integrity; with no or only minor alterations
- It displays craftsmanship
- It is highly visible

Secondary

- It dates from the period of significance
- It has been altered, but retains integrity overall
- It is less visible and/or purely functional to the maintenance and operation of the site

Not

- It post-dates the period of significance
- It has been substantially altered

5 PRESERVATION GUIDELINES

As a designated HCM, the Silver Lake and Ivanhoe Reservoir Complex is subject to the Los Angeles Cultural Heritage Ordinance. The Ordinance stipulates that the Cultural Heritage Commission (CHC) and Office of Historic Resources (OHR) are responsible for reviewing alterations to historical resources listed under national, state, and local landmark programs.[12] Alterations are reviewed by the CHC and OHR for compliance with the *Secretary of Interior's Standards for the Treatment of Historic Properties* (Standards). The Standards are a series of best practices issued by the National Park Service for maintaining, repairing, and replacing historic materials, as well as designing new additions or making alterations to historic properties including buildings, structures, and landscapes. The Standards are accompanied by Guidelines for four types of treatments for historical resources: Preservation, Rehabilitation, Restoration, and Reconstruction.

The goal of the Silver Lake Reservoir Complex Master Plan project is to guide future use and repurposing of the site as a community gathering space now that it is no longer used for the storage and treatment of drinking water. The most appropriate treatment is therefore rehabilitation. Rehabilitation emphasizes the protection of existing historic fabric while allowing for compatible change.

Standards for Rehabilitation

The definition of rehabilitation assumes that at least some repair or alteration of the historic property will be needed in order to provide for an efficient contemporary use; however, these repairs and alterations must not damage or destroy materials, features, or finishes that are important in defining the building's historic and architectural character. To this end, the character-defining features of the Silver Lake and Ivanhoe Reservoir Complex are identified in Appendix D.

The Standards for Rehabilitation are as follows:

1. A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces and spatial relationships.
2. The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.
3. Each property will be recognized as a physical record of its time, place and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.

[12] Los Angeles Administrative Code, §22.171.14, of Article 1, Chapter 9, Division 22.

4. Changes to a property that have acquired significance in their own right will be retained and preserved.

5. Distinctive materials, features, finishes and construction techniques or examples of craftsmanship that characterize a property will be preserved.

6. Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.

7. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.

8. Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.

9. New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work shall be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.

10. New additions and adjacent or related new construction will be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

It is important to note that the Standards are not intended to be prescriptive, but instead provide general guidance.[13] They are intended to be flexible and adaptable to specific project conditions to balance continuity and change, while retaining materials and features to the maximum extent feasible. Their interpretation requires exercising professional judgment and balancing the various opportunities and constraints of any given project. Not every Standard necessarily applies to every aspect of a project, nor is it necessary to comply with every Standard to achieve compliance.

Guidelines for Rehabilitating Cultural Landscapes[14]

The *Guidelines for the Treatment of Cultural Landscapes* illustrates how to apply the Standards for Rehabilitation to cultural landscapes as a property type.

Identify, Retain, and Preserve Historic Materials and Features

Guidance for the treatment Rehabilitation begins with recommendations to identify those landscape features and materials important to the landscape's historic character and which must be retained. Therefore, guidance on identifying, retaining, and preserving character-defining features is always given first. An overall evaluation of existing conditions should always begin at this level. The character of a cultural landscape is defined by its spatial organization and land patterns; features such as topography, vegetation, and circulation; and materials, such as an embedded aggregate pavement.

---

[13] For more information on how federal, state, and local reviewers interpret the Standards, please see Anne E. Grimmer and Kay D Weeks, "Preservation Brief #14: New Exterior Additions to Historic Buildings: Preservation Concerns," US Department of the Interior, National Park Service, Cultural Resources, August 2010.

[14] Excerpted from "Guidelines for Rehabilitating Cultural Landscapes," U.S. Department of the Interior, National Park Service, accessed July 5, 2019, https://www.nps.gov/tps/standards/four-treatments/landscape-guidelines/rehab/approach.htm.

Protect and Maintain Historic Features and Materials

After identifying those materials and features that are important and must be retained in the process of Rehabilitation work, then protecting and maintaining them are addressed. Protection generally involves the least degree of intervention and is preparatory to other work; it may be accomplished through permanent or temporary measures. For example, protection includes restricting access to fragile earthworks or cabling a tree to protect against breakage. Maintenance includes daily, seasonal, and cyclical tasks, and the techniques, methods and materials used to implement them. For example, repointing a stone footbridge, pruning a hedge, or rotating crops.

Repair Historic Features and Materials

When existing conditions of character-defining materials and portions of features warrant more extensive work, repairing is recommended. Rehabilitation guidance for the repair of historic features and materials, such as brick pavements, masonry walls, and wire fencing, begins with the least degree of intervention possible. Such work could include re-grading a section of a silted swale, aerating soil, or reclaiming a segment of meadow edge. Repairing also includes the limited replacement in kind of extensively deteriorated materials or parts of features, or replacement in kind of materials or parts of features lost due to seasonal change. Using material, which matches the historic in design, color, and texture, is always the preferred option; however, substitute material is acceptable if the material conveys the same visual appearance as the historic period. For example, spring replacement of annual beds; in an orchard, planting a tree of new stock that matches the historic form, and composition; or, using a spun aluminum baluster where a cast zinc member was beyond repair.

Replace Deteriorated Historic Materials and Features

Following repair in the hierarchy, Rehabilitation guidance is provided for replacing an entire character-defining feature with new material because the level of deterioration or damage precludes repair. Examples include replacing a farm's drought-damaged pasture or replacing a corroded cast iron fence surrounding a reservoir. Like the guidance for repair, the preferred option is always replacement of the entire feature in kind. Because this approach may not always be technically, economically, or environmentally feasible, the use of compatible substitute materials can be considered. Whatever level of replacement takes place; the historic features and materials should serve as a guide to the work. While the Guidelines recommend the replacement of an entire feature that is extensively deteriorated or damaged, they never recommend removal and replacement with new material if repair is possible.

Design for the Replacement of Missing Historic Features

When an entire feature is missing, the landscape's historic character is diminished. Although accepting the loss is one possibility, where an important feature is missing, its replacement is always recommended in the Rehabilitation guidelines as the first or preferred, course of action. Thus, if adequate historical, pictorial, and physical documentation exists so that the feature may be accurately reproduced, and if it is desirable to re-establish the feature as part of the landscape's historical appearance, then planning, designing and installing a new feature based on such information is appropriate.

A second course of action for the replacement feature is a new design that is compatible with the remaining character-defining features of the historic landscape. The new design should always take into account the spatial organization and land patterns, features, and materials of the cultural landscape itself and, most importantly, should be clearly differentiated so that a false historical appearance is not created. For example, replacing a set of lost granite steps with concrete steps, which match the historic in location, size, scale, color and texture or replacing a mass of Eastern hemlocks with Japanese spruce.

Alterations/Additions for the New Use

When alterations to a cultural landscape are needed to assure its continued use, it is most important that such alterations do not radically change, obscure, or destroy character-defining spatial organization and land patterns or features and materials. Alterations may include enclosing a septic system, increasing lighting foot candles, extending acceleration and deceleration lanes on parkways, or, adding new planting to screen a contemporary use or facility. Such work may also include the selective removal of features that detract from the overall historic character.

The installation of additions to a cultural landscape may seem to be essential for the new use, but it is emphasized in the Rehabilitation guidelines that such new additions should be avoided, if possible, and considered only after it is determined that those needs cannot be met by altering secondary, i.e., non-character-defining, spatial organization and land patterns or features. If, after a thorough evaluation of alternative solutions, a new addition is still judged to be the only viable alternative, it should be planned, designed, and installed to be clearly differentiated from the character-defining features, so that these features are not radically changed, obscured, damaged, or destroyed.

Special Considerations (Accessibility, Health and Safety, Environmental, and Energy Efficiency)

These sections of the Rehabilitation guidance address work done to meet accessibility requirements; health and safety code; environmental requirements; or limited retrofitting measures to improve energy efficiency. Although this work is quite often an important aspect of preservation projects, it is usually not part of the overall process of protecting, stabilizing, conserving, or repairing character-defining features; rather, such work is assessed for its potential negative impact on the landscape's character. For this reason, particular care must be taken not to obscure, damage, or destroy character-defining materials or features in the process of undertaking work to meet code and energy requirements.

6 CHALLENGES & CONSTRAINTS

GPA has identified the following challenges and constraints for the Silver Lake Reservoir Complex Master Plan project:

- Alterations to the Silver Lake and Ivanhoe Reservoir Complex should be made in compliance the Standards to comply with the Los Angeles Cultural Heritage Ordinance and to avoid a significant impact under CEQA.
- Character-defining features that contribute to the site's historic character and relate to its historic use as a reservoir should be preserved.
- Wholesale removal of primary character-defining features would not comply with the Standards and may result in a significant impact under CEQA.
- Alterations to character-defining features to accommodate the new use may be permitted but should be minimized.
- Because the existing embankments are a primary character-defining feature of the Silver Lake and Ivanhoe Reservoirs, providing increased access to the water by substantially altering the existing embankments would not comply with the Standards and may result in a significant impact under CEQA. Limited removal of the embankments may be acceptable to accommodate the new use, but the design of these alterations should be closely coordinated with OHR and the Cultural Heritage Commission.

- Changes that create a false sense of historical development should not be undertaken.
- New construction should not destroy character-defining features and should be compatible with historic materials, features, size, scale, and proportion to protect the integrity of the site as a whole.
- New construction should be undertaken in such a manner that, if removed in the future, the essential form and integrity of the site would be unimpaired.

7 OPPORTUNITIES

GPA has identified the following opportunities for the Silver Lake Reservoir Complex Master Plan project:

- Create a unique public space through the enhancement of the Silver Lake and Ivanhoe Reservoir Complex's unique historic character.
- Cultivate the connection between the Silver Lake community and its history as well as enrich the neighborhood's visual and tangible historic identity.
- Foster scenic, economic, ecological, social, recreational, and educational opportunities through the preservation of the Silver Lake neighborhood's historic and cultural heritage.
- Strengthen the historic character of site and improve its historic integrity by restoring buildings or structures that no longer contribute to the site due to the cumulative impact of alterations over time.

8 NEXT STEPS

GPA recommends the following next steps to ensure proposed alterations to the Silver Lake and Ivanhoe Reservoir Complex are in compliance with the Standards as well as consistent with best practices in historic preservation:

- Seek concurrence from OHR on the character-defining features of the site.
- Present the draft Master Plan to the Los Angeles Cultural Heritage Commission.

9 POTENTIAL FUNDING SOURCES

Government funding sources for historic properties are primarily federal tax incentive and grant programs designed to assist private properties owners in the preservation or rehabilitation of historic buildings. The largest federal program is the Federal Historic Preservation Tax Incentives Program, which is administered by the National Park Service and provides a 20% federal tax credit to private property owners who undertake a substantial rehabilitation of a historic property in a business or income-producing use. Another federal program, the Historic Preservation Easement program, provides private property owners with tax benefits in exchange for donating an easement to a qualified charitable or governmental organization that ensures the protection of the property's historic character.

GPA has identified the following potential funding sources listed below that provide funding to local governments for further surveys, studies, and educational programs for historic properties. Please note that the programs listed do not provide funds for projects related to the construction, restoration, rehabilitation, or stabilization of historic properties. No federal, state, or private foundation grant programs for historic properties were identified that could potentially provide funding for implementing the Silver Lake Reservoir Complex Master Plan project.

1. Preservation Technology and Training Grants

   Administered by the National Center for Preservation Technology and Training and provides federal agencies, states, tribes, local governments, and non-profit organizations with funding for innovative research that develops new technologies or adapts existing technologies to preserve cultural resources.

   https://www.ncptt.nps.gov/grants/preservation-technology-and-training-grants/

2. Certified Local Government Program & Local Preservation Tools

   Administered by the California Office of Historic Preservation and provides local governments with funding for projects that involve new or innovative approaches and activities intended to promote the identification, evaluation, and preservation of historic resources and facilitate the integration of historic preservation planning into broader land-use planning activities and decision making. Please note that grant recipients may not use funding for projects related to the construction, restoration, rehabilitation, or stabilization of buildings and structures.

   http://ohp.parks.ca.gov/?page_id=24493

3. Preserve America Grants

   Administered by the Advisory Council on Historic Preservation and provides eligible recipients with a 50/50 matching grant to support a variety of activities related to heritage tourism and innovative approaches to the use of historic properties as educational and economic assets. Eligible recipients include State Historic Preservation Officers, Tribal Historic Preservation Officers, designated Preserve America Communities, and Certified Local Governments. Eligible projects include research and documentation, interpretation and education, planning, marketing, and training. Funds however have not been appreciated for the Preserve America Grant program since the 2017 fiscal year.

APPENDIX A

Silver Lake and Ivanhoe Reservoir Complex Construction History[1]		
Date	**Feature**	**Chronology**
1906	Ivanhoe Reservoir	Constructed.
1907	Silver Lake Reservoir	Constructed.
c.1906–10	Caretaker's House	Constructed.
c.1906–10	Stone Retaining Wall	Constructed.
c. 1906–30	Bathroom Building	Constructed.
c. 1906–30	Landscape Building	Constructed.
c. 1906–30	Shed	Constructed.
1920	Silver Lake Reservoir	Shore line excavated, altering slope of embankments; increased reservoir depth by 20 feet; portions of the embankments likely covered with paving at this time to prevent erosion.
1920	Silver Lake Dam	Possibly raised by approximately five feet.
1927	Silver Lake Meter House	Constructed
c. 1927	Chemical/Chlorine Plant	Constructed.
c. 1930	Ivanhoe Reservoir	Wood cover removed.
1937	Silver Lake Outlet Tower	Constructed.
c. 1937	Ivanhoe Chlorination Station	Constructed.
1942	Ivanhoe Inlet Tower	Original inlet tower removed and replaced with a reinforced concrete tower and box inlet conduit through the Ivanhoe Dam.
1944	Ivanhoe Dam Spillway	Constructed.
1947	Silver Lake South Outlet Chlorination Station	Constructed.
1951–53	East Cove	New embankment constructed along east bank at location of East Cove and lagoon infilled with dirt.
1951–53	Ivanhoe Reservoir	Reservoir reshaped and depth increased by 10 feet; piers removed that originally supported wood cover; embankments and basin paved with asphaltic lining.
1951–53	Silver Lake Reservoir	Embankments heightened and paved; depth of reservoir increased; and reservoir reshaped by infilling of East Cove.
1951–53	Silver Lake Dam	Excavation of the reservoir-facing side down to bedrock and reconstruction using new earthen fill.
1954	Concrete Curb Wall	Constructed.
1954	Main Access Road	Paved.
1955	Laboratory Building (now known as Water Quality Office)	Constructed.
1968	Silver Lake Chlorinating Station	Constructed.
c. 1970s	Silver Lake Outlet Tower	Extensively altered.
1975–76	Silver Lake Dam	Reconstructed.

[1] Construction history was compiled using Greenwood & Associates, *Cultural Resources Assessment Report: Silver Lake Reservoir Complex Storage Replacement Project* (Santa Ana: CH2MHILL, August 2004); and Los Angeles Department of Water and Power (LADWP), *History of the Silver Lake Reservoir Complex*, unpublished manuscript on file at LADWP, Los Angeles.

Silver Lake and Ivanhoe Reservoir Complex Construction History[1]		
Date	**Feature**	**Chronology**
1975–76	Silver Lake Reservoir	Reservoir reshaped by reconstruction of the Silver Lake Dam.
1983	Silver Lake Reservoir	Concrete curb constructed along reservoir on east side of periphery road.
1993–94	Ivanhoe Reservoir	Embankments repaved and new bypass line installed.
1995	Silver Lake Dog Park	Constructed.
2011	East Cove	Three-acre passive park known as Silver Lake Meadow constructed.
2011–17	Silver Lake Reservoir	Bypass line constructed.
2018	Silver Lake Dam	Pedestrian walkway constructed.
2018	Ivanhoe Reservoir	Pedestrian walkway constructed.

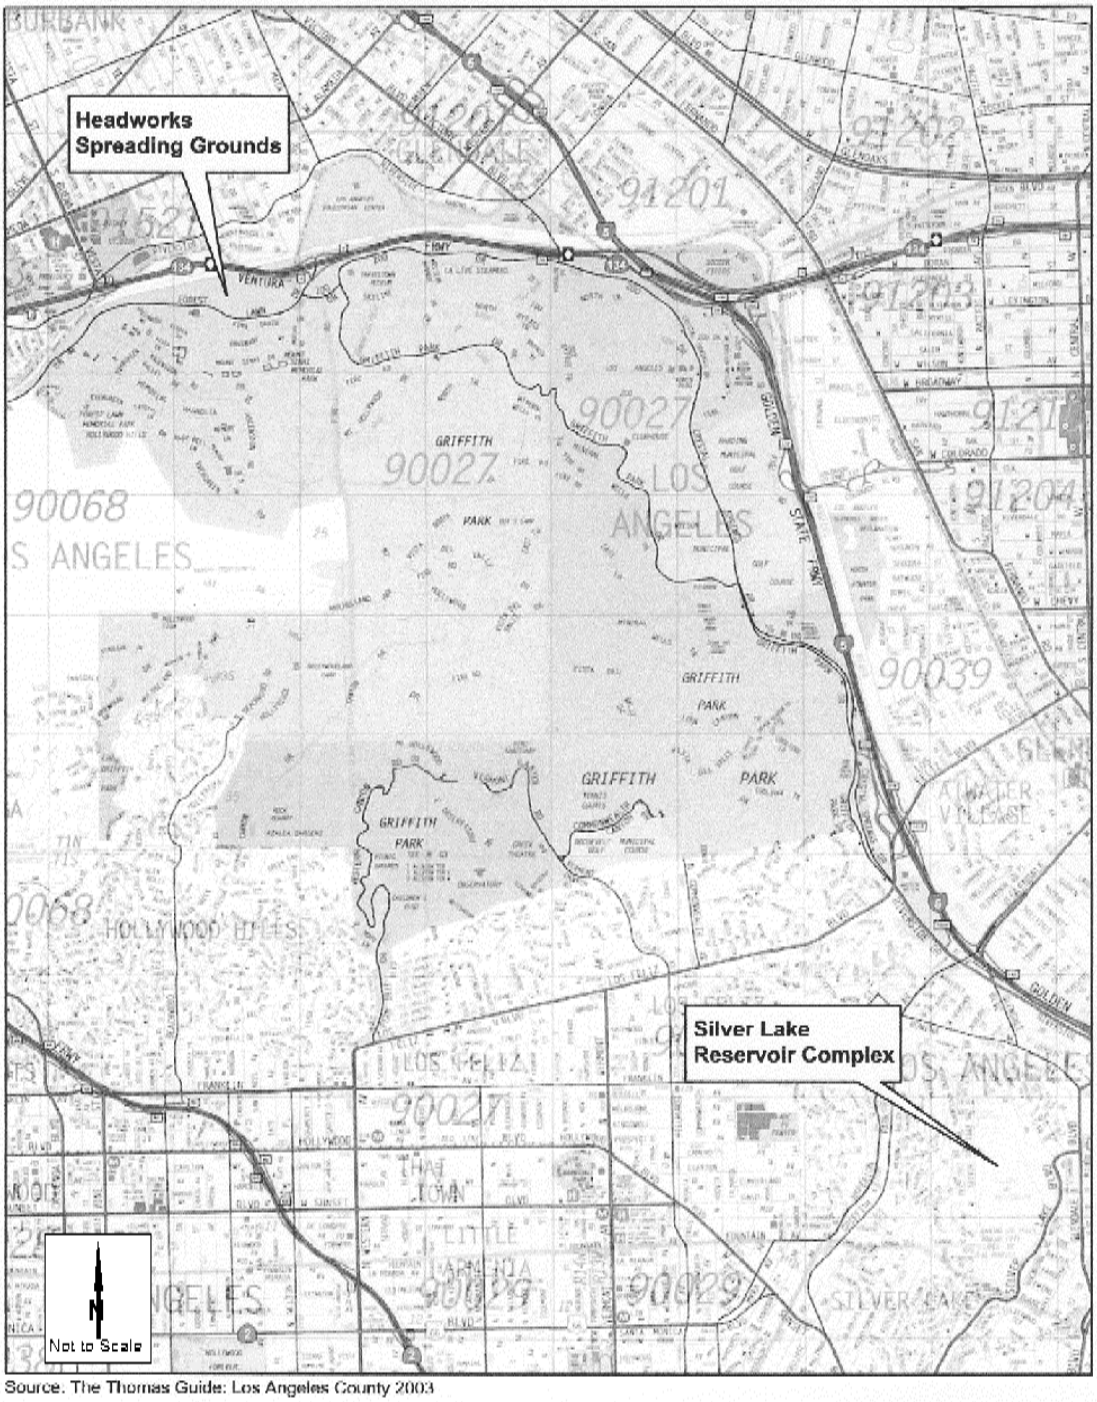
1.0 Introduction

Greenwood and Associates has conducted a cultural resources impact assessment for the proposed Silver Lake Reservoir Complex Storage Replacement Project, located in the City of Los Angeles (City), California. This document assesses the environmental consequences of the project on cultural resources, based on background research and field investigation. The information contained in this report is prepared for use in an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA). The City of Los Angeles, Department of Water and Power (LADWP), as Lead Agency under CEQA, has determined that the project could have a significant impact on the environment and that an EIR will be prepared.

1.1 Project Location and Description

1.1.1 Introduction

The Proposed Project would remove Silver Lake and Ivanhoe Reservoirs from direct service to the LADWP water distribution system. Water storage currently provided by the two reservoirs, together referred to as the Silver Lake Reservoir Complex (SLRC), would be replaced by a 110-million-gallon (MG) underground covered storage reservoir at the former Headworks Spreading Grounds (HWSG) site. The new storage reservoir would be accompanied by a 4-megawatt (MW) hydroelectric power generating facility at the HWSG site to capture energy from the water pressure coming into the reservoir. The addition of a regulator station and a new bypass pipeline would convey water delivery flow to existing service areas, and operation of Silver Lake and Ivanhoe Reservoirs as drinking water storage facilities would change.



1.1.2 Project Location

The Proposed Project would be located at the HWSG site and at the SLRC, as shown in Figure 1-1. The HWSG site consists of 43 acres of undeveloped land, presently a series of dry shallow basins, adjacent to the Los Angeles River and between the City of Burbank and Griffith Park. It is bounded on the north by the Los Angeles River and the 134 Freeway, and on the east and south by Forest Lawn Drive. The property is owned by the City of Los Angeles Department of Recreation and Parks, and LADWP retains an easement over the entire property. It is located approximately 8.0 miles northwest of the SLRC.

The SLRC is located in the community of Silver Lake and consists of LADWP-owned Silver Lake and Ivanhoe Reservoirs and related facilities. Silver Lake is five miles northwest of downtown Los Angeles and just east of Griffith Park.

1.1.3 HWSG Site Facilities

Facilities to be constructed and operated at the HWSG Site include a 110-MG underground storage reservoir and a 4-MW hydroelectric power generating facility. Construction and operation information for these facilities is described in detail below.

Source. The Thomas Guide: Los Angeles County 2003

Figure 1-1
SLRC SRP
Cultural Resources Assessment
Project Location Map

1.1.3.1 110-MG Underground Storage Reservoir

1.1.3.1.1 Overview

To replace the operational storage from Silver Lake and Ivanhoe Reservoirs, LADWP would construct a 110-MG buried reservoir at the HWSG site. The reservoir would occupy approximately 19 acres on the east side of the HWSG site. The reservoir itself would be 10 acres in area and 40 feet high. Figure 1-2 shows the location of the reservoir within the HWSG site.

The reservoir would include inlets and outlets connecting to the River Supply Conduit, requiring a total of four vaults for inlet and outlet valves. The vaults will be located within the southern slope of the reservoir (Figure 1-2). Each valve vault will be approximately 22 feet by 19 feet and will be buried. Access to each vault will be from a 3-foot by 3-foot steel hatch. An access road along the southern slope of the reservoir with ingress and egress from Forest Lawn Drive would be constructed to provide access to the vaults.

1.1.3.1.2 Construction

Construction activities for the underground storage reservoir would include grading and reservoir site preparation, inlet/outlet and vault construction, construction of the reservoir storage structure, and burying the storage structure. Approximately 470,000 cubic yards of soil material would be excavated for the construction of the reservoir. Of the 470,000 cubic yards, approximately 5 percent, or 23,000 cubic yards, would be disposed offsite due to its unsuitability as fill material.

Excavation for the inlet/outlet and vault construction would be done as part of the grading and reservoir site preparation, as described above. Inlet/outlet and vault construction would require approximately 810 cubic yards of concrete.

Materials required for reservoir tank construction include concrete and gravel. A total of approximately 98,686 cubic yards of concrete would be required. Approximately 11 trucks per day would deliver 99 cubic yards of concrete per day to the site. A total of approximately 18,336 cubic yards of gravel would be required.

Approximately 394,000 cubic yards of fill material would be required to bury the storage structure. Of this amount, 156,000 would be obtained onsite from tank excavation, and 238,000 cubic yards would be imported.

1.1.3.1.3 Reservoir Operation and Maintenance

Following construction, native vegetation would be planted on the side slopes and top of the reservoir. The remainder of the HWSG site that would be disturbed during construction would be returned to its original condition.

During operation of the reservoir, Department staff would check the facility once a week, while security would check the facility daily. The reservoir inlet/outlet valves would be checked once a year. The tanks that make up the reservoir require cleaning once every four years. It is likely that the Department would stagger tank cleaning such that one tank is cleaned every two years. Tank cleaning takes approximately one week and requires a utility truck and possibly a dump truck if there is a significant amount of sand at the bottom of the reservoir.

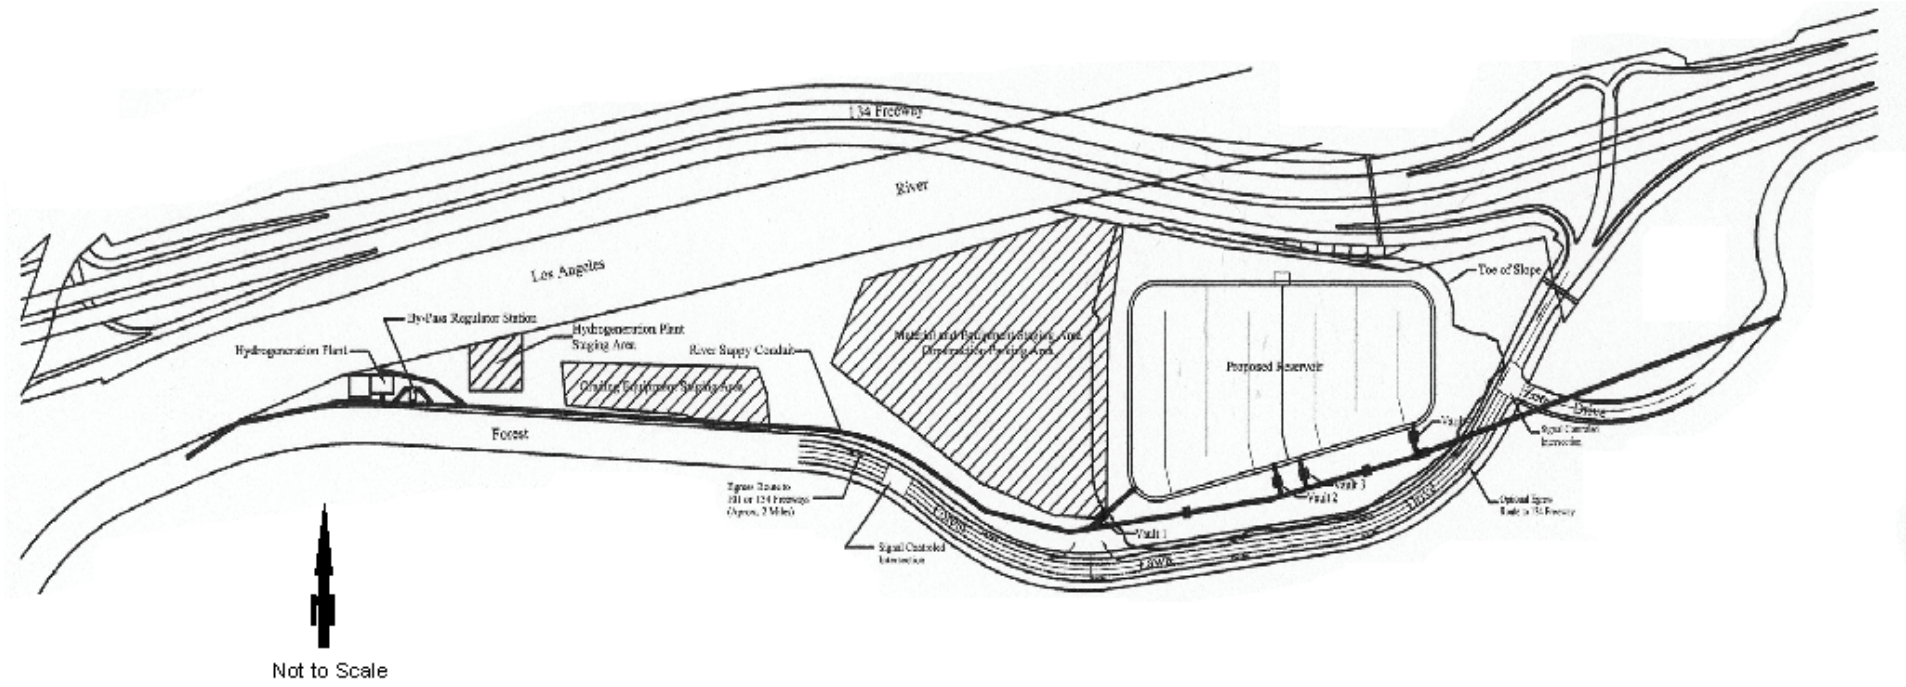


Figure 1-2

Cultural Resources Assessment
HWSG Site

1.1.3.2 4-MW Hydroelectric Power Generating Facility

1.1.3.2.1 Overview

To capitalize on a green power opportunity and reduce the water pressure coming into the new storage reservoir, LADWP would construct a 4-MW hydroelectric power generating facility at or near the HWSG site. The hydroelectric facility would require a powerhouse, connection to the existing 35-kilovolt (kV) LADWP distribution system, outdoor substation, and backup emergency generator.

The powerhouse would house the turbine/generator, associated isolation valves, piping, electrical switchgear, controls, and instrumentation. The inlet pipeline connection would be approximately 56 inches in diameter and the outlet would be approximately 68 inches in diameter. The powerhouse would be operated from a remote control center. The powerhouse would be constructed of reinforced concrete and would be approximately 50 feet wide by 70 feet long. The powerhouse would be approximately 30 feet high and would be partially buried, with the highest point roughly 18 feet above ground.

The hydroelectric generated power would be connected to the existing 35 kV LADWP distribution system. The existing 35 kV overhead power line runs along the north side of Forest Lawn Drive. No new power poles would be needed to connect to the existing 35 kV line.

The outdoor substation would consist of a main transformer and related substation equipment and would require a switchyard of 60’ by 60’ chain link fence enclosure. The Department may decide to eliminate the outdoor substation, in which case the electrical equipment would be housed in the powerhouse. In that case, the powerhouse would be increased in size to 50 feet wide by 86 feet long.

For backup station service power, an emergency generator of approximately 125 kW capacity would be housed in a separate enclosure from the powerhouse and switchyard. The enclosure would be either an outdoor metal shed type or a brick building of 30 feet wide by 25 feet long by 10 feet tall.

1.1.3.2.2 Construction

The hydroelectric plant would be constructed at the west end of the HWSG site, as shown in Figure 1-2. Approximately 2 acres would be disturbed during construction.

Approximately 6,000 cubic yards of soil material would be excavated for the construction of the hydroelectric plant. 2,600 cubic yards would be exported and 3,400 cubic yards would be retained onsite for burial of the hydroelectric plant.

1.1.3.2.3 Operation and Maintenance

The hydroelectric facility would not require staff onsite; rather, the facility would be operated remotely, from the Department area control center. A Department operator would visit the facility once a week. Security would check the facility daily. The facility would have video surveillance cameras as well as other security features.

Quarterly preventative maintenance would be performed on the plant ancillary equipment (cooling water system, air compressor, electric motor actuators), requiring one service truck for one day. Once a year, the facility would be shut down for internal and external inspection. This maintenance activity would require 3 service trucks per day for 2 weeks. The facility would be shut down for overhaul once every 5 years. This maintenance activity would require 3 service trucks and one crane per day for 4 weeks.

1.1.4 SLRC Facilities

Facilities to be constructed and operated at or near the SLRC include a bypass pipeline and a regulator station, as shown in Figure 1-3. Construction and operation information for these facilities are described in detail below.

1.1.4.1 Bypass Pipeline

1.1.4.1.1 Overview

A bypass pipeline is needed to convey water through the SLRC to the rest of the system. The bypass pipeline would consist of approximately 4,900 linear feet of 66-inch diameter pipe. The bypass pipeline would be constructed of welded steel encased in concrete.

The pipe would be tunneled beneath various streets beginning at the intersection of West Silver Lake Drive and Armstrong Avenue running south on West Silver Lake Drive for approximately 3,800 feet; turning southeasterly on Redesdale Avenue for approximately 900 feet; turning southwesterly toward the grassy area south of Silver Lake Reservoir dam approximately 100 feet. Redesdale Avenue does not intersect West Silver Lake Drive; it is a paper street and Redesdale Avenue is approximately 85 feet higher than West Silver Lake Drive.

Because the bypass line would need to be a minimum of 30 to 40 feet deep, the method of construction is tunneling. For tunneling operations, jacking (entrance) and receiving (exit) pits would be needed at the ends of the pipe for equipment and to export materials. Construction staging for equipment and materials would take place within the SLRC property, along the east side of the Silver Lake Reservoir (Figure 1-3).

1.1.4.1.2 Construction

Jacking and receiving pits for bypass pipeline tunneling would be located in West Silver Lake Drive. Roughly 5 to 15 feet around each pit would be blocked off, and the traffic around each pit would be reduced to one lane in each direction. An additional jacking pit would be located in the grassy area south of Silver Lake Reservoir dam. The portion of the bypass pipeline within the grassy area south of Silver Lake Reservoir dam would be constructed by trench method. Approximately 6,625 cubic yards of soil would be removed during bypass pipeline construction. This soil would be exported to the HWSG site.

1.1.4.1.3 Operation

The bypass pipeline would not require any maintenance, as its lifespan is approximately 100 years. In the unlikely event of pipeline leakage, the repair would be performed within the pipeline (e.g., excavation of the pipeline would not be required).

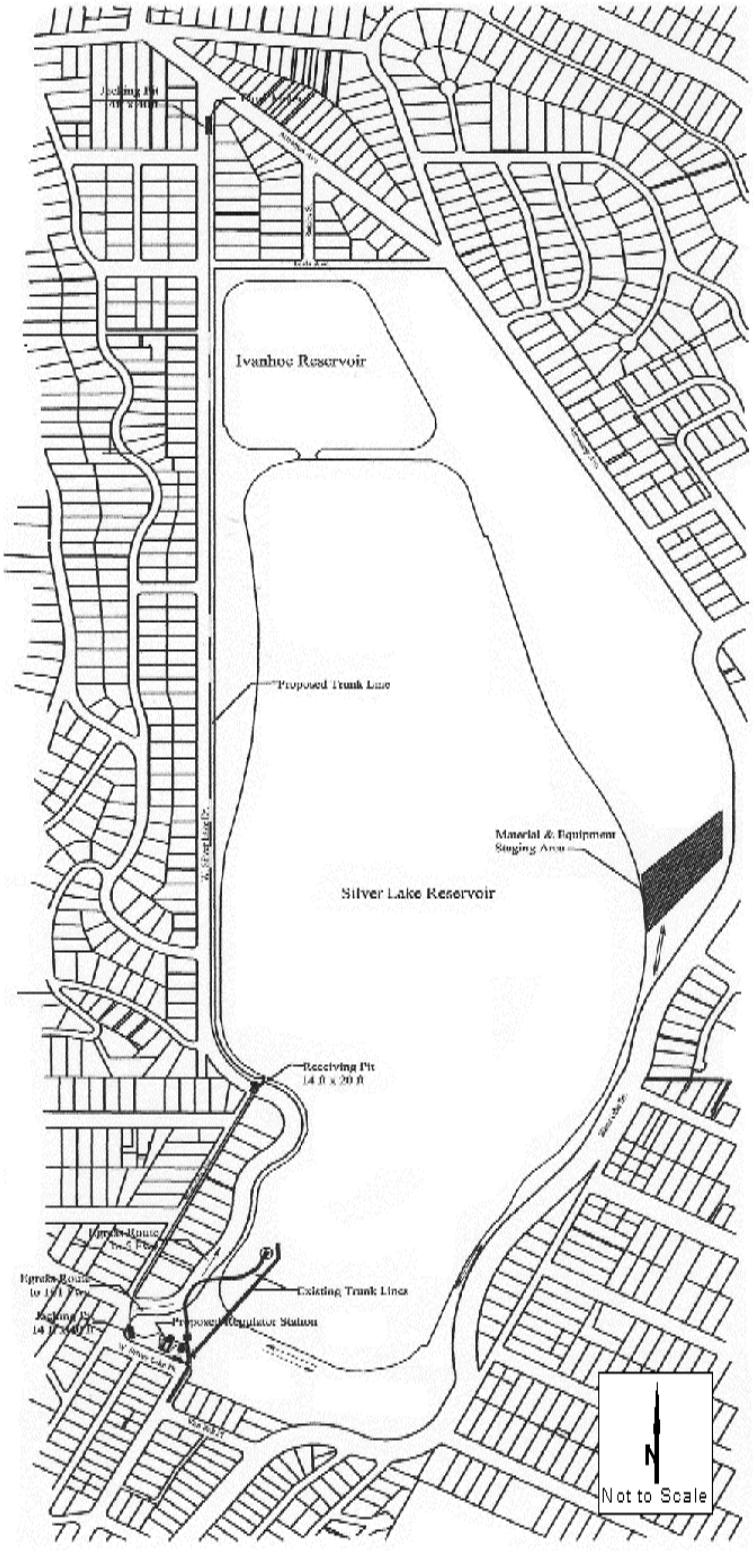

Figure 1-3
SLRC SRP
Cultural Resources Assessment
SLRC Site

Because Silver Lake and Ivanhoe Reservoirs at the SLRC would no longer be used for water supply, day-to-day operations would change. Specifically, the water currently flowing into Silver Lake and Ivanhoe Reservoirs would bypass SLRC as described above. The SLRC facility and property would be maintained consistent with the appearance and condition that LADWP has provided at this facility for several years. Based on the Department's recent positive experience at the Hollywood Reservoirs, the Department would cease chlorination within the Silver Lake and Ivanhoe Reservoirs.

1.1.4.2 Regulating Station

1.1.4.2.1 Overview

A regulating station to control water pressure would be located at the SLRC in the grassy area just south of the Silver Lake Reservoir dam, as shown in Figure 1-4. A bypass valve, relief station, and relief station dissipator, plus an isolation valve for the existing Silver Lake Reservoir outlet line would each be enclosed in buried vaults at the same location. The regulating station would be housed in a vault approximately 45 feet long by 25 feet wide by 14 feet deep that would be buried with grass on top. Access to the vault would be either from two 3-foot by 3-foot steel hatches or two 48-inch diameter lids on each end of the vault. The bypass valve would be housed in a vault approximately 14 feet long by 15 feet wide by 12 feet deep. The relief station would be housed in a 14-foot by 18-foot by 12-foot vault and the relief station dissipator would be housed in two 9-foot by 11.5-foot by 4-foot vaults. The isolation valve would be housed in a 14-foot by 15-foot by 12-foot vault. Access to each vault would be either through a 3-foot by 3-foot steel hatch or a 48-inch diameter lid. In addition, there would be 6 valves housed in a 48-inch diameter by 14-foot high can that is buried and with top access.

Above ground facilities anticipated include two ventilation hoods (4 feet in diameter and 3 feet high), 6 ventilation stand-pipes (1 foot in diameter and 3 feet high) and a control cabinet (4 feet square and 6 feet high). The control cabinet may be located near the existing chlorination building.

The regulating station and associated facilities would be constructed within a 30,000 square foot area within the grassy area just south of Silver Lake Reservoir dam.

1.1.4.2.2 Construction

Approximately 330 cubic yards of concrete would be required for construction of the regulating station. Approximately 5 to 15 trucks per day would deliver up to 130 cubic yards of concrete per day to the site for approximately 5 days. Concrete would be obtained from the Southern California area, specifically Los Angeles and Orange counties. Construction staging for equipment and materials would take place within the SLRC property, along the east side of the Silver Lake Reservoir.

1.1.4.2.3 Operation and Maintenance

During operation, the regulating station would run 24 hours per day. The noise level of the regulating station would be 90 DB inside the vault and approximately 60 DB 100 feet away.

Maintenance of the regulating station would be performed quarterly. Typical activities would include verifying valve settings, checking for debris in the lines and cleaning the vault. This work takes approximately 2 hours and uses a utility truck.

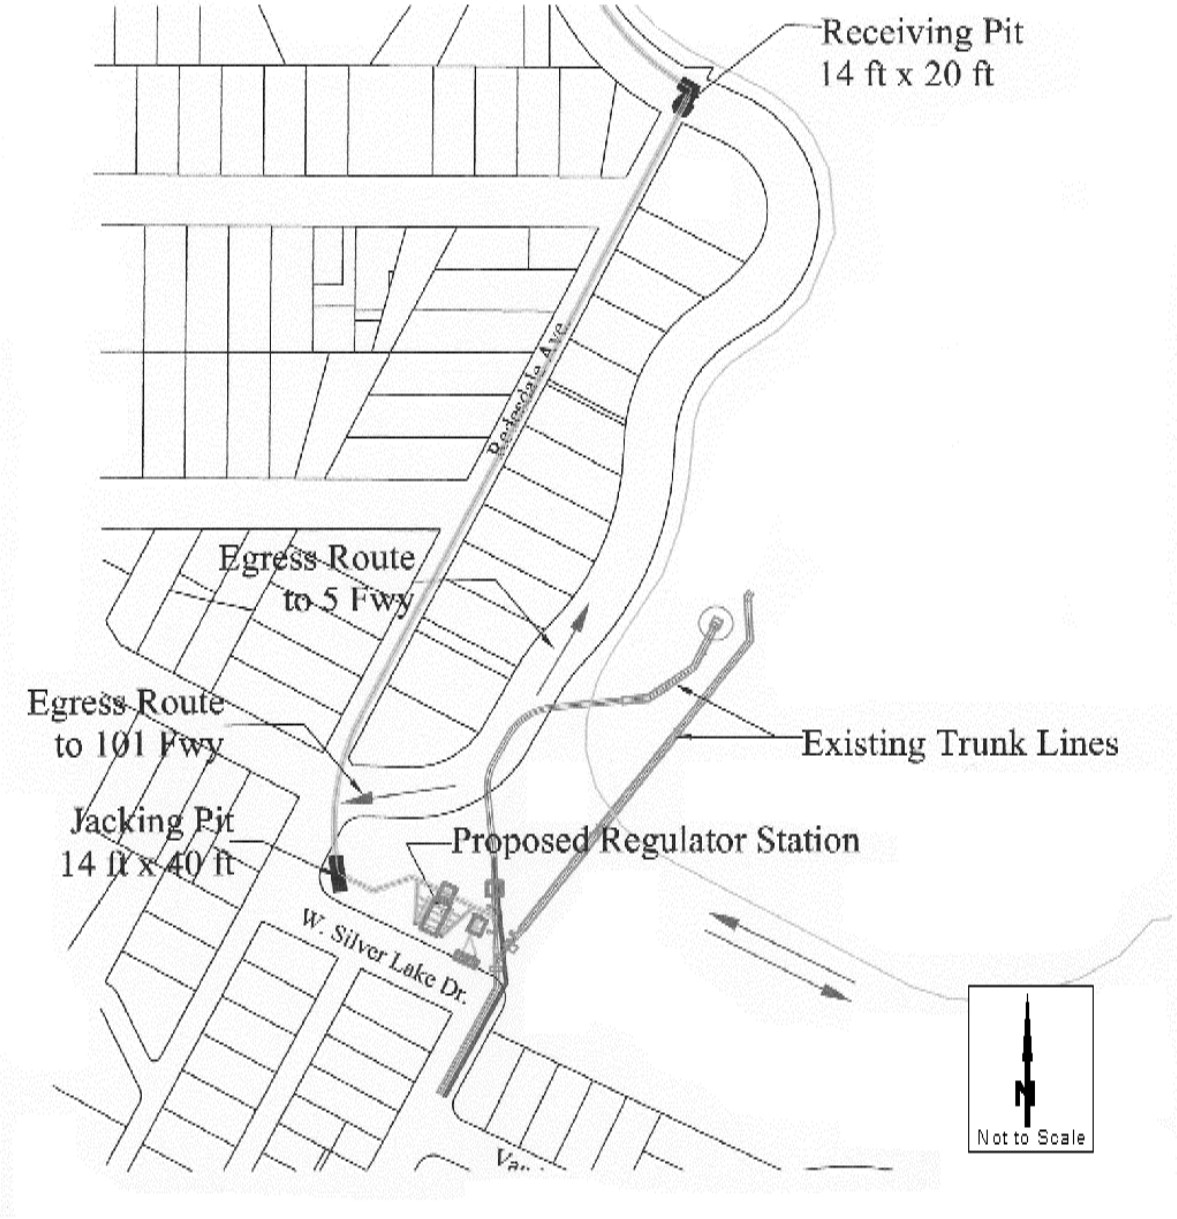

Figure 1-4
SLRC SRP
Cultural Resources Assessment
Proposed Regulating Facility

2.0 Environmental Setting

2.1 Methodology

2.1.1 Area of Study

For this cultural resources investigation, the study area is recognized to include the corridors proposed for construction of pipelines, and parcels identified for construction of facilities (regulating station, hydroelectric power generating facility, underground storage reservoir, etc.), and for staging of construction equipment and materials. As the adjacent Silver Lake and Ivanhoe Reservoirs, collectively, have previously been designated as historic resources (City Historic Cultural Monument [HCM] No. 422), the boundaries of the study area for historical resources includes all property historically associated with the reservoir complex and owned by the City/LADWP. The area is roughly bounded by Silver Lake Boulevard and Armstrong Avenue on the east, Tesla Avenue on the north, West Silver Lake Drive on the west, and West Silver Lake Drive, Silver Lake Boulevard, and Van Pelt Place on the south.

