# EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by WSCS Design for the property located at 25820 and 25840 Idyllwild Road in Idyllwild, Riverside County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide WSCS Design with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

### Property Description

Parcel A of the subject property is located on the east side of CA Highway 243 and Parcel B is located on the east side of Oakwood Street within a mixed commercial/residential area of Riverside County. Please refer to the table below for further description of the subject property:

| ***Subject Property Data*** | |
|---|---|
| **Address(es):** | 25820 and 25840 Idyllwild Road or California 243, Idyllwild, California |
| **Property Use:** | Vacant |
| **Land Acreage (Ac):** | 2.28 Ac |
| **Number of Buildings:** | None |
| **Assessor's Parcel Number (APN):** | 563-250-017-3 (Parcel A); 563-250-031-5 (Parcel B) |
| **Site Assessment Performed By:** | Chong Ly of Partner |
| **Site Assessment Conducted On:** | July 27, 2020 |

The subject property currently consists of two undeveloped parcels.

According to available historical sources, the subject property was formerly undeveloped as early as 1901; Parcel A was utilized as a construction borrow pit between 1981 and 1996; and continues to be undeveloped and vacant land with an Idyllwild Water District water well and pump house, and vacant mobile structure located on Parcel B.

The immediately surrounding properties consist of single-family and multi-family residences to the north; an extended stay motel and single-family residences to the south; Mt. San Jacinto State Park to the west across CA-243 and a single-family residence and a vacant lot across Oakwood Street; and single-family residences to the east.

According to previous subsurface investigation conducted on a nearby property (25015 Highway 243 and Case #083303997T), the depth to groundwater in the vicinity of the subject property is inferred to be approximately between 15 and 30 feet below ground surface (bgs) and groundwater flow is inferred to be toward the south-southwest.

### Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under

conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Parcel B of the subject property has an Idyllwild Water District water well and pump house. The water well and pump house are currently active and are owned and maintained by the Idyllwild Water District. As no hazardous materials or petroleum products are stored in the vicinity of the well, this feature is not expected to represent a significant environmental concern.

**Conclusions, Opinions and Recommendations**

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 25820 and 25840 Idyllwild Road in Idyllwild, Riverside County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

# 1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 25820 and 25840 Idyllwild Road in Idyllwild, Riverside County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

## 1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

## 1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject

property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

## 1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

## 1.4 User Reliance

WSCS Design engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of WSCS Design. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its

officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

## 1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of the AAI User Questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner submitted a Freedom of Information Act (FOIA) request to the Riverside County Fire Department for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

# 2.0 SITE DESCRIPTION

## 2.1 Site Location and Legal Description

The subject property at 25820 and 25840 Idyllwild Road in Idyllwild, California, where Parcel A of the subject property is located on the east side of CA Highway 243 and Parcel B is located on the east side of Oakwood Street within a mixed commercial/residential area of Riverside County. ## 2.4 Physical Setting Sources

### *2.4.1 Topography*

The United States Geological Survey (USGS) *Idyllwild, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 5,450 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping moderately toward the south-southwest. Structural development is not depicted on the 2018 map.

A copy of the most recent topographic map is included as Figure 3 of this report.

### *2.4.2 Hydrology*

According to topographic map interpretation, the direction of groundwater flow in the vicinity of the subject property is inferred to be toward the south-southwest. The nearest surface water in the vicinity of the subject property is the Strawberry Creek located approximately 2,000 feet east of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, public water systems operated by the Fern Valley Water District and Idyllwild Water District serve the subject property vicinity. According to the 2019 Consumer Confidence Report, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of Idyllwild are surface water from Tahquitz and Strawberry Creeks and 10 vertical groundwater wells.

According to previous subsurface investigation conducted on a nearby property (25015 Highway 243 and Case #083303997T), the depth to groundwater in the vicinity of the subject property is inferred to be approximately between 15 and 30 feet below ground surface (bgs) and groundwater flow is inferred to be toward the south-southwest.

