	3,044	725	1537	1501

Year	Construction Water GHG Emissions Total	Electricity Emission	Electricity Emission
2026	4.93	**(MT CO2e/MWh)**	**(lbs CO2e/MWh)**
		0.16	348.22

Sources and Assumptions:

Conservatively assumed acerage per day would be the same as the site acerage
-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).
-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. "Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

B.6 Operational Greenhouse Gas Calculations and Modeling

6201 Bristol Parkway

Greenhouse Gas Emissions Summary - Project

Project Operations Summary (Full Buildout Year 2030)	
Category	**$mTCO_2e/yr$**
Mobile	4,026
Area	39
Energy (Natural Gas)	534
Energy (Electricity)	682
EV Charging	23
Water	144
Waste	211
Construction - Amortized	212
Project Total	**5,871**

$mTCO_2e$ = Metric Tons Carbon Dioxide equivalents

6201 Bristol Parkway
Operational Energy Analysis
Project Estimated Electricity demand from Electric Vehicle Supply Equipment (EVSE)

Land Use Type	Number of EVSE Charging Spaces	Average Charge (kWh/day) [a]	Days/Year	Electricity Demand (kWh/yr)	Electricity Demand (MWh/yr)
Total	**121**	**4.40**	**365.00**	194326	194.33

Notes:

Operational year
2030

Electricity Emission Factor (MT CO2/MWh)	Electricity Emission Factor (lbs CO2/MWh)	Total EV Charging GHG Emissions Per Year
0.12	260.79	23.17
(MT CH4/MWh)	**(lbs CH4/MWh)**	
1.50E-05	0.033	
(MT N2O/MWh)	**(lbs N2O/MWh)**	
1.81E-06	0.004	

a. Estimated based on reference sources listed below. GHG emission factors based on forcast 2030 factors.

b. The project would install 10% of the total 1192 parking spaces as required by Title 24 CalGreen Building Code

Sources and Assumptions:

CalEEMod Appendix A, Pg. 8, based on given piece of equipment can pass over in an 8-hour workday

Conservatively assumed acerage per day would be the same as the site acerage

-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).

-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. "Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Demolition	Demolition	1/1/2026	3/23/2026	6.00	70.0	—
Site Preparation	Site Preparation	6/15/2026	6/20/2026	6.00	6.00	—
Grading/Excavation	Grading	6/21/2026	12/9/2026	6.00	147	—
Concrete (Garage and Podium)	Building Construction	12/10/2026	7/5/2028	6.00	492	—
Building Construction (framing, roofing, MEPs)	Building Construction	12/21/2027	7/5/2029	6.00	483	—
Paving	Paving	7/1/2029	9/14/2029	6.00	65.0	—
Finishing/Painting 1	Architectural Coating	9/4/2028	7/13/2029	6.00	269	—
Finishing/Painting 2	Architectural Coating	2/16/2029	12/27/2029	6.00	270	—
Finishing/Painting (Equipment Only)	Architectural Coating	9/4/2028	12/27/2029	6.00	412	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Excavators	Diesel	Average	1.00	10.0	362	0.38
Demolition	Rubber Tired Loaders	Diesel	Average	1.00	10.0	150	0.36
Demolition	Tractors/Loaders/Backhoes	Diesel	Average	1.00	10.0	84.0	0.37

Grading/Excavation	Excavators	Diesel	Average	2.00	10.0	362	0.38
Grading/Excavation	Rollers	Diesel	Average	1.00	10.0	36.0	0.38
Grading/Excavation	Rubber Tired Loaders	Diesel	Average	2.00	10.0	150	0.36
Grading/Excavation	Scrapers	Diesel	Average	1.00	10.0	423	0.48
Grading/Excavation	Skid Steer Loaders	Diesel	Average	1.00	10.0	71.0	0.37
Concrete (Garage and Podium)	Cranes	Electric	Average	2.00	10.0	367	0.29
Concrete (Garage and Podium)	Cranes	Diesel	Average	1.00	10.0	367	0.29
Concrete (Garage and Podium)	Pumps	Diesel	Average	1.00	10.0	11.0	0.74
Concrete (Garage and Podium)	Rough Terrain Forklifts	Diesel	Average	4.00	10.0	96.0	0.40
Concrete (Garage and Podium)	Forklifts	Diesel	Average	1.00	10.0	82.0	0.20
Concrete (Garage and Podium)	Off-Highway Trucks	Diesel	Average	1.00	10.0	376	0.38
Building Construction (framing, roofing, MEPs)	Aerial Lifts	Electric	Average	2.00	10.0	46.0	0.31
Building Construction (framing, roofing, MEPs)	Cranes	Electric	Average	2.00	10.0	367	0.29
Building Construction (framing, roofing, MEPs)	Rough Terrain Forklifts	Diesel	Average	3.00	10.0	96.0	0.40
Building Construction (framing, roofing, MEPs)	Cranes	Diesel	Average	1.00	10.0	367	0.29
Paving	Cement and Mortar Mixers	Diesel	Average	1.00	10.0	10.0	0.56
Paving	Pavers	Diesel	Average	1.00	10.0	81.0	0.42
Paving	Paving Equipment	Diesel	Average	1.00	10.0	89.0	0.36
Paving	Rollers	Diesel	Average	1.00	10.0	36.0	0.38