2.1.2 Research Sources Consulted

Greenwood and Associates conducted a California Historical Resources Information System (CHRIS) review of available literature, archaeological site archives, and relevant historical maps and other records for the SLRC site at the South Central Coastal Information Center (SCCIC) on March 16, 2004 by Alice Hale, M.A (File No. 4163). A comparable review for the HWSG site was conducted by the SCCIC on March 29, 2004 (File No. 4200). For both project locations, cultural resources and previous studies located within a one-half mile radius were identified. Results of literature and records search are summarized below.

Specialized listings for cultural resources consulted for this report include the National Register of Historic Places – Listed Properties and Determined Eligible Properties (1988, computer listings 1966 through Jan. 2004 by National Park Service); the California Register of Historical Resources (2003); the California Inventory of Historic Resources (1976); California Historical Landmarks (1996); the California Points of Historical Interest (1992); the *Handbook of North American Indians*, Vol. 8, California (1978); the Directory of Properties in the Historic Property Data File for the City of Los Angeles (2004); and City of Los Angeles Historic-Cultural Monuments (listings through 2004).

Additionally, specialized research was conducted at the City of Los Angeles Department of Water and Power Resource Center, Archives, Survey Section, and Library; City of Los Angeles Department of Building and Safety; Los Angeles Central Public Library; University of California Los Angeles, Young Research Library; and the City of Los Angeles Cultural Heritage Commission. Reference materials secured from internet sources and other project documents were also consulted.

2.1.3 Agencies, Groups, and Individuals Consulted

Greenwood and Associates consulted representatives of various City agencies, including: Paul Liu, LADWP Water Master Planning; Linh Phan, LADWP Water Master Planning; Douglas Sunshine, LADWP Facilities Management; Vee Miller, LADWP Facilities Management; Jay Oren, City of Los Angeles, Cultural Heritage Commission; Isabel Rosas, City of Los Angeles, Cultural Heritage Commission.

2.2 Regional Setting

The following summary is based on the literature search conducted for the vicinities of both the SLRC and HWSG areas. It is designed both to indicate the potential for the presence of cultural resources within the project area, and to provide a context for any cultural data that may be present within the study area.

2.2.1 Environment

The project area lies within central Los Angeles County. Regional vegetation includes Agricultural; Riparian (along natural drainages); Sage-Scrub (within canyon areas); Oak-Woodland (scattered patches mostly on north-facing slopes at lower elevations); and Grassland (grazed lands). The prehistoric Gabrieliño Indians used plants from many biotic communities. Acorns were a staple food and many of the archaeological sites contain portable stone mortars used to grind acorns. Sage, buckwheat, grass seeds, yucca, and elderberry were also extensively eaten. Willow was used in house construction and reeds used for basketry material. Plants used for medicines and dyes include mugwort, poison oak, tobacco, nightshade, and coastal sage.

In prehistoric times, animals were abundant in the area and included mule deer; coyote; bobcat; raccoon; fox; birds (dove, woodpecker, robin, sparrow, hummingbird, jays, golden eagle and condor), and snakes, lizards and frogs. In the hilly areas, grizzly bears, sheep, wolves, and mountain lions were once present. Animals used most often for food included deer, rabbits, and certain rodents; birds and reptiles were eaten less commonly (Bean and Blackburn 1976).

The project vicinity has a Mediterranean climate, lying between the dry climate of the Mojave Desert to the northeast and the humid mesothermal climate of the Pacific Coast to the south. The weather is dominated by warm, dry summers and mild, moderately wet winters. Temperatures range from approximately 100 degrees in July and August, to the low thirties in January. Snowfall is rare, and rainfall occurs normally between November and April. The Los Angeles River and several minor drainages that flow from the Santa Monica Mountains influenced prehistoric and historic settlement patterns.

2.2.2 Prehistory/Ethnography

The archaeological record indicates that sedentary populations occupied the coastal and inland regions of California more than 9,000 years ago. Early periods were characterized by the processing of hard seeds with the *mano* and milling stone and the use of the *atlatl* (dart thrower) to bring down large game, e.g., deer.

The Early Period dates from approximately 8000 to 3350 Before Present (B.P.) – a time roughly corresponding to Rogers' (1929) Oak Grove Culture and Wallace's (1955) Millingstone Horizon. The Early Period is characterized by the use of large flake and core tools, millingstones, and handstones, combined with a lack of bone and shell tools, ornamentation, and refuse. The millingstones indicate grinding of hard seeds, probably gathered from sage plants. Mortars and pestles (used for acorn grinding) were not widely used until late in the Early Period (Glassow et al. 1985). Early Period settlements appear to represent the remains of residential base camps and were usually located on hilltops or knolls (Glassow and Wilcoxon 1988). Cemeteries are associated with permanent settlements.

The Middle Period dates from about 3350 to 800 B.P. and correlates with Rogers' and Harrison's (1964) Hunting People, and Wallace's Intermediate Horizon. This period is characterized by a shift in the economic/subsistence focus from plant gathering and the use of hard seeds, to a more generalized hunting-maritime-gathering adaptation. The shift to the predominance of mortars and pestles for milling implements indicates increased exploitation and dependence on acorns (Glassow and Wilcoxon 1988). Inherited leadership and status differentiation with religious specialists, as shown by mortuary data, were all social elements of the Middle Period. Villages were more permanently occupied, and some satellite sites became differentiated in size and purpose. Middle Period sites are distinguishable into subphases by different types of beads, projectile points, and other diagnostic artifacts. Middle Period sites tend to be small and often contain artifacts that are lighter in weight and more portable than those from earlier sites.

The Middle Period is followed chronologically by the Late Prehistoric Horizon (Wallace 1955, 1978) or Shoshonean Tradition (Warren 1968), beginning around 500 A.D. (Bean and Smith 1978). The Late Period is marked by a dramatic increase in population. Permanent inland settlements of up to 150 people subsisted on the abundant acorns, seed plants, rabbits, and deer. Villages (also known as rancherias) were located near the confluence of watercourses and/or habitats. New tools and ornaments began to occur. Among the recognized archaeological changes were the appearance of arrowheads, soapstone bowls, callus shell beads, steatite effigies, and cremations. These changes have been linked to the arrival of Shoshonean peoples to this area. Some researchers suggest that desiccation around the Salton Sink pushed inland populations toward the coast, creating a ripple effect of changes.

The project area lies within the territorial boundaries of the Gabrieliño Indians. The Gabrieliños were Shoshonean and Takic language speakers, who resided in the general Los Angeles Basin and adjacent San Fernando Valley. Their name is derived from their association with the Mission San Gabriel Archangel. However, these Shoshonean people called themselves *Tong-va* according to Johnston (1962) and today some Gabrieliño have chosen this name (McCawley 1996). The fully developed Gabrieliño culture was a socially and economically complex hunting and gathering society, very advanced in their culture, social organization, religious beliefs, and art and material object production.

Gabrieliño culture underwent dramatic changes following European contact. Introduced diseases weakened and killed large numbers of native peoples, and most Gabrieliño villages were abandoned by 1810. Gabrieliño survivors helped build the Spanish Missions and the Mexican and American ranches that followed (Bean and Smith 1978:538). Today, several

thousand individuals in Southern California trace their ancestry to the precontact Chumash. They place a high value on objects and places associated with their past.

2.2.3 Regional History

Spanish and Mexican Periods

Although Spain claimed Alta California (the present day state of California) in the sixteenth century, settlement did not begin until 200 years later. To consolidate the Spanish claim to Alta California, an expedition led by Gaspar de Portolá was dispatched from Mexico City in the summer of 1769. Marching northward from San Diego, Portolá passed through the San Gabriel and San Fernando valleys in 1770. Mission San Gabriel was established in 1771 and by the early nineteenth century, most Gabrieliño were incorporated into the mission. The environs of present day Los Angeles and the current project area were included in the mission's domain. Mission San Fernando was added to the system in 1797 (Baer 1958:95).

The Pueblo de la Reina de Los Angeles was founded in 1781 on the west bank of the Los Angeles River (Rio Porciúncula). Settled by a small group of "*pobladores*" of African, Native American, and Spanish descent, the outpost manifested Spanish colonial ambitions for Alta California, which envisioned a series of civilian pueblos that would function in support of the Missions and *presidios* and expand the region's population (Robinson 1981:9).

Los Angeles remained an isolated settlement for many years, gradually gaining in population and importance as a center of commerce and social exchange. By1800, the pueblo boasted a population of 315. With the demise of the Mission system and abandonment of Mission San Gabriel in the 1830s, the town became the center of trading and economic activity in the region (Robinson 1981:111).

As part of Spain's effort to colonize Alta California, a system of land grants was initiated to induce settlement and long term occupation of the region. The large rancho tracts were bestowed upon a select few, primarily ex-soldiers and others who had provided services to the government. The political change from Spanish to Mexican colony in 1821 and the subsequent secularization of the missions in the 1830s had little effect on land use in pueblo controlled areas and in the San Fernando Valley; it continued as grazing land for cattle and settlement remained light.

American Period

With the United States takeover of California in 1848, the ensuing Gold Rush, and ultimate American statehood in 1850, the pace of settlement in the region expanded rapidly, as did commerce. The discovery of gold in northern California created a boom in the local cattle industry which fed the hordes of miners. Cattle ranching in the region declined during the 1860s after years of drought followed by disastrous floods, but continued to be a major economic activity. The American population of the Los Angeles region continued to rise through the 1860s, as many of the old rancho families lost title to their land, leaving a vacuum that was promptly filled by settlers from the east and mid-west. Most of the vast ranchos were divided and sold off in parcels as agriculture gained in importance. Within Los Angeles, development expanded from the early city center; the street grid was extended as new tracts were surveyed and subdivided. By 1870, the San Fernando Valley had emerged as the regions breadbasket, supplying wheat to Los Angeles and other markets.

The extension of the Southern Pacific Railroad into Southern California in 1876, followed by the Atchison, Topeka and Santa Fe in 1887, set the stage for a massive real estate boom that resulted in the founding of hundreds of new towns and tremendous growth of the City of Los Angeles. The City's population rose from 5,700 in 1870 to 50,000 by 1890 as residential development pushed ever outward. Industrial and commercial expansion, in addition to agricultural growth and advances as a shipping hub, established Los Angeles as a leading West Coast metropolis by the turn of the twentieth century (Fogelson 1968).

2.3 Project Setting

2.3.1 HWSG Site History

The Headworks site lies within the historic boundaries of Rancho Providencia. The property was originally part of a larger rancho, Rancho Portesuela, granted by the Spanish colonial government to Mariano de la Luz Verdugo, a Spanish native, in 1795. Rancho Portesuela encompassed the broad plains of the San Fernando Valley at the base of the Cahuenga Pass, extending eastward to the Verdugo Mountains. The desire for additional grazing lands prompted the fathers of the newly founded Mission San Fernando to displace Verdugo around 1810 (Foster et al. 2000).

Following secularization, the Mexican government conferred a 4,600-acre portion of the rancho, renamed Rancho Providencia, to Vicente de Osa in 1846. De Osa also owned Rancho Encino. The property included land on both sides of the Porciuncula (Los Angeles) River and extended to the crest of the Santa Monica Mountains (Cowan 1977:62). In 1851, de Osa sold the property to Alexander Bell and David Alexander, who became the first American landowners in San Fernando Valley. Bell and Alexander grazed cattle on the rancho, continuing the established pattern of land use (Roderick 2001:31).

Dr. David Burbank, a native of New Hampshire, purchased portions of Rancho Provedencia and Rancho San Rafael to the north in 1867. He raised sheep on the land and occasionally sold off small plots. Completion of the Southern Pacific Railroad across the Valley in 1874 instigated settlement of a number of new towns, including "Burbank," which was laid out northeast of the current project area in 1886. The boundaries of the new community extended as far south as the Los Angeles River. Lands on the opposite side of the river, including the current project area, were acquired by Col. G. J. Griffith and remained open ranch lands. A wealthy mining and real estate investor, Griffith donated 3,500 acres spanning the Santa Monica Mountains to the City of Los Angeles in 1896. Griffith Park was established east of the project area and initially incorporated the Headworks site itself (Eberts 2004). There are no roads or buildings indicated south of the river in the vicinity of the HWSG site on the 1902 USGS map of the area.

The first decades of the twentieth century saw the emergence of the movie industry in the San Fernando Valley. Universal City was established at the mouth of Cahuenga Pass in 1912. *The Birth of A Nation* was filmed in 1914 by D.W. Griffith on the slopes southwest of the project area, now part of Forest Lawn Hollywood Hills Memorial Park. Cecil B. DeMille's Lasky-Famous Players Company leased several hundred acres, known as the Lasky Ranch, along the river between Cahuenga Pass and Burbank. The movie ranch bordered, and may have even included, a portion of the present project area.

The 1921 USGS map indicates that the Los Angeles River's course immediately northeast of the project area had shifted to the south. There were as yet no roads close by. The real estate boom of the 1920s brought many new residents to the Burbank area and the local movie industry continued to expand. Universal was joined by Disney Studios in 1938. The north slopes of the Santa Monica Mountains above the project area remained undeveloped ranch and park land.

Flooding of the Los Angeles River had been a continuing problem since the initial settlement of the region, and the issue of flood control gained importance as development expanded in the early twentieth century. Plans to restrict the flow of the river, including complete channelization, had been pondered since a huge flood in 1914. Major floods in the early 1930s brought renewed planning efforts and, following a devastating flood in March 1938 that destroyed numerous bridges and caused extensive property damage, a program of channelization was implemented almost immediately. The section of river along the north side of Griffith Park and adjacent to the project area was among the first sections channelized in 1939.

The years following World War II saw numerous large-scale civic improvement projects undertaken in the Los Angeles region, and residential development in San Fernando Valley in the post-war era building boom was unprecedented. Orange groves were replaced by tract houses, and continued channelization opened new acreage for building. Channelization resulted in a substantial realignment of the river's course and many of its meanders were eliminated, including in the area adjacent to the project area, where its course was shifted somewhat to the north. A bow north of the present equestrian area, northeast of the project, was also straightened. In 1948, Forest Lawn Hollywood Hills Memorial Park was established on the hillsides south of the project area, on the former Lasky movie ranch property. The postwar era also witnessed the coming of the region's freeway system. Construction of the Ventura (101) Freeway commenced in 1952 and the 134 Freeway, which borders the east end of project area, was opened in 1968 (Roderick 2001:183).

Hollingsworth Drive, later renamed Forest Lawn Drive, which borders the project area on the south, was in place by 1945, its alignment approximating the existing one. Travel Town Museum, with its collection of miniature trains, was established at the northwest corner of Griffith Park, directly east of the project, in 1952. The most recent addition to the area is Mount Sinai Memorial Park, directly south of the Headworks site, which was divided from Forest Lawn Memorial Park in 1954 and developed in the 1960s (Lindsay 2004, pers. com.).

2.3.1.1 Site Specific History

With water supply seasonally unable to meet the demands of the rapidly growing city at the turn of the twentieth century, the Los Angeles Water Department worked diligently to increase the amount of available water. Among the measures undertaken was construction of a new diversion dam and main supply conduit on the northwestern side of Griffith Park, across the Los Angeles River from Burbank, on lands known as the Headworks site (Gumprecht 1999:98).

Two infiltration galleries were installed at the Headworks site in 1905 to capture the river's subsurface flow, and were expanded in 1916. The Crystal Springs Galleries, developed in 1886 on the east side of the park, were also expanded, and together provided the City enough

water in 1917 to allow a halt to all surface water diversions (that, unlike the naturally filtered subterranean water, required treatment). The flow soon proved inadequate and a third Headworks gallery was built in 1920. Well development along the river was also intensified and by 1925, there were 14 wells at the Headworks plant. The object of the wells, here and at other locations, was to capture as much usable river water as possible.

Channelization of the Los Angeles River radically altered the nature of the Headworks site. The section of the river spanned by the Headworks was straightened, and the deep, straight-sided, concrete lined channel was moved northward. Spreading basins were constructed along both sides of the river channel, with the principal basins placed to the south at the HWSG site. With construction of the 134 Freeway along the channel in the late 1950s, basins on the north side of the river were eliminated.

Pollution eventually forced the LADWP to eliminate its remaining surface diversions on the river and to discontinue pumping for water all along its course. The Headworks Deep Gallery was shut down in 1972 because of water quality concerns. Diversions from the river into the HWSG were halted in 1983 because of increased discharges of untreated sewage into the river. The last five wells in use at the Headworks plant were shut down in May 1986.

By 1993, treated wastewater had improved the quality of water flowing into the river so much that the LADWP conducted a study to determine whether water diverted from the river to the HWSG and later pumped to the surface by wells would be clean enough to drink. The study found that the extracted water complied with all drinking water standards, however, the project was ultimately abandoned in favor of alternative approaches (Gumprecht 1999:120-129).

2.3.2 Silver Lake History

The southern portion of the SLRC site lies within the four square leagues of land set aside by the Spanish crown for establishment of the Pueblo de Los Angeles in 1781, while the northern half is within the historic boundaries of Rancho Los Feliz. The 1 ½ square league rancho was granted to Vicente Feliz by the Spanish government in 1802. Juan Diego acquired the property prior to the American takeover, and received patent for the 6,647 acres in April 1871. In 1882, J. Griffith, donor of Griffith Park, purchased Rancho Los Feliz.

An open ditch that was a part of the Rancho Los Feliz water supply system passed through the canyon now occupied by Silver Lake Reservoir by the mid 1800s. The ditch was acquired by the Los Angeles Canal and Reservoir Co which in turn, became part of the City's system in 1868 (Layne 1957:24, 39).

The Silver Lake area was known as "Ivanhoe" before the turn of the twentieth century. Reminded of the rolling green hills of his homeland, Scottish developer Hugo Reid named the area after the famous novel by Sir Walter Scott. Many of the streets in Silver Lake have Scottish names, or names that are related to characters from the novel, such as Herkimer, Rowena, Hawick, Kenilworth, and Ben Lomond. The Ivanhoe community, northwest of the SLRC site, included around a dozen homes in 1893 (USGS 1902).

In the late 1800s, hunters journeyed to the area to seek game that was attracted to the natural ponding condition in Ivanhoe Canyon. Recognizing the value of the land, the Water Department began acquiring land for the SLRC in the 1880s when the surrounding area was primarily undeveloped. By the time the last parcel was acquired in 1904, the area was still largely uninhabited. With the addition of the reservoirs this quickly changed.

Construction of Ivanhoe Reservoir was completed in 1906. Silver Lake Reservoir, named for Herman Silver, a member of Los Angeles' first Board of Water Commissioners, was finished the following year.

City planners soon recognized the potential of a uniquely situated residential development overlooking the reservoirs and made substantial investment in underground utilities and concrete streets. In the 1920's and 1930's private developers were encouraged by the City to build and they were attracted by the rolling hills and blue water views of the focal point that is Silver Lake and Ivanhoe Reservoirs. Probably the most well-known developer was the silent film star Antonio Moreno. He modeled his development (the Moreno Highlands) after a Mediterranean village he had visited. His landmark home, the Canfield-Moreno Estate, set the architectural theme for many of the homes in the hills on the west side of the reservoir.

Silver Lake and adjacent Edendale and Echo Park areas were home to many early motion picture studios. The Mack Sennett Studios, Tom Mix, Disney, Monogram, and Talmadge Studios were located there and drew creative people to the area. Many locations in Silver Lake appeared in early motion pictures. For example, the famous Laurel and Hardy short film "The Music Box" was filmed here, and many of the Keystone Cops chase scenes were shot along Glendale Boulevard. Not only was the area home to many of the early studios, numerous film makers, actors, and directors also lived in Silver Lake. These included Gloria Swanson, Laurel and Hardy, Antonio Moreno, and many others.

"From the mid-1920s through the early 60s, Silver Lake was a showcase for some of California's best known and most innovative and influential architects" (LAT 1984). The area has been noted as having the greatest density of high style historic residences of any in the city. The neighborhood's distinctive character is established by its rich mixture of area residences designed in Mediterranean and other Revival styles of the1920s and 1930s, integrated with important works by major figures in the Modern movement, including Richard Neutra, Rudolf Schindler, Rafael Soriano, Gregory Ain, and John Lautner.

2.3.2.1 SLRC History

Planning for reservoirs at Ivanhoe was one of the first projects undertaken by the newly named Los Angeles Department of Water Superintendent, William Mulholland. Conceived in 1903, the Ivanhoe and Silver Lake reservoirs were to hold 1 billion gallons of surplus water collected during wet months. In September 1905, City voters approved a $1.5 million bond measure to finance the Los Angeles-Owens River Aqueduct project by an overwhelming popular mandate. "From that date on the Water Department bent every effort, both in planning and building within the city limits, for the accommodation and use of the additional water to be received from its new source of supply" (Layne 1957: 75). Excavation work began on the Ivanhoe Reservoir in November 1905. It was to occupy the upper

(northern) end of the site planned for the larger Silver Lake Reservoir. The Ivanhoe Reservoir was completed in May 1906, and in August of that year work was begun on Silver Lake Reservoir just below it.

The method employed to construct Silver Lake Reservoir was unique. Under Superintendent Mulholland's plans and supervision, an innovative hydraulic sluicing technique adapted from the mining industry was used to dredge soil from what would become the lake bed and move the material to form the earthen dam to create the reservoir. This was the first time the method had ever been used in the United States. The process proved so successful that engineers came from all parts of the country to study the method. Mulholland served as a consultant on numerous hydraulic fill dams built between 1910 and 1930, including the enormous Gatun Dam in the Panama Canal (Rogers 1995:23). Until 1923, all of the LA Bureau of Water Works and Supply reservoirs were earthen embankments, built using Mulholland's hydraulic sluicing techniques. Silver Lake Reservoir was completed in 1907 with a capacity of 773,000,000 gallons (Layne 1957:85).

Regular improvements to the reservoir complex continued into the 1940s. As part of their water conservation efforts following Owens Valley Aqueduct approval, the Water Department constructed a wooden roof over the new Ivanhoe Reservoir to decrease evaporation in 1911. The concrete pile supported roof required 800 barrels of cement and 750,000 ft of lumber. It remained until 1938, when it was removed "for health and maintenance reasons" (Layne 1957:87; supt. ltr.). Silver Lake has always been an open reservoir.

Prior to 1921, the reservoirs were used for reserve supply only, but the surrounding area's rapid growth through the teens necessitated its improvement for use as a domestic supply distribution reservoir (Layne 1957:184). Historically, water is supplied to the reservoir from the River Supply Conduit through a 60-inch inlet line to Ivanhoe Reservoir, and then into Silver Lake.

Beginning in 1922, fences were placed around the reservoirs, principally to keep out violators of the City's Fishing, Bathing, Boating, and Hunting ordinance. Besides a fence, a diversion ditch, later replaced by a wall, was constructed around Silver Lake Reservoir, which had received drainage from the surrounding hills that were fast becoming covered with residences (Layne 1957:185).

An outlet gate tower was added to Silver Lake in 1937. Located on the site of the present tower, the Classical Revival style structure complimented the existing Chlorine Plant below the dam. In 1944, work commenced on a new River Supply Conduit. Formed of some 41,260 feet of reinforced concrete pipe, the conduit delivered aqueduct water from the North Hollywood Pumping Plant to the Silver Lake reservoirs. It was put into service in March 1949. In 1945 the reservoirs were drained, the earth-filled dams improved, and the Ivanhoe Inlet Tower constructed (Layne 1957:299).

Between 1950 and 1953, a $1.5 million program of improvements was undertaken at Silver Lake and Ivanhoe Reservoirs. Far more extensive that any previous effort, the reservoirs were drained, deepened, their sides regraded and surfaced with asphaltic cement to reduce plant growth and erosion from wave action, and the dams were raised two feet. A 60-inch bypass pipeline was added at the bottom of the reservoirs, and a new 66-inch outlet

line was built from the Silver Lake dam south along West Silver Lake Drive. Additionally, a portion of Silver Lake Reservoir known as the "East Cove," where water historically tended to stagnate, was filled in. That area, as well as areas nearest the reservoirs affected by construction, was re-landscaped to restore their natural appearance. The reservoirs were refilled and returned to service in December 1953 (LADWP 1950; 1952;1953).

Most recently in 1976, after a dam of similar design suffered severe damage in the 1971 Sylmar earthquake, Silver Lake dam was reconstructed and seismically strengthened. The outlet tower control house and bridge were renovated at that time as well (*Downtown News*).

2.4 Findings

2.4.1 Cultural Resources Literature Review

2.4.1.1 HWSG Site

The record search revealed that three prior archaeological investigations have been undertaken with a one-half mile radius of the project area. One of these (Beroza 1980) included a portion of the HWSG site. That project reported no cultural resources of any kind within or adjacent to the HWSG project area. The other two previous surveys (McLean 1998; Windmiller 2001) encountered no significant cultural resources.

Two known historic properties are located within a one-half mile radius of the project area. One of these, CA-LAN-22H (19-150414), is located on the north side of the Los Angeles River and the 134 Freeway, and will therefore not be impacted by work in the HWSG area. The other historic property, CA-LAN-23H (19-150415), is located within or immediately adjacent to the HWSG project area.

CA-LAN-22H

The site of "Triunfo's Adobe" was identified from a plat map for Rancho Providencia, surveyed in 1868. Recorded as the rancho house of Rancho Cahuenga, formerly occupied by the "Indian Jose Miguel Triunfo," the structure was in ruins at the time of the survey. It was located approximately one-quarter mile northwest of the project area, near the present site of Disney Studios (Edberg 1978a).

CA-LAN-23H

Identified from a plat map of Rancho Providencia, surveyed in 1868, this is the site of the "Old House of Lopez." Probably an adobe structure, it was recorded as occupied by a man named Lopez at the time of the survey. The site record places this structure in the extreme eastern portion of the HWSG area, although its location is not certain. The house appears to have been located on the north bank of the Los Angeles River, and therefore beyond the limits of the current project area. It is quite possible that it is immediately adjacent to or under the 134 Freeway (Edberg 1978b).

2.4.1.2 SLRC Site

The record search revealed one prior cultural resources survey of the Silver Lake Reservoir Complex, and five previous archaeological surveys located within a one-half mile radius of the reservoirs. The previous survey of the reservoir complex itself (Brown 1990) observed

some historic structures that seemed to date to the period of dam construction and artifacts (early 20th century glass) within the perimeter fence of the reservoir. The buildings and landscape features existing on the property have never been recorded in a systematic survey or individually assessed. No prehistoric sites or materials were reported. None of the five surveys within a one-half mile radius of the SLRC (Brechbiel 1998; Duke 1999, 2000; Kuta 1998; Smith 2000) encountered archaeological sites or materials.

A number of historic resources were identified within a one-half mile radius of the SLRC. They include buildings and structures constructed in the first four decades of the twentieth century, as follows:

Garbutt House/Hathaway Mansion

A Mediterranean Revival style structure built in 1926, the Garbutt House/Hathaway Mansion is located 0.25 mile southeast of Silver Lake Reservoir at 1809 Apex Avenue. It was added to the NRHP in 1987 (19-166820).

Glendale-Hyperion Viaduct

The Glendale-Hyperion Viaduct is a concrete arch structure that spans the Los Angeles River, Riverside Drive, and the Golden State Freeway between Ettrick Street and Glendale Boulevard, approximately one-half mile north of the SLRC. Constructed by the City of Los Angeles in 1929, the viaduct was declared City HCM No. 164 in 1976. It was determined NRHP-eligible in 1986.

Site of First Disney Studio

Declared City HCM No. 163 in 1976, the site of the first Walt Disney Studio is located one-quarter mile northwest of the SLRC at 2725 Hyperion Avenue.

Tierman House

Designed by acclaimed local Modern architect Gregory Ain and constructed in 1940, the Tiernam House stands one-quarter mile northwest of the SLRC, at 2323 Micheltorrena Street. It was declared City HCM No. 124 in 1974.

Mack Sennett Studios

One of the first motion picture studios in Los Angeles, the Mack Sennett Studios were built in 1912. Declared City HCM No. 256 in 1982, the structure is located one-half mile southeast of the SLRC at 1712 Glendale Boulevard.

Engine Company No. 56

Built in 1924, Engine Company No. 56 is one of the few remaining unaltered Mediterranean Revival style engine houses in the City of Los Angeles. Located one-quarter mile northeast of the SLRC at 2838 Rowena Avenue, the structure was declared City HCM No. 337 in 1988.

Canfield-Moreno Estate

Also known as the Danziger House, and the Crestmount, this Mediterranean Revival style country villa was designed by Robert Farquhar and constructed in 1923 for Daisy Canfield

Danziger and her actor husband Antonio Moreno. Located at 1923 Micheltorena Street, one-quarter mile west of the SLRC, it was declared City HCM No. 391 in 1988.

Silver Lake and Ivanhoe Reservoirs

Silver Lake and Ivanhoe Reservoirs were designated City HCM No. 422 in March 1989. The nomination refers specifically to only the reservoirs and dams, noting their importance in the growth of the city and to its water system, declaring that "Silver Lake is as much a landmark as any structure of mortar or stucco" (Kanner 1989).

VDL Research House

An International style house designed by noted architect Richard Neutra and originally built in 1932, the house was destroyed by fire in 1963 and reconstructed by Neutra and son, Dion. Located at 2300 Silver Lake Boulevard, adjacent to the east side of the SLRC, it was declared City HCM No. 640 in 1997.

2.4.2 Cultural Resources Field Investigations

2.4.2.1 Field Methods

The two discrete areas of investigation for the proposed project, the Headworks and SLRC sites, were field surveyed by Greenwood and Associates cultural resource specialists Matthew Bandy, Ph.D. (archaeologist) and Dana Slawson, M. Arch. (architectural historian) on March 22, 2004. The cultural resources reconnaissance examined the proposed ground-disturbance footprints for built facilities, pipeline route corridors, and materials and equipment staging areas. Survey methods entailed pedestrian inspection of the areas to be impacted, which were restricted by topography, vegetation cover, modern land use, and general accessibility. All existing features of both facilities were photographed, and architectural details of buildings and structures, as well as landscape features, were recorded. Results are reported below. As the Silver Lake and Ivanhoe Reservoirs have previously been identified as an historical resource (City of Los Angeles HCM No. 422), and the SLRC SRP has a potential to impact contributing features of the reservoir complex, the entire SLRC property was included in the survey of historical resources.

2.4.2.2 HWSG Site

Archaeological Resources

For the purposes of this report, the HWSG site is considered as a single area. Essentially the entire parcel is scheduled to be impacted by construction of large subterranean storage tanks and by related staging and access area. For this reason the entire HWSG area was intensively surveyed for archaeological resources. The lenticular site is bounded on the northwest by the concrete channel of the Los Angeles River, and on the northeast by the 134 Freeway. The southern and eastern boundary of the site is Forest Lawn Drive, which bends southward near its midpoint, then northward as it meets the Rte 134/Zoo Drive interchange. The HWSG site is located on the USGS Burbank Quadrangle 7.5' map.

The site is currently unmaintained, and is covered with a mixture of native and introduced grasses and shrubs. Visibility ranges from very good (>80%) to moderate (~30%). In general, surface visibility is adequate in this entire area to permit surface identification of

archaeological remains. However, the entire area has been extensively modified with mechanical equipment. The HWSG area has the form of an elliptical bowl. The center is low, and surrounded on all sides by higher ground. The center (lower portion) of the area has been completely remodeled by earth-moving activity related to creation of the spreading grounds complex. Numerous traces of this remain, including cement-lined ponds and baffles, wells, and other features. The only relatively undisturbed areas of the HWSG are higher patches near the south, east, and west perimeter fences. Even these areas have been modified, however, most prominently by fill related to the construction of Forest Lawn Drive. In short, the entire HWSG area has been extensively disturbed, and the probability of encountering intact archaeological contexts or deposits of any kind is very low.

Historical Resources

Headworks Spreading Grounds encompasses a series of dry shallow basins situated beside the Los Angeles River, near the border between the cities of Los Angeles and Burbank. The east-west oriented, lozenge-shaped site is nearly 0.75 mile in length, and 0.20 mile across at its widest point. The spreading basins are depressed approximately 30 ft below the level of Forest Lawn Drive and generally overgrown with low brush. The configuration of the spreading grounds includes an earthen banked channel roughly 15 ft deep, running east-west through the central section of the site. At the west end of this channel is a concrete gate structure that once allowed Los Angeles River water to flow onto the site. Presently, the channel is dry and a large diameter corrugated metal pipe runs within it. The eastern half to two-thirds of the site is occupied by the actual spreading basins. The westernmost basins are the largest, measuring roughly 500 ft across. The two basins are separated by a central, east-west earthen berm and have bottoms of native sand and gravel. A series of smaller basins to the east also is divided by earthen berms. The side walls of two small basins in the northeast section of the site are lined with gunnite. At the east end of the site, extensive filling has occurred, raising the ground level several feet above the level of the spreading basin berms.

Additional features of the site include a row of 18 well casings that protrude vertically roughly 3 feet above grade, located along the top of the berm between the two large western basins. These are 10 inches in diameter and many are covered by conical caps, presumably to deflect rainwater. These are believed to date to the 1920-1940 period.

There are two small buildings on the site, both of recent construction. The first is a metal clad shed containing electrical equipment located in the south-central section of the site. The second building is located near the west end of the spreading grounds site. It is roofless, with concrete walls that are stepped at the top on two sides, with small decorative penetrations. The structure contains equipment associated with an inflatable Los Angeles River dam. Other features of the site include a series of hand operated geared steel cranks along the top of the river channel, also at the west end of the site. These are thought to be associated with flood gates in the channel directly below. Also, a row of electrical transmission towers parallels the river channel along the north side of the site. These date to the mid-1950s or later.

2.4.2.3 SLRC

The project vicinity has experienced extensive ground disturbance from past and ongoing municipal and residential development, construction of underground utilities, and road infrastructure improvements. The SLRC area is located on the USGS Hollywood Quadrangle 7.5' map. The reservoirs are enclosed by a perimeter fence and bordered on the west by West Silver Lake Drive, on the south southeast by Silver Lake Drive, on the northeast by Armstrong Avenue, and on the north by Tesla Avenue. Three areas of archaeological concern identified in the SLRC area have been given the following designations for ease of discussion: SLRC-1, -2, and –3. Their locations are indicated on Figure 2-1.

2.4.2.3.1 Archaeological Resources

SLRC-1

An area within the reservoir perimeter fence, east of the reservoir itself and south of the prominent landform known locally as "the Knoll." This broad, flat area is scheduled to be used as a staging area for construction materials and machinery. The area was once a part of the reservoir referred to as the East Cove, and seems to be composed primarily of deposits associated with filling completed in the 1950s. At present, it is planted in grass with landscaped islands of ornamental shrubbery. Surface visibility is generally poor (around 10%), being limited to bare patches in the grass, especially on the verges, and areas of rodent disturbance. The probability of archaeological sites existing near the surface in this area is extremely low. The only part of the SLRC-1 that is relatively undisturbed, and is therefore at all likely to have intact archaeological deposits, is the base of the hill to the north (the "Knoll").

This area has been heavily disturbed in the historic period, and the modern surface seems to reflect extensive filling and grading dating to the 1950s. This area was inspected by conventional pedestrian survey techniques, with transects spaced at approximately 20 meter intervals. Surface visibility was not high but was adequate, and no materials or sites of historic or archaeological significance were observed.

SLRC-2

An open public park area adjacent to but outside the reservoir perimeter fence, at the corner of West Silver Lake Drive, near the southwest corner of the reservoir itself, is the projected location of regulating station. It has been extensively landscaped and modified by mechanical means in the recent past. The park is planted with grass and a few trees. Visibility is slightly better than in SLRC-1, due to the higher rate of rodent activity, but remains low (around 15%). Most exposures are the result of rodent burrowing. The probability of encountering intact archaeological remains in SLRC-2 is very low, due to the extensive recent landscaping and other disturbance in this area.

This area has been extensively landscaped in its history as a public park. Further, its proximity to the face of the earthen Silver Lake dam suggests that it may have been subject to disturbance at the time the dam was constructed. It was inspected using judgmentally-spaced transects located opportunistically in order to take advantage of patches of rodent disturbance or high surface visibility. Surface visibility was poor but generally adequate. No materials or sites of historic or archaeological significance were observed.

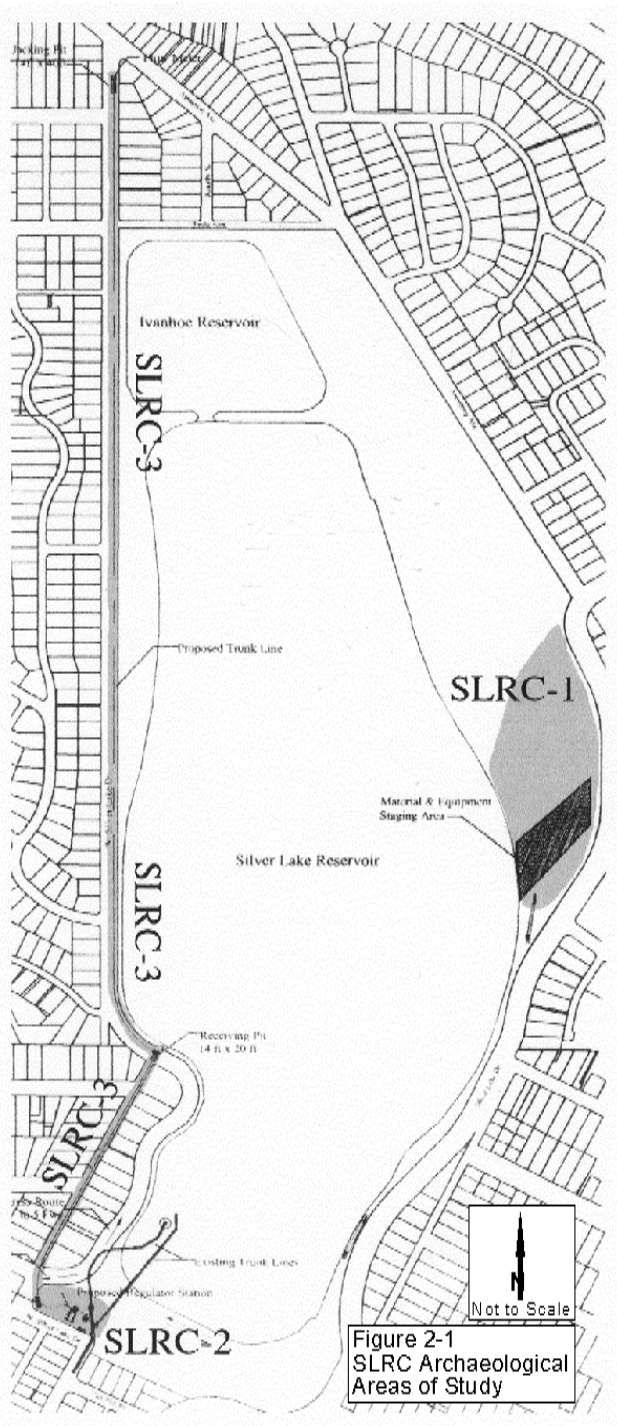

Figure 2-1
SLRC Archaeological Areas of Study

SLRC-3

A series of jackpits, receiving pits, and underground conduits are scheduled for construction along the west edge of the SLRC area, on West Silver Lake Drive and Redesdale Avenue. This entire area is paved at present and surface visibility is zero. This being the case, it is impossible to evaluate the presence or absence of cultural resources.

2.4.2.3.2 Historical Resources

Ivanhoe Reservoir and Dam

Built at the summit of Ivanhoe Canyon in 1906, Ivanhoe Reservoir is of the double earthen dam type. Its original capacity was about 154 acre ft. In 1907 Silver Lake Reservoir was constructed directly south of Ivanhoe (Figure 2-2). The two reservoirs were originally connected by a 36 inch cast iron pipe beneath the fill of the separating dam. Somewhat west of center of the dam between the two reservoirs is a reinforced concrete spillway. Added in 1944, the open channel type spillway is rectangular in section and measures 84 ft long and 53 ft wide. In 1952 Ivanhoe Reservoir was deepened 10 ft and paved with an asphaltic cement lining. Its present capacity is 174.78 acre ft. In 1993 the reservoir was re-paved and a 72 inch bypass pipeline was installed in the south end of the reservoir. This bypass was installed to add the capability to bypass both Silver Lake and Ivanhoe reservoirs concurrently. The Ivanhoe Reservoir has a capacity of 59 million gallons and covers an area of 7.84 acres. The top of the dam is 451 feet above sea level (LADWP n.d.a).

Ivanhoe Reservoir Inlet Tower

Rising from the waters of the Ivanhoe Reservoir near the center of its north bank, the inlet tower is formed from a vertical, large diameter steel pipe which is covered by a conical steel roof (Figure 2-3). A steel deck wraps the structure well above the high water line. It is accessed via a steel I-beam bridge with pipe railings. The inlet tower was constructed in 1933, concurrent with improvements to the River Supply Conduit. It is essentially unaltered and retains integrity of design.

Silver Lake Reservoir and Dam

Silver Lake Reservoir was constructed by the City of Los Angeles Water Department and placed in service in 1907 (Figure 2-4). It was constructed at an initial cost of $115,547; however, considerable work was done on the reservoir in the years that followed, bringing the total investment by the end of the 1930s to $271,107. The reservoir is formed by two earth fill dams – one at the south, and one at the north that separates it from Ivanhoe Reservoir. The irregularly shaped reservoir has a capacity 658 million gallons and covers an area of 78.2 acres. The Silver Lake dam is roughly 900 feet in length and the dam crest is at an elevation of 451 feet above sea level. Asphaltic cement paving was applied to the steep sides of the reservoir in 1953, and a 20 foot wide paved perimeter road encircles the structure (LADWP n.d.b). The south face of the Silver Lake dam is planted in shrubs and ornamental grasses.

Silver Lake Outlet Tower

The outlet gate control tower for the Silver Lake Reservoir rises from the waters of the reservoir near its southwest corner. Constructed in 1937 in the Renaissance Revival style, the

tower was extensively altered during reservoir renovations completed in the mid 1970s. The outlet tower is of cast-in-place reinforced concrete construction. It is square in plan and covered by a flat roof with overhanging eaves. At each corner of the control house is a buttress-like feature that rises to the structure's roof. These are supported from below by brackets. Extending from the west shore to the tower is a steel plate girder bridge that provides the only access to the structure. At the end of the bridge is a steel double door with single-light glazing.

Silver Lake South Outlet Chlorination Station

Situated roughly 100 feet south of the toe of the Silver Lake dam, near its west end, is the Silver Lake South Outlet Chlorination Station (Figure 2-5). It is a single-story Mediterranean Revival style building with a front-gabled rectangular main block and a lower wing that wraps the south and east sides. The structure is covered by a red shingle tile roof and the walls are smooth-finished stucco over cast-in-place reinforced concrete. Classical detailing includes narrow molded cornice trim beneath the closed eaves, with cornice returns at the gables and a molded water table. Impressions from the board formwork are visible in the area below the water table. The focus of the facade of the front gabled portion is a large multi-paneled wooden garage door surmounted by a small rectangular vent (now covered). The principal entrance is located in the street facade of the shed wing. It features a molded six-panel door with squared label mold trim incorporating a stylized keystone and corbel stops. Except for a small vent opening in the south elevation, the building is without windows. Designed by LADWP staff, the chlorination station was constructed in 1947 as a replacement for a 1920s structure at the opposite end of the dam. The structure is stylistically similar to many of the water system-related utilitarian facilities constructed by the LADWP during the 1910s through the 1940s. It is presently used by LADWP for storage.

Silver Lake Meter House

Standing off the southwest corner of the chlorination station, nearer the street, is the Silver Lake Meter House (Figure 2-5). The small one-story Mediterranean Revival style building corresponds architecturally with the adjacent chlorination station. It is square in footprint and covered by a pyramidal hipped roof clad with red Spanish tiles. Of cast-in-place concrete construction, the walls are finished with rough-troweled stucco with a narrow molded cornice beneath closed eaves. The windowless building is accessed by a steel clad door in its east elevation.

The meter house was designed by LADWP Bureau of Water Works and Supply staff and was likely completed in late 1927 or early 1928, about 20 years before the adjacent chlorination station. It originally contained a single outlet flow meter. The structure's exterior is essentially unaltered.

The chlorination station and meter house lot is enclosed by a low chain link fence and attractively landscaped with ficus trees and topiary, ivy ground cover, yucca, and neatly trimmed holly shrubs.