### *2.4.3 Geology/Soils*

The general area of the subject property is located within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges Province is a distinct geomorphic region characterized as a complex series of northwest-southeast oriented mountain ranges and valleys generally sub-parallel to faults composing the San Andreas rift zone. The Peninsular Ranges Geomorphic Province is further described by three fault-bounded sub-units, which include the Santa Ana, Perris and San Jacinto Blocks. The Perris Block is characterized as a broad area of intermixed valleys and low mountain ranges situated between the Elsinore and San Jacinto fault zone.

Based on information obtained from the USDA Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Pacific-Preston or Pacifico families complex and Wind River-Oak Glen families association. The Pacifico series consists of shallow, somewhat excessively drained soils that formed in material weathered from granitic and anorthosite rocks. Pacifico soils are on uplands and have slopes of 15 to 75 percent. The Wind River-Oak Glen families association consists of deep, well drained soils that formed from residuum weathered from granite. These soils are found on mountains with slopes that range from 2 to 15 percent.

### *2.4.4 Flood Zone Information*

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06065C2155G, dated August 28, 2008, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

A copy of the reviewed flood map is not included in Appendix B of this report.

# 3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

## 4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

### 4.2.2 Subject Property Listings

The subject property is not identified in the regulatory database report.

### 4.2.3 Adjacent Property Listings

The adjacent property to the west of Parcel A is identified as a RCRA NonGen/NLR site in the regulatory database report, as discussed below:

- The property, identified as California State Parks Mount San Jacinto SP at 25905 Highway 243, is located adjacent to the west of Parcel A of the subject property. This site is listed a non-generator, does not currently generate hazardous wastes, and is only a transporter of hazardous wastes. Since the facility does not generate hazardous wastes and based on the absence of reported violations, this listing is not expected to represent a significant environmental concern.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

### 4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

### 4.2.5 Orphan Listings

No orphan listings of concern are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

No potential environmental concerns were identified during the onsite reconnaissance.

## 6.1 General Site Characteristics

### *6.1.1 Solid Waste Disposal*

No solid waste is generated at the subject property. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance except for some concrete waste debris observed at the northwest end of Parcel A. As no hazardous materials or petroleum products were observed, this waste is not expected to represent a significant environmental concern.

### *6.1.2 Sewage Discharge and Disposal*

No sanitary discharges were observed on the subject property. No wastewater treatment facilities or septic systems were observed or reported on the subject property.

### *6.1.3 Surface Water Drainage*

Storm water is removed from the subject property primarily by sheet flow action across the unpaved surfaces and through percolation. The subject property is not connected to a municipal sewer system as there are no buildings or permanent structures on the subject property.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

### *6.1.4 Source of Heating and Cooling*

There is no cooling system on the subject property.

### 6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed on Parcel A during the site reconnaissance. Parcel B has an Idyllwild Water District water well and pump house. The water well and pump house are currently active and are owned and maintained by the Idyllwild Water District. As no hazardous materials or petroleum products are stored in the vicinity of the well, this feature is not expected to represent a significant environmental concern.

### 6.1.6 Wastewater

No domestic wastewater is generated at the subject property. No industrial process is currently performed at the subject property.

### 6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

### 6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

## 6.2 Potential Environmental Hazards

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the subject property during Partner's reconnaissance.

### 6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

### 6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

### 6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

### 6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

### 6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

### 6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

## 6.3 Non-ASTM Services

### 6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property does not have any permanent structures; therefore, ACMs were not considered within the scope of this assessment.

### 6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 $mg/cm^2$ (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

The subject property does not have any permanent structures; therefore, LBP was not considered within the scope of this assessment.

### 6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

| *EPA Radon Zones* | | |
|---|---|---|
| **EPA Zones** | **Average Predicted Radon Levels** | **Potential** |
| Zone 1 | Exceed 4.0 pCi/L | Highest |

| *EPA Radon Zones* | | |
|---|---|---|
| **EPA Zones** | **Average Predicted Radon Levels** | **Potential** |
| Zone 2 | Between 2.0 and 4.0 pCi/L | Moderate |
| Zone 3 | Less than 2.0 pCi/L | Low |

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

### *6.3.4 Lead in Drinking Water*

According to available information, public water systems operated by the Fern Valley Water District and Idyllwild Water District serve the subject property vicinity. According to the 2019 Consumer Confidence Report, shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for the City of Idyllwild are surface water from Tahquitz and Strawberry Creeks and 10 vertical groundwater wells. According to the 2019 Consumer Confidence Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

### *6.3.5 Mold*

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

The subject property does not have any permanent structures; therefore, mold was not considered within the scope of this assessment.