Paving	Tractors/Loaders/Back	Diesel	Average	1.00	10.0	84.0	0.37
Finishing/Painting (Equipment Only)	Tractors/Loaders/Backhoes	Diesel	Average	2.00	10.0	84.0	0.37
Finishing/Painting (Equipment Only)	Pumps	Diesel	Average	1.00	10.0	11.0	0.74
Finishing/Painting (Equipment Only)	Skid Steer Loaders	Diesel	Average	1.00	10.0	71.0	0.37
Finishing/Painting (Equipment Only)	Air Compressors	Diesel	Average	1.00	10.0	37.0	0.48

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	66.0
AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9
Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—
CleanUp Sites	78.3
Groundwater	90.0
Haz Waste Facilities/Generators	78.1
Impaired Water Bodies	66.7
Solid Waste	84.7
Sensitive Population	—
Asthma	40.7
Cardio-vascular	24.2
Low Birth Weights	67.2

Socioeconomic Factor Indicators	—
Education	3.87
Housing	40.9
Linguistic	6.27
Poverty	4.91
Unemployment	49.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	75.96561016
Employed	94.55921981
Median HI	69.22879507
Education	—
Bachelor's or higher	91.08174002
High school enrollment	100
Preschool enrollment	95.7141024
Transportation	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	48.0
Healthy Places Index Score for Project Location (b)	84.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Finishing/Painting 1	1,137,226	379,075	160,695	47,483	36,504
Finishing/Painting 2	877,925	292,642	40,425	13,158	1,906

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	12,187	—
Grading/Excavation	—	66,838	276	0.00	—
Paving	0.00	0.00	0.00	0.00	0.24

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Condo/Townhouse High Rise	—	0%
High Turnover (Sit Down Restaurant)	0.00	0%
General Office Building	0.00	0%
Other Non-Asphalt Surfaces	0.00	0%
Other Asphalt Surfaces	0.24	100%
Enclosed Parking with Elevator	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	1,111	346	0.03	< 0.005
2027	2,350	346	0.03	< 0.005
2028	2,350	346	0.03	< 0.005
2029	1,239	346	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	66.0
AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9
Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—
CleanUp Sites	78.3
Groundwater	90.0
Haz Waste Facilities/Generators	78.1
Impaired Water Bodies	66.7
Solid Waste	84.7
Sensitive Population	—
Asthma	40.7
Cardio-vascular	24.2
Low Birth Weights	67.2

Socioeconomic Factor Indicators	—
Education	3.87
Housing	40.9
Linguistic	6.27
Poverty	4.91
Unemployment	49.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	75.96561016
Employed	94.55921981
Median HI	69.22879507
Education	—
Bachelor's or higher	91.08174002

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	48.0
Healthy Places Index Score for Project Location (b)	84.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	See Project assumptions for land use
Construction: Construction Phases	See Project assumptions for schedule
Construction: Off-Road Equipment	See Project assumptions for equipment list
Construction: Dust From Material Movement	See Project assumptions for quanitites
Construction: Demolition	See Project assumptions
Construction: Trips and VMT	Trips and VMT emissions calulated outside of CalEEMod.
Construction: Architectural Coatings	See Project assumptions for architectural coating
Construction: Paving	See Project assumptions for Paving

B.10 CalEEMod Operational Output Files

B.10-1 CalEEMod Operational Output Files – Total Project Operations

6201 Bristol Parkway - Total Operation Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	6201 Bristol Parkway - Total Operation
Operational Year	2030
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	8.20
Location	6201 Bristol Pkwy, Culver City, CA 90230, USA
County	Los Angeles-South Coast
City	Culver City
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4436
EDFZ	16
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Condo/Townhouse High Rise	846	Dwelling Unit	4.62	995,136	0.00	—	2,504	—