Silver Lake Chemical/Chlorine Plant

Situated between Silver Lake Boulevard and the toe of the Silver Lake Dam near its eastern terminus, the Chlorine Plant is a small, 22 x 14 ft, rectangular one-story building constructed

of cast-in-place reinforced concrete with hip roof (Figure 2-6). The Renaissance Revival style structure is typical of water system-related utilitarian buildings erected by LADWP during the 1910s through the 1930s. Characteristic of the style, the building displays symmetrical elevations with corner pilasters, water table, and simplified entablature that frame the wall planes. Its walls show the impressions left by the horizontal board concrete formwork. The street elevation features a centrally placed Classical entrance with squared pilasters supporting a stylized entablature. Flanking the entrance on either side are large rectangular window openings that are presently covered. The west elevation also displays two symmetrical window openings; both other elevations are without windows or doors. Red Spanish tiles cover the building's hip roof, which has a slight eave overhang. Currently, the chlorine plant is used for equipment storage. The plant stands within the grounds of the reservoir complex amid landscaped lawn, trees, and bushes. Chain link boundary fencing extends from either end of the building's facade.
Referred to as a "Chemical Plant" on architectural drawings and a "Chlorine Plant" on other maps, the building is believed to have been erected around the time that the Silver Lake and Ivanhoe Reservoirs went into use for domestic water supply (1920). Plans dating to 1927 depict the building much as it presently appears, but with a glazed and paneled front door and 12-light sash windows. The structure was functionally replaced in 1947 by the chlorination station at the west end of the dam. It is presently used for storage.

Caretaker's Residence

Located directly east of the Ivanhoe dam, the caretaker's residence is thought to have been constructed around the time of completion of the Ivanhoe and Silver Lake Reservoirs, between 1906 and 1910 (Figure 2-7). It is a modest single-story wood frame vernacular cottage with a hip roof. Clad with false clapboard wooden siding accented with cornerboards, the dwelling is roughly rectangular in footprint with a partial-width enclosed porch projecting from the front (east) elevation. Its medium pitched roof is clad with composition shingles and has moderately overhanging open eaves with rafter tails exposed beneath, and an extension of the principal roof shelters the front porch. Centered in the south wall is an external stucco-clad chimney. Fenestration is typically one-over-one double hung sash placed singly, paired, and in multi-window groups. Several aluminum sliding sash windows have been added on the south and east sides, but these do not detract significantly from the overall historic character of the house. Other alterations include addition of an entrance porch with a pipe-framed roof and concrete steps, and attic ventilators. Associated landscaping includes mature palm, olive, and willow trees, plus various ornamental bushes and vines.

Garage

Associated with the caretaker's residence, the garage stands to the northeast of that structure, adjacent to the principal reservoir access road (Figure 2-8). A small bathroom building stands adjacent to its north. The garage is a vernacular one-story wood frame building with a medium pitched front-gabled roof and a rectangular footprint. It appears somewhat later in its construction than the residence, perhaps dating to the 1920s (no permits or records were uncovered). Cut into the hill slope, it rests on a concrete foundation

and has walls clad with horizontal channel wooden drop siding. Composition shingles cover the roof, which has open overhanging eaves with rafter ends exposed. There is a single four-light wood casement window with plain, medium width trim in either side elevation. The street facade features a large paneled metal overhead garage door, a recent modification. The door has wide lugged wood trim and is surmounted by a sunburst motif slatted vent opening in the gable peak.

Bathroom Building

Located immediately north of the garage, the bathroom building is a small wood frame structure, nearly square in plan, and covered by a medium-pitched front-gabled roof (Figure 2-9). It rests on a concrete foundation and has a clapboard wall finish. The bathroom has a five-panel wooden door with medium width lugged trim on the front (east) side, shielded by a latticework screen. A single one-over-one double hung sash window in the north elevation, also with lugged trim, comprises the only fenestration. The building's roof is clad with composition shingles and it displays moderately overhanging eaves with exposed rafter ends. It is believed to date to the 1906-1930 period.

Sheds

To the rear (west) of the garage and north of the caretaker's residence, there are three single-story wood framed sheds associated with the residence (Figure 2-10). The northernmost of these is recently constructed, with painted plywood walls and a shed roof. The two other sheds appear roughly contemporaneous with the garage, bathroom, and house. The easterly shed is rectangular in plan and has a medium-sloped gabled roof with open eaves and composition shingles, and walls sheathed with painted corrugated sheet metal panels. It rests on a concrete foundation. There is a two-over-two double hung sash window with lugged trim centered in the north elevation. Based on its size and placement, this shed may represent an earlier garage.

The smaller westerly shed is also rectangular in plan. It is sheltered by a shed roof covered with roll roofing and its walls are finished with vertical tongue and groove planks. The single window visible has jalousie sash placed within the original window frame with lugged trim. It has a cast-in-place concrete foundation.

Landscape Building

The landscape building stands to the east of the Ivanhoe dam and approximately 300 feet south of the caretaker's residence, along the west side of the primary reservoir access road (Figure 2-11). It is a wood frame vernacular utility building with a side-gabled roof and redwood clapboard siding. The original portion of the building has a rectangular footprint. A full width shed annex has been added to the rear (west) side. The structure is believed to have originally housed reservoir related equipment and supplies, and dates to the 1906-1930 period. At the center of the landscape building's principal (east) façade is a large sliding freight door with diagonal bracing. The open eaves of the composition shingle clad roof overhang considerably, and the eave above the freight door is raised to allow access to taller equipment. There is an original four-panel personnel door with lugged trim to the left of the freight door, and two original windows in the south elevation are presently boarded, but plain, medium width trim is visible. A pair of rectangular louvered vents in the north gable

end and a mushroom type metal ventilator along the ridgeline appear original to the building. The structure rests on a cast in place concrete foundation. An office has been added within the north end of the building, and a modern door, aluminum sash windows, and a small louver-sided shed containing AC equipment have been installed in that area. Although the landscape building has had a number of modifications, it continues to manifest its historic character and the feeling of its period of significance.

Chlorination Station (Ivanhoe)

To the north of the caretaker's residence and its outbuildings, on the east side of the Ivanhoe Reservoir, is a former chlorination station (Figure 2-12). It is presently used by LADWP as a work shop. It is believed to date to ca. 1937, when a bypass pipeline was built from the Fletcher Drive pumping plant, northeast of the SLRC, to the reservoir. Displaying Art Moderne elements, it is a single-story, cast-in-place concrete structure with a two level parapeted flat roof. Its walls are exposed concrete with regularly spaced horizontal channels. A narrow rectilinear cornice caps the roof parapet. There is a metal roll-up door on the building's west elevation, and a metal clad personnel door on the south side. The exterior of the chlorination station appears to be unaltered.

Laboratory Building

The laboratory building stands to the east of the caretaker's residence, near Armstrong Avenue. Designed by LADWP staff in 1955, it is a Modern one-story, wood frame structure, rectangular in plan, and covered by opposed two-level shed roofs. The structure is clad with wood weatherboards and rests on a concrete slab. Fenestration is typically one-over-one double-hung sash.

Stone Retaining Walls

East of Ivanhoe Reservoir, adjacent to the east, uphill, side of the primary reservoir access road, and also along both sides of driveways extending from Armstrong Avenue to the perimeter road, are low stone retaining walls (Figure 2-13). Typically between two and three feet in height, the walls are of mortared random rubble construction, incorporating both rough-dressed stone and natural cobbles. In one location, opposite the landscape building, a three riser stone stair is cut into the wall. The stone retaining walls are thought to be early features of the reservoir complex, dating to the 1906-1940 period.

Concrete Retaining Walls

Following the reservoir's conversion to use for domestic water supply in 1921, there was heightened awareness of the facility's vulnerability to contamination from hillside runoff. To allay this problem, open perimeter ditches along the west and north sides of the site were constructed. These were replaced by the existing concrete retaining wall along West Silver Lake Drive in the 1930s. The walls are typically two feet high and topped by chain link fencing.

Trees and Other Landscape Features

The intent of the designers of the Silver Lake and Ivanhoe Reservoirs was to create natural looking bodies of water in a richly landscaped sylvan setting that would both attract

development to the surrounding area and exist as a verdant enclave in the midst of the expanding city. To this end, portions of the reservoir property were left with their original natural topography and vegetation, while other areas were planted in a naturalistic way with trees, shrubs, and other vegetation. Some alterations to the original landscaping were necessitated by the various reservoir improvement projects beginning in the 1930s and continuing through the present day. Reservoir improvements of the early 1950s in particular resulted in changes in the appearance of the reservoir and landscaping of directly adjacent areas. In-filling of the East Cove resulted in a substantial level area planted in lawn referred to as the "meadow." Currently the reservoir complex incorporates numerous mature trees of both native and introduced species, including live oak, eucalyptus, California sycamore, various species of pines, cedars, and palms, bottlebrush, olive, pepper, and magnolia. Additionally, the well maintained park-like setting is enhanced by areas of shrubs and bushes interspersed within expanses of open lawn and low vegetation such as the "meadow." Silver Lake's south dam is also attractively landscaped with ornamental grasses, wildflowers, and other ground cover.

3.0 Environmental Impacts

3.1 Standards of Significance

Adopted standards of significance that are applicable to cultural resources are provided in the CEQA Guidelines (2002) and the Draft City of L.A. CEQA Thresholds Guide (1998). Significance criteria considered for the cultural resources impact analysis are provided below.

3.1.1 Historical Resources

As defined by Section 15064.5(a) of the State CEQA Guidelines, the term "historical resource" includes the following:

- A resource listed in, or determined eligible for, listing in the California Register of Historical Resources (PRC Sections 5024.1);
- A resource included in a local register of historical resources, or identified as significant in an historical resource survey meeting the requirements of Section 5024.1(g) of the PRC. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant;
- Any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided the lead agency's determination is supported by substantial evidence in light of the historical record.

Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (PRC Section 5024.1[a]) including the following:

- It is associated with events that have made a significant contribution to the broad patterns of California history and cultural heritage;
- It is associated with the lives of persons important in our past;
- It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
- Has yielded, or may be likely to yield, important information in prehistory or history.

3.1.1.1 California Register of Historical Resources

As provided in California Public Resources Code Section 5020.4, the California Legislature established the CRHR in 1992. The CRHR is used as a guide by state and local agencies, private groups, and citizens to identify the state historical resources and to include which properties are to be protected, to the extent prudent and feasible, from substantial adverse change. The CRHR, as instituted by the California Public Resources Code, automatically includes all California properties already listed in the NRHP. It also includes those formally determined to be eligible for listing in the NRHP (Categories 1 and 2 in the State Inventory of Historical Resources), as well as specific listings of the State Historical Landmarks and in the State Inventory of Historical Resources, and specific listings of State Historical Landmarks and State Points of Historical Interest. The CRHR may also include various other types of historical resources that meet the criteria for eligibility, including the following:

- Individual historic resources
- Resources that contribute to a historic district
- Resources identified as significant in historic resource surveys
- Resources with a significance rating of Category 3 through Category 5 in the State Inventory (Categories 3 and 4 refer to potential eligibility for the NRHP; Category 5 indicates a property with local significance)

The CRHR follows the lead of the NRHP in utilizing the 50-year threshold. A resource is usually considered for its historical significance after it reaches the age of 50 years. This threshold is not absolute, but was selected as a reasonable span of time after which a professional evaluation of historical value/importance can be made.

Historic Districts

Historic districts are unified geographic entities which contain a concentration of historic buildings, structures, objects, or sites united historically, culturally or architecturally. Historic districts are defined by precise geographic boundaries. Therefore, districts with unusual boundaries require a description of what lies immediately outside the area, in order to define the edge of the district and to explain the exclusion of adjoining areas. The district must meet at least one of the criteria for significance discussed in Section 4852 (b)(1)-(4).

Those individual resources contributing to the significance of the historic district will also be listed in the California Register. For this reason, all individual resources located within the boundaries of an historic district must be designated as either contributing or as noncontributing to the significance of the historic district.

3.1.1.2 City of Los Angeles Historic Designation

In 1962, City Ordinance 162102 of the Los Angeles Administrative Code established the City Cultural Heritage Commission and created criteria for Historic-Cultural Monument (HCM) designation. The criteria formulated for HCM listing correspond closely with criteria established for State and National Register eligibility, and are as follows:

- any site (including significant trees and other plant life located thereon), building or structure of particular historic or cultural significance to the City of Los Angeles, such as

historic structures or sites in which the broad cultural, political, economic or social history of the nation, state, or community is reflected or exemplified,

- any site, building or structure which is identified with historic personages or with important events in the main currents of national, state or local history, or;
- any site, building or structure which embodies the distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction, or a notable work of a master builder, designer, or architect whose individual genius influenced his age.

3.1.2 Archaeological Resources

An archaeological resource shall be considered by the lead agency to be an "important" resource as defined by CEQA, if it:

- Is associated with an event or person of recognized importance in California or American prehistory or of recognized scientific importance in prehistory
- Can provide information which is both of demonstrable public interest and useful in addressing scientifically consequential and reasonable archaeological research questions
- Has a special or particular quality, such as the oldest, best, largest, or last surviving example of its kind
- Is at least 100-years-old and possesses substantial stratigraphic integrity
- Involves important research questions that historical research has shown can be answered only with archaeological methods

3.1.3 Threshold for Significant Impacts

3.1.3.1 Historical Resources

Criteria presented in the Draft City of L.A. CEQA Thresholds Guide (1998) are consistent with state criteria noted above. Under the Draft L.A CEQA Thresholds, a project would have a significant impact on historical resources if it would result in a substantial adverse change in the significance of an historical resource. A substantial adverse change in significance occurs if the project involves:

- Demolition of a significant resource;
- Relocation that does not maintain the integrity and significance of a significant resource;
- Conversion, rehabilitation, or alteration of a significant resource which does not conform to the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings; or,
- Construction that reduces the integrity or significance of important resources on the site or in the vicinity.

3.1.3.2 Archaeological Resources

The project would have a significant impact upon archaeological resources if it would disturb, damage, or degrade an important archaeological resource or its setting.

3.2 Evaluation of Significance

3.2.1 HWSG Site

Because continuous changes to the Headworks Spreading Ground site over the course of its 100 year history have resulted in a loss of integrity of design, character, and setting, such that it no longer reflects associations with the early development of the Los Angeles water supply system, the HWSG site and its various constituents do not appear eligible for state or city historic designation.

3.2.2 SLRC

The Silver Lake Reservoir Complex, comprised of both the Ivanhoe and Silver Lake Reservoirs and surrounding city-owned property, appears eligible for listing in the California Register as an historic district. The Silver Lake Reservoir and Dam was the first facility built by Superintendent William Mulholland and the Water Department using a unique water sluicing technique. The reservoir complex is part of a broad integrated system of water supply developed by the Department during the first decades of the twentieth century. Among the largest systems in the world, it continues to serve the city well nearly 100 years later.

The LADWP made a conscious effort to achieve a pleasing aesthetic appearance at the facilities. The initial design of the reservoir property and subsequent renovations have sought to provide a richly landscaped, natural appearance. The buildings associated with the reservoir complex, in keeping with LADWP's philosophy of facilities design of the era, were attractively rendered to integrate with and enhance the adjacent residential neighborhoods. Referring to Department chlorine stations, the *Intake* in 1932 took pride in stating that, "Beauty is combined with utilities in buildings of the Department of Water and Power" (LADWP 1932:4).

The SLRC is eligible for the CRHR for its contribution to the broad patterns of history. Construction of the reservoirs transformed a forgotten corner of the city into one of its most desirable neighborhoods. Silver Lake district underwent a period of rapid development during the 1920s and 1930s, in large part due to the development of the reservoirs and water delivery infrastructure there. Additionally, the aesthetic appeal resulting from LADWP's creation of a natural appearing "lake" amid trees and lush native and introduced vegetation functioned as a magnet for private development of the hillsides overlooking the reservoirs. From its beginnings, this "blue jewel" attracted the City's elite, including numerous Hollywood personalities. The Silver Lake neighborhood emerged as an enclave of the work of many of the region's most renowned architects, and the area has been noted as having the greatest density of high style historic residences of any area in the city. The neighborhood's distinctive character is established by its rich mixture of residences designed in Mediterranean and other Revival styles of the 1920s and 1930s by architects such as Pierpont and Walter Davis and Robert Farquhar, among others, integrated with important works by major figures in the Modern movement, including Richard Neutra, Rudolf Schindler, Rafael Soriano, Gregory Ain, and John Lautner. Noted architectural historians David Gebhard and Robert Winter have observed that, "For so small a district, the Silver Lake area has a high concentration of first-rate architecture, making it one of the most important places to visit in the city….Obviously, the view (of the hills and the reservoir) was the attraction, and the architects have played up to it" (Gebhard and Winter 1994:177-178). The district boundaries

take in the all facilities associated with the historic functioning of the complex and the surrounding landscaped property owned by the City/LADWP and confined by the city street grid established after completion of the reservoirs, by the1920s.

The SLRC is also significant for its association with William Mulholland. Mulholland was a larger than life personality in the annals of southern California history, who by force of character was able to make his vision of water supply for southern California a reality. He is the person most responsible for the current water management system of the Los Angeles Basin. Mulholland was responsible for conceiving the construction of the Los Angeles-Owens Valley Aqueduct, which transformed the face of the region, enabling Los Angeles' expansion to major city proportions, in addition to increasing agricultural production. Mulholland, who headed the Department of Water and Power for 42 years, oversaw the design and construction of the aqueduct, which, at roughly 240 miles in length, was the most grandiose of its day and an engineering marvel. He was also responsible for developing the system of pipelines, reservoirs, and dams that provided the region with a dependable and inexpensive supply of water. William Mulholland was intimately involved in the development of the Ivanhoe and Silver Lake Reservoirs beginning with the selection of the site. Mulholland himself designed the reservoirs and dams, and he was responsible for developing the unique construction technique employed (Kanner 1989).

The SLRC is also eligible for the CRHR for the significance of its design and aspects of its engineering. Silver Lake Reservoir and dam were the first structures in the country to utilize the hydraulic sluicing technique of excavation and puddled earth dam construction. This method later became commonplace throughout the country and beyond. It is the first built and the only surviving example of a hydraulically sluiced reservoir in the Los Angeles water supply system, the others being either mechanically excavated earthen structures, or concrete. The DWP designers worked diligently to create a dam in Ivanhoe Canyon that would be not merely functional, but aesthetically pleasing for the thousands who would live on the "seven hills" overlooking it. While the various features of the reservoirs have been changed and upgraded over the course of its 100 year history, it continues to manifest its historic appearance, character and association with William Mulholland and the Department of Water and Power. The present appearance of the reservoirs reflects changes in technology through their functional life and evolution of the water supply system during their period of significance, established as 1906-1953. This period represents initial construction through the improvement program of the early 1950s.

Table 3-1 summarizes the elements of the SLRC and identifies the status of the various features. Noncontributing features have typically been identified as such because of their a) recent construction; or b) loss of integrity. The locations of SLRC contributing features are indicated on Figure 3-1.

TABLE 3-1
SLRC Historic District
Status of Historic Resources at the SLRC

Element	Status	
	Contributing	Noncontributing
Silver Lake Reservoir	x	
Silver Lake Dam	x	
Silver Lake Outlet Tower		x
Ivanhoe Reservoir	x	
Ivanhoe Dam	x	
Ivanhoe Inlet Tower	x	
Silver Lake South Outlet Chlorination Station	x	
Silver Lake Meter House	x	
Chemical/Chlorine Plant	x

SLRC SRP
Contributing Historic Resources

3.3 HWSG Site Impacts

Facilities proposed for the HWSG Site include a 110-MG underground storage reservoir and a 4-MW hydroelectric power generating facility. The reservoir would occupy approximately 19 acres on the east half of the HWSG site. The reservoir itself would be 10 acres in area and 40 feet high. Following construction, native vegetation would be planted on the side slopes and top of the reservoir. LADWP also proposes to construct a 4-MW hydroelectric power generating facility at or near the HWSG site. The powerhouse would be approximately 50 feet wide, 70 feet long, and 30 feet high, and would be partially buried, with the highest point roughly 18 feet above ground. The remainder of the HWSG site that would be disturbed during construction would be returned to its original condition.

3.3.1 Construction/Short-term Impacts

Given the highly disturbed nature of the HWSG site, no impacts to historical resources associated with construction of the underground storage reservoir and hydroelectric power generating facility at the HWSG site are anticipated and no additional measures are necessary.

The potential for discovery of prehistoric or historical archaeological sites on the parcel is considered to be low. However, implementation of Mitigation Measure 2 would ensure that potential impacts would be less than significant.

3.3.2 Operation/Maintenance/Long-term Impacts

There will be no impacts to archaeological or historical resources associated with operation of the underground storage reservoir and hydroelectric power generating facility at the HWSG site and no additional measures are necessary.

3.4 SLRC Site Impacts

3.4.1 Construction/Short-term Impacts

3.4.1.1 Materials and Equipment Staging Area (SLRC-1)

Implementation of the proposed project would entail storage of various construction materials and equipment on an approximately 5 acre area presently a well maintained grass lawn interspersed with banks of low shrubs and small trees. Use of the area for this purpose would result in removal and/or degradation of the existing landscaping. Dating to the early to mid-1950s when a portion of the reservoir that extended into this area was in-filled, the existing landscape features do not relate to the early development of the reservoir complex. However, the "meadow" has existed for 50 years or more, is in keeping with the historic landscaping of the reservoir complex which incorporates other areas of open lawn, and contributes to the overall historic character of the resource. Therefore, project related impacts to the area are considered potentially significant. These impacts may be reduced to a less than significant level through implementation of Mitigation Measure 1.

3.4.1.2 Regulating Station (SLRC-2)

Construction of the Regulating Station and associated facilities will involve excavation and grading of an approximately 30,000 square foot area at the southwest corner of the SLRC property. This work will result in the removal of grass and trees presently located within the construction site. The existing landscape features include approximately eight California sycamore trees 10-18 inches in diameter, that are believed to date to LADWP improvements between 1951 and 1977. Several pine trees on the periphery of the site are considerably older. While not associated with the early development of the reservoir complex, the sycamore trees are in keeping with the character of the historic landscaping, and they contribute to the overall historic qualities of the reservoir complex. Removal of the sycamore trees and other landscape features will result in a potentially significant adverse impact to historical resources without mitigation. Implementation of Mitigation Measure 1 will reduce this impact to less than significant.

The potential for discovery of prehistoric or historical archaeological sites on the parcel is considered to be low. However, if encountered during construction, unavoidable impacts can be mitigated to a less than significant level by implementation of Mitigation Measure 2.

3.4.1.3 Silver Lake Bypass Pipeline (SLRC-3)

Initial LADWP assessments indicate that, with the proposed techniques, tunneling for the Silver Lake Bypass Pipeline at a depth of between 30 and 100 feet below grade and off-set laterally from building footprints by a minimum of 30 ft will not result in noise or vibration levels likely to result in impacts to existing residential construction and related features along the west side of West Silver Lake Drive, along Redesdale Avenue, or to contributing elements of the SLRC. Further, none of the buildings located along West Silver Lake Drive adjacent to the tunnel alignment is now a locally, state or federally designated historical resource.

Excavations for the north jacking pit and one receiving pit will be located within the travel lanes of the existing streets. A second jacking pit will be placed on a corner of the SLRC that is presently a landscaped public park area. Impacts related to these excavations will be temporary, and project specifications call for restoration of affected areas to their preconstruction appearance.

Existing trees and other landscaping on SLRC property at the corner of W. Silver Lake Drive and Redesdale Avenue are believed to date to the 1951-1977 period, with older (pine) trees located on the slope to the north. While generally not associated with the early development of the reservoir complex, the landscaping is in keeping with the historic character and function of this portion of the SLRC property and contributes to the historic resource. Impacts associated with removal of vegetation in this area are considered potentially significant without mitigation. Impacts will be reduced to less than significant with implementation of Mitigation Measure 1.

Because soils in these areas could not be examined, the potential for existence of archaeological resources could not be fully assessed. Impacts to cultural resources resulting from excavation/unanticipated discovery would be mitigated to insignificance through implementation of Mitigation Measure 2.

3.4.2 Operation/Maintenance/Long-term Impacts

3.4.2.1 Silver Lake Bypass Pipeline (SLRC-1)

There will be no direct impacts related to operation of the bypass pipeline. As a result of the project, Silver Lake and Ivanhoe Reservoirs at the SLRC would no longer be used for water supply and day-to-day operations would change. Specifically, the water currently flowing into Silver Lake and Ivanhoe Reservoirs would bypass SLRC. Provided that current project specifications, which call for the SLRC facility and property to be maintained consistent with the appearance and condition that LADWP has provided at this facility for several years, project impacts related to the change in function of the Silver Lake and Ivanhoe Reservoirs are not considered to be potentially significant adverse and no additional measures are necessary.

3.4.2.2 Regulating Station (SLRC-2)

There will be no impacts to archaeological or historical resources associated with operation of the regulating station at the SLRC and no additional measures are necessary.

3.4.2.3 Materials and Equipment Staging Area (SLRC-3)

Use of the meadow area will be limited to the construction phase of the SLRC-SRP and there will be no operational impacts to known archaeological or historical resources.

4.0 Mitigation Measures

4.1 Construction/Short-term Impacts

Potential adverse environmental impacts on cultural resources during construction will be addressed by implementing the following mitigation measures:

Mitigation Measure 1

Landscaping of the 30,000 square foot park area located at the southwest corner of the SLRC, the proposed location of a jacking pit, pipeline, concrete vaults for a regulating station, and other new facilities, shall be returned to an appearance approximating the pre-construction conditions, in so far as is possible, prior to decommissioning of the SLRC for domestic water supply usage. Where avoidance or transplantation of on-site trees and other vegetation is not possible, the proposed regulating station area (SLRC-2) should be landscaped with mature, healthy trees and plant material of comparable species, in keeping with the historic character and appearance of these portions of the reservoir complex. In areas where planting of trees and other large vegetation would impede operation of the new facilities, grass will be replanted over the buried structures, approximating the current appearance of the site in as much as that is practicable. In so far as is possible, landforms shall be returned to their pre-construction topography. The *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Cultural Landscapes* should be employed to mitigate potential impacts to the existing landscaping resulting from construction activities.

The same mitigation measures shall be employed for impacts related to the removal or degradation of landscaping in the area designated for equipment and material staging (SLRC-1), within the former East Cove area.

Mitigation Measure 2

The impact to cultural resources related directly or indirectly to the project-related activities shall be reduced to below the level of significance through the recovery or treatment of archaeological resources encountered during any archaeological site investigations or monitoring of ground-disturbing activities (construction) in areas with the potential to contain archaeological resources.

When investigations identify unique archaeological resources as defined in Section 21083.2 of the Public Resources Code, the site shall be subject to specified requirements for treatment. Where any respective element of the project is expected to require earthmoving, the following program shall be implemented and the requirement duly noted in project plans and specifications:

- Retain a qualified archaeologist to implement a monitoring and recovery program in any area identified as having the potential to contain unique archaeological resources.

- A qualified archaeologist shall monitor earth-moving activities in areas that are likely to contain unique archaeological resources. The archaeologist shall be authorized to halt construction, if necessary, in the immediate area where buried cultural remains are encountered. Prior to the resumption of grading activities in the immediate vicinity of the cultural remains, the project proponent shall provide the archaeologist with the necessary resources to identify and implement a program for the appropriate disposition as specified by Section 15064.5(e) of the CEQA Guidelines.
- The selected archaeologist shall be required to secure a written agreement with a recognized museum repository regarding the final disposition and permanent storage and maintenance of any unique archaeological resources recovered as a result of the archaeological monitoring. This would also include corresponding geographic site data that might be recovered as a result of the specified monitoring program. The written agreement for the disposition of recovered artifacts shall specify the level of treatment (preparation, identification, curation, cataloging) required before the collection would be accepted for storage.
- The selected archaeologist shall attend a preconstruction meeting to provide information regarding regulatory requirements for the protection of unique archaeological resources. Construction personnel shall be trained on procedures to be followed in the event that a unique archaeological resource is encountered during construction. In addition, the archaeologist shall ensure that the preconstruction meeting participants are trained to notify the Los Angeles County Medical Examiner (coroner) within 24 hours of the discovery of human remains. Upon discovery of human remains, there shall be no further excavation or disturbance of the site or any reasonably nearby area suspected to overlie adjacent human remains until the following conditions are met:
  - The Los Angeles County Medical Examiner has been informed and has determined that no investigation of the cause of death is required, and if the remains are of Native American origin, the descendants of the deceased Native Americans have made a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98.

If archaeological sites are encountered during construction of the proposed project, an evaluation of significance will be made by the selected archaeologist. Those sites that are determined to be eligible for listing in the CRHR shall be treated in accordance with one of the three feasible measures described in the "CEQA and Archaeological Resources," CEQA Technical Advice Series:

- Capping (covering) the site with a level of soil prior to construction over the site
- Incorporation into open space areas of the project site
- Excavation where the first two measures are not feasible.

For eligible sites, the City of Los Angeles shall, prior to construction, implement the applicable treatment plan.

With implementation of these measures, construction of the proposed SLRC SRP would not result in significant cultural resources impacts.

4.2 Operation/Maintenance/Long-term Impacts

No adverse environmental impacts to cultural resources are expected during routine operation of the proposed project, provided that the SLRC facility and property are maintained consistent with the appearance and condition that LADWP has provided at this facility for several years. As such, no mitigation measures are required.

Addendum to the Cultural Resources Assessment Report for the Silver Lake Reservoir Complex Storage Replacement Project

Introduction

This Technical Memorandum is an addendum to the *Silver Lake Reservoir Complex Storage Replacement Project – Cultural Resources Assessment Report* (CRAR) prepared by Greenwood and Associates in August 2004. The CRAR is incorporated herein by reference. This Technical Memorandum was prepared by CH2M HILL's cultural resources specialist, Dr. Jim Bard.

The purpose of this Addendum is to address additional, recently identified changes to the Project and their implications for the management and protection of cultural resources. These additional project components were not considered in the CRAR and include:

- Excavation for a proposed pipeline immediately to the east of Ivanhoe Reservoir
- Excavation for cut-and-plug operations at the northeast end of Silver Lake Reservoir
- Trenching along West Silver Lake Drive immediately southwest of the Silver Lake Reservoir for the Regulating Station Trunk Line
- Excavations for two Relief Stations along Silver Lake Boulevard southeast of the SLRC, one at West Silver Lake Drive and the other at London Street

Analysis

Construction activities necessary to remove Silver Lake and Ivanhoe Reservoirs (excavation east of Ivanhoe Reservoir and northeast of Silver Lake Reservoir) would take place in areas previously investigated by Greenwood and Associates. No historic buildings would be affected. Potential impacts associated with the area referred to as SLRC-1 would apply to this area. The potential for discovery of prehistoric or historical archaeological sites in this area is considered to be low. However, if encountered during construction, unavoidable impacts would be mitigated to a less-than-significant level by implementation of Mitigation Measure 2. Adverse impacts to historic landscaping are not likely to be significant in this area; however, to ensure that potential impacts would be less than significant, Mitigation Measure 1 would also be implemented.

Potential construction of the trunk line for the regulating station in West Silver Lake Drive, immediately south of the location for the regulating station, would be unlikely to result in adverse impacts to any archaeological resources that might be present because existing streets and underground utilities have likely already disturbed such resources. However, to ensure that impacts are less than significant, Mitigation Measure 2 would be implemented.

The two separate relief stations would be constructed belowground within existing streets; no historic buildings would be affected. Construction for the relief stations would be

unlikely to result in adverse impacts to any archaeological resources that might be present because existing streets and underground utilities have likely already disturbed such resources. However, to ensure that impacts are less than significant, Mitigation Measure 2 would be implemented.

Conclusions

The addition of project elements identified above does not affect the findings and conclusions presented in the CRAR prepared by Greenwood and Associates. Implementation of Mitigation Measures 1 and 2 in the CRAR would ensure protection of any archaeological resources that might be inadvertently encountered during construction and will ensure restoration of the historic character of the landscaping and setting once construction has been completed.

Memorandum

Date:	May 11, 2020
For:	Meghen Quinn, Hargreaves Jones
Subject:	Silver Lake Reservoir Complex Master Plan, *Secretary of the Interior's Standards for the Treatment of Historic Properties* Analysis
From:	Teresa Grimes, Principal Architectural Historian, and Emily Rinaldi, Associate Architecture Historian

Introduction

The purpose of this memorandum is to analyze the proposed site plan for the Silver Lake Reservoir Complex Master Plan (SLRCMP or Master Plan). The Silver Lake and Ivanhoe Reservoir Complex (Complex) is a designated Los Angeles Historic-Cultural Monument (HCM No. 422). The construction history of the Complex was included in a separate report prepared by GPA. As a designated HCM, the Complex is subject to the Los Angeles Cultural Heritage Ordinance (Ordinance). The Ordinance stipulates that the Cultural Heritage Commission (CHC) and Office of Historic Resources (OHR) are responsible for reviewing alterations to historical resources listed under national, state, and local landmark programs. Alterations are reviewed by the CHC and OHR for compliance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties* (Standards).

The Standards were issued by the National Park Service (NPS) and are accompanied by Guidelines for four types of treatments: Preservation, Rehabilitation, Restoration, and Reconstruction. The most common treatment and the one that applies to the proposed site plan is rehabilitation, which is defined by NPS as "the process of returning a property to a state of utility, through repair or alteration, which makes possible an efficient contemporary use while preserving those portions and features of the property which are significant to its historic, architectural, and cultural values."[1]

Proposed Design Summary

The Master Plan design has been developed in concert with a robust community process including four large, community workshops and seven smaller meetings with the Stakeholder Working Group (SWG) to date. In total, the community workshops have had 1,570 attendees and over 7,500 responses to three questionnaires about the Master Plan goals and design.

The design of the Master Plan is rooted in the environmental and social values of sustainable design (see attached Proposed Site Plan). Feedback from the SWG and responses to

[1] "Rehabilitation as a Treatment," National Park Service, accessed May 11, 2020, https://www.nps.gov/tps/standards/four-treatments/treatment-rehabilitation.htm.

questionnaires demonstrate the community places a high value on amplifying the power of the reservoirs to attract and sustain wildlife, connect with nature and neighbors, and educate.

Habitat and wildlife goals are achieved by enhancing the habitat value of the existing wooded Knoll and Eucalyptus Grove areas and re-establishing wetland and aquatic ecologies. To improve the Knoll and Eucalyptus Grove, a tree and ground cover replanting program will gradually replace a portion of the existing Eucalyptus trees to increase plant community biodiversity and food resources for wildlife. Wetland terraces are proposed to replace portions of both reservoir embankments and are complimented by floating wetland islands. Combined, these wetlands will support a habitat and food web primarily for local and migratory birds including aquatic wildlife such as fish, as well as provide secondary water quality treatment.

Community spaces are interwoven within this ecological system, connecting Silver Lake residents to natural processes and ecological cycles. The proposed design consists of a series of six primary spaces stitched together by a tree-lined Promenade (orange line on plan) with seating terraces and ornamental plantings: Ivanhoe Overlook, The Knoll, The Meadow, The East and West Narrows, Eucalyptus Grove, and South Valley.

The most prominent community space is the Meadow. It represents an expansion and reconfiguration of an existing 3.4 acres area of open lawn and shade trees. The new area is approximately 7.5 acres. The primary design moves consist of a large lawn with shade trees that slopes down to seating terraces and walking paths, which step to the water's edge and give way to constructed wetlands and floating habitat islands. A second flat lawn is perched at the water's edge and seating terraces. Along the street frontage is a series of native gardens, walking trails, and a picnic grove.

The remaining spaces consist predominantly of a combination of walkways, overlooks seating terraces, and ornamental planting. In select areas of the Ivanhoe Overlook and Eucalyptus Grove, small foot paths lead to observation platforms within the wetland terraces. In the South Valley, the existing Recreation Center renovated dog parks, play fields, and courts are complimented by a new multi-purpose community building, which includes an indoor basketball court.

History of the Silver Lake and Ivanhoe Reservoir Complex

Throughout its history, the Silver Lake and Ivanhoe Reservoir Complex has been integrated into a larger, ever evolving water system – initially it was part of an ecological network of streams and wetlands, and most recently, a man-made feature of the City's potable water infrastructure.

A natural depression within Ivanhoe Canyon of the San Gabriel Mountain Range, the Complex was once a marshy pond historically referred to as a "meadowland" which attracted surrounding wildlife. In fact, the abundance of wildlife enticed hunters to this area for game. Wetlands mapped for the Historical Ecology of the Ballona Creek Watershed, prior to 1890, show an intermittently flowing stream from the south end of what is now Silver Lake Reservoir draining into a small wet meadow complex to the south. From here, water flowed south to a vast wetland called La Cienega, located just north of Baldwin Hills, and eventually flowed to Ballona Lagoon. The La Cienega and Ballona Lagoon complexes supported the largest wetland habitat in the watershed.

The Complex was selected by the City for its adventitious location to connect to an evolving LA water system and provide storage capacity and stable water supply needed for the growing

population of Los Angeles. The site was anticipated to have a flow line at 445 feet above sea level and once constructed would have a surface area of approximately 129 acres. In 1903 the City acquired the land necessary to build the Complex, designed and engineered by Los Angeles Water Department Superintendent, William Mulholland. Of historic significance, Mulholland was the first engineer in America to use a method of construction called hydraulic sluicing to build a dam. The two reservoirs were formed by three reinforced earthen dams, the Silver Lake and Ivanhoe Dams, and originally featured unpaved earthen embankments.

Named after the Ivanhoe Canyon, Ivanhoe Reservoir was completed first in 1906, followed by Silver Lake in 1907 which was named after Herman Silver, a member of Los Angeles' first Board of Water Commissioners. Initially, the Silver Lake Reservoir was used as a source of water for irrigation, while the Ivanhoe Reservoir provided domestic drinking water. Since its completion, Ivanhoe and Silver Lake Reservoirs have been altered over time. Notable alterations include those undertaken in 1920, 1951–1953, 1975–1976, and 2011–2017. In 1920 the reservoirs were modified so that both were used exclusively for potable domestic water supply. At this time, the embankments of the Silver Lake Reservoir were altered with a steeper slope, increasing the depth of the reservoir and portions of the embankments were also likely covered in a paving material at this time to prevent erosion.

During 1951–1953, both reservoirs underwent extensive improvements, again to meet City water demands and government water quality regulations. The Silver Lake Reservoir was enlarged by steepening the embankment slopes and paving them. Additionally, a 60-inch bypass line was installed underneath the reservoir. Much of the excess excavated soil from this work was used to fill in the east shore and a lagoon known as the East Cove. East Cove was an area prone to stagnation and algae growth which negatively impacted water quality. The Ivanhoe Reservoir was also deepened at this time and its basin and embankments were paved with asphalt.

Due to seismic concerns, the Silver Lake Dam was completely reconstructed in 1975-1976. The outlet tower was renovated, and a new 72-inch bypass pipe was installed. As a result, the southern end of the Silver Lake Reservoir was reshaped to its current configuration.

Since they were completed in 1907, the Silver Lake and Ivanhoe Reservoirs have become beloved water bodies synonymous with the Silver Lake neighborhood. In the 1920s and 1930s developers were encouraged to build by the City and were attracted by the hills and the blue jewel focal point that is the Silver Lake and Ivanhoe Reservoirs. The neighborhood attracted an eclectic mix of artists, filmmakers, actors and directors whose homes were designed by great names in architecture, such as Richard Neutra, David Hyun, Eric Lloyd Wright, Gregory Ain, John Lautner, Raphael Soriano, Rudolph Schindler, Rodney Walker, and Frank Lloyd Wright.

In 2008 the Complex was decommissioned and removed from the City's drinking water supply system due to a change in US federal regulations. The Silver Lake Reservoir was taken out of service in 2008, drained in November 2015 to construct a Bypass Project, and refilled in April 2017. The Ivanhoe Reservoir was removed from the distribution system in December 2017 and remains filled with water.

Today, the reservoirs remain a locus of the Silver Lake neighborhood and a cherished resource of the community.

Character-Defining Features

The first step in applying the Standards to a historic property is the identification of character-defining features. Character-defining features are the components that contribute to a historic property's sense of time and place. GPA identified the character-defining features of the Complex in a separate report using the *Guidelines for the Treatment of Cultural Landscapes.* Cultural landscapes are geographic areas that have been modified by human design or use. The period of significance for the Complex was established as 1906 to 1953, representing the date of construction through the improvement program of the early 1950s. The character-defining features are summarized below for convenience (see Table1 and attached Existing Site Plan).

Compliance with Secretary of the Interior's Standards and Guidelines

The following is an analysis of the proposed SLRCMP site plan (Proposed Site Plan) for compliance with the Standards and Guidelines for Rehabilitating Cultural Landscapes:

Standard 1. *A property will be used as it was historically or be placed in a new use that requires minimal change to its distinctive materials, features, spaces and spatial relationships.*

The Complex was decommissioned and removed from the municipal domestic water distribution system between 2011 and 2017. As such, the Complex can no longer be used for its historic purpose. The SLRCMP will repurpose approximately 116 acres of the property as a public park and community gathering space, while the remaining 11 acres will be retained by LADWP. Although the Complex will no longer be used for the storage and treatment of drinking water, LADWP has active components at the Complex which will require retaining areas of the property for system operations, personnel, and future projects. LADWP's active uses are located at the northeast portion of the property and are not a part of the SLRCMP. They also include the North Ivanhoe Dam, Ivanhoe Inlet Tower, as well as the Silver Lake Reservoir bypass line, dam, and outlet tower.

Ninety-four of the 116 acres of the property are occupied by the Ivanhoe and Silver Lake Reservoirs. These constructed water features will no longer be used for the storage and treatment of drinking water. They will be retained and the cultivation of wildlife habitat will be further enhanced. The reservoirs currently provide an important year-round resource for wildlife. A number of different bird species have been observed at the reservoirs, including species of migratory birds that are protected by the Migratory Birds Treaty Act such as the great blue heron and Allen's hummingbird. As part of the SLRCMP, the embankment edges will be altered to construct habitat terraces and habitat islands installed within the bodies of water in order to increase habitat diversity, provide predator protection, and improve water quality. Wetlands and habitat islands are central to expanding wildlife habitat, which was identified as a primary goal of the SLRCMP early on in the community engagement process.

The Proposed Site Plan complies with Standard #1 because the new use will require minimal change to the defining characteristics of the property and its environment compared to other uses considered by the LADWP. In 2006, Federal Environmental Protection Agency issued new guidelines for water quality that required open reservoirs to be covered, to be removed from service, or for the water to be treated before distribution. Both the covering of the Ivanhoe and Silver Lake Reservoirs and the treatment of water before distribution would have necessitated the construction of new infrastructure that would have substantially changed the character-defining features of the Complex. In the past, the LADWP has also considered a proposal to drain the reservoirs of water and completely fill them in, which would essentially destroy the physical integrity of the Complex.

Reservoirs, like Ivanhoe and Silver Lake, are constructed for the purpose of storing water. The enhanced habitat use at the Complex will therefore require minimal

change to the reservoirs' defining features, which are their overall shape and structure designed as a repository for water. These features, which retain their 1953 configuration and appearance, will be retained and both reservoirs will continue to store water. Neither the new materials installed along embankments, including new concrete paving, boulders, and vegetation, nor the habitat islands will substantially alter the reservoirs' historic configuration, which have evolved since their construction.

Other character-defining land uses, such as the Knoll, West Landscaped Area, and Grassy Patch, will be reprogrammed for passive recreation and educational uses. New features will be added as part of the SLRCMP but the historic character of the Complex will be preserved overall. New pedestrian circulation will be added at the Knoll and Eucalyptus Grove. New structures will also be constructed at the base and summit of the Knoll, including a new shade pavilion/outdoor classroom, environmental education center, and seating terraces. New furnishings will be added to the Picnic Grove, and new native vegetation will be planted throughout. However, the impact of these alterations is minimal as new features will not substantially change, obscure, damage, or destroy these character-defining land uses. Therefore, the historic spatial organization and land use patterns will remain overall.

Features and spaces that will be substantially altered do not date from the period of significance and are therefore not character defining. These include the Silver Lake Meadow where a new slopped lawn will be constructed; the Recreation and Parks Center where a new community center, play field, and basketball court will be constructed; the Ivanhoe Path, which will be incorporated into the new park's pedestrian circulation; and the Silver Lake Dog Park, which will be renovated and expanded. Other non-character-defining features and spaces such as the Tesla Pocket Park, Nursery School, and East Landscaped Area will remain.

Standard 2. *The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.*

The Proposed Site Plan complies with Standard #2 because the historic character of the property will be retained and preserved overall. The constructed water features, the Ivanhoe and Silver Lake Reservoirs, will be retained and comprise a majority of the Complex's total acreage. Additionally, most of the remaining character-defining features are located within the LADWP-controlled areas of the Complex and are not a part of the SLRCMP. These include the majority of character-defining buildings and structures as well as vehicle entrances and circulation at the northeast corner of the property. As discussed under Standard #1, non-character-defining features such as the Silver Lake Meadow will be altered; however, these features were constructed after the end of the period of significance and therefore do not contribute to the historic character of the property.

Character-defining features that will be altered as part of the SLRCMP include the embankments and perimeter paths of the Ivanhoe and Silver Lake Reservoirs.

Alterations at the embankment edges include the construction of seating terraces, habitat terraces, and observation platforms, the installation of vegetation, boulders, as well as the repaving of the remaining embankment surfaces. The Ivanhoe and Silver Lake Reservoir perimeter paths will also be reconfigured at select locations in order to better facilitate pedestrian circulation through the new park. The alteration of these features however will not diminish the historic character of the Complex overall. The topography or shape of the reservoirs will be retained, and the general configuration of the perimeter paths will be largely preserved. Additionally, while the embankments and perimeter paths retain their 1953 configuration and appearance, both features have substantially changed over time since the Complex's original construction in 1906–1907. The reservoir embankments originally consisted of a soft, natural edge that was planted with various vegetation. Over time, the reservoirs were re-shaped and deepened and the embankments paved. The perimeter paths are also not original, and portions of the paths were constructed over time to facilitate LADWP operations.