## 6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

# 7.0 FINDINGS AND CONCLUSIONS

### Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- Parcel B of the subject property has an Idyllwild Water District water well and pump house. The water well and pump house are currently active and are owned and maintained by the Idyllwild Water District. As no hazardous materials or petroleum products are stored in the vicinity of the well, this feature is not expected to represent a significant environmental concern.

### Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 25820 and 25840 Idyllwild Road in Idyllwild, Riverside County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

***State and tribal landfill and/or solid waste disposal site lists***

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

| Site History: | ***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** 3 tanks pulled 9/4/97. Samples under tanks showed TPH contamination. Tank #1 turbine end -3,700 ppm at 12' bgs. Soil sampled under dispensers. 2 samples hot. #4-2800ppm TPH, 2.5 ppm MBTE; #5-1600 ppm TPH, 4.3 ppm MTBE. One well installed 11/16/1998. Well screened from 1-40. 2 additional wells, MW-2 and MW-3, were installed in 1999. 4th well, MW-4, was installed in 2000. Free product detected in well 1 in September 2000. Passive floating skimmer installed. Well 1 no longer had free product 3/13/2003. One well, MW-5, was installed off-site to the south of Ridge View Drive May 8, 2006 . 5 wells, MW-7-MW-9, MW-11 and MW-12 were drilled off-site to the south of Ridge View Drive March 13 and 14, 2008. 2 SVE wells installed August 22, 2007. The wells were screened from 10-23. Up to 3030 ppm TPHg was found in the soil sample from SVE-1. Up to 0.185 ppm benzene, 2.54 ppm MTBE. SVE-2 had up to 1460 ppm TPHG, ND benzene and MTBE, 0.637 ppm TBA. SVE system began August 30, 2007 using wells MW-1, SVE-1, SVE-2 and MW-4.and run until April 28, 2008 when the water table rose. 3123 lbs of hydrocarbons were removed. SVE-1 and MW-4 were ND for TPHg and SVE-2 TPHg went from ND to 17 ppmv when system was shut down. 2 additional off-site wells, MW-6 and MW-10, were installed to the west of Hwy. 243 on September 18, 2008. MW-13 was drilled across Hwy-243 from the site on March 18, 2009. MW-13 is cross gradient to the site. MW-15 was drilled across Hwy-243 from the site on September 11, 2009. The well is up gradient to the site and immediately downgradient of the Chevron station in Idyllwild. The well had a high of 10600 ppb MTBE which was suspected to be from the Chevron station. SVE Remediation: August 2007 to April 2008 Following the installation of two vapor extraction wells (SVE-1 and SVE-2 screened from 10 to 23 ft bg) in the vicinity of the former USTs, a SVE system operated at the site extracting from wells MW-1, |