High Turnover (Sit Down Restaurant)	11.4	1000sqft	0.10	11,406	0.00	—	—	—
General Office Building	27.9	1000sqft	0.20	27,879	0.00	—	—	—
Other Non-Asphalt Surfaces	171	1000sqft	1.59	171,415	73,834	—	—	—
Other Asphalt Surfaces	10.2	1000sqft	0.24	10,200	0.00	—	—	—
Enclosed Parking with Elevator	534	1000sqft	0.30	534,095	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	66.0
AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9

Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—
CleanUp Sites	78.3
Groundwater	90.0
Haz Waste Facilities/Generators	78.1
Impaired Water Bodies	66.7
Solid Waste	84.7
Sensitive Population	—
Asthma	40.7
Cardio-vascular	24.2
Low Birth Weights	67.2
Socioeconomic Factor Indicators	—
Education	3.87
Housing	40.9
Linguistic	6.27
Poverty	4.91
Unemployment	49.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	75.96561016
Employed	94.55921981
Median HI	69.22879507
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	48.0
Healthy Places Index Score for Project Location (b)	84.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	6201 Bristol Parkway - Phase 1 Operational
Operational Year	2029
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	8.20
Location	6201 Bristol Pkwy, Culver City, CA 90230, USA
County	Los Angeles-South Coast
City	Culver City
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4436
EDFZ	16
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.30

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Condo/Townhouse High Rise	452	Dwelling Unit	3.32	561,593	0.00	—	1,338	—

High Turnover (Sit Down Restaurant)	11.4	1000sqft	0.10	11,406	0.00	—	—	—
General Office Building	27.3	1000sqft	0.15	27,301	0.00	—	—	—
Other Non-Asphalt Surfaces	114	1000sqft	0.91	114,252	47,860	—	—	—
Other Asphalt Surfaces	10.2	1000sqft	0.24	10,200	0.00	—	—	—
Enclosed Parking with Elevator	534	1000sqft	0.30	534,095	0.00	—	—	—

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	66.0
AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9

Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—
CleanUp Sites	78.3

Re: 6201 Bristol Parkway; Culver City, Burton job #24.049

Dear Matt,

This report has been prepared following my site visit and visual assessment of various trees at and adjacent to the above-referenced project location. The purpose of the visit was to evaluate the overall condition of the trees, identify and comment on any health or structural concerns, and provide recommendations based on an upcoming redevelopment project at the site.

The findings in this report are based on visual inspections conducted during the site visit (1-7-25), taking into consideration factors such as tree species, age, size, current health, and environmental conditions. My observations and recommendations are intended to support the long-term health and safety of the trees while aligning with the goals of the project. Please find the assessment summary and recommendations outlined in the sections below.

Note: This report is best viewed in color. Any copies in black and white may make some details difficult to properly interpret and/or understand. Atlas accepts no responsibility for misunderstandings due to the reading of a black and white copy of this report.

Summary

This report evaluates the condition and potential impacts on trees located in the city parkway adjacent to the site as well as the suitability of select on-site trees for relocation as part of the proposed construction project.

City Parkway Trees

There are 11 trees located in the city parkway, identified as follows:

- **Species Composition**:
  - 5 *Podocarpus macrophyllus* (commonly known as yew pines).
  - 6 *Pinus canariensis* (commonly known as Canary Island pines).

The potential impact to these trees is directly related to the treatment of the existing city sidewalk during construction:

1. **Retention of the Existing Sidewalk:**
   - If the current sidewalk is left in place, there will be minimal disturbance to the root zones of the trees. This scenario allows the trees to remain in place with little or no adverse effects.
2. **Removal and Replacement of the Sidewalk:**
   - If the sidewalk is removed and replaced, significant root zone disturbance is expected. This level of disruption will likely compromise the structural stability and health of the trees, necessitating their removal.

On-Site Trees for Relocation

Six Canary Island pines (labeled A-F) have been identified on-site as candidates for relocation within the project area. The condition and suitability for transplanting these trees are as follows:

9032 Olive Drive, Spring Valley, CA 91977 | t 619.463.1707 f 619.463.1961 | CA Contractor's Lic. #593660 |

- **Three trees** (A, C, and D) are in good condition and ideal candidates for successful transplanting.
- **Two trees** (B, E) are in fair condition and are viable for relocation with appropriate preparation and post-transplant care.
- **One tree** (F) is in poor condition and is not recommended for relocation due to its low likelihood of survival post-transplant.