Standard 3. *Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.*

New features in the Proposed Site Plan include pavilion/outdoor classroom structures, seating terraces, habitat terraces and islands, observation platforms, fitness circuit, living laboratory, as well as various park furnishings like seating, trash cans, and lighting. The development of construction documents for the new public park is not part of the SLRCMP process; therefore, the design of these new features has only been developed in concept. Based on the renderings dated January 23, 2020, new features appear to be adequately differentiated as new by their design, modern assembly, and hardware. They do not appear to create a false sense of historical development nor do they appear to be conjectural features. Therefore, they will be distinguishable as non-original upon close inspection. Therefore, the Proposed Site Plan complies with Standard #3.

Standard 4. *Changes to a property that have acquired historic significance in their own right will be retained and preserved.*

None of the changes to the Complex since 1953 have acquired significance in their own right. Therefore, the Proposed Site Plan complies with Standard #4.

Standard 5. *Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.*

The Proposed Site Plan complies with Standard #5 because distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize the property will be preserved. Features and finishes that will be removed generally consist of utilitarian and common materials, such as the concrete and asphalt paving at the embankments and perimeter paths. The concrete paving at the Ivanhoe Reservoir embankment and asphalt paving at both reservoir's perimeter paths was added after the end of the period of significance and therefore not character defining. While the asphalt paving at the

Silver Lake Reservoir embankment likely dates from the early 1950s, it is not a distinctive material nor is it an example of craftmanship that characterizes the property.

As described under Standard #2, the Ivanhoe and Silver Lake Reservoir embankments will be altered; however, neither is an example of distinctive construction techniques. The Ivanhoe and Silver Lake Reservoirs were originally constructed using a modified method of hydraulic sluicing; however, both have been so substantially modified over time that none of this original infrastructure remains extant. Each reservoir has been substantially re-shaped and deepened, and the soft, natural edges paved. The Ivanhoe and Silver Lake Dams have also been substantially altered or reconstructed entirely. The Complex has been entirely reengineered since its original construction using modern and common construction techniques.

Standard 6. *Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.*

The Proposed Site Plan complies with Standard #6 to the extent feasible. The replacement of missing historic features is not proposed. The only deteriorated historic features that will be removed and replaced are the mature trees located throughout the Complex that have reached the end of their natural lifespan. The Master Plan Report will recommend developing a comprehensive tree replacement plan that follows current and best practices for improving ecological function and habitat as well as maximizing biodiversity. This may necessitate replacing non-native eucalyptus tree species with native species. The *Guidelines for Rehabilitating Cultural Landscapes* note that if replacing vegetation in kind is not "not technically, economically, or environmentally feasible" then a compatible substitute may be considered.[2] The removal of non-native species of mature trees is unavoidable in order to achieve the project's goals of protecting wildlife and enhancing habitat. For species of native trees that have reached the end of their natural lifespan, the Guidelines recommend replacing them in kind with a species of similar type, form, shape, and scale. As the Complex is a designated HCM, a

[2] "Guidelines for Rehabilitating Cultural Landscapes," U.S. Department of the Interior, National Park Service, accessed March 13, 2020, https://www.nps.gov/tps/standards/four-treatments/landscape-guidelines/rehab/vegetation.htm.

comprehensive tree replacement plan would be reviewed by the CHC and OHR for compliance with the Standards.

Standard 7. *Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.*

The Proposed Site Plan complies with Standard #7 because no treatments that would cause damage to historic materials are proposed.

Standard 8. *Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.*

The Proposed Site Plan complies with Standard #8 because there are no known archeological resources within the Complex.

Standard 9. *New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work will be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.*

The Proposed Site Plan complies with Standard #9. As described above, alterations to the Ivanhoe and Silver Lake Reservoir embankments and perimeter paths will not diminish the historic character of the Complex overall. The topography or shape of the reservoirs will be retained, and the general configuration of the perimeter paths will be largely preserved.

New additions to the Ivanhoe and Silver Lake Reservoirs include the construction of habitat islands. Character-defining features will not be destroyed as a result of their construction, and both the Ivanhoe and Silver Lake Reservoirs will be preserved. The number and location of habitat islands has not been finalized. Based upon renderings dated January 23, 2020, habitat islands will be generally located within 165 feet of the embankments and only comprise approximately 6% of the total area of the water body. The habitat islands are also modest in massing, size, and scale as well as differentiated from the old by their modern design and assembly. As the Complex is a designated HCM, the design of new additions would be reviewed by the CHC and OHR for compliance with the Standards.

New construction is properly located within the Complex. The Environmental Education Center will be located at the southwest base of the Knoll, and shade pavilions/outdoor classrooms are proposed for the summit of the Knoll and the northwest corner of the Ivanhoe Reservoir. Character-defining features will not be destroyed as a result of their construction, and both the Knoll and Ivanhoe Reservoir will be preserved. Because of the variations in the topography and the overall size of the Complex, the three structures appear to be only visible from select vantages and will not dominate the Complex's significant viewsheds. As noted above, the designs of these structures will not be finalized as part of the SLRCMP process. Based upon renderings dated January 23, 2020, each structure appears to be modest in massing, size, and scale as well as differentiated from the old by its modern design

and assembly. The design of new buildings would also be reviewed by the CHC and OHR for compliance with the Standards.

Standard 10. New additions and adjacent or related new construction will be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

The Proposed Site Plan complies with Standard #10. New additions and related new construction are freestanding. Therefore, if removed at a later date, the essential form and integrity of the Complex and its environment would be unimpaired.

The habitat islands will be new features anchored to the bottom of the reservoirs, that are neither visible nor character-defining. Installing them will not require the destruction of any character-defining features and removing them in the future would not compromise the integrity of the Complex. As the habitat islands only effect approximately 6% of the total area of the water body and are modest in size, during their lifespans the new features will not diminish the historic character of the SLRCMP area overall, which encompasses a total of 116 acres. Additionally, the immediate setting of the Ivanhoe and Silver Lake Reservoirs has substantially changed over time. The water level of the reservoirs continually fluctuates due to naturally occurring evaporation and man-made alterations, including changes to the reservoirs' depth as well as local and state regulations dictating the height of the water. Views of the water within the reservoirs have also changed. The Ivanhoe Reservoir was originally constructed to supply domestic drinking water. It was covered with a wood structure from its construction through at least the 1930s when the cover was removed. Therefore, the water at the Ivanhoe Reservoir would not have been visible for approximately 30 of the 50 years that constitute the Complex's period of significance. The Silver Lake Reservoir was originally constructed as a source of water for irrigation. It had soft, natural edges and basin. Various vegetation would have been visible along the edges presumably within the reservoir itself depending on the level of water and sediment build up.

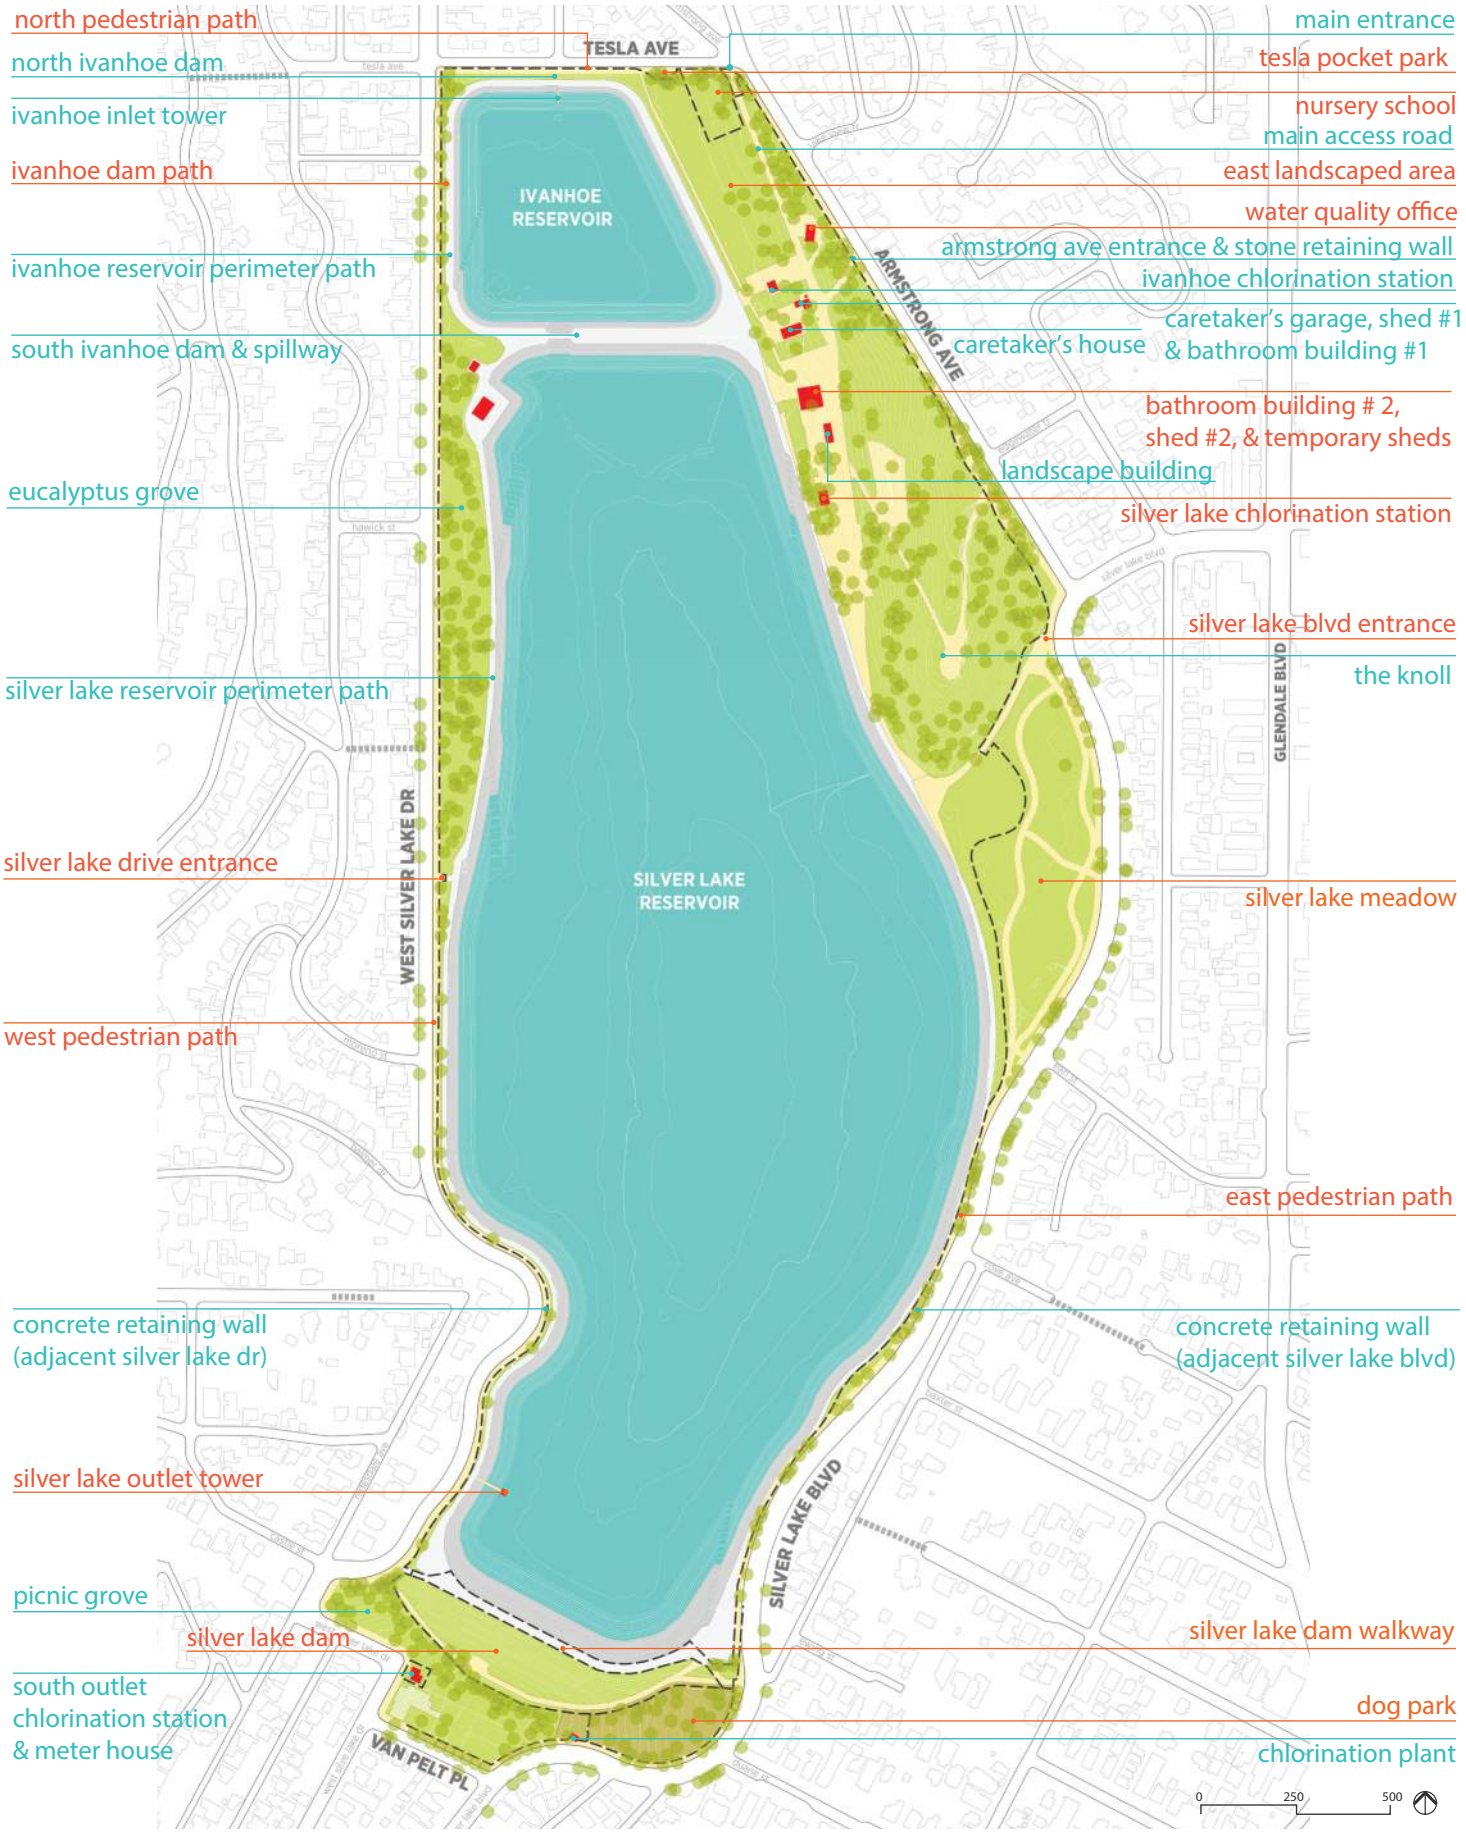
While the habitat islands will also partially obscure views of an uninterrupted body of water, views and viewsheds from within the Complex itself and from outside the boundaries of the SLRCMP are not considered character defining. The Complex is a historic designed landscape, which was engineered and constructed for the purpose of water storage. Unlike some historic landscapes, the Complex has neither natural nor designed viewsheds. An example of a natural viewshed that is character defining is Picket's Charge at Gettysburg National Military Park in Gettysburg Pennsylvania, which is characterized by an uninterrupted view of the natural topography between the historic locations of the Union and Confederate battle lines. An example of a designed viewshed is the view from Bethesda Terrace looking north in New York City's Central Park. Landscape architects Fredrick Law Olmstead and Calvert Vaux designed a layered viewshed composed of the Lake in the foreground, the Ramble in the middle ground, and Belvedere Castle in the background. Conversely, the Complex was designed for a utilitarian purpose without thought to constructing viewsheds at specific vantages. Alterations to the

views of the uninterrupted body of water from within and outside the SLRCMP area are therefore independent from the effects to the integrity of the Complex.

It is important to note that the Standards are not intended to be prescriptive, but instead provide general guidance. They are intended to be flexible and adaptable to specific project conditions to balance continuity and change, while retaining materials and features to the maximum extent feasible. Their interpretation requires exercising professional judgment and balancing the various opportunities and constraints of any given project. Not every Standard necessarily applies to every aspect of a project, nor is it necessary to comply with every Standard to achieve compliance as a whole.

Recommendations

Based on the review of the Proposed Site Plan dated January 23, 2020, the SLRCMP complies with the Standards and Guidelines for Rehabilitating Cultural Landscapes. As the SLRCMP is further developed, GPA encourages the consideration of the following recommendations to ensure the proposed project complies with the Standards:



- The historic concrete retaining walls along Silver Lake Boulevard and Silver Lake Drive should be retained and incorporated into the SLRCMP site plan to the maximum extent feasible.
- A comprehensive tree replacement plan should be developed based on the *Guidelines for Rehabilitating Cultural Landscapes.*

Thank you for your consideration of this memorandum. We are happy to answer any questions you may have. You can reach us at (310) 792-2690 or by e-mail at teresa@gpaconsulting-us.com and emily@gpaconsulting-us.com.

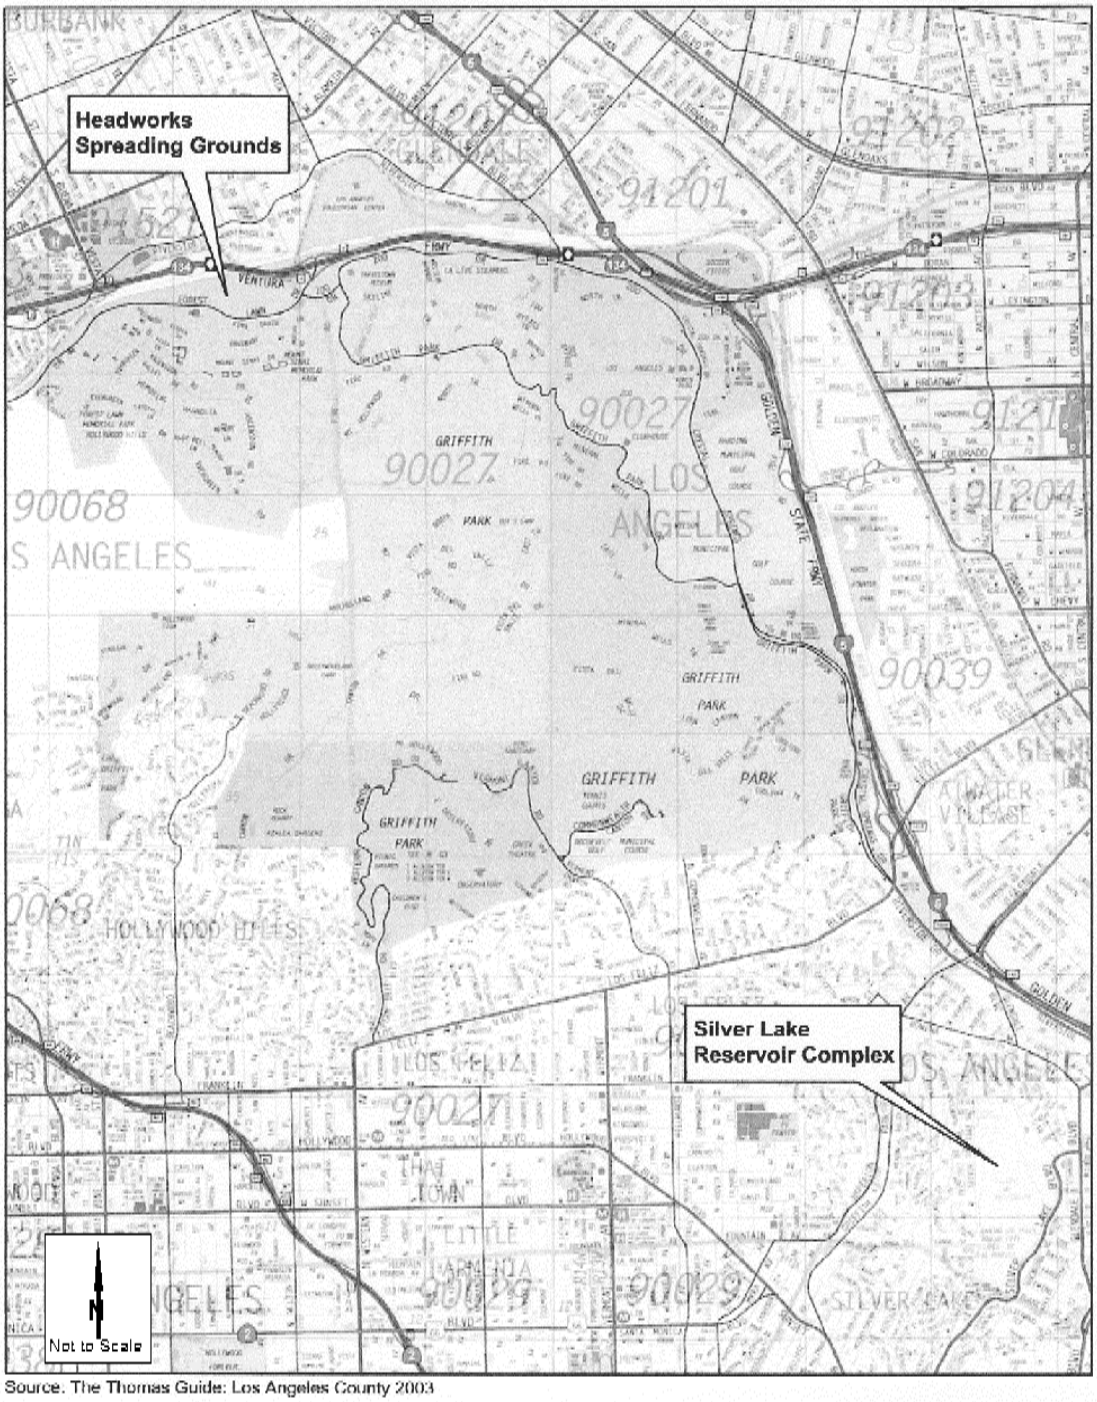
1.0 Introduction

Greenwood and Associates has conducted a cultural resources impact assessment for the proposed Silver Lake Reservoir Complex Storage Replacement Project, located in the City of Los Angeles (City), California. This document assesses the environmental consequences of the project on cultural resources, based on background research and field investigation. The information contained in this report is prepared for use in an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA). The City of Los Angeles, Department of Water and Power (LADWP), as Lead Agency under CEQA, has determined that the project could have a significant impact on the environment and that an EIR will be prepared.

1.1 Project Location and Description

1.1.1 Introduction

The Proposed Project would remove Silver Lake and Ivanhoe Reservoirs from direct service to the LADWP water distribution system. Water storage currently provided by the two reservoirs, together referred to as the Silver Lake Reservoir Complex (SLRC), would be replaced by a 110-million-gallon (MG) underground covered storage reservoir at the former Headworks Spreading Grounds (HWSG) site. The new storage reservoir would be accompanied by a 4-megawatt (MW) hydroelectric power generating facility at the HWSG site to capture energy from the water pressure coming into the reservoir. The addition of a regulator station and a new bypass pipeline would convey water delivery flow to existing service areas, and operation of Silver Lake and Ivanhoe Reservoirs as drinking water storage facilities would change.



1.1.2 Project Location

The Proposed Project would be located at the HWSG site and at the SLRC, as shown in Figure 1-1. The HWSG site consists of 43 acres of undeveloped land, presently a series of dry shallow basins, adjacent to the Los Angeles River and between the City of Burbank and Griffith Park. It is bounded on the north by the Los Angeles River and the 134 Freeway, and on the east and south by Forest Lawn Drive. The property is owned by the City of Los Angeles Department of Recreation and Parks, and LADWP retains an easement over the entire property. It is located approximately 8.0 miles northwest of the SLRC.

The SLRC is located in the community of Silver Lake and consists of LADWP-owned Silver Lake and Ivanhoe Reservoirs and related facilities. Silver Lake is five miles northwest of downtown Los Angeles and just east of Griffith Park.

1.1.3 HWSG Site Facilities

Facilities to be constructed and operated at the HWSG Site include a 110-MG underground storage reservoir and a 4-MW hydroelectric power generating facility. Construction and operation information for these facilities is described in detail below.

Source. The Thomas Guide: Los Angeles County 2003

Figure 1-1
SLRC SRP
Cultural Resources Assessment
Project Location Map

1.1.3.1 110-MG Underground Storage Reservoir

1.1.3.1.1 Overview

To replace the operational storage from Silver Lake and Ivanhoe Reservoirs, LADWP would construct a 110-MG buried reservoir at the HWSG site. The reservoir would occupy approximately 19 acres on the east side of the HWSG site. The reservoir itself would be 10 acres in area and 40 feet high. Figure 1-2 shows the location of the reservoir within the HWSG site.

The reservoir would include inlets and outlets connecting to the River Supply Conduit, requiring a total of four vaults for inlet and outlet valves. The vaults will be located within the southern slope of the reservoir (Figure 1-2). Each valve vault will be approximately 22 feet by 19 feet and will be buried. Access to each vault will be from a 3-foot by 3-foot steel hatch. An access road along the southern slope of the reservoir with ingress and egress from Forest Lawn Drive would be constructed to provide access to the vaults.

1.1.3.1.2 Construction

Construction activities for the underground storage reservoir would include grading and reservoir site preparation, inlet/outlet and vault construction, construction of the reservoir storage structure, and burying the storage structure. Approximately 470,000 cubic yards of soil material would be excavated for the construction of the reservoir. Of the 470,000 cubic yards, approximately 5 percent, or 23,000 cubic yards, would be disposed offsite due to its unsuitability as fill material.

Excavation for the inlet/outlet and vault construction would be done as part of the grading and reservoir site preparation, as described above. Inlet/outlet and vault construction would require approximately 810 cubic yards of concrete.

Materials required for reservoir tank construction include concrete and gravel. A total of approximately 98,686 cubic yards of concrete would be required. Approximately 11 trucks per day would deliver 99 cubic yards of concrete per day to the site. A total of approximately 18,336 cubic yards of gravel would be required.

Approximately 394,000 cubic yards of fill material would be required to bury the storage structure. Of this amount, 156,000 would be obtained onsite from tank excavation, and 238,000 cubic yards would be imported.

1.1.3.1.3 Reservoir Operation and Maintenance

Following construction, native vegetation would be planted on the side slopes and top of the reservoir. The remainder of the HWSG site that would be disturbed during construction would be returned to its original condition.

During operation of the reservoir, Department staff would check the facility once a week, while security would check the facility daily. The reservoir inlet/outlet valves would be checked once a year. The tanks that make up the reservoir require cleaning once every four years. It is likely that the Department would stagger tank cleaning such that one tank is cleaned every two years. Tank cleaning takes approximately one week and requires a utility truck and possibly a dump truck if there is a significant amount of sand at the bottom of the reservoir.

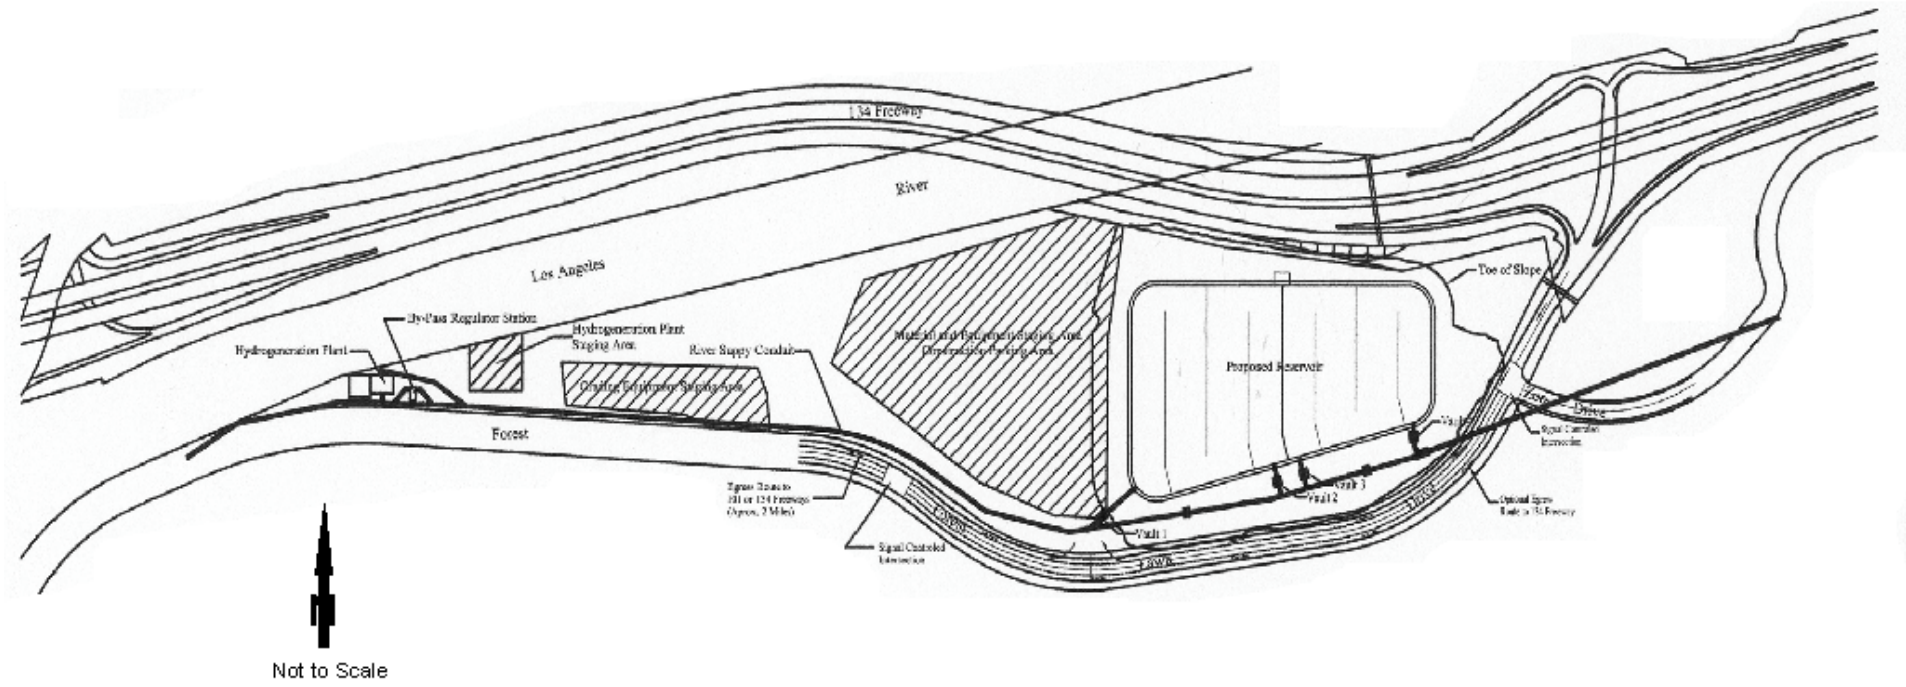


Figure 1-2
SLRC SRP
Cultural Resources Assessment
HWSG Site

1.1.3.2 4-MW Hydroelectric Power Generating Facility

1.1.3.2.1 Overview

To capitalize on a green power opportunity and reduce the water pressure coming into the new storage reservoir, LADWP would construct a 4-MW hydroelectric power generating facility at or near the HWSG site. The hydroelectric facility would require a powerhouse, connection to the existing 35-kilovolt (kV) LADWP distribution system, outdoor substation, and backup emergency generator.

The powerhouse would house the turbine/generator, associated isolation valves, piping, electrical switchgear, controls, and instrumentation. The inlet pipeline connection would be approximately 56 inches in diameter and the outlet would be approximately 68 inches in diameter. The powerhouse would be operated from a remote control center. The powerhouse would be constructed of reinforced concrete and would be approximately 50 feet wide by 70 feet long. The powerhouse would be approximately 30 feet high and would be partially buried, with the highest point roughly 18 feet above ground.

The hydroelectric generated power would be connected to the existing 35 kV LADWP distribution system. The existing 35 kV overhead power line runs along the north side of Forest Lawn Drive. No new power poles would be needed to connect to the existing 35 kV line.

The outdoor substation would consist of a main transformer and related substation equipment and would require a switchyard of 60’ by 60’ chain link fence enclosure. The Department may decide to eliminate the outdoor substation, in which case the electrical equipment would be housed in the powerhouse. In that case, the powerhouse would be increased in size to 50 feet wide by 86 feet long.

For backup station service power, an emergency generator of approximately 125 kW capacity would be housed in a separate enclosure from the powerhouse and switchyard. The enclosure would be either an outdoor metal shed type or a brick building of 30 feet wide by 25 feet long by 10 feet tall.

1.1.3.2.2 Construction

The hydroelectric plant would be constructed at the west end of the HWSG site, as shown in Figure 1-2. Approximately 2 acres would be disturbed during construction.

Approximately 6,000 cubic yards of soil material would be excavated for the construction of the hydroelectric plant. 2,600 cubic yards would be exported and 3,400 cubic yards would be retained onsite for burial of the hydroelectric plant.

1.1.3.2.3 Operation and Maintenance

The hydroelectric facility would not require staff onsite; rather, the facility would be operated remotely, from the Department area control center. A Department operator would visit the facility once a week. Security would check the facility daily. The facility would have video surveillance cameras as well as other security features.

Quarterly preventative maintenance would be performed on the plant ancillary equipment (cooling water system, air compressor, electric motor actuators), requiring one service truck for one day. Once a year, the facility would be shut down for internal and external inspection. This maintenance activity would require 3 service trucks per day for 2 weeks. The facility would be shut down for overhaul once every 5 years. This maintenance activity would require 3 service trucks and one crane per day for 4 weeks.

1.1.4 SLRC Facilities

Facilities to be constructed and operated at or near the SLRC include a bypass pipeline and a regulator station, as shown in Figure 1-3. Construction and operation information for these facilities are described in detail below.

1.1.4.1 Bypass Pipeline

1.1.4.1.1 Overview

A bypass pipeline is needed to convey water through the SLRC to the rest of the system. The bypass pipeline would consist of approximately 4,900 linear feet of 66-inch diameter pipe. The bypass pipeline would be constructed of welded steel encased in concrete.

The pipe would be tunneled beneath various streets beginning at the intersection of West Silver Lake Drive and Armstrong Avenue running south on West Silver Lake Drive for approximately 3,800 feet; turning southeasterly on Redesdale Avenue for approximately 900 feet; turning southwesterly toward the grassy area south of Silver Lake Reservoir dam approximately 100 feet. Redesdale Avenue does not intersect West Silver Lake Drive; it is a paper street and Redesdale Avenue is approximately 85 feet higher than West Silver Lake Drive.

Because the bypass line would need to be a minimum of 30 to 40 feet deep, the method of construction is tunneling. For tunneling operations, jacking (entrance) and receiving (exit) pits would be needed at the ends of the pipe for equipment and to export materials. Construction staging for equipment and materials would take place within the SLRC property, along the east side of the Silver Lake Reservoir (Figure 1-3).

1.1.4.1.2 Construction

Jacking and receiving pits for bypass pipeline tunneling would be located in West Silver Lake Drive. Roughly 5 to 15 feet around each pit would be blocked off, and the traffic around each pit would be reduced to one lane in each direction. An additional jacking pit would be located in the grassy area south of Silver Lake Reservoir dam. The portion of the bypass pipeline within the grassy area south of Silver Lake Reservoir dam would be constructed by trench method. Approximately 6,625 cubic yards of soil would be removed during bypass pipeline construction. This soil would be exported to the HWSG site.

1.1.4.1.3 Operation

The bypass pipeline would not require any maintenance, as its lifespan is approximately 100 years. In the unlikely event of pipeline leakage, the repair would be performed within the pipeline (e.g., excavation of the pipeline would not be required).

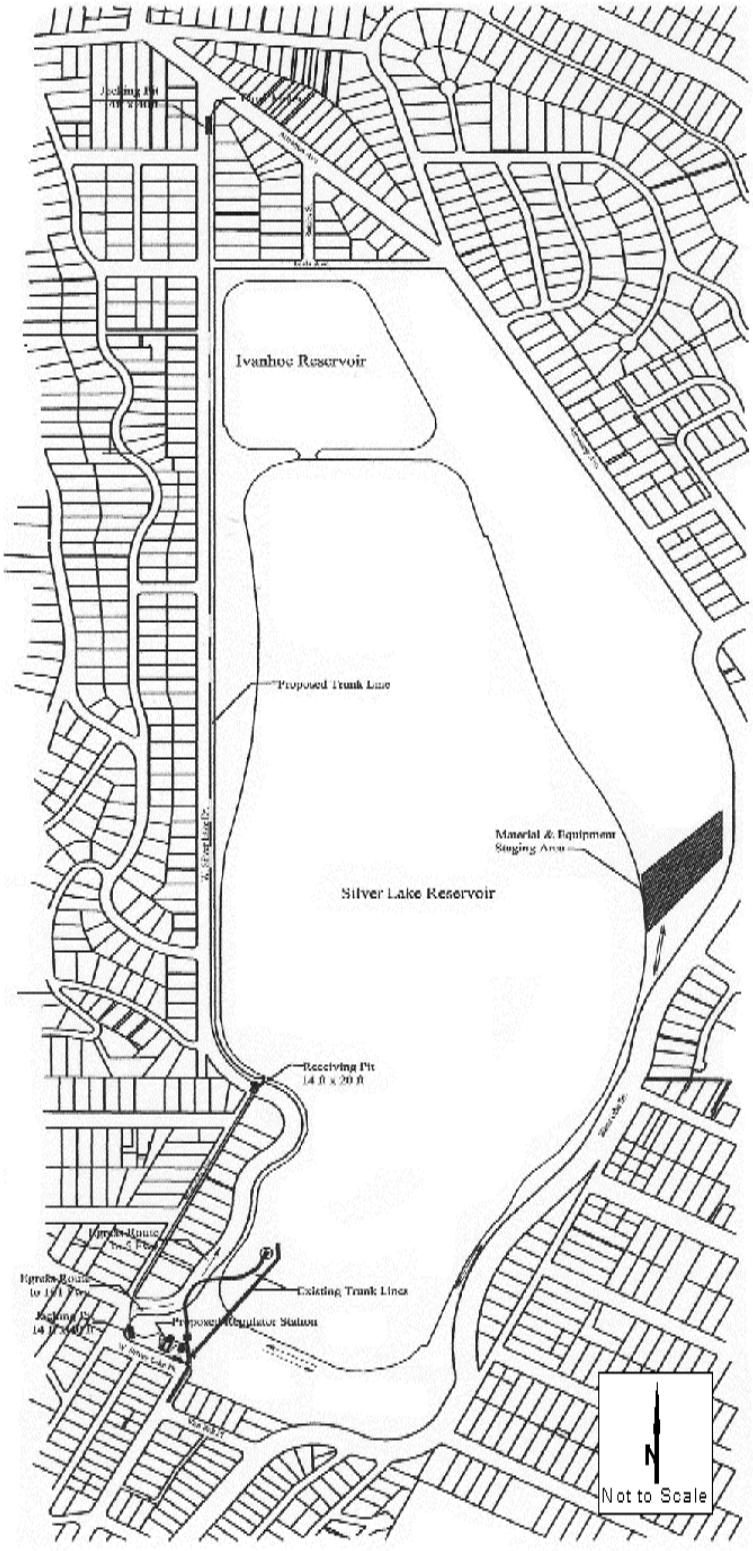

Figure 1-3
SLRC SRP
Cultural Resources Assessment
SLRC Site

Because Silver Lake and Ivanhoe Reservoirs at the SLRC would no longer be used for water supply, day-to-day operations would change. Specifically, the water currently flowing into Silver Lake and Ivanhoe Reservoirs would bypass SLRC as described above. The SLRC facility and property would be maintained consistent with the appearance and condition that LADWP has provided at this facility for several years. Based on the Department's recent positive experience at the Hollywood Reservoirs, the Department would cease chlorination within the Silver Lake and Ivanhoe Reservoirs.

1.1.4.2 Regulating Station

1.1.4.2.1 Overview

A regulating station to control water pressure would be located at the SLRC in the grassy area just south of the Silver Lake Reservoir dam, as shown in Figure 1-4. A bypass valve, relief station, and relief station dissipator, plus an isolation valve for the existing Silver Lake Reservoir outlet line would each be enclosed in buried vaults at the same location. The regulating station would be housed in a vault approximately 45 feet long by 25 feet wide by 14 feet deep that would be buried with grass on top. Access to the vault would be either from two 3-foot by 3-foot steel hatches or two 48-inch diameter lids on each end of the vault. The bypass valve would be housed in a vault approximately 14 feet long by 15 feet wide by 12 feet deep. The relief station would be housed in a 14-foot by 18-foot by 12-foot vault and the relief station dissipator would be housed in two 9-foot by 11.5-foot by 4-foot vaults. The isolation valve would be housed in a 14-foot by 15-foot by 12-foot vault. Access to each vault would be either through a 3-foot by 3-foot steel hatch or a 48-inch diameter lid. In addition, there would be 6 valves housed in a 48-inch diameter by 14-foot high can that is buried and with top access.

Above ground facilities anticipated include two ventilation hoods (4 feet in diameter and 3 feet high), 6 ventilation stand-pipes (1 foot in diameter and 3 feet high) and a control cabinet (4 feet square and 6 feet high). The control cabinet may be located near the existing chlorination building.

The regulating station and associated facilities would be constructed within a 30,000 square foot area within the grassy area just south of Silver Lake Reservoir dam.

1.1.4.2.2 Construction

Approximately 330 cubic yards of concrete would be required for construction of the regulating station. Approximately 5 to 15 trucks per day would deliver up to 130 cubic yards of concrete per day to the site for approximately 5 days. Concrete would be obtained from the Southern California area, specifically Los Angeles and Orange counties. Construction staging for equipment and materials would take place within the SLRC property, along the east side of the Silver Lake Reservoir.

1.1.4.2.3 Operation and Maintenance

During operation, the regulating station would run 24 hours per day. The noise level of the regulating station would be 90 DB inside the vault and approximately 60 DB 100 feet away.

Maintenance of the regulating station would be performed quarterly. Typical activities would include verifying valve settings, checking for debris in the lines and cleaning the vault. This work takes approximately 2 hours and uses a utility truck.

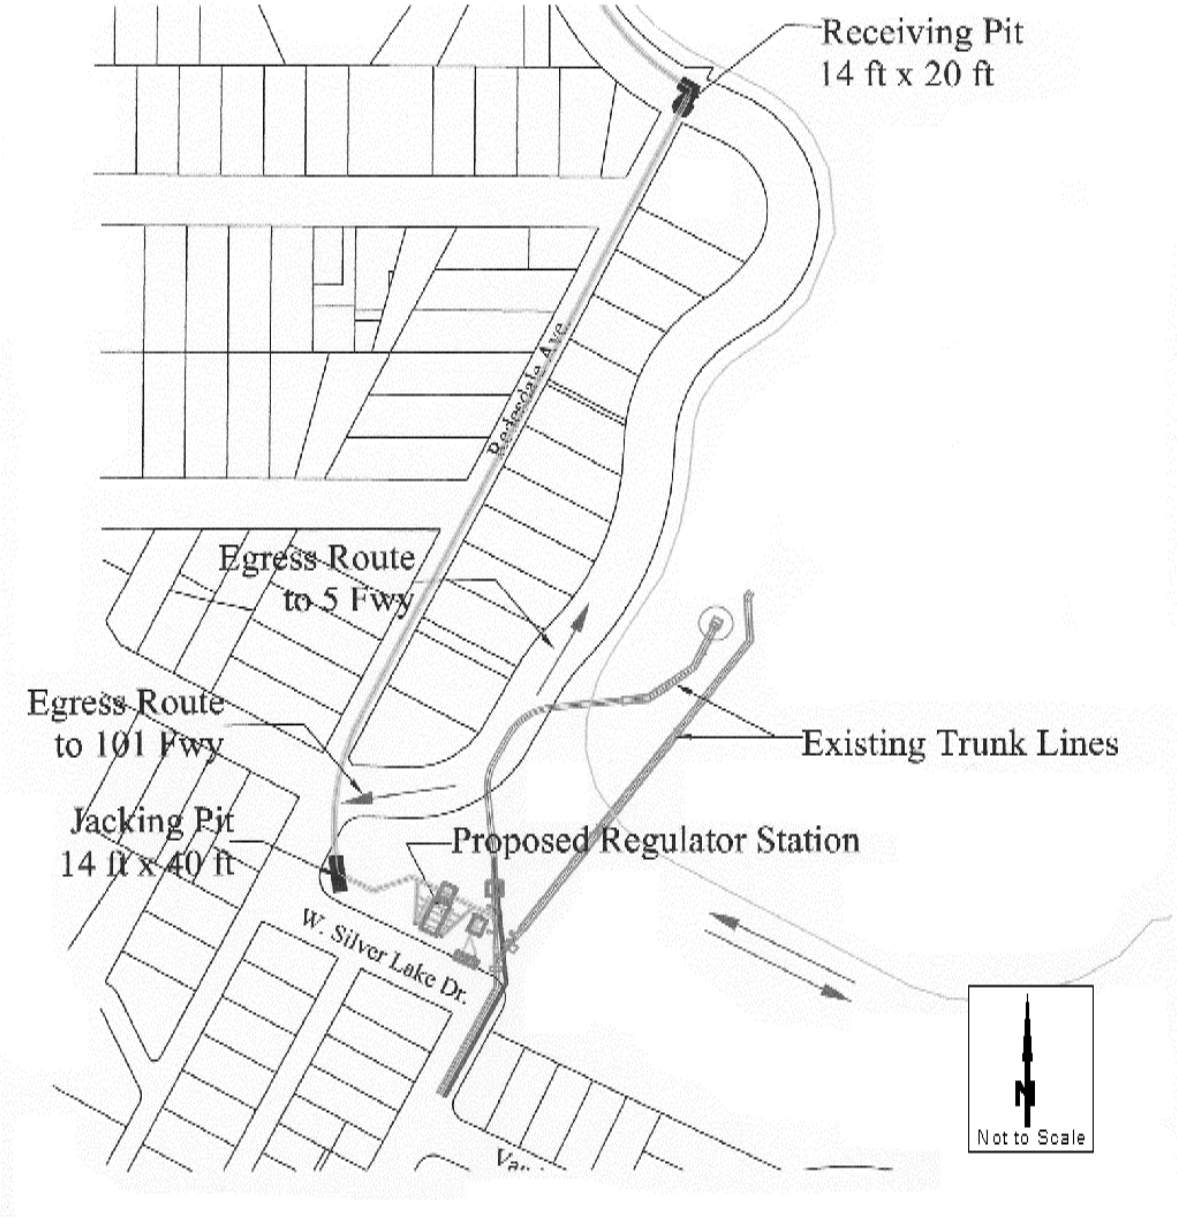

Figure 1-4
SLRC SRP
Cultural Resources Assessment
Proposed Regulating Facility

2.0 Environmental Setting

2.1 Methodology

2.1.1 Area of Study

For this cultural resources investigation, the study area is recognized to include the corridors proposed for construction of pipelines, and parcels identified for construction of facilities (regulating station, hydroelectric power generating facility, underground storage reservoir, etc.), and for staging of construction equipment and materials. As the adjacent Silver Lake and Ivanhoe Reservoirs, collectively, have previously been designated as historic resources (City Historic Cultural Monument [HCM] No. 422), the boundaries of the study area for historical resources includes all property historically associated with the reservoir complex and owned by the City/LADWP. The area is roughly bounded by Silver Lake Boulevard and Armstrong Avenue on the east, Tesla Avenue on the north, West Silver Lake Drive on the west, and West Silver Lake Drive, Silver Lake Boulevard, and Van Pelt Place on the south.

