1	41 Sprinklers	Globe			41
2					
3					

Important Note:

- All components for every fire alarm and fire detection system shall be California State Fire Marshal listed and approved for the purpose for which they are installed.
- All components of every fire extinguishing system shall be UL or FM listed.
- Prior to the installation of any fire protection system in the City of San Jose, plans must be approved by the Fire Marshal and final inspection approving the system must be made before the system may be placed into service.
- This permit application or approved permit will expire after 180 days of inactivity.
- All fees as a result of this permit are the responsibility of the installing contractor.
- Call this office at least 72 hours in advance to schedule an inspection.

I declare under the penalty of perjury, under the laws of the State of California, that the foregoing is true and correct and that, to the best of my knowledge, the license(s) listed above are those required for the work to be performed and are in full force and effect, or if exempt, that the exemptions meet the requirements of the Contractor's State License Law as contained in the Business and Professions Code, Division 3, Chapter 9. If there is any change which would materially affect the above information, I will notify the Bureau of Fire Prevention.

SIGN PERMIT APPLICATION

Please complete the FRONT Sheet of this application and provide the following.
Incomplete Application will NOT be accepted.

☐ **FILING FEE** $262 Checks are made payable to the "City of San Jose".
$26 for each additional sign after the 1st
$524 for each adjustment after the 1st to process simultaneously
$110 per hour for consultation regarding review of a proposal prior to filing the application.

☐ **ASSESSOR'S PARCEL MAP** marked with the project location.

☐ **PHOTOGRAPHS** of existing buildings, existing signage and surrounding area.

☐ **THREE (3) COPIES** of plans for the signs that include:

a.) **SITE PLAN, drawn to scale** containing the following information
- Dimensions of subject property, lot lines, and existing driveways.
- Streets adjoining the subject property.
- Existing buildings and structures.
- Setback dimensions of existing and proposed signs.
- Existing off-street parking, loading, and circulation areas.
- The location of the proposed signs.
- Dimensioned drawings of proposed sign(s) indicating height, width, the lighting source, color and materials.

b.) For **ATTACHED SIGNS**:
- Dimensioned elevations of building(s) and occupancy frontage(s) including proposed location of sign on frontage

For **FREE STANDING SIGNS**:
- Dimensioned elevations of the proposed free standing sign.
- Dimensions of subject property, lot lines, and existing driveways.
- Setback dimensions of existing and proposed signs.
- Existing off-street parking, loading, and circulation areas.
- The location of the proposed signs.
- Show all property lines and setback to proposed sign.

☐ **MASTER SIGN PROGRAM.** The applicant is required to submit a copy of the approved program for this site with this application, if one exists.

SIGN PERMIT WORKSHEET

PLEASE CONSULT SIGN ORDINANCE (TITLE 23) FOR SIGN REGULATIONS.

- **NUMBER OF PROPOSED NEW ATTACHED SIGNS** one **SHOWN ON PLANS.**
  Number of Existing Attached Signs two shown on Plans.

FRONTAGE: Number of Occupancy Frontages two.
(Maximum of one sign per frontage; A ground level occupancy exceeding 20,000 sq. ft. may have up to 3 signs)

AREA:
1st occupancy frontage 343 lineal feet ▲ Proposed sign area 177 sq. ft.
(Maximum area is 300 sq. ft. per tenant frontage)
2nd occupancy frontage 200 lineal feet ▲ Proposed sign area existing sq. ft.
3rd occupancy frontage N/A ▲ Proposed sign area N/A sq. ft.
(1st floor allowance cannot exceed one square foot for each linear foot of building frontages
2nd or 3rd floor allowance is one-half of 1st floor area allowance)

- **NUMBER OF PROPOSED FREE-STANDING SIGNS SHOWN ON PLANS** N/A.

Number of existing free-standing sign on property and show on plans one with OSH lexon panels

FRONTAGE: Number of Street frontages _____.
(Minimum of 100 linear feet of street frontage required for a free standing sign)

AREA: Street Frontage _____ ft. divided by 5 ft. = _____. ▲ Proposed sign size _____ sq. ft.
(Maximum area is 120 sq. ft. per street/frontage)

HEIGHT: Proposed Sign Size _____ sq. ft. divided by 4 ft.= _____ ▲ Proposed sign height _____ ft.
(Maximum height is 20 ft.)

SETBACK: Proposed Sign Height _____
(Minimum setbacks: 4 ft. for signs 6 ft. tall or less,
6 ft. for signs greater than 6 ft. tall or less than 10 ft.,
10 ft. for signs 10 ft. tall or greater.

ENVIRONMENTAL SERVICES DEPARTMENT (ESD)

TO:	Rebekah Ross Department of Planning, Building, & Code Enforcement	**FROM:**	Geoff Blair Environmental Services Department
SUBJECT:	Response to Development Application	**DATE:**	Staff Review Agenda February 24, 2005
APPROVED:	Geoff Blair	**DATE:**	2-24-05

PLANNING NO. :	H05-006
LOCATION:	5293 Prospect Road. Northeast corner of Prospect Road and Lawrence Expressway.
DESCRIPTION:	Site Development Permit to construct 41,705 square foot additions to an existing shopping mall (WESTGATE) and allow façade and site modifications on a 18.9 gross acre site.
APN:	38136012

ESD received the subject project and is submitting the following conditions and comments. Questions regarding these comments may be directed to the program contact given or to me at (408) 382-8842.

Source Control

Commercial

The proposed development must conform to the City of San Jose (City) industrial waste discharge regulations[1]. Any non-domestic wastewater discharge into the sanitary sewer system will require Source Control staff to review and approve the final plans. An Industrial Wastewater Discharge Permit may also be required. Implementation of Best Management Practices (BMPs) adopted by the City for specific commercial groups may also be required.

The inclusion of any of the following commercial uses requires Source Control staff to review and approve the final plans:

- Restaurant
- Photoprocessor
- Medical Clinic
- Dry Cleaner
- Analytical Lab
- x-ray Clinic
- Laundry
- Dentist
- Pathological Lab

Contact Source Control staff at (408) 945-3000, if you have questions.

[1] In accordance with the San Jose Municipal Code, Chapter 15.14 - Industrial Waste Discharge Regulations

Restaurants

The proposed facility must conform to the City of San Jose (City) industrial waste discharge regulations[2]. Any non-domestic wastewater discharge into the sanitary sewer system will require Source Control staff to review and approve the final plans. Such review will include sizing of grease traps and interceptors.

Contact Environmental Engineering staff at (408) 945-3000, if you have questions.

[2] In accordance with the San Jose Municipal Code, Chapter 15.14 - Industrial Waste Discharge Regulations

Integrated Waste Management (IWM)

Commercial, Industrial, and Institutional Buildings

1. The proposed commercial development must follow the requirements for recycling container space[2]. When 30 percent or more of the original floor space is added to a new or existing building, provision must be made for the storage and collection of recyclables. Project plans must show the placement of recycling containers, for example, within the details of the solid waste enclosures.
2. It is recommended that scrap construction and demolition debris be recycled instead of disposing of it in a landfill. An infrastructure exists within San Jose to accommodate such recycling efforts. Integrated Waste Management staff can provide assistance on how to recycle construction and demolition debris from the project, including information on where to conveniently recycle the material. For further information, contact the Commercial Solid Waste Program at (408) 277-5533.

JOSEPH HORWEDEL, ACTING DIRECTOR

PUBLIC NOTICE
INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION
CITY OF SAN JOSÉ, CALIFORNIA

Project File Number, Description, and Location
H05-006, Site Development Permit to construct 41,705 square foot additions to an existing shopping mall and allow facade and site modifications on a 18.9 gross acre site. Located on the east side of Lawrence Expressway between Graves Avenue and Prospect Road (West Valley Properties, Owner, Kenneth Rododrigues & Partners, INC, Developer). Council District: 1

California State Law requires the City of San José to conduct environmental review for all pending projects that require a public hearing. Environmental review examines the nature and extent of any potentially significant adverse effects on the environment that could occur if a project is approved and implemented. The Director of Planning, Building & Code Enforcement would require the preparation of an Environmental Impact Report if the review concluded that the proposed project could have a significant unavoidable effect on the environment. The California Environmental Quality Act (CEQA) requires this notice to disclose whether any listed toxic sites are present. The project location **does not** contain a listed toxic site.

Based on an initial study, the Director has concluded that the project described above will not have a significant effect on the environment. We have sent this notice to all owners and occupants of property within 500 feet of the proposed project to inform them of the Director's intent to adopt a Mitigated Negative Declaration for the proposed project on **February 20, 2006**, and to provide an opportunity for public comments on the draft Mitigated Negative Declaration. The public review period for this draft Mitigated Negative Declaration begins on **January 31, 2006** and ends on **February 20, 2006**

A public hearing on the project described above is tentatively scheduled for **February 22, 2006** at **9:00AM** in the City of San Jose Council Chambers, 200 East Santa Clara Street, San Jose, CA 95113. The draft Mitigated Negative Declaration, initial study, and reference documents are available for review under the above file number from 9:00 a.m. to 5:00 p.m. Monday through Friday at the City of San Jose Department of Planning, Building & Code Enforcement, City Hall, 200 East Santa Clara Street, San José CA 95113-1905. The documents are also available at the Dr. Martin Luther King, Jr. Main Library, 150 E. San Fernando St, San José, CA 95112, and the West Valley Branch Library at 1243 Thomas Aquino Road, San José, CA 95117, and online at http://www.sanjoseca.gov/planning/eir/MND.asp Adoption of a Negative Declaration does not constitute approval of the proposed project. The decision to approve or deny the project described above will be made separately as required by City Ordinance. For additional information, please call **Reena Mathew** at (408) 535-3555.

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Department of Planning, Building and Code Enforcement
JOSEPH HORWEDEL, ACTING DIRECTOR

MITIGATED NEGATIVE DECLARATION

The Director of Planning, Building and Code Enforcement has reviewed the proposed project described below to determine whether it could have a significant effect on the environment as a result of project completion. "Significant effect on the environment" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance.

NAME OF PROJECT: Westgate West Shopping Center Expansion Project

PROJECT FILE NUMBER: H05-006

PROJECT DESCRIPTION: Site Development Permit to construct 41,705 square foot additions to an existing shopping mall and allow facade and site modifications on a 18.9 gross acre site

PROJECT LOCATION & ASSESSORS PARCEL NO.: Located on the east side of Lawrence Expressway between Graves Avenue and Prospect Road. 381-36-012,-014,-016,-018,-020,-021, -023,-025,-026

COUNCIL DISTRICT: 1

APPLICANT CONTACT INFORMATION:
Chris Bryant
West Valley Properties, Inc
280 Second Street, Suite 230
Los Altos, CA 94022
(650) 559-8484

FINDING

The Director of Planning, Building & Code Enforcement finds the project described above will not have a significant effect on the environment in that the attached initial study identifies one or more potentially significant effects on the environment for which the project applicant, before public release of this draft Mitigated Negative Declaration, has made or agrees to make project revisions that clearly mitigate the effects to a less than significant level.

MITIGATION MEASURES INCLUDED IN THE PROJECT TO REDUCE POTENTIALLY SIGNIFICANT EFFECTS TO A LESS THAN SIGNIFICANT LEVEL

I. **AESTHETICS** – The project will not have a significant impact on this resource, therefore no

mitigation is required.

II. AGRICULTURE RESOURCES – The project will not have a significant impact on this resource, therefore no mitigation is required.

III. AIR QUALITY –

Construction of the proposed project could result in significant short-term air quality impacts associated with dust generation. Implementation of the mitigation measures would reduce local air quality impacts associated with the construction of the proposed project to a less than significant level.

MITIGATION MEASURES: The project proposes the following measures, recommended by BAAQMD, to reduce air quality impacts associated with grading and new construction to a less than significant level:

- Water all active construction areas at least twice daily and more often during windy periods. Active areas adjacent to residences shall be kept damp at all times.
- Cover all hauling trucks or maintain at least two feet of freeboard. Dust-proof chutes shall be used as appropriate means to load debris onto trucks during demolition.
- Enclose, pave, apply water at least twice daily, hydroseed, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas, staging areas, exposed stockpiles, and inactive construction areas (i.e., previously-graded areas that are inactive for 10 days or more).
- Sweep daily (with water sweepers) all paved access roads, parking areas, and staging areas and sweep streets daily (with water sweepers) if visible soil material is deposited onto the adjacent roads.
- Limit traffic speeds on any unpaved roads to 15 miles per hour.
- Replant vegetation in disturbed areas as quickly as possible.
- Suspend construction activities that cause visible dust plumes to extend beyond the construction site.
- During renovation and demolition activities, removal or disturbance of any materials containing asbestos, lead-based paint, or other hazardous pollutants shall be conducted in accordance with BAAQMD rules and regulations.

Construction of the proposed project could result in significant short-term air quality impacts associated with diesel particulate matter exhaust.

MITIGATION MEASURES: The project proposes the following measures to reduce diesel particulate matter exhaust from construction equipment impacts to a less than significant level:

- Prohibit use of "dirty" equipment. Opacity2 is an indicator of exhaust particulate emissions from off-road diesel powered equipment. The project shall ensure that emissions from all construction diesel powered equipment used on the project site do not exceed 40 percent opacity for more than three minutes in any one hour. Any equipment found to exceed 40 percent opacity (or Ringelmann 2.10) shall be prepared immediately.
- The contractor shall install temporary electrical service whenever possible to avoid the need for independently powered equipment (e.g. compressors).
- Diesel equipment standing idle for more than two minutes shall be turned off. This shall include trucks waiting to deliver or receive soil, aggregate, or other bulk materials. Rotating drum concrete trucks can keep their engines running continuously as long as they are on-site.
- Properly tune and maintain equipment for low emissions.

IV. BIOLOGICAL RESOURCES – The project may remove up to 39 non-ordinance size landscape trees from the site. Implementation of the mitigation measures would reduce impacts to trees to a less

than significant level.

MITIGATION MEASURES:

- Replace non-ordinance size trees at a ratio of two to one (2 replacements: 1 removed).
- In the event that the project does not have sufficient area to accommodate the required number of replacement trees, an alternative site(s) shall be identified for additional tree planting or a donation of funds shall be made to San Jose Beautiful or Our City Forest for in-lieu off-site tree planting and maintenance in the community.
- Prepare and implement custom Tree Protection Specifications for any existing trees on the project site that would be saved.

V. CULTURAL RESOURCES – The proposed project is not anticipated to result in significant impacts to cultural resources.

MITIGATION MEASURES: As required by County ordinance, this project has incorporated the following guidelines. - Pursuant to Section 7050.5 of the Health and Safety Code, and Section 5097.94 of the Public Resources Code of the State of California in the event of the discovery of human remains during construction, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains. The Santa Clara County Coroner shall be notified and shall make a determination as to whether the remains are Native American. If the Coroner determines that the remains are not subject to his authority, he shall notify the Native American Heritage Commission who shall attempt to identify descendants of the deceased Native American. If no satisfactory agreement can be reached as to the disposition of the remains pursuant to this State law, then the land owner shall re-inter the human remains and items associated with Native American burials on the property in a location not subject to further subsurface disturbance.

VI. GEOLOGY AND SOILS – The project site has a moderately high potential for liquefaction, with a moderately low potential for ground failure vertically, and a low potential for ground failure laterally. The project site includes low to moderately expansive soils, which may expand and contract as a result of seasonal or man-made soil moisture conditions. The project site is located in a seismically active region and, therefore, strong ground shaking would be expected during the lifetime of the proposed project. With the implementation of the standard engineering practices and requirements, the proposed project would not result in significant geologic or soils impacts.

MITIGATION MEASURES: The project would be required to be constructed in accordance with the standard engineering practices in the Uniform Building Code. In addition, the City of San Jose Department of Public works requires a grading permit to be obtained prior to the issuance of Public Works Clearance. These standard practices would ensure that future buildings on the site are designed property to account for the expansive soils on the site. Therefore, the presence of expansive soils on the site would not represent a significant impact to future development on the project site.

The proposed project would be designed and constructed in conformance with the Uniform Building Code guidelines for Seismic Zone 4 to avoid or minimize potential damage from seismic shaking and seismic-related hazards on the site, including liquefaction, on the site. Therefore, potential impacts associated with future exposure to the proposed project would be reduced or avoid by conformance to the standard specified in the Uniform Building Code for Seismic Zone 4 and with the recommendations of the structural analysis required for future development proposed on liquefaction-s soils. For this reason, the project would not be subject to significant impacts from seismic-related hazards.

VII. **HAZARDS AND HAZARDOUS MATERIALS** –Due to the age of the on-site buildings, Asbestos-Containing Materials and Lead-Based Paint may be present. The proposed project, with the implementation of standard requirements, would not result in significant hazardous materials impacts.

MITIGATION MEASURES: As appropriate, a lead survey of painted surfaces and soil around the buildings built prior to 1978 shall be performed prior to demolition. Requirements outlined by Cal/OSHA Lead in Construction Standard, Title 8, CCR 1532.1 would be followed during demolition activities, including employee training, employee air monitoring, and dust control. Any debris or soil containing lead-based paint or coatings would be disposed of at landfills that meet acceptance criteria for the waste being disposed.

All potentially friable ACMs shall be removed in accordance with NESHAP guidelines prior to building demolition or renovation that may disturb the materials. All demolition activities will be undertaken in accordance with OSHA standards contained in Title 8 of the CCR, Section 1529, to protect workers from exposure to asbestos. Specific measures could include air monitoring during demolition and the use of vacuum extraction for asbestos-containing materials.

A registered asbestos abatement contractor will be retained to remove and dispose of ACMs identified in the asbestos survey performed for the site in accordance with the standards stated above.

Materials containing more than one (1) percent asbestos are also subject to BAAQMD regulations. Removal of materials containing more than one (1) percent asbestos will be completed in accordance with BAAQMD requirements.

VIII. HYDROLOGY AND WATER QUALITY – The proposed project includes the reconstruction of approximately 14,420 square feet of commercial building area, expansion of existing commercial buildings by approximately 24,450 square feet, and the construction of approximately 13,920 square feet of new commercial building area. Project demolition and construction activities would affect the water quality of storm water runoff. Development of the proposed project could result in increased storm water pollution, particularly during construction. The proposed project, with the implementation of mitigation measures, would not result in significant hydrology or water quality impacts.

MITIGATION MEASURES:

- The proposed development shall comply with the NPDES Permit issued to the City of San Jose and other co-permitees of the SCVURPPP, and shall include measures to control pollutants discharge to the storm water system. Future activities that require a permit from the City of San Jose shall be evaluated for appropriate "best management practices" including, but not limited to, the following:
- The proposed development shall comply with the NPDES Permit issued to the City of San Jose and other co-permitees of the SCVURPPP, and shall include measures to control pollutants discharged to the storm water system. Future activities that require a permit from the City of San Jose shall be evaluated for appropriate "best management practices" including , but not limited to, the following:
  - -use of landscaped-based storm water treatment measures, such as biofilters and vegetated swales to manage runoff from the site;
  - -minimization of impervious surfaces and increase use of permeable pavement;
  - -if inlet filters are used, a maintenance program to maintain the functional integrity of the systems;
  - -damp sweeping of streets and on-site parking lots;

-routine storm drain cleaning; and
-covering of dumpsters and material handling areas.

- Prior to construction of any phase of the project, the City applicant(s) shall submit a Storm Water Pollution Prevention Plan (SWPPP) and a Notice of Intent (NOI) to the State of California Water Resource Quality Control Board to control the discharge of storm water pollutants including sediments associated with construction activities. Along with these documents, the applicant may also be required to prepare an Erosion Control Plan. The Erosion Control Plan may include Best Management Practices (BMPs) as specified in the California Storm Water Best Management Practice Handbook for reducing impacts on the City's storm drainage system from construction activities. The SWPPP shall include control measures during the construction period for
  -Soil stabilization practices
  -Sediment control practices
  -Wind erosion control practices and
  -Non-storm water management and waste management and disposal control practices.

- Prior to issuance of a grading permit, the applicant shall be required to submit copies of the NOI and Erosion Control Plan (if required) to the City Project Engineer, Department of Public Works. The applicant shall also be required to maintain a copy of the most current SWPPP on-site and provide a copy to any City representative or inspector on demand.
- Each phase of development shall comply with the City of San Jose Grading Ordinance, including erosion-and dust-control during site preparation, and with the City of San Jose Zoning Ordinance requirement for keeping adjacent streets free of dirt and mud during construction.
- The project shall comply with NPDES Permit Number CAS0299718

IX. LAND USE AND PLANNING – The project will not have a significant impact on this resource, therefore no mitigation is required.

X. MINERAL RESOURCES – The project will not have a significant impact on this resource, therefore no mitigation is required.

XI. NOISE –The proposed project would reduce existing noise levels at nearby residences compared to existing conditions and would meet the City's noise goals, therefore, the proposed project, with the implementation of mitigation measures would result in less than significant long-tem noise impacts.

MITIGATION MEASURES:

- Construct 12-foot tall sound wall around the loading dock areas along the new loading areas (refer to item number 23 in figure 4 of the Initial Study).

- Close the rear access driveway located along Graves Avenue, to the north of Building G (refer to Figure 4 of the Initial Study).

The proposed project would result in a short-term increase in noise levels in the project area during demolition and construction activities. The proposed project, with the implementation of mitigation measures, would not result in significant construction-related noise impacts.

MITIGATION MEASURES:

- Limit all construction-related activities on weekdays between 7:00 AM and 7:00 PM, Monday through Friday. Construction outside of these hours may be approved through a development permit based on a site-specific construction noise mitigation plan, and a finding by the Director

of Planning, Building, and Code Enforcement that the construction noise mitigation plan is adequate to prevent noise disturbance of affected residential uses.

- Designate a "noise disturbance coordinator" who will be responsible for responding to any local complaints about construction noise. The disturbance coordinator will determine the cause of the noise complaints (e.g., beginning work too early, bad muffler, etc.) and institute reasonable measures warranted to correct the problem. A telephone number for the disturbance coordinator shall be conspicuously posted at the construction site.
- Equip all internal combustion engine-driven equipment with mufflers with are in good condition and appropriate for the equipment.
- Locate stationary noise-generating equipment as far as possible from existing nearby residences and other noise-sensitive land uses. Acoustically shield such equipment.
- Prohibit unnecessary idling of internal combustion engines.

XII. POPULATION AND HOUSING – The project will not have a significant impact on this resource, therefore no mitigation is required.

XIII. PUBLIC SERVICES – The project will not have a significant impact on this resource, therefore no mitigation is required.

XIV. RECREATION – The project will not have a significant impact on this resource, therefore no mitigation is required.

XV. TRANSPORTATION / TRAFFIC– The proposed project would not result in substantial additional peak hour traffic in the area or result in significant impacts to the transportation conditions.

XVI. UTILITIES AND SERVICE SYSTEMS – The project will not have a significant impact on this resource, therefore no mitigation is required.

XVII. MANDATORY FINDINGS OF SIGNIFICANCE – The project will not substantially reduce the habitat of a fish or wildlife species, be cumulatively considerable, or have a substantial adverse effect on human beings, therefore no additional mitigation is required.

PUBLIC REVIEW PERIOD

Before 5:00 p.m. on February 20, 2006, any person may:

(1) Review the Draft Mitigated Negative Declaration (MND) as an informational document only; or

(2) Submit written comments regarding the information, analysis, and mitigation measures in the Draft MND. Before the MND is adopted, Planning staff will prepare written responses to any comments, and revise the Draft MND, if necessary, to reflect any concerns raised during the public review period. All written comments will be included as part of the Final MND; or

(3) File a formal written protest of the determination that the project would not have a significant effect on the environment. This formal protest must be filed in the Department of Planning,

Building and Code Enforcement, 200 East Santa Clara Street, San José CA 95113-1905 and include a $100 filing fee. The written protest should make a "fair argument" based on substantial evidence that the project will have one or more significant effects on the environment. If a valid written protest is filed with the Director of Planning, Building & Code Enforcement within the noticed public review period, the Director may (1) adopt the Mitigated Negative Declaration and set a noticed public hearing on the protest before the Planning Commission, (2) require the project applicant to prepare an environmental impact report and refund the filing fee to the protestant, or (3) require the Draft MND to be revised and undergo additional noticed public review, and refund the filing fee to the protestant.

Joseph Horwedel, Acting Director
Planning, Building and Code Enforcement

Adopted on: 2/22/06

Deputy

Amendment to the Westgate West Shopping Center Expansion Project Initial Study/Draft Negative Declaration

In response to additional information received during the circulation of the Initial Study/Draft Negative Declaration, (January 31, 2006 to February 20, 2006), the project description and long-term exterior noise mitigation section of the Initial Study/Negative Declaration have been revised to state that the project proposes to enhance the existing 10-foot landscaping buffer located along the north side of the existing soundwall along Graves Avenue. Originally, the Initial Study/Draft Negative Declaration incorrectly stated that the project proposed to plant a new 10-foot wide landscaping buffer along the south side of the existing soundwall.

The revision to the project description and long-term noise mitigation section will not result in any new significant impacts; nor will it increase the severity of any impacts already discussed in the Initial Study/Draft Negative Declaration. Therefore, in conformance with CEQA and CEQA Guidelines Section 15073.5, it is determined that a substantial revision to the project has not been made and recirculation of the Initial Study/Draft Negative Declaration is not required.

Amendment to the Westgate West Shopping Center Expansion Project Initial Study/Draft Negative Declaration

In response to additional information received during the circulation of the Initial Study/Draft Negative Declaration, (January 31, 2006 to February 20, 2006), the project description and long-term exterior noise mitigation section of the Initial Study/Negative Declaration have been revised to state that the project proposes to enhance the existing 10-foot landscaping buffer located along the north side of the existing soundwall along Graves Avenue. Originally, the Initial Study/Draft Negative Declaration incorrectly stated that the project proposed to plant a new 10-foot wide landscaping buffer along the south side of the existing soundwall.

The revision to the project description and long-term noise mitigation section will not result in any new significant impacts; nor will it increase the severity of any impacts already discussed in the Initial Study/Draft Negative Declaration. Therefore, in conformance with CEQA and CEQA Guidelines Section 15073.5, it is determined that a substantial revision to the project has not been made and recirculation of the Initial Study/Draft Negative Declaration is not required.

SANTA CLARA

Attention: Reena Mathew

Subject: City File No. H05-006 / Westgate West Shopping Center Expansion Project

Dear Ms. Mathew:

Santa Clara Valley Transportation Authority (VTA) staff have reviewed the Westgate West Shopping Center Expansion Project consisting of 41,705 square feet of additions to an existing shopping mall located at East side Lawrence Expressway between Graves Avenue and Prospect Road. We have the following comments.

Transportation Impact Analysis Report

VTA's Congestion Management Program (CMP) requires a Transportation Impact Analysis (TIA) for any project that is expected to generate 100 or more new peak-hour trips. Based on the information provided on the size of the project, a TIA will be required. VTA's Transportation Impact Analysis Guidelines should be used when preparing the TIA. This document includes the analysis of bicycle facilities, parking, site circulation and pedestrian access, as well as roadways, and may be downloaded from http://www.vta.org/news/vtacmp/0-Technical%20Guidelines/. For more information on TIA guidelines, please call Murali Ramanujam, Development & Congestion Management Division, at 408-952-8905.

Thank you for the opportunity to review this project. If you have any questions, please call Tyler Newgren at (408) 321-5821.

Sincerely,

Roy Molseed
Senior Environmental Planner

ADDITIONAL INSTRUCTIONS FOR
STORMWATER RUNOFF DATA

The California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB), requires that the City of San Jose demonstrate compliance with the National Pollution Discharge Elimination System (NPDES) Permit issued to the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP).

In order to comply with the NPDES Permit requirements, the City of San Jose must provide the RWQCB with the following information requested below. Thank you for your cooperation in compliance.

INSTRUCTIONS

What Projects Apply?
All applicants creating, adding, or replacing **5,000 square feet or more of impervious surface*** on the project site must fill out the following information and submit it along with their application for a Planning permit to the Department of Planning, Building and Code Enforcement, Room 400, City Hall, 801 North First Street, San Jose.

What is an Impervious Surface?
An impervious surface prevents the infiltration or passage of water into the soil. Impervious surfaces include rooftops, paved or covered patios, driveways, parking lots, paved walkways, and streets.

For more information on the selection of Best Management Practices for stormwater pollution prevention, please refer to ***Start at the Source*** by BASMAA and ***the Guidance Manual on Selection of Stormwater Quality Control Measures***. These documents are available for purchase in the Department of Planning, Building and Code Enforcement at Room 400, City Hall, 801 North First Street, San Jose. You may also contact Bill Scott at: bill.scott@sanjoseca.gov or (408) 277-4576.

* DO NOT INCLUDE routine maintenance work such as reroofing, or resurfacing of existing paved areas, in the calculation of impervious surface.

Dear Mr. Bryant:

In accordance with your request, we have performed a geotechnical evaluation for the above project. The accompanying report presents the results of our field exploration, laboratory tests, and engineering analyses. The soil and foundation conditions are discussed, and recommendations for the earthwork and foundation engineering aspects of the project are presented.

Detailed recommendations are presented in the text of this report. If you have any questions concerning our findings, please call.

Very truly yours,

DONALD E. BANTA & ASSOCIATES, INC.

INTRODUCTION

In this report, we present the results of our geotechnical evaluation for the proposed building additions to be constructed as shown on the Site Plan, Figure 1. The purpose of this study was to evaluate the subsurface conditions and to provide recommendations pertaining to the earthwork and foundation aspects of this project.

It is our understanding that the new structures are planned adjacent to the existing bank building and to the north and west of the existing Longs Drug store. The buildings will have a combined footprint of approximately 45,000 square feet. The new structures will be located adjacent to existing buildings and will not be connected to the existing structures. Building loads are expected to be typical for wood-frame construction. Appurtenant construction will consist of exterior flatwork and pavements. We also understand that the existing underground utilities in the building areas will be relocated.

SCOPE OF WORK

The scope of work performed for this evaluation included a site reconnaissance, subsurface exploration, laboratory testing, engineering analyses of the field and laboratory data, and the preparation of this report. The data obtained and the analyses performed were for the purpose of providing design and construction criteria for site earthwork, building foundations, slabs-on-grade, asphaltic pavement sections, and lateral earth pressures. The scope of our services did not include an environmental assessment of the property, or the testing of soil or groundwater samples for hazardous substances.

SITE EXPLORATION

A subsurface exploration was performed on March 30, 2005, using a truck-mounted flight auger to sample the subsurface soils. Four exploratory borings were drilled to depths of between 15 and 30 feet at the approximate locations shown on the attached Site Plan, Figure 1. Logs of our borings and details regarding our field exploration are included in Appendix A; the results of our laboratory tests are discussed in Appendix B.

A. Surface Features

Most of the improvements will be located in areas presently covered with either asphalt pavement or concrete flatwork with only a minor area of existing landscape. The new finished floor elevations will vary from approximately 6 inches to 2½ feet above existing grades.

B. Subsurface

All four exploratory borings encountered asphaltic pavement sections of approximately 9 inches. The pavement sections were underlain by very stiff sandy clays and medium-dense clayey sands to depths of between 2 and 19 feet. Boring 1 encountered a dense clayey gravel at a depth of 14 feet. A firm to stiff sandy silt was encountered between 2 and 7 feet in Boring 2 followed by medium-dense silty sands and sandy gravels to 20 feet, where dense gravels were found. Boring 3 encountered approximately 2 feet of very wet clayey silt and sandy clay below 3 feet; unless this is allowed to dry, this soil may create unstable subgrade conditions during the grading activities.

More detailed subsurface information is shown on the boring logs, and related information is presented in Appendix A. It should be noted, however, that this information depicts subsurface conditions only at the locations indicated. Subsurface conditions at other locations may differ from conditions occurring at these boring locations. Also, the passage of time may result in a variation in the subsurface conditions due to environmental factors.

C. Groundwater

Free groundwater was not encountered in our borings at the time of drilling and probably exists at depths greater than those explored (30 feet). Although seasonal groundwater studies were beyond the scope of this study, fluctuations in the groundwater table at the site will probably occur due to variations in rainfall, temperature, and possibly other factors that were not evident at the time of our study.

D. Seismicity

The San Francisco Bay Area is considered by geologists and seismologists as one of the most seismically active regions in the United States. The significant earthquakes which occur in the Bay Area are associated with crustal movement generally along well-defined, active fault zones. The California Division of Mines and Geology (CDMG) has issued maps locating "Active Fault Near-Source Zones" to be used with the 1997 Uniform Building Code ("Maps of Known Active Fault Near-Source Zones in California and Adjacent Portions of Nevada," CDMG/ICBO, February 1998). Faults are classified as either "A," "B," or "C," as shown below. Only faults classified as "A" or "B" are mapped since faults classified as "C" do not increase the near-source factor.

SEISMIC SOURCE TYPE	SEISMIC SOURCE DESCRIPTION	SEISMIC SOURCE DEFINITION*	
		Maximum Moment Magnitude, M	Slip Rate, SR (mm/year)
A	Faults that are capable of producing large magnitude events and that have a high rate of seismic activity.	M ≥ 7.0	SR ≥ 5
B	All faults other than Types A and C.	M ≥ 7.0 M < 7.0 M ≥ 6.5	SR < 5 SR > 2 SR < 2
C	Faults that are not capable of producing large magnitude earthquakes and that have a relatively low rate of seismic activity.	M < 6.5	SR ≤ 2

*Note: Both maximum moment magnitude and slip rate conditions must be satisfied concurrently when determining seismic source type.

F. Liquefaction Potential

Soil liquefaction is a phenomenon in which a saturated cohesionless soil located near the ground surface loses strength during cyclic loading such as imposed by earthquakes. Soils most susceptible to liquefaction are clean, loose, saturated, fine-grained sands located below the groundwater table. Clayey soils are not susceptible to liquefaction.

The State of California Seismic Hazard Zone Map for the San Jose West Quadrangle dated February 7, 2002, indicates that the site is not in a zone of required liquefaction investigation. Based on this map, the accompanying Seismic Hazard Zone Report 058, and the data from our exploratory borings, it is our opinion that the potential for damage to the proposed structures due to liquefaction of the soils underlying the site is very low.

CONCLUSIONS AND RECOMMENDATIONS

From a soil and foundation engineering standpoint, it is our opinion that the site is suitable for the proposed development provided that the conclusions and recommendations presented in this report are incorporated in the design and construction of the project.

Detailed soil and foundation engineering recommendations are presented in subsequent sections of this report. The following opinions, conclusions, and recommendations are based on the properties of the materials encountered in our borings. Since the proposed improvements occupy a much larger area than could be explored in detail during the design phase of the project, we suggest that we be retained to provide observation and testing services during the mass grading and installation of foundations. This would allow us the opportunity to substantiate the recommendations presented herein or to expedite supplemental recommendations if the exposed subsurface conditions warrant.

We also suggest that we be retained to review your final foundation and earthwork plans/specifications. It has been our experience that this review provides an opportunity to detect misinterpretations or misunderstandings prior to the start of construction.

A. SITE PREPARATION, EARTHWORK OPERATIONS, AND SURFACE DRAINAGE

1. Clearing and Site Preparation

The area of the proposed improvements should be cleared of all obstructions including the existing pavements, slabs, old foundations, and underground utilities. Holes resulting from the removal of underground obstructions that extend below the planned finished site grades should be cleared and backfilled with suitable material compacted to the requirements given below under Item A. 5, "Compaction."

After clearing, the landscape portion of the site should be stripped to sufficient depth to remove any surface vegetation and organic-laden topsoil. The cleared and stripped materials should be removed from the site.

2. Subgrade Preparation

After the site has been properly cleared and stripped, the required excavation and filling operations can be performed in the proposed building and pavement areas. As discussed above (Conclusions and Recommendations), it is essential that all underground obstructions and any old fills/loose soils that may be present within the limits of the new buildings and exterior slabs/pavements be identified, removed, and replaced with compacted structural fill. In areas where it is not practical to remove existing fills or loose native soils, foundations may have to be deepened. The excavated subgrade should be observed by our representative. After all unsuitable materials have been removed, the exposed subgrade should be scarified to a depth of 8 inches, moisture conditioned, and compacted in accordance with the requirements given below under Item A. 5, "Compaction."

3. Subgrade Conditions

The native surficial soils are sensitive to excess water, and unstable conditions or "pumping" may be encountered during the grading/excavation operations, particularly if they are performed during or following the wet winter months. We suggest that most of the grading operations be performed during the summer months to allow for drying in the event that wet soils are encountered. If unstable subgrade conditions are encountered, special subgrade stabilization measures, such as lime/cement treatment, may be required.

4. Material for Fill

All on-site soils below the stripped layer that are free of organics and debris (as determined by our field representative) are suitable for use as fill except in those areas where select granular material is required beneath slabs or pavements. In general, fill material should not contain rocks or lumps larger than 6 inches in greatest dimension with no more than 15 percent larger than 2.5 inches. Imported fill materials should be non-expansive, predominantly granular soils with a plasticity index of 15 or less. We recommend that the grading contractor submit a sample of the proposed imported fill material to our office for approval at least 48 hours prior to the start of filling operations.

5. Compaction

All structural fill placed at the site should be compacted to at least 90 percent relative compaction by mechanical means only as determined by ASTM Test Designation D 1557. Fill should be placed in lifts not exceeding 8 inches in uncompacted thickness. The upper 6 inches of subgrade in pavement areas should be compacted to 95 percent relative compaction.

6. Trench Backfill

Pipeline trenches under the building pads and in exterior slab and pavement areas

should be backfilled with compacted structural fill. If on-site soil is used, the material should be placed in lifts not exceeding 8 inches in uncompacted thickness and compacted to at least 85 percent relative compaction by mechanical means only. Imported sand/gravel may also be used for backfilling trenches provided it is compacted to at least 90 percent relative compaction and is "capped" with at least one foot of compacted native soil and provided that cut-offs are constructed as discussed below under Item A. 8, "Seepage Control." Water jetting to attain the minimum required degree of compaction should not be permitted. In all pavement, exterior slab, and building pad areas, the upper 3 feet of trench backfill should be compacted to at least 90 percent relative compaction for on-site soils and 95 percent where imported sand/gravel backfill is used. In addition, the upper 6 inches of all trench backfill in pavement areas should be compacted to at least 95 percent relative compaction.

7. Surface Drainage

Positive surface gradients of at least 2 percent should be provided adjacent to the structures so as to direct surface water runoff away from foundations and slabs toward suitable discharge facilities. Ponding of surface water should not be allowed on pavements or adjacent to the buildings. Rainwater collected on the roofs of the buildings should be transported through gutters, downspouts, and closed pipes which discharge on pavements or lead directly to the storm sewer.

8. Seepage Control

Where utility lines extend through or beneath exterior footings, backfill should be terminated at least one foot from the footing; concrete should be used around the pipe in this area and beneath the footing to act as a seepage cut-off. Beneath footings, the pipe should be "sleeved" through the concrete cut-off, and the annular space between the pipe and "sleeve" should be filled with a waterproof caulk. Alternatively, native low permeability soils could be used for trench backfill for a minimum of 5 feet on either side of footings. This will reduce the amount of water seeping through the pervious trench backfill and collecting under the buildings.

9. Construction Observation

All grading and earthwork should be performed under the observation of our representative. Sufficient notification prior to earthwork operations is essential to make certain that the work will be properly observed. All earthwork should be performed in accordance with the recommendations presented in this report.

Variations in soil conditions are possible between borings and may be encountered during construction. In order to permit correlation between the preliminary soil data obtained for this report and the actual soil conditions encountered during construction, we should be retained to perform continuous or intermittent review as required during earthwork, excavation, and foundation phases of construction.

B. FOUNDATIONS

1. Footings

We recommend that the proposed buildings be supported on conventional continuous and/or isolated spread footings bearing on either native soil or compacted fills. All footings should be founded at least 20 inches below the lowest adjacent grade or to the same depth as the adjacent footings, whichever is deeper. Footings bearing on either stiff native or recompacted soil may be designed for an allowable bearing pressure of 2000 pounds per square foot for dead loads, 2500 pounds per square foot for dead plus live loads, and 3300 pounds per square foot for all loads including seismic.

Grade beams should be used around the perimeters of the buildings in any areas where continuous footings are not incorporated. These grade beams will serve as a cut-off to reduce lateral seepage. Grade beams should be reinforced with top and bottom steel and be extended to the same depths as the footings. A 12-inch minimum width is recommended for grade beams serving only as a seepage cut-off.

In order to maintain adequate support, any footings located adjacent to utility trenches or other footings should be deepened as necessary so that their bearing surfaces are below an imaginary plane having an inclination of 1.5 horizontal to 1.0 vertical projected upward from the bottom edge of the adjacent trench or footing.

Where new footings extend below adjacent existing footings, the existing footings could be: 1) underpinned, 2) adjusted to match the existing bearing level, or 3) excavated below the adjoining footings in alternating sections of less than 7 feet. Prior to excavating between these sections, the initial sections should be poured and allowed at least two days to cure.

All continuous perimeter footings should be reinforced with top and bottom steel to provide structural continuity and to permit spanning of local irregularities. We strongly recommend that our representative observe the bearing soils exposed in footing excavations prior to placing reinforcing steel or concrete.

Settlements under building loads are expected to be within tolerable limits for the proposed structures. We estimate that post construction differential settlement between adjacent heavily and lightly loaded building elements will be less than ¾-inch.

2. Building Slabs-on-Grade

Interior slabs-on-grade should be founded on 5 inches of well-graded gravel/base rock approved by our office.

Slab reinforcement should be provided in accordance with the anticipated use and loading of the slabs. However, we recommend that consideration be given to strengthening the slabs with a minimum slab reinforcement of No. 3 bars spaced at 24 inches on-center in both directions. This will help to reduce the width of any cracks which develop.

In slab areas where it is desired to reduce floor wetness (such as office or retail areas

that will have moisture sensitive floor coverings), we recommend that 4 inches of free draining, open-graded gravel (such as clean ½-inch crushed rock) be placed beneath the floor slab to serve as a capillary break between the subgrade soil and the slab. To reduce vapor transmission, an impermeable membrane should be placed over the crushed rock. The membrane should be covered with one inch of sand to protect it during construction; the sand should be lightly moistened just prior to placing concrete.

3. Retaining Walls

Any low retaining walls constructed at the site should be designed to resist lateral earth pressures from the backfill and any surcharge loads. We recommend that unrestrained walls be designed to resist an equivalent fluid pressure of 40 pounds per cubic foot. Walls restrained from movement at the top should be designed for an additional uniform pressure of 6H pounds per square foot where "H" equals the height of backfill above the top of wall footing in feet. Walls subjected to surcharge loads should be designed for an additional uniform lateral pressure equal to one-third or one-half of the anticipated surcharge load for unrestrained and restrained walls, respectively.

The preceding pressures assume sufficient drainage behind the walls to prevent the buildup of hydrostatic pressures from surface water infiltration. Adequate drainage may be provided by a subdrain or weep hole system behind the walls.

4. Lateral Load Resistance

Lateral loads may be resisted by friction between the footing and the supporting subgrade. A friction coefficient of 0.35 can be used. Additional lateral resistance may be provided by passive pressures acting against foundations poured neat against undisturbed soil. We recommend that an equivalent fluid pressure of 250 pounds per cubic foot be used in design. This passive pressure can be assumed to act starting at the top of the adjacent grade in paved areas and at a depth of one foot below grade in unpaved areas.

C. PAVEMENT DESIGN

Based on the results of our laboratory tests and our experience with similar soils in the area of the site, we have used an "R" value of 10 in our pavement design. Utilizing the "R" value and State of California Department of Transportation design procedures (Highway Design Manual), the following recommended pavement sections were developed for various traffic indices:

PAVEMENT DESIGN ALTERNATIVES

Flexible Pavement Components

Traffic Index	Asphaltic Concrete (Inches)	Aggregate Base Class 2 (Inches)	Total Thickness (Inches)
4.5	2.5	8.5	11.0
5.0	2.5	10.0	12.5
5.5	3.0	11.0	14.0
6.0	3.0	12.5	15.5
6.5	3.5	13.5	17.0
7.0	4.0	14.0	18.0

Asphalt concrete, aggregate base, and preparation of the subgrade should conform to and be placed in accordance with the California Division of Highways Standard Specifications, latest revision, except that ASTM Test Designation D 1557 should be used to determine the percent compaction.

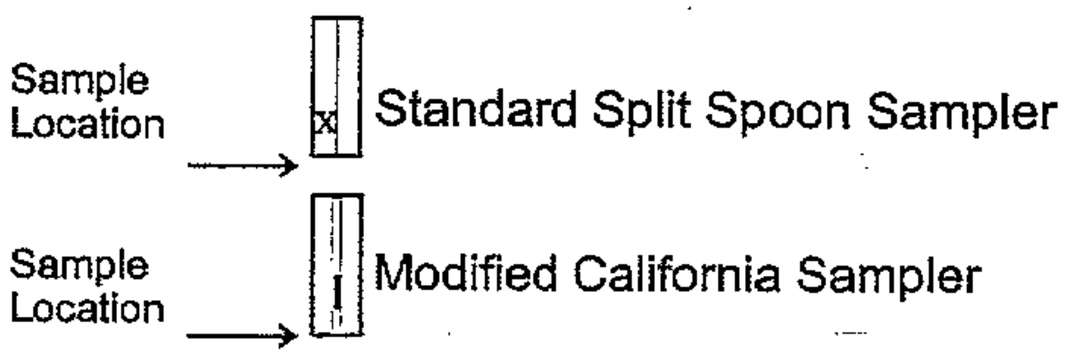
APPENDIX A - FIELD EXPLORATION

The field exploration consisted of a surface reconnaissance and a subsurface exploration program using a truck-mounted flight auger. Four exploratory borings were drilled on March 30, 2005, to depths of between 15 and 30 feet. The approximate locations of the exploratory borings are shown on the Site Plan, Figure 1. The soils encountered in the borings were continuously logged in the field by our representative and described in accordance with the Unified Soil Classification System. Following completion of drilling, the bore holes were backfilled with neat cement grout. Logs of the borings, as well as a key for the classification of the soil (Figure A-1), are included as part of this appendix.

Representative soil samples were obtained from the exploratory borings at selected depths appropriate to the soil evaluation. All samples were returned to our laboratory for evaluation and appropriate testing. Standard penetration resistance blow counts were obtained by dropping a 140-pound hammer through a 30-inch free fall. The 2-inch O. D. split spoon sampler was driven to a maximum depth of 18 inches and the number of blows recorded for each 6-inch penetration interval. The blows per foot recorded on the boring logs represent the accumulated number of blows that were required to drive the last 12 inches. In addition, samples were obtained by driving a 2.4-inch I. D. Modified California sampler through a distance of 18 inches using a 140-pound hammer; these blow counts have also been recorded on the boring logs. Boring log notations for standard split spoon and Modified California samplers are indicated below:



Field tests included an evaluation of the undrained shear strength of soil samples using a pocket penetrometer device. The results of these tests are presented on the boring logs at the appropriate sample depths and are designated "(p)."

Unified Soil Classification System

PRIMARY DIVISIONS			GROUP SYMBOL	SECONDARY DIVISIONS
COARSE GRAINED SOILS — MORE THAN HALF OF MATERIAL IS LARGER THAN # 200 SIEVE SIZE	GRAVELS — MORE THAN HALF OF COARSE FRACTION IS LARGER THAN # 4 SIEVE	CLEAN GRAVELS (LESS THAN 5% FINES)	GW	Well graded gravels, gravel-sand mixtures, little or no fines
			GP	Poorly graded gravels or gravel-sand mixtures, little or no fines
		GRAVELS WITH FINES	GM	Silty gravels, gravel-sand-silt mixtures, non-plastic fines
			GC	Clayey gravels, gravel-sand-clay mixtures, plastic fines
	SANDS — MORE THAN HALF OF COARSE FRACTION IS SMALLER THAN # 4 SIEVE	CLEAN SANDS (LESS THAN 5% FINES)	SW	Well graded sands, gravelly sands, little or no fines
			SP	Poorly graded sands or gravelly sands, little or no fines
		SANDS WITH FINES	SM	Silty sands, sand-silt mixtures, non-plastic fines
			SC	Clayey sands, sand-clay mixtures, plastic fines
FINE GRAINED SOILS — MORE THAN HALF OF MATERIAL IS SMALLER THAN # 200 SIEVE SIZE	SILTS AND CLAYS — LIQUID LIMIT IS LESS THAN 50%		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
			OL	Organic silts and organic silty clays of low plasticity
	SILTS AND CLAYS — LIQUID LIMIT IS GREATER THAN 50%		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
			CH	Inorganic clays and silty clays of high plasticity, fat clays
			OH	Organic clays and silts of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS			Pt	Peat and other highly organic soils

APPENDIX B - LABORATORY TESTING

The laboratory testing program was directed toward a quantitative and qualitative evaluation of the physical and mechanical properties of the soils underlying the site.

The natural water content was determined on 29 samples of the materials recovered from the borings. These water contents are recorded on the boring logs at the appropriate sample depths.

Dry density determinations were performed on 17 samples to measure the unit weight of the subsurface soils. The results of these tests are shown on the boring logs at the appropriate sample depths.

The percent soil fraction passing the No. 200 sieve was determined on 29 samples to aid in their classification. The results of these tests are also shown on the boring logs at the appropriate sample depths.

The percent soil fraction passing the No. 4 sieve was determined on 22 samples to aid in their classification. The results of these tests are also shown on the boring logs at the appropriate sample depths.

Atterberg Limits were determined on 2 samples of the more clayey near surface soil encountered at the site to determine the range of water contents over which these materials exhibit plasticity. The Atterberg Limits are used to classify the soil in accordance with the Unified Soil Classification System and to evaluate the soil's expansion potential. The results of these tests are presented on Figure B-1 and on the logs of Borings 1 and 4 at depths of 1.5 to 2 feet.

ADDITIONAL INSTRUCTIONS FOR
STORMWATER RUNOFF DATA

PROJECT SIZE:

a. Site size: 836,301 sq. ft.

b. Existing impervious surface area (includes land covered by buildings, sheds, patios/covers, parking lots, streets, sidewalks, paved walkways and driveways): 735,532 sq. ft.

c. Impervious surface area created, added, or replaced: +/- 145,234 sq. ft.

d. Total impervious surface area (new + existing): +/- 730,000 sq. ft.

e. Percent increase/replacement of impervious surface area (i.e. c/b multiplied by 100: 19.7 %

Estimated area of land disturbance during construction: +/- 145,234 sq. ft.
(including clearing, grading, or excavating).

HAZARDOUS MATERIALS:

Will or have hazardous materials been used or stored on site? ☐ Yes ☒ No

a. If yes, please provide list and quantity of materials and note previous location and proposed location on site plan:

b. If required, has a Hazardous Materials Management Plan been approved for the site? ☐ Yes ☒ No

TYPES OF STORMWATER CONTROL MEASURES: proposed with project (please refer to item below and check all that apply):

☐ Stormwater Treatment ☐ Source Control ☐ Site Design

SPECIFIC STORMWATER CONTROL MEASURES (Check all that apply):

Storm water Treatment	Source Controls	Site Design
☐ Biofilter (veg. swale/strip)	☐ Wash area/racks, drain to sanitary sewer	☐ Minimize land disturbance
☐ Detention basin (dry)	☐ Covered dumpster area, drain to sanitary sewer	☐ Minimize impervious surfaces
☐ Detention pond (wet)	☐ Swimming pool drain to sanitary sewer	☐ Minimum impact street or parking lot design
☐ Underground detention	☐ Beneficial landscaping (minimizes irrigation, runoff, pesticides and fertilizers; promotes stormwater treatment)	☐ Cluster structures/pavement
☐ Media filter (sand, organic matter, bioretention)	☐ Outdoor material storage protection	☐ Disconnect downspouts (make sure they don't drain on to paved areas)
☐ Hydrodynamic device (commercially available in-line treatment unit)	☐ Covers and drains for loading docks, maintenance bays, and fueling areas	☐ Pervious driveway design
☐ Infiltration trench	☐ Maintenance (street sweeping, catch basin cleaning, etc.)	☐ Microdetention in landscape
☐ Porous pavement	☐ Other _____	☐ Preserve open space
☐ Wetland basin		☐ Protect riparian and wetland areas, riparian buffers
☐ Wetland channel		☐ Other _____
☐ Inlet filter		
☐ Other _____		

PLEASE CALL THE APPOINTMENT DESK AT (408) 277-8820 FOR AN APPLICATION APPOINTMENT.

ADDITIONAL INSTRUCTIONS FOR
STORMWATER RUNOFF DATA

The California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB), requires that the City of San Jose demonstrate compliance with the National Pollution Discharge Elimination System (NPDES) Permit issued to the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP).

In order to comply with the NPDES Permit requirements, the City of San Jose must provide the RWQCB with the following information requested below. Thank you for your cooperation in compliance.

INSTRUCTIONS

What Projects Apply?
All applicants creating, adding, or replacing **5,000 square feet or more of impervious surface*** on the project site must fill out the following information and submit it along with their application for a Planning permit to the Department of Planning, Building and Code Enforcement, Room 400, City Hall, 801 North First Street, San Jose.

What is an Impervious Surface?
An impervious surface prevents the infiltration or passage of water into the soil. Impervious surfaces include rooftops, paved or covered patios, driveways, parking lots, paved walkways, and streets.

For more information on the selection of Best Management Practices for stormwater pollution prevention, please refer to ***Start at the Source*** by BASMAA and ***the Guidance Manual on Selection of Stormwater Quality Control Measures***. These documents are available for purchase in the Department of Planning, Building and Code Enforcement at Room 400, City Hall, 801 North First Street, San Jose. You may also contact Bill Scott at: bill.scott@sanjoseca.gov or (408) 277-4576.

* DO NOT INCLUDE routine maintenance work such as reroofing, or resurfacing of existing paved areas, in the calculation of impervious surface.

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Department of Planning, Building and Code Enforcement
JOSEPH HORWEDEL, DIRECTOR

DEVELOPMENT PERMIT ADJUSTMENT

PROJECT FILE NO.: AD06-1343

PERMIT TO BE ADJUSTED: H05-006

PROJECT DESCRIPTION: Permit Adjustment to address items "a" through "e" noted in H05-006 "Condition 4 Subsequent Permit Required." Does not address item 4f.

PROJECT LOCATION: 5293 PROSPECT RD

A.P.N.(s): 38136012

ZONING: CG General Commercial

GENERAL PLAN: GC

ACTION: Approved

SUBJECT TO THE FOLLOWING CONDITIONS: All proposed lighting shall conform to the City"s Outdoor Lighting Policy. No light tresspass shall occur on adjacent residential properties from lighting on-site.

Plan Set: [X] Yes [ ] No

Approved by: Reena Mathew **Signature:** _____

Action Date: June 28, 2007

This permit sheet is only valid when accompanied by an original signature and when fastened to a stamped plan set, if applicable.

of or by the applicant pursuant to all of the terms, provisions, and conditions of this permit or other approval and the provisions of Title 20 applicable to such Permit.

2. **Payment of Recording Fees.** Fees for recording a Certificate of Permit with the Recorder for the County of Santa Clara should be submitted to the Director of Planning within 30 days of approval of this permit, but must be submitted prior to issuance of a Building Permit. Submittal of the recording fee less than one week prior to issuance of a Building Permit will delay the Building Permit issuance for up to one week to allow for recordation of the permit with the County Recorder. This Permit shall be effective at such time when recordation with the County of Santa Clara occurs.

3. **Permit Expiration.** This Site Development Permit shall automatically expire 30 months from and after the date of adoption of the Resolution by the Planning Commission, or by the City Council on appeal, granting this Permit, if within such 30 month period, the proposed use of this site or the construction of buildings has not commenced, pursuant to and in accordance with the provisions of this Site Development Permit. The date of adoption is the date the Resolution granting this Site Development Permit is approved by the Planning Commission. However, the Director of Planning may approve a Permit Adjustment in accordance with Title 20 to extend the validity of this Permit for a period of up to but not exceeding one (1) year; provided, however, that no more than two (2) such term extensions are approved. The Permit Adjustment must be approved prior to the expiration of this Permit.

4. **Subsequent Permit Required.** The developer shall secure a Permit Adjustment to address the items noted below to the satisfaction of the Director of Planning, Building, and Code Enforcement within 60 days of the issuance of this Site Development Permit. Failure to secure this permit shall render the subject permit null and void.

   a. A canopy shall be provided to cover all Trader Joe's outdoor storage areas. Appropriate screening shall be provided for Trader Joe's loading area. BUILDING X (A-13)

   b. Architectural elements shall be incorporated to the following buildings:

   (A-3) 1) Building A-Add veneer or stone equivalent to entryways proposed on Buildings B&C
   (A-8) 2) Building G-Add architectural enhancements, such as façade pop-outs and trellises, to achieve similar level of articulation proposed for the front of Building G
   (A-10) 3) Buildings K, J, S, &T-more stone or veneer shall be applied to the south elevation and to the blank tower on the west elevation, add trellises with growing vines to break up the long façade on the north elevation.
   (A-11) 4) Building L- more veneer or stone shall be added on the tower element on the west elevation

   c. Provide a comprehensive lighting plan for the center that complies with the City's Outdoor Lighting Policy. (WORKING ON IT)

(L-1) d. Provide more substantial landscape improvements along Graves Avenue and Lawrence Expressway. Said landscaping shall be adequately dense to cover all dirt areas. Vines or shrubs shall be planted adjacent to block walls to soften appearance and discourage

Please complete the FRONT Sheet of this application and provide the following.
INCOMPLETE APPLICATION WILL NOT BE ACCEPTED.

☑ **FILING FEE:**

- $272* - Checks are made payable to the "City of San Jose".
- —— $648* for Major Adjustment.
- $545* for each adjustment after the 1st to process simultaneously
- $135* per hour for consultation regarding review of a proposal prior to filing the application.

**includes the General Plan Update fee*

☑ **ASSESSOR'S PARCEL MAP** marked with the project location.

☐ **PHOTOGRAPHS** of existing building or subject area. (will send)

☐ **FOUR (4) COPIES** of the development plans that include: (Need 3 more)

a. A **SITE PLAN* DRAWN TO SCALE** showing the location of the proposed changes on the subject property, and
b. A **DRAWING TO SCALE** of the proposed change (elevations, floor plans, construction, details, as appropriate).

*A **Site Plan** should contain the following basic information:

- Dimensions of subject property, lot lines, and existing and proposed driveways.
- Streets adjoining the subject property.
- Existing and proposed buildings and structures, including proposed building removal.
- Dimensions of existing and proposed setbacks.
- Existing and proposed off-street parking, loading, landscape and circulation areas.
- Existing trees to be removed. Include circumference of tree at 2 feet above ground level as well as distances from existing and proposed structures and/or trees on the site.

☑ N/A A **LETTER** from the **Homeowner's Association/Architectural Review Committee** commenting specifically on the plans it reviewed, if appicable.

HUD FEDERAL FUNDING AND ENVIRONMENTAL COMPLIANCE WITH THE NATIONAL ENVIRONMENTAL POLICY ACT (NEPA). Compliance with the national environmental policy act (nepa) is required for all projects involving property acquisition, new construction for any project that has been awarded, proposes to include, or anticipates the use of federal funding from the department of Housing and Urban Development (HUD), for any portion of the project. Additional review, reports, and/or referrals may be necessary. additional fees will be required for projects funded by hud programs other than the cdbg program. please contact the plan implementation division environmental review team principal or senior planner for more information at 408.535-7801.

Department of Planning, Building and Code Enforcement
JOSEPH HORWEDEL, DIRECTOR

DEVELOPMENT PERMIT ADJUSTMENT

PROJECT FILE NO.: **AD08-787**

PERMIT TO BE ADJUSTED: **H05-006**

PROJECT DESCRIPTION: **Major permit adjustment for an exterior remodel of Pad L, J, Z & X at Westgate West in the CG zoning district on an 18.9 acre site**

PROJECT LOCATION: **5291 PROSPECT RD**

A.P.N.(s): **381-36-012**

ZONING: **CG General Commercial**

GENERAL PLAN: **GC**

ACTION: Approved

SUBJECT TO THE FOLLOWING CONDITIONS: For exterior remodel only

Conformance with Municipal Code. No part of this approval shall be construed to permit a violation of any part of the San José Municipal Code, including, but not limited to, use of property and off-street parking requirements.

Plan Set: **[X] Yes** **[ ] No**

Approved by: Edward Schreiner **Signature:**

Action Date: July 11, 2008

This permit sheet is only valid when accompanied by an original signature and when fastened to a stamped plan set, if applicable.

DESCRIPTION OF THE PROPOSED MINOR CHANGE *(Approval is limited to description contained herein)*
EXTERIOR REMODEL OF PAD L, J, Z & X ELEVATIONS.
NOTE: PAD J IS EXTERIOR PAINT & ROOF UPGRADE ONLY.

DOES THE PROJECT INVOLVE HUD FEDERAL FUNDING/ASSISTANCE? ☒ NO ☐ YES
Please indicate whether HUD Funding has been awarded, is proposed, or is anticipated, for the proposed project.
If **yes**, indicate type of funding (i.e. CDBG Grant, HOME Investment Partnership Program, Section 108 Loan Guarantee, etc.), funding amount, whether awarded (if known) or application is pending, and fiscal year of award or application request.

PLEASE NOTE: Projects involving 1) acquisition of real property involving a change of use, or 2) new construction require an Environmental Assessment (EA). Concurrent environmental review per the California Environmental Quality Act (CEQA) is also required. The obtainment of a qualified environmental consultant to provide documentation services (i.e. a combined Initial Study/ EA) is strongly required.

SIGNATURE OF PROPERTY OWNER REQUIRED

Check One:

☐ I hereby certify that a Homeowner's Association/Architectural Review Committee does exist and have reviewed this project. Please include a copy of their letter and comments with the application.

☒ *I hereby certify that a Homeowner's Association does not exist to comment on the requested change to my property.*

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Department of Planning, Building and Code Enforcement
JOSEPH HORWEDEL, ACTING DIRECTOR

PUBLIC NOTICE
INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION
CITY OF SAN JOSÉ, CALIFORNIA

Project File Number, Description, and Location
H05-006, Site Development Permit to construct 41,705 square foot additions to an existing shopping mall and allow facade and site modifications on a 18.9 gross acre site. Located on the east side of Lawrence Expressway between Graves Avenue and Prospect Road (West Valley Properties, Owner, Kenneth Rododrigues & Partners, INC, Developer). Council District: 1

California State Law requires the City of San José to conduct environmental review for all pending projects that require a public hearing. Environmental review examines the nature and extent of any potentially significant adverse effects on the environment that could occur if a project is approved and implemented. The Director of Planning, Building & Code Enforcement would require the preparation of an Environmental Impact Report if the review concluded that the proposed project could have a significant unavoidable effect on the environment. The California Environmental Quality Act (CEQA) requires this notice to disclose whether any listed toxic sites are present. The project location **does not** contain a listed toxic site.

Based on an initial study, the Director has concluded that the project described above will not have a significant effect on the environment. We have sent this notice to all owners and occupants of property within 500 feet of the proposed project to inform them of the Director's intent to adopt a Mitigated Negative Declaration for the proposed project on **February 20, 2006**, and to provide an opportunity for public comments on the draft Mitigated Negative Declaration. The public review period for this draft Mitigated Negative Declaration begins on **January 31, 2006** and ends on **February 20, 2006**

A public hearing on the project described above is tentatively scheduled for **February 22, 2006** at **9:00AM** in the City of San Jose Council Chambers, 200 East Santa Clara Street, San Jose, CA 95113. The draft Mitigated Negative Declaration, initial study, and reference documents are available for review under the above file number from 9:00 a.m. to 5:00 p.m. Monday through Friday at the City of San Jose Department of Planning, Building & Code Enforcement, City Hall, 200 East Santa Clara Street, San José CA 95113-1905. The documents are also available at the Dr. Martin Luther King, Jr. Main Library, 150 E. San Fernando St, San José, CA 95112, and the West Valley Branch Library at 1243 Thomas Aquino Road, San José, CA 95117, and online at http://www.sanjoseca.gov/planning/eir/MND.asp Adoption of a Negative Declaration does not constitute approval of the proposed project. The decision to approve or deny the project described above will be made separately as required by City Ordinance. For additional information, please call **Reena Mathew** at (408) 535-3555.

JOSEPH HORWEDEL, ACTING DIRECTOR

DRAFT
MITIGATED NEGATIVE DECLARATION

The Director of Planning, Building and Code Enforcement has reviewed the proposed project described below to determine whether it could have a significant effect on the environment as a result of project completion. "Significant effect on the environment" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance.

NAME OF PROJECT: Westgate West Shopping Center Expansion Project

PROJECT FILE NUMBER: H05-006

PROJECT DESCRIPTION: Site Development Permit to construct 41,705 square foot additions to an existing shopping mall and allow facade and site modifications on a 18.9 gross acre site

PROJECT LOCATION & ASSESSORS PARCEL NO.: Located on the east side of Lawrence Expressway between Graves Avenue and Prospect Road. 381-36-012,-014,-016,-018,-020,-021, -023,-025,-026

COUNCIL DISTRICT: 1

APPLICANT CONTACT INFORMATION:
Chris Bryant
West Valley Properties, Inc
280 Second Street, Suite 230
Los Altos, CA 94022
(650) 559-8484

FINDING

The Director of Planning, Building & Code Enforcement finds the project described above will not have a significant effect on the environment in that the attached initial study identifies one or more potentially significant effects on the environment for which the project applicant, before public release of this draft Mitigated Negative Declaration, has made or agrees to make project revisions that clearly mitigate the effects to a less than significant level.

MITIGATION MEASURES INCLUDED IN THE PROJECT TO REDUCE POTENTIALLY SIGNIFICANT EFFECTS TO A LESS THAN SIGNIFICANT LEVEL

I. **AESTHETICS** – The project will not have a significant impact on this resource, therefore no

mitigation is required.

II. AGRICULTURE RESOURCES – The project will not have a significant impact on this resource, therefore no mitigation is required.

III. AIR QUALITY –

Construction of the proposed project could result in significant short-term air quality impacts associated with dust generation. Implementation of the mitigation measures would reduce local air quality impacts associated with the construction of the proposed project to a less than significant level.

MITIGATION MEASURES: The project proposes the following measures, recommended by BAAQMD, to reduce air quality impacts associated with grading and new construction to a less than significant level:

- Water all active construction areas at least twice daily and more often during windy periods. Active areas adjacent to residences shall be kept damp at all times.
- Cover all hauling trucks or maintain at least two feet of freeboard. Dust-proof chutes shall be used as appropriate means to load debris onto trucks during demolition.
- Enclose, pave, apply water at least twice daily, hydroseed, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas, staging areas, exposed stockpiles, and inactive construction areas (i.e., previously-graded areas that are inactive for 10 days or more).
- Sweep daily (with water sweepers) all paved access roads, parking areas, and staging areas and sweep streets daily (with water sweepers) if visible soil material is deposited onto the adjacent roads.
- Limit traffic speeds on any unpaved roads to 15 miles per hour.
- Replant vegetation in disturbed areas as quickly as possible.
- Suspend construction activities that cause visible dust plumes to extend beyond the construction site.
- During renovation and demolition activities, removal or disturbance of any materials containing asbestos, lead-based paint, or other hazardous pollutants shall be conducted in accordance with BAAQMD rules and regulations.

Construction of the proposed project could result in significant short-term air quality impacts associated with diesel particulate matter exhaust.

MITIGATION MEASURES: The project proposes the following measures to reduce diesel particulate matter exhaust from construction equipment impacts to a less than significant level:

- Prohibit use of "dirty" equipment. Opacity2 is an indicator of exhaust particulate emissions from off-road diesel powered equipment. The project shall ensure that emissions from all construction diesel powered equipment used on the project site do not exceed 40 percent opacity for more than three minutes in any one hour. Any equipment found to exceed 40 percent opacity (or Ringelmann 2.10) shall be prepared immediately.
- The contractor shall install temporary electrical service whenever possible to avoid the need for independently powered equipment (e.g. compressors).
- Diesel equipment standing idle for more than two minutes shall be turned off. This shall include trucks waiting to deliver or receive soil, aggregate, or other bulk materials. Rotating drum concrete trucks can keep their engines running continuously as long as they are on-site.
- Properly tune and maintain equipment for low emissions.

IV. BIOLOGICAL RESOURCES – The project may remove up to 39 non-ordinance size landscape trees from the site. Implementation of the mitigation measures would reduce impacts to trees to a less

than significant level.

MITIGATION MEASURES:

- Replace non-ordinance size trees at a ratio of two to one (2 replacements: 1 removed).
- In the event that the project does not have sufficient area to accommodate the required number of replacement trees, an alternative site(s) shall be identified for additional tree planting or a donation of funds shall be made to San Jose Beautiful or Our City Forest for in-lieu off-site tree planting and maintenance in the community.
- Prepare and implement custom Tree Protection Specifications for any existing trees on the project site that would be saved.

V. CULTURAL RESOURCES – The proposed project is not anticipated to result in significant impacts to cultural resources.

MITIGATION MEASURES: As required by County ordinance, this project has incorporated the following guidelines. - Pursuant to Section 7050.5 of the Health and Safety Code, and Section 5097.94 of the Public Resources Code of the State of California in the event of the discovery of human remains during construction, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains. The Santa Clara County Coroner shall be notified and shall make a determination as to whether the remains are Native American. If the Coroner determines that the remains are not subject to his authority, he shall notify the Native American Heritage Commission who shall attempt to identify descendants of the deceased Native American. If no satisfactory agreement can be reached as to the disposition of the remains pursuant to this State law, then the land owner shall re-inter the human remains and items associated with Native American burials on the property in a location not subject to further subsurface disturbance.

VI. GEOLOGY AND SOILS – The project site has a moderately high potential for liquefaction, with a moderately low potential for ground failure vertically, and a low potential for ground failure laterally. The project site includes low to moderately expansive soils, which may expand and contract as a result of seasonal or man-made soil moisture conditions. The project site is located in a seismically active region and, therefore, strong ground shaking would be expected during the lifetime of the proposed project. With the implementation of the standard engineering practices and requirements, the proposed project would not result in significant geologic or soils impacts.

MITIGATION MEASURES: The project would be required to be constructed in accordance with the standard engineering practices in the Uniform Building Code. In addition, the City of San Jose Department of Public works requires a grading permit to be obtained prior to the issuance of Public Works Clearance. These standard practices would ensure that future buildings on the site are designed property to account for the expansive soils on the site. Therefore, the presence of expansive soils on the site would not represent a significant impact to future development on the project site.

The proposed project would be designed and constructed in conformance with the Uniform Building Code guidelines for Seismic Zone 4 to avoid or minimize potential damage from seismic shaking and seismic-related hazards on the site, including liquefaction, on the site. Therefore, potential impacts associated with future exposure to the proposed project would be reduced or avoid by conformance to the standard specified in the Uniform Building Code for Seismic Zone 4 and with the recommendations of the structural analysis required for future development proposed on liquefaction-s soils. For this reason, the project would not be subject to significant impacts from seismic-related hazards.

VII. **HAZARDS AND HAZARDOUS MATERIALS** –Due to the age of the on-site buildings, Asbestos-Containing Materials and Lead-Based Paint may be present. The proposed project, with the implementation of standard requirements, would not result in significant hazardous materials impacts.

MITIGATION MEASURES: As appropriate, a lead survey of painted surfaces and soil around the buildings built prior to 1978 shall be performed prior to demolition. Requirements outlined by Cal/OSHA Lead in Construction Standard, Title 8, CCR 1532.1 would be followed during demolition activities, including employee training, employee air monitoring, and dust control. Any debris or soil containing lead-based paint or coatings would be disposed of at landfills that meet acceptance criteria for the waste being disposed.

All potentially friable ACMs shall be removed in accordance with NESHAP guidelines prior to building demolition or renovation that may disturb the materials. All demolition activities will be undertaken in accordance with OSHA standards contained in Title 8 of the CCR, Section 1529, to protect workers from exposure to asbestos. Specific measures could include air monitoring during demolition and the use of vacuum extraction for asbestos-containing materials.

A registered asbestos abatement contractor will be retained to remove and dispose of ACMs identified in the asbestos survey performed for the site in accordance with the standards stated above.

Materials containing more than one (1) percent asbestos are also subject to BAAQMD regulations. Removal of materials containing more than one (1) percent asbestos will be completed in accordance with BAAQMD requirements.

VIII. HYDROLOGY AND WATER QUALITY – The proposed project includes the reconstruction of approximately 14,420 square feet of commercial building area, expansion of existing commercial buildings by approximately 24,450 square feet, and the construction of approximately 13,920 square feet of new commercial building area. Project demolition and construction activities would affect the water quality of storm water runoff. Development of the proposed project could result in increased storm water pollution, particularly during construction. The proposed project, with the implementation of mitigation measures, would not result in significant hydrology or water quality impacts.

MITIGATION MEASURES:

- The proposed development shall comply with the NPDES Permit issued to the City of San Jose and other co-permitees of the SCVURPPP, and shall include measures to control pollutants discharge to the storm water system. Future activities that require a permit from the City of San Jose shall be evaluated for appropriate "best management practices" including, but not limited to, the following:
- The proposed development shall comply with the NPDES Permit issued to the City of San Jose and other co-permitees of the SCVURPPP, and shall include measures to control pollutants discharged to the storm water system. Future activities that require a permit from the City of San Jose shall be evaluated for appropriate "best management practices" including , but not limited to, the following:
  - -use of landscaped-based storm water treatment measures, such as biofilters and vegetated swales to manage runoff from the site;
  - -minimization of impervious surfaces and increase use of permeable pavement;
  - -if inlet filters are used, a maintenance program to maintain the functional integrity of the systems;
  - -damp sweeping of streets and on-site parking lots;

-routine storm drain cleaning; and
-covering of dumpsters and material handling areas.

- Prior to construction of any phase of the project, the City applicant(s) shall submit a Storm Water Pollution Prevention Plan (SWPPP) and a Notice of Intent (NOI) to the State of California Water Resource Quality Control Board to control the discharge of storm water pollutants including sediments associated with construction activities. Along with these documents, the applicant may also be required to prepare an Erosion Control Plan. The Erosion Control Plan may include Best Management Practices (BMPs) as specified in the California Storm Water Best Management Practice Handbook for reducing impacts on the City's storm drainage system from construction activities. The SWPPP shall include control measures during the construction period for
  -Soil stabilization practices
  -Sediment control practices
  -Wind erosion control practices and
  -Non-storm water management and waste management and disposal control practices.

- Prior to issuance of a grading permit, the applicant shall be required to submit copies of the NOI and Erosion Control Plan (if required) to the City Project Engineer, Department of Public Works. The applicant shall also be required to maintain a copy of the most current SWPPP on-site and provide a copy to any City representative or inspector on demand.
- Each phase of development shall comply with the City of San Jose Grading Ordinance, including erosion-and dust-control during site preparation, and with the City of San Jose Zoning Ordinance requirement for keeping adjacent streets free of dirt and mud during construction.
- The project shall comply with NPDES Permit Number CAS0299718

IX. LAND USE AND PLANNING – The project will not have a significant impact on this resource, therefore no mitigation is required.

X. MINERAL RESOURCES – The project will not have a significant impact on this resource, therefore no mitigation is required.

XI. NOISE –The proposed project would reduce existing noise levels at nearby residences compared to existing conditions and would meet the City's noise goals, therefore, the proposed project, with the implementation of mitigation measures would result in less than significant long-tem noise impacts.

MITIGATION MEASURES:

- Construct 12-foot tall sound wall around the loading dock areas along the new loading areas (refer to item number 23 in figure 4 of the Initial Study).
- Plant a 10-foot wide landscape buffer along the existing sound wall located along Graves Avenue to reduce noise levels (refer to item Figure 4 of the Initial Study).
- Close the rear access driveway located along Graves Avenue, to the north of Building G (refer to Figure 4 of the Initial Study).

The proposed project would result in a short-term increase in noise levels in the project area during demolition and construction activities. The proposed project, with the implementation of mitigation measures, would not result in significant construction-related noise impacts.

MITIGATION MEASURES:

- Limit all construction-related activities on weekdays between 7:00 AM and 7:00 PM, Monday through Friday. Construction outside of these hours may be approved through a development

permit based on a site-specific construction noise mitigation plan, and a finding by the Director of Planning, Building, and Code Enforcement that the construction noise mitigation plan is adequate to prevent noise disturbance of affected residential uses.

- Designate a "noise disturbance coordinator" who will be responsible for responding to any local complaints about construction noise. The disturbance coordinator will determine the cause of the noise complaints (e.g., beginning work too early, bad muffler, etc.) and institute reasonable measures warranted to correct the problem. A telephone number for the disturbance coordinator shall be conspicuously posted at the construction site.
- Equip all internal combustion engine-driven equipment with mufflers with are in good condition and appropriate for the equipment.
- Locate stationary noise-generating equipment as far as possible from existing nearby residences and other noise-sensitive land uses. Acoustically shield such equipment.
- Prohibit unnecessary idling of internal combustion engines.

XII. POPULATION AND HOUSING – The project will not have a significant impact on this resource, therefore no mitigation is required.

XIII. PUBLIC SERVICES – The project will not have a significant impact on this resource, therefore no mitigation is required.

XIV. RECREATION – The project will not have a significant impact on this resource, therefore no mitigation is required.

XV. TRANSPORTATION / TRAFFIC– The proposed project would not result in substantial additional peak hour traffic in the area or result in significant impacts to the transportation conditions.

XVI. UTILITIES AND SERVICE SYSTEMS – The project will not have a significant impact on this resource, therefore no mitigation is required.

XVII. MANDATORY FINDINGS OF SIGNIFICANCE – The project will not substantially reduce the habitat of a fish or wildlife species, be cumulatively considerable, or have a substantial adverse effect on human beings, therefore no additional mitigation is required.

PUBLIC REVIEW PERIOD

Before 5:00 p.m. on February 20, 2006, any person may:

(1) Review the Draft Mitigated Negative Declaration (MND) as an informational document only; or

(2) Submit written comments regarding the information, analysis, and mitigation measures in the Draft MND. Before the MND is adopted, Planning staff will prepare written responses to any comments, and revise the Draft MND, if necessary, to reflect any concerns raised during the public review period. All written comments will be included as part of the Final MND; or

(3) File a formal written protest of the determination that the project would not have a significant effect on the environment. This formal protest must be filed in the Department of Planning, Building and Code Enforcement, 200 East Santa Clara Street, San José CA 95113-1905 and include a $100 filing fee. The written protest should make a "fair argument" based on substantial evidence that the project will have one or more significant effects on the environment. If a valid written protest is filed with the Director of Planning, Building & Code Enforcement within the noticed public review period, the Director may (1) adopt the Mitigated Negative Declaration and set a noticed public hearing on the protest before the Planning Commission, (2) require the project applicant to prepare an environmental impact report and refund the filing fee to the protestant, or (3) require the Draft MND to be revised and undergo additional noticed public review, and refund the filing fee to the protestant.

Joseph Horwedel, Acting Director
Planning, Building and Code Enforcement

San Jose, Ca 95119

Re: Temporary use of parking lot for Christmas tree sales
Westgate West Shopping Center, San Jose, CA

Dear Mr. Kimball:

Pursuant to Section 10.4 of the Lease, Landlord has approved Orchard Supply Hardware's ("Tenant") request to temporarily utilize a portion of the parking lot ("Allocated Area") located adjacent to the Premises effective November 20, 2013 – December 26, 2013 for the purpose of Christmas tree sales.

Landlord's approval is contingent upon the Tenant's procurement of all necessary licenses or other governmental approvals or permits in connection to Tenant's use of the Allocated Area. Tenant must forward a copy of the permit to Landlord's agent on or before the effective date stated above.

Tenant shall make all necessary repairs to areas damaged as a result of its use of the Allocated Area and properly store and dispose of all garbage and refuse.

Tenant agrees to be solely responsible for any loss or damage to their personal property or injury to themselves or others resulting from use of the Allocated Area. Tenant will indemnify, defend and hold harmless Landlord and Landlord's agents from and against any and all claims, damages, actions, liability and expense, including attorneys' fees and court costs, in connection with personal injury and/or damage to property arising from the use of the Allocated Area.

Please sign below to confirm your agreement to the above arrangements and return via email to dhedges@mmrs.com or fax a copy to (415) 217-5368.

Should you have any questions, please contact me directly at (415) 277-6824.

Sincerely,
Madison Marquette, as manager for

RE: Happy Lemon Signage Response
Westgate West
San Jose, California

Dear Tenant:

The sign submittal received at our office for the above-referenced project has been reviewed and **approved as noted**. Please use the comments noted on the drawings and the guidelines listed below to make any necessary adjustment to your documents and the installation of your sign.

1. All signs shall be reviewed for conformance with the sign criteria and overall design quality and is not a plan check for dimensional errors, code violations or any other restrictions to the property. Approval or disapproval of sign submittals based on aesthetics of design shall remain the sole right of the Landlord/Manager.
2. Prior to the installation and manufacture of any sign, the Tenant shall provide Landlord with a copy of the sign permit from the governmental agency having jurisdiction. **After completion, a copy of the signed off permit must be provided to the landlord.**
3. Each tenant shall be responsible to repair any damage to any surface caused by the signage or its' installation.
4. Landlord reserves the right to periodically hire an independent electrical engineer, at Tenant's sole expense, to inspect the installation of all Tenants' signs. Tenants shall be required to have any discrepancies and/or code violations corrected at Tenant's expense. Any code violations, requests for sign removals, or discrepancies not corrected within fifteen (15) days of notice, may be corrected by the Landlord at Tenant's expense.
5. Upon vacancy, Tenant shall remove sign and restore fascia to original condition at Tenant's sole cost and expense within fifteen (15) days of expiration of term or earlier termination of Tenant's lease.
6. Exposed junction boxes, transformers, lamps, tubing, conduit, or raceways of any type are NOT PERMITTED.

3501 Del Paso Road
Suite 100
Sacramento, CA 95835
(916) 920-5555
FAX: (916) 920-4265
donahueschriber.com
Lic 01875932

7. Sign manufacturer's names, stamps, or decals may not be visible from the street or normal viewing angles.
8. All signs must be pegged off wall ½" minimum.
9. Tenant's sign contractor shall install and connect sign display and primary wiring at sign location approved by Landlord. Signs are to be connected to the J-box provided by the Landlord, which is connected to the Landlord's house panel, and shall be wired to Landlord's control at Landlord's timer for uniform control of hours of illumination unless otherwise directed by Landlord.
10. Prior to sign installation, we require the following:
    a. A copy of your sign contractor's insurance certificate naming **DS Westgate West LP; and all related affiliates,** as additional insured (with additional insured endorsement page attached).
    b. A copy of the permit and the contractor's license.
    c. At least 48-hour notice of date of install and requesting access to electrical room, if required.

    Should any other contractor provide installations or other work on the site, please call me to coordinate insurance requirements.

In the event that the above information contradicts the lease signage criteria, the lease signage criteria are to supersede. Should you have any questions, please call me at 916-286-5204.

Sincerely,

DONAHUE SCHRIBER

THE FIELD WORK WAS COMPLETED ON AUGUST 5, 2016.

PROFESSIONAL LAND SURVEYOR HARRY D. JAYNE Exp. 12/31/17 No. 7923 STATE OF CALIFORNIA

BY: _____ DATE: _____
HARRY D. JAYNE, LS 7923

ZONING: CG - COMMERCIAL GENERAL ZONE DISTRICT
PER CITY OF SAN JOSE ZONE DISTRICT MAP

ZONING STANDARDS LISTED BELOW PER ZONING AND SITE REQUIREMENTS SUMMARY REPORT DATED SEPTEMBER 1, 2016 PREPARED BY THE PLANNING & ZONING RESOURCE COMPANY

I. PROPERTY LOCATION AND SIZE
a. JURISDICTION: CITY OF SAN JOSE, CA
b. NAME: WESTGATE WEST
c. ADDRESS: 5353 THROUGH 5399 PROSPECT ROAD
d. SIZE: 19.80 ACRES/862,778.7 SQ.FT.±

II. EXISTING LAND USE AND ZONING
1. DATE OF EXISTING ORDINANCE: AUGUST 2, 2016
2. EXISTING ZONING DESIGNATION: "CG" COMMERCIAL GENERAL
3. ADJACENT ZONING DESIGNATION AND OR USES IF APPLICABLE: NOT APPLICABLE
4. EXISTING LAND USE: SHOPPING CENTER WITH RESTAURANT, RETAIL
IS THE EXISTING LAND USE IN CONFORMANCE?
YES, AS PERMITTED USES (COMMERCIAL GENERAL)

III. ZONING REGULATIONS
1. ARE COPIES OF ZONING REGULATIONS AVAILABLE FOR THIS SITE?
YES
2. IF ANY ASPECT OF THE PROPERTY IS NOT IN CONFORMANCE WITH CURRENT ZONING, DOES THE MUNICIPALITY PROVIDE ORDINANCES DEALING WITH NON–CONFORMING USE?
YES

IV. PROPERTY SPECIFICATIONS
1. SETBACKS
a. FRONT (PROSPECT ROAD): 15 FEET MINIMUM, 15 FEET EXISTING
b. CORNER SIDE (LAWRENCE EXPRESSWAY): 12.5 FEET MINIMUM, 23 FEET EXISTING
c. INTERIOR SIDE: NONE, EXISTING NOT APPLICABLE
d. REAR: NONE, EXISTING NOT APPLICABLE
ARE THE EXISTING SETBACKS CONFORMING?
YES, TO THE SETBACKS
2. BUILDING SIZE
a. MAXIMUM BUILDING HEIGHT OR STORIES: 65 FEET
b. EXISTING BUILDING HEIGHT OR STORIES: 35 FEET
c. BUILDING SITE AREA REQUIREMENTS: MINIMUM LOT AREA 1 ACRE
EXISTING LOT AREA 19.80 ACRES
IS THE EXISTING BUILDING IN CONFORMANCE?
YES
3. DENSITY
a. BUILDING DENSITY FORMULA: NONE SPECIFIED
a. APPROXIMATE BUILDING FOOTPRINT: 238,570 SQ.FT.
IS THE BUILDING COVERAGE IN CONFORMANCE?
YES
4. PARKING
a. PARKING SPACE FORMULA: NEIGHBORHOOD SHOPPING CENTER
1 SPACE PER 225 SQUARE FEET
238,570 / 225 = 1,060 SPACES
b. PARKING SPACES REQUIRED: 1,060 TOTAL PARKING SPACES
c. EXISTING PARKING SPACES: 1,039 TOTAL PARKING SPACES
IS THE EXISTING PARKING IN CONFORMANCE?
YES

V. SITE HISTORY
1. WAS SPECIAL PERMITTING OR CONDITION(S) APPLIED TO EXISTING ZONING?
YES
SITE PLAN APPROVAL OR PLANNED UNIT DEVELOPMENT?
SITE PLAN APPROVAL
OTHERS
THIS INFORMATION HAS BEEN REQUESTED AND WILL BE FORWARDED UPON RECEIPT.
2. ARE THERE ANY OUTSTANDING BUILDING OR ZONING VIOLATIONS ON FILE?
NO, ACCORDING TO A SEARCH OF CITY OF SAN JOSE RECORDS, THERE ARE NO OPEN VIOLATIONS ON FILE FOR THE SUBJECT PROPERTY.
3. IS A CERTIFICATE OF OCCUPANCY AVAILABLE FOR THE SITE?
YES

VI. CONCLUSIONS
1. CONFORMANCE STATUS: LEGAL CONFORMING
2. NONCONFORMING CHARACTERISTICS OF THE SITE: NONE
3. RECOMMENDED ACTION: NONE
4. REBUILDABILITY CLAUSE: NOT APPLICABLE

RSC PROJECT NOTES

A. GENERAL

1. IT IS INTENDED THAT THESE PLANS AND SPECIFICATIONS REQUIRE ALL LABOR AND MATERIAL NECESSARY AND PROPER FOR THE WORK CONTEMPLATED AND THAT THE WORK BE COMPLETED IN ACCORDANCE WITH THEIR TRUE INTENT AND PURPOSE THE CONTRACTOR SHALL NOTIFY THE ENGINEER IMMEDIATELY REGARDING ANY DISCREPANCIES OR AMBIGUITIES WHICH MAY EXIST IN THE PLANS OR SPECIFICATIONS. THE ENGINEER'S INTERPRETATION THEREOF SHALL BE CONCLUSIVE.

2. WHERE THE PLANS OR SPECIFICATIONS DESCRIBE PORTIONS OF THE WORK IN GENERAL TERMS BUT NOT IN COMPLETE DETAIL, IT IS UNDERSTOOD THAT ONLY THE BEST GENERAL PRACTICE IS TO PREVAIL AND THAT ONLY MATERIALS AND WORKMANSHIP OF THE FIRST QUALITY ARE TO BE USED.

3. THE CONTRACTOR SHALL, AT THE SAME TIME OF BIDDING, AND, THROUGHOUT THE PERIOD OF THE CONTRACT, BE LICENSED IN THE STATE OF CALIFORNIA UNDER THE PROVISIONS OF CHAPTER 9, DIVISION 3 OF THE BUSINESS AND PROFESSIONS CODE AND SHALL BE BONDABLE FOR AN AMOUNT EQUAL TO OR GREATER THAN THE AMOUNT BID AND TO DO THE TYPE OF WORK CONTEMPLATED IN THE PLANS AND SPECIFICATIONS. CONTRACTOR SHALL BE SKILLED AND REGULARLY ENGAGED IN THE GENERAL CLASS AND TYPE OF WORK CALLED FOR IN THE PLANS AND SPECIFICATIONS.

4. CONTRACTOR SHALL INSPECT THE SITE OF THE WORK PRIOR TO BIDDING TO SATISFY THEMSELVES BY PERSONAL EXAMINATION OR BY SUCH OTHER MEANS AS THEY MAY PREFER, OF THE LOCATION OF THE PROPOSED WORK, AND OF THE ACTUAL CONDITIONS OF AND AT THE SITE OF WORK.

IF, DURING THE COURSE OF THEIR EXAMINATION, A BIDDER FINDS FACTS OR CONDITIONS WHICH APPEAR TO THEM TO BE IN CONFLICT WITH THE LETTER OR SPIRIT OF THE PROJECT PLANS AND SPECIFICATIONS, THEY SHALL CONTACT THE ENGINEER FOR ADDITIONAL INFORMATION AND EXPLANATION BEFORE SUBMITTING THEIR BID.

SUBMISSION OF A BID BY THE CONTRACTOR SHALL CONSTITUTE ACKNOWLEDGMENT THAT, IF AWARDED THE CONTRACT, THEY HAVE RELIED AND ARE RELYING ON THEIR OWN EXAMINATION OF (1) THE SITE OF THE WORK, (2) ACCESS TO THE SITE, AND (3) ALL OTHER DATA AND MATTERS REQUISITE TO THE FULFILLMENT OF THE WORK AND ON THEIR OWN KNOWLEDGE OF EXISTING FACILITIES ON AND IN THE VICINITY OF THE SITE OF THE WORK TO BE CONSTRUCTED UNDER THIS CONTRACT.

THE INFORMATION PROVIDED BY THE CITY OR THE ENGINEER IS NOT INTENDED TO BE A SUBSTITUTE FOR, OR A SUPPLEMENT TO THE INDEPENDENT VERIFICATION BY THE CONTRACTOR TO THE EXTENT SUCH INDEPENDENT INVESTIGATION OF SITE CONDITIONS IS DEEMED NECESSARY OR DESIRABLE BY THE CONTRACTOR. CONTRACTOR SHALL ACKNOWLEDGE THAT THEY HAVE NOT RELIED SOLELY UPON THE CITY OR ENGINEER FURNISHED INFORMATION REGARDING SITE CONDITIONS IN PREPARING AND SUBMITTING THEIR BID.

5. ALL WORK WITHIN THE RIGHT OF WAY SHALL BE COMPLETED IN ACCORDANCE WITH CITY STANDARDS.

6. THE CONTRACTOR SHALL PROVIDE ALL LIGHTS, BARRICADES, SIGNS, FLAGMEN OR OTHER DEVICES NECESSARY FOR PUBLIC SAFETY.

7. THE CONTRACTOR AGREES THAT:

A. THEY SHALL BE RESPONSIBLE TO CLEAN THE JOB SITE AT THE END OF EACH PHASE OF WORK.

B. THEY SHALL BE RESPONSIBLE TO REMOVE AND DISPOSE OF ALL TRASH, SCRAP AND UNUSED MATERIAL AT THEIR OWN EXPENSE IN A TIMELY MANNER.

C. THEY SHALL BE RESPONSIBLE TO MAINTAIN THE SITE IN A NEAT, SAFE AND ORDERLY MANNER AT ALL TIMES.

D. THEY SHALL BE RESPONSIBLE TO KEEP MATERIALS, EQUIPMENT, AND TRASH OUT OF THE WAY OF OTHER CONTRACTORS SO AS NOT TO DELAY THE JOB. FAILURE TO DO SO WILL RESULT IN A DEDUCTION FOR THE COST OF CLEAN UP FROM THE FINAL PAYMENT.

E. THEY SHALL BE RESPONSIBLE FOR THEIR OWN SAFETY, TRAFFIC CONTROL, PERMITS RETESTING AND REINSPECTIONS AT THEIR OWN EXPENSE.

F. UNLESS OTHERWISE NOTED ALL EXCESS SOILS AND MATERIALS SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE LAWFULLY DISPOSED OF OFF SITE AT THE CONTRACTOR'S EXPENSE.

8. THE CONTRACTOR SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE CITY AND ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE CITY OR THE ENGINEER.

9. DUST CONTROL SHALL BE PROVIDED AT ALL TIMES, AT THE CONTRACTOR'S EXPENSE, TO MINIMIZE ANY DUST NUISANCE AND SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF THE CITY.

10. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ADEQUATELY SCHEDULING INSPECTION AND TESTING OF ALL FACILITIES CONSTRUCTED UNDER THIS CONTRACT. ALL TESTING SHALL CONFORM TO THE REGULATORY AGENCY'S STANDARD SPECIFICATIONS. ALL TESTING AND INSPECTION SHALL BE PAID FOR BY THE CONTRACTOR.

11. IF EXISTING IMPROVEMENTS INCLUDING SURVEY MONUMENTATION NEED TO BE DISTURBED AND/OR REMOVED FOR THE PROPER PLACEMENT OF IMPROVEMENTS TO BE CONSTRUCTED BY THESE PLANS, THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTING EXISTING IMPROVEMENTS FROM DAMAGE. COST OF REPLACING OR REPAIRING EXISTING IMPROVEMENTS SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEMS REQUIRING REMOVAL AND/OR REPLACEMENT OF EXISTING IMPROVEMENTS. THERE WILL BE NO EXTRA COST DUE THE CONTRACTOR FOR REPLACING OR REPAIRING EXISTING IMPROVEMENTS.

12. WHENEVER EXISTING FACILITIES ARE REMOVED, DAMAGED, BROKEN, OR CUT IN THE INSTALLATION OF THE WORK COVERED BY THESE PLANS OR SPECIFICATIONS, SAID FACILITIES SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE, AFTER PROPER BACKFILLING AND/OR CONSTRUCTION, WITH MATERIALS EQUAL TO OR BETTER THAN THE MATERIALS USED IN THE ORIGINAL EXISTING FACILITIES. THE FINISHED PRODUCT SHALL BE SUBJECT TO THE APPROVAL OF THE OWNER, THE ENGINEER, AND THE RESPECTIVE REGULATORY AGENCY.

13. THE CONTRACTOR SHALL MAINTAIN A NEATLY MARKED SET OF FULL-SIZE AS-BUILT RECORD DRAWINGS SHOWING THE FINAL LOCATION AND LAYOUT OF ALL MECHANICAL; ELECTRICAL AND INSTRUMENTATION EQUIPMENT; PIPING AND CONDUITS; STRUCTURES AND OTHER FACILITIES. THE AS-BUILTS OF THE ELECTRICAL SYSTEM SHALL INCLUDE THE SIGNAL LAYOUT PLAN SHOWING LOCATION OF STANDARDS, CABINETS, DETECTORS, CONDUITS, CONDUCTORS, POINTS OF CONNECTIONS TO SERVICES, PULLBOXES, AND WIRE SIZES. AS-BUILT RECORD DRAWINGS SHALL REFLECT CHANGE ORDERS, ACCOMMODATIONS, AND ADJUSTMENTS TO ALL IMPROVEMENTS CONSTRUCTED. WHERE NECESSARY, SUPPLEMENTAL DRAWINGS SHALL BE PREPARED AND SUBMITTED BY THE CONTRACTOR.

14. PRIOR TO ACCEPTANCE OF THE PROJECT, THE CONTRACTOR SHALL DELIVER TO THE ENGINEER, ONE SET OF NEATLY MARKED AS-BUILT RECORD DRAWINGS SHOWING THE INFORMATION REQUIRED ABOVE. AS-BUILT RECORD DRAWINGS SHALL BE REVIEWED AND THE COMPLETE AS-BUILT RECORD DRAWING SET SHALL BE CURRENT WITH ALL CHANGES AND DEVIATIONS REDLINED AS A PRECONDITION TO THE FINAL PROGRESS PAYMENT APPROVAL AND/OR FINAL ACCEPTANCE.

15. THE CONTRACTOR SHALL NOTIFY THE OWNER AND RSC ENGINEERING INC, PRIOR TO ANY CORRECTIVE ACTION. SHOULD ANY CORRECTIVE WORK BE DONE PRIOR TO NOTIFICATION, THE OWNER ASSUMES NO LIABILITIES FOR THE COSTS INCURRED FOR THIS WORK. WHERE IT IS DETERMINED THAT ANY CORRECTIVE ACTION WILL REQUIRE FINANCIAL PARTICIPATION BY THE OWNER, THAT AMOUNT SHALL BE AGREED TO IN WRITING PRIOR TO TAKING CORRECTIVE ACTION. FAILURE TO OBTAIN WRITTEN ACCEPTANCE FROM THE OWNER WILL NEGATE ALL REQUIREMENTS OF OUR FINANCIAL ASSISTANCE.

16. THE CONTRACTOR SHALL PROVIDE THE REQUIRED INFORMATION SHOWING COMPLIANCE WITH THE WASTE MANAGEMENT PLAN IN ACCORDANCE WITH THE CALIFORNIA GREEN BUILDING CODE.

17. THE CONTRACTOR SHALL INSTALL TEMPORARY CONSTRUCTION FENCING AROUND THE PERIMETER OF THE PROJECT AT THE CONSTRUCTION LIMITS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING THE FENCING AND RELOCATE FENCING AS NECESSARY DURING CONSTRUCTION.

18. FOR THE AREAS THAT HAVE BEEN HYDROSEEDED AS PART OF THIS PROJECT THE CONTRACTOR SHALL APPLY WATER TO THE AREAS FOR THE DURATION OF THE CONTRACT OR UNTIL VEGETATION HAS BEEN ESTABLISHED TO THE SATISFACTION OF THE OWNER OR OWNERS REPRESENTATION. THE CONTRACTOR SHALL COMPLETE MULTIPLE APPLICATIONS OF THE HYDROSEED FOR BARE AREAS WHERE THE PREVIOUS APPLICATIONS DID NOT RESULT IN SEED GERMINATION

19. THE CONTRACTOR SHALL ENSURE THAT ALL WALKWAYS AND SIDEWALKS ALONG ACCESSIBLE ROUTES OF TRAVEL ARE CONTINUOUSLY ACCESSIBLE (INCLUDING INSTALLATION OF TEMPORARY WALKWAYS), HAVE A MAXIMUM OF 1/2" CHANGES IN ELEVATION, ARE A MINIMUM 48" IN WIDTH, HAVE A MAXIMUM 1/4" PER FOOT SLOPE AND WHERE NECESSARY TO CHANGE ELEVATION AT A SLOPE EXCEEDING 5% SHALL HAVE RAMPS COMPLYING WITH 2013 CBC, SECTION 1133B.5. WHERE A WALK CROSSES OR ADJOINS A VEHICULAR WAY, AND THE WALKING SURFACES ARE NOT SEPARATED BY CURBS, RAILINGS OR OTHER ELEMENTS BETWEEN THE PEDESTRIAN AREAS AND VEHICULAR AREAS SHALL BE DEFINED BY A CONTINUOUS DETECTABLE WARNING WHICH IS 36" WIDE, COMPLYING WITH 2010 CBC, SECTION 11338.8.5. AND ANY OTHER APPLICABLE ADA AND TITLE 24 REQUIREMENTS.

20. 2013 CALIFORNIA BUILDING CODE, 2013 CALIFORNIA MECHANICAL CODE, 2013 CALIFORNIA PLUMBING CODE, 2013 CALIFORNIA ELECTRICAL CODE, 2013 CALIFORNIA FIRE CODE, 2013 CALIFORNIA ENERGY CODE, AS AMENDED BY STATE OF CALIFORNIA AND LOCAL JURISDICTION ARE APPLICABLE TO THIS PROJECT.

B. UNDERGROUND UTILITIES

1. THE INFORMATION SHOWN ON THE PLANS WITH REGARD TO THE EXISTING UTILITIES AND/OR IMPROVEMENTS WAS DERIVED FROM FIELD INVESTIGATIONS AND/OR RECORD INFORMATION. THE ENGINEER DOES NOT GUARANTEE THESE LOCATIONS TO BE EITHER TRUE OR EXACT. PRIOR TO CONSTRUCTION, IT SHALL BE THE CONTRACTOR'S SOLE RESPONSIBILITY TO VERIFY ALL EXISTING IMPROVEMENTS AND TO EXPOSE ALL EXISTING UNDERGROUND UTILITIES RELATED TO THE PROJECT, INCLUDING BUT NOT LIMITED TO, SEWER, STORM DRAIN, WATER, IRRIGATION, GAS, ELECTRICAL, ETC. AND SHALL NOTIFY THE ENGINEER IN WRITING FORTY-EIGHT (48) HOURS IN ADVANCE OF EXPOSING THE UTILITIES, SO THAT THE EXACT LOCATION AND ELEVATION CAN BE VERIFIED AND DOCUMENTED. THE COST ASSOCIATED TO PERFORM THIS WORK SHALL BE INCLUDED IN EITHER THE LUMP SUM CLEARING COST OR IN THE VARIOUS ITEMS OF WORK. IF LOCATION AND/OR ELEVATION DIFFERS FROM THAT SHOWN ON THE DESIGN PLANS, PROVISION TO ACCOMMODATE NEW LOCATION/ELEVATION MUST BE MADE PRIOR TO CONSTRUCTION.

2. PRIOR TO COMMENCING ANY WORK, IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO HAVE EACH UTILITY COMPANY LOCATE, IN THE FIELD, THEIR MAIN AND SERVICE LINES. THE CONTRACTOR SHALL NOTIFY MEMBERS OF THE UNDERGROUND SERVICE ALERT (U.S.A.) 48 HOURS IN ADVANCE OF PERFORMING ANY EXCAVATION WORK BY CALLING THE TOLL-FREE NUMBER (800) 227-2600. THE CONTRACTOR SHALL RECORD THE U.S.A. ORDER NUMBER AND FURNISH ORDER NUMBER TO THE CITY AND ENGINEER PRIOR TO ANY EXCAVATION. IT WILL BE THE CONTRACTORS SOLE RESPONSIBILITY TO DIRECTLY CONTACT ANY OTHER UTILITY COMPANIES THAT ARE NOT MEMBERS OF UNDERGROUND SERVICE ALERT. IT SHALL BE THE CONTRACTOR'S SOLE RESPONSIBILITY TO PROTECT ALL EXISTING UTILITIES SO THAT NO DAMAGE RESULTS TO THEM DURING THE PERFORMANCE OF THIS CONTRACT. ANY REPAIRS NECESSARY TO DAMAGED UTILITIES SHALL BE PAID FOR BY THE CONTRACTOR. THE CONTRACTOR SHALL BE REQUIRED TO COOPERATE WITH OTHER CONTRACTORS AND UTILITY COMPANIES INSTALLING NEW STRUCTURES, UTILITIES AND SERVICE TO THE PROJECT.

3. THE CONTRACTOR SHALL PROVIDE ALL SHORING, BRACING, SLOPING OR OTHER PROVISIONS NECESSARY TO PROTECT WORKMEN FOR ALL AREAS TO BE EXCAVATED TO A DEPTH OF 5' OR MORE. EXCAVATIONS OF 5 FEET OR MORE IN DEPTH WILL REQUIRE AN EXCAVATIONS PERMIT FROM THE STATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL SAFETY. FOR TRENCHES 5 FEET OR MORE IN DEPTH, THE CONTRACTOR SHALL COMPLY WITH SECTION 5-1.02A OF THE CALTRANS STANDARDS, SECTION 6705 OF THE STATE OF CALIFORNIA LABOR CODE, AND ANY LOCAL CODES OR ORDINANCES.

4. WE CALL YOUR ATTENTION TO TITLE 8 CALIFORNIA ADMINISTRATION CODE SECTION 1540 (A)(1) OF THE CONSTRUCTION SAFETY ORDERS ISSUED BY THE OCCUPATIONAL SAFETY AND HEALTH STANDARDS BOARD PURSUANT TO THE CALIFORNIA OCCUPATIONS SAFETY AND HEALTH ACT OF 1973 AS AMENDED WHICH STATES:
(1) PRIOR TO OPENING AN EXCAVATION, EFFORT SHALL BE MADE TO DETERMINE WHETHER UNDERGROUND INSTALLATIONS; I.E. SEWER, WATER, FUEL, ELECTRIC LINES, ETC., WILL BE ENCOUNTERED AND IF SO, WHERE SUCH UNDERGROUND INSTALLATIONS ARE LOCATED. WHEN THE EXCAVATION APPROACHES THE APPROXIMATE LOCATION OF SUCH AN INSTALLATION, THE EXACT LOCATION SHALL BE DETERMINED BY CAREFUL PROBING OR HAND DIGGING; AND, WHEN IT IS UNCOVERED, ADEQUATE PROTECTION SHALL BE PROVIDED FOR THE EXISTING INSTALLATION. ALL KNOWN OWNERS OF UNDERGROUND FACILITIES IN THE AREA CONCERNED SHALL BE ADVISED OF PROPOSED WORK AT LEAST 48 HOURS PRIOR TO THE START OF ACTUAL EXCAVATION.

5. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO INSTALL PIPE OF ADEQUATE CLASSIFICATION WITH SUFFICIENT BEDDING TO MEET ALL REQUIREMENTS AND RECOMMENDATIONS OF CITY OF ROCKLIN AND CALTRANS FOR D-LOAD REQUIREMENTS, WHERE NECESSARY.

6. WATER LINES SHALL BE A MINIMUM OF 10' HORIZONTALLY FROM SEWER AND STORM MAINS. CROSSINGS SHALL MEET STATE HEALTH STANDARDS.

7. ALL UNDERGROUND UTILITIES SHALL BE IN PLACE PRIOR TO INSTALLATION OF CURB, GUTTER, SIDEWALK AND PAVING.

8. ALL UNDERGROUND UTILITIES SHALL BE INSTALLED IN ACCORDANCE WITH THE AUTHORITY HAVING JURISDICTION.

C. SURFACE IMPROVEMENTS

1. ALL EXISTING AND PROPOSED MANHOLE RIMS, DRAIN BOXES, LAMPHOLES, VALVES, VAULTS, PULLBOXES, AND MONUMENT BOXES, ETC. SHALL BE ADJUSTED TO FINISH GRADE AFTER PAVING OPERATIONS, WHETHER IN PAVED OR UNPAVED AREAS. ITEMS IN PROPOSED PAVEMENT AREAS SHALL BE REPLACED AS NECESSARY WITH TRAFFIC RATED MATERIALS, UNLESS OTHERWISE NOTED. COST FOR THIS WORK, AND ANY REQUIRED TESTING AND CERTIFICATIONS SHALL BE INCLUDED IN OTHER VARIOUS ITEMS OF WORK AND NO ADDITIONAL PAYMENT WILL BE ALLOWED THEREFORE.

D. EARTHWORK

1. THE CONTRACTOR SHALL EXPORT ANY EXCESS MATERIAL RESULTING FROM THE GRADING OPERATION TO ACHIEVE THE PROPOSED GRADES AS SHOWN ON THE PLANS. ALL GRADING AND EARTHWORK SHALL BE COMPLETED UNDER THE SUPERVISION OF THE SITE GEO-TECHNICAL ENGINEER.

GENERAL EROSION AND SEDIMENT CONTROL NOTES:

1. CONTRACTOR MUST ENSURE THAT THE CONSTRUCTION SITE IS PREPARED PRIOR TO THE ONSET OF ANY STORM. CONTRACTOR SHALL HAVE ALL EROSION AND SEDIMENT CONTROL MEASURES IN PLACE FOR THE WINTER MONTHS PRIOR TO OCTOBER 1.

2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED. CHANGES TO THIS EROSION AND SEDIMENT CONTROL PLAN SHALL BE MADE TO MEET FIELD CONDITIONS ONLY WITH THE APPROVAL OF OR AT THE DIRECTION OF A REPRESENTATIVE OF THE DEPARTMENT OF UTILITIES.

3. THIS PLAN MAY NOT COVER ALL THE SITUATIONS THAT ARISE DURING CONSTRUCTION DUE TO UNANTICIPATED FIELD CONDITIONS. VARIATIONS MAY BE MADE TO THE PLAN IN THE FIELD SUBJECT TO THE APPROVAL OF OR AT THE DIRECTION OF A REPRESENTATIVE OF THE DEPARTMENT OF UTILITIES.

4. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CHECKED BEFORE AND AFTER ALL STORMS TO ENSURE MEASURES ARE FUNCTIONING PROPERLY.

5. CONTRACTOR SHALL MAINTAIN A LOG AT THE SITE OF ALL INSPECTIONS OR MAINTENANCE OF BMPS, AS WELL AS, ANY CORRECTIVE CHANGES TO THE BMPS OR EROSION AND SEDIMENT CONTROL PLAN.

6. IN AREAS WHERE SOIL IS EXPOSED, PROMPT REPLANTING WITH NATIVE COMPATIBLE, DROUGHT-RESISTANT VEGETATION SHALL BE PERFORMED. NO AREAS WILL BE LEFT EXPOSED OVER THE WINTER SEASON.

7. THE CONTRACTOR SHALL INSTALL THE STABILIZED CONSTRUCTION ENTRANCE PRIOR TO COMMENCEMENT OF GRADING. LOCATION OF THE ENTRANCE MAY BE ADJUSTED BY THE CONTRACTOR TO FACILITATE GRADING OPERATIONS. ALL CONSTRUCTION TRAFFIC ENTERING THE PAVED ROAD MUST CROSS THE STABILIZED CONSTRUCTION ENTRANCE. THE STABILIZED CONSTRUCTION ENTRANCE SHALL REMAIN IN PLACE UNTIL THE ROAD BASE ROCK COURSE IS COMPLETED.

8. ALL SEDIMENT DEPOSITED ON PAVED ROADWAYS SHALL BE SWEPT AT THE END OF EACH WORKING DAY OR AS NECESSARY.

9. CONTRACTOR SHALL PLACE GRAVEL BAGS AROUND ALL NEW DRAINAGE STRUCTURE OPENINGS IMMEDIATELY AFTER THE STRUCTURE OPENING IS CONSTRUCTED. THESE GRAVEL BAGS SHALL BE MAINTAINED AND REMAIN IN PLACE UNTIL CONSTRUCTION IS COMPLETED.

10. CONTRACTOR SHALL IMPLEMENT HOUSEKEEPING PRACTICES AS FOLLOWS:

A. SOLID WASTE MANAGEMENT:
PROVIDE DESIGNATED WASTE COLLECTION AREAS AND CONTAINERS. ARRANGE FOR REGULAR REMOVAL AND DISPOSAL. CLEAR SITE OF TRASH INCLUDING ORGANIC DEBRIS, PACKAGING MATERIALS, SCRAP OR SURPLUS BUILDING MATERIALS AND DOMESTIC WASTE DAILY.

B. MATERIAL DELIVERY AND STORAGE:
PROVIDE A DESIGNATED MATERIAL STORAGE AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. STORE MATERIAL ON PALLETS AND PROVIDE COVERING FOR SOLUBLE MATERIALS. RELOCATE STORAGE AREA INTO BUILDING SHELL WHEN POSSIBLE. INSPECT AREA WEEKLY.

C. CONCRETE WASTE:
PROVIDE A DESIGNATED AREA FOR A TEMPORARY PIT TO BE USED FOR CONCRETE TRUCK WASH-OUT. DISPOSE OF HARDENED CONCRETE OFFSITE. AT NO TIME SHALL A CONCRETE TRUCK DUMP ITS WASTE AND CLEAN ITS TRUCK INTO THE CITY STORM DRAINS VIA CURB AND GUTTER. INSPECT DAILY TO CONTROL RUNOFF, AND WEEKLY FOR REMOVAL OF HARDENED CONCRETE.

D. PAINT AND PAINTING SUPPLIES:
PROVIDE INSTRUCTION TO EMPLOYEES AND SUBCONTRACTORS REGARDING REDUCTION OF EVIDENCE OF IMPROPER DISPOSAL.

E. VEHICLE FUELING, MAINTENANCE AND CLEANING:
PROVIDE A DESIGNATED FUELING AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. NOT ALLOW MOBILE FUELING OF EQUIPMENT. PROVIDE EQUIPMENT WITH DRIP PANS. RESTRICT ONSITE MAINTENANCE AND CLEANING OF EQUIPMENT TO A MINIMUM. INSPECT AREA WEEKLY.