Conclusions and Recommendations

1. **City Parkway Trees**: To preserve the health and viability of the 11 city parkway trees, it is recommended to retain the existing sidewalk where feasible. Minimizing root zone disturbance will ensure their continued health and stability.
2. **On-Site Relocation**: Focus on relocating the three trees in good condition (A, C, and D) and the two in fair condition (B, E) to maximize success rates. Trees in poor condition should not be considered for transplanting, as their likelihood of survival is significantly reduced, even with enhanced preparation such as proactive root pruning, soil amendments, and diligent post-transplant care.

This summary highlights some of the potential risks and opportunities associated with the project. Further consultation and collaboration are encouraged to ensure the best outcomes for the trees and the broader project objectives.

Introduction/Background

The property located at 6201 Bristol Parkway is a currently vacant commercial strip mall with an expansive parking lot containing numerous mature trees. This site is situated at the southeast corner of Green Valley Circle and Bristol Parkway in Culver City. The property is slated for significant redevelopment, transitioning into a modern 8-story mixed-use development that will incorporate both residential and commercial spaces.

9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 |

As part of the pre-construction planning process, a comprehensive assessment of select existing trees is required to guide decisions regarding preservation, removal, and relocation:

1. **Street Trees**: A review of the street trees located within the city parkway (the area between the curb and sidewalk) along the perimeter of the project is necessary. These trees will potentially be impacted by construction activities, requiring an evaluation of their current health and structural stability, as well as the feasibility of their preservation.
2. **On-Site Trees for Relocation**: There are six significant trees located within the property that have been identified as potential candidates for on-site relocation. Assessing their current condition, suitability for transplanting, and likelihood of survival post-relocation is critical for informed decision-making and ensuring the success of the project's landscaping plan.

This report aims to provide an evaluation of the trees, offering insights and recommendations to balance development needs with the preservation of urban greenery and tree health.

Assignment

Via our proposal #12003, we agreed I would:

A) Perform a visual assessment for approximately 15 trees located throughout the property site and in the Right-of-Way (streetside).
   a. Includes approx. 7 trees in the ROW, per the PRC Comments to 'address the health of the existing street trees and if it can withstand the shock of the root removal that will take place when the existing curb, gutter, and sidewalk are relocated'.

9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 |

b. Includes approx. 6 pine trees on site to review for health and on-site relocation potential for the new project.

B) Provide a written report summarizing the assessment process, findings, and relevant recommendations.

General Observations of Site and Trees

On January 7, 2025, I conducted a site visit and assessment of the trees associated with this project and assignment. My observations and findings are based on conditions visible at the time of the visit. As part of this evaluation, only trees with a trunk diameter greater than 6 inches were included in the assessment.

The site is currently a vacant strip mall located at the intersection of Green Valley Circle and Bristol Parkway in Culver City, California. The property spans a relatively flat area, characteristic of urban development, and is enclosed with temporary fencing. During my visit, there was an on-site security guard, providing additional oversight of the property.

The site appears to have been established approximately 35 to 50 years ago, based on the age and maturity of the existing structures and vegetation. The trees within the property reflect this timeframe, with several specimens exhibiting characteristics of prolonged growth in an urban environment. The observed tree conditions are consistent with their age, site history, and current level of care.

Street Trees

There are 11 street trees (between the curb and sidewalk) adjacent to this project. These trees are located along both Green Valley Circle and along Bristol Parkway (see marked site aerial for tree locations). The following list inventories these trees:

9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 |

Tree ID	Tree Name	Trunk Diameter(s)
1	*Podocarpus macrophylla*	4.5", 7"
2	*Podocarpus macrophylla*	7", 8"
3	*Podocarpus macrophylla*	5", 5.5", 11"
4	*Podocarpus macrophylla*	4", 5"
5	*Podocarpus macrophylla*	6", 6", 7", 15"
6	*Pinus canariensis*	23"
7	*Pinus canariensis*	24"
8	*Pinus canariensis*	24"
9	*Pinus canariensis*	18"
10	*Pinus canariensis*	20"
11	*Pinus canariensis*	17"

At right, I have labeled this Google aerial, oriented north, to indicate the 11 perimeter street trees adjacent to this project.

9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 | atlastree.com

Tree Assessment

The street trees associated with this project are mature and have reached or are near the full size expected for their respective species. All trees are in average health and display good overall structural condition, which suggests they have been able to adapt reasonably well to their urban environment. However, all *Podocarpus macrophyllus* trees show varying levels of sooty mold on their foliage. This condition, while not immediately life-threatening, can indicate underlying issues such as high levels of honeydew secreted by pests like aphids or scale insects.