SVE-1, SVE-2, and MW-4. The SVE system was shut-down due April 28, 2008 due to poor recovery rates and rising GW conditions covering the well screens. A total of 2858.46 lbs of TPHg, 4.01 lbs of benzene, 84.27 lbs of toluene, 28.75 lbs of ethylbenzene, 150.85 lbs of xylenes, 5.89 lbs of MTBE and 0.28 lbs of TAME were removed from the site by SVE. Soil verification: October 2012 - Four confirmation soil borings (B-1 through B-4) were drilled to 31 feet and soil samples were collected every 5 ft. GW was encountered at approximately 22 ft in the boreholes. All samples from all borings above the capillary fringe (20 ft) were non-detect for all constituents tested (8015/8260 full scan). The highest concentrations were detected in B-3 at 25 ft bg: 208 ppm TPHg, ND<1 ppm B, 2.54 ppm T, 3.20 ppm E, 25.06 ppm X, ND<1 ppm MTBE, 2.85 naphthalene, 23.6 ppm 1,2,4-TMB, and 6.1 ppm 1,3,5-TMB. GW in the vicinity of this site has been sampled regularly since 1999. On-site well MW-1 had accumulations (up to 2.64 inches) of LPH product in 2000. On-site and downgradient GW conditions have since improved to the current (9/2013 and 12/2/2013) maximum concentrations of: 540 ppb TPH (MW-1), 1.62 ppb B (MW-4), <1 ppb T (all), <1 ppb E (all), <3 ppb X (all), 1430 ppb MTBE (MW-10), and ND<2500 ppb TBA (all). Impacts in off-site wells MW-6, MW-7, MW-10, MW-11, MW-13, and MW-15 currently (9/2013) have concentrations up to 1430 ppb (MW-10) MTBE and this has been shown to be associated with the Idyllwild Chevron located approximately 160 ft north (up-gradient) of this site. Ownership of these wells will be transferred to the Idyllwild Chevron and they will utilize these wells for monitoring purposes. GW analytical data from wells MW-1 through MW-13 showed elevated BTXE and MTBE impacts near the UST cavity (MW-1) and off-site impacts were primarily oxygenates (MTBE). Concentrations at and down-gradient of the site (south of Hwy 243) showed decreased concentrations downgradient to the south (downslope toward Strawberry Creek). Cross-gradient and up-gradient wells located north of Hwy 243 had higher MTBE concentrations (up to 9240 ppb in MW-10 and up to 8790 ppb in MW-13) than wells located south of the highway. This suggested there may be an off-site source contributing to the impacts MTBE. April & June 2013 Eight GW monitoring wells were installed at the Chevron station located upgradient of the site. Elevated concentrations of BTXE and MTBE were detected in the GW downgradient of the Chevron USTs. It was determined that a release had taken place at the Chevron station and GW impacts cross- and up-gradient from the Village Food and Fuel station were attributed to the Chevron station. In August 2014, wells MW-6, MW-10, MW-13 and MW-15 are transferred from Village Food and Fuel to Idyllwild Chevron who will be responsible for maintaining, sampling and eventually destruction of the wells. 11/20/2014 RCDEH received report documenting destruction of Monitoring Wells MW-1 through MW-5, MW-8, MW-9, and MW-12 on August 28 and 29, 2014 by pressure grouting. The waste was removed October 27, 2014 and taken to Filter Recycling Services, Inc. RCDEH issued NFA/closure letter dated 12/5/2014