F. HAZARDOUS WASTE MANAGEMENT:
PREVENT THE DISCHARGE OF POLLUTANTS FROM HAZARDOUS WASTES TO THE DRAINAGE SYSTEM THROUGH PROPER MATERIAL USE, WASTE DISPOSAL AND TRAINING OF EMPLOYEES. HAZARDOUS WASTE PRODUCTS COMMONLY FOUND ON-SITE INCLUDE, BUT ARE NOT LIMITED TO PAINTS & SOLVENTS, PETROLEUM PRODUCTS, FERTILIZERS, HERBICIDES & PESTICIDES, SOIL STABILIZATION PRODUCTS, ASPHALT PRODUCTS AND CONCRETE CURING PRODUCTS.

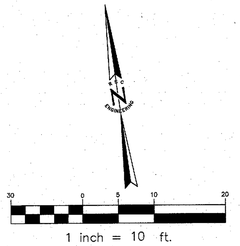
DEMOLITION LEGEND

- REMOVE EXISTING CONCRETE
- REMOVE EXISTING SHRUBS, TURF, AND IRRIGATION; CAP LINES OUTSIDE OF NEW CONCRETE LIMITS; REFER TO LANDSCAPE AND IRRIGATION PLANS FOR NEW WORK AND IRRIGATION EXTENSION
- STRIPING TO BE REMOVED
- REMOVE EXISTING SURFACE IMPROVEMENT (CURB, CURB & GUTTER, OR FENCING)
- DEMOLISH AND REMOVE EXISTING BUILDING, REFER TO ARCHITECTURAL PLANS
- REMOVE EXISTING AC PAVEMENT
- XXXXXXX REMOVE EXISTING WATER LINE

DEMOLITION KEYNOTES

1. REMOVE AND DISPOSE OF EXISTING TREE AND ROOTBALL
2. REMOVE EXISTING LOADING DOCK INCLUDING RETAINING WALL & SLOT DRAIN
3. REMOVE AND RELOCATE TRANSFORMER AND PAD. COORDINATE WORK WITH PG&E.
4. REMOVE EXISTIING GATE
5. REMOVE EXISTING GAS METER, CUT AND CAP SERVICE LINE TO LIMIT OF PROPOSED IMPROVEMENTS. WORK SHALL BE COORDINATED WITH PGE.
6. REMOVE EXISTING RAIN LEADER AND UNDER SIDEWALK DRAIN
7. REMOVE EXISTING RAIN LEADER AND CAP SD LINE. INSTALL UTILITY MARKER AT STUB.
8. REMOVE AND REPLACE EXISTING 1" WATER SERVICE WITH 2" PVC. WORK SHALL BE COORDINATED WITH WATER COMPANY. INSTALL TRENCH AND BACKFILL PER CITY STANDARDS
9. REMOVE AND REPLACE 1" WATER METER AND RP DEVICE WITH NEW 2" WATER METER AND RP DEVICE. WORK SHALL BE COORDINATED WITH WATER COMPANY.
10. REMOVE AND REPLACE EXISTING 1" WATER SERVICE WITH 2.5" PVC
11. REMOVE PORTION OF EXISTING FIRE SERVICE AND CAP END. INSTALL UTILITY MARKER AT STUB.
12. REMOVE EXISTING BOLLARD. CONTRACTOR SHALL SALVAGE AND REUSE IF POSSIBLE. COORDINATE WITH OWNER.
13. REMOVE EXISTING FENCING
14. REMOVE CONCRETE RAMP
15. PROTECT EXISTING TREE IN PLACE
16. REMOVE PORTION OF EXISTING 6" SEWER LINE



NOTE

** CONTRACTOR SHALL DISPOSE OFFSITE ALL MATERIALS REMOVED AS PART OF THIS PROJECT TO A CITY APPROVED FACILITY.

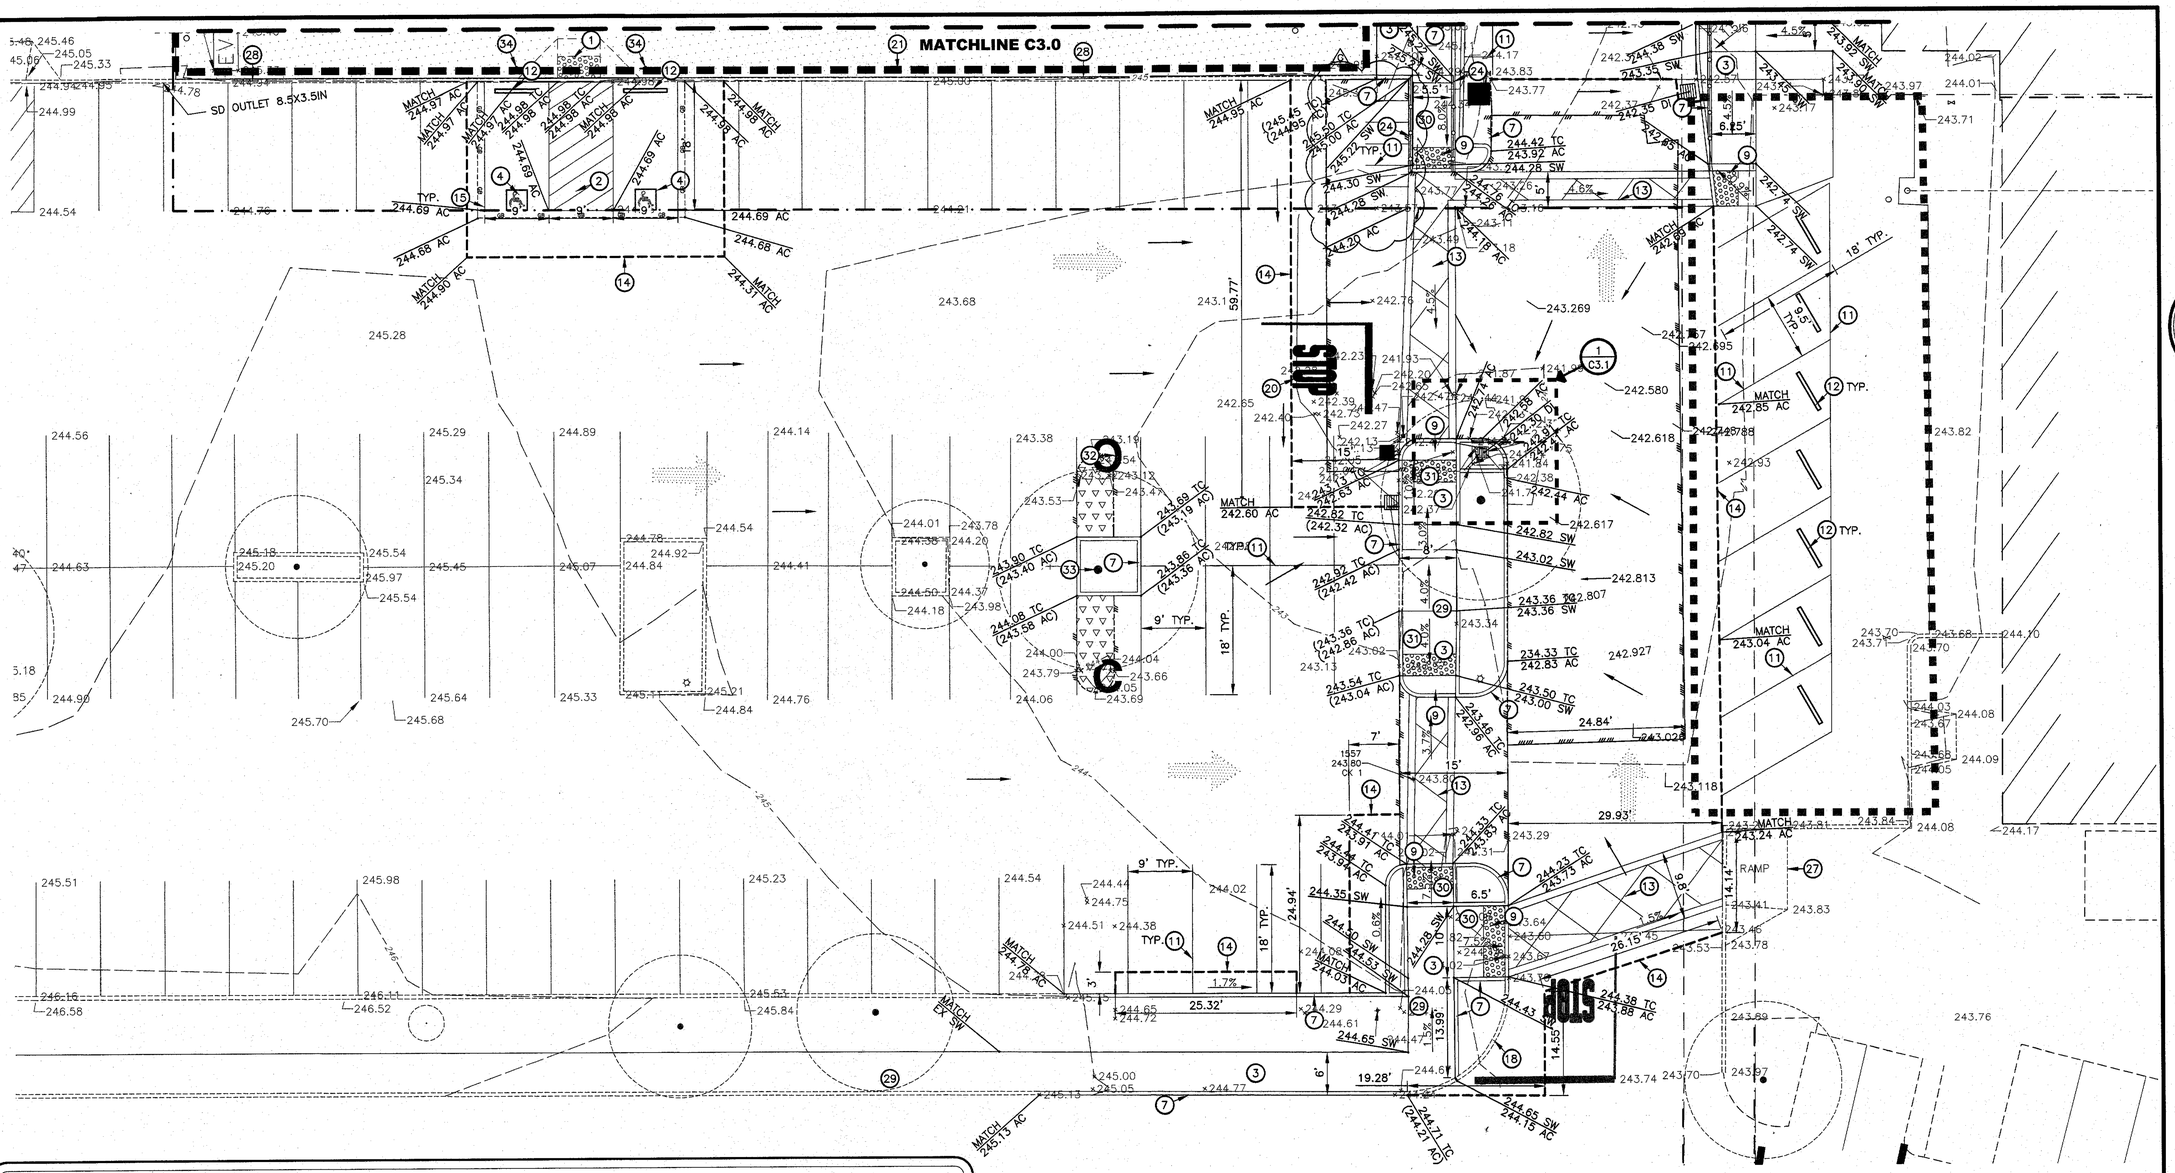
C3.1

© MCG ARCHITECTS 2018 ALL RIGHTS RESERVED



GRADING NOTES

1. RAMP SHALL BE CONSTRUCTED BY OTHERS
2. PLACE ADA LOADING ZONE STRIPING, REFER TO DETAIL 9/C5.0
3. PLACE NEW SIDEWALK, REFER TO DETAIL 3/C5.0
4. PLACE ADA PARKING STRIPING, REFER TO DETAIL 4/C5.0
5. INSTALL CURB OPENING FOR BIORETENTION BASIN, REFER TO DETAIL 2/C5.1
6. INSTALL BIORETENTION BASIN, REFER TO DETAIL 1/C5.1
7. INSTALL BARRIER CURB, REFER TO DETAIL 8/C5.0
8. INSTALL TYPE A2 CURB AND GUTTER, REFER TO CITY OF SAN JOSE STD DETAIL R-1
9. INSTALL TRUNCATED DOMES, REFER TO DETAIL 6/C5.0
10. INSTALL GUARDRAIL, REFER TO DETAIL 10/C5.0
11. PLACE SINGLE 4" WIDE SOLID WHITE STRIPE
12. INSTALL WHEEL STOP, REFER TO DETAIL 11/C5.0
13. PLACE STAMPED ASPHALT CROSSWALK, USE STREETBOND OR APPROVED EQUAL. MATCH PATTERN AND COLOR OF EXISTING CROSSWALKS, SUGGESTED COLORS ARE PEWTER FOR THE 1' BORDER AND SUNSET BLUSH FOR THE MAIN WALK
14. CONFORM LINE
15. INSTALL SINGLE 4" WIDE SOLID BLUE STRIPE FOR ADA STALL
16. REMOVE & REPAIR EXIST. UNEVEN AC PAVEMENT, TYP.
17. REMOVE EXIST. CONC. RAMP, REPLACE WITH AC PAVING
18. EXISTING CURB TO REMAIN
19. NOT USED
20. STOP BAR STRIPING, REFER TO DETAIL 5/C5.1
21. PAD LIMIT
22. INSTALL 1.5' CURB OPENING
23. ADJUST EXISTING INLET TO PROPOSED GRADE
24. INSTALL HANDRAIL, REFER TO DETAIL 8/C5.1
25. INSTALL 4" BOLLARD, REFER TO DETAIL 7/C5.1
26. INSTALL VALLEY GUTTER, REFER TO DETAIL 9/C5.1. MATCH EXISTING GRADES.
27. EXIST. CURB RAMP TO REMAIN
28. EXIST. CURB TO REMAIN, CONTRACTOR WILL REMOVE AND REPLACE IF DAMAGED, COORDINATE LIMITS OF REPLACEMENT, IF ANY, WITH OWNER.
29. EXIST. WALK TO REMAIN.
30. CURB RAMP PER DETAIL 1/C5.1
31. CURB RAMP PER DETAIL 2/C5.1
32. PAINT 4' HIGH "C" TO DENOTE A COMPACT PARKING STALL
33. PROTECT EXISTING TREE IN PLACE.
34. ACCESSIBLE SIGN SHALL BE INSTALLED BY OTHERS
35. TYPE A2 CURB AND GUTTER PER CITY OF SAN JOSE STANDARD DRAWING R1
36. MODIFIED WHEELCHAIR RAMP PER CITY OF SAN JOSE STANDARD DRAWING R-10
37. DETECTABLE WARNING SHALL BE FROM CITY OF SAN JOSE APPROVED MATERIAL LIST.

GRADING LEGEND

- XX.XX CONC — PROPOSED GRADE
- x 250.62 — EXISTING GRADE
- CONCRETE WALK, 4" CONC. OVER 4" AB
- GRIND/OVERLAY 2" TO 4" EXISTING AC
- PROPOSED LANDSCAPE AREA
- MATCH EXISTING LINE
- NEW AC PAVEMENT, 5" AC OVER 6" BASE COMPACTED TO 95% OF MAXIMUM DRY DENSITY, AS DETERMINED BY ASTM TEST METHOD D 1557
- DENOTES IMPROVEMENTS COMPLETED UNDER SEPARATE PERMIT
- DIRECTION OF SURFACE RUNOFF FLOW
- OVERLAND RELEASE PATH

NOTES

1. CONTRACTOR SHALL PREPARE BUILDING PAD PER RECOMMENDATIONS OUTLINED IN GEOTECHNICAL REPORT
2. ALL GRADING AND COMPACTION OPERATIONS SHALL BE IN CONFORMANCE WITH THE RECOMMENDATIONS OUTLINED IN GEOTECHNICAL REPORT

BIOTREATMENT SOIL REQUIREMENTS

- BIORETENTION SOIL MIX SHALL MEET THE REQUIREMENTS AS OUTLINED IN APPENDIX C OF THE C.3 STORM WATER HANDBOOK AND SHALL BE A MIXTURE OF FINE SAND AND COMPOST MEASURED ON A VOLUME BASIS OF 60–70% SAND AND 30–40% COMPOST. CONTRACTOR TO REFER TO APPENDIX C FOR SAND AND COMPOST MATERIAL SPECIFICATIONS. CONTRACTOR MAY OBTAIN A COPY OF THE C3 HANDBOOK AT : HTTP://WWW.SANJOSECA.GOV/INDEX.ASPX?NID=1761
- PRIOR TO ORDERING THE BIOTREATMENT SOIL MIX OR DELIVERY TO THE PROJECT SITE, CONTRACTOR SHALL PROVIDE A BIOTREATMENT SOIL MIX SPECIFICATION CHECKLIST, COMPLETED BY THE SOIL MIX SUPPLIER AND CERTIFIED TESTING LAB.

BIORETENTION & FLOW–THROUGH PLANTER NOTES:

1. SEE GRADING PLAN FOR BASIN FOOTPRINT AND DESIGN ELEVATIONS.
2. PLACE 3 INCHES OF COMPOSTED, NON–FLOATABLE MULCH IN AREAS BETWEEN PLANTINGS AND SIDE SLOPES.
3. SEE LANDSCAPE PLAN FOR MULCH, PLANT MATERIALS AND IRRIGATION REQUIREMENTS
4. CURB CUTS SHALL BE A MINIMUM 18" WIDE AND SPACED AT 10' O.C. INTERVALS OR LESS AND SLOPED TO DIRECT STORMWATER TO DRAIN INTO THE BASIN. CURB CUTS SHALL ALSO NOT BE PLACED INLINE WITH OVERFLOW CATCH BASIN. SEE GRADING PLAN FOR MORE DETAIL ON LOCATIONS OF CURB CUTS.
5. A MINIMUM 0.2' DROP BETWEEN STORM WATER ENTRY POINT (I.E. CURB OPENING, FLUSH CURB, ETC.) AND ADJACENT LANDSCAPE FINISHED GRADE.
6. DO NOT COMPACT NATIVE SOIL / SUBGRADE AT BOTTOM OF BASIN. LOOSEN SOIL TO 12" DEPTH.

- II.B. PHONE NUMBER OF CONTACT: 1–916–286–5235
- II.C. EMAIL: CJOHNSON@DSRG.COM
- II.D. ADDRESS: DONAHUE SCHRIBER REALTY GROUP, 3501 DEL PASO ROAD, SUITE 100, SACRAMENTO, CA 95835

PROJECT SITE INFORMATION:

1. SOILS TYPE: LEAN CLAY (CL) HYDROLOGIC SOIL TYPE C
2. GROUND WATER DEPTH: >50'
3. NAME OF RECEIVING BODY: SAN TOMAS AQUINAS CREEK
4. FLOOD ZONE: D
5. FLOOD ELEVATION (IF APPLICABLE):

SOURCE CONTROL MEASURES:

1. CONNECT THE FOLLOWING FEATURES TO SANITARY SEWER:
   a. COVERED TRASH/ RECYCLING ENCLOSURES.
2. MAINTENANCE (PAVEMENT SWEEPING, CATCH BASIN CLEANING, GOOD HOUSEKEEPING).
3. STORM DRAIN LABELING.

SITE DESIGN MEASURES:

1. PROTECT EXISTING TREES, VEGETATION AND SOIL
2. DIRECT RUNOFF FROM ROOFS, SIDEWALKS, PATIOS TO LANDSCAPED AREAS.

TABLE 1
ROUTINE MAINTENANCE ACTIVITIES FOR BIORETENTION AREAS

NO.	MAINTENANCE TASK	FREQUENCY OF TASK
1	REMOVE OBSTRUCTIONS, WEEDS, DEBRIS AND TRASH FROM BIORETENTION AREA AND ITS INLETS AND OUTLETS; AND DISPOSE OF PROPERLY.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
2	INSPECT BIORETENTION AREA FOR STANDING WATER. IF STANDING WATER DOES NOT DRAIN WITHIN 2-3 DAYS, TILL AND REPLACE THE SURFACE BIOTREATMENT SOIL WITH THE APPROVED SOIL MIX AND REPLANT.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
3	CHECK UNDERDRAINS FOR CLOGGING. USE THE CLEANOUT RISER TO CLEAN ANY CLOGGED UNDERDRAINS.	QUARTERLY, OR AS NEEDED AFTER STORM EVENTS
4	MAINTAIN THE IRRIGATION SYSTEM AND ENSURE THAT PLANTS ARE RECEIVING THE CORRECT AMOUNT OF WATER (IF APPLICABLE).	QUARTERLY
5	ENSURE THAT THE VEGETATION IS HEALTHY AND DENSE ENOUGH TO PROVIDE FILTERING AND PROTECT SOILS FROM EROSION. PRUNE AND WEED THE BIORETENTION AREA. REMOVE AND/OR REPLACE ANY DEAD PLANTS.	ANNUALLY, BEFORE THE WET SEASON BEGINS
6	USE COMPOST AND OTHER NATURAL SOIL AMENDMENTS AND FERTILIZERS INSTEAD OF SYNTHETIC FERTILIZERS, ESPECIALLY IF THE SYSTEM USES AN UNDERDRAIN.	ANNUALLY, BEFORE THE WET SEASON BEGINS
7	CHECK THAT MULCH IS AT APPROPRIATE DEPTH (2 - 3 INCHES PER SOIL SPECIFICATIONS) AND REPLENISH AS NECESSARY BEFORE WET SEASON BEGINS.	ANNUALLY, BEFORE THE WET SEASON BEGINS
8	INSPECT THE ENERGY DISSIPATION AT THE INLET TO ENSURE IT IS FUNCTIONING ADEQUATELY, AND THAT THERE IS NO SCOUR OF THE SURFACE MULCH. REMOVE ACCUMULATED SEDIMENT.	ANNUALLY, BEFORE THE WET SEASON BEGINS
9	INSPECT OVERFLOW PIPE TO ENSURE THAT IT CAN SAFELY CONVEY EXCESS FLOWS TO A STORM DRAIN. REPAIR OR REPLACE DAMAGED PIPING.	ANNUALLY, BEFORE THE WET SEASON BEGINS
10	REPLACE BIOTREATMENT SOIL AND MULCH, IF NEEDED. CHECK FOR STANDING WATER, STRUCTURAL FAILURE AND CLOGGED OVERFLOWS. REMOVE TRASH AND DEBRIS. REPLACE DEAD PLANTS.	
11	INSPECT BIORETENTION AREA USING THE ATTACHED INSPECTION CHECKLIST.	ANNUALLY, BEFORE THE WET SEASON

Online form auto-calculates **Impervious Surfaces Total**	e.1. 32,933	e.2. 31,738	e.3. 504	e.4. 32,937
2.f. PERVIOUS SURFACES				
Landscaped Area	704	200	1,900	Total Proposed Pervious Surface (replaced + new)
Pervious Paving				
Green Roof and other Pervious Surfaces				
Online form auto-calculates **Pervious Surfaces Total**	f.1. 704	f.2. 200	f.3. 1,900	f.4. 2,000

2.g. Percentage of Site's Impervious Area Replacement (e.2 ÷ 2.c) X 100: Online form auto-calculates g. 99.10 %

[1] *Proposed Replaced Impervious Surface:* Replacement of an existing impervious surface with another impervious surface.

[2] *Proposed New Impervious Surface:* New impervious surface that will cover an existing pervious surface.

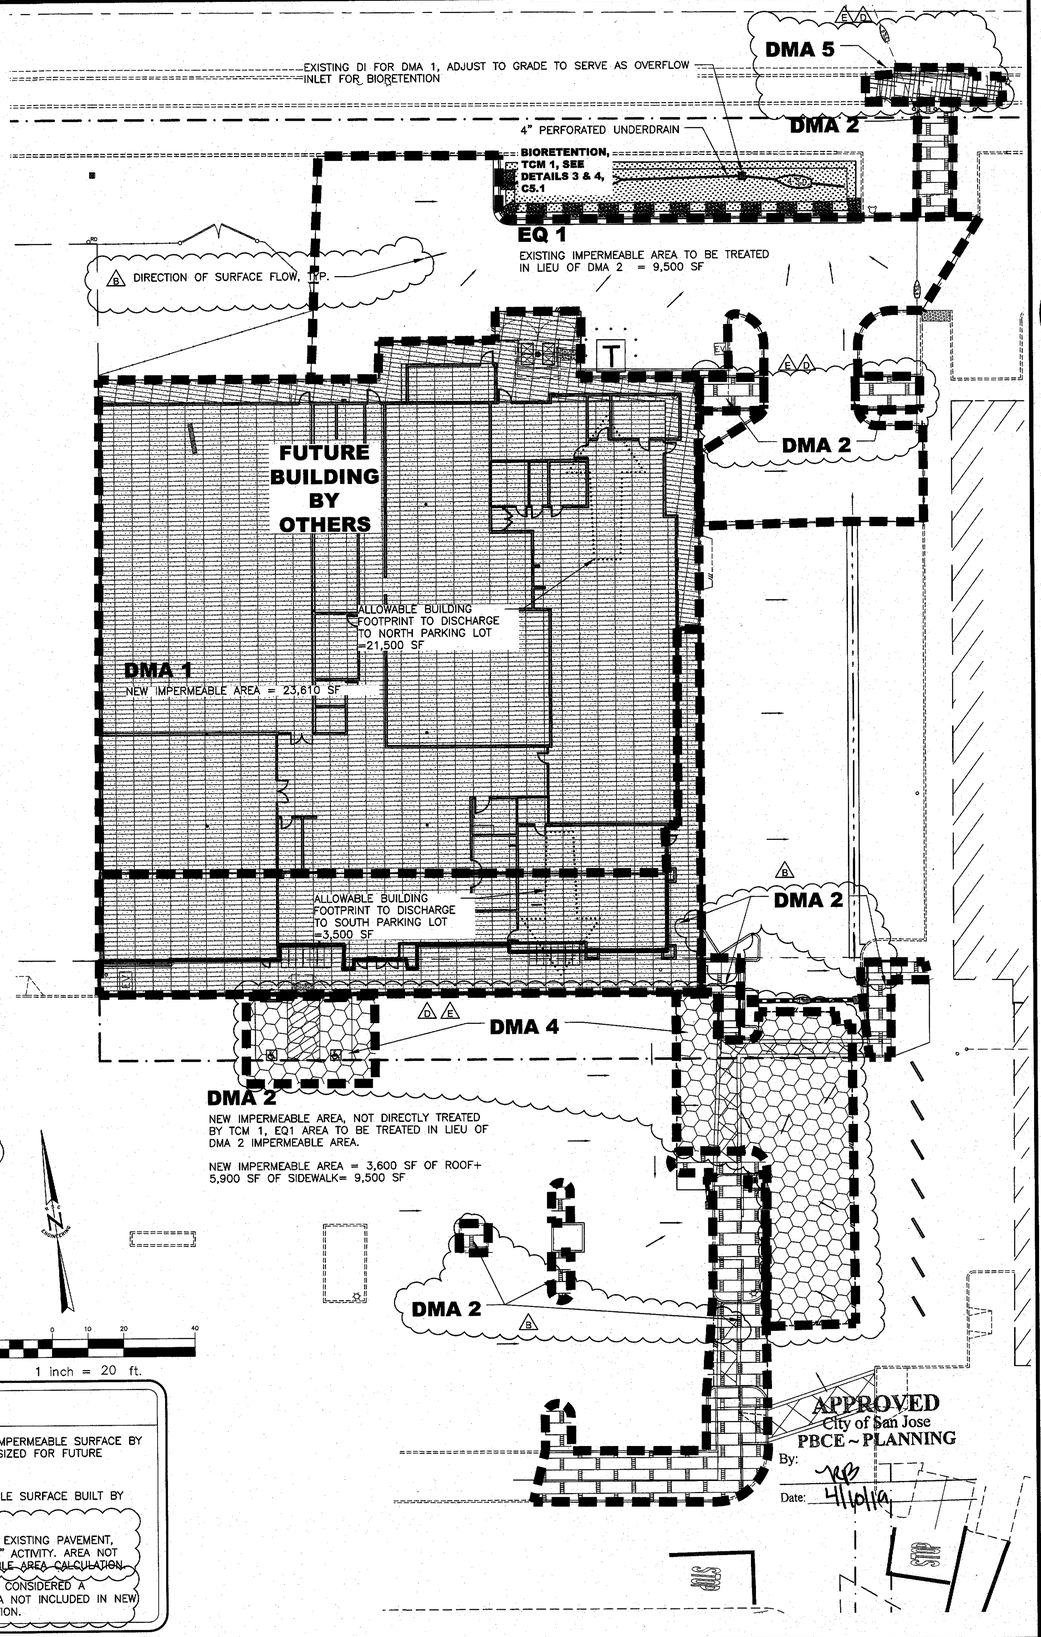
TREATMENT CONTROL MEASURE SUMMARY TABLE:

DMA #	TCM #	Location	Treatment Type	LID or Non-LID	Sizing Method	Drainage Area (s.f.)	Impervious Area (s.f.)	Pervious Area (Permeable Pavement) (s.f.)	Pervious Area (Other) (s.f.)	% Onsite Area Treated by LID or Non-LID TCM	Bioretention Area Required (s.f.)	Bioretention Area Provided (s.f.)	Overflow Riser Height (in)	Storage Depth Required (ft)	Storage Depth Provided (ft)	Comments
1	1	Onsite	Bioretention unlined w/ underdrain	LID	2C. Flow: 4% Method **	25,410	23,610		1,800	72.79%	944	1,350	6	0.5	0.5	
2			Untreated ****	N/A	N/A	9,500	9,500				n/a					Being equivalently treated by EQ-1
EQ-1****	1	Onsite	Bioretention unlined w/ underdrain	LID	2C. Flow: 4% Method **	9,500	9,500			27.21%	380	1,350	6	0.5	0.5	
4		Onsite	Maintenance	N/A	N/A	4,000	4,000			-						Maintenance activity, no treatment required.
5***		Offsite	Maintenance	N/A	N/A	400	400			-						Maintenance activity, no treatment required.
					Totals:	34,910	33,110	0	1,800	100.00%						

Footnotes:
* "Lined" refers to an impermeable liner placed on the bottom of a Bioretention basin or a concrete Flow-Through Planter, such that no infiltration into native soil occurs.
** Sizing for Bioretention Area Required calculated using the 4% Method (Impervious Area x 0.04)
*** Per Chapter 2.3 of the C3 Stormwater Handbook Roadway projects that add new sidewalk along an existing roadway are exempt from Provision C.3.c of the Municipal Stormwater Permit.
**** DMA 2 is not being treated but will be treated by Equivalent Treatment Area EQ-1. Area EQ-1 is equal to or greater than the required treatment area of DMA 2.

STANDARD STORMWATER CONTROL NOTES:

- STANDING WATER SHALL NOT REMAIN IN THE TREATMENT MEASURES FOR MORE THAN FIVE DAYS. TO PREVENT MOSQUITO GENERATION. SHOULD ANY MOSQUITO ISSUES ARISE, CONTACT THE SANTA CLARA VALLEY VECTOR CONTROL DISTRICT (DISTRICT). MOSQUITO LARVICIDES SHALL BE APPLIED ONLY WHEN ABSOLUTELY NECESSARY, AS INDICATED BY THE DISTRICT, AND THEN ONLY BY A LICENSED PROFESSIONAL OR CONTRACTOR. CONTACT INFORMATION FOR THE DISTRICT IS PROVIDED BELOW.
- DO NOT USE PESTICIDES OR OTHER CHEMICAL APPLICATIONS TO TREAT DISEASED PLANTS. CONTROL WEEDS OR REMOVED UNWANTED GROWTH. EMPLOY NON-CHEMICAL CONTROLS (BIOLOGICAL, PHYSICAL AND CULTURAL CONTROLS) TO TREAT A PEST PROBLEM. PRUNE PLANTS PROPERLY AND AT THE APPROPRIATE TIME OF YEAR. PROVIDE ADEQUATE IRRIGATION FOR LANDSCAPE PLANTS. DO NOT OVER WATER.



20 0 10 20 40
1 inch = 20 ft.

LEGEND

- FUTURE NEW OR REPLACED IMPERMEABLE SURFACE BY OTHERS. BIORETENTION WAS SIZED FOR FUTURE BUILDING AND HARDSCAPE.
- NEW OR REPLACE IMPERMEABLE SURFACE BUILT BY THIS PROJECT
- AREA OF GRIND/OVERLAY OF EXISTING PAVEMENT, CONSIDERED A "MAINTENANCE" ACTIVITY. AREA NOT INCLUDED IN NEW IMPERMEABLE AREA CALCULATION.
- AREA OF OFF SITE SIDEWALK CONSIDERED A "MAINTENANCE" ACTIVITY. AREA NOT INCLUDED IN NEW IMPERMEABLE AREA CALCULATION.

IRRIGATION SITE NOTES

1. THE SPRINKLER SYSTEM HAS BEEN DESIGNED AS AN EXTENSION OF THE EXISTING IRRIGATION SYSTEM. ALL NEW PLANTER SHALL BE ADDED TO EXISTING SYSTEM.
2. CONTRACTOR TO ENSURE THAT EXISTING IRRIGATION SYSTEM REMAINS FUNCTIONAL DURING DEMOLITION.
3. CONTRACTOR SHALL REPLACE AND/OR REPAIR IRRIGATION SYSTEM DISTURBED DURING CONSTRUCTION.
4. CONTRACTOR TO TIE NEW VALVES INTO EXISTING CONTROLLER. TEST AND REUSE EXISTING WIRES IF FEASIBLE. CONTRACTOR TO INSTALL NEW WIRES IF NEEDED.

LEGEND:
1. ELECTRIC CONTROL VALVE.
2. RECTANGULAR VALVE BOX W/GREEN BOLT DOWN COVER. HEAT BRAND VALVE STATION NO. ON LID IN 2" HIGH CHARACTERS.
3. CHRISTY I.D. TAG NUMBERED TO MATCH DRAWINGS.
4. FINISH GRADE.
5. UNION FITTING.
6. PVC PIPE TO SPRINKLERS. ANGLE PIPE TO SPECIFIED DEPTH WITH 45° ELLS.
7. COMMON BRICK (2 REQUIRED).
8. COMMON WIRE TO OTHER VALVES ON SAME CONTROLLER.
9. 3/4" CRUSHED ROCK. 8" DEPTH.
10. CONTROL/COMMON WIRES FROM CONTROLLER.
11. PVC SCH. 80 NIPPLE.
12. PVC SxS 90° ELL.
13. DBY BY 3M WIRE SPLICE KIT.
14. MAINLINE FITTING W/SOLVENT WELD OUTLET.

NOTE:
X – 1" IN TURF AREAS
2" IN TURF AREAS

A ELECTRIC REMOTE CONTROL VALVE (DOMESTIC)
SCALE: N.T.S.

LEGEND:
1. POP-UP SPRAY HEAD.
2. WALK OR CURB.
3. PVC SCH. 80 NIPPLE (4" MIN. LENGTH).
4. PVC TxT 90° ELL.
5. LATERAL LINE PIPE AND FITTING.
6. PVC SCH. 40 90° STREET ELL.
7. PVC SCH. 80 NIPPLE (6" LONG).
8. FINISH GRADE.

NOTES:
USE TEFLON TAPE ON ALL MALE PIPE THREADS.

X 1" IN TURF AREAS.
3" IN PLANTING BEDS.

PER MWELO, HEADS MAY BE PLACED AS NOTED ABOVE, PROVIDED THAT HARDSCAPED AREAS DRAIN TOWARDS LANDSCAPED AREAS, AND WITH NO OVERSPRAY. OTHERWISE SETBACK FROM HARDSCAPE 24" IS REQUIRED.

B POP-UP SPRINKLER
SCALE: N.T.S.

IRRIGATION SPRINKLER LEGEND

SYMBOL	BODY DESCRIPTION	NOZZLE DESCRIPTION	RADIUS	FLOW	PSI	PRECIP. RATE (INCHES)	PATTERN
	HUNTER PRO SPRAY PROS-06-CV-R	HUNTER MP2000-180	20	0.74 GPM	40	0.39	HALF
	HUNTER PRO SPRAY PROS-06-CV-R	HUNTER MP2000-90	20	0.40 GPM	40	0.39	QUARTER

1. CONTRACTOR SHALL ADJUST RADIUS AS NEEDED ON ALL SPRAY NOZZLES IN ORDER TO AVOID OVERSPRAY ONTO WALKS AND BUILDINGS AND TO PREVENT SPRAY FROM BEING DIRECTED OUTSIDE THE BOUNDARIES OF THE LANDSCAPE AREA.

IRRIGATION MAINLINE EQUIPMENT

SYMBOL	MANUFACTURER	MODEL	DESCRIPTION
	--	--	EXISTING POINT OF CONNECTION AND WATER METER. SEE CIVIL IMPROVEMENT PLANS FOR MORE INFORMATION. VERIFY LOCATION IN FIELD.
	--	--	EXISTING REDUCED PRESSURE BACKFLOW DEVICE.
	--	--	EXISTING IRRIGATION CONTROLLER. VERIFY LOCATION IN FIELD.
	HUNTER	ICV SERIES	REMOTE CONTROL VALVE. SEE PLAN FOR SIZE. PROVIDE IN VALVE BOX PER DETAIL.

IRRIGATION EQUIPMENT

SYMBOL	SQUARE FOOTAGE	DESCRIPTION
	1012	INSTALL NEW SPRINKLERS AND TIE INTO EXISTING ADJACENT IRRIGATION VALVE.
	270	REVISE EXISTING IRRIGATION SPRINKLERS TO ACHIEVE FULL COVERAGE OF TURF.

IRRIGATION PIPING

SYMBOL	TYPE	DESCRIPTION
	SLEEVE	PVC SCHEDULE 40 – TWICE THE DIAMETER OF THE LINE SIZE MINIMUM OR AS NOTED ON PLAN. INSTALL 24" BELOW FINISHED GRADE. EXTEND 12" PAST END OF PAVING.
A1		INDICATES CONTROLLER LETTER DESIGNATION AND STATION NUMBER
13.0		INDICATES FLOW IN GALLONS PER MINUTE
1"		INDICATES ELECTRIC CONTROL VALVE SIZE
T		INDICATES TYPE OF PLANT MATERIAL BEING IRRIGATED. T = TURF, S = SHRUB/GC. OR INDICATES TWO-WIRE DECODER SIZE AND GROUP NUMBER
L		INDICATES HYDROZONE AREA. L = LOW, M = MODERATE, H = HIGH

EXISTING IRRIGATION NOTES

1. CAUTION. EXISTING IRRIGATION SYSTEM EXISTS. PROVIDE MEASURES TO PROTECT EXISTING EQUIPMENT. PROVIDE ALL ADJUSTMENTS TO EXISTING EQUIPMENT NECESSARY TO ENSURE HEAD-TO-HEAD COVERAGE.
2. IT SHALL BE THE RESPONSIBILITY OF THE IRRIGATION CONTRACTOR TO MAKE THE FINAL HOOK-UP FROM THE VALVES TO THE AUTOMATIC CONTROLLER.
3. THIS DESIGN IS DIAGRAMMATIC. ALL PIPING, VALVES, ETC. SHOWN WITHIN THE PAVED AREAS IS FOR DESIGN CLARIFICATION ONLY AND SHALL BE INSTALLED IN PLANTING AREAS. AVOID ANY CONFLICTS BETWEEN THE SPRINKLER SYSTEM, PLANTING AND ARCHITECTURAL FEATURES.
4. THE IRRIGATION CONTRACTOR SHALL FLUSH AND ADJUST ALL SPRINKLER HEADS FOR OPTIMUM PERFORMANCE AND TO PREVENT OVERSPRAY ONTO THE WALKS, ROADWAYS AND/OR BUILDINGS AS MUCH AS POSSIBLE. THIS SHALL INCLUDE SELECTING THE BEST DEGREE OF ARC TO FIT THE EXISTING SITE CONDITIONS AND TO THROTTLE THE FLOW CONTROL AT EACH VALVE TO OBTAIN THE OPTIMUM OPERATING PRESSURE FOR EACH SYSTEM.
5. DO NOT WILLFULLY INSTALL THE SPRINKLER SYSTEM AS SHOWN ON THE DRAWINGS WHEN IT IS OBVIOUS IN THE FIELD THAT OBSTRUCTIONS, GRADE DIFFERENCES OR DIFFERENCES IN THE AREA DIMENSIONS EXIST THAT MIGHT NOT HAVE BEEN CONSIDERED IN THE ENGINEERING. SUCH OBSTRUCTIONS OR DIFFERENCES SHOULD BE BROUGHT TO THE ATTENTION OF THE OWNER'S AUTHORIZED REPRESENTATIVE. IN THE EVENT THIS NOTIFICATION IS NOT PERFORMED, THE IRRIGATION CONTRACTOR SHALL ASSUME FULL RESPONSIBILITY FOR ANY REVISIONS NECESSARY.
6. INSTALL ALL PIPE MATERIALS AND EQUIPMENT AS SHOWN IN THE DETAILS. USE TEFLON TAPE OR TEFLON PIPE DOPE ON ALL PVC MALE PIPE THREADS ON ALL SPRINKLER SWING JOINT AND VALVE ASSEMBLIES.
7. IT IS THE RESPONSIBILITY OF THE IRRIGATION CONTRACTOR TO FAMILIARIZE HIMSELF WITH ALL GRADE DIFFERENCES, LOCATION OF WALLS, RETAINING WALLS, ETC. HE SHALL COORDINATE HIS WORK WITH THE GENERAL CONTRACTOR AND OTHER SUB-CONTRACTORS FOR THE LOCATION AND THE INSTALLATION OF PIPE SLEEVES THROUGH WALLS, UNDER ROADWAYS, PAVING, STRUCTURES, ETC.
8. IN ADDITION TO THE CONTROL WIRE SLEEVES SHOWN ON THE DRAWINGS, THE IRRIGATION CONTRACTOR SHALL BE RESPONSIBLE FOR THE INSTALLATION OF CONTROL WIRE SLEEVES OF SUFFICIENT SIZE UNDER ALL OTHER PAVED AREAS.
9. THE IRRIGATION CONTRACTOR SHALL TIE INTO THE EXISTING MAIN LINE AT THE APPROXIMATE POINT SHOWN ON THE PLAN. WHEN DIGGING, AVOID HITTING EXISTING PIPES. IF A PIPE IS BROKEN, IT IS THE CONTRACTOR'S RESPONSIBILITY TO REPAIR THE DAMAGED SECTION. IF NECESSARY, EXISTING IRRIGATION LATERALS MAY NEED TO BE CUT AND CAPPED.
10. IT IS THE RESPONSIBILITY OF THE IRRIGATION CONTRACTOR TO DETERMINE THE SUITABILITY OF THE EXISTING BACKFLOW PREVENTER AND LOCATION OF ELECTRICAL CONTROLLER.

PLANTING SITE NOTES

1. SEE TREE TABLE FOR TREES TO BE REMOVED. ALL OTHER TREES SHALL BE PROTECTED IN PLACE.
2. SEE CIVIL PLANS FOR EXISTING TURF AND SHRUBS TO BE REMOVED.
3. CONTRACTOR SHALL REPLACE AND/OR REPAIR ANY EXISTING PLANT MATERIAL DISTURBED DURING CONSTRUCTION.

1. GROUND COVER PLANT MATERIAL FROM 1 GALLON CONTAINER, FLAT, OR LINER. TRIANGULAR SPACING. SEE PLANTING PLAN AND LEGEND.
2. TOP DRESSING PER PLANTING NOTES.
3. MINIMUM 2"–3" HIGH WATER BASIN.
4. AMENDED SOIL PER PLANTING NOTES.
5. SCARIFIED SUB–GRADE. SEE PLANTING NOTES.

NOTES:
A. PLANT GROUND COVER AT EQUAL SPACING PER PLANT LEGEND.
B. PROVIDE GROUND COVER UP TO THE EDGE OF SOIL BERMS AT ALL TREES AND SHRUBS.

D GROUND COVER PLANTING
SCALE: N.T.S.

GENERAL PLANTING NOTES

1. CONTRACTOR SHALL VERIFY ALL SITE CONDITIONS PRIOR TO BIDDING AND CONSTRUCTION.
2. ALL TREES SHALL BE TAGGED AND/OR APPROVED BY OWNER & LANDSCAPE ARCHITECT. NURSERY SOURCES SHALL BE AT OWNER/LANDSCAPE ARCHITECT'S DISCRETION.
3. ALL SHRUBS AND GROUND COVER AREAS SHALL BE TOP DRESSED WITH A THREE (3") INCH LAYER "SHREDDED" CEDAR BARK PER PLANS AND SPECIFICATIONS.
4. ALL TREES (EXCEPT IN TURF AREAS), SHRUBS AND GROUND COVERS (INCLUDING THOSE ON SLOPES) SHALL HAVE WATERING BASINS BUILT UP AT LEAST TWO (2) TIMES THE DIAMETER OF THE ROOTBALL. TREE AND SHRUB BASINS SHALL BE A MINIMUM OF THREE (3") INCHES HIGH. GROUND COVER BASINS SHALL BE A MINIMUM OF TWO (2") INCHES HIGH.
5. ALL PLANT MATERIALS SHALL BE IMMEDIATELY "HAND" WATERED AFTER PLANTING AND CONTINUALLY MONITORED AND SUPPLEMENTALLY "HAND" WATERED DURING THE CONSTRUCTION AND CONTRACT MAINTENANCE PHASES AS NEEDED.
6. SUBSTITUTION OF PLANT MATERIALS WILL NOT BE ACCEPTABLE UNLESS OTHERWISE APPROVED BY THE LANDSCAPE ARCHITECT.
7. ALL PLANT MATERIALS DELIVERED TO THE SITE MUST HAVE AT LEAST ONE OF EACH PLANT TYPE TAGGED WITH THE GENUS AND SPECIES CLEARLY MARKED. PLANTS OF THE SAME GENUS TYPE WITH DIFFERENT SPECIES TYPE WITH DIFFERENT COLOR OR SPECIES VARIATION MUST HAVE ALL OF EACH DIFFERENT SPECIES CLEARLY TAGGED.
8. ALL PLANT HOLES SHALL BE DUG TO A MINIMUM OF TWO (2) TIMES THE PLANT CONTAINER WIDTH (WIDTH ONLY, NOT DEPTH) AND ALL VERTICAL SIDES IN THE HOLES SHALL BE SHOVEL SCORED. IN NO CASE SHALL SMOOTHLY EXCAVATED SIDES BE ALLOWED FOR PLANTING.
9. PRIOR TO PLANTING OF ANY MATERIALS, COMPACTED SOILS SHALL BE TRANSFORMED INTO A FRIABLE CONDITION. ON ENGINEERED SLOPES, ONLY AMENDED PLANTING HOLES NEED TO MEET THIS REQUIREMENT. "FRIABLE" MEANS A SOIL CONDITION THAT IS EASILY CRUMBLED OR LOOSELY COMPACTED DOWN TO A MINIMUM PLANTING DEPTH PER PLANTING MATERIAL WHEREBY THE ROOT STRUCTURE OR NEWLY PLANTED MATERIAL WILL BE ALLOWED TO SPREAD UNIMPEDED.
10. PREPARE ALL PLANTING AREAS WITH FOUR (4) CUBIC YARDS/1,000 S.F. OF NITROLIZED ORGANIC SOIL CONDITIONER. PROVIDE 200 LBS./1,000 S.F. OF GRO–POWER 5–3–1 FERTILIZER. ROTOTILL EVENLY TO A DEPTH OF SIX (6") INCHES INTO EXISTING SOIL.
11. PROVIDE SOILS FERTILITY TEST, AS PER SPECIFICATIONS, TO LANDSCAPE ARCHITECT PRIOR TO COMMENCING WITH WORK. PREPARE ALL PLANTING AREAS WITH THE MINIMUM OF SOIL CONDITIONER AND FERTILIZER AS STATED IN NOTE #10 ABOVE, OR AS PER RECOMMENDATIONS OF SOILS FERTILITY TEST, WHICHEVER IS GREATER. ROTOTILL EVENLY TO A DEPTH OF SIX (6") INCHES INTO EXISTING SOIL.
12. IF ANY PORTION OF THE SITE IS LIME TREATED, THE LANDSCAPE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ARCHITECT IN WRITING. DO NOT PROCEED WITH ANY WORK IN LIME TREATED SOIL. TYPICALLY, LIME TREATED SOILS ABOVE 1% RESULT IN PH VALUES AND COMPACTION THAT ARE DELETERIOUS TO PLANT MATERIAL, EVEN WITH AGGRESSIVE AMENDMENTS AND CONDITIONERS. THESE LIME TREATED SOILS MUST BE REMOVED AND REPLACED WITH IMPORT SOILS OF SUITABLE CHEMISTRY AND COMPATIBLE TEXTURE. THE LANDSCAPE CONTRACTOR SHALL NOT PROCEED WITH ANY WORK IN LIME TREATED AREAS UNTIL A RESOLUTION IS PROVIDED IN WRITING.
13. ALL LANDSCAPE BERMS ARE TO BE GRADED SIX (6") INCHES HIGHER THAN THE HIGHEST CONTOUR SHOWN ON PLANS, TYPICAL.
14. ALL LANDSCAPE AREAS WITH A SLOPE OF TWO AND A HALF TO ONE (2–1/2:1) OR GREATER MUST HAVE JUTE NETTING INSTALLED FOR EROSION CONTROL.
15. SHRUB AND GROUND COVER AREAS SHALL BE TREATED WITH CHIPCO RONSTAR 'G' PRE–EMERGENT HERBICIDE. PROVIDE PER MANUFACTURER'S SPECIFICATIONS.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and system-level interoperability.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is A+ Certified when ordered with DTL® controls marked by a trademark superscript. DTL DLL equipped luminaires meet the A+ specification for luminaire to photocontrol interoperability1
- This luminaire is part of an A+ Certified solution for ROAM® or XPoint™ Wireless control networks, providing out-of-the-box control compatibility with simple commissioning, when ordered with drivers and control options marked by a trademark superscript.

To learn more about A+, visit www.acuitybrands.com/aplus.

See ordering tree for details.

A+ Certified Solutions for ROAM require the order of one ROAM node per luminaire. Sold Separately: Link to Roam; Link to DTL DLL

				DSSTXD Textured sandstone

Shipped separately	
RBPW	Retrofit back plate[3]
VG	Vandal guard[12]
WG	Wire guard[12]

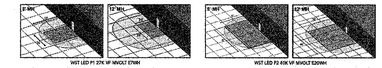
Accessories	
WSTHCSBW DDBXD U	Remote Surface - mounted back box
WSBWIRE DDBXD	Surface - mounted back box
WSPWIRE DDBXD	Recessed back box

NOTES

1 MVOLT driver operates on any line voltage from 120-277V (50/60 Hz).
2 Single fuse (SF) requires 120V, 277V or 347V. Double fuse (DF) requires 208V, 240V or 480V.
3 Not available as a separate accessory; see accessories information.
4 Top conduit entry standard.
5 Need to specify 120, 208, 240 or 277 voltage.
6 Photocell ordered and shipped as a separate line item from Acuity Brands Controls. Shorting Cap included.
7 Not available with VG or WG. See PER Table.
8 Reference Motion Sensor table.
9 Not available with Emergency options, PE or PER options.
10 Not available with 347/480V.
11 Battery pack rated for -20°F to 40°C.
12 Comes with PBBW.
13 Warranty period is 5 years.
14 Not available with BBW.
15 Must order with fixture; not an accessory.

Emergency Battery Operation

The emergency battery backup is integral to the luminaire — no external housing required! This design provides reliable emergency operation while maintaining the aesthetics of the product.
All emergency backup configurations include an independent secondary driver with an integral relay to immediately detect AC power loss, meeting interpretations of NFPA 70/NEC 2008 - 700.16.
The emergency battery will power the luminaire for a minimum duration of 90 minutes (maximum duration three hours) from the time supply power is lost, per International Building Code Section 1006 and NFPA 101 Life Safety Code Section 7.9, provided luminaires are mounted at an appropriate height and illuminate an open space with no major obstructions.
The examples below show illuminance of 1 fc average and 0.1 fc minimum of the P1 power package and VF distribution product in emergency mode.



Performance Data

Lumen Ambient Temperature (LAT) Multipliers
Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

Ambient	Typical WST LED
0°C	1.03
10°C	1.03
25°C	1.01
30°C	1.00
40°C	0.98

Projected LED Lumen Maintenance
Values calculated according to IESNA TM-21-11 methodology and valid up to 40°C.

Electrical Load

FEATURES & SPECIFICATIONS

INTENDED USE
The classic architectural shape of the WST LED was designed for applications such as hospitals, schools, malls, restaurants, and commercial buildings. The long life LEDs and driver make this luminaire nearly maintenance-free.

CONSTRUCTION
The single-piece die-cast aluminum housing integrates secondary heat sinks to optimize thermal performance. The driver is mounted to the rear housing for ease of service. The LEDs are thermally pad to direct contact with the casting for a low operating temperature and long life. The die-cast door frame is fully gasketed with a one-piece solid silicone gasket to keep out moisture and dust, providing a IP65 rating for the luminaire.

FINISH
Exterior parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a minimum 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling. Standard Super Durable colors include dark bronze, black, natural aluminum, sandstone and white. Available in textured and non-textured finishes.

OPTICS
The high efficiency reflector optics allow the light engine to be recessed within the luminaire, providing visual comfort, superior distribution, uniformity, and spacing in wall-mount applications. The WST LED has zero uplight and qualifies as a Nightdriver Friendly™ product, meaning it is consistent with the LEED® and Green Globes™ criteria for eliminating wasteful uplight.

ELECTRICAL
Light engine(s) consist of 98 high-efficacy LEDs mounted to a metal core circuit board and integral aluminum heat sinks to maximize heat dissipation and promote long life (50,000 hrs at 40°C, L87). Class 2 electronic driver has a power factor >90%, THD <20%. Easily-serviceable surge protection device meets a minimum Category B (per ANSI/IEEE C62.41.2).

INSTALLATION
Included universal mounting plate with integral mounting support arms allows the fixture to hinge down for easy access while making wiring connections.

LISTINGS
CSA certified to U.S. and Canadian standards. Luminaire is IP65 rated. PIR and back box options are rated for wet location. Rated for -30°C to 40°C ambient.

DesignLights Consortium® (DLC) Premium qualified product. Not all versions of this product may be DLC Premium qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.

WARRANTY
5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/CommercialWarrantyTerms_en_LithoWire.aspx.

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C. Specifications subject to change without notice.

PLANNING DIRECTOR'S HEARING AGENDA

Wednesday, April 10, 2019

9:00 a.m.
Council Chambers
City Hall

200 East Santa Clara Street
San José, California 95113-1905

Hearing Officer

Timothy Rood, Division Manager
on behalf of

Rosalynn Hughey, Director
Planning, Building and Code Enforcement

NOTICE

To request an accommodation for City-sponsored meetings or events or an alternative format for printed materials, please call Danielle Buscher at 408-535-7868 or 408-294-9337 (TTY) at least three business days before any meeting or event. If you requested such an accommodation, please identify yourself to the technician seated at the staff table. If you did not call in advance but now need assistance, please see the technician.

NOTICE TO THE PUBLIC

1. CALL TO ORDER

Good morning, we are calling to order the Planning Director's Hearing of **April 10, 2019**. My name is ***Timothy Rood*** and I am the Hearing Officer for today's agenda on behalf of and delegated by the Director of Planning, Building and Code Enforcement Rosalynn Hughey.

Please note the following:

- Please turn off all cell phones.
- Copies of the agenda are available on the tables by the doors for your convenience.
- A parking validation machine for the garage under City Hall is located at the rear of the chambers.

The hearing procedure and order of input will be as follows:

1. I will identify each project as described on the agenda.
2. For those items on the Consent Calendar, I will ask if anyone wishes to speak on the item. If a separate discussion is warranted, I will move the item to the Public Hearing portion of the agenda. If a separate discussion is not needed, the item will remain on the Consent Calendar for approval.
3. For those items listed under Public Hearing, I will ask staff to provide a brief report.
4. The applicant or their representative will have up to five minutes to speak at the microphone and should identify themselves by stating their name for the record. If you do not wish to speak, please simply wave from the audience.
5. After the applicant or their representative has spoken, any member of the public who wishes to speak on the item may provide testimony, up to two minutes per speaker, either for or against the project. All speakers are required to state their name for the record.
6. Following comments from the public, the applicant may make additional remarks for up to five minutes.
7. I will then close the public hearing, and I may ask staff to answer questions, respond to comments made by the applicant or the public, or further discuss the item. I will take action on the item.

If you challenge these land use decisions in court, you may be limited to raising only those issues you or someone else raised at this public hearing or in written correspondence delivered to the City at, or prior to, the public hearing.

The Planning Director's actions on agenda items will be final when the permit is signed and mailed, unless the permit or the environmental clearance determination is appealed. The Planning Director's actions on the permits are appealable in accordance with the requirements of Title 20 of the Municipal Code (Zoning Ordinance). The Planning Director's actions on the environmental review for the permits under the California Environmental Quality Act (CEQA) are separately appealable in accordance with the requirements of Title 21 of the Municipal Code (Environmental Clearance).

The City of San Jose is committed to open and honest government and strives to consistently meet the community's expectations by providing excellent service, in a positive and timely manner, and in the full view of the public. The City Code of Ethics may be viewed on-line at http://www.sanjoseca.gov/documentcenter/view/3818

All public records relating to an open session item on this agenda, which are not exempt from disclosure pursuant to the California Public Records Act, that are distributed to a majority of the legislative body will be available for public inspection at the Planning, Building and Code Enforcement at San José City Hall, 200 E. Santa Clara Street, San José, CA 95113 at the same time that the public records are distributed or made available to the legislative body.

AGENDA
ORDER OF BUSINESS

2. DEFERRALS

Any item scheduled for hearing this morning for which deferral to a future meeting date is being requested will be moved to this portion of the agenda and considered on the matter of deferral. A list of staff recommended deferrals is available on the table. I will identify any items to be deferred and ask for comments from the audience. If you want to change any of the deferral dates or speak to the question of deferring these or any other items, you should say so at this time. I will now open the public hearing. The following items are proposed for deferral.

No Items.

The matter of Deferrals is now closed.

3. CONSENT CALENDAR

NOTICE TO THE PUBLIC
Consent calendar items are considered to be routine and will be considered in one action. There will be no separate discussion of these items unless a request is made by the staff or the public to have an item removed from the consent calendar and considered separately.

a. **H18-008** Site Development Permit to allow a partial demolition and construction of a new 40,000-square foot addition to an existing retail building (Building H Westgate West Shopping Center), site improvements, and the removal of two trees on an approximately 4.03-gross acre site in the CG Commercial General Zoning District located on the ast side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (5365 Prospect Road). (DS Westgate West LP, Owner). Council District: 1. CEQA: Mitigated Negative Declaration for the Westgate West Project.

PROJECT MANAGER, *RHONDA BUSS*

Staff Recommendation: Consider the Mitigated Negative Declaration for the Westgate West Project in accordance with CEQA. Approve a Site Development Permit as described above.

b. **PD18-048** Planned Development Permit to extend the existing lobby area up to 516 square feet by enclosing the existing covered landscape areas adjacent to the existing entryway for an existing apartment complex on a 2.08-gross acre site located on Block 4 between S. Third and S. Fourth Streets at Paseo de San Antonio (201 S. 4th Street). (SFC Residential Partners, Owner). Council District: 3. CEQA: Exempt pursuant to CEQA Guidelines Section 15301(e) for Existing Facilities.

PROJECT MANAGER, *ANGELA WANG*

Staff Recommendation: Consider the Exemption in accordance with CEQA. Approve a Planned Development Permit as described above.

c. **PDA12-019-03** Planned Development Permit Amendment to allow the construction of a 3-story, 133,107-square foot parking structure with 406 parking spaces at the northeast corner of Highline Drive and Champions Drive (APN 230-46-081) and one minor change to the parking lot between Building 4 and Amenity Building 2 located at the southwest cornerof Coleman Avenue and Aviation Avenue (1149 Coleman Drive)). (Hunter/Storm, LLC, Owner). Council District: 3. CEQA: Determination of Consistency with the FMC/Coleman Avenue Environmental Impact Report (SCH# 1999122059), the Airport West Stadium and Great Oaks Place Project Environmental Impact Report (SCH# 2009052053), the Envision San Jose 2040 General Plan Final Environmental Impact Report (SCH# 2009072096), the Envision San Jose 2040 General Plan Final Supplemental Environmental Impact Report (SCH# 2009072096), and addenda thereto.

PROJECT MANAGER, *ANGELA WANG*

Staff Recommendation: Consider the Determination of Consistency with the FMC/Coleman Avenue Environmental Impact Report (SCH# 1999122059), the Airport West Stadium and Great Oaks Place Project Environmental Impact Report (SCH# 2009052053), the Envision San Jose 2040 General Plan Final Environmental Impact Report (SCH# 2009072096), the Envision San Jose 2040 General Plan Final Supplemental Environmental Impact Report (SCH# 2009072096), and addenda thereto in accordance with CEQA. Approve a Planned Development Permit Amendment as described above.

The Consent Calendar is now closed.

4. PUBLIC HEARING

No Items.

5. ADJOURNMENT

This concludes the Planning Director's Hearing for April 10, 2019. Thank you.

CITY OF SAN JOSÉ CODE OF CONDUCT FOR PUBLIC MEETINGS IN THE COUNCIL CHAMBERS AND COMMITTEE ROOMS

The Code of Conduct is intended to promote open meetings that welcome debate of public policy issues being discussed by the City Council, Redevelopment Agency Board, their Committees, and City Boards and Commissions in an atmosphere of fairness, courtesy, and respect for differing points of view.

1. Public Meeting Decorum:
   a) Persons in the audience will refrain from behavior which will disrupt the public meeting. This will include making loud noises, clapping, shouting, booing, hissing or engaging in any other activity in a manner that disturbs, disrupts or impedes the orderly conduct of the meeting.
   b) Persons in the audience will refrain from creating, provoking or participating in any type of disturbance involving unwelcome physical contact.
   c) Persons in the audience will refrain from using cellular phones and/or pagers while the meeting is in session.
   d) Appropriate attire, including shoes and shirts are required in the Council Chambers and Committee Rooms at all times.
   e) Persons in the audience will not place their feet on the seats in front of them.
   f) No food, drink (other than bottled water with a cap), or chewing gum will be allowed in the Council Chambers and Committee Rooms, except as otherwise pre-approved by City staff.
   g) All persons entering the Council Chambers and Committee Rooms, including their bags, purses, briefcases and similar belongings, may be subject to search for weapons and other dangerous materials.
2. Signs, Objects or Symbolic Material:
   a) Objects and symbolic materials, such as signs or banners, will be allowed in the Council Chambers and Committee Rooms, with the following restrictions:
      - No objects will be larger than 2 feet by 3 feet.
      - No sticks, posts, poles or other such items will be attached to the signs or other symbolic materials.
      - The items cannot create a building maintenance problem or a fire or safety hazard.
   b) Persons with objects and symbolic materials such as signs must remain seated when displaying them and must not raise the items above shoulder level, obstruct the view or passage of other attendees, or otherwise disturb the business of the meeting.
   c) Objects that are deemed a threat to persons at the meeting or the facility infrastructure are not allowed. City staff is authorized to remove items and/or individuals from the Council Chambers and Committee Rooms if a threat exists or is perceived to exist. Prohibited items include, but are not limited to: firearms (including replicas and antiques), toy guns, explosive material, and ammunition; knives and other edged weapons; illegal drugs and drug paraphernalia; laser pointers, scissors, razors, scalpels, box cutting knives, and other cutting tools; letter openers, corkscrews, can openers with points, knitting needles, and hooks; hairspray, pepper spray, and aerosol containers; tools; glass containers; and large backpacks and suitcases that contain items unrelated to the meeting.

CITY OF SAN JOSÉ CODE OF CONDUCT FOR PUBLIC MEETINGS IN THE COUNCIL CHAMBERS AND COMMITTEE ROOMS (CONT'D)

3. Addressing the Council, Redevelopment Agency Board, Committee, Board or Commission:

   a) Persons wishing to speak on an agenda item or during open forum are requested to complete a speaker card and submit the card to the City Clerk or other administrative staff at the meeting.

   b) Meeting attendees are usually given two (2) minutes to speak on any agenda item and/or during open forum; the time limit is in the discretion of the Chair of the meeting and may be limited when appropriate. Applicants and appellants in land use matters are usually given more time to speak.

   c) Speakers should discuss topics related to City business on the agenda, unless they are speaking during open forum.

   d) Speakers' comments should be addressed to the full body. Requests to engage the Mayor, Council Members, Board Members, Commissioners or Staff in conversation will not be honored. Abusive language is inappropriate.

   e) Speakers will not bring to the podium any items other than a prepared written statement, writing materials, or objects that have been inspected by security staff.

   f) If an individual wishes to submit written information, he or she may give it to the City Clerk or other administrative staff at the meeting.

   g) Speakers and any other members of the public will not approach the dais at any time without prior consent from the Chair of the meeting.

Failure to comply with this Code of Conduct which will disturb, disrupt or impede the orderly conduct of the meeting may result in removal from the meeting and/or possible arrest.

5th Review Letter

SITE ADDRESS: 5365 Prospect Road

RE.: File No. H18-008: Site Development Permit to allow a partial demolition and construction of a new 40,000-square foot addition to an existing retail building, Building H (Westgate West Shopping Center), and site improvements on an 4.03-gross acre site zoned CG Commercial General.

Zoning Consistency

The subject site is located in the CG Commercial General Zoning District. This district allows for a full range of retail and commercial uses. The proposed project use is consistent with the Zoning designation for the subject site based on §20.40.100 and the proposed project description. Please identify all property lines and setbacks on the Site Plan as identified below.

a. Setbacks:

    i. Side, interior, none

Analysis: Please dimension the right side setback on sheet, we calculated approximately, 143 feet which is consistent. Please verify as this will need to be included in the draft permit.

b. Parking: Please provide a table identifying the information below.

    The standard parking ratios below may be used. This is based upon the total square footage of the shopping center. When calculated, the square footage on Set A-1 does not comport with the square footages in the table on A-2. ***Please clarify the total amount of square footage, and update the table if needed.***

    i. Vehicle: 1 parking space per 225-square feet of floor area for Neighborhood shopping center (minimum 100,000 sq. ft. in size)

    ii. Motorcycle: 1 motorcycle space per 20 code required auto parking spaces. Please see the link for motorcycle parking information.

Analysis: For this area of work, please clarify if the motorcycle parking is based off of net or gross square footages. If it is gross, then 8 motorcycle parking spaces required and 9 are

Environmental Review - California Environmental Quality Act (CEQA)

The Administrative Draft Initial Study is in process. The Environmental Project Manager is Adam Petersen please contact him at adam.petersen@sanjoseca.gov for any environmental questions.

Comments from Other Departments/Divisions and Agencies

Attached is a memorandum from other departments/divisions and outside agencies as indicated below. Please carefully review the memos, as they contain essential information needed to successfully and efficiently move your project through the Planning entitlement process. As required, comments contained in the attached memos must be incorporated into the revised plan sets. Concerns about any of these issues should be brought to my attention so that I can coordinate with appropriate City staff on your behalf.

a. Building – No comment
b. Fire – To be forwarded upon receipt
c. Public Works – Comments have been forwarded to the engineer and are attached.

Community Outreach

At this time a community meeting will not be required, but this is subject to change if significant public interest is generated.

Resubmittal Fees

Pursuant to the Planning Application Filing Fee Schedule. This is the 5th review and there is a 30% Supplemental Review Fee for each subsequent round of review after 3 reviews. Therefore, this and any future rounds of review are subject to the Supplemental Review Fee. So please be sure to carefully review and address each item in this letter.

Next Steps

Please be advised that this summary does not constitute a final review. Additional comments may be provided upon review of any additional information and plan revisions submitted in response to this letter. In order to facilitate the development review process, **please include a detailed response letter with your resubmittal** that addresses all items contained in this letter and attached memos. Additionally, please submit six (six) 24" x 36" size revised plans, three (3) 11"x17" size plans, and a PDF. Please individually roll all 24" x 36" hard copies.

Should you have any questions, you may contact me at rhonda.buss@sanjoseca.gov or (408) 535-3887. You may also contact the Supervising Planner overseeing this project, John Tu at John.Tu@sanjoseca.gov.

We look forward to continuing to work with you and your team on your project in San Jose.

Sincerely,

Rhonda Buss

REGARDING SITE ADDRESS: 5365 Prospect Road
File No. H18-008 Construction of a new 40,000 sf commercial shell
MCG Project No. 17.269.10

Dear Rhonda:

Please find below the responses to the 5th Review Letter dated February 11, 2019:

Zoning Consistency

a. Setbacks: i. Side, Interior, none

The additional setback dimensions have been added to Sheet A-2.2.

b. Parking:

Building square footages have been revised to match on Sheets A-1 and A-2. The table on A-2 is correct.

The table on Sheet A-2 has been adjusted for the motorcycle parking calculation.

Design Guidelines Consistency

a. Landscaping

Perimeter Landscaping

The height of the existing screen wall is approximately 6' tall. The dimension has been added to Civil Sheet C2.0, C3.0 and the landscape exhibit as requested. Cobble as previously shown on the exhibit has been replaced with Flower Carpet Red Rose

Internal Landscaping

Plan Clarifications and Required Additional Information

Sheet A-2: FAR calculations have been added for Parcel 1 and Parcel 7

Sheet LP-3.0:

Sheet LP-1.0 & LP-1.3

- Flower Carpet Red Rose has been shown in the planter area between the existing 6' tall screen wall and Grave Ave.

Sheet LP-1.0 thru LP-1.3

- The tree information table has been updated to reflect the replacement of 2 existing trees with (4) 24 inch box trees, in accordance with the tree replacement mitigation table.

Yours truly,
MCG ARCHITECTURE

Memorandum

TO: Rhonda Buss
Planning and Building

FROM: Michelle Kimball
Public Works

SUBJECT: **FINAL RESPONSE TO DEVELOPMENT APPLICATION**

DATE: 02/12/19

PLANNING NO.:	H18-008
DESCRIPTION:	Site Development Permit to allow partial demolition and construction of a new 40,000-square foot addition to an existing 1-story commercial building, Building H (Westgate West Shopping Center) and site modifications on an 4.03-gross acre site zoned CG Commercial General.
LOCATION:	East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center).
P.W. NUMBER:	3-07718

Public Works received revised plans for the subject project on 01/10/18 and submits the following comments and requirements.

Project Conditions:

Public Works Clearance for Building Permit(s): Prior to the approval of the issuance of Building permits, the applicant will be required to have satisfied all of the following Public Works conditions. The applicant is strongly advised to apply for any necessary Public Works permits prior to applying for Building permits. Standard review timelines and submittal instructions for Public Works permits may be found at the following: http://www.sanjoseca.gov/index.aspx?nid=2246.

1. **Minor Improvement Permit**: The public improvements conditioned as part of this permit require the execution of a Minor Street Improvement Permit that guarantees the completion of the public improvements to the satisfaction of the Director of Public Works. The Minor Improvement Permit includes privately engineered plans, insurance, surety deposit, and engineering and inspection fees.

2. **Transportation:** A Transportation Analysis has been performed for this project based on 30 AM and 48 PM peak hour trips. We conclude that the subject project will be in conformance with the City of San Jose Transportation Level of Service Policy (Council Policy 5-3) and a determination for a negative declaration can be made with respect to traffic impacts. See separate Traffic memo dated 02/12/19 for additional information.

3. **Urban Village Plan:** This project is located in a designated Urban Village per the Envision San Jose 2040 General Plan. Urban Villages are designed to provide a vibrant and inviting mixed-use setting to attract pedestrians, bicyclists, and transit users of all ages and to promote job growth.

4. **Grading/Geology:**
   a) A grading permit is required prior to the issuance of a Public Works Clearance.
   b) All on-site storm drainage conveyance facilities and earth retaining structures 4 foot in height or greater (top of wall to bottom of footing) or is being surcharged (slope of 3:1 or greater abutting the wall) shall be reviewed and approved under Public Works grading and drainage permit prior to the issuance of Public Works Clearance. The drainage plan should include all underground pipes, building drains, area drains and inlets. The project shall provide storm drainage calculations that adhere to the 2013 California Plumbing Code or submit a stamped and signed alternate engineered design for Public Works discretionary approval and should be designed to convey a 10 year storm event.
   c) A soils report must be submitted to and accepted by the City prior to the issuance of a grading permit. This report should include, but is not limited to: foundation, earthwork, utility trenching, retaining and drainage recommendations.

5. **Stormwater Runoff Pollution Control Measures:** This project must comply with the City's Post-Construction Urban Runoff Management Policy (Policy 6-29) which requires implementation of Best Management Practices (BMPs) which includes site design measures, source controls and numerically-sized Low Impact Development (LID) stormwater treatment measures to minimize stormwater pollutant discharges.
   a) The project's Stormwater Control Plan and numeric sizing calculations have been reviewed and this project will be in conformance with City Policy 6-29.
   b) Final inspection and maintenance information on the post-construction treatment control measures must be submitted prior to issuance of a Public Works Clearance.

6. **Stormwater Peak Flow Control Measures**: The project is located in a non-Hydromodification Management area and is not required to comply with the City's Post-Construction Hydromodification Management Policy (Council Policy 8-14).

7. **Flood: Zone D** The project site is not within a designated Federal Emergency Management Agency (FEMA) 100-year floodplain. Flood Zone D is an unstudied area where flood hazards are undetermined, but flooding is possible. There are no City floodplain requirements for Zone D.

8. **Sewage Fees:** In accordance with City Ordinance all storm sewer area fees, sanitary sewer connection fees, and sewage treatment plant connection fees, less previous credits, are due and payable.

9. **Undergrounding**: The In Lieu Undergrounding Fee shall be paid to the City for all frontage adjacent to Prospect Road prior to issuance of a Public Works Clearance. (50%) of the base fee in place at the time of payment will be due. Currently, the 2019 base fee is

$489 per linear foot of frontage and is subject to change every January 31st based on the Engineering News Record's City Average Cost Index for the previous year. The project will be required to pay the current rate in effect at the time the Public Works Clearance is issued.

10. **Street Improvements**:
    a) Construct ADA compliant ramp along Graves Avenue project frontage.
    b) Applicant shall be responsible to remove and replace curb, gutter, and sidewalk damaged during construction of the proposed project.
    c) Dedication and improvement of the public streets to the satisfaction of the Director of Public Works.

Please contact Alex Wong at alex.wong@sanjoseca.gov or (408) 793-4160 or me at michelle.kimball@sanjoseca.gov or (408) 535-8300 if you have any questions. You may also reach our Division Manager, Ryan Do at ryan.do@sanjoseca.gov or (408) 535-6899.

Memorandum

TO: Rhonda Buss

FROM: Alex Wong
Public Works

SUBJECT: SEE BELOW

DATE: 02/12/19

Approved [signature] [signature]

Date 2/12/19

SUBJECT: FITNESS CENTER ADDITION TO WESTGATE WEST
PW NO. 3-07718 (H18-008)

We have completed the review of the transportation analysis for the subject project. The project proposes to partially demolish an existing 23,550 square-foot (s.f.) building and construct a new 16,450 s.f. second floor, totaling 40,000 s.f. to be used as a fitness center. The project within the Westgate West Shopping Center located at 5365 Prospect Road. The proposed development is projected to add 30 AM peak hour trips and 48 PM peak hour trips.

MULTI-MODAL ACCESS

Existing transit service in the area is provided by the Santa Clara Valley Transportation Authority (VTA). The study area is served directly by one express bus route (Route 101), one limited stop bus route (Route 328), and four local bus routes (Route 26, 57, 58, and 82). Class II bike lanes are present along Lawrence Expressway/Quito Road, Prospect Road, and W. Campbell Avenue/Hamilton Avenue. There are sidewalks along all streets in the study area, except for Lawrence Expressway north of the project site, and a pedestrian walkway access from Graves Avenue into the shopping center. The existing network of sidewalks and crosswalks in the study area has adequate connectivity and provides pedestrians with safe routes to transit services and other points of interest in the vicinity. Vehicular access to the site will be provided via three existing driveways along the project frontage; one on Lawrence Expressway, one on Prospect Road, and one on Graves Avenue.

ANALYSIS

In alignment with the State of California Senate Bill 743 (SB 743), the City of San Jose has adopted a new Transportation Analysis Policy, Council Policy 5-1. The policy establishes the threshold for transportation impacts under the California Environmental Quality Act (CEQA) based on vehicle miles traveled (VMT) instead of levels of service (LOS). This project analyzed transportation impacts using the VMT metric and conformed to Council Policy 5-1.

CEQA Transportation Analysis

Project Impacts: Because the project is constructing an addition to a regional shopping center the City's VMT Evaluation Tool (sketch tool) could not be used. The project VMT was

evaluated by comparing the regional VMT with and without the project. The City's Travel Forecasting Model was used to calculate the change in VMT resulting from the fitness center. The results of the analysis indicate that the new fitness center would not cause an increase in trips, but rather a change in trips because people would leave existing nearby fitness centers to join the new fitness center. The model results show that the project would result in a net decrease of 41 VMT per day. The work based VMT would be reduced by 48 daily VMT and the social/recreational based VMT would be increased by 7 daily VMT. Since the project is not resulting in a net new increase in daily VMT, no mitigation measures are required.

Local Transportation Analysis

Intersection Operations Analysis: Five (5) signalized intersections – two (2) City of San Jose intersections and three (3) Santa Clara County intersections – were analyzed for the AM and PM peak hours to identify any adverse intersection operations effects using standards and methodologies outlined in the *City of San Jose Transportation Analysis Handbook*. The results of the analysis indicate that there are no adverse intersection operations effects at any of the study intersections under both background and background plus project conditions (See Table 6 Attached).

Vehicular Access and Circulation: Project traffic would enter the site via driveways on Lawrence Expressway, Prospect Road, and Graves Avenue. The existing driveways provide adequate width for vehicular access. The project proposes to modify existing islands on-site as well as lengthen on-site drive isles. These changes will improve on-site circulation. The site plan shows adequate on-site vehicular circulation.

Sight Distance Analysis: Sight distance analysis was performed at the project driveways. The results of the analysis indicate that the sight distance is adequate at the project driveways.

Truck Access and Circulation: The project is removing loading docks at the rear of the building in order to construct trash enclosures. Garbage vehicles will enter the project site via the Graves Avenue driveway and perform pick-up operations on-site. The on-site drive aisles are adequate for garbage trucks to enter, exit, and perform garbage operations.

Emergency Vehicle Access (EVA) is provided via the project driveways on Lawrence Expressway and Graves Avenue. The driveways meet the City's Fire Code requirements for driveway width.

Pedestrian and Bicycle Access: The existing network of sidewalks and crosswalks in the immediate vicinity of the project site has adequate connectivity and provides pedestrians with safe routes to various transit services and other points of interest in the study area. Class II bike lanes are present along Lawrence Expressway/Quito Road, Prospect Road, and W. Campbell Avenue/Hamilton Avenue. The existing bicycle network is sufficient to serve the project.

Parking: The parking requirement was evaluated based on the City of San Jose Parking standards (San Jose Municipal Code Chapter 20.90, Table 20-190). The parking requirement for the shopping center is 970 spaces after addition of the project. The project is constructing an addition 29 new parking spaces, expanding the total number of parking spaces to 1,068 spaces to

serve the shopping center, which meets the City's parking requirements.

The project is required to provide 14 bicycle parking spaces and is proposing to provide 14 bicycle parking spaces. The project as proposed meets the City's bicycle parking requirement.

RECOMMENDATION:

The subject project will be in conformance with the City of San Jose Transportation Analysis Policy (Council Policy 5-1). Therefore, a determination for a negative declaration can be made with respect to transportation impacts.

Please contact me at Alex.Wong@sanjoseca.gov or (408) 793-4160 if you have any questions. You may also reach the Senior Engineer overseeing the project, Michelle Kimball, at Michelle.Kimball@sanjoseca.gov or (408) 535-6830 or the Transportation Manager, Karen Mack, at Karen.Mack@sanjoseca.gov or (408) 535-6816.

4th Review Letter

SITE ADDRESS: 5365 Prospect Road

RE.: File No. H18-008: Site Development Permit to allow a partial demolition and construction of a new 40,000-square foot addition to an existing retail building, Building H (Westgate West Shopping Center), and site improvements on an 4.03-gross acre site zoned CG Commercial General.

Dear Mr. Blair,

Your application, referenced above, has undergone review for completeness and consistency with City policies and regulations. The purpose of this letter is to provide you with comments and revisions necessary for the project to meet City policies and ordinances so you can appropriately respond to the issues identified below. The comments below are based on the plans and information currently on file. Additional comments may be made at a later time when we receive revised plans and additional information. Please let me or the contact listed in the attached memos know if you have any questions regarding these comments.

Project Issues and Concerns

Based on our initial review of your project, the items in this letter are the issues that affect the proposed project, and are explained in more detail in this letter.

Permit Streamlining Act

Pursuant to the Permit Streamlining Act (Government Code Chapter 4.5 of Title 7), your application has been deemed **complete**. The following information must be addressed to complete the review of your project. Although your application's initial requirement submittal documents have been provided and that component is complete, *additional information and revisions will be required for the completion of the review of the proposed project.* Please submit the following information, as further clarified in the letter.

1. Please see the parking information below. Clarification is needed regarding how that

parking ratio is met.

Project Review

Project Description

Site Development Permit to allow a partial demolition and construction of a new 40,000-square foot addition to an existing retail building, Building H (Westgate West Shopping Center), and site modifications on an 4.03-gross acre site zoned CG Commercial General.

Please confirm the description above includes all aspects of the proposed project, and advise us immediately if any information is incorrect or omitted.

Applicable City Council Policies

A condition will be placed in the permit indicating that the Outdoor Lighting policy must be met. Are the freestanding lights in the parking lot existing and indicate if they are within the area of work? If new, please provide a detail showing

Zoning Consistency

The subject site is located in the CG Commercial General Zoning District. This district allows for a full range of retail and commercial uses. The proposed project use is consistent with the Zoning designation for the subject site based on §20.40.100 and the proposed project description. Please identify all property lines and setbacks on the Site Plan as identified below.

a. Setbacks:

   i. Front, 15 feet

   ii. Side, interior, none

   iii. Rear, Interior, none

b. Parking: Please provide a table identifying the information below.

   The standard parking ratios below may be used. This is based upon the total square footage of the shopping center. When calculated, the square footage on Set A-1 does not comport with the square footages in the table on A-2. ***Please clarify the total amount of square footage, and update the table if needed.***

   i. Vehicle: 1 parking space per 225-square feet of floor area for Neighborhood shopping center (minimum 100,000 sq. ft. in size)

   ii. Bicycle: 1 per 3,000 sq. ft. of floor area at publicly accessible entrances

   iii. Motorcycle: 1 motorcycle space per 20 code required auto parking spaces. Please see the link for motorcycle parking information.

Environmental Review - California Environmental Quality Act (CEQA)

The Administrative Draft Initial Study is in process. The Environmental Project Manager is Adam Petersen please contact him at adam.petersen@sanjoseca.gov for any environmental questions.

Comments from Other Departments/Divisions and Agencies

Attached is a memorandum from other departments/divisions and outside agencies as indicated below. Please carefully review the memos, as they contain essential information needed to successfully and efficiently move your project through the Planning entitlement process. As required, comments contained in the attached memos must be incorporated into the revised plan sets. Concerns about any of these issues should be brought to my attention so that I can coordinate with appropriate City staff on your behalf.

i. Building – To be forwarded upon receipt
j. Fire – To be forwarded upon receipt
k. Public Works – See attached

Community Outreach

At this time a community meeting will not be required, but this is subject to change if significant public interest is generated.

Resubmittal Fees

Pursuant to the Planning Application Filing Fee Schedule. There is a 30% Supplemental Review Fee for each subsequent round of review after 3 reviews. Therefore, this and any future rounds of review are subject to the Supplemental Review Fee.

Next Steps

Please be advised that this summary does not constitute a final review. Additional comments may be provided upon review of any additional information and plan revisions submitted in response to this letter. In order to facilitate the development review process, **please include a detailed response letter with your resubmittal** that addresses all items contained in this letter and attached memos. Additionally, please submit six (six) 24" x 36" size revised plans, three (3) 11"x17" size plans, and a PDF. Please individually roll all 24" x 36" hard copies. Please anticipate at least three weeks for departmental staff to review your responses and revisions.

The decision to approve, deny, conditionally approve, or continue this proposal will occur at a **Director's Hearing.** Director hearings are held most **every Wednesday at 9:00 a.m.,** in the City Council Chambers. Once the project plans are acceptable and all comments have been addressed, the project will be scheduled for public hearing. There is a three-week lead time prior to the hearing for preparation, distribution and responses to the public notice, and for

Design Guidelines Consistency -

Please refer to the Commercial Design Guidelines for design information. Please pay particular attention to the following sections.

c. Landscaping

   i. Perimeter Landscaping.

      - Page 17 1. e. A wall at least 4 feet tall to screen parking lots, as required by the Zoning Ordinance, when the parking lot is across the street from a residential area.

   ii. Internal Landscaping

      - Page 20, 9. Texture and color variation in paving materials should occur where pedestrian and vehicular areas overlap. The use of stamped concrete, stone, brick or granite pavers exposed aggregate or colored concrete is encouraged in parking lots to promote pedestrian safety and to minimize the impact of large expanses of pavement.

d. Parking and Circulation

   i. Pedestrian/Bicycle

      - Page 33 D. 2 Bicycle parking racks should be provided at all commercial centers and at other retail and office sites large enough to attract and accommodate bicyclists.

Plan Clarifications and Required Additional Information

e. Please clearly identify the area of work on the site plan and all other applicable plans.

f. Sheet A-2:

   i. As identified above, the square footage on sheets A-1 and A-2 need to comport. Parking is based upon square footage and will need to be revised accordingly if applicable.

   ii. Dimensioned the front and side setbacks.

   iii. Please label the type of use of all adjacent properties including uses to the west, south, and north sides.

g. Sheet LP-1:

   i. The ground cover landscaping in the rear facing Graves Ave. should be refreshed. Please include update planting material in the landscaping plan. Also, please identify were the replacement trees are to be located.

h. Sheet 5.2: Please include the stormwater information.

   i. Include square footage of site to be disturbed.

   ii. Type of soil to be added to the storm water sheet.

preparation of the draft permit.

Should you have any questions, you may contact me at rhonda.buss@sanjoseca.gov or (408) 535-3887. You may also contact the Supervising Planner overseeing this project, John Tu at John.Tu@sanjoseca.gov.

We look forward to continuing to work with you and your team on your project in San Jose.

Sincerely,

Rhonda Buss

Memos:
Public Works

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Memorandum

TO: Rhonda Buss
Planning and Building

FROM: Michelle Kimball
Public Works

SUBJECT: **3rd INITIAL RESPONSE TO DEVELOPMENT APPLICATION**

DATE: 10/25/18

Approved RBD Date 10/26/18

PLANNING NO.: H18-008
DESCRIPTION: Site Development Permit to allow partial demolition and construction of a new 40,000-square foot addition to an existing 1-story commercial building, Building H (Westgate West Shopping Center) and site modifications on an 4.03-gross acre site zoned CG Commercial General.
LOCATION: East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center).
P.W. NUMBER: 3-07718

Public Works received the subject project on 10/11/18 and submits the following comments and requirements. **Upon completion of the Action/Revisions Required items by the applicant, Public Works will forward a Final Memo to the Department of Planning prior to the preparation of the Staff Report for Public Hearing.**

Actions / Revisions Required:

1. **Stormwater Runoff Pollution Control Measures:**
   a) Revise and resubmit Stormwater Evaluation Form to reflect the following:
      i) Revise the square footage in section 2.c. The existing impervious area should be slightly less than the total area of the site listed in section 2.b of 8.37 acres (Parcels 1, 4, and 7 total 8.37 acres) because the site is mostly impervious.
      ii) Revise section 2.d to reflect total area of site that will be disturbed, not including areas of grind and overlay. Ensure that 2.d=e.1+f.1.
      iii) Recalculate section 2.g.
   b) Revise the Stormwater Control Plan (SCP) to reflect the following:
      i) Replace the Pervious and Impervious Surfaces Comparison Table on sheet C5.2 with the updated table from the Stormwater Evaluation Form.
      ii) Update the TCM Summary table to show EQ-1 TCM Location as on-site.
      iii) Revise Treatment Control Measure (TCM) Table to show TCM 1 as unlined bioretention rather than lined.

2. **Landscape Plan:** Revise the Landscaping Plan to reflect the following: On sheet LP-2.0 revise all proposed shrubs and groundcovers that are not shown in approved plant species in Appendix D of the C.3. Stormwater Handbook.
   i) *Coleonema P. 'Sunset Gold'*
   ii) *Rosmarinus O. 'Prostratus'*

3. **Transportation:**
   a) A traffic report is required prior to environmental clearance or zoning. The traffic report must conform to the City of San Jose Guidelines for the preparation of a traffic report. For Traffic Analysis process and submittal requirements refer to "Traffic Analysis Handbook (April 2018)" copies of the handbooks may be found at the Development Services website at: http://www.sanjoseca.gov/index.aspx?NID=5571
   b) A Traffic Work Scope Memo was provided to Hexagon Transportation Consultants, Inc. from the City on October 3, 2018, and the City is currently waiting for the submittal of the traffic report.

4. **Trash/Recycling Enclosures and Cover:** Show a properly designed cover to the trash/recycling enclosure on sheet A7. Also, show a plumbed sanitary sewer connection line within the enclosure/cover and ensure surrounding areas will be graded away on the Grading/Drainage Plan, per City Council Policy 6-29. More information is also outlined, per Municipal Code section 15.14.515, in the Solid Waste Enclosure Area Guidelines for New Construction and Redevelopment. Access to these resources can be found in the following links:

   a) Municipal Code: https://www.municode.com/library/ca/san_jose/codes/code_of_ordinances?nodeId=SAJOMUCOVOI2000

   b) Solid Waste Enclosure Area Guidelines: https://www.sanjoseca.gov/DocumentCenter/Home/View/437

Project Conditions:

Public Works Clearance for Building Permit(s) or Map Approval: Prior to the approval of the Tract or Parcel Map (if applicable) by the Director of Public Works, or the issuance of Building permits, whichever occurs first, the applicant will be required to have satisfied all of the following Public Works conditions. The applicant is strongly advised to apply for any necessary Public Works permits prior to applying for Building permits. Standard review timelines and submittal instructions for Public Works permits may be found at the following: http://www.sanjoseca.gov/index.aspx?nid=2246.

4. **Minor Improvement Permit**: The public improvements conditioned as part of this permit require the execution of a Minor Street Improvement Permit that guarantees the completion of the public improvements to the satisfaction of the Director of Public Works. The Minor Improvement Permit includes privately engineered plans, insurance, surety deposit, and engineering and inspection fees.

5. **Urban Village Plan:** This project is located in a designated Urban Village per the Envision San Jose 2040 General Plan. Urban Villages are designed to provide a vibrant and inviting mixed-use setting to attract pedestrians, bicyclists, and transit users of all ages and to promote job growth.

6. **Grading/Geology:**
   a) A grading permit is required prior to the issuance of a Public Works Clearance.
   b) All on-site storm drainage conveyance facilities and earth retaining structures 4 foot in height or greater (top of wall to bottom of footing) or is being surcharged (slope of 3:1 or greater abutting the wall) shall be reviewed and approved under Public Works grading and drainage permit prior to the issuance of Public Works Clearance. The drainage plan should include all underground pipes, building drains, area drains and inlets. The project shall provide storm drainage calculations that adhere to the 2013 California Plumbing Code or submit a stamped and signed alternate engineered design for Public Works discretionary approval and should be designed to convey a 10 year storm event.
   c) A soils report must be submitted to and accepted by the City prior to the issuance of a grading permit. This report should include, but is not limited to: foundation, earthwork, utility trenching, retaining and drainage recommendations.

7. **Stormwater Runoff Pollution Control Measures:** This project must comply with the City's Post-Construction Urban Runoff Management Policy (Policy 6-29) which requires implementation of Best Management Practices (BMPs) which includes site design measures, source controls and numerically-sized Low Impact Development (LID) stormwater treatment measures to minimize stormwater pollutant discharges.
   a) The project's Stormwater Control Plan and numeric sizing calculations have been reviewed and additional information is required per the Actions/Revisions section.
   b) Final inspection and maintenance information on the post-construction treatment control measures must be submitted prior to issuance of a Public Works Clearance.

8. **Stormwater Peak Flow Control Measures**: The project is located in a non-Hydromodification Management area and is not required to comply with the City's Post-Construction Hydromodification Management Policy (Council Policy 8-14).

9. **Flood: Zone D** The project site is not within a designated Federal Emergency Management Agency (FEMA) 100-year floodplain. Flood Zone D is an unstudied area where flood hazards are undetermined, but flooding is possible. There are no City floodplain requirements for Zone D.

10. **Sewage Fees:** In accordance with City Ordinance all storm sewer area fees, sanitary sewer connection fees, and sewage treatment plant connection fees, less previous credits, are due and payable.

11. **Undergrounding**: The In Lieu Undergrounding Fee shall be paid to the City for all frontage adjacent to Prospect Road prior to issuance of a Public Works Clearance. 50

percent of the base fee in place at the time of payment will be due. Currently, the 2018 base fee is $485 per linear foot of frontage and is subject to change every January 31st based on the Engineering News Record's City Average Cost Index for the previous year. The project will be required to pay the current rate in effect at the time the Public Works Clearance is issued.

12. **Street Improvements**:
    a) Construct ADA ramp along Graves Avenue project frontage.
    b) Applicant shall be responsible to remove and replace curb, gutter, and sidewalk damaged during construction of the proposed project.
    c) Dedication and improvement of the public streets to the satisfaction of the Director of Public Works.

Please contact Genevive Yambao at genevive.yambao@sanjoseca.gov or (408) 535-7643 or me at michelle.kimball@sanjoseca.gov or (408) 535-6830 if you have any questions. You may also reach the Division Manager overseeing the project, Ryan Do at ryan.do@sanjoseca.gov or (408) 535-6899.

SITE ADDRESS: 5365 Prospect Road

RE.: File No. H18-008: Site Development Permit to allow a partial demolition and construction of a new 40,000-square foot addition to an existing retail building, Building H (Westgate West Shopping Center), and site improvements on an 18.9-gross acre site zoned CG Commercial General.

Dear Mr. Blair,

Your application, referenced above, has undergone review for completeness and consistency with City policies and regulations. The purpose of this letter is to provide you with comments and revisions necessary for the project to meet City policies and ordinances so you can appropriately respond to the issues identified below. The comments below are based on the plans and information currently on file. Additional comments may be made at a later time when we receive revised plans and additional information. Please let me or the contact listed in the attached memos know if you have any questions regarding these comments.

Project Issues and Concerns

Based on our initial review of your project, the items listed below are the substantial issues that affect the proposed project, and are explained in more detail in this letter:

1. Please bold and thicken the property lines and identify all of the setbacks on the site plan.
2. As identified below, the landscaping plan must comport with the rest of the plan set (a bio-retention area is shown on the landscaping plan where parking is shown on the architectural and civil sheets). Please clarify.
3. Kindly cloud all revisions.

Permit Streamlining Act

Pursuant to the Permit Streamlining Act (Government Code Chapter 4.5 of Title 7), your application has been deemed **incomplete**. The following information must be addressed to complete the review of your project and deem your application complete.

a. Clarification is needed with regards to parking. Please see the mark up and information below.

b. The items in the Plan Clarifications sections below need to be addressed.

Project Review

1. Project Description

Site Development Permit to allow a partial demolition and construction of a new 40,000-square foot addition to an existing retail building, Building H (Westgate West Shopping Center), and site modifications on an 18.9-gross acre site zoned CG Commercial General.

Please confirm the description above includes all aspects of the proposed project, and advise us immediately if any information is incorrect or omitted.

2. Applicable City Council Policies

A condition will be placed in the permit indicating that the Outdoor Lighting policy is met.

3. Zoning Consistency

The subject site is located in the CG Commercial General Zoning District. This district allows for a full range of retail and commercial uses. The proposed project use is consistent with the Zoning designation for the subject site based on §20.40.100 and the proposed project description. Please identify all property lines and setbacks on the Site Plan as identified below.

a. Setbacks:

   i. Front, 15 feet

   ii. Side, interior, none

   iii. Rear, Interior, none

b. Parking:

   i. Vehicle: 1 parking space per 225-square feet of floor area for Neighborhood Shopping center (minimum 100,000 sq. ft. in size). Please see the notes on the mark up. There is a discrepancy between the 22 parking spaces we added up and the 29 we calculate between existing and proposed on the parking table. Please clarify.

   ii. Bicycle: 1 per 3,000 sq. ft. of floor area at publicly accessible entrances

   iii. Motorcycle: 1 motorcycle space per 20 code required auto parking spaces. Please see the link for motorcycle parking information. 43,275 SF is identified in the table and need to comport with the 40,000 SF shown on the plan. Please clarify so the required motorcycle parking can be determined.

4. Design Guidelines Consistency -

Please refer to the Commercial Design Guidelines for design information. Please pay particular attention to the following sections.

a. Additional landscaping is needed along Graves Ave. that complies with Title 15.11.

5. Plan Clarifications and Required Additional Information

The entire submittal package needs to comport. Please update the following:

a. The landscaping plans need to comport with the civil and architectural plans. Please pay

special attention to the bio-retention areas, and how the bio-retention area affects the number or parking stalls.

b. The number of parking spaces on the plan set needs to comport with the parking table. Please see the mark up for comments.

c. The trash enclosure needs to be shown on all site plans.

d. Please put pages in order as identified on the index sheet.

a. Sheet A-2:

   i. Please label the type of use of all adjacent properties.

   ii. Please dimension the building setbacks, and drive aisle width.

   iii. Please show the trash enclosure.

b. Sheet LP1.1:

   i. Show the existing wall on the plan set.

   ii. Include a tree table to the landscaping plan and add a column to the tree table indicating whether the tree is native or non-native.

   iii. The tree table shows two trees to be removed. Please provide replacements that are consistent with the table below and show that in the plan set.

Diameter of Tree to be Removed	**Type of Tree to be Removed**			**Minimum Size of Each Replacement Tree**
	Native	**Non-Native**	**Orchard**	
18 inches or greater	5:1	4:1	3:1	24-inch box
12 - 18 inches	3:1	2:1	none	24-inch box
less than 12 inches	1:1	1:1	none	15-gallon container
x:x = tree replacement to tree loss ratio **Note:** Trees greater than 18" diameter shall not be removed unless a Tree Removal Permit, or equivalent, has been approved for the removal of such trees.				

   iv. Please show Item 15 (Protect Existing Tree in Place) on this sheet.

c. Sheet C3.1

   i. Remove Item 19 (Trash Enclosure) and show it on the floor/site plan.

6. Environmental Review - California Environmental Quality Act (CEQA)

The Administrative Draft Initial Study is in process. The Environmental Project Manager is Adam Petersen please contact him at adam.petersen@sanjoseca.gov for any environmental questions.

7. Comments from Other Departments/Divisions and Agencies

Attached is a memorandum from other departments/divisions and outside agencies as indicated below. Please carefully review the memos, as they contain essential information needed to successfully and efficiently move your project through the Planning entitlement process. As required, comments contained in the attached memos must be incorporated into the revised plan sets. Concerns about any of these issues should be brought to my attention so that I can coordinate with appropriate City staff on your behalf.

a. Public Works – Please see the attached comments.

8. Community Outreach

At this time a community meeting will not be required, but this is subject to change if significant public interest is generated.

9. Next Steps

Please be advised that this summary does not constitute a final review. Additional comments may be provided upon review of any additional information and plan revisions submitted in response to this letter. In order to facilitate the development review process, **please include a detailed response letter with your resubmittal** that addresses all items contained in this letter and attached memos. Additionally, please submit six (six) 24" x 36" size revised plans and three (3) 11"x17" size plans. Please anticipate at least three weeks for departmental staff to review your responses and revisions.

Additional fees may be applicable for community meetings, additional public noticing, and for other processes/reviews as a result of revisions to the project description or plans, based on the adopted fee schedule. We will inform you should additional fees be required. The project will not be scheduled for hearing until all fees have been paid in full.

The decision to approve, deny, or conditionally approve this proposal will occur at a **Director's Hearing.** Consideration of the request may also be continued to a future hearing should issues or questions arise during or before the scheduled hearing that require additional time for analysis. Director hearings are held **every Wednesday at 9:00 a.m.,** in the City Council Chambers. Once the project plans are acceptable and all comments have been addressed, the project will be scheduled for public hearing. There is a three-week lead time prior to the hearing for preparation, distribution and responses to the public notice, and for preparation of the draft permit.

Should you have any questions, you may contact me at rhonda.buss@sanjoseca.gov or (408) 535-3887. You may also contact the Supervising Planner overseeing this project, Shaunn Mendrin at shaunn.mendrin@sanjoseca.gov.

We look forward to continuing to work with you and your team on your project in San Jose.

Sincerely,

Rhonda Buss

   iii. Rear, Interior, none

b. Parking:

   i. Vehicle: 1 parking space per 225-square feet of floor area for Neighborhood Shopping center (minimum 100,000 sq. ft. in size). Please see the notes on the mark up. There is a discrepancy between the 22 parking spaces we added up and the 29 we calculate between existing and proposed on the parking table. Please clarify.

   ii. Bicycle: 1 per 3,000 sq. ft. of floor area at publicly accessible entrances

   iii. Motorcycle: 1 motorcycle space per 20 code required auto parking spaces. Please see the link for motorcycle parking information. 43,275 SF is identified in the table and need to comport with the 40,000 SF shown on the plan. Please clarify so the required motorcycle parking can be determined.

4. Design Guidelines Consistency -

Please refer to the Commercial Design Guidelines for design information. Please pay particular attention to the following sections.

a. Additional landscaping is needed along Graves Ave. that complies with Title 15.11.

5. Plan Clarifications and Required Additional Information

The entire submittal package needs to comport. Please update the following:

a. The landscaping plans need to comport with the civil and architectural plans. Please pay

special attention to the bio-retention areas, and how the bio-retention area affects the number or parking stalls.

b. The number of parking spaces on the plan set needs to comport with the parking table. Please see the mark up for comments.

c. The trash enclosure needs to be shown on all site plans.

d. Please put pages in order as identified on the index sheet.

a. Sheet A-2:

   i. Please label the type of use of all adjacent properties.

   ii. Please dimension the building setbacks, and drive aisle width.

   iii. Please show the trash enclosure.

b. Sheet LP1.1:

   i. Show the existing wall on the plan set.

   ii. Include a tree table to the landscaping plan and add a column to the tree table indicating whether the tree is native or non-native.

   iii. The tree table shows two trees to be removed. Please provide replacements that are consistent with the table below and show that in the plan set.

Diameter of Tree to be Removed	**Type of Tree to be Removed**			**Minimum Size of Each Replacement Tree**
	Native	**Non-Native**	**Orchard**	
18 inches or greater	5:1	4:1	3:1	24-inch box
12 - 18 inches	3:1	2:1	none	24-inch box
less than 12 inches	1:1	1:1	none	15-gallon container
x:x = tree replacement to tree loss ratio **Note:** Trees greater than 18" diameter shall not be removed unless a Tree Removal Permit, or equivalent, has been approved for the removal of such trees.				

   iv. Please show Item 15 (Protect Existing Tree in Place) on this sheet.

c. Sheet C3.1

   i. Remove Item 19 (Trash Enclosure) and show it on the floor/site plan.

6. Environmental Review - California Environmental Quality Act (CEQA)

The Administrative Draft Initial Study is in process. The Environmental Project Manager is Adam Petersen please contact him at adam.petersen@sanjoseca.gov for any environmental questions.

7. Comments from Other Departments/Divisions and Agencies

Attached is a memorandum from other departments/divisions and outside agencies as indicated below. Please carefully review the memos, as they contain essential information needed to successfully and efficiently move your project through the Planning entitlement process. As required, comments contained in the attached memos must be incorporated into the revised plan sets. Concerns about any of these issues should be brought to my attention so that I can coordinate with appropriate City staff on your behalf.

a. Public Works – Please see the attached comments.

8. Community Outreach

At this time a community meeting will not be required, but this is subject to change if significant public interest is generated.

9. Next Steps

Please be advised that this summary does not constitute a final review. Additional comments may be provided upon review of any additional information and plan revisions submitted in response to this letter. In order to facilitate the development review process, **please include a detailed response letter with your resubmittal** that addresses all items contained in this letter and attached memos. Additionally, please submit six (six) 24" x 36" size revised plans and three (3) 11"x17" size plans. Please anticipate at least three weeks for departmental staff to review your responses and revisions.

Additional fees may be applicable for community meetings, additional public noticing, and for other processes/reviews as a result of revisions to the project description or plans, based on the adopted fee schedule. We will inform you should additional fees be required. The project will not be scheduled for hearing until all fees have been paid in full.

The decision to approve, deny, or conditionally approve this proposal will occur at a **Director's Hearing.** Consideration of the request may also be continued to a future hearing should issues or questions arise during or before the scheduled hearing that require additional time for analysis. Director hearings are held **every Wednesday at 9:00 a.m.,** in the City Council Chambers. Once the project plans are acceptable and all comments have been addressed, the project will be scheduled for public hearing. There is a three-week lead time prior to the hearing for preparation, distribution and responses to the public notice, and for preparation of the draft permit.

Should you have any questions, you may contact me at rhonda.buss@sanjoseca.gov or (408) 535-3887. You may also contact the Supervising Planner overseeing this project, Shaunn Mendrin at shaunn.mendrin@sanjoseca.gov.

We look forward to continuing to work with you and your team on your project in San Jose.

Sincerely,

Rhonda Buss

Rhonda Buss
Project Manager
City of San José

Public Works Memo

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Memorandum

TO: Rhonda Buss
Planning and Building

FROM: Michelle Kimball
Public Works

SUBJECT: **2nd INITIAL RESPONSE TO DEVELOPMENT APPLICATION**

DATE: 09/07/18

Approved _____ Date 9-10-18

PLANNING NO.: H18-008
DESCRIPTION: Site Development Permit to allow partial demolition and construction of a new 40,000-square foot addition to an existing 1-story retail building, Building H (Westgate West Shopping Center) and site modifications on an 18.9-gross acre site zoned CG Commercial General.
LOCATION: East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center).
P.W. NUMBER: 3-07718

Public Works received additional information for the subject project on 04/10/18 and submits the following comments and requirements. **Upon completion of the Action/Revisions Required items by the applicant, Public Works will forward a Final Memo to the Department of Planning prior to the preparation of the Staff Report for Public Hearing.**

Actions / Revisions Required:

1. **Stormwater Runoff Pollution Control Measures:**
   a) Stormwater Evaluation Form: Confirm what the Total Site area is for the project. The SCP shows 1.88 AC, but the description provides 18.90 AC. Moreover, sheet A-2.1 shows the project site to be part of an oddly shaped parcel (Parcel 1), which seems to be consistent with the 18.90 acreage. Update the Surface Data Table once these figures have been reconciled.
   b) Stormwater Control Plan: Revise sheet C5.2 to reflect the following:
      i) Revise scale of exhibit to 1" = 20' for clarity.
      ii) Update Pervious and Impervious Surfaces Comparison Table per Stormwater Evaluation Form.
      iii) Clearly label Treatment Control Measure (TCM) Summary Table. Add location column to table.Show how DMA's drain to TCM area (i.e. piped or surface flow). Show drainage arrows.

iv) Add the contact information of the responsible party for maintenance.
v) Revise the Source Control Measures and Site Design Measures to be consistent with the submitted Stormwater Evaluation Form.
vi) Add arrow leaders/callouts between DMA 2 text and DMA 2 location areas.
vii) New/Replaced vs Maintenance/Retained Impervious Surfaces – Replacement of impervious area on driveways and parking areas north and south of the building appear to be regrading work of which would need to be treated. Confirm otherwise if these areas are reserved for maintenance that will retain the existing impervious area (e.g. slurry seal/grind and overlay work).
viii) Curb-Opening Note – Replace the first sentence of the curb-cut note with the following (Bioretention Note 4): "Curb cuts shall be a minimum 18" wide and spaced at 10' O.C. intervals or less and sloped to direct stormwater to drain into the basin".
ix) Floor Plan/Top Floor Clarity – There appears to be multiple floors to the fitness building, but they are not shown on architectural sheets. It is unclear whether the higher floors will be open to the sky or covered. Provide the accurate floor plan sheets and update the SCP to reflect how runoff will be generated on the building roof, outdoor gym areas (if any), outdoor pools, etc.
x) Mulch Note – Update the mulch note to the following (Bioretention Note 2): "Place 3 inches of composted, non-floatable mulch in areas between plantings and side slopes."
xi) Site Design Measures – Remove measure 4, cluster structures/pavement.

2. **Landscape Plan:** Revise the Landscaping Plan to reflect the following:
a) On sheet LP-2.0 revise all proposed shrubs and groundcovers that are not shown in approved plant species in Appendix D of the C.3. Stormwater Handbook.
i) *Coleonema P. 'Sunset Gold'*
ii) *Rosmarinus O. 'Prostratus'*
iii) *Nassella Pulchera*
iv) *Sisyrinchium Bellum*
b) Legend – Provide a Bioretention title in the legend symbology to clearly call out stormwater treatment plantings.
c) Plant Placement – Specify where plants will be located on the Landscape Plan. Note that the C.3 Handbook Appendix D plant list specifies where each species can be placed (i.e. basin, banks, highlands of Bioretention Areas). For example, *Mahona Repens* and *Sisyrinchium Bellum* are only acceptable on the banks and highlands of Bioretention Areas, not the basin.
d) Scientific Names – Correct the Purple Needlegrass scientific name to *Stipa Pulchra.*
e) Mulch – Add the following note: "Include 3 inches of composted, non-floatable mulch in areas between plantings and side slopes.

3. **Transportation:**
   a) A traffic report is required prior to environmental clearance or zoning. The traffic report must conform to the City of San Jose Guidelines for the preparation of a traffic report. For Traffic Analysis process and submittal requirements refer to "Traffic Analysis Handbook (April 2018)" copies of the handbooks may be found at the Development Services website at: http://www.sanjoseca.gov/index.aspx?NID=5571
   b) A Traffic Work Scope request was submitted to the City on August 31, 2018 from Hexagon Transportation Consultants, Inc. and it is currently under review.

4. **Other**:
   a) Revise sheet C2.0 through C5.2 to be drawn to scale.
   b) On cover sheet index revise Water Quality Details to Stormwater Control Plan.

5. **Trash/Recycling Enclosures and Cover:** Provide a properly designed cover to the trash/recycling enclosure on sheet A7.
   a) Municipal Code: https://www.municode.com/library/ca/san_jose/codes/code_of_ordinances?nodeId=SAJOMUCOVOI2000
   b) Solid Waste Enclosure Area Guidelines: https://www.sanjoseca.gov/DocumentCenter/Home/View/437

Project Conditions:

Public Works Clearance for Building Permit(s) or Map Approval: Prior to the approval of the Tract or Parcel Map (if applicable) by the Director of Public Works, or the issuance of Building permits, whichever occurs first, the applicant will be required to have satisfied all of the following Public Works conditions. The applicant is strongly advised to apply for any necessary Public Works permits prior to applying for Building permits. Standard review timelines and submittal instructions for Public Works permits may be found at the following: http://www.sanjoseca.gov/index.aspx?nid=2246.

6. **Minor Improvement Permit**: The public improvements conditioned as part of this permit require the execution of a Minor Street Improvement Permit that guarantees the completion of the public improvements to the satisfaction of the Director of Public Works. The Minor Improvement Permit includes privately engineered plans, insurance, surety deposit, and engineering and inspection fees.

7. **Urban Village Plan:** This project is located in a designated Urban Village per the Envision San Jose 2040 General Plan. Urban Villages are designed to provide a vibrant and inviting mixed-use setting to attract pedestrians, bicyclists, and transit users of all ages and to promote job growth.

8. **Grading/Geology:**
   a) A grading permit is required prior to the issuance of a Public Works Clearance.
   b) All on-site storm drainage conveyance facilities and earth retaining structures 4 foot in height or greater (top of wall to bottom of footing) or is being surcharged (slope of 3:1 or greater abutting the wall) shall be reviewed and approved under Public Works grading and drainage permit prior to the issuance of Public Works Clearance. The drainage plan should include all underground pipes, building drains, area drains and inlets. The project shall provide storm drainage calculations that adhere to the 2013 California Plumbing Code or submit a stamped and signed alternate engineered design for Public Works discretionary approval and should be designed to convey a 10 year storm event.
   c) A soils report must be submitted to and accepted by the City prior to the issuance of a grading permit. This report should include, but is not limited to: foundation, earthwork, utility trenching, retaining and drainage recommendations.