2.1.2 Research Sources Consulted

Greenwood and Associates conducted a California Historical Resources Information System (CHRIS) review of available literature, archaeological site archives, and relevant historical maps and other records for the SLRC site at the South Central Coastal Information Center (SCCIC) on March 16, 2004 by Alice Hale, M.A (File No. 4163). A comparable review for the HWSG site was conducted by the SCCIC on March 29, 2004 (File No. 4200). For both project locations, cultural resources and previous studies located within a one-half mile radius were identified. Results of literature and records search are summarized below.

Specialized listings for cultural resources consulted for this report include the National Register of Historic Places – Listed Properties and Determined Eligible Properties (1988, computer listings 1966 through Jan. 2004 by National Park Service); the California Register of Historical Resources (2003); the California Inventory of Historic Resources (1976); California Historical Landmarks (1996); the California Points of Historical Interest (1992); the *Handbook of North American Indians*, Vol. 8, California (1978); the Directory of Properties in the Historic Property Data File for the City of Los Angeles (2004); and City of Los Angeles Historic-Cultural Monuments (listings through 2004).

Additionally, specialized research was conducted at the City of Los Angeles Department of Water and Power Resource Center, Archives, Survey Section, and Library; City of Los Angeles Department of Building and Safety; Los Angeles Central Public Library; University of California Los Angeles, Young Research Library; and the City of Los Angeles Cultural Heritage Commission. Reference materials secured from internet sources and other project documents were also consulted.

2.1.3 Agencies, Groups, and Individuals Consulted

Greenwood and Associates consulted representatives of various City agencies, including: Paul Liu, LADWP Water Master Planning; Linh Phan, LADWP Water Master Planning; Douglas Sunshine, LADWP Facilities Management; Vee Miller, LADWP Facilities Management; Jay Oren, City of Los Angeles, Cultural Heritage Commission; Isabel Rosas, City of Los Angeles, Cultural Heritage Commission.

2.2 Regional Setting

The following summary is based on the literature search conducted for the vicinities of both the SLRC and HWSG areas. It is designed both to indicate the potential for the presence of cultural resources within the project area, and to provide a context for any cultural data that may be present within the study area.

2.2.1 Environment

The project area lies within central Los Angeles County. Regional vegetation includes Agricultural; Riparian (along natural drainages); Sage-Scrub (within canyon areas); Oak-Woodland (scattered patches mostly on north-facing slopes at lower elevations); and Grassland (grazed lands). The prehistoric Gabrieliño Indians used plants from many biotic communities. Acorns were a staple food and many of the archaeological sites contain portable stone mortars used to grind acorns. Sage, buckwheat, grass seeds, yucca, and elderberry were also extensively eaten. Willow was used in house construction and reeds used for basketry material. Plants used for medicines and dyes include mugwort, poison oak, tobacco, nightshade, and coastal sage.

In prehistoric times, animals were abundant in the area and included mule deer; coyote; bobcat; raccoon; fox; birds (dove, woodpecker, robin, sparrow, hummingbird, jays, golden eagle and condor), and snakes, lizards and frogs. In the hilly areas, grizzly bears, sheep, wolves, and mountain lions were once present. Animals used most often for food included deer, rabbits, and certain rodents; birds and reptiles were eaten less commonly (Bean and Blackburn 1976).

The project vicinity has a Mediterranean climate, lying between the dry climate of the Mojave Desert to the northeast and the humid mesothermal climate of the Pacific Coast to the south. The weather is dominated by warm, dry summers and mild, moderately wet winters. Temperatures range from approximately 100 degrees in July and August, to the low thirties in January. Snowfall is rare, and rainfall occurs normally between November and April. The Los Angeles River and several minor drainages that flow from the Santa Monica Mountains influenced prehistoric and historic settlement patterns.

2.2.2 Prehistory/Ethnography

The archaeological record indicates that sedentary populations occupied the coastal and inland regions of California more than 9,000 years ago. Early periods were characterized by the processing of hard seeds with the *mano* and milling stone and the use of the *atlatl* (dart thrower) to bring down large game, e.g., deer.

The Early Period dates from approximately 8000 to 3350 Before Present (B.P.) – a time roughly corresponding to Rogers' (1929) Oak Grove Culture and Wallace's (1955) Millingstone Horizon. The Early Period is characterized by the use of large flake and core tools, millingstones, and handstones, combined with a lack of bone and shell tools, ornamentation, and refuse. The millingstones indicate grinding of hard seeds, probably gathered from sage plants. Mortars and pestles (used for acorn grinding) were not widely used until late in the Early Period (Glassow et al. 1985). Early Period settlements appear to represent the remains of residential base camps and were usually located on hilltops or knolls (Glassow and Wilcoxon 1988). Cemeteries are associated with permanent settlements.

The Middle Period dates from about 3350 to 800 B.P. and correlates with Rogers' and Harrison's (1964) Hunting People, and Wallace's Intermediate Horizon. This period is characterized by a shift in the economic/subsistence focus from plant gathering and the use of hard seeds, to a more generalized hunting-maritime-gathering adaptation. The shift to the predominance of mortars and pestles for milling implements indicates increased exploitation and dependence on acorns (Glassow and Wilcoxon 1988). Inherited leadership and status differentiation with religious specialists, as shown by mortuary data, were all social elements of the Middle Period. Villages were more permanently occupied, and some satellite sites became differentiated in size and purpose. Middle Period sites are distinguishable into subphases by different types of beads, projectile points, and other diagnostic artifacts. Middle Period sites tend to be small and often contain artifacts that are lighter in weight and more portable than those from earlier sites.

The Middle Period is followed chronologically by the Late Prehistoric Horizon (Wallace 1955, 1978) or Shoshonean Tradition (Warren 1968), beginning around 500 A.D. (Bean and Smith 1978). The Late Period is marked by a dramatic increase in population. Permanent inland settlements of up to 150 people subsisted on the abundant acorns, seed plants, rabbits, and deer. Villages (also known as rancherias) were located near the confluence of watercourses and/or habitats. New tools and ornaments began to occur. Among the recognized archaeological changes were the appearance of arrowheads, soapstone bowls, callus shell beads, steatite effigies, and cremations. These changes have been linked to the arrival of Shoshonean peoples to this area. Some researchers suggest that desiccation around the Salton Sink pushed inland populations toward the coast, creating a ripple effect of changes.

The project area lies within the territorial boundaries of the Gabrieliño Indians. The Gabrieliños were Shoshonean and Takic language speakers, who resided in the general Los Angeles Basin and adjacent San Fernando Valley. Their name is derived from their association with the Mission San Gabriel Archangel. However, these Shoshonean people called themselves *Tong-va* according to Johnston (1962) and today some Gabrieliño have chosen this name (McCawley 1996). The fully developed Gabrieliño culture was a socially and economically complex hunting and gathering society, very advanced in their culture, social organization, religious beliefs, and art and material object production.

Gabrieliño culture underwent dramatic changes following European contact. Introduced diseases weakened and killed large numbers of native peoples, and most Gabrieliño villages were abandoned by 1810. Gabrieliño survivors helped build the Spanish Missions and the Mexican and American ranches that followed (Bean and Smith 1978:538). Today, several

thousand individuals in Southern California trace their ancestry to the precontact Chumash. They place a high value on objects and places associated with their past.

2.2.3 Regional History

Spanish and Mexican Periods

Although Spain claimed Alta California (the present day state of California) in the sixteenth century, settlement did not begin until 200 years later. To consolidate the Spanish claim to Alta California, an expedition led by Gaspar de Portolá was dispatched from Mexico City in the summer of 1769. Marching northward from San Diego, Portolá passed through the San Gabriel and San Fernando valleys in 1770. Mission San Gabriel was established in 1771 and by the early nineteenth century, most Gabrieliño were incorporated into the mission. The environs of present day Los Angeles and the current project area were included in the mission's domain. Mission San Fernando was added to the system in 1797 (Baer 1958:95).

The Pueblo de la Reina de Los Angeles was founded in 1781 on the west bank of the Los Angeles River (Rio Porciúncula). Settled by a small group of "*pobladores*" of African, Native American, and Spanish descent, the outpost manifested Spanish colonial ambitions for Alta California, which envisioned a series of civilian pueblos that would function in support of the Missions and *presidios* and expand the region's population (Robinson 1981:9).

Los Angeles remained an isolated settlement for many years, gradually gaining in population and importance as a center of commerce and social exchange. By1800, the pueblo boasted a population of 315. With the demise of the Mission system and abandonment of Mission San Gabriel in the 1830s, the town became the center of trading and economic activity in the region (Robinson 1981:111).

As part of Spain's effort to colonize Alta California, a system of land grants was initiated to induce settlement and long term occupation of the region. The large rancho tracts were bestowed upon a select few, primarily ex-soldiers and others who had provided services to the government. The political change from Spanish to Mexican colony in 1821 and the subsequent secularization of the missions in the 1830s had little effect on land use in pueblo controlled areas and in the San Fernando Valley; it continued as grazing land for cattle and settlement remained light.

American Period

With the United States takeover of California in 1848, the ensuing Gold Rush, and ultimate American statehood in 1850, the pace of settlement in the region expanded rapidly, as did commerce. The discovery of gold in northern California created a boom in the local cattle industry which fed the hordes of miners. Cattle ranching in the region declined during the 1860s after years of drought followed by disastrous floods, but continued to be a major economic activity. The American population of the Los Angeles region continued to rise through the 1860s, as many of the old rancho families lost title to their land, leaving a vacuum that was promptly filled by settlers from the east and mid-west. Most of the vast ranchos were divided and sold off in parcels as agriculture gained in importance. Within Los Angeles, development expanded from the early city center; the street grid was extended as new tracts were surveyed and subdivided. By 1870, the San Fernando Valley had emerged as the regions breadbasket, supplying wheat to Los Angeles and other markets.

The extension of the Southern Pacific Railroad into Southern California in 1876, followed by the Atchison, Topeka and Santa Fe in 1887, set the stage for a massive real estate boom that resulted in the founding of hundreds of new towns and tremendous growth of the City of Los Angeles. The City's population rose from 5,700 in 1870 to 50,000 by 1890 as residential development pushed ever outward. Industrial and commercial expansion, in addition to agricultural growth and advances as a shipping hub, established Los Angeles as a leading West Coast metropolis by the turn of the twentieth century (Fogelson 1968).

2.3 Project Setting

2.3.1 HWSG Site History

The Headworks site lies within the historic boundaries of Rancho Providencia. The property was originally part of a larger rancho, Rancho Portesuela, granted by the Spanish colonial government to Mariano de la Luz Verdugo, a Spanish native, in 1795. Rancho Portesuela encompassed the broad plains of the San Fernando Valley at the base of the Cahuenga Pass, extending eastward to the Verdugo Mountains. The desire for additional grazing lands prompted the fathers of the newly founded Mission San Fernando to displace Verdugo around 1810 (Foster et al. 2000).

Following secularization, the Mexican government conferred a 4,600-acre portion of the rancho, renamed Rancho Providencia, to Vicente de Osa in 1846. De Osa also owned Rancho Encino. The property included land on both sides of the Porciuncula (Los Angeles) River and extended to the crest of the Santa Monica Mountains (Cowan 1977:62). In 1851, de Osa sold the property to Alexander Bell and David Alexander, who became the first American landowners in San Fernando Valley. Bell and Alexander grazed cattle on the rancho, continuing the established pattern of land use (Roderick 2001:31).

Dr. David Burbank, a native of New Hampshire, purchased portions of Rancho Provedencia and Rancho San Rafael to the north in 1867. He raised sheep on the land and occasionally sold off small plots. Completion of the Southern Pacific Railroad across the Valley in 1874 instigated settlement of a number of new towns, including "Burbank," which was laid out northeast of the current project area in 1886. The boundaries of the new community extended as far south as the Los Angeles River. Lands on the opposite side of the river, including the current project area, were acquired by Col. G. J. Griffith and remained open ranch lands. A wealthy mining and real estate investor, Griffith donated 3,500 acres spanning the Santa Monica Mountains to the City of Los Angeles in 1896. Griffith Park was established east of the project area and initially incorporated the Headworks site itself (Eberts 2004). There are no roads or buildings indicated south of the river in the vicinity of the HWSG site on the 1902 USGS map of the area.

The first decades of the twentieth century saw the emergence of the movie industry in the San Fernando Valley. Universal City was established at the mouth of Cahuenga Pass in 1912. *The Birth of A Nation* was filmed in 1914 by D.W. Griffith on the slopes southwest of the project area, now part of Forest Lawn Hollywood Hills Memorial Park. Cecil B. DeMille's Lasky-Famous Players Company leased several hundred acres, known as the Lasky Ranch, along the river between Cahuenga Pass and Burbank. The movie ranch bordered, and may have even included, a portion of the present project area.

The 1921 USGS map indicates that the Los Angeles River's course immediately northeast of the project area had shifted to the south. There were as yet no roads close by. The real estate boom of the 1920s brought many new residents to the Burbank area and the local movie industry continued to expand. Universal was joined by Disney Studios in 1938. The north slopes of the Santa Monica Mountains above the project area remained undeveloped ranch and park land.

Flooding of the Los Angeles River had been a continuing problem since the initial settlement of the region, and the issue of flood control gained importance as development expanded in the early twentieth century. Plans to restrict the flow of the river, including complete channelization, had been pondered since a huge flood in 1914. Major floods in the early 1930s brought renewed planning efforts and, following a devastating flood in March 1938 that destroyed numerous bridges and caused extensive property damage, a program of channelization was implemented almost immediately. The section of river along the north side of Griffith Park and adjacent to the project area was among the first sections channelized in 1939.

The years following World War II saw numerous large-scale civic improvement projects undertaken in the Los Angeles region, and residential development in San Fernando Valley in the post-war era building boom was unprecedented. Orange groves were replaced by tract houses, and continued channelization opened new acreage for building. Channelization resulted in a substantial realignment of the river's course and many of its meanders were eliminated, including in the area adjacent to the project area, where its course was shifted somewhat to the north. A bow north of the present equestrian area, northeast of the project, was also straightened. In 1948, Forest Lawn Hollywood Hills Memorial Park was established on the hillsides south of the project area, on the former Lasky movie ranch property. The postwar era also witnessed the coming of the region's freeway system. Construction of the Ventura (101) Freeway commenced in 1952 and the 134 Freeway, which borders the east end of project area, was opened in 1968 (Roderick 2001:183).

Hollingsworth Drive, later renamed Forest Lawn Drive, which borders the project area on the south, was in place by 1945, its alignment approximating the existing one. Travel Town Museum, with its collection of miniature trains, was established at the northwest corner of Griffith Park, directly east of the project, in 1952. The most recent addition to the area is Mount Sinai Memorial Park, directly south of the Headworks site, which was divided from Forest Lawn Memorial Park in 1954 and developed in the 1960s (Lindsay 2004, pers. com.).

2.3.1.1 Site Specific History

With water supply seasonally unable to meet the demands of the rapidly growing city at the turn of the twentieth century, the Los Angeles Water Department worked diligently to increase the amount of available water. Among the measures undertaken was construction of a new diversion dam and main supply conduit on the northwestern side of Griffith Park, across the Los Angeles River from Burbank, on lands known as the Headworks site (Gumprecht 1999:98).

Two infiltration galleries were installed at the Headworks site in 1905 to capture the river's subsurface flow, and were expanded in 1916. The Crystal Springs Galleries, developed in 1886 on the east side of the park, were also expanded, and together provided the City enough

water in 1917 to allow a halt to all surface water diversions (that, unlike the naturally filtered subterranean water, required treatment). The flow soon proved inadequate and a third Headworks gallery was built in 1920. Well development along the river was also intensified and by 1925, there were 14 wells at the Headworks plant. The object of the wells, here and at other locations, was to capture as much usable river water as possible.

Channelization of the Los Angeles River radically altered the nature of the Headworks site. The section of the river spanned by the Headworks was straightened, and the deep, straight-sided, concrete lined channel was moved northward. Spreading basins were constructed along both sides of the river channel, with the principal basins placed to the south at the HWSG site. With construction of the 134 Freeway along the channel in the late 1950s, basins on the north side of the river were eliminated.

Pollution eventually forced the LADWP to eliminate its remaining surface diversions on the river and to discontinue pumping for water all along its course. The Headworks Deep Gallery was shut down in 1972 because of water quality concerns. Diversions from the river into the HWSG were halted in 1983 because of increased discharges of untreated sewage into the river. The last five wells in use at the Headworks plant were shut down in May 1986.

By 1993, treated wastewater had improved the quality of water flowing into the river so much that the LADWP conducted a study to determine whether water diverted from the river to the HWSG and later pumped to the surface by wells would be clean enough to drink. The study found that the extracted water complied with all drinking water standards, however, the project was ultimately abandoned in favor of alternative approaches (Gumprecht 1999:120-129).

2.3.2 Silver Lake History

The southern portion of the SLRC site lies within the four square leagues of land set aside by the Spanish crown for establishment of the Pueblo de Los Angeles in 1781, while the northern half is within the historic boundaries of Rancho Los Feliz. The 1 ½ square league rancho was granted to Vicente Feliz by the Spanish government in 1802. Juan Diego acquired the property prior to the American takeover, and received patent for the 6,647 acres in April 1871. In 1882, J. Griffith, donor of Griffith Park, purchased Rancho Los Feliz.

An open ditch that was a part of the Rancho Los Feliz water supply system passed through the canyon now occupied by Silver Lake Reservoir by the mid 1800s. The ditch was acquired by the Los Angeles Canal and Reservoir Co which in turn, became part of the City's system in 1868 (Layne 1957:24, 39).

The Silver Lake area was known as "Ivanhoe" before the turn of the twentieth century. Reminded of the rolling green hills of his homeland, Scottish developer Hugo Reid named the area after the famous novel by Sir Walter Scott. Many of the streets in Silver Lake have Scottish names, or names that are related to characters from the novel, such as Herkimer, Rowena, Hawick, Kenilworth, and Ben Lomond. The Ivanhoe community, northwest of the SLRC site, included around a dozen homes in 1893 (USGS 1902).

In the late 1800s, hunters journeyed to the area to seek game that was attracted to the natural ponding condition in Ivanhoe Canyon. Recognizing the value of the land, the Water Department began acquiring land for the SLRC in the 1880s when the surrounding area was primarily undeveloped. By the time the last parcel was acquired in 1904, the area was still largely uninhabited. With the addition of the reservoirs this quickly changed.

Construction of Ivanhoe Reservoir was completed in 1906. Silver Lake Reservoir, named for Herman Silver, a member of Los Angeles' first Board of Water Commissioners, was finished the following year.

City planners soon recognized the potential of a uniquely situated residential development overlooking the reservoirs and made substantial investment in underground utilities and concrete streets. In the 1920's and 1930's private developers were encouraged by the City to build and they were attracted by the rolling hills and blue water views of the focal point that is Silver Lake and Ivanhoe Reservoirs. Probably the most well-known developer was the silent film star Antonio Moreno. He modeled his development (the Moreno Highlands) after a Mediterranean village he had visited. His landmark home, the Canfield-Moreno Estate, set the architectural theme for many of the homes in the hills on the west side of the reservoir.

Silver Lake and adjacent Edendale and Echo Park areas were home to many early motion picture studios. The Mack Sennett Studios, Tom Mix, Disney, Monogram, and Talmadge Studios were located there and drew creative people to the area. Many locations in Silver Lake appeared in early motion pictures. For example, the famous Laurel and Hardy short film "The Music Box" was filmed here, and many of the Keystone Cops chase scenes were shot along Glendale Boulevard. Not only was the area home to many of the early studios, numerous film makers, actors, and directors also lived in Silver Lake. These included Gloria Swanson, Laurel and Hardy, Antonio Moreno, and many others.

"From the mid-1920s through the early 60s, Silver Lake was a showcase for some of California's best known and most innovative and influential architects" (LAT 1984). The area has been noted as having the greatest density of high style historic residences of any in the city. The neighborhood's distinctive character is established by its rich mixture of area residences designed in Mediterranean and other Revival styles of the1920s and 1930s, integrated with important works by major figures in the Modern movement, including Richard Neutra, Rudolf Schindler, Rafael Soriano, Gregory Ain, and John Lautner.

2.3.2.1 SLRC History

Planning for reservoirs at Ivanhoe was one of the first projects undertaken by the newly named Los Angeles Department of Water Superintendent, William Mulholland. Conceived in 1903, the Ivanhoe and Silver Lake reservoirs were to hold 1 billion gallons of surplus water collected during wet months. In September 1905, City voters approved a $1.5 million bond measure to finance the Los Angeles-Owens River Aqueduct project by an overwhelming popular mandate. "From that date on the Water Department bent every effort, both in planning and building within the city limits, for the accommodation and use of the additional water to be received from its new source of supply" (Layne 1957: 75). Excavation work began on the Ivanhoe Reservoir in November 1905. It was to occupy the upper

(northern) end of the site planned for the larger Silver Lake Reservoir. The Ivanhoe Reservoir was completed in May 1906, and in August of that year work was begun on Silver Lake Reservoir just below it.

The method employed to construct Silver Lake Reservoir was unique. Under Superintendent Mulholland's plans and supervision, an innovative hydraulic sluicing technique adapted from the mining industry was used to dredge soil from what would become the lake bed and move the material to form the earthen dam to create the reservoir. This was the first time the method had ever been used in the United States. The process proved so successful that engineers came from all parts of the country to study the method. Mulholland served as a consultant on numerous hydraulic fill dams built between 1910 and 1930, including the enormous Gatun Dam in the Panama Canal (Rogers 1995:23). Until 1923, all of the LA Bureau of Water Works and Supply reservoirs were earthen embankments, built using Mulholland's hydraulic sluicing techniques. Silver Lake Reservoir was completed in 1907 with a capacity of 773,000,000 gallons (Layne 1957:85).

Regular improvements to the reservoir complex continued into the 1940s. As part of their water conservation efforts following Owens Valley Aqueduct approval, the Water Department constructed a wooden roof over the new Ivanhoe Reservoir to decrease evaporation in 1911. The concrete pile supported roof required 800 barrels of cement and 750,000 ft of lumber. It remained until 1938, when it was removed "for health and maintenance reasons" (Layne 1957:87; supt. ltr.). Silver Lake has always been an open reservoir.

Prior to 1921, the reservoirs were used for reserve supply only, but the surrounding area's rapid growth through the teens necessitated its improvement for use as a domestic supply distribution reservoir (Layne 1957:184). Historically, water is supplied to the reservoir from the River Supply Conduit through a 60-inch inlet line to Ivanhoe Reservoir, and then into Silver Lake.

Beginning in 1922, fences were placed around the reservoirs, principally to keep out violators of the City's Fishing, Bathing, Boating, and Hunting ordinance. Besides a fence, a diversion ditch, later replaced by a wall, was constructed around Silver Lake Reservoir, which had received drainage from the surrounding hills that were fast becoming covered with residences (Layne 1957:185).

An outlet gate tower was added to Silver Lake in 1937. Located on the site of the present tower, the Classical Revival style structure complimented the existing Chlorine Plant below the dam. In 1944, work commenced on a new River Supply Conduit. Formed of some 41,260 feet of reinforced concrete pipe, the conduit delivered aqueduct water from the North Hollywood Pumping Plant to the Silver Lake reservoirs. It was put into service in March 1949. In 1945 the reservoirs were drained, the earth-filled dams improved, and the Ivanhoe Inlet Tower constructed (Layne 1957:299).

Between 1950 and 1953, a $1.5 million program of improvements was undertaken at Silver Lake and Ivanhoe Reservoirs. Far more extensive that any previous effort, the reservoirs were drained, deepened, their sides regraded and surfaced with asphaltic cement to reduce plant growth and erosion from wave action, and the dams were raised two feet. A 60-inch bypass pipeline was added at the bottom of the reservoirs, and a new 66-inch outlet

line was built from the Silver Lake dam south along West Silver Lake Drive. Additionally, a portion of Silver Lake Reservoir known as the "East Cove," where water historically tended to stagnate, was filled in. That area, as well as areas nearest the reservoirs affected by construction, was re-landscaped to restore their natural appearance. The reservoirs were refilled and returned to service in December 1953 (LADWP 1950; 1952;1953).

Most recently in 1976, after a dam of similar design suffered severe damage in the 1971 Sylmar earthquake, Silver Lake dam was reconstructed and seismically strengthened. The outlet tower control house and bridge were renovated at that time as well (*Downtown News*).

2.4 Findings

2.4.1 Cultural Resources Literature Review

2.4.1.1 HWSG Site

The record search revealed that three prior archaeological investigations have been undertaken with a one-half mile radius of the project area. One of these (Beroza 1980) included a portion of the HWSG site. That project reported no cultural resources of any kind within or adjacent to the HWSG project area. The other two previous surveys (McLean 1998; Windmiller 2001) encountered no significant cultural resources.

Two known historic properties are located within a one-half mile radius of the project area. One of these, CA-LAN-22H (19-150414), is located on the north side of the Los Angeles River and the 134 Freeway, and will therefore not be impacted by work in the HWSG area. The other historic property, CA-LAN-23H (19-150415), is located within or immediately adjacent to the HWSG project area.

CA-LAN-22H

The site of "Triunfo's Adobe" was identified from a plat map for Rancho Providencia, surveyed in 1868. Recorded as the rancho house of Rancho Cahuenga, formerly occupied by the "Indian Jose Miguel Triunfo," the structure was in ruins at the time of the survey. It was located approximately one-quarter mile northwest of the project area, near the present site of Disney Studios (Edberg 1978a).

CA-LAN-23H

Identified from a plat map of Rancho Providencia, surveyed in 1868, this is the site of the "Old House of Lopez." Probably an adobe structure, it was recorded as occupied by a man named Lopez at the time of the survey. The site record places this structure in the extreme eastern portion of the HWSG area, although its location is not certain. The house appears to have been located on the north bank of the Los Angeles River, and therefore beyond the limits of the current project area. It is quite possible that it is immediately adjacent to or under the 134 Freeway (Edberg 1978b).

2.4.1.2 SLRC Site

The record search revealed one prior cultural resources survey of the Silver Lake Reservoir Complex, and five previous archaeological surveys located within a one-half mile radius of the reservoirs. The previous survey of the reservoir complex itself (Brown 1990) observed

some historic structures that seemed to date to the period of dam construction and artifacts (early 20th century glass) within the perimeter fence of the reservoir. The buildings and landscape features existing on the property have never been recorded in a systematic survey or individually assessed. No prehistoric sites or materials were reported. None of the five surveys within a one-half mile radius of the SLRC (Brechbiel 1998; Duke 1999, 2000; Kuta 1998; Smith 2000) encountered archaeological sites or materials.

A number of historic resources were identified within a one-half mile radius of the SLRC. They include buildings and structures constructed in the first four decades of the twentieth century, as follows:

Garbutt House/Hathaway Mansion

A Mediterranean Revival style structure built in 1926, the Garbutt House/Hathaway Mansion is located 0.25 mile southeast of Silver Lake Reservoir at 1809 Apex Avenue. It was added to the NRHP in 1987 (19-166820).

Glendale-Hyperion Viaduct

The Glendale-Hyperion Viaduct is a concrete arch structure that spans the Los Angeles River, Riverside Drive, and the Golden State Freeway between Ettrick Street and Glendale Boulevard, approximately one-half mile north of the SLRC. Constructed by the City of Los Angeles in 1929, the viaduct was declared City HCM No. 164 in 1976. It was determined NRHP-eligible in 1986.

Site of First Disney Studio

Declared City HCM No. 163 in 1976, the site of the first Walt Disney Studio is located one-quarter mile northwest of the SLRC at 2725 Hyperion Avenue.

Tierman House

Designed by acclaimed local Modern architect Gregory Ain and constructed in 1940, the Tiernam House stands one-quarter mile northwest of the SLRC, at 2323 Micheltorrena Street. It was declared City HCM No. 124 in 1974.

Mack Sennett Studios

One of the first motion picture studios in Los Angeles, the Mack Sennett Studios were built in 1912. Declared City HCM No. 256 in 1982, the structure is located one-half mile southeast of the SLRC at 1712 Glendale Boulevard.

Engine Company No. 56

Built in 1924, Engine Company No. 56 is one of the few remaining unaltered Mediterranean Revival style engine houses in the City of Los Angeles. Located one-quarter mile northeast of the SLRC at 2838 Rowena Avenue, the structure was declared City HCM No. 337 in 1988.

Canfield-Moreno Estate

Also known as the Danziger House, and the Crestmount, this Mediterranean Revival style country villa was designed by Robert Farquhar and constructed in 1923 for Daisy Canfield

Danziger and her actor husband Antonio Moreno. Located at 1923 Micheltorena Street, one-quarter mile west of the SLRC, it was declared City HCM No. 391 in 1988.

Silver Lake and Ivanhoe Reservoirs

Silver Lake and Ivanhoe Reservoirs were designated City HCM No. 422 in March 1989. The nomination refers specifically to only the reservoirs and dams, noting their importance in the growth of the city and to its water system, declaring that "Silver Lake is as much a landmark as any structure of mortar or stucco" (Kanner 1989).

VDL Research House

An International style house designed by noted architect Richard Neutra and originally built in 1932, the house was destroyed by fire in 1963 and reconstructed by Neutra and son, Dion. Located at 2300 Silver Lake Boulevard, adjacent to the east side of the SLRC, it was declared City HCM No. 640 in 1997.

2.4.2 Cultural Resources Field Investigations

2.4.2.1 Field Methods

The two discrete areas of investigation for the proposed project, the Headworks and SLRC sites, were field surveyed by Greenwood and Associates cultural resource specialists Matthew Bandy, Ph.D. (archaeologist) and Dana Slawson, M. Arch. (architectural historian) on March 22, 2004. The cultural resources reconnaissance examined the proposed ground-disturbance footprints for built facilities, pipeline route corridors, and materials and equipment staging areas. Survey methods entailed pedestrian inspection of the areas to be impacted, which were restricted by topography, vegetation cover, modern land use, and general accessibility. All existing features of both facilities were photographed, and architectural details of buildings and structures, as well as landscape features, were recorded. Results are reported below. As the Silver Lake and Ivanhoe Reservoirs have previously been identified as an historical resource (City of Los Angeles HCM No. 422), and the SLRC SRP has a potential to impact contributing features of the reservoir complex, the entire SLRC property was included in the survey of historical resources.

2.4.2.2 HWSG Site

Archaeological Resources

For the purposes of this report, the HWSG site is considered as a single area. Essentially the entire parcel is scheduled to be impacted by construction of large subterranean storage tanks and by related staging and access area. For this reason the entire HWSG area was intensively surveyed for archaeological resources. The lenticular site is bounded on the northwest by the concrete channel of the Los Angeles River, and on the northeast by the 134 Freeway. The southern and eastern boundary of the site is Forest Lawn Drive, which bends southward near its midpoint, then northward as it meets the Rte 134/Zoo Drive interchange. The HWSG site is located on the USGS Burbank Quadrangle 7.5' map.

The site is currently unmaintained, and is covered with a mixture of native and introduced grasses and shrubs. Visibility ranges from very good (>80%) to moderate (~30%). In general, surface visibility is adequate in this entire area to permit surface identification of

archaeological remains. However, the entire area has been extensively modified with mechanical equipment. The HWSG area has the form of an elliptical bowl. The center is low, and surrounded on all sides by higher ground. The center (lower portion) of the area has been completely remodeled by earth-moving activity related to creation of the spreading grounds complex. Numerous traces of this remain, including cement-lined ponds and baffles, wells, and other features. The only relatively undisturbed areas of the HWSG are higher patches near the south, east, and west perimeter fences. Even these areas have been modified, however, most prominently by fill related to the construction of Forest Lawn Drive. In short, the entire HWSG area has been extensively disturbed, and the probability of encountering intact archaeological contexts or deposits of any kind is very low.

Historical Resources

Headworks Spreading Grounds encompasses a series of dry shallow basins situated beside the Los Angeles River, near the border between the cities of Los Angeles and Burbank. The east-west oriented, lozenge-shaped site is nearly 0.75 mile in length, and 0.20 mile across at its widest point. The spreading basins are depressed approximately 30 ft below the level of Forest Lawn Drive and generally overgrown with low brush. The configuration of the spreading grounds includes an earthen banked channel roughly 15 ft deep, running east-west through the central section of the site. At the west end of this channel is a concrete gate structure that once allowed Los Angeles River water to flow onto the site. Presently, the channel is dry and a large diameter corrugated metal pipe runs within it. The eastern half to two-thirds of the site is occupied by the actual spreading basins. The westernmost basins are the largest, measuring roughly 500 ft across. The two basins are separated by a central, east-west earthen berm and have bottoms of native sand and gravel. A series of smaller basins to the east also is divided by earthen berms. The side walls of two small basins in the northeast section of the site are lined with gunnite. At the east end of the site, extensive filling has occurred, raising the ground level several feet above the level of the spreading basin berms.

Additional features of the site include a row of 18 well casings that protrude vertically roughly 3 feet above grade, located along the top of the berm between the two large western basins. These are 10 inches in diameter and many are covered by conical caps, presumably to deflect rainwater. These are believed to date to the 1920-1940 period.

There are two small buildings on the site, both of recent construction. The first is a metal clad shed containing electrical equipment located in the south-central section of the site. The second building is located near the west end of the spreading grounds site. It is roofless, with concrete walls that are stepped at the top on two sides, with small decorative penetrations. The structure contains equipment associated with an inflatable Los Angeles River dam. Other features of the site include a series of hand operated geared steel cranks along the top of the river channel, also at the west end of the site. These are thought to be associated with flood gates in the channel directly below. Also, a row of electrical transmission towers parallels the river channel along the north side of the site. These date to the mid-1950s or later.

2.4.2.3 SLRC

The project vicinity has experienced extensive ground disturbance from past and ongoing municipal and residential development, construction of underground utilities, and road infrastructure improvements. The SLRC area is located on the USGS Hollywood Quadrangle 7.5' map. The reservoirs are enclosed by a perimeter fence and bordered on the west by West Silver Lake Drive, on the south southeast by Silver Lake Drive, on the northeast by Armstrong Avenue, and on the north by Tesla Avenue. Three areas of archaeological concern identified in the SLRC area have been given the following designations for ease of discussion: SLRC-1, -2, and –3. Their locations are indicated on Figure 2-1.

2.4.2.3.1 Archaeological Resources

SLRC-1

An area within the reservoir perimeter fence, east of the reservoir itself and south of the prominent landform known locally as "the Knoll." This broad, flat area is scheduled to be used as a staging area for construction materials and machinery. The area was once a part of the reservoir referred to as the East Cove, and seems to be composed primarily of deposits associated with filling completed in the 1950s. At present, it is planted in grass with landscaped islands of ornamental shrubbery. Surface visibility is generally poor (around 10%), being limited to bare patches in the grass, especially on the verges, and areas of rodent disturbance. The probability of archaeological sites existing near the surface in this area is extremely low. The only part of the SLRC-1 that is relatively undisturbed, and is therefore at all likely to have intact archaeological deposits, is the base of the hill to the north (the "Knoll").

This area has been heavily disturbed in the historic period, and the modern surface seems to reflect extensive filling and grading dating to the 1950s. This area was inspected by conventional pedestrian survey techniques, with transects spaced at approximately 20 meter intervals. Surface visibility was not high but was adequate, and no materials or sites of historic or archaeological significance were observed.

SLRC-2

An open public park area adjacent to but outside the reservoir perimeter fence, at the corner of West Silver Lake Drive, near the southwest corner of the reservoir itself, is the projected location of regulating station. It has been extensively landscaped and modified by mechanical means in the recent past. The park is planted with grass and a few trees. Visibility is slightly better than in SLRC-1, due to the higher rate of rodent activity, but remains low (around 15%). Most exposures are the result of rodent burrowing. The probability of encountering intact archaeological remains in SLRC-2 is very low, due to the extensive recent landscaping and other disturbance in this area.

This area has been extensively landscaped in its history as a public park. Further, its proximity to the face of the earthen Silver Lake dam suggests that it may have been subject to disturbance at the time the dam was constructed. It was inspected using judgmentally-spaced transects located opportunistically in order to take advantage of patches of rodent disturbance or high surface visibility. Surface visibility was poor but generally adequate. No materials or sites of historic or archaeological significance were observed.

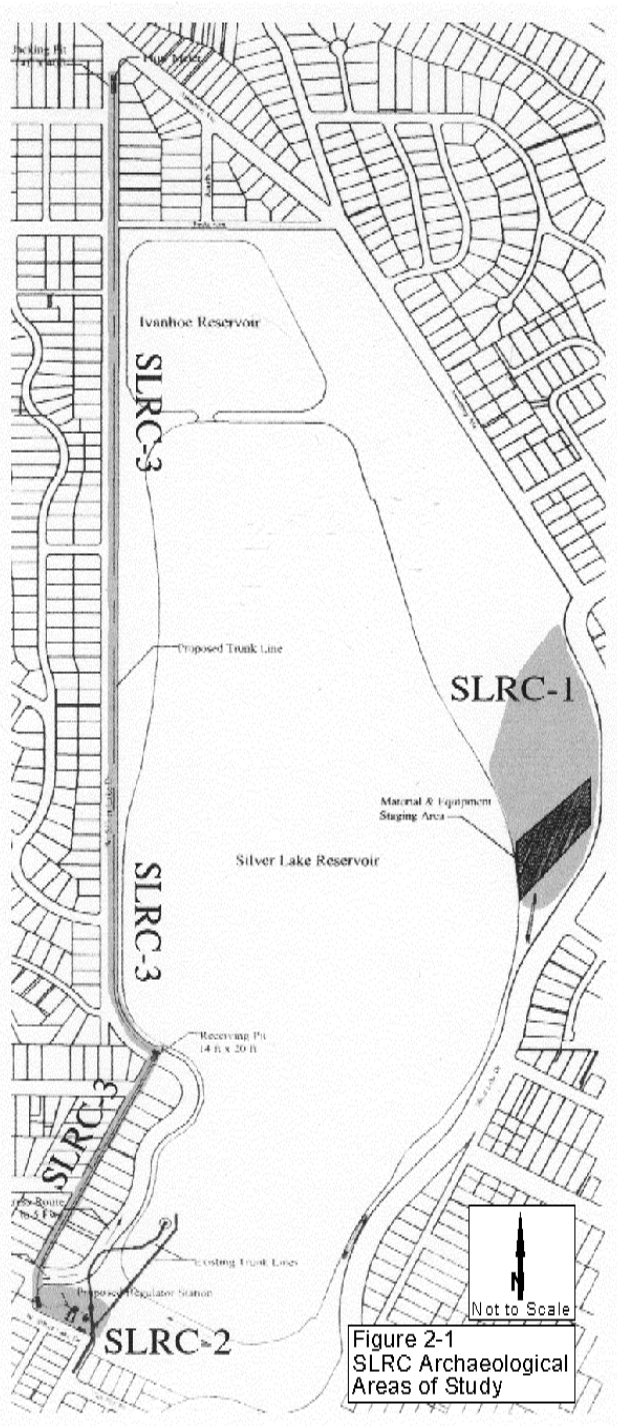

Figure 2-1
SLRC Archaeological Areas of Study

SLRC-3

A series of jackpits, receiving pits, and underground conduits are scheduled for construction along the west edge of the SLRC area, on West Silver Lake Drive and Redesdale Avenue. This entire area is paved at present and surface visibility is zero. This being the case, it is impossible to evaluate the presence or absence of cultural resources.

2.4.2.3.2 Historical Resources

Ivanhoe Reservoir and Dam

Built at the summit of Ivanhoe Canyon in 1906, Ivanhoe Reservoir is of the double earthen dam type. Its original capacity was about 154 acre ft. In 1907 Silver Lake Reservoir was constructed directly south of Ivanhoe (Figure 2-2). The two reservoirs were originally connected by a 36 inch cast iron pipe beneath the fill of the separating dam. Somewhat west of center of the dam between the two reservoirs is a reinforced concrete spillway. Added in 1944, the open channel type spillway is rectangular in section and measures 84 ft long and 53 ft wide. In 1952 Ivanhoe Reservoir was deepened 10 ft and paved with an asphaltic cement lining. Its present capacity is 174.78 acre ft. In 1993 the reservoir was re-paved and a 72 inch bypass pipeline was installed in the south end of the reservoir. This bypass was installed to add the capability to bypass both Silver Lake and Ivanhoe reservoirs concurrently. The Ivanhoe Reservoir has a capacity of 59 million gallons and covers an area of 7.84 acres. The top of the dam is 451 feet above sea level (LADWP n.d.a).

Ivanhoe Reservoir Inlet Tower

Rising from the waters of the Ivanhoe Reservoir near the center of its north bank, the inlet tower is formed from a vertical, large diameter steel pipe which is covered by a conical steel roof (Figure 2-3). A steel deck wraps the structure well above the high water line. It is accessed via a steel I-beam bridge with pipe railings. The inlet tower was constructed in 1933, concurrent with improvements to the River Supply Conduit. It is essentially unaltered and retains integrity of design.

Silver Lake Reservoir and Dam

Silver Lake Reservoir was constructed by the City of Los Angeles Water Department and placed in service in 1907 (Figure 2-4). It was constructed at an initial cost of $115,547; however, considerable work was done on the reservoir in the years that followed, bringing the total investment by the end of the 1930s to $271,107. The reservoir is formed by two earth fill dams – one at the south, and one at the north that separates it from Ivanhoe Reservoir. The irregularly shaped reservoir has a capacity 658 million gallons and covers an area of 78.2 acres. The Silver Lake dam is roughly 900 feet in length and the dam crest is at an elevation of 451 feet above sea level. Asphaltic cement paving was applied to the steep sides of the reservoir in 1953, and a 20 foot wide paved perimeter road encircles the structure (LADWP n.d.b). The south face of the Silver Lake dam is planted in shrubs and ornamental grasses.

Silver Lake Outlet Tower

The outlet gate control tower for the Silver Lake Reservoir rises from the waters of the reservoir near its southwest corner. Constructed in 1937 in the Renaissance Revival style, the

tower was extensively altered during reservoir renovations completed in the mid 1970s. The outlet tower is of cast-in-place reinforced concrete construction. It is square in plan and covered by a flat roof with overhanging eaves. At each corner of the control house is a buttress-like feature that rises to the structure's roof. These are supported from below by brackets. Extending from the west shore to the tower is a steel plate girder bridge that provides the only access to the structure. At the end of the bridge is a steel double door with single-light glazing.

Silver Lake South Outlet Chlorination Station

Situated roughly 100 feet south of the toe of the Silver Lake dam, near its west end, is the Silver Lake South Outlet Chlorination Station (Figure 2-5). It is a single-story Mediterranean Revival style building with a front-gabled rectangular main block and a lower wing that wraps the south and east sides. The structure is covered by a red shingle tile roof and the walls are smooth-finished stucco over cast-in-place reinforced concrete. Classical detailing includes narrow molded cornice trim beneath the closed eaves, with cornice returns at the gables and a molded water table. Impressions from the board formwork are visible in the area below the water table. The focus of the facade of the front gabled portion is a large multi-paneled wooden garage door surmounted by a small rectangular vent (now covered). The principal entrance is located in the street facade of the shed wing. It features a molded six-panel door with squared label mold trim incorporating a stylized keystone and corbel stops. Except for a small vent opening in the south elevation, the building is without windows. Designed by LADWP staff, the chlorination station was constructed in 1947 as a replacement for a 1920s structure at the opposite end of the dam. The structure is stylistically similar to many of the water system-related utilitarian facilities constructed by the LADWP during the 1910s through the 1940s. It is presently used by LADWP for storage.