| Potential Media Affect: | Aquifer used for drinking water supply, Soil |
| Potential Contaminants of Concern: | MTBE / TBA / Other Fuel Oxygenates, Gasoline |
| Site History: | During 1995, one 10-000-gallon gasoline underground storage tank (UST), two 4,000-gallon gasoline USTs, one 2,000-gallon diesel UST, one 550-gallon waste oil UST, two 1,000 gallon USTs (contents unknown), and one 500-gallon UST (contents unknown) were removed from the site under the direction of the County of Riverside Department of Environmental Health (CRDEH). Soil samples collected during the removal of the above USTs indicated soil concentrations of total petroleum hydrocarbon as gasoline (TPH-g) up to 290 mg/Kg, TPH as diesel (TPH-d) up to 440 mgKg, benzene (to 0.92 mg/Kg), toluene (to 19 mg/Kg), ethylbenzene (to 14 mg/Kg), xylenes (to 40 mg/Kg), and total lead (to 16 mg/Kg). Laboratory analysis for fuel oxygenates was not conducted. From March 2000 through December 2009, groundwater monitoring has been conducted at the Village Food and Fuel Facility located approximately 200 feet to the south of the site. The groundwater monitoring results of the Village Food and Fuel Facility have indicated MTBE concentrations in cross-gradient and up-gradient wells MW-13 and MW- 15. The detected MTBE in these wells have been suspected as being derived fiom an unauthorized release from the Idyllwild Chevron (subject site). On January 19, 201 0, the CRDEH issued a directive for a site characterization investigation of the site to delineate the lateral and vertical extent of soil contamination and determine possible impacts to groundwater. Groundwater monitoring wells MW-1A, MW-3A, and MW-4A were installed April 23 and 24, 2013. MW-2A was not completed due to refusal at 16 bgs. Only one soil sample was taken at 10 bgs in MW-2A and no analytes were detected. MW-1A was screened from 15 to 30, MW-3A from 20 to 34 and MW-4A from 20 to 30. Soil samples were taken every 5. TPHg (up to 809 ppm and TPHd (up to 300 ppm) was detected in wells MW-1A and MW-3A at depths between 15 and 30. TPHg was detected in MW-4A (up to 0.192 ppm) between 25 and 30 feet. N-butylbenzene (to 3.02 ppm), ethylbenzene (to 20.0 ppm), naphthalene (to 7.65 ppm), n-propylbenzene (to 7.73 ppm), toluene (37.7 ppm), 1,2,4-trimethylbenzene (67.0 ppm), 1,3,5-trimethylbenzene (to 18.0 ppm), xylenes (to 130.9 ppm) were detected in the soil samples collected from well MW-1A at depths of 15 to 25 bgs and MW-3A at depth of 20 and 25 bgs. No oxygenates were detected. The static water level in the wells was ~21 bgs. Groundwater monitoring wells MW-2A, MW-5A, MW-6A, MW-7A and MW-8A were installed June 21 and 22, 2013 to 23 to 33 feet bgs. MW-2A was screened from 13 to 23 bgs, MW-5A, MW-6A, MW-7A and MW-8A from 17 to 32 bgs. Soil samples were not taken |

**IDYLLWILD CHEVRON (Continued)** **S103066246**

from MW-2A. MW-5A had one hit of MTBE of 0.117 ppm at 25. MW-6A had up to 87.3 ppb TPHg, 1.04 ppm toluene, 0.623 ppm ethylbenzene and 4.23 ppm xylenes at 33. MW-7A had 0.121 ppm MTBE at 25 and 0.04 ppm at 30. 9 wells were gauged and sampled (the 8 new wells plus MW-15 from Village Food and Fuel) May 3 and June 28, 2013. WL ranged from 18.75 to 25.01. Flow to the S30W at 0.036 ft/ft. TPHg was detected in 5 wells ranging from 148 to 81300 ppb. TPHd was detected in 3 wells ranging from 3670 to 15700 ppb. Benzene was detected in 5 wells ranging from 4.06 to 7020 ppb. Toluene was detected in 4 wells ranging from 115 to 14400. Ethylbenzene was detected in 3 wells ranging from 760 to 1960 ppb. Xylenes were detected in 4 wells ranging from 252.2 to 10580 ppb. MTBE was detected in 4 wells ranging from 56.9 to 14800 ppb. ETBE was detected in 2 wells at 7.13 and 23.6 ppb. Naphthalene was detected in 4 wells ranging from 36.7 to 212 ppb. 1,2,4-TMB was detected in 4 wells ranging from 41.2 to 3430 ppb. 1,3,5-TMB was detected in 4 wells ranging from 13 to 1030 ppb. N-propylbenzene was detected in 3 wells ranging from 114 to 304 ppb. Isopropylbenzene was detected in 2 wells at 54.3 and 83.7 ppb. 6 vapor extraction wells (SVE-1 through SVE-6) were installed November 6 and 7, 2013. SVE-1 was drilled and sampled as a continuous core and wells SVE-2 through SVE-4 were sampled every 5 to 25 bgs. Wells SVE-5 and SVE-6 were sampled every 5 to 20 bgs. The wells were screened from 8 to 18. TPHg was detected in SVE-1 from 13.5 to 24 with a high of 4930 ppm at 19.5. Diesel was detected from 12 to 24 with a high of 929 ppm at 18. No benzene or MTBE was detected. SVE-2 had TPHg between 9 and 24 with a high of 1770 ppm at 19 and TPHd at 19 and 24 with a high of 249 ppm at 19. No BTEX or MTBE was detected. SVE-3 had TPHg from 6 to 20 with a high of 2570 ppm at 15 and TPHg from 6 to 20 with a high of 1230 ppm at 6. No Benzene, toluene or MTBE was detected. SVE-4 had TPHg at 15 at 0.263 ppm and TPHd from 6 to 25 with a high of 448 ppm at 6. No BTEX or MTBE was detected. SVE-5 had TPHg at 15 at 0.222 ppm and TPHg from 9 to 20 feet with a high of 572 ppm at 9. No BTEX or MTBE was detected. SVE-6 had TPHg at 15 and 20 with a high of 1630 ppm at 20 and TPHd from 10 to 20 with a high of 235 ppm at 15. No BTE or MTBE was detected.