9. **Stormwater Runoff Pollution Control Measures:** This project must comply with the City's Post-Construction Urban Runoff Management Policy (Policy 6-29) which requires implementation of Best Management Practices (BMPs) which includes site design measures, source controls and numerically-sized Low Impact Development (LID) stormwater treatment measures to minimize stormwater pollutant discharges.
   a) The project's Stormwater Control Plan and numeric sizing calculations have been reviewed and additional information is required per the Actions/Revisions section.
   b) Final inspection and maintenance information on the post-construction treatment control measures must be submitted prior to issuance of a Public Works Clearance.

10. **Stormwater Peak Flow Control Measures**: The project is located in a non-Hydromodification Management area and is not required to comply with the City's Post-Construction Hydromodification Management Policy (Council Policy 8-14).

11. **Flood: Zone D** The project site is not within a designated Federal Emergency Management Agency (FEMA) 100-year floodplain. Flood Zone D is an unstudied area where flood hazards are undetermined, but flooding is possible. There are no City floodplain requirements for Zone D.

12. **Sewage Fees:** In accordance with City Ordinance all storm sewer area fees, sanitary sewer connection fees, and sewage treatment plant connection fees, less previous credits, are due and payable.

13. **Undergrounding**: The In Lieu Undergrounding Fee shall be paid to the City for all frontage adjacent to Prospect Road prior to issuance of a Public Works Clearance. 50 percent of the base fee in place at the time of payment will be due. Currently, the 2018 base fee is $485 per linear foot of frontage and is subject to change every January 31st

based on the Engineering News Record's City Average Cost Index for the previous year. The project will be required to pay the current rate in effect at the time the Public Works Clearance is issued.

14. **Street Improvements**:
    a) Applicant shall be responsible to remove and replace curb, gutter, and sidewalk damaged during construction of the proposed project.
    b) Dedication and improvement of the public streets to the satisfaction of the Director of Public Works.

Please contact Genevive Yambao at genevive.yambao@sanjoseca.gov or (408) 535-7643 or me at michelle.kimball@sanjoseca.gov or (408) 535-6830 if you have any questions. You may also reach the Division Manager overseeing the project, Ryan Do, at ryan.do@sanjoseca.gov or (408) 535-6899.

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Memorandum

TO: Rhonda Buss
Planning and Building

FROM: Michelle Kimball
Public Works

SUBJECT: **INITIAL RESPONSE TO DEVELOPMENT APPLICATION**

DATE: 05/18/18

Approved [signature] Date 5-18-18

PLANNING NO.: H18-008
DESCRIPTION: Site Development Permit to allow partial demolition and construction of a new 40,000-square foot addition to an existing 1-story retail building, Building H (Westgate West Shopping Center) and site modifications on an 18.9-gross acre site zoned CG Commercial General.
LOCATION: East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center).
P.W. NUMBER: 3-07718

Public Works received additional information for the subject project on 04/10/18 and submits the following comments and requirements. **Upon completion of the Action/Revisions Required items by the applicant, Public Works will forward a Final Memo to the Department of Planning prior to the preparation of the Staff Report for Public Hearing.**

Actions / Revisions Required:

1. **Stormwater Runoff Pollution Control Measures:** Revise sheet C5.2 to reflect the following:
   a) Retitle sheet "Stormwater Control Plan" rather than Water Quality Details Sheet and revise plan coversheet accordingly.
   b) Relabel Drainage Sheds exhibit as Drainage Management Areas.
      i) Revise scale of exhibit to 1" = 20' for clarity.
      ii) Remove all references to sheds and replace with Drainage Management Areas (DMA).
      iii) Split DMA 1 (aka Shed 1) into 3 DMA's labeled as DMA 1 (i.e. 20,500 sf roof and 800 sf sidewalk) DMA 2 (i.e. 4,700 sf roof and X sf exterior site improvements) and EQ-1 (i.e. 10,500 sf existing impermeable area). Clearly show new boundary limits of each DMA.
      iv) Verify that Drainage Management Area EQ-1 does not receive additional runoff/inflow from surrounding parking lot. Otherwise bioretention area will need to be resized to accommodate additional runoff and EQ-1 boundary limits will need to be expanded. Valley gutter on east side of building appears to be draining into EQ-1.
      v) Add callout to bioretention area and label as TCM 1.

c) Clearly label Treatment Control Measure (TCM) Summary Table.
   i) Update TCM Summary Table per City standard Stormwater Control Details and Notes (attached).
   ii) Add EQ-1 *** to table.
   iii) Show storage depth required/provided as 0.5' rather than 1'.

d) Add/update details per City standard Stormwater Control Details and Notes (attached).
   i) Add Curb Adjacent to Bioretention detail.
   ii) Replace detail 1 with Bioretention Basin without Liner (4% sizing method).

e) Add Section 2 (Surface Data) including the comparison of impervious and pervious surfaces at Project Site Table (PISC Table) from Stormwater Evaluation Form to sheet C5.2.

2. **Landscape Plan**:
   a) Clearly label bioretention area on sheet LP-1.1
   b) Remove all proposed plant species not shown in Appendix D of the C.3. Stormwater Handbook (i.e. Delta Bluegrass).

3. **Transportation:**
   a) A traffic report is required prior to environmental clearance or zoning. The traffic report must conform to the City of San Jose Guidelines for the preparation of a traffic report. For Traffic Analysis process and submittal requirements refer to "Traffic Analysis Handbook (April 2018)" copies of the handbooks may be found at the Development Services website at: http://www.sanjoseca.gov/index.aspx?NID=5571
   b) A final traffic report is required prior to environmental clearance or zoning approval.

4. **Street Improvements:** Show new ADA curb ramp along Graves frontage at the intersection of Graves Avenue/Fields Drive for pedestrian crossing.

5. **Storm**:
   a) Staff recommends replacing existing inlet located in proposed bioretention area on sheet C4.0 with junction box with solid cover.
   b) Add separate/new overflow structure for bioretention area and connect to junction box to reduce potential drainage/maintenance issues.
   c) Indicate overland release path in arrows.
   d) Show drainage arrows, spot elevations, and ridge lines along proposed EQ-1 boundaries to clearly show drainage path. Ensure additional runoff/inflow from surrounding parking lot does not drain to bioretention area.

6. **Other**:
   a) Revise sheet C2.0 through C5.2 to be drawn to scale.
   b) Extend brick walls at existing pedestrian walkway entrance to narrow opening as recommendation.

Project Conditions:

Public Works Clearance for Building Permit(s) or Map Approval: Prior to the approval of the Tract or Parcel Map (if applicable) by the Director of Public Works, or the issuance of Building permits, whichever occurs first, the applicant will be required to have satisfied all of the following Public Works conditions. The applicant is strongly advised to apply for any necessary Public Works permits prior to applying for Building permits. Standard review timelines and submittal instructions for Public Works permits may be found at the following: http://www.sanjoseca.gov/index.aspx?nid=2246.

7. **Minor Improvement Permit**: The public improvements conditioned as part of this permit require the execution of a Minor Street Improvement Permit that guarantees the completion of the public improvements to the satisfaction of the Director of Public Works. The Minor Improvement Permit includes privately engineered plans, insurance, surety deposit, and engineering and inspection fees.

8. **Urban Village Plan:** This project is located in a designated Urban Village per the Envision San Jose 2040 General Plan. Urban Villages are designed to provide a vibrant and inviting mixed-use setting to attract pedestrians, bicyclists, and transit users of all ages and to promote job growth.

9. **Grading/Geology:**
   a) A grading permit is required prior to the issuance of a Public Works Clearance.
   b) All on-site storm drainage conveyance facilities and earth retaining structures 4 foot in height or greater (top of wall to bottom of footing) or is being surcharged (slope of 3:1 or greater abutting the wall) shall be reviewed and approved under Public Works grading and drainage permit prior to the issuance of Public Works Clearance. The drainage plan should include all underground pipes, building drains, area drains and inlets. The project shall provide storm drainage calculations that adhere to the 2013 California Plumbing Code or submit a stamped and signed alternate engineered design for Public Works discretionary approval and should be designed to convey a 10 year storm event.
   c) A soils report must be submitted to and accepted by the City prior to the issuance of a grading permit. This report should include, but is not limited to: foundation, earthwork, utility trenching, retaining and drainage recommendations.

10. **Stormwater Runoff Pollution Control Measures:** This project must comply with the City's Post-Construction Urban Runoff Management Policy (Policy 6-29) which requires implementation of Best Management Practices (BMPs) which includes site design measures, source controls and numerically-sized Low Impact Development (LID) stormwater treatment measures to minimize stormwater pollutant discharges.
   a) The project's Stormwater Control Plan and numeric sizing calculations have been reviewed and additional information is required per the Actions/Revisions section.
   b) Final inspection and maintenance information on the post-construction treatment control measures must be submitted prior to issuance of a Public Works Clearance.

11. **Stormwater Peak Flow Control Measures**: The project is located in a non-Hydromodification Management area and is not required to comply with the City's Post-Construction Hydromodification Management Policy (Council Policy 8-14).

12. **Flood: Zone D** The project site is not within a designated Federal Emergency Management Agency (FEMA) 100-year floodplain. Flood Zone D is an unstudied area where flood hazards are undetermined, but flooding is possible. There are no City floodplain requirements for Zone D.

13. **Sewage Fees:** In accordance with City Ordinance all storm sewer area fees, sanitary sewer connection fees, and sewage treatment plant connection fees, less previous credits, are due and payable.

14. **Undergrounding**: The In Lieu Undergrounding Fee shall be paid to the City for all frontage adjacent to Prospect Road prior to issuance of a Public Works Clearance. 50 percent of the base fee in place at the time of payment will be due. Currently, the 2018 base fee is $485 per linear foot of frontage and is subject to change every January 31st based on the Engineering News Record's City Average Cost Index for the previous year. The project will be required to pay the current rate in effect at the time the Public Works Clearance is issued.

15. **Street Improvements**:
    a) Applicant shall be responsible to remove and replace curb, gutter, and sidewalk damaged during construction of the proposed project.
    b) Dedication and improvement of the public streets to the satisfaction of the Director of Public Works.

Please contact Genevive Yambao at genevive.yambao@sanjoseca.gov or (408) 535-7643 or me at michelle.kimball@sanjoseca.gov or (408) 535-6830 if you have any questions. You may also reach the Senior Engineer overseeing the project, Jeff Lee, at jeff.lee@sanjoseca.gov or (408) 535-6829.

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Memorandum

TO: Rhonda Buss
Planning and Building

FROM: Michelle Kimball
Public Works

SUBJECT: **INITIAL RESPONSE TO DEVELOPMENT APPLICATION**

DATE: 05/18/18

Approved [signature] Date 5-18-18

PLANNING NO.: H18-008
DESCRIPTION: Site Development Permit to allow partial demolition and construction of a new 40,000-square foot addition to an existing 1-story retail building, Building H (Westgate West Shopping Center) and site modifications on an 18.9-gross acre site zoned CG Commercial General.
LOCATION: East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center).
P.W. NUMBER: 3-07718

Public Works received additional information for the subject project on 04/10/18 and submits the following comments and requirements. **Upon completion of the Action/Revisions Required items by the applicant, Public Works will forward a Final Memo to the Department of Planning prior to the preparation of the Staff Report for Public Hearing.**

Actions / Revisions Required:

1. **Stormwater Runoff Pollution Control Measures:** Revise sheet C5.2 to reflect the following:
   a) Retitle sheet "Stormwater Control Plan" rather than Water Quality Details Sheet and revise plan coversheet accordingly.
   b) Relabel Drainage Sheds exhibit as Drainage Management Areas.
      i) Revise scale of exhibit to 1" = 20' for clarity.
      ii) Remove all references to sheds and replace with Drainage Management Areas (DMA).
      iii) Split DMA 1 (aka Shed 1) into 3 DMA's labeled as DMA 1 (i.e. 20,500 sf roof and 800 sf sidewalk) DMA 2 (i.e. 4,700 sf roof and X sf exterior site improvements) and EQ-1 (i.e. 10,500 sf existing impermeable area). Clearly show new boundary limits of each DMA.
      iv) Verify that Drainage Management Area EQ-1 does not receive additional runoff/inflow from surrounding parking lot. Otherwise bioretention area will need to be resized to accommodate additional runoff and EQ-1 boundary limits will need to be expanded. Valley gutter on east side of building appears to be draining into EQ-1.
      v) Add callout to bioretention area and label as TCM 1.

c) Clearly label Treatment Control Measure (TCM) Summary Table.
   i) Update TCM Summary Table per City standard Stormwater Control Details and Notes (attached).
   ii) Add EQ-1 *** to table.
   iii) Show storage depth required/provided as 0.5' rather than 1'.

d) Add/update details per City standard Stormwater Control Details and Notes (attached).
   i) Add Curb Adjacent to Bioretention detail.
   ii) Replace detail 1 with Bioretention Basin without Liner (4% sizing method).

e) Add Section 2 (Surface Data) including the comparison of impervious and pervious surfaces at Project Site Table (PISC Table) from Stormwater Evaluation Form to sheet C5.2.

2. **Landscape Plan:**
   a) Clearly label bioretention area on sheet LP-1.1
   b) Remove all proposed plant species not shown in Appendix D of the C.3. Stormwater Handbook (i.e. Delta Bluegrass).

3. **Transportation:**
   a) A traffic report is required prior to environmental clearance or zoning. The traffic report must conform to the City of San Jose Guidelines for the preparation of a traffic report. For Traffic Analysis process and submittal requirements refer to "Traffic Analysis Handbook (April 2018)" copies of the handbooks may be found at the Development Services website at: http://www.sanjoseca.gov/index.aspx?NID=5571
   b) A final traffic report is required prior to environmental clearance or zoning approval.

4. **Street Improvements:** Show new ADA curb ramp along Graves frontage at the intersection of Graves Avenue/Fields Drive for pedestrian crossing.

5. **Storm**:
   a) Staff recommends replacing existing inlet located in proposed bioretention area on sheet C4.0 with junction box with solid cover.
   b) Add separate/new overflow structure for bioretention area and connect to junction box to reduce potential drainage/maintenance issues.
   c) Indicate overland release path in arrows.
   d) Show drainage arrows, spot elevations, and ridge lines along proposed EQ-1 boundaries to clearly show drainage path. Ensure additional runoff/inflow from surrounding parking lot does not drain to bioretention area.

6. **Other**:
   a) Revise sheet C2.0 through C5.2 to be drawn to scale.
   b) Extend brick walls at existing pedestrian walkway entrance to narrow opening as recommendation.

Project Conditions:

Public Works Clearance for Building Permit(s) or Map Approval: Prior to the approval of the Tract or Parcel Map (if applicable) by the Director of Public Works, or the issuance of Building permits, whichever occurs first, the applicant will be required to have satisfied all of the following Public Works conditions. The applicant is strongly advised to apply for any necessary Public Works permits prior to applying for Building permits. Standard review timelines and submittal instructions for Public Works permits may be found at the following: http://www.sanjoseca.gov/index.aspx?nid=2246.

7. **Minor Improvement Permit**: The public improvements conditioned as part of this permit require the execution of a Minor Street Improvement Permit that guarantees the completion of the public improvements to the satisfaction of the Director of Public Works. The Minor Improvement Permit includes privately engineered plans, insurance, surety deposit, and engineering and inspection fees.

8. **Urban Village Plan:** This project is located in a designated Urban Village per the Envision San Jose 2040 General Plan. Urban Villages are designed to provide a vibrant and inviting mixed-use setting to attract pedestrians, bicyclists, and transit users of all ages and to promote job growth.

9. **Grading/Geology:**
   a) A grading permit is required prior to the issuance of a Public Works Clearance.
   b) All on-site storm drainage conveyance facilities and earth retaining structures 4 foot in height or greater (top of wall to bottom of footing) or is being surcharged (slope of 3:1 or greater abutting the wall) shall be reviewed and approved under Public Works grading and drainage permit prior to the issuance of Public Works Clearance. The drainage plan should include all underground pipes, building drains, area drains and inlets. The project shall provide storm drainage calculations that adhere to the 2013 California Plumbing Code or submit a stamped and signed alternate engineered design for Public Works discretionary approval and should be designed to convey a 10 year storm event.
   c) A soils report must be submitted to and accepted by the City prior to the issuance of a grading permit. This report should include, but is not limited to: foundation, earthwork, utility trenching, retaining and drainage recommendations.

10. **Stormwater Runoff Pollution Control Measures:** This project must comply with the City's Post-Construction Urban Runoff Management Policy (Policy 6-29) which requires implementation of Best Management Practices (BMPs) which includes site design measures, source controls and numerically-sized Low Impact Development (LID) stormwater treatment measures to minimize stormwater pollutant discharges.
   a) The project's Stormwater Control Plan and numeric sizing calculations have been reviewed and additional information is required per the Actions/Revisions section.
   b) Final inspection and maintenance information on the post-construction treatment control measures must be submitted prior to issuance of a Public Works Clearance.

11. **Stormwater Peak Flow Control Measures**: The project is located in a non-Hydromodification Management area and is not required to comply with the City's Post-Construction Hydromodification Management Policy (Council Policy 8-14).

12. **Flood: Zone D** The project site is not within a designated Federal Emergency Management Agency (FEMA) 100-year floodplain. Flood Zone D is an unstudied area where flood hazards are undetermined, but flooding is possible. There are no City floodplain requirements for Zone D.

13. **Sewage Fees:** In accordance with City Ordinance all storm sewer area fees, sanitary sewer connection fees, and sewage treatment plant connection fees, less previous credits, are due and payable.

14. **Undergrounding**: The In Lieu Undergrounding Fee shall be paid to the City for all frontage adjacent to Prospect Road prior to issuance of a Public Works Clearance. 50 percent of the base fee in place at the time of payment will be due. Currently, the 2018 base fee is $485 per linear foot of frontage and is subject to change every January 31st based on the Engineering News Record's City Average Cost Index for the previous year. The project will be required to pay the current rate in effect at the time the Public Works Clearance is issued.

15. **Street Improvements**:
    a) Applicant shall be responsible to remove and replace curb, gutter, and sidewalk damaged during construction of the proposed project.
    b) Dedication and improvement of the public streets to the satisfaction of the Director of Public Works.

Please contact Genevive Yambao at genevive.yambao@sanjoseca.gov or (408) 535-7643 or me at michelle.kimball@sanjoseca.gov or (408) 535-6830 if you have any questions. You may also reach the Senior Engineer overseeing the project, Jeff Lee, at jeff.lee@sanjoseca.gov or (408) 535-6829.

PLANNING DIVISION

April 20, 2018

David Blair
MCG Architects
250 Sutter Street, Suite 500
San Francisco, California 94108

SITE ADDRESS: 5365 Prospect Road
RE.: File No. H18-008: Construction of a new 40,000 square foot commercial shell for a future tenant.

Dear Mr. Blair,

Your application, referenced above, has undergone review for completeness and consistency with City policies and regulations. The purpose of this letter is to provide you with comments and revisions necessary for the project to meet City policies and ordinances so you can appropriately respond to the issues identified below. The comments below are based on the plans and information currently on file. Additional comments may be made at a later time when we receive revised plans and additional information. Please let me or the contact listed in the attached memos know if you have any questions regarding these comments.

Project Issues and Concerns

Based on our initial review of your project, the items listed below are the substantial issues that affect the proposed project, and are explained in more detail in this letter:

1. Throughout the plan set, the reference to a future 24-Hour Fitness needs to be removed. It should read "Future TI by Others".
2. The property lines and setbacks are still unclear. Please identify all property and setback lines so it is more readily identified.
3. Kindly cloud all revisions.

Permit Streamlining Act

Pursuant to the Permit Streamlining Act (Government Code Chapter 4.5 of Title 7), your application has been deemed **incomplete**. The following information must be addressed to complete the review of your project and deem your application complete.

1. A wet-ink stamped and signed landscaping plan that complies with Title 15 is required for the north and east sides too.
2. Please see the parking ratio information below. As identified above, clarification is needed regarding how that parking ratio is met.
3. Stormwater Data Tables - See Attached
4. The items in the Plan Clarifications sections below need to be addressed.

Project Review

1. Project Description

Site Development Permit to allow partial demolition and construction of a new 40,000-square foot addition to an existing 1-story retail building, Building H (Westgate West Shopping Center) and site modifications on an 18.9-gross acre site zoned CG Commercial General.

Please confirm the description above includes all aspects of the proposed project, and advise us immediately if any information is incorrect or omitted.

2. Applicable City Council Policies

Note City Council policies applicable to the proposed project. The following includes policies that apply.

Please refer to the City Council Outdoor Lighting Policy exception for more information at http://www.sanjoseca.gov/index.aspx?nid=1733. Pursuant to the exception to the Outdoor Lighting Policy, light fixture heights should not exceed eight feet when adjacent to residential uses unless the setback of the fixture from property line is twice the height of the fixture and no ground mounted light fixture shall exceed twenty-five feet in height. Would you kindly verify the height? Since the setbacks were not shown on the site plan this could not be reviewed and it appears that the setback would not be 40 feet or greater, so the fixtures may need to be lowered.

- Outdoor Lighting
- Outdoor Lighting Exemption

Web Pages: http://www.sanjoseca.gov/index.aspx?nid=1733 and http://www.sanjoseca.gov/index.aspx?NID=1961

3. Zoning Consistency

The subject site is located in the CG Commercial General Zoning District. This district allows for a full range of retail and commercial uses. The proposed project use is consistent with the Zoning designation for the subject site based on §20.40.100 and the proposed project description. Please identify all property lines and setbacks on the Site Plan as identified below.

a. Setbacks:
    i. Front, 15 feet
    ii. Side, interior, none
    iii. Rear, Interior, none

b. Parking: Please provide a table identifying the information below. We have received your letter indicating a 1:400 parking ratio date 8/2/17. Using that is an option. Please see the options below.

    Option 1:

    Pursuant to parking exception 20.90.220(c)(1), very specific uses (note 3) qualify for this reduction.

    i. Building
    ii. Ground Floor/Number of Stories (if using Option 1)
    iii. Use (if using Option 1)
    iv. Square footage
    v. Required parking
    vi. Total Required Parking

vii. Total Existing Parking.

Option 2.

Alternatively, the standard parking ratios below may be used.

viii. Vehicle: 1 parking space per 225-square feet of floor area for Neighborhood shopping center (minimum 100,000 sq. ft. in size)

ix. Bicycle: 1 per 3,000 sq. ft. of floor area at publicly accessible entrances

x. Motorcycle: 1 motorcycle space per 20 code required auto parking spaces. Please see the link for motorcycle parking information.

4. Design Guidelines Consistency

Please refer to the Commercial Design Guidelines for design information. Please pay particular attention to the following sections.

a. Landscaping

i. Perimeter Landscaping.

- Page 16 B. 1. e. Street front landscaping should consist of a mixed planting of trees. shrubs. and ground cover in the area between buildings and the sidewalk.
- Page 17 1. e. A wall at least 4 feet tall to screen parking lots, as required by the Zoning Ordinance, when the parking lot is across the street from a residential area.

ii. Internal Landscaping

- Page 20, 7. A minimum of one tree for each four parking spaces should be planted along rows of parking spaces.
- Page 20, 9. Texture and color variation in paving materials should occur where pedestrian and vehicular areas overlap. The use of stamped concrete, stone, brick or granite pavers exposed aggregate or colored concrete is encouraged in parking lots to promote pedestrian safety and to minimize the impact of large expanses of pavement.
- Page 20, 10. In high traffic areas such as in retail centers where plants are more susceptible to injury by pedestrian or motor traffic or other environmental hazards. They should be protected by raised curbs tree guards and/or other devices.

b. Parking and Circulation

i. Pedestrian/Bicycle

- Page 33 D. 2 Bicycle parking racks should be provided at all commercial centers and at other retail and office sites large enough to attract and accommodate bicyclists. Please show where the bike racks are.

5. Plan Clarifications and Required Additional Information

a. Title Sheet:

i. The entire submittal package needs to comport. Please update the following:

- Please verify the acreage in the project description on the plan set.

b. Sheet A-2:

i. The property lines and building setbacks need to be shown.
ii. Please label the type of use of all adjacent properties.

c. Sheet C2:
   i. On the landscaping plan. Please provide a tree table that indicates the items below. Whether the tree is going to remain or be removed or replaced.
      - Identify the tree number
      - Size
      - Type of tree
      - Replacement information
      - Total number of trees
   ii. Please show Item 15 on this sheet.
d. Sheet C3.1
   i. Remove item 19 and show it on the floor/site plan.
   ii. Where is item 33? Be sure to include it on the landscape plan.
e. Sheet C3.2
   i. Please include this sheet, as it was not a part of the plan set we received.
f. Sheet A-2
   i. As discussed above, please clearly identify where the property lines and setbacks are.

6. Environmental Review - California Environmental Quality Act (CEQA)

As previously discussed, the project required an Initial Study. Please note, all technical studies need to be submitted to the City directly by the applicant. The Environmental Project Manager is

7. Comments from Other Departments/Divisions and Agencies

Attached is a memorandum from other departments/divisions and outside agencies as indicated below. Please carefully review the memos, as they contain essential information needed to successfully and efficiently move your project through the Planning entitlement process. As required, comments contained in the attached memos must be incorporated into the revised plan sets. Concerns about any of these issues should be brought to my attention so that I can coordinate with appropriate City staff on your behalf.

a. Building – To be forwarded upon receipt
b. City of Saratoga – To be forwarded upon receipt
c. Environmental Services – To be forwarded upon receipt
d. Fire – To be forwarded upon receipt
e. Public Works – The following plans are needed for review.
   - Grading and Drainage Plans
   - Stormwater and Control Plans
   - Stormwater/Hydromodification Plans
f. San Jose Water Company – To be forwarded upon receipt

8. Community Outreach

At this time a community meeting will not be required, but this is subject to change if significant public interest is generated.

9. On-Site Sign Posting

Per the City's Public Outreach Policy, a sign describing the proposed project is required to be placed on each project site street frontage so it is legible from the street. Attached is a PDF of the on-site poster. Once the sign is posted, we would appreciate it if you could please take pictures of the on-site sign and fill out the Declaration of Posting (page 3 of the first link) and send both of those to my attention.

On-Site Noticing/Posting Requirements: http://www.sanjoseca.gov/DocumentCenter/Home/View/373
Public Outreach: http://www.sanjoseca.gov/DocumentCenter/Home/View/374

10. Next Steps

Please be advised that this summary does not constitute a final review. Additional comments may be provided upon review of any additional information and plan revisions submitted in response to this letter. In order to facilitate the development review process, **please include a detailed response letter with your resubmittal** that addresses all items contained in this letter and attached memos. Additionally, please submit six (six) 24" x 36" size revised plans and three (3) 11"x17" size plans. Please anticipate at least three weeks for departmental staff to review your responses and revisions.

Additional fees may be applicable for community meetings, additional public noticing, and for other processes/reviews as a result of revisions to the project description or plans, based on the adopted fee schedule. We will inform you should additional fees be required. The project will not be scheduled for hearing until all fees have been paid in full.

The decision to approve, deny, or conditionally approve this proposal will occur at a **Director's Hearing.** Consideration of the request may also be continued to a future hearing should issues or questions arise during or before the scheduled hearing that require additional time for analysis. Director hearings are held **every Wednesday at 9:00 a.m.,** in the City Council Chambers. Once the project plans are acceptable and all comments have been addressed, the project will be scheduled for public hearing. There is a three-week lead time prior to the hearing for preparation, distribution and responses to the public notice, and for preparation of the draft permit.

Should you have any questions, you may contact me at rhonda.buss@sanjoseca.gov or (408) 535-3887. You may also contact the Supervising Planner overseeing this project, Shaunn Mendrin at shaunn.mendrin@sanjoseca.gov.

We look forward to continuing to work with you and your team on your project in San Jose.

Sincerely,

Rhonda Buss
Project Manager
City of San José

Buss, Rhonda

From: Chiang, John
Sent: Friday, April 13, 2018 11:25 AM
To: Buss, Rhonda
Cc: dblair@mcgarchitecture.com
Subject: H18-008---Building H at Westgate West Shopping Center

Hello Rhonda,

I spoke to David Blair of MCG Architecture a few moments ago. I called David because I did not find any response to my comments generated on 2/13/18 in his response letter addressed to you on 3/29/2018. David informed me that his office would address my comments at the Building Permit application stage. I told him that I was fine with that as long as those comments were addressed before the Building Permit is issued.

Thank you.

Memorandum

BUILDING CODE ISSUES, PRELIMINARY REVIEW

DATE: 02/13/18

TO: Rhonda Buss
FROM: John Chiang

Re: Building Division Comments
PLANNING NO: H18-008
DESCRIPTION: Site Development Permit to allow partial demolition and construction of a new 23,594 sf addition to an existing 1-story retail building, Building H (WESTGATE WEST SHOPPING CENTER) and allow site modifications on a 18.9 gross acre site
LOCATION: East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center).
ADDRESS: East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center). (5365 PROSPECT RD)
FOLDER #: 18 103936 DV

The Building Division review is limited to general compliance with the 2016 California Building Code. This review should not be construed as a comprehensive plan check review that is required by the Building Division before obtaining building permit. This review is only intended to assist the designer toward preparing more detailed plans in obtaining building permit. Items that affect this planning permit should be resolved at this stage.

1.	Building Permit is required for the demolition of the existing building.
2.	Property line needs to be clearly shown on the site plan to determine the new building's allowable floor area, based on its type of construction and occupancy group. Property lines are also needed for evaluating the allowable opening areas on the exterior walls of the building. Due to the lack of information on the building's type of construction, its occupancy group, the property lines and locations of the exterior walls, the allowable floor area cannot be confirmed at this review.
3.	It appears that there is a fire wall between the existing OSH store building and the building proposed to be rebuilt. This will affect the construction of the projection/overhang on either side of the fire wall at front of the stores. It will also affect the opening on the existing OSH store at the back where the truck loading dock is proposed as the fire wall is not allowed to have any openings/penetrations unless an Alternate Material and Method of Construction is being proposed and considered.
4.	In addition to the on-site accessible path of travel to the building and within the building, an accessible path of travel is also required from the building entrance to nearby public transportation stop(s) and to nearby stores.

David Blair
MCG Architects
250 Sutter Street, Suite 500
San Francisco, California 94108

SITE ADDRESS: 5365 Prospect Road
RE.: File No. H18-008: Construction of a new 40,000 square foot commercial shell for a future tenant.

Dear Mr. Blair,

Your application, referenced above, has undergone review for completeness and consistency with City policies and regulations. The purpose of this letter is to provide you with comments and revisions necessary for the project to meet City policies and ordinances so you can appropriately respond to the issues identified below. The comments below are based on the plans and information currently on file. Additional comments may be made at a later time when we receive revised plans and additional information. Please let me or the contact listed in the attached memos know if you have any questions regarding these comments.

Project Issues and Concerns

Based on our initial review of your project, the items listed below are the substantial issues that affect the proposed project, and are explained in more detail in this letter:

1. It is unclear if this is a complete demolition of a portion of the existing building or a façade remodel and addition. An existing floor plan and demolition plan will be required. Please note that there are inconsistencies between the plans, project description and stormwater data form.
2. Please make sure that the resubmittal package responds to all comments
3. Large expanses of stucco walls need to be addressed through landscaping and architectural treatment.
4. The site plan needs to address what is being done with the converted loading area behind the new retail space.
5. Parking around the façade/addition needs to be increased to be consistent with the Commercial Design guidelines. Please see the parking ratio information below. Clarification is needed regarding how that parking ratio is met.

Permit Streamlining Act

Pursuant to the Permit Streamlining Act (Government Code Chapter 4.5 of Title 7), your application has been deemed **incomplete**. The following information must be addressed to complete the review of your project and deem your application complete.

1. As identified below the following plans are needed for Public Works Review:

- Grading and Drainage Plans
- Stormwater and Control Plans
- Stormwater/Hydromodification Plans

2. Please provide an Operations Plan which includes the hours of deliveries.
3. A wet-ink stamped and signed landscaping plan that complies with Title 15 is required.
4. A Lighting Plan needs to be submitted. Refer to City Council Lighting Policy for more information. Refer to the Department Development Policy webpage at http://www.sanjoseca.gov/index.aspx?nid=1733. Please provide a photometrics plan and light details. If light poles are proposed, please identify the total height of the light poles. Pursuant to the exception to the Outdoor Lighting Policy, light fixture heights should not exceed eight feet when adjacent to residential uses unless the setback of the fixture from property line is twice the height of the fixture and no ground mounted light fixture shall exceed twenty-five feet in height.
5. Please see the parking ratio information below. As identified above, clarification is needed regarding how that parking ratio is met.
6. The items in the Plan Clarifications sections below need to be addressed.

Project Review

1. Project Description

Site Development Permit to allow partial demolition and construction of a new 40,000-square foot addition to an existing 1-story retail building, Building H (Westgate West Shopping Center) and site modifications on an 18.9-gross acre site zoned CG Commercial General.

Please confirm the description above includes all aspects of the proposed project, and advise us immediately if any information is incorrect or omitted.

2. General Plan Consistency

The subject site is designated Neighborhood/Community Commercial (NCC) as identified on the Land Use/Transportation Diagram of the Envision San José 2040 General Plan. This designation supports a very broad range of commercial activity, including commercial uses that serve the communities in neighboring areas, such as neighborhood serving retail. NCC uses typically have a strong connection to and provide services and amenities for the nearby community and should be designed to promote that connection with an appropriate urban form that supports walking, transit use and public interaction. The proposed project is **consistent** with the following goals and polices of the Envision San Jose 2040 General Plan:

- **LU-4.1** Retain existing commercial lands to provide jobs, goods, services, entertainment, and other amenities for San José's workers, residents, and visitors.
- **LU-5.7** Encourage retail, restaurant, and other active uses as ground-floor occupants in identified growth areas and other locations with high concentrations of development.

3. Applicable City Council Policies

Note City Council policies applicable to the proposed project. The following includes policies that apply.

- Green Building Policy

- Outdoor Lighting
- Outdoor Lighting Exemption
- Post-Construction Hydromodification Management
- Post-Construction Urban Runoff Management

Web Pages: http://www.sanjoseca.gov/index.aspx?nid=1733 and http://www.sanjoseca.gov/index.aspx?NID=1961

4. Zoning Consistency

The subject site is located in the CG Commercial General Zoning District. This district provides for [briefly describe the types of uses or development in the district. This district allows for a full range of retail and commercial uses. The proposed project use is consistent with the Zoning designation for the subject site based on §20.40.100 and the proposed project description. Please all setbacks on the Site Plan as identified below.

a. Height: 65 feet maximum; 45 feet, 6 inches is proposed and is consistent.

b. Setbacks:

   i. Front, 15 feet

   ii. Side, interior, none

   iii. Rear, Interior, none

c. Parking:

   i. Vehicle: 1 parking space per 225-square feet of floor area for Neighborhood shopping center (minimum 100,000 sq. ft. in size)

   ii. Bicycle: 1 per 3,000 sq. ft. of floor area at publicly accessible entrances

   iii. Motorcycle: 1 motorcycle space per 20 code required auto parking spaces. Please see the link for motorcycle parking information.

d. Noise: Please note that the maximum noise level in decibels allowed through at Site Development Permit at property line is 55. Anything over this requires a Conditional Use Permit. This is something to be aware of, if the proposed use is a Gym, then this should not be an issue.

5. Design Guidelines Consistency

Please refer to the Commercial Design Guidelines for design information. Please pay particular attention to the following sections. Additionally, we are concerned about the blank walls at the as shown on the north and east elevations. The materials and design concept needs to be continued on the north and east elevations.

a. Landscaping

   i. Perimeter landscaping

   ii. Internal landscaping

b. Service Facilities

   i. Loading

ii. Lighting

c. Parking and Circulation

i. Automobile

ii. Truck

iii. Pedestrian/Bicycle

For Trash Enclosure Design Guidelines please refer to the link.

6. Plan Clarifications and Required Additional Information

a. Title Sheet:

i. Since this project is for a partial demolition, please indicate partial demolition rather than "Partial Exterior Façade Remodel". The entire submittal package needs to comport.

ii. The APN is needed on Title Sheet.

iii. Please show the boundary line for Westgate West.

b. Sheet A-2:

i. The property lines and building setbacks are need to be shown.

ii. The drive aisle width needs to be identified. A 26-foot width is required for two-way access.

iii. Please dimension the loading dock area.

iv. Parking space dimensions are needed.

v. Total existing and proposed gross square footage of floor space for each non-residential use

vi. Total existing and proposed net square footage of floor space (85% of gross) for each non-residential use

vii. Use of all adjacent properties, including locations of any buildings.

viii. Location of existing and proposed on-site lighting fixtures

ix. Please provide the west elevation.

c. Elevations:

i. Please show and dimension the loading dock wall. The trash enclosure needs to be dimensioned.

ii. As identified above, the blank walls are a concern. Pursuant to the Commercial Design guidelines, blank walls and the walls of interior parking or service areas should be avoided where they are visible from a public street or adjacent to a major pedestrian walkway. Please address the blank walls proposed on the north and east elevations.

iii. Please provide the west elevation.

7. Environmental Review - California Environmental Quality Act (CEQA)

An Environmental Evaluation Form was submitted for the project. The study is currently under review and comments will be forwarded upon receipt.

Please note, the subject site is located in and subject to the Habitat Conservation Plan (HCP).

According to our database, the site has archeological sensitivity and may be subject to the following conditions as part of the permit approval.

- In the event that prehistoric or historic resources are encountered during excavation and/or grading of the site, all activity within a 50-foot radius of the find shall be stopped, the Director of Planning, Building and Code Enforcement shall be notified, and the archaeologist will examine the find and make appropriate recommendations prior to issuance of building permits. Recommendations could include collection, recordation, and analysis of any significant cultural materials. A report of findings documenting any data recovery during monitoring would be submitted to the Director of Planning, Building and Code Enforcement.
- In the event that human remains are discovered during excavation and/or grading of the site, all activity within a 50-foot radius of the find shall be stopped. The Santa Clara County Coroner shall be notified and make a determination as to whether the remains are of Native American origin or whether an investigation into the cause of death is required. If the remains are determined to be Native American, the Coroner will notify the Native American Heritage Commission (NAHC) immediately. Once the NAHC identifies the most likely descendants, the descendants will make recommendations regarding proper burial, which will be implemented in accordance with Section 15064.5(e) of the CEQA Guidelines

8. Comments from Other Departments/Divisions and Agencies

Attached is a memorandum from other departments/divisions and outside agencies as indicated below. Please carefully review the memos, as they contain essential information needed to successfully and efficiently move your project through the Planning entitlement process. As required, comments contained in the attached memos must be incorporated into the revised plan sets. Concerns about any of these issues should be brought to my attention so that I can coordinate with appropriate City staff on your behalf.

a. Building – To be forwarded upon receipt
b. City of Saratoga – To be forwarded upon receipt
c. Environmental Services – To be forwarded upon receipt
d. Fire – To be forwarded upon receipt
e. Public Works – The following plans are needed for review.
   - Grading and Drainage Plans
   - Stormwater and Control Plans
   - Stormwater/Hydromodification Plans
f. San Jose Water Company – To be forwarded upon receipt

9. Community Outreach

At this time a community meeting will not be required, but this is subject to change if significant public interest is generated.

10. On-Site Sign Posting

Per the City's Public Outreach Policy, a sign describing the proposed project is required to be placed on each project site street frontage so it is legible from the street. Attached is a PDF of the on-site poster. Once the sign is posted, we would appreciate it if you could please take pictures of the on-site sign and fill out the Declaration of Posting (page 3 of the first link) and send both of those to my attention.

On-Site Noticing/Posting Requirements:
http://www.sanjoseca.gov/DocumentCenter/Home/View/373
Public Outreach: http://www.sanjoseca.gov/DocumentCenter/Home/View/374

11. Next Steps

Please be advised that this summary does not constitute a final review. Additional comments may be provided upon review of any additional information and plan revisions submitted in response to this letter. In order to facilitate the development review process, **please include a detailed response letter with your resubmittal** that addresses all items contained in this letter and attached memos. Additionally, please submit six (six) 24" x 36" size revised plans and three (3) 11"x17" size plans. Please anticipate at least three weeks for departmental staff to review your responses and revisions.

Additional fees may be applicable for community meetings, additional public noticing, and for other processes/reviews as a result of revisions to the project description or plans, based on the adopted fee schedule. We will inform you should additional fees be required. The project will not be scheduled for hearing until all fees have been paid in full.

The decision to approve, deny, or conditionally approve this proposal will occur at a **Director's Hearing.** Consideration of the request may also be continued to a future hearing should issues or questions arise during or before the scheduled hearing that require additional time for analysis. Director hearings are held **every Wednesday at 9:00 a.m.,** in the City Council Chambers. Once the project plans are acceptable and all comments have been addressed, the project will be scheduled for public hearing. Memorandum

BUILDING CODE ISSUES, PRELIMINARY REVIEW

DATE: 02/13/18

TO: Rhonda Buss
FROM: John Chiang

Re: Building Division Comments
PLANNING NO: H18-008
DESCRIPTION: Site Development Permit to allow partial demolition and construction of a new 23,594 sf addition to an existing 1-story retail building, Building H (WESTGATE WEST SHOPPING CENTER) and allow site modifications on a 18.9 gross acre site
LOCATION: East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center).
ADDRESS: East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center). (5365 PROSPECT RD)
FOLDER #: 18 103936 DV

The Building Division review is limited to general compliance with the 2016 California Building Code. This review should not be construed as a comprehensive plan check review that is required by the Building Division before obtaining building permit. This review is only intended to assist the designer toward preparing more detailed plans in obtaining building permit. Items that affect this planning permit should be resolved at this stage.

1.	Building Permit is required for the demolition of the existing building.
2.	Property line needs to be clearly shown on the site plan to determine the new building's allowable floor area, based on its type of construction and occupancy group. Property lines are also needed for evaluating the allowable opening areas on the exterior walls of the building. Due to the lack of information on the building's type of construction, its occupancy group, the property lines and locations of the exterior walls, the allowable floor area cannot be confirmed at this review.
3.	It appears that there is a fire wall between the existing OSH store building and the building proposed to be rebuilt. This will affect the construction of the projection/overhang on either side of the fire wall at front of the stores. It will also affect the opening on the existing OSH store at the back where the truck loading dock is proposed as the fire wall is not allowed to have any openings/penetrations unless an Alternate Material and Method of Construction is being proposed and considered.
4.	In addition to the on-site accessible path of travel to the building and within the building, an accessible path of travel is also required from the building entrance to nearby public transportation stop(s) and to nearby stores.

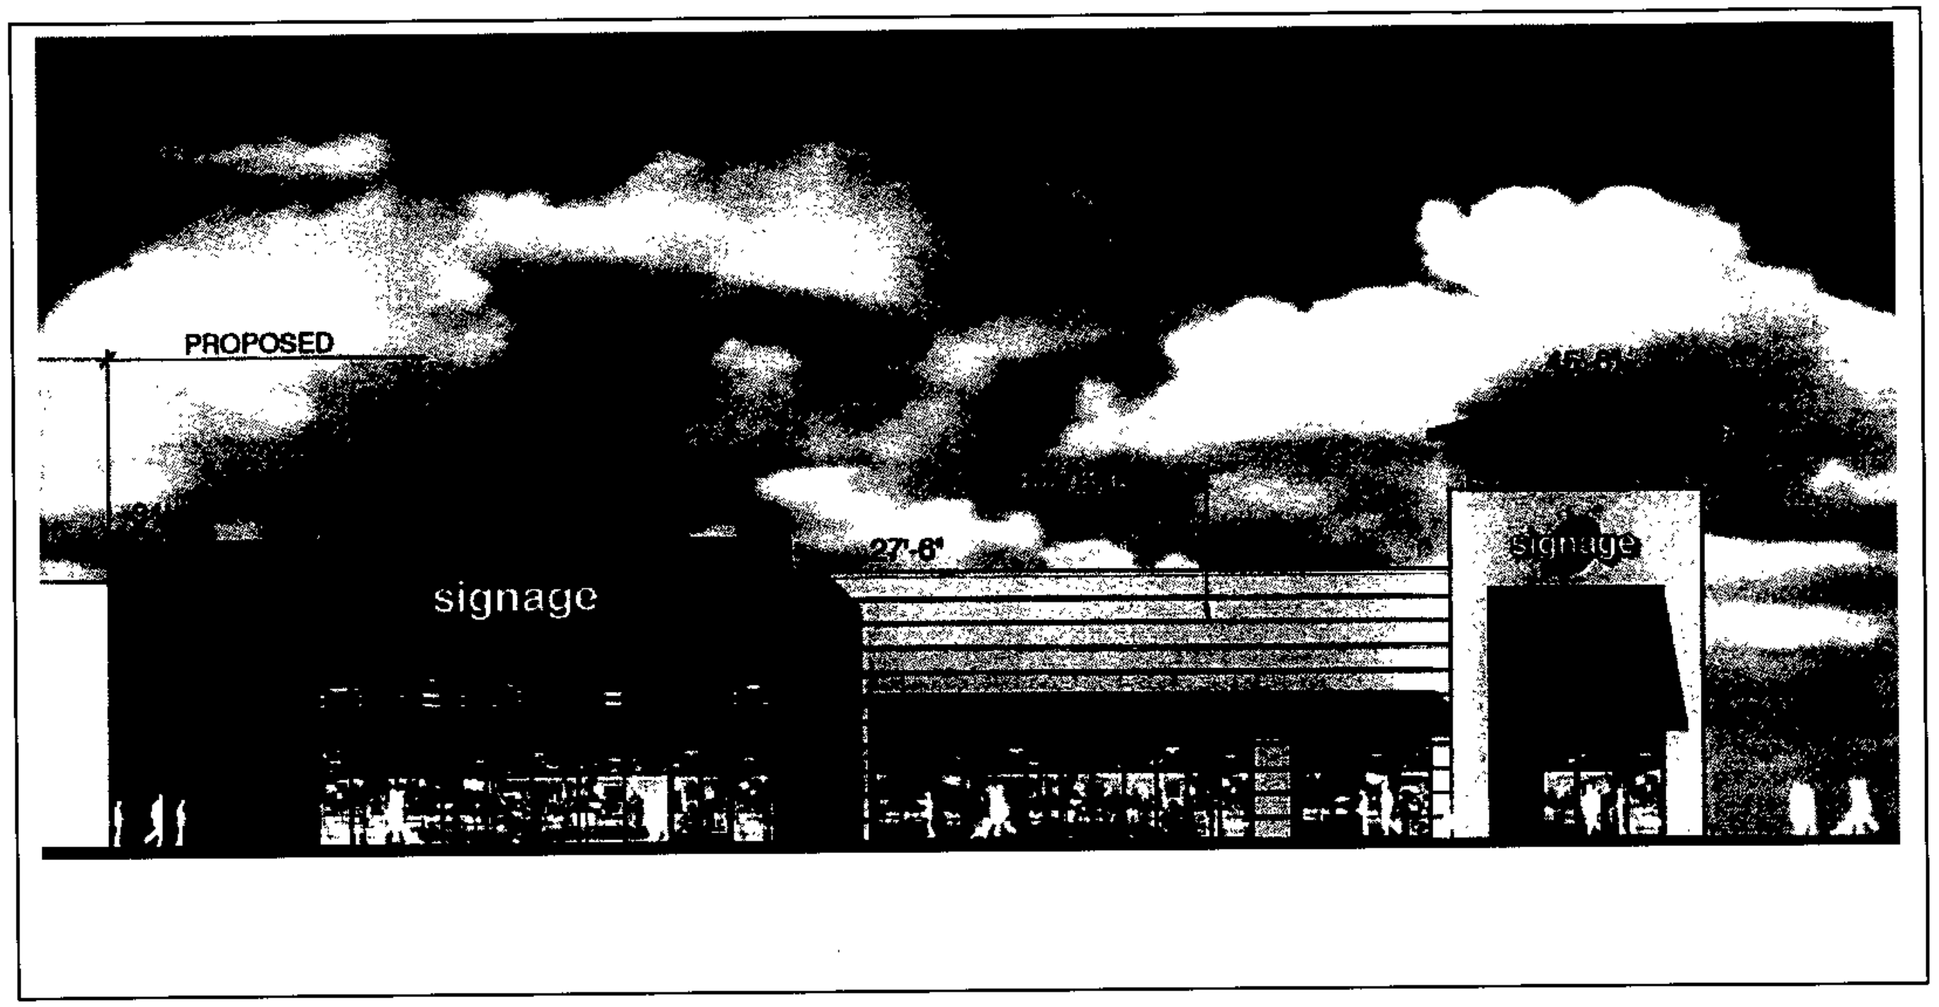
CAPITAL OF SILICON VALLEY

NOTICE OF DEVELOPMENT PROPOSAL

The City of San Jose's Planning, Building and Code Enforcement Department has received an application for a development permit at this property



PROJECT DESCRIPTION: **Site Development Permit to allow partial demolition and construction of a new 23,594-square foot addition to an existing 1-story retail building, Building H (WESTGATE WEST SHOPPING CENTER) and site modifications on a 18.9-gross acre site zoned CG Commercial General.**

PROJECT ADDRESS: **East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center at 5365 Prospect Road)**

PROJECT FILE: **H18-008**

APPLICANT: **David Blair, MCG Architects**

COUNCIL DISTRICT: **1**

SNI AREA: **No**

For Additional Information:

- View information and/or submit comments at the City of San Jose's Online Permitting webpage at http://www.sjpermits.org by using the project file number located above.
- Contact Rhonda Buss in the Planning Division at 408-535-3887 or by e-mail at Rhonda.Buss@sanjoseca.gov.
- Visit the Planning Division's Public Information Counter, Monday through Friday, located at: City Hall, 200 East Santa Clara Street.
- Muốn biết tin tức bằng tiếng Việt Nam về tờ thông tin này, xin quý vị liên lạc Kieulan Pham ở số 408-793-4174và đọc số dự án **H18-008**.
- Para información en Español acerca de esta solicitud, comuníquese con Jennifer Provedor al 408-793-4100e índique el número de proyecto **H18-008.**

Buss, Rhonda

Subject: File No. H18-008, 5365 Prospect Road

Dear David,

We have heard from the environmental team. Based upon the information received an initial study including a complete scope of work will be required. Please note, traffic will be reviewed under level of service for evaluation purposes.

Please feel free to contact me if you have any questions.

Thank you,

Rhonda Buss

RECEIVED
JAN 07 2019

January 4, 2019

Rhonda Buss
City of San Jose Planning Department
200 E. Santa Clara Street
San Jose, California 95113

REGARDING SITE ADDRESS: 5365 Prospect Road
File No. H18-008 Construction of a new 40,000 sf commercial shell
MCG Project No. 17.269.10

Dear Rhonda:

Please find below the responses to the 3rd Initial Response to Development Application memorandum from Michelle Kimball, Public Works, dated October 25, 2018:

1. **Stormwater Runoff Pollution Control Measures:**
   a. The stormwater Evaluation Form has been revised per comments. The form was submitted via email prior to the submittal for a preliminary review.
      i. Section 2.c was revised to include all of the impervious areas on parcels 1,4, and 7.
      ii. Section 2.d was revised to not include areas with overlay activities.
      iii. Section 2g was recalculated.

   b.
      i. The Pervious and impervious surfaces comparison table and the stormwater evaluation form have been reconciled.
      ii. The Treatment Control Summary Table has been revised per the comment.
      iii. The Treatment Control Summary Table has been revised per the comment.

2. **Landscape Plan:**
   a. The plants proposed for the bioretention areas will comply with the approved species list in the C.3 Handbook. The species

referenced in the comment are only to be planted in planter locations not included in bio-retention areas.

3. **Transportation:**
   a. A traffic report is currently being processed under a separate cover.
   b. Comment noted.

4. **Trash/Recycling Enclosures and Cover:**
A properly designed cover to the trash/recycling enclosure has been added to sheet A7. A note was added to the grading plan (C3.0) stating that the area surrounding the trash enclosure shall be sloped away from the trash enclosure.

12. **Street Improvements:**
a. See sheet C3.0 for ADA ramp along Graves Ave.
b. Comment acknowledged
c. Comment acknowledged

Please find below the responses to the 4th Review Letter dated November 5, 2018:

Project Description: The project description is correct.

Applicable City Council Policies
The freestanding parking lot light fixtures are all existing to remain. The current building has building mounted lighting which will be replaced with new building mounted fixtures as shown on Sheet SE1P.

Zoning Consistency
Sheets A-1 and A-2 have been clarified to match building square footages. The perceived discrepancy was a result of indicating total building area spanning across both parcels. The square footages have been revised to be clearer for each parcel and the net new floor area proposed for the project.

Design Guidelines Consistency
c. Landscaping
   i. There is an existing 6' tall screen wall that screens the project from Graves Ave. The existing wall is to remain. A callout on the wall has been included on the plans.
   ii. The proposed cross walks will be stamped AC. Key note 13 has been revised to the following: "PLACE STAMPED ASPHALT CROSSWALK, USE STREETBOND OR APPROVED

EQUAL. MATCH PATTERN AND COLOR OF EXISTING CROSSWALKS, SUGGESTED COLORS ARE PEWTER FOR THE 1' BORDER AND SUNSET BLUSH FOR THE MAIN WALK"

d. i. See Sheet A-3 for bicycle rack locations.

Plan Clarifications and Required Additional Information

e. The Area of Work is shown with a dashed line on sheets A-1 and A-2.

f. i. As noted previously, the square footages shown on Sheets A-1 and A-2 have been revised to correspond better with each other.

ii. A new sheet, A-2.2 has been added to show existing and proposed building setbacks as requested.

iii. Sheet A-2 has been revised to include adjacent land use labels.

g. Sheet LP-1

i. The landscaping at the pedestrian connection to Graves Ave. will be refreshed, see the revised grading/site plan (C3.0). At the request of the neighboring community, the project is proposing to install cobble where the existing planter only has bare ground, in order to deter the camping activities of the transient population in the area. An exhibit that includes proposed elevations of the frontage has been provided with the resubmittal. The replacement tree locations are shown on L1.2.

h. Sheet 5.2

i. The total disturbed project area is .81 acres as shown in the updated Pervious/ Impervious Surface Comparison Table.
ii. The project's hydrologic soil type is type C. This has been added to the storm water sheet.

Please find below the responses to the Initial Response to Development Application from Theresa Chung, Fire Department, dated March 19, 2018:

1.

a. Building Features. The building type and occupancy has not been determined as of yet. This item will be addressed with the building

design and be part of the plans submitted to the bldg. department for the permit to construct the new building.

b. A fire access plan has been added to the plan set, see sheet C6.0. The plan shows that the proposed layout will meet the requirements of CFC appendix D with San Jose Amendments.

c. The required fire flow will be determined upon design of the building and be reflected on the building plans submitted to the city for the permit to construct the new building.

d. The available fire flow letter from the Water Company will be provided during the building permit approval process for the construction of the new building.

e. The existing fire hydrants have been shown on sheet C6.0. The project is not proposing to install any additional hydrants at this time. The number of required hydrants will be determined during the building permit approval process for the construction of the new building.

2. Items a thru d will be addressed during the building permit approval process for the construction of the new building.

Yours truly,
MCG ARCHITECTURE

Subject: Re: File No. H18-008, 5365 Prospect Road

David,

I would need to elevations and examples of how that would look. While I acknowledge concern about creating places for people to encamp staff has to balance both a need to provide perimeter landscaping to help match the residential use across the street and provide visual interest that would help screen those walls and provide some relief and break up of the impervious surface and elevations.

So visual images or example would help us understand visually how it may look.

Best,
Tong (John) Tu

Hi John,

We haven't met yet, but I understand you are now the Supervising Planner working with Rhonda on the Westgate West project.

I had just sent Rhonda a note regarding one of the city's comments in the attached letter. I understand she is on vacation this week and hope that you review the comment and the response below to get your feedback. We would like to resubmit to get this project scheduled for the Director's Hearing as soon as possible. I appreciate your help.

Hi Rhonda,

We are working on assembling the revised drawings, but I wanted to give you some feedback/input on one of your comments.

Comment "g.i." on page 3 refers to refreshing the ground cover along Graves Ave. According to the property management of Donahue Schriber, there has been an on-going homeless encampment issue along that stretch of Graves up against the screen wall. Over the years, the neighbors had complained numerous times to the owners about the issue. In order to address the neighbor's request, the shrubs had been slowly removed and the dirt allowed to compact to make it a less desirable place to camp out. The issues seems to have subsided and the neighbors appear to be ok with the solution so far.

The long-term solution that Donahue Schriber wants to implement is to replace the ground cover with cobble to discourage any future encampments. They hope this can be a permanent solution.

I wanted to run this by you informally to get your feedback before we respond to the comment in the resubmittal. All of the other comments have been addressed, so we will be ready to go once I hear back from you.

Thanks.

David Blair

CAPITAL OF SILICON VALLEY
Planning, Building and Code Enforcement

FORM #120 8/8/2018 SUBJECT TO CHANGE

PLANNING DIVISION

Stormwater Evaluation Form

RECEIVED
OCT 09 2018

FILE #

This form must be submitted with ALL Planning Permit applications with Sections 1.a. and 2.e. completed. The entire form must be completed ONLY if the project meets the criteria below:

- **Creates or replaces 10,000 sq. ft. or more of impervious surface on a project site; OR**
- **Involves a restaurant, auto service facility, retail gasoline outlet, uncovered parking lot, or top uncovered portion of a parking structure that creates or replaces 5,000 sq. ft. or more of impervious surface on a project site.**

Such projects must comply with Provision C.3 of the Municipal Regional Stormwater Permit (MRP) and must complete this form. For more information and definitions, see the **Stormwater Management** web page at **www.sanjoseca.gov/planning**.

What is an impervious surface? An impervious surface is pavement or other surface covering that prevents land from absorbing rainfall and stormwater. Impervious surfaces include driveways, walkways, parking lots, rooftops and any other continuous watertight covering. Pervious pavement underlain with pervious soil or material, e.g., drain rock, that infiltrates rainfall at a rate equal to or greater than surrounding unpaved areas OR that stores and infiltrates the water quality design volume specified in Provision C.3.d of the MRP, is not considered an impervious surface.

1.a. Are any of these uses included in your project?
Check all that apply.

☐ Restaurant

☐ Retail Fuel Outlet

☒ Uncovered Parking

☐ Auto Service, as categorized by the Standard Industrial Classification (SIC) Codes 5013-5014, 5541, 7532-7534, 7536-7539.
Determine your SIC Codes at **www.osha.gov**. List the applicable SIC Code/s: _____

1.b. Check the watershed in which your project is located.
See the **Watershed Maps** web page at **www.sanjoseca.gov**

☐ Baylands

☐ Calabazas

☐ Coyote (including Lower Penitencia)

☐ Guadalupe

☒ San Tomas

1.c. Special Project Status.
Use the online **Special Project Worksheet** at www.sanjoseca.gov to determine if your project qualifies as a Special Project. Does your project qualify?

☐ Yes If yes, attach the Special Project Worksheet to this application.
☒ No

Note: A separate Narrative is required for all Special Projects. Refer to the **Special Projects Worksheet** for requirements.

2. SURFACE DATA

2.a. Enter the Project Phase Number (1, 2, 3, etc. or N/A if Not Applicable): N/A

2.b. Total area of site: 8.37 acres

2.c. Total Existing Impervious Surfaces on site: 73,700 sq. ft.

2.d. Total area of site that will be disturbed: 1.88 acres

COMPARISON OF IMPERVIOUS AND PERVIOUS SURFACES AT PROJECT SITE	**Existing Surface Area Disturbed** sq. ft.	**Proposed Surface**	
		To Be Replaced sq. ft. [1]	**New** sq. ft. [2]
2.e. **IMPERVIOUS SURFACES**			
Roof Area	23,550	25,000	
Parking	7,800	3,200	
Sidewalks, Patios, Driveways, Etc.	6,160	5,730	
Public Streets			
Private Streets			
Online form auto-calculates **Impervious Surfaces Total**	e.1. 37,510	e.2. 33,930	e.3. 0
2.f. **PERVIOUS SURFACES**			
Landscaped Area	290		1,800
Pervious Paving			
Green Roof and other Pervious Surfaces			
Online form auto-calculates **Pervious Surfaces Total**	f.1. 290	f.2. 0	f.3. 1,800

		Total Proposed Impervious Surface (replaced + new)
		e.4. 33,930
		Total Proposed Pervious Surface (replaced + new)
		f.4. 1,800

2.g. **Percentage of Site's Impervious Area Replacement** (e.2 ÷ 2.c) X 100:	Online form auto-calculates	g. 46.04 %

[1] *Proposed Replaced Impervious Surface:* Replacement of an existing impervious surface with another impervious surface.

[2] *Proposed New Impervious Surface:* New impervious surface that will cover an existing pervious surface.

3. PROVISION C.3 APPLICABILITY

3.a. Is box 2.e.4 above equal to 10,000 sq. ft. or more for any type of project, or 5,000 sq. ft. or more for restaurants, auto service facilities, retail gas outlets, and uncovered parking? Check one:

- ☒ Yes. Site Design, Source Control, and Treatment System requirements will all apply to the project area.
- ☐ No. Site Design and Source Control requirements will apply to the project area (Treatment Systems do not apply).

3.b. Is box 2.g above equal to or greater than 50%? Check one:

- ☐ Yes. Site Design, Source Control, and Treatment System requirements all apply to the entire site.
- ☒ No. Site Design, Source Control, and Treatment System requirements only apply to the area of site that is disturbed.

continued>

3.c. Indicate the Provision C.3 measures to be applied to your project. Check all that apply:

SITE DESIGN MEASURES

PROTECTION MEASURES

- ■ Protect existing trees, vegetation, and soil.
- ❑ Protect riparian and wetland areas/ buffers.
- ❑ Preserve open space and natural drainage patterns.
- ❑ Rainwater harvesting and use (e.g., rain barrel, cistern connected to roof drains) [1]

LANDSCAPE DESIGN MEASURES

- ■ Direct runoff from roofs, sidewalks, patios to landscaped areas.
- ❑ Plant trees adjacent to and in parking areas and adjacent to other impervious areas.

DESIGN MEASURES TO MINIMIZE IMPERVIOUS SURFACE AREA

- ❑ Reduce existing impervious surfaces.
- ❑ Cluster structures/pavement.
- ❑ Create new pervious areas:
  - ○ Landscaping
  - ○ Parking stalls
  - ○ Walkways and patios
  - ○ Emergency vehicle access
  - ○ Private streets and sidewalks
- ❑ Install a Green Roof on all or a portion of the roof.
- ❑ Parking:
  - ○ On top of or under buildings
  - ○ Not provided in excess of Code
- ❑ Other: _____

SOURCE CONTROL MEASURES

- ❑ Beneficial landscaping [3]
- ❑ Use water efficient irrigation systems.
- ■ Good housekeeping, e.g., sweep pavement and clean catch basin.
- ■ Label storm drains.
- ■ Connect to the sanitary sewer: [2]
  - ◉ Covered trash/recycling enclosures
  - ○ Interior parking structures
  - ○ Wash area/racks
  - ○ Pools, spas, fountains
  - ○ Covered loading docks and maintenance bays
  - ○ Pumped groundwater
- ❑ Fueling areas must (all required):
  - Be graded to prevent ponding.
  - Use a concrete surface.
  - Be separated from the site by a grade break to prevent run-on.
  - Have a canopy cover extending at least 10 feet from each pump.
- ❑ Industrial, outdoor material storage, and recycling facilities must (all required):
  - Stockpile material on an impervious surface or under a permanent roof or covering.
  - Direct ponded water to the sanitary sewer,[2] an on-site treatment system, or off-site disposal.
  - Install berms or curbs to prevent runoff from the storage/processing areas.
  - Segregate pollutant-generating activities into a distinct drainage management area and provide treatment.
- ❑ Other: _____

TREATMENT SYSTEMS

LID TREATMENT

- ❑ Impervious surfaces drain to a self-retaining area that is sized per the design criteria listed in the C.3 Stormwater Handbook.
- ❑ Rainwater harvest and use (e.g., cistern or rain barrel sized for C.3.d treatment)
- ❑ Infiltration basin
- ❑ Infiltration trench
- ❑ Exfiltration trench
- ❑ Underground detention and infiltration system (e.g. pervious pavement drain rock, large diameter pipe)

BIOTREATMENT

For use when Infiltration and Rainwater Harvest and Use is proven infeasible

- ■ Bioretention area
- ❑ Flow-through planter
- ❑ Tree box with bioretention soil [4]
- ❑ Other: _____

OTHER TREATMENT METHODS

SPECIAL PROJECTS ONLY [5]

- ❑ Proprietary tree box filter
- ❑ Media filter (sand, compost, or proprietary media)

MULTI-STEP PROCESS ONLY [6]

- ❑ Vegetated filter strip
- ❑ Dry detention basin

FOOTNOTES

1 As a site design measure, it does not have to be sized to comply with Provision C.3.d treatment requirements.
2 Subject to the requirements of the sanitary sewer authority.
3 Landscaping that minimizes irrigation and runoff, promotes surface infiltration where possible, and minimizes the use of pesticides and fertilizers.
4 Bioretention soils shall infiltrate runoff at a minimum of 5 inches per hour during the life of the facility and sustain healthy, vigorous plant growth.
5 These treatment measures are only allowed if the project qualifies as a Special Project.
6 These treatment measures are only allowed as part of a multi-step treatment process.

continued>

4. TREATMENT SYSTEM SIZING FOR PROJECTS WITH TREATMENT REQUIREMENTS

For each treatment system component, indicate the hydraulic sizing criteria used and provide the calculated design flow or volume to be treated:

Treatment System Component	**Hydraulic Sizing Criteria** Enter numbers from Table below	**Design Flow or Volume** cfs or cu.ft.
Bioretention	2C:Flow	4% of impervious area
		per C.3 handbook

CODING TABLE FOR HYDRAULIC SIZING CRITERIA Enter the appropriate number in the above column		
1a: Volume – WEF Method 1b: Volume – CASQA BMP Handbook Method	2a: Flow – Factored Flood Flow Method 2b: Flow – CASQA BMP Handbook Method 2c: Flow – Uniform Intensity Method	3: Combination Flow and Volume Design Basis

5. HYDROMODIFICATION MANAGEMENT (HM) APPLICABILITY

5.a. Does the project create or replace one acre or more of impervious surface AND create an increase in total impervious surface from the pre-project condition (from page 2, is 2.e.4 > 2.e.1 and ≥ one acre)? Check one:

☐ Yes. Continue to Question 5.b.
☒ No. Project is exempt from Hydromodification Management.

5.b. Is the project located in the green "Subwatersheds less than 65% Impervious" area on the HM Applicability Map? Check one:

☐ Yes. Project must implement HM requirements. Continue to Question 5.c.
☒ No. Project is exempt from Hydromodification Management.

5.c. If Yes to 5.b, select the specific flow duration controls for Hydromodification Management. Check all that apply:

☐ Detention basin
☐ Underground tank or vault
☐ Bioretention with outlet control
☐ Other: _____

6. OPERATION & MAINTENANCE (O&M) CONTACT INFORMATION

Please enter the contact information of the Responsible Party for Stormwater Treatment/Hydromodification Control O&M:

Re: Westgate West – Site Modifications

Planning No. H18-008

Dear Rhonda,

Please find below our response to the comments on the civil and landscape plans dated September 26, 2018:

4. Design Guidelines Consistency-
   a. There are existing trees along Graves that were not shown on the previously submitted landscape plans. The existing trees are now shown on the plans. No proposed improvements to the landscape area between the existing screenwall and back of walk are anticipated. The existing landscape area is intended to remain in its current condition.

5. Plan Clarifications and Required Additional Information

   b. LP1.1:
      i. The existing wall has been called out on the plans.
      ii. The tree tables have been removed from the civil demolition sheet and added to the landscape plans (sheets LP-1.0 thru LP-1.2)
      iii. A total of 2 non native trees will be removed. To comply with the table provided in the comments a total of 4 new trees will be planted (2:1 ratio)
      iv. Callouts to protect trees in place have been added to the plans.

   c. C3.1:
      i. The callout for the trash enclosure (note 19) was removed. The enclosure has been shown on the architect's site plan (A-2) and floor plan (A-3).

Re: Westgate West – Site Modifications

Planning No. H18-008
P.W. No. 3-07718

Dear Michelle,

Please find below our response to the comments dated September 7, 2018:

1. <u>Stormwater Runoff Pollution Control Measures:</u>
   a. The proposed project includes improvements on parcels 1,4 & 7. The total site area for these three parcels is 8.37 Acres. The total disturbed project area is 1.88. The stormwater evalutation form and the surface data table have been updated along the cover sheet, A-2, A-2.1 for consistancy and clarity.
   b.
      i. The scale of the exhibit is 1"=20'. The sheets have been resized to 24"x36".
      ii. The Pervious and impervious surfaces comparison table and the stormwater evaluation form have been reconciled.
      iii. The Treatment Control Summary Table has been revised per the comment. Drainage arrows, indicating direction of surface flow have been added to the plan.
      iv. The information for the responsible party has been added to the plan.
      v. The source control measures and site design measures have been revised to be consistent with the submitted storm water evaluation form.
      vi. Callouts have been added to areas included in DMA 2.
      vii. The area in question will be an area of grind and overlay, which is considered a maintenance activity. A hatch has been added to the plan that shows where the overlay will occur.
      viii. The curb opening note has been revised as requested.

RSC Engineering, Inc.
Consulting Engineers

2250 Douglas Blvd.
Suite 150
Roseville, CA 95661
916.788.2884
Fax 916.788.4408

RSC ENGINEERING

ix. The top floor of the building will be covered. There will be no "open air" portion of building. The entirety of the roof area will surface drain to the surrounding parking lot. The proportion of the buildings that will drain to each side is labeled on the plan. 21500 SF of the building roof will drain to the bioretention basin to the north. The remainder of the roof will drain to the parking lot to the south and enter the storm drain system.
x. The mulch note has been revised as requested.
xi. Measure 4 of the site design measures has been removed.

2. Landscape Plan:
   a. The plants proposed for the bioretention area have been revised so that they are approved species from the C.3 Handbook.
   b. A bioretention section has been added to legend.
   c. Plant placement has been added to legend.
   d. Revised
   e. The requested note has been added.

3. Transportation:
   a. A traffic report is currently being processed under a separate cover.
   b. Comment noted.

4. Other:
   a. The original sheets were intended to be printed as 32"x40". With this resubmittal the sheets have been re-sized to 24"x36". As a result sheets C2.2 and C3.2 have been added to the plan set to account for the smaller sheet size.
   b. The sheet index located on the cover sheet has been revised accordingly.

5. Trash/Recycling Enclosures and Cover:
   a. A properly designed cover to the trash/recycling enclosure has been added to sheet A7.
   b. See response to 5.a. above.

I hope that you find our response to your comments satisfactory. If you have any questions please call me at (916) 788-2884, or email me at J.Vanderpost@rsc-engr.com.

Sincerely,

Jim Vanderpost

REGARDING SITE ADDRESS: 5365 Prospect Road
File No. H18-008 Construction of a new 40,000 sf commercial shell
MCG Project No. 17.269.10

Dear Rhonda:

Please find below the responses to your recent comments letter. Attached to this letter are the resubmittal drawings with the changes requested. Also attached are response letters from civil and landscape consultants.

Project Issues and Concerns

1. See sheet A2 for building setbacks. See sheet A2.1 for enhanced property lines in red.
2. Bio retention area has been coordinated with architectural, civil and landscape drawings.
3. Revisions have been clouded.

Project Streamlining Act

1. Parking calculations have been addressed below as requested.
2. See comments in Plan Clarifications section.

Project Review

1. Project Description is correct.
2. Acknowledged
3. See sheet A.2 for revised parking table and building setbacks.
4. See response letter from civil/landscape architects attached.
5. See response letter from civil/landscape architects attached.
6. Acknowledged.
7. See response letter from civil engineer dated September 8, 2018.
8. Acknowledged.
9. Revised sheets attached to this submittal.

Yours truly,
MCG ARCHITECTURE

Re: Westgate West – Site Modifications

Planning No. H18-008

Dear Rhonda,

Please find below our response to the comments on the civil and landscape plans dated September 26, 2018:

4. Design Guidelines Consistency-
   a. There are existing trees along Graves that were not shown on the previously submitted landscape plans. The existing trees are now shown on the plans. No proposed improvements to the landscape area between the existing screenwall and back of walk are anticipated. The existing landscape area is intended to remain in its current condition.

5. Plan Clarifications and Required Additional Information

   b. LP1.1:
      i. The existing wall has been called out on the plans.
      ii. The tree tables have been removed from the civil demolition sheet and added to the landscape plans (sheets LP-1.0 thru LP-1.2)
      iii. A total of 2 non native trees will be removed. To comply with the table provided in the comments a total of 4 new trees will be planted (2:1 ratio)
      iv. Callouts to protect trees in place have been added to the plans.

   c. C3.1:
      i. The callout for the trash enclosure (note 19) was removed. The enclosure has been shown on the architect's site plan (A-2) and floor plan (A-3).

Re: Westgate West – Site Modifications

Planning No. H18-008
P.W. No. 3-07718

Dear Michelle,

Please find below our response to the comments dated September 7, 2018:

1. Stormwater Runoff Pollution Control Measures:
   a. The proposed project includes improvements on parcels 1,4 & 7. The total site area for these three parcels is 8.37 Acres. The total disturbed project area is 1.88. The stormwater evalutation form and the surface data table have been updated along the cover sheet, A-2, A-2.1 for consistancy and clarity.
   b.
      i. The scale of the exhibit is 1"=20'. The sheets have been resized to 24"x36".
      ii. The Pervious and impervious surfaces comparison table and the stormwater evaluation form have been reconciled.
      iii. The Treatment Control Summary Table has been revised per the comment. Drainage arrows, indicating direction of surface flow have been added to the plan.
      iv. The information for the responsible party has been added to the plan.
      v. The source control measures and site design measures have been revised to be consistent with the submitted storm water evaluation form.
      vi. Callouts have been added to areas included in DMA 2.
      vii. The area in question will be an area of grind and overlay, which is considered a maintenance activity. A hatch has been added to the plan that shows where the overlay will occur.
      viii. The curb opening note has been revised as requested.

RSC Engineering, Inc.
Consulting Engineers

Fax 916.788.4408

RSC ENGINEERING

ix. The top floor of the building will be covered. There will be no "open air" portion of building. The entirety of the roof area will surface drain to the surrounding parking lot. The proportion of the buildings that will drain to each side is labeled on the plan. 21500 SF of the building roof will drain to the bioretention basin to the north. The remainder of the roof will drain to the parking lot to the south and enter the storm drain system.
x. The mulch note has been revised as requested.
xi. Measure 4 of the site design measures has been removed.

2. Landscape Plan:
   a. The plants proposed for the bioretention area have been revised so that they are approved species from the C.3 Handbook.
   b. A bioretention section has been added to legend.
   c. Plant placement has been added to legend.
   d. Revised
   e. The requested note has been added.

3. Transportation:
   a. A traffic report is currently being processed under a separate cover.
   b. Comment noted.

4. Other:
   a. The original sheets were intended to be printed as 32"x40". With this resubmittal the sheets have been re-sized to 24"x36". As a result sheets C2.2 and C3.2 have been added to the plan set to account for the smaller sheet size.
   b. The sheet index located on the cover sheet has been revised accordingly.

5. Trash/Recycling Enclosures and Cover:
   a. A properly designed cover to the trash/recycling enclosure has been added to sheet A7.
   b. See response to 5.a. above.

I hope that you find our response to your comments satisfactory. If you have any questions please call me at (916) 788-2884, or email me at J.Vanderpost@rsc-engr.com.

Sincerely,

Jim Vanderpost

FORM #120 8/8/2018 SUBJECT TO CHANGE

PLANNING DIVISION

Stormwater Evaluation Form

FILE #

This form must be submitted with ALL Planning Permit applications with Sections 1.a. and 2.e. completed. The entire form must be completed ONLY if the project meets the criteria below:

- **Creates or replaces 10,000 sq. ft. or more of impervious surface on a project site; OR**
- **Involves a restaurant, auto service facility, retail gasoline outlet, uncovered parking lot, or top uncovered portion of a parking structure that creates or replaces 5,000 sq. ft. or more of impervious surface on a project site.**

Such projects must comply with Provision C.3 of the Municipal Regional Stormwater Permit (MRP) and must complete this form. For more information and definitions, see the Stormwater Management web page at www.sanjoseca.gov/planning.

What is an impervious surface? An impervious surface is pavement or other surface covering that prevents land from absorbing rainfall and stormwater. Impervious surfaces include driveways, walkways, parking lots, rooftops and any other continuous watertight covering. Pervious pavement underlain with pervious soil or material, e.g., drain rock, that infiltrates rainfall at a rate equal to or greater than surrounding unpaved areas OR that stores and infiltrates the water quality design volume specified in Provision C.3.d of the MRP, is not considered an impervious surface.

1.a. Are any of these uses included in your project?
Check all that apply.

☐ Restaurant

☐ Retail Fuel Outlet

■ Uncovered Parking

☐ Auto Service, as categorized by the Standard Industrial Classification (SIC) Codes 5013-5014, 5541, 7532-7534, 7536-7539.
Determine your SIC Codes at www.osha.gov. List the applicable SIC Code/s: _____

1.b. Check the watershed in which your project is located.
See the Watershed Maps web page at www.sanjoseca.gov

☐ Baylands

☐ Calabazas

☐ Coyote (including Lower Penitencia)

☐ Guadalupe

■ San Tomas

1.c. Special Project Status.
Use the online Special Project Worksheet at www.sanjoseca.gov to determine if your project qualifies as a Special Project.
Does your project qualify?

☐ Yes If yes, attach the Special Project Worksheet to this application.
■ No

Note: A separate Narrative is required for all Special Projects. Refer to the Special Projects Worksheet for requirements.

\\pbce-communications\COLLATERAL PLANNING\APPLICATIONS

continued>

2. SURFACE DATA

2.a. Enter the Project Phase Number (1, 2, 3, etc. or N/A if Not Applicable): N/A

2.b. Total area of site: 8.37 acres

2.c. Total Existing Impervious Surfaces on site: 73,700 sq. ft.

2.d. Total area of site that will be disturbed: 1.88 acres

COMPARISON OF IMPERVIOUS AND PERVIOUS SURFACES AT PROJECT SITE	**Existing Surface Area Disturbed** sq. ft.	**Proposed Surface**		
		To Be Replaced sq. ft. [1]	**New** sq. ft. [2]	
2.e. IMPERVIOUS SURFACES				
Roof Area	23,550	25,000		
Parking	7,800	3,200		
Sidewalks, Patios, Driveways, Etc.	6,160	5,730		
Public Streets				**Total Proposed Impervious Surface (replaced + new)**
Private Streets				
Online form auto-calculates **Impervious Surfaces Total**	e.1. 37,510	e.2. 33,930	e.3. 0	e.4. 33,930
2.f. PERVIOUS SURFACES				
Landscaped Area	290		1,800	
Pervious Paving				**Total Proposed Pervious Surface (replaced + new)**
Green Roof and other Pervious Surfaces				
Online form auto-calculates **Pervious Surfaces Total**	f.1. 290	f.2. 0	f.3. 1,800	f.4. 1,800

2.g. Percentage of Site's Impervious Area Replacement (e.2 ÷ 2.c) X 100:	Online form auto-calculates	**g. 46.04 %**

[1] *Proposed Replaced Impervious Surface:* Replacement of an existing impervious surface with another impervious surface.

[2] *Proposed New Impervious Surface:* New impervious surface that will cover an existing pervious surface.

3. PROVISION C.3 APPLICABILITY

3.a. Is box 2.e.4 above equal to 10,000 sq. ft. or more for any type of project, or 5,000 sq. ft. or more for restaurants, auto service facilities, retail gas outlets, and uncovered parking? Check one:

■ Yes. Site Design, Source Control, and Treatment System requirements will all apply to the project area.

☐ No. Site Design and Source Control requirements will apply to the project area (Treatment Systems do not apply).

3.b. Is box 2.g above equal to or greater than 50%? Check one:

☐ Yes. Site Design, Source Control, and Treatment System requirements all apply to the entire site.

■ No. Site Design, Source Control, and Treatment System requirements only apply to the area of site that is disturbed.

continued>

3.c. Indicate the Provision C.3 measures to be applied to your project. Check all that apply:

SITE DESIGN MEASURES

PROTECTION MEASURES

- ■ Protect existing trees, vegetation, and soil.
- ❑ Protect riparian and wetland areas/ buffers.
- ❑ Preserve open space and natural drainage patterns.
- ❑ Rainwater harvesting and use (e.g., rain barrel, cistern connected to roof drains) [1]

LANDSCAPE DESIGN MEASURES

- ■ Direct runoff from roofs, sidewalks, patios to landscaped areas.
- ❑ Plant trees adjacent to and in parking areas and adjacent to other impervious areas.

DESIGN MEASURES TO MINIMIZE IMPERVIOUS SURFACE AREA

- ❑ Reduce existing impervious surfaces.
- ❑ Cluster structures/pavement.
- ❑ Create new pervious areas:
  - ○ Landscaping
  - ○ Parking stalls
  - ○ Walkways and patios
  - ○ Emergency vehicle access
  - ○ Private streets and sidewalks
- ❑ Install a Green Roof on all or a portion of the roof.
- ❑ Parking:
  - ○ On top of or under buildings
  - ○ Not provided in excess of Code
- ❑ Other: _____

SOURCE CONTROL MEASURES

- ❑ Beneficial landscaping [3]
- ❑ Use water efficient irrigation systems.
- ■ Good housekeeping, e.g., sweep pavement and clean catch basin.
- ■ Label storm drains.
- ■ Connect to the sanitary sewer: [2]
  - ◉ Covered trash/recycling enclosures
  - ○ Interior parking structures
  - ○ Wash area/racks
  - ○ Pools, spas, fountains
  - ○ Covered loading docks and maintenance bays
  - ○ Pumped groundwater
- ❑ Fueling areas must (all required):
  - Be graded to prevent ponding.
  - Use a concrete surface.
  - Be separated from the site by a grade break to prevent run-on.
  - Have a canopy cover extending at least 10 feet from each pump.
- ❑ Industrial, outdoor material storage, and recycling facilities must (all required):
  - Stockpile material on an impervious surface or under a permanent roof or covering.
  - Direct ponded water to the sanitary sewer,[2] an on-site treatment system, or off-site disposal.
  - Install berms or curbs to prevent runoff from the storage/processing areas.
  - Segregate pollutant-generating activities into a distinct drainage management area and provide treatment.
- ❑ Other: _____

TREATMENT SYSTEMS

LID TREATMENT

- ❑ Impervious surfaces drain to a self-retaining area that is sized per the design criteria listed in the C.3 Stormwater Handbook.
- ❑ Rainwater harvest and use (e.g., cistern or rain barrel sized for C.3.d treatment)
- ❑ Infiltration basin
- ❑ Infiltration trench
- ❑ Exfiltration trench
- ❑ Underground detention and infiltration system (e.g. pervious pavement drain rock, large diameter pipe)

BIOTREATMENT

For use when Infiltration and Rainwater Harvest and Use is proven infeasible

- ■ Bioretention area
- ❑ Flow-through planter
- ❑ Tree box with bioretention soil [4]
- ❑ Other: _____

OTHER TREATMENT METHODS

SPECIAL PROJECTS ONLY [5]

- ❑ Proprietary tree box filter
- ❑ Media filter (sand, compost, or proprietary media)

MULTI-STEP PROCESS ONLY [6]

- ❑ Vegetated filter strip
- ❑ Dry detention basin

FOOTNOTES

1 As a site design measure, it does not have to be sized to comply with Provision C.3.d treatment requirements.
2 Subject to the requirements of the sanitary sewer authority.
3 Landscaping that minimizes irrigation and runoff, promotes surface infiltration where possible, and minimizes the use of pesticides and fertilizers.
4 Bioretention soils shall infiltrate runoff at a minimum of 5 inches per hour during the life of the facility and sustain healthy, vigorous plant growth.
5 These treatment measures are only allowed if the project qualifies as a Special Project.
6 These treatment measures are only allowed as part of a multi-step treatment process.

continued>

4. TREATMENT SYSTEM SIZING FOR PROJECTS WITH TREATMENT REQUIREMENTS

For each treatment system component, indicate the hydraulic sizing criteria used and provide the calculated design flow or volume to be treated:

Treatment System Component	**Hydraulic Sizing Criteria** Enter numbers from Table below	**Design Flow or Volume** cfs or cu.ft.
Bioretention	2C:Flow	4% of impervious area
		per C.3 handbook

CODING TABLE FOR HYDRAULIC SIZING CRITERIA Enter the appropriate number in the above column		
1a: Volume – WEF Method 1b: Volume – CASQA BMP Handbook Method	2a: Flow – Factored Flood Flow Method 2b: Flow – CASQA BMP Handbook Method 2c: Flow – Uniform Intensity Method	3: Combination Flow and Volume Design Basis

5. HYDROMODIFICATION MANAGEMENT (HM) APPLICABILITY

5.a. Does the project create or replace one acre or more of impervious surface AND create an increase in total impervious surface from the pre-project condition (from page 2, is 2.e.4 > 2.e.1 and ≥ one acre)? Check one:

☐ Yes. Continue to Question 5.b.
■ No. Project is exempt from Hydromodification Management.

5.b. Is the project located in the green "Subwatersheds less than 65% Impervious" area on the HM Applicability Map? Check one:

☐ Yes. Project must implement HM requirements. Continue to Question 5.c.
■ No. Project is exempt from Hydromodification Management.

5.c. If Yes to 5.b, select the specific flow duration controls for Hydromodification Management. Check all that apply:

☐ Detention basin
☐ Underground tank or vault
☐ Bioretention with outlet control
☐ Other: _____

6. OPERATION & MAINTENANCE (O&M) CONTACT INFORMATION

Please enter the contact information of the Responsible Party for Stormwater Treatment/Hydromodification Control O&M:

Yes, the tenant will process the CUP separately.

By the way, I sent an email to Shaunn while you were on vacation requesting additional clarification of the comments regarding the submittal package. I have copied the text of the email below with the attachments I sent to him. I really need your help in understanding the comments and how to address them and want to include the landlord and the civil/landscape consultants in the conversation. Let me know what we can do to set up a call or meet in person as soon as you can schedule it. Thanks.

From my email to Shaunn:
The response letter from Rhonda has raised a lot of questions regarding the site related issues, especially the landscape section. Attached is the actual parcel that this building sits in, and you can see that it wraps around the site. The scope of work for this submittal is a small part of the parcel and there was no intention of re-landscaping in such an awkward parcel configuration.

Can you review what has been drafted in the response relative to the scope and can we set up a conference call to discuss with the civil engineer and landscape architect? It would be helpful to all of us to hear from you.

We can be available as soon as possible to fit your schedule. Thanks.

Buss, Rhonda

From: Petersen, Adam
Sent: Friday, September 14, 2018 4:51 PM
To: Buss, Rhonda
Cc: Walsh, Susan
Subject: RE: H18-008 Westgate West Questions

Hi Rhonda,
I'm seeing more numbers in the project plans that are inconsistent, and they will need to be accurate and precise to complete the IS/MND project description. This email and my previous email correspond to plans received 8/17/18.

Sheet A-2 shows the following:

	Total Building Area	Building H Area	Difference
Proposed Area	256,605 sf.	40,000 sf.	
Minus Existing	235,540 sf.	23,550 sf.	
Difference	**21,065 additional sf.**	**16,450 additional sf**	**4,615 sf.**

My understanding of the project based on the plans and information provided on sheet A-2, is that the only addition is to Building H on Parcel 1. Therefore, the additional area added to the "Total Building Area" should be consistent with the area added to Building H. The numbers on sheet A-2, as shown in the table above, add approximately 4,615 sf. of area somewhere to the site, which isn't shown in the project plans.

Second, the project description on the cover sheet indicates that improvements would occur to an existing 65,961 sf. retail building. This number is inconsistent with information shown on sheet A-2.

Sheet A-2 Building Area By Parcel	**Existing Building Area**	**New Building Area**
Parcel 7 (to remain)	39,497 sf.	39,497 sf.
Parcel 1 (project site)	23,550 sf.	40,000 sf.
Subtotal – Existing SF.	**63,047 sf.**	**79,497 sf.**
Tenants J9-13 (to remain)	10,912 sf.	10,912 sf.
Total	**73,959 sf.**	**90,409 sf.**

Lastly, I do see 7 new parking spaces, but these are located offsite. I've updated my numbers in the email below, but the question remains about reciprocal ~~access and~~ shared parking agreements.

Sincerely,

Adam Petersen

Subject: H18-008 Westgate West Questions

Good Afternoon Rhonda,
Welcome back on 9/17!

I was reviewing the project plans for H18-008 with respect to the initial study/Mitigated Neg Dec, and I wanted to receive your input.

Parking:
Information on the site plans (sheets A-1 and A-2) related to parking is either incomplete, inconsistent, or I am missing something. The "Total Parking Provided" on sheet A-2 shows 1,039 existing stalls and 1,068 new stalls, resulting 29 new stalls. Sheet A-2 indicates a reconfiguration of the parking lot resulting in 22 new stalls. However, this reconfiguration would remove nine parking spaces, yielding a net increase of only 13 new spaces. Also, sheet A-2 indicates there are four new accessible spaces located along the southern edge of the building. However, my review of Sheet A-1 indicates the reconfiguration of this row does not yield new parking spaces. Therefore, the total net new spaces is 13 parking stalls.

1. Am I missing where the additional 16 parking spaces are located to produce 29 new parking spaces?
2. Are there improvements that would add parking to other areas of the center that are not shown on the plans? Are there reciprocal access and parking agreements across parcels to share parking in order to actually count the 7 spaces that are offsite?

Project Plan Inconsistencies:
Civil sheets C3.0 and C4.0 as well as landscaping sheets LI1.1 and LP1.1 are inconsistent with site plan sheet A-2 and sheet A-3 with respect to the location of the trash enclosure at the rear of the site. Additionally, landscape sheets and civil sheets show the installation of a bioretention area adjacent to Graves Ave. This bioretention area is not shown on the site plan or landscape plan. The location of the trash enclosure and bioretention area reduces the parking onsite. The correct parking count and site modifications will need to be defined for the project description in the initial study.

3. Does staff anticipate receiving an updated plan set with consistent sheets (civil, site plan and landscape)? Likely unrelated to environmental review, but will they provide a second floor floor plan for the building in the project plans?

Electronic Docs:

4. I was looking on the server (\\Nch-pbce3\Implementation\PLANNING FILES\Site Development\2018\H18-008 Westgate West Blldg. H demo), and am curious if we have an electronic set of plans?
5. Lastly, does the City have electronic confirmation of tribal notification for the project?

Thanks for your time and input Rhonda, and I look forward to coordinating upon your return.

Sincerely,

Adam Petersen

Subject: Westgate West - Bldg H - 5365 Prospect Road. 2018-103936 File No. H18-008
Attachments: ASP100.pdf; Form 315i Construction Valuation Form_20171120 Bldg H demo.pdf

Hi Alec,
Per our conversation:
We will be submitting the first phase of the Building H revisions as soon as possible.
The first phase consist of the demolition of the 23k building portion, infilling of existing CMU openings in the remaining building , and leveling of the dirt pad. See attached site plan for reference.
Full set of reference drawings at this drop box link (if you want to preview)
The valuation of the work is $485,000 (see attached).
Could you provide us a fee estimate for the submittal? – thank you
Hi Rhonda,
Could you advise us if there are any additional requirements for us to provide to run a concurrent review with the development Site permit #2018-103936 File No. H18-008?
The second phase will deal with the new proposed building. We are only doing the demo and infill openings for this building permit.
Thank you.
Hi Jason,
Could you advise us what the process would be to receive public works approval for this first phase of the project, including the grading permit?
And if we need any additional information to receive the building and demo permit for this phase?
Currently we believe the submittal to the building department will be routed to public works for approval.
Thank you
Please call with any questions.

File No. H18-008 Construction of a new 40,000 sf commercial shell
MCG Project No. 17.269.05

Dear Rhonda:

Please find below the responses to your recent comments letter. Attached to this letter are the resubmittal drawings with the changes requested.

Project Issues and Concerns

1. All plan sets have been revised as requested.
2. See sheet A2.1 for enhanced property lines in red for clarity.
3. Revisions have been clouded.

Project Streamlining Act

1. See Landscape Plans attached.
2. See sheet A.2 for revised parking ratio information.
3. See sheet C4.1 and response letter attached from civil engineer.

Project Review

1. Project Description is correct.
2. Acknowledged
3. See sheet A.2 for revised parking table.
4. Acknowledged, see sheet A.3 for bicycle rack locations.
5. Acreage for parcels has been added to Title Sheet. Property lines have been enhanced on sheets A.2 and A2.1. Adjacent uses have been added to sheet A.2. See sheets C2-C3.2 for civil and landscape revisions.
6. An Initial Study is in progress.
7. Acknowledged
8. Acknowledged.
9. On-site sign was posted on April 6, 2018.
10. Revised sheets attached to this submittal.

Attachments: 20180808090608376.pdf

Dear Michelle,

Thank you for your email. Pursuant to your request, the site plan is attached. The water efficient landscaping requirements are found in Title 15.11. Chapter 3 of the Commercial Design Guidelines also speak to landscaping. Planning reviews trees that are on-site only. Trees within the public right-of-way are considered to be street trees and are under the purview of the City Arborist's office.

You seem to be interested in stormwater information, and that that information is reviewed by ESD and Public Works. Should you have any stormwater information, please contact Genevieve Yambao (copied) if you have any questions. Additionally, Public Works reviews the dimensions of the tree wells.

Hope this information helps.

Hello,
Thanks for your prompt reply. Unfortunately I'm unable to visit City Hall to view the file- but I'm mainly interested in the site plan. Do you have a concept site plan as a PDF file that you can email me? An additional 10,000 SF of impervious area is significant, and would likely require stormwater improvements anyway to handle increased runoff. So from that response, I'm inferring that there isn't any code required landscaping improvements for redevelopment, which is unfortunate.

Regards,
Michelle

Subject: development proposal inquiry- Westgate West center

Hello,

I saw the sign for a development proposal just north of the Trader Joe's north of Prospect Road, Westgate -West shopping center and I have a few questions about it. Driving by I noticed it was about 1/2 acre project. I couldn't find a site plan on the Planning dept. website. I presume that the center will remain open during construction, with the work area blocked off from the public; please correct me otherwise.

1. Where in the mall is the project specifically- by what store(s)?

File No. H18-008 for Westgate West is a proposed Site Development Permit to allow partial demolition and construction of a new 40,000-square foot addition to an existing 1-story retail building, Building H (East side of the building where Orchard Supply Hardware is located) and site modifications on an 18.9-gross acre site zoned CG Commercial General located at 5365 Prospect Road.

2. Will it be an increase or decrease of impervious area?

Yes, there will be an increase impervious area (existing impervious=10,500sf/new impervious= 21,300sf).

3. Will it require a Public Works permit for utility or storm sewer improvements? (Or are they all private utilities affected?)

Not at this time, it will be part of the grading permit submittal.

4. Will this project affect any of the existing entrances to the shopping center? If so- which ones?

The driveways are to remain the same. No new changes are proposed.

5. Will there be any landscaping improvements required as part of this redevelopment project? If it's not required by current ordinance, I highly recommend it be considered for future ordinance changes or any subjective approval process such as a variance if needed. The shopping center parking lot (especially near Graves Ave.) has so much pavement and very little green space and could use some aesthetic improvements with added green space, but that will also help reduce the heat island effect, provide shade, and reduce stormwater runoff. While I understand the importance of number of parking spaces, the strip malls in this area are pretty ugly and appear to be a sea of pavement.

A landscaping plan has been requested, and there will be landscape improvements for stormwater treatment purposes on site.

6. I also recommend the interior landscape island minimum size be reviewed, since the East center (across street near Target) have very small diamond shape islands, barely large enough for the stunted trees in them. Consider 300-400 SF interior landscape islands.

7. For the trees presumedly in public right of way (Prospect Road in front of this project), is there any underground open structure for the trees that are crammed in such a small pervious area at sidewalk? They have products to provide tree root support below sidewalks; if not, those planting areas should be larger to allow reasonable growth and reduce pavement/sidewalk maintenance from resulting trip hazards from tree roots with nowhere to grow.

It is the owner's responsibility to coordinate with City Arborist on this.

Thanks for your attention and I look forward to your reply.

Regards,

Michelle

San Jose, California 95113

REGARDING HA18-008, Construction of a new 40,000 sf commercial shell for a future tenant
MCG Project No. 17.269.10

Dear Rhonda,

Attached are six (6) 24" x 36" sets and three (3) 11x17 sets of the revised plans for Building H at Westgate West based on the comments in your email dated March 8, 2018. Below are responses to your comments:

Project Issues and Concerns

1. Cover Sheet: See revised Project Description concerning partial demolition of the existing building and construction of new building in its place. See sheets C2.0 and C2.1 for Existing Conditions and Demolition Plans.

2. Resubmittal package responds to all comments as requested.

3. Sheets A-5 and A-6: See revised elevations incorporating additional design elements to reduce the expanses of stucco walls.

4. Sheet C2.0: See demolition plan for notes regarding the removal of the existing loading dock and Sheet C3.0 for the proposed reconfiguration.

5. Sheet A-1: See Sheet A-2 for parking calculations. This shopping center is parked under the El Paseo de Saratoga Urban Village parking requirements of 1 stall per 400 net square feet. Attached is city response letter dated August 2, 2017 regarding Application HA88-070 indicating the method of calculating parking for this previous

application at Westgate West. Also attached is the Covenant of Easement for parking of the entire shopping center as requested in that letter.

Permit Streamlining Act

1. See Sheets C1.0 – C5.2 for Grading, Drainage and Stormwater plans

2. See Sheet A-1 regarding delivery. This tenant uses only small panel-type trucks for laundry and small item deliveries throughout the day. They do not use large semi-tractor trailers and no depressed dock is proposed. There are no specific delivery restrictions for the shopping center other than local noise ordinances.

3. See Sheets C3.1 and C3.2 for landscape notes.

4. See Sheet SE1P for Photometric Plan and new wall-mounted fixture cut sheet. All other existing parking lot light fixtures are to remain. See Sheets A-4 through A-7 for sconce location on wall. Mounting height shown is 20' above grade.

5. Similar to note #5 above, see Sheet A-2 for parking documentation.

6. See comments below as requested.

Project Review

1. Project Description
The project description noted is correct. Refer to Cover Sheet for revised wording.

2. General Plan Consistency
Acknowledged

3. Applicable City Council Policies
Acknowledged

4. Zoning Consistency
Acknowledged

5. Design Guidelines Consistency
Acknowledged. See Sheets A-5 and A-6 for revisions to Exterior Elevations. See Sheet A-7 for trash enclosure.

6. Plan Clarifications and Required Additional Information

a. Title Sheet

i. See Project Description for revised wording.
ii. APN is shown on Cover Sheet as requested.
iii. See Aerial/Vicinity Map for boundary line of Westgate West shown in red.

b. Sheet A-2

i. Property and setback lines have been added/enhanced.
ii. Drive aisle dimensions have been added. There is one existing drive aisle at 24' which is to remain.
iii. The revised loading dock previously shown on the adjacent tenant has been deleted as a part of this submittal. The adjacent tenant (OSH) currently does not use the existing dock on this side of the building. They no longer want this dock and will continue to use the existing dock at the northeast side of the building.
iv. Parking stall dimensions have been added.
v. Existing and proposed building square footages have been added.
vi. Net square footage (85% of gross) have been included.
vii. Adjacent retail buildings are shown on this plan. Adjacent buildings across the public streets are not a part of the site survey, but are shown on the Cover Sheet.
viii. Existing parking lot lighting is shown on plan. See note underneath "Building H" label.
ix. West Elevation is shown on Sheet A-7. It is existing to remain with no proposed changes in this submittal.

c. Elevations

i. The loading dock has been removed from this plan set. See Sheet A-7 for trash enclosure plan and elevations.

ii. See revised North and East Elevations on Sheets A-5 and A-6 for enhanced wall designs.

iii. See Sheet A-7 for existing West Elevation.

Yours truly,
MCG ARCHITECTURE

Subject: RE: File No. H18-008, 5365 Prospect Road

Hi Rhonda,

I want to follow up on Cindy's email last week regarding the Initial Study.

Is the purposed of the Study is related to traffic and parking? As noted in a letter from Lea Simvoulakis on August 2, 2017 regarding another project on this site, the shopping center falls under the El Paseo de Saratoga Urban Village where density and mixed uses are encouraged. See the highlighted areas on page 2 of the attached letter. Under the Urban Village guidelines, the parking required for this 256,600 sf shopping center is 546 stalls, and the parking provided is 1,068 stalls.

We would like to get an understanding of why you feel an Initial Study is necessary for this use.

Secondly, we have a question about the existing monument sign near Building A. The landlord would like to replace the existing monument with a new design incorporating an additional tenant panel. What is the process to get planning approval for the sign replacement?

Thanks again for your help in addressing all the components of Westgate West.

Shaunn and Rhonda,
I need to tag on to Dave's communications to make it really clear we direly need your attention. The Tenant can and may terminate the Lease over this delay in the process. Based on our previous meetings with you Shaunn, Lea, and Tracy, we were told this was an approved use and the approval process was anticipated to be 3-4 months. Delaying 5-6 months from now is a potential disaster.

Please get back to us as soon as possible, we very much need a meeting or at least a conference call to work out our options and strategy.

Thank you,

To: Blair, David <DBlair@mcgarchitecture.com>
Subject: File No. H18-008, 5365 Prospect Road

Dear David,

We have heard from the environmental team. Based upon the information received an initial study including a complete scope of work will be required. Please note, traffic will be reviewed under level of service for evaluation purposes.

Please feel free to contact me if you have any questions.

Thank you,

Rhonda Buss
Planner
City of San José

RE: Site Development Permit Amendment to allow exterior modifications to an existing 12,565 square foot retail shop building within the Westgate West Shopping Center on a 19.8 gross acre site.

Dear Mr. Blair:

Your application, referenced above, has undergone review for completeness and consistency with City policies and regulations. The purpose of this letter is to provide you with comments and revisions necessary so you can appropriately respond to the issues identified below. The comments below are based on the plans and information currently on file. Please let me know if you have any questions regarding these comments.

Project Issues and Concerns

Based on the initial review of your project the items noted below are substantial issues that affect the proposed project. These include the following and are explained in more detail in this letter:

1. Staff would like to see a few architectural modifications made to the facades.
2. Is there a property line running through the building? You may need to combine Parcels 1 and 8. Please see the Building memo attached to the email with this letter.

Permit Streamlining Act

Pursuant to the Permit Streamlining Act (Government Code Chapter 4.5 of Title 7), your application has been deemed **complete**. However, there is an item missing from your plan set. I have also noted several changes to the plan set discussed below.

1. Please provide a Lighting Plan. Refer to City Council Lighting Policy for more information. Refer to the Department Development Policy webpage at: http://www.sanjoseca.gov/index.aspx?nid=1733
2. Please add a landscape plan and provide more planting along the west elevation.

Project Review

1. **Project Description**
   Please confirm the project description above and add it to the Title Sheet referencing the permit type.
2. **General Plan Consistency**

The subject site is designated Neighborhood/Community Commercial (NCC) on the Land Use/Transportation Diagram of the Envision San José 2040 General Plan. This designation supports a very broad range of commercial activity, including commercial uses that serve the communities in neighboring areas. **This site is also within the Paseo de Saratoga Urban Village, which is a Horizon 3 Village. The existing commercial building is permitted in this land use designation and the exterior changes are bringing it more into conformance with the urban design goals of the Urban Village.**

3. **Urban Village: Paseo de Saratoga**
Urban Villages are meant to be vibrant, walkable, mixed-use urban communities that are bicycle and transit-friendly. The goal of an Urban Village is to create a better pedestrian experience. This remodel will help this center promote a community identity and walkability, and solidify this center as an important destination for retail and other activities for the neighboring area. The few design suggestions below will add to the positive effect this remodel will have on the overall center.

4. **Zoning Consistency**
The subject site is located in the CG Commercial General Zoning District. This district is intended to support those services that provide for the needs of the general population. This zoning district is auto-accommodating and includes larger commercial centers.

The following development standards are required of development in the CG Commercial General Zoning District:

Height	65 feet, or 120 feet * *exception for being in an Urban Village
Front Setback	15 feet
Corner Side Setback	12.5 feet
Rear Setback	None

The project conforms to all of the required setbacks.

Parking

Per section 20.90.220(C), the off-street vehicle parking for ground floor commercial uses in an Urban Village shall be reduced to one space per four hundred square feet of floor area. This is a net square footage calculation. Using this ratio, for 12,565 square feet of retail space, or 10,680 net square feet, you need to provide 27 parking stalls. The 1,039 parking stalls in the overall parking lot likely accommodate all of the existing and proposed uses. However, given that the shopping center has multiple parcels, and no Covenant of Easement exists yet, you will need to identify the number of parking spaces available on Parcel 1. From the Alta survey I can tell that there is sufficient parking on this parcel, but if you could note the number of parking spaces on Parcel 1 on the current site plan (Sheet A-1) that would be helpful.

You are required to provide one motorcycle parking space per 20 code required automobile parking spaces. Based on the 27 required spaces, you need two motorcycle space. Please identify these two spaces on the Site Plan (Sheet A-1).

Bicycle parking for retail is generally provided at one space per 3,000 square feet of floor area.

Bicycle parking for public eating establishment is required at one space per 50 seats or 1 space per 800 square feet of dining area, whichever requires the greater number of parking spaces. I am not sure if the existing tenants (excluding Boston Market, which I know has vacated) will be staying in the existing building. If Yogurtland and Dickey's are staying, you will need to provide bicycle parking for these tenants based on the eating establishment ratio. The remaining tenants can be parked at the bicycle ratio for retail. Please identify the bicycle racks and the number of racks on the Site Plan (Sheet A-1).

5. **Architecture and Site Design**
   Staff requests the following design modifications to minimize some blank space areas and to add to the overall finish of the building.
   a. Please and spandrel glass or some sort of trellis/planting area to cover the existing blank wall on the east elevation. The blank wall exists now, and should be revised in some way with this upgrade.
   b. Please add a roof band on the east elevation to the portions of the building that are not made of siding or don't have the metal roof. These portions of the building look unfinished.
   c. Please provide a detail of the trellis on the east elevation.
   d. Please add canopies over the doors on the west elevation. The back of house look needs to be minimized.
   e. Carry the same materials from the east elevation to the corresponding tenant space on the west elevation.
   f. Add a roof band to the tenant spaces that do not have any siding on the west elevation.
   g. Add trees to the landscaping area to minimize the inactive nature of the west elevation.
   h. Add a roof band/trim to the south elevation.

6. **Plan Clarifications**
   a. Title Sheet: Please add the project description from the first page of this letter to the title sheet.
   b. Sheet A1: Please provide the existing parking space count for just Parcel 1.
   c. Sheets A-2 through A-4: Please add the curb line to the hardscape plan detail.
   d. Sheets A-2 through A-4: Please make the design modifications discussed above.
   e. Please add a lighting plan.
   f. Please add a detail sheet of proposed new or existing lighting fixtures that will be on the building elevations.
   g. Please add a landscape plan that shows the addition of trees on the West elevation.

7. **Environmental Review - California Environmental Quality Act (CEQA)**
   Based on the project description and the provided scope of work, the proposed project is exempt from environmental review for compliance with the California Environmental Quality Act (CEQA). The proposed project will quality for exemption 15303(c) New Construction of Conversion of Small Structures as the project is for construction of a commercial building in an urbanized area that is less than 10,000 square feet in floor area.

8. **Comments from Other Departments/Divisions and Agencies**
   The Building Department issued the attached Building Memo. Public Works has issued their final memo and has no comments at this time. Fire has no comments at this time.

9. **Community Outreach**
   A community meeting is not required at this time. Once the on-site sign is posted I will be able to gauge whether anyone is interested in this project.

10. **On-Site Sign Posting**

Per the Public Outreach Policy, the City of San Jose Department of Planning, Building, and Code Enforcement requires that a sign describing the proposed project be placed on each project site so it is legible from the street. I am attaching a PDF of the required sign. This sign will need to be 4'x6' and secured to the ground with a 2''x2'' post. Please put the sign on the Prospect Road frontage. Please place sign somewhere on the east elevation as well. This can be hung in a window of a tenant space if there is no landscaped area to put the sign in the ground on the east elevation. Once the signs are posted, please email me a photo of the signs. These signs needs to be posted roughly 30 days before the public hearing on the project. Please keep in mind that if there are any ordinance sized trees being removed, the sign will need to be amended to include the removal of these trees in the project description.

11. Next Steps

Please be advised that this summary does not constitute a final review. Additional comments may be necessary upon review of additional information and plan revisions submitted in response to this letter. In order to facilitate the development review process, **please include a response letter with your resubmittal** that addresses all items contained in this letter and attached memos. Additionally, please submit two 24"x36" full-size plans and two 11"x17" reduced plans.

I would like to take this to hearing by September 13. This will require that you make a resubmittal within the next week, or by August 14th at the lasted. The hearing notice for the September 13th date is due on August 18. I will need to know by that date that my comments have been addressed and a second review will not be necessary.

The decision to approve, deny, or conditionally approve this proposal will occur at a **Director's Hearing.** These public hearings are held **every Wednesday of the month at 9:00 a.m.** in the City Council Chambers.

Should you have any questions, you may contact me at Lea.Simvoulakis@sanjoseca.gov or (408) 535-7837. I look forward to continuing to work with you and your team on this project for San Jose.

Sincerely,
Lea C. Simvoulakis
Project Manager

COVENANT OF EASEMENT
(Government Code sec. 65871;
SJMC Ch. 20.110, Part 1)

WHEREAS, DS Westgate West LP, a Delaware limited partnership ("OWNER") is the owner of all that real property described in Exhibit "A" attached hereto and incorporated herein by reference ("PROPERTY"); and

WHEREAS, the CITY OF SAN JOSE, a municipal corporation ("CITY") has required that a non-exclusive easement be provided for parking pursuant to the provisions of Government Code sections 65870-65875 and Part 1 of Chapter 20.110 of the San Jose Municipal Code; and

WHEREAS, OWNER intends to comply with the above-described condition of approval by creating the required easement on the PROPERTY.

NOW, THEREFORE, OWNER grants to the CITY a non-exclusive easement for parking on the PROPERTY described herein in Exhibit "A." Said easement is more particularly described as in Exhibit "B."

This Covenant of Easement shall be recorded in the office of the Santa Clara County Recorder. Upon recordation, the burdens of the Covenant shall be binding upon all successors in interest to the real PROPERTY described in Exhibit "A."

[document continues on following page]

This Covenant of Easement shall not be modified or released without the prior approval of the CITY in the manner required by applicable law.

Expires: December 31, 2019

Date: 12/13/17

EXHIBIT "A"
COVENANT OF EASEMENT
LEGAL DESCRIPTION

Covenant of Easement for a non-exclusive easement to be provided for parking on a 19.97 gross acre property.

All that certain real property situated in the City of San Jose, County of Santa Clara, State of California, being more particularly described as follows:

Parcel One-A, Parcel One-B, Parcel Two-A, Parcel Three-A, Parcel Four-A, Parcel Six-A, Parcel Seven-A, Parcel Eight-A and Parcel Nine-A, as said parcels are described in the Grant Deed to DS WESTGATE WEST LP, recorded in the office of the Recorder of Santa Clara County on September 20, 2016 as Document No. 23437545.