Silver Lake Meter House

Standing off the southwest corner of the chlorination station, nearer the street, is the Silver Lake Meter House (Figure 2-5). The small one-story Mediterranean Revival style building corresponds architecturally with the adjacent chlorination station. It is square in footprint and covered by a pyramidal hipped roof clad with red Spanish tiles. Of cast-in-place concrete construction, the walls are finished with rough-troweled stucco with a narrow molded cornice beneath closed eaves. The windowless building is accessed by a steel clad door in its east elevation.

The meter house was designed by LADWP Bureau of Water Works and Supply staff and was likely completed in late 1927 or early 1928, about 20 years before the adjacent chlorination station. It originally contained a single outlet flow meter. The structure's exterior is essentially unaltered.

The chlorination station and meter house lot is enclosed by a low chain link fence and attractively landscaped with ficus trees and topiary, ivy ground cover, yucca, and neatly trimmed holly shrubs.

Silver Lake Chemical/Chlorine Plant

Situated between Silver Lake Boulevard and the toe of the Silver Lake Dam near its eastern terminus, the Chlorine Plant is a small, 22 x 14 ft, rectangular one-story building constructed

of cast-in-place reinforced concrete with hip roof (Figure 2-6). The Renaissance Revival style structure is typical of water system-related utilitarian buildings erected by LADWP during the 1910s through the 1930s. Characteristic of the style, the building displays symmetrical elevations with corner pilasters, water table, and simplified entablature that frame the wall planes. Its walls show the impressions left by the horizontal board concrete formwork. The street elevation features a centrally placed Classical entrance with squared pilasters supporting a stylized entablature. Flanking the entrance on either side are large rectangular window openings that are presently covered. The west elevation also displays two symmetrical window openings; both other elevations are without windows or doors. Red Spanish tiles cover the building's hip roof, which has a slight eave overhang. Currently, the chlorine plant is used for equipment storage. The plant stands within the grounds of the reservoir complex amid landscaped lawn, trees, and bushes. Chain link boundary fencing extends from either end of the building's facade.
Referred to as a "Chemical Plant" on architectural drawings and a "Chlorine Plant" on other maps, the building is believed to have been erected around the time that the Silver Lake and Ivanhoe Reservoirs went into use for domestic water supply (1920). Plans dating to 1927 depict the building much as it presently appears, but with a glazed and paneled front door and 12-light sash windows. The structure was functionally replaced in 1947 by the chlorination station at the west end of the dam. It is presently used for storage.

Caretaker's Residence

Located directly east of the Ivanhoe dam, the caretaker's residence is thought to have been constructed around the time of completion of the Ivanhoe and Silver Lake Reservoirs, between 1906 and 1910 (Figure 2-7). It is a modest single-story wood frame vernacular cottage with a hip roof. Clad with false clapboard wooden siding accented with cornerboards, the dwelling is roughly rectangular in footprint with a partial-width enclosed porch projecting from the front (east) elevation. Its medium pitched roof is clad with composition shingles and has moderately overhanging open eaves with rafter tails exposed beneath, and an extension of the principal roof shelters the front porch. Centered in the south wall is an external stucco-clad chimney. Fenestration is typically one-over-one double hung sash placed singly, paired, and in multi-window groups. Several aluminum sliding sash windows have been added on the south and east sides, but these do not detract significantly from the overall historic character of the house. Other alterations include addition of an entrance porch with a pipe-framed roof and concrete steps, and attic ventilators. Associated landscaping includes mature palm, olive, and willow trees, plus various ornamental bushes and vines.

Garage

Associated with the caretaker's residence, the garage stands to the northeast of that structure, adjacent to the principal reservoir access road (Figure 2-8). A small bathroom building stands adjacent to its north. The garage is a vernacular one-story wood frame building with a medium pitched front-gabled roof and a rectangular footprint. It appears somewhat later in its construction than the residence, perhaps dating to the 1920s (no permits or records were uncovered). Cut into the hill slope, it rests on a concrete foundation

and has walls clad with horizontal channel wooden drop siding. Composition shingles cover the roof, which has open overhanging eaves with rafter ends exposed. There is a single four-light wood casement window with plain, medium width trim in either side elevation. The street facade features a large paneled metal overhead garage door, a recent modification. The door has wide lugged wood trim and is surmounted by a sunburst motif slatted vent opening in the gable peak.

Bathroom Building

Located immediately north of the garage, the bathroom building is a small wood frame structure, nearly square in plan, and covered by a medium-pitched front-gabled roof (Figure 2-9). It rests on a concrete foundation and has a clapboard wall finish. The bathroom has a five-panel wooden door with medium width lugged trim on the front (east) side, shielded by a latticework screen. A single one-over-one double hung sash window in the north elevation, also with lugged trim, comprises the only fenestration. The building's roof is clad with composition shingles and it displays moderately overhanging eaves with exposed rafter ends. It is believed to date to the 1906-1930 period.

Sheds

To the rear (west) of the garage and north of the caretaker's residence, there are three single-story wood framed sheds associated with the residence (Figure 2-10). The northernmost of these is recently constructed, with painted plywood walls and a shed roof. The two other sheds appear roughly contemporaneous with the garage, bathroom, and house. The easterly shed is rectangular in plan and has a medium-sloped gabled roof with open eaves and composition shingles, and walls sheathed with painted corrugated sheet metal panels. It rests on a concrete foundation. There is a two-over-two double hung sash window with lugged trim centered in the north elevation. Based on its size and placement, this shed may represent an earlier garage.

The smaller westerly shed is also rectangular in plan. It is sheltered by a shed roof covered with roll roofing and its walls are finished with vertical tongue and groove planks. The single window visible has jalousie sash placed within the original window frame with lugged trim. It has a cast-in-place concrete foundation.

Landscape Building

The landscape building stands to the east of the Ivanhoe dam and approximately 300 feet south of the caretaker's residence, along the west side of the primary reservoir access road (Figure 2-11). It is a wood frame vernacular utility building with a side-gabled roof and redwood clapboard siding. The original portion of the building has a rectangular footprint. A full width shed annex has been added to the rear (west) side. The structure is believed to have originally housed reservoir related equipment and supplies, and dates to the 1906-1930 period. At the center of the landscape building's principal (east) façade is a large sliding freight door with diagonal bracing. The open eaves of the composition shingle clad roof overhang considerably, and the eave above the freight door is raised to allow access to taller equipment. There is an original four-panel personnel door with lugged trim to the left of the freight door, and two original windows in the south elevation are presently boarded, but plain, medium width trim is visible. A pair of rectangular louvered vents in the north gable

end and a mushroom type metal ventilator along the ridgeline appear original to the building. The structure rests on a cast in place concrete foundation. An office has been added within the north end of the building, and a modern door, aluminum sash windows, and a small louver-sided shed containing AC equipment have been installed in that area. Although the landscape building has had a number of modifications, it continues to manifest its historic character and the feeling of its period of significance.

Chlorination Station (Ivanhoe)

To the north of the caretaker's residence and its outbuildings, on the east side of the Ivanhoe Reservoir, is a former chlorination station (Figure 2-12). It is presently used by LADWP as a work shop. It is believed to date to ca. 1937, when a bypass pipeline was built from the Fletcher Drive pumping plant, northeast of the SLRC, to the reservoir. Displaying Art Moderne elements, it is a single-story, cast-in-place concrete structure with a two level parapeted flat roof. Its walls are exposed concrete with regularly spaced horizontal channels. A narrow rectilinear cornice caps the roof parapet. There is a metal roll-up door on the building's west elevation, and a metal clad personnel door on the south side. The exterior of the chlorination station appears to be unaltered.

Laboratory Building

The laboratory building stands to the east of the caretaker's residence, near Armstrong Avenue. Designed by LADWP staff in 1955, it is a Modern one-story, wood frame structure, rectangular in plan, and covered by opposed two-level shed roofs. The structure is clad with wood weatherboards and rests on a concrete slab. Fenestration is typically one-over-one double-hung sash.

Stone Retaining Walls

East of Ivanhoe Reservoir, adjacent to the east, uphill, side of the primary reservoir access road, and also along both sides of driveways extending from Armstrong Avenue to the perimeter road, are low stone retaining walls (Figure 2-13). Typically between two and three feet in height, the walls are of mortared random rubble construction, incorporating both rough-dressed stone and natural cobbles. In one location, opposite the landscape building, a three riser stone stair is cut into the wall. The stone retaining walls are thought to be early features of the reservoir complex, dating to the 1906-1940 period.

Concrete Retaining Walls

Following the reservoir's conversion to use for domestic water supply in 1921, there was heightened awareness of the facility's vulnerability to contamination from hillside runoff. To allay this problem, open perimeter ditches along the west and north sides of the site were constructed. These were replaced by the existing concrete retaining wall along West Silver Lake Drive in the 1930s. The walls are typically two feet high and topped by chain link fencing.

Trees and Other Landscape Features

The intent of the designers of the Silver Lake and Ivanhoe Reservoirs was to create natural looking bodies of water in a richly landscaped sylvan setting that would both attract

development to the surrounding area and exist as a verdant enclave in the midst of the expanding city. To this end, portions of the reservoir property were left with their original natural topography and vegetation, while other areas were planted in a naturalistic way with trees, shrubs, and other vegetation. Some alterations to the original landscaping were necessitated by the various reservoir improvement projects beginning in the 1930s and continuing through the present day. Reservoir improvements of the early 1950s in particular resulted in changes in the appearance of the reservoir and landscaping of directly adjacent areas. In-filling of the East Cove resulted in a substantial level area planted in lawn referred to as the "meadow." Currently the reservoir complex incorporates numerous mature trees of both native and introduced species, including live oak, eucalyptus, California sycamore, various species of pines, cedars, and palms, bottlebrush, olive, pepper, and magnolia. Additionally, the well maintained park-like setting is enhanced by areas of shrubs and bushes interspersed within expanses of open lawn and low vegetation such as the "meadow." Silver Lake's south dam is also attractively landscaped with ornamental grasses, wildflowers, and other ground cover.

3.0 Environmental Impacts

3.1 Standards of Significance

Adopted standards of significance that are applicable to cultural resources are provided in the CEQA Guidelines (2002) and the Draft City of L.A. CEQA Thresholds Guide (1998). Significance criteria considered for the cultural resources impact analysis are provided below.

3.1.1 Historical Resources

As defined by Section 15064.5(a) of the State CEQA Guidelines, the term "historical resource" includes the following:

- A resource listed in, or determined eligible for, listing in the California Register of Historical Resources (PRC Sections 5024.1);
- A resource included in a local register of historical resources, or identified as significant in an historical resource survey meeting the requirements of Section 5024.1(g) of the PRC. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant;
- Any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided the lead agency's determination is supported by substantial evidence in light of the historical record.

Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (PRC Section 5024.1[a]) including the following:

- It is associated with events that have made a significant contribution to the broad patterns of California history and cultural heritage;
- It is associated with the lives of persons important in our past;
- It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
- Has yielded, or may be likely to yield, important information in prehistory or history.

3.1.1.1 California Register of Historical Resources

As provided in California Public Resources Code Section 5020.4, the California Legislature established the CRHR in 1992. The CRHR is used as a guide by state and local agencies, private groups, and citizens to identify the state historical resources and to include which properties are to be protected, to the extent prudent and feasible, from substantial adverse change. The CRHR, as instituted by the California Public Resources Code, automatically includes all California properties already listed in the NRHP. It also includes those formally determined to be eligible for listing in the NRHP (Categories 1 and 2 in the State Inventory of Historical Resources), as well as specific listings of the State Historical Landmarks and in the State Inventory of Historical Resources, and specific listings of State Historical Landmarks and State Points of Historical Interest. The CRHR may also include various other types of historical resources that meet the criteria for eligibility, including the following:

- Individual historic resources
- Resources that contribute to a historic district
- Resources identified as significant in historic resource surveys
- Resources with a significance rating of Category 3 through Category 5 in the State Inventory (Categories 3 and 4 refer to potential eligibility for the NRHP; Category 5 indicates a property with local significance)

The CRHR follows the lead of the NRHP in utilizing the 50-year threshold. A resource is usually considered for its historical significance after it reaches the age of 50 years. This threshold is not absolute, but was selected as a reasonable span of time after which a professional evaluation of historical value/importance can be made.

Historic Districts

Historic districts are unified geographic entities which contain a concentration of historic buildings, structures, objects, or sites united historically, culturally or architecturally. Historic districts are defined by precise geographic boundaries. Therefore, districts with unusual boundaries require a description of what lies immediately outside the area, in order to define the edge of the district and to explain the exclusion of adjoining areas. The district must meet at least one of the criteria for significance discussed in Section 4852 (b)(1)-(4).

Those individual resources contributing to the significance of the historic district will also be listed in the California Register. For this reason, all individual resources located within the boundaries of an historic district must be designated as either contributing or as noncontributing to the significance of the historic district.

3.1.1.2 City of Los Angeles Historic Designation

In 1962, City Ordinance 162102 of the Los Angeles Administrative Code established the City Cultural Heritage Commission and created criteria for Historic-Cultural Monument (HCM) designation. The criteria formulated for HCM listing correspond closely with criteria established for State and National Register eligibility, and are as follows:

- any site (including significant trees and other plant life located thereon), building or structure of particular historic or cultural significance to the City of Los Angeles, such as

historic structures or sites in which the broad cultural, political, economic or social history of the nation, state, or community is reflected or exemplified,

- any site, building or structure which is identified with historic personages or with important events in the main currents of national, state or local history, or;
- any site, building or structure which embodies the distinguishing characteristics of an architectural-type specimen, inherently valuable for a study of a period style or method of construction, or a notable work of a master builder, designer, or architect whose individual genius influenced his age.

3.1.2 Archaeological Resources

An archaeological resource shall be considered by the lead agency to be an "important" resource as defined by CEQA, if it:

- Is associated with an event or person of recognized importance in California or American prehistory or of recognized scientific importance in prehistory
- Can provide information which is both of demonstrable public interest and useful in addressing scientifically consequential and reasonable archaeological research questions
- Has a special or particular quality, such as the oldest, best, largest, or last surviving example of its kind
- Is at least 100-years-old and possesses substantial stratigraphic integrity
- Involves important research questions that historical research has shown can be answered only with archaeological methods

3.1.3 Threshold for Significant Impacts

3.1.3.1 Historical Resources

Criteria presented in the Draft City of L.A. CEQA Thresholds Guide (1998) are consistent with state criteria noted above. Under the Draft L.A CEQA Thresholds, a project would have a significant impact on historical resources if it would result in a substantial adverse change in the significance of an historical resource. A substantial adverse change in significance occurs if the project involves:

- Demolition of a significant resource;
- Relocation that does not maintain the integrity and significance of a significant resource;
- Conversion, rehabilitation, or alteration of a significant resource which does not conform to the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings; or,
- Construction that reduces the integrity or significance of important resources on the site or in the vicinity.

3.1.3.2 Archaeological Resources

The project would have a significant impact upon archaeological resources if it would disturb, damage, or degrade an important archaeological resource or its setting.

3.2 Evaluation of Significance

3.2.1 HWSG Site

Because continuous changes to the Headworks Spreading Ground site over the course of its 100 year history have resulted in a loss of integrity of design, character, and setting, such that it no longer reflects associations with the early development of the Los Angeles water supply system, the HWSG site and its various constituents do not appear eligible for state or city historic designation.

3.2.2 SLRC

The Silver Lake Reservoir Complex, comprised of both the Ivanhoe and Silver Lake Reservoirs and surrounding city-owned property, appears eligible for listing in the California Register as an historic district. The Silver Lake Reservoir and Dam was the first facility built by Superintendent William Mulholland and the Water Department using a unique water sluicing technique. The reservoir complex is part of a broad integrated system of water supply developed by the Department during the first decades of the twentieth century. Among the largest systems in the world, it continues to serve the city well nearly 100 years later.

The LADWP made a conscious effort to achieve a pleasing aesthetic appearance at the facilities. The initial design of the reservoir property and subsequent renovations have sought to provide a richly landscaped, natural appearance. The buildings associated with the reservoir complex, in keeping with LADWP's philosophy of facilities design of the era, were attractively rendered to integrate with and enhance the adjacent residential neighborhoods. Referring to Department chlorine stations, the *Intake* in 1932 took pride in stating that, "Beauty is combined with utilities in buildings of the Department of Water and Power" (LADWP 1932:4).

The SLRC is eligible for the CRHR for its contribution to the broad patterns of history. Construction of the reservoirs transformed a forgotten corner of the city into one of its most desirable neighborhoods. Silver Lake district underwent a period of rapid development during the 1920s and 1930s, in large part due to the development of the reservoirs and water delivery infrastructure there. Additionally, the aesthetic appeal resulting from LADWP's creation of a natural appearing "lake" amid trees and lush native and introduced vegetation functioned as a magnet for private development of the hillsides overlooking the reservoirs. From its beginnings, this "blue jewel" attracted the City's elite, including numerous Hollywood personalities. The Silver Lake neighborhood emerged as an enclave of the work of many of the region's most renowned architects, and the area has been noted as having the greatest density of high style historic residences of any area in the city. The neighborhood's distinctive character is established by its rich mixture of residences designed in Mediterranean and other Revival styles of the 1920s and 1930s by architects such as Pierpont and Walter Davis and Robert Farquhar, among others, integrated with important works by major figures in the Modern movement, including Richard Neutra, Rudolf Schindler, Rafael Soriano, Gregory Ain, and John Lautner. Noted architectural historians David Gebhard and Robert Winter have observed that, "For so small a district, the Silver Lake area has a high concentration of first-rate architecture, making it one of the most important places to visit in the city….Obviously, the view (of the hills and the reservoir) was the attraction, and the architects have played up to it" (Gebhard and Winter 1994:177-178). The district boundaries

take in the all facilities associated with the historic functioning of the complex and the surrounding landscaped property owned by the City/LADWP and confined by the city street grid established after completion of the reservoirs, by the1920s.

The SLRC is also significant for its association with William Mulholland. Mulholland was a larger than life personality in the annals of southern California history, who by force of character was able to make his vision of water supply for southern California a reality. He is the person most responsible for the current water management system of the Los Angeles Basin. Mulholland was responsible for conceiving the construction of the Los Angeles-Owens Valley Aqueduct, which transformed the face of the region, enabling Los Angeles' expansion to major city proportions, in addition to increasing agricultural production. Mulholland, who headed the Department of Water and Power for 42 years, oversaw the design and construction of the aqueduct, which, at roughly 240 miles in length, was the most grandiose of its day and an engineering marvel. He was also responsible for developing the system of pipelines, reservoirs, and dams that provided the region with a dependable and inexpensive supply of water. William Mulholland was intimately involved in the development of the Ivanhoe and Silver Lake Reservoirs beginning with the selection of the site. Mulholland himself designed the reservoirs and dams, and he was responsible for developing the unique construction technique employed (Kanner 1989).

The SLRC is also eligible for the CRHR for the significance of its design and aspects of its engineering. Silver Lake Reservoir and dam were the first structures in the country to utilize the hydraulic sluicing technique of excavation and puddled earth dam construction. This method later became commonplace throughout the country and beyond. It is the first built and the only surviving example of a hydraulically sluiced reservoir in the Los Angeles water supply system, the others being either mechanically excavated earthen structures, or concrete. The DWP designers worked diligently to create a dam in Ivanhoe Canyon that would be not merely functional, but aesthetically pleasing for the thousands who would live on the "seven hills" overlooking it. While the various features of the reservoirs have been changed and upgraded over the course of its 100 year history, it continues to manifest its historic appearance, character and association with William Mulholland and the Department of Water and Power. The present appearance of the reservoirs reflects changes in technology through their functional life and evolution of the water supply system during their period of significance, established as 1906-1953. This period represents initial construction through the improvement program of the early 1950s.

Table 3-1 summarizes the elements of the SLRC and identifies the status of the various features. Noncontributing features have typically been identified as such because of their a) recent construction; or b) loss of integrity. The locations of SLRC contributing features are indicated on Figure 3-1.

TABLE 3-1
SLRC Historic District

SLRC SRP
Contributing Historic Resources

3.3 HWSG Site Impacts

Facilities proposed for the HWSG Site include a 110-MG underground storage reservoir and a 4-MW hydroelectric power generating facility. The reservoir would occupy approximately 19 acres on the east half of the HWSG site. The reservoir itself would be 10 acres in area and 40 feet high. Following construction, native vegetation would be planted on the side slopes and top of the reservoir. LADWP also proposes to construct a 4-MW hydroelectric power generating facility at or near the HWSG site. The powerhouse would be approximately 50 feet wide, 70 feet long, and 30 feet high, and would be partially buried, with the highest point roughly 18 feet above ground. The remainder of the HWSG site that would be disturbed during construction would be returned to its original condition.

3.3.1 Construction/Short-term Impacts

Given the highly disturbed nature of the HWSG site, no impacts to historical resources associated with construction of the underground storage reservoir and hydroelectric power generating facility at the HWSG site are anticipated and no additional measures are necessary.

The potential for discovery of prehistoric or historical archaeological sites on the parcel is considered to be low. However, implementation of Mitigation Measure 2 would ensure that potential impacts would be less than significant.

3.3.2 Operation/Maintenance/Long-term Impacts

There will be no impacts to archaeological or historical resources associated with operation of the underground storage reservoir and hydroelectric power generating facility at the HWSG site and no additional measures are necessary.

3.4 SLRC Site Impacts

3.4.1 Construction/Short-term Impacts

3.4.1.1 Materials and Equipment Staging Area (SLRC-1)

Implementation of the proposed project would entail storage of various construction materials and equipment on an approximately 5 acre area presently a well maintained grass lawn interspersed with banks of low shrubs and small trees. Use of the area for this purpose would result in removal and/or degradation of the existing landscaping. Dating to the early to mid-1950s when a portion of the reservoir that extended into this area was in-filled, the existing landscape features do not relate to the early development of the reservoir complex. However, the "meadow" has existed for 50 years or more, is in keeping with the historic landscaping of the reservoir complex which incorporates other areas of open lawn, and contributes to the overall historic character of the resource. Therefore, project related impacts to the area are considered potentially significant. These impacts may be reduced to a less than significant level through implementation of Mitigation Measure 1.

3.4.1.2 Regulating Station (SLRC-2)

Construction of the Regulating Station and associated facilities will involve excavation and grading of an approximately 30,000 square foot area at the southwest corner of the SLRC property. This work will result in the removal of grass and trees presently located within the construction site. The existing landscape features include approximately eight California sycamore trees 10-18 inches in diameter, that are believed to date to LADWP improvements between 1951 and 1977. Several pine trees on the periphery of the site are considerably older. While not associated with the early development of the reservoir complex, the sycamore trees are in keeping with the character of the historic landscaping, and they contribute to the overall historic qualities of the reservoir complex. Removal of the sycamore trees and other landscape features will result in a potentially significant adverse impact to historical resources without mitigation. Implementation of Mitigation Measure 1 will reduce this impact to less than significant.

The potential for discovery of prehistoric or historical archaeological sites on the parcel is considered to be low. However, if encountered during construction, unavoidable impacts can be mitigated to a less than significant level by implementation of Mitigation Measure 2.

3.4.1.3 Silver Lake Bypass Pipeline (SLRC-3)

Initial LADWP assessments indicate that, with the proposed techniques, tunneling for the Silver Lake Bypass Pipeline at a depth of between 30 and 100 feet below grade and off-set laterally from building footprints by a minimum of 30 ft will not result in noise or vibration levels likely to result in impacts to existing residential construction and related features along the west side of West Silver Lake Drive, along Redesdale Avenue, or to contributing elements of the SLRC. Further, none of the buildings located along West Silver Lake Drive adjacent to the tunnel alignment is now a locally, state or federally designated historical resource.

Excavations for the north jacking pit and one receiving pit will be located within the travel lanes of the existing streets. A second jacking pit will be placed on a corner of the SLRC that is presently a landscaped public park area. Impacts related to these excavations will be temporary, and project specifications call for restoration of affected areas to their preconstruction appearance.

Existing trees and other landscaping on SLRC property at the corner of W. Silver Lake Drive and Redesdale Avenue are believed to date to the 1951-1977 period, with older (pine) trees located on the slope to the north. While generally not associated with the early development of the reservoir complex, the landscaping is in keeping with the historic character and function of this portion of the SLRC property and contributes to the historic resource. Impacts associated with removal of vegetation in this area are considered potentially significant without mitigation. Impacts will be reduced to less than significant with implementation of Mitigation Measure 1.

Because soils in these areas could not be examined, the potential for existence of archaeological resources could not be fully assessed. Impacts to cultural resources resulting from excavation/unanticipated discovery would be mitigated to insignificance through implementation of Mitigation Measure 2.

3.4.2 Operation/Maintenance/Long-term Impacts

3.4.2.1 Silver Lake Bypass Pipeline (SLRC-1)

There will be no direct impacts related to operation of the bypass pipeline. As a result of the project, Silver Lake and Ivanhoe Reservoirs at the SLRC would no longer be used for water supply and day-to-day operations would change. Specifically, the water currently flowing into Silver Lake and Ivanhoe Reservoirs would bypass SLRC. Provided that current project specifications, which call for the SLRC facility and property to be maintained consistent with the appearance and condition that LADWP has provided at this facility for several years, project impacts related to the change in function of the Silver Lake and Ivanhoe Reservoirs are not considered to be potentially significant adverse and no additional measures are necessary.

3.4.2.2 Regulating Station (SLRC-2)

There will be no impacts to archaeological or historical resources associated with operation of the regulating station at the SLRC and no additional measures are necessary.

3.4.2.3 Materials and Equipment Staging Area (SLRC-3)

Use of the meadow area will be limited to the construction phase of the SLRC-SRP and there will be no operational impacts to known archaeological or historical resources.

4.0 Mitigation Measures

4.1 Construction/Short-term Impacts

Potential adverse environmental impacts on cultural resources during construction will be addressed by implementing the following mitigation measures:

Mitigation Measure 1

Landscaping of the 30,000 square foot park area located at the southwest corner of the SLRC, the proposed location of a jacking pit, pipeline, concrete vaults for a regulating station, and other new facilities, shall be returned to an appearance approximating the pre-construction conditions, in so far as is possible, prior to decommissioning of the SLRC for domestic water supply usage. Where avoidance or transplantation of on-site trees and other vegetation is not possible, the proposed regulating station area (SLRC-2) should be landscaped with mature, healthy trees and plant material of comparable species, in keeping with the historic character and appearance of these portions of the reservoir complex. In areas where planting of trees and other large vegetation would impede operation of the new facilities, grass will be replanted over the buried structures, approximating the current appearance of the site in as much as that is practicable. In so far as is possible, landforms shall be returned to their pre-construction topography. The *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Cultural Landscapes* should be employed to mitigate potential impacts to the existing landscaping resulting from construction activities.

The same mitigation measures shall be employed for impacts related to the removal or degradation of landscaping in the area designated for equipment and material staging (SLRC-1), within the former East Cove area.

Mitigation Measure 2

The impact to cultural resources related directly or indirectly to the project-related activities shall be reduced to below the level of significance through the recovery or treatment of archaeological resources encountered during any archaeological site investigations or monitoring of ground-disturbing activities (construction) in areas with the potential to contain archaeological resources.

When investigations identify unique archaeological resources as defined in Section 21083.2 of the Public Resources Code, the site shall be subject to specified requirements for treatment. Where any respective element of the project is expected to require earthmoving, the following program shall be implemented and the requirement duly noted in project plans and specifications:

- Retain a qualified archaeologist to implement a monitoring and recovery program in any area identified as having the potential to contain unique archaeological resources.

- A qualified archaeologist shall monitor earth-moving activities in areas that are likely to contain unique archaeological resources. The archaeologist shall be authorized to halt construction, if necessary, in the immediate area where buried cultural remains are encountered. Prior to the resumption of grading activities in the immediate vicinity of the cultural remains, the project proponent shall provide the archaeologist with the necessary resources to identify and implement a program for the appropriate disposition as specified by Section 15064.5(e) of the CEQA Guidelines.
- The selected archaeologist shall be required to secure a written agreement with a recognized museum repository regarding the final disposition and permanent storage and maintenance of any unique archaeological resources recovered as a result of the archaeological monitoring. This would also include corresponding geographic site data that might be recovered as a result of the specified monitoring program. The written agreement for the disposition of recovered artifacts shall specify the level of treatment (preparation, identification, curation, cataloging) required before the collection would be accepted for storage.
- The selected archaeologist shall attend a preconstruction meeting to provide information regarding regulatory requirements for the protection of unique archaeological resources. Construction personnel shall be trained on procedures to be followed in the event that a unique archaeological resource is encountered during construction. In addition, the archaeologist shall ensure that the preconstruction meeting participants are trained to notify the Los Angeles County Medical Examiner (coroner) within 24 hours of the discovery of human remains. Upon discovery of human remains, there shall be no further excavation or disturbance of the site or any reasonably nearby area suspected to overlie adjacent human remains until the following conditions are met:
  - The Los Angeles County Medical Examiner has been informed and has determined that no investigation of the cause of death is required, and if the remains are of Native American origin, the descendants of the deceased Native Americans have made a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98.

If archaeological sites are encountered during construction of the proposed project, an evaluation of significance will be made by the selected archaeologist. Those sites that are determined to be eligible for listing in the CRHR shall be treated in accordance with one of the three feasible measures described in the "CEQA and Archaeological Resources," CEQA Technical Advice Series:

- Capping (covering) the site with a level of soil prior to construction over the site
- Incorporation into open space areas of the project site
- Excavation where the first two measures are not feasible.

For eligible sites, the City of Los Angeles shall, prior to construction, implement the applicable treatment plan.

With implementation of these measures, construction of the proposed SLRC SRP would not result in significant cultural resources impacts.

4.2 Operation/Maintenance/Long-term Impacts

No adverse environmental impacts to cultural resources are expected during routine operation of the proposed project, provided that the SLRC facility and property are maintained consistent with the appearance and condition that LADWP has provided at this facility for several years. As such, no mitigation measures are required.

Addendum to the Cultural Resources Assessment Report for the Silver Lake Reservoir Complex Storage Replacement Project

Introduction

This Technical Memorandum is an addendum to the *Silver Lake Reservoir Complex Storage Replacement Project – Cultural Resources Assessment Report* (CRAR) prepared by Greenwood and Associates in August 2004. The CRAR is incorporated herein by reference. This Technical Memorandum was prepared by CH2M HILL's cultural resources specialist, Dr. Jim Bard.

The purpose of this Addendum is to address additional, recently identified changes to the Project and their implications for the management and protection of cultural resources. These additional project components were not considered in the CRAR and include:

- Excavation for a proposed pipeline immediately to the east of Ivanhoe Reservoir
- Excavation for cut-and-plug operations at the northeast end of Silver Lake Reservoir
- Trenching along West Silver Lake Drive immediately southwest of the Silver Lake Reservoir for the Regulating Station Trunk Line
- Excavations for two Relief Stations along Silver Lake Boulevard southeast of the SLRC, one at West Silver Lake Drive and the other at London Street

Analysis

Construction activities necessary to remove Silver Lake and Ivanhoe Reservoirs (excavation east of Ivanhoe Reservoir and northeast of Silver Lake Reservoir) would take place in areas previously investigated by Greenwood and Associates. No historic buildings would be affected. Potential impacts associated with the area referred to as SLRC-1 would apply to this area. The potential for discovery of prehistoric or historical archaeological sites in this area is considered to be low. However, if encountered during construction, unavoidable impacts would be mitigated to a less-than-significant level by implementation of Mitigation Measure 2. Adverse impacts to historic landscaping are not likely to be significant in this area; however, to ensure that potential impacts would be less than significant, Mitigation Measure 1 would also be implemented.

Potential construction of the trunk line for the regulating station in West Silver Lake Drive, immediately south of the location for the regulating station, would be unlikely to result in adverse impacts to any archaeological resources that might be present because existing streets and underground utilities have likely already disturbed such resources. However, to ensure that impacts are less than significant, Mitigation Measure 2 would be implemented.

The two separate relief stations would be constructed belowground within existing streets; no historic buildings would be affected. Construction for the relief stations would be

unlikely to result in adverse impacts to any archaeological resources that might be present because existing streets and underground utilities have likely already disturbed such resources. However, to ensure that impacts are less than significant, Mitigation Measure 2 would be implemented.

Conclusions

The addition of project elements identified above does not affect the findings and conclusions presented in the CRAR prepared by Greenwood and Associates. Implementation of Mitigation Measures 1 and 2 in the CRAR would ensure protection of any archaeological resources that might be inadvertently encountered during construction and will ensure restoration of the historic character of the landscaping and setting once construction has been completed.

SLRC Los Angeles Historic Cultural Monument Nomination, 1989

ESA

C ..TURAL HERITAGE COMMISSI(
Cultural Affairs Department
Room 1500, City Hall
Los Angeles, CA 90012
(213) 485-6793

REQUEST FOR HISTORIC - CULTURAL MONUMENT DECLARATION

NAME OF PROPOSED MONUMENT WITHIN THE CITY OF LOS ANGELES: The Silverlake and Ivanhoe Reservoirs

LOCATION: between West Silver Lake Drive and Silver Lake Boulevard (Community) 90039 (Zip)

(Cross Streets) Armstrong on the north

COUNCILMANIC DISTRICT NO. 13

OWNER'S NAME & ADDRESS: City of Los Angeles - Dept. of Water and Power

(City) (Zip)

DATE OF CONSTRUCTION OF PROPOSED MONUMENT: 1906
(This information is important)

ARCHITECT: William Mulholland
(Identification of the architect is very important)

DESCRIBE ARCHITECTURAL FEATURES: Occupying 76.6 acres of former marshland, the reservoir has been expanded over the years to a capacity of 2,324 acre feet. Fifty million gallons of water are provided to the city each day. The reservoir was expanded and earthquake proofed in various renovations, the first in 1945, and the latest in 1975. The dam was reconstructed in 1976.
(Photograph must be provided)

DESCRIBE HISTORIC-CULTURAL SIGNIFICANCE AS IT PERTAINS TO SEC. 22.130 OF THE LOS ANGELES ADMINISTRATIVE CODE: (If necessary, attach a sheet) attached

SOURCE/S OF INFORMATION: Historical Society of Southern California Quarterly, 1948; L.A. Times, Nov. 26, 1906; 5th Annual Report, L.A. Water Commission, 1906.

NAME & ADDRESS OF PROPONENT: Councilman Michael Woo, Room 218 City Hall

Los Angeles (City) 90012 (Zip)

TELEPHONE NO. (213) 485-3353 DATE: 1-9-89

(This portion to be filled in by Cultural Heritage Commission Members)

PLEASE NOTE THAT CULTURAL HERITAGE COMMISSION ACTION RECOMMENDING DECLARATION IS SUBJECT TO ADOPTION BY THE LOS ANGELES CITY COUNCIL.

Council File No. _____ City Council Action Dated _____

January 9, 1989
Silverlake Reservoir Historic-Cultural Monument Application
Researched by Diane Kanner

In 1906, a year before the Owens River Aqueduct was completed, William Mulholland prepared a report on another of his aquatic achievements.

"The reservoir at Ivanhoe was completed and put into commission last May," he wrote to the Los Angeles Board of Water Commissioners of a new project in Ivanhoe Canyon, above Sunset Boulevard. "The larger reservoir at Ivanhoe is now under construction, and it is expected we will be able to put some surplus water into it during the early spring months."

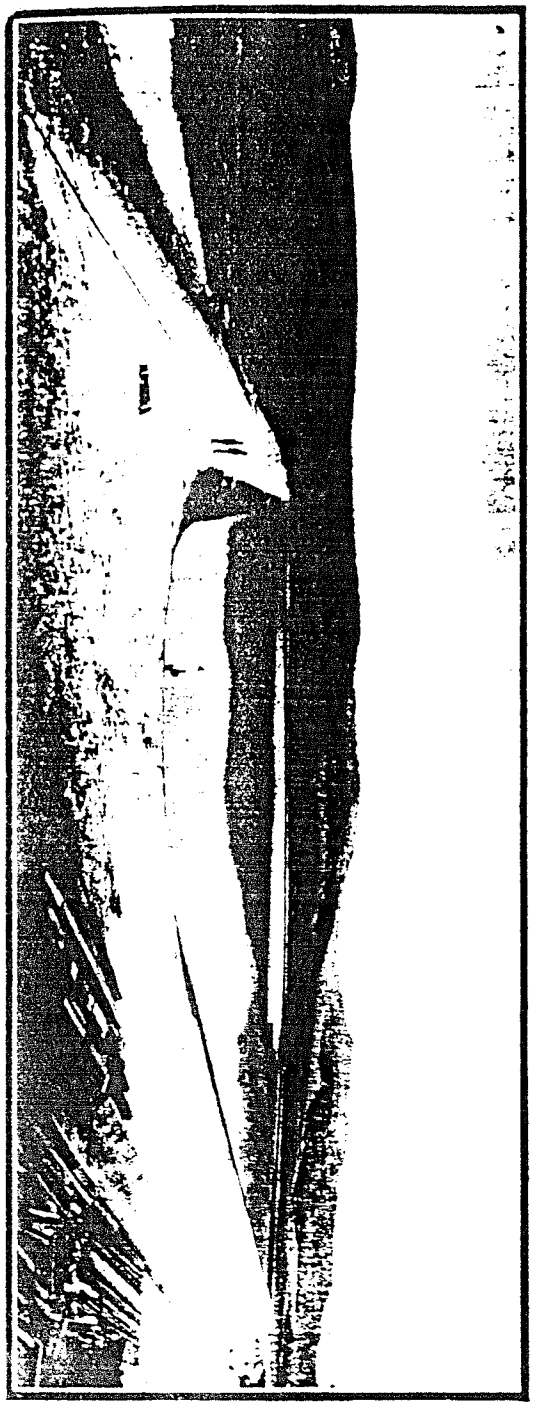
While Mulholland himself designed the reservoirs and dam, he named the larger of the two "Silver Lake" in honor of Water Commissioner Harry Silver. According to a story that fall in the Los Angeles Times, Mullholland suffered sleepless nights, awaiting the completion of the aqueduct.

"The problem of keeping the water supply of the City of Los Angeles up to the requirements of the rapidly-increasing population and providing a reserve sufficient to avert a serious shortage before the Owens River aqueduct is completed is a difficult one," it said in the Times.

The capacity of the two reservoirs was 767 million gallons, enough water to supply the city for 20 days. The Times called it "an important addition to the city water system." Previously the area had been marshland, dotted with bulrushes and populated by red-winged blackbirds. Now there was a body of water 47-feet deep.

"This great body of water will give a stability to our supply not alone by adding the amount of its contents," Mulholland wrote, "but in regulating the flow (which will) enable the works to meet any unusual demand caused by extensive conflagrations or other disastrous occurrence."

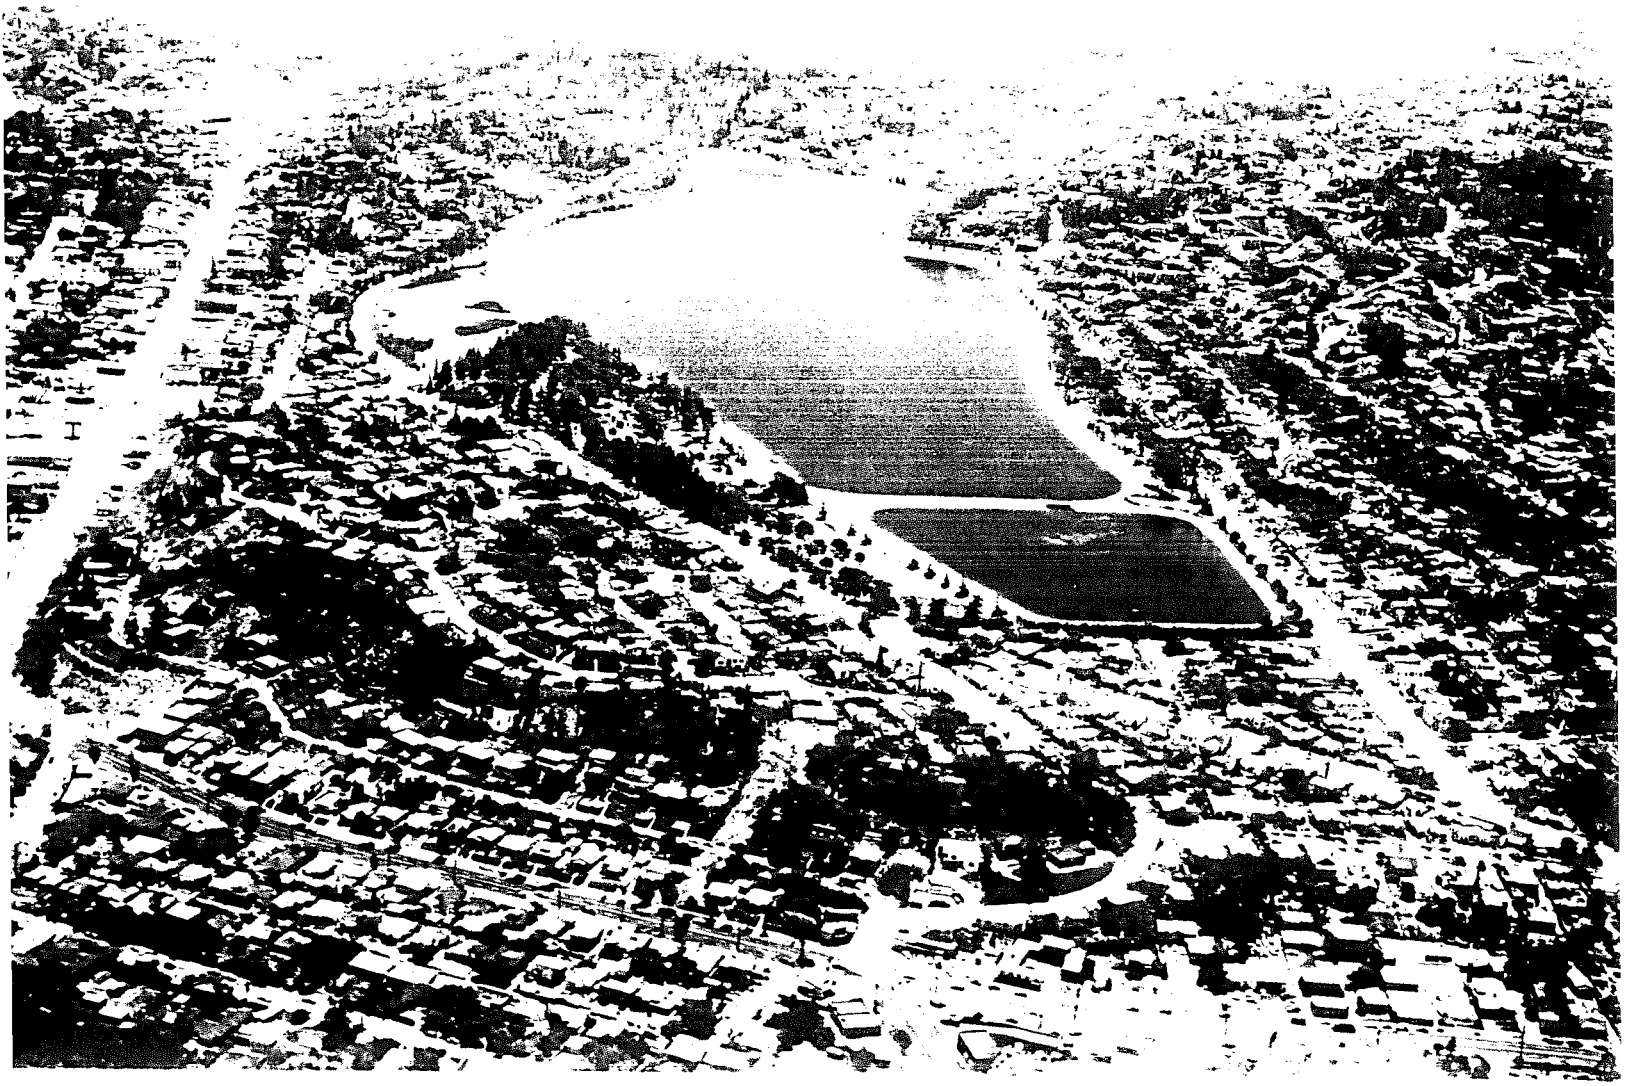
The reservoir has been reconfigured in subsequent years, and reinforced to withstand earthquakes. Its 2.2 mile "shore" has been fenced, and topped in parts by barbed wire, to keep cars and the curious from getting too close to its 2,300 acre feet of water. Yet as a community has grown up around it, including the film studios of Mack Sennett and Walt Disney, the lake has remained an oasis. The roads which surround it, configured as they are to its curves, have kept major traffic from the middle of Ivanhoe Canyon.



"Many longtime residents think this is their lake," the reservoir keeper, Manuel Trujillo, told a reporter several years ago. "The lake adds to the property values of the nearby homes. When the lake was drained in 1975 for some reconstruction, the property values dipped."

Silver Lake has served as inspiration for almost every "modern" architect of the 20th century. Among the architects who have either lived in the community, or built there are: Lloyd Wright, Richard Neutra, William Kesling, R.M. Schindler, H.H. Harris, Gregory Ain, and John Lautner. Lautner's monumental

"Silvertop" derives its name from the body of water. Neutra's 1932 VDL House, on the east shore, overlooks both reservoirs.



Contemporary architects living and working in the area include Peter Wurzburger, Michael Rotondi, and Jim Bonar.

As the center of a community known for its tolerance of divergent lifestyles and divergent architectural styles, Silver Lake is as much a landmark as any structure of mortar or stucco.