Sidewalk and Root Interaction

For both *Podocarpus macrophyllus* and *Pinus canariensis*, there are visible instances of sidewalk lifting, caused by root growth beneath the pavement. The proximity of the trees to the sidewalk is notable, with the usual sidewalk edge being approximately 12 to 18 inches from the base of the trees, with some even closer.

- **If the Existing Infrastructure Remains**:
  If the curb, gutter, and sidewalk remain undisturbed, the level of root interference will be minimal. Consequently, the root systems of the trees should remain largely intact, preserving their structural stability and health. Under these conditions, minimal trauma to the trees is expected.

- **If the Infrastructure is Removed and Replaced**:
  Should the curb, gutter, and/or sidewalk be removed and replaced in the same location, significant root disturbance is expected to occur. This process would likely involve cutting through major structural roots, many of which are located near the base of each tree. Such extensive root loss would:
    - Severely compromise the structural integrity and anchoring ability of the trees.

9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 |

- Increase the risk of tree instability, leading to potential hazards in the future.
- Likely result in the decline or death of the trees due to stress and insufficient support.

Given the extent of trauma anticipated under these conditions, it is recommended that the affected trees be **removed** if this construction process (sidewalk removal and replacement) is pursued. Removal would ensure safety and eliminate the risks associated with destabilized or declining trees.

Parking Lot Trees

Assessment of Pine Trees for On-Site Relocation

Six Canary Island pine trees (*Pinus canariensis*) have been identified for potential on-site relocation and transplanting as part of the site redevelopment. These trees are currently situated in the parking lot area within ground-level planters, which are evenly distributed throughout the site.

You provided an aerial image that clearly marks the trees under consideration for relocation. These trees are labeled A through F on the attached image for reference. Their current locations are spread across the parking lot, reflecting their original placement as part of the landscaping design for the strip mall.

The condition, transplant viability, and strategic importance of these trees was assessed based on their health, structural stability, and suitability for relocation. Their positions within the parking lot provide relatively confined root zones, which may influence their adaptability during the transplanting process. Recommendations for each tree, including the feasibility of successful relocation, will be detailed in the following section of this report.

These pines are notable for their resilience in urban settings and their aesthetic contribution, making them a valuable consideration for retention within the new development.

9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 | arbstrategies.com

The following classifications are used to evaluate each tree's condition and its potential for successful transplantation. These assessments consider the tree's health, structural condition, and the likelihood of thriving after relocation. These are general classifications, and not every tree will fit perfectly into one category. Each tree may exhibit unique characteristics that may fall between these classifications.

Good:

A tree classified as "Good" exhibits robust health and strong structural integrity. It shows no significant signs of disease, damage, or stress, and its overall condition supports a high likelihood of survival and successful establishment after transplantation. Trees in this category are excellent candidates for relocation, requiring general and standard preparatory care to ensure success.

Fair:

A tree classified as "Fair" displays moderate health and/or structural condition. It may present minor health or structural issues, such as small wounds, slight canopy thinning, or early-stage pest activity, which can typically be mitigated through appropriate treatment. While not ideal, these trees still have reasonable potential for successful transplantation, provided additional care and monitoring are implemented during and after the process.

Poor:

A tree classified as "Poor" has significant health and/or structural deficiencies. It may be severely affected by disease, advanced decay, major structural instability, or other challenges that are difficult or impractical to resolve. Trees in this category have a low likelihood of surviving transplantation and are not recommended for relocation due to the high risk of failure and potential safety concerns.