EXCEPTING THEREFROM the following described portion of said Parcels One-A, One-B and Eight-A:

COMMENCING at the Southeast corner of said Parcel One-B;
Thence, along the southerly boundary of said Parcel One-B, the following two (2) courses:
(1) North 81°50'00" West, 20.03 feet;
(2) North 70°29'13" West, 39.24 feet to the **POINT OF BEGINNING**;
Thence, continuing along said southerly boundary of said Parcel One-B, the following two (2) courses:
(1) North 70°29'13" West, 38.71 feet;
(2) along a tangent curve to the right, having a radius of 71.00 feet, through a central angle of 44°15'24", with an arc length of 54.84 feet;
Thence North 09°30'15" East, 113.04 feet;
Thence North 43°55'23" West, 7.76 feet;
Thence North 04°43'46" East, 76.11 feet;
Thence North 03°58'36" East, 159.17 feet;
Thence along a tangent curve to the right, having a radius of 18.00 feet, through a central angle of 92°49'18", with an arc length of 29.16 feet; thence South 83°12'06" East, 40.33 feet; thence South 02°56'41" West, 156.21 feet;
Thence South 81°29'38" East, 27.53 feet;
Thence South 07°59'50" West, 88.61 feet;
Thence South 82°04'02" East, 2.90 feet;
Thence South 08°20'24" West, 165.56 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels One-A, and Seven-A:

COMMENCING at the Northwest corner of said Parcel Seven-A;

Thence, along the westerly boundary of said Parcel Seven-A, South 02°08'27" West, 34.30 feet to an angle point in said westerly boundary;
Thence South 80°57'09" East, 9.82 feet to the **POINT OF BEGINNING**;
Thence South 81°45'04" East, 360.06 feet;
Thence South 08°08'54" West, 37.36 feet;
Thence South 81°30'44" East, 77.75 feet;
Thence South 08°13'04" West, 172.52 feet;
Thence North 81°51'12" West, 426.96 feet;
Thence North 05°15'39" East, 211.25 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels Six-A, and Seven-A:

COMMENCING at the Northeast corner of said Parcel Six-A;
Thence North 51°09'33" West, 45.86 feet to the **POINT OF BEGINNING**;
Thence South 08°50'26" West, 219.91 feet;
Thence North 81°50'00" West, 112.66 feet;
Thence North 08°07'29" East, 219.78 feet;
Thence South 81°53'21" East, 115.41 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels One-A, Six-A, and Nine-A:

COMMENCING at the Southwest corner of said Parcel Nine-A;
Thence North 05°17'11" East, 41.24 feet to the **POINT OF BEGINNING**;
Thence North 08°28'39" East, 130.67 feet;
Thence South 81°31'21" East, 75.84 feet;
Thence North 08°28'39" East, 16.00 feet;
Thence South 81°31'35" East, 69.46 feet;
Thence South 08°28'39" West, 146.76 feet;
Thence North 81°28'28" West, 20.52 feet;
Thence North 08°28'39" East, 18.06 feet;
Thence North 81°31'21" West, 53.00 feet;
Thence South 08°28'39" West, 18.00 feet;
Thence North 81°31'02" West, 71.78 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels One-A, Two-A, and Three-A:

COMMENCING at the Southwest corner of said Parcel Two-A;
Thence North 01°06'57" East, 68.35 feet to the **POINT OF BEGINNING**;
Thence North 08°01'40" East, 87.31 feet;

Thence South 81°52'29" East, 7.83 feet;
Thence North 08°15'39" East, 33.79 feet;
Thence South 81°51'06" East, 163.97 feet;
Thence South 07°59'36" West, 121.04 feet;
Thence North 81°52'20" West, 172.02 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels One-A, Three-A and Four-A:

COMMENCING at the Northeast corner of said Parcel One-A;
Thence South 62°34'12" West, 76.12 feet to the **POINT OF BEGINNING**;
Thence South 81°51'40" East, 291.50 feet;
Thence South 08°07'42" West, 52.73 feet;
Thence South 81°36'31" East, 116.51 feet;
Thence South 08°09'53" West, 274.63 feet;
Thence North 81°50'48" West, 261.71 feet;
Thence North 08°50'18" East, 40.08 feet;
Thence North 81°47'37" West, 147.47 feet;
Thence North 08°17'52" East, 287.55 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcel Three-A:

COMMENCING at the Southeast corner of said Parcel Three-A;
Thence North 13°18'59" West, 29.16 feet;
Thence North 82°38'56" West, 95.98 feet;
Thence North 08°14'09" East, 181.53 feet;
Thence North 41°26'40" East, 39.65 feet to the **POINT OF BEGINNING**;
Thence North 08°13'14" East, 218.20 feet;
Thence South 81°36'38" East, 79.84 feet;
Thence South 08°07'58" West, 83.82 feet;
Thence South 80°25'16" East, 41.02 feet;
Thence South 08°08'08" West, 133.30 feet;
Thence North 81°43'14" West, 121.17 feet feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcel Three-A:

COMMENCING at the Southeast corner of said Parcel Three-A;
Thence North 13°18'59" West, 29.16 feet to the **POINT OF BEGINNING**;
Thence North 82°38'56" West, 95.98 feet;
Thence North 08°14'09" East, 181.53 feet;
Thence South 82°00'42" East, 96.34 feet;

Thence South 08°21'10" West, 180.46 feet to the **POINT OF BEGINNING**.

The above described easement is graphically depicted on Exhibit "B" attached hereto and made a part hereof.

This description was prepared by me or under my direction pursuant to the California Professional Land Surveyor's Act.

Subject: RE: File No. H18-008, 5365 Prospect Road
Attachments: IMG_0539.JPG; HA88-070-01 30 day letter.pdf

Hi Rhonda,

I want to follow up on Cindy's email last week regarding the Initial Study.

Is the purposed of the Study is related to traffic and parking? As noted in a letter from Lea Simvoulakis on August 2, 2017 regarding another project on this site, the shopping center falls under the El Paseo de Saratoga Urban Village where density and mixed uses are encouraged. See the highlighted areas on page 2 of the attached letter. Under the Urban Village guidelines, the parking required for this 256,600 sf shopping center is 546 stalls, and the parking provided is 1,068 stalls.

We would like to get an understanding of why you feel an Initial Study is necessary for this use.

Secondly, we have a question about the existing monument sign near Building A. The landlord would like to replace the existing monument with a new design incorporating an additional tenant panel. What is the process to get planning approval for the sign replacement?

Thanks again for your help in addressing all the components of Westgate West.

Regards,

David Blair

Subject: RE: File No. H18-008, 5365 Prospect Road

Shaunn and Rhonda,
I need to tag on to Dave's communications to make it really clear we direly need your attention. The Tenant can and may terminate the Lease over this delay in the process. Based on our previous meetings with you Shaunn, Lea, and Tracy, we were told this was an approved use and the approval process was anticipated to be 3-4 months. Delaying 5-6 months from now is a potential disaster.

Please get back to us as soon as possible, we very much need a meeting or at least a conference call to work out our options and strategy.

Thank you,

From: Blair, David

Subject: FW: File No. H18-008, 5365 Prospect Road

Hi Shaunn,

I received the email below from Rhonda regarding our application for the demolition and new construction at Westgate West for a new fitness tenant.

Donohue Schriber would like to schedule either a meeting or conference call with the staff involved in the study so they can get a better sense of scope and timing. I've emailed and called Rhonda to see about schedule, but since this is a potential major delay, I'd like to see if we can get your help with getting everyone on the same page. Whatever you can do would be appreciated as this really came out of the blue for us.

Thanks for your help.

Dear David,

The typical processing timeline for a standard Initial Study is 5-6 months, which includes three rounds of review, public circulation, and hearing preparation. Please note that it is very important the scope of work be complete!

The plans can continue to be reviewed while the Initial Study is in process.

Thank you,

Hi Rhonda,

Thank you for the update. Can you let us know what this means in terms of timing for completion of the study and scheduling of the hearing?

We are working on responding to your comment letter and will resubmit the set when completed.

Thank you.

Dear David,

We have heard from the environmental team. Based upon the information received an initial study including a complete scope of work will be required. Please note, traffic will be reviewed under level of service for evaluation purposes.

Please feel free to contact me if you have any questions.

Thank you,

To: Buss, Rhonda; Mendrin, Shaunn
Cc: Walsh, Susan; Nusbaum, Jenny
Subject: H18-008 - Westgate West shopping center changes

Hi Rhonda,

I did some research into this site. There was an IS/MND approved in March 2006 for a similar expansion and façade changes to the current Smart & Final Extra building (file H05-006). That project does not appear to be fully implemented and does not cover the OSH building and adjacent building.

As the project proposes to increase floor area and reconfigure parking throughout the shopping center, the infill exemption would not apply because the site is more than 5 acres.

I recommend the applicant retain an environmental consultant to prepare an Initial Study. Also, check in with Karen Mack about how the traffic will be evaluated (LOS or VMT under the new Transportation Policy 5-1).

We will determine the appropriate Environmental Project Manager once the IS is submitted. If we are able to hire a contract planner, this project may be a good candidate to assign to them.

Thanks,

Dear David,

Thank you for your submittal. Your comments are attached. We have received your email, and thought it would be best to respond here. If there are any proposed revisions to the project please identify and include that in your resubmittal. Any revisions will be reviewed at that time.

Planning typically needs to issue the demolition permit. Please see the attached letter for information on demolition. The file has been routed to Environmental Planning for review (which is needed for demolition work). ***Please note, if you choose to submit for a Building Permit, you do so at your own risk***. The development project must be reviewed (design changes may be required), go to public hearing, and if the project is approved, there is a 10-day appeal period.

Please see the attached email dated 2/14/18. We need one contact person on this project to whom information will flow to and from. The application shows you as the contact. If that has changed, that is fine. We are happy to work with whomever is the contact is. Would you kindly confirm who the contact will be?

Should you have any additional questions please feel free to contact me.

Thank you,

Rhonda Buss

Subject: Westgate West - Bldg H - 5365 Prospect Road. 2018-103936 File No. H18-008

Hi Alec,
Per our conversation:
We will be submitting the first phase of the Building H revisions as soon as possible.
The first phase consist of the demolition of the 23k building portion, infilling of existing CMU openings in the remaining building , and leveling of the dirt pad. See attached site plan for reference.
Full set of reference drawings at this drop box link (if you want to preview)

- The valuation of the work is $485,000 (see attached).
  Could you provide us a fee estimate for the submittal? – thank you
  Hi Rhonda,
  Could you advise us if there are any additional requirements for us to provide to run a concurrent review with the development Site permit #2018-103936 File No. H18-008?
  The second phase will deal with the new proposed building. We are only doing the demo and infill openings for this building permit.
  Thank you.
  Hi Jason,
  Could you advise us what the process would be to receive public works approval for this first phase of the project, including the grading permit?
  And if we need any additional information to receive the building and demo permit for this phase?
  Currently we believe the submittal to the building department will be routed to public works for approval.
  Thank you
  Please call with any questions.

ENVIRONMENTAL EVALUATION APPLICATION

INSTRUCTIONS

Please prepare the application form, environmental analysis, and other required information listed below and return them, in conjunction with other required forms for your project (i.e., Planned Development Permit/ Amendment, Conditional Use Permit/Amendment, Rezoning, etc.). This application is accepted by Appointment only. Please visit the Planning Division's website: http://www.sanjoseca.gov/index.aspx?nid=1725 to set up an appointment.

1. **Completed Application Form.** Each application shall be signed by the preparer of the application. Original wet signatures (not Xeroxed) are required. **One** copy of the application shall be submitted for each site.

   The application must contain the following:

   (a) Aerial photograph (8 ½" x 11" or 11" x 17")
   - Minimum scale 1"= 200'
   - Include a north arrow and the scale of the photograph
   - Include date of the photograph
   - The site shown in the center of the photograph
   - Clearly outline and identify the site

   (b) Site Plan (drawn to scale) showing the proposed project. (8 ½" X 11" or 11" X 17")

   (c) Vicinity Map that shows the surrounding roadways, schools, etc., (8 ½" X 11")
   - Include a north arrow
   - Site in the center of the map with North at the top of the page
   - Clearly outline and identify the site
   - Name each surrounding street
   - Label all land uses within 500 feet of the site

   (d) Photographs of the site and surrounding properties
   - Snapshots or Polaroid photos will be accepted
   - Mount on (8 ½" X 11") paper
   - Identify the subject of each photograph

3. **Noticing the Neighborhood.** Refer to the Public Outreach Policy for a full description of the City's public notification procedures. Public Hearing notices will be mailed for development proposals at least 10 calendar days before the date set for hearing for a project. Notices will be sent to all property owners and residents within 300 feet for Very Small projects, 500 feet for Standard Development Proposals and a minimum of 1,000 feet for large or controversial projects as detailed in the Public Outreach Policy.

4. **HUD Federal Funding and Environmental Compliance with the National Environmental Policy Act (NEPA).** Compliance with the National Environmental Policy Act (NEPA) is required for all projects anticipating the use of federal funding from the Department of Housing and Urban Development (HUD), for any portion of the project. Additional review, reports, and/or referrals may be necessary. Additional fees will be required for projects not funded by the Community Development Block Grant (CDBG) program. Please contact the Environmental Review Team for more information.

5. **Santa Clara Valley Habitat Conservation Plan (HCP).** Please provide HCP information for the project below, and refer to the HCP Geobrowser at http://www.hcpmaps.com as needed. To determine if a project eligible for coverage under the HCP, complete the Coverage Screen Form and as needed, the Fees and Conditions Worksheet. Both are available on the HCP Website at http://scv-habitatagency.org.

   Land Cover Designation: URBAN/SUBURBAN
   Private Development Area: 4
   Permanently Disturbed Footprints (in acres): 19.8
   Fee Zone(s): URBAN AREA
   Wildlife Survey Area(s): N/A
   Plant Survey Area(s): N/A
   Streams and Setback: N/A

6. **Fees.** An application fee, associated Public Noticing fee(s), and the appropriate Environmental application fees are due at the time of filing (see fee schedule). Checks are made payable to the "City of San Jose".

This application is accepted by APPOINTMENT ONLY. To arrange an appointment, please visit the Planning Division's website: http://www.sanjoseca.gov/index.aspx?nid=1725. For assistance, call (408) 535-3555.

Are the following items applicable to the project or its effects? Discuss below all items checked yes (attach additional sheets as necessary):		
YES	NO	
☐	☒	Does the project involve or whether the use of Federal funding is anticipated?
☒	☐	Does the project propose the demolition or alteration of any existing structures on the project site?
☐	☒	Does the project change existing features of any bays, tidelands, beaches, lakes or hills or substantial alteration of ground contours?
☐	☒	Does the project change scenic views or vistas from existing residential areas or public lands or roads?
☐	☒	Does the project change pattern, scale or character of the general area of the project?
☐	☒	Does the project create a significant amount of solid waste or litter?
☐	☒	Does the project change the amount of dust, ash, smoke, fumes or odors in the vicinity?
☐	☒	Does the project propose to locate a feature within a riparian corridor or area subject to flooding?
☐	☒	Does the project propose a substantial change in existing noise or vibration levels in the vicinity?
☐	☒	Does the project propose to develop on land or on a slope of 15 percent or more?
☐	☒	Does the project propose the use of hazardous materials to be used as part of the operation of any of the establishments on the project site?
☐	☒	Does the project propose a substantial change in the demand for municipal services (police, fire, water, sewage, etc.)?
☐	☒	Doest the project propose a substantial increase in fossil fuel consumption (electricity, oil, natural gas, etc.)?
☑	☒	Does the project have a relationship with a larger project or series of projects?
☐	☒	Does the project create one acre or more of impervious surface on the site?
☐	☒	Does the project site include any structures listed as City Landmarks, Candidate City Landmarks, Structures of Merit, or listed Determined Eligible for Listing on the National or California Register of Historic Places?

Per below instructions

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Planning, Building and Code Enforcement
ROSALYNN HUGHEY, DIRECTOR

January 17, 2019

DS Westgate West, LP
Mission Center Road Unit 602-8
San Diego, CA 92108

Dear DS Westgate West, LP:

RE: **Lot Line Adjustment Permit, File No. AT18-051,** located on the **5365 Prospect Road**.

Your Lot Line Adjustment Permit, referenced above, was approved by the Director of Planning. To be effective, the enclosed Lot Line Adjustment Permit must be recorded **by the property owner(s)** with the Santa Clara County Recorder's Office **within six months of date of issuance**. A Grant Deed must be prepared to record simultaneously with the Lot Line Adjustment Permit. The following **original documents and one copy** are required at the time of recordation:

- Lot Line Adjustment Permit
- Exhibit "A" Map
- Legal Description
- Grant Deeds for referenced properties

After recordation, a copy of these recorded documents must be received by the Department of Planning, Building and Code Enforcement on or before **5:00 p.m., June 17, 2019.** Please forward a complete copy of the recorded documents including the County's recordation label showing their document number to:

City of San José – Planning Implementation Support Staff
200 E. Santa Clara Street, 3rd Floor Tower
San Jose, CA. 95113

You may wish to contact the Santa Clara County Recorder's Office at (408) 299-5680 to obtain a Preliminary Change of Ownership Report, a Mortgage and Transfer Tax Ownership Report and information regarding recording fees which are payable to the County Recorder at the time of recordation.

If you have any questions, please contact your Project Manager, Rina Shah at (408) 535-7835 or by e-mail at rina.shah@sanjoseca.gov.

Sincerely,

Sarah Martina Davis
Deputy

CC DS Westgate West, LP, Mission Center Road Unit 602-8, San Diego, CA 92108

LOT LINE ADJUSTMENT PERMIT

FILE NO.	**AT18-051**
LOCATION OF PROPERTY	**5365 Prospect Road**
ASSESSOR PARCEL NUMBERS	**381-36-027 and 381-36-020**
PROPOSED ADJUSTMENT	**Lot Line Adjustment between two lots culminating in the transfer of 5,936 square feet from Parcel 2 to Parcel B, as designated on the attached plat map entitled, "Exhibit 'B' Lot Line Adjustment, Lands of DS Westgate West, LP" dated October 10, 2018, and described in the attached legal description entitled, "Exhibit "A"**
ENVIRONMENTAL STATUS	**Exempt under Section 15305(a) for Minor Alterations in Land Use Limitations**
ENGINEER ADDRESS	**RSC Engineering, Inc. 2250 Douglas Blvd., Ste. 150 Roseville, CA 95661**
OWNERS / ADDRESSES	**DS Westgate West, LP Mission Center Road Unit 602-8 San Diego, CA 92108**

FINDINGS

1. This Lot Line Adjustment request will reconfigure two lots, Parcel "B" (APN 381-36-027), and Parcel "2" (APN 381-36-020), as depicted in the attached plat map entitled, "Exhibit 'B' Lot Line Adjustment, Lands of Westgate West, LLP."
2. Parcel B is currently 151,055 square feet (3.46-gross acres) in size and Parcel 2 is 163,029 square feet (3.74-gross acres) in size.
3. The proposed Lot Line Adjustment will serve to transfer approximately 5,936 square feet from Parcel 2 to Parcel B.
4. The resulting "Parcel B" will be 156, 991 square feet (3.6-gross acres) in size and Parcel 2 will be 157,093 square feet (3.6-gross acres) in size.
5. The subject lots are designated Neighborhood/ Community Commercial on the Envision San José 2040 General Plan Land Use/Transportation Diagram. The transfer of square footage between the two lots does not preclude or require development or improvements on the site.
6. The subject parcels are located in the CG Commercial General Zoning District, and this Lot Line Adjustment results in parcels that comply with the development standards of the said Zoning District, including required minimum setbacks from property lines for all structures on-site, and the applicable provisions of the Zoning Ordinance, Title 20 of the City of San José Municipal Code.

7. The environmental impacts of the project will not have an unacceptable negative effect on adjacent property or properties in that:

   a. Under the provisions of Section 15305(a) is of the State Guidelines for Implementation of the California Environmental Quality Act (CEQA), for minor lot line adjustments not resulting in the creation of any new parcel, this project is exempt from the environmental review requirements of Title 21 of the San José Municipal Code, implementing the California Environmental Quality Act of 1970, as amended. The project will not have a significant adverse effect on the environment.

Based on the above-stated findings and subject to the condition set forth below, the Director of Planning approves, pursuant to Section 19.08.440(A)(7) of the San José Municipal Code and Section 66412(d) of the Subdivision Map Àct, said Lot Line Adjustment.

APPROVED SUBJECT TO THE FOLLOWING CONDITIONS:

1. **Permit Expiration.** This Lot Line Adjustment shall automatically expire six months from and after the date of issuance hereof by the Director of Planning if within such six-month period this Lot Line Adjustment has not been recorded. In the event of a change of ownership, the applicant shall provide evidence to the satisfaction of the Director of Planning that a disclosure of this Lot Line Adjustment has been provided to all new owners prior to recordation of said Lot Line Adjustment.

APPROVED and issued on this 17th day of January 2018.

Rosalynn Hughey, Director
Planning, Building and Code Enforcement

Deputy

RSC ENGINEERING

PROJECT DESCRIPTION

On behalf of the owner, DS Westgate West LP, we are requesting a lot line adjustment (LLA) to modify one lot line between two parcels at the existing Westgate West Shopping Center located at the northeast corner of Prospect Road and Lawrence Expressway.

The purpose of the LLA is to shift a lot line approximately 28 feet south to accommodate the new 24 Hour Fitness building. The new entry and pop-outs for the building encroach into the existing property line thus making it necessary to perform a lot line adjustment. The new lot line will be located at the end of the parking facing the building. This will allow the building to meet or exceed building code and fire code requirements. With the change to the lot line the front of the building will be 26.5' from the property line which exceeds the setback requirement for the commercial general zone. Other setbacks are not impacted.

A Covenant of Easement was recorded on the property on February 6, 2018 that allows for cross access and parking between parcels at the shopping center. It already contemplated the changes to the 24 Hour Fitness building so it does not need to be modified.

Subject: RE: AT18-051/PW 3-07718 (Westgate West Lot Line Adjustment)

Rina,

See our comments to your letter dated December 19, 2018 below:

1. Please find attached the project description describing the need for the LLA in more detail.
2. Exhibit B includes DS Westgate West LP in the title block which is the ownership name.
3. The architect's site plan for the 24 hour Fitness building is attached which precipitated the need for a LLA. Do you need their actual building plans? Please let me know and I will need to obtain from the architect.
4. Exhibit A and B are attached.

We processed a COE before. I only have a conformed copy. See attached. Please let me know if you need further information. Thanks.

Hi Tiffany:

I have a few comments on your project as it is not very clear as to the purpose of the LLA. Also, explain how it will affect the new development and parking configuration. Is there a COE for the whole parcel? If so, has it been documented?

Thanks,

Rina Shah

001035_LLA1.pdf; 001035_LLA2.pdf;

Rina,

We added the dimensions of the 18' parking stall and 10.13' walkway for a total of 28.13' which is the dimension on the west side. The 28.10' is within the drive aisle. The proposed lot line is at the end of the parking stall. If this is sufficient we can have our surveyor stamp the exhibit. Please let me know. Thanks.

Subject: Re: AT18-051/PW 3-07718 (Westgate West Lot Line Adjustment)

Hi Tiffany:

Could you please superimpose the parking stalls on the LLA exhibit and send that exhibit to us. The planner working on the actual project is concerned about the lines going through the parking spaces.

Please dimension the planter strip and the parking spaces to make up the 28'-10" as well.

Thanks,

Rina Shah

PROPERTY ADDRESS: 5365 Prospect Road, San Jose, CA

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, ***Fidelity National Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Fidelity National Title Insurance Company, a Florida Corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

EXCEPTIONS
(Continued)

31. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the limited partnership named below:

    Name: DS Westgate West LP, a Delaware limited partnership

    a) Satisfactory evidence that the partnership was validly formed, is in good standing and that there have been no amendments to the partnership agreement

    The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

32. The Company will require that an Owner's Affidavit be completed by the party(s) named below before the issuance of any policy of title insurance.

    Party(s): DS Westgate West LP, a Delaware limited partnership

    The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit.

33. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

    The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

    The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

34. The transaction contemplated in connection with this Report is subject to the review and approval of the Company's Corporate Underwriting Department. The Company reserves the right to add additional items or make further requirements after such review.

END OF EXCEPTIONS

NOTES

1. None of the items shown in this report will cause the Company to decline to attach CLTA Endorsement Form 100 to an Extended Coverage Loan Policy, when issued.

2. Note: The Company is not aware of any matters which would cause it to decline to attach CLTA Endorsement Form 116 indicating that there is located on said Land Commercial Property, known as 5365 Prospect Road, San Jose, CA, to an Extended Coverage Loan Policy.

3. Note: Property taxes for the fiscal year shown below are PAID. For proration purposes the amounts were:

Tax Identification No.:	381-36-020
Fiscal Year:	2017-2018
1st Installment:	$78,862.39
2nd Installment:	$78,862.39
Land:	$7,335,000.00
Improvements:	$4,965,000.00
Code Area:	017-046
Bill No.:	381-36-020-00

4. Note: Property taxes for the fiscal year shown below are PAID. For proration purposes the amounts were:

Tax Identification No.:	381-36-027
Fiscal Year:	2017-2018
1st Installment:	$137,483.56
2nd Installment:	$137,483.56
Land:	$8,010,000.00
Improvements:	$11,875,000.00
Code Area:	017-046
Bill No.:	381-36-027-00

5. Note: The name(s) of the proposed insured(s) furnished with this application for title insurance is/are:

   No names were furnished with the application. Please provide the name(s) of the buyers as soon as possible.

6. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

7. Note: The charge for a policy of title insurance, when issued through this title order, will be based on the Basic Title Insurance Rate.

8. Your application for title insurance was placed by reference to only a street address or tax identification number. Based on our records, we believe that the legal description in this report covers the parcel(s) of Land that you requested. If the legal description is incorrect, the seller/borrower must notify the Company and/or the settlement company in order to prevent errors and to be certain that the correct parcel(s) of Land will appear on any documents to be recorded in connection with this transaction and on the policy of title insurance.

NOTES
(Continued)

9. Note: If a county recorder, title insurance company, escrow company, real estate broker, real estate agent or association provides a copy of a declaration, governing document or deed to any person, California law requires that the document provided shall include a statement regarding any unlawful restrictions. Said statement is to be in at least 14-point bold face type and may be stamped on the first page of any document provided or included as a cover page attached to the requested document. Should a party to this transaction request a copy of any document reported herein that fits this category, the statement is to be included in the manner described.

10. Note: Any documents being executed in conjunction with this transaction must be signed in the presence of an authorized Company employee, an authorized employee of an agent, an authorized employee of the insured lender, or by using Bancserv or other approved third-party service. If the above requirement cannot be met, please call the Company at the number provided in this report.

11. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

12. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

13. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

14. Due to the special requirements of SB 50 (California Public Resources Code Section 8560 et seq.), any transaction that includes the conveyance of title by an agency of the United States must be approved in advance by the Company's State Counsel, Regional Counsel, or one of their designees.

END OF NOTES

WIRE SAFE™ | Inquire before you wire!

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

Types of Information Collected
We may collect two types of information from you: Personal Information and Browsing Information.

Personal Information. FNF may collect the following categories of Personal Information:

- contact information (*e.g.,* name, address, phone number, email address);
- demographic information (*e.g.,* date of birth, gender, marital status);
- identity information (*e.g.,* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.,* loan or bank account information); and
- other personal information necessary to provide products or services to you.

Browsing Information. FNF may automatically collect the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or mobile device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website

How Personal Information is Collected
We may collect Personal Information about you from:

- information we receive from you on applications or other forms;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

How Browsing Information is Collected
If you visit or use an FNF Website, Browsing Information may be collected during your visit. Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics
Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to other websites. FNF is not responsible for the privacy practices or the content of any of those other websites. We advise you to read the privacy policy of every website you visit.

Use of Personal Information
FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and third parties' products and services, jointly or independently.

When Information Is Disclosed
We may make disclosures of your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or

Copyright © 2018. Fidelity National Financial, Inc. All Rights Reserved

- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Please see "**Choices With Your Information**" to learn the disclosures you can restrict.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to guard your Personal Information. We limit access to nonpublic personal information about you to employees who need to know that information to do their job. When we provide Personal Information to others as discussed in this Privacy Notice, we expect that they process such information in compliance with our Privacy Notice and in compliance with applicable privacy laws.

Choices With Your Information
If you do not want FNF to share your information with our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties, except as permitted by California law.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not share information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are meant for adults and are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence for any of the purposes described in this Privacy Notice. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except (1) as required or authorized by contract with the mortgage loan servicer or lender, or (2) as required by law or in the good-faith belief that such disclosure is necessary to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes
By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The revised Privacy Notice, showing the new revision date, will be posted on the FNF Website. Each time you provide information to us following any amendment of this Privacy Notice, your provision of information to us will signify your assent to and acceptance of the terms of the revised Privacy Notice for all previously collected information and information

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the field rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for each discount. These discounts only apply to transaction involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

FNF Underwritten Title Company
FNTC - Fidelity National Title Company
FNTCCA –Fidelity National Title Company of California

FNTIC - Fidelity National Title Insurance Company

Available Discounts

CREDIT FOR PRELIMINARY REPORTS AND/OR COMMITMENTS ON SUBSEQUENT POLICIES (FNTIC)
Where no major change in the title has occurred since the issuance of the original report or commitment, the order may be reopened within 12 or 36 months and all or a portion of the charge previously paid for the report or commitment may be credited on a subsequent policy charge.

DISASTER LOANS (FNTIC)
The charge for a lender's Policy (Standard or Extended coverage) covering the financing or refinancing by an owner of record, within 24 months of the date of a declaration of a disaster area by the government of the United States or the State of California on any land located in said area, which was partially or totally destroyed in the disaster, will be 50% of the appropriate title insurance rate.

CHURCHES OR CHARITABLE NON-PROFIT ORGANIZATIONS (FNTIC)
On properties used as a church or for charitable purposes within the scope of the normal activities of such entities, provided said charge is normally the church's obligation the charge for an owner's policy shall be 50% to 70% of the appropriate title insurance rate, depending on the type of coverage selected. The charge for a lender's policy shall be 40% to 50% of the appropriate title insurance rate, depending on the type of coverage selected.

OWNER'S DECLARATION

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 30019510-991-991-1MP for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 30019510-991-991-1MP for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Fidelity National Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, claims of lien, special assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records.

5. The Land is currently in use as _____; _____occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

This declaration is made with the intention that Fidelity National Title Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on ____ at _____.

CALIFORNIA LAND TITLE ASSOCIATION

STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.

4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% % of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% % of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or

(b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.

7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

(Except as provided in Schedule B - Part II,(t(or T)his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

(PART I

(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:)

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.
7. (Variable exceptions such as taxes, easements, CC&R's, etc. shown here.)

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

RE: Lot Line Adjustment Application (File No. AT18-051)

Your application, referenced above, for Lot Line Adjustment application has undergone review for completeness and consistency with City policies and regulations. The purpose of this letter is to provide you with information as early as possible so you can appropriately respond to the issues identified below. While I continue to work on your application, your timely response will help expedite the process.

COMPLETENESS OF YOUR APPLICATION

Permit Streamlining Act. Pursuant to the Permit Streamlining Act (Government Code Chapter 4.5 of Title 7), your application is complete. However, the following issues must be addressed for me to complete the review of your project.

1. Project Description. A brief statement on a separate sheet of paper stating the reason for this lot line adjustment. How will it affect parking or setbacks for the proposed development, etc.
2. Provide name or address on the plat map, "Exhibit B," similar to legal description. For instance: "Lands of DC Westgate West LP"
3. Provide plans associated with the building modifications via email.
4. Provide pdf of Exhibit A & B via e-mail.

COMMENTS FROM OTHER DEPARTMENTS/DIVISIONS AND AGENCIES

Public Works comments are attached to this letter.

CONCLUSION

Please provide a response letter as part of the project's re-submittal package addressing all the comments above. At the time of re-submittal, you should anticipate at least two weeks for departmental staff to review your response.

If you have questions about the information contained in this letter, please contact me at rina.shah@sanjoseca.gov or (408) 535-7835.

Sincerely,

Rina Shah
Project Manager

Sutter Health
2880 Gateway Oaks Drive, #220
Sacramento, CA 95833
Attn: Jason Little

RE: Sutter Health Signage Response
Westgate West
San Jose, California

Dear Tenant:

The sign submittal received at our office for the above-referenced project has been reviewed and **approved as noted**. Please use the comments noted on the drawings and the guidelines listed below to make any necessary adjustment to your documents and the installation of your sign.

1. All signs shall be reviewed for conformance with the sign criteria and overall design quality and is not a plan check for dimensional errors, code violations or any other restrictions to the property. Approval or disapproval of sign submittals based on aesthetics of design shall remain the sole right of the Landlord/Manager.
2. Prior to the installation and manufacture of any sign, the Tenant shall provide Landlord with a copy of the sign permit from the governmental agency having jurisdiction. **After completion, a copy of the signed off permit must be provided to the landlord.**
3. Each tenant shall be responsible to repair any damage to any surface caused by the signage or its' installation.
4. Landlord reserves the right to periodically hire an independent electrical engineer, at Tenant's sole expense, to inspect the installation of all Tenants' signs. Tenants shall be required to have any discrepancies and/or code violations corrected at Tenant's expense. Any code violations, requests for sign removals, or discrepancies not corrected within fifteen (15) days of notice, may be corrected by the Landlord at Tenant's expense.
5. Upon vacancy, Tenant shall remove sign and restore fascia to original condition at Tenant's sole cost and expense within fifteen (15) days of expiration of term or earlier termination of Tenant's lease.
6. Exposed junction boxes, transformers, lamps, tubing, conduit, or raceways of any type are NOT PERMITTED.

3501 Del Paso Road
Suite 100
Sacramento, CA 95835
(916) 920-5555
FAX: (916) 920-4265
donahueschriber.com
Lic. 01875932

7. Sign manufacturer's names, stamps, or decals may not be visible from the street or normal viewing angles.
8. All signs must be pegged off wall ½" minimum.
9. Tenant's sign contractor shall install and connect sign display and primary wiring at sign location approved by Landlord. Signs are to be connected to the J-box provided by the Landlord, which is connected to the Landlord's house panel, and shall be wired to Landlord's control at Landlord's timer for uniform control of hours of illumination unless otherwise directed by Landlord.
10. Prior to sign installation, we require the following:
    a. A copy of your sign contractor's insurance certificate naming **DS Westgate West LP; and all related affiliates,** as additional insured (with additional insured endorsement page attached).
    b. A copy of the permit and the contractor's license.
    c. At least 48-hour notice of date of install and requesting access to electrical room, if required.

    Should any other contractor provide installations or other work on the site, please call me to coordinate insurance requirements.

In the event that the above information contradicts the lease signage criteria, the lease signage criteria are to supersede. Should you have any questions, please call me at 916-286-5204.

Sincerely,

DONAHUE SCHRIBER

STATE OF CALIFORNIA
SIGN LIGHTING
CEC-NRCC-LTS-01-E(Revised 08/16) CALIFORNIA ENERGY COMMISSION

CERTIFICATE OF COMPLIANCE	NRCC-LTS-01-E
Sign Lighting	(Page 1 of 5)
Project Name: Sutter Health Walk In Care at Westgate West	Date Prepared: 6/26/2019

A. General Information

Project Address: 5343 Prospect Road, Suite F17, San Jose CA 95129

Location of Sign	☑ Outdoor Signs	☐ Indoor Signs		
Phase of Sign Construction	☑ New Signs	☐ Sign Alterations		
Type of Lighting Control	☐ New Lighting Controls	☐ Replaced Lighting Controls	☑ Not Installing Lighting Controls	

This Certificate of Compliance includes the following components (check all that apply):
☐ Mandatory Measures (Lighting Controls) ☐ Maximum Allowed Lighting Power ☑ Specific Lighting Sources

1. Mandatory Sign Lighting Controls

NOTES:

1. *The same responsible person may install both the sign lighting power and the sign lighting controls, or a different responsible person may install the sign lighting controls than the responsible person installing the sign lighting power.*
2. *The Mandatory Measures (sign lighting controls) are required for compliance with the sign lighting Standards. If the person responsible for installing the sign lighting power is not also responsible for the sign lighting controls, then the owner of the sign, general contractor, or architect shall be responsible to have the sign lighting controls installed.*
3. *If more than one person has responsibility for compliance, each responsible person shall prepare and sign a Certificate of Compliance and an Installation Certificate applicable to the portion of construction for which they are responsible; alternatively, the person with chief responsibility for construction shall prepare and sign the Certificate of Compliance Declaration Statement for the entire construction (e.g. a C-10 contractor may complete parts 1a and 1b on one compliance document and a C-45 contractor may complete parts 2a and 2b on a separate compliance document – the Responsible Designer shall submit the two compliance documents together for the same complete installation).*

I have responsibility for installing the sign lighting controls:

☐ Yes, I have responsibility for the sign lighting controls, and will complete parts 1a and 1b of this compliance document

☑ No, I do not have responsibility for installing the sign lighting controls. Someone else will complete parts 1a and 1b of this compliance document.

1a. Check Yes or No for all of the following statements:

1	There are existing sign lighting controls that comply with the applicable provisions of §110.9 and §130.3	☐ Yes ☐ No
2	There are no existing sign lighting controls and I will be installing sign lighting controls that comply with the applicable provisions of §110.9 and §130.3	☐ Yes ☐ No
3	There are existing sign lighting controls that do not comply with the applicable provisions of §110.9 and §130.3 and I will be installing sign lighting controls that comply with the applicable provisions of §110.9 and §130.3	☐ Yes ☐ No

STATE OF CALIFORNIA
SIGN LIGHTING
CEC-NRCC-LTS-01-E(Revised 08/16) CALIFORNIA ENERGY COMMISSION

CERTIFICATE OF COMPLIANCE	NRCC-LTS-01-E
Sign Lighting	(Page 2 of 5)
Project Name: Sutter Health Walk In Care at Westgate West	Date Prepared: 6/26/2019

1b. Mandatory Sign Lighting Controls

If the person signing the Certificate of Compliance Declaration Statement on this NRCC-LTS-01-E is responsible for complying with the sign lighting control requirements, that person shall answer all of the following questions:

If there are construction documents, indicate where on the building plans the mandatory measures (sign lighting control) note block can be located:

1	**§130.3(a)1.** All **indoor sign lighting** is controlled with an automatic time-switch control or astronomical time-switch control.	Y ○	N ○	NA ⊙
2	**§130.3(a)2A.** All **outdoor sign lighting** is controlled with a photocontrol in addition to an automatic time-switch control, or an astronomical time-switch control.	Y ○	N ○	NA ○
	EXCEPTION to Section 130.3(a)2A: Outdoor signs in tunnels, and signs in large permanently covered outdoor areas that are intended to be continuously lit, 24 hours per day and 365 days per year.	Y ○		NA ⊙
3	**§130.3(a)2B.** All **outdoor sign lighting** that is ON both day and night is controlled with a dimmer that provides the ability to automatically reduce sign lighting power by a minimum of 65% during nighttime hours. Signs that are illuminated at night and for more than 1 hour during daylight hours shall be considered ON both day and night.	Y ○	N ○	NA ○
	EXCEPTION to Section 130.3(a)2B: Outdoor signs in tunnels and large covered areas that are intended to be illuminated both day and night.	Y ○		NA ⊙
4	**§130.3(a)3. Demand Responsive Electronic Message Center Control.** An Electronic Message Center (EMC) having a new connected lighting power load greater than 15 kW has a control installed that is capable of reducing the lighting power by a minimum of 30% when receiving a demand response signal.	Y ○	N ○	N/A ⊙
	EXCEPTION to Section 130.3(a)3: Lighting for EMCs that is not permitted by a health or life safety statute, ordinance, or regulation to be reduced by 30%.	Y ○		NA ⊙

Field Inspector Notes:

2. Mandatory Sign Lighting Measures

I have responsibility for installing the sign lighting

☑ Yes, I have responsibility for the sign lighting, and will complete parts 2a and 2b of this compliance document ☐ No, I do not have responsibility for installing the sign lighting. Someone else will complete parts 2a and 2b of this compliance document.

2a. Maximum Allowed Lighting Power Method of Compliance

Certificate of Compliance and Field Inspection Energy Checklist.

Complete this part if there are signs using the maximum allowed lighting power method of compliance. (Complete part 2b of this Certificate of Compliance if there are signs using the Specific Lighting Sources method of compliance).

A	Symbol or code used on the plans (when plans are required) and other documents.
B	A description of the sign, or location of sign on the building; and the location of sign on construction documents.
C	OPTIONAL - Check this box only if this sign has a permanent, pre-printed, factory-installed, ENERGY VERIFIED label, confirming that the sign complies with the Section 140.8 of the California 2016 Title 24, Part 6 Standards, using the Maximum Allowed Lighting Power method of compliance. The only labels that will be recognized for this purpose are ENERGY VERIFIED Certification Marks authorized by Underwriters Laboratories (UL) or other Product Certification Body accredited to ISO/IEC Guide 65 by the American National Standards Institute in accordance with ISO/IEC 17011. Surveillance by the Accredited Certification Body shall be an ongoing annual inspection program carried out by a Type A Inspection body in accordance with ISO/IEC 17020. For signs with such an ENERGY VERIFIED label, columns 'D' through 'I' are not required to be filled out. Note: Using an ENERGY VERIFIED label is an optional method to validate compliance. An ENERGY VERIFIED label is not needed for compliance.
D	The sign area in square feet.
E	List "I" if the sign is internally illuminated. List "E" if the sign is externally illuminated.
F	Allowed watts per square foot. Enter 12 if the sign is listed as "I" in column E. Enter 2.3 if sign is listed as "E" in column E.
G	Multiply the square footage in column D times the allowed Lighting Power Density (LPD = watts) in column F.
H	Show the total installed watts in the sign, as determined according to the applicable provisions of §130(c).
I	Enter Y if the number in column H is less than or equal to the number in column G. Otherwise, the sign does not comply.
J	This page doubles as a field inspection checklist.

Field Inspector Notes:

2b. Specific Lighting Source Method of Compliance

Certificate of Compliance and Field Inspection Energy Checklist

Complete this part if there are signs using the Specific Lighting Source method of compliance. (Complete part 2 of this Certificate of Compliance if there are signs using the maximum allowed lighting power method of compliance)

		☐		☐

A	Symbol or code used on the plans (when plans are required) and other documents.
B	A narrative description of the sign, or location of sign on the building; and the location of sign on construction documents
C	OPTIONAL - Check this box only if this sign has a permanent, pre-printed, factory-installed ENERGY VERIFIED label, confirming that this sign complies with the Section 140.8 of the California 2016 Title 24, Part 6 Standards, using the Specific Lighting Source Method of Compliance. The only labels that will be recognized for this purpose are ENERGY VERIFIED Certification Marks authorized by Underwriters Laboratories (UL) or other Product Certification Body accredited to ISO/IEC Guide 65 by the American National Standards Institute in accordance with ISO/IEC 17011. Surveillance by the Accredited Certification Body shall be an ongoing annual inspection program carried out by a Type A Inspection body in accordance with ISO/IEC 17020. For signs with such an ENERGY VERIFIED label, column 'D' is not required to be filled out. Note: Using an ENERGY VERIFIED label is an optional method to validate compliance. An ENERGY VERIFIED label is not needed for compliance.
D	Specific Light Source Compliance Method. The sign(s) identified above use only the following lighting technologies: List all applicable numbers (1 through 9) that apply in column D above for each row. 1 High pressure sodium lamps 2 Metal halide lamps that are pulse start or ceramic served by a ballast that has a minimum efficiency of 88% or greater. Ballast efficiency is the measured output wattage to the lamp divided by the measured operating input wattage when tested according to ANSI C82.6-2005. 3 Metal halide lamps that are pulse start that are 320 watts or smaller, are not 250 watt or 175 watt lamps, and are served by a ballast that has a minimum efficiency of 80%. Ballast efficiency is the measured output wattage to the lamp divided by the measured operating input wattage when tested according to ANSI C82.6-2005. 4 Neon or cold cathode lamps with transformer or power supply efficiency greater than or equal to a minimum efficiency of 75% when the transformer or power supply rated output current is less than 50 mA. The ratio of the output wattage to the input wattage is at 100% tubing load. 5 Neon or cold cathode lamps with transformer or power supply efficiency greater than or equal to a minimum efficiency of 68% when the transformer or power supply rated output current is 50 mA or greater. The ratio of the output wattage to the input wattage is at 100% tubing load. 6 Fluorescent lighting systems meeting one of the following requirements: A.) Use only lamps with a minimum color rendering index (CRI) of 80; or B.) Use only electronic ballasts with a fundamental output frequency not less than 20 kHz. 7 Light emitting diodes (LEDs) with a power supply having an efficiency of 80% or greater. 8 Single voltage external power supplies that are designed to convert 120 volt AC input into lower voltage DC or AC output, and have a nameplate output power less than or equal to 250 watts, shall comply with the applicable requirements of the Appliance Efficiency Regulations (Title 20). 9 Compact fluorescent lamps that do not contain a medium screw base sockets (E24/E26).
E	This page doubles as a field inspection checklist.

Sign Lighting	(Page 5 of 5)
Project Name: Sutter Health Walk In Care at Westgate West	Date Prepared: 6/26/2019

DOCUMENTATION AUTHOR'S DECLARATION STATEMENT

1. I certify that this Certificate of Compliance documentation is accurate and complete.

Documentation Author Name: Rachel Bennett	Documentation Author Signature:
Company: Weidner CA	Signature Date: 6/26/2019
Address: 5001 24th Street	CEA Certification Identification (if applicable):
City/State/Zip: Sacramento CA 95822	Phone: 916 452-8000

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. The information provided on this Certificate of Compliance is true and correct.
2. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design or system design identified on this Certificate of Compliance (responsible designer).
3. The energy features and performance specifications, materials, components, and manufactured devices for the building design or system design identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
4. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.
5. I will ensure that a completed signed copy of this Certificate of Compliance shall be made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a completed signed copy of this Certificate of Compliance is required to be included with the documentation the builder provides to the building owner at occupancy.

CERTIFICATE OF PERMIT

NOTICE OF GRANTING OF A PERMIT
PURSUANT TO THE PROVISIONS OF
TITLE 20 OF THE SAN JOSÉ MUNICIPAL CODE

NOTICE IS HEREBY GIVEN that a permit (**File No. H18-008**), covering all of that certain property hereinafter described is granted to **DS Westgate West, LP** by the Director of Planning of the City of San José on **April 10, 2019**, and becomes effective on the date recorded as shown above. This permit contained conditions, restrictions, and use limitations, which are subject to enforcement by the City. The subject property is located at **East side of Lawrence Expressway, between Graves Avenue to the north and Prospect Road to the South (Westgate West Shopping Center, 5365 Prospect Road), San José, California.** That said real property is more particularly described in the attached legal description.

Said permit is on file in the office of the Department of Planning, Building and Code Enforcement of the City of San José and is available for inspection at said office by any person interested herein.

City of San José
Rosalynn Hughey, Director
Planning, Building and Code Enforcement

Timothy Rood, Deputy

LEGAL DESCRIPTION:

REAL PROPERTY IN THE CITY OF SAN JOSE, COUNTY OF SANTA CLARA, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS.

PARCEL ONE
PARCEL ONE-A:
PARCEL "B" AS SHOWN ON THE PARCEL MAP FILED MAY 27, 1977 IN BOOK 397 OF MAPS AT PAGE 44 OF SANTA CLARA COUNTY RECORDS.

EXCEPTING THEREFROM AND THEREOUT THAT PORTION DESCRIBED AS FOLLOWS
BEGINNING AT THE SOUTHEAST CORNER OF PARCEL "A" AS SHOWN ON SAID MAP (397 MAPS 44); THENCE SOUTH 08° 11' 38" WEST, 25.00 FEET; THENCE NORTH 81° 48' 22" WEST, 84.00 FEET; THENCE NORTH 08° 11' 38" EAST, 10.00 FEET, THENCE NORTH 81° 48' 22" WEST, 112.57 FEET TO THE EASTERLY LINE OF LAWRENCE EXPRESSWAY; THENCE NORTHERLY ALONG SAID EASTERLY LINE NORTH 02° 22' 34" EAST, 15.08 FEET TO THE SOUTHERLY LINE OF PARCEL "A", THENCE ALONG SAID SOUTHERLY LINE SOUTH 81° 48' 22" EAST, 198.10 FEET TO THE POINT OF BEGINNING.
THE LEGAL IS MADE PURSUANT TO THAT CERTAIN CERTIFICATE APPROVING A LOT LINE ADJUSTMENT, RECORDED JUNE 21, 1990, AS INSTRUMENT NO 10565231, IN BOOK L395, PAGE 350 OFFICIAL RECORDS.

PARCEL ONE-B:
PARCEL 1 AS SHOWN ON THAT CERTAIN MAP ENTITLED "PARCEL MAP BEING A PORTION OF LOTS 9, 10 AND 11, AS SHOWN ON THE MAP OF THE SUBDIVISION OF GRAVES TRUST, FILED SEPTEMBER 24, 1889 IN BOOK D OF MAPS, PAGE 145 OF SANTA CLARA COUNTY RECORDS", WHICH MAP WAS FILED FOR RECORD IN THE OFFICE OF THE RECORDER OF THE COUNTY OF SANTA CLARA, STATE OF CALIFORNIA ON APRIL 5, 1973 IN BOOK 320 OF MAPS, PAGE 29

PARCEL ONE-C:
EASEMENTS FOR PEDESTRIAN AND VEHICULAR INGRESS AND EGRESS AND PARKING GRANTED IN THAT CERTAIN DECLARATION ESTABLISHING RECIPROCAL PARKING RECORDED APRIL 21, 2005 AS INSTRUMENT NO 18335996, OFFICIAL RECORDS.

PARCEL TWO:

PARCEL TWO-A:
BEGINNING AT THE POINT OF INTERSECTION OF THE NORTHERLY LINE OF PROSPECT ROAD, AS ESTABLISHED BY THE DEED FROM THOMAS NEWTON FOSTER, ET AL, TO CITY OF SAN JOSE, DATED FEBRUARY 24, 1956, RECORDED AUGUST 3, 1956 IN BOOK 3567 OF OFFICIAL RECORDS, AT PAGE 595, SANTA CLARA COUNTY RECORDS, WITH THE WESTERLY LINE OF PARCEL NO 1, AS SAID PARCEL NO. 1 WAS DESCRIBED IN THE DEED FROM Y ARCHIBALD TO THOMAS N FOSTER, ET UX, DATED MAY 19, 1964 AND RECORDED MAY 29, 1964 IN BOOK 6522 OF OFFICIAL RECORDS, PAGE 458, SANTA CLARA COUNTY RECORDS; RUNNING THENCE ALONG SAID NORTHERLY LINE OF PROSPECT ROAD NORTH 81° 50' WEST, 150.00 FEET, THENCE LEAVING SAID LINE AND RUNNING PARALLEL TO SAID WESTERLY LINE NORTH 8° 10' 57" EAST, 202.29 FEET; THENCE LEAVING SAID PARALLEL LINE AND RUNNING PARALLEL TO SAID NORTHERLY LINE OF PROSPECT ROAD, SOUTH 81° 50' EAST 150.00 FEET TO A POINT IN SAID WESTERLY LINE OF THE FOSTER PARCEL HEREINABOVE REFERRED TO, RUNNING THENCE ALONG SAID LAST NAMED LINE SOUTH 8° 10' 57" WEST, 202.29 FEET TO THE POINT OF BEGINNING AND BEING A PORTION OF LOTS 9 AND 10, AS SAID LOTS ARE SHOWN UPON THE MAP OF THE SUBDIVISION OF THE GRAVES TRACT IN THE QUITO RANCHO, WHICH SAID MAP WAS FILED FOR RECORD IN THE OFFICE OF THE RECORDER OF SAID COUNTY ON SEPTEMBER 24, 1889 IN BOOK "D" OF MAPS, AT PAGE 145, SANTA CLARA COUNTY RECORDS.

PARCEL TWO-B
EASEMENTS FOR PEDESTRIAN AND VEHICULAR INGRESS AND EGRESS AND PARKING GRANTED IN THAT CERTAIN DECLARATION ESTABLISHING RECIPROCAL PARKING RECORDED APRIL 21, 2005 AS INSTRUMENT NO 18335996, OFFICIAL RECORDS

PARCEL THREE:

PARCEL THREE-A:
A PORTION OF LOTS 9 AND 10, AS SHOWN ON THE MAP OF THE SUBDIVISION OF THE GRAVES TRACT IN THE QUITO RANCHO, FILED SEPTEMBER 24, 1889, BOOK D OF MAPS, PAGE 145, SANTA CLARA COUNTY RECORDS, DESCRIBED AS FOLLOWS:

BEGINNING ON THE NORTHERLY LINE OF PROSPECT ROAD, AS ESTABLISHED BY DEED TO CITY OF SAN JOSE, RECORDED AUGUST 3, 1956, OFFICIAL RECORDS, PAGE 595, AT THE EASTERLY LINE OF SAID LOT 9, THENCE FROM SAID POINT OF BEGINNING ALONG SAID EASTERLY LINE OF LOT 9, NORTH 8° 10' 57" EAST, 860.54 FEET TO THE SOUTHERLY LINE OF GRAVES AVENUE, AS ESTABLISHED BY SAID DEED TO CITY OF SAN JOSE, THENCE ALONG SAID LINE, NORTH 81° 49' 06" WEST, 454.50 FEET; THENCE SOUTH 8° 11' 12" WEST, PARALLEL WITH SAID EASTERLY LINE OF LOT 9 A DISTANCE OF 368.48 FEET, THENCE SOUTH 81° 49' 06" EAST AND PARALLEL WITH SAID LINE OF GRAVES AVENUE, 70 FEET; THENCE SOUTH 8° 11' 12" WEST AND PARALLEL WITH SAID EASTERLY LINE OF LOT 9, A DISTANCE OF 115 FEET, THENCE NORTH 81° 49' 06" WEST, PARALLEL WITH SAID LINE OF GRAVES AVENUE, 77.87 FEET; THENCE SOUTH 8° 10' 57" WEST PARALLEL WITH SAID WESTERLY LINE OF LOT 9, A DISTANCE OF 176.89 FEET TO THE SOUTHERLY LINE OF PARCEL OF LAND CONVEYED TO THOMAS N. FOSTER, ET UX, BY DEED RECORDED JANUARY 19, 1967, BOOK 7617, OFFICIAL RECORDS, PAGE 726, THENCE SOUTH 81° 50' EAST ALONG SAID LINE, 98.87 FEET, MORE OR LESS, TO THE SOUTHEAST CORNER THEREOF; THENCE SOUTH 8° 10' 57" WEST, PARALLEL WITH THE SAID EASTERLY LINE OF LOT 9, A DISTANCE OF 202.65 FEET TO SAID NORTHERLY LINE OF PROSPECT ROAD; THENCE SOUTH 81° 50' EAST, 369.5 FEET TO THE POINT OF BEGINNING

PARCEL THREE-B
EASEMENTS FOR PEDESTRIAN AND VEHICULAR INGRESS AND EGRESS AND PARKING GRANTED IN THAT CERTAIN DECLARATION ESTABLISHING RECIPROCAL PARKING RECORDED APRIL 21, 2005 AS INSTRUMENT NO 18335996, OFFICIAL RECORDS

PARCEL FOUR:

PARCEL FOUR-A.
PARCEL D OF PARCEL MAP FILED MAY 27, 1977 IN BOOK 397 OF MAPS, PAGE 44, SANTA CLARA COUNTY RECORDS

PARCEL FOUR-B:
EASEMENTS FOR PEDESTRIAN AND VEHICULAR INGRESS AND EGRESS AND PARKING GRANTED IN THAT CERTAIN DECLARATION ESTABLISHING RECIPROCAL PARKING RECORDED APRIL 21, 2005 AS INSTRUMENT NO 18335996, OFFICIAL RECORDS

PARCEL FIVE:

A NON-EXCLUSIVE EASEMENT AND RIGHT-OF-WAY IN PERPETUITY, CREATED APPURTENANT TO PARCELS ONE, TWO AND THREE ABOVE IN THE DEED TO THOMAS N. FOSTER, ET UX, RECORDED AUGUST 4, 1964, BOOK 6608, OFFICIAL RECORDS, PAGE 266, FOR INGRESS, EGRESS AND REGRESS OVER A PORTION OF LOT 8, AS SHOWN ON THE MAP OF THE SUBDIVISION OF THE GRAVES TRACT IN THE QUITO RANCHO, FILED SEPTEMBER 24, 1889 IN BOOK D OF MAPS, PAGE 145, SANTA CLARA COUNTY RECORDS, DESCRIBED AS FOLLOWS.

BEGINNING ON THE NORTHWEST LINE OF SARATOGA AVENUE, AS WIDENED BY THE DEED TO THE CITY OF SAN JOSE, RECORDED AUGUST 3, 1956, BOOK 3567, OFFICIAL RECORDS, PAGE 595, AT THE SOUTHERLY LINE OF CERTAIN PARCEL OF LAND CONVEYED TO STEVEN CREEK
BOWL, INC., A CORPORATION, BY DEED RECORDED JULY 12, 1957, BOOK 3842, OFFICIAL RECORDS, PAGE 200; THENCE FROM SAID POINT OF BEGINNING ALONG THE SOUTHERLY LINE OF SAID PARCEL OF LAND SO CONVEYED TO STEVENS CREEK BOWL, INC., AND THE WESTERLY PROLONGATION THEREOF, NORTH 81° 49' 06" WEST, 881.11 FEET TO THE WESTERLY LINE OF SAID LOT 8, THENCE ALONG SAID LINE,
SOUTH 8° 10' 57" WEST 70 FEET TO THE INTERSECTION THEREOF WITH THE WESTERLY PROLONGATION OF THE NORTHERLY LINE OF THAT CERTAIN PARCEL OF LAND CONVEYED TO H. S. SCOTT, BY DEED RECORDED AUGUST 2, 1957, BOOK 3859, OFFICIAL RECORDS, PAGE 29; THENCE SOUTH 81° 49' 06" EAST AND ALONG SAID PROLONGED LINE AND ALONG THE NORTHERLY LINE OF SAID LAND SO CONVEYED TO H. S. SCOTT, 833.13 FEET TO THE NORTHEAST CORNER THEREOF IN SAID NORTHWEST LINE OF SARATOGA AVENUE; THENCE ALONG SAID NORTHWEST LINE OF SARATOGA AVENUE, NORTH 42° 36' 42" EAST, 84.87 FEET TO THE POINT OF BEGINNING
EXCEPTING THEREFROM THAT PORTION OF SAID EASEMENT CONVEYED BY THAT CERTAIN QUITCLAIM DEED RECORDED OCTOBER 30, 1989 IN BOOK L145, PAGE 545, OFFICIAL RECORDS

PARCEL SIX:

PARCEL SIX-A:
PARCEL C, AS SHOWN UPON THE PARCEL MAP FILED MAY 27, 1977 IN BOOK 397 OF MAPS, PAGE 44, SANTA CLARA COUNTY RECORDS.

PARCEL SIX-B:
EASEMENTS FOR PEDESTRIAN AND VEHICULAR INGRESS AND EGRESS AND PARKING GRANTED IN THAT CERTAIN DECLARATION ESTABLISHING RECIPROCAL PARKING RECORDED APRIL 21, 2005 AS INSTRUMENT NO 18335996, OFFICIAL RECORDS

PARCEL SEVEN

PARCEL SEVEN-A:
ALL OF PARCEL 2 AS SHOWN ON THAT CERTAIN PARCEL MAP FILED FOR RECORD ON APRIL 5, 1973 IN BOOK 320 OF MAPS, PAGE 29.3

PARCEL SEVEN-B:
EASEMENTS FOR PEDESTRIAN AND VEHICULAR INGRESS AND EGRESS AND PARKING GRANTED IN THAT CERTAIN DECLARATION ESTABLISHING RECIPROCAL PARKING RECORDED APRIL 21, 2005 AS INSTRUMENT NO 18335996, OFFICIAL RECORDS.

PARCEL EIGHT:

PARCEL EIGHT-A:
PARCEL "A" AND A PORTION OF PARCEL "B", AS SHOWN ON THE PARCEL MAP FILED MAY 27, 1977 IN BOOK 397 OF MAPS, PAGE 44, DESCRIBED AS FOLLOWS.

BEGINNING AT THE SOUTHEAST CORNER OF SAID PARCEL "A"; THENCE SOUTH 08° 11" 38" WEST, 25.00 FEET; THENCE NORTH 81° 48" 22" WEST, 84.00 FEET; THENCE NORTH 08° 11" 38" EAST, 10.00 FEET; THENCE NORTH 81° 48' 22" WEST, 112.57 FEET TO THE EASTERLY LINE OF LAWRENCE EXPRESSWAY; THENCE NORTHERLY ALONG SAID EASTERLY LINE NORTH 02° 22" 34" EAST 142.36 FEET TO THE BEGINNING OF A CURVE TO THE RIGHT HAVING A RADIUS OF 50.00 FEET, THENCE ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 93° 11" 54", AN ARC DISTANCE OF 81.33 FEET; THENCE SOUTH 81° 49' 06" EAST, 163.54 FEET, THENCE SOUTH 08° 11' 38" WEST, 181.68 FEET TO THE POINT OF BEGINNING
THE LEGAL IS MADE PURSUANT TO THAT CERTAIN CERTIFICATE APPROVING A LOT LINE ADJUSTMENT, RECORDED JUNE 21, 1990, AS INSTRUMENT NO. 10565231, IN BOOK L395, PAGE 350 OFFICIAL RECORDS

PARCEL EIGHT-B.
EASEMENTS FOR PEDESTRIAN AND VEHICULAR INGRESS AND EGRESS AND PARKING GRANTED IN THAT CERTAIN DECLARATION ESTABLISHING RECIPROCAL PARKING RECORDED APRIL 21, 2005 AS INSTRUMENT NO 18335996, OFFICIAL RECORDS

PARCEL NINE:

PARCEL NINE-A:
PARCEL 3, AS SHOWN ON THAT PARCEL MAP FILED FOR RECORD IN THE OFFICE OF THE RECORDER OF THE COUNTY OF SANTA CLARA, STATE OF CALIFORNIA ON APRIL 05, 1973, IN BOOK 320 OF MAPS, PAGE(S) 25

Memorandum

TO: Rhonda Buss

FROM: Alex Wong
Public Works

SUBJECT: SEE BELOW

DATE: 02/12/19

Approved [signature] Date 2/12/19

SUBJECT: FITNESS CENTER ADDITION TO WESTGATE WEST
PW NO. 3-07718 (H18-008)

We have completed the review of the transportation analysis for the subject project. The project proposes to partially demolish an existing 23,550 square-foot (s.f.) building and construct a new 16,450 s.f. second floor, totaling 40,000 s.f. to be used as a fitness center. The project within the Westgate West Shopping Center located at 5365 Prospect Road. The proposed development is projected to add 30 AM peak hour trips and 48 PM peak hour trips.

MULTI-MODAL ACCESS

Existing transit service in the area is provided by the Santa Clara Valley Transportation Authority (VTA). The study area is served directly by one express bus route (Route 101), one limited stop bus route (Route 328), and four local bus routes (Route 26, 57, 58, and 82). Class II bike lanes are present along Lawrence Expressway/Quito Road, Prospect Road, and W. Campbell Avenue/Hamilton Avenue. There are sidewalks along all streets in the study area, except for Lawrence Expressway north of the project site, and a pedestrian walkway access from Graves Avenue into the shopping center. The existing network of sidewalks and crosswalks in the study area has adequate connectivity and provides pedestrians with safe routes to transit services and other points of interest in the vicinity. Vehicular access to the site will be provided via three existing driveways along the project frontage; one on Lawrence Expressway, one on Prospect Road, and one on Graves Avenue.

ANALYSIS

In alignment with the State of California Senate Bill 743 (SB 743), the City of San Jose has adopted a new Transportation Analysis Policy, Council Policy 5-1. The policy establishes the threshold for transportation impacts under the California Environmental Quality Act (CEQA) based on vehicle miles traveled (VMT) instead of levels of service (LOS). This project analyzed transportation impacts using the VMT metric and conformed to Council Policy 5-1.

CEQA Transportation Analysis

Project Impacts: Because the project is constructing an addition to a regional shopping center the City's VMT Evaluation Tool (sketch tool) could not be used. The project VMT was

evaluated by comparing the regional VMT with and without the project. The City's Travel Forecasting Model was used to calculate the change in VMT resulting from the fitness center. The results of the analysis indicate that the new fitness center would not cause an increase in trips, but rather a change in trips because people would leave existing nearby fitness centers to join the new fitness center. The model results show that the project would result in a net decrease of 41 VMT per day. The work based VMT would be reduced by 48 daily VMT and the social/recreational based VMT would be increased by 7 daily VMT. Since the project is not resulting in a net new increase in daily VMT, no mitigation measures are required.

Local Transportation Analysis

Intersection Operations Analysis: Five (5) signalized intersections – two (2) City of San Jose intersections and three (3) Santa Clara County intersections – were analyzed for the AM and PM peak hours to identify any adverse intersection operations effects using standards and methodologies outlined in the *City of San Jose Transportation Analysis Handbook*. The results of the analysis indicate that there are no adverse intersection operations effects at any of the study intersections under both background and background plus project conditions (See Table 6 Attached).

Vehicular Access and Circulation: Project traffic would enter the site via driveways on Lawrence Expressway, Prospect Road, and Graves Avenue. The existing driveways provide adequate width for vehicular access. The project proposes to modify existing islands on-site as well as lengthen on-site drive isles. These changes will improve on-site circulation. The site plan shows adequate on-site vehicular circulation.

Sight Distance Analysis: Sight distance analysis was performed at the project driveways. The results of the analysis indicate that the sight distance is adequate at the project driveways.

Truck Access and Circulation: The project is removing loading docks at the rear of the building in order to construct trash enclosures. Garbage vehicles will enter the project site via the Graves Avenue driveway and perform pick-up operations on-site. The on-site drive aisles are adequate for garbage trucks to enter, exit, and perform garbage operations.

Emergency Vehicle Access (EVA) is provided via the project driveways on Lawrence Expressway and Graves Avenue. The driveways meet the City's Fire Code requirements for driveway width.

Pedestrian and Bicycle Access: The existing network of sidewalks and crosswalks in the immediate vicinity of the project site has adequate connectivity and provides pedestrians with safe routes to various transit services and other points of interest in the study area. Class II bike lanes are present along Lawrence Expressway/Quito Road, Prospect Road, and W. Campbell Avenue/Hamilton Avenue. The existing bicycle network is sufficient to serve the project.

Parking: The parking requirement was evaluated based on the City of San Jose Parking standards (San Jose Municipal Code Chapter 20.90, Table 20-190). The parking requirement for the shopping center is 970 spaces after addition of the project. The project is constructing an addition 29 new parking spaces, expanding the total number of parking spaces to 1,068 spaces to

serve the shopping center, which meets the City's parking requirements.

The project is required to provide 14 bicycle parking spaces and is proposing to provide 14 bicycle parking spaces. The project as proposed meets the City's bicycle parking requirement.

RECOMMENDATION:

The subject project will be in conformance with the City of San Jose Transportation Analysis Policy (Council Policy 5-1). Therefore, a determination for a negative declaration can be made with respect to transportation impacts.

Executive Summary

This study was conducted for the purpose of identifying any potential transportation impacts caused by the proposed fitness center addition to the Westgate West Shopping Center in San Jose, California. The proposed site would partially demolish and expand on an existing space of 23,550 square feet and build a second floor with approximately 16,450 square feet, totaling 40,000 square feet. Access to the project site is provided via driveways on Lawrence Expressway, Prospect Road, and Graves Avenue.

The potential impacts of the project were evaluated in accordance with the standards and methodologies set forth by the City of San Jose. Based on the City of San Jose's Transportation Analysis Policy (Policy 5-1) and the *Transportation Analysis Handbook 2018*, the transportation analysis report for the project includes a CEQA transportation analysis (TA) and a local transportation analysis (LTA) The CEQA transportation analysis comprises of an evaluation of Vehicle Miles Traveled (VMT). VMT is defined in Chapter 1. The LTA supplements the CEQA transportation analysis by identifying transportation operational issues via an evaluation of weekday AM and PM peak-hour traffic conditions for five signalized intersections in the vicinity of the project site. The LTA also includes an analysis of site access, on-site circulation, parking, vehicle queueing, and effects to transit, bicycle, and pedestrian access.

CEQA Transportation Impacts

Project Vehicle Miles Traveled (VMT) Impacts and Mitigation Measures

Project Impact: Because the proposed project is constructing an addition to an existing shopping center that generates regional traffic, the VMT sketch tool could not be used. The Project VMT was analyzed by comparing the existing regional VMT to the regional VMT with the project. The City of San Jose Travel Forecasting Model (model) was used to calculate the change in VMT resulting from the proposed Health Club at the Westgate Mall. The underlying premise is that the new health club would not cause an *increase* in trips but rather result in a *change* in trip making because some people would leave nearby health clubs to join the proposed health club. In order to estimate the impact on VMT with the model, the project's additional 16,450 square feet of building area was converted to 40 retail jobs, using a ratio of one retail job per 400 square feet. The project's transportation analysis zone (TAZ) is compromised of the area bounded by Lassen Avenue, Saratoga Avenue, Prospect Road, and Lawrence Expressway. There are two similar health clubs near the project site: Planet Fitness at 328 Saratoga Avenue and Right Stuff at 1730 West Campbell Avenue. It was assumed that some members of these nearby clubs would join the proposed Westgate Mall health club instead and, in order to reflect this, 40 retail jobs were removed from the TAZ's where these two nearby health clubs are located. These job changes were then made in the 2015 land use file and the model was run, with and without the project. The model was run with the worker trips as Home Based-Work trips. Health club trips are

considered recreational trips and are reflected in the model as “social/recreational” trips. Therefore, the daily VMT’s for the social/recreational trips, with and without the project, were calculated for the affected TAZ’s.

The model results showed that the proposed project would cause a net decrease of 41 VMT per day. The work trips would result in 48 fewer daily VMT and the social/recreational trips would result in an increase of 7 daily VMT. Because the project results in no increase in daily VMT, no mitigation measures are needed.

Local Transportation Analysis

Project Trip Generation

As proposed, the fitness center would utilize and expand existing building space formerly used as retail at the project site. Project trips were estimated using trip rates published in the Institute of Transportation Engineers’ (ITE) *Trip Generation Manual*, 10th Edition. The trip generation rates for Health/Fitness Club (Land Code Use 492) were used for this project. Trip generation rates for Shopping Center (Land Use Code 820) were used for existing trip credits.

With trip reductions and taking credit for trips generated by the former retail use, the project is estimated to generate 30 net new trips during the AM peak hour (13 inbound and 17 outbound) and 48 trips during the PM peak hour (36 inbound and 12 outbound).

Intersection Traffic Operations

Based on the City of San Jose and CMP intersection operations analysis criteria, none of the study intersections would be adversely affected by the project.

Other Transportation Issues

The proposed site plan shows adequate site access and on-site circulation, and no significant operational issues are expected to occur as a result of the project. The project would not have an adverse effect on the existing pedestrian, bicycle, or transit facilities in the area.

1. Introduction

This report presents the results of the transportation analysis conducted for the proposed fitness center at the Westgate West Shopping Center located at 5365 Prospect Road in San Jose, California (see Figure 1). This study was conducted for the purposed of identifying the potential transportation impacts related to the proposed development.

The transportation impacts of the project were evaluated following the standards and methodologies established in the City of San Jose's *Transportation Analysis Handbook*, adopted in April 2018. Based on the City of San Jose's Transportation Analysis Policy (Policy 5-1) and the *Transportation Analysis Handbook,* the transportation analysis report for the project includes a California Environmental Quality Act (CEQA) transportation analysis (TA) and a local transportation analysis (LTA).

Project Description

The proposed fitness center would remodel and expand on an existing building creating a two-level fitness center. Access to the site is currently provided by several driveways accessing the Westgate West shopping center. There are multiple driveways located on Lawrence Expressway, Prospect Road, and Graves Avenue. The project site plan is shown on Figure 2.

Transportation Policies

In adherence with State of California Senate Bill 743 (SB 743) and the City's goals as set forth in the Envision San Jose 2040 General Plan, the City of San Jose has adopted a new Transportation Analysis Policy, Council Policy 5-1. The policy replaces its predecessor (Council Policy 5-3) and establishes the thresholds for transportation impacts under CEQA based on vehicle miles traveled (VMT) instead of intersection level of service (LOS). The intent of this change is to shift the focus of transportation analysis under CEQA from vehicle delay and roadway auto capacity to a reduction in vehicle emissions, and the creation of robust multimodal networks that support integrated land uses. All new projects are required to analyze transportation impacts using the VMT metric and conform to Council Policy 5-1.

Figure 2
Proposed Site Plan

The new Transportation Analysis Policy aligns with the Envision San Jose 2040 General Plan which seeks to focus new development growth within Planned Growth Areas, bringing together office, residential, and service land uses to internalize trips and reduce VMT. VMT-based policies support dense, mixed-use, infill projects as established in the General Plan's Planned Growth Areas.
The Envision San Jose 2040 General Plan contains the following policies to encourage the use of non-automobile transportation modes to minimize vehicle trip generation and reduce VMT:

- Consider impacts on overall mobility and all travel modes when evaluating transportation impacts of new developments or infrastructure projects (TR-1.2);
- Through the entitlement process for new development, projects shall be required to fund or construct needed transportation improvements for all transportation modes, giving first consideration to improvement of biking, walking and transit facilities and services that encourage reduced vehicle travel demand (TR-1.4);
- Require new development where feasible to provide on-site facilities such as bicycle storage and showers, provide connections to existing and planned facilities, dedicate land to expand existing facilities or provide new facilities such as sidewalks and/or bicycle lanes/paths, or share in the cost of improvements (TR-2.8);
- As part of the development review process, require that new development along existing and planned transit facilities consist of land use and development types and intensities that contribute towards transit ridership. In addition, require that new development is designed to accommodate and to provide direct access to transit facilities (TR-3.3);
- Discourage, as part of the entitlement process, the provision of parking spaces significantly above the number of spaces required by code for a given use (TR-8.4);
- Allow reduced parking requirements for mixed-use developments and for developments providing shared parking or a comprehensive transportation demand management (TDM) program, or developments located near major transit hubs or within Villages and Corridors and other growth areas (TR-8.6);
- Encourage private property owners to share their underutilized parking supplies with the general public and/or other adjacent private developments (TR-8.7);
- Within new development, create and maintain a pedestrian-friendly environment by connecting the internal components with safe, convenient, accessible, and pleasant pedestrian facilities and by requiring pedestrian connections between building entrances, other site features, and adjacent public streets (CD-3.3);
- Create a pedestrian-friendly environment by connecting new residential development with safe, convenient, accessible, and pleasant pedestrian facilities. Provide such connections between new development, its adjoining neighborhood, transit access points, schools, parks, and nearby commercial areas (LU-9.1);
- Encourage all developers to install and maintain trails when new development occurs adjacent to a designated trail location. Use the City’s Parkland Dedication Ordinance and Park Impact Ordinance to have residential developers build trails when new residential development occurs adjacent to a designated trail location, consistent with other parkland priorities. Encourage developers or property owners to enter into formal agreements with the City to maintain trails adjacent to their properties (PR-8.5).

CEQA Transportation Analysis Scope

The City of San Jose's Transportation Analysis Policy establishes procedures for determining project impacts on VMT based on project description, characteristics, and/or location. VMT is the total miles of travel by personal motorized vehicles a project is expected to generate in a day. VMT measures the full distance of personal motorized vehicle-trips with one end within the project. Typically, development projects that are farther from other, complementary land uses (such as a business park far from housing) and in areas without transit or active transportation infrastructure (bike lanes, sidewalks, etc.) generate more driving than development near complementary land uses with more robust transportation options. Therefore, developments located in a central business district with high density and diversity of complementary land uses and frequent transit services are expected to internalize trips and generate shorter and fewer vehicle trips than developments located in a suburban area with low density of residential developments and no transit service in the project vicinity.

To evaluate the project's VMT impact, VMT is calculated per employee for office and industrial developments (dividing the project's VMT by the number of employees). For retail developments, the policy looks at total VMT. Any increase in city-wide VMT is considered an impact.

Because the proposed project is an addition to an existing shopping center that generates regional traffic, the CEQA transportation analysis of the project requires a project-level VMT impact analysis using the City of San Jose's Travel Demand Model (model). The total regional VMT was analyzed both with and without the project. If there is an overall increase in VMT due to the proposed project, possible mitigation measures need to be analyzed using the San Jose VMT Evaluation Tool (sketch tool) to bring overall regional VMT down to baseline conditions.

Local Transportation Analysis Scope

A local transportation analysis (LTA) identifies transportation operational issues that may arise due to a development project, evaluates the effects of the project on transportation, access, circulation, and related safety elements in the proximate area of the project, and supplements the VMT analysis.

As part of the LTA, a project is required to conduct an intersection operations analysis if the project is expected to add 10 vehicle trips per hour per lane to a signalized intersection that meets the parameters outlined in the *Transportation Analysis Handbook*. The project is not expected to add 10 vehicle trips per hour per lane or more to any signalized intersections within a half mile of the project, and there is no signalized intersection currently operating at LOS D or worse within one mile of the project. Nevertheless, the City of San Jose requested that the following intersections be included for analysis:

Study Intersections:

1. Saratoga Avenue and Prospect Road (CMP)
2. Westgate West Shopping Center and Prospect Road
3. Lawrence Expressway and Prospect Road (CMP)
4. Lawrence Expressway and Saratoga Avenue (CMP)
5. Lawrence Expressway and Westgate West Shopping Center

Traffic conditions at the study intersections were analyzed for both the weekday AM and PM peak hours of adjacent street traffic. The AM peak hour typically occurs between 7:00 AM and 9:00 AM and the PM peak hour typically occurs between 4:00 PM and 6:00 PM on a regular weekday. These are the

peak commute hours during which most weekday traffic congestion occurs on the roadways in the study area. Intersection operations conditions were evaluated for the following scenarios:

- ***Existing Conditions.*** Existing AM and PM peak hour traffic volumes at the study intersections were obtained from the City of San Jose, the 2016 CMP Annual Monitoring Report, and new traffic counts conducted in October 2018. The signalized study intersection was evaluated with a level of service analysis using TRAFFIX software in accordance with the *2000 Highway Capacity Manual* methodology.
- ***Background Conditions*.** Background traffic volumes reflect traffic added by nearby approved projects that are not yet completed or occupied. The added traffic from approved but not yet completed developments was provided by the City of San Jose. Background conditions represent the baseline conditions to which project conditions are compared for the purpose of determining potential adverse operational effects of the project.
- ***Background Plus Project Conditions.*** Background plus project conditions reflect projected traffic volumes on the planned roadway network with completion of the project and approved developments. Background plus project traffic volumes were estimated by adding to background traffic volumes the additional traffic generated by the project.

The LTA also includes a vehicle queuing analysis, an evaluation of potential project impacts on bicycle, pedestrian, and transit facilities, and a review of site access, and on-site circulation.

VMT Analysis Methodology

Methodology

To determine whether a project would result in CEQA transportation impacts related to VMT, the City has developed the San Jose VMT Evaluation Tool (sketch tool) to streamline the analysis for residential, office, and industrial projects with local traffic. For non-residential or non-office projects, very large projects or projects that can potentially shift travel patterns, the City's Travel Demand Model can be used to determine project VMT.

Because the proposed project is an addition to an existing shopping center that generates regional traffic, the CEQA transportation analysis of the project requires a project-level VMT impact analysis using the City of San Jose's Travel Demand Model (model). The total regional VMT was be analyzed both with and without the project. If there is an overall increase in VMT due to the proposed project, possible mitigation measures need to be analyzed using the San Jose VMT Evaluation Tool (sketch tool) to bring overall regional VMT down to baseline conditions.

The sketch tool evaluates a list of selected VMT reduction measures that can be applied to a project to reduce the project VMT. There are four strategy tiers whose effects on VMT can be calculated with the sketch tool:

1. Project characteristics (e.g. density, diversity of uses, design, and affordability of housing) that encourage walking, biking and transit uses.
2. Multimodal network improvements that increase accessibility for transit users, bicyclists, and pedestrians,
3. Parking measures that discourage personal motorized vehicle-trips, and

4. Transportation demand management (TDM) measures that provide incentives and services to encourage alternatives to personal motorized vehicle-trips.

The first three strategies – land use characteristics, multimodal network improvements, and parking – are physical design strategies that can be incorporated into the project design. TDM includes programmatic measures that aim to reduce VMT by decreasing personal motorized vehicle mode share and by encouraging more walking, biking, and riding transit. TDM measures should be enforced through annual trip monitoring to assess the project's status in meeting the VMT reduction goals.

Thresholds of Significance

Table 1 shows the VMT thresholds of significance for development projects, as established in the Transportation Analysis Policy. The VMT impact threshold for retail development is any increase in regional VMT.

Projects that trigger a significant VMT impact can assess a variety of the four strategies described above to reduce the impact. A significant impact is said to be satisfactorily mitigated when the strategies and VMT reductions implemented render the VMT impact less than significant.

Table 1
VMT Thresholds of Significance for Development Projects

Project Types	Significance Criteria	Current Level	Threshold
Residential Uses	Project VMT per capita exceeds existing citywide average VMT per capita minus 15 percent, or existing regional average VMT per capita minus 15 percent, whichever is lower.	11.91 VMT per capita (Citywide Average)	10.12 VMT per capita
General Employment Uses	Project VMT per employee exceeds existing regional average VMT per employee minus 15 percent.	14.37 VMT per employee (Regional Average)	12.21 VMT per employee
Industrial Employment Uses	Project VMT per employee exceeds existing regional average VMT per employee.	14.37 VMT per employee (Regional Average)	14.37 VMT per employee
Retail / Hotel / School Uses	Net increase in existing regional total VMT.	Regional Total VMT	Net Increase
Public / Quasi-Public Uses	In accordance with most appropriate type(s) as determined by Public Works Director.	Appropriate levels listed above	Appropriate thresholds listed above
Mixed-Uses	Evaluate each land use component of a mixed-use project independently, and apply the threshold of significance for each land use type included.	Appropriate levels listed above	Appropriate thresholds listed above
Change of Use / Additions to Existing Development	Evaluate the full site with the change of use or additions to existing development, and apply the threshold of significance for each project type included.	Appropriate levels listed above	Appropriate thresholds listed above
Area Plans	Evaluate each land use component of the Area Plan independently, and apply the threshold of significance for each land use type included.	Appropriate levels listed above	Appropriate thresholds listed above

Source: City of San Jose, *2018 Transportation Analysis Handbook* , Table 2.

Intersection Operations Analysis Methodology

This section presents the methods used to determine the traffic conditions at the study intersections and the potential adverse operational effects due to the project. It includes descriptions of the data requirements, the analysis methodologies, the applicable intersection level of service standards, and the criteria used to determine adverse effects on intersection operations.

All study intersections are located within the City of San Jose and were evaluated based on the City of San Jose level of service standard.

Data Requirements

The data required for the analysis were obtained from previous traffic studies, new traffic counts, the City of San Jose, the 2016 CMP Annual Monitoring Report, and field observations. The following data were collected from these sources:

- existing traffic volumes
- lane configurations
- signal timing and phasing
- a list of approved and planned projects

Analysis Methodologies and Level of Service Standard

Traffic conditions at the study intersections were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays. The analysis methods are described below.

Signalized Intersections

The signalized study intersections are subject to the City of San Jose's level of service standards. The City of San Jose level of service methodology is TRAFFIX, which is based on the 2000 *Highway Capacity Manual* (HCM) method for signalized intersections. TRAFFIX evaluates signalized intersections operations on the basis of average delay time for all vehicles at the intersection. Since TRAFFIX is also the CMP-designated intersections level of service methodology, the City of San Jose methodology employs the CMP defaults values for the analysis parameters. The City of San Jose level of service standard for intersections is LOS D or better. The correlation between average delay and level of service is shown in Table 2.

CMP Signalized Intersections

Since TRAFFIX is the designated level of service methodology for the CMP and the City of San Jose, the CMP study intersections are not analyzed separately, but rather is among the signalized intersections analyzed using TRAFFIX. The only difference between the City of San Jose and CMP analyses is that the CMP level of service standard for signalized intersections is LOS E or better.

Table 1
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (sec.)
A	Operations with very low delay occurring with favorable progression and/or short cycle lengths.	up to 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	10.1 to 20.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.1 to 35.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.1 to 80.0
F	Operation with delays unacceptable to most drivers occurring due to oversaturation, poor progression, or very long cycle lengths.	Greater than 80.0

Adverse Intersection Operations Effects

According to the City of San Jose's *Transportation Analysis Handbook 2018*, an adverse effect on intersection operations would occur if for either peak hour:

1. The level of service at the intersection degrades from an acceptable level (LOS D or better) under background conditions to an unacceptable level under background plus project conditions, or
2. The level of service at the intersection is an unacceptable level (LOS E or F) under background conditions and the addition of project trips cause both the critical-movement delay at the intersection to increase by four (4) or more seconds *and* the volume-to-capacity ratio (V/C) to increase by one percent (.01) or more.

The exception to this threshold is when the addition of project traffic reduces the amount of average control delay for critical movements, i.e., the change in average control delay for critical movements are negative. In this case, the threshold is when the project increases the critical v/c value by 0.01 or more.

Adverse effects at signalized intersections can be addressed by one of the following approaches:

- Reduce project vehicle-trips to eliminate adverse effects by selecting additional TDM measures to achieve a reduction
- Construct improvements to the subject intersection or other roadway segments of the city-wide transportation system to increase overall capacity

Report Organization

This report has a total of four chapters. Chapter 2 describes existing transportation conditions including VMT of the existing land uses in the proximity of the project, the existing roadway network, transit service, bicycle and pedestrian facilities. Chapter 3 describes the CEQA transportation analysis, including the project VMT impact, mitigation measures to reduce the VMT impact, and cumulative transportation impact. Chapter 4 describes the local transportation analysis including the method by which project traffic is estimated, intersection operations analysis for background plus project conditions, any adverse intersection traffic effects caused by the project, intersection vehicle queuing analysis, site access and on-site circulation review, effects on bicycle, pedestrian, and transit facilities, and parking.

2. Existing Transportation Conditions

This chapter describes the existing conditions of the transportation system within the study area of the project. It describes transportation facilities in the vicinity of the project site, including the roadway network, transit service, and pedestrian and bicycle facilities. The analysis of existing intersection operations is included as part of the Local Transportation Analysis (Chapter 4).

Existing Roadway Network

Regional access to the project site is provided via SR 85 and I-280. Local access to the project site is provided via Lawrence Expressway, Prospect Road, Saratoga Avenue, and Graves Avenue. These facilities are described below.

SR-85 is a six-lane freeway (two mixed-flow lanes and one high occupancy vehicle (HOV) lane in each direction) in the vicinity of the site. It extends from its starting point at US-101 in South San Jose westward and northward to Mountain View, where it ends as it again merges with US-101. Access to the project site is provided via its interchange with Prospect Road and Quito Road, where it becomes Lawrence Expressway as it approaches the project area.

I-280 is an eight-lane freeway (three mixed-flow lanes and one high occupancy vehicle (HOV) lane in each direction) in the vicinity of the project site. It extends from San Francisco in the north to East San Jose. Access to the project site is provided via an interchange at Saratoga Avenue and Stevens Creek Boulevard to Lawrence Expressway.

Lawrence Expressway is a six lane arterial in the project vicinity. It extends from Highway 237 in the north to Saratoga Avenue in the south, where it becomes Quito Road. There is direct access from both directions of Lawrence Expressway to the project site. Drivers on southbound Lawrence Expressway can access a left turn lane, providing access to one of the project driveways. Similarly, drivers on northbound Lawrence Expressway have a right turn lane providing access to the same driveway.

Prospect Road is a six lane arterial in the project vicinity. It extends from Saratoga Avenue near the project site to Saratoga in the west. There is direct access to the project site from Prospect Road via a signalized intersection at the Westgate West Shopping Center driveway and Prospect Road. There are also three other driveways along the shopping center frontage on Prospect Road.

Saratoga Avenue is a six lane arterial in the project vicinity. It extends from Santa Clara in the northeast to Saratoga in the southwest.

Graves Avenue is a two lane roadway serving the residential neighborhood just north of the project site. The project site can be directly accessed by two driveways on Graves Avenue.

Existing Pedestrian and Bicycle Facilites

There are sidewalks along all streets in the study area, except for along Lawrence Expressway north of the project site. There is also a pedestrian walkway accessing the shopping area from Graves Avenue, north of the project site. There are crosswalks with pedestrian signal heads at all signalized intersections within the project vicinity on Lawrence Expressway, Prospect Road, and Saratoga Avenue.

Bicycle facilities in the vicinity of the project site are shown in Figure 3.

Bike lanes are provided on the following roadways:

- *Lawrence Expressway/Quito Road* – Bicycle Lanes exist throughout both streets, however, less experienced riders may be uncomfortable and should use caution on Lawrence Expressway, as vehicles in the drive lane are faster than normal arterials.
- *Prospect Road* – throughout its length
- *W Campbell Avenue/Hamilton Avenue* – throughout its length on Hamilton Avenue (Prospect Road becomes W Campbell Avenue/Hamilton Avenue after the Saratoga Road intersection.

No shared bike routes are present on the neighborhood streets in the immediate vicinity of the project site. However, the surrounding neighborhood streets, such as Graves Avenue and the streets connecting to it, carry low traffic volumes and are conducive to bicyclists.

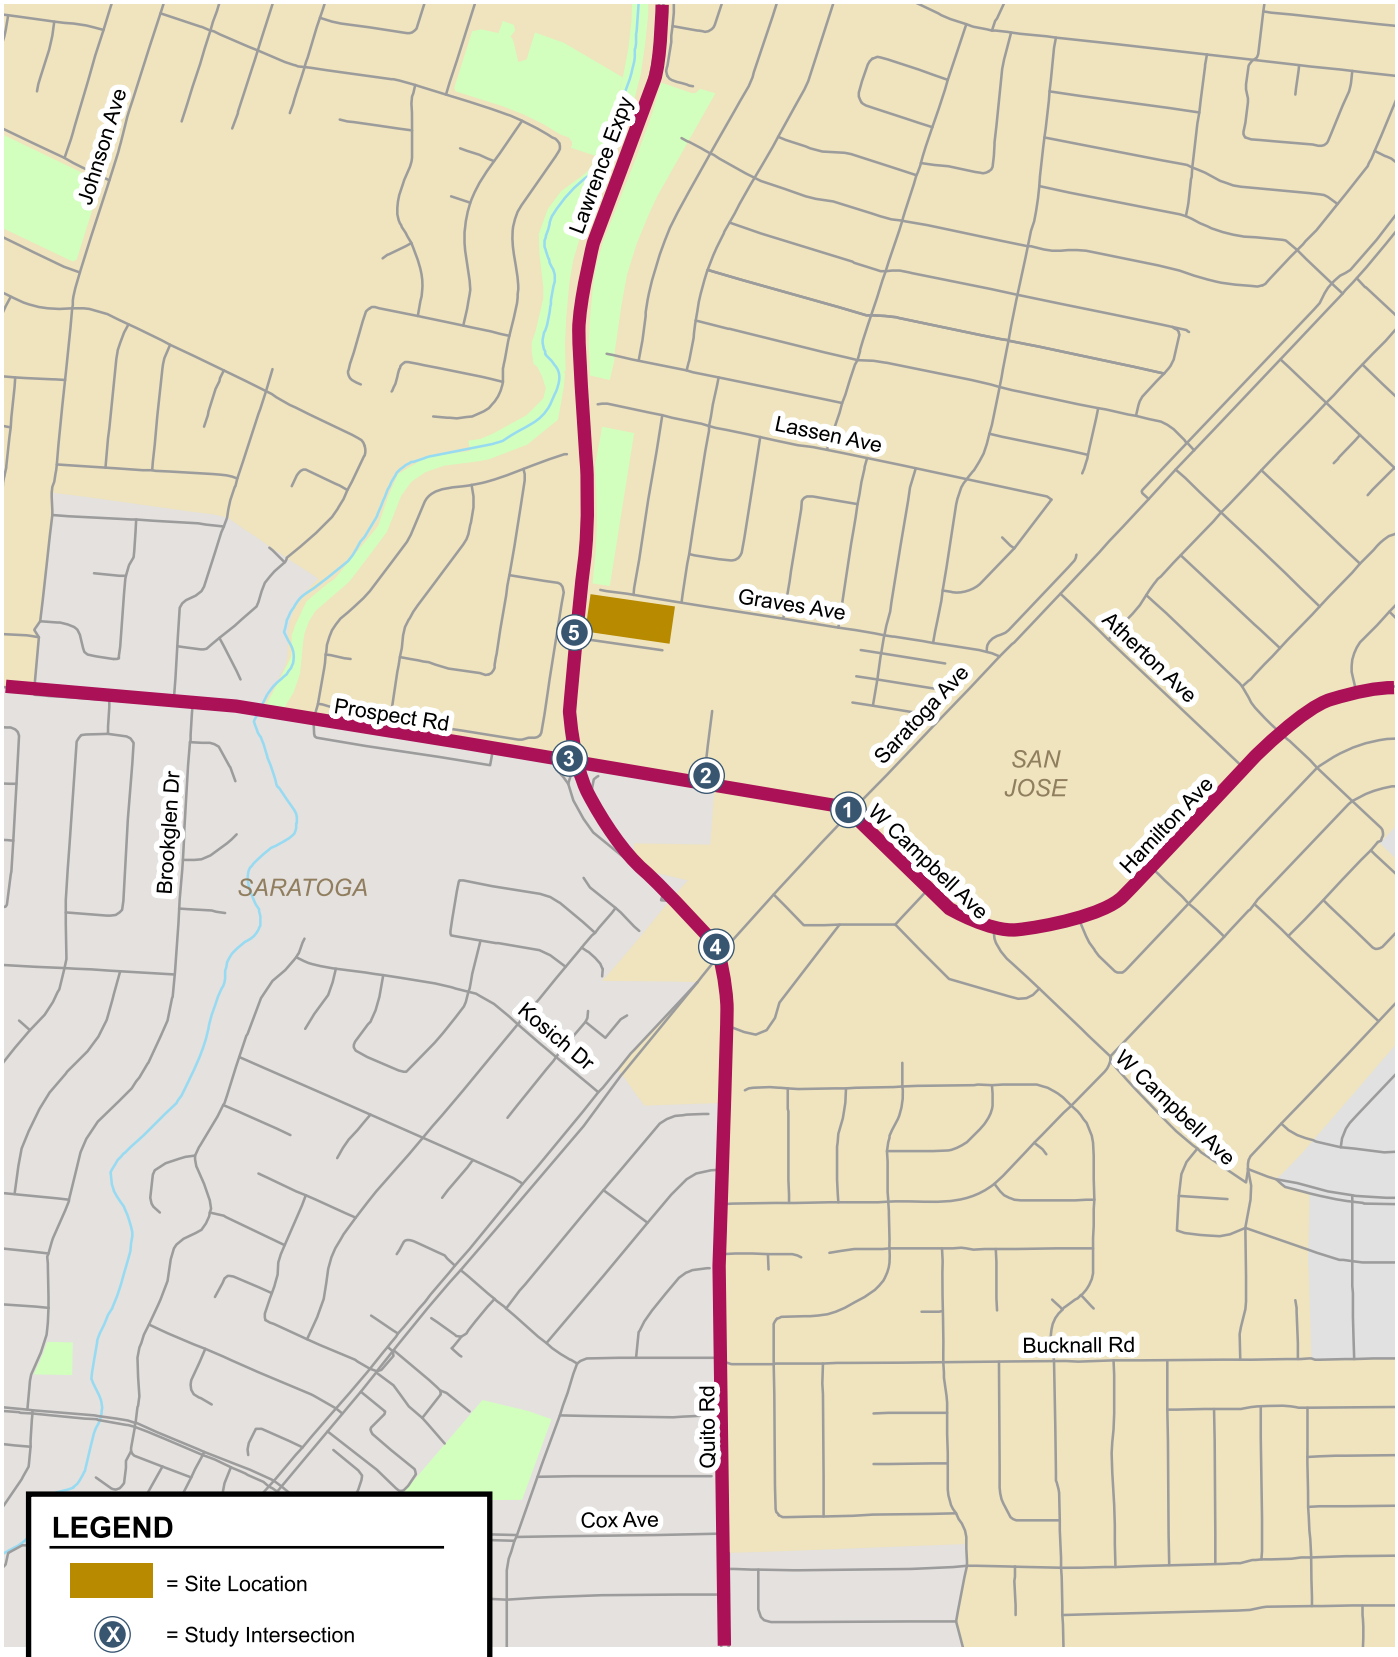

Figure 3
Existing Bicycle Facilities

Transit Service

Existing transit service in the study area is provided by the Santa Clara Valley Transportation Authority (VTA) (see Figure 4). The study area is served directly by one express bus route, one limited stop bus route, and four local routes. The transit routes that run through the study area are listed in Table 3, including their route description and commute hour headways (frequency of stops). The study area is well served by buses.

Table 3
Transit Routes

Transit Route	Route Description	Hours of Operation	Headway [1]
Local Route 26	Sunnyvale/Lockheed Martin Transit Center to Eastridge Transit Center	5:30 am - 11:50 pm	30 - 35 mins
Local Route 57	West Valley College to Great America	5:30 am - 10:50 pm	25 - 30 mins
Local Route 58	West Valley College to Alviso	6:00 am - 8:00 pm	25 - 35 mins
Local Route 82	Westgate to Downtown San Jose	6:00 am - 9:30 pm	30 mins
Express Route 101	Camden & Highway 85 to Palo Alto	6:15 am - 6:45 pm	60 mins
Limited Route 328	Almaden Expressway&Camden to Lockheed Martin/Moffett Industrial Park	6:00 am - 7:15 pm	60 mins

Notes:
[1] Approximate headways during peak commute periods.

The nearest bus stop locations to the project site include bus stops along Prospect Road, W Campbell Road(which extends from Prospect Road at Saratoga Avenue), and Saratoga Avenue. The closest bus stops are on Prospect Road, adjacent to the shopping center frontage and approximately 1,000 feet from the project site. Express Route 101, Limited Stop Route 328, and Local Route 26 serve these stops. The next closest bus stops are on Saratoga Avenue, also adjacent to the shopping center frontage, and about 1,500 feet from the project site. Local Routes 57, 58, and 82 serve this bus stop.

Existing Intersection Lane Configurations and Traffic Volumes

The existing lane configurations at the study intersections were determined by observations in the field and are shown on Figure 5.

Existing traffic volumes were obtained from new traffic counts, the City of San Jose, and the 2016 CMP Annual Monitoring Report. The existing peak-hour intersection volumes are shown on Figure 6. New intersection turning-movement counts conducted for this analysis are included in Appendix A.

Intersection Traffic Operations

Intersection traffic operations at study intersections were evaluated against the City of San Jose level of service standard (LOS D) and CMP level of service standard (LOS E). The results of the intersection level of service analysis (see Table 4) show that all study intersections currently operate at an acceptable level of service during both the AM and PM peak hours of traffic. The intersection level of service calculation sheets are included in Appendix C.

Table 4
Existing Level of Service

Study Number	Intersection	Peak Hour	Count Date	Existing Conditions Avg. Delay (sec)	LOS
1	Saratoga Avenue and Prospect Road*	AM	10/11/16	38.3	D
		PM	10/11/16	47.8	D
2	Westgate West Shopping Center and Prospect Road	AM	10/25/18	15.6	B
		PM	10/25/18	28.0	C

		PM	10/02/18	9.4	A

Note:
* Denotes the CMP designated Intersection

Observed Existing Traffic Conditions

Traffic conditions were observed in the field to identify existing operational deficiencies and to confirm the accuracy of calculated levels of service. The purpose of this effort was (1) to identify any existing traffic problems that may not be directly related to level of service, and (2) to identify any locations where the level of service analysis does not accurately reflect actual existing traffic conditions.

AM and PM field observations conducted in October 2018 revealed that overall the study intersections operate well, and the level of service calculations accurately reflect existing conditions. There were no observed operational issues at the study intersections or project driveways.

3. CEQA Transportation Analysis

This chapter describes the CEQA transportation analysis, including the VMT threshold of significance, the project-level VMT impact analysis results, and mitigation measures to reduce a VMT impact.

Project-Level VMT Impact Analysis

Project VMT

The project-level impact analysis under CEQA uses the VMT metric to evaluate a project's transportation impacts by comparing against the VMT thresholds of significance as established in the Transportation Analysis Policy. Usually, the San Jose VMT Evaluation Tool (sketch tool) is used to estimate the project VMT, based on the project location (APN), type of development, project description, and proposed trip reduction measures. However, because the proposed project is constructing an addition to an existing shopping center that generates regional traffic, the project must use the City's Travel Demand Model to estimate additional VMT generated by the project.

The project's transportation analysis zone (TAZ) is compromised of the area bounded by Lassen Avenue, Saratoga Avenue, Prospect Road, and Lawrence Expressway. About 60% of the TAZ is developed with 325 residential units. The southern part of the TAZ contains primarily retail uses and also includes several one-story office buildings. Based on the City's 2015 land use data base, the retail/commercial portion of this TAZ has 919 jobs.

The City of San Jose Travel Forecasting Model (model) was used to calculate the change in VMT resulting from the proposed Health Club at the Westgate Mall. The underlying premise is that the new health club would not cause an *increase* in trips but rather result in a *change* in trip making because some people would leave nearby health clubs to join the proposed health club. In order to estimate the impact on VMT with the model, the project's additional 16,450 square feet of building area was converted to 40 retail jobs, using a ratio of one retail job per 400 square feet, developed by City of San Jose staff. There are two similar health clubs near the project site: Planet Fitness at 328 Saratoga Avenue and Right Stuff at 1730 West Campbell Avenue. It was assumed that some members of these nearby clubs would join the proposed Westgate Mall health club instead and, in order to reflect this, 40 retail jobs were removed from the TAZ's where these two nearby health clubs are located. These job changes were then made in the 2015 land use file and the model was run, with and without the project. The model was run with the worker trips as Home Based-Work trips. Health club trips are considered recreational trips and are reflected in the model as "social/recreational" trips. Therefore, the daily VMT's for the social/recreational trips, with and without the project, were calculated for the affected TAZ's.

The model results showed that the proposed project would cause a net decrease of 41 VMT per day. The work trips would result in 48 fewer daily VMT and the social/recreational trips would result in an increase of 7 daily VMT. Because the project results in no increase in daily VMT, no mitigation measures are needed.

4. Local Transportation Analysis

This chapter describes the local transportation analysis including the method by which project traffic is estimated, intersection operations analysis for background plus project conditions, any adverse intersection traffic effects caused by the project, site access and on-site circulation review, and effects on bicycle, pedestrian, and transit facilities.

Intersection Operations Analysis

The intersection operations analysis is intended to quantify the operations of San Jose intersections and to identify potential negative effects due to the addition of project traffic. Information required for the intersection operations analysis related to project trip generation, trip distribution, and trip assignment are presented in this section. The study intersections are located in the City of San Jose and are evaluated based on the City of San Jose's intersection analysis methodology and standards in determining potential adverse operational effects due to the project, as described in Chapter 1.

Project Trip Estimates

The magnitude of traffic produced by a new development and the locations where that traffic would appear are estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. In determining project trip generation, the magnitude of traffic entering and exiting the site is estimated for the AM and PM peak hours. As part of the project trip distribution, the directions to and from which the project trips would travel are estimated. In the project trip assignment, the project trips are assigned to specific streets and intersections. These procedures are described below.

Trip Generation

Through empirical research, data have been collected that quantify the amount of traffic produced by common land uses. There are standard trip generation rates that can be applied to help predict the future traffic increases that would result from a new development. The magnitude of traffic added to the roadway system by a particular development is estimated by multiplying the applicable trip generation rates by the size of the development. Trip generation rates resulting from new development proposed within the City of San Jose typically are estimated using trip rates published in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 10th Edition. The ITE trip generation rates for Health/Fitness Club (Land Code Use 492) were used for this project.

Trip Adjustments and Reductions

According to the *Transportation Analysis Handbook,* the VMT reduction resulting from implementing the VMT reduction strategies in the sketch tool should be included as part of the trip generation estimates, however, because the project was analyzed with a conversion from a fitness center to an office to analyze VMT, it is not entirely accurate. The VMT reduction that can usually apply to the trip adjustments would only be applied to employees, who account for little of the peak hour trips. For the purpose of trip generation and analyses, the VMT mitigation measure adjustments were not used, and the Intersection Operations Analysis represents a more conservative analysis.

The existing retail use at the project site can be credited against the proposed fitness center trip generation estimates. The existing retail use was estimated using the ITE trip generation rates for Shopping Center (Land Code Use 820). The estimated trips for the retail use are 22 trips during the AM peak hour and 90 trips during the PM peak hour.

Net Project Trips

After applying appropriate trip reductions and existing site trip credits, the project would generate 30 new trips during the AM peak hour and 48 trips during the PM peak hour (see Table 5).

Table 5
Trip Generation

			Daily Trip		AM Peak Hour				PM Peak Hour			
					Pk-Hr	Trips			Pk-Hr	Trips		
Land Use	Size		Rates	Daily Trips	Rate	In	Out	Total	Rate	In	Out	Total
Proposed Use												
Fitness Center [1]	40,000	SF	23.80	952	1.31	27	25	52	3.45	79	59	138
Existing Use												
Retail [2]	23,550	SF	37.75	889	0.94	14	8	22	3.81	43	47	90
Net Project Trips (Proposed - Existing):				***62***		***13***	***17***	***30***		***36***	***12***	***48***

Notes:
[1] Rates based on ITE Land Use Code 492 (Health/Fitness Club), average rates. Daily trips were estimated by assuming average of AM & PM peak hour trips rates to be 10% of daily trips.
[2] Rates based on ITE Land Use Code 820 (Shopping Center), average rates.
Source: Institute of Traffic Engineers, *Trip Generation Manual, 10th Edition*, 2017.

Trip Distribution and Assignment

The directional distribution of site-generated traffic was estimated based on existing travel patterns on the surrounding roadway system and the locations of complementary land uses (see Figure 7).

The peak-hour vehicle trips associated with the project were added to the roadway network in accordance with the trip distribution pattern, the roadway network connections, and the locations of project driveways (see Figure 8). Project trips were assigned to different driveways based on the estimated trip distribution.

Roadway Network under Background and Project Conditions

The roadway network under background conditions and background plus project conditions would be the same as the existing roadway network because: 1) there are no approved projects in the area that would alter the existing roadway network, and 2) the project would not alter the existing roadway network.

Traffic Volumes under Background and Project Conditions

Background peak hour traffic volumes were estimated by adding to existing volumes the estimated traffic from approved but not yet constructed developments. The added traffic from approved but not yet constructed developments was obtained from the City of San Jose (see Appendix B). Background traffic volumes are shown on Figure 9. Background Plus Project traffic volumes are shown on Figure 10.