NEW IVANHOE RESERVOIR

From the 5th Annual Report
of the Los Angeles Water Commission, 1906

Western States Jewish History — President Marwah

OCT. 87 V.XX N.1, JAN. 88 V.XX, NUM. 2

⇒ MANY TIMES OVER THE YEARS, MY NEIGHBORS ~~believed~~ THOUGHT THAT THE "SILVER" IN SILVER LAKE DESCRIBED THE APPEARANCE OF THE LAKE. I BELIEVE THAT THEY WOULD BE SURPRISED IF THEY KNEW THAT THE AREA, THE PARK, THE BOULEVARD AND THE RESERVOIR WERE NAMED FOR BOTH A FASCINATING AND PROMINENT CIVIC LEADER OF LOS ANGELES - HERMAN SILVER

~~A FEW MINUTES ON HERMAN SILVERS LIFE PRIOR TO HIS COMING RESIDING IN LOS ANGELES.~~

BORN IN 1830 IN THE DISTRICT OF MAGDEBURG, NOW EAST GERMANY.

AFTER RECEIVING A GOOD SECULAR EDUCATION AND AN ADVANCED HEBRAIC EDUCATION, HE LEFT HIS HOME FOR THE U.S, MORE FOR HIS HEALTH THAN ADVENTURE.

1850 - 1860 -

STUDIED LAW, GOT MARRIED, HELPED TO ORGANIZE THE REPUBLICAN PARTY IN THE STATE OF ILLINOIS.

~~and~~ IN 1860, H. SILVER WENT TO THE STATE CAPITAL AT SPRINGFIELD, WHERE HE MET ABRAHAM LINCOLN AND WAS TRUSTED WITH ORGANIZING POLITICAL WORK IN NO. ILLINOIS.

Unable to join the Military due to Poor health, H. Silver:

① Raised 20 companies of men for Active service in the Civil War.

② Also noted by his daughter "that he had previously aided escaping slaves from the South".

1864 - elected Circuit Court Clerk in his District

His health problems (respiratory) caused him to go to Denver Colorado.

It was in 1877 that President Grant appointed Herman Silver Superintendant of the Denver Mint, a position held for 8 years.

After his service at the Mint, H. Silver then assumed significant posts in the private sector

He was auditor and treasurer for the receivership of the Denver and Rio Grande Railroad and held executive posts on the *Denver Tribune*. It was reported that "all of these positions Mr. Silver filled with rare ability and fidelity. Few men possess administrative capacity of a higher order than Mr. Silver, none have ever displayed a stricter integrity, or conducted public affairs in a more courteous or satisfactory manner."[19]

ONCE AGAIN, HEALTH CONSIDERATIONS FORCED H.S. TO MOVE. ALONG WITH THOUSANDS OF IOWA FARMERS EAGER TO RETIRE FROM BITTER MIDWESTERN WINTERS AND MANY OTHERS LIKE HIM WHO HAD RESPIRATORY PROBLEMS, HE ARRIVED IN THAT TURN OF THE CENTURY PARADISE KNOW AS SOUTHERN CALIF.

* TELL - "IF ANY OF YOU ARE OVER 50, YOU CAN REMEMBER WHAT A CRYSTAL CLEAR BLUE SKY IT WAS LIKE WITH THE SNOW CAPPED PEAKS OF THE SAN GABRIEL MOUNTAINS FRAMED IN THE BACKGROUND.

O. He was SOON ASKED TO BE SECT. TREASURER OF THE SANTA FE R.R. OPERATIONS IN CALIF. AFTER COMPLETING THIS ASSIGNMENT WITH HIS USUAL BUSINESS ACUMEN AND ~~PERSONAL~~ INTEGRITY,

[23] Silver continued to put his expertise in public transportation to good use. Once more the attorney accepted a court-appointed receivership to operate the Los Angeles and Pacific Railway. ~~He listed his occupation that year as railroad man. A local newspaper called him "a business mum of sound~~

IN DEC. OF 1896 HE WAS ELECTED TO THE LOS ANGELES CITY COUNCIL AND OFFERED THE PRESIDENCY OF THAT BODY. AFTER COMPLETION OF HIS HIS FIRST TERM, HE WAS RE-ELECTED AND AGAIN CHOSEN BY ACCLOMATION TO BE COUNCIL PRESIDENT

On October 13, 1900 Silver was nominated as the Republican candidate for Mayor of Los Angeles to oppose former Mayor Meredith P. Snyder. ~~Delegate Will A. Harris addressed the party convention and said:~~

~~X~~ A major local story was the serenading of Silver by members of the Union League and other Republicans following his nomination as Mayor. On the night of October 15, 1900, nearly 250 persons plus a band met at 7:00 P.M. at the Union League Club and having engaged "several special street cars" proceeded down Spring Street in the direction of the Silver residence which was located at 1321 South Figueroa Street. The crowd gave him three cheers and Silver returned the compliment from the "piazza of his residence." With the gathering overflowing his front lawn and the adjacent street he noted that normally in time of peace a man's home was his castle "and is free from invasion at any time. This, I take it, is a friendly army and I am here to take in their music." Carrying on the imagery he accepted his role as their standard bearer and "under that flag we will conquer." He called upon his troops "to stand firmly at the firing line, and with ballots, not with bullets." He concluded his remarks, "my home is open to you. Come in. You need not fear, for there is nothing intoxicating here."[30]

The *Los Angeles Times* couldn't praise him enough, or for that matter, oppose his rival Snyder any more actively.

> **A vote for Herman Silver is a vote for the enforcement of the law, and for decency in municipal government. A vote for Snyder is a vote for quite another kind of government. Let the people take their choice.**
>
> **If Mr. Snyder is not to be the servant of the disreputable saloons in case he should be elected, why are these saloons unanimously supporting his candidacy? Whisky and water are paramount issues in this campaign. Herman Silver is right on both.[32]**

Silver was attacked as an elitist by Populist elements. In order to show that he favored public ownership of certain utilities, he stated unequivocally that he was "in favor of municipal ownership of the water plant." ~~He was less unequivocal on the issue of municipal~~

> Mr. Silver is by no means the bloated bondholder and aristocrat that his detractors would have his fellow citizens believe. He has simply accumulated during his long and useful life, a sufficient competence to keep him comfortably in his old age. He is still a worker . . . .

L A Times commented that

THE POINT WAS MADE THAT SILVER HAD BEGUN AS A POOR BOY WHO HAD WORKED WITH HANDS AS WELL AS WITH HIS BRAINS.

UNFORTUNATELY, H.S WAS DEFEATED 6,946 TO 10,061

In 1899 the lease of the Griffith-Beudry-Lazard owned Los Angeles City Water Works Company ran out. The original contract between the private utility and the municipality provided that at the expiration of the agreement the city could, for an arbitrated price, take over the system. The price was compromised at $2,000,000. In 1902 the Los Angeles City Council passed an emergency ordinance establishing an administrative board of seven water commissioners. With his background as an attorney, a government official and as a railroad man, Silver was named chairman. A ~~year later the board was changed to be an appointive one by the Mayor consisting of five members. Mayor Snyder did not reappoint Silver.~~[42]

READ

At his retirement from the City Water Commission, [redacted]s A Chamber of Commerce resolution also honored Silver's work.

> Resolved, that this board is confident that it voices the sentiment of a majority of the citizens of Los Angeles in recognizing the services of President Silver, who performed a vast amount of work without compensation, services the value of which is beyond computation, and for which he was well fitted by reason of his long training, scrupulous integrity and recognized ability.[44]

It was this public service that brought the new board to name the reservoir, Herman Silver Lake.

A new opportunity for civic service came to Silver in 1903 when Governor George C. Pardee appointed him to membership in the California State Bank Commission. He became its president and served for two terms until his retirement in 1908 when he closed his public career. [redacted] bankers had urged his reappointment by Governor Pardee, ~~noting~~:

> Silver's death in 1913 was front page news for the *Los Angeles Times*. There was a two-column picture of him and the headlines read, "O'er the Way All Mortals Must Go, The Late Herman Silver, One of the notable figures of Los Angeles, California, and the United States, whose bright career closed last night [August 19, 1913]. ~~Good Man Departed Death Angel Calls Sunday on Silver~~." The article praised Silver for having spent more than half a century in active politics as "a public servant of high renown in three states, contemporary and friend of the immortal Lincoln."

THE HERMAN SILVER LAKE ~~Section~~ IS HIS MEMORIAL. ONO IS INDEED PART OF THE CULTURAL heritage OF THE CITY OF LA ~~IT IS NOT FOR FROM DODGER STADIUM. SILVER would have enjoyed THAT, he was a BIG LEAGUER.~~ !!

ESA

Margarita Jerabek-Bray, PhD

Historic Resources Director

EDUCATION

Ph.D., Art History, University of California, Los Angeles

M.A., Architectural History, School of Architecture, University of Virginia

Certificate of Historic Preservation, School of Architecture, University of Virginia

B.A., Art History, Oberlin College

32 YEARS EXPERIENCE

AWARDS

2020 Gold Nugget Merit Award, PCBC, Best Rehabilitation Project

2018 Merit Award, Environmental Analysis Document, Association of Environmental Professionals

2016 Preservation Design Award, Interpretive Exhibit, California Preservation Foundation

2014 Preservation Award, Los Angeles Conservancy

2014 Westside Prize, Westside Urban Forum

2014 Design Award: Westside Urban Forum

2012 Preservation Design Award, California Preservation Foundation

Margarita Jerabek-Bray, Ph.D., has 32 years of professional practice in the United States with an extensive background in historic preservation, architectural history, and historical archaeology. She specializes in American Architecture, Modern and Contemporary Architecture, Urban History and Design, and Cultural Landscape, and is a regional expert on Southern California architecture. Her qualifications and experience meet and exceed the Secretary of the Interior's Professional Qualification Standards in History, Architectural History, and Archaeology. Margarita assists clients with strategic advice and historic preservation consultation services to support project success. Highly experienced and solution oriented, she provides historic resources management and preservation consultation services for all stages of project development, from due diligence through planning and design, to preparation of required documentation for environmental review and permitting. She provides expert historic preservation services for environmental review and, when necessary, implements mitigation requirements and preservation treatment measures.

Margarita is a highly experienced and respected authority in the evaluation, management and treatment of historic properties, and is expert in the preparation of legally defensible documentation for compliance with Sections 106 and 110 of the National Historic Preservation Act (NHPA), National Environmental Policy Act (NEPA), Section 4(f) of the Department of Transportation Act, California Environmental Quality Act (CEQA), and local ordinances and planning requirements. She has managed and conducted hundreds of projects for public and private clients throughout California and the United States, and as primary investigator she has authored numerous historic resources technical reports, plan reviews, HABS/HAER/HALS reports, salvage inventories, rehabilitation plans, relocation plans, construction monitoring reports, interpretive programs, as well as curated exhibits, provided input for interpretive websites and assisted in the development of content for documentary films.

Margarita Directs ESA's Southern California Historic Resources Practice, leading a team of historians, architectural historians, and preservation specialists who are a part of ESA's more than 30-member Cultural Resources Group. She has conducted a broad range of planning and technical studies for development projects throughout Southern California. Her relevant on-call contracts with various agencies, policy documents, environmental compliance work, and historic preservation projects are summarized below.

PROFESSIONAL AFFILIATIONS

California Preservation Foundation

Santa Monica Conservancy

Society of Architectural Historians, Life Member

American Institute of Architects (AIA), National Allied Member

Neutra Institute, Fellow

Relevant Experience

Agency On-Call Preservation Contracts. Margarita currently manages ESA's on-call preservation consulting contracts with the City of Santa Monica, City of Hermosa Beach, and serves as principal investigator for historic resources for our on-call contracts with the City of Los Angeles's Department of Public Works Bureau of Engineering, and Los Angeles Unified School District.

Policy Documents. Margarita has contributed her preservation planning expertise to several projects including **Lincoln Specific Plan** (Whittier), and **CPA-7** (Culver Studios). Her knowledge of preservation policy and law is also demonstrated in the **Citywide Survey and General Plan Update** completed by ESA for the City of Hermosa Beach, and the **Culver City General Plan Update**.

City of Santa Monica On-Call Historic Preservation Services, Santa Monica, CA. *Project Manager/Principal Architectural Historian.* Dr. Jerabek is the primary point of contact and contract administrator for ESA's on-call contract for historic preservation services with the City of Santa Monica. Under her 12-year tenure, ESA's historic division has prepared hundreds of studies including **preliminary assessments, landmark assessments, structure of merit assessments, Secretary of the Interior's Standards plan reviews** and preservation recommendations, **landscape assessments, character-defining features reports** and **CEQA impacts analyses**.

Historic Resources and Preservation Consultation Service for Santa Monica City Hall, City of Santa Monica, CA. *Project Manager/Principal Architectural Historian.* Prepared a **Section 106 Effects Evaluation** report and provided mitigation services pursuant to a **Memorandum of Agreement for Structural Seismic Upgrades, ADA Improvements, Relocation of Wood Paneling, and Adaptive Re-use of the Historic Jail** under a grant from the Federal Emergency Management Administration (FEMA). Dr. Jerabek was the primary point of contact, provided project management and agency coordination, and served as principal architectural historian for the project. ESA prepared a **HABS report** for the historic jail located in the northeast wing of City Hall; conducted **Plan Reviews** and provided preservation recommendations for the seismic upgrades; reviewed proposed ADA improvements and provided recommendations to avoid impacts; reviewed the wood paneling relocation plans and worked with the City to select a qualified master craftsman and conducted construction monitoring for the project; reviewed the jail rehabilitation project for conversion of the two-story jail into an IT Center and offices and provided design consultation for conformance with the Standards, including in-kind replacement of the historic windows; curated, designed and oversaw installation of an interpretive exhibit in the IT Center lobby. Follow-on services for the City included **Preservation Consultation and Monitoring** for restoration of the entrance to City Hall, and **Paint Analysis** and color recommendations for repainting City Hall. Dr. Jerabek also conducted a **Landscape Analysis** and provided **Plan Reviews** for the City's **Ken Genser Square** and **Tongva Park** projects that received a 2014 *Design Award* from the Westside Urban Forum.

City of Hermosa Beach On-Call Historic Preservation Services. *Project Director.* ESA has performed a number of surveys, Certificate of Appropriateness, and CEQA compliance reviews for historic structures while serving as a historic preservation consultant for the City of Hermosa Beach. Projects include historic resources

surveys on three of the oldest commercial buildings in the downtown area of Hermosa Beach for the City of Hermosa Beach: **Bank of America Building** at 90 Pier Avenue, the **Hermosa Hotel** at 26 Pier Avenue, Art Deco-style **Community Center**, and the Neoclassical Revival-style **Bijou Theatre** located at 1221-1227 Hermosa Avenue. ESA prepared a comprehensive assessment of each building, and reviewed all plans for compliance under the local preservation ordinance and CEQA, which stipulate the use of the Secretary of the Interior's Standards for Rehabilitation as mitigation. Upon implementation of rehabilitation work on the Bijou, ESA also monitored all construction work until final completion. ESA was later commissioned to undertake a Certificate of Appropriateness and CEQA compliance review of interior tenant improvements to the Bijou Theater for conformance with the Secretary of the Interior's Standards. ESA has carried out site reviews of the work to examine the scope and nature of selective demolition and new construction, provided guidance on technical preservation matters, and undertook a substantial completion review of the works. Most recently, ESA provided project review for tenant improvements, and conducting construction monitoring and oversight for restoration of ornamental plasterwork in the Bijou Building. Additionally, ESA provided paint analysis and restoration treatment recommendations for the Art Deco-style Hermosa Beach Community Center.

Hermosa Beach General Plan Update and EIR, City of Hermosa Beach, CA. *Project Manager for Cultural Resources/Principal Architectural Historian.* Managed ESA's Cultural Resources scope of work and collaborated with Raimi & Associates and PMC to provide consulting services to the City of Hermosa Beach for preparation of a **Comprehensive Integrated General Plan and Coastal Land Use Plan Update and EIR Focused on Sustainability and Low Carbon Future**. Directed city-wide reconnaissance survey to identify potentially eligible historical resources. Developed historic contexts and themes for the City's historical resources. Reviewed and provided recommendations for revisions to the preservation ordinance. Provided input for preparation of historic preservation goals and policies for the General Plan update. Managed preparation of the cultural resources technical report, and oversaw preparation of the historic resources, archaeological and paleontological discussions and analyses for the EIR.

City of Long Beach, Environmental Consultation and HABS Documentation. Margarita has assisted the City of Long Beach by preparing documentation for the **City Hall and Library Complex HABS** and associated landscape plaza; she provided historic resources support for the City's EIR, and prepared documentation for the **Atlantic Theater HABS** and an **Interpretive Exhibit** for installation in the new North Long Beach Public Library.

City of Whittier, Preservation Consultation Services for the Public Library Rehabilitation Project. Margarita lead a **Historical Resources Assessment and Impacts Analysis** and provided design consultation for rehabilitation of the Modern-style Whittier Library. Constructed in 1958, the property is significant for its association with Mid-Century Modernism, postwar period institutional properties, and architect William Henry Harrison. ESA found that the library possesses sufficient historical significance and architectural merit to convey its significant as an individual resource under National Register Criteria A and C. Margarita's role on the project was to direct and manage the ESA project team,

coordinate with the architect and City, provide review and internal quality assurance/quality control to the ESA team in the preparation of both the Historic Resources Assessment to evaluate the significance and integrity of the building, as well as for the plan review that was conducted to evaluate the proposed project's conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties, and hearing attendance. ESA is currently completing a **HABS report** as baseline documentation for the rehabilitation project.

City of Burbank, Historic Preservation Consultation Services. Margarita directed preparation of ESA's historic resources technical report and CEQA impacts analysis, and prepared the historic section of the **IS/MND for the Burbank Reservoir No. 1 Replacement Project**, which evaluated the eligibility of the Burbank Reservoir facility and analyzed the potential impacts of the Project for compliance with the CEQA. Margarita directed preparation of ESA's historic resources technical report and historic resources EIR section for the **Burbank Bob Hope Airport Replacement Terminal Project EIR**, which evaluated the eligibility of the buildings and structures for eligibility as a potential historic district and as individual resources, and analyzed the potential impacts of the Project for compliance with the CEQA. While the Airport did not appear eligible as a historic district, ESA evaluated 11 hangars and buildings over 45 years in age as potential individual resources. The majority of the buildings and structures were found ineligible, however, Hangars 1 and 2, which are the earliest intact hangars, were recommended eligible for the National Register, California Register, and for local listing. Under contract with the City of Burbank, Margarita managed and conducted a historic resources impacts analysis and plan review for **Rehabilitation of the Casting Building** as a Fitness Center, by Marmol Radziner and Associates, AIA, located in the Disney Studio's Historic District. The Project repurposed and expanded the existing 4,000 square feet Casting Building on the Studio Lot by about 8,700 square feet for an Employee Fitness Center adjacent to the historic Commissary. Margarita provided design consultation for conformance with the Secretary of the Interior's Standards to rehabilitate the Casting Building as a fitness center. To reduce potential impacts, Margarita prepared a HABS report to record the Casting Building in professional large format HABS photographs and a narrative history and description of the building.

SoCal Historic Resource Surveys. Margarita has managed and conducted several large historic resources survey projects including three surveys for the **Adelante-Eastside** (Boyle Heights), **Wilshire Center/Koreatown**, and **Normandie 5** redevelopment areas that were among the earliest to utilize *SurveyLA* tools and methods and to employ the Multiple Property Documentation Approach, working in close collaboration with the Los Angeles Office of Historic Resources. These surveys have been incorporated into the **Los Angeles Citywide Survey**. Other notable accomplishments include **Hermosa Beach Citywide Survey**, and **Santa Monica North of Wilshire Survey** for which she served as Project Director.

Mills Act Applications and Architectural Conservation. Margarita has assisted applicants in Los Angeles, Beverly Hills and West Hollywood with the preparation of Mills Act Applications. Her expertise in the preservation of Modern architecture is represented by the Landmark nomination and Mills Act Application for Victor Gruen's **Rosenstiel Residence**, 1210 Coldwater Canyon Drive in Beverly Hills. Her forward-looking landmark nomination for a Mills Act application for the Post-Modern **Sun Tech Townhomes** in Santa Monica, illustrates her broad ranging

knowledge in resources of the recent past. Her conservation and interpretation skills are represented by the award-winning **Montebello Home Savings and Loan** project that involved cleaning and restoration of the historic bank building and art works designed by Millard Sheets Studio, and design and installation of a 5-panel interpretive exhibit and rediscovery of a lost tapestry originally designed for the building, for which she received a *California Preservation Design Award, 2016*. Her in-depth and award-winning preservation work includes the **RMS Queen Mary Survey of Fine and Decorative Art**, the **RMS Queen Mary Historic Structure Report**, and the **Queen Mary Conservation Management Plan** (*California Preservation Foundation Preservation Design Award, 2012*).

Environmental Documentation and Compliance with CEQA. Margarita has prepared a full range of CEQA documentation for historic preservation projects throughout greater Los Angeles including Categorical Exemption Letters, assessments and plan reviews for Certificates of Appropriateness, Initial Studies/MNDs, Focused EIRs, and EIRs. A partial list of important environmental documents for projects in Los Angeles involving substantial historical analysis completed by Dr. Jerabek-Bray includes the **LAX Specific Plan Amendment Study EIR, Academy of Motion Pictures Project EIR, The New Century Plan EIR for Westfield, Washington Square EIR, Sunset Doheny Mixed-Use EIR, One Santa Fe Mixed-Use MND, Lindbrook & Gayley Mixed-Use MND, 6230 Sunset Mixed-Use Project EIR, Hollywood Center EIR, Palladium EIR, Sunset and Crescent Heights EIR, and Yucca and Argyle EIR**. In Santa Monica she contributed to the **Fairmont Miramar Hotel & Bungalows Revitalization Plan EIR, St. John's Health Center Development Agreement Addendum EIR, Santa Monica Pier Gangway Project and Phase 4 Structural Upgrade**, and CEQA support for the **Santa Monica-Malibu Unified School District-Wide Facilities Plan**. In Pasadena her experience includes the **Glenarm Power Plant Repowering Project EIR**. In Long Beach she provided expertise and support for the **Art Exchange Redevelopment Project EIR** support, and the **Golden Shore Master Plan EIR**.

Educational Facilities and University Campuses, CA. *Principal Investigator/Project Manager.* Dr. Jerabek-Bray has conducted numerous evaluations of school and university campuses throughout Southern California. Under ESA's on-call contract with the Los Angeles Unified School District, she has managed and completed over 30 task orders involving historic resources, including campus assessments, character-defining features analysis, and project reviews for compliance with CEQA. For example, Margarita managed and conducted preparation of a historic resources technical report for Jefferson High School and provided preservation design consultation for this site-specific school upgrade and modernization project under the District's School Upgrade Program (SUP). The proposed project included the rehabilitation of existing character-defining buildings and landscapes, demolition and removal of non-contributing buildings, and construction of new facilities. Rehabilitation work included modernization and seismic upgrade to existing buildings. Because the school site is considered a historical resource under CEQA, Margarita provided design consultation for conformance with the Secretary of the Interior's Standards to reduce potential project impacts to less than significant. Once project plans were developed, Margarita oversaw review of the proposed project by ESA historic staff

and completed impacts analysis findings regarding potential project impacts to identified historical resources that would be affected by the project. Margarita also provided project management, oversight and contributed to the preparation of CEQA and NEPA procedural guidelines to help the Los Angeles Unified School District (LAUSD) to comply with the historical resources requirements of CEQA and NEPA, and to implement practical approaches to preserving culturally significant resources whenever possible. The LAUSD's Office of Environmental Health and Safety requested the preparation of CEQA and NEPA guidelines, in addition to design guidelines and treatment approaches, specifically in support of the School Upgrade Program, and generally to guide ongoing repair and maintenance work on these sites. The guidelines build upon the District's ongoing efforts to identify historical resources, including the recently updated Historic Context Statement, survey of 55 campuses, creation of an ArcGIS-compatible database with current and previous survey results, and a Historic Resources Inventory. Dr. Jerabek-Bray worked with LAUSD and facilities staff to determine the scope, class, and type of projects that would impact historical resources and need to be addressed in the procedural guidelines. As a final work product, Dr. Jerabek-Bray authored a CEQA and NEPA procedural guidelines document that included the following sections: introduction, regulatory setting, environmental setting, project description, management and planning guidelines, procedural low charts for CEQA and NEPA/Section 106, and standard mitigation measures.

Margarita served as the project manager and principal investigator for the district-wide cultural resources survey for Long Beach Unified School District (LBUSD) which included the evaluation of 70 potentially eligible District school facilities for listing in the National Register and California Register, and included preservation guidelines for the district-wide facilities modernization program. She conducted CEQA Compliance reviews for select projects including rehabilitation of Long Beach Polytechnic Auditorium and Woodrow Wilson Auditorium. Margarita completed a district-wide historic resources survey for the Santa Monica Unified School District, and provided preservation consultation for modernization and additions to selected school sites.

As part of the larger USC Master Plan Project Margarita prepared a historic resources analysis for the USC Student Union Project IS/MND evaluating the Formalist Modern Norman Topping Center and impacts to the adjacent Commons Building and surrounding historic district. She also prepared a HABS report for the Schoenburg Institute at USC. Other HABS reports for educational facilities include the Gymnasium at the University of La Verne, and the Administration Building at Harvard-Westlake Academy.

Harkham Hillel Hebrew Academy Renovation and Expansion Project, Historic Resources Assessment and Impacts Analysis, Beverly Hills, CA. *Principal Investigator/Project Manager.* Margarita directed the historic significance analysis of two school buildings—the original Oakhurst Building designed by master architect Sydney Eisenshtat in 1963 in the Modern Style and the Doheny Building constructed in 1989 and designed by Harshad Patel. She oversaw preparation of an intensive-level Historic Resource Assessment Report for the two buildings in accordance with the California Office of Historic Preservation's requirements for preparing historic resource evaluation reports. ESA found that the Oakhurst Building is eligible for listing on the National Register of Historic Places and the California Register of Historical Resources under criteria A/1 and C/3, but it did not meet the requirements for local eligibility under the City of Beverly Hills criteria. The client plans to rehabilitate the

existing buildings, which would be updated for current use and continue to function as school buildings. The proposed project would add two additions to the rear of the property in order to accommodate additional classroom and gymnasium space. Margarita oversaw preparation of a character-defining features analysis and provided design consultation for conformance with the Secretary of the Interior's Standards to reduce potential project impacts to less than significant. She also conducted an impacts analysis of the proposed project and prepared a preservation plan that was incorporated into the project as a project design feature to ensure the project would meet the Secretary's Standards for Rehabilitation. The project has been reviewed and approved by the City of Beverly Hills as an Initial Study/Mitigated Negative Declaration.

Rehabilitation of the Dunbar Hotel, 4255 S. Central Avenue, Los Angeles, CA. *Project Manager/Principal Architectural Historian.* As a Project Manager, Dr. Jerabek-Bray directed a careful space-by-space inventory of character-defining features (including all windows) associated with the Dunbar Hotel's period of significance (1928-1970). This included photo documentation of each feature along with a written description, condition, and treatment options. ESA recorded 425 character- defining features and spaces into an electronic database. Dr. Jerabek was principal author for the rehabilitation report that included a project description, methods, historical background and construction history, accompanied by historic photographs, an architectural description of existing conditions, a maintenance plan for high-integrity features, a restoration plan for low-integrity features, and a replication plan. The written report also provided a list of any issues and concerns that should be taken into account during the building rehabilitation and for the long-term preservation of the Dunbar Hotel. The hotel reopened in June 2013 as a senior living facility amidst local fanfare, "An encore for the historic Dunbar Hotel," Los Angeles Times, June 11, 2013. The project was the recipient of the 2014 *Westside Prize* from the Westside Urban Forum and recipient of a 2014 *Preservation Award* from the L.A. Conservancy.

Historical Resources and Preservation Consulting Services for The Culver Studios, Culver City, CA. *Project Manager/Principal Architectural Historian.* Since late 2014, Dr. Jerabek-Bray and ESA' s Historic Resources Practice has provided a suite of services including historical resources evaluation, environmental review and documentation, and historic preservation consultation services for the CPA-6 Specific Plan, and the CPA-7 Specific Plan known as "The Innovation Plan," a blueprint for the future of The Culver Studios. Dr. Jerabek is the point of contact for historic services, attends client and city meetings, attends public hearings, provides technical direction and advice, directs and conducts the preparation of report deliverables, directs and conducts construction monitoring, and acts as the City's preservation officer for the Innovation Plan. The Plan will transform the 14.3-acre Studio into a new media production hub, keeping the Studio on the vanguard of changing production practices in the entertainment industry. The Culver Studios is a motion picture studio in downtown Culver City established in 1919 by Thomas Ince, and eventually became the home of RCA, one of the "Big Eight" major motion picture companies in the Los Angeles metropolitan area. The Studio was the production site of historically significant motion pictures like King Kong, Gone with the Wind, and Citizen Kane. The Innovation Plan will restore and re-group historic structures adjacent to the Mansion, build new support buildings

near existing historic sound-stages, and establish a creative campus in the core of the 14.3-acre studio lot. The Studio's 100-year history will be showcased, historic bungalows will be preserved, and original landscaping in front of the Mansion will be restored. The Innovation Plan balances the need to provide state-of-the-art studio facilities, while retaining the Studio's unique ambiance and prominent place in the community. ESA surveyed and evaluated the Studio's historical resources, provided input to the development of The Plan to reduce impacts to historical resources, completed HABS report for Bungalows S, T, U and V, prepared a Relocation and Rehabilitation Plan for the bungalows, conducted construction monitoring for relocation of the bungalows, conducted plan reviews for tenant improvements to the Mansion and associated historic buildings in the historic core, conducted a landscape analysis, and provided documentation and input for the landscape restoration. ESA also prepared the environmental documentation for The Innovation Plan EIR, and is implementing the mitigation program for historical resources including HABS documentation of Stages 2/3/4 and a salvage program, preparation of a preservation plan for the Studio, and development of an interpretive program for the Studio.

Historic Resources and Preservation Consultation Services for the Redevelopment of the Fred C. Nelles State Reform School, Whittier, CA. *Project Manager/Principal Architectural Historian.* The Fred C. Nelles Correctional Facility is a listed California State Landmark, and is significant as the state's first reform school for boys. The 1920s-1930s Tudor Revival-style campus is currently vacant and will soon be redeveloped as a multi-use residential and commercial project, "The Groves", entitled under the certified Lincoln Specific Plan EIR. For over a decade, Dr. Jerabek-Bray has been providing Historic Resources and Preservation Consultation services to the developer, Brookfield Homes. Work began with preparation of a historic resources assessment report to clarify the regulatory status and assessed the potential eligibility of a historic district. No district was found to be present, but eight individual resources were identified. Margarita conducted an opportunities and constraints analysis and provided input to the developer on managing impacts to historic resources and the feasibility of adaptive reuse of the individual buildings for the project. She directed preparation of feasibility studies for the EIR, that were peer reviewed by the City's consultants. She provided peer review of the Lincoln Plan EIR on behalf of the developer, and attended city meetings and hearings for the EIR. Once the EIR was certified, she worked with the developer's architect to prepare rehabilitation plans for the individual resources to be retained and adaptively reused. The rehabilitation plans were peer reviewed by the City and the City's preservation consultant. She directed ESA's historic team in the completion of a HABS/HALS for the campus, with photography by Positive Image. She also worked with Eye-Glass Productions on a documentary film, and oral histories. Dr. Jerabek-Bray assisted the client to implement a full suite of mitigation measures including a heritage trail, a signage program, oral histories, salvage program, and construction monitoring for rehabilitation historic buildings. She recently completed consultation services and construction monitoring for adaptive reuse of the school's Commissary as a community center (The Commons), which is the first historic building to be restored. The Commons project received a Gold Nugget merit award (2020) for best rehabilitation project from Pacific Coast Builders Conference (PCBC).

Home Savings and Loan Art and Architecture Conservation Services, Interpretive Exhibit, Montebello, CA. *Project Manager/Principal Investigator.*

Margarita provided project management and oversight for the conservation work of the art and architecture and an interpretive exhibit for the Montebello branch of Home Savings and Loan Association. Constructed in 1973, the Montebello branch was designed by Millard Sheets (1907–1989), an accomplished, nationally prominent artist and designer, with integrated art works by the Millard Sheets Design Company. The building and art works were preserved in preparation for the building's new use as a medical office by PIH Health. ESA provided oversight for the conservation work undertaken by Preservation Arts. Additionally, Margarita assisted with the development of a project schedule, conducted conservation monitoring and documentation, and provided project oversight during the implementation of the conservation project to ensure that the cleaning and repair of the art works and exterior architectural materials was conducted in accordance with accepted standards for art and architectural conservation work, that the work completed is of acceptable quality, and that the project stayed on schedule and within budget. After the conservation work was completed, she oversaw the development of an interpretive exhibit to beautify the interior and protect the building's important art, architecture, and history. The exhibit contains professionally mounted permanent narrative panels and photographic enlargements with captions illustrating the key information about the Montebello Branch and its historic use. One of the highlights of the interpretive exhibit is a reproduction of the original tapestry hung its original location for which ESA coordinated with the Mingei International Museum. The project was the recipient of a prestigious 2016 *Preservation Design Award* from the California Preservation Foundation.

Rancho Los Amigos South Campus EIR, County of Los Angeles, Department of Public Works, Downey. CA. *Project Manager/Principal Architectural Historian*. The County of Los Angeles (County) proposes redevelopment of a portion of the Rancho Los Amigos (RLA) South Campus which is located in the City of Downey. The 74-acre RLA South Campus was the home of the "Los Angeles County Poor Farm" that was established in 1880s to provide room and board to indigent citizens in exchange for agricultural labor, then served as an infirmary and later evolved into a hospital facility in 1932. The RLA South Campus functioned as a major hospital complex from 1956 to the 1990s, when it was abandoned. The RLA South Campus is currently unoccupied and has been designated as the RLA Historic District in the National Register of Historic Places. The County is proposing redevelopment of a 21-acre portion of the RLA South Campus with County uses, including a Sheriff's Station Crime Laboratory, Internal Services Department Headquarters, and Probation Department Headquarters. The project will include supporting parking and installation of utilities and other features on a site that has been abandoned for nearly 30 years. Building demolition and/or repurposing or relocation of existing buildings will be required. ESA lead the CEQA process on behalf of the County, including preparation of all technical studies in support of a full-scope EIR for the RLA South Campus Project. This included a Historic District Evaluation, archaeological surveys, traffic, water supply, arborist services, and all other CEQA-required topics. ESA is also served in an Executive Consultant role to the County, to advise on other potential future projects at the RLA Campus.

Preservation Action, Member

Shannon is a Senior Architectural Historian and Cultural Resource Specialist with 23 years of professional experience in architectural history, cultural resource management, and historic preservation planning, policy, and economics. She has authored historic resource assessment, State and National Register Nominations, historic structure reports, CEQA Impacts Analysis, feasibility studies, LAHCM nominations, and HABS/HAER reports.

Relevant Experience

CEQA Impacts Analysis, 1715 – 1739 Bronson Avenue, Los Angeles, CA. *Project Manager.* Shannon analyzed the potential impacts of construction of a 24-story, mixed-use project in Hollywood, adjacent to the historic Lombardi House for compliance with CEQA impacts threshold and for conformance with the SOI Standards.

Pasadena Avenue Historic District, Pasadena, CA. *Project Manager.* Shannon completed re-survey and prepared State and National Register Nomination of historic district that included approximately 130 residential resources.

Environmental Impact Report, Culver Crossings, Culver City, CA. *Senior Architectural Historian*. Shannon managed cultural portion of CEQA environmental review process, focusing on ten cold-storage facilities as potential historic resources, including eligibility evaluations, analysis of projects impacts and recommendations on adaptive reuse and mitigation.

Los Angeles Historic Cultural Monument Nomination, Kun House II, Los Angeles, CA. *Project Manager.* Shannon prepared LAHCM nomination for the Joseph Kun House II, 1950 residence designed by Richard Neutra.

Los Angeles Historic Cultural Monument Nomination, 1828 Edgemont St, Hollywood, CA. *Project Manager.* Shannon prepared LAHCM nomination for a 1940 Garden Apartment complex in Hollywood.

Environmental Impact Report, 1600 Naud and 1635 – 1639 Main St, Los Angeles, CA. *Senior Architectural Historian.* Shannon managed cultural portion of CEQA environmental review process, focusing on ten cold-storage facilities as potential historic resources, including eligibility evaluations, analysis of projects impacts and recommendations on adaptive reuse and mitigation.

Seismic Retrofit Project, Lockwood Elementary School and First Street Elementary School, Los Angeles, CA. *Project Manager.* Shannon managed a documentation project for two LAUSD campuses in preparation for a planned

seismic retrofit. Project deliverables includes character-defining matrixes and California DPR forms for multiple historical resources.

Historic Structure Report, New Mexico Veteran's Home, Truth or Consequences. *Project Manager.* Shannon served as the Project Manager on the preparation of an Historic Structure Report for a 1937 hospital for crippled children, including historic narrative and context, evaluation of significance, documentation of original construction and later modifications, and historic preservation recommendations.

State & National Register Nomination, Ashley Pond Residence (535 East Palace Avenue), Santa Fe, NM. *Project Manager.* Shannon prepared State and National Register nomination of a 1925 residence and compound designed by John Gaw Meem.

Multiple Property Documentation Form for the Cañon neighborhood, Taos, NM. *Project Manager.* Shannon performed the initial neighborhood survey, individual nominations for three resources, and associated historic context. The properties listed included a residential compound, a guesthouse/hotel and a community chapel.

Architectural Survey of the Sioux Falls Historic District & Pettigrew Heights neighborhood, Sioux Falls, SD. *Project Manager.* Shannon served as the Project Manager on the re-survey of a 1974 National Register district, including approximately 240 residential resources. New survey of an adjoining neighborhood with approximately 120 residential resources. She also prepared survey reports with recommendations on district expansion and new district possibilities.

County-wide Architectural Surveys, South Dakota. *Project Manager.* Shannon served as the Project Manager on four county-wide architectural surveys, including integrity evaluation, identification of potentially significant resources for inclusion in the National Register of Historic Places; research and writing of an accompanying historic context.

- Tripp County: 1,617 square miles, 351 surveyed resources.
- McPherson County: 1,152 square miles, 168 surveyed resources.
- Walworth County: 745 square miles, 211 surveyed resources.
- Moody County: 521 square miles, 204 surveyed resources

Cultural Resource Surveys. Shannon performed cultural resource surveys for a variety of compliance documents including Environmental Impacts Reports, Section 106, Section 4F, and NEPA compliance. Project duties included consultation with states, local municipalities, tribes and planning consultants, as well as overseeing the archaeological portion of the survey.

- Cold War Era Properties Survey, Shaw Air Force Base, Sumter, SC
- Property Surveys for EA, Fort Bliss Army Base, El Paso, TX
- Portales Railroad Depot Focus Area, Portales, NM
- Washington Avenue Pedestrian Improvements, Lovington, NM

- Environmental Assessment, Water Control Facilities, Montezuma, NM
- Interstate 25 Landscape Improvements, Glorieta/Rowe, NM
- 12.68-mile Pipeline Expansion, Bosque, NM
- Housing Rehabilitation Project, Santo Domingo Pueblo
- NM Visual Impact Assessment, various Plateau Cell Towers, NM
- Construction at Day School Complex, Picuris Pueblo, Penasco, NM
- Santa Fe County Courthouse, Santa Fe, NM

Historic American Building Surveys, Walker Air Force Base, Roswell, NM. *Project Manager.* Shannon prepared the building documentation (HABS Level III standard) of three buildings at the former Walker Air Force Base as well as the former Roswell Airfield Terminal Building

Historic American Building Surveys, Kirtland Air Force Base, Albuquerque, NM. *Project Manager.* Shannon prepared the building documentation (HABS Level II standard) of the 21st EOD Headquarters at Kirtland Air Force Base.

Historic American Building Surveys, White Sands Missile Range, Alamogordo, New Mexico. Shannon prepared the building documentation (HABS Level II standards) of the old Officer's Club at White Sands Missile Range.

National Conference of State Historic Preservation Officers,Washington D.C. *Director of Communications and State Services.* Shannon served as the primary liaison and resource for all fifty-nine State Historic Preservation Offices and represented NCSHPO to Congress and the federal government as well as the press, partner organizations and general public. Worked extensively with the National Park Service and the Advisory Council on Historic Preservation and served on task forces dealing with the Section 106 review process, the Secretary of the Interior's Standards for Rehabilitation of Historic Buildings, and National Register Criteria and Processes.

CarrAmerica Urban Development, Inc., Washington, DC. *Development Assistant.* Shannon was the assistant for multiple downtown development projects including a mixed-use project of approximately 450,000 square feet combining office, residential andpreferred arts retail in three historic buildings along with new construction. Duties included assistance with project approvals, design review, due diligence,acquisition and development documents, pro forma analysis as well as workingwith public and private groups to garner support and necessary approvals.

Claire Cancilla

Architectural Historian

EDUCATION

MS, Historic Preservation, Columbia University Graduate School of Architecture, Planning, and Preservation, 2020

BA, History, Occidental College, 2015

3 YEARS OF EXPERIENCE

PROFESSIONAL AFFILIATIONS

Society of Architectural Historians Member

California Preservation Foundation Member

National Trust for Historic Preservation Member

Vernacular Architecture Forum Member

Preservation Alumni Member

AWARDS

Zabar Family Scholarship, Preservation League of New York State, 2020

Cleo and James Marston Fitch Prize, 2019

Avery Scholar, Columbia University Historic Preservation Program, 2018-2020

Outstanding Honors Thesis in History, Occidental College, 2016

Claire is an architectural historian with 3 years of professional and academic experience. Her background is in history, digital documentation, materials conservation, and historic preservation with a specialty in modern American architecture of the 20th century. Claire has conducted preservation work in diverse geographic locations and for varied municipalities, including Los Angeles, Laguna Beach, Culver City, Glendale, Agoura Hills, Beverly Hills, Sequoia National Park, New York City, and Venice, Italy. She has completed historic resources surveys on the individual and neighborhood level, National Register nominations and determinations of eligibility, material assessments and conditions reports, as well as reports for non-profits with recommendations for developing programs and increasing audience engagement.

Relevant Experience

5652-5654 Fountain Avenue Historic Resources Assessment, Los Angeles, CA. *Architectural Historian.* The client proposed the redevelopment of a site with a previously identified historic resource, an American Colonial Revival residential building constructed in 1919. Claire authored the Historic Resource Evaluation (HRA) to document the building's history, which included extensive research about the building, its site, neighborhood development, and an analysis of the building's material and design integrity.

Kun House II L.A Historic Cultural Monument Nomination, Los Angeles, CA. *Architectural Historian.* Claire co-authored the Los Angeles Historic Cultural Monuments Landmark nomination for Kun House II, designed by master architect Richard Neutra. The nomination involved archival research and physical inspection of the property as well as an analysis of the home's significance as an example of Netura's small-scale residential designs.

7 Oakmont Drive Character Defining Features Matrix, Los Angeles, CA. *Architectural Historian.* Claire identified character-defining features of the Paul Revere Williams Los Angeles Historic Cultural Monument residence at 7 Oakmont Drive and provided preservation recommendations and treatments in anticipation of a rehabilitation and exterior addition to the home.

1001 North Roxbury Drive Historic Resource Assessment, Beverly Hills, CA. *Architectural Historian.* Claire assessed the eligibility of a Regency Revival residence in Beverly Hills. The report involved intensive research into the builder of the residence, Carleton Lyle Burgess, and a comparison of the subject property to other work built by Burgess in Beverly Hills.

1707 Tropical Drive, Historic Resource Assessment, Beverly Hills, CA. *Architectural Historian.* Claire assessed the eligibility of an American Colonial Revival residence built by Carleton Lyle Burgess and occupied by Edward Paul Dentzel. Research included a construction chronology and identification of alterations, research on the builder and occupants, and analysis of neighborhood integrity.

448 West Cypress, Historic Resource Assessment, Glendale, CA. *Architectural Historian.* Claire authored a Historic Resource Assessment an industrial warehouse constructed in the Tropico neighborhood of Glendale in 1908. Research included an integrity evaluation, research on Tropico's history as an early agricultural center, and the strawberry industry.

28307 Agoura Road Historic Resource Assessment, Agoura Hills, CA. *Architectural Historian.* Claire authored a Historic Resource Assessment for a 1940s commercial property in Agoura Hills. Work involved researching the rural character and history of Agoura Hills, conducting research at the Agoura Hills Library and Building Division, identifying occupants of the structure, and assessing the property's eligibility.

Culver Crossings Historic Resource Assessment and EIR, Culver City and Los Angeles, California. *Architectural Historian.* Claire authored a historic resource assessment of a large industrial site located on the border of Los Angeles and Culver City for a proposed redevelopment. Work involved research on the property and its history as well as an evaluation of the site's eligibility.

1051 Marine Drive Historic Resource Assessment Laguna Beach, CA. *Architectural Historian.* Claire wrote a Historic Resource Assessment for a residential structure on the coast in Laguna Beach. Work involved intensive research on the home's original owner as well as a contextual analysis of the integrity of the neighborhood surrounding the subject property to assess its eligibility under national, local, and state criteria.

989 Cliff Drive Historic Resource Assessment and Impacts Analysis, Laguna Beach, CA. *Architectural Historian*. Claire wrote a Historic Resource Assessment and conducted an impacts analysis for a proposed alteration to a garage at a historic residence in Laguna Beach. Work involved identifying adjacent resources, analyzing potential indirect, direct, and cumulative impacts, as well as through research and documentation of the residence itself.