***Federal NPL site list***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

**EDR HIGH RISK HISTORICAL RECORDS**

***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

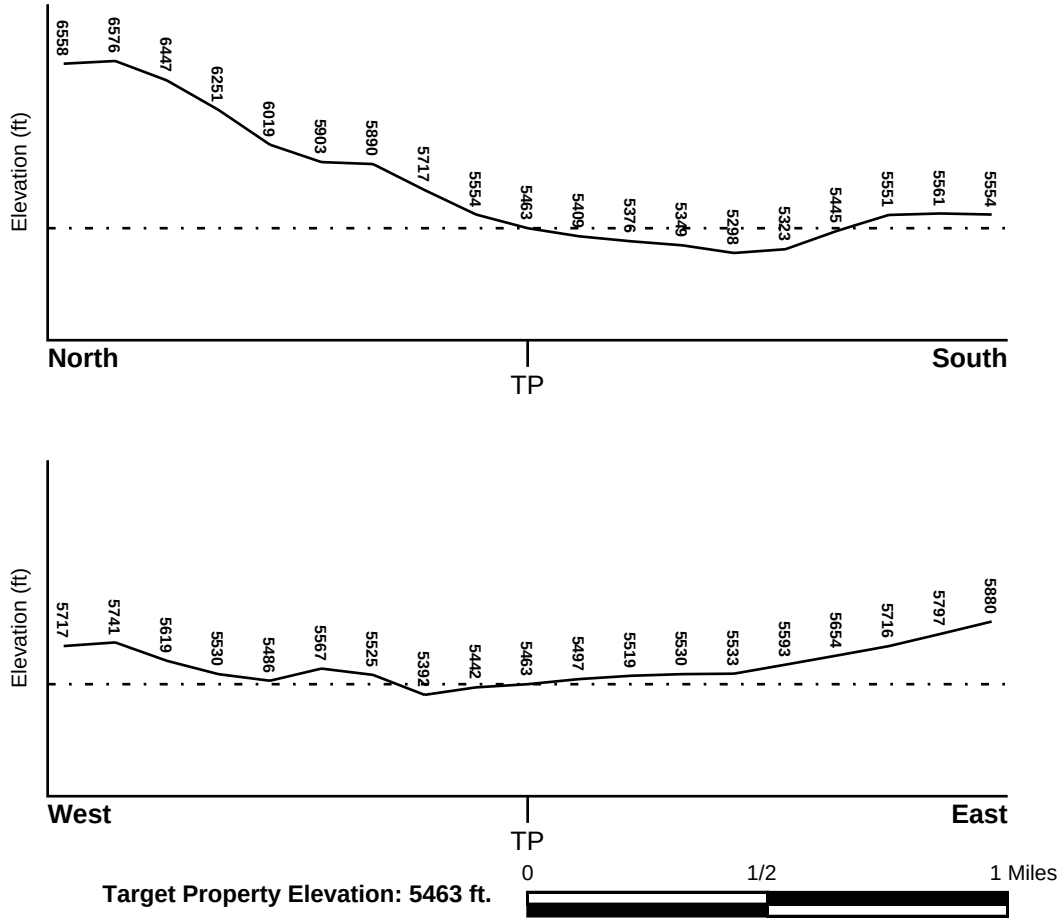

**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General SSW

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**AQUIFLOW®**

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.