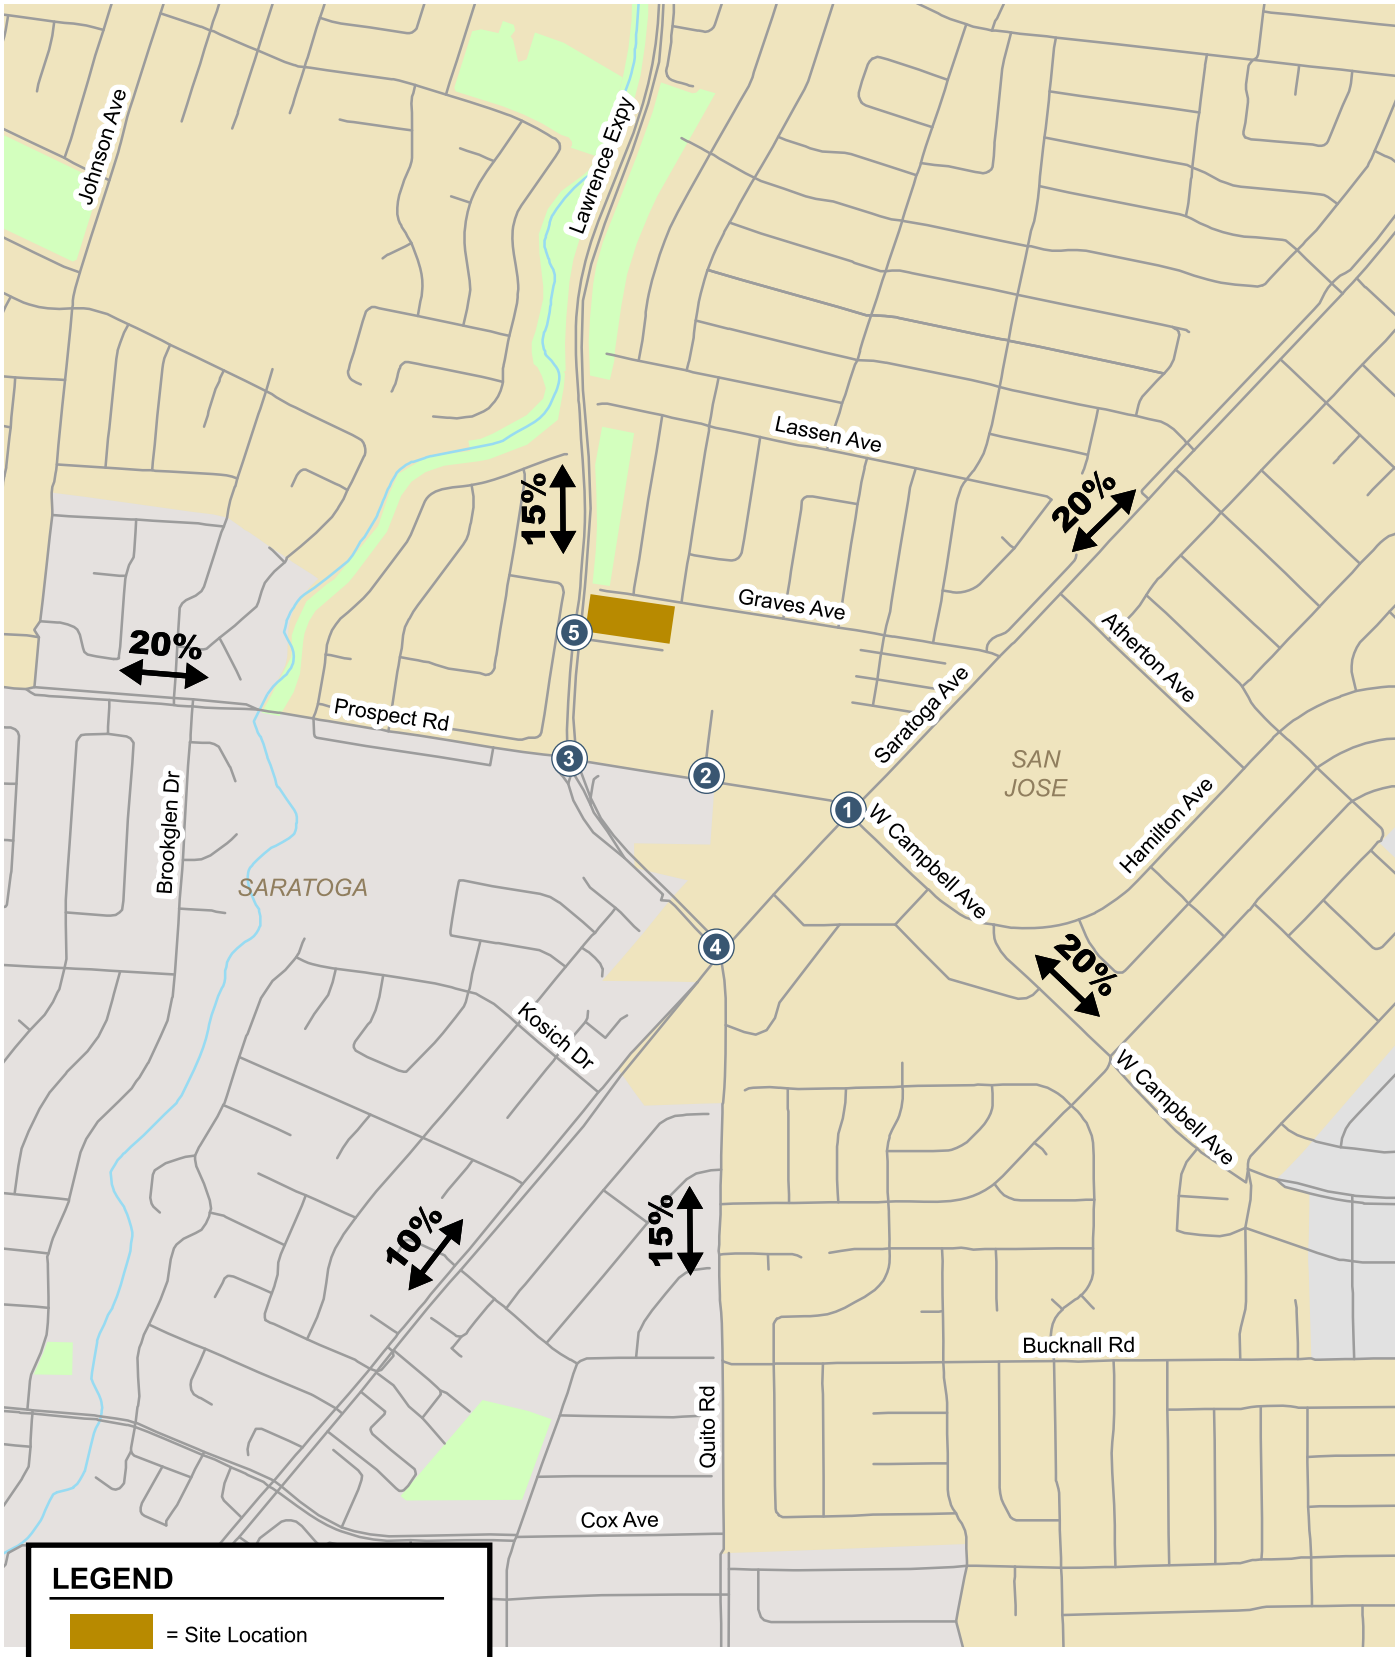

Figure 7
Project Trip Distribution

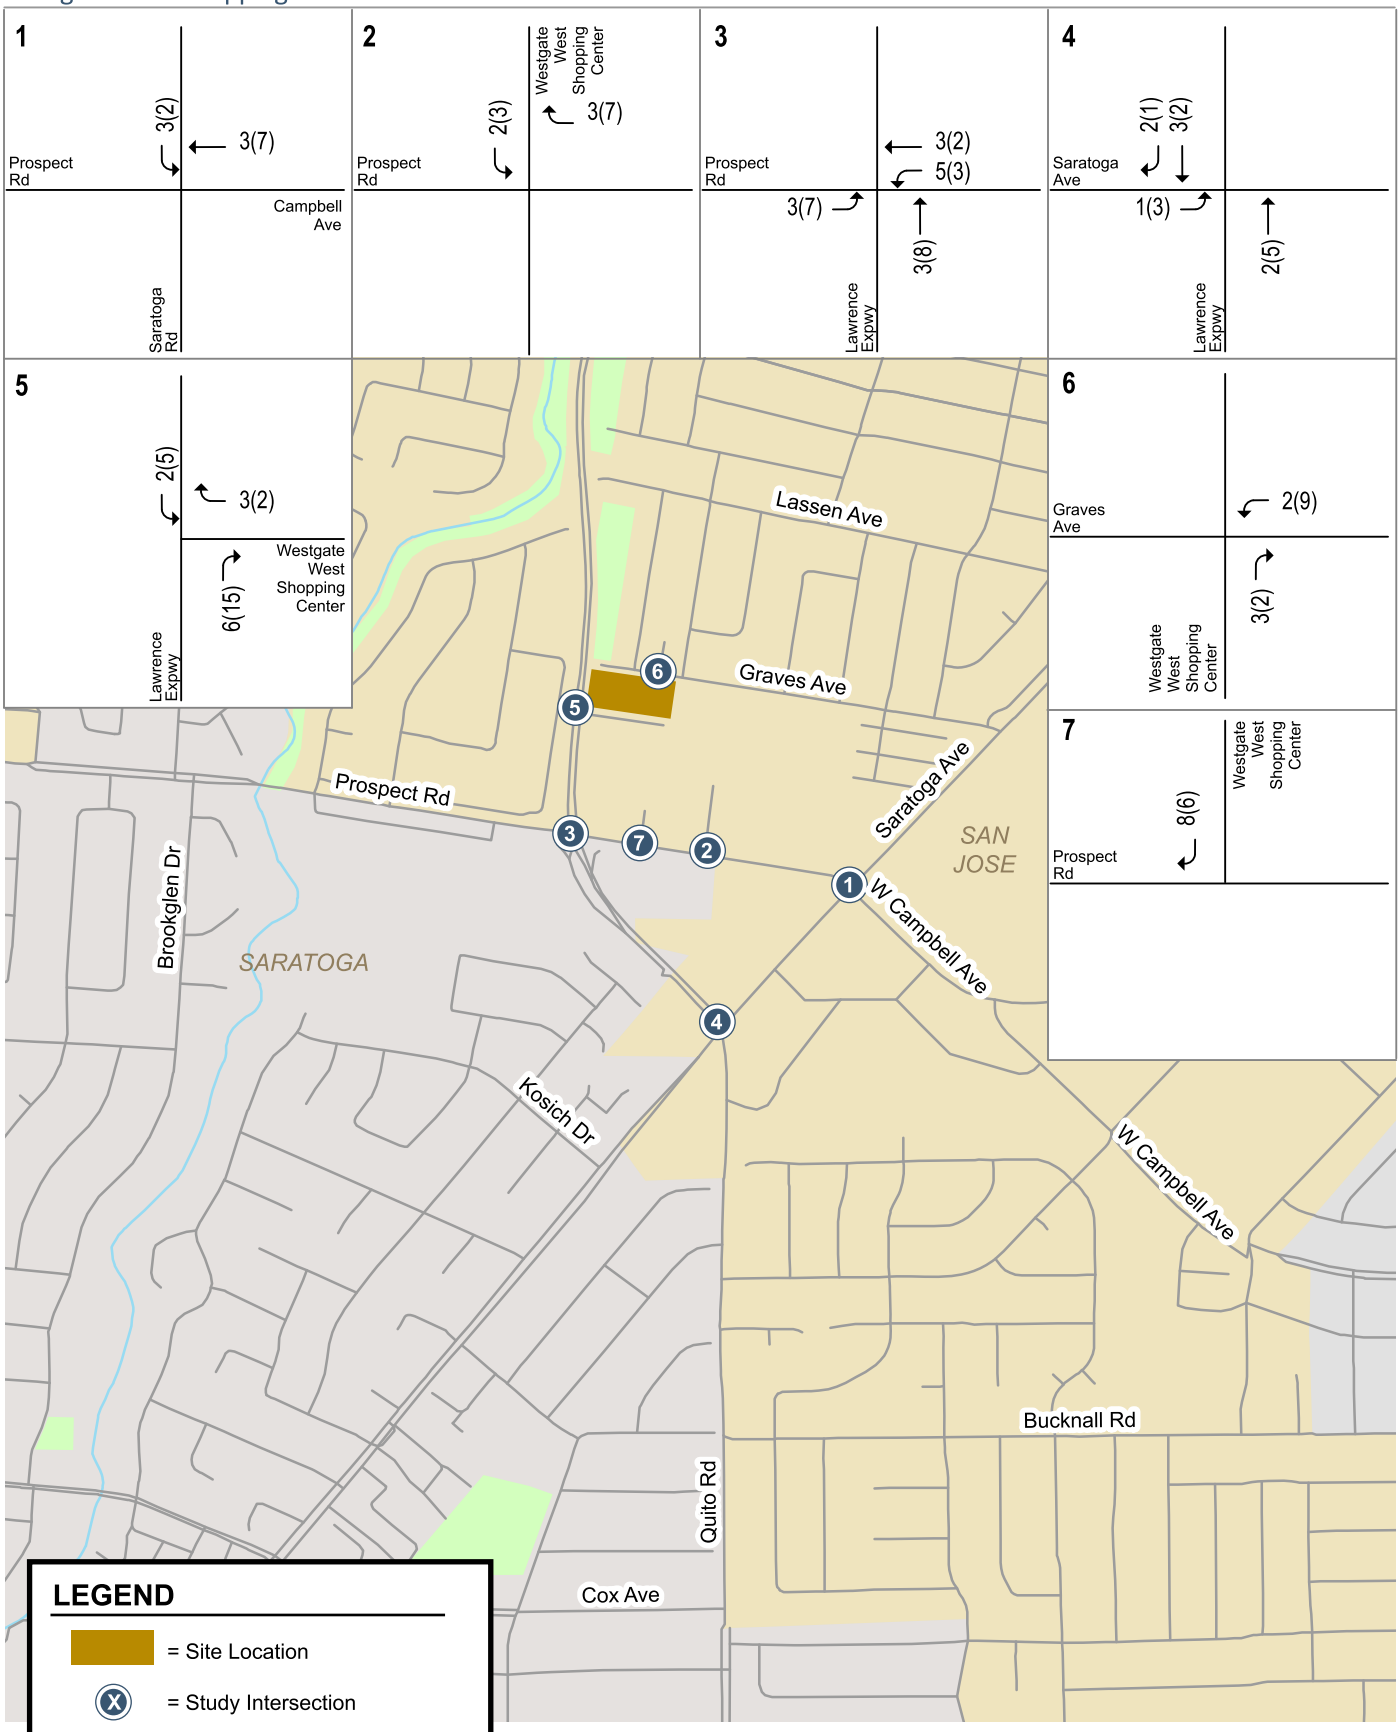

Figure 8
Project Trip Assignment

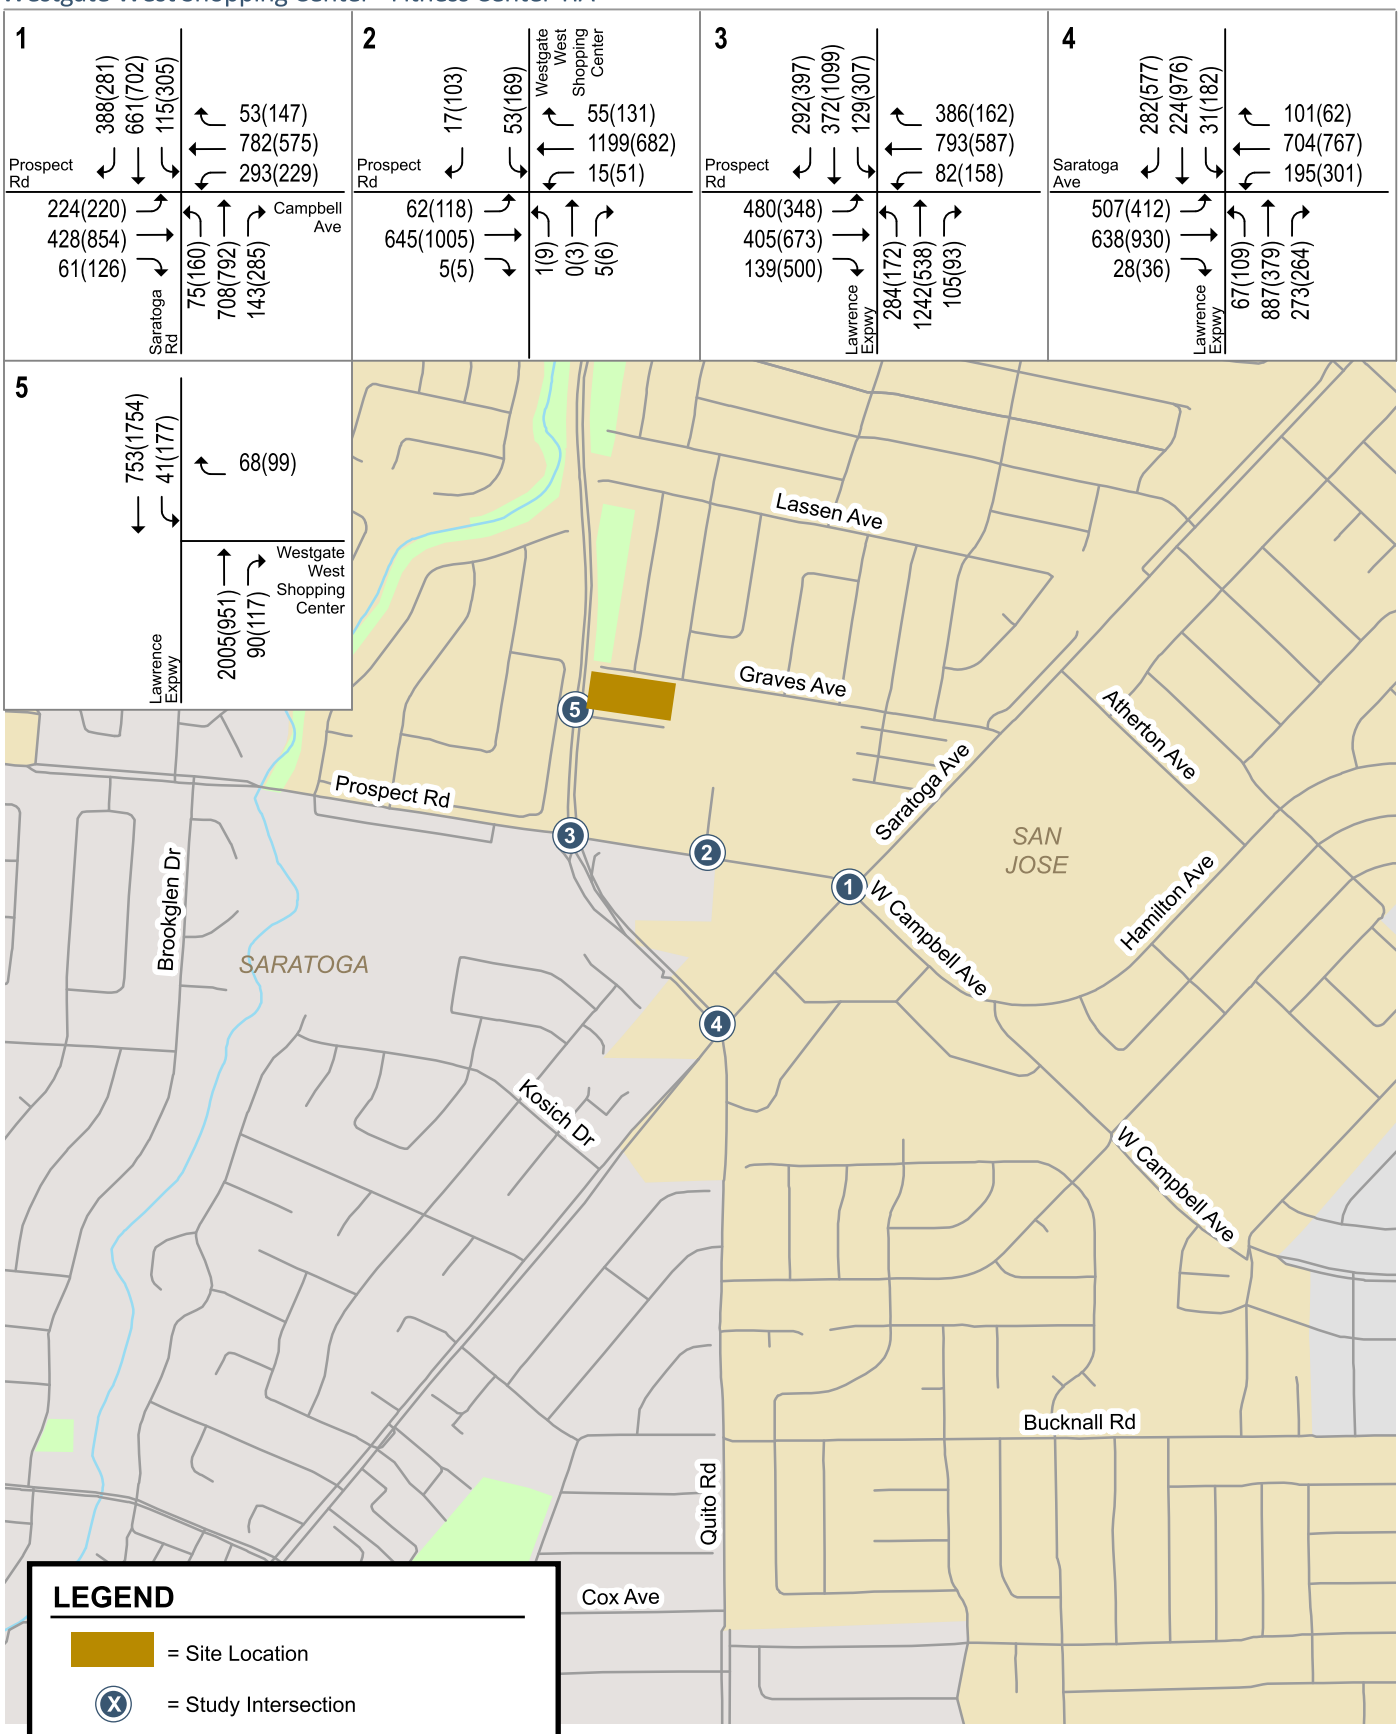

Figure 9
Background Traffic Volumes

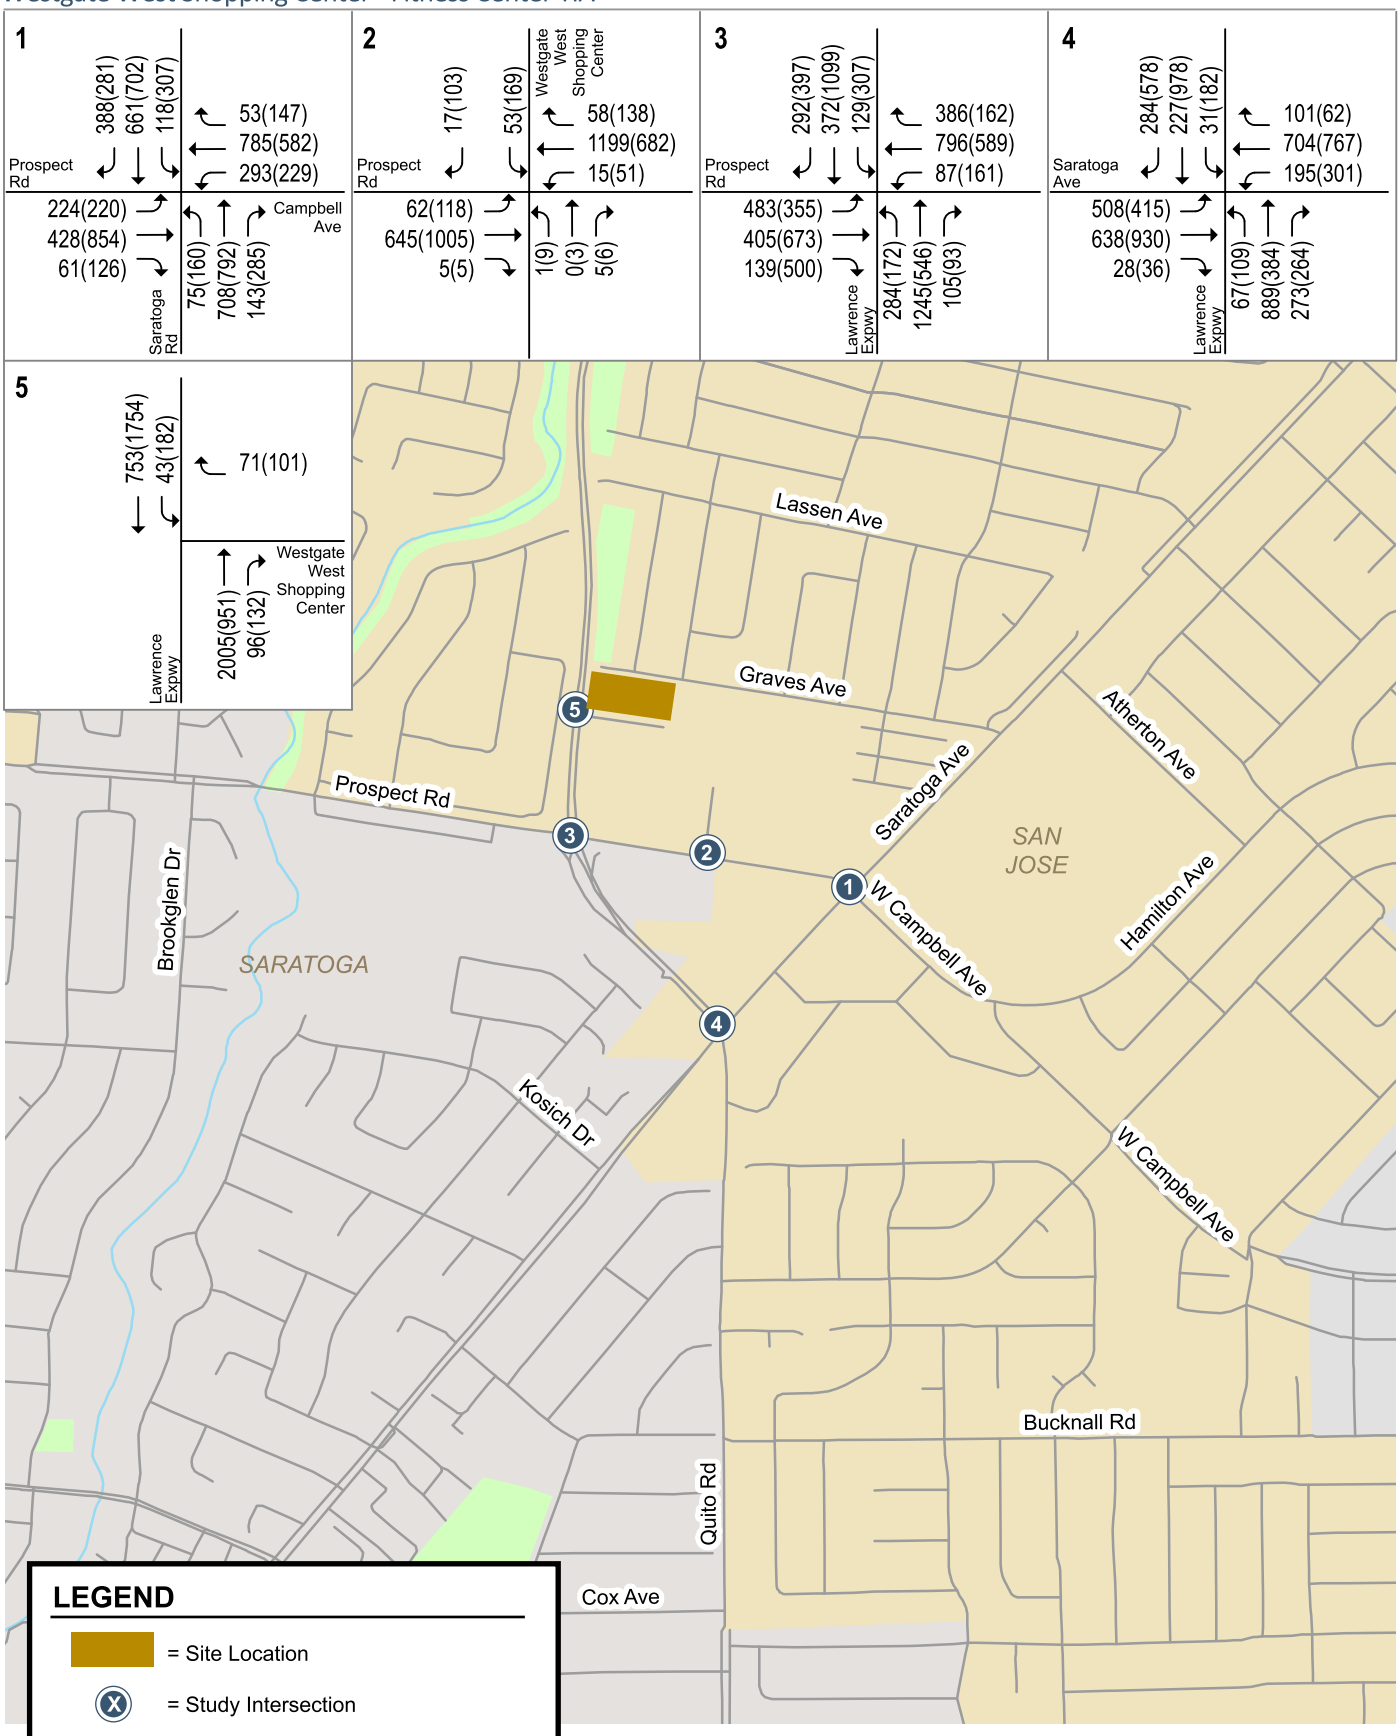

Figure 10
Background Plus Project Traffic Volumes

Intersection Traffic Operations under Background and Project Conditions

Intersection traffic operations at study intersections were evaluated against the City of San Jose level of service standard (LOS D) and CMP level of service standard (LOS E). The results of the intersection level of service analysis (see Table 6) show that the study intersection would operate at an acceptable level of service during both AM and PM peak hours of traffic under both background and background plus project conditions. The intersection level of service calculation sheets are included in Appendix C.

		PM	9.4	A	9.5	A	0.0	-0.001

Note:
* Denotes the CMP designated Intersection

Vehicular Access and Circulation

The site access and circulation evaluation is based on the August 2018 site plan prepared by MCG Architecture (see Figure 2). Site access and on-site circulation were reviewed in accordance with generally accepted traffic engineering standards.

Site Access

The project generated traffic can access the site via driveways on Lawrence Expressway, Prospect Road, and Graves Avenue. The driveway on Lawrence Expressway can be accessed from either direction; however, the exit is restricted to right turns only onto northbound Lawrence Expressway. There are four driveways into the Westgate West Shopping Center on Prospect Road: one full-access signalized intersection, and three right-turn only driveways. There is are two full access driveways on Graves Avenue.

The driveways are all approximately 30 to 33 feet in width, with the exception of the driveway with the signalized intersection at Prospect Road. This driveway is approximately 40 feet wide with two exit lanes. The minimum required width for a two-way driveway is 26 feet. The existing driveways provide adequate width for vehicular access and meet City of San Jose requirements for driveway width.

Sight Distance

The proposed project driveways are free and clear of obstructions for optimized sight distance. Adequate sight distance reduces the likelihood of a collision at driveways and provides drivers with the ability to locate sufficient gaps in traffic to exit a driveway. There are no roadway curves, street parking,

or landscaping features that obstruct the vision of exiting drivers at any of the driveways. Therefore, sigh distance is adequate at the project driveways.

On-Site Circulation

On-site vehicular circulation was reviewed in accordance with the City of San Jose Zoning Code and generally accepted traffic engineering standards. The site plan proposes to punch through some existing islands and lengthen some existing drive aisles. Some parking spaces would be lost, but others would be gained. The new drive aisles would improve on-site circulation.

Parking Stall Dimensions

The City of San Jose Zoning Code (Section 20.90.100) requirement for uniform-size parking stalls is 8.5 feet wide by 17 feet long. The parking spaces shown in the site plan are 9 feet wide by 18 feet long. Therefore, the parking space dimensions would be adequate and would not have vehicles extending into the parking aisles.

Truck Access and Circulation

The project proposes to remove the loading docks at the rear of the building and construct a trash enclosure. This is acceptable because the fitness center would not be receiving any major truck deliveries, in contrast to the previous tenant that had many deliveries. If there are any trucks needing to access the project site, it is recommended that trucks utilize the driveway on Graves Avenue, as it provides direct access to the rear of the building.

Garbage Collection

The project site plan shows a new trash enclosure to be located at the rear of the building on the north side of the project site. Garbage vehicles can access the project site using the driveway on Graves Avenue and make a U-Turn near the trash enclosure area.

Emergency Vehicle Access

Emergency Vehicle Access would be provided via the project driveway on Lawrence Expressway and Graves Avenue. The City of San Jose Fire Code requires driveways to provide 32 feet of width for fire access. The project driveways meet requirements for emergency vehicle access.

Parking Supply

Parking provided on site was evaluated based on the City of San Jose parking standards (San Jose Municipal Code Chapter 20.90, Table 20-190). The vehicle parking requirement for neighborhood shopping center is one parking space per 225 square feet of floor area.

It is estimated that 970 parking spaces are required based on the developer's estimation of 218,114 square feet of floor space that will be available after the project completion. The project developer has also stated that the project proposes to construct 29 new spaces, expanding the total number of parking spaces to 1,068 spaces, meeting the requirement for parking supply.

The bicycle parking requirement for the project is one space per 3,000 square feet. The proposed 40,000 square foot fitness center would require 14 bicycle parking spaces. The developer has

proposed 14 bicycle parking spaces immediately outside of the fitness center by providing 8 “U” shaped bicycle racks. This meets the requirement for bicycle parking supply.

Pedestrian, Bicycle, and Transit Analysis

All new development projects in San Jose should encourage multi-modal travel, consistent with the goals of the City’s General Plan. It is the goal of the General Plan that all development projects accommodate and encourage the use of non-automobile transportation modes to achieve San Jose’s mobility goals and reduce vehicle trip generation and vehicle miles traveled. In addition, the adopted City Bike Master Plan establishes goals, policies, and actions to make bicycling a daily part of life in San Jose. The Master Plan includes designated bike lanes along all City streets, as well as on designated bike corridors. In order to further the goals of the City, pedestrian and bicycle facilities should be encouraged with new development projects.

The City’s General Plan identifies both walk and bicycle commute mode split targets as 15 percent or more for the year 2040. This level of pedestrian and bicycle mode share is a reasonable goal for the project, particularly if bus services and the proposed shuttle service are utilized in combination with bicycle commuting.

Pedestrian Facilites

Pedestrian facilities in the study area consist of sidewalks, crosswalks, and pedestrian signals at signalized intersections (see Chapter 2 for details). There are no planned improvements with the proposed fitness center expansion. The network of sidewalks and crosswalks within the shopping center and the project vicinity has adequate connectivity and provides pedestrians with safe routes to transit services and other points of interest in the vicinity of the project site. The proposed fitness center would utilize existing sidewalks and crosswalks within the Westgate West Shopping Center.

Bicycle Facilies

Class II striped bike lanes are provided along various roadways in the vicinity of the project site (see Chapter 2 for details). The project is not proposing any modifications or improvements to the existing bicycle network. The project proposes 14 bicycle parking spaces in front of the proposed fitness center. The existing bicycle network is sufficient to serve the project.

On-site bicycle circulation is adequate. There is direct access to bicycle lanes from the project driveways on Lawrence Expressway and Prospect Road.

Transit Service

There are several VTA bus lines that serve the immediate project area (see Chapter 2 for details). The bus stops closest to the project site are on Prospect Road and Saratoga Avenue, and are easily accessible from the project site. The project is not expected to generate a significant increase in demand for transit services.

5. Conclusions

The potential impacts of the project were evaluated in accordance with the standards set forth by the City of San Jose. The study included the analysis of traffic conditions for five (5) signalized intersections in the vicinity of the project site during the weekday AM and PM peak hours. The weekday peak hours are typically between 7:00-9:00 AM and between 4:00-6:00 PM. The study also included an analysis of transit services and bicycle and pedestrian access.

The results of the VMT analysis show that the proposed project will not have an increase in regional VMT, therefore regional VMT is not significantly impacted by the project.

The results of the intersection analysis under background plus project conditions show that, measured against the City of San Jose level of service standards, all the study intersections would operate at an acceptable level of service during both the AM and PM peak hours of traffic. None of the study intersections would be significantly impacted by the project.

The site plan shows adequate site access and on-site circulation, and no significant operational issues are expected to occur at the site or at the study intersections as a result of the project. Thus, the project would not have an adverse effect on the existing transit, pedestrian, or bicycle facilities in the study area.

Owner of 22 Midas shops quits business to settle lawsuit

By Josh Richman
Oakland Tribune

Posted: 01/25/2010 10:30:32 AM PST

Updated: 01/25/2010 05:36:36 PM PST

He owned more than a dozen Midas auto repair shops in the Bay Area, but all that Maurice Irving "Mike" Glad touched is now turning to something decidedly other than gold.

Glad, of Modesto, has agreed to sell all of his 22 California shops, leave the auto-repair business and pay $1.8 million to settle a lawsuit claiming he bilked customers for unneeded repairs, state Attorney General Jerry Brown announced Monday.

Midas International Corp. will buy and continue operating all of Glad's shops, while Glad will be permanently barred from seeking or holding any license or registration issued by the state Bureau of Automotive Repair, or running any business requiring such a license or registration.

"For years, Glad ran a bait-and-switch scam, in which he deceptively lured customers into his Midas shops with cheap brake specials, then charged them hundreds of dollars more for unnecessary repairs," Brown said in a news release. "Our settlement makes sure that Glad will never own or operate an auto repair shop in California again."

Glad's Midas shops include four in San Jose; three in Fresno; two each in Hayward, Fremont and Modesto; and one each in Campbell, Clovis, Concord, Dublin, Manteca, Merced, San Leandro, Turlock and Walnut Creek. In an unrelated incident, the Walnut Creek store was also the subject of an employee dispute after a worker hung a noose in his personal area, prompting complaints from a colleague.

A four-year undercover investigation by the Bureau of Automotive Repair found Glad regularly advertised $79 to $99 brake specials at his Midas shops to draw in customers and then often charged another $110 to $130 for unnecessary brake-rotor resurfacing. In some cases, customers were charged hundreds of dollars more for repairs that were not needed or never performed. Brown, along with Alameda and Fresno County prosecutors, sued Glad in June in Alameda County Superior Court.

The state had sued Glad for similar violations in 1989, leading to an injunction barring his shops from performing unnecessary repairs, charging for services not performed, or using scare tactics to convince customers to purchase unnecessary parts and services. The Bureau of Automotive Repair launched its recent investigation to monitor Glad's compliance with that previous injunction, sending agents posing as customers into his stores; they had more than 35 incidents, involving 105 violations, in which shop managers, mechanics and employees made false or misleading statements to pressure customers into purchasing unnecessary parts and services.

Alameda County Deputy District Attorney Scott Patton said Monday that his office is "very satisfied with the result."

Consumers who believe they have been overcharged by an auto-repair facility can file a complaint with the Department of Consumer Affairs' Bureau of Automotive Repair online at www.autorepair.ca.gov or by calling 800-952-5210.

	☐ Underground Storage Tank	☐ Cal-ARP	☐ CESQG ☐ Satellite Only
	☐ A/G Storage Tank (SPCC Plan)	☐ Toxic Gas	☐ Silver Only ☐ N/A

VIOLATIONS: Codes noted below in the "Violation Codes" column represent specific violations of State law and/or local Ordinance. These codes are defined in the attached Violation Codes document(s). Time granted for correction of violations does not preclude any enforcement action by this Department or other agencies.
This facility may be subject to reinspection at any time. Consent to Inspect Given By: Ramin Badal

Violation Codes	Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions	Corrective Actions Taken
G023	Waste coolant container was observed open. Keep container closed except when adding or removing waste (violation corrected)	Manager sealed the lids of the containers 1/21/09
G052	Safety Kleen consolidated manifests were not found for waste shipments after March 2007. Ensure that records are available for all shipments within the last 3 years.	Received receipts from main office & placed in shop binder 2/5/09
G211	Add the location(s) of your spill control equipment to your posted emergency procedures.	Added 2/5/09 and posted
G415	Add lids to the open 2-55 gallon used filter DRUMS & use DRUM Rings to secure the lids to the DRUMS.	Ordered lids from Evergreen & put on containers 1/27/09
G431	Operator stated that saturated solvent rags in the parts washer are recycled. Soiled rags can't be recycled & must be managed as hazardous waste.	Employees are instructed to use RAGS ONLY TO WIPE DRY (NOT TO CLEAN)

All violations must be corrected within 30 days of the inspection date unless noted otherwise, above. Section 25404.1.2(c)(1) of California Health and Safety Code (HSC) requires that you write a brief description of the corrective actions you have taken to bring this facility into compliance and submit it to HMCD within 5 days of achieving compliance, or within 35 days of the inspection date, whichever comes first. ***(Note: Detailed instructions on actions you must take are printed on the reverse side of this page.)***

THE OFF[illegible]AL NOTICE OF INSPECTION EX[illegible]AINED

This Official Notice of Inspection (NOI) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or — for those violations which are impossible to correct within 30 days — propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the NOI. **Your description of corrective actions taken, along with your signed certification of the NOI and any required supporting documents, will serve as your written response to this Notice to Comply.** Your response must be mailed to Santa Clara County Hazardous Materials Compliance Division (HMCD) at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716. The effective date of the certification that any violation has been corrected is the date that it is postmarked.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the NOI has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. **Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be returned to HMCD. The pink copy is for your records.**

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why you believe the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this NOI to dispute violations.

What About Photographs or Samples Taken During the Inspection?

If samples were taken, split samples will be given to you upon request. Since this NOI was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this NOI. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

****

- **Per HSC §§25187.8(b) and 25404.1.2(c), failure to sign the certification on this Notice to Comply and return it to HMCD is a violation of State law.**
- **Per HSC §25404.1.2(c)(2), a false statement that compliance has been achieved is a misdemeanor.**
- **Per HSC §25191(b), a false statement that hazardous waste compliance has been achieved is a violation of State law punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year.**
- **Per HSC §§25299(a)(8) and (b)(7), a false statement that underground storage tank compliance has been achieved is a violation of State law punishable by a fine of not less than $500 or more than $5,000.**
- **Per HSC §§25187.8(i), HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility.**

OFFICIAL NOTICE OF INSPECTION

Facility Name: MIDAS Auto System experts	Inspection Date: 1/21/09
Site Address: 5287 Prospect Rd. San Jose	Employee No.: 4656
Contact Person(s): Ramin Badal	☐ Samples Taken ☐ Photographs Taken

Inspection Type: ☐ Hazardous Materials Storage ☒ Hazardous Waste Generator ☐ HazMat Business Plan ☐ HazWaste Tiered Permit ☐ Underground Storage Tank ☐ Cal-ARP ☐ A/G Storage Tank (SPCC Plan) ☐ Toxic Gas

Hazardous Waste Generator Type: ☒ < 1,000 Kg /mo. ☐ ≥ 1,000 Kg /mo ☐ CESQG ☐ Satellite Only ☐ Silver Only ☐ N/A

VIOLATIONS: Codes noted below in the "Violation Codes" column represent specific violations of State law and/or local Ordinance. These codes are defined in the attached Violation Codes document(s). Time granted for correction of violations does not preclude any enforcement action by this Department or other agencies.
This facility may be subject to reinspection at any time. Consent to Inspect Given By: Ramin Badal

Violation Codes	Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions	Corrective Actions Taken
G023	Waste coolant container was observed open. Keep container closed except when adding or removing waste (violation corrected)	Manager sealed the top of the container 1/21/09
G052	Safety Kleen consolidated manifests were not found for waste shipments after March 2007. Ensure that receipts are available for all shipments within the last 3 years.	
G211	Add the location(s) of your spill control equipment to your posted emergency procedures.	
G413	Add lids to your 2-55 gallon used filter drums & use drum rings to secure the lids to the drums.	
G430	Operator stated that saturated solvent rags in the parts washer are recycled. Saturated rags can't be recycled & must be managed as hazardous waste.	

All violations must be corrected within 30 days of the inspection date unless noted otherwise, above. Section 25404.1.2(c)(1) of California Health and Safety Code (HSC) requires that you write a brief description of the corrective actions you have taken to bring this facility into compliance and submit it to HMCD within 5 days of achieving compliance, or within 35 days of the inspection date, whichever comes first. ***(Note: Detailed instructions on actions you must take are printed on the reverse side of this page.)***

FACILITY SENDS YELLOW COPY TO AGENCY, KEEPS PINK COPY.

THE OFFICIAL NOTICE OF INSPECTION EXPLAINED

This Official Notice of Inspection (NOI) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or — for those violations which are impossible to correct within 30 days — propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the NOI. **Your description of corrective actions taken, along with your signed certification of the NOI and any required supporting documents, will serve as your written response to this Notice to Comply.** Your response must be mailed to Santa Clara County Hazardous Materials Compliance Division (HMCD) at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716. The effective date of the certification that any violation has been corrected is the date that it is postmarked.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the NOI has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. **Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be returned to HMCD. The pink copy is for your records.**

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why you believe the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this NOI to dispute violations.

What About Photographs or Samples Taken During the Inspection?

If samples were taken, split samples will be given to you upon request. Since this NOI was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this NOI. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

****

- **Per HSC §§25187.8(b) and 25404.1.2(c), failure to sign the certification on this Notice to Comply and return it to HMCD is a violation of State law.**
- **Per HSC §25404.1.2(c)(2), a false statement that compliance has been achieved is a misdemeanor.**
- **Per HSC §25191(b), a false statement that hazardous waste compliance has been achieved is a violation of State law punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year.**
- **Per HSC §§25299(a)(8) and (b)(7), a false statement that underground storage tank compliance has been achieved is a violation of State law punishable by a fine of not less than $500 or more than $5,000.**
- **Per HSC §§25187.8(i), HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility.**

All violations must be corrected within 30 days of the inspection date unless noted otherwise, above. Section 25187.8 of the State Health and Safety Code (H&SC) requires that you write a brief description of the corrective actions you have taken to bring this facility into compliance and submit it to this Department within 5 days of achieving compliance, or within 35 days of the inspection date, whichever comes first. ***(Note: Detailed instructions on actions you must take are printed on the reverse side of this page.)***

Certification: I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

Signature of Owner/Operator: _____ Title: _____ Date: ___/___/___

FACILITY SENDS YELLOW COPY TO AGENCY, KEEPS PINK COPY.

THE OFFICIAL NOTICE OF INSPECTION EXPLAINED

This Official Notice of Inspection (Notice of Inspection) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or - for those violations which are impossible to correct within 30 days - propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the Notice of Inspection. Your description of corrective actions taken, along with your signed certification of the Notice of Inspection and any required supporting documents, will serve as your written response to the inspection. Your response must be mailed to the Santa Clara County Hazardous Materials Compliance Division (HMCD) at P.O. Box 28070, San Jose, CA 95159-8070.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the Notice of Inspection has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be submitted to HMCD. The pink copy is for your records.

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this Notice of Inspection, you must submit a written Notice of Disagreement, within 35 days of the inspection date, to the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this Notice of Inspection to dispute violations.

What About Photographs or Samples Taken During the Inspection?

Since this Notice of Inspection was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this Notice of Inspection. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

****

Hazardous Waste Violations

- **Per H&SC, Section 25187.8(g)(1), failure to sign the certification on this Notice of Inspection and return it to this Department is a violation of State law.**
- **Per H&SC, Section 25191, a false statement that compliance has been achieved is a violation of State law punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year.**
- **Per H&SC, Section 25187.8(j), this Department has the right to acquire the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility.**

For the following questions, check the appropriate box:

1. Does this facility discharge process waste waters to sanitary sewer? ❑ Yes; ☒ No
2. Does this facility generate infectious/biomedical wastes? ❑ Yes; ☒ No

Definitions of Treatment/Disposal Methods

Recycled on-site: The facility takes the waste or any constituent of the waste, treated or not, and reuses it on-site or ships it off-site as an Excluded Recyclable Material.

Treated on-site: The facility employs any method, technique, or process which changes or is designed to change the physical, chemical, or biological character or composition of the hazardous waste or any material contained therein, or removes or reduces its harmful properties or characteristics for any purpose including, but not limited to, energy recovery, material recovery, or reduction in volume *(e.g. pH adjustment, evaporation, precipitation, filtration, distillation, compacting, etc.)*. If, after treatment, the material is reused at the facility, the "Recycled on-site" box in the waste inventory table should be checked.

Shipped off-site for recycling/treatment/disposal: The facility sends the waste, or any hazardous treatment residual, to an off-site permitted treatment, storage, or disposal facility (TSDF).

Note: Depending on how a waste or its constituents are recycled and/or treated, more than one treatment/disposal category may apply. All applicable boxes in column 2 of the waste inventory table should be checked.

CERTIFICATION OF COMPLIANCE

BUSINESS NAME: MIDAS MUFFLER INSPECTOR NICOLE JAKABY

COUNTY I.D. NO. 3865-F DATE OF INSP. 12/9/92

506777

I certify under penalty of law that:

This Business has corrected all violations marked on the official notice of inspection.

I have personally examined any documentation attached to this certification to establish that the violations have been corrected.

Based on my examination of the attached documentation and inquiry of the individuals who prepared or obtained it, I believe that the information is true, accurate, and complete.

I am authorized to file this certification for the Business.

I am aware that there are significant penalties for submitting false information.

2220 Moorpark Avenue
San Jose, Ca. 95128

Dear Ms. Jakaby:

This letter is in response to the Hazardous Waste Generator Official Notice of Inspection dated 12/9/92 at our 5287 Prospect Road, San Jose store. A response to each violation is noted below:

#66262.34 (f) 55-Gal. waste brake fluid not labeled as to contents.

response: Label was completed with contents at the time of the inspection.

#66262.73 55-Gal. waste brake fluid not sealed when not in use.

response: 55-Gal. drum is now sealed except for when in use.

#66265.16 (d) No training records were kept on-site for Charles Ingebrigtsen or Richard Grove.

response: A complete set of training records for Charles Ingebrigtsen and Richard Grove are now on-site, training is completed and being implemented.

#66265.52 (e)(f) Contingency Plan/Emergency Response Plan did not list specific locations of fire extinguishers, size and type, and did not show plan of facility with evacuation routes.

response: Contingency Plan/Emergency Response Plan lists specific locations of fire extinguishers, size and type, and does show a plan of the facility and its evacuation routes.

#66262.42 no signed TSDF copy of manifest #88379669.

response: Manifest has been received, a copy is enclosed.

All violations have been corrected. This letter will serve as documentation that all violations have been corrected. Also, enclosed you will find a "Certification of Compliance".

If you should have any questions please do not hesitate to call me at (408) 973-8846.

Sincerely,

Charles Ingebrigtsen
Store Manager

Summary of Violations & Notice to Comply

Program: PR0392431 - HAZARDOUS WASTE - 2205
Inspection Type: ROUTINE INSPECTION-COMPLETED

VC	Class	Violation	Corrective Actions Taken
G020	M	**MARKING OF HAZARDOUS WASTE** Facility failed to properly mark a hazardous waste tank and/or container ***Provide a current accumulation start date at the waste oil tank. One mobile waste oil drain was unlabelled and a second mobile drain had a label with faded information on the label. Use the labels provided to you to label your tank and containers.*** Mark all hazardous waste tanks with the words "HAZARDOUS WASTE" and the accumulation start date. Mark all hazardous waste containers and portable tanks with the words "HAZARDOUS WASTE;" the accumulation start date; the name and address of the generator; and the composition, physical state, and hazardous properties of the waste. Additionally, mark used oil containers, aboveground tanks, and fill pipes for underground tanks with the words "USED OIL " [CCR 66262 34(f), 66279.21(b)]	
G320	M	**TRAINING** Personnel are not adequately trained on managing hazardous waste ***Training could not be located for 2010 and 2011. Ensure that hazardous waste management training is regularly provided on an annual basis.*** Provide a program of instruction that. 1) is directed by a person trained in hazardous waste management procedures, 2) teaches waste management procedures relevant to the position of each employee, and 3) ensures facility personnel are able to respond effectively to emergencies. Provide this training within 6 months of hire, and annually thereafter. [CCR 66265 16]	
G321	M	**RECORDS: HAZARDOUS WASTE TRAINING** Hazardous waste training records are incomplete or are not being kept as required. ***Current training records could not be located. Ensure that records include required information described below. Visit www.ehinfo.org to obtain example training record.*** Maintain training records that include 1) the name and job title of each person in a position that has hazardous waste management responsibility; 2) a written job description that includes the duties, skills, education, or other qualifications required for each position described above; 3) a description of the type and amount of introductory and continuing training that will be given for each position, and 4) documentation that this training was completed by facility personnel Keep current employee training records until facility closure. Keep records on former employee for at least 3 years from the date the employee last worked at the facility [CCR 66265 16(e)]

OFFICIAL NOTICE OF INSPECTION

Facility ID: FA0265749
Facility Name: MIDAS
Site Address: 5287 PROSPECT RD
SAN JOSE, CA 95129

Inspection Date: 7/5/2011

VC	Class	Violation	Corrective Actions Taken
G340	II	**TANK SYSTEM ASSESSMENT** Facility failed to obtain or keep on file a current and complete written hazardous waste tank system assessment ***Facility has increased monthly waste oil generation and is now a large quantity generator. Obtain a hazardous waste tank system assessment for your waste oil tank*** Make arrangements to have the tank system assessed by an appropriate Professional Engineer (PE) who is knowledgeable of hazardous waste tank system requirements. Provide a specific date by which the assessment is expected to be completed. Upon completion of the assessment, submit a copy of the final report to HMCD. [CCR 66265 191(a), 66265 192(h)]	
G342	M	**TANK OPERATING REQUIREMENTS** Facility failed to use appropriate controls or practices to prevent spills and overflows from a hazardous waste tank or secondary containment system. ***Observed a funnel in the tank secondary containment vent line. The containment was checked and waste oil is in the secondary containment. Discontinue this practice, remove the oil from the secondary containment, and keep the secondary containment dry.*** Establish or install spill prevention controls (e.g , check valves, dry disconnect couplings), and overfill prevention controls (e g , level sensing devices, high level alarms, automatic feed cutoff). For uncovered tanks, maintain at least 2 feet of freeboard. [CCR 66265 194]	
G343	M	**TANK INSPECTIONS** Facility could not demonstrate that hazardous waste tanks are being inspected daily as required. ***Observed waste oil residue on the tank top. Tank was observed open. Operator was unaware of how often the tank is being inspected. Clean the top of the tank and keep it clean. Secure the tank bung to the tank bunghole. Keep the square lid cover hatch closed except when adding or removing waste. Inspect the waste tank daily and keep an inspection log to document your inspections.*** Perform and document hazardous waste tank inspections daily. Inspections must cover: 1) overfill/spill control equipment; 2) aboveground portions of the tank system; 3) data gathered from monitoring and leak detection equipment; 4) construction materials and the area immediately surrounding the tank system; and 5) the level of waste in the tank, for uncovered tanks. [CCR 66265 195]	
Comments:			

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 08/04/2011, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. 2044 REV 8/06

THE OFFI_ .L NOTICE OF INSPECTION EX. .INED

This Official Notice of Inspection (NOI) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or — for those violations which are impossible to correct within 30 days — propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the NOI. **Your description of corrective actions taken, along with your signed certification of the NOI and any required supporting documents, will serve as your written response to this Notice to Comply.** Your response must be mailed to Santa Clara County Hazardous Materials Compliance Division (HMCD) at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716. The effective date of the certification that any violation has been corrected is the date that it is postmarked.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the NOI has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. **Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be returned to HMCD. The pink copy is for your records.**

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why you believe the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this NOI to dispute violations.

What About Photographs or Samples Taken During the Inspection?

If samples were taken, split samples will be given to you upon request. Since this NOI was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this NOI. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

****

- **Per HSC §§25187.8(b) and 25404.1.2(c), failure to sign the certification on this Notice to Comply and return it to HMCD is a violation of State law.**
- **Per HSC §25404.1.2(c)(2), *a false statement that compliance has been achieved is a misdemeanor.***
- **Per HSC §25191(b), a false statement that hazardous waste compliance has been achieved is a violation of State law punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year.**
- **Per HSC §§25299(a)(8) and (b)(7), a false statement that underground storage tank compliance has been achieved is a violation of State law punishable by a fine of not less than $500 or more than $5,000.**
- **Per HSC §§25187.8(i), HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility.**

THE OFFI AL NOTICE OF INSPECTION EX AINED

This Official Notice of Inspection (NOI) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or — for those violations which are impossible to correct within 30 days — propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the NOI. **Your description of corrective actions taken, along with your signed certification of the NOI and any required supporting documents, will serve as your written response to this Notice to Comply.** Your response must be mailed to Santa Clara County Hazardous Materials Compliance Division (HMCD) at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716. The effective date of the certification that any violation has been corrected is the date that it is postmarked.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the NOI has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. **Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be returned to HMCD. The pink copy is for your records.**

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why you believe the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this NOI to dispute violations.

What About Photographs or Samples Taken During the Inspection?

If samples were taken, split samples will be given to you upon request. Since this NOI was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this NOI. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

Contact Person: Paul Gomez Contact Phone No.: (408) 973-~~8844~~

Principal Type of Business (e.g. auto repair, photoprocessing): Auto Repair

☐ Owned by Individual
☐ Partnership
☒ Corporation or LLC
☐ Other

EPA ID Number: CAL000349618

Hazardous Waste Inventory Information:

The annual permit fee is determined by the total quantity of hazardous waste generated per year. Complete the table below for all hazardous waste inventory *(e.g., used oil, used parts cleaning solvent, waste paint, spent fixer, etc.)*.

Name of Hazardous Waste	Treatment/Disposal Method(s) *(Definitions provided on back of form.)*	Annual Quantity Generated*
USED oil / brake fluid	☐ Recycled on-site. ☐ Treated on-site. ☒ Shipped off-site for recycling/treatment/disposal.	2400 ☒ gal. ☐ lbs.
~~USED brake fluid~~	☐ Recycled on-site. ☐ Treated on-site. ☒ Shipped off-site for recycling/treatment/disposal.	☐ gal. ☐ lbs.
USED coolant	☐ Recycled on-site. ☐ Treated on-site. ☒ Shipped off-site for recycling/treatment/disposal.	240 ☒ gal. ☐ lbs.
USED parts washer waste	☐ Recycled on-site. ☐ Treated on-site. ☒ Shipped off-site for recycling/treatment/disposal.	120 ☒ gal. ☐ lbs.
USED absorbant.	☐ Recycled on-site. ☐ Treated on-site. ☒ Shipped off-site for recycling/treatment/disposal.	55 ☒ gal. ☐ lbs.
	☐ Recycled on-site. ☐ Treated on-site. ☐ Shipped off-site for recycling/treatment/disposal.	☐ gal. ☐ lbs.
	☐ Recycled on-site. ☐ Treated on-site. ☐ Shipped off-site for recycling/treatment/disposal.	☐ gal. ☐ lbs.

* *Solids must be reported in pounds. Liquids may be reported in either pounds or gallons.*

The undersigned hereby applies for a Hazardous Waste Generator Permit from the County of Santa Clara. I hereby certify that the submitted information is true, accurate, and complete. I understand that a new application will be required if this facility changes ownership, moves, or begins generating hazardous wastes which are not listed on this application.

Signature of Owner/Operator: Paul K Gom Title: Manager Date: 2-26-10

Definitions of Treatment/Disposal Methods

Recycled on-site: The facility takes the waste or any constituent of the waste, treated or not, and reuses it on-site or ships it off-site as an Excluded Recyclable Material.

Treated on-site: The facility employs any method, technique, or process which changes or is designed to change the physical, chemical, or biological character or composition of the hazardous waste or any material contained therein, or removes or reduces its harmful properties or characteristics for any purpose including, but not limited to, energy recovery, material recovery, or reduction in volume *(e.g., pH adjustment, evaporation, precipitation, filtration, distillation, compacting, etc.)*. If, after treatment, the material is reused at the facility, the "Recycled on-site" box in the waste inventory table should be checked.

Shipped off-site for recycling/treatment/disposal: The facility sends the waste, or any hazardous treatment residual, to an off-site permitted treatment, storage, or disposal facility (TSDF).

Note: Depending on how a waste or its constituents are recycled and/or treated, more than one treatment/disposal category may apply. All applicable boxes in column 2 of the waste inventory table should be checked.
Note to medical facilities: Do not list medical (i.e,. red bag) wastes on this form.

HAZARDOUS MATERIALS BUSINESS PLAN MODULES FOR USE WITH CERS ELECTRONIC REPORTING

Complete These Modules and Use the "Upload Document" Feature in CERS to Complete Your HMBP for Electronic Submittal

A. Emergency Response/Contingency Plan *[HSC §25504(b); 19 CCR §2731; 22 CCR §66262.34(a)(4)]*

All facilities that handle hazardous materials in HMBP quantities must have a written emergency response plan. In addition, facilities that generate 1,000 kilograms or more of hazardous waste (or more than 1 kilogram of acutely hazardous waste or 100 kilograms of debris resulting from the spill of an acutely hazardous waste) per month, or accumulate more than 6,000 kilograms of hazardous waste on-site at any one time, must prepare a hazardous waste contingency plan. Because the requirements are similar, they have been combined in a single document, provided below, for your convenience. This plan is a required module of the Hazardous Materials Business Plan (HMBP).

This site-specific Emergency Response/Contingency Plan is the facility's plan for dealing with emergencies and shall be implemented immediately whenever there is a fire, explosion, or release of hazardous materials that could threaten human health and/or the environment. **At least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency.** A copy of the plan and any revisions must be provided to any contractor, hospital, or agency with whom special (i.e., contractual) emergency services arrangements have been made *(see section 3, below)*.

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of the facility *(check all that apply)*:

☐ Bells; ☐ Horns/Sirens; ☒ Verbal *(i.e., shouting)*; ☐ Other *(specify* _____

b. ☒ Evacuation map is prominently displayed throughout the facility.

Note: A properly completed HMBP Site Plan satisfies contingency plan map requirements. This drawing (or any other drawing that shows primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas) must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

2. a. Emergency Contacts*:

Fire/Police/Ambulance	Phone No.: **911**
State Office of Emergency Services	Phone No.: **(800) 852-7550**

b. Post-Incident Contacts*:

Certified Unified Program Agency (CUPA)	Phone No.: **(408) 918-3400**
Local Hazardous Materials Program	Phone No.: **(408) 277-4659**
California EPA Department of Toxic Substances Control	Phone No.: **(510) 540-3739**
Cal-OSHA Division of Occupational Safety and Health	Phone No.: **(510) 794-2521**
Air Quality Management District	Phone No.: **(415) 771-6000**
Regional Water Quality Control Board	Phone No.: **(510) 622-2300**

*** Phone numbers for agencies in Unidocs Member Agency geographic jurisdictions are available at www.unidocs.org.**

c. Emergency Resources:

Poison Control Center*	Phone No.: **(800) 876-4766**
Nearest Hospital: Name: **Good Samaritan Hospital**	Phone No.: **(408) 559-2211**
Address: **2425 Samaritan Dr**	City: **San Jose**

3. Arrangements With Emergency Responders: *(Attach additional pages, if needed.)*

If you have made special (i.e., contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements below:

4. Emergency Procedures:

Emergency Coordinator Responsibilities:

a. Whenever there is an imminent or actual emergency situation such as a explosion, fire, or release, the emergency coordinator *(or his/her designee when the emergency coordinator is on call)* shall:
   i. Identify the character, exact source, amount, and areal extent of any released hazardous materials.
   ii. Assess possible hazards to human health or the environment that may result from the explosion, fire, or release. This assessment must consider both direct and indirect effects *(e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-off from water or chemical agents used to control fire, etc.).*
   iii. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.
   iv. Notify appropriate local authorities *(i.e., call 911).*
   v. Notify the State Office of Emergency Services at 1-800-852-7550.
   vi. Monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the incident.
   vii. Take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall:
   i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from a explosion, fire, or release at the facility.
   ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.
   iii. Ensure that all emergency equipment is cleaned, fit for its intended use, and available for use.
   iv. Notify the California Environmental Protection Agency's Department of Toxic Substances Control, the local CUPA, and the local fire department's hazardous materials program that the facility is in compliance with requirements b-i and b-ii, above.

Responsibilities of Other Personnel:

On a separate page, list any emergency response functions not covered in the "Emergency Coordinator Responsibilities" section, above. Next to each function, list the job title or name of each person responsible for performing the function.

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials incident that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any hazardous materials emergency incident or threatened hazardous materials emergency incident that triggers implementation of this plan, a written Emergency Incident Report, including, but not limited to a description of the incident and the facility's response to the incident, must be submitted to the California Environmental Protection Agency's Department of Toxic Substances Control, the local CUPA, and the local fire department's hazardous materials program. The report shall include:

a. Name, address, and telephone number of the facility's owner/operator;
b. Name, address, and telephone number of the facility;
c. Date, time, and type of incident *(e.g., fire, explosion, etc.)*;
d. Name and quantity of material(s) involved;
e. The extent of injuries, if any;
f. An assessment of actual or potential hazards to human health or the environment, where this is applicable;
g. Estimated quantity and disposition of recovered material that resulted from the incident;
h. Cause(es) of the incident;
i. Actions taken in response to the incident;
j. Administrative or engineering controls designed to prevent such incidents in the future.

6. Earthquake Vulnerability: [19 CCR §2731(e)]

As an attachment to this plan, you must identify any areas of the facility and mechanical or other systems that require immediate inspection or isolation because of their vulnerability to earthquake-related ground motion.

7. Hazard Mitigation/Prevention/Abatement: [19 CCR §2731(c)]

As an attachment to this plan, you must include procedures that provide for mitigation, prevention, or abatement of hazards to persons, property, or the environment. These procedures must be scaled appropriately for the size and nature of the business, the nature of the damage potential of the hazardous materials handled, and the proximity of the business to residential areas and other populations.

8. Emergency Equipment Inventory Table: *[22 CCR §66265.52(e), as referenced by §66262.34(a)(4)]*

Complete the following Emergency Equipment Inventory Table by identifying equipment maintained on-site:

1. Equipment Category	2. Equipment Type	3. Locations *	4. Description**
Personal Protective Equipment, Safety Equipment, and First Aid Equipment	☐ Cartridge Respirators		
	☐ Chemical Monitoring Equipment *(describe)*		
	☐ Chemical Protective Aprons/Coats		
	☐ Chemical Protective Boots		
	☐ Chemical Protective Gloves		
	☐ Chemical Protective Suits *(describe)*		
	☐ Face Shields		
	☒ First Aid Kits/Stations *(describe)*	office	standard industrial kit
	☐ Hard Hats		
	☐ Plumbed Eye Wash Stations		
	☒ Portable Eye Wash Kits *(i.e., bottle type)*		wall mounted contained unit
	☐ Respirator Cartridges *(describe)*		
	☒ Safety Glasses/Splash Goggles	individual	plastic glasses
	☐ Safety Showers		
	☐ Self-Contained Breathing Apparatuses (SCBA)		
	☒ Other *(describe)*	individual	uniforms
Fire Extinguishing Systems	☐ Automatic Fire Sprinkler Systems		
	☐ Fire Alarm Boxes/Stations		
	☐ Fire Extinguisher Systems *(describe)*		
	☒ Fire Extinguishers *(describe)*	shop area	mounted,portable fire extinguishers
	☐ Other *(describe)*		
Spill Control Equipment and Decontamination Equipment	☒ Absorbents *(describe)*	shop area	rags& bentonite clay
	☒ Berms/Dikes *(describe)*	shop area	4' length 3" dia.berms
	☐ Decontamination Equipment *(describe)*		
	☐ Emergency Tanks *(describe)*		
	☐ Exhaust Hoods		
	☐ Gas Cylinder Leak Repair Kits *(describe)*		
	☐ Neutralizers *(describe)*		
	☐ Overpack Drums		
	☐ Sumps *(describe)*		
	☒ Other *(describe)*	shop arae	absorbent pads
Communications and Alarm Systems	☐ Chemical Alarms *(describe)*		
	☐ Intercoms/ PA Systems		
	☐ Portable Radios		
	☒ Telephones	entire facility	standard business system
	☐ Tank Leak Detection Systems		
	☐ Other *(describe)*		
Additional Equipment *(Use Additional Pages if Needed.)*	☐		
	☐		
	☐		
	☐		
	☐		

* *Use the map and grid numbers or location identifiers from your HMBP.*

** *Describe the equipment and its capabilities. If applicable, specify any testing/maintenance procedures/intervals. Attach additional pages, if needed.*

B. Employee Training Plan *[HSC, Section 25504(c); 22 CCR §66262.34(a)(4)]*

All facilities that handle hazardous materials in HMBP quantities must have a written employee training plan. This plan is a required module of the Hazardous Materials Business Plan (HMBP). A blank plan has been provided below for you to complete and submit if you do not already have such a plan. **If you already have a brief written description of your training program that addresses all subjects covered below, you are not required to complete the blank plan, below, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. *[Note: Items marked with an asterisk (*) are required.]*:

1. **Personnel** are trained in the following procedures:

☒	Internal alarm/notification *
☒	Evacuation/re-entry procedures & assembly point locations*
☒	Emergency incident reporting
☐	External emergency response organization notification
☐	Location(s) and contents of Emergency Response/Contingency Plan
☐	Facility evacuation drills, that are conducted at least *(specify)*: *(e.g., "Quarterly", etc.)*

2. **Chemical Handlers** are additionally trained in the following:

☒	Safe methods for handling and storage of hazardous materials *
☒	Location(s) and proper use of fire and spill control equipment
☒	Spill procedures/emergency procedures
☒	Proper use of personal protective equipment *
☒	Specific hazard(s) of each chemical to which they may be exposed, including routes of exposure *(i.e., inhalation, ingestion, absorption)* *
☒	**Hazardous Waste Handlers/Managers** are trained in all aspects of hazardous waste management specific to their job duties *(e.g., container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.)* *

3. **Emergency Response Team Members** are capable of and engaged in the following:

Complete this section only if you have an in-house emergency response team

☐	Personnel rescue procedures
☐	Shutdown of operations
☐	Liaison with responding agencies
☐	Use, maintenance, and replacement of emergency response equipment
☒	Refresher training, which is provided at least annually *
☐	Emergency response drills, which are conducted at least *(specify)*: *(e.g., "Quarterly", etc.)*

C. Record Keeping

All facilities that handle hazardous materials must maintain records associated with their management. A summary of your record keeping procedures is a required module of the Unidocs Hazardous Materials Business Plan (HMBP). A blank summary has been provided below for you to complete and submit if you do not already have such a document. **If you already have a brief written description of your hazardous materials record keeping systems that addresses all subjects covered below, you are not required to complete this page, but you must include a copy of your existing document as part of your HMBP.**

Check all boxes that apply. The following records are maintained at the facility. *[Note: Items marked with an asterisk (*) are required.]*:

☒	Current employees' training records *(to be retained until closure of the facility)* *
☒	Former employees' training records *(to be retained at least three years after termination of employment)* *
☒	Training Program(s) *(i.e., written description of introductory and continuing training)* *
☒	Current copy of this Emergency Response/Contingency Plan *
☒	Record of recordable/reportable hazardous material/waste releases *
☒	Record of hazardous material/waste storage area inspections *
☒	Record of hazardous waste tank daily inspections *
☐	Description and documentation of facility emergency response drills

Note: The above list of records does not necessarily identify every type of record required to be maintained by the facility.

Note: The following section applies where local agencies require facility owners/operators to perform and document routine facility self-inspections:

A copy of the Inspection Check Sheet(s) or Log(s) used in conjunction with required routine self-inspections of your facility must be submitted with your HMBP. *[Exception: Unidocs provides a Hazardous Materials/Waste Storage Area Inspection Form that you may use if you do not already have your own form. If you use the Unidocs form (available at* **www.unidocs.org***), you do not need to attach a copy.]*

Check the appropriate box:

☐	We will use the Unidocs "Hazardous Materials/Waste Storage Area Inspection Form" to document inspections.
☒	We will use our own documents to record inspections. ***(A blank copy of each document used must be uploaded to CERS with the HMBP.)***

Hazardous Materials Training/Orientation

Today's Date _____ Date of Hire _____

Employee Name _____ Trainer _____

In our Midas Shops you will be working with Hazardous Materials and Hazardous Wastes. It is very important that you know how to handle these substances safely and correctly as part of your routine job duties. In this training session, you will be familiarized with the types of materials and wastes that are present and/or generated; and our procedures, **which must be followed at all times**.

Hazardous Material Waste Liquids in our shops are required to be stored in containers that have secondary containment to prevent inadvertent discharge should the primary container leak or fail. Hazardous wastes liquids include the following materials:

- Used Motor Oil
- Used Antifreeze, and/or other spent or used coolant solutions
- Hydraulic Fluids (gear oil, transmission and brake fluids)
- Lead acid automotive batteries (batteries contain a sulfuric acid mixture, which is very corrosive)

Waste Liquids (and lead-acid batteries) are stored in the following containers:

- 240 gallon above ground double-walled tank to collect all waste oil and hydraulic fluids
- 55 gallon plastic drums placed in overpack drum or other vessels for used antifreeze/coolant(s)
- A small plastic tub or tray is used for temporary storage of lead-acid automotive batteries

Secondary Containment systems must be kept clean and dry at all times

- Do not use such containment to store funnels, drip-pans or let dispensing hose(s) drip into it
- Tops of drums and tanks must be kept clean and dry
- All storage container openings must be closed when they are not in use (drum plugs must be screwed into the openings)

Hazardous Materials Waste Solids (non-fluid) do not require secondary containment. Hazardous waste solids include the following:

- Oil Filters
- Transmission filters
- Fuel filters

All filters must be drained for 12 hours before disposal in the waste oil filter drum. Drained oil filters are still hazardous but do not require secondary containment. Keep the lid on the drum when not in use.

Universal Wastes include the following: and **cannot** be thrown into regular garbage dumpsters:

- Fluorescent light tubes, lamps and/or bulbs – items should be placed in their original container if available or other suitable container that will minimize the potential for breakage
- Alkaline or 'Household' type batteries (size AAA, AA, C, D, 9 volt)
- Computer monitors, computers, printers and other miscellaneous electronic equipment
- Mercury switches (thermostats, automotive switches)

These items should be accumulated in designated areas for pickup and proper disposal. Because of the unpredictable nature of Universal Waste(s), pickups will be arranged by contacting a company Safety Representative.

Other Regulated Items

Aerosol Cans (Brake Clean, WD-40, Silicone Spray, Carb/Choke Cleaner etc.) may be thrown in the regular garbage provided the cans are completely empty. DO NOT THROW HALF-FULL CANS IN THE TRASH.

Metal Waste from cutting rotors and drums will be collected in 5-gallon plastic buckets and then recycled along with other scrap metals, such as rotors, drums, mufflers, pipes, struts and shocks, etc. Metal Shavings will not be thrown into regular garbage dumpsters.

- Complete a Disposal Record receipt when metals are picked up by the recycling service. Most commodities will have a receipt. This receipt MUST BE STORED (REQUIRED BY LAW) in the appropriate binder.

Tires (although non-hazardous) cannot be thrown into the garbage dumpster. Tires are stored in the areas provided until pickup by the service provider (Lakin Tire). Minimum charge for pickup is $70 plus $1 per additional tire.

No Hazardous Materials or Waste will be swept or washed out of the shop area into the driveway or parking lots.

- NEVER ALLOW any Hazardous Materials or Waste (including waste water) to enter the storm drain.
- Dispose of wastewater used for mopping into a toilet or sink. Some shops (River Park, Clovis, Turlock, Modesto 2 and Manteca) have drains that run the entire length of the bays and can be utilized for wastewater because they connect to the sewer.
- Shop floors will be wet-mopped.

Each shop has been provided with spill containment supplies, such as absorbent ('kitty' litter), absorbent mats, containment booms and shop rags.

- Floor sweep should be used to soak up minor spills on shop floors. Used sweep will be collected in 55-gallon drums until scheduled pickup by appropriate service providers.
    - Evergreen Environmental for all shops
- Absorbent Mats can be placed on the tops of drums and tanks to catch minor drips. Mats should be replaced on a regular basis and can be disposed of as regular garbage as long as they are not soaked with material(s).
- Booms are to be used to prevent larger spills from entering the storm drains or to control a major spill for other reasons. If booms (or other materials) become contaminated during actions to clean-up a large spill or to prevent discharge to a storm sewer, they must be disposed of as waste.
- Shop rags can be used for most common cleanups.
- Used shop rags will be collected in "Oily Rag Buckets" with lids kept closed at all times.
- Separate containers are provided for clean rags.

Summary

- If during the course of your work you are not sure how to handle or dispose of an item, please advise your shop manager to request assistance.
- Immediately report any large spills or non-standard situations to your supervisor or the shop manager.

Hazardous Materials Procedures/Training for Managers

This additional training is for Shop Managers, Service Writers and Senior Technicians/Shop Foremen.
The following Hazardous Wastes generated are produced in our shops and have to be picked up by our service providers.

- Waste Oil and Hydraulic Fluids
- Used Filters (Oil, Transmission and Fuel)
- Used Antifreeze
- Used Tires
- Used Absorbents (kitty litter, mats, booms)

Service Providers

- Evergreen Environmental
- Lakin Tire

Receipts

Receipts for pickup of Waste must be kept on site for 3 years and will be placed in the Waste Receipt Binder, separated by category. This binder also includes receipts for used tires.

Labels

- Containers for used oil and used antifreeze must be labeled with 'Hazardous Waste Labels' in order to track pickup records. Your shop information (address, phone number, EPA I.D. #, contents composition, etc., see example attached) must be filled out and legible. Accumulation start and pickup dates and manifest tracking number must be entered for each pickup. Most service providers will fill in that information, however it is your responsibility to see that it is done.
- The satellite waste oil accumulation containers, which collect used oil directly from under the vehicle, must have a different label attached.
- Extra labels will be kept in your Waste Receipt Binder.
- All Hazardous waste must be picked up within 180 days from the accumulation start date.

Inspections

Weekly inspections of Hazardous Waste Storage areas and containers must be performed. Use the inspection logs provided and fill out completely. Follow the steps listed on the inspection log. Keep original in binder (see example log attached). Records must be kept on site for 3 years.

Binders

Keep the following binders in the location established at each shop.

- Hazardous Materials Business Plan (HMBP)
- Waste Receipts
- Inspection logs
- Material Safety Data Sheets (MSDS)
- Safety Manual

The above named binders must be available for review by any city or county inspector when requested and by authorized company employees as needed.

11			

EMERGENCY PROCEDURES

Post near telephones and as appropriate

In case of a fire, spill, or other emergency involving hazardous chemicals or wastes, do the following:

Major Emergency

⇒ Evacuate the affected areas per the facility Evacuation Plan
⇒ **Call 911** and report the emergency
⇒ Report the emergency to the facility Emergency Coordinator

Minor Emergency

⇒ Try to control the emergency if you are trained to do so and can do it safely
⇒ Report the emergency to the facility Emergency Coordinator

OFFICIAL NOTICE OF INSPECTION

Facility Name:	Inspection Date: 7/5/11
Site Address: MIDAS 5287 Prospect Rd San Jose	Employee No.: 4656
Contact Person(s): Paul Gomez, Duke Lee	☐ Samples Taken ☐ Photographs Taken

Inspection Type:
☒ Hazardous Materials ☐ Hazardous Waste
☐ Underground Storage Tank ☐ Medical Waste Generator/Storage/Treatment
☐ Toxic Gas ☐ Other

Comments/Observations

☐ Facility handles hazardous materials in quantities (Liquid ≥ 55 gal, Solid ≥ 500 lb, Gas ≥ 200 ft³) requiring a Hazardous Materials Business Plan (HMBP), but does not have a plan which meets the requirements of law. SUBMIT THE BUSINESS ACTIVITIES PAGE, OWNER/OPERATOR ID PAGE, INVENTORY SHEETS, AND MAP WITHIN 30 DAYS. (Forms available at www.EHInfo.org/hazmat)

☐ Facility completed and provided a Hazardous Materials Business Plan Certification Form to update an existing HMBP dated:

The following documents will be reviewed during routine compliance inspections:

☒ Facility's emergency response/contingency plan ☒ Facility's written notice to property owner

☒ Facility's training plan and employee training records ☒ Facility's inspection/monitoring records

Received an HMBP dated 4/22/10 on this date. Complete & submit a certification form per 2011 after reviewing updated quantities below. Mail to your property owner & keep copy of letter. (Example letter provided in packet)

Summary of Violations & Notice to Comply

Program: PR0392431 - HAZARDOUS WASTE GENERATOR - 2205
Inspection Type: FACILITY CLOSURE-UNCLASSIFIED

VC	Class	Violation	Corrective Actions Taken
		No violations were observed during this inspection.	

Comments: A site visit revealed that the business was closed.

No new business is operating at this location.

ACCID was completed to inactivate record and remove business from inventory.

Immediately correct any violation designated as a Class I or Class II violation. Correct all other violations no later than 08/22/2013, unless otherwise noted by the inspector.

Using the space provided, write a brief description of the actions taken by the facility to correct each violation. Attach additional pages if more space is needed. Within 5 days of achieving compliance or within 35 days of the inspection date, whichever comes first, sign the certification statement below and return a copy of this report to HMCD. Time granted for correction of violations does not preclude any enforcement action by HMCD or other agencies. This facility may be subject to reinspection at any time. [Authority: HSC 25185(c), 25187.8, 25404.1.2(c)]

CALIFORNIA REGIONAL WATER
JUL 24 1992
QUALITY CONTROL BOARD

July 22, 1992

Mr. Steve Morse
Regional Water Quality Control Board
2101 Webster Street, Suite 500
Oakland, CA 94612

Dear Mr. Morse:

Subject: Oversight Transfer—Dean's Goodyear, 5291 Prospect Road, San Jose, CA 95129

This informs you that the District will be unable to provide active agency oversight on the investigation and remediation activities for Dean's Goodyear. Our staff currently provide oversight only for fuel leak sites. As stated in the analytical reports dated April 11, 1992 from Sequoia Analytical, 810 ppm of Total Oil and Grease was detected in the soil at the subject site. Since the petroleum hydrocarbons are associated with a sump, this site cannot be overseen by the District.

It is appropriate, then, that any investigation and remediation activities should be overseen by the Regional Board staff. If you need any further information, please call Kristina Traffas at our Camden Office at (408) 927-0710, extension 2638.

Sincerely,

ORIGINAL SIGNED BY

Attached please find the results of sampling from the Bill Dean Goodyear site on Prospect Road in San Jose.

V. Catunao has informed me that he will be turning this case over to the Water District. We propose to over-excavate the sump area and re-sample. We do not plan to take any further action at the other sampling points.

Please provide me with your comments on these plans.

SUBJECT: No Further Action, Former Dean's Goodyear, 5291 Prospect Road, San Jose, Santa Clara County

Dear Mr. Avila:

This letter confirms the completion of site investigation and remedial action for the pollutant releases at the subject site. The attached Case Closure Summary describes our case-closure rationale.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the pollutant releases at the subject site is required.

If you have any questions, please contact Celina Hernandez of my staff at (510) 622-2447 [e-mail Celina.Hernandez@waterboards.ca.gov].

Sincerely,

Bruce H. Wolfe
Executive Officer

CASE CLOSURE SUMMARY

I. AGENCY INFORMATION

Date: 10/27/17

Agency Name: SF Bay Regional Water Quality Control Board	Address: 1515 Clay Street, Suite 1400
City/State/Zip: Oakland, CA 94612	Phone: 510-622-2300
Responsible Staff Person: Celina Hernandez	Title: Engineering Geologist

II. SITE INFORMATION

Site Facility Name: Dean's Goodyear		
Site Facility Address: 5291 Prospect Road, San Jose, Santa Clara County		
RB Case No.: 43S0765	Local Case No.: 1108	Priority: Low
Responsible Party (include address and phone number)		
Current: , DS Westgate West, LP, Attn.: Henry A. Avila, c/o Donahue Schriber, 3501 Del Paso Road., Suite 100,		
Sacramento, CA 95835		
Phone number: 916-920-5555		

Tank No.	Size in Gallons	Contents	Closed In—Place/Removed?	Date
1	Unknown	Oil and grease	Removed	03/12/1992

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: petroleum hydrocarbon release from a sump		
Site characterization complete? Yes	Date Approved by Oversight Agency: 10/26/2017	
Monitoring wells installed? No	Number: not applicable (NA)	Proper screened interval? NA
Highest GW Depth Below Ground Surface: NA	Lowest Depth: NA	Flow Direction: NA
Most Sensitive Current Use: Potential source of drinking water		
Most Sensitive Potential Use and Probability of Use: Potential source of drinking water		
Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley – Santa Clara	
Is surface water affected? No	Nearest surface water name: Saratoga Creek	
Off-Site Beneficial Use Impacts (Addresses/Locations): NA		

Report(s) on file? Yes	Where is report(s) filed? GeoTracker database

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Tank (sump)	Unknown	Removed; destination unknown	3/12/1992
Piping	Unknown		
Free Product	None present		
Soil	Unknown		
Groundwater	Unknown		
Barrels	Unknown		

MAXIMUM DOCUMENTED POLLUTANT CONCENTRATIONS—BEFORE AND AFTER CLEANUP

POLLUTANT	Soil (ppm)		Water (ppb)		POLLUTANT	Soil (ppm)		Water (ppb)	
	Before	After	Before	After		Before	After	Before	After
Oil and Grease	810	NA	NA	NA	Ethyl Benzene	<0.0050	NA	NA	NA
High BP Hydrocarbon	11.0	NA	NA	NA	VOCs	<0.005	NA	NA	NA
Xylenes	<0.0050	NA	NA	NA					
Low/med BP Hydrocarbon	<1.0	NA	NA	NA					
Benzene	<0.0060	NA	NA	NA					
Toluene	<0.0050	NA	NA	NA					

Comments (Depth of Remediation, etc.):

BP = boiling point
VOCs = volatile organic compounds by EPA Method 8010

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes		
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes		
Does corrective action protect public health for current land use? Yes		
Site Management Requirements: NA		
Monitoring Wells Decommissioned: NA	Number Decommissioned: NA	Number Retained: NA
List Enforcement Actions Taken: None		
List Enforcement Actions Rescinded: None		

V. TECHNICAL REPORTS, CORRESPONDENCE, ETC., THAT THIS CLOSURE RECOMMENDATION WAS BASED UPON

Oversight Transfer Letter package	07/22/1992
Correspondence – Case Update	10/22/1996

VI. ADDITIONAL COMMENTS, DATA, ETC.

- *Pollutant sources are identified and evaluated*
  An auto repair business formerly operated at the Site. The primary pollutant source was a sump. Petroleum hydrocarbons as oil and grease are the primary chemicals of concern.

- *The site is adequately characterized*
  The Site was characterized on March 12, 1992, by soil samples that were collected from multiple locations across the site: fire room drain, tire wash rack, sump (north and south ends), and waste oil storage area.

- *Exposure pathways, receptors, and potential risks, threats, and other environmental concerns are identified and assessed*
  The Site is located in a shopping center with paved parking lots. The improvements have not changed since 1992. The properties adjacent to the Site are commercial. The surrounding area includes commercial properties, a high school, and residential. No impacted water supply wells are associated with the Site.

- *Pollutant sources are remediated to the extent feasible*
  The sump was removed on March 12, 1992. Post-removal soil concentrations were below current soil environmental screening levels (ESLs).

- *Unacceptable risks to human health, ecological health, and sensitive receptors, considering current and future land and water uses, are mitigated*
  Soil concentrations are below current ESLs.

- *Unacceptable threats to groundwater and surface water resources, considering existing and potential beneficial uses, are mitigated:* NA

- *Groundwater plumes are decreasing:* NA

- *Cleanup standards can be met within a reasonable timeframe:* NA

- *Risk management measures are appropriate, documented, and do not require future Water Board oversight:* NA

This document and the related CASE CLOSURE LETTER shall be retained by the lead agency as part of the official site file.

COVENANT OF EASEMENT
(Government Code sec. 65871;
SJMC Ch. 20.110, Part 1)

WHEREAS, DS Westgate West LP, a Delaware limited partnership ("OWNER") is the owner of all that real property described in Exhibit "A" attached hereto and incorporated herein by reference ("PROPERTY"); and

WHEREAS, the CITY OF SAN JOSE, a municipal corporation ("CITY") has required that a non-exclusive easement be provided for parking pursuant to the provisions of Government Code sections 65870-65875 and Part 1 of Chapter 20.110 of the San Jose Municipal Code; and

WHEREAS, OWNER intends to comply with the above-described condition of approval by creating the required easement on the PROPERTY.

NOW, THEREFORE, OWNER grants to the CITY a non-exclusive easement for parking on the PROPERTY described herein in Exhibit "A." Said easement is more particularly described as in Exhibit "B."

This Covenant of Easement shall be recorded in the office of the Santa Clara County Recorder. Upon recordation, the burdens of the Covenant shall be binding upon all successors in interest to the real PROPERTY described in Exhibit "A."

[document continues on following page]

This Covenant of Easement shall not be modified or released without the prior approval of the CITY in the manner required by applicable law.

EXHIBIT "A"
WESTGATE WEST SHOPPING CENTER
PROPERTY DESCRIPTION

all that certain real property situated in the City of San Jose, County of Santa Clara, State of California, being more particularly described as follows:

All of Parcel One-A, Parcel One-B, Parcel Two-A, Parcel Three-A, Parcel Four-A, Parcel Six-A, Parcel Seven-A, Parcel Eight-A and Parcel Nine-A, as said parcels are described in the Grant Deed to DS WESTGATE WEST LP, recorded in the office of the Recorder of Santa Clara County on September 20, 2016 as Document No. 23437545.

This description was prepared by me or under my direction pursuant to the California Professional Land Surveyor's Act.

John E. Klamm, L.S. 7375
Expires: December 31, 2019

Date: 12/13/17

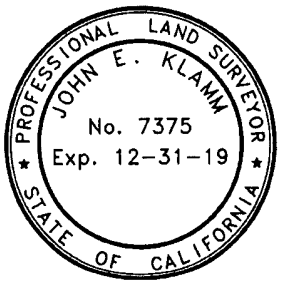

EXHIBIT "A"
COVENANT OF EASEMENT
LEGAL DESCRIPTION

Covenant of Easement for a non-exclusive easement to be provided for parking on a 19.97 gross acre property.

All that certain real property situated in the City of San Jose, County of Santa Clara, State of California, being more particularly described as follows:

Parcel One-A, Parcel One-B, Parcel Two-A, Parcel Three-A, Parcel Four-A, Parcel Six-A, Parcel Seven-A, Parcel Eight-A and Parcel Nine-A, as said parcels are described in the Grant Deed to DS WESTGATE WEST LP, recorded in the office of the Recorder of Santa Clara County on September 20, 2016 as Document No. 23437545.

EXCEPTING THEREFROM the following described portion of said Parcels One-A, One-B and Eight-A:

COMMENCING at the Southeast corner of said Parcel One-B;
Thence, along the southerly boundary of said Parcel One-B, the following two (2) courses:
(1) North 81°50'00" West, 20.03 feet;
(2) North 70°29'13" West, 39.24 feet to the **POINT OF BEGINNING**;
Thence, continuing along said southerly boundary of said Parcel One-B, the following two (2) courses:
(1) North 70°29'13" West, 38.71 feet;
(2) along a tangent curve to the right, having a radius of 71.00 feet, through a central angle of 44°15'24", with an arc length of 54.84 feet;
Thence North 09°30'15" East, 113.04 feet;
Thence North 43°55'23" West, 7.76 feet;
Thence North 04°43'46" East, 76.11 feet;
Thence North 03°58'36" East, 159.17 feet;
Thence along a tangent curve to the right, having a radius of 18.00 feet, through a central angle of 92°49'18", with an arc length of 29.16 feet; thence South 83°12'06" East, 40.33 feet; thence South 02°56'41" West, 156.21 feet;
Thence South 81°29'38" East, 27.53 feet;
Thence South 07°59'50" West, 88.61 feet;
Thence South 82°04'02" East, 2.90 feet;
Thence South 08°20'24" West, 165.56 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels One-A, and Seven-A:

COMMENCING at the Northwest corner of said Parcel Seven-A;

Thence, along the westerly boundary of said Parcel Seven-A, South 02°08'27" West, 34.30 feet to an angle point in said westerly boundary;
Thence South 80°57'09" East, 9.82 feet to the **POINT OF BEGINNING**;
Thence South 81°45'04" East, 360.06 feet;
Thence South 08°08'54" West, 37.36 feet;
Thence South 81°30'44" East, 77.75 feet;
Thence South 08°13'04" West, 172.52 feet;
Thence North 81°51'12" West, 426.96 feet;
Thence North 05°15'39" East, 211.25 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels Six-A, and Seven-A:

COMMENCING at the Northeast corner of said Parcel Six-A;
Thence North 51°09'33" West, 45.86 feet to the **POINT OF BEGINNING**;
Thence South 08°50'26" West, 219.91 feet;
Thence North 81°50'00" West, 112.66 feet;
Thence North 08°07'29" East, 219.78 feet;
Thence South 81°53'21" East, 115.41 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels One-A, Six-A, and Nine-A:

COMMENCING at the Southwest corner of said Parcel Nine-A;
Thence North 05°17'11" East, 41.24 feet to the **POINT OF BEGINNING**;
Thence North 08°28'39" East, 130.67 feet;
Thence South 81°31'21" East, 75.84 feet;
Thence North 08°28'39" East, 16.00 feet;
Thence South 81°31'35" East, 69.46 feet;
Thence South 08°28'39" West, 146.76 feet;
Thence North 81°28'28" West, 20.52 feet;
Thence North 08°28'39" East, 18.06 feet;
Thence North 81°31'21" West, 53.00 feet;
Thence South 08°28'39" West, 18.00 feet;
Thence North 81°31'02" West, 71.78 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels One-A, Two-A, and Three-A:

COMMENCING at the Southwest corner of said Parcel Two-A;
Thence North 01°06'57" East, 68.35 feet to the **POINT OF BEGINNING**;
Thence North 08°01'40" East, 87.31 feet;

Thence South 81°52'29" East, 7.83 feet;
Thence North 08°15'39" East, 33.79 feet;
Thence South 81°51'06" East, 163.97 feet;
Thence South 07°59'36" West, 121.04 feet;
Thence North 81°52'20" West, 172.02 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcels One-A, Three-A and Four-A:

COMMENCING at the Northeast corner of said Parcel One-A;
Thence South 62°34'12" West, 76.12 feet to the **POINT OF BEGINNING**;
Thence South 81°51'40" East, 291.50 feet;
Thence South 08°07'42" West, 52.73 feet;
Thence South 81°36'31" East, 116.51 feet;
Thence South 08°09'53" West, 274.63 feet;
Thence North 81°50'48" West, 261.71 feet;
Thence North 08°50'18" East, 40.08 feet;
Thence North 81°47'37" West, 147.47 feet;
Thence North 08°17'52" East, 287.55 feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcel Three-A:

COMMENCING at the Southeast corner of said Parcel Three-A;
Thence North 13°18'59" West, 29.16 feet;
Thence North 82°38'56" West, 95.98 feet;
Thence North 08°14'09" East, 181.53 feet;
Thence North 41°26'40" East, 39.65 feet to the **POINT OF BEGINNING**;
Thence North 08°13'14" East, 218.20 feet;
Thence South 81°36'38" East, 79.84 feet;
Thence South 08°07'58" West, 83.82 feet;
Thence South 80°25'16" East, 41.02 feet;
Thence South 08°08'08" West, 133.30 feet;
Thence North 81°43'14" West, 121.17 feet feet to the **POINT OF BEGINNING**.

ALSO EXCEPTING THEREFROM the following described portion of said Parcel Three-A:

COMMENCING at the Southeast corner of said Parcel Three-A;
Thence North 13°18'59" West, 29.16 feet to the **POINT OF BEGINNING**;
Thence North 82°38'56" West, 95.98 feet;
Thence North 08°14'09" East, 181.53 feet;
Thence South 82°00'42" East, 96.34 feet;

Thence South 08°21'10" West, 180.46 feet to the **POINT OF BEGINNING**.

The above described easement is graphically depicted on Exhibit "B" attached hereto and made a part hereof.

This description was prepared by me or under my direction pursuant to the California Professional Land Surveyor's Act.

Ms. Vidales:

Converse Consultants (Converse) is pleased to submit the attached report that summarizes the activities and the results of a Phase I Environmental Site Assessment (Phase I ESA) that was conducted at the referenced property (Property).

A summary of the assessment is presented in the Executive Summary, as well as in Sections 7.0, 8.0, and 9.0 of the report. Non-scope items are discussed in Section 11.0. Recognized Environmental Conditions were identified during this assessment.

We appreciate the opportunity to be of service. Should you have any questions or comments regarding this report, please contact Laura Tanaka at (714) 444-9660, or Norman Eke at (626) 930-1260.

Executive Summary

The following is an Executive Summary of the Phase I Environmental Site Assessment (Phase I ESA) that was conducted by Converse Consultants (Converse). Please refer to the appropriate sections of the report for a complete discussion of these issues. In the event of a conflict between this Executive Summary and the report, or an omission in the Executive Summary, the report shall prevail.

This report presents the results of the Converse Phase I ESA performed at Westgate West, 5253-5399 Prospect Road, in the City of San Jose, California, referred to as the Property in this report. Converse was retained by Donahue Schriber Realty Group, LP to conduct this Phase I ESA. Our study has been conducted in order to identify, to the extent practical within the scope of an ESA, Recognized Environmental Conditions (RECs) in connection with the Property.

Converse has compiled and reviewed information that was obtained from interviews, document research, and on-site and area reconnaissance to identify potential environmental conditions at the Property, in conformance with the ASTM Standard E: 1527-13 Environmental Site Assessment Standard Practice (ASTM Standard: E1527-13). This Phase I ESA was conducted during the period of July 27, 2016 to August 15, 2016.

The Property appears to have been developed for residential use from as early as 1889 through 1899, and was further developed for agricultural use as early as 1939. The entire Property remained in agricultural use until 1968, when the eastern portion of the Property was developed with a portion of the existing shopping center. By 1973, the western portion of the Property has also been developed with retail buildings as part of the shopping center. Additional retail buildings were constructed at the Property in the 1980s, 1990s, and 2000s. By 2012, the Property was developed in its' current configuration.

The Property is owned by Grosvener International, and consists of nine (9) retail buildings with 39 total tenant spaces, in an operational shopping center (Westgate West). The anchor tenants at the Property include an Orchards Supply Hardware (OSH), CVS drug store, and Trader Joe's market.

Currently located at the shopping center is a dry cleaner (Holiday Cleaners at 5309 Prospect Road). The dry cleaner has been on-site since the shopping center opened in 1985. It is not known when the PCE usage stopped by is estimated to be around 2009-2010. Soil sampling occurred in 2001, which did not indicated levels of concern in the soil. However, no soil gas sampling has been conducted at the facility.

Copyright 2016 Converse Consultants

Former auto related uses at the Property have included the following:

- Former Midas Muffler at 5287 Prospect Road. It is unclear whether a clarifier and hydraulic lifts have been removed from the site or were abandoned in place. Soil sampling conducted in 2001 did not indicate any contamination at significant levels of concern. No further action appears warranted at this time; however, if the clarifier and/or hoists are uncovered during any redevelopment activities, the features will need to be removed.

- Former Dean's Goodyear operations at 5291 Prospect Road is an "open-inactive" RWQCB case. It is unclear whether this is an open leaking underground storage tank (LUST) case or related to a leak that impacted a sump. Sampling of the sump indicated 810 milligrams per kilogram of heavy oil range total petroleum hydrocarbons, which is below the Environmental Screening Levels (ESLs) established by the San Francisco Regional Water Quality Control Board.

  Converse recommends that a copy of a closure letter be obtained from the Property Owner. If no letter exists, and Donahue Schriber desires a formal, written closure from a regulatory agency, additional assessment may be requested by the regulatory agency.

This assessment has revealed no evidence of RECs in connection with the Property, except for the following:

- The presence of an active dry cleaner on-site (Holiday Cleaners at 5309 Prospect Road). PCE was utilized on-site until possibly 2009-2010. Currently, a hydrocarbon fluid based machine is in operation. The last Phase II assessment was conducted in 2001 and only included soil sampling.

Copyright 2016 Converse Consultants

1.0 Introduction

1.1 Purpose and Scope of Services

This report presents the results of the Converse Consultants (Converse) Phase I Environmental Site Assessment (ESA) performed at Westgate West, 5253-5399 Prospect Road, in the City of San Jose, Santa Clara County, California, referred to as the Property in this report. Converse was retained by Donahue Schriber Realty Group, LP to conduct this Phase I ESA. Our study has been conducted in order to identify, to the extent practical, Recognized Environmental Conditions (RECs) in connection with the Property. The term Recognized Environmental Conditions is defined in Section 1.1.1 of the American Society of Testing and Materials (ASTM) Standard Practice as *the presence or likely presence of any hazardous substances or petroleum products in, at or on a property due to any release to the environment; under conditions indicative of a release to the environment; under conditions that pose a material threat of a future release to the environment.*

This Phase I ESA was completed in accordance with our proposal dated July 27, 2016. Our work consisted of the following and was completed in general conformance with the scope and limitations of the ASTM Practice E1527-13 and complies with standards and practices set forth in 40 Code of Federal Regulations (CFR) Part 312 for AAI.

- Interviews with the Property owner representatives
- Property and vicinity reconnaissance
- Review of regulatory agency records
- Description of physical setting
- Historical review
- Interviews with public agency personnel
- Preparation of this report

1.2 Non-Scope Considerations

There are a number of non-scope issues which are sometimes assessed concurrently with a Phase I ESA. Unless specifically agreed in the contract proposal documents, these non-scope considerations are not included as part of the Phase I assessment. Examples of non-scope issues include:

- Asbestos-containing building material
- Lead-base Paint
- Wetlands
- Radon
- Lead in Drinking Water
- Regulatory Compliance

Copyright 2016 Converse Consultants

- Cultural & Historic Resources
- Industrial Hygiene
- Health & Safety
- Mold
- Diffuse Anthropogenic Pollution
- Ecological Resources
- Endangered Species
- Indoor Air Quality
- Biological Agents
- Non-liquid Polychlorinated Biphenyls

No Non-scope issues were addressed in this report.

1.3 Significant Assumptions

Converse made the following assumptions for this assessment:

- The Property was not covered on currently published groundwater contour maps. Therefore, the direction of regional groundwater is inferred to follow surface topography toward the south-southeast.

1.4 Limitations and Exceptions

The following limitations and exceptions were encountered during the course of this assessment:

- As of the date of this report, the Santa Clara Valley Water District (SCVWD) and City of San Jose Fire Department (SJFD) have not responded to our records requests.

1.5 Special Terms and Conditions

No other users were identified.

1.6 Reliance

This report is for the sole benefit and exclusive use of Donahue Schriber Realty Group, LP in accordance with the terms and conditions attached to our proposal under which these services have been provided. Its preparation has been in accordance with generally accepted environmental practices. No other warranty, either express or implied, is made. The Scope of Services associated with the report was designed solely in accordance with the objectives, schedule, budget, and risk-management preferences of Donahue Schriber Realty Group, LP.

Copyright 2016 Converse Consultants

This report should not be regarded as a guarantee that no further contamination, beyond that which could be detected within the scope of this assessment, is present at the Property. Converse makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others. It is possible that information exists beyond the scope of this assessment. It is not possible to absolutely confirm that no hazardous materials and/or substances exist at the Property. If none are identified as part of a limited scope of work, such a conclusion should not be construed as a guaranteed absence of such materials, but merely the results of the evaluation of the property at the time of the assessment. Also, events may occur after the Property visit, which may result in contamination of the Property. Additional information, which was not found or available to Converse at the time of report preparation, may result in a modification of the conclusions and recommendations presented.

Any reliance on this report by Third Parties shall be at the Third Party's sole risk. Should Donahue Schriber Realty Group, LP wish to identify any additional relying parties not previously identified, a completed Application of Authorization to Use (see Appendix A of this report) must be submitted to Converse Consultants.

Copyright 2016 Converse Consultants

2.2 Location and Legal Description

The Property consists of eight (8) parcels of land. The Property is addressed as 5253-5299 Prospect Road, in the City of San Jose, Santa Clara County, California.

The Property is located on the northeast corner of the intersection of Prospect Road and Lawrence Expressway. The Property is located approximately 1.75-miles south of Interstate 280 (Junipero Serra Freeway).

The Santa Clara County Assessor's Parcel Numbers for the Property are 381-36-012, -014, -018, -020, -021, -023, -026, and -027.

2.3 Zoning Information

According to the City of San Jose, Planning Department, the zoning for the Property is C1, which is defined as general commercial.

2.4 Property Characteristics

The Property consists of eight (8) irregular-shaped parcels of land totaling approximately 20-acres. It is generally level. The majority of the Property is covered with asphalt-paved parking lots with landscaped areas along each Property boundary. It is developed with nine (9) single-story wood-framed commercial buildings, multiple concrete and cinder-block trash enclosures, and several pedestrian sidewalks.

Access to the Property is gained via entry roads from Prospect Road to the south and Lawrence Expressway to the west. Properties in the general area are developed with residential and commercial developments, as well as school developments.

2.5 Description of Property Structure(s)

There are nine (9) wood-framed, single-story, slab-on-grade buildings with stucco exteriors located at the Property. The nine buildings consist of a total of approximately 234,000 square feet.

Flooring in the interiors of the buildings consists of linoleum tile, concrete, ceramic tile or commercial carpet. Interior walls consist of painted and/or textured drywall, and interior ceilings consist of either two-foot by four-foot suspended ceiling tiles or painted drywall.

Copyright 2016 Converse Consultants

Also located at the Property are multiple stucco-covered concrete masonry unit (CMU) trash enclosures.

The following services were present at the Property at the time of the assessment.

- Electricity: Pacific Gas & Electric (PG&E)
- Gas: PG&E
- Potable Water: Santa Clara Valley Water District
- Sanitary Sewer: City of San Jose
- Heating, Ventilation, Air Conditioning (HVAC): Roof-mounted HVAC units for individual buildings/tenant spaces.
- Solid Waste: Republic Services

Copyright 2016 Converse Consultants

3.0 User/Owner Provided Information & Responsibilities

3.1 Requested Documents and Information

The ASTM E1527 specifies that the Property owner, key site manager and the User provide any helpful documents that may be available. In order to facilitate, and document, the collection of this information, Converse prepared a form titled Owner Interview and Helpful Information. Converse requested that the User Donahue Schriber Realty Group, LP and current Property Owner complete the form.

The following documents and information were requested from Donahue Schriber Realty Group, LP and the Property Owner:

- Environmental site assessment or environmental compliance audit reports
- Environmental permits or hazardous waste generator notices/reports
- Registrations for aboveground and underground storage tanks
- Septic systems, oil wells, or water wells
- Registrations for underground injection systems
- Material Safety Data Sheets; Community Right to Know Plans; or Safety, Preparedness and Prevention Plans; Spill Protection Countermeasures and Control Plans
- Reports regarding hydrologic conditions on the Property or surrounding area
- Notices or other correspondence form any government agency relating to past or current violations of environmental laws with respect to the Property or relating to environmental liens encumbering the Property.
- Hazardous waste generator notices or reports
- Geotechnical studies
- Risk assessments
- Recorded Activity Use Limitations (AULs)
- Proceedings regarding hazardous substances and petroleum products including any pending, threatened or past: litigation; administrative proceedings; or notices from any governmental entity regarding possible violations of environmental laws or other possible liability related to hazardous substances or petroleum products.

The following reports were provided to Donahue Schriber Property Group, LP from the Property owner. Summaries of the documents provided are as follows:

Advance Soil Technology, Inc. (AST), Soil and Foundation Investigation, Proposed 7000 Square Retail Building, NE Corner of Lawrence Expressway and Prospect Road, San Jose, California, June 27, 1995.

Copyright 2016 Converse Consultants

According to AST, the field investigation was performed on June 20, 1995, and consisted of drilling two (2) exploratory borings to depths ranging from 15 to 40 feet below ground surface (bgs). Soil samples were collected at varying depths in brass sleeves and were analyzed to determine the physical and engineering properties in the soils underlying the site. The borings revealed predominantly gravelly silty sand with clay binder to the depth of approximately 30 feet bgs. The soil was moist and dense. A dense layer of gravelly coarse sand along with rock fragments was encountered at the depth of 30 feet to the bottom of the borehole (40 feet).

Based on the findings, AST concluded that the site is suitable for the proposed development.

NAC, Phase II Subsurface Investigation, Westgate West Shopping Center, 5253-5399 Prospect Road, San Jose, California, November 19, 2001.

According to NAC, the Property is currently developed as a strip shopping center with 10 single-story structures constructed in stages between 1962 and 1996. NAC stated that 46 tenants spaces are divided amongst the 10 buildings, including a dry cleaner and auto repair business. NAC completed a Phase I ESA on the Property on October 24, 2001. NAC summarized the Phase I ESA findings as follows:

- Holiday Cleaners is an original tenant at 5309 Prospect Road, which was constructed in the center of the Property in 1985. The existing operator has owned the business for approximately 6 years. The operator believes that the existing dry cleaning machine is a replacement that is less than 10 years old. The current machine has an underlying metal pan (secondary containment) but the floor of the cleaners consisted of soaking wet carpet (apparently from condensation), making inspection for old stains impossible. The operator maintains permits and waste manifest records (dating back to 1998), but does not maintain MSDS sheets, training records for the dry cleaning machine, or a hazardous materials business plan.
- Midas Muffler includes an oil-water separator at 5287 Prospect Road (on the mid-northern portion of the Property). The Midas facility previously was a Firestone auto service center (in the late 1970s). Twelve in-ground hydraulic lifts are located within six service bays. The lifts were identified as being at least 20 years old. Midas Muffler also once operated an underground waste oil tank. The tank was removed, and following a review of laboratory data which indicated trace concentrations of total oil and grease, the Santa Clara Valley Water District granted LUST closure in 1997.
- Bill Deane Goodyear Tire was located at 5291 Prospect Road (mid-southerly margin of the Property) prior to replacement by the existing strip retail building in the mid-1990s. The former tire shop operated six in-ground lifts, four (4) five-foot deep sumps, an additional sump for a wash rack, and an underground waste oil storage tank. This facility was decommissioned under Fire Department oversight in 1992. The Fire Department records were incomplete (missing laboratory data and official closure letter), but this site was not referred to any other agency for additional investigation. No soil data from the UST or hydraulic lift removal was

Copyright 2016 Converse Consultants

available, though they were removed under Fire Department oversight. The Fire Department had some information concerning soil samples obtained from beneath the former sump and floor drain areas (between 67 and 810 parts per million petroleum oil and grease was detected beneath the former sump area); however, no volatile organic compounds were detected. No remediation or further investigation was performed.

Based on these findings, NAC recommended subsurface investigation in the areas of the existing dry cleaning facility, the existing Midas Muffler oil-water separator and in-ground hydraulic lifts, and the former Goodyear tire facility.

NAC completed a subsurface investigation which consisted of the following:

- Three (3) soil borings were advanced to a maximum depth of 30 feet bgs. Two (2) of the borings were advanced to five feet bgs via hand auger within the dry cleaners tenant space. Soil samples were collected at depths of 5 feet bgs. The remaining boring was completed to a depth of 29 feet bgs in the parking area of the tenant space. Soil samples were collected continuously from the boring located outside of the tenant space.
- NAC advanced three (3) soil borings to a maximum depth of 20 feet bgs at Midas. Two (2) of the borings were advanced near the hydraulic lift equipment within two of the six service bays. The remaining borings was advanced near the northwestern corner of the in-ground oil-water separator outside the northwestern portion of the Midas tenant space. Soil samples were collected continuously.
- Two (2) soil borings were advanced to a maximum depth of 20 feet bgs on the southern and northern sides of the former Goodyear tire building. Soil samples were collected continuously.
- All soil samples were screened using a photo-ionization detector. No field screening readings or olfactory indications of contamination were observed in any of the soils removed.
- A total of eight (8) soil samples were selected from the three (3) borings within and adjacent to the existing dry cleaning facility, and were analyzed for VOCs by EPA 8260B. A total of six soil samples were selected from the three (3) borings advanced within and adjacent to the existing Midas Muffler facility and were analyzed for one or more of the following VOCs, TPH as gasoline, diesel, motor oil and/or hydraulic fluid by EPA 8015; benzene, toluene, ethyl benzene, xylenes, and MTBE by EPA 8020 Method; and total cadmium, chromium, nickel, lead, and zinc by EPA 6010B.
- Four (4) soil samples were selected from the two (2) borings advanced adjacent to the former Goodyear tire center, and were analyzed for one or more of the following compounds: VOCs, TPH as gasoline, diesel, motor oil, and/or hydraulic fluid; benzene, toluene, ethyl benzene, xylenes, and MTBE; and cadmium, chromium, nickel, lead, and zinc.

According to the analytical reports, no detectable concentrations of organic contaminant compounds were detected. Analyses for metals revealed low levels of target metals

Copyright 2016 Converse Consultants

within expected background ranges and below California Title 22 criteria for hazardous waste.

Based on these findings, NAC concluded “it appears that the existing and former uses of the site have not impacted the subject Property in the areas investigated at this time. As such, no further action is recommended for this site”.

National Assessment Corporation (NAC), Phase I Environmental Site Assessment Report, Holiday Cleaners, 5309 Prospect Road, San Jose, California 95129, March 5, 2004

According to NAC, the Property has been occupied by a dry cleaner since 1985. The current operator is Holiday Cleaners. NAC noted the presence of “one closed-loop dry cleaning machine that utilizes perchloroethylene (PCE) in the cleaning process”. According to NAC, the machine has a 4-inch metal drip pan underneath the entire unit. NAC identified two (2) drums of PCE that did not have secondary containment. NAC stated that the drums were not properly labeled, and that violations had been issued to the facility over the years for record keeping and training violations.

The Phase I ESA report summarized the 2001 Phase II ESA. Based on the findings of the 2004 Phase I ESA, NAC concluded that “this assessment has revealed no evidence of recognized environmental conditions in connection with the Property except that dry cleaners present an inherent potential to impact the underlying subsurface areas and continued vigilance is prudent to minimize potential impacts.” In addition, NAC had the following recommendations for the dry cleaning suite.

- New labels must be placed on the waste drums each time the waste is removed to properly indicate the contents and starting accumulation dates.
- All copies of manifests must be maintained on the Property.
- Properly remove/dispose of four unlabeled two-gallon containers located in the mezzanine.
- Remove the carpet remnants from beneath the waste drums and provide secondary containment to prevent migration of potential drum leaks and spills.
- Conduct periodic visual inspections of the dry cleaning operation.
- NAC recommended sealing of the concrete floor with an epoxy grade resin to prevent potential migration of PCE from accidental spills.

Bluewater Services, Inc. (Bluewater), Removal of Mold Infested Material and Insulation Located at 5377 Prospect Road, San Jose, California, May 19, 2005.

According to the report, Bluewater cleaned the unit of mold affected material using containment, wet removal methods, negative air, and HEPA vacuums.

Included within the report is a post-remediation sampling report prepared by Benchmark, and dated May 26, 2005. According to Benchmark, “no visible mold was identified on accessible surfaces of the structure within the designated work area (DWA); additionally, there was no excessive dust or debris identified on surfaces within

Copyright 2016 Converse Consultants

the DWA". Benchmark also concluded that "a moisture survey of the accessible structural elements within the DWA did not indicate elevated moisture levels that may support mold growth." Benchmark further concluded that the results of air samples collected within the DWA indicated that "the airborne mold levels within the DWA had a similar rank and order of mold genera to that of the normally occurring exterior background levels on the outside of the structure."

LandAmerica Assessment Corporation (LAC), Phase I Environmental Site Assessment, Westgate Shopping Center, 5253-5399 Prospect Road, San Jose, California, September 26, 2005.

According to LAC, "The Property consists of nine contiguous and irregularly shaped parcels, totaling approximately 19.8 acres in size. The Property is designed and used for commercial retail/service purposes. Currently, the Property is developed with ten structures that were constructed in phases between 1962 and 2005. The structures at the Property are one story in height, and comprise approximately 235,766 square feet of building space. The site presently offers a total of 48 tenant spaces."

LAC obtained and reviewed a database report from Environmental Data Resources, Inc. (EDR) for the Property and the surrounding area. Current and previous tenants of the Property were listed in the EDR report on the RCRIS-SQG, LUST, CHMIRS, Cortese, and EMI databases. Based on the lack of violations and resolved status of the regulatory issues, the listing of the tenants on these databases is not expected to pose an environmental concern for the Property at this time. Based on the database report, no upgradient sites were identified as potential concerns to the Property. LAC did identify 10 LUST sites located within the prescribed search radii. The sites are more than a ¼ mile from the Property, are cross- to downgradient of the Property, have soil only impacts, are closed cases, and/or had no known releases, and therefore are not considered to pose environmental concerns for the Property.

LAC reported the following findings:

- In 2001, ACM was identified in several materials at the Property. The consultant recommended that damaged materials be repaired and replaced and that an O&M Program be prepared and implemented. According to the property manager, an O&M Program does not appear to have been prepared.
- An oil/water separator is present at the onsite Midas facility which is not in use. The separator, and the floor drains connected to it are potential conduits for contaminants.

Based on these findings, LAC had the following recommendations:

- An O&M Program should be prepared and implemented at the Property to properly maintain or replace the ACM present on the Property.
- If no future use of the oil/water separator is required, LAC recommends it be closed in accordance with applicable local and state guidelines.

Copyright 2016 Converse Consultants

Eckland Consultants, Inc. (Eckland), Environmental Document Review, Westgate Shopping Center, 5233-5399 Prospect Road, San Jose, California, February 17, 2006.

Eckland provided summaries of several previous environmental reports conducted at the Property. The Eckland summaries are provided as follows:

1) Tank Closure Report, Midas Muffler, 5287 Prospect Road, prepared by Handex of Kansas, dated September 11, 1996. This report summarizes activities related to the removal and regulatory closure of one 280-gallon waste oil UST located on the northwest exterior of the Midas Muffler shop (formerly a Firestone auto repair facility). Handex submitted the closure report to the San Jose Fire Department, Storage Tank Division, on behalf of Bridgestone/Firestone, Inc.

   On July 1, 1996, Handex oversaw removal of the UST, which was noted to have no obvious holes. The tank, including about 100 gallons of residual oil/sludge, was transported offsite and scrapped, with waste manifest information included in the report. Two soil samples were recovered, one from the base of the excavation at 9.5 feet below grade, and the other from soil backfill from the excavation. Handex stated that groundwater was not encountered in the excavation and thus, was not sampled.

   The soil sample from the floor of the excavation (FL-1) was tested for Diesel and Gasoline-range Total Petroleum Hydrocarbons (TPH-DRO and GRO), Oil and Grease-range petroleum hydrocarbons, Volatile Organic Compounds (VOCs), specific gasoline ingredients BTEX (Benzene, Toluene, Ethylbenzene and Xylenes), and TCLP (leachable) Lead. The stockpile sample (SP-1) was tested for TPH-DRO and GRO, Oil and Grease-range hydrocarbons, VOCs, PCBs and Total RCRA Metals. The floor sample tested below laboratory detection limits except for gasoline-range hydrocarbons (fractionally above the detection limit at 0.055 mg/kg) and oil/grease-range hydrocarbons at 26 mg/kg. The soil stockpile sample tested below laboratory detection limits except for oil/grease-range hydrocarbons at 88 mg/kg, and certain metals (arsenic, barium, chromium and lead).

   Based on the test results, an Underground Storage Tank Unauthorized Release Contamination Site Report Form was submitted to the fire department on July 17, 1996. However, Handex concluded that the observed analytical results did not warrant further action and recommended closure of the case by the fire department. According to the September 2005 Phase I report by LAC (see Document 4) below) the identified LUST incident was formally closed in 1997. A closure letter was included in Appendix G of the LAC report, although the text only was provided to Eckland for review.

Copyright 2016 Converse Consultants

2) Underground Storage Tank System Closure Permit Application/Closure Plan, prepared by Bridgestone/Firestone, Inc. (BFI), Retail Division (Law Department), dated March 25, 1999 (cover letter).

   This three-page form references one 250-gallon waste oil UST, with Handex as the Consultant, and that Midas leased the building from BFI. The form is signed by the applicant (July 1, 1996), and by the fire department (July 1 and October 2, 1996) indicating that the tank closure activities were completed.

3) Phase II Subsurface Investigation, Westgate West Shopping Center, prepared by National Assessment Corporation (NAC), dated December 10,2001 (text only).

   NAC referenced an October 24, 2001, Phase I Environmental Site Assessment prepared by their firm (not provided to Eckland). NAC identified recognized environmental conditions associated with three current or former tenants on the subject property, including:

   - Dry-cleaning activities at Holiday Cleaners (5309 Prospect Road), starting in 1985.
   - Operation of an oil-water separator and 12 in-ground hydraulic lifts at Midas Muffler (5287 Prospect Road), starting in the 1970s.
   - Operation of a tire shop with six in-ground lifts, five floor sumps and a waste oil UST at the former Bill Deane Goodyear (5291 Prospect Road). The Bill Deane Goodyear building was decommissioned with fire department oversight in 1992, then demolished and replaced with a current multi-tenant structure.