"William L. Pereira's Modern Architecture in Los Angeles: History and Preservation Challenges," Graduate Thesis, Columbia University. *Author.* Claire wrote a 200-page thesis on Modern architect William Pereira and his work in Los Angeles with a focus on three projects facing demolition. Her original research included a three-week archival research trip to Los Angeles and interviews with people who worked for and advocate for Pereira's work.

Determination of Eligibility (DOE), Cedar Grove, Sequoia and Kings Canyon National Parks, Three Rivers, California. *Architectural Historian.* Claire lived and worked out of Sequoia National Park to develop a National Register Determination of Eligibility for the Cedar Grove area of Kings Canyon as part of the park's section 110 compliance. Claire's work included conducting archival research, site visits and field work, and conditions assessments of the structures in Cedar Grove. The work culminated in a full determination of eligibility for the area which will be used to guide future Park projects.

Victoria Theatre Historic Resource Report, Harlem, New York. *Author.* Claire was the sole author of a historic resource report that thoroughly documented more than 100 years of the architectural, social, and cultural development of the Victoria Theatre located on 125th Street in Harlem, New York. The report involved conducting image and archival research at repositories throughout New York City and synthesizing thousands of pages of research into a succinct report. The report provided the foundation for a historical exhibition on the Victoria's history that will be in the theater's lobby as part of a large-scale commercial redevelopment.

National Register Nomination, Moslem Mosque, Williamsburg, Brooklyn. *Author.* Claire was the sole author of a National Register nomination for the Moslem Mosque located in Williamsburg, Brooklyn. The Moslem Mosque is one of the oldest mosques in the United States, founded by Muslim Lipka Tatars who emigrated to Brooklyn from modern-day Lithuania, Belarus, and Poland. The nomination focused on the mosque as a social and cultural resource that served as a bridge to help ease the transition of Tatar immigrants to New York City.

***The A&E System*, Temple Hoyne Buell Center for the Study of American Architecture at Columbia University.** *Co-author.* Claire contributed to the research and writing of the Buell Center's publication entitled *The A&E System.* This publication focused on examining the systems of large architecture and engineering firms in the United States, delving into specific projects done by these firms as well as the stakeholders, managers, stewards, and clients who make these projects happen.

Digital Documentation, Piazza di Malta, Venice, Italy. *Graduate Student.* Claire worked as part of a ten-person team to digitally document the Piazza di Malta, owned by the Knights of Malta, in Venice, Italy. Work conducted included photogrammetry and 3D modelling of the site's historic altar which was moved to the church during Napoleon's reign; conditions assessments, photogrammetry, and Lucida scanning of tombstones within the Piazza; and 3D Faro scanning of the full complex resulting in an interactive digital model of the site.

Sources and Assumptions:
CalEEMod Appendix A, Pg. 8, based on given piece of equipment can pass over in an 8-hour workday
-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).
-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. “Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

Conversion factor of 1,035 Btu per cubic foot based on United States Energy Information Administration data

(see: USEIA, Natural Gas, Heat Content of Natural Gas Consumed, February 28, 2018,

https://www.eia.gov/dnav/ng/ng_cons_heat_a_EPG0_VGTH_btucf_a.htm. Accessed March 2020.)

An electricity efficiency factor is applied to natural gas use to convert to electricity. Efficiency factors are derived from CAPCOA's Handbook for Analyzing GHG Emission Reductions, Table E-15.2. https://www.airquality.org/ClimateChange/Documents/Final%20Handbook_AB434.pdf

Conversion factor of 3.412 kBTU per kWh for electrificaton from natural gas

Natural Gas	million cubic foot (cf)
SoCalGas 2030	778,180
Project Annual	0.191
Percent Net Project of SoCalGas	0.000024%

Source: California Gas and Electric Utilities, 2020 California Gas

SLRC
Operational Energy Analysis

Estimated Electricity demand from Electric Vehicle Supply Equipment (EVSE)

Land Use Type	Number of EVSE Charging Spaces	Number of Spaces with EV Chargers [b]	Average Charge (kWh/day) [a]	Days/Year	Electricity Demand (kWh/yr)	Electricity Demand (MWh/yr)
Total	**26**	**3.00**	**4.4**	**365**	4,818	4.82

Notes:

a. Estimated based on reference sources listed below.

b. Project would install EV charging spaces for approximately 10 percent of its 403 required parking spaces for immediate use.

c. Project would install pre-wiring for EV charging spaces for 20 percent of its parking capacity for future use (so 10% in addition to the immediate use).

SLRC
Project Energy Analysis
Fuel Usage from VMT

Annual VMT (Traffic Study)[4]: 2,486,228 miles/year

Fuel Type:[1]	Gasoline	Diesel	Electricity	Natural Gas	Plug-in Hybrid
Percent:	86.1%	5.3%	5.8%	0.3%	2.5%
Miles per Gallon Fuel:	26.4	9.2	-	4.6	62.0
Annual VMT by Fuel Type (miles):	2,140,420	131,890	143,757	7,152	63,009
Annual Fuel Usage (gallons):	80,936	14,376	-	197,322	1,016

	Los Angeles County Fuel Consumption [3]	
	Gasoline	Diesel
Los Angeles County:	3,559,000,000	563,265,306
Mobile	81,952	14,376
Project Total	81,952	14,376
Percent Net Project of Los Angeles County:	0.002%	0.003%

Notes:

1. California Air Resources Board, EMFAC2021 (LA County; Annual; 2030', Aggregate Fleet).
2. Assumes electric vehicles would replace traditional gasoline-fueled vehicles.
3. California Energy Commission, California Retail Fuel Outlet Annual Reporting (CEC-A15) Results, 2019. Available at: https://ww2.energy.ca.gov/almanac/transportation_data/gasoline/piira_retail_survey.html. Accessed May 2021. Diesel is adjusted to account for retail (48%) and non-retail (52%) diesel sales.

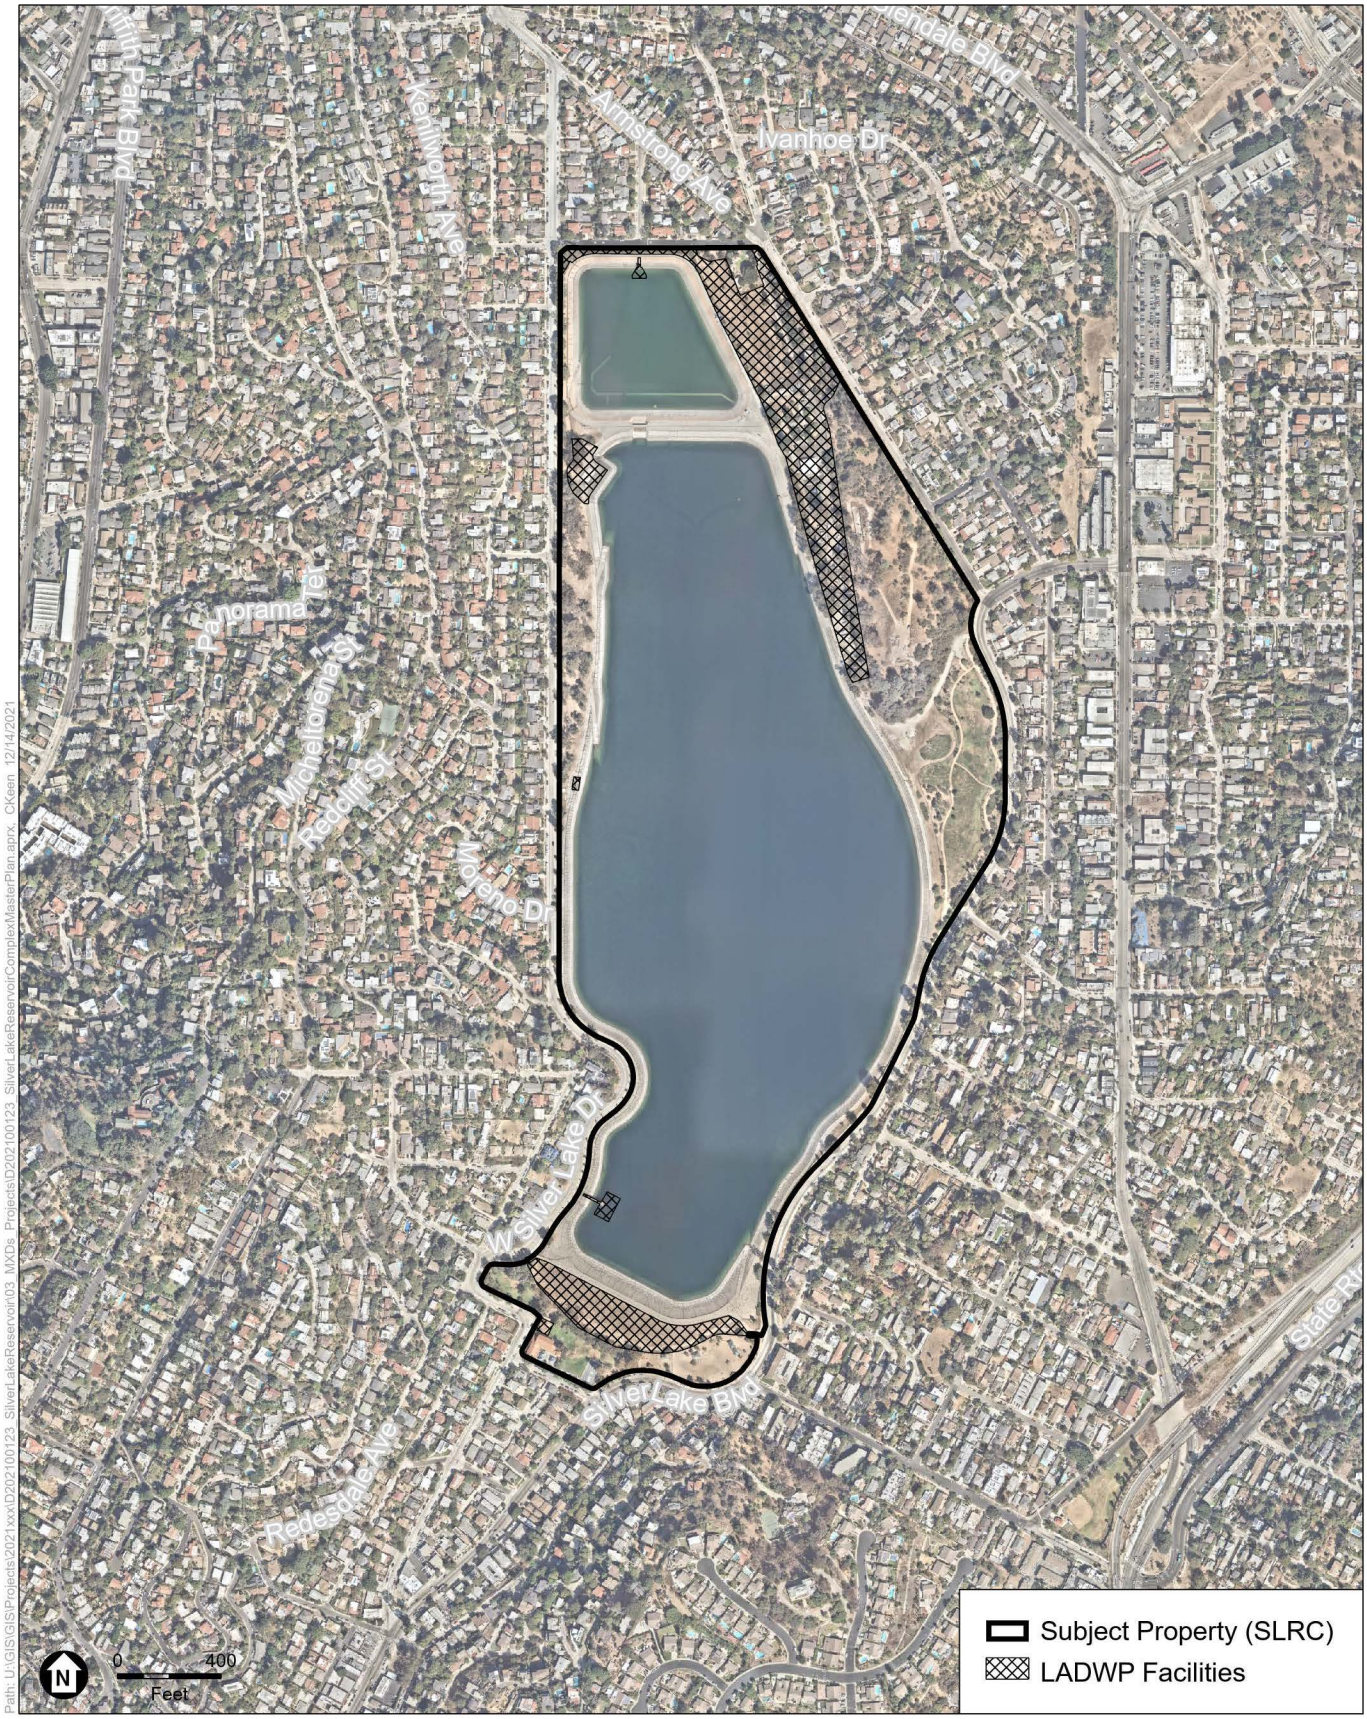
SECTION 1.0
Executive Summary

Environmental Science Associates (ESA) compiled this executive summary using excerpts from the Phase I Environmental Site Assessment report that follows. This executive summary may not provide all the information necessary to fully characterize the site and gain an understanding of the issues, nor does it detail the Phase I assessment and its findings. ESA does not recommend relying solely on this executive summary.

This Phase I Environmental Site Assessment was conducted on behalf of the City of Los Angeles (City) Bureau of Engineering for the Silver Lake Reservoir Complex Master Plan Project (proposed Project). The Phase I Environmental Site Assessment covers the entire Silver Lake Reservoir Complex (SLRC or subject property), located in the Silver Lake neighborhood of the City of Los Angeles, California (see **Figure 1, *Subject Property***). This assessment was conducted in accordance with guidance from the American Society of Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21), 40 Code of Federal Regulations (CFR) Section 312.1, *Purpose, Applicability, Scope and Disclosure Obligations*, and in accordance with the proposal dated February 12, 2021. This Phase I Environmental Site Assessment was conducted to identify Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or Controlled Recognized Environmental Conditions (CRECs) at the subject property (see Section 2.1 for definitions).



The SLRC is located on a 127-acre site and includes reservoirs, dams, buildings, water and stormwater infrastructure, interior roads, and public recreational facilities. The SLRC is bounded by Tesla Avenue on the north, Armstrong Avenue and Silver Lake Boulevard on the east, Van Pelt Place and Silver Lake Boulevard on the south, and West Silver Lake Drive on the west. The surrounding neighborhood is primarily made up of residential uses with some smaller commercial areas, and some existing public access in and around of the SLRC that allows park uses.

The subject property was inspected by ESA on October 18, 2021. The Los Angeles Department of Water and Power (LADWP), which operates a portion of the subject property, provided access to their restricted property within the SLRC. The LADWP property includes a chlorination station, a modular office building, equipment storage containers, and related facilities to support LADWP operations. According to information that was provided by LADWP, the existing Silver Lake Reservoir Chlorination Station in the LADWP property is used to store hazardous materials such as bleach and sodium thiosulfate, and will be soon used to store additional amounts of chemicals related to a future aeration system project that will be implemented at the reservoirs. Access to the interiors of LADWP facilities was not provided during the inspection, however, the exteriors of the chlorination station, modular office building, equipment storage containers, and

support facilities within the LADWP property were observed to be in good condition. **The search of regulatory records did not reveal any RECs, HRECs, or CRECs relative to the SLRC**.

A commercial database service searched relevant federal, State, and local regulatory agency lists for listings of the properties assessed in this report, and nearby properties within the appropriate ASTM 1527 standard search distances. In addition, regulatory agency websites were checked to provide additional information about the SLRC. The chlorination station was listed for the removal of 20.58 tons of an "unspecified aqueous solution" in 2003. The chlorination station has an active Hazardous Waste Generator and Hazardous Material permit with the local Certified Unified Program Agency (CUPA) Los Angeles Fire Department (LAFD), and LADWP disposes of hazardous wastes with authorized and accredited contractors. The subject property has no other listings (i.e., spills or violations). Some residential and commercial properties in the vicinity of the subject property are listed for the use, storage, and in some cases, spills of hazardous materials. **However, none of the listed properties are anticipated to have affected the subject property; no RECs, HRECs, or CRECs were identified.**

An LADWP representative was interviewed for knowledge of the property during the site inspection as described above. **To their knowledge, the subject property has never had above or below ground storage tanks and has no known history of hazardous materials spills**.

SECTION 2.0
Introduction

2.1 Purpose, Standards, and Definitions

On behalf of the City, Environmental Science Associates conducted this Phase I Environmental Site Assessment for the SLRC located in the Silver Lake neighborhood of the City of Los Angeles, California (see Figure 1).

This Phase I Environmental Site Assessment was conducted in general accordance with the ASTM *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-21) (ASTM 2021) and the U.S. Environmental Protection Agency (USEPA) Final Rule regarding Standards and Practices for All Appropriate Inquiries (70 *Federal Register* [FR] 66070, November 1, 2005; 40 Code of Federal Regulations [CFR] Part 312) (AAI Rule). The EPA has stated that the newly revised ASTM E1527-21 is consistent with the AAI Rule (78 FR 79319, December 30, 2013). Specifically, this final rule amends the AAI Rule at 40 CFR Part 312 to reference ASTM E1527-21 and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the AAI Rule.

The purpose of this Phase I Environmental Site Assessment is to enable the parties relying on it to satisfy one or more of the requirements for the innocent landholder defense to liability under the Comprehensive Environmental Response, Compensation, and Liability Act and to evaluate the potential for Recognized Environmental Conditions (RECs) at the Project site. Three types of RECs are defined by ASTM E1527-21, as listed below. The term *Recognized Environmental Conditions (RECs)* means:

> (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

In addition, the updated ASTM E1527-21 defines the two categories cited below.

The term *Historical Recognized Environmental Conditions (HRECs)* means:

> A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions,

activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.

For a past REC to be considered an HREC, it must:

- Have already been remediated (or meet current standards without remediation);
- Not require use restrictions or engineering controls (e.g., cap, subslab depressurization system); and
- Meet current standards.

If the REC has use restrictions or engineering controls (e.g., cap, subslab depressurization system), the REC may be designated as a Controlled Recognized Environmental Condition (CREC), as defined below. Unlike HRECs, a CREC will be listed in the conclusions section of the Phase I assessment, along with other RECs. The purpose of this new category is to bring continuing obligations, such as use restrictions, maintenance requirements, and reporting requirements, to the forefront. The term *CREC* means:

> A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.

RECs, HRECs, and CRECs are not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. In addition, business environmental conditions (e.g., subsurface crude oil pipelines) are noted but not considered RECs, HRECs, or CRECs.

The ASTM Standard practice also defines a "business environmental risk" as a risk that can have a material environmental impact on the planned use of a property.

2.2 Scope of Services

The following sections describe ESA's work scope:

- Section 2.0, *Introduction*, discusses the purpose for performing the Phase I Environmental Site Assessment; the standards and definitions used for the Phase I assessment; and significant assumptions and limitations.
- Section 3.0, *Site Description*, compiles information concerning the location, legal description, and current and proposed uses of the subject property, along with a description of any structures and improvements at the time of ESA's assessment.
- Section 4.0, *Records Review*, includes ESA's review of various databases available from federal, State, and local regulatory agencies regarding hazardous materials use, storage, or disposal within or near the properties considered in this assessment. Copies of relevant documents are included in the appendices of this report. Physical setting sources such as topography, soil, and groundwater conditions are described.
- Section 5.0, *Site Reconnaissance*, describes ESA's observations during reconnaissance of the subject property. The methodology used and limiting conditions are described.
- Section 6.0, *User-Provided Information*, documents interviews conducted with the property managers.
- Section 7.0, *Findings and Opinions*, presents ESA's findings and professional opinions regarding the information contained in this report. It provides ESA's conclusions regarding the presence of RECs connected with the subject property and data gaps, if any, that could affect the recognition of RECs.
- Section 8.0, *Report Authors and Qualifications*, provides the signatures and qualifications of the report authors.
- Section 9.0, *References*, is a summary of the resources used to compile this report that supplement the information provided in the appendices.
- The appendices contain certain pertinent documentation regarding the subject property. Appendices A and B contain the report of regulatory agency records search results, historical aerial photographs, historical topographic maps fire insurance maps, and city directories.

2.3 Limitations and Exceptions

No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with a property. Conformance of this Phase I Environmental Site Assessment with ASTM E1527-21 reduces, but does not eliminate, uncertainty regarding the potential for RECs, HRECs, and CRECs in connection with the subject property. While ESA has made every effort to discover and interpret available historical and current information on the properties assessed within the time available, some potential always remains for undiscovered contamination to be present. ESA's report is a best-efforts collection and interpretation of available information, and cannot be considered wholly conclusive. This report and the associated work were provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all warranties,

expressed or implied. No other warranty is expressed or implied. ASTM E1527-21 is included in this report by reference.

This Phase I Environmental Site Assessment is based primarily on historical research, a database review, and a site reconnaissance of accessible areas. This Phase I does not include "non-scope issues" as specified by ASTM E1527-21, such as surveys for the presence of the following items on or in the vicinity of the subject property: asbestos-containing materials, polychlorinated biphenyls (PCBs), radon, effects on indoor air quality, lead-based paint (LBP), lead in drinking water, industrial hygiene, health and safety, regulatory compliance, and high-voltage lines.

The conclusions presented are professional opinions based solely upon indicated data described in this report, visual site and vicinity observations, and the interpretation of the available historical information and documents reviewed, as described in this report. Unless ESA has actual knowledge to the contrary, information obtained from interviews or provided to ESA is assumed to be correct and complete. ESA does not assume any liability for information that was misrepresented to ESA by others or for items not visible, accessible, or present on the parcels during the time of the site reconnaissance. The conclusions are intended exclusively for the purpose outlined herein and the site location and project indicated. Any use or reuse of this document or the findings, conclusions, or recommendations presented herein is at the sole risk of the user.

Opinions and recommendations presented herein apply to the site conditions existing at the time of this Phase I Environmental Site Assessment and cannot necessarily apply to site changes of which ESA is not aware and has not had the opportunity to evaluate. Changes in the conditions of the parcels may occur with time due to natural processes or the works of man on the property or adjacent properties. Changes in applicable standards may also occur as a result of legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond ESA's control. Opinions and judgments expressed herein are based on ESA's understanding and interpretation of current regulatory standards, and should not be construed as legal opinions.

SECTION 3.0
Site Description

3.1 General Setting and Location

The SLRC (or subject property) is located in the Silver Lake neighborhood of the City of Los Angeles, California (Figure 1). The Silver Lake neighborhood is primarily made up of residential uses with some smaller commercial areas, and some existing public access in and around of the SLRC that allows park uses. The SLRC is located on a 127-acre site and includes reservoirs, dams, buildings, water and stormwater infrastructure, interior roads, and public recreational facilities. Under the Los Angeles General Plan, the SLRC is part of the Silver Lake-Echo Park-Elysian Valley Community Plan Area (Community Plan) and is zoned as Open Space (OS) (City of Los Angeles 2013).

3.2 Current and Proposed Land Uses

The Silver Lake and Ivanhoe Reservoirs, collectively known as the SLRC, are owned by LADWP. Although the Silver Lake and Ivanhoe Reservoirs are no longer in service, LADWP currently operates various facilities within the SLRC. LADWP currently leases approximately three acres of SLRC land to the City of Los Angeles Recreation and Parks Department (RAP) to operate and maintain the Meadow, an open grassy area along the eastern side of the SLRC that is currently open to public access from dawn until dusk. Additionally, approximately four acres of the SLRC are owned and operated by RAP for the existing Silver Lake Recreation Center along the south side, and a nursery school along the northeastern portion of the subject property. Currently, there are two pathways shared with the public on the west side of Ivanhoe Reservoir and along the top of Silver Lake Dam. Approximately four acres of existing paved surfaces around the reservoirs' perimeters are available for shared public use with LADWP. The entire SLRC is enclosed by a perimeter chain link fence varying in height from 6 to 12 feet.

The proposed Project would redesign approximately 116 acres on the existing 127-acre SLRC with community park amenities, including the approximately 77 acres of open water. The proposed Project would re-develop the SLRC with a contemporary design that would create park zones blending vegetated areas with public spaces. The design would enhance the visual and recreational quality of the area to be consistent with goals and objectives of the Community Plan and provide the opportunity for the public to access natural park space. None of the existing public facilities within the SLRC would be removed, rather public spaces and facilities would be expanded, renovated, and redesigned to improve visitor experience, including the perimeter walking path/promenade.

This page intentionally left blank

SECTION 4.0
Records Review

The purpose of the records review is to obtain and examine records that could help to evaluate potential RECs, HRECs, and CRECs in connection with the subject property. This section documents the database records search and the evaluation of other records, summarizes information provided by the property owners, and describes the physical setting of the subject property.

4.1 Standard Environmental Record Sources

Federal, State, and local regulatory agencies publish databases of businesses and properties that handle hazardous materials or hazardous waste, including those properties with a known release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. ESA contracted with a commercial database service to perform the government database search for listings within the appropriate ASTM standard minimum search distance (EnviroSite 2021). A detailed description of the types of information in each database reviewed and the agency responsible for compiling the data is included in the Government Records Report provided as **Appendix A**, which includes a list of acronyms for the individual databases in the executive summary of the Radius Report.

ESA evaluated the listings with regard to the nature of potential chemicals of concern and the extent of known releases. In general, reported or potential releases likely to affect a property would include those located on or within a 1/8-mile (660-foot) radius of the subject property. ESA also considered additional factors such as chemical properties, regional knowledge of the site vicinity, groundwater flow direction, and available past regulatory documentation as part of the REC evaluation.

4.2 Results of Database Search

Sites identified within the ASTM-specified search radius in the surrounding area are discussed below. The site locations are shown on maps with the records search report in Appendix A. In addition, to augment the regulatory records search, the State Water Resources Control Board (SWRCB) GeoTracker and California Department of Toxic Substances Control (DTSC) EnviroStor websites were accessed to review documents that describe the locations and status of sites with environmental issues.

Subject Property–The Silver Lake Reservoir Chlorination Station located within the SLRC has an active Hazardous Waste Generator and Hazardous Material permit with the local CUPA.

Approximately 200 gallons of bleach and 100 gallons of sodium thiosulfate are stored on site. No violations or spills have been recorded for the subject property.

There are numerous listings for various properties within the ASTM-required search distance. Most listings are for the storage and use of hazardous materials but with no recorded violations or spills. For example, various residential properties in the vicinity of the subject property are listed for the removal of asbestos-containing materials. This indicates that the site occupants removed asbestos-containing materials that were likely previously used as insulation. Only those nearby sites with violations or spills are discussed below.

Site A17– 2252 Kenilworth Avenue – On October 4, 2019, an incident involving a contractor hitting a half-inch-diameter pipe resulted in the release of natural gas. This gas release would not have been able to affect the subject property.

Site E19 – St. Albans Lake Place Tract – This site, located approximately 550 feet east of the subject property on the northwest corner of Glendale Boulevard and Silver Lake Boulevard, is a former leaking gasoline underground storage tank (UST) site (EnviroSite 2021). The case was opened in 1991, the site remediated and monitored, and the case closed by the Los Angeles Regional Water Quality Control Board (RWCQB) in August 1996 (RWQCB 1996a). The case closure indicates that the regulatory agency concluded that this site does not pose a threat to people and the environment. The site is currently occupied by a residential development with no fuel services.

Based on previous groundwater monitoring conducted for Site E20, described below, it is assumed that groundwater flows at Site E19 flow to the northeast and away from the subject property, due to the similarity in slope conditions at Site E19 and E20. Therefore, contamination from this site would not have been able to migrate to the subject property.

Site E20 – Chevron – This site is located on the southwest corner of Glendale Boulevard and Silver Lake Boulevard, approximately 500 feet east of the subject property. This site is a former Chevron service station previously equipped with three gasoline USTs, one used-oil UST, four gasoline dispenser islands, and an office/garage. In February 1986, a gasoline leak was discovered and reported as a result of a leak in product lines adjacent to a dispenser island. Fuel hydrocarbon sources were removed from the site, including the USTs and associated piping (removed in 1995), phase-separated hydrocarbons (last observed in 1990), and soil containing potentially mobile petroleum hydrocarbon components. Subsequent investigations determined that petroleum hydrocarbons in groundwater have been either not detected or at low concentrations (Wayne Perry, Inc. 1996). The regulatory agency closed the case, indicating that the residual levels of petroleum hydrocarbons at this site do not pose a threat to people and the environment (RWQCB 1996b). The site is currently occupied by the Silver Lake Branch Library that does not store or sell fuel. Note that monitoring wells installed at this site indicated that the direction of groundwater flow in the local vicinity is to the northeast, away from the subject property. This means that the site would not be able to affect the subject property.

Site E21 – 2400 Glendale Boulevard – This site, located approximately 650 feet east of the subject property, is a former leaking gasoline UST site (EnviroSite 2021). The case was opened in 1989, the site assessed and remediated, and the case was closed by the Los Angeles RWQCB in July 1996 (RWQCB 1996c). The case closure indicates that the regulatory agency concluded that this site does not pose a threat to people and the environment. The site is currently occupied by a Bank of America financial center and that does not store or sell fuel. Groundwater flows at the site are anticipated to flow northeast, away from the subject property, based on groundwater monitoring conducted for Site E20. Therefore, contamination from this site would not have been able to migrate to the subject property.

Orphan Sites – Sites not plotted due to poor or inadequate address information are referred to as "orphan sites" and are listed in the record search (Appendix A) under *Unmappable Summary*. The records search identified 10 orphan sites. The partial location and database listing information was reviewed and indicate that none of these sites would be within 1/8-mile of the subject property.

4.3 Other Records Reviewed

The regulatory agency records search also provides fire insurance maps, city directories, historical aerial photographs, and historical topographic maps, all of which are provided in **Appendix B**. The search results are discussed below.

Fire Insurance Maps

Historical fire insurance maps are available for the subject property and local vicinity for the years 1914, 1919, 1923, 1950, 1953, 1955, 1957, 1960, 1961, 1966, 1968, 1969, and 1970.

The **1914** fire insurance map indicates that the layout of the subject property was similar to present-day conditions. The subject property includes two large water bodies: One is identified as Silver Lake Reservoir and the other as "covered reservoir," which would later be identified as Ivanhoe Reservoir starting with the **1950** fire insurance map. Areas that surround the reservoirs within the subject property are mapped in green and include a trail, indicating that the property included park spaces around the reservoirs. There is one structure shown at the northeast portion of the subject property, adjacent to the eastern end of the dam that separates the two reservoirs.

The fire insurance maps for the years **1919 through 1970** show the majority of structures surrounding the subject property to be homes, garages, restaurants, and offices. The **1970** fire insurance map identifies two gas stations at the Silver Lake Boulevard and Glendale Boulevard intersection; the two properties are currently a library and a residential development with no fuel services (refer to Sites E19 and E20 above in Section 4.2, *Results of Database Search*). The map identifies an auto repair shop, a sign painting shop, and a tire shop on properties to the north of these sites, also located along Glendale Boulevard. As described above, given the anticipated northeast direction of groundwater flow that occurs at sites in this vicinity of the Silver Lake Boulevard/Glendale Boulevard intersection, spills, if any, from the gas stations, auto repair shop, sign painting shop, or tire shop, would not have been able to migrate to the subject property.

Other industrial and commercial land uses that would have used chemicals are located on the blocks further north or east of the subject property in areas where spills would not be able to migrate to the site.

City and Telephone Directories

City and telephone directories are available for the subject property and local vicinity from 1973 to 2019. The 1973 through 2019 telephone directories indicate that the Silver Lake Recreation Center was operating at the southern portion of the subject property at 1850 W. Silver Lake Drive. The 2019 telephone directory lists Low Cost Pet Vaccines of LA at the same address. These listings indicate industrial or commercial use that would involve large quantities of hazardous materials.

The listings for the predominant majority of surrounding properties are names of individuals (most likely residents) and small commercial operations (private investigation and real estate). These listings do not indicate industrial or commercial use that involve large quantities of chemicals or hazardous materials that could affect the subject property.

Historical Aerial Photographs

Historical aerial photographs are available for the years 1927, 1928, 1938, 1940, 1944, 1948, 1952, 1956, 1960, 1962, 1964, 1965, 1967, 1969, 1970, 1972, 1976, 1980, 1981, 1983, 1985, 1989, 1994, 1995, 2002, 2005, 2009, 2010, 2012, 2014, 2016, 2018, and 2020, and are included in Appendix B. The subject property is identified with a red arrow.

In the **1927** aerial photograph, the subject property is developed similar to existing conditions. The map shows the Silver Lake Reservoir as well as what appears to be surrounding green space, trees, and trails within the subject property. Several buildings and access roads are shown in the eastern portions of the subject property, where present-day meadows and LADWP facilities exist today. Ivanhoe Reservoir appears to be covered by an unknown material and its water is not visible. Neighborhood tracts are shown to the east of the subject property, however, the lands west and south of the subject property appear to be largely undeveloped with the exception of roadways and sparsely located buildings.

Subsequent aerial photographs from **1928 to 2020** show increasing residential and commercial development in surrounding areas and the eventual uncovering of Ivanhoe Reservoir. Silver Lake Reservoir is shown to have been drained of all water in 1976 and 2016 and the bed of the reservoir can be seen in aerial photographs for these years. No other substantial changes to the overall layout and structures at the subject property are shown.

Historical Topographic Maps

Historical topographic maps are available for various portions of the subject property for the years 1894, 1896, 1898, 1900, 1902, 1920, 1921, 1928, 1953, 1966, 2012, 2015, and 2018, and are included in Appendix B. The subject property is identified with a red star.

The **1834 through 1902** topographic maps show major roadways, rivers, and railroads in the area surrounding the subject property but do not depict any structures or delineate the subject property.

The **1920 through 1928** topographic maps show more detail but do not depict structures. The subject property is delineated. Only the northern reservoir, Silver Lake Reservoir, is depicted.

The **1953** topographic map shows both reservoirs and surrounding green spaces at the subject property. Structures are identified in areas west of the subject property, but none are shown within or in close proximity to the subject property.

The **1966** topographic map is similar to the 1953 map but shows the Silver Lake Recreation Center at the southern boundary of the subject property. Several structures are shown at northeast portion of the subject property but are not labeled.

The **2012** through **2018** topographic maps identify the subject property but do not depict any structures within the subject property or surrounding areas.

4.4 Physical Setting

The following sections provide information about the physical setting of the project. Geotechnical information is not a required element of ASTM E1527-21 Phase I Environmental Site Assessments and is not included in this Phase I assessment.

Topography. The subject property is within the Hollywood, California, 7.5-minute quadrangles at an elevation of about 417 feet above mean sea level (EnviroSite 2021). The surrounding neighborhood is characterized by steep slopes which ascend from the reservoir to the north, west, and east, and descend to the south.

Geology, Soils, and Hydrology. The surface geology consists of Miocene marine rocks including sandstone, shale, siltstone, conglomerate and breccia, in part Pliocene (5.4 million to 2.6 million years before present) and Oligocene (33.9 million to 23 million years before present). Some soil units within the subject property are Hambright Series Loam, which are shallow, well drained soils with moderate corrosion potential. Other data points within the subject property are characterized as miscellaneous soils (urban and water) (EnviroSite 2021).

Flood Hazard. The subject property is located in a 100-year flood zone.[1] Specifically, the reservoirs within the subject property are identified as Zone A – 1 Percent Annual Chance Flood Hazard Contained in a Channel (FEMA 2021).

[1] A 100-year flood zone is an area that has a 1 percent chance of being equaled or exceeded in any given year.

SECTION 5.0
Site Reconnaissance

5.1 Methodology and Limiting Conditions

Andray Cardoza from ESA conducted the site reconnaissance on October 18, 2021, to assess present conditions at the subject property. Access to restricted areas of the SLRC was provided by LADWP. Publicly accessible portions of the SLRC were observed from trails that surround the subject property. Weather at the time of the site reconnaissance was partly cloudy after rainy conditions in the morning. The site conditions discussed below are limited to readily apparent environmental conditions observed.

5.2 General Site Setting

The subject property is located within the Silver Lake neighborhood of the City of Los Angeles and consists of reservoirs, dams, buildings, water and stormwater infrastructure, interior roads, and public recreational facilities. The observed conditions, along with photographs, are described below. Figure 1 shows the subject property and local area.

5.3 Site Observations

Residential homes and apartments are located across the street from the subject property on all sides. No commercial or industrial uses were visible in the immediate vicinity of the subject property. The Silver Lake and Ivanhoe Reservoirs are gated from public access, except for two pathways along the west side of Ivanhoe Reservoir and the south side of Silver Lake Reservoir. The SLRC's open spaces, walking trails, and recreation facilities surround the gated reservoirs and are accessible by the public. Notable structures in these areas include the Silver Lake Recreation Center building at the southern portion of the SLRC and a nursery school at the northeast portion of the SLRC.

Private access to LADWP facilities along the eastern portion of the SLRC is provided from a gate and gravel driveway near the intersection of Tesla Avenue and Armstrong Avenue at the northeastern corner of the subject property. The LADWP modular office is located approximately 800 feet south of the access gate and adjacent to a paved parking lot. The modular office is a 60-by-60-foot, single-story, rectangular wooden building. Located approximately 300 feet south of the modular office at the base of a knoll is the Silver Lake Chlorination Station. The chlorination station is a small, rectangular brick structure equipped with a gate, barbed wire, and keycard access doors. The structure is surrounded by soils, grass, trees, and other vegetation. The area between the modular office and chlorination station is used for storing and staging construction equipment. Various storage containers, tractors, trucks, and canopies were observed in this area. This area is within the subject property, but outside of the proposed Project areas.

Figure 2 shows the LADWP operations building and chlorination station. No unusual stains or odors were noted around the modular office or its supporting electrical boxes. Soils at the base of the chlorination station were noted to be wet from rain that occurred earlier in the day of the site survey. This is considered a *de minimis* condition. No observations of chemical spills or stains at the chlorination station were observed.

Storage containers, canopies, and construction equipment observed in the LADWP staging area are shown in **Figure 3**. Some storage containers are labeled with a no smoking sign, indicating that equipment with flammable materials such as gasoline are stored inside. No chemical spills or unusual stains or odors were noted on the exteriors of the storage containers or surrounding soils.

Various construction vehicles, such as forklifts, excavators, and one tanker truck were observed in the LADWP construction staging area. No Occupational Safety Health Administration (OSHA) symbols or placards were observed on the tank, indicating the truck is likely used to transport water. No observations of chemical spills or unusual stains or odors were noted in this portion of the subject property.

Figure 4 shows northern and southern views of Silver Laker Reservoir from the private access road. The road travels through LADWP property and around the SLRC reservoirs:

Recent photographs of the exterior of the Silver Lake Recreation Center from the Silver Lake Reservoir Complex Master Plan are shown in **Figure 5**. The Recreation Center also includes outdoor playgrounds, basketball courts, and picnic areas.

The southwest portion of the Silver Lake Recreation Center has a small, detached storage unit, also depicted in Figure 5. It was noted by LADWP staff during the site survey that the unit was previously used to store chemicals for water treatment. Today, the unit is used to store landscaping and recreation equipment. The building was not included on government records as a hazardous materials site. No spills or unusual stains or odors were observed on the exterior of the unit or on surrounding surfaces.

5.4 Results of Site Reconnaissance

There were no observations of chemical spills, underground or aboveground storage tanks, waste pits or ponds, stained soil, pavement, or floors, unusual odors, or stressed vegetation at the subject property. Therefore, no RECs, HRECs, or CRECs were observed on the subject property.

SECTION 6.0
User-Provided Information

The site conditions and history were discussed with LADWP staff during the site inspection on October 18, 2021. It was noted that the Silver Lake Chlorination station is currently used to store hazardous chemicals and will soon be storing additional chemicals related to an upcoming aeration system project within the SLRC. It was also noted that the auxiliary storage structure at the southwest portion of the Silver Lake Recreation Center was previously used to store reservoir water treatment chemicals but is now used to store equipment only. Following the site inspection, ESA received further documentation from LADWP detailing hazardous materials conditions at the subject property, which has been summarized below.

According to information that was provided by LADWP, approximately 200 gallons of bleach and 100 gallons of sodium thiosulfate are currently stored in the Silver Lake Chlorination Station. A second chlorination station that was maintained by LADWP has since been taken out of service and was deregistered from California Accidental Release (CalARP) and Risk Management Plan (RMP) requirements on June 17, 2014. There is no history of reportable spills for the chlorination stations. Separately, on April 9, 2008, there was a contained automotive oil spill on the walking path around Silver Lake Reservoir, on the southwest side near an outlet tower, which did not enter any water way or storm drain. The spill appears to have been cleaned up by LADWP Hazmat, since they were contacted. LADWP's Wastewater Quality and Compliance Group checked most recent spill records and no accidental spill reports were identified for the subject property.

Other potentially hazardous conditions at the subject property were addressed in the interview documentation, including but not limited to: the use of pesticides and herbicides at the subject property via spray and bait boxes; pre-1980 buildings which may contain asbestos containing materials (ACM) or LBP; and, when reservoir fills beyond its capacity, the discharge of reservoir waters into a spillway that deposits into a storm drain system that connects to Ballona Creek. **To LADWP's knowledge, the subject property has never had above or below ground storage tanks and has no known history of hazardous materials spills**.

This page intentionally left blank

SECTION 7.0
Findings and Opinions

7.1 Findings and Opinions

A commercial database service searched relevant federal, State, and local regulatory agency records for listings of the properties assessed in this report, and nearby properties within the appropriate ASTM 1527 standard search distances. Further, regulatory agency websites were checked to provide additional information about the Project Area, and representatives from the LADWP Hazardous Substances Group provided responses to a questionnaire regarding hazardous materials use and storage at the subject property.

The Silver Lake Chlorination Station within the subject property has an active Hazardous Waste Generator and Hazardous Material permit with the local CUPA and stores approximately 200 gallons of bleach and 100 gallons of sodium thiosulfate on the site. The Silver Lake and Ivanhoe Reservoirs Aeration and Recirculation Systems Projects within the subject property is listed as an active site but is a permitted use under Clean Water Act Section 401. The subject property has no other listings. Various properties in the vicinity are listed for the use, storage, and in some cases, spills of hazardous materials. **The search of regulatory records did not reveal any RECs, HRECs, or CRECs relative to the subject property**.

The LADWP property within the SLRC was inspected on October 18, 2021. Structures observed within the property include the modular office, chlorination station, and storage containers. Other structures observed at the SLRC include the Silver Lake Recreation Facility and an auxiliary storage building. There were no observations of chemical spills, underground or aboveground storage tanks, waste pits or ponds, stained soil or floors, unusual odors, or stressed vegetation at the subject property. **No RECs, HRECs, or CRECs were observed relative to hazardous materials, hazardous waste, or chemical use, storage, or disposal**.

The LADWP representative was interviewed for knowledge of the property during the site inspection as described above. **To their knowledge, the subject property has never had above or below ground storage tanks and has no known history of hazardous materials spills**.

7.2 Data Gaps

ESA attempted to obtain reasonably ascertainable information regarding the subject property and the surrounding environs. There were no data gaps identified that could affect the identification of RECs, HRECs, or CRECs.

SECTION 8.0
Report Authors and Qualifications

8.1 Report Authors and Signatures

This section includes qualification statements of the environmental professionals responsible for conducting the Phase I assessment and preparing this report.

Mr. Andray Cardoza of ESA conducted the data review for the subject property, conducted the site reconnaissance, and prepared the Phase I Environmental Site Assessment report.

The work conducted and report written by Mr. Cardoza were reviewed by Mr. Michael Burns. Mr. Burns has over 30 years of experience in environmental site investigations, characterizations, and assessments, including Phase I Environmental Site Assessments.

Mr. Cardoza declares that, to the best of his professional knowledge and belief, he meets the definition of "Environmental Professional" as defined in 40 CFR 312.10. Mr. Burns declares that, to the best of his professional knowledge and belief, he meets the definition of "Environmental Professional" as defined in 40 CFR 312.10.

Mr. Cardoza has the specific qualifications based on education, training, and experience to assess parcels of the nature, history, and setting of these parcels. With the assistance of Mr. Burns, he has developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Reg Measure Title :	Enrollee - 401 Certification for Los Angeles City DWP

Reg Measure Description :

LADWP plans to install an aeration and recirculation system for the purpose of controlling algae, and associated odors, at the Silver Lake and Ivanhoe Reservoirs (SLRC), therefore improving the water quality of the SLRC. The project has been broken into two phases, an aeration system Phase 1; and a recirculation system, Phase 2. Phase 1 - Aeration System: Blowers or compressors will supply air bubbles via self-weighted one-inch air pipes to a series of diffusing equipment inside each reservoir. Approximately six diffusers will be installed in Ivanhoe Reservoir and 14 diffusers would be installed in Silver Lake Reservoir. The equipment will increase the oxygen levels at the reservoir bottom and locally mix the water around it. This aeration system will discourage algae growth and reduce related odors from anaerobic conditions. Phase 2 - Recirculation System: Existing pumps and pipelines will be utilized to transfer water from the southern end of the Silver Lake Reservoir to Ivanhoe Reservoir. The water then will overflow from Ivanhoe Reservoir to Silver Lake Reservoir via the existing spillway. This full water transfer between both basins allows for more thorough mixing and de-stratification, which will also reduce algae development. The majority of anticipated impacts under this Notice of Intent will occur in Ivanhoe Reservoir for the installation of a new pipeline that will facilitate the recirculation of water between Silver Lake and Ivanhoe Reservoir.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