   At the time of their Phase II report, NAC stated that the subject site was developed with ten single-story retail structures containing 46 retail tenants, constructed between 1962 and 1996.

   NAC completed three soil borings at the dry-cleaner tenant space (two borings to 5 feet below the floor inside the tenant space, and one boring to sampling refusal at 29 feet outside the entrance to the space). Three borings were advanced at the Midas Muffler shop (two borings near hydraulic lifts in two of the six service bays) and one boring outside the facility near the oil-water separator (maximum depth of 20 feet below grade). Near the former Goodyear Tire shop, NAC completed two soil borings to a maximum depth of 20 feet (one boring on the south side of the replacement retail building, and one boring in the delivery alley on the north side of the building).

   A total of eight soil samples from the dry cleaner borings were tested for VOCs. Six soil samples from the Midas Muffler shop and four samples from near the former Goodyear Tire shop were tested for one or more of: VOCs, TPH-DRO, GRO and motor/hydraulic oil, BTEX and MTBE and the metals Cadmium,

Copyright 2016 Converse Consultants

Chromium, Nickel, Lead and Zinc. Groundwater was planned to be recovered from the outside boring near the dry cleaner space, but none was encountered prior to sampling refusal.

According to NAC, all 18 soil samples were below laboratory detection limits for all organic compounds, and the metals test results were within expected background levels for native soils. Location diagrams and laboratory appendix data were not included in the report copy provided to Eckland.

4) Phase I Environmental Site Assessment, Westgate West Shopping Center, prepared by LandAmerica Assessment Corporation (LAC), dated September 26, 2005 (text only).

   By address, LAC appears to be the NAC entity referenced in Document 3) above. At the time of their Phase I report, LAC noted that the subject site was developed with ten retail structures (48 tenant spaces) on 19.8 acres, constructed from 1962 to 2005. Midas Mufflers (5287 Prospect Road) and Holiday Cleaners (5309 Prospect Road) were active tenants at the time.

   LAC identified historical use of the subject site to include a rural residence (dating from the late 1800s) and later an orchard, prior to construction of the first of the subject buildings in 1962. LAC referenced the activities of Holiday Cleaners, Firestone/Midas Muffler and the former Deane Goodyear Tire shop, and the 2001 Phase II Assessment listed in Document 3) above. LAC concluded that there were no "current recognized environmental conditions in connection with the property", although they note that a separate LUST incident associated with the former waste oil UST at Deane Goodyear did not have regulatory closure from the Santa Clara County Environmental Health Department. Asbestos-containing materials (ACM), identified in 2001, and the oil/water separator outside Midas Muffler (unused at the time) were listed as environmental concerns. LAC recommended preparation of an Asbestos O&M Program, and formal closure of the oil/water separator if it is no longer used.

Based on the review of the above documents, Eckland had the following comments and recommendations:

1) Eckland recommended a formal closure letter be obtained from the Santa Clara County Environmental Health Department in regards to the LUST cast at the former Deane Goodyear Tire shop at the Property. Eckland did state that residual petroleum impairment that is below state action levels may be present.
2) The Midas Muffler shop and Holiday Cleaners have been operating on the subject site since the 1970s and 1985, respectively. Eckland stated that given the significant duration of the Holiday Cleaner and Midas Muffler activities on the subject site, the age of the in-ground hydraulic lifts at Midas Muffler, and the time since the 2001 Phase II work was completed, they recommended that a limited Phase II Environmental assessment be completed in and near the Holiday

Copyright 2016 Converse Consultants

Cleaners tenant space, and near the underground hydraulic lifts in the Midas Muffler tenant space.

Professional Services Industries, Inc. (PSI), Post Abatement Asbestos Observations and Air Sampling Report, Westgate Shopping Center, 5289 Prospect Road, Units C, D, E, and F, San Jose, California, April 1, 2011

According to PSI, the following is a list of the units and asbestos-containing materials (ACM) removed:

- Unit C – Removal of approximately 50 square feet of ACM sheet flooring in the restroom
- Unit D – Removal of approximately 400 square feet of ACM sheet flooring in both restrooms.
- Unit E&F (two units combined) – Removal of approximately 400 square feet of ACM sheet flooring in both restrooms, and approximately 3,000 square feet of ACM black mastic in the Sales floor area.

PSI summarized the post-abatement observation and air-sampling results. According to PSI, they observed that the abatement contractor had constructed containment to enclose the flooring removal work areas within each of the three units. PSI stated that the designated ACM flooring material was completed as required for the project. Following post abatement observations, PSI collected one (1) air sample within Unit C work area containment, two (2) air samples within Unit D work area containment, and three (3) samples in Unit E&F work area containment.

The air samples were analyzed using National Institute for Occupational Safety and Health (NIOSH) Method 7400 protocols. The sampling media consisted of 25 millimeter (mm), three-piece cassettes with 50-mm electrically conductive extension cowls and 0.8-micron pore size mixed cellulose ester (MCE) filters. Analysis was performed using Phase Contrast Microscopy (PCM) at PSI's National Laboratory located in Pittsburgh, PA. Sample results were reported in fibers per cubic centimeter of air (f/cc) and were compared to the Environmental Protection Agency (EPA) recommended re-occupancy criteria and the California Division of Occupational Safety and Health (DOSH) Class 1 work area perimeter level, both of which are <0.01 f/cc.

The results of all six clearance air samples collected in Units C, D and E&F indicated airborne fiber levels below the recommended EPA and DOSH criteria. PCI concluded that based on the observations and air sampling results, no additional actions are required at this time and the area is suitable for reconstruction and re-occupancy.

Copyright 2016 Converse Consultants

3.2 User Provided Information

Section 6 of ASTM E1527-13 outlines specific User's responsibilities. This information will help identify the possibility of RECs in connection with the Property. The ASTM Standard provides a questionnaire to help the User to comply with the statutory requirements to perform tasks which would help identify RECs. Converse included the questionnaire as Attachment A to our proposal. In general, any Users should make Converse aware of information they have regarding the following:

- Environmental Cleanup Liens filed or recorded against the Property
- Activity and land use limitations that are in place on the Property or have been filed or recorded in a registry.
- Specialized knowledge or experience of the person seeking to qualify for the Legal Liability Protections (LLP)
- Relationship of the purchase price to fair market value of the Property if it were not contaminated
- Commonly known or reasonably ascertainable information about the Property
- The degree or obviousness of the presence or likely presence of contamination at the Property, and the ability to detect this contamination by appropriate investigation.

The following information was requested from the User DSRG.

3.2.1 Environmental Cleanup Liens

Converse obtained an Environmental Lien and Activity and Use Limitation (AUL) report from Environmental Data Resources, Inc. (EDR). According to the report, there are no environmental liens on the Property. A copy of the Environmental Lien report is provided in Appendix D.

3.2.2 Activity and Use Limitations

According to EDR, there are no AULs associated with the Property. A copy of the AUL report is provided in Appendix D.

3.2.3 Specialized Knowledge or Experience

The User provided no information indicating they had specialized knowledge or experience related to the Property or nearby property, other than the information included in the previous environmental reports provided to Converse.

Copyright 2016 Converse Consultants

3.2.4 Reason for Significantly Lower Purchase Price

Converse has no information regarding the purchase price of the Property or comparable properties. The User has not indicated to Converse that there is any conclusion that there was a lower purchase price because of known or suspected contamination at the Property.

3.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide any information about: past uses; specific chemicals at the Property; past spills; environmental cleanup or other reasonably ascertainable information regarding the Property, other than the information included in the previous environmental reports provided to Converse.

3.2.6 Obviousness of Contamination

DSRG did not provide any information based on their knowledge or experience that would be obvious indicators of contamination on the Property.

Unless specifically stated otherwise in the Scope of Services, the purpose of this Phase I ESA was to qualify for the landowner liability protections to CERCLA Liability as described in ASTM E1527-13.

Business risk unrelated to the CERCLA innocent landowners defense are only assessed as specifically agreed in the Scope of Services and discussed in Section 11.0, Additional Non-Scope Services, of this report.

3.3 Continuing Obligations

In order to assert a LLP, the User must satisfy a number of statutory requirements that are generally referred to as Continuing Obligations, which are outside the Scope of Services of the Phase I ESA. Examples of Continuing Obligations include providing legally required notices stopping continuing releases and complying with land use restrictions. Failure to comply with these and other statutory post-acquisition requirements will jeopardize liability protection.

It is the responsibility of the User to comply with the Continuing Obligations requirements of ASTM E1527-13 and AAI.

Copyright 2016 Converse Consultants

4.0 Records Review

4.1 Physical Setting

4.1.1 Physical Setting

The Property is located approximately 250 feet above mean sea level with surface topography sloping towards the northeast (United States Geological Survey [USGS] Topographic Map, San Jose West, California, 2012).

4.1.2 Geology

The Property is situated near the southwestern portion of the Santa Clara Valley within the Coast Ranges geomorphic province. The Santa Clara Valley is generally bounded by the Santa Cruz Mountains to the west, by the San Francisco Bay to the north, and by the Diablo Range to the east.

According to the 1991 regional geologic map of California, San Francisco-San Jose quadrangle, the near surface soils within the general vicinity are recognized as quaternary alluvium.

A foundation investigation was conducted at the Property by Advanced Soil Technology in 1995. Two (2) exploratory borings were advanced to depths ranging from 15 to 40 feet below ground surface (bgs). The borings revealed predominantly gravelly silty sand with clay binder to the depth of approximately 30 feet bgs. The soil was moist and dense. A dense layer of gravelly coarse sand along with rock fragments was encountered at the depth of 30 feet to the bottom of the borehole (40 feet).

Soils encountered during Converse's August 10, 2016 Phase II assessment at the Property consisted of silty sands, silty clays and sand in the upper 15-feet of soil.

4.1.3 Groundwater

According to data obtained from the State Water Resources Control Board's Geotracker database for a site located approximately 600 feet southeast of the Property at 1704 Saratoga Avenue, groundwater ranges from 86 to 87 feet below ground surface (bgs), and groundwater flow is to the southeast.

Copyright 2016 Converse Consultants

4.1.4 Potable Water Supplier

Potable water is supplied by the Santa Clara Valley Water District (SCVWD). SCVWD's water supply is a mix of local groundwater (45%) and imported surface water (55%) from the State Water Project.

4.2 Historical Review

4.2.1 Aerial Photograph and Map Review

Available historical aerial photographs, USGS topographic maps, and Sanborn maps of the Property were requested from Environmental Data Resources (EDR), and are summarized below.

According to EDR, there was no Sanborn map coverage of the Property. Copies of the aerial photographs and topographic maps are provided in Appendix E.

Table 1 – Aerial Photograph and Map Review

Date	Reference	Observations
1889 1897 1899	Topo Maps	The Property is developed with two structures in the north central portion of the Property. The general vicinity appears sporadically developed with structures.
1939 1948 1950 1953 1956 1961	Aerial Photos Topo Map Aerial Photo Topo map	The Property appears developed for agricultural use with one structure located in the north central portion of the Property. The adjoining properties appear to be developed for agricultural use and are developed with small structures. The general vicinity is primarily developed for agricultural use.
1968	Aerial Photo & Topo Map	The western portion of the Property remains developed for agricultural use. The small structure located in the north central portion of the Property remains. The eastern half of the Property has been developed with asphalt-paved parking areas and two (2) of the existing commercial-retail buildings. The adjoining properties to the north and northeast are developed with the existing residential neighborhood. The adjoining properties to the east are developed with the existing commercial office complex, and several of the existing commercial-retail buildings.

Copyright 2016 Converse Consultants

Table 1 – Aerial Photograph and Map Review

Date	Reference	Observations
		The adjoining properties to the southeast and south are developed for commercial and retail uses. The adjoining property to the southwest is developed with the existing Prospect High School campus. The adjoining properties to the west are developed with the existing multi-family residential buildings. The northwestern adjoining properties appear to be vacant. The general vicinity is developed for residential, commercial, and institutional uses.
1973 1974	Topo Map Aerial Photo	The western portion of the Property is no longer developed for agricultural use. Three of the existing commercial-retail buildings have been constructed on the western portion of the Property. Two areas in the southern portion of the western half of the Property appear to have been graded. There are no significant identifiable changes on the adjoining properties with the exception of the northwestern adjoining property which has been developed with the existing multi-family residential dwellings. The general vicinity remains in residential, commercial and institutional uses.
1980 1982	Topo Map Aerial Photo	Additions have been constructed on the buildings in the southwestern and northeastern corners of the Property. One small graded area remains in the south central portion of the Property. There are no significant identifiable changes to the adjoining properties. The general vicinity remains in residential, commercial, and institutional uses.
1991 1998	Aerial Photos	The eastern portion of the Property has been developed with the two (2) existing commercial buildings. The area in the south central portion of the Property that appeared graded in the previous photos and maps has been has been developed with the existing building. There are no significant identifiable changes in uses on the adjoining properties, with the exception of the construction of another existing commercial building on the eastern adjoining property.

		The general vicinity remains in residential, commercial, and institutional uses.
2005 2006 2009 2010	Aerial Photos	There are no significant identifiable changes to the Property. There are no significant identifiable changes to the adjoining properties with the exception of the eastern adjoining retail shopping center which is in its current configuration. The general vicinity remains in residential, commercial, and institutional uses.
2012	Aerial Photo & Topo Map	A former retail building along the western Property boundary was razed, and the existing restaurant building was constructed in the same place. No additional significant identifiable changes were noted. There are no significant identifiable changes to the adjoining properties. The general vicinity remains in residential, commercial, and institutional uses.

4.2.2 Building Permit Review

Building permits were reviewed using the City of San Jose's online building permit record repository. The full range of addresses (5253 -5399 Prospect Road) was researched. A chronological summary of the available permits that were identified is provided as follows:

5269 Prospect Road

2000
On October 10, 2000, a building permit to install a new walk-in cooler was issued to Trader Joes.

5273 Prospect Road

2005
On June 28, 2005, a building permit for interior remodel of a 1,200 square foot retail space was issued to Omaha Steaks.

5377 Prospect Road

2007
On February 18, 2007, a building permit for tenant improvements was issued at the address. No owner information was provided.

Copyright 2016 Converse Consultants

4.2.3 City Directories

A city directory search was completed on the Property by EDR. The complete city directory is provided in Appendix F, EDR-City Directory.

5253 Prospect Road
The tenant space was identified as being occupied by FedEx Office and Kinkos in 2008 and 2013.

5269 Prospect Road
The tenant space was identified as being occupied by Trader Joes from 1996 through 2013.

5281 Prospect Road
The tenant spacey was identified as being occupied by Pay Less Drug Stores from 1966 to 1986; Ethan Allen, Longs Drugs, and Smart & Final in 2006; Longs Drug Store, Smart & Final, and M&S Watch Repair in 2008; and M&S Watch Repair and Smart & Final in 2013.

5285 Prospect Road
The tenant space was identified as being occupied by Payless Grocery in 1966; Payless Drug Store and Albertsons in 1970; Yardage Fair from 1975 to 1986; Payless Drug Store and House of Fabrics in 1991; Ethan Allen Galleries, and M&S Jewelry and Watch Repair in 1996; Ethan Allen Galleries and Longs Drugs in 2008; and CVS Pharmacy and Ethan Allen in 2013.

5287 Prospect Road
The tenant space was identified as being occupied by Firestone in 1980; and Midas Muffler from 1985 through 2013.

5291 Prospect Road
The tenant space was identified as being occupied by Deane Bill Goodyear Auto Repair from 1970 to 1991; Lyons Restaurant from 1996 to 2000; Fish House and Hammerheads in 2006; and AAA from 2008 through 2013.

5295 Prospect Road
The tenant space was identified as being occupied by various banking institutions from 1975 through 2008.

5309 Prospect Road
The tenant space was identified as being occupied by Holiday Cleaners from 1991 through 2013.

Copyright 2016 Converse Consultants

5365 Prospect Road
The tenant space was identified as being occupied by Builders Emporium from 1975 through 1986; and OSH from 1991 through 2013.

5389 Prospect Road
The tenant space was identified as being occupied by McDonalds from as early as 1996 to 2008; and Taco Bell in 2013.

5391 Prospect Road
The tenant space was identified as being occupied by Posh Bagel from 1996 to 2000; Main St. Bagel & Deli in 2008; and Dickey's BBQ Pit in 2013.

Adjoining properties
The adjoining properties were identified as being occupied by residential and commercial businesses from as early as 1960 through 2013.

4.2.4 Data Failure

Historical information regarding the Property was dated as early as 1889 and identified the Property as developed for with two (2) structures; therefore, there is historical data failure for this assessment.

This failure does not appear to be significant and remaining ASTM sources are deemed unlikely to yield significant information.

4.2.5 Summary of Historical Property Use

The Property appears to have been developed for residential use from as early as 1889 through 1899, and was further developed for agricultural use as early as 1939. The entire Property remained in agricultural use until 1968, when the eastern portion of the Property was developed with a portion of the existing shopping center. By 1973, the western portion of the Property has also been developed with retail buildings as part of the shopping center. Additional retail buildings were constructed at the Property in the 1980s, 1990s, and 2000s. By 2012, the Property was developed in its' current configuration.

4.2.6 Summary of Past Uses of Adjoining Properties

Adjacent properties appear to have been developed for residential use as early 1889. The Properties were further developed for agricultural use as early as 1939. The Properties were further developed for residential and commercial uses in the 1950s through the mid-2000s, and have remained as such since that time.

Copyright 2016 Converse Consultants

4.2.7 Summary of Past Uses of the Surrounding Area

The surrounding area appears to have been residential as early as 1889 and for agricultural use as early as 1939. The general vicinity was further developed for retail, commercial, and institutional uses in the 1950s through the present.

4.3 Results of Environmental Records Sources Review

An Environmental Data Resources (EDR) report of Standard Environmental Record Sources (Records) was prepared specifically for the Property. The search included queries to databases for cases within specified ASTM search distances. The EDR report is provided in Appendix G.

4.3.1 Property Listings

The following addresses associated with the Property were identified on the following databases in the EDR report:

5263 Prospect Road

Facility and Manifest Data (HAZNET)
Database of sites which submit a hazardous waste manifest to DTSC.

JC Henderson One Hour Photo was listed in this database for the generation of various quantities of metal sludge (alkaline solution with a pH greater than or equal to 12.5 with metals), other inorganic solid waste, and photochemicals/photoprocessing waste between 1993 and 1997. The disposal methods were identified as recycler, and treatment/incineration.

5281 Prospect Road

CUPA Santa Clara
Smart & Final #433 was listed in this database as a generator of less than 10 gallons per year. No additional pertinent information was provided.

Facility and Manifest Data (HAZNET)
Smart & Final #433 was listed in this database for the generation of various quantities of unspecified solvent mixture, pharmaceutical waste, pesticides and other wastes associated with pesticide production, and alkaline solution without metals greater than or equal to 12.5 in 2013 and 2014. The disposal methods were identified as neutralization only, storage, bulking and/or transfer offsite,

5285 Prospect Road

RCRA Generators List
The EPA's RCRA Program identifies and tracks hazardous waste from the point of generation to the point of disposal. This is a database which lists facilities which

Copyright 2016 Converse Consultants

generate, store, transport, treat, or dispose of hazardous waste. Small quantity facilities generate less than 1,000 kilograms per month of non-acutely hazardous waste. Large quantity facilities generated at least 1,000 kilograms per month of non-acutely hazardous waste or one kilogram per month of acutely hazardous waste.

Longs Drug Store # 498 was listed in this database as a large quantity generator as of January 3, 2013. No violations were issued to the facility. The facility was also listed in the FINDS and ECHO database based on its' inclusion in this database.

CUPA Santa Clara
CVS Pharmacy #9498 was listed in this database as an HMBP facility, with 1-3 chemicals, and as a generator of greater than 10 gallons per year.

San Jose Hazmat
CVS Pharmacy #9498 was listed in this database as a "auto wrecking/misc simple facility".

Facility and Manifest Data (HAZNET)
Payless Drugs was listed in this database for the generation various quantities of polychlorinated biphenyl's (PCBs) and material containing PCBs, photochemicals and photoprocessing waste, metal sludge (alkaline solution with metals and pH greater than or equal to 12.5), liquids with pH less than or equal to 2, unspecified organic liquid mixture, other inorganic waste, liquids with mercury greater than or equal to 20 milligrams per liter (mg/l), and off-specification, aged or surplus organics between 1993 and 1999. Disposal methods were identified as recycler, transfer station, and disposal/other.

CVS Pharmacy #9498 was listed in this database for the generation of various quantities of off-specification, aged or surplus inorganics, photoprocessing/photochemical waste, pharmaceutical waste, alkaline solution without metals pH greater than or equal to 12.5, and unspecified aqueous solution between 1999 and 2014. The disposal methods were listed as storage, bulking, and/or transfer offsite, and transfer station.

Longs Drug Store #498 was listed in this database for the generation of various quantities of unspecified organic liquid mixture, and asbestos containing waste between 2005 and 2009. The disposal methods were listed as evaporation and storage, bulking and/or transfer offsite.

Rite Aid # 5995 was listed in this database for the generation of various quantities of photochemicals/photoprocessing waste in 1997 and 1998. The disposal method was listed as storage, bulking and/or transfer offsite.

5287 Prospect Road

Facility and Manifest Data (HAZNET)
Westvalley Properties was listed in this database for the generation of 3.12 tons of unspecified oil-containing waste in 2006. The disposal method was identified as recycler.

Midas Auto Service Experts was listed in this database for the generation of various quantities of aqueous solution with total organic residues less than 10 percent, unspecified organic liquid mixture, and liquids with halogenated organic compounds greater than or equal to 1,000 mg/l between 1997 and 2000.

RGA LUST
Midas Muffler was listed in this database from 1998 through 2012.

Copyright 2016 Converse Consultants

Leaking Underground Storage Tanks (LUST) Sites
An inventory of reported leaking underground storage tank incidents reported to the state.

Midas Muffler was listed in this database as a "completed-case closed" case as of September 25, 1997. The LUST listing was the result of a leak of waste-oil/motor oil/hydraulic/lubricating oils that was identified in 1996. The case was limited to soil only.

EDR US Historical Auto Stations (EDR US Hist Auto Stat)
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

Midas Muffler was listed in this database in 1999, 2000, 2007, 2009, 2010, and 2011.

5291 Prospect Road

RGA LUST
Dean's Goodyear is listed in this database from 2002 through 2007.

Statewide SLIC Cases (SLIC)
The SLIC (Spills, Leaks, Investigations and Cleanup) program is designed to protect and restore water quality from spills, leaks, and similar discharges.

Dean's Goodyear is listed in this database as of March 13, 1992. The leak was confirmed during "tank closure". The status of the facility is "leak being confirmed".

Dean's Goodyear is also listed in this database as a cleanup program site that is listed as "open-inactive" as of April 17, 2009. The potential contaminants of concern are identified as other chlorinated hydrocarbons, benzene, diesel, ethylbenzene, gasoline, toluene, xylene. The potential media affected was listed as "soil".

Facility and Manifest Data (HAZNET)
Dean's Goodyear is listed in this database for the generation of 0.29 tons of unspecified organic liquid mixture and 9.6 tons of oxygenated solvents in 1993. The disposal methods are listed as recycler and transfer station.

EDR US Historical Auto Stations (EDR US Hist Auto Stat)
Dean's Goodyear is listed in this database in 1970 and 1975 as an "automobile repairing" facility.

5309 Prospect Road

EDR Exclusive Historic Dry Cleaners (EDR Hist Cleaner)
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

Holiday Cleaners was listed in this database in from 1999 through 2012.

Copyright 2016 Converse Consultants

Facility and Manifest Data (HAZNET)
Holiday Cleaners was listed in this database for the generation of various quantities of halogenated solvents, off-specification, aged or surplus organics, and liquids with halogenated organic compounds greater than or equal to 1,000 mg/l between 1999 and 2002. The disposal methods were listed as transfer station and recycler.

RCRA Generators List
Holiday Cleaners is listed in this database as small quantity generator as of September 1, 1996. No violations were listed at the facility. The facility was also listed in the FINDS database based on its' inclusion in this database.

CUPA Santa Clara
Holiday Cleaners is listed in this database as a generator of less than 5 tons per year.

Cleaner Facilities (DRYCLEANERS)
A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; drycleaning plants, except rugs; carpet and upholstery cleaning; industrial launderers; laundry and garment services.

Holiday Cleaners is listed in this database as conducting drycleaning and laundry services. No additional pertinent information was provided.

Emissions Inventory Data (EMI)
Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies.

Holiday Cleaners is listed in this database for the generation of various quantities of total organic hydrocarbon gases and reactive organic gases between 1990 and 2011.

5357 Prospect Road

EDR US Historical Auto Stations (EDR US Hist Auto Stat)
Winchester Auto Stores is listed in this database in 1999 and 2000.

Facility and Manifest Data (HAZNET)
Westvalley Properties was listed in this database for the generation of 0.42 tons of asbestos containing waste in 2002. The disposal method was identified as disposal/land fill.

5365 Prospect Road

Facility and Manifest Data (HAZNET)
Orchard Supply Hardware (OSH) is listed in this database for the generation of various quantities of latex waste, liquids with pH less than or equal to 2, off-specification aged or surplus inorganics, unspecified solvent mixture, alkaline solution without metals pH greater than or equal to 12.5, and laboratory waste chemicals between 2004 and 2013. Disposal methods were identified as landfill, transfer station, treatment tank, recycler, and/or storage, bulking and/or transfer offsite.

Copyright 2016 Converse Consultants

CHMIRS
PG&E is listed in this database for an unauthorized release of 40 gallons of non-PCB mineral oil in 1997. The spill was listed as contained.

4.3.2 Adjoining Properties

The following adjoining properties were identified in the EDR report:

- 5211 Prospect Road (EDR Map ID No. B33). This property is located in the shopping center east of the Property and is identified in the following databases:

  EDR Exclusive Historic Dry Cleaners (EDR Hist Cleaner)
  The site was listed as being occupied by West Valley Cleaners in 1970 and 1975; ESB Cleaners in 1999; and Crown Cleaners in 2001 and 2002.

  Based on the type of listing, direction of regional groundwater flow and appears to be in a non-contiguous portion of the adjacent shopping center, this site is not expected to be an environmental concern in connection with the Property.

- CSK Auto, Inc./Kragen Auto Parts, 18506 Prospect Road (EDR Map ID Nos. C34 and C35). This site is south of the Property, across Prospect Road, and was listed in the following database:

  CUPA Santa Clara
  The site is listed in this database as a Hazmat Storage & HMBP Facility with 4-6 chemicals that generates 100 kilograms per year to less than 5 tons per year.

  Facility and Manifest Data (HAZNET)
  The site is listed in this database for the generation of various quantities of aqueous solution with total organic residues 10 percent or more, other organic solids, unspecified oil-containing waste, and unspecified organic liquid mixture between 2000 and 2014. The disposal methods were identified as recycler, storage, bulking and/or transfer offsite, and other recover of reclamation for reuse.

  EDR US Historical Auto Stations (EDR US Hist Auto Stat)
  The facility is listed in this database in 2003.

  Based on the types of listings and direction of regional groundwater flow, this site is not expected to be an environmental concern in connection with the Property.

- Classic Car Wash Westgate, 18560 Prospect Road (EDR Map ID Nos. C36, C37, C39, C40, and C41). This site is south of the Property, across Prospect Road, and was listed in the following database:

  Historical and Active Underground Storage Tank (UST) Sites
  An inventory of USTs identified on the following databases: Facility Inventory Database (CA FID UST); UST; Hazardous Substance Storage Container Database

Copyright 2016 Converse Consultants

(HIST UST); and Statewide Environmental Evaluation and Planning System (SWEEPS UST).

UST - The facility is listed in this database. No additional pertinent information is provided.
CA FID UST – The facility is listed in this database as an active facility.
HIST UST – The facility is listed in this database for the operation of three (3) 1,000-gallon gasoline and/or diesel fuel USTs.
SWEEPS UST – The facility is listed in this database for the operation of three (3) USTs.

EDR US Historical Auto Stations (EDR US Hist Auto Stat)
The facility is listed in this database as Classic Car Wash in 2005.

Leaking Underground Storage Tanks (LUST) Sites
The facility is listed in this database with a status of "completed-case closed" as of May 15, 1996. The LUST case was related to an unauthorized release of gasoline that was limited to soil only.

Based on the regulatory status of the facility, and the location of the site with respect to the direction of regional groundwater flow, this site is not expected to be an environmental concern in connection with the Property.

- Tire Plus/Wheel Works, 18522 Prospect Road (EDR Map ID Nos. C43 and C44). This site is south of the Property, across Prospect Road, and was listed in the following database:

CUPA Santa Clara
The site is listed in this database as a facility that generates 100 kilograms per year to less than 5 tons per year, and as a HMBP facility with 4-6 chemicals.

EDR US Historical Auto Stations (EDR US Hist Auto Stat)
The facility is listed in this database as being occupied by Tire Plus Total Car Care from 2003 to 2008; and Morgan Tire & Auto Inc. in 2009.

Based on the types of listings, this site is not expected to be an environmental concern in connection with the Property.

4.3.3 Other Off-site Locations of Concern

Other off-site locations of concern identified by EDR within a maximum 1.0 -mile radius from the Property included registered UST sites, LUST sites, hazardous waste generators, historic auto, historic cleaners and CUPA sites.

The potential for environmental concern to the Property from these off-site locations of concern appear to be low due to one or more of the following: type of regulatory listing, location with respect to the direction of regional groundwater, distance from the Property, status of the case, remedial

Copyright 2016 Converse Consultants

efforts being directed by a regulatory agency, and/or potential responsible parties have been identified.

4.3.4 Orphan Listings

The EDR database report identified two (2) orphan listings. The locations of the sites were identified by address and were found to be in the general vicinity of the Property; however, due to distance, and regulatory stratus were determined to have a low potential for environmental concern to the Property.

4.4 Additional Environmental Record Sources

4.4.1 U.S. Department of Transportation, Pipeline and Hazardous Material Safety Administration (PHMSA)

PHMSA online mapping system for gas transmission pipelines or hazardous liquid pipelines in Santa Clara County was reviewed (https://www.npms.phmsa.dot.gov/default.htm). No pipelines are located on the Property or adjacent properties.

4.4.2 California Environmental Protection Agency (Cal/EPA), Department of Toxic Substances Control (DTSC)

No information regarding the Property was on file with DTSC.

The Envirostor website (http://www.envirostor.dtsc.ca.gov/public/) was reviewed for information, and the Property was not listed in the database.

4.4.3 Cal/EPA, San Francisco Regional Water Quality Control Board (RWQCB)

The RWQCB had no records on file regarding underground storage tank (UST) or Well Investigation Program (WIP) issues related to the Property.

The Geotracker website (http://geotracker.waterboards.ca.gov/) was reviewed for information, and two addresses associated with the Property were identified:

Midas Muffler at 5287 Prospect Road is listed in this database as a “completed-case closed” LUST case as of September 25, 1997. According to the database, a 250-gallon waste-oil UST was removed from

Copyright 2016 Converse Consultants

the facility on July 1, 1996 and following soil sampling and the removal of an unknown quantity of soil, the RWQCB issued case closure.

Dean's Goodyear at 5291 Prospect Road is listed in this database as an "open-inactive" case as of April 17, 2009. According to the database, the case is related to an unauthorized release of petroleum hydrocarbons that impacted a sump. Soil sampling was conducted in the vicinity of the sump and 810 mg/kg of heavy oil range hydrocarbons were detected in the sample. In an update letter dated October 22, 1996, Dean's Goodyear was listed as "remediation-no further action taken" and "Priority-Low". The case was transferred on July 22, 1992 from the oversight of the Santa Clara Valley Water District to the San Francisco Regional Water Quality Control Board because the unauthorized release was said to be related to a sump, and not a UST. The Santa Clara Valley Water District only helps with the oversight of UST cases.

Copies of the RQWCB information is provided in Appendix H.

4.4.4 California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR)

According the DOGGR on line mapping system (http://maps.conservation.ca.gov/doms/doms-app.html), there are no oil or gas wells located on the Property or adjoining properties.

4.4.5 Bay Area Air Quality Management District (BAAQMD)

The following record was provided by the BAAQMD:

- The document provided contains information regarding 5309 Prospect Road. The document identifies the tenant as Holiday Cleaners, and identifies that the cleaners emits approximately 0.8 tons of organics annually. No additional pertinent information is provided.

A copy of the BAAQMD record is provided in Appendix H.

4.4.6 Santa Clara County, Department of Environmental Health (DEH)

Summaries of the records provided by DEH are as follows. Copies of the provided records are provided in Appendix H.

Copyright 2016 Converse Consultants

5281 Prospect Road

- December 17, 2013, Hazardous Waste Generator Permit Application, Smart & Final Stores, LLC. According to the application, Smart & Final generates between 10 and 30 pounds of each of the following wastes annually: corrosive acidic, oxidizers, corrosive bases, universal wastes, and CA State regulated solids and liquids.

5285 Prospect Road

- Various documents for Longs Drug Store were provided by DEH. The documents were dated from 1990 to 2010. In 2010, it was noted that the store was no longer present. Over the years various inspections and notices of violations were documented. The violations included missing waste manifests, damage to products and missing labels.
- Hazardous Materials Business Plans February 2011 and 2012, CVS Pharmacy. According to the plan, CVS has hazardous materials on site related to the products which CVS stocks for retail purposes.
- April 25, 2013, Official Notice of Inspection, CVS Pharmacy. The facility was issued minor infractions for not having necessary spill kit in main waste storage area, and failure to retain three years of waste manifests.
- July 30, 2014, Application Coding and Computer Input Document (ACCID), CVS Pharmacy #9498. According to the application, CVS Headquarters request that all CVS be permitted as RCRA LQG because of P-listed wastes (Nicotine).

5287 Prospect Road

- Various inspection reports from 1992 to 2009 were provided by DEH. Violations noted in the reports included no accumulation dates for the hazardous material, missing labels, and no training records.
- April 2, 2010, Hazardous Materials Business Plan, Midas Muffler. According to the Plan, hazardous materials are stored on site, and hazardous wastes are generated. Various quantities of new and used motor oil, new and used coolant, new and used transmission fluid, acetylene, carbon dioxide, oxygen, and spent lead acid automotive batteries are stored on site.
- July 5, 2011, Notice of Inspection – Midas. According to the inspection report, the facility was issued multiple violations for training, paperwork, and labeling violations, as well as for failure to maintain storage tank records, and maintain spill prevention measures.
- In 2013, the business was noted as being closed and all permits were void.

Copyright 2016 Converse Consultants

5293 Prospect Road, Suite D

- May 8, 2007 – A Notice of Inspection was conducted which indicated hazardous waste was generated from ink cartridges. The store did not have a permit. The occupant was indicated as Cartridge World.
- May 31, 2007 – A computer input document indicated the store had a permit for the hazardous waste. A note on the document also indicated the store was exempt from the permitting.
- 2010 – A new permit for the generation of hazardous waste was issued to Cartridge World.
- A July 23, 2013 inspection report indicated the facility was closed and no longer in business.

5309 Prospect Road

- Various inspection reports from 1997 to 2011 were provided by DEH. The occupant was identified as Holiday Cleaners. In 1997, a note on the inspection report noted 67-gallons of PCE were on-site. Various violations noted on the inspection reports included missing hazardous waste manifests, missing labels, inoperable fire extinguishers, no business plans, no permits for the generation of hazardous waste.
- April 29, 2014, Notice of Inspection – Holiday Cleaners. According to the inspection report, five (5) 5-gallon drums of DF-2000 and three (3) 40-gallon tanks of DF-2000 were observed on-site. The inspection indicated the ownership was new and therefore, provided information on the CERS website and what was necessary in order to operate the drycleaners.
- December 23, 2014, Notice of Inspection – Holiday Cleaners. No violations were issued.

5365 Prospect Road

- A permit for the generation of hazardous waste was issued in 2004 to Orchard Supply Hardware #280 (OSH). The wastes generated included paint, batteries, corrosive liquids, gasoline/oil mixture and pesticides. All wastes were disposed of off-site.
- A hazardous waste inventory from 2007 was on file. The inventory noted that gasoline, waste paint, aerosols, batteries, mineral spirits and motor oil were shipped off-site for disposal.
- In 2007 and 2009, inspections were conducted by DEH at OSH and noted violations pertaining to: unmarked containers of hazardous materials, improper disposal of fluorescent light tubes, missing fire extinguishers and spill control materials.

Copyright 2016 Converse Consultants

- On April 23, 2012, OSH was notified that a business plan was due to the County.

4.4.7 Santa Clara Valley Water District

As of the date of this report, the Santa Clara Valley Water District has not responded to our request for records.

4.4.8 City of San Jose, Fire Department

As of the date of this report, the City of San Jose has not responded to our records request.

Ms. Loretta Worthy of the San Jose Fire Department was briefly interviewed for information pertaining to 5291 Prospect Road (Goodyear). Ms. Worthy stated that the San Jose Fire Department had no records pertaining to 5291 Prospect Road. Ms. Worthy stated she would provide responses to our records requests once she was able to search all Property addresses.

Copyright 2016 Converse Consultants

5.0 Property Reconnaissance

5.1 Methodology

On August 4, 2016, Converse visited the Property to evaluate present use and to identify observable environmental conditions at the Property. Our methodology involved walking the perimeters, center lines, and accessible interior areas of the buildings while noting observed evidence of present and potential environmental concerns.

A field-generated map is provided in Appendix B. Pertinent Property photographs are provided in Appendix C.

5.2 Limiting Conditions

Converse's findings are based on the Property conditions observed on Thursday August 4, 2016. Converse accessed the following buildings/tenant spaces:

Address	Tenant
5253	FedEx/Kinkos
5259	Legendary Beauty Salon
5269	Trader Joes
5273	Omaha Steaks
5275	Kenneth Ballentine, O.D.
5281	CVS
5285	Ethan Allen
5287	Vacant
5289A	Vacant
5291	AAA
5293C	Ogiasan Ramen
5295	Vacant
5301	Yao Yong Dance

Address	Tenant
5309	Holiday Cleaners
5313	Dominos Pizza
5337	Color Me Mine
5339	The UPS Store
5343	Schroeders
5347	Vacant
5353	Vacant
5357	Vacant
5365	OSH
5377	Vacant
5391	Dickey's BBQ Pit
5399	Boston Market
--	--

Tenant spaces not observed on the day of Converse's Property reconnaissance included the following:

Address	Tenant
5255	Sport Clips
5257	Permanent Nails
5263	Mod Pizza
5279	Sally Beauty
5289C	Four Seasons Skin Care

Address	Tenant
5293D	Hearwell
5317	Edible Arrangements
5325	Dolce Bella
5329	Genius Kids Club
5385	Jersey Mike's Subs

Copyright 2016 Converse Consultants

Address	Tenant
5289D-F	Dikram Yoga
5293	Cycle Bar

Address	Tenant
5389	Taco Bell
5395	Yogurtland

5.3 Interior Observations of Property

During our Property visit, Converse made the following observations of the interior of the Property's building(s):

Table 2 – Interior Observations of Property

Item or Condition	Observed Evidence	No Evidence Observed	Comments
Hazardous Substances & Petroleum Products:	☒	☐	Various quantities of cleaning agents, detergents, and minor quantities of paints were observed in the **CVS (5281)** and **Trader Joe's (5269)** tenant spaces. All observed materials were household quantities and were in original manufacturers packaging. No leaking or staining was observed. A hazardous material/damaged product storage area was observed in the rear of **CVS (5281)**. No leaking or staining was observed. Various quantities of paints, automotive lubricants, oils, coolants, transmission fluid, aerosol pesticides, aerosol paints, and cleaning agents were observed for sale in **OSH space (5365)**. In addition, a large (approximately 250-gallon), plastic-lined cardboard container for paint waste was observed in the rear of the OSH tenant space. No leaking or staining was observed. Five (5) 5-gallon cans of hydrocarbon fluid were observed in **Holiday Cleaners (5309)**. In addition, one (1) 55-gallon drum of unidentified solid waste was also observed in the tenant space. No major leaking or staining was observed. Minor quantities of cleaning agents were observed in several of the other tenant spaces. No leaking or staining

			was observed.
Storage Tanks & Related Equipment:	☐	☒	
Odors:	☐	☒	
Standing Surface Water or Other Pools of Liquid:	☐	☒	
Drums & Other Containers of Hazardous Substances, Petroleum Products, or Other Unidentified Contents:	☒	☐	See above.
Transformers or Equipment containing Polychlorinated Biphenyls (PCBs):	☐	☒	
Heating/Cooling System:	☒	☐	HVAC ductwork and vents were observed in several of the tenant spaces observed.
Stains or Corrosion on Floors, Walls, or Ceilings:	☐	☒	
Drains and Sumps:	☒	☐	Floor drains were observed in the kitchen areas of the restaurants.

In addition to the above items, Converse also made the following observation:

- Six (6) in-ground hydraulic lifts that appeared to be filled with concrete were observed in the former Midas Muffler tenant space (5287).

5.4 Exterior Observations of Property

During our Property visit, Converse made the following observations of the exterior of the Property:

5.5 Current Uses of Adjoining Properties

Based on our research and observations during our Property visit, the Property is bordered by the following:

Table 4 – Adjoining Property Use

Direction	Current Development
North:	Graves Avenue followed by single-family residential neighborhood.
Northeast:	Graves Avenue followed by single-family residential neighborhood.
Northwest:	Lawrence Expressway followed by multi-family residential dwellings.
South:	Prospect Road followed by commercial-retail developments (18470-18490 Prospect Road and 18568 Prospect Road), O'reilly Auto Parts (18506 Prospect Road), Classic Car Wash (18560 Prospect Road), and McDonalds (18578 Prospect Road).
Southeast	Prospect Road followed by Jack In The Box (5220 Prospect Road).
Southwest:	Intersection of Prospect Road and Lawrence Expressway followed by Prospect High School (18900 Prospect Road).
East:	Commercial retail shopping center
West:	Lawrence Expressway followed by multi-family residential dwellings.

5.6 Current Uses of Surrounding Area

Based on our research and observations during our Property visit, the surrounding area of the Property consists of residential and commercial developments.

Copyright 2016 Converse Consultants

6.0 Interviews

During the interviews, the owners and occupants were asked if they had any available documents that would be helpful. The documents that were requested are detailed in Section 3.1 of this report:

6.1 Property Owner

Mr. Darren Hedges, Property Manager and Owner representative, was interviewed during the Property reconnaissance. Mr. Hedges stated that he has worked at the Property since February of 2013. Mr. Hedges stated that the Property has been owned by Grosvener International since approximately 2008.

Mr. Hedges stated that he was unaware of any environmental issues pertaining to the Property or adjoining properties. Mr. Hedges stated that there are no oil or water wells on site. Mr. Hedges stated that there were probably minor amounts of potentially hazardous materials in tenant suites but that the materials were for retail purposes and that he didn't believe any hazardous materials were generated on site.

Mr. Hedges stated that he believed the former Midas Muffler business vacated the Property (5287 tenant space) in 2012. Mr. Hedges was unaware of whether the former hydraulic lifts and clarifier were removed from the Property or were closed in place.

Mr. Hedges stated that he had no information pertaining to the former Dean's Goodyear facility that operated at 5291 Prospect Road. Mr. Hedges was unaware of the open RWQCB case related to the former Dean's Goodyear facility and had no information about the case or whether USTs were formerly located at the facility.

Mr. Hedges was unaware of the types of solvent used at the Holiday Cleaners (5309) tenant space.

Mr. Hedges was unaware of any subsurface assessments having been conducted at the Property during his time at the Property, and/or prior to his employment at the Property.

6.2 Tenant/Occupant

Ms. Lou Martinez, Manager of CVS (5281), was interviewed. Ms. Martinez has managed the business for approximately 9 months. Ms. Martinez identified

Copyright 2016 Converse Consultants

multiple hazardous material storage bins in the rear of the store, and stated that corporate handles the removal of the bins.

Rosalie, a store manager at Ethan Allen (5285), was interviewed. Rosalie stated that there were no paints, thinners, or stains located at the store, and that all the furniture was constructed offsite. Rosalie stated that the store was only a furniture showroom.

Mr. John Miller, Owner of Holiday Cleaners (5309), was interviewed by telephone. Mr. Miller stated that he has owned the business for 2 years. Mr. Miller stated that the cleaners occupied the Property prior to his purchase of the business. Mr. Miller added that the current hydrocarbon machine was present when he purchased the business and to the best of his knowledge, the current hydrocarbon machine is approximately 4 to 5 years old.

Mr. Miller stated that he utilizes a closed-loop dry cleaning machine that utilizes hydrocarbon fluid. Mr. Miller stated that due to the closed-loop nature of the machine, no wastes are generated. Mr. Miller stated he uses approximately 5-gallons of hydrocarbon fluid monthly.

Mr. Mike Francis, Manager of OSH (5365), was interviewed. Mr. Francis stated that OSH had various quantities of hazardous paint, cleaners, and automotive related materials for sale at the store. Mr. Francis stated that in addition to those materials stored for retail purposes, OSH also ran a paint drop-off program in partnership with the County of Santa Clara. Mr. Francis identified an approximate 250-gallon, plastic-lined cardboard container for the storage of paints dropped off by the public.

6.3 State or Local Government Officials

Ms. Melinda Wong of the San Francisco RWQCB was interviewed. Ms. Wong stated that the RWQCB had no files related to the Property.

When Converse informed Ms. Wong that there was an open RWQCB case at 5291 Prospect Road, and a closed LUST case at 5287 Prospect Road, Ms. Wong stated that the RWQCB oversees cases in Santa Clara County in partnership with the Santa Clara Valley Water District. Ms. Wong stated that Converse should contact the SCVWD or City of San Jose Fire Department for information pertaining to the Property.

Mr. George Cook of the SCVWD was interviewed for information pertaining to the open case at the former Dean's Goodyear (5291) site. Mr. cook stated that the SCVWD stopped conducting oversight in conjunction with the RWQCB in

Copyright 2016 Converse Consultants

approximately 2004, and that all oversight for Santa Clara County would be conducted by the DEH or RWQCB.

Ms. Loretta Worthy of the City of San Jose Fire Department was contacted for information pertaining to the former Dean's Goodyear (5291) located at the Property. Ms. Worthy stated that the Fire Department had no files pertaining to that address, and that Converse should contact either DEH or the RWQCB.

6.4 Owners and Occupants of Neighboring Sites

No interviews of owners or occupants of neighboring sites were conducted.

7.0 Findings

A cursory summary of findings is provided below. However, details were not included or fully developed in this section, and the report must be read in its entirety for a comprehensive understanding of the items contained herein.

The Property appears to have been developed for residential use from as early as 1889 through 1899, and was further developed for agricultural use as early as 1939. The entire Property remained in agricultural use until 1968, when the eastern portion of the Property was developed with a portion of the existing shopping center. By 1973, the western portion of the Property has also been developed with retail buildings as part of the shopping center. Additional retail buildings were constructed at the Property in the 1980s, 1990s, and 2000s. By 2012, the Property was developed in its' current configuration.

The Property is owned by Grosvener International, and consists of nine (9) retail buildings with 39 total tenant spaces, in an operational shopping center (Westgate West). The anchor tenants at the Property include an Orchards Supply Hardware (OSH), CVS drug store, and Trader Joe's market.

The following observations of the Property were made during Converse's reconnaissance conducted on August 4, 2016:

- Various quantities of cleaning agents, detergents, and minor quantities of paints were observed in the CVS (5281) and Trader Joes (5269) tenant spaces. All observed materials were household quantities and were in original manufacturers packaging. No leaking or staining was observed.
- A hazardous material/damaged product storage area was observed in the rear of the CVS tenant space (5281). No leaking or staining was observed.
- Various quantities of paints, automotive lubricants, oils, coolants, transmission fluid, aerosol pesticides, aerosol paints, and cleaning agents were observed for sale in the OSH tenant space (5365). In addition, a large (approximately 250-gallon), plastic-lined cardboard container for paint waste was observed in the rear of the OSH tenant space. No leaking or staining was observed.
- Five (5) 5-gallon cans of hydrocarbon fluid were observed in the Holiday Cleaners tenant space (5309). In addition, one (1) 55-gallon drum of unidentified solid waste was also observed in the tenant space. No major leaking or staining was observed.
- Minor quantities of cleaning agents were observed in several of the other tenant spaces. No leaking or staining was observed.
- Utility-owned, pad-mounted transformers were observed along each of the four Property boundaries.

Copyright 2016 Converse Consultants

- One three-stage clarifier that appeared to be filled with concrete was observed on the western side of the former Midas Muffler tenant space (5287). In-ground hoists were also observed to be filled in with concrete.

The tenant space located at 5287 Prospect Road was identified as being occupied by Firestone in 1980; and Midas Muffler from 1985 through 2013. According to the Geotracker website, a 250-gallon waste-oil UST was removed from the Property on July 1, 1996. An unauthorized release was identified at the time of the UST removal. The facility was issued a "completed-case closed" designation for the LUST case on September 25, 1997.

The tenant space located at 5291 Prospect Road was identified as being occupied by Deane Bill Goodyear Auto Repair from 1970 to 1991; Lyons Restaurant from 1996 to 2000; Fish House and Hammerheads in 2006; and AAA from 2008 through 2013. Dean's Goodyear at 5291 Prospect Road is listed in the Geotracker database as an "open-inactive" case as of April 17, 2009. According to the Geotracker database, the case is related to an unauthorized release of petroleum hydrocarbons that impacted a sump. Soil sampling was conducted in the vicinity of the sump and 810 mg/kg of heavy oil range hydrocarbons were detected in the sample. In an update letter dated October 22, 1996, Dean's Goodyear was listed as "remediation-no further action taken" and "Priority-Low". The case was transferred on July 22, 1992 from the oversight of the Santa Clara Valley Water District to the San Francisco Regional Water Quality Control Board because the unauthorized release was said to be related to a sump, and not a UST. No records were found with the RWQCB, City of San Jose Fire Department and SCVWD.

The tenant space located at 5309 Prospect Road was identified as being occupied by Holiday Cleaners, a dry cleaning facility, from 1991 through 2013. Currently, a closed-loop hydrocarbon machine is utilized by the dry cleaner. It is estimated that a PCE machine was used up until approximately 2009-2010.

Several previous environmental assessments have been conducted at the Property between 1995 and 2011. The most recent Phase II Subsurface Assessment was conducted in 2001 and assessed Holiday Cleaners (5309), the former Midas Muffler (5287) and former Goodyear (5291) tenant spaces. Soil samples were collected and the results did not detect any significant levels of contaminates.

Several current and former tenants of the Property were listed in the regulatory database report. Databases included the RCRA, UST, HIST UST, LUST, CUPA, HAZNET, EMI, RGA LUST, Historical Auto Stations, and Historical Cleaners databases.

Four (4) adjoining properties were identified in the regulatory database report:

- The eastern adjoining property located 5211 Prospect Road was identified in the historical cleaners database in 1970, 1975, 2001, and 2002.

Copyright 2016 Converse Consultants

- The southern adjoining property located at 18506 Prospect Road was identified in the CUPA, HAZNET, and Historical Auto Stations databases.
- The southern adjoining property located at 18560 Prospect Road was listed in the UST, CA FID UST, HIST UST, SWEEPS UST, Historical Auto Stations, and LUST databases. The LUST case was issued a "completed-case closed" designation in 1996.
- The southern adjoining property located at 18522 Prospect Road was listed in the CUPA, and Historical Auto Stations databases.

Copyright 2016 Converse Consultants

8.0 Opinion

- The historical agricultural use at the Property is not considered a REC as the Property has since been redeveloped with the existing shopping center.

- The existing dry cleaning operations at 5309 Prospect Road (Holiday Cleaners) is considered a REC. Soil sampling occurred in 2001, which did not indicated levels of concern in the soil. However, it appears PCE use continued on-site after the 2001 assessment.

- The former Midas Muffler operations are considered a HREC as the LUST case at the Property was issued a "completed-case closed" designation and the facility no longer operates at the Property. It is unclear whether the clarifier and hydraulic lifts were removed or abandoned in place. However, soil sampling conducted in 2001 did not indicate any contamination at significant levels of concern.

- The former Dean's Goodyear operations at 5291 Prospect Road is an "open-inactive" RWQCB case. Based on regulatory records and interviews, the case appears to be related to a leak that impacted a sump. It does not appear as though USTs were present at the facility. Sampling of the sump indicated 810 mg/kg of heavy oil range TPH. According to the San Francisco RWQCB's most recent Environmental Screening Levels (ESLs) from February 2016, the ESL for TPH in the heavy oil range is 5,100 mg/kg. Soil sampling conducted in 2001 did not indicate any contamination at significant levels of concern.

- The existing commercial-retail operations, including the sale and generation of minor quantities of hazardous materials are not considered RECs. All housekeeping operations appeared to be acceptable throughout the various tenant spaces.

- The identification of various current and former Property tenants in the regulatory database report are not considered RECs based on the types of listings.

- The identification of adjoining properties in the regulatory database report are not considered RECs based on the types of listings, regulatory status of the facilities, and/or location of the sites with respect to the direction of regional groundwater.

- No controlled recognized environmental conditions (CRECs) or de minimus conditions were identified at the Property.

- No significant data gaps were identified that affect the ability of the Environmental Professional (EP) to identify RECs.

Copyright 2016 Converse Consultants

- There are no unusual circumstances where greater certainty is required regarding RECs.

Copyright 2016 Converse Consultants

9.0 Conclusions and Recommendations

Converse has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E1527-13 Westgate West, 5253-5399 Prospect Road, in the City of San Jose, Santa Clara County, California. Any exceptions to or deletions from this practice are described in the Limitations and Exceptions of Assessment section of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except for the following:

- The presence of an active dry cleaner on-site (Holiday Cleaners at 5309 Prospect Road). PCE was utilized on-site until possibly 2009-2010. Currently, a hydrocarbon fluid based machine is in operation. The last Phase II assessment was conducted in 2001 and only included soil sampling.

Former auto related uses at the Property included:

- Former Midas Muffler at 5287 Prospect Road. It is unclear whether a clarifier and hydraulic lifts have been removed from the site or were abandoned in place. Soil sampling conducted in 2001 did not indicate any contamination at significant levels of concern. No further action appears warranted at this time; however, if the clarifier and/or hoists are uncovered during any redevelopment activities, the features will need to be removed.

- Former Dean's Goodyear operations at 5291 Prospect Road is an "open-inactive" RWQCB case. It is unclear whether this is an open LUST case or related to a leak that impacted a sump. Sampling of the sump indicated 810 mg/kg of heavy oil range TPH, which is below the ESLs established by the San Francisco RWQCB.

  Converse recommends that a copy of a closure letter be obtained from the Property Owner. If no letter exists, and Donahue Schriber desires a formal, written closure from a regulatory agency, additional assessment may be requested by the regulatory agency.

Copyright 2016 Converse Consultants

10.0 Deviations and Limitations

The following limitations were encountered:

- As of the date of this report, the SCVWD and SJFD have not responded to our records request.

Copyright 2016 Converse Consultants

11.0 Additional Non-Scope Services

There are environmental issues outside the scope of the ASTM E1527-13 that can be assessed in connection with a commercial real estate transaction. These are dealt with as non-scope considerations since they do not typically present a Superfund Liability. The specific level of inquiry (if any) is defined in the Proposal which contains a Scope of Work. These non-scope services are very client specific and not covered by the ASTM standard. They are frequently related to the business environmental risk which is defined in the standard as "risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate…"

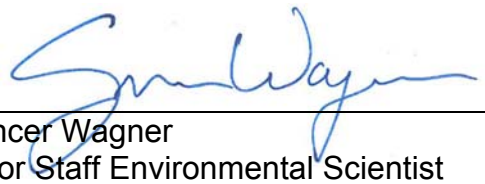
No non-scope issues were addressed in this report.

Copyright 2016 Converse Consultants

12.0 Signature of Environmental Professional

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training and experience to assess a *property* of the nature, history, and setting of the *subject property*. I have developed and performed the all appropriate inquiries in conformance with the standard and practices set forth in 40 CFR Part 312.



Spencer Wagner
Senior Staff Environmental Scientist

This Phase I ESA was completed by the above Environmental Professional. A complete list of preparers, and their responsibilities for this assessment, is provided in the following section (Section 13.0, List of Preparers).

Copyright 2016 Converse Consultants

13.0 List of Preparers

Norman S. Eke
Senior Vice President/Managing Officer

B.A., Liberal Studies, Environmental Studies Emphasis, University of California, Santa Barbara, 1988.
Cal/OSHA Certified Asbestos Consultant, #96-2093
NIOSH 582 Equivalent Training

Senior Vice President and Managing Officer of Converse's California Environmental offices. Mr. Eke has served as the Principal-in-Charge and Contract Administrator to deliver services to our public agency and private clients. Mr. Eke has 27 years of experience in the fields of Environmental Due Diligence including Phase I and Phase II Environmental Site Assessments, Asbestos surveys/specifications/abatement monitoring, Preliminary Endangerment Assessments and associated Supplemental Site Investigations and Removal Action Work Plans/Implementation, various forms of Remediation, Human Health Risk Assessment and Indoor Air Quality. Mr. Eke is the current Subcommittee Chairman for E.50-02 Real Assessment and Management of the ASTM E.50 Committee on Environmental Assessment, Risk Management, Corrective Action, which includes Phase I ESA standards. By way of this national leadership role, Mr. Eke has up to date knowledge on key environmental guidance relating to environmental assessment of real estate.

Principal area of responsibility for this ESA report: Quality Assurance/Quality Control and Technical Review.

Laura Tanaka
Principal Environmental Scientist

B.S., Biology, California State Polytechnic University, Pomona, 1987
Cal/OSHA Asbestos Consultant, 11-4708
DPH Certified Lead Inspector/Assessor, #I-3086
DPH Certified Project Designer, #D-3086
DPH Certified Project Monitor, #M-3086

Ms. Tanaka is currently responsible for the day-to-day operations of the Costa Mesa office. Ms. Tanaka has 26 years' experience with Phase I and II ESAs, Preliminary Endangerment Assessments, asbestos surveys, lead-based paint surveys, abatement monitoring, as well as hazardous material audits, completing business plans, and SCAQMD permitting. Current duties at Converse include project management,

Copyright 2016 Converse Consultants

business development and client maintenance, conducting/managing ESAs, and completing third party documents reviews.

Principal area of responsibility for this ESA report: Project Management, Client Point of Contact, and Report Review.

Spencer Wagner

Senior Staff Environmental Scientist

B.A., Environmental Science and Policy, California State University, Long Beach, 2006
B.A., Geography, California State University, Long Beach, 2006
40-Hour HAZWOPER Certified
Certified Wood Destroying Organism (WDO) Inspector

Mr. Wagner has over 10 years' experience conducting Phase I and II Environmental Site Assessments throughout California. Mr. Wagner has completed Phase I ESAs on undeveloped land, residential properties, commercial/retail facilities, industrial facilities, and school sites. His Phase II ESA experience includes collection of soil matrix, soil vapor, indoor air and groundwater samples. Phase II projects worked on have included residential properties, commercial warehousing sites, school sites, dry cleaning facilities, automotive service sites, metal plating facilities and multi-tenant commercial properties

Principal area of responsibility for this ESA report: Historical Research, Regulatory Agency Interaction, Property Reconnaissance, Interviews, and Report Generation.

1.0 Introduction

This report presents the results of the Converse Consultants (Converse) *Supplemental Phase II Environmental Site Assessment* (*ESA*) that was performed at the Westgate West Shopping Center (Site), which is located at the northeast corner of the intersection of Prospect Road and Lawrence Expressway, in the City of San Jose, Santa Clara County, California. The location of the Site is indicated on Figure 1, Site Location Map. Converse was retained by the Donahue Schriber Realty Group, LP (*User*) to conduct the *Supplemental Phase II ESA* at the Site. The scope of services provided were completed in general accordance with our proposals dated September 16, and October 17, 2016.

Converse generally followed the standard practices of the American Society for Testing Materials (ASTM) Designation: E1903-11 *Standard Practice for Environmental Site Assessments: Phase II Environmental Site Assessment Process* (ASTM, E 1903-11). The purpose of conducting the *Phase II ESA* in accordance with ASTM E1903-11 is to acquire and evaluate information sufficient to achieve the objective(s) set forth in the "Statement of Objectives" developed by the *User* and Converse.

The objectives of this *Phase II ESA* are to:

1. Further assess the potential threat to groundwater posed by the previously reported concentrations of tetrachloroethylene (PCE) in soil and soil vapor in the vicinity of the dry cleaners suite (5309 Prospect Road).
2. Assess the extents to which soil may have potentially been impacted by releases of hazardous substances from 12 hydraulic hoists formerly located in 6 service bays at the tenant space previously occupied by Midas Muffler (5287 Prospect Road).
3. Identify if potential target analytes are present at concentrations greater than threshold criteria.

Copyright 2016 Converse Consultants

2.0 Background

2.1 Site Description and Features

2.1.1 Current Uses of the Site

The Site is currently an active commercial shopping center occupied by various retail, restaurant, and commercial stores.

Holiday Cleaners, located at 5309 Prospect Road, is an operational dry cleaner that has been present at the shopping center since its inception in 1985. Although they currently use a hydrocarbon-based cleaning machine, records indicate that the drycleaner utilized a tetrachloroethylene (PCE)-based cleaning machine from 1985 until sometime around 2009-2010.

In addition, the Site was formerly occupied by Midas Mufflers at 5287 Prospect Road. This facility utilized six service bays that housed a total of 12 in-ground hydraulic lifts.

2.1.2 Location and Legal Description

The Site is located at 5253-5399 Prospect Road, City of San Jose, Santa Clara County, California. The building in which the drycleaners is located is identified as being on Parcel 6 (APN 381-36-023) in an ALTA survey prepared in 2005. Parcel 6 is located in the interior of the subject property and consists of a 16,752 square foot building housing multiple businesses. The building in which Midas Mufflers was formerly located is identified as being on Parcel 4 (APN 381-36-021) in the ALTA survey. Parcel 4 is located in the interior of the subject property and consists of a 4,587 square foot building.

2.1.3 Site and Vicinity General Characteristics

The areas surrounding the Site consists of retail and commercial properties to the east and south, a school across the street to the southwest, and residential use to the west and north.

2.2 Physical Setting

2.2.1 Topography

The Site is located approximately 250 feet above mean sea level with surface topography sloping towards the northeast (United States Geological

Copyright 2016 Converse Consultants

Survey [USGS] Topographic Map, San Jose West, California, 1961 photo revised 1981).

2.2.2 Geology

The Site is situated near the southwestern portion of the Santa Clara Valley within the Coast Ranges geomorphic province. The Santa Clara valley is generally bounded by the Santa Cruz Mountains to the west, by the San Francisco Bay to the north, and by the Diablo Range to the east. According to the 1991 regional geologic map of California, San Francisco-San Jose quadrangle, the near surface soils within the general vicinity are recognized as quaternary alluvium.

A foundation investigation was conducted by Advanced Soil Technology in 1995. During this foundation investigations, two (2) exploratory borings were advanced to depths ranging from 15 to 40 feet below ground surface (bgs). The borings revealed predominantly gravelly silty sand with clay binder to the depth of approximately 30 feet bgs. The soil was moist and dense. A dense layer of gravelly coarse sand along with rock fragments was encountered at the depth of 30 feet bgs to the bottom of the borehole (40 feet).

2.2.3 Hydrogeology

Historical groundwater elevation data provided by the Santa Clara valley water district indicated general groundwater depth in the area at 50 to 100 feet bgs. The nearest well to the Site is located approximately 2,800 feet to the north. In July 2016 the depth to groundwater in this well was reported at 141.9 feet bgs, but this may not be representative of the depth to the shallowest aquifer.

According to the Santa Clara Valley Water District, the general groundwater gradient is towards the San Francisco bay to the north. However, the Site lies within a depression with gradients to the south and north.

According to data obtained from the State Water Resources Control Board's Geotracker database for a property located approximately 600 feet southeast of the Site at 1704 Saratoga Avenue, groundwater in the vicinity of the Site in 2013 reportedly ranged from 86 to 87 feet bgs, and groundwater flow was to the southeast.

2.3 Site History and Land Use

Holiday Cleaners is an original tenant to the Westgate West shopping center at 5309 Prospect Road, which was constructed in the center of the Site in 1985.

Copyright 2016 Converse Consultants

The tenant space located at 5287 Prospect Road was identified as being occupied by Firestone in 1980; and Midas Muffler from 1985 through 2013. According to the Geotracker website, a 250-gallon waste-oil underground storage tank (UST) was removed from the Site on July 1, 1996. An unauthorized release was identified at the time of the UST removal. The facility was issued a "completed-case closed" designation for the Leaking UST (LUST) case on September 25, 1997. During a site visit conducted by Converse on August 4, 2016 one three-stage clarifier that appeared to be filled with concrete was observed on the western side of the former Midas Muffler tenant space (5287), and in-ground hoists at this location were also observed to be filled in with concrete.

2.4 Summary of Previous Assessment Reports

Converse prepared a Phase I ESA for the Site dated August 15, 2016. That report presents a summary of seven (7) reports previously prepared for the Site. Of those reports, the only one related to this current investigation was a Phase II Subsurface Investigation dated November 19, 2001 prepared by NAC. Three (3) soil borings were completed at the drycleaner tenant space (two borings to 5 feet below the floor inside the tenant space, and one boring to sampling refusal at 29 feet outside the entrance to the space). A total of eight soil samples from the dry cleaner borings were tested for volatile organic compounds (VOCs). According to NAC, concentrations of reported organic compounds were below laboratory detection limits in all 8 soil samples. No samples of soil vapor were collected.

Refer to Converse's Phase I ESA for a summary of other assessments previously conducted by others at the Site.

The Converse Phase I ESA revealed no evidence of *recognized environmental conditions (RECs)* in connection with the Site, except for the following:

- The presence of an active dry cleaner on-site (Holiday Cleaners at 5309 Prospect Road). PCE was utilized on-site until possibly 2009-2010. Currently, a hydrocarbon fluid based machine is in operation. The last Phase II assessment was conducted in 2001 and only included soil sampling.

Former auto related uses at the Site included:

- Former Midas Muffler at 5287 Prospect Road. It is unclear whether a clarifier and hydraulic lifts have been removed from the site or were abandoned in place. Soil sampling conducted in 2001 did not indicate any contamination at significant levels of concern. No further action appears warranted at this time; however, if the clarifier and/or hoists are uncovered during any redevelopment activities, the features will need to be removed.

Copyright 2016 Converse Consultants

- Former Dean's Goodyear operations at 5291 Prospect Road is an "open-inactive" RWQCB case. It is unclear whether this is an open LUST case or related to a leak that impacted a sump. Sampling of the sump indicated 810 milligrams per kilogram (mg/kg) of heavy oil range TPH, which is below the Environmental Screening Levels (ESLs) established by the San Francisco Regional Water Quality Control Board (RWQCB).

In August 2016, Converse completed a *Limited Phase II ESA* at Holiday Cleaners (5309 Prospect Road), dated August 16, 2016, that consisted of four borings completed to 15.5 feet bgs. Three (3) borings were completed in the vicinity of the current dry cleaning machine (GP-2, GP-3, and GP-4), and one (1) was completed in the parking lot in front of the suite (GP-1). Soil samples analyzed were reported to contain PCE, but at concentrations less than the San Francisco Bay RWQCB's Tier 1 ESL. No other VOCs were reported in the soil samples analyzed. A total of 15 VOCs were detected in the soil vapor samples, but only PCE was reported in excess of its ESL. The PCE concentrations in all soil vapor samples from interior boring locations ranged from 260,000 to 987,000 micrograms per cubic meter (µg/m^3), and exceeded the ESL of 2,100 µg/m^3. The maximum PCE concentration from the location in front of the suite of 1,830 µg/m^3 was less than the ESL, but concentrations were noted to be increasing with depth. Converse recommended further assessment to evaluate the potential threat to indoor air and groundwater.

In August 2016, Converse completed an *Indoor Air Sampling* event at the Site, report dated August 24, 2016, that consisted of the collection of indoor air samples from the Holiday Cleaners suite, six (6) neighboring suites, and at one outdoor location. The samples were collected over 8-hours using 6-liter summa canisters, primarily while the businesses were closed for the evening, between August 17 and 18, 2016. The following is a summary of the findings:

- 14 of the 15 VOCs previously detected in soil vapor samples were detected in one or more of the indoor air samples. The majority of these compounds were reported in indoor air samples at concentrations similar to what was estimated based on the soil vapor concentrations, which indicates that vapor intrusion may be occurring at the Site, and that the rate of attenuation may be similar to that assumed in the previous *Limited Phase II ESA.*
- The following compounds were detected in one or more of the indoor air samples at concentrations in excess of their respective screening levels: benzene, 1-3 butadiene, 1,2-dibromoethane, 1,4-dichlorobenzene, naphthalene, vinyl chloride, and PCE.
    - Historic onsite dry cleaning operations are likely the source of the elevated PCE concentrations in soil vapor and indoor air, as well as the potential source of vinyl chloride concentrations in indoor air. The source of these other compounds is unknown.
    - With the exception of the PCE concentration in sample WW5309, all reported concentrations in excess of their screening levels are considered

Copyright 2016 Converse Consultants

to be relatively minor exceedances (less than 10x their screening level) which would likely result in a risk to human health that falls within the EPAs risk management range of $1E^{-4}$ to $1E^{-6}$. The maximum PCE concentration reported in the sample from the dry cleaner suite was considered to be a more significant concern.

Converse concluded the following:

- The Site has been impacted by releases from historic onsite dry cleaning operations. PCE concentrations in indoor air samples WW5309 and WW5337 (29.0 and 3.13 µg/m3, respectively) exceeded the screening level of 2.1 µg/m3. The maximum concentration reported in the sample collected from the dry cleaner suite is considered to be a significant concern. However, it is unclear what fraction of the PCE present in the suite is resulting from vapor intrusion, and what, if any, portion of the concentration may be attributable to above grade sources (such as garments, spot treatment chemicals, building materials).
- Intrusion of subsurface vapors to indoor air may be occurring.
- The source of the majority of the 58 VOCs detected in indoor air samples, other than PCE and its breakdown byproducts (TCE, cis-1,2-dichloroethene, and vinyl chloride), are unknown. However, based on the concentrations reported, these compounds are not considered to pose an unacceptable risk to the health of property occupants.

Converse recommended further assessment of the Site to evaluate the potential threat to groundwater posed by the previously reported concentrations of PCE in soil vapor, as well to evaluate potential mitigation or remediation measures to reduce the potential vapor intrusion risk to Site occupants.

Copyright 2016 Converse Consultants

3.0 Work Performed and Rationale

3.1 Scope of Assessment

A conceptual model was developed based on data presented regarding the present and historic use of the Site.

3.1.1 Target Analytes

Data obtained during the previous investigations indicate that VOCs, specifically PCE, are present in the soil, soil vapor, and indoor air at the Site.

3.1.2 Target Analytes First Entered the Environment

The data indicates that target analytes would have first entered the environment by offsite surface spills or releases to the surface soil.

3.1.3 Environmental Media and Locations Most Likely to Have the Highest Concentrations of Target Analytes

The environmental media most likely to have the highest concentrations of target analytes is soil vapor.

This *Limited Phase II ESA* consisted of the following primary elements:

- Utility Clearance - The work areas and proposed boring locations were marked, and Underground Service Alert (USA) was notified of our intent to drill so that subsurface utilities would be marked.

- Eight (8) borings (SV-1 through SV-8) were completed using a Geoprobe drill rig to depths of 44 feet below ground surface (bgs) or refusal in the vicinity of the dry cleaners suite. Soil samples were collected at 5-foot intervals, with subsamples collected using Encore containers. A portion of all soil samples was screened in the field for VOCs using a PID. Soil vapor probes were installed in each boring at 4 depths using ¼-diameter Teflon tubing, and were covered at ground surface with a traffic-rated well box.

- Co-located borings were attempted at two (2) locations (SV-1A and SV-7A/B) around the cleaners suite using a cone penetration testing (CPT) drill rig. The desired depth of 100 feet bgs was not achieved at either location due to refusal. Two borings were attempted at location SV-7 (SV-7A and SV-7B) but refusal was encountered at depths of 34 and 32 feet respectively. Refusal was encountered at 40 feet bgs at location SV-1A. Electronic sensors at the tip of the drilling rod measure soil properties and approximate the soil types, and a

Copyright 2016 Converse Consultants

membrane interphase probe (MIP) measured relative concentrations of VOCs with depth while drilling. Copies of the CPT data are included in Appendix B.

- Twelve (12) borings (M-1 through M-12) were completed using Geoprobe drill rig to depths of 20 feet bgs or refusal in the vicinity of the former hoists (2 borings per service bay) at the former Midas Muffler suite. Soil samples were collected at 5 foot intervals.

- Laboratory analysis of samples as follows:

  - Select soil samples from borings SV-1 through SV-8 near the dry cleaners were analyzed for VOCs in accordance with EPA Test Method 8260B.
  - All soil samples from borings M-1 through M-12 in the former Midas area were analyzed in accordance with EPA test methods 8082 for Polychlorinated Biphenyls (PCBs), and 8015D for total petroleum hydrocarbons (TPH) in the diesel and heavy oil range.
  - All soil vapor samples from borings SV-1 through SV-8 near the dry cleaners were collected and analyzed for VOCs in accordance with EPA Test Method 8260B by a mobile laboratory.

3.2 Soil Sample Collection

Borings were advanced at eight (8) locations in the vicinity of the cleaners (SV-1 through SV-8), and 12 borings were advanced near former hydraulic hoists at the former Midas Mufflers (M-1 through M-12). These borings were all completed using direct-push (Geoprobe®) drilling methods. Soil samples were generally collected from each boring at 5-foot intervals. The acetate liners, which contained the retrieved soil cores, were cut at the appropriate sample depths. Subsamples were collected from each sample sleeve using EnCore sample containers in accordance with EPA Method 5035. A portion of all soil samples were transferred into sealable bags and screened in the field for VOCs using a photo ionization detector (PID). The sample containers were sealed, labeled, and placed on ice for transport to a California-certified laboratory under chain-of-custody control.

At locations SV-7 and SV-8 refusal was encountered during drilling at a depth of 37 feet bgs. All other borings were completed to their proposed depths of 44 or 20 feet bgs.

3.3 Groundwater Sample Collection

Groundwater was not encountered during this assessment in borings completed to maximum depths of 44 feet bgs.

Copyright 2016 Converse Consultants

3.4 Soil Vapor Sample Collection

At locations SV-1 through SV-6 soil vapor probes were installed at depths of 5, 15, 30 and 44 feet bgs, and at locations SV-7 and SV-8 they were installed at 5, 15, 25/26 and 37 feet bgs. Six (6)-inch long porous probes, connected to ¼-inch diameter Teflon tubing, were inserted to the bottom of the bore holes and an approximate 1-foot sand pack was then placed around and slightly above the probes. The boreholes were then sealed with hydrated bentonite up to the next interval where a probe was installed in a similar manner. The borehole was backfilled with hydrated bentonite up to 2 feet bgs, and a protective cover was then set in place over the probes using concrete.

Subsurface conditions were allowed to re-equilibrate for a minimum period of 2 hours prior to sample collection. Following equilibration, the probes were then purged and sampled in general accordance with the Joint Department of Toxic Substances Control (DTSC)/Regional Water Quality Control Board (RWQCB) Advisory for Active Soil Gas Investigations, dated July, 2015. The rate at which tubing was purged and samples were collected did not exceed 200 milliliters per minute. Approximately 3 well-volumes of air was purged from the line using a low flow pump, and then samples were collected using a glass syringe. The sample was transferred directly from the syringe into the mobile laboratories equipment for analysis.

3.5 Field Quality Assurance/Quality Control

The following are some of the quality assurance and quality control measures that were taken to evaluate the quality of the data generated:

- Standard EPA sample handling protocol including chain-of-custody control were followed.
- New dedicated sampling equipment (probes, gloves, acetates sleeves, Teflon tubing) were used for the collection of samples.
- Prior to purging and sampling of soil vapor at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably.

  Tracer gas was applied at the ground surface near the probes during sample collection to evaluate if ambient air was being drawn through a leak in the fittings.

Copyright 2016 Converse Consultants

3.6 Chemical Analytical Methods

The soil samples were submitted to American Environmental Testing Laboratory, Inc. (AETL) in Burbank, under chain-of-custody documentation. Select soil samples from borings SV-1 through SV-8 near the dry cleaners were analyzed for VOCs in accordance with EPA Test Method 8260B. All soil samples from borings M-1 through M-12 in the former Midas area were analyzed in accordance with EPA test methods 8082 for PCBs, and 8015D for TPH in the diesel and heavy oil range. A copy of the laboratory report is provided in Appendix C.

The soil vapor samples were all collected and analyzed in the field by Jones Environmental for VOCs in accordance with EPA Method 8260B. A copy of the laboratory report is provided in Appendix D.

Copyright 2016 Converse Consultants

4.0 Presentation and Evaluation of Results

4.1 Subsurface Conditions

The soils observed in subsurface samples collected were generally clayey silts to silty sands in the upper 15 to 20 feet, and then silty sand to gravelly sand to maximum depths explored (44 feet bgs). The soil samples were generally brown to dark brown in color and slightly moist to dry. No staining, odors, or other signs of contamination were noted in any of the samples. See the boring logs in Appendix A for complete description of the soil types encountered during drilling activities.

Groundwater was not encountered in any of the borings completed to depths up to 44 feet bgs. Refusal due to hard conditions was encountered at approximately 37 feet bgs during the drilling of borings SV-7 and SV-8.

4.2 Analytical Results

Data for the soil matrix and soil vapor are included below and in Tables 1, 2, and 3. Analytical reports from the laboratories for the soil, and soil vapor samples are provided in Appendices B and C, respectively.

4.2.1 Soil Matrix Samples

Holliday Cleaners
Tetrachloroethylene (PCE) was the only VOC detected in the soil samples. The maximum PCE concentration of 0.0794 mg/kg (during the September 21, 2016 event) is less than the maximum reported during the August 10, 2016 assessment (0.180 mg/kg), and less than the Tier 1 ESL screening level of 0.420 mg/kg.

Midas Muffler
No PBCs were detected in any of the soil samples.

Total petroleum hydrocarbons (TPH) in the diesel range was reported in three (3) samples at a maximum concentration of 380 mg/kg, which is less than the Tier 1 ESL of 1,000 mg/kg. TPH in the heavy oil range was reported in four (4) samples at a maximum concentration of 6,410 mg/kg which exceed the Tier 1 ESL of 500 mg/kg as a potential odor nuisance, but not as a threat to worker exposure or groundwater.

Copyright 2016 Converse Consultants

4.2.2 Soil Vapor

A total of 13 VOCs were detected in the soil vapor samples. Concentrations of the chemicals reported in soil vapor samples were evaluated relative to ESLs, and to screening levels that were calculated using formulas presented in the DTSC Vapor Intrusion Guidance, the Regional Screening Levels (RSLs) for indoor air concentrations (for select chemicals screening levels established by DTSC in HHRA Note 3 were used in place of RSL values), and an attenuation factor associated with the existing development of the Site.

During this assessment PCE was detected at a maximum concentration of 765,000 ug/m^3 in the sample from 15 feet bgs at location SV-2. The concentrations at location SV-2 are generally consistent with those from GP-2 and GP-3 from the prior assessment, and indicate a potential threat to human health from vapor intrusion.

Concentrations of PCE decreased with distance away from the rear of the cleaners, with maximum concentrations at locations SV-1, -3, -4, -6, and -8 being less than the screening level of 2,100 ug/m^3. Therefore, the threat to human health from potential vapor intrusion appears to latterly be limited to an approximate 50-foot radius centered around the rear of the cleaners.

Below 15 feet bgs, PCE concentrations generally decreased with depth (but not at location SV-7). Concentrations at multiple depths from locations SV-2 and SV-7 were determined to pose a potential threat to groundwater using the RWQCB Attenuation Factor Method for VOC.

All reported concentrations of the other 12 VOCs were less than the calculated human-health based soil vapor screening levels, and they do not appear to pose a potential threat to groundwater.

4.3 Data Quality Assurance/Quality Control

4.3.1 Hold Times

All soil samples were transported to the laboratory under chain-of-custody documentation, and were analyzed within the appropriate hold times. All soil vapor samples were analyzed on site.

4.3.2 Laboratory Quality Assurance

The laboratory provided data to estimate precision, accuracy, and bias. The laboratory report indicates that the method blanks and matrix spikes met quality assurance objectives. Overall, the presented data are reliable and useable for project decision making. Laboratory Quality Assurance data are included in the analytical reports in Appendices C and D.

Copyright 2016 Converse Consultants

4.3.3 Detection Limits

- The Practical Quantitation Limits (PQLs) for the VOCs in the soil ranged from 10 to 50 mg/kg.
- The PQLs for TPH in soil were 1.0 mg/kg for the gasoline range (C4-C10), and 5 mg/kg for diesel range (C11-C12) and oil range (C23-C35) hydrocarbons.
- The Practical Quantitation Limits (PQL) for VOCs in soil vapor ranged from 8.0 to 400 µg/m^3 for all analytes except PCE. Due to the need for dilutions, PQLs for PCE ranged from 8.0 to 2,000 ug/m^3.

Copyright 2016 Converse Consultants

5.0 Interpretation and Conclusions

5.1 RECs and Potential Release Area(s)

Previous assessment conducted at the Site identified a recognized environmental condition (REC) due to historic dry cleaning operations at the current cleaners.

5.2 Conceptual Model Validation/Adequacy of Investigations

It is our opinion that the field and analytical data validated the conceptual model and the investigations adequately evaluated the identified objectives of the *Limited Phase II ESA*.

5.3 Absence, Presence, Degree, Extent of Target Analytes

Holiday Cleaners

PCE, the primary target analyte associated with historic dry cleaning operations at the Site, was detected in the soil matrix and soil vapor samples.

PCE was the only VOC detected in soil matrix samples. The maximum PCE concentration of 0.0794 mg/kg during this supplemental assessment is less than the maximum reported during the prior assessment (0.180 mg/kg), and less than the Tier 1 ESL screening level of 0.420 mg/kg.

A total of 13 VOCs were detected in the soil vapor samples, but PCE was the only compound detected at concentrations considered to pose a potential threat to human-health or groundwater. The maximum concentration of PCE (765,000 ug/m^3) exceeds the soil vapor screening level (2,100 ug/m^3) and is considered to pose a potential threat to human health from vapor intrusion. This threat appears to be limited latterly to an approximate 50-foot radius centered around the rear of the cleaners based on maximum PCE concentrations at locations SV-1, -3, -4, -6, and -8 being less than the screening level. Based on the results of prior indoor air sampling it appears that PCE-impacted soil vapor may be intruding through the building foundation and impacting indoor air quality. Concentrations of PCE at multiple depths from locations SV-2 and SV-7 were determined to pose a potential threat to groundwater using the RWQCB Attenuation Factor Method for VOC.

Midas Muffler

Impacts to the soil in the former Midas Muffler tenant space are not a significant concern. In the soil samples from the former Midas Muffler tenant space, no PBCs

Copyright 2016 Converse Consultants

were detected, and all TPH concentrations are less than Tier 1 ESLs for worker exposure and protection of groundwater.

5.4 Other Concerns

5.4.1 Significant Assumptions

No significant assumptions need to be noted in this *Limited Phase II ESA* report.

5.4.2 Limitations and Exceptions

Borings completed with a CPT drill rig were unable to reach their intended depth of 100 feet bgs due to refusal encountered between 32 and 40 feet bgs. These borings were intended to further evaluate the potential threat to groundwater posed by vapor concentrations at depths greater than 44 feet bgs.

5.4.3 Special Terms and Conditions

No special terms or conditions need to be noted in this *Limited Phase II ESA* report.

5.5 Conclusions/Objectives Met

Converse has performed a *Supplemental Phase II ESA* at Westgate West in the City of San Jose, Santa Clara County, California, in general conformance with the scope and limitations of ASTM, E1903-11 and the following objectives:

- Further assess the potential threat to groundwater posed by the previously reported concentrations of tetrachloroethylene (PCE) in soil and soil vapor in the vicinity of the dry cleaners suite (5309 Prospect Road).
- Assess the extents to which soil may have potentially been impacted by releases of hazardous substances from 12 hydraulic hoists formerly located in 6 service bays at the tenant space previously occupied by Midas Muffler (5287 Prospect Road).
- Identify if potential target analytes are present at concentrations greater than threshold criteria.

Based on the results of this assessment it appears that the Site has been impacted by releases from historic dry cleaning operations. Concentrations of PCE were detected in the soil vapor at levels that pose a potential threat to the health of Site occupants from vapor intrusion, as well as a potential threat to groundwater.

Copyright 2016 Converse Consultants

6.0 Recommendations

Based on the results of this assessment, Converse recommends that Supplemental Phase II ESA activities be conducted to further evaluate the potential threat to groundwater. Due to the geologic conditions beneath the Site, these additional activities should include installation of groundwater monitoring wells using hollow stem auger drilling methods, and the potential installation of deep soil vapor monitoring probes.

7.0 Reliance

This report is for the sole benefit and exclusive use of the Donhaue Schriber Realty Group in accordance with the terms and conditions of a mutually agreed upon contract under which these services have been provided. The preparation of this report has been in accordance with generally accepted environmental practices. No other warranty, either express or implied, is made. This report should not be regarded as a guarantee that no further contamination beyond that which could be detected within the scope of this assessment is present at the Site.

This report should not be regarded as a guarantee that no further contamination, beyond that which could be detected within the scope of this assessment, is present at the Site. Converse makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others. It is possible that information exists beyond the scope of this assessment. It is not possible to absolutely confirm that no hazardous materials and/or substances exist at the Site. If none are identified as part of a limited scope of work, such a conclusion should not be construed as a guaranteed absence of such materials, but merely the results of the evaluation of the Site at the time of the assessment. Also, events may occur after the Site visit, which may result in contamination of the Site. Additional information, which was not found or available to Converse at the time of report preparation, may result in a modification of the conclusions and recommendations presented.

Any reliance on this report by Third Parties shall be at the Third Party's sole risk. Should the User wish to identify any additional relying parties not previously identified, a completed Application of Authorization to Use (see following page) must be submitted to Converse Consultants.

Log of Boring No. SV-1

Dates Drilled: 9/22/2016 Logged by: MVF Checked By: MVF

Equipment: GEOPROBE Driving Weight and Drop: N/A

Ground Surface Elevation (ft): N/A Depth to Water (ft): NOT ENCOUNTERED

Depth (ft)	Graphic Log	SUMMARY OF SUBSURFACE CONDITIONS	SAMPLES DRIVE	SAMPLES BULK	PID (PPM)	OTHER
		This log is part of the report prepared by Converse for this project and should be read together with the report. This summary applies only at the location of the boring and at the time of drilling. Subsurface conditions may differ at other locations and may change at this location with the passage of time. The data presented is a simplification of actual conditions encountered.				
		0-4" ASPHALT				
		CLAYEY SILT (ML): dark brown, slightly moist, stiff.				
5						
10						
		SANDY SILT (ML): light brown, very fine to coarse sand, poorly sorted, slightly moist.				
15		**SILTY CLAY (CL):** brown, moist, slightly stiff.				
		GRAVELLY SILT (ML): light brown, moist, slightly stiff.				
20		**SILTY CLAY (CL):** brown, slightly moist, stiff, minor very fine to fine sand.				
		SILTY SAND (SM): light brown, minor gravel, poorly sorted, slightly moist.				
25		**SAND (SW):** brownish yellow, very fine to fine, slightly cemented, dry, stiff.				
30		**SILTY SAND (SM):** brown, slightly moist, very fine to fine grained sand, trace gravel, poorly sorted.

Converse Consultants
Attn: Michael Van Fleet

Subject: High Resolution Site Characterization (HRSC) and
Cone Penetration Testing (CPT) Investigation.
Holiday Cleaners
San Jose, California
GREGG Project Number: 16-168MA

Dear Mr. Van Fleet:

The following report presents the results of Gregg Drilling and Testing's Cone Penetration Test and High Resolution test investigation for the above referenced site. The following testing services were performed:

1	Membrane Interface Probe	(MIP)	☒
2	Cone Penetration Tests	(CPTU)	☒

A list of reference papers providing additional background on the specific tests conducted is provided in the bibliography following the text of the report. If you would like a copy of any of these publications or should you have any questions or comments regarding the contents of this report, please do not hesitate to contact our office at (562) 427-6899.

Sincerely,

GREGG Drilling & Testing, Inc.

Frank Stolfi
HRSC Division Manager

Mary Walden
Operations Manager

Cone Penetration Testing Procedure (CPT)

Gregg Drilling carries out all Cone Penetration Tests (CPT) using an integrated electronic cone system, *Figure CPT*.

The cone takes measurements of tip resistance (q_c), sleeve resistance (f_s), and penetration pore water pressure (u_2). Measurements are taken at either 2.5 or 5 cm intervals during penetration to provide a nearly continuous profile. CPT data reduction and basic interpretation is performed in real time facilitating on-site decision making. The above mentioned parameters are stored electronically for further analysis and reference. All CPT soundings are performed in accordance with revised ASTM standards (D 5778-12).

The 5mm thick porous plastic filter element is located directly behind the cone tip in the u_2 location. A new saturated filter element is used on each sounding to measure both penetration pore pressures as well as measurements during a dissipation test (*PPDT*). Prior to each test, the filter element is fully saturated with oil under vacuum pressure to improve accuracy.

When the sounding is completed, the test hole is backfilled according to client specifications. If grouting is used, the procedure generally consists of pushing a hollow tremie pipe with a "knock out" plug to the termination depth of the CPT hole. Grout is then pumped under pressure as the tremie pipe is pulled from the hole. Disruption or further contamination to the site is therefore minimized.

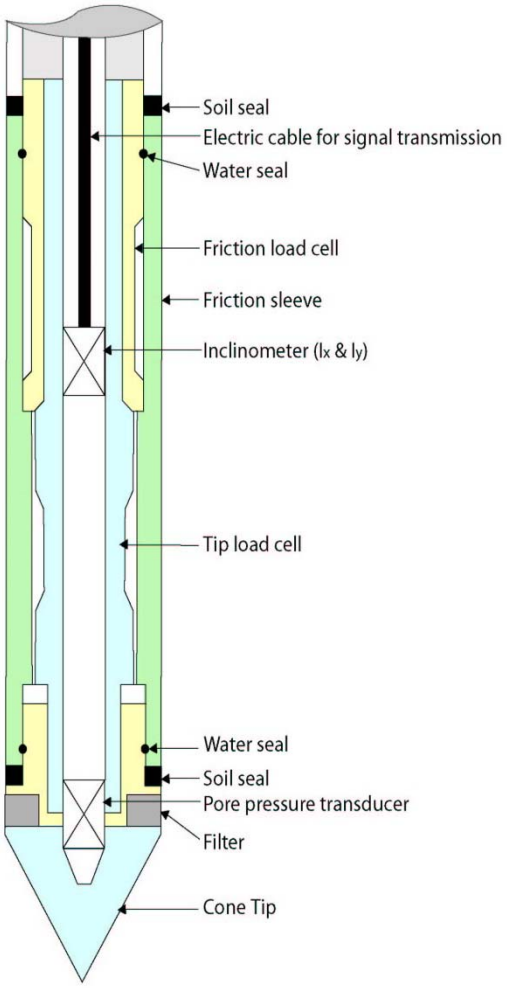

Figure CPT

Gregg 15cm^2 Standard Cone Specifications

Dimensions	
Cone base area	15 cm^2
Sleeve surface area	225 cm^2
Cone net area ratio	0.80
Specifications	
Cone load cell	
Full scale range	180 kN (20 tons)
Overload capacity	150%
Full scale tip stress	120 MPa (1,200 tsf)
Repeatability	120 kPa (1.2 tsf)
Sleeve load cell	
Full scale range	31 kN (3.5 tons)
Overload capacity	150%
Full scale sleeve stress	1,400 kPa (15 tsf)
Repeatability	1.4 kPa (0.015 tsf)
Pore pressure transducer	
Full scale range	7,000 kPa (1,000 psi)
Overload capacity	150%
Repeatability	7 kPa (1 psi)

Note: The repeatability during field use will depend somewhat on ground conditions, abrasion, maintenance and zero load stability.

Cone Penetration Test Data & Interpretation

The Cone Penetration Test (CPT) data collected are presented in graphical and electronic form in the report. The plots include interpreted Soil Behavior Type (SBT) based on the charts described by Robertson (1990). Typical plots display SBT based on the non-normalized charts of Robertson et al (1986). For CPT soundings deeper than 30m, we recommend the use of the normalized charts of Robertson (1990) which can be displayed as SBTn, upon request. The report also includes spreadsheet output of computer calculations of basic interpretation in terms of SBT and SBTn and various geotechnical parameters using current published correlations based on the comprehensive review by Lunne, Robertson and Powell (1997), as well as recent updates by Professor Robertson (Guide to Cone Penetration Testing, 2015). The interpretations are presented only as a guide for geotechnical use and should be carefully reviewed. Gregg Drilling & Testing Inc. does not warranty the correctness or the applicability of any of the geotechnical parameters interpreted by the software and does not assume any liability for use of the results in any design or review. The user should be fully aware of the techniques and limitations of any method used in the software. Some interpretation methods require input of the groundwater level to calculate vertical effective stress. An estimate of the in-situ groundwater level has been made based on field observations and/or CPT results, but should be verified by the user.

A summary of locations and depths is available in Table 1. Note that all penetration depths referenced in the data are with respect to the existing ground surface.

Note that it is not always possible to clearly identify a soil type based solely on q_t, f_s, and u_2. In these situations, experience, judgment, and an assessment of the pore pressure dissipation data should be used to infer the correct soil behavior type.

Cone Penetration Test (CPT) Interpretation

Gregg uses a proprietary CPT interpretation and plotting software. The software takes the CPT data and performs basic interpretation in terms of soil behavior type (SBT) and various geotechnical parameters using current published empirical correlations based on the comprehensive review by Lunne, Robertson and Powell (1997). The interpretation is presented in tabular format using MS Excel. The interpretations are presented only as a guide for geotechnical use and should be carefully reviewed. Gregg does not warranty the correctness or the applicability of any of the geotechnical parameters interpreted by the software and does not assume any liability for any use of the results in any design or review. The user should be fully aware of the techniques and limitations of any method used in the software.

The following provides a summary of the methods used for the interpretation. Many of the empirical correlations to estimate geotechnical parameters have constants that have a range of values depending on soil type, geologic origin and other factors. The software uses 'default' values that have been selected to provide, in general, conservatively low estimates of the various geotechnical parameters.

Input:

1 Units for display (Imperial or metric) (atm. pressure, p_a = 0.96 tsf or 0.1 MPa)
2 Depth interval to average results (ft or m). Data are collected at either 0.02 or 0.05m and can be averaged every 1, 3 or 5 intervals.
3 Elevation of ground surface (ft or m)
4 Depth to water table, z_w (ft or m) – input required
5 Net area ratio for cone, a (default to 0.80)
6 Relative Density constant, C_{Dr} (default to 350)
7 Young's modulus number for sands, α (default to 5)
8 Small strain shear modulus number
  a. for sands, S_G (default to 180 for SBT_n 5, 6, 7)
  b. for clays, C_G (default to 50 for SBT_n 1, 2, 3 & 4)
9 Undrained shear strength cone factor for clays, N_{kt} (default to 15)
10 Over Consolidation ratio number, k_{ocr} (default to 0.3)
11 Unit weight of water, (default to γ_w = 62.4 lb/ft^3 or 9.81 kN/m^3)

Column

1 Depth, z, (m) – CPT data is collected in meters
2 Depth (ft)
3 Cone resistance, q_c (tsf or MPa)
4 Sleeve resistance, f_s (tsf or MPa)
5 Penetration pore pressure, u (psi or MPa), measured behind the cone (i.e. u_2)
6 Other – any additional data
7 Total cone resistance, q_t (tsf or MPa) $q_t = q_c + u\,(1-a)$

8	Friction Ratio, R_f (%)	$R_f = (f_s/q_t) \times 100\%$
9	Soil Behavior Type (non-normalized), SBT	see note
10	Unit weight, γ (pcf or kN/m^3)	based on SBT, see note
11	Total overburden stress, σ_v (tsf)	$\sigma_{vo} = \sigma\, z$
12	In-situ pore pressure, u_o (tsf)	$u_o = \gamma_w (z - z_w)$
13	Effective overburden stress, σ'_{vo} (tsf)	$\sigma'_{vo} = \sigma_{vo} - u_o$
14	Normalized cone resistance, Q_{t1}	$Q_{t1} = (q_t - \sigma_{vo}) / \sigma'_{vo}$
15	Normalized friction ratio, F_r (%)	$F_r = f_s / (q_t - \sigma_{vo}) \times 100\%$
16	Normalized Pore Pressure ratio, B_q	$B_q = u - u_o / (q_t - \sigma_{vo})$
17	Soil Behavior Type (normalized), SBT_n	see note
18	SBT_n Index, I_c	see note
19	Normalized Cone resistance, Q_{tn} (n varies with I_c)	see note
20	Estimated permeability, k_{SBT} (cm/sec or ft/sec)	see note
21	Equivalent SPT N_{60}, blows/ft	see note
22	Equivalent SPT $(N_1)_{60}$ blows/ft	see note
23	Estimated Relative Density, D_r, (%)	see note
24	Estimated Friction Angle, ϕ', (degrees)	see note
25	Estimated Young's modulus, E_s (tsf)	see note
26	Estimated small strain Shear modulus, Go (tsf)	see note
27	Estimated Undrained shear strength, s_u (tsf)	see note
28	Estimated Undrained strength ratio	s_u/σ_v'
29	Estimated Over Consolidation ratio, OCR	see note

Notes:

1 Soil Behavior Type (non-normalized), SBT (Lunne et al., 1997 and table below)

2 Unit weight, γ either constant at 119 pcf or based on Non-normalized SBT (Lunne et al., 1997 and table below)

3 Soil Behavior Type (Normalized), SBT_n Lunne et al. (1997)

4 SBT_n Index, I_c $I_c = ((3.47 - \log Q_{t1})^2 + (\log F_r + 1.22)^2)^{0.5}$

5 Normalized Cone resistance, Q_{tn} (n varies with Ic)

$Q_{tn} = ((q_t - \sigma_{vo})/pa)\ (pa/(\sigma'_{vo})^n$ and recalculate I_c, then iterate:

When $I_c < 1.64$, n = 0.5 (clean sand)
When $I_c > 3.30$, n = 1.0 (clays)
When $1.64 < I_c < 3.30$, $n = (I_c - 1.64)0.3 + 0.5$
Iterate until the change in n, $\Delta n < 0.01$

6 Estimated permeability, k_{SBT} based on Normalized SBT_n (Lunne et al., 1997 and table below)

7 Equivalent SPT N_{60}, blows/ft Lunne et al. (1997)

$$\frac{(q_t/p_a)}{N_{60}} = 8.5\left(1 - \frac{I_c}{4.6}\right)$$

8 Equivalent SPT $(N_1)_{60}$ blows/ft $(N_1)_{60} = N_{60}\, C_N$,
where $C_N = (pa/\sigma'_{vo})^{0.5}$

9 Relative Density, D_r, (%) $D_r^2 = Q_{tn} / C_{Dr}$
Only SBT_n 5, 6, 7 & 8 *Show 'N/A' in zones 1, 2, 3, 4 & 9*

10 Friction Angle, ϕ', (degrees) $\tan\phi' = \frac{1}{2.68}\left[\log\left(\frac{q_c}{\sigma'_{vo}}\right) + 0.29\right]$
Only SBT_n 5, 6, 7 & 8 *Show'N/A' in zones 1, 2, 3, 4 & 9*

11 Young's modulus, E_s $E_s = \alpha\, q_t$
Only SBT_n 5, 6, 7 & 8 *Show 'N/A' in zones 1, 2, 3, 4 & 9*

12 Small strain shear modulus, Go

a. $G_o = S_G\,(q_t\ \sigma'_{vo}\ pa)^{1/3}$ *For SBT_n 5, 6, 7*

b. $G_o = C_G\, q_t$ *For SBT_n 1, 2, 3& 4*

Show 'N/A' in zones 8 & 9

13 Undrained shear strength, s_u $s_u = (q_t - \sigma_{vo}) / N_{kt}$
Only SBT_n 1, 2, 3, 4 & 9 *Show 'N/A' in zones 5, 6, 7 & 8*

14 Over Consolidation ratio, OCR $OCR = k_{ocr}\, Q_{t1}$
Only SBT_n 1, 2, 3, 4 & 9 *Show 'N/A' in zones 5, 6, 7 & 8*

The following updated and simplified SBT descriptions have been used in the software:

SBT Zones		**SBT_n Zones**	
1	sensitive fine grained	1	sensitive fine grained
2	organic soil	2	organic soil
3	clay	3	clay
4	clay & silty clay	4	clay & silty clay
5	clay & silty clay		
6	sandy silt & clayey silt		

7	silty sand & sandy silt	5	silty sand & sandy silt
8	sand & silty sand	6	sand & silty sand
9	sand		
10	sand	7	sand
11	very dense/stiff soil*	8	very dense/stiff soil*
12	very dense/stiff soil*	9	very dense/stiff soil*

*heavily overconsolidated and/or cemented

Track when soils fall with zones of same description and print that description (i.e. if soils fall only within SBT zones 4 & 5, print 'clays & silty clays')

Estimated Permeability (see Lunne et al., 1997)

SBT_n	Permeability (ft/sec)	(m/sec)
1	$3x\ 10^{-8}$	$1x\ 10^{-8}$
2	$3x\ 10^{-7}$	$1x\ 10^{-7}$
3	$1x\ 10^{-9}$	$3x\ 10^{-10}$
4	$3x\ 10^{-8}$	$1x\ 10^{-8}$
5	$3x\ 10^{-6}$	$1x\ 10^{-6}$
6	$3x\ 10^{-4}$	$1x\ 10^{-4}$
7	$3x\ 10^{-2}$	$1x\ 10^{-2}$
8	$3x\ 10^{-6}$	$1x\ 10^{-6}$
9	$1x\ 10^{-8}$	$3x\ 10^{-9}$

Estimated Unit Weight (see Lunne et al., 1997)

SBT	Approximate Unit Weight (lb/ft^3)	(kN/m^3)
1	111.4	17.5
2	79.6	12.5
3	111.4	17.5
4	114.6	18.0
5	114.6	18.0
6	114.6	18.0
7	117.8	18.5
8	120.9	19.0
9	124.1	19.5
10	127.3	20.0
11	130.5	20.5
12	120.9	19.0

Pore Pressure Dissipation Tests (PPDT)

Pore Pressure Dissipation Tests (PPDT's) conducted at various intervals can be used to measure equilibrium water pressure (at the time of the CPT). If conditions are hydrostatic, the equilibrium water pressure can be used to determine the approximate depth of the ground water table. A PPDT is conducted when penetration is halted at specific intervals determined by the field representative. The variation of the penetration pore pressure (*u)* with time is measured behind the tip of the cone and recorded.

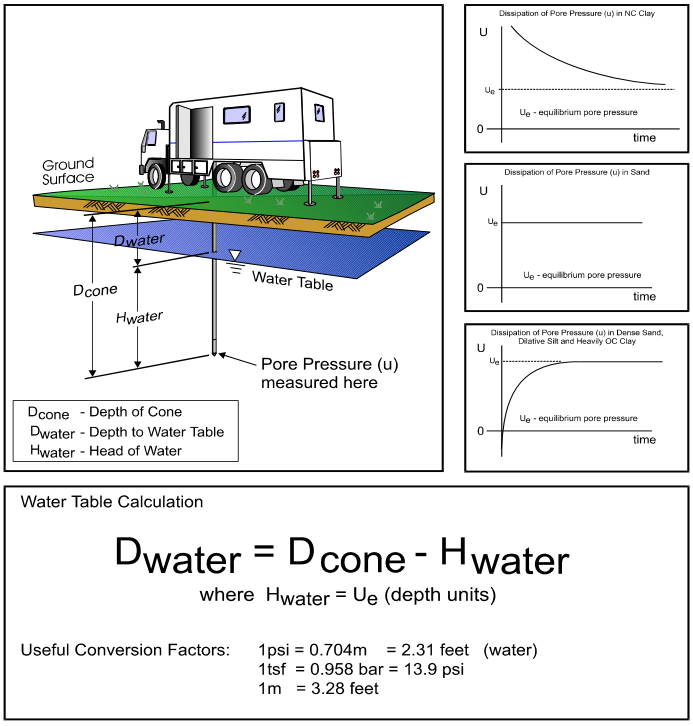
Pore pressure dissipation data can be interpreted to provide estimates of:

- Equilibrium piezometric pressure
- Phreatic Surface
- In situ horizontal coefficient of consolidation (c_h)
- In situ horizontal coefficient of permeability (k_h)

In order to correctly interpret the equilibrium piezometric pressure and/or the phreatic surface, the pore pressure must be monitored until it reaches equilibrium, *Figure PPDT*. This time is commonly referred to as t_{100}, the point at which 100% of the excess pore pressure has dissipated.

A complete reference on pore pressure dissipation tests is presented by Robertson et al. 1992 and Lunne et al. 1997.

A summary of the pore pressure dissipation tests are summarized in Table 1.



Water Table Calculation

$$D_{water} = D_{cone} - H_{water}$$

where $H_{water} = U_e$ (depth units)

Useful Conversion Factors: 1psi = 0.704m = 2.31 feet (water)
1tsf = 0.958 bar = 13.9 psi
1m = 3.28 feet

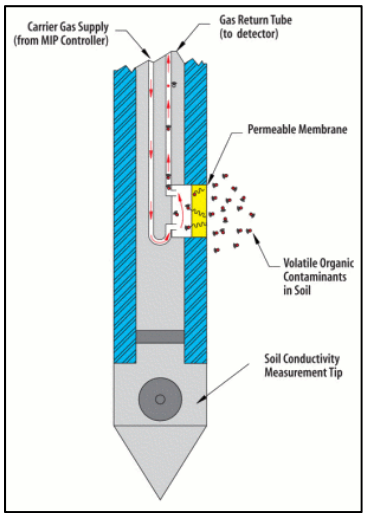
Figure PPDT

Membrane Interface Probe

System Overview:

The MIP is a direct push tool that produces continuous chemical and physical logs of the vadose and saturated zones. The system detects VOCs in-situ and shows where the contaminants occur relative to the geologic and hydrologic units. Vertical profiles, transects, 3D images and maps can all be produced from the electronic data generated by the MIP logs. The unique capability of providing reliable, real-time information allows for informed and timely decision making in the field.

The MIP is a downhole tool that heats the soil and groundwater adjacent to the probe to 120 degrees Celsius. This increases volatility and the vapor phase diffuses across a membrane into a closed, inert gas loop that carries these vapors to a series of detectors housed at the surface. Continuous chemical logs or profiles are generated from each hole. Soil conductivity is also measured and these logs can be compared to chemical logs to better understand where the VOCs occur. The MIP technology is only appropriate for volatile organic compounds (VOCs). The gas stream can be analyzed with multiple detectors; for example an XSD detector is used to detect chlorinated solvents, a photo-ionization detector is used to detect petroleum hydrocarbons, and a flame ionization detector is used to detect methane.



Detector Overview:

- XSD – The Halogen Specific Detector converts compounds containing halogens to their oxidation products and free halogen atoms by oxidative pyrolysis. These halogen atoms are adsorbed onto the activated platinum surface of the detector probe assembly resulting in an increase thermionic emission. This emission current provides a corresponding voltage that is measured via an electrometer circuit in the detector controller.
- PID – Photo Ionization Detector sample stream flows through the detector's reaction chamber where it is continuously irradiated with high energy ultraviolet light. When compounds are present that have a lower ionization potential than that of the irradiation energy (10 electron volts with standard lamp) they are ionized. The ions formed are collected in an electrical field,

producing an ion current that is proportional to compound concentration. The ion current is amplified and output by the gas chromatograph's electrometer.

- FID – Flame Ionization Detector consists of a hydrogen/air flame and a collector plate. The effluent from the GC (trunk line) passes through the flame, which breaks down organic molecules and produces ions. The ions are collected on a biased electrode and produce an electric signal.

Data Collected:

- Depth - Data is collected from twenty data points per foot. 0.05', 0.10', 0.15', etc…
- Electrical Conductivity - Electrical Conductivity data is measured/collected in milli-siemens per Meter (ms/M). The conductivity of soils is different for each type of media. Finer grained sediments, such as silts or clays, will have a higher EC signal. While coarser grained sediments, sands and gravel, will have a lower EC signal. The coarser grained sediments will allow the migration of contaminants and the finer grained sediments will trap the contaminant.
- Speed/Advancement Rate - Speed data is measured/collected in feet per minute (ft/min). Speed is an indication of the physical advancement rate of the MIP probe. Speed of the MIP probe can vary due to operator advancement and dense soil types. Speed log can provide soil type information which can be correlated with electrical conductivity. Lower advancement speeds are correlated with lower conductivity and larger grained soils that are most likely associated with dense or compacted sands.
- Temperature - Temperature data is measured/collected in Degrees Celsius. Temperature is an indication of the physical temperature of the MIP block. Minimum and Maximum temperature is collected at each vertical interval. Gregg Drilling's temperature protocol indicates that the MIP probe shall maintain a minimum temperature of 75 Degrees Celsius.
- Pressure - Pressure data is measured/collected in PSI. Pressure is an indication of the internal pressure of the nitrogen lines located within the trunk line and the pressure behind the membrane. Gregg Drilling's protocol indicates that the MIP probe pressure shall not exceed 1.5 PSI difference from baseline.
- Detector (XSD, PID, FID) - Detector responses are measured/collected in micro Volts (uV). Detector responses are an indication of relative contaminant responses. Minimum and Maximum detector responses are collected at each vertical interval.

Hydraulic Profiling Tool

System Overview:

The HPT system is designed to evaluate the hydraulic behavior of unconsolidated materials. As the probe is pushed or hammered at 2cm/s, clean water is injected through a screen on the side of the HPT probe at a flow rate usually less than 300 mL/min. The injection pressure, which is monitored and plotted with depth, is an indication of the hydraulic properties of the soil. A relatively low pressure response indicates a relatively large grain size, and the ability to easily transmit water. However, a relatively high pressure response indicates a relatively small grain size, which correlates with the inability to transmit water.

Additionally, an EC dipole is integrated into the HPT probe. This allows for the collection soil electrical conductivity (EC) data to interpret the lithology of the subsurface. In general, the higher the electrical conductivity value, the smaller the grain size, the lower the electrical conductivity value, the larger the grain size. However, other factors can affect EC, such as mineralogy and pore water chemistry (brines, extreme pH, contaminants). Conversely, the HPT pressure response is independent of these chemical and mineralogical factors.

There are five primary components of the HPT system: the probe assembly, controller, pump, trunkline, and field instrument. The probe assembly consists of the section that houses the 100 psi pressure transducer, water and electrical connections, and the probe body with the injection screen and electrical conductivity.

Injecting water at a constant rate is integral to system operation. A controller box houses components that monitor and regulate the water injection rate and pressure, as well as pressure transducer signal conditioning electronics. The flow rate is set manually on the front of the controller, and a valve is used to turn on or shut off flow.

A vane pump provides system pressure ensuring adequate flow to the screen. The pump is secured to a frame with an integrated visual flow meter. Water and power are transmitted from the controller to the probe assembly via the trunkline. The probe rods are pre-strung with the trunkline before advancing of the HPT probe begins.

Data Collected:

The HPT system collects depth, electrical conductivity, advancement rate, hydraulic pressure, and flow information. Additional detail regarding each of these parameters is provided below.

- Depth - Data is collected from twenty data points per foot. 0.05', 0.10', 0.15', etc…
- Electrical Conductivity - Electrical Conductivity (EC) data is collected in milli-siemens per meter (ms/M). The conductivity of soils is different for each type of media. Finer grained sediments, such as silts or clays, will have a higher EC signal. While coarser grained sediments, sands and gravel, will have a lower EC signal. The coarser grained sediments will allow the migration of contaminants and the finer grained sediments will trap the contaminant.

- Advancement Rate – Advancement rate is collected in units of feet per minute (ft/min). Advancement rate of the HPT probe can vary due to operator advancement and soil types encountered.

- Pressure - Pressure data is collected in pounds per square inch (PSI). Pressure is an indication of hydraulic pressure applied to the subsurface by the HPT system. The system collects both the minimum and maximum pressures over each vertical interval.

- Flow - Flow data is collected in milliliters per minute (mL/min). Flow is an indication of the rate water that is pumped out of the membrane at the HPT probe. The system collects both the minimum and maximum flow over each vertical interval.

- Estimated Hydraulic Conductivity (est. K) – Hydraulic conductivity, symbolically represented as K, is an in-situ property that describes the ease with which water can move through pore spaces or fractures. It is dependent on the intrinsic permeability of the material and on the degree of saturation. With respect to the HPT system, the estimated K values are only applicable to the saturated portion of the formation. The estimated K value is calculated using the HPT pressure and flow data. It is also necessary to collect HPT response test data before and after each boring. Additionally, it is necessary to conduct at least one pressure dissipation test during the logging operation, below the static water table level.

The samples were analyzed as specified on the enclosed chain of custody.
No analytical non-conformances were encountered.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.
2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181
Tel: (888) 288-AETL • (818) 845-8200 • Fax: (818) 845-8840 • www.aetlab.com

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

The samples were analyzed as specified on the enclosed chain of custody.
No analytical non-conformances were encountered.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

American Environmental Testing Laboratory Inc.
2834 & 2908 North Naomi Street, Burbank, CA 91504 • DOHS NO: 1541, LACSD NO: 10181

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

Project Name:	Westgate West	**Date Analyzed:**	9/22/2016
Project Address:	5309 Prospect Road San Jose, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B - Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

SUBJECT: Geotechnical Investigation Report
Proposed Commercial Building at Westgate West Shopping Center – Pad B
5295 Prospect Road
San Jose, California

Dear Ms. Johnson:

Kleinfelder is pleased to present our geotechnical investigation report for the proposed commercial building to be located at 5295 Prospect Road in San Jose, California. Our services were provided in general accordance with our proposal dated March 21, 2017.

Due to some near-surface relatively soft soils, mitigation is recommended, which consists of overexcavating about 4 feet of the surface site soils and backfilling with compacted excavated soils. The proposed building can then be supported on a shallow foundation system. Our conclusions and geotechnical recommendations for the design and construction of the proposed building are presented in Section 5 of our report.

We appreciate the opportunity to provide our services for this project. If you have questions regarding this report or need further assistance, please contact us at your convenience.

Sincerely,

KLEINFELDER, INC.

1.0 INTRODUCTION

In this report we present the results of our geotechnical engineering investigation performed for the proposed new commercial building to be located in the Westgate West Shopping Center, at 5295 Prospect Road in San Jose, California. A site vicinity map is shown on Figure 1.

The project site has a plan area of 40,907 square feet and is identified as Pad B of the Westgate West Shopping Center. Based on a site plan, prepared by PLS Partners Inc., dated February 27, 2017, the site is currently occupied by a commercial building with a plan area of 4,970 square feet. The areas around the existing building are mostly paved for parking, and a drive-through lane wraps around the north and west sides of the existing building.

We understand that the existing building will be demolished, and a new commercial building will be constructed. The new building will be a one-story rectangular-shaped building with a plan area of 6,926 square feet (about 100 feet by 68 feet). Maximum column structural loads were provided to us by Mr. Robert Riegel of ATI Architects and Engineers, and are anticipated to be 25 kips for dead loads and 20 kips for live loads. Since the site is relatively flat, no major cuts and fills were planned in the conceptual design. No retaining walls or basement are anticipated. Other improvements will include modifying the layouts of parking stalls, sidewalks, landscaping areas, and a new drive-through lane around the north and west sides of the new building. We anticipate that new improvements will include concrete flatwork, landscaping, and buried utilities. The new landscaping areas will consist of bioretention areas and self-treating landscaping areas.

In the event these structural or improvement details are inconsistent with the final design criteria, our firm should be contacted prior to final design in order that we may update our recommendations as needed.

© 2017 Kleinfelder

2.0 PURPOSE AND SCOPE OF SERVICES

The purpose of our services was to explore and evaluate the subsurface conditions at the site in order to develop recommendations related to the geotechnical aspects of project design and construction.

The scope of our services was outlined in our Proposal (MP170795.001P) dated March 21, 2017 and included the following:

- A site reconnaissance to observe the surface conditions at the project site
- A field investigation that consisted of drilling borings within the area of the proposed development to explore the subsurface conditions
- Laboratory testing of selected soil samples obtained during the field investigation to evaluate relevant physical and engineering parameters of the subsurface soils
- Evaluation of the field and laboratory data obtained and performing engineering analyses to develop our geotechnical conclusions and recommendations
- Preparation of this report which includes:
    - Site vicinity map and exploration location map
    - Description of the project
    - Boring logs and laboratory tests
    - Conclusions pertaining to feasibility of the proposed development, impacts of geotechnical and geologic features on the proposed development and geologic hazards
    - Recommendations for spread footings and slabs-on-grade, including mitigation of near-surface soft soils and expansive soils
    - Recommendations for site grading, subgrade preparation, earthwork, and fill placement and compaction specifications
    - Recommendations for asphalt pavement design and construction
    - Additional construction considerations, as applicable
    - Seismic design parameters in accordance with 2016 California Building Code (CBC)
    - Estimated soil permeability values for the design of bioretention system based on established correlations for the soil types encountered

© 2017 Kleinfelder

3.0 FIELD AND LABORATORY INVESTIGATIONS

3.1 FIELD INVESTIGATION

3.1.1 Exploratory Borings

The subsurface conditions at the site were explored by drilling two exploratory borings on April 28, 2017. The two borings were drilled to depths of about 30 feet (Boring KB-1) and 21 feet (Boring KB-2) below existing grade. The borings were drilled using a B40 Mobile truck-mounted drill rig utilizing 8-inch outside-diameter hollow-stem augers. The approximate boring locations are presented on Figure 2. Explorations were located in the field by measuring from existing landmarks. Horizontal coordinates and elevations of the borings were not surveyed.

A Kleinfelder professional maintained logs of the borings, visually classified the soils encountered according to the Unified Soil Classification System presented on Figure A-1 in Appendix A, and obtained relatively undisturbed and bulk samples of the subsurface materials. Soil classifications made in the field from samples and auger cuttings were in accordance with American Society for Testing and Materials (ASTM) Method D 2488. These classifications were re-evaluated in the laboratory after further examination and testing in accordance with ASTM D 2487. The undrained shear strengths of cohesive soil samples were estimated in the field using a hand-held penetrometer device. Sample classifications, blow counts recorded during sampling, and other related information were recorded on the boring logs. The blow counts listed on the boring logs have not been corrected for the effects of overburden pressure, rod length, sampler size, or hammer efficiency. Correction factors were applied to the raw blow counts to estimate the sample apparent density noted on the boring logs and for engineering analyses. After the borings were completed, they were backfilled with cement grout and patched with asphalt at the surface.

Soil cuttings were placed in 55-gallon drums during drilling. At the completion of our field exploration, a sample of the soil cuttings was collected for analytical testing. The analytical test results indicate that the sample tested was considered non-hazardous, and the soil cuttings were disposed of at a state-licensed facility by our subcontractor.

© 2017 Kleinfelder

Keys to the soil descriptions and symbols used on the boring logs are presented on Figures A-1 and A-2 in Appendix A. Logs of the borings are presented on Figures A-3 through A-4.

3.1.2 Sampling Procedures

Soil samples were collected from the borings at depth intervals of approximately 2½ to 5 feet. Samples were collected from the borings at selected depths by driving either a 2.5-inch inside diameter (I.D.) California sampler or a 1.4-inch I.D. Standard Penetration Test (SPT) sampler driven 18 inches (unless otherwise noted) into undisturbed soil. The samplers were driven using a 140-pound semi-automatic (downhole) hammer free-falling a distance of about 30 inches. Blow counts were recorded at 6-inch intervals for each sample attempt and are reported on the logs.

The SPT sampler did not contain liners, but had space for them. The 2.5-inch I.D. California sampler contained stainless steel liners. The California sampler was in general conformance with ASTM D3550. The SPT sampler was in general conformance with ASTM D1586.

Soil samples obtained from the borings were packaged and sealed in the field to reduce moisture loss and disturbance. Following drilling, the samples were returned to our laboratory for further examination and testing.

3.2 GEOTECHNICAL LABORATORY TESTING

Kleinfelder performed laboratory tests on selected samples recovered from the borings to evaluate their physical and engineering characteristics. The following laboratory tests were performed:

- Unit Weight (ASTM D2937)
- Moisture Content (ASTM D2216)
- Atterberg Limits (ASTM D4318)
- Particles Finer Than #200 Sieve (ASTM D1140)
- Unconsolidated Undrained Triaxial Shear (ASTM D2850)
- Corrosion - Soluble Sulfate Content (ASTM D4327)
- Corrosion - Soluble Chloride Content (ASTM D4327)
- pH (ASTM D4972)
- Minimum Resistivity (ASTM G57)

© 2017 Kleinfelder

The results of most of the laboratory tests are included on the boring logs in Appendix A. All laboratory test data are summarized in Appendix B. The soluble sulfate, soluble chloride, pH, and minimum resistivity test results are discussed in Section 5.13 of this report. The laboratory reports are included in Appendix B and Appendix C.

© 2017 Kleinfelder

4.0 SITE CONDITIONS

4.1 SITE DESCRIPTION

The site is currently occupied by a commercial building with a plan area of 4,970 square feet. The areas around the existing building is mostly paved for parking, and a drive-through lane wraps around the north and west sides of the existing building. The site is relatively flat.

4.2 SUBSURFACE CONDITIONS

The following description provides a general summary of the subsurface conditions encountered during the current study performed at the site. For more thorough descriptions of the actual conditions encountered at specific exploration locations, refer to the subsurface exploration logs located in Appendix A.

The two borings were drilled in asphalt paved areas. The asphalt pavement section thicknesses varied between about 2 inches in Boring KB-1 to about 6 inches in Boring KB-2. The asphalt sections were underlain by a baserock section of about 6 to 7 inches thick.

Underneath the pavement section, soft to medium stiff to stiff sandy lean clays and lean clay with sand and gravel were encountered to a depth of about 7 feet. Stiff sandy lean clay and lean clay with gravel were encountered between the depths of about 7 feet and 14 feet. Beneath that, to the termination of Boring KB-2, low plasticity, dense poorly graded sands with clay was encountered. In Boring KB-1, beneath a depth of about 14 feet, interbedded layers medium dense clayey sand with gravel, sandy clay, lean clay with sand and gravel, and poorly graded sand with silt were encountered to the termination of boring at about 30 feet.

No groundwater was encountered in the borings during our investigation. Based on the California Geological Survey (CGS, 2002), groundwater at the site is anticipated to be greater than 50 feet below ground surface.

Our interpretations of soil and groundwater conditions at the site are based on the conditions encountered in the borings, published geologic maps, and our knowledge of geologic and hydrogeologic conditions in the site vicinity. It is possible that groundwater conditions at the site could change due to variations in rainfall, groundwater withdrawal or recharge, construction

© 2017 Kleinfelder

activities, well pumping, or other factors not apparent at the time of our investigation. If soil or groundwater conditions exposed during construction vary from those presented in this report, Kleinfelder should be notified to evaluate whether our conclusions or recommendations should be modified.

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 GENERAL

Based on our findings, it is our professional opinion that the site should be suitable from a geotechnical engineering standpoint for support of the proposed new structures provided the recommendations contained herein are incorporated into the project design. Sub-excavation of the surface soil is recommended. More detail discussion regarding sub-excavation is provided in Section 5.3 of this report. Specific conclusions and recommendations regarding the geotechnical aspects of design and construction are presented in the following sections.

5.2 GEOLOGIC HAZARDS

The site is not located within a State-designated Alquist-Priolo Earthquake Fault Zone where site-specific studies addressing the potential for surface fault rupture are required, and no known active faults traverse the site. In our opinion, the potential for fault-related ground surface rupture at the site is low.

Earthquake-induced soil liquefaction can be described as a significant loss of soil strength and stiffness caused by an increase in pore water pressure resulting from cyclic loading during shaking. The site is not located within a State of California Seismic Hazard Zones map for liquefaction where areas of historical occurrence of liquefaction, or local geological, geotechnical and groundwater conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required (CGS, 2003b). As indicated in Section 4.2 of this report, groundwater at the site is anticipated to be greater than 50 feet below ground surface. Based on these reasons, in our opinion, the potential for earthquake-induced soil liquefaction at the site is low.

Lateral spreading is a potential hazard commonly associated with liquefaction where extensional ground cracking and settlement occur as a response to lateral migration of subsurface liquefiable material. These phenomena typically occur adjacent to free faces such as slopes and creek channels. Since no slopes and channels are located in the vicinity of the site, and the potential of liquefaction is considered low, in our opinion, the potential for lateral spreading at the site is low.

© 2017 Kleinfelder

Dynamic compaction, or seismic settlement, typically occur in unsaturated, loose granular material or uncompacted fill soils. Since the site soils generally consist clayey soils interbedded with relatively thin layers of medium dense sand and clayey sand, in our opinion, the potential for dynamic compaction at the site is low.

5.3 SOFT SOILS AND POTENTIAL VARIATIONS IN SUBSURFACE CONDITION

Soil boring data and laboratory test results indicate that soft soil could exist in the uppermost seven feet of the site soils. Soft soils could cause unacceptable elastic and consolidation settlements of shallow spread foundations. Also, our borings were drilled outside of the existing building. At this time, we do not have information on the building pad of the existing building. It is possible that some mitigation measures were conducted during the construction of the existing building. Due to this unknown, and due to the potential of near-surface soft soils, in order to provide a more uniform support of the footings and floor slabs of the new building, we recommend that sub-excavation be conducted during site grading of the new building by excavating about 4 feet of the surface soil, scarifying and recompacting the excavation bottom, and backfilling the excavation with compacted onsite soils. The sub-excavation should extend laterally to about 5 feet beyond the footprint of the new building. Geotechnical recommendations related to scarifying, fill material specifications, backfilling, and compacting are presented in Section 5.9 of this report.

Imported material meeting the import fill requirements may be used to backfill the sub-excavation. However, they should be placed in the upper portion of the sub-excavation so that the new exterior continuous footings are keyed at least one foot into the onsite recompacted clayey soils. This requirement reduces the risk of excessive moisture cumulating in the granular fill below the new floor slabs. If restricting the thickness of the granular fill layer is not possible, deepening the exterior continuous footings may be required.

5.4 EXPANSIVE SOILS

Based on the results of an Atterberg Limits test performed on a near-surface soil sample (Boring KB-2 at 2½ feet below ground surface), and an Expansion Index test on the same sample, the surficial soils have low expansion potential (Liquid Limit of 29, Plasticity Index of 12, and Expansion Index of 41). These surficial soils may shrink or swell as a result of soil moisture

© 2017 Kleinfelder

content changes, but the amounts of shrinking and swelling are expected to be relatively small. It is our opinion that moisture conditioning of the clayey soils and maintaining the moisture during site grading and keying the exterior continuous wall footing into clayey soils could reduce the risk of building distresses due to expansive soils.

5.5 CBC SEISMIC DESIGN CRITERIA

Considering the location of the site and the soils that were encountered during the field exploration, the site can be classified as Site Class D according to Table 20.3-1 of the ASCE7-10. Site Class D is defined as a soil profile consisting of stiff soil with a shear wave velocity between 600 feet/second and 1,200 feet/second, standard penetration test (SPT) blow counts (N-value) between 15 blows per foot and 50 blows per foot, or undrained shear strength between 1,000 pounds per square foot (psf) and 2,000 psf in the top 100 feet.

The site is located approximately at the following coordinates:

- Latitude: 37.29268 degrees
- Longitude: -121.99595 degrees

For a 2016 California Building Code (CBC) based design, the estimated Maximum Considered Earthquake (MCE) mapped spectral accelerations for 0.2 second and 1 second periods (S_S and S_1), associated soil amplification factors (F_a and F_v), and mapped peak ground acceleration (PGA) are presented in Table 5-1. Corresponding site modified (S_{MS} and S_{M1}) and design (S_{DS} and S_{D1}) spectral accelerations, PGA modification coefficient (F_{PGA}), PGA_M, risk coefficients (C_{RS} and C_{R1}), and long-period transition period (T_L) are also presented in Table 5-1. Presented values were estimated using Section 1613.3 of the 2016 California Building Code (CBC), chapters 11 and 22 of ASCE 7-10, and the United States Geological Survey (USGS) U.S. seismic design maps[1].

5.6 SHALLOW FOUNDATIONS

5.6.1 Allowable Bearing Pressure

The new building may be supported on shallow isolated spread footings or continuous wall footings founded on the recompacted site soils. We recommend that a continuous exterior wall footing be used. A net allowable bearing pressure of 2,000 pounds per square foot for dead plus sustained live loading may be used to size column and continuous footings. A one-third increase in the allowable bearing pressure may be applied when considering short-term loading due to wind or seismic forces.

Footings should have a minimum width of 18 inches for continuous footings and 24 inches for isolated square footings. Spread or strip footings should be founded at least 18 inches below the lowest adjacent finished grade.

© 2017 Kleinfelder

Lateral loads may be resisted by a combination of friction between the foundation bottoms and the supporting subgrade, and by passive resistance acting against the vertical faces of the foundations. An allowable coefficient of sliding friction of 0.3 between the foundation and the supporting subgrade may be used for design. This value includes a safety factor of at least 1.5. For allowable passive resistance, an equivalent fluid weight of 300 pounds per cubic foot (pcf) acting against the side of the foundation may be used. This value is based on a safety factor of at least 1.5 and generally corresponds to a lateral deflection of less than ½ inch. Passive resistance in the upper 12 inches of soil should be neglected unless the area in front of the footing is protected from disturbance by concrete or pavement. The allowable friction coefficient and passive resistance may be used concurrently without reduction.

Total settlement of an individual foundation will vary depending on the plan dimensions of the foundation and the actual load supported. Based on the anticipated/assumed foundation dimensions and loads, we estimate the maximum total and differential foundation settlement of spread foundations should be on the order of 1 and ½ inch, respectively, provided the recommendations presented in this report are followed.

5.6.2 Construction

Prior to placing steel or concrete, footing excavations should be cleaned of all debris, loose or soft soil, and water. All footing excavations should be observed by the project Geotechnical Engineer just prior to placing steel or concrete to verify the recommendations contained herein are implemented during construction. The structural engineer should evaluate footing configurations and reinforcement requirements to account for loading and settlement.

5.7 PAVEMENTS

5.7.1 Subgrade Preparation

Following site stripping, all subgrade soils to support pavements should be scarified to a minimum depth of 6 inches below the finished subgrade elevation, uniformly moisture conditioned to about 2 percent above the optimum moisture content, and compacted as engineered fill to at least 95 percent relative compaction (ASTM D 1557). The subgrade soils should be in a stable, non-pumping condition at the time aggregate base materials are placed and compacted. The

© 2017 Kleinfelder

aggregate base materials should also be in a stable, non-pumping condition at the time asphalt is placed and compacted.

5.7.2 Asphalt Concrete Pavement Sections

Pavement sections (determined in units of inches rounded up to the nearest ½ inch) are presented below based on an assumed R-value of 5, current Caltrans design procedures, and an assumed traffic index (TI) of 5. The project Owner and/or Civil Engineer should review the pavement sections and evaluate the suitable TI for this project.

Table 5-2
Asphalt Concrete Pavement Sections

R-Value	Traffic Index	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)
5	5	3.5	9

The pavement sections provided above are contingent on the following recommendations being implemented during and following construction.

- Aggregate base and asphalt concrete materials and placement methods should conform to the current Caltrans Standard Specifications. Class 2 aggregate should be compacted as engineered fill to at least 95 percent relative compaction.
- Adequate drainage (both surface and subsurface) should be provided such that the subgrade soils and aggregate base materials are not allowed to become wet. Pavement sections should be isolated from intrusion of water at all locations where pavements are adjacent to irrigated landscaping or areas that may pond water. For long-term performance, pavement edge drains should be placed to collect water and to convey it to a storm drain or other drainage facility. As an alternative, but one that tends to be less effective, edge barriers, such as concrete curbs, polyethylene membranes and the like, should be placed that extend a minimum of 4 inches below the aggregate base and into the subgrade soil. Additional details regarding these systems can be provided upon request.
- Periodic maintenance should be performed to repair degraded areas and seal cracks with appropriate filler.

© 2017 Kleinfelder

The pavement sections provided above are based on the soil conditions encountered during our field investigation and our assumptions regarding final site grades. The actual pavement subgrade materials exposed during grading may differ from those tested because of earthwork operations or natural variations in soil conditions. A representative from our firm should observe the subgrade conditions following rough grading. If the subgrade conditions vary from those anticipated, additional soil samples will need to be obtained for R-value tests. Should the R-value test results vary significantly from the R-value used for our pavement section design, the recommended sections will need to be revised.

5.8 BUILDING SLABS-ON-GRADE

A modulus of subgrade reaction of 75 pounds per cubic inch (pci) may be used for design of slabs supported on engineered fill.

In order to provide uniform support and moisture condition the soils to reduce the potential for expansion, we recommend the existing soils within proposed building pads be overexcavated to a depth of approximately 4 feet below existing grade as discussed in Section 4.3 replaced as engineered fill. Prior to placing engineered fill, the base of the overexcavation should be scarified 12 inches, moisture conditioned, and recompacted.

5.8.1 CAPILLARY BREAK

For floor slabs with moisture sensitive floor coverings or storage is anticipated, we recommend the compacted subgrade be overlain with a minimum 4-inch thick of compacted crushed rock to serve as a capillary break. The material should have less than 5 percent by weight passing the No. 4 sieve size. A capillary break may reduce the potential for soil moisture migrating upwards toward the slab. In general, Caltrans Class 2 aggregate base or similar materials do not meet the above recommendations and should not be used to underlay interior concrete slabs supported-on-grade where moisture sensitive floor coverings or storage is anticipated.

5.8.2 VAPOR BARRIER

It is understood that the environmental consultant for this project has specified a vapor barrier for use. The requirements from the environmental consultant should be evaluated in addition to the recommendations presented below.

© 2017 Kleinfelder

Subsurface moisture and moisture vapor naturally migrate upward through the soil and, where the soil is covered by a building or pavement, this subsurface moisture will collect. Based on the soil conditions observed during our field explorations and the depth to groundwater, we recommend that a moisture vapor retarder be installed beneath the new building floor slab. The moisture vapor retarder product should meet the performance standards of an ASTM E1745, Class A material, and be properly installed in accordance with ACI publication 302. The vapor retarder should be at least 10 mils thick and be properly lapped and sealed. The joints between the sheets and the openings for utility piping should be lapped and taped. The sheeting should also be lapped into the sides of the footing trenches a minimum of 6 inches. Any puncture of the vapor retarder should be repaired prior to casting concrete.

Normally, a thin layer of moist clean sand (about two inches thick) is placed on the sheeting to facilitate concrete curing and to decrease the likelihood of slab curling. The final decision for the need and thickness of sand above the vapor barrier is the purview of the slab designer/structural engineer. The moisture vapor retarder is intended only to reduce moisture vapor transmission from the soil beneath the concrete and will not provide a waterproof or vapor proof barrier or reduce vapor transmission from sources above the retarder.

It should be noted that this system, although currently the industry standard, may not be completely effective in preventing moisture transmission through the floor slab and related floor covering problems. These systems typically will not necessarily assure that floor slab moisture transmission rates will meet floor-covering manufacturer standards and that indoor humidity levels will be appropriate to inhibit mold growth. The design and construction of such systems are totally dependent on the proposed use and design of the proposed building and all elements of building design and function should be considered in the slab-on-grade floor design. Building design and construction may have a greater role in perceived moisture problems since sealed buildings/rooms or inadequate ventilation may produce excessive moisture in a building and affect indoor air quality.

© 2017 Kleinfelder

Various factors such as surface grades, adjacent planters, the quality of slab concrete (water-cement ratio) and the permeability of the on-site soils affect slab moisture and can influence performance. In many cases, floor moisture problems are the result of water-cement ratio, improper curing of floor slabs, improper application of flooring adhesives, or a combination of these factors. Studies have shown that concrete water-cement ratios lower than 0.5 and proper slab curing can significantly reduce the potential for vapor transmission through floor slabs. We recommend contacting a flooring consultant experienced in the area of concrete slab-on-grade floors for specific recommendations regarding your proposed flooring applications.

Special precautions must be taken during the placement and curing of all concrete slabs. Excessive slump (high water-cement ratio) of the concrete and/or improper curing procedures used during either hot or cold weather conditions could lead to excessive shrinkage, cracking or curling of the slabs. High water-cement ratio and/or improper curing also greatly increase the water vapor permeability of concrete. We recommend that all concrete placement and curing operations be performed in accordance with the American Concrete Institute (ACI) Manual.

5.9 GENERAL EARTHWORK

The following presents recommendations for general earthwork criteria. Previous sections should be reviewed for specific or supplemental earthwork recommendations.

5.9.1 Site Preparation

Site preparation will include demolishing the existing building. No information of the foundation of the existing building was provided to us. We envision that building demolition will include removing the foundations and associated underground utilities and associated pipe bedding materials. Outside of the existing building, site preparation will include removing the existing asphalt pavement and associated aggregate base materials. Existing utilities and associated bedding materials within the footprint of the new building should either be removed or plugged with cement grouted to prevent migration of soil and/or water. If the cement grouting method is used, the bedding material surrounding the utility lines should also be plugged at both ends by replacing

© 2017 Kleinfelder

the granular materials with compacted clayey soil or grout. Some existing landscape islands may need to be removed, which should include removing roots and topsoils.

As indicated in Section 5.3 of this report, sub-excavation is required, and sub-excavation requirements are presented in that Section of this report.

5.9.2 Subgrade Preparation

All subgrade areas that will receive engineered fill for support of structures should be scarified to a depth of 12 inches, uniformly moisture conditioned to a moisture content at least 2 percent above the optimum moisture content, and compacted as engineered fill to at least 90 percent relative compaction. Overexcavation of disturbed soil, scarification and compaction of the exposed subgrade, and replacement with engineered fill may be required to sufficiently densify all disturbed soil.

Following rough grading, construction and trenching activities often loosen or otherwise disturb the subgrade soils. On occasion, this disturbance can lead to isolated movement of the subgrade soils following construction and cracking of overlying slabs and pavement. Accordingly, loose/disturbed areas should be repaired and trench backfill should be properly compacted prior to placement of concrete.

5.9.3 Temporary Excavations

Construction site safety is the sole responsibility of the contractor, who shall also be solely responsible for the means, methods, and sequencing of construction operations. The contractor should be aware that slope height, slope inclination, or excavation depths (including utility trench excavations) should in no case exceed those specified in local, state, and/or federal safety regulations (e.g., OSHA Health and Safety Standards for Excavations, 29 CFR Part 1926, or successor regulations). Flatter slopes and/or trench shields may be required if loose, cohesionless soils and/or water are encountered along the slope face. Heavy construction equipment, building materials, excavated soil, and vehicular traffic should not be allowed within a lateral distance equal to one-third the slope height from the top of any excavation. During wet weather, earthen berms or other methods should be used to prevent runoff water from entering all excavations. All runoff water**,** seepage, and/or groundwater encountered within excavations should be collected and disposed of outside the construction limits.

© 2017 Kleinfelder

5.9.4 Fill Materials

The native soils encountered in our borings, minus debris, rock particles larger than 3 inches in maximum dimension, and deleterious materials, should be suitable for use as engineered fill in proposed building areas. All import fill soils should be nearly free of organic or other deleterious debris, essentially non-plastic, and contain rock particles less than 3 inches in maximum dimension. In general, well-graded mixtures of gravel, sand, non-plastic silt, and small quantities of cobbles, rock fragments, and/or clay are acceptable for use as import fill. All imported fill materials to be used for engineered fill should be sampled and tested by the project Geotechnical Engineer prior to being transported to the site. Import fill guidelines are provided below.

Table 5-3
Import Fill Guidelines

Fill Requirement		**Test Procedures**	
Gradation		**ASTM**[1]	**Caltrans**[2]
Sieve Size	**Percent Passing**		
3 inch	100	D422	202
¾ inch	70-100	D422	202

[2]State of California, Department of Transportation, Standard Test Methods (latest edition)

Trench backfill and bedding placed within existing or future city right-of-ways should meet or exceed the requirements outlined in the current city specifications. Trench backfill or bedding placed outside existing or future right-of-ways could consist of native or imported soil that meets the requirements for fill material provided above. However, coarse-grained sand and/or gravel should be avoided for pipe bedding or trench zone backfill unless the material is fully enclosed in

© 2017 Kleinfelder

a geotextile filter fabric such as Mirafi 140N or an equivalent substitute. In a very moist or saturated condition, fine-grained soil can migrate into the coarse sand or gravel voids and cause "loss of ground" or differential settlement along and/or adjacent to the trenches, thereby leading to pipe joint displacement and pavement distress.

Trench backfill recommendations provided above should be considered minimum requirements only. More-stringent material specifications may be required to fulfill bedding requirements for specific types of pipe. The project Civil Engineer should develop these material specifications based on planned pipe types, bedding conditions, and other factors beyond the scope of this study.

5.9.5 Engineered Fill

All fill soils, either native or imported, required to bring the site to final grade should be compacted as engineered fill. The fill should be uniformly moisture conditioned to a moisture content at least 2 percent above the optimum moisture content, placed in horizontal lifts less than 8 inches in loose thickness, and compacted to at least 90 percent of the maximum dry density as determined by ASTM Test Method D 1557. Additional fill lifts should not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable. Discing and/or blending may be required to uniformly moisture condition soils used for engineered fill.

All trench backfill in building or other structural areas should be placed and compacted in accordance with the recommendations provided above for engineered fill. During backfill, mechanical compaction of engineered fill is recommended.

5.9.6 Wet/Unstable Subgrade Mitigation

If construction is to proceed during the winter and spring months, the moisture content of the near-surface soils may be significantly above optimum. This condition, if encountered, could seriously delay grading by causing an unstable subgrade condition. Typical remedial measures include discing and aerating the soils, mixing the soils with dryer materials, removing and replacing the soils with an approved fill material, stabilization with a geotextile fabric or grid, or mixing the soils with an approved hydrating agent such as a lime or cement product. Our firm should be consulted prior to implementing any remedial measure to observe the unstable subgrade condition and provide site-specific recommendations.

© 2017 Kleinfelder

5.10 EXTERIOR FLATWORK

Subgrade soils underlying exterior flatwork should be scarified 12 inches, moisture conditioned, and recompacted. The subgrade preparation should extend beyond the proposed improvements a horizontal distance of at least 2 feet. The moisture content of the subgrade soils should be maintained at least 2 percent above optimum prior to the placement of any flatwork or engineered fill.

Where exterior flatwork is anticipated to be subjected to vehicular traffic, we recommend 4 inches of aggregate base, compacted to a minimum of 95 percent of the maximum dry density, be used under the flatwork.

Moisture conditioning to the full 12-inch depth should be verified by the geotechnical engineer's representative. Careful control of the water/cement ratio should be performed to avoid shrinkage cracking due to excess water or poor concrete finishing or curing. Unreinforced slabs should not be built in areas where further saturation may occur following construction.

Exterior concrete slabs for pedestrian traffic should be at least 4 inches thick. Weakened plane joints should be located at intervals of about 6 feet. For large areas of hardscape, expansion joints should be placed at a minimum of 12- to 15-foot intervals.

5.11 SITE DRAINAGE

Foundation and slab performance depends greatly on proper irrigation and how well runoff water drains from the site. This drainage should be maintained both during construction and over the entire life of the project. The ground surface around structures should be graded such that water drains rapidly away from structures without ponding. The surface gradient needed to do this depends on the landscaping type. In general, landscape area within 10 feet of buildings should slope away at gradients of at least 5 percent, per Section 1804.3 of 2013 CBC.

We recommend that landscape planters either not be located adjacent to buildings and pavement areas or be properly drained to area drains. Drought resistant plants and minimum watering are recommended for planters immediately adjacent to structures. No raised planters should be

© 2017 Kleinfelder

installed immediately adjacent to structures unless they are damp-proofed and have a drainpipe connected to an area drain outlet. Planters should be built such that water exiting from them will not seep into the foundation areas or beneath slabs and pavement. Where slabs or pavement areas abut landscaped areas, the aggregate base and subgrade soil should be protected against saturation.

Vertical cut-off structures are recommended to reduce lateral seepage under slabs from adjacent landscaped areas, including bio-retention areas. Vertical cut-off structures may consist of deepened concrete perimeters, or equivalent, extending at least four (4) inches below the base/subgrade interface, or 1 foot below the base of the gravel retention layer underlying bio-swales, whichever is deeper. Vertical cut-off structures should be poured neat against undisturbed native soil or compacted clayey fill. The cut-off structures should be continuous.

In addition, waterproofing the slab and walls should be considered. Roof water should be directed to fall on hardscape areas sloping to an area drain, or roof gutters and downspouts should be installed and routed to area drains. In any event, maintenance personnel should be instructed to limit irrigation to the minimum actually necessary to properly sustain landscaping plants. Should excessive irrigation, waterline breaks or unusually high rainfall occur, saturated zones and “perched” groundwater may develop. Consequently, the site should be graded so that water drains away readily without saturating the foundation or landscaped areas. Potential sources of water such as water pipes, drains, and the like should be frequently examined for signs of leakage or damage. Any such leakage or damage should be promptly repaired. Wet utilities should also be designed to be watertight.

5.12 STORM WATER MANAGEMENT

We have evaluated the potential for storm water infiltration/percolation into the subgrade soils at the subject project site. As encountered during our field explorations at the project site, the upper soils are primarily fine grained (clay) and, consequently, have a very low hydraulic conductivity. Due to the clayey nature of the near-surface site soils, they are not considered conducive to infiltration systems for storm water management. Recommendations for implementation of storm water managements systems, if required, are presented below.

© 2017 Kleinfelder

Recent storm water runoff regulations require pretreatment of runoff and infiltration of storm water to the extent feasible. Typically, this results in the use of bioretention areas, vegetated swales, infiltration trenches, buried storm water detention/infiltration galleries, or permeable pavement near or within parking lots and at the location of roof run-off collection. These features are not well-suited to fine-grained, low permeability soils, which do not allow significant infiltration over short time periods. In addition, allowing water to pond on potentially expansive clay soils can cause the soils to swell, which can cause distress to pavements, slabs, and lightly loaded structures.

Implementation of storm water infiltration criteria will likely result in increased distress and reduced service life of pavement and flatwork if not carefully designed in fine-grained soils. In general, bioretention areas, vegetated swales and infiltration areas should be located in landscaped areas and well away from pavements, buildings, and slopes.

If it is not possible to locate these infiltration systems away from buildings and/or pavements, alternatives that isolate the infiltrated water, such as flow-through planters, could be considered. When using an infiltration system in fine-grained soils, underdrains that discharge to the storm drains should be used. In addition, the top of the swales should be a laterally separated a minimum of 12 inches from the curbs. To reduce potential for rotation of the curbs, curbs adjacent to the swales should extend a minimum of 12 inches below the bottom of the aggregate base course.

5.13 SOIL CORROSIVITY

Kleinfelder has completed laboratory testing to provide data regarding corrosivity of onsite soils. Our scope of services does not include corrosion engineering and, therefore, a detailed analysis of the corrosion test results is not included in this report. A qualified corrosion engineer should be retained to review the test results and design protective systems that may be required. Kleinfelder may be able to provide those services.

Laboratory chloride concentration, sulfate concentration, pH, oxidation reduction potential, and electrical resistivity tests were performed on a near-surface soil sample. The results of the tests are presented in Appendix C and are summarized in Table 5-4. If fill materials will be imported to the project site, similar corrosion potential laboratory testing should be completed on the imported material.

© 2017 Kleinfelder

Table 5-4
Chemistry Laboratory Test Results

Boring and Depth	Material	Resistivity, ohm-cm		pH	Oxidation Reduction Potential, mV	Water-Soluble Ion Concentration, ppm

KB-1 Bulk 2 @ 2.5 – 5 ft.	Lean Clay with Sand and Gravel	3,100	2,800	7.87	350	N.D.*	N.D.	N.D.

*N.D. - None Detected

Ferrous metal and concrete elements in contact with soil, whether part of a foundation or part of the supported structure, are subject to degradation due to corrosion or chemical attack. Therefore, buried ferrous metal and concrete elements should be designed to resist corrosion and degradation based on accepted practices.

Based on the "10-point" method developed by the American Water Works Association (AWWA) in standard AWWA C105/A21.5, the soils at the site have a mild corrosion potential to buried ferrous metal piping, cast iron pipes, or other objects made of these materials. We recommend that a corrosion engineer be consulted to recommend appropriate protective measures.

The degradation of concrete or cement grout can be caused by chemical agents in the soil or groundwater that react with concrete to either dissolve the cement paste or precipitate larger compounds within the concrete, causing cracking and flaking. The concentration of water-soluble sulfates in the soils is a good indicator of the potential for chemical attack of concrete or cement grout. The American Concrete Institute (ACI) in their publication "Guide to Durable Concrete" (ACI 201.2R-08) provides guidelines for this assessment. The sulfate tests indicated no detected sulfate in the sample. The results of sulfate test indicate the potential for deterioration of concrete is mild, no special requirements should be necessary for the concrete mix.

Concrete and the reinforcing steel within it are at risk of corrosion when exposed to water-soluble chloride in the soil or groundwater. Chloride tests indicated no detected chloride in the sample. The project structural engineer should review this data to determine if remedial measures are necessary for the concrete reinforcing steel.

© 2017 Kleinfelder

6.0 ADDITIONAL SERVICES

The review of final plans and specifications, and field observations and testing during construction by Kleinfelder is an integral part of the conclusions and recommendations made in this report. If Kleinfelder is not retained for these services, the client agrees to assume Kleinfelder's responsibility for any potential claims that may arise during construction. The actual tests and observations by Kleinfelder during construction will vary depending on type of project and soil conditions. The tests and observations would be additional services provided by our firm. The costs for these services are not included in our current fee arrangements.

As a minimum, our construction services should include observation and testing during site preparation, grading, and placement of engineered fill and observation of foundation excavations prior to placement of reinforcing steel. Many of our clients find it helpful to have concrete compressive tests performed for each building even though this information may not be required by any agency. It may also be helpful to perform a floor level and crack survey of all slab-on-grade floors prior to the application of any floor covering. The floor level survey can be readily performed by the client or as an additional service provided by Kleinfelder using a manometer device.

© 2017 Kleinfelder

7.0 LIMITATIONS

The conclusions and recommendations of this report are provided for the design and construction of the new commercial building to be located at 5295 Prospect Road in San Jose, California, as described in the text of this report. The conclusions and recommendations in this report are invalid if:

- The assumed structural or grading details change
- The report is used for adjacent or other property
- Any other change is implemented which materially alters the project from that proposed at the time this report was prepared

The scope of services was limited to the drilling of two test borings in areas accessible to our drill rig. It should be recognized that definition and evaluation of subsurface conditions are difficult. Judgments leading to conclusions and recommendations are generally made with incomplete knowledge of the subsurface conditions present due to the limitations of data from field studies. The conclusions of this assessment are based on our subsurface exploration including borings drilled to a maximum depth of 30 feet; groundwater level measurements in test borings after drilling completion; laboratory testing of natural moisture content, in-place density, plasticity, and shear strength tests; and engineering analyses.

Kleinfelder offers various levels of investigative and engineering services to suit the varying needs of different clients. Although risk can never be eliminated, more-detailed and extensive studies yield more information, which may help understand and manage the level of risk. Since detailed study and analysis involve greater expense, our clients participate in determining levels of service which provide information for their purposes at acceptable levels of risk. The client and key members of the design team should discuss the issues covered in this report with Kleinfelder so that the issues are understood and applied in a manner consistent with the owner's budget, tolerance of risk, and expectations for future performance and maintenance.

Recommendations contained in this report are based on our field observations and subsurface explorations, limited laboratory tests, and our present knowledge of the proposed construction. It is possible that soil or groundwater conditions could vary between or beyond the points explored.

© 2017 Kleinfelder

If soil or groundwater conditions are encountered during construction that differ from those described herein, the client is responsible for ensuring that Kleinfelder is notified immediately so that we may reevaluate the recommendations of this report. If the scope of the proposed construction, including the estimated building loads and the design depths or locations of the foundations, changes from that described in this report, the conclusions and recommendations contained in this report are not considered valid unless the changes are reviewed and the conclusions of this report are modified or approved in writing by Kleinfelder.

As the geotechnical engineering firm that performed the geotechnical evaluation for this project, Kleinfelder should be retained to evaluate whether the recommendations of this report are properly incorporated in the design of this project and properly implemented during construction. This may avoid misinterpretation of the information by other parties and will allow us to review and modify our recommendations if variations in the soil conditions are encountered. As a minimum, Kleinfelder should be retained to provide the following continuing services for the project:

- Review the project plans and specifications, including any revisions or modifications
- Observe the site earthwork operations to assess whether the subgrade soils are suitable for construction of foundations, slabs-on-grade, pavements and placement of engineered fill
- Evaluate whether engineered fill for the structure and other improvements is placed and compacted per the project specifications
- Observe foundation bearing soils to evaluate whether conditions are as anticipated

The scope of services for this subsurface exploration and geotechnical report did not include environmental assessments or evaluations regarding the presence or absence of wetlands or hazardous substances in the soil, surface water, or groundwater at this site.

Kleinfelder cannot be responsible for interpretation by others of this report or the conditions encountered in the field. Kleinfelder must be retained so that all geotechnical aspects of construction will be monitored on a full-time basis by a representative from Kleinfelder, including site preparation, preparation of foundations, installation of piles, and placement of engineered fill and trench backfill. These services provide Kleinfelder the opportunity to observe the actual soil

© 2017 Kleinfelder

and groundwater conditions encountered during construction and to evaluate the applicability of the recommendations presented in this report to the site conditions. If Kleinfelder is not retained to provide these services, we will cease to be the engineer of record for this project and will assume no responsibility for any potential claim during or after construction on this project. If changed site conditions affect the recommendations presented herein, Kleinfelder must also be retained to perform a supplemental evaluation and to issue a revision to our original report.

This report, and any future addenda or reports regarding this site, may be made available to bidders to supply them with only the data contained in the report regarding subsurface conditions and laboratory test results at the point and time noted. Bidders may not rely on interpretations, opinions, recommendations, or conclusions contained in the report. Because of the limited nature of any subsurface study, the contractor may encounter conditions during construction which differ from those presented in this report. In such event, the contractor should promptly notify the owner so that Kleinfelder's geotechnical engineer can be contacted to evaluate those conditions. We recommend the contractor describe the nature and extent of the differing conditions in writing and that the construction contract include provisions for dealing with differing conditions. Contingency funds should be reserved for potential problems during earthwork and foundation construction. Furthermore, the contractor should be prepared to handle contamination conditions encountered at this site, which may affect the excavation, removal, or disposal of soil; dewatering of excavations; and health and safety of workers.

We are not floor moisture proofing experts. We make no guarantee nor provide any assurance that the slab underlayment discussed in Section 5.8 will reduce concrete slab-on-grade floor moisture penetration to any specific rate or level, particularly those required by floor covering manufacturers. Qualified specialists with local knowledge of slab moisture protection systems, flooring design, and other potential components that may be influenced by moisture should be consulted.

This report was prepared in accordance with the generally accepted standard of practice that existed in Alameda County at the time the report was written. No warranty, expressed or implied, is made.

It is the CLIENT'S responsibility to see that all parties to the project, including the designer, contractor, subcontractors, etc., are made aware of this report in its entirety.

© 2017 Kleinfelder

This report may be used only by the client and only for the purposes stated within a reasonable time from its issuance, but in no event later than two years from the date of the report. Land use, site conditions (both on- and off-site), or other factors may change over time, and additional work may be required. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else, unless specifically agreed to in advance by Kleinfelder in writing, will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party.

- WATER LEVEL (additional levels after exploration)
- OBSERVED SEEPAGE

NOTES

- The report and graphics key are an integral part of these logs. All data and interpretations in this log are subject to the explanations and limitations stated in the report.
- Lines separating strata on the logs represent approximate boundaries only. Actual transitions may be gradual or differ from those shown.
- No warranty is provided as to the continuity of soil or rock conditions between individual sample locations.
- Logs represent general soil or rock conditions observed at the point of exploration on the date indicated.
- In general, Unified Soil Classification System designations presented on the logs were based on visual classification in the field and were modified where appropriate based on gradation and index property testing.
- Fine grained soils that plot within the hatched area on the Plasticity Chart, and coarse grained soils with between 5% and 12% passing the No. 200 sieve require dual USCS symbols, ie., GW-GM, GP-GM, GW-GC, GP-GC, GC-GM, SW-SM, SP-SM, SW-SC, SP-SC, SC-SM.
- If sampler is not able to be driven at least 6 inches then 50/X indicates number of blows required to drive the identified sampler X inches with a 140 pound hammer falling 30 inches.

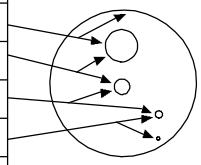
Boulders		>12 in. (304.8 mm.)	>12 in. (304.8 mm.)	Larger than basketball-sized
Cobbles		3 - 12 in. (76.2 - 304.8 mm.)	3 - 12 in. (76.2 - 304.8 mm.)	Fist-sized to basketball-sized
Gravel	coarse	3/4 -3 in. (19 - 76.2 mm.)	3/4 -3 in. (19 - 76.2 mm.)	Thumb-sized to fist-sized
	fine	#4 - 3/4 in. (#4 - 19 mm.)	0.19 - 0.75 in. (4.8 - 19 mm.)	Pea-sized to thumb-sized
Sand	coarse	#10 - #4	0.079 - 0.19 in. (2 - 4.9 mm.)	Rock salt-sized to pea-sized
	medium	#40 - #10	0.017 - 0.079 in. (0.43 - 2 mm.)	Sugar-sized to rock salt-sized
	fine	#200 - #40	0.0029 - 0.017 in. (0.07 - 0.43 mm.)	Flour-sized to sugar-sized
Fines		Passing #200	<0.0029 in. (<0.07 mm.)	Flour-sized and smaller



SECONDARY CONSTITUENT

	AMOUNT	
Term of Use	Secondary Constituent is Fine Grained	Secondary Constituent is Coarse Grained
Trace	<5%	<15%
With	≥5 to <15%	≥15 to <30%
Modifier	≥15%	≥30%

MOISTURE CONTENT

DESCRIPTION	FIELD TEST
Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, usually soil is below water table

CEMENTATION

DESCRIPTION	FIELD TEST
Weakly	Crumbles or breaks with handling or slight finger pressure
Moderately	Crumbles or breaks with considerable finger pressure
Strongly	Will not crumble or break with finger pressure

CONSISTENCY - FINE-GRAINED SOIL

CONSISTENCY	SPT - N_{60} (# blows / ft)	Pocket Pen (tsf)	UNCONFINED COMPRESSIVE STRENGTH (Q_u)(psf)	VISUAL / MANUAL CRITERIA
Very Soft	<2	PP < 0.25	<500	Thumb will penetrate more than 1 inch (25 mm). Extrudes between fingers when squeezed.
Soft	2 - 4	0.25≤ PP <0.5	500 - 1000	Thumb will penetrate soil about 1 inch (25 mm). Remolded by light finger pressure.
Medium Stiff	4 - 8	0.5≤ PP <1	1000 - 2000	Thumb will penetrate soil about 1/4 inch (6 mm). Remolded by strong finger pressure.
Stiff	8 - 15	1≤ PP <2	2000 - 4000	Can be imprinted with considerable pressure from thumb.
Very Stiff	15 - 30	2≤ PP <4	4000 - 8000	Thumb will not indent soil but readily indented with thumbnail.
Hard	>30	4≤ PP	>8000	Thumbnail will not indent soil.

REACTION WITH HYDROCHLORIC ACID

DESCRIPTION	FIELD TEST
None	No visible reaction
Weak	Some reaction, with bubbles forming slowly
Strong	Violent reaction, with bubbles forming immediately

APPARENT / RELATIVE DENSITY - COARSE-GRAINED SOIL

APPARENT DENSITY	SPT-N_{60} (# blows/ft)	MODIFIED CA SAMPLER (# blows/ft)	CALIFORNIA SAMPLER (# blows/ft)	RELATIVE DENSITY (%)
Very Loose	<4	<4	<5	0 - 15
Loose	4 - 10	5 - 12	5 - 15	15 - 35
Medium Dense	10 - 30	12 - 35	15 - 40	35 - 65
Dense	30 - 50	35 - 60	40 - 70	65 - 85
Very Dense	>50	>60	>70	85 - 100

FROM TERZAGHI AND PECK, 1948

PLASTICITY

DESCRIPTION	LL	FIELD TEST
Non-plastic	NP	A 1/8-in. (3 mm.) thread cannot be rolled at any water content.
Low (L)	< 30	The thread can barely be rolled and the lump or thread cannot be formed when drier than the plastic limit.
Medium (M)	30 - 50	The thread is easy to roll and not much time is required to reach the plastic limit. The thread cannot be rerolled after reaching the plastic limit. The lump or thread crumbles when drier than the plastic limit.
High (H)	> 50	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump or thread can be formed without crumbling when drier than the plastic limit.

STRUCTURE

DESCRIPTION	CRITERIA
Stratified	Alternating layers of varying material or color with layers at least 1/4-in. thick, note thickness.
Laminated	Alternating layers of varying material or color with the layer less than 1/4-in. thick, note thickness.
Fissured	Breaks along definite planes of fracture with little resistance to fracturing.
Slickensided	Fracture planes appear polished or glossy, sometimes striated.
Blocky	Cohesive soil that can be broken down into small angular lumps which resist further breakdown.
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay; note thickness.

ANGULARITY

DESCRIPTION	CRITERIA
Angular	Particles have sharp edges and relatively plane sides with unpolished surfaces.
Subangular	Particles are similar to angular description but have rounded edges.
Subrounded	Particles have nearly plane sides but have well-rounded corners and edges.
Rounded	Particles have smoothly curved sides and no edges.

GBA INFORMATION SHEET

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled*. No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be*, and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed*. The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only*. To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely*. Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures*. If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

SUBJECT: Geotechnical Investigation Report
Proposed Orchard Downsizing and New Building Pad
Westgate West Shopping Center – Phase II
Lawrence Expressway and Prospect Road
San Jose, California

Dear Ms. Johnson:

Kleinfelder is pleased to present our geotechnical investigation report for the proposed Orchard Supply Hardware (Orchard) store downsizing and new building pad in San Jose, California. Our services were provided in general accordance with our proposal dated May 11, 2017.

This report covers the demolition of existing buildings on the subject new building pad, design and construction of a new wall/foundation for the adjacent existing Orchard hardware store building where a portion of the existing building will be demolished to make room for the new building pad, and regrading of the subject building pad to be delivered to future tenant. We understand the new building of the subject new building pad will be designed and constructed by future tenant, and the design and construction of such building is not covered under this report.

Based on the conditions encountered during the field exploration and our current understanding of the project, it is our opinion that the subject project is feasible from a geotechnical engineering standpoint provided that the recommendations presented in this report are incorporated into the design and construction of the subject project. The new building wall of the existing Orchard hardware store building may be supported on a shallow foundation system. Differential settlements between the existing and new foundations will be equivalent to the total settlement of the new foundations, and may be up to 1 inch; the structural design, utilities and architectural features should be designed to accommodate this potential differential settlement. Geotechnical recommendations are presented in this report.

We appreciate the opportunity to provide our services for this project. If you have questions regarding this report or need further assistance, please contact us at your convenience.

Sincerely,

KLEINFELDER, INC.

1.0 INTRODUCTION

In this report we present the results of our geotechnical engineering investigation performed for the proposed Orchard hardware store downsizing and new building pad to be located in the Westgate West Shopping Center, at the intersection of Lawrence Expressway and Prospect Road in San Jose, California. A site vicinity map is shown on Figure 1.

This report covers the demolition of existing buildings on the subject new building pad, design and construction of a new wall/foundation for the adjacent existing Orchard hardware store building where a portion of the existing building will be demolished to make room for the new building pad, and regrading of the subject building pad to be delivered to a future tenant. Some minor repaving may be required. Other improvements may include exterior concrete flatwork, landscaping, and buried utilities. We understand the new structure of the subject new building pad will be designed and constructed by future tenant. At this time, we understand that the potential future tenant plans to construct a new fitness center on the subject building pad. The design and construction of such building is not covered under this report.

Based on a Leasing Plan prepared by Retail Design Collaborative, dated May 2, 2017, the proposed new building pad is currently occupied by commercial buildings, including an existing Orchard Supply Hardware (Orchard) store. We understand that the commercial buildings and a portion of the hardware store will be demolished, a new wall for the Orchard hardware store building will be constructed and the building pad will be prepared. The areas around the north, east, and south sides of the new building pad are currently paved parking areas. A loading dock with a depressed ramp is located on the north side of the proposed building pad.

The proposed building pad footprint will be rectangular in shape, and will have a ground floor area of about 30,000 square feet (220 feet by 138 feet). The remaining hardware store building will be abutting the building pad on the west side. The building site and the surrounding areas are relatively flat, so no significant cuts and fills are expected. We envision that the depressed loading dock ramp on the north side of the site will be removed, and the depressed area will be backfilled to the building pad grade.

© 2017 Kleinfelder

2.0 PURPOSE AND SCOPE OF SERVICES

The purpose of our services was to explore and evaluate the subsurface conditions at the site in order to develop recommendations related to the geotechnical aspects of project design and construction.

The scope of our services was outlined in our Proposal (MP180873.001P) dated May 11, 2017 and included the following:

- A site reconnaissance to observe the surface conditions at the project site
- A field investigation that consisted of drilling borings in the area of the proposed development to explore the subsurface conditions
- Laboratory testing of selected soil samples obtained during the field investigation to evaluate relevant physical and engineering parameters of the subsurface soils
- Evaluation of the field and laboratory data obtained and performing engineering analyses to develop our geotechnical conclusions and recommendations
- Preparation of this report which includes:
    - Site vicinity map and exploration location map
    - Description of the project
    - Boring logs and laboratory tests
    - Conclusions pertaining to feasibility of the proposed development, impacts of geotechnical and geologic features on the proposed development and geologic hazards
    - Recommendations for spread footings and slabs-on-grade including mitigation of expansive soils
    - Recommendations for site grading, subgrade preparation, earthwork, and fill placement and compaction specifications
    - Additional construction considerations, as applicable
    - Seismic design parameters in accordance with 2016 California Building Code (CBC)

© 2017 Kleinfelder

3.0 FIELD AND LABORATORY INVESTIGATIONS

3.1 FIELD INVESTIGATION

3.1.1 Exploratory Borings

The subsurface conditions at the site were explored by drilling two exploratory borings, B-1 and B-2, on June 23, 2017. The two borings were drilled to depths of about 22.5 feet (Boring B-1) and about 25 feet (Boring B-2) below existing grade. The borings were drilled using a B24 Mobile truck-mounted drill rig utilizing a 4-inch outside-diameter solid-stem augers. The approximate boring locations are presented on Figure 2. Explorations were located in the field by measuring from existing landmarks. Horizontal coordinates and elevations of the borings were not surveyed.

A Kleinfelder professional maintained logs of the borings, visually classified the soils encountered according to the Unified Soil Classification System presented on Figure A-1 in Appendix A, and obtained relatively undisturbed and bulk samples of the subsurface materials. Soil classifications made in the field from samples and auger cuttings were in accordance with American Society for Testing and Materials (ASTM) Method D 2488. These classifications were re-evaluated in the laboratory after further examination and testing in accordance with ASTM D 2487. The undrained shear strengths of cohesive soil samples were estimated in the field using a hand-held penetrometer device. Sample classifications, blow counts recorded during sampling, and other related information were recorded on the boring logs. The blow counts listed on the boring logs have not been corrected for the effects of overburden pressure, rod length, sampler size, or hammer efficiency. Correction factors were applied to the raw blow counts to estimate the sample apparent density noted on the boring logs and for engineering analyses. After the borings were completed, they were backfilled with cement grout and patched with asphalt at the surface.

Soil cuttings were placed in 55-gallon drums during drilling. At the completion of our field exploration, a sample of the soil cuttings was collected for analytical testing. The analytical test results indicate that the sample tested was considered non-hazardous, and the soil cuttings were disposed of at a state-licensed facility by our subcontractor.

Keys to the soil descriptions and symbols used on the boring logs are presented on Figures A-1 and A-2 in Appendix A. Logs of the borings are presented on Figures A-3 through A-4.

© 2017 Kleinfelder

3.1.2 Sampling Procedures

Soil samples were collected from the borings at depth intervals of approximately 2½ to 5 feet. Samples were collected from the borings at selected depths by driving either a 2.5-inch inside diameter (I.D.) California sampler or a 1.4-inch I.D. Standard Penetration Test (SPT) sampler driven 18 inches (unless otherwise noted) into undisturbed soil. The samplers were driven using a 140-pound manual (cathead and rope) hammer free-falling a distance of about 30 inches. Blow counts were recorded at 6-inch intervals for each sample attempt and are reported on the logs.

The SPT sampler did not contain liners, but had space for them. The 2.5-inch I.D. California sampler contained stainless steel liners. The California sampler was in general conformance with ASTM D3550. The SPT sampler was in general conformance with ASTM D1586.

Soil samples obtained from the borings were packaged and sealed in the field to reduce moisture loss and disturbance. Following drilling, the samples were returned to our laboratory for further examination and testing.

3.2 GEOTECHNICAL LABORATORY TESTING

Kleinfelder performed laboratory tests on selected samples recovered from the borings to evaluate their physical and engineering characteristics. The following laboratory tests were performed:

- Unit Weight (ASTM D2937)
- Moisture Content (ASTM D2216)
- Atterberg Limits (ASTM D4318)
- Particles Finer Than #200 Sieve (ASTM D1140)
- Sieve Analysis, Coarse and Fine (ASTM D6913)
- Unconsolidated Undrained Triaxial Shear (ASTM D2850)
- Corrosion - Soluble Sulfate Content (ASTM D4327)
- Corrosion - Soluble Chloride Content (ASTM D4327)
- pH (ASTM D4972)
- Minimum Resistivity (ASTM G57)

The results of geotechnical laboratory tests are included on the boring logs in Appendix A and are summarized in Appendix B. The soluble sulfate, soluble chloride, pH, and minimum resistivity test results are discussed in Section 5.11 of this report. The laboratory reports are included in Appendix B and Appendix C.

© 2017 Kleinfelder

4.0 SITE CONDITIONS

4.1 SITE DESCRIPTION

The site is currently occupied by commercial buildings, including an existing Orchard hardware store. The areas around the north, east and south sides of the site is mostly paved for parking, and a loading dock with a depressed ramp is located on the north side of the site. The site is relatively flat.

4.2 SUBSURFACE CONDITIONS

The following description provides a general summary of the subsurface conditions encountered during the current study performed at the site. For more thorough descriptions of the actual conditions encountered at specific exploration locations, refer to the subsurface exploration logs located in Appendix A.

The two borings were drilled in asphalt paved areas. The asphalt pavement section thicknesses varied between about 4.5 inches in Boring B-1 to about 5 inches in Boring B-2. The asphalt sections were underlain by an aggregate base section; thicknesses of the aggregate base were not measured, however based on our previous experience at the site it is assumed the base thickness is approximately 6 inches.

Underneath the pavement section, in Boring B-1, very stiff to hard, low to medium plasticity lean clays, sandy lean clays and gravelly lean clays were encountered to a depth of about 13 feet. A medium dense sand lens with gravel was encountered beneath the clay to a depth of approximately 15½ feet, which was underlain by very stiff to hard, low plasticity lean clays and gravelly lean clays to the termination of the boring. The boring was terminated at a depth of about 22½ feet due to auger refusal.

Underneath the pavement section, in Boring B-2, very stiff to hard, low to medium plasticity lean clays, sandy lean clays and gravelly lean clays were encountered to the termination of the boring. The boring was terminated at a depth of about 25 feet due to auger refusal.

© 2017 Kleinfelder

No groundwater was encountered in the borings during our investigation. Based on the California Geological Survey (CGS, 2002), groundwater at the site is anticipated to be greater than 50 feet below ground surface.

Our interpretations of soil and groundwater conditions at the site are based on the conditions encountered in the borings, published geologic maps, and our knowledge of geologic and hydrogeologic conditions in the site vicinity. It is possible that groundwater conditions at the site could change due to variations in rainfall, groundwater withdrawal or recharge, construction activities, well pumping, or other factors not apparent at the time of our investigation. If soil or groundwater conditions exposed during construction vary from those presented in this report, Kleinfelder should be notified to evaluate whether our conclusions or recommendations should be modified.

© 2017 Kleinfelder

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 GENERAL

Based on our findings, it is our professional opinion that the subject project is feasible from a geotechnical engineering standpoint provided that the recommendations presented in this report are incorporated into the design and construction. Specific conclusions and recommendations regarding the geotechnical aspects of design and construction are presented in the following sections.

5.2 GEOLOGIC HAZARDS

The site is not located within a State-designated Alquist-Priolo Earthquake Fault Zone where site-specific studies addressing the potential for surface fault rupture are required, and no known active faults traverse the site. In our opinion, the potential for fault-related ground surface rupture at the site is low.

Earthquake-induced soil liquefaction can be described as a significant loss of soil strength and stiffness caused by an increase in pore water pressure resulting from cyclic loading during shaking. The site is not located within a State of California Seismic Hazard Zone for liquefaction where areas of historical occurrence of liquefaction, or local geological, geotechnical and groundwater conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required (CGS, 2003b). As indicated in Section 4.2 of this report, groundwater at the site is anticipated to be greater than 50 feet below ground surface. Based on these reasons, in our opinion, the potential for earthquake-induced soil liquefaction at the site is low.

Lateral spreading is a potential hazard commonly associated with liquefaction where extensional ground cracking and settlement occur as a response to lateral migration of subsurface liquefiable material. These phenomena typically occur adjacent to free faces such as slopes and creek channels. Since no slopes and channels are located in the vicinity of the site, and the potential of liquefaction is considered low, in our opinion, the potential for lateral spreading at the site is low.

© 2017 Kleinfelder

Dynamic compaction, or seismic settlement, typically occur in unsaturated, loose granular material or uncompacted fill soils. Since the site soils generally consist clayey soils interbedded with relatively thin layers of medium dense sand and clayey sand, in our opinion, the potential for dynamic compaction at the site is low.

5.3 EXPANSIVE SOILS

Based on the results of Atterberg Limits tests performed on near-surface soil samples, the surficial soils have low expansion potential. These surficial soils may shrink or swell as a result of soil moisture content changes, but the amounts of shrinking and swelling are expected to be relatively small. It is our opinion that moisture conditioning of the clayey soils and maintaining the moisture during site grading and keying the exterior continuous wall footing into clayey soils could reduce the risk of building distresses due to expansive soils.

5.4 CBC SEISMIC DESIGN CRITERIA

Considering the location of the site and the soils that were encountered during the field exploration, the site can be classified as Site Class D according to Table 20.3-1 of the ASCE7-10. Site Class D is defined as a soil profile consisting of stiff soil with a shear wave velocity between 600 feet/second and 1,200 feet/second, standard penetration test (SPT) blow counts (N-value) between 15 blows per foot (bpf) and 50 bpf, or undrained shear strength between 1,000 pounds per square foot (psf) and 2,000 psf in the top 100 feet.

The site is located approximately at the following coordinates:

- Latitude: 37.294152 degrees
- Longitude: -121.996224 degrees

For a 2016 California Building Code (CBC) based design, the estimated Maximum Considered Earthquake (MCE) mapped spectral accelerations for 0.2 second and 1 second periods (S_S and S_1), associated soil amplification factors (F_a and F_v), and mapped peak ground acceleration (PGA) are presented in Table 5-1. Corresponding site modified (S_{MS} and S_{M1}) and design (S_{DS} and S_{D1}) spectral accelerations, PGA modification coefficient (F_{PGA}), PGA_M, risk coefficients (C_{RS} and C_{R1}), and long-period transition period (T_L) are also presented in Table 5-1. Presented values were

© 2017 Kleinfelder

estimated using Section 1613.3 of the 2016 California Building Code (CBC), chapters 11 and 22 of ASCE 7-10, and the United States Geological Survey (USGS) U.S. seismic design maps[1].

5.5 SHALLOW FOUNDATIONS

5.5.1 Allowable Bearing Pressure

As indicated above, this report covers only the new wall/foundation of the adjacent existing Orchard hardware store building where a portion of the existing building will be demolished to make room for the new building pad. The adjacent new structure will be designed and constructed by future tenant, and such building is not covered by this report. Geotechnical design parameters such as allowable bearing pressure, minimum footing width, and minimum footing embedment depth of the new structure may be different from those presented in this report due to different building height and structural loads, and should be determined by the geotechnical engineer for that project.

[1] http://geohazards.usgs.gov/designmaps/us/

© 2017 Kleinfelder

The new building wall of the existing Orchard hardware store building may be supported on continuous wall footings founded on firm and stable site soils. A net allowable bearing pressure of 2,500 pounds per square foot for dead plus sustained live loading may be used to size the continuous footings. A one-third increase in the allowable bearing pressure may be applied when considering short-term loading due to wind or seismic forces.

Continuous footings should have a minimum width of 18 inches for continuous footings. New strip footing embedment depth should match the foundation embedment depth of the existing Orchard store building, but should not be less than 12 inches.

Lateral loads may be resisted by a combination of friction between the foundation bottoms and the supporting subgrade, and by passive resistance acting against the vertical faces of the foundations. An allowable coefficient of sliding friction of 0.3 between the foundation and the supporting subgrade may be used for design. This value includes a safety factor of at least 1.5. For allowable passive resistance, an equivalent fluid weight of 300 pounds per cubic foot (pcf) acting against the side of the foundation may be used. This value is based on a safety factor of at least 1.5 and generally corresponds to a lateral deflection of less than ½ inch. Passive resistance in the upper 12 inches of soil should be neglected unless the area in front of the footing is protected from disturbance by concrete or pavement. The allowable friction coefficient and passive resistance may be used concurrently without reduction.

Total settlement of an individual foundation will vary depending on the plan dimensions of the foundation and the actual load supported. Based on the anticipated/assumed foundation dimensions and loads, we estimate the maximum total and differential foundation settlement of new spread foundations should be on the order of 1 and ½ inch, respectively, provided the recommendations presented in this report are followed. Differential settlements between the existing and new foundations will be equivalent to the total settlement of the new foundations, and may be up to 1 inch; the structural design, utilities and architectural features should be designed to accommodate this potential differential settlement.

5.5.2 Construction

Prior to placing steel or concrete, footing excavations should be cleaned of all debris, loose or soft soil, and water. All footing excavations should be observed by the project Geotechnical Engineer just prior to placing steel or concrete to verify the recommendations contained herein

© 2017 Kleinfelder

are implemented during construction. The structural engineer should evaluate footing configurations and reinforcement requirements to account for loading and settlement.

5.6 BUILDING SLABS-ON-GRADE

Since this report does not cover the new structure, no new building slabs-on-grade is expected under the current project. We can provide geotechnical recommendations for the design and construction of slabs-on-grade under a separate contract, if requested.

5.7 GENERAL EARTHWORK

We envision that earthwork of the subject project will be limited to the following:

- Removing existing foundations (assuming to be shallow foundations), existing underground utilities and associated bedding materials, and the existing depressed loading dock ramp; and backfilling the voids with engineered fill;
- Scarifying and recompacting the building pad subgrade; and
- Excavating for new wall foundation of the existing Orchard store building.

The following presents recommendations for general earthwork criteria.

5.7.1 Site Preparation

Site preparation will include demolishing the existing buildings. Information for the foundations of the existing buildings was not available, but are assumed to be shallow spread footings. We envision that building demolition will include removing the foundations and associated underground utilities and associated pipe bedding materials. Outside of the existing buildings, site preparation may include removing existing sidewalks, existing asphalt pavement and associated aggregate base materials. Existing utilities and associated bedding materials within the footprint of the new building should either be removed or plugged with cement grouted to prevent migration of soil and/or water. If the cement grouting method is used, the bedding material surrounding the utility lines should also be plugged at both ends by replacing the granular materials with compacted clayey soil or grout.

5.7.2 Subgrade Preparation

Prior to grading of the building pad, trenches and voids created from foundation and underground utilities removal should be backfilled by engineered fill. All loose and soft soils in the trenches and voids should be removed prior to backfilling.

© 2017 Kleinfelder

All subgrade areas that will receive engineered fill for support of structures should be scarified to a depth of 12 inches, uniformly moisture conditioned to a moisture content at least 2 percent above the optimum moisture content, and compacted as engineered fill to at least 90 percent relative compaction (ASTM D 1557). Any disturbed soil, soft soil, or unstable soil should be removed and the void backfilled with engineered fill.

Also, in order to provide uniform support for the future new building, we recommend that the uppermost 12 inches of building pad, and extending at least 5 beyond the edge of the building, soil subgrade be scarified, moisture-conditioned to at least 2 percent above the optimum content, and recompacted to at least 90 percent relative compaction (ASTM D1557).

5.7.3 Temporary Excavations

Construction site safety is the sole responsibility of the contractor, who shall also be solely responsible for the means, methods, and sequencing of construction operations. The contractor should be aware that slope height, slope inclination, or excavation depths (including utility trench excavations) should in no case exceed those specified in local, state, and/or federal safety regulations (e.g., OSHA Health and Safety Standards for Excavations, 29 CFR Part 1926, or successor regulations). Flatter slopes and/or trench shields may be required if loose, cohesionless soils and/or water are encountered along the slope face. Heavy construction equipment, building materials, excavated soil, and vehicular traffic should not be allowed within a lateral distance equal to one-third the slope height from the top of any excavation. During wet weather, earthen berms or other methods should be used to prevent runoff water from entering all excavations. All runoff water**,** seepage, and/or groundwater encountered within excavations should be collected and disposed of outside the construction limits.

5.7.4 Fill Materials

The existing site soils encountered in our borings, minus debris, rock particles larger than 3 inches in maximum dimension, and deleterious materials, should be suitable for use as engineered fill. All import fill soils should be nearly free of organic or other deleterious debris, essentially non-plastic, and contain rock particles less than 3 inches in maximum dimension. In general, well-graded mixtures of gravel, sand, non-plastic silt, and small quantities of cobbles, rock fragments, and/or clay are acceptable for use as import fill. All imported fill materials to be used for engineered fill should be sampled and tested by the project Geotechnical Engineer prior to being transported to the site. Import fill guidelines are provided below.

© 2017 Kleinfelder

Table 5-2
Import Fill Guidelines

Fill Requirement		Test Procedures	
		ASTM[1]	Caltrans[2]
Gradation			
Sieve Size	**Percent Passing**		
3 inch	100	D422	202
¾ inch	70-100	D422	202

Less than 2,000 ppm		---	417
Soluble Chloride			
Less than 300 ppm		---	422
Resistivity			
Greater than 2,000 ohm-cm		---	643

[1]American Society for Testing and Materials Standards (latest edition)
[2]State of California, Department of Transportation, Standard Test Methods (latest edition)

Trench backfill and bedding placed within existing or future city right-of-ways should meet or exceed the requirements outlined in the current city specifications. Trench backfill or bedding placed outside existing or future right-of-ways could consist of native or imported soil that meets the requirements for fill material provided above. However, coarse-grained sand and/or gravel should be avoided for pipe bedding or trench zone backfill unless the material is fully enclosed in a geotextile filter fabric such as Mirafi 140N or an equivalent substitute. In a very moist or saturated condition, fine-grained soil can migrate into the coarse sand or gravel voids and cause "loss of ground" or differential settlement along and/or adjacent to the trenches, thereby leading to pipe joint displacement and pavement distress.

Trench backfill recommendations provided above should be considered minimum requirements only. More-stringent material specifications may be required to fulfill bedding requirements for specific types of pipe. The project Civil Engineer should develop these material specifications based on planned pipe types, bedding conditions, and other factors beyond the scope of this study.

© 2017 Kleinfelder

5.7.5 Engineered Fill

All fill soils, either existing on-site or imported, required to bring the site to final grade should be compacted as engineered fill. The fill should be uniformly moisture conditioned to a moisture content at least 2 percent above the optimum moisture content, placed in horizontal lifts less than 8 inches in loose thickness, and compacted to at least 90 percent of the maximum dry density as determined by ASTM Test Method D 1557. Additional fill lifts should not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable. Discing and/or blending may be required to uniformly moisture condition soils used for engineered fill.

All trench backfill in building or other structural areas should be placed and compacted in accordance with the recommendations provided above for engineered fill. During backfill, mechanical compaction of engineered fill is recommended.

5.7.6 Wet/Unstable Subgrade Mitigation

If construction is to proceed during the winter and spring months, the moisture content of the near-surface soils may be significantly above optimum. This condition, if encountered, could seriously delay grading by causing an unstable subgrade condition. Typical remedial measures include discing and aerating the soils, mixing the soils with dryer materials, removing and replacing the soils with an approved fill material, stabilization with a geotextile fabric or grid, or mixing the soils with an approved hydrating agent such as a lime or cement product. Our firm should be consulted prior to implementing any remedial measure to observe the unstable subgrade condition and provide site-specific recommendations.

5.8 EXTERIOR FLATWORK

Subgrade soils underlying exterior flatwork should be scarified to a depth of about 12 inches, moisture conditioned, and recompacted. The subgrade preparation should extend beyond the proposed improvements a horizontal distance of at least 2 feet. The moisture content of the subgrade soils should be maintained at least 2 percent above optimum prior to the placement of any flatwork or engineered fill.

Where exterior flatwork is anticipated to be subjected to vehicular traffic, we recommend 4 inches of aggregate base, compacted to a minimum of 95 percent of the maximum dry density, be provided under the flatwork.

© 2017 Kleinfelder

Moisture conditioning to the full 12-inch depth should be verified by the geotechnical engineer's representative. Careful control of the water/cement ratio should be performed to avoid shrinkage cracking due to excess water or poor concrete finishing or curing. Unreinforced slabs should not be built in areas where further saturation may occur following construction.

Exterior concrete slabs for pedestrian traffic should be at least 4 inches thick. Weakened plane joints should be located at intervals of about 6 feet. For large areas of hardscape, expansion joints should be placed at a minimum of 12- to 15-foot intervals.

5.9 SITE DRAINAGE

Foundation and slab performance depends greatly on proper irrigation and how well runoff water drains from the site. This drainage should be maintained both during construction and over the entire life of the project. The ground surface around structures should be graded such that water drains rapidly away from structures without ponding. The surface gradient needed to do this depends on the landscaping type. In general, landscape area within 10 feet of buildings should slope away at gradients of at least 5 percent, per Section 1804.3 of 2013 CBC.

We recommend that landscape planters either not be located adjacent to buildings and pavement areas or be properly drained to area drains. Drought resistant plants and minimum watering are recommended for planters immediately adjacent to structures. No raised planters should be installed immediately adjacent to structures unless they are damp-proofed and have a drainpipe connected to an area drain outlet. Planters should be built such that water exiting from them will not seep into the foundation areas or beneath slabs and pavement. Where slabs or pavement areas abut landscaped areas, the aggregate base and subgrade soil should be protected against saturation.

Vertical cut-off structures are recommended to reduce lateral seepage under slabs from adjacent landscaped areas, including bio-retention areas. Vertical cut-off structures may consist of deepened concrete perimeters, or equivalent, extending at least four (4) inches below the base/subgrade interface, or 1 foot below the base of the gravel retention layer underlying bio-swales, whichever is deeper. Vertical cut-off structures should be poured neat against undisturbed native soil or compacted clayey fill. The cut-off structures should be continuous.

© 2017 Kleinfelder

In addition, waterproofing the slab and walls should be considered. Roof water should be directed to fall on hardscape areas sloping to an area drain, or roof gutters and downspouts should be installed and routed to area drains. In any event, maintenance personnel should be instructed to limit irrigation to the minimum actually necessary to properly sustain landscaping plants. Should excessive irrigation, waterline breaks or unusually high rainfall occur, saturated zones and "perched" groundwater may develop. Consequently, the site should be graded so that water drains away readily without saturating the foundation or landscaped areas. Potential sources of water such as water pipes, drains, and the like should be frequently examined for signs of leakage or damage. Any such leakage or damage should be promptly repaired. Wet utilities should also be designed to be watertight.

5.10 STORM WATER MANAGEMENT

We have evaluated the potential for storm water infiltration/percolation into the subgrade soils at the subject project site. As encountered during our field explorations at the project site, the upper soils are primarily fine grained (clay) and, consequently, have a very low hydraulic conductivity. Due to the clayey nature of the near-surface site soils, they are not considered conducive to infiltration systems for storm water management. Recommendations for implementation of storm water managements systems, if required, are presented below.

Recent storm water runoff regulations require pretreatment of runoff and infiltration of storm water to the extent feasible. Typically, this results in the use of bioretention areas, vegetated swales, infiltration trenches, buried storm water detention/infiltration galleries, or permeable pavement near or within parking lots and at the location of roof run-off collection. These features are not well-suited to fine-grained, low permeability soils, which do not allow significant infiltration over short time periods. In addition, allowing water to pond on potentially expansive clay soils can cause the soils to swell, which can cause distress to pavements, slabs, and lightly loaded structures.

Implementation of storm water infiltration criteria will likely result in increased distress and reduced service life of pavement and flatwork if not carefully designed in fine-grained soils. In general, bioretention areas, vegetated swales and infiltration areas should be located in landscaped areas and well away from pavements, buildings, and slopes.

© 2017 Kleinfelder

If it is not possible to locate these infiltration systems away from buildings and/or pavements, alternatives that isolate the infiltrated water, such as flow-through planters, could be considered. When using an infiltration system in fine-grained soils, underdrains that discharge to the storm drains should be used. In addition, the top of the swales should be a laterally separated a minimum of 12 inches from the curbs. To reduce potential for rotation of the curbs, curbs adjacent to the swales should extend a minimum of 12 inches below the bottom of the aggregate base course.

5.11 SOIL CORROSIVITY

Kleinfelder has completed laboratory testing to provide data regarding corrosivity of onsite soils. Our scope of services does not include corrosion engineering and, therefore, a detailed analysis of the corrosion test results is not included in this report. A qualified corrosion engineer should be retained to review the test results and design protective systems that may be required. Kleinfelder may be able to provide those services.

Laboratory chloride concentration, sulfate concentration, pH, oxidation reduction potential, and electrical resistivity tests were performed on a near-surface soil sample. The results of the tests are presented in Appendix C and are summarized in Table 5-3. If fill materials will be imported to the project site, similar corrosion potential laboratory testing should be completed on the imported material.

Table 5-3
Chemistry Laboratory Test Results

Boring and Depth	Material	Resistivity, ohm-cm		pH	Oxidation Reduction Potential, mV	Water-Soluble Ion Concentration, ppm		
		Saturated	In-Situ Moisture			Chloride	Sulfide	Sulfate
B-1 Bulk A @ 1 – 2.5 ft.	Sandy Lean Clay with Gravel	1,700	7,500	8.00	+470	N.D.*	N.D.	55

*N.D. - None Detected

Ferrous metal and concrete elements in contact with soil, whether part of a foundation or part of the supported structure, are subject to degradation due to corrosion or chemical attack. Therefore, buried ferrous metal and concrete elements should be designed to resist corrosion and degradation based on accepted practices.

© 2017 Kleinfelder

Based on the “10-point” method developed by the American Water Works Association (AWWA) in standard AWWA C105/A21.5, the soils at the site have a moderate corrosion potential to buried ferrous metal piping, cast iron pipes, or other objects made of these materials. We recommend that a corrosion engineer be consulted to recommend appropriate protective measures.

The degradation of concrete or cement grout can be caused by chemical agents in the soil or groundwater that react with concrete to either dissolve the cement paste or precipitate larger compounds within the concrete, causing cracking and flaking. The concentration of water-soluble sulfates in the soils is a good indicator of the potential for chemical attack of concrete or cement grout. The American Concrete Institute (ACI) in their publication “Guide to Durable Concrete*”* (ACI 201.2R-08) provides guidelines for this assessment. The sulfate tests indicated no detected sulfate in the sample. The results of sulfate test indicate the potential for deterioration of concrete is mild, no special requirements should be necessary for the concrete mix.

Concrete and the reinforcing steel within it are at risk of corrosion when exposed to water-soluble chloride in the soil or groundwater. Chloride tests indicated no detected chloride in the sample. The project structural engineer should review this data to determine if remedial measures are necessary for the concrete reinforcing steel.

© 2017 Kleinfelder

6.0 ADDITIONAL SERVICES

The review of final plans and specifications, and field observations and testing during construction by Kleinfelder is an integral part of the conclusions and recommendations made in this report. If Kleinfelder is not retained for these services, the client agrees to assume Kleinfelder's responsibility for any potential claims that may arise during construction. The actual tests and observations by Kleinfelder during construction will vary depending on type of project and soil conditions. The tests and observations would be additional services provided by our firm. The costs for these services are not included in our current fee arrangements.

As a minimum, our construction services should include observation and testing during site preparation, grading, and placement of engineered fill and observation of foundation excavations prior to placement of reinforcing steel. Many of our clients find it helpful to have concrete compressive tests performed for each building even though this information may not be required by any agency. It may also be helpful to perform a floor level and crack survey of all slab-on-grade floors prior to the application of any floor covering. The floor level survey can be readily performed by the client or as an additional service provided by Kleinfelder using a manometer device.

© 2017 Kleinfelder

7.0 LIMITATIONS

The conclusions and recommendations of this report are provided for the design and construction of the subject project located in Phase II of the Westgate West Shopping Center in San Jose, California, as described in the text of this report. The conclusions and recommendations in this report are invalid if:

- The assumed structural or grading details change
- The report is used for adjacent or other property
- Any other change is implemented which materially alters the project from that proposed at the time this report was prepared

The scope of services was limited to the drilling of two test borings in areas accessible to our drill rig. It should be recognized that definition and evaluation of subsurface conditions are difficult. Judgments leading to conclusions and recommendations are generally made with incomplete knowledge of the subsurface conditions present due to the limitations of data from field studies. The conclusions of this assessment are based on our subsurface exploration including borings drilled to a maximum depth of 25 feet; groundwater level measurements in test borings after drilling completion; laboratory testing of natural moisture content, in-place density, plasticity, and shear strength tests; and engineering analyses.

Kleinfelder offers various levels of investigative and engineering services to suit the varying needs of different clients. Although risk can never be eliminated, more-detailed and extensive studies yield more information, which may help understand and manage the level of risk. Since detailed study and analysis involve greater expense, our clients participate in determining levels of service which provide information for their purposes at acceptable levels of risk. The client and key members of the design team should discuss the issues covered in this report with Kleinfelder so that the issues are understood and applied in a manner consistent with the owner's budget, tolerance of risk, and expectations for future performance and maintenance.

Recommendations contained in this report are based on our field observations and subsurface explorations, limited laboratory tests, and our present knowledge of the proposed construction. It is possible that soil or groundwater conditions could vary between or beyond the points explored. If soil or groundwater conditions are encountered during construction that differ from those

© 2017 Kleinfelder

described herein, the client is responsible for ensuring that Kleinfelder is notified immediately so that we may reevaluate the recommendations of this report. If the scope of the proposed construction, including the estimated building loads and the design depths or locations of the foundations, changes from that described in this report, the conclusions and recommendations contained in this report are not considered valid unless the changes are reviewed and the conclusions of this report are modified or approved in writing by Kleinfelder.

As the geotechnical engineering firm that performed the geotechnical evaluation for this project, Kleinfelder should be retained to evaluate whether the recommendations of this report are properly incorporated in the design of this project and properly implemented during construction. This may avoid misinterpretation of the information by other parties and will allow us to review and modify our recommendations if variations in the soil conditions are encountered. As a minimum, Kleinfelder should be retained to provide the following continuing services for the project:

- Review the project plans and specifications, including any revisions or modifications
- Observe the site earthwork operations to assess whether the subgrade soils are suitable for construction of foundations, slabs-on-grade, pavements and placement of engineered fill
- Evaluate whether engineered fill for the structure and other improvements is placed and compacted per the project specifications
- Observe foundation bearing soils to evaluate whether conditions are as anticipated

The scope of services for this subsurface exploration and geotechnical report did not include environmental assessments or evaluations regarding the presence or absence of wetlands or hazardous substances in the soil, surface water, or groundwater at this site.

Kleinfelder cannot be responsible for interpretation by others of this report or the conditions encountered in the field. Kleinfelder must be retained so that all geotechnical aspects of construction will be monitored on a full-time basis by a representative from Kleinfelder, including site preparation, preparation of foundations, installation of piles, and placement of engineered fill and trench backfill. These services provide Kleinfelder the opportunity to observe the actual soil and groundwater conditions encountered during construction and to evaluate the applicability of the recommendations presented in this report to the site conditions. If Kleinfelder is not retained to provide these services, we will cease to be the engineer of record for this project and will

© 2017 Kleinfelder

assume no responsibility for any potential claim during or after construction on this project. If changed site conditions affect the recommendations presented herein, Kleinfelder must also be retained to perform a supplemental evaluation and to issue a revision to our original report.

This report, and any future addenda or reports regarding this site, may be made available to bidders to supply them with only the data contained in the report regarding subsurface conditions and laboratory test results at the point and time noted. Bidders may not rely on interpretations, opinions, recommendations, or conclusions contained in the report. Because of the limited nature of any subsurface study, the contractor may encounter conditions during construction which differ from those presented in this report. In such event, the contractor should promptly notify the owner so that Kleinfelder's geotechnical engineer can be contacted to evaluate those conditions. We recommend the contractor describe the nature and extent of the differing conditions in writing and that the construction contract include provisions for dealing with differing conditions. Contingency funds should be reserved for potential problems during earthwork and foundation construction. Furthermore, the contractor should be prepared to handle contamination conditions encountered at this site, which may affect the excavation, removal, or disposal of soil; dewatering of excavations; and health and safety of workers.

This report was prepared in accordance with the generally accepted standard of practice that existed in Santa Clara County at the time the report was written. No warranty, expressed or implied, is made.

It is the CLIENT'S responsibility to see that all parties to the project, including the designer, contractor, subcontractors, etc., are made aware of this report in its entirety.

This report may be used only by the client and only for the purposes stated within a reasonable time from its issuance, but in no event later than two years from the date of the report. Land use, site conditions (both on- and off-site), or other factors may change over time, and additional work may be required. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else, unless specifically agreed to in advance by Kleinfelder in writing, will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party.

NOTES

- The report and graphics key are an integral part of these logs. All data and interpretations in this log are subject to the explanations and limitations stated in the report.
- Lines separating strata on the logs represent approximate boundaries only. Actual transitions may be gradual or differ from those shown.
- No warranty is provided as to the continuity of soil or rock conditions between individual sample locations.
- Logs represent general soil or rock conditions observed at the point of exploration on the date indicated.
- In general, Unified Soil Classification System designations presented on the logs were based on visual classification in the field and were modified where appropriate based on gradation and index property testing.
- Fine grained soils that plot within the hatched area on the Plasticity Chart, and coarse grained soils with between 5% and 12% passing the No. 200 sieve require dual USCS symbols, ie., GW-GM, GP-GM, GW-GC, GP-GC, GC-GM, SW-SM, SP-SM, SW-SC, SP-SC, SC-SM.
- If sampler is not able to be driven at least 6 inches then 50/X indicates number of blows required to drive the identified sampler X inches with a 140 pound hammer falling 30 inches.

With	≥5 to <15%	≥15 to <30%
Modifier	≥15%	≥30%

MOISTURE CONTENT

DESCRIPTION	FIELD TEST
Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, usually soil is below water table

CEMENTATION

DESCRIPTION	FIELD TEST
Weakly	Crumbles or breaks with handling or slight finger pressure
Moderately	Crumbles or breaks with considerable finger pressure
Strongly	Will not crumble or break with finger pressure

CONSISTENCY - FINE-GRAINED SOIL

CONSISTENCY	SPT - N_{60} (# blows / ft)	Pocket Pen (tsf)	UNCONFINED COMPRESSIVE STRENGTH (Q_u)(psf)	VISUAL / MANUAL CRITERIA
Very Soft	<2	PP < 0.25	<500	Thumb will penetrate more than 1 inch (25 mm). Extrudes between fingers when squeezed.
Soft	2 - 4	0.25≤ PP <0.5	500 - 1000	Thumb will penetrate soil about 1 inch (25 mm). Remolded by light finger pressure.
Medium Stiff	4 - 8	0.5≤ PP <1	1000 - 2000	Thumb will penetrate soil about 1/4 inch (6 mm). Remolded by strong finger pressure.
Stiff	8 - 15	1≤ PP <2	2000 - 4000	Can be imprinted with considerable pressure from thumb.
Very Stiff	15 - 30	2≤ PP <4	4000 - 8000	Thumb will not indent soil but readily indented with thumbnail.
Hard	>30	4≤ PP	>8000	Thumbnail will not indent soil.

REACTION WITH HYDROCHLORIC ACID

DESCRIPTION	FIELD TEST
None	No visible reaction
Weak	Some reaction, with bubbles forming slowly
Strong	Violent reaction, with bubbles forming immediately

APPARENT / RELATIVE DENSITY - COARSE-GRAINED SOIL

APPARENT DENSITY	SPT-N_{60} (# blows/ft)	MODIFIED CA SAMPLER (# blows/ft)	CALIFORNIA SAMPLER (# blows/ft)	RELATIVE DENSITY (%)
Very Loose	<4	<4	<5	0 - 15
Loose	4 - 10	5 - 12	5 - 15	15 - 35
Medium Dense	10 - 30	12 - 35	15 - 40	35 - 65
Dense	30 - 50	35 - 60	40 - 70	65 - 85
Very Dense	>50	>60	>70	85 - 100

FROM TERZAGHI AND PECK, 1948

PLASTICITY

DESCRIPTION	LL	FIELD TEST
Non-plastic	NP	A 1/8-in. (3 mm.) thread cannot be rolled at any water content.
Low (L)	< 30	The thread can barely be rolled and the lump or thread cannot be formed when drier than the plastic limit.
Medium (M)	30 - 50	The thread is easy to roll and not much time is required to reach the plastic limit. The thread cannot be rerolled after reaching the plastic limit. The lump or thread crumbles when drier than the plastic limit.
High (H)	> 50	It takes considerable time rolling and kneading to reach the plastic limit. The thread can be rerolled several times after reaching the plastic limit. The lump or thread can be formed without crumbling when drier than the plastic limit.

STRUCTURE

DESCRIPTION	CRITERIA
Stratified	Alternating layers of varying material or color with layers at least 1/4-in. thick, note thickness.
Laminated	Alternating layers of varying material or color with the layer less than 1/4-in. thick, note thickness.
Fissured	Breaks along definite planes of fracture with little resistance to fracturing.
Slickensided	Fracture planes appear polished or glossy, sometimes striated.
Blocky	Cohesive soil that can be broken down into small angular lumps which resist further breakdown.
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay; note thickness.

ANGULARITY

DESCRIPTION	CRITERIA
Angular	Particles have sharp edges and relatively plane sides with unpolished surfaces.
Subangular	Particles are similar to angular description but have rounded edges.
Subrounded	Particles have nearly plane sides but have well-rounded corners and edges.
Rounded	Particles have smoothly curved sides and no edges.

GBA INFORMATION SHEET

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled*. No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be*, and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed*. The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only*. To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely*. Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures*. If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

1.0 Introduction

This *Soil Vapor Extraction Pilot Test* Report has been prepared by Converse Consultants (Converse), on behalf of Donahue Schriber Realty Group (DSRG), for the dry cleaning facility (Holiday Cleaners) at the Westgate West shopping center located at 5309 Prospect Road, in San Jose, California (Site). The location of the Site is shown on Figure 1, Site Location Map.

1.1 Background

Holiday Cleaners, the Site, is located within the Westgate West shopping center (Property). The Site is an operational dry cleaner that has been present at the Property since its inception in 1985. Although they currently use a hydrocarbon-based cleaning machine, records indicated that the drycleaner utilized a tetrachloroethylene (PCE)-based cleaning machine from 1985 until sometime around 2009-2010.

Beginning in August 2016 Converse has conducted several rounds of environmental assessment activities. Boring locations related to these assessments are presented on Figure 2, Probe and Well Locations. Temporary soil vapor probes GP-1 through GP-4, located within or in front of the Site, were previously removed (and therefore not indicated on Figure 2), but all other probes remain in place for use as monitoring points. The findings of these assessments have revealed the following:

- Maximum reported concentrations of PCE in soil samples were less than the Tier 1 Environmental Screening Level (ESL) of the San Francisco Bay Regional Water Quality Control Board (RWQCB). No other volatile organic compounds (VOCs) were reported in the soil samples analyzed.

- A total of 15 VOCs were reported in various soil vapor samples, but only PCE was detected at concentrations considered to pose potential threats to human-health or groundwater. Subsequent indoor air sampling indicated no significant impacts in any of the suites tested, except for Holiday Cleaners, and no VOCs were detected in any of the groundwater samples collected.

- The PCE concentrations at depths of 15 feet or less, at locations from within the dry cleaner suite (GP-2 through GP-4) and near the rear of an adjacent suite (SV-2), ranged from 260,000 to 987,000 micrograms per cubic meter (ug/m^3). These concentrations exceed the Department of Toxic Substances Control (DTSC) soil vapor screening level of 2,000 ug/m^3 presented in Human Health Risk Assessment (HHRA) Note 3. Elevated concentrations of PCE appear to be limited latterly to an approximate 50-foot radius centered around the rear of the cleaners based on maximum PCE concentrations at locations SV-1, -3, -4, -6, and -8 being less than the screening level.

Based on the results of these assessments, Converse concluded that impacts from historic dry cleaning operations on the Site have resulted in elevated levels of PCE in the soil vapor that pose a potential threat to the health of Site occupants. This threat appears to be limited latterly to an approximate 50-foot radius centered around the rear of the cleaners, and vertically to a depth of approximately 40 feet below ground surface (bgs). However, it appears that the groundwater is not impacted, and that concentrations of PCE in the soil and soil vapor between 50 and 85 feet bgs do not pose a potential threat to groundwater.

The Site has been enrolled in the Voluntary Cleanup Program (VCP) administrated by the Santa Clara County Department of Environmental Health (DEH). Following their review of available documents DEH concurred with the recommendation to initiate remedial activities. Converse prepared a Workplan - Soil Vapor Extraction Pilot Test (Workplan), dated March 3, 2017 which outlined the procedures for installing additional wells, as well as test equipment and procedures. Approval to implement the scope of work outlined in the Workplan was received from DEH in a letter dated September 1, 2017.

2.0 Scope of Services

2.1 Objective

The objective of the proposed scope of work was to evaluate the effectiveness of Soil Vapor Extraction (SVE) as remedial technology to reduce concentrations of PCE in the subsurface at the Site.

2.2 Project Set-up

Converse personnel coordinated and scheduled Site access with Donahue Scriber Realty Group and the tenants of suites in which access was required.

Well applications for the SVE wells were submitted to the Santa Clara Valley Water District (SCVWD) and approved on October 24, 2017. Subsequent notifications were made during the field activities for SCVWD to obverse the well installation as per the permits. See Appendix A for a copy of the well permits. Permits were not required by SCVWD for the shallow soil vapor monitoring wells since those borings did not extend beyond 15 feet bgs and were not anticipated to encounter groundwater.

2.3 Field Activities

The field activities were completed between November 1 and December 5, 2017. Prior to conducting the SVE pilot test two (2) sets of nested SVE wells identified as SVE-1 and SVE-2 were installed, along with two (2) additional sets of shallow soil vapor monitoring probes identified as SV-9 and SV-10. A pilot test of a temporary SVE system was then conducted. All activities were completed in general accordance with the approved Workplan.

2.3.1 Utility Clearance and Notifications

The work area and proposed boring locations were marked, and Underground Service Alert (USA) was notified of our intent to drill so that subsurface utilities would be marked.

2.3.2 Well Installation Methodologies

Two (2) types of wells were installed during this assessment: shallow soil vapor monitoring wells and soil vapor extraction wells. Soil samples were collected during the advancement of the borings. Details regarding soil types encountered and wells construction parameters were recorded on boring logs. Copies of the

boring logs are included in Appendix B. The following sections outline how the various wells were completed.

2.3.2.1 Shallow Soil Vapor Wells

On November 2, 2017, two (2) borings (SV-9 and SV-10) were advanced within the dry cleaner suite using a direct push (Geoprobe®) drill rig operated by Environmental Control Associates (ECA). Boring SV-9 was completed to the proposed depth of 15 feet bgs, but SV-10 was only completed to 12.5 feet bgs due to refusal. Permanent soil vapor probes were installed in each of these borings at depths of 5 feet bgs, and at the bottom of the boreholes These new soil vapor wells were installed to monitor the effectiveness of remedial activities since the probes installed in the three (3) borings previously advanced in this suite (GP-2, GP-3, and GP-4) were abandoned shortly after samples were collected in August 2016. Well SV-9 is located near the central portion of the suite, and SV-10 is located in front of the dry cleaning machine near the rear of the suite. See Figure 2, Probe and Well Location Map for locations.

Soil samples were continuously collected during the advancement of each boring, and those samples were used for lithologic evaluation of the soil types. No soil samples from these borings were submitted to a laboratory for chemical analysis. Soil vapor probes were installed once the borings were completed to their total depth (15 feet bgs in SV-9 and 12.5 feet in SV-10). Six (6)-inch long stainless steel probes, connected to Teflon tubing, were inserted to the bottom of the boreholes and an approximate 1-foot sand pack was then placed around and slightly above the probes. The boreholes were then sealed up to approximately 5.5 feet bgs with hydrated bentonite where a probe was installed in a similar manner, and then the remainder of the borehole was backfilled with hydrated bentonite to approximately 0.5 feet bgs. A flush-mount well cover was installed with concrete to protect the tubing.

2.3.2.2 Soil Vapor Extraction Wells

On November 1 and 2, 2017 soil vapor extraction (SVE) wells were drilled and constructed at 2 locations (SVE-1 and SVE-2) using a HSA drill rig operated by ECA. The borings were located in the parking area on the east side of the Site building and were separated by a distance of approximately 35 feet. The borings were completed to depths of 40 bgs, and soil samples were collected at 5 or 10-foot intervals. At each location a total of two (2) SVE well casings were then installed. Well locations are indicated on Figure 2, and a construction diagram of wells SVE-1 and SVE-2 is presented on Figure 3.

Borings were initially drilled using augers with an approximate outside diameter of 7 inches, and soil samples were collected at 5-foot intervals for lithologic evaluation, and/or laboratory analysis. The borings were subsequently reamed to 10-inches in diameter using larger augers. No soil samples were collected during the reaming process. Upon completion of reaming, the augers were partially removed from the hold and the well casings and annular fill materials were installed through the center of the augers. The augers were incrementally removed as well construction progressed. The wells were all constructed of 2-inch diameter schedule - 40 PVC casing. The annular space between the casing and the borehole walls was filled with #3 Monterey sand, medium bentonite chips, and neat cement slurry. The wells were completed flush to ground surface with traffic rated covers set in concrete. The general well construction parameters were as follows:

Soil Vapor Well Construction Details

Well ID	SVE-1	SVE-2
Concrete	0-2 feet	0-2 feet
Slurry	2-8 feet	2-8 feet
Bentonite	8-9 feet 20-24 feet	8-9 feet 20-24 feet
Sand	9-20 feet 24-40 feet	9-20 feet 24-40 feet
Screen	10-20 feet 25-40 feet	10-20 feet 25-40 feet
Total Depth	40 feet	40 feet

The neat cement slurry was mixed onsite in drums using eight 47-pound bags of Type II-V Portland Cement for every 50-gallon batch of slurry. County well inspectors were onsite to observe and approve of the mixing and placement of the slurry seals.

Following the installation of well SVE-1, an alternate access port to this well was installed adjacent to that of well SVE-2. The purpose of this alternate location was to avoid needing to block off additional parking spaces in front of the Site during the pilot test. To install the port a “T” fitting was attached to the top of the well casing, a 2-inch PVC pipe was then connected to this fitting and run beneath the skirt of the well cover and through a trench where it was stubbed up. Access to this port was secured with a similar well cover.

2.3.3 Sample Collection

The following sections document how samples of soil and soil vapor were collected during drilling and/or following the completion of well installation activities.

2.3.3.1 Soil Samples

All soil samples for laboratory chemical analysis were collected in 2.5-inch diameter brass rings, which were driven to the appropriate sample depth using the HSA drill rig. Subsamples were collected from select soil rings in accordance with Environmental Protection Agency (EPA) Method 5035 using encore samplers for the potential analysis of VOCs. A portion of each soil sample was also placed in a sealable plastic bag for lithologic evaluation and field-screening for VOCs using a photo-ionization detector (PID). The sample sleeves were then capped, labeled and placed on ice for transport, under chain of custody documentation to a State of California certified laboratory.

Soil samples for laboratory analysis of geotechnical parameters were collected either as discrete samples in brass rings as described above, or as bulk samples. Bulk samples were collected from the drill cuttings as the augers lifted the soil from the boring. A shovel was used to transfer the soil into plastic sample bags. These sample containers were labeled and then delivered to an appropriate laboratory for analysis.

2.3.3.2 Soil Vapor Samples

Prior to conducting the SVE pilot test, a baseline round of soil vapor samples were collected on November 9, 2018 from each of the newly installed shallow soil vapor wells, as well as from a limited number of the previously installed soil vapor probes. Subsurface conditions were allowed to equilibrate for a minimum period of 48 hours following the probe installations before samples were collected. Post-test samples were also collected from select probes on December 5, 2018. It is noted that samples collected from the probe installed at 12 feet bgs in boring SV-10 (SV-10-12) were mislabeled on the chain of custodies as being from 15 feet bgs (SV-10-15). The probes were purged and sampled in general accordance with the joint Department of Toxic Substance Control (DTSC) and Regional Water Quality Control Board (RWQCB) *Advisory for Active Soil Gas Investigations*, dated July 2015.

All probes were purged of three (3) sample train volumes (approximately 1 liter) of air prior to collecting samples. Purging was completed using a syringe connected to a 3-way valve. Samples were collected using 1-liter summa canisters. After the probe was purged, the canister was connected, and then a shut-in test was conducted to check the integrity of

the seals. If a leak was detected, fittings were tightened and the test was conducted again. Sample collected was conducted at flow rate of 200 milliliters per minute.

Soil vapor samples were also collected from each of the newly installed SVE wells during the pilot test. Startup samples were collected on November 28 and 29, 2018, within 30 minutes of beginning extraction from a well. Test End samples were collected on December 2, 2018 shortly before the SVE test was discontinued. It is noted that the startup sample collected from well SVE-1-20 was not analyzed because it was determined that there was a leak in a fitting that may have compromised the sample. Samples from the SVE wells were collected in 6-liter summa canisters. Since the SVE system was actively pulling air from the well, no additional purging was conducted prior to collecting samples from these wells.

All soil vapor samples collected in summa canisters were shipped under chain of custody control to ESC Lab Sciences Mount Vernon, Tennessee, a State of California certified laboratory.

It is also noted that samples were periodically collected from the individual SV wells and various system locations (manifold, carbon midpoint, and effluent) to evaluate system effectiveness and operational performance during the test. These samples were screened in the field for VOCs using a PID.

2.3.4 SVE System Pilot Test

The SVE pilot test system was installed in general accordance as outlined in the approved workplan. A trailer mounted system was delivered to the Site and the soil vapor extraction wells were manifolded to the system. The area was temporally fenced off with chain link fence and wind screens.

The system was operated for a period of 96 hours (approximately 4 days) for pilot testing. Once the test began on November 28, 2017, the system operated continuously until the test ended on December 2, 2017. Newly installed wells SVE1 and SVE2, which are separated by 35 feet, (each with a shallow and deep casing) were utilized as soil vapor extraction (SVE) wells during this pilot test. Soil vapor probes at locations SV-1 through SV-10 were utilized as monitoring points during the pilot test.

Daily monitoring and screening of the SVE wells and system was conducted during the pilot test, with the main focus of the test being the collection of data for use in determining the effective radius of influence (ROI) of the extraction wells. The vacuum, flow rate, and relative vapor concentrations in the SVE wells, as well as the vacuum of select monitoring probes, were recorded at regular intervals when a technician was onsite. The flow rates in the SVE wells was

measured using an electronic anemometer. Vacuum conditions were measured using dedicated vacuum gauges installed near the well head in the SVE wells, and using analog magnehelic gauges in the monitoring probes. Relative vapor concentrations were measured in the extraction wells using a photo-ionization detector (PID). Samples were also collected for laboratory analysis of VOCs from each of the SVE wells at the start and end of the test, as well as from select monitoring probes before and after the pilot test. Copies of the analytical reports are included in Appendix C.

The extracted soil vapors were treated prior to emission to the atmosphere by passing through drums filled with granular carbon. Two sets of drums were connected in series at all times, and concentrations of VOCs were frequently monitored at the midpoint between carbon treatment drums to evaluate if the primary drum had become saturated and may need to be changed out.

2.3.4.1 SVE System

The SVE wells (SVE-1 and SVE-2) were connected to a trailer-mounted SVE system using 2-inch flexible hoses. The SVE system consisted of the following:

- Air blower capable of producing flow rates up to 290 Cubic Feet per Minute (CFM), and vacuum of up to 90 inches of water (In-H2O);
- 5 HP Motor;
- Air/Water separator;
- High water level shutoff;
- 230 Volt AC Three Phase Power (15 Amps); and
- 55-gallon drum-based carbon vessels (4 total).

Each 2-inch line from the SEV wells was equipped with a two-inch ball valve and sample port.

2.3.4.2 Test Settings

The variations between tests setting included which wells were actively being used for extraction, and the rate of air flow being extracted. Table 1 presents a summary of the various test setting. All field monitored flow, vacuum, and PID readings recorded during the pilot test are tabulated on Table 2.

The objective of test settings over the initial 2 days of testing was to evaluate optimal flow conditions for the subsequent longer duration test settings for the last 2 days of testing, as well as to aid in the selection of an appropriate SVE blower for the full-scale system. The longer duration test settings were conducted to establish vacuum responses in the observation wells and provide data for estimating achievable effective ROIs. This data will be used

to evaluate the area of influence, efficiency of extraction wells, and air permeability in the pilot test locations for the eventual design of a full-scale remediation system.

2.4 Analytical

All soil samples for chemical analysis were submitted to American Environmental Testing Laboratories (AETL) in Burbank, California. All soil vapor samples were submitted to ESC Lab Sciences in Mount Juliet, Tennessee. Both laboratories are certified by the State of California as environmental testing laboratories. All soil samples collected from SVE-1 and SVE-2 during this installation were analyzed for VOCs in accordance with EPA Test Method 8260B. All soil vapor samples collected from the SVE wells shortly after the start of the test and before the end of the test, as well as from select monitoring probes collected before and after the pilot test, were analyzed for VOCs in accordance with EPA Test Method TO-15.

Select soil samples collected from the SVE borings were submitted to the laboratories of Converse and AP Engineering and Testing for analysis of the physical parameters of grain size, dry bulk density, total and water-filled porosity, and hydraulic conductivity. The selected soil samples were analyzed as follows:

- Grain size, ASTM D422
- Grain density (specific gravity), ASTM D854
- Soil moisture content, ASTM D2216
- Hydraulic Conductivity, ASTM D5084
- Total and Dry bulk density, ASTM D2937
- Total porosity (calculated from soil bulk density and grain density)

The analytical reports and chain of custody documentation for the chemical and physical properties of samples are provided in Appendices C and D respectively.

2.5 Investigative Derived Waste Disposal

Wastes were generated associated with the installation of the SVE wells between November 1 and 2, 2017. A total seven (7) 55-gallon drums containing soil and decon water was generated. A representative sample of the waste in these drums was collected and analyzed to profile this waste for disposal. These drums were removed from the Site on November 30, 2017 by American Integrated Services and disposed of as hazardous waste at the Potrero Hills Landfill in Suisun City, California.

2.6 Field Variances

Variances from Converse's March 2017 Workplan included the following:

- No soil vapor sample could be collected from SVE-1-20 at the start of the test from that well due to a faulty sample container.
- The boring at location SV10 could only be completed to 12.5 feet bgs instead of the intended 15 feet due to refusal. The deeper soil vapor probe at this location was installed at 12 feet bgs rather than 15 feet bgs.
- The total duration of the pilot test was approximately 15 hours shorter than anticipated. This is partially due to conditions at some test settings stabilizing quicker than anticipated.

3.0 Discussion of Findings

3.1 Soil Conditions

The soil observed in subsurface samples collected from borings SVE-1 and SVE-2 were generally dark brown clayey silt in the upper 20 feet, except that a layer of silty sand was observed between 10 and 15 feet bgs in boring SVE-1. Between 20 and 40 feet bgs in both of these borings the soil was generally brown silty sand or sandy silt. All samples were observed to be slightly moist.

See Appendix B, Boring Logs, for complete descriptions.

3.2 Groundwater

Groundwater was not encountered in either of the newly completed SVE wells at the maximum depth drilled of 40 feet bgs. The depth to groundwater was monitored in the three (3) previously installed onsite monitoring wells (MW-1, MW-2, and MW-3) prior to the beginning of the pilot test on November 28, 2017 at depths between 80.37 and 82.20 feet bgs. These measurements indicate that groundwater was approximately 12 to 14 feet shallower than when previously measured in November 2016.

Groundwater depths were measured daily in each of the wells over the course of the pilot test. Between the start and end of the test the water level in each well rose between 0.4 and 2.2 feet, possibly related to the vacuum conditions created by the test in the vadose zone. Following the completion of the SVE pilot test the water level in each of the monitoring wells dropped and was approximately 0.5 feet lower than prior to the start of the test.

Depth to water measurements are tabulated on Table 3.

3.3 Analytical Results

A summary of the analytical results is provided below, and in Tables 4, 5, 6, and 7. The analytical reports and chain of custody documentation are provided in Appendix C.

3.3.1 Soil

3.3.1.1 Physical Properties

A total of eight (8) soil samples from boring SVE-1 and SVE-2 were submitted for analysis of physical properties. See Table 4 for a complete summary of the analytical results for soil physical properties. The following is a range of select parameters reported:

- Soil bulk density (dry) – 109.59 to 126.07 pounds per cubic foot (lb/ft^3)
- Grain density – 2.596 to 2.724 grams per cubic centimeter (g/cm^3)
- Total porosity – 22.6% to 35.6%
- Soil moisture content – 4.3% to 12.1%

3.3.1.2 Chemical Properties

A total of 8 soil samples collected from borings SVE-1 and SVE-2 were analyzed by the laboratory for VOC in accordance with EPA Method 8260B. A concentration of one (1) VOC was reported in 1 of the 8 soil samples analyzed above the method detection limits (MDLs).

PCE was reported at a concentration of 0.0269 milligrams per kilogram (mg/kg) in the sample from SVE-1 at 40 feet bgs. This concentration is below the Tier 1 ESL of 0.420 mg/kg. No other VOCs were detected in any of the soil samples analyzed.

See Table 5 for a complete summary of the chemical analytical results for soil samples collected from this and prior assessments.

3.3.2 Groundwater

No samples of groundwater were collected for analysis.

3.3.3 Soil Vapor

As discussed in section 2.3.3.2, soil vapor samples were collected from all of the SVE wells and select monitoring probes prior to or shortly after start-up of the pilot test to establish a baseline of VOC concentrations. Samples were again collected shortly before or after the conclusion of the pilot test to evaluate the effect of the system.

A total of 23 VOCs were detected in one or more of the pre- or post-test soil vapor samples collected as part of this SVE pilot test. A complete summary of all VOCs detected in soil vapor samples from the Site during this and prior sampling events is presented on Table 6. Fifteen (15) of these VOCs were reported in fewer than 20 of the 62 samples analyzed, and all reported concentrations of these VOCs are less than their respective soil vapor screening levels. The

following eight (8) VOCs were detected in 20 or more samples: PCE, ethanol, ethylbenzene, n-hexane, tetrahydrofuran, 1,2,4-trimethylbenzene, toluene, and xylenes. A summary of the 8 primary VOCs detected in these pre- and post-test samples is presented on Table 7.

With the exception of PCE, no other VOCs were reported in any samples at concentrations in excess of their respective soil vapor screening levels. Concentrations of PCE was reported in all but 3 samples. The maximum PCE concentration of 469,000 ug/m^3 was reported in the sample from location SV-10 (location closest to the dry-cleaning machine) at a depth of 5 feet bgs. This maximum concentration is well in excess of the soil vapor screening level of 2,100 ug/m^3. Concentrations of PCE in excess of the screening level were reported in a total of 32 samples from 5 of the 10 probe locations (SV-2, SV-5, SV-7/7A, SV-9, and SV-10), as well as in 1 sample from an SVE well (SVE-2-40).

3.4 SVE Pilot Test

3.4.1 Flow and Vacuum Measurements

The objectives of initial test settings completed on November 28 and 29, 2017 were primarily to evaluate the extraction rate capacities of each of the SVE wells individually at varying vacuum settings. It was determined that some of the lower flow rates were less than the optimal range of the meter being used (Velocical 9555). Confirmation readings conducted using an alternate meter that was more sensitive to lower flow rates (Velocical 9535) indicated that rates measured with the initial meter of around 3 CFM may actually have been closer to 13 CFM. The Velocical 9535 anemometer was used for the duration of the pilot test beginning on November 30 to measure flow rates in the extraction wells. Flow rates presented on the report tables and discussed below have not been adjusted to account for the potentially low bias of the instrument, so it is noted that actual flow rates may be greater than reported.

Each of the SVE well casings were used for extraction individually at varying rates lasting approximately 1 hour (abbreviated step test). Vacuum measurements were also recorded during this testing in the extraction wells and in select monitoring probes. Figure 4 presents a plot of vacuum readings versus the flow rates monitored in each of the SVE wells, and Figure 5 presents a plot of vacuum readings monitored over time in select monitoring probes. See Tables 1 and 2 for summaries of the field readings. The responses observed for each of the SVE well casings were as follows:

- SVE-1-20
  Flow rates between 40 and 43 CFM were achieved at the maximum vacuum of 60 In-H_2O. Flow rates were continuing to increase slightly at

the end of this test setting. At a lower vacuum rate of 25 In-H2O the flow rate was measured to be steady at 22 CFM.

- SVE-1-40
  A maximum flow rate of 15 CFM was achieved and remained steady at a maximum vacuum of 60 In-H2O. At a lower vacuum rate of 23 In-H2O the flow rate in this well was measured to be steady at around 7.5 CFM.

- SVE-2-20
  A maximum flow rate of 15 CFM was achieved and remained relatively steady with a maximum vacuum of 64 In-H2O achieved. At a lower vacuum rate of 26 In-H2O the flow rate in this well was measured to be steady at around 6 CFM.

- SVE-2-40
  A maximum flow rate of 19 CFM was achieved at a maximum vacuum of 54 In-H2O, but that rate could not be maintained and declined to 17.5 CFM by the end of that test setting. At a lower vacuum rate of 34 In-H2O the flow rate in this well was measured to be steady at around 3 CFM.

Well SVE-1-20 was determined to be capable of producing the greatest flow rates at approximately 43 CFM. Maximum flow rates achieved from the other 3 wells were roughly comparable at around 15 CMF. Based on the plot of vacuum readings versus the flow rates on Figure 4, if a blower capable of greater vacuum were used (up to 150 In-H2O), it appears that well SVE-1-20 may be capable of producing flow at maximum rates between 50 and 60 CFM. However, the maximum sustainable flow from the other wells is estimated to be between 20 and 25 CFM.

The objectives of the subsequent portion of the pilot test completed November 30 through December 2, 2017 were primarily to evaluate the maximum achievable flow rates from the SVE wells, and the effective ROI based on vacuum conditions induced at monitoring probes at varying distances from the SVE wells. This phase of the test was conducted over an approximate period of 43 hours. The following is a summary of the findings and observations:

- Similar to the initial phase of testing, the maximum flow rates were recorded in well SVE-1-20. Flow rates in this well were generally 2 to 3 times greater than those in the other wells.

- Flow rates measured in each of the other wells (SVE1-40, SVE-2-20, and SVE-2-40) varied fairly significantly over the course of this portion of the test from 5.6 to 27.3 CFM. However, the average flow rate between these wells of 14.3 CFM is generally consistent with the rates measured under maximum vacuum conditions during the initial phase of the pilot test. The cause of the variations is unknown.

- The average vacuum reading in all wells was 46 In-H2O over the course of this portion of the test, with variations between 28 and 51 In-H2O.

- The maximum vacuum induced at a monitoring probe was 0.25 In-H2O in SV7-15, which is located approximately 18 feet from each of the SVE wells. The vacuum conditions at this monitoring probe were relatively stable after approximately 4 hours. The next highest levels of vacuum, generally 0.09 to 0.10 In-H2O, were measured at location SV-9, which is located approximately 40 feet from the SVE wells. The maximum vacuum measured in probes greater than 80 feet from the SVE wells was 0.035 In-H2O.

3.4.2 Radius of Influence Evaluation

The effective ROI that a SVE well may induce vacuum over is an important consideration in designing a full-scale SVE remediation system. This ROI is used in evaluating the spacing between extraction wells. The ROI achievable at an SVE well may be determined by evaluating the sub-surface vacuum induced at monitoring points at varying radial distances from the SVE well. A conventional assumption is that a minimum vacuum pressure of at least 0.1 In-H_2O is required to induce flow of soil gas at sufficient pore-gas velocities to be effective in transporting contamination.

Measurable vacuum influence was induced in most of the probes monitored at the end of the pilot test. However, the vacuum level in most of the probes was generally below the desired level of 0.1 In-H2O in most of the probes located 40 feet or more from the SVE wells. The greatest vacuum influence was generally observed in the probes at location SV-7/7A which are located approximately 18 feet from each of the SVE wells. The measured vacuum levels were generally related more to the distance from the SVE wells than the depth of the probe.

The effective ROI may be determined by fitting the data collected from the observations wells during the pilot test on a semi-log plot of pressure versus distance from the SVE wells. See Figure 6 for a distance-drawdown graph of data collected at the end of the pilot test when levels are considered to have stabilized. Based on this plot the effective ROI for extraction wells at the Site is estimated to be approximately 35 feet.

3.4.3 Contaminant Reduction

A comprehensive discussion of all soil vapor analytical results is presented in above Section 3.3.3. This section will be limited to the evaluation of PCE concentration in soil vapor samples related to the pilot test, as it is the primary

chemical of concern. The following is noted regarding the reported PCE concentrations:

- PCE was not detected in the samples from location SV-1, which is located approximately 100 feet away from the dry cleaning machine, and was also not detected in the sample from 80 feet bgs at location SV-7A, which is the deepest vapor probe onsite.
- At locations SV-3, SV-4, SV-6, and SV-8 all reported PCE concentrations were less than the soil vapor screening level. PCE concentrations between the pre- and post-test samples in these probes (with the possible exception of locations SV-4 and SV-8 from which pre-test samples were not collected) decreased by approximately 35%. It is noted that none of these probe locations are located between the dry-cleaning machine and SVE wells.
- Probe locations SV-7/7A, SV-9, and SV-10 are located between the presumed plume source (dry cleaning machine) and the SVE wells. Changes in PCE concentration between the pre- and post-test samples were mixed, but on average concentrations increased by roughly 30%. This increase is likely an effect of higher PCE concentrations in the source plume being drawn towards these probes by the SVE wells.

Figure 7 presents isoconcentration contours of PCE concentrations in the pre- and post-test samples from probes at 15 feet bgs. This figure illustrates a general eastward shift of the PCE plume towards the extraction wells.

Based on a total system run time of approximately 96 hours at an average rate of approximately 50 CFM and an average PCE concentration of approximately 10,000 ug/m^3, it is calculated that approximately 200 pounds of PCE were removed from the subsurface during pilot test operation.

4.0 Conclusions and Recommendations

4.1 Conclusions

Based on the field observations and analytical results of this assessment, Converse has reached the following conclusions:

4.1.1 Chemical Analyses Conclusions

- In the soil samples analyzed from this and prior assessments at the Site PCE has been the only VOC detected. All reported PCE concentrations have been less than the ESL screening level of 0.420 mg/kg.
- A total of 23 VOCs were detected in one or more of the pre- or post-test soil vapor samples collected as part of this SVE pilot test. With the exception of PCE, all reported VOC concentrations are less than their respective soil vapor screening levels. The maximum PCE concentration of 469,000 ug/m^3 was reported in the sample from location SV-10 (location closest to the dry-cleaning machine) at a depth of 5 feet bgs. Concentrations of PCE in excess of the screening level (2,100 ug/m^3) were reported in a total of 32 samples from 5 of the 10 probe locations (SV-2, SV-5, SV-7/7A, SV-9, and SV-10).
- In the soil vapor probes not located between the source and SVE wells (locations SV-3, SV-4, SV-6, and SV-8) all reported PCE concentrations were less than the soil vapor screening level, and they decreased by approximately 35% between the pre- and post-test samples. In the probes located between the source (dry cleaning machine) and the SVE wells (locations SV-7/7A, SV-9, and SV-10) changes in PCE concentration between the pre- and post-test samples were mixed, but on average concentrations increased by roughly 30%. This increase is likely an effect of higher PCE concentrations in the source plume being drawn towards these probes by the SVE wells.
- Approximately 200 pounds of PCE were removed from the subsurface during the pilot test.

Results of chemical analyses for the soil vapor samples analyzed suggest that the limited SVE pilot test resulted in relatively significant reductions in PCE concentrations at monitoring points located up to 150 feet from the extraction wells.

4.1.2 Geotechnical Analyses Conclusions

Geotechnical analyses were performed on select soil samples to aid in evaluating the technical feasibility of the proposed remedial technology for the Site. Conclusions of geotechnical analyses include:

- Soil bulk density (dry) – 109.59 to 126.07 lb/ft^3
- Grain density – 2.596 to 2.724 g/cm^3
- Total porosity – 22.6% to 35.6%
- Soil moisture content – 4.3% to 12.1%

Results of geotechnical analyses for the parameters suggest that some subsurface geotechnical conditions are generally conducive for SVE at the Site. However, the total porosity values of most samples are representative of relatively dense mixed-grain sands, and the average fluid saturation of the pore spaces (approximately 50%) is relatively high.

4.1.3 SVE Pilot Testing Conclusions

The blower motor used during the pilot test was cable of producing a maximum vacuum of approximately 60 In-H2O. At this vacuum level, well SVE-1-20 was determined to be capable of producing the greatest flow rates at approximately 43 CFM, while the maximum flow rates achieved from the other 3 SVE wells were roughly 15 CMF. If a blower capable of producing up to 150 In-H20 of vacuum were used it is estimated that flow rates between 50 and 60 CFM may be achievable from well SVE-1-20, and between 20 and 25 CFM from the other SVE wells.

Measurable vacuum influence was induced in most of the probes monitored at the end of the pilot test. However, the vacuum level in most of the probes was generally below the desired level of 0.1 In-H2O in most of the probes located 40 feet or more from the SVE wells. Based on the distance-drawdown of vacuum measurements in probes relative to their distance from the SVE wells, the effective ROI for extraction wells at the Site is estimated to be approximately 35 feet.

Evaluation of the PCE concentrations in the pre- and post-test samples indicates a general eastward shift of the PCE plume towards the extraction wells. Based on the reduction in PCE concentrations in monitoring probes that are located further from the SVE wells, it appears that the ROI from the SVE wells may have extended 80 feet or more. The system was successful in removing approximately 200 pounds of PCE from the subsurface during the pilot test.

The results of this pilot test indicate that SVE may be a technically feasible technology to implement at the Site for the removal of VOCs from the subsurface soils.

4.2 SVE Recommendations

It is recommended that a remedial action plan (RAP) be prepared to address the remediation of impacts from VOCs in soil vapor beneath the Site, and that plan should be submitted to the Santa Clara County DEH for review and approval.

5.0 Reliance

This report is for the sole benefit and exclusive use of Donahue Schriber Realty Group in accordance with the terms and conditions under which these services have been provided. Its preparation has been in accordance with generally accepted environmental practices. No other warranty, either express or implied, is made. The Scope of Services associated with the report was designed solely in accordance with the objectives, schedule, budget, and risk-management preferences of Donahue Schriber Realty Group.

This report should not be regarded as a guarantee that no further contamination, beyond that which could be detected within the scope of this assessment, is present at the Site. Converse makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others. It is possible that information exists beyond the scope of this assessment. It is not possible to absolutely confirm that no hazardous materials and/or substances exist at the Site. If none are identified as part of a limited scope of work, such a conclusion should not be construed as a guaranteed absence of such materials, but merely the results of the evaluation of the Site at the time of the assessment. Also, events may occur after the Site visit, which may result in contamination of the Property. Additional information, which was not found or available to Converse at the time of report preparation, may result in a modification of the conclusions and recommendations presented. Any reliance on this report by Third Parties shall be at the Third Party's sole risk.

Other wells exist on this property? ☐ Yes ☒ No If yes, status: ☐ Active ☐ Inactive ☐ Abandoned

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and the conditions of this permit (see page 2). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ. I also understand that it is my responsibility, as the well owner, to notify the District of any changes in the purpose of this well, from which, is indicated on this application.

Signature	Date	Print Name
Signature of Property Owner/Agent:	Date: 10/13/2017	Print Name of Property Owner/Agent: Henry Avila
Signature of Well Owner/Agent:	Date: 10/13/2017	Print Name of Well Owner/Agent: Henry Avila

WELL CONSTRUCTION APPLICATION

DISTRICT WELL PERMIT NO.: C2017102400I

Based on information on this application and attachment(s) hereto (if any) and subject to approval noted below, permission is hereby granted to construct (drill) the described well. Permission to start work may be withheld until a field check verifies all statements made on application by permittee and is also subject to the "General" and "Special" Conditions stated below.

SANTA CLARA COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH APPROVAL (Water Supply Well Only)

NOTE: Department of Environmental Health approval must be granted before this application will be accepted by Santa Clara Valley Water District.

Approved by: , R.E.H.S	☐ Approved as submitted ☐ Approved as corrected
	Date:

SITE PLAN

A 8½" x 11" paper site plan **must** be attached to this application, including:

1. Location of site features, including major buildings, landscaped areas, tank fields, existing wells, etc.
2. North arrow and scale
3. Location of proposed well with dimensions in feet from well to nearest cross streets.

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before construction of the annular seal**. An authorized District representative must be on site to witness the construction of the annular seal. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification, under penalty of perjury, that the well was constructed in accordance with the District Well Standards and with the permit conditions.

B. Permittee agrees to construct, operate, and maintain the well according to provisions of the latest District Ordinance and the latest published revisions of District Well Standards to the end that this well will not cause pollution or contamination of groundwater or otherwise jeopardize the health, safety, or welfare of the people of the District.

C. This permit is valid only for the purpose specified herein. Well construction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative finds that site conditions warrant such a change).

D. This permit is only valid for the Assessor's Parcel No. indicated on it.

E. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that was constructed under this permit must be destroyed in accordance with District and State Well Standards.

F. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2589).

G. Before the well constructed under this permit can be used as a drinking water source, its use must be approved by the regulatory agency with authority over such use (typically the Santa Clara County Department of Environmental Health or the State of California Department of Public Health). A completed Well Inventory Form must also be approved.

H. If the well constructed under this permit cannot be or is not being used for its intended purpose, permittee is hereby required to destroy the well according to the District Well Standards and under permit from the District. Any test holes drilled under this permit must be destroyed within 24 hours of completion of testing activities. Destruction activities must be completed according to District standards. District must be notified a minimum of 24 hours prior to destruction.

I. Within 30 days of the completion of the well construction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and mail the original to the District's Wells and Water Production Unit.

J. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees, free and harmless from any and all expense, cost, and liability in connection with or resulting from the granting or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

K. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

L. A current C-57 Water Well Drilling Contractor's License is required for the construction of all wells.

M. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials or waters generated during drilling, well construction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters must not be allowed to move off the property where the work is being completed.

N. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with District.

O. This permit shall expire if not exercised within 180 calendar days of its approval, unless an extension of the permit expiration date is granted by an authorized District representative.

P. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Q. Permittee shall notify Underground Service Alert (USA) at 1-800-227-2600 or 811 prior to any digging.

SIGNATURES

I understand and agree that all work associated with this permit is required to be done in accordance with Santa Clara Valley Water District (District) Well Ordinance 90-1, the District Well Standards, and the conditions of this permit (see page 2). I certify that the information given in this permit is correct to the best of my knowledge and that the signature below, whether original, electronic, or photocopied, is authorized and valid, and is affixed with the intent to be enforceable. I also certify that a right of entry/encroachment agreement has been formalized between the well owner and property owner, if parties differ. I also understand that it is my responsibility, as the well owner, to notify the District of any changes in the purpose of this well, from which is indicated on this application.

SITE PLAN

A 8½" x 11" paper site plan **must** be attached to this application, including:

1. Location of site features, including major buildings, landscaped areas, tank fields, existing wells, etc.
2. North arrow and scale
3. Location of proposed well with dimensions in feet from well to nearest cross streets.

GENERAL CONDITIONS

A. **District** (telephone 408-265-2607, ext. 2660) **must be notified a minimum of one working day before construction of the annular seal**. An authorized District representative must be on site to witness the construction of the annular seal. This requirement may be waived by an authorized District representative. If the District waives the inspection requirement, the District may request the permittee(s) to furnish certification, under penalty of perjury, that the well was constructed in accordance with the District Well Standards and with the permit conditions.

B. Permittee agrees to construct, operate, and maintain the well according to provisions of the latest District Ordinance and the latest published revisions of District Well Standards to the end that this well will not cause pollution or contamination of groundwater or otherwise jeopardize the health, safety, or welfare of the people of the District.

C. This permit is valid only for the purpose specified herein. Well construction methods authorized under this permit may not be changed except by written approval of an authorized District representative, and only if the District believes that such a change will result in equal or superior compliance with the District and State Well Standards (e.g., if the District representative finds that site conditions warrant such a change).

D. This permit is only valid for the Assessor's Parcel No. indicated on it.

E. This permit may be voided if it contains incorrect information. If the permit is voided after work has begun, the well or boring that was constructed under this permit must be destroyed in accordance with District and State Well Standards.

F. If any work associated with this permit will take place on District property/easement, an encroachment or construction permit must be granted by the District's Community Projects Review Unit (telephone 408-265-2607, ext. 2589).

G. Before the well constructed under this permit can be used as a drinking water source, its use must be approved by the regulatory agency with authority over such use (typically the Santa Clara County Department of Environmental Health or the State of California Department of Public Health). A completed Well Inventory Form must also be approved.

H. If the well constructed under this permit cannot be or is not being used for its intended purpose, permittee is hereby required to destroy the well according to the District Well Standards and under permit from the District. Any test holes drilled under this permit must be destroyed within 24 hours of completion of testing activities. Destruction activities must be completed according to District standards. District must be notified a minimum of 24 hours prior to destruction.

I. Within 30 days of the completion of the well construction activities, the driller or consultant identified on this permit shall fully complete State of California DWR Form 188 and mail the original to the District's Wells and Water Production Unit.

J. The permittee(s) shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend, and hold the District, its officers, agents, and employees, free and harmless from any and all expense, cost, and liability in connection with or resulting from the granting or exercise of this permit including, but not limited to, property damage, personal injury, and wrongful death.

K. Permittees are required to be in full compliance with Cal/OSHA California Labor Code Section 6300.

L. A current C-57 Water Well Drilling Contractor's License is required for the construction of all wells.

M. Permittee, permittee's contractors, consultants, or agents shall be responsible to assure that all materials or waters generated during drilling, well construction, well development, pump testing, or other activities associated with this permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on- or off-site storm sewers, dry wells, or waterways. Such materials/waters must not be allowed to move off the property where the work is being completed.

N. The driller and consultants (if applicable) shall have an active copy of their Worker's Compensation Insurance on file with District.

O. This permit shall expire if not exercised within 180 calendar days of its approval, unless an extension of the permit expiration date is granted by an authorized District representative.

P. This permit must be kept on site during all activities associated with it and shall immediately be presented to an authorized District representative upon request.

Q. Permittee shall notify Underground Service Alert (USA) at 1-800-227-2600 or 811 prior to any digging.

_x_ None, _ HNO_3, _ NaOH, _ ZnOAc, _ HCl, _ $Na_2S_2O_3$, _ MeOH

_ Other (Specify):

	Yes	No, explain below	Name, if client was notified.
1. Are the COCs Correct?	x		
2. Are the Sample labels legible?	x		
3. Do samples match the COC?	x		
4. Are the required analyses clear?	x		
5. Is there enough samples for required analysis?	x		
6. Are samples sealed with evidence tape?		x	
7. Are sample containers in good condition?	x		
8. Are samples preserved?	x		
9. Are samples preserved properly for the intended analysis?	x		
10. Are the VOAs free of headspace?	NA		
11. Are the jars free of headspace?	x		

Explain all "No" answers for above questions:

CERTIFICATE OF ANALYSIS
CASE NARRATIVE

AETL received 8 samples with the following specification on 11/03/2017.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
90097.01	SVE1-10	11/01/2017	Soil	2
90097.02	SVE1-20	11/01/2017	Soil	2
90097.03	SVE1-30	11/01/2017	Soil	2
90097.04	SVE1-40	11/01/2017	Soil	2
90097.05	SVE2-10	11/02/2017	Soil	2
90097.06	SVE2-20	11/02/2017	Soil	2
90097.07	SVE2-30	11/02/2017	Soil	2
90097.08	SVE2-40	11/02/2017	Soil	2

Method ^ Submethod	*Req Date*	*Priority*	*TAT*	*Units*
(8260B)	11/10/2017	2	Normal	ug/Kg

The samples were analyzed as specified on the enclosed chain of custody.
No analytical non-conformances were encountered.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

ANALYTICAL REPORT

November 15, 2017

Converse Consultants - Monrovia, CA

Sample Delivery Group:	L949928
Samples Received:	11/10/2017
Project Number:	16-42-194-06
Description:	

Report To: Michael Van Fleet
717 S. Myrtle Avenue
Monrovia, CA 91016

Entire Report Reviewed By:

Brian Ford
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Jason Romer

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J4	The associated batch QC was outside the established quality control range for accuracy.

ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

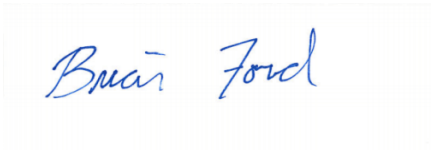
All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.



Brian Ford
Technical Service Representative

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Client may have forgotten to mark the analysis. Log all samples for TO-15. No NCF needed.

Also, please correct the ID for sample **SV-D-15** to **SV-2D-15** per the email below, and scan a copy with the COC.

Thanks,
Jason

Hi Brian,
You should be receiving a total of 20 canisters from us today for project # 16-42-194-06 that were collected yesterday. My field crew just informed me that they may have forgotten to indicate the analyses on the COCs. All 20 samples should be analyzed for VOCs by TO-15.

Also, one of the samples may be listed on the COC as SV-D-15. That sample should actually be listed as SV-2D-15.

Thanks,

Michael Van Fleet, PG

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J4	The associated batch QC was outside the established quality control range for accuracy.

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Executive Summary

This study was conducted for the purpose of identifying any potential transportation impacts caused by the proposed fitness center addition to the Westgate West Shopping Center in San Jose, California. The proposed site would partially demolish and expand on an existing space of 23,550 square feet and build a second floor with approximately 16,450 square feet, totaling 40,000 square feet. Access to the project site is provided via driveways on Lawrence Expressway, Prospect Road, and Graves Avenue.

The potential impacts of the project were evaluated in accordance with the standards and methodologies set forth by the City of San Jose. Based on the City of San Jose's Transportation Analysis Policy (Policy 5-1) and the *Transportation Analysis Handbook 2018*, the transportation analysis report for the project includes a CEQA transportation analysis (TA) and a local transportation analysis (LTA) The CEQA transportation analysis comprises of an evaluation of Vehicle Miles Traveled (VMT). VMT is defined in Chapter 1. The LTA supplements the CEQA transportation analysis by identifying transportation operational issues via an evaluation of weekday AM and PM peak-hour traffic conditions for five signalized intersections in the vicinity of the project site. The LTA also includes an analysis of site access, on-site circulation, parking, vehicle queueing, and effects to transit, bicycle, and pedestrian access.

CEQA Transportation Impacts

Project Vehicle Miles Traveled (VMT) Impacts and Mitigation Measures

Project Impact: Because the proposed project is constructing an addition to an existing shopping center that generates regional traffic, the VMT sketch tool could not be used. The Project VMT was analyzed by comparing the existing regional VMT to the regional VMT with the project. The City of San Jose Travel Forecasting Model (model) was used to calculate the change in VMT resulting from the proposed Health Club at the Westgate Mall. The underlying premise is that the new health club would not cause an *increase* in trips but rather result in a *change* in trip making because some people would leave nearby health clubs to join the proposed health club. In order to estimate the impact on VMT with the model, the project's additional 16,450 square feet of building area was converted to 40 retail jobs, using a ratio of one retail job per 400 square feet. The project's transportation analysis zone (TAZ) is compromised of the area bounded by Lassen Avenue, Saratoga Avenue, Prospect Road, and Lawrence Expressway. There are two similar health clubs near the project site: Planet Fitness at 328 Saratoga Avenue and Right Stuff at 1730 West Campbell Avenue. It was assumed that some members of these nearby clubs would join the proposed Westgate Mall health club instead and, in order to reflect this, 40 retail jobs were removed from the TAZ's where these two nearby health clubs are located. These job changes were then made in the 2015 land use file and the model was run, with and without the project. The model was run with the worker trips as Home Based-Work trips. Health club trips are

considered recreational trips and are reflected in the model as “social/recreational” trips. Therefore, the daily VMT’s for the social/recreational trips, with and without the project, were calculated for the affected TAZ’s.

The model results showed that the proposed project would cause a net decrease of 41 VMT per day. The work trips would result in 48 fewer daily VMT and the social/recreational trips would result in an increase of 7 daily VMT. Because the project results in no increase in daily VMT, no mitigation measures are needed.

Local Transportation Analysis

Project Trip Generation

As proposed, the fitness center would utilize and expand existing building space formerly used as retail at the project site. Project trips were estimated using trip rates published in the Institute of Transportation Engineers’ (ITE) *Trip Generation Manual*, 10th Edition. The trip generation rates for Health/Fitness Club (Land Code Use 492) were used for this project. Trip generation rates for Shopping Center (Land Use Code 820) were used for existing trip credits.

With trip reductions and taking credit for trips generated by the former retail use, the project is estimated to generate 30 net new trips during the AM peak hour (13 inbound and 17 outbound) and 48 trips during the PM peak hour (36 inbound and 12 outbound).

Intersection Traffic Operations

Based on the City of San Jose and CMP intersection operations analysis criteria, none of the study intersections would be adversely affected by the project.

Other Transportation Issues

The proposed site plan shows adequate site access and on-site circulation, and no significant operational issues are expected to occur as a result of the project. The project would not have an adverse effect on the existing pedestrian, bicycle, or transit facilities in the area.

1. Introduction

This report presents the results of the transportation analysis conducted for the proposed fitness center at the Westgate West Shopping Center located at 5365 Prospect Road in San Jose, California (see Figure 1). This study was conducted for the purposed of identifying the potential transportation impacts related to the proposed development.

The transportation impacts of the project were evaluated following the standards and methodologies established in the City of San Jose's *Transportation Analysis Handbook*, adopted in April 2018. Based on the City of San Jose's Transportation Analysis Policy (Policy 5-1) and the *Transportation Analysis Handbook,* the transportation analysis report for the project includes a California Environmental Quality Act (CEQA) transportation analysis (TA) and a local transportation analysis (LTA).

Project Description

The proposed fitness center would remodel and expand on an existing building creating a two-level fitness center. Access to the site is currently provided by several driveways accessing the Westgate West shopping center. There are multiple driveways located on Lawrence Expressway, Prospect Road, and Graves Avenue. The project site plan is shown on Figure 2.

Transportation Policies

In adherence with State of California Senate Bill 743 (SB 743) and the City's goals as set forth in the Envision San Jose 2040 General Plan, the City of San Jose has adopted a new Transportation Analysis Policy, Council Policy 5-1. The policy replaces its predecessor (Council Policy 5-3) and establishes the thresholds for transportation impacts under CEQA based on vehicle miles traveled (VMT) instead of intersection level of service (LOS). The intent of this change is to shift the focus of transportation analysis under CEQA from vehicle delay and roadway auto capacity to a reduction in vehicle emissions, and the creation of robust multimodal networks that support integrated land uses. All new projects are required to analyze transportation impacts using the VMT metric and conform to Council Policy 5-1.

Figure 2
Proposed Site Plan

The new Transportation Analysis Policy aligns with the Envision San Jose 2040 General Plan which seeks to focus new development growth within Planned Growth Areas, bringing together office, residential, and service land uses to internalize trips and reduce VMT. VMT-based policies support dense, mixed-use, infill projects as established in the General Plan's Planned Growth Areas.
The Envision San Jose 2040 General Plan contains the following policies to encourage the use of non-automobile transportation modes to minimize vehicle trip generation and reduce VMT:

- Consider impacts on overall mobility and all travel modes when evaluating transportation impacts of new developments or infrastructure projects (TR-1.2);
- Through the entitlement process for new development, projects shall be required to fund or construct needed transportation improvements for all transportation modes, giving first consideration to improvement of biking, walking and transit facilities and services that encourage reduced vehicle travel demand (TR-1.4);
- Require new development where feasible to provide on-site facilities such as bicycle storage and showers, provide connections to existing and planned facilities, dedicate land to expand existing facilities or provide new facilities such as sidewalks and/or bicycle lanes/paths, or share in the cost of improvements (TR-2.8);
- As part of the development review process, require that new development along existing and planned transit facilities consist of land use and development types and intensities that contribute towards transit ridership. In addition, require that new development is designed to accommodate and to provide direct access to transit facilities (TR-3.3);
- Discourage, as part of the entitlement process, the provision of parking spaces significantly above the number of spaces required by code for a given use (TR-8.4);
- Allow reduced parking requirements for mixed-use developments and for developments providing shared parking or a comprehensive transportation demand management (TDM) program, or developments located near major transit hubs or within Villages and Corridors and other growth areas (TR-8.6);
- Encourage private property owners to share their underutilized parking supplies with the general public and/or other adjacent private developments (TR-8.7);
- Within new development, create and maintain a pedestrian-friendly environment by connecting the internal components with safe, convenient, accessible, and pleasant pedestrian facilities and by requiring pedestrian connections between building entrances, other site features, and adjacent public streets (CD-3.3);
- Create a pedestrian-friendly environment by connecting new residential development with safe, convenient, accessible, and pleasant pedestrian facilities. Provide such connections between new development, its adjoining neighborhood, transit access points, schools, parks, and nearby commercial areas (LU-9.1);
- Encourage all developers to install and maintain trails when new development occurs adjacent to a designated trail location. Use the City’s Parkland Dedication Ordinance and Park Impact Ordinance to have residential developers build trails when new residential development occurs adjacent to a designated trail location, consistent with other parkland priorities. Encourage developers or property owners to enter into formal agreements with the City to maintain trails adjacent to their properties (PR-8.5).

CEQA Transportation Analysis Scope

The City of San Jose's Transportation Analysis Policy establishes procedures for determining project impacts on VMT based on project description, characteristics, and/or location. VMT is the total miles of travel by personal motorized vehicles a project is expected to generate in a day. VMT measures the full distance of personal motorized vehicle-trips with one end within the project. Typically, development projects that are farther from other, complementary land uses (such as a business park far from housing) and in areas without transit or active transportation infrastructure (bike lanes, sidewalks, etc.) generate more driving than development near complementary land uses with more robust transportation options. Therefore, developments located in a central business district with high density and diversity of complementary land uses and frequent transit services are expected to internalize trips and generate shorter and fewer vehicle trips than developments located in a suburban area with low density of residential developments and no transit service in the project vicinity.

To evaluate the project's VMT impact, VMT is calculated per employee for office and industrial developments (dividing the project's VMT by the number of employees). For retail developments, the policy looks at total VMT. Any increase in city-wide VMT is considered an impact.

Because the proposed project is an addition to an existing shopping center that generates regional traffic, the CEQA transportation analysis of the project requires a project-level VMT impact analysis using the City of San Jose's Travel Demand Model (model). The total regional VMT was analyzed both with and without the project. If there is an overall increase in VMT due to the proposed project, possible mitigation measures need to be analyzed using the San Jose VMT Evaluation Tool (sketch tool) to bring overall regional VMT down to baseline conditions.

Local Transportation Analysis Scope

A local transportation analysis (LTA) identifies transportation operational issues that may arise due to a development project, evaluates the effects of the project on transportation, access, circulation, and related safety elements in the proximate area of the project, and supplements the VMT analysis.

As part of the LTA, a project is required to conduct an intersection operations analysis if the project is expected to add 10 vehicle trips per hour per lane to a signalized intersection that meets the parameters outlined in the *Transportation Analysis Handbook.* The project is not expected to add 10 vehicle trips per hour per lane or more to any signalized intersections within a half mile of the project, and there is no signalized intersection currently operating at LOS D or worse within one mile of the project. Nevertheless, the City of San Jose requested that the following intersections be included for analysis:

Study Intersections:

1. Saratoga Avenue and Prospect Road (CMP)
2. Westgate West Shopping Center and Prospect Road
3. Lawrence Expressway and Prospect Road (CMP)
4. Lawrence Expressway and Saratoga Avenue (CMP)
5. Lawrence Expressway and Westgate West Shopping Center

Traffic conditions at the study intersections were analyzed for both the weekday AM and PM peak hours of adjacent street traffic. The AM peak hour typically occurs between 7:00 AM and 9:00 AM and the PM peak hour typically occurs between 4:00 PM and 6:00 PM on a regular weekday. These are the

peak commute hours during which most weekday traffic congestion occurs on the roadways in the study area. Intersection operations conditions were evaluated for the following scenarios:

- ***Existing Conditions.*** Existing AM and PM peak hour traffic volumes at the study intersections were obtained from the City of San Jose, the 2016 CMP Annual Monitoring Report, and new traffic counts conducted in October 2018. The signalized study intersection was evaluated with a level of service analysis using TRAFFIX software in accordance with the *2000 Highway Capacity Manual* methodology.
- ***Background Conditions*.** Background traffic volumes reflect traffic added by nearby approved projects that are not yet completed or occupied. The added traffic from approved but not yet completed developments was provided by the City of San Jose. Background conditions represent the baseline conditions to which project conditions are compared for the purpose of determining potential adverse operational effects of the project.
- ***Background Plus Project Conditions.*** Background plus project conditions reflect projected traffic volumes on the planned roadway network with completion of the project and approved developments. Background plus project traffic volumes were estimated by adding to background traffic volumes the additional traffic generated by the project.

The LTA also includes a vehicle queuing analysis, an evaluation of potential project impacts on bicycle, pedestrian, and transit facilities, and a review of site access, and on-site circulation.

VMT Analysis Methodology

Methodology

To determine whether a project would result in CEQA transportation impacts related to VMT, the City has developed the San Jose VMT Evaluation Tool (sketch tool) to streamline the analysis for residential, office, and industrial projects with local traffic. For non-residential or non-office projects, very large projects or projects that can potentially shift travel patterns, the City's Travel Demand Model can be used to determine project VMT.

Because the proposed project is an addition to an existing shopping center that generates regional traffic, the CEQA transportation analysis of the project requires a project-level VMT impact analysis using the City of San Jose's Travel Demand Model (model). The total regional VMT was be analyzed both with and without the project. If there is an overall increase in VMT due to the proposed project, possible mitigation measures need to be analyzed using the San Jose VMT Evaluation Tool (sketch tool) to bring overall regional VMT down to baseline conditions.

The sketch tool evaluates a list of selected VMT reduction measures that can be applied to a project to reduce the project VMT. There are four strategy tiers whose effects on VMT can be calculated with the sketch tool:

1. Project characteristics (e.g. density, diversity of uses, design, and affordability of housing) that encourage walking, biking and transit uses.
2. Multimodal network improvements that increase accessibility for transit users, bicyclists, and pedestrians,
3. Parking measures that discourage personal motorized vehicle-trips, and

4. Transportation demand management (TDM) measures that provide incentives and services to encourage alternatives to personal motorized vehicle-trips.

The first three strategies – land use characteristics, multimodal network improvements, and parking – are physical design strategies that can be incorporated into the project design. TDM includes programmatic measures that aim to reduce VMT by decreasing personal motorized vehicle mode share and by encouraging more walking, biking, and riding transit. TDM measures should be enforced through annual trip monitoring to assess the project's status in meeting the VMT reduction goals.

Thresholds of Significance

Table 1 shows the VMT thresholds of significance for development projects, as established in the Transportation Analysis Policy. The VMT impact threshold for retail development is any increase in regional VMT.

Projects that trigger a significant VMT impact can assess a variety of the four strategies described above to reduce the impact. A significant impact is said to be satisfactorily mitigated when the strategies and VMT reductions implemented render the VMT impact less than significant.

Table 1
VMT Thresholds of Significance for Development Projects

Project Types	Significance Criteria	Current Level	Threshold
Residential Uses	Project VMT per capita exceeds existing citywide average VMT per capita minus 15 percent, or existing regional average VMT per capita minus 15 percent, whichever is lower.	11.91 VMT per capita (Citywide Average)	10.12 VMT per capita
General Employment Uses	Project VMT per employee exceeds existing regional average VMT per employee minus 15 percent.	14.37 VMT per employee (Regional Average)	12.21 VMT per employee
Industrial Employment Uses	Project VMT per employee exceeds existing regional average VMT per employee.	14.37 VMT per employee (Regional Average)	14.37 VMT per employee
Retail / Hotel / School Uses	Net increase in existing regional total VMT.	Regional Total VMT	Net Increase
Public / Quasi-Public Uses	In accordance with most appropriate type(s) as determined by Public Works Director.	Appropriate levels listed above	Appropriate thresholds listed above
Mixed-Uses	Evaluate each land use component of a mixed-use project independently, and apply the threshold of significance for each land use type included.	Appropriate levels listed above	Appropriate thresholds listed above
Change of Use / Additions to Existing Development	Evaluate the full site with the change of use or additions to existing development, and apply the threshold of significance for each project type included.	Appropriate levels listed above	Appropriate thresholds listed above
Area Plans	Evaluate each land use component of the Area Plan independently, and apply the threshold of significance for each land use type included.	Appropriate levels listed above	Appropriate thresholds listed above

Intersection Operations Analysis Methodology

This section presents the methods used to determine the traffic conditions at the study intersections and the potential adverse operational effects due to the project. It includes descriptions of the data requirements, the analysis methodologies, the applicable intersection level of service standards, and the criteria used to determine adverse effects on intersection operations.

All study intersections are located within the City of San Jose and were evaluated based on the City of San Jose level of service standard.

Data Requirements

The data required for the analysis were obtained from previous traffic studies, new traffic counts, the City of San Jose, the 2016 CMP Annual Monitoring Report, and field observations. The following data were collected from these sources:

- existing traffic volumes
- lane configurations
- signal timing and phasing
- a list of approved and planned projects

Analysis Methodologies and Level of Service Standard

Traffic conditions at the study intersections were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions with little or no delay, to LOS F, or jammed conditions with excessive delays. The analysis methods are described below.

Signalized Intersections

The signalized study intersections are subject to the City of San Jose's level of service standards. The City of San Jose level of service methodology is TRAFFIX, which is based on the 2000 *Highway Capacity Manual* (HCM) method for signalized intersections. TRAFFIX evaluates signalized intersections operations on the basis of average delay time for all vehicles at the intersection. Since TRAFFIX is also the CMP-designated intersections level of service methodology, the City of San Jose methodology employs the CMP defaults values for the analysis parameters. The City of San Jose level of service standard for intersections is LOS D or better. The correlation between average delay and level of service is shown in Table 2.

CMP Signalized Intersections

Since TRAFFIX is the designated level of service methodology for the CMP and the City of San Jose, the CMP study intersections are not analyzed separately, but rather is among the signalized intersections analyzed using TRAFFIX. The only difference between the City of San Jose and CMP analyses is that the CMP level of service standard for signalized intersections is LOS E or better.

Table 1
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (sec.)
A	Operations with very low delay occurring with favorable progression and/or short cycle lengths.	up to 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	10.1 to 20.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.1 to 35.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.1 to 80.0
F	Operation with delays unacceptable to most drivers occurring due to oversaturation, poor progression, or very long cycle lengths.	Greater than 80.0

Source: Transportation Research Board, *2010 Highway Capacity Manual,* (Washington, D.C., 2010).

Adverse Intersection Operations Effects

According to the City of San Jose's *Transportation Analysis Handbook 2018*, an adverse effect on intersection operations would occur if for either peak hour:

1. The level of service at the intersection degrades from an acceptable level (LOS D or better) under background conditions to an unacceptable level under background plus project conditions, or
2. The level of service at the intersection is an unacceptable level (LOS E or F) under background conditions and the addition of project trips cause both the critical-movement delay at the intersection to increase by four (4) or more seconds *and* the volume-to-capacity ratio (V/C) to increase by one percent (.01) or more.

The exception to this threshold is when the addition of project traffic reduces the amount of average control delay for critical movements, i.e., the change in average control delay for critical movements are negative. In this case, the threshold is when the project increases the critical v/c value by 0.01 or more.

Adverse effects at signalized intersections can be addressed by one of the following approaches:

- Reduce project vehicle-trips to eliminate adverse effects by selecting additional TDM measures to achieve a reduction
- Construct improvements to the subject intersection or other roadway segments of the city-wide transportation system to increase overall capacity

Report Organization

This report has a total of four chapters. Chapter 2 describes existing transportation conditions including VMT of the existing land uses in the proximity of the project, the existing roadway network, transit service, bicycle and pedestrian facilities. Chapter 3 describes the CEQA transportation analysis, including the project VMT impact, mitigation measures to reduce the VMT impact, and cumulative transportation impact. Chapter 4 describes the local transportation analysis including the method by which project traffic is estimated, intersection operations analysis for background plus project conditions, any adverse intersection traffic effects caused by the project, intersection vehicle queuing analysis, site access and on-site circulation review, effects on bicycle, pedestrian, and transit facilities, and parking.

2. Existing Transportation Conditions

This chapter describes the existing conditions of the transportation system within the study area of the project. It describes transportation facilities in the vicinity of the project site, including the roadway network, transit service, and pedestrian and bicycle facilities. The analysis of existing intersection operations is included as part of the Local Transportation Analysis (Chapter 4).

Existing Roadway Network

Regional access to the project site is provided via SR 85 and I-280. Local access to the project site is provided via Lawrence Expressway, Prospect Road, Saratoga Avenue, and Graves Avenue. These facilities are described below.

SR-85 is a six-lane freeway (two mixed-flow lanes and one high occupancy vehicle (HOV) lane in each direction) in the vicinity of the site. It extends from its starting point at US-101 in South San Jose westward and northward to Mountain View, where it ends as it again merges with US-101. Access to the project site is provided via its interchange with Prospect Road and Quito Road, where it becomes Lawrence Expressway as it approaches the project area.

I-280 is an eight-lane freeway (three mixed-flow lanes and one high occupancy vehicle (HOV) lane in each direction) in the vicinity of the project site. It extends from San Francisco in the north to East San Jose. Access to the project site is provided via an interchange at Saratoga Avenue and Stevens Creek Boulevard to Lawrence Expressway.

Lawrence Expressway is a six lane arterial in the project vicinity. It extends from Highway 237 in the north to Saratoga Avenue in the south, where it becomes Quito Road. There is direct access from both directions of Lawrence Expressway to the project site. Drivers on southbound Lawrence Expressway can access a left turn lane, providing access to one of the project driveways. Similarly, drivers on northbound Lawrence Expressway have a right turn lane providing access to the same driveway.

Prospect Road is a six lane arterial in the project vicinity. It extends from Saratoga Avenue near the project site to Saratoga in the west. There is direct access to the project site from Prospect Road via a signalized intersection at the Westgate West Shopping Center driveway and Prospect Road. There are also three other driveways along the shopping center frontage on Prospect Road.

Saratoga Avenue is a six lane arterial in the project vicinity. It extends from Santa Clara in the northeast to Saratoga in the southwest.

Graves Avenue is a two lane roadway serving the residential neighborhood just north of the project site. The project site can be directly accessed by two driveways on Graves Avenue.

Existing Pedestrian and Bicycle Facilites

There are sidewalks along all streets in the study area, except for along Lawrence Expressway north of the project site. There is also a pedestrian walkway accessing the shopping area from Graves Avenue, north of the project site. There are crosswalks with pedestrian signal heads at all signalized intersections within the project vicinity on Lawrence Expressway, Prospect Road, and Saratoga Avenue.

Bicycle facilities in the vicinity of the project site are shown in Figure 3.

Bike lanes are provided on the following roadways:

- *Lawrence Expressway/Quito Road* – Bicycle Lanes exist throughout both streets, however, less experienced riders may be uncomfortable and should use caution on Lawrence Expressway, as vehicles in the drive lane are faster than normal arterials.
- *Prospect Road* – throughout its length
- *W Campbell Avenue/Hamilton Avenue* – throughout its length on Hamilton Avenue (Prospect Road becomes W Campbell Avenue/Hamilton Avenue after the Saratoga Road intersection.

No shared bike routes are present on the neighborhood streets in the immediate vicinity of the project site. However, the surrounding neighborhood streets, such as Graves Avenue and the streets connecting to it, carry low traffic volumes and are conducive to bicyclists.

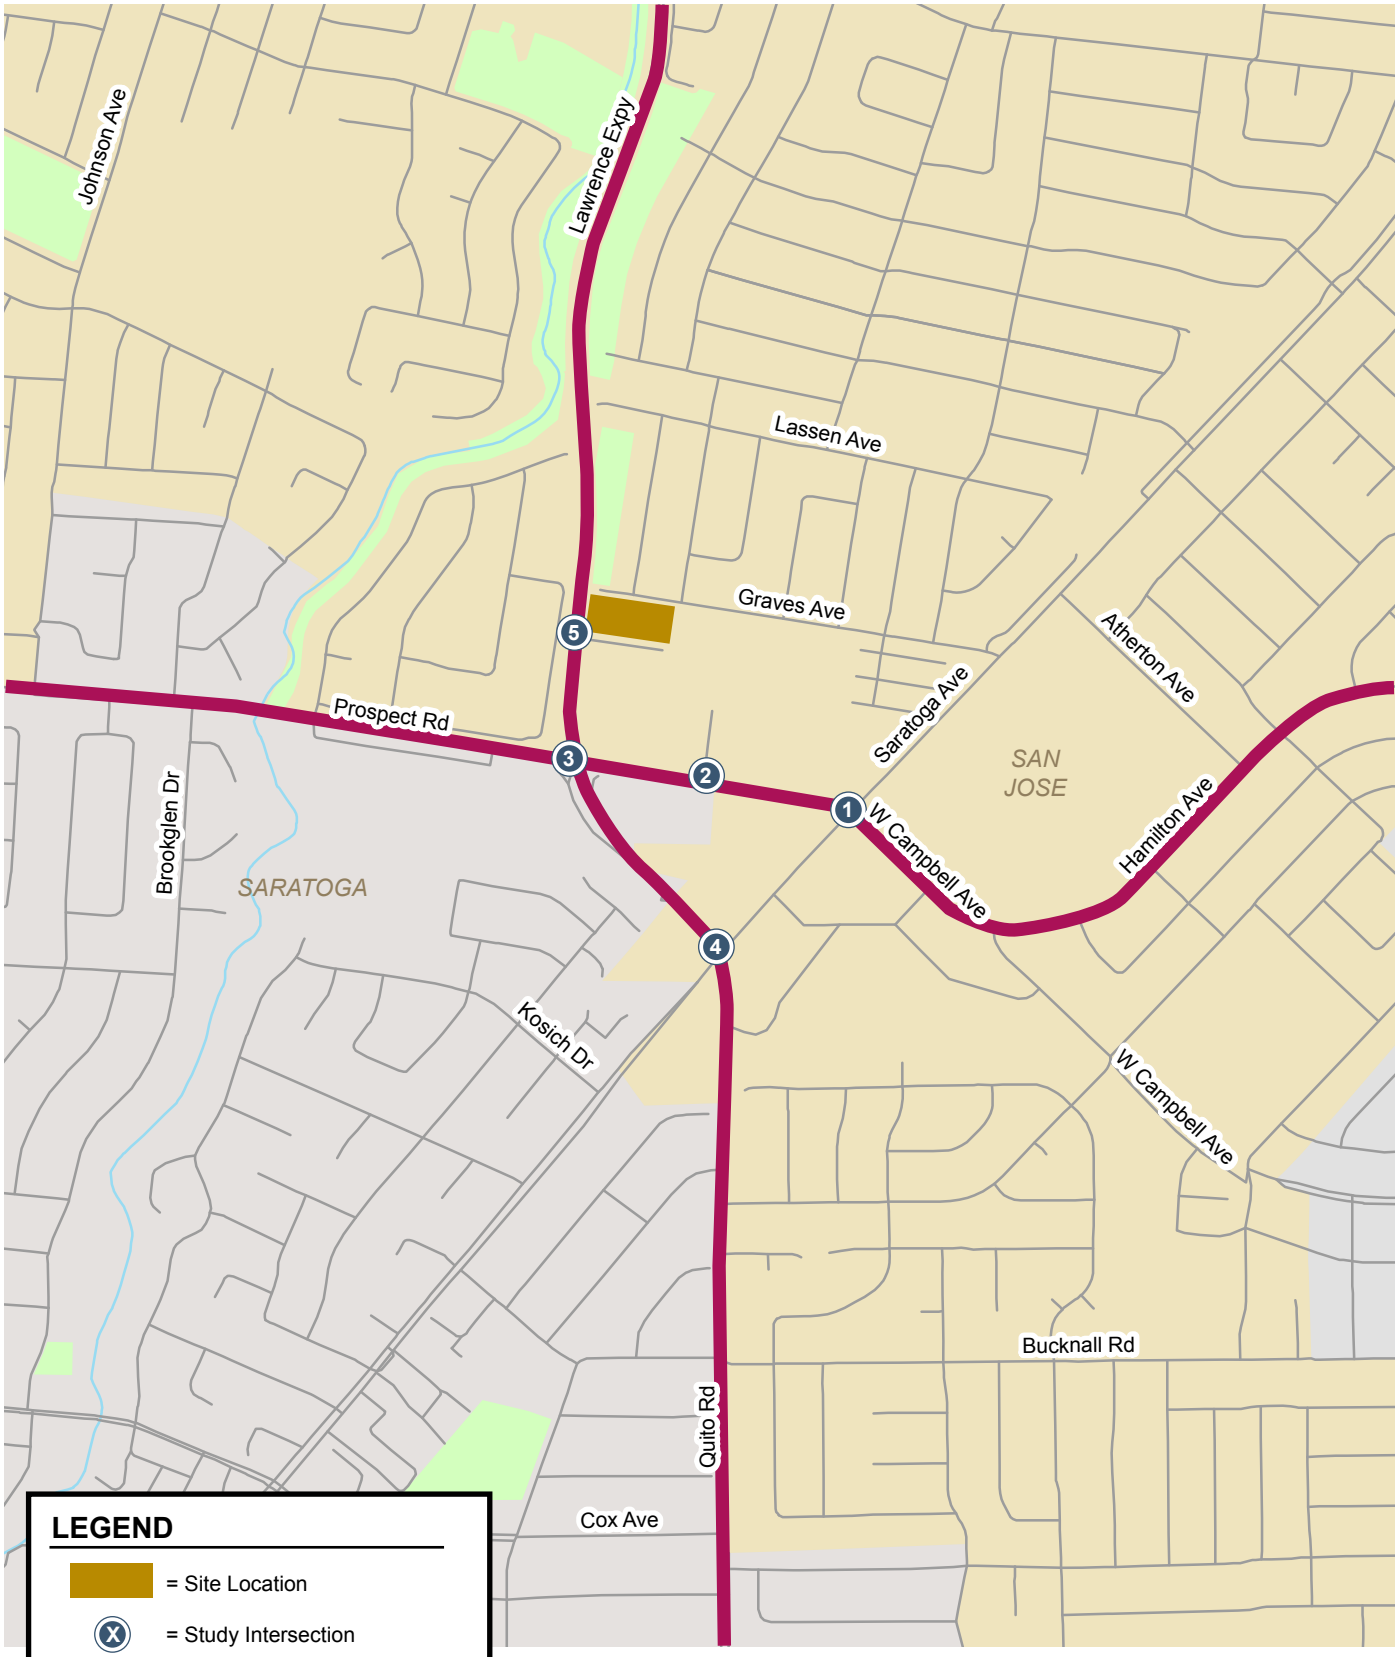

Figure 3
Existing Bicycle Facilities

Transit Service

Existing transit service in the study area is provided by the Santa Clara Valley Transportation Authority (VTA) (see Figure 4). The study area is served directly by one express bus route, one limited stop bus route, and four local routes. The transit routes that run through the study area are listed in Table 3, including their route description and commute hour headways (frequency of stops). The study area is well served by buses.

Table 3
Transit Routes

Transit Route	Route Description	Hours of Operation	Headway [1]
Local Route 26	Sunnyvale/Lockheed Martin Transit Center to Eastridge Transit Center	5:30 am - 11:50 pm	30 - 35 mins
Local Route 57	West Valley College to Great America	5:30 am - 10:50 pm	25 - 30 mins
Local Route 58	West Valley College to Alviso	6:00 am - 8:00 pm	25 - 35 mins
Local Route 82	Westgate to Downtown San Jose	6:00 am - 9:30 pm	30 mins
Express Route 101	Camden & Highway 85 to Palo Alto	6:15 am - 6:45 pm	60 mins
Limited Route 328	Almaden Expressway&Camden to Lockheed Martin/Moffett Industrial Park	6:00 am - 7:15 pm	60 mins

Notes:
[1] Approximate headways during peak commute periods.

The nearest bus stop locations to the project site include bus stops along Prospect Road, W Campbell Road(which extends from Prospect Road at Saratoga Avenue), and Saratoga Avenue. The closest bus stops are on Prospect Road, adjacent to the shopping center frontage and approximately 1,000 feet from the project site. Express Route 101, Limited Stop Route 328, and Local Route 26 serve these stops. The next closest bus stops are on Saratoga Avenue, also adjacent to the shopping center frontage, and about 1,500 feet from the project site. Local Routes 57, 58, and 82 serve this bus stop.

Existing Intersection Lane Configurations and Traffic Volumes

The existing lane configurations at the study intersections were determined by observations in the field and are shown on Figure 5.

Existing traffic volumes were obtained from new traffic counts, the City of San Jose, and the 2016 CMP Annual Monitoring Report. The existing peak-hour intersection volumes are shown on Figure 6. New intersection turning-movement counts conducted for this analysis are included in Appendix A.

Intersection Traffic Operations

Intersection traffic operations at study intersections were evaluated against the City of San Jose level of service standard (LOS D) and CMP level of service standard (LOS E). The results of the intersection level of service analysis (see Table 4) show that all study intersections currently operate at an acceptable level of service during both the AM and PM peak hours of traffic. The intersection level of service calculation sheets are included in Appendix C.

Table 4
Existing Level of Service

Study Number	Intersection	Peak Hour	Count Date	Existing Conditions Avg. Delay (sec)	LOS
1	Saratoga Avenue and Prospect Road*	AM	10/11/16	38.3	D
		PM	10/11/16	47.8	D
2	Westgate West Shopping Center and Prospect Road	AM	10/25/18	15.6	B
		PM	10/25/18	28.0	C
3	Lawrence Expressway and Prospect Road*	AM	10/03/18	49.7	D
		PM	10/06/16	49.7	D
4	Lawrence Expressway and Saratoga Avenue*	AM	10/03/18	43.2	D
		PM	10/06/16	50.4	D
5	Lawrence Expressway and Westgate West Shopping Center	AM	10/03/18	6.9	A
		PM	10/02/18	9.4	A

Note:
* Denotes the CMP designated Intersection

Observed Existing Traffic Conditions

Traffic conditions were observed in the field to identify existing operational deficiencies and to confirm the accuracy of calculated levels of service. The purpose of this effort was (1) to identify any existing traffic problems that may not be directly related to level of service, and (2) to identify any locations where the level of service analysis does not accurately reflect actual existing traffic conditions.

AM and PM field observations conducted in October 2018 revealed that overall the study intersections operate well, and the level of service calculations accurately reflect existing conditions. There were no observed operational issues at the study intersections or project driveways.

3. CEQA Transportation Analysis

This chapter describes the CEQA transportation analysis, including the VMT threshold of significance, the project-level VMT impact analysis results, and mitigation measures to reduce a VMT impact.

Project-Level VMT Impact Analysis

Project VMT

The project-level impact analysis under CEQA uses the VMT metric to evaluate a project's transportation impacts by comparing against the VMT thresholds of significance as established in the Transportation Analysis Policy. Usually, the San Jose VMT Evaluation Tool (sketch tool) is used to estimate the project VMT, based on the project location (APN), type of development, project description, and proposed trip reduction measures. However, because the proposed project is constructing an addition to an existing shopping center that generates regional traffic, the project must use the City's Travel Demand Model to estimate additional VMT generated by the project.

The project's transportation analysis zone (TAZ) is compromised of the area bounded by Lassen Avenue, Saratoga Avenue, Prospect Road, and Lawrence Expressway. About 60% of the TAZ is developed with 325 residential units. The southern part of the TAZ contains primarily retail uses and also includes several one-story office buildings. Based on the City's 2015 land use data base, the retail/commercial portion of this TAZ has 919 jobs.

The City of San Jose Travel Forecasting Model (model) was used to calculate the change in VMT resulting from the proposed Health Club at the Westgate Mall. The underlying premise is that the new health club would not cause an *increase* in trips but rather result in a *change* in trip making because some people would leave nearby health clubs to join the proposed health club. In order to estimate the impact on VMT with the model, the project's additional 16,450 square feet of building area was converted to 40 retail jobs, using a ratio of one retail job per 400 square feet, developed by City of San Jose staff. There are two similar health clubs near the project site: Planet Fitness at 328 Saratoga Avenue and Right Stuff at 1730 West Campbell Avenue. It was assumed that some members of these nearby clubs would join the proposed Westgate Mall health club instead and, in order to reflect this, 40 retail jobs were removed from the TAZ's where these two nearby health clubs are located. These job changes were then made in the 2015 land use file and the model was run, with and without the project. The model was run with the worker trips as Home Based-Work trips. Health club trips are considered recreational trips and are reflected in the model as "social/recreational" trips. Therefore, the daily VMT's for the social/recreational trips, with and without the project, were calculated for the affected TAZ's.

The model results showed that the proposed project would cause a net decrease of 41 VMT per day. The work trips would result in 48 fewer daily VMT and the social/recreational trips would result in an increase of 7 daily VMT. Because the project results in no increase in daily VMT, no mitigation measures are needed.

4. Local Transportation Analysis

This chapter describes the local transportation analysis including the method by which project traffic is estimated, intersection operations analysis for background plus project conditions, any adverse intersection traffic effects caused by the project, site access and on-site circulation review, and effects on bicycle, pedestrian, and transit facilities.

Intersection Operations Analysis

The intersection operations analysis is intended to quantify the operations of San Jose intersections and to identify potential negative effects due to the addition of project traffic. Information required for the intersection operations analysis related to project trip generation, trip distribution, and trip assignment are presented in this section. The study intersections are located in the City of San Jose and are evaluated based on the City of San Jose's intersection analysis methodology and standards in determining potential adverse operational effects due to the project, as described in Chapter 1.

Project Trip Estimates

The magnitude of traffic produced by a new development and the locations where that traffic would appear are estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. In determining project trip generation, the magnitude of traffic entering and exiting the site is estimated for the AM and PM peak hours. As part of the project trip distribution, the directions to and from which the project trips would travel are estimated. In the project trip assignment, the project trips are assigned to specific streets and intersections. These procedures are described below.

Trip Generation

Through empirical research, data have been collected that quantify the amount of traffic produced by common land uses. There are standard trip generation rates that can be applied to help predict the future traffic increases that would result from a new development. The magnitude of traffic added to the roadway system by a particular development is estimated by multiplying the applicable trip generation rates by the size of the development. Trip generation rates resulting from new development proposed within the City of San Jose typically are estimated using trip rates published in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 10th Edition. The ITE trip generation rates for Health/Fitness Club (Land Code Use 492) were used for this project.

Trip Adjustments and Reductions

According to the *Transportation Analysis Handbook,* the VMT reduction resulting from implementing the VMT reduction strategies in the sketch tool should be included as part of the trip generation estimates, however, because the project was analyzed with a conversion from a fitness center to an office to analyze VMT, it is not entirely accurate. The VMT reduction that can usually apply to the trip adjustments would only be applied to employees, who account for little of the peak hour trips. For the purpose of trip generation and analyses, the VMT mitigation measure adjustments were not used, and the Intersection Operations Analysis represents a more conservative analysis.

The existing retail use at the project site can be credited against the proposed fitness center trip generation estimates. The existing retail use was estimated using the ITE trip generation rates for Shopping Center (Land Code Use 820). The estimated trips for the retail use are 22 trips during the AM peak hour and 90 trips during the PM peak hour.

Net Project Trips

After applying appropriate trip reductions and existing site trip credits, the project would generate 30 new trips during the AM peak hour and 48 trips during the PM peak hour (see Table 5).

Table 5
Trip Generation

Land Use	Size		Daily Trip Rates	Daily Trips	AM Peak Hour Pk-Hr Rate	AM Peak Hour Trips In	AM Peak Hour Trips Out	AM Peak Hour Trips Total	PM Peak Hour Pk-Hr Rate	PM Peak Hour Trips In	PM Peak Hour Trips Out	PM Peak Hour Trips Total
Proposed Use												
Fitness Center [1]	40,000	SF	23.80	952	1.31	27	25	52	3.45	79	59	138
Existing Use												
Retail [2]	23,550	SF	37.75	889	0.94	14	8	22	3.81	43	47	90
Net Project Trips (Proposed - Existing):				***62***		***13***	***17***	***30***		***36***	***12***	***48***

Notes:
[1] Rates based on ITE Land Use Code 492 (Health/Fitness Club), average rates. Daily trips were estimated by assuming average of AM & PM peak hour trips rates to be 10% of daily trips.
[2] Rates based on ITE Land Use Code 820 (Shopping Center), average rates.
Source: Institute of Traffic Engineers, *Trip Generation Manual, 10th Edition*, 2017.

Trip Distribution and Assignment

The directional distribution of site-generated traffic was estimated based on existing travel patterns on the surrounding roadway system and the locations of complementary land uses (see Figure 7).

The peak-hour vehicle trips associated with the project were added to the roadway network in accordance with the trip distribution pattern, the roadway network connections, and the locations of project driveways (see Figure 8). Project trips were assigned to different driveways based on the estimated trip distribution.

Roadway Network under Background and Project Conditions

The roadway network under background conditions and background plus project conditions would be the same as the existing roadway network because: 1) there are no approved projects in the area that would alter the existing roadway network, and 2) the project would not alter the existing roadway network.

Traffic Volumes under Background and Project Conditions

Background peak hour traffic volumes were estimated by adding to existing volumes the estimated traffic from approved but not yet constructed developments. The added traffic from approved but not yet constructed developments was obtained from the City of San Jose (see Appendix B). Background traffic volumes are shown on Figure 9. Background Plus Project traffic volumes are shown on Figure 10.

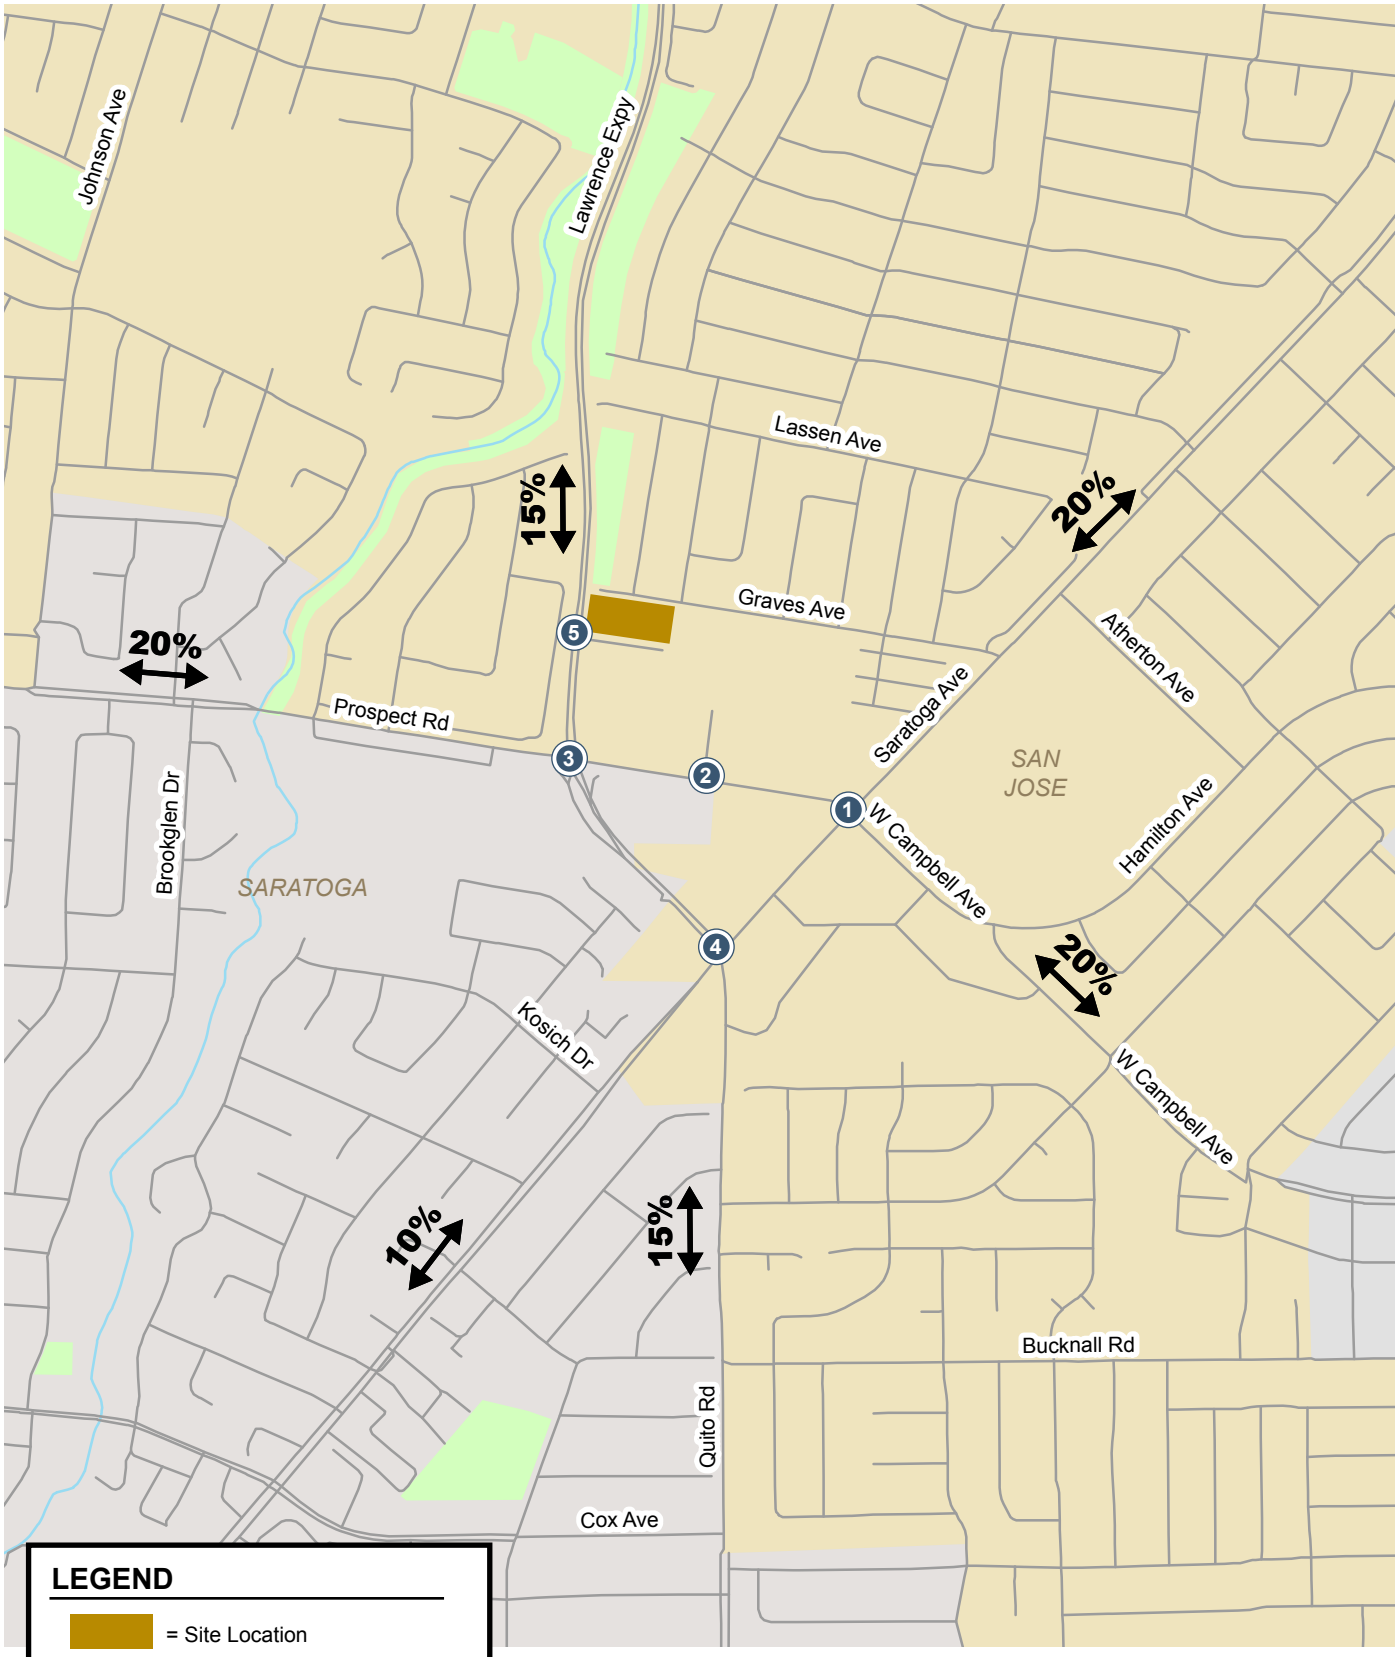

Figure 7
Project Trip Distribution

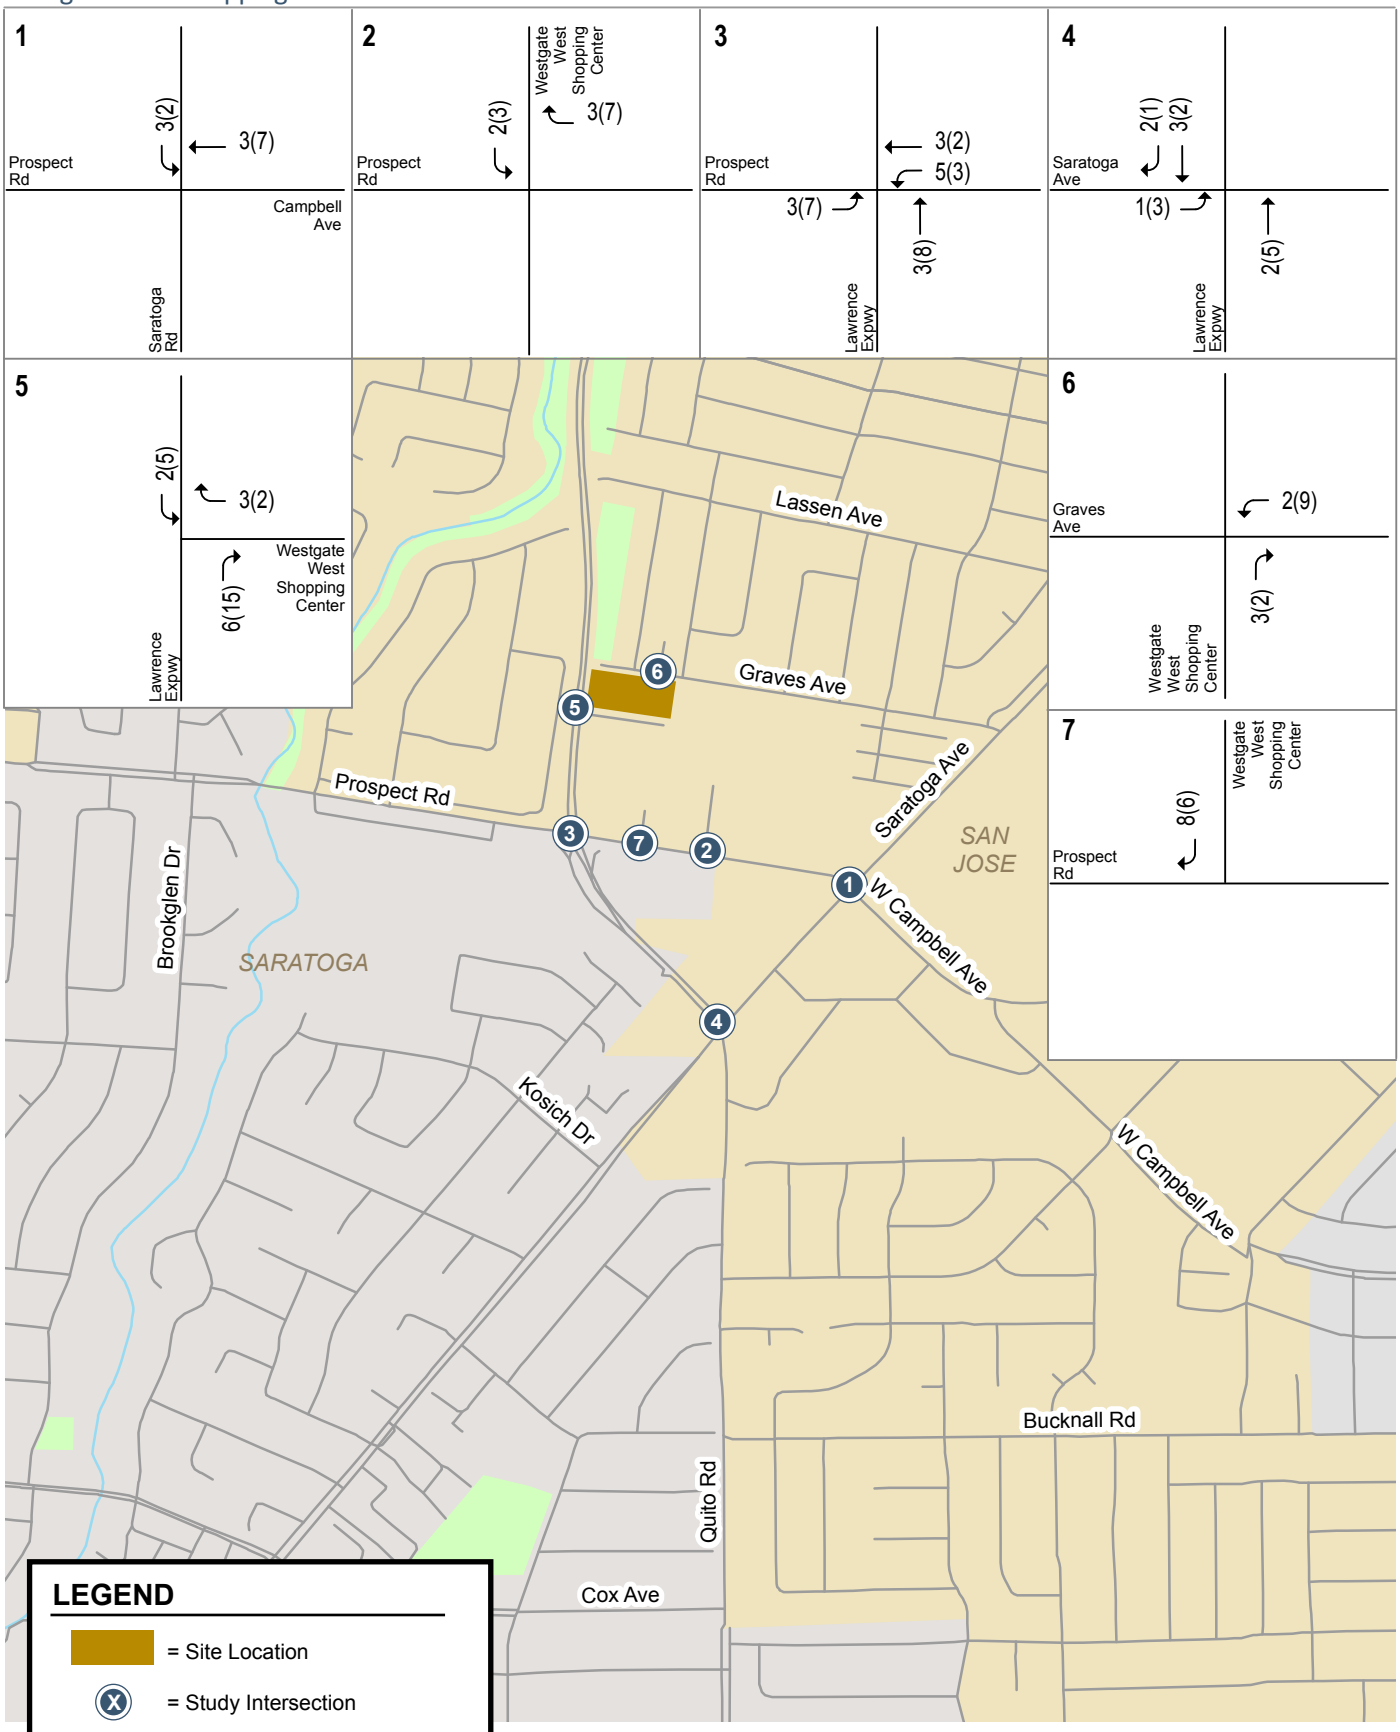

Figure 8
Project Trip Assignment

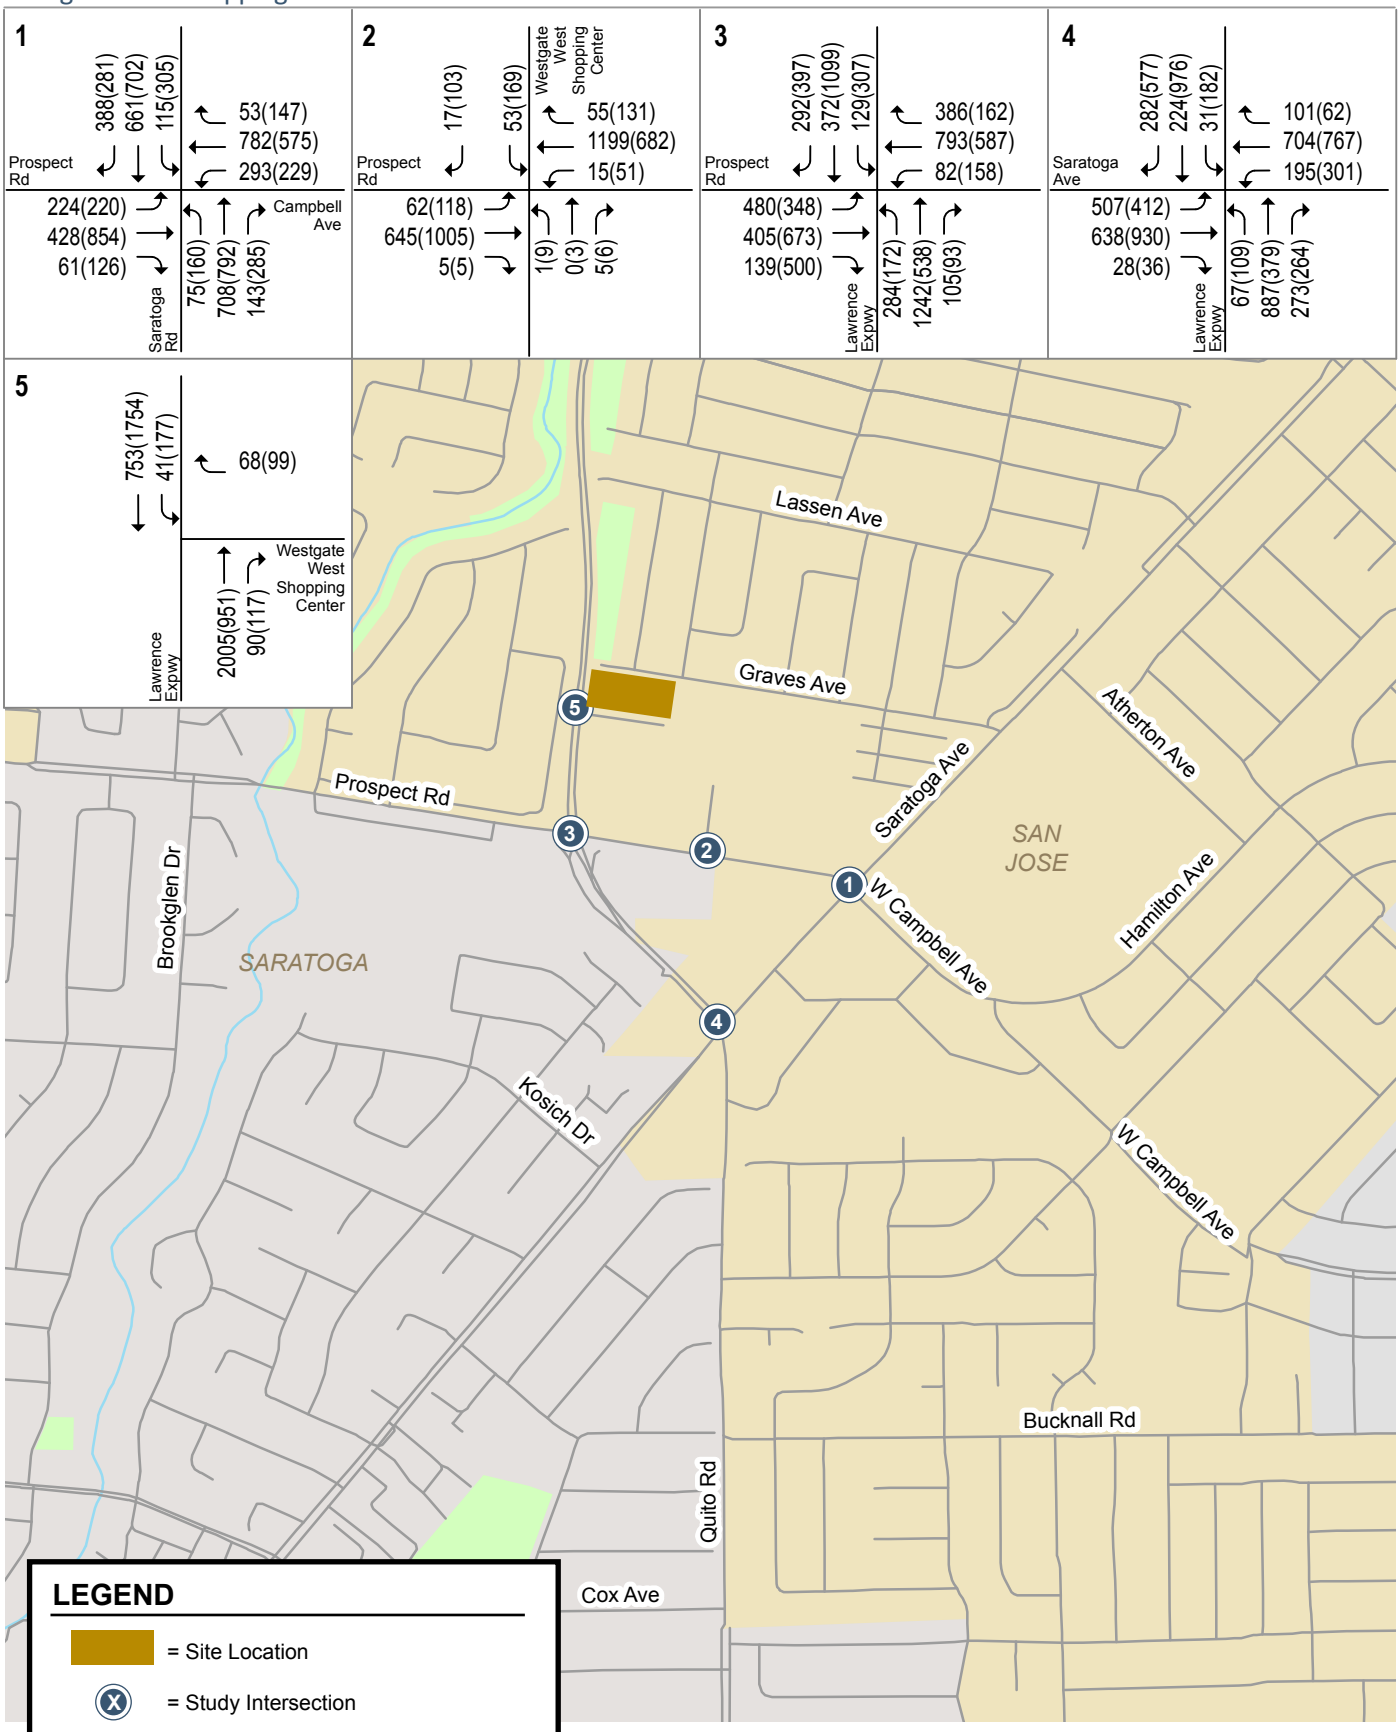

Figure 9
Background Traffic Volumes

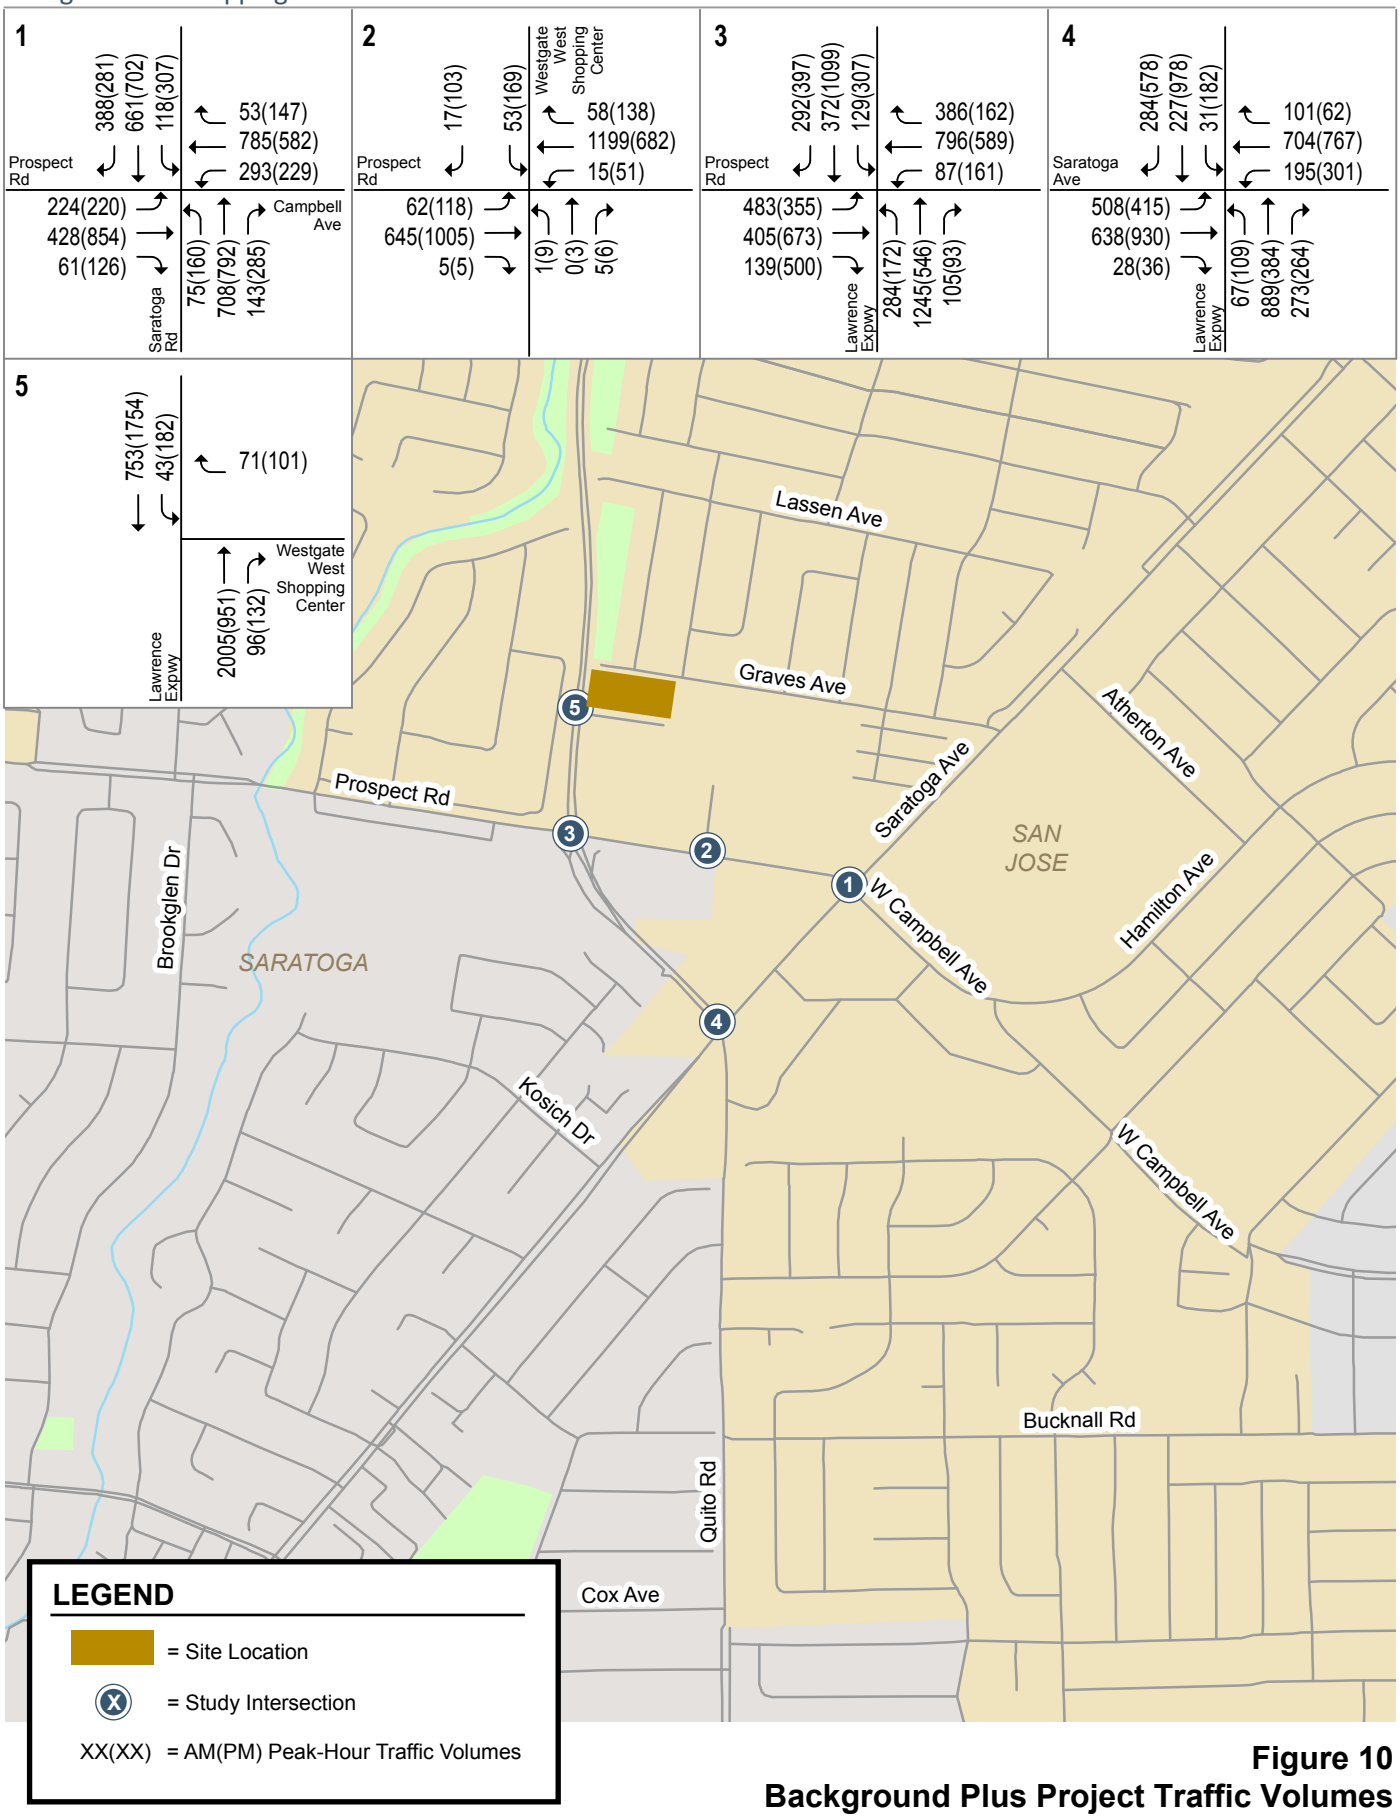

Figure 10
Background Plus Project Traffic Volumes

Intersection Traffic Operations under Background and Project Conditions

Intersection traffic operations at study intersections were evaluated against the City of San Jose level of service standard (LOS D) and CMP level of service standard (LOS E). The results of the intersection level of service analysis (see Table 6) show that the study intersection would operate at an acceptable level of service during both AM and PM peak hours of traffic under both background and background plus project conditions. The intersection level of service calculation sheets are included in Appendix C.

Vehicular Access and Circulation

The site access and circulation evaluation is based on the August 2018 site plan prepared by MCG Architecture (see Figure 2). Site access and on-site circulation were reviewed in accordance with generally accepted traffic engineering standards.

Site Access

The project generated traffic can access the site via driveways on Lawrence Expressway, Prospect Road, and Graves Avenue. The driveway on Lawrence Expressway can be accessed from either direction; however, the exit is restricted to right turns only onto northbound Lawrence Expressway. There are four driveways into the Westgate West Shopping Center on Prospect Road: one full-access signalized intersection, and three right-turn only driveways. There is are two full access driveways on Graves Avenue.

The driveways are all approximately 30 to 33 feet in width, with the exception of the driveway with the signalized intersection at Prospect Road. This driveway is approximately 40 feet wide with two exit lanes. The minimum required width for a two-way driveway is 26 feet. The existing driveways provide adequate width for vehicular access and meet City of San Jose requirements for driveway width.

Sight Distance

The proposed project driveways are free and clear of obstructions for optimized sight distance. Adequate sight distance reduces the likelihood of a collision at driveways and provides drivers with the ability to locate sufficient gaps in traffic to exit a driveway. There are no roadway curves, street parking,

or landscaping features that obstruct the vision of exiting drivers at any of the driveways. Therefore, sigh distance is adequate at the project driveways.

On-Site Circulation

On-site vehicular circulation was reviewed in accordance with the City of San Jose Zoning Code and generally accepted traffic engineering standards. The site plan proposes to punch through some existing islands and lengthen some existing drive aisles. Some parking spaces would be lost, but others would be gained. The new drive aisles would improve on-site circulation.

Parking Stall Dimensions

The City of San Jose Zoning Code (Section 20.90.100) requirement for uniform-size parking stalls is 8.5 feet wide by 17 feet long. The parking spaces shown in the site plan are 9 feet wide by 18 feet long. Therefore, the parking space dimensions would be adequate and would not have vehicles extending into the parking aisles.

Truck Access and Circulation

The project proposes to remove the loading docks at the rear of the building and construct a trash enclosure. This is acceptable because the fitness center would not be receiving any major truck deliveries, in contrast to the previous tenant that had many deliveries. If there are any trucks needing to access the project site, it is recommended that trucks utilize the driveway on Graves Avenue, as it provides direct access to the rear of the building.

Garbage Collection

The project site plan shows a new trash enclosure to be located at the rear of the building on the north side of the project site. Garbage vehicles can access the project site using the driveway on Graves Avenue and make a U-Turn near the trash enclosure area.

Emergency Vehicle Access

Emergency Vehicle Access would be provided via the project driveway on Lawrence Expressway and Graves Avenue. The City of San Jose Fire Code requires driveways to provide 32 feet of width for fire access. The project driveways meet requirements for emergency vehicle access.

Parking Supply

Parking provided on site was evaluated based on the City of San Jose parking standards (San Jose Municipal Code Chapter 20.90, Table 20-190). The vehicle parking requirement for neighborhood shopping center is one parking space per 225 square feet of floor area.

It is estimated that 970 parking spaces are required based on the developer's estimation of 218,114 square feet of floor space that will be available after the project completion. The project developer has also stated that the project proposes to construct 29 new spaces, expanding the total number of parking spaces to 1,068 spaces, meeting the requirement for parking supply.

The bicycle parking requirement for the project is one space per 3,000 square feet. The proposed 40,000 square foot fitness center would require 14 bicycle parking spaces. The developer has

proposed 14 bicycle parking spaces immediately outside of the fitness center by providing 8 “U” shaped bicycle racks. This meets the requirement for bicycle parking supply.

Pedestrian, Bicycle, and Transit Analysis

All new development projects in San Jose should encourage multi-modal travel, consistent with the goals of the City’s General Plan. It is the goal of the General Plan that all development projects accommodate and encourage the use of non-automobile transportation modes to achieve San Jose’s mobility goals and reduce vehicle trip generation and vehicle miles traveled. In addition, the adopted City Bike Master Plan establishes goals, policies, and actions to make bicycling a daily part of life in San Jose. The Master Plan includes designated bike lanes along all City streets, as well as on designated bike corridors. In order to further the goals of the City, pedestrian and bicycle facilities should be encouraged with new development projects.

The City’s General Plan identifies both walk and bicycle commute mode split targets as 15 percent or more for the year 2040. This level of pedestrian and bicycle mode share is a reasonable goal for the project, particularly if bus services and the proposed shuttle service are utilized in combination with bicycle commuting.

Pedestrian Facilites

Pedestrian facilities in the study area consist of sidewalks, crosswalks, and pedestrian signals at signalized intersections (see Chapter 2 for details). There are no planned improvements with the proposed fitness center expansion. The network of sidewalks and crosswalks within the shopping center and the project vicinity has adequate connectivity and provides pedestrians with safe routes to transit services and other points of interest in the vicinity of the project site. The proposed fitness center would utilize existing sidewalks and crosswalks within the Westgate West Shopping Center.

Bicycle Facilies

Class II striped bike lanes are provided along various roadways in the vicinity of the project site (see Chapter 2 for details). The project is not proposing any modifications or improvements to the existing bicycle network. The project proposes 14 bicycle parking spaces in front of the proposed fitness center. The existing bicycle network is sufficient to serve the project.

On-site bicycle circulation is adequate. There is direct access to bicycle lanes from the project driveways on Lawrence Expressway and Prospect Road.

Transit Service

There are several VTA bus lines that serve the immediate project area (see Chapter 2 for details). The bus stops closest to the project site are on Prospect Road and Saratoga Avenue, and are easily accessible from the project site. The project is not expected to generate a significant increase in demand for transit services.

5. Conclusions

The potential impacts of the project were evaluated in accordance with the standards set forth by the City of San Jose. The study included the analysis of traffic conditions for five (5) signalized intersections in the vicinity of the project site during the weekday AM and PM peak hours. The weekday peak hours are typically between 7:00-9:00 AM and between 4:00-6:00 PM. The study also included an analysis of transit services and bicycle and pedestrian access.

The results of the VMT analysis show that the proposed project will not have an increase in regional VMT, therefore regional VMT is not significantly impacted by the project.

The results of the intersection analysis under background plus project conditions show that, measured against the City of San Jose level of service standards, all the study intersections would operate at an acceptable level of service during both the AM and PM peak hours of traffic. None of the study intersections would be significantly impacted by the project.

The site plan shows adequate site access and on-site circulation, and no significant operational issues are expected to occur at the site or at the study intersections as a result of the project. Thus, the project would not have an adverse effect on the existing transit, pedestrian, or bicycle facilities in the study area.

Geotechnical Engineering, Environmental & Groundwater Science, Inspection & Testing Services

May 8, 2019

Ms. Cindy Johnson
Donahue Schriber Realty Group
3501 Del Paso Road, Suite 100
Sacramento, CA 95835

Subject: **Hazardous Materials Soil Screening Report**
Westgate West – 24 Hour Fitness Pad
5365 Prospect Road
San Jose, California 95129
Converse Project No. 16-42-194-11

Ms. Johnson:

Converse Consultants (Converse) has received and reviewed the analytical results of the soil samples collected from future building pad for the future 24 Hour Fitness (Tenant) space at the Westgate West Shopping Center, located at 5365 Prospect Road, San Jose, California (Site). The location of the Site is indicated on Figure 1. The soil samples were collected in general accordance with our proposal, dated April 12, 2019.

The proposal was based upon Tenant lease requirements that shallow soil samples be collected and tested to determine if contaminants from previous agricultural operations have occurred at concentrations above established screening levels. On April 15, 2019 Converse used direct-push drilling methods to advance four (4) borings (B1 through B4) at the Site to depths of 2 feet below ground surface (bgs). Boring locations are indicated on Figure 2. At each location, the concrete foundation was observed to be approximately 4 to 6 inches thick. Soil samples were collected in acetate sleeves from depths of 1 and 2 feet bgs. The samples sleeves were cut, capped, labeled, and placed on ice in a cooler for transport to a laboratory for analysis. A portion of each soil sample was also screened in the field for volatile compounds using a photoionization detector (PID); all readings were below the detection limit of the PID.

The samples were transported to American Environmental Testing Laboratory (AETL) in Burbank under chain-of-custody documentation for analysis. The laboratory was requested to prepare four (4) composite samples (identified as Comp B1 through Comp B4) using the two (2) discrete samples collected from each boring. The composite samples were analyzed for organochlorine pesticides (OCPs) and metals in accordance Environmental Protection Agency (EPA) Test Methods 8081 and 6010B, respectively. Analytical results of the samples have been compared to hazardous waste disposal threshold criteria, Department of Toxic Substance Control (DTSC) and/or EPA health-risk based screening levels, as well as hazardous waste disposal thresholds. The final

laboratory analytical report for the samples is attached. A summary of the results is presented on Table 1 and as follows:

- Metals – A total of eight (8) metals were detected in one or more of the composite samples analyzed: barium, chromium, cobalt, copper, lead, nickel, vanadium, and zinc. The other nine (9) metals reported, including arsenic, were not detected in any of the samples analyzed. The maximum concentrations of all detected metals are less than their respective health-risk based DTSC and/or EPA screening levels. All reported metals concentrations are also less than their respective hazardous waste disposal threshold values.
- Organochlorine Pesticides (OCPs) – Six (6) OCPs were reported in one or more of the composite samples analyzed: chlordane, DDD, DDE, DDT, dieldrin, and endrin. The maximum concentrations of all detected OCPs are less than their respective health-risk based DTSC and/or EPA screening levels. All reported OCP concentrations are also less than their respective hazardous waste disposal threshold values.

Results of the sample analyses indicate that all reported constituents are below their respective health-risk based screening levels and hazardous waste disposal threshold values. Based on the results of this assessment, no further assessment appears warranted at this time.

This report has been prepared for the exclusive use of Donahue Schriber Realty Group in accordance with the terms and conditions under which these services were provided. Any reliance on this report by third parties shall be at third party's sole risk. Our services have been performed in accordance with applicable state and local ordinances, and generally accepted practices in the geosciences. No other warranty, either expressed or implied, is made.

Converse is not responsible or liable for the accuracy or completeness of available information provided by others. Site exploration identifies actual conditions only at those points where samples are taken, when they are taken.

Data derived through sampling and analytical testing are extrapolated by geoscientists who then render an opinion about overall conditions. Actual conditions in the areas not sampled may differ from the predictions. This report should not be regarded as a guarantee that no further contamination, beyond that which was detected in our investigation, is present beneath the property. In the event that changes to the property occur, or additional, relevant information about the property is brought to our attention, the recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the recommendations of this report are modified in writing.

We appreciate the opportunity to be of service. Should you have any questions or comments regarding this report, please contact Michael Van Fleet at (626) 930-1267 or Laura Tanaka (626) 930-1261.

Sincerely,

CONVERSE CONSULTANTS

Michael Van Fleet, PG

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

2834 NORTH NAOMI ST. BURBANK, CALIFORNIA 91504 DHS # 1541 LACSD# 10181
TEL (888) 288-AETL (818) 845-8200 FAX (818) 845-8840 www.aetlab.com

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

Subject: **Waste Disposal Soil Profile Screening Report**
Westgate West – 24 Hour Fitness Pad
5365 Prospect Road
San Jose, California 95129
Converse Project No. 16-42-194-11

Ms. Johnson:

Converse Consultants (Converse) has received and reviewed the analytical results of the soil samples collected in the vicinity of the future 24 Hour Fitness (Tenant) space at the Westgate West Shopping Center, located at 5365 Prospect Road, San Jose, California (Site). The location of the Site is indicated on Figure 1. The soil samples were collected in general accordance with our proposal, dated April 12, 2019. It is understood that excess soils are anticipated to be generated during the planned redevelopment of the Tenant space, and that these soils will likely need to be disposed of offsite. The majority of the soils are anticipated to be generated from the installation of a bioretention basin in the parking area north of the building. Excavation of soils from this area are anticipated to extend to depths of approximately 4 feet below ground surface (bgs). The objective of this assessment was to collect representative samples of the soils anticipated to be generated to be used in generating a soil profile for waste disposal purposes.

On April 15, 2019 Converse used direct-push drilling methods to advance three (3) borings (SP-1 through SP-3) at the Site to depths of 4 feet bgs. Locations of the soil profile borings are indicated on Figure 2. At each location the asphalt paving was observed to be approximately 2 to 3 inches thick. Soil samples were collected in acetate sleeves from depths of 2 and 4 feet bgs. Sub-samples were collected from the sleeves of the samples collected from boring SP-1 in accordance with Environmental Protection Agency (EPA) Method 5035 using Encore containers. The sample containers capped, labeled, and placed on ice in a cooler for transport to a laboratory for analysis. A portion of each soil sample was also screened in the field for volatile organic compounds (VOCs) using a photoionization detector (PID); all readings were below the detection limit of the PID.

The samples were transported to American Environmental Testing Laboratory (AETL) in Burbank under chain-of-custody documentation for analysis. The laboratory was

requested to prepare two (2) composite samples (identified as Comp SP-2 and Comp SP-4) using the three (3) discrete samples collected from each depth.

The composite samples prepared by the laboratory were requested to be analyzed for the following:

- EPA Method 6010B/7470A – Title 22 (CAM 17) Metals
- EPA Method 8015M – Total Petroleum Hydrocarbon (TPH) carbon chain analysis (gasoline, diesel and oil ranges)
- EPA Method 8081A – Organochlorine Pesticides (OCPs)
- EPA Method 8082 – Polychlorinated Biphenyls (PCBs)
- EPA Method 8270C – Semi-volatile Organic Compounds (SVOCs)

The composite samples collected in accordance with EPA Method 5035 were requested to be analyzed for the following:

- EPA Method 8260B – Volatile Organic Compounds (VOCs)

Analytical results of the samples have been compared to hazardous waste disposal threshold criteria, Department of Toxic Substance Control (DTSC) and/or EPA health-risk based screening levels, as well as hazardous waste disposal thresholds. The final laboratory analytical report for the samples is attached. A summary of the results is presented on Table 1 and as follows:

- Metals – A total of eight (8) metals were detected in both of the composite samples analyzed; barium, chromium, cobalt, copper, lead, nickel, vanadium, and zinc. The other nine (9) metals reported, including arsenic, were not detected in any of the samples analyzed. The maximum concentrations of all detected metals are less than their respective health-risk based DTSC and/or EPA screening levels. All reported metals concentrations are also less than their respective hazardous waste disposal threshold values.
- Organochlorine Pesticides (OCPs) – One (1) OCP (DDD) was reported in one of the two composite samples analyzed. DDD was reported in sample Comp SP-4 at a concentration of 4.09 micrograms per kilogram (µg/kg). This reported concentration is well below its health-risk based screening levels and hazardous waste disposal threshold values.
- TPH was not reported in either of the composite samples analyzed.
- PCBs were not reported in either of the composite samples analyzed.
- SVOCs were not reported in either of the composite samples analyzed.
- VOCs were not reported in either of the discrete samples analyzed.

Results of the sample analyses indicate that all reported constituents are below their respective health-risk based screening levels and hazardous waste disposal threshold values. The soil is considered to be non-hazardous waste for disposal purposes, and may be suitable for reuse onsite, or at other project sites. A copy of this report should be presented for acceptance to the location that will potentially be receiving these soils.

This report has been prepared for the exclusive use of Donahue Schriber Realty Group in accordance with the terms and conditions under which these services were provided. Any reliance on this report by third parties shall be at third party's sole risk. Our services have been performed in accordance with applicable state and local ordinances, and generally accepted practices in the geosciences. No other warranty, either expressed or implied, is made.

Converse is not responsible or liable for the accuracy or completeness of available information provided by others. Site exploration identifies actual conditions only at those points where samples are taken, when they are taken.

Data derived through sampling and analytical testing are extrapolated by geoscientists who then render an opinion about overall conditions. Actual conditions in the areas not sampled may differ from the predictions. This report should not be regarded as a guarantee that no further contamination, beyond that which was detected in our investigation, is present beneath the property. In the event that changes to the property occur, or additional, relevant information about the property is brought to our attention, the recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the recommendations of this report are modified in writing.

We appreciate the opportunity to be of service. Should you have any questions or comments regarding this report, please contact Michael Van Fleet at (626) 930-1267 or Laura Tanaka (626) 930-1261.

Sincerely,

CONVERSE CONSULTANTS

COOLER RECEIPT FORM

Client Name: Converse
Project Name:
AETL Job Number: 97298
Date Received: 4/17/19 Received by: Sergey
Carrier: ☑ AETL Courier ☐ Client ☐ GSO ☐ FedEx ☐ UPS
☐ Others:

Samples were received in: ☑ Cooler (1) ☐ Other (Specify):
Inside temperature of shipping container No 1: 3.4°C, No 2: _____, No 3: _____
Type of sample containers: ☐ VOA, ☐ Glass bottles, ☐ ☐ Wide mouth jars, ☐ ☐ HDPE bottles, ☐ Metal sleeves, ☑ Others (Specify): Sleeves / encore
How are samples preserved: ☐ None, ☐ Ice, ☑ Blue Ice, ☐ Dry Ice
☑ None, ☐ HNO_3, ☐ NaOH, ☐ ZnOAc, ☐ HCl, ☐ $Na_2S_2O_3$, ☐ MeOH
☐ Other (Specify):

	Yes	No, explain below	Name, if client was notified.
1. Are the COCs Correct?	✓		
2. Are the Sample labels legible?	✓		
3. Do samples match the COC?	✓		
4. Are the required analyses clear?	✓		
5. Is there enough samples for required analysis?	✓		
6. Are samples sealed with evidence tape?		✓	
7. Are sample containers in good condition?	✓		
8. Are samples preserved?	✓		
9. Are samples preserved properly for the intended analysis?	✓		
10. Are the VOAs free of headspace?	NA		
11. Are the jars free of headspace?	NA		

Explain all "No" answers for above questions:

CERTIFICATE OF ANALYSIS
CASE NARRATIVE

AETL received 8 samples with the following specification on 04/17/2019.

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
97248.01	SP1-2	04/15/2019	Soil	3

Method ^ Submethod	Req Date	Priority	TAT	Units
(8260B)	04/24/2019	2	Normal	ug/Kg

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
97248.05	SP1-4	04/15/2019	Soil	3

Method ^ Submethod	Req Date	Priority	TAT	Units
(8260B)	04/24/2019	2	Normal	ug/Kg

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
97248.02	SP2-2	04/15/2019	Soil	1
97248.03	SP3-2	04/15/2019	Soil	1
97248.06	SP2-4	04/15/2019	Soil	1
97248.07	SP3-4	04/15/2019	Soil	1

Method ^ Submethod	Req Date	Priority	TAT	Units
ARCHIVE	04/24/2019	2	Normal	--

Lab ID	Sample ID	Sample Date	Matrix	Quantity Of Containers
97248.04	COMP SP-2	04/15/2019	Soil	1
97248.08	COMP SP-4	04/15/2019	Soil	1

Method ^ Submethod	Req Date	Priority	TAT	Units
(6010B/7000CAM)	04/24/2019	2	Normal	mg/Kg
(8081A)	04/24/2019	2	Normal	ug/Kg
(8082)	04/24/2019	2	Normal	ug/Kg
(8270C)	04/24/2019	2	Normal	mg/Kg
(M8015D) ^ C13-C40	04/24/2019	2	Normal	mg/Kg
(M8015G)	04/24/2019	2	Normal	mg/Kg

The samples were analyzed as specified on the enclosed chain of custody. Analytical non-conformances have been noted on the report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

Data Qualifiers and Descriptors

Data Qualifier:

#:	Recovery is not within acceptable control limits.
*:	In the QC section, sample results have been taken directly from the ICP reading. No preparation factor has been applied.
B:	Analyte was present in the Method Blank.
D:	Result is from a diluted analysis.
E:	Result is beyond calibration limits and is estimated.
H:	Analysis was performed over the allowed holding time due to circumstances which were beyond laboratory control.
J:	Analyte was detected . However, the analyte concentration is an estimated value, which is between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL).
M:	Matrix spike recovery is outside control limits due to matrix interference. Laboratory Control Sample recovery was acceptable.
MCL:	Maximum Contaminant Level
NS:	No Standard Available
S6:	Surrogate recovery is outside control limits due to matrix interference.
S8:	The analysis of the sample required a dilution such that the surrogate concentration was diluted below the method acceptance criteria.
X:	Results represent LCS and LCSD data.

Definition:

%Limi:	Percent acceptable limits.
%REC:	Percent recovery.
Con.L:	Acceptable Control Limits
Conce:	Added concentration to the sample.
LCS:	Laboratory Control Sample
MDL:	Method Detection Limit is a statistically derived number which is specific for each instrument, each method, and each compound. It indicates a distinctively detectable quantity with 99% probability.

2834 NORTH NAOMI ST. BURBANK, CALIFORNIA 91504 DHS # 1541 LACSD# 10181
TEL (888) 288-AETL (818) 845-8200 FAX (818) 845-8840 www.aetlab.com

Data Qualifiers and Descriptors

MS:	Matrix Spike
MS DU:	Matrix Spike Duplicate
ND:	Analyte was not detected in the sample at or above MDL.
PQL:	Practical Quantitation Limit or ML (Minimum Level as per RWQCB) is the minimum concentration that can be quantified with more than 99% confidence. Taking into account all aspects of the entire analytical instrumentation and practice.
Recov:	Recovered concentration in the sample.
RPD:	Relative Percent Difference

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Kleinfelder, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILDFAX® PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Kleinfelder, Inc. on Jun 21, 2021.

TARGET PROPERTY

5253, 5287, 5347, 5289 Prospect Rd
San Jose, CA 95129

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