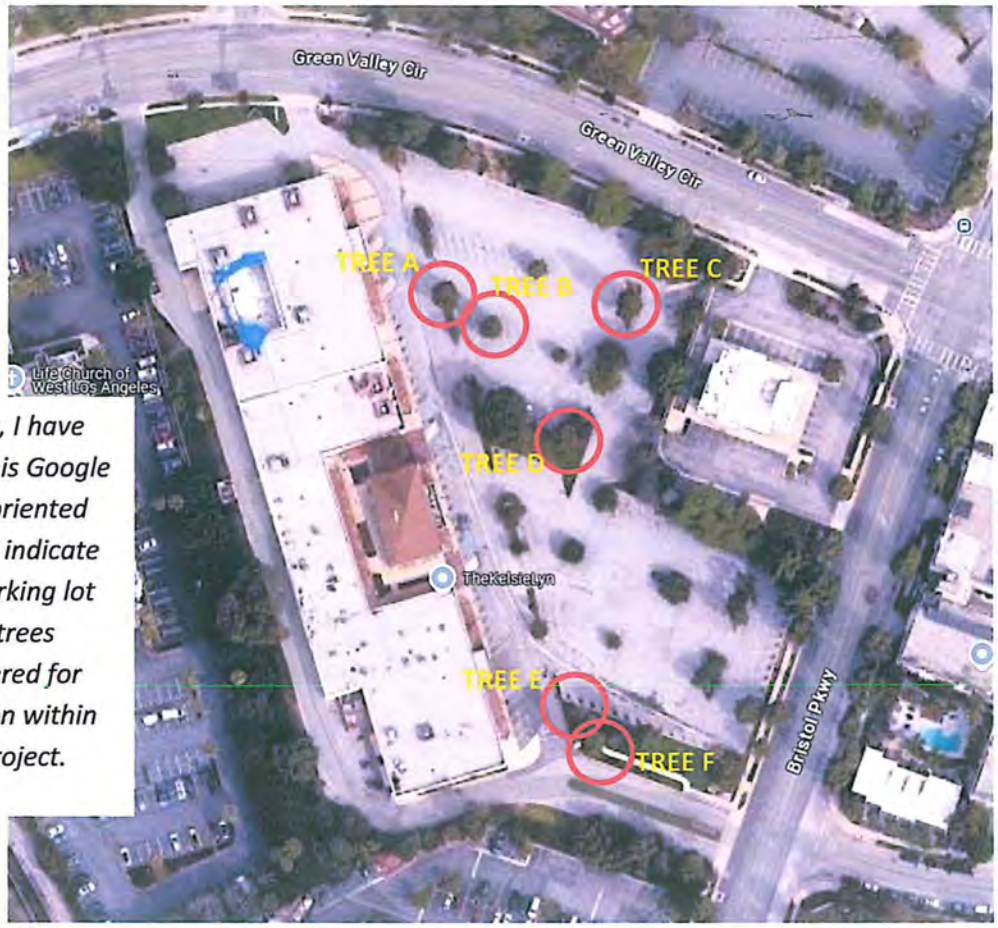
9032 Olive Drive, Spring Valley, CA 91977 | 619.463.1707 | 619.463.1961 | CA Contractor's Lic. #593660 |

These suitability factors guide the decision-making process for which trees should be prioritized for relocation, require further evaluation, or are unsuitable for transplant efforts.

The following list inventories these trees.

Tree ID	Trunk Diameter	Suitability For On-Site Relocation
A	21"	Good
B	12"	Fair
C	20"	Good
D	17"	Good
E	16"	Fair
F	18"	Poor

At right, I have labeled this Google aerial, oriented north, to indicate the 6 parking lot pine trees considered for relocation within this project.



9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 | atlastree.com

Notes:

A) Trees E and F appear to have been recently affected by root loss due to a new concrete walkway installed between them.
B) Transplant potential (success) does not consider the cost or practicality of the on-site relocation process.
C) The recommended root ball size for large tree transplanting is approximately one foot of root ball diameter for every one inch of trunk diameter.

Conclusion

Following my site visit and visual assessment of the subject trees in the adjacent parkway and throughout the parking lot of the property, I have reached the following conclusions regarding the potential impact on these trees and their suitability for relocation.

Street Trees:

The 11 street trees, which include both *Podocarpus macrophyllus* and *Pinus canariensis*, will experience minimal impact if the existing curb, gutter, and sidewalk are left intact. In this scenario, the trees' root zones will remain largely undisturbed, and they should continue to thrive with minimal disruption. However, if the existing curb, gutter, or sidewalk is removed and replaced in the same location, it will result in considerable disturbance to the root zones of these trees. This disturbance could compromise their root structure and stability, leading to a high likelihood that these trees would need to be removed to preserve the overall safety and structural integrity of the site.

On-Site Relocation of Pine Trees:

As for the six Canary Island pine trees identified as potential candidates for on-site

9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 |

relocation, they have been evaluated based on their health, structural integrity, and overall suitability for transplant. The trees have been categorized as follows:

- Three trees exhibit good suitability, indicating they are in strong health and structural condition, and they have a high potential for successful transplantation.
- Two trees have a fair suitability, meaning they are in reasonable health but may require some treatment or monitoring during the relocation process to ensure success.
- One tree has a poor suitability, indicating it is in poor health or has significant structural issues that would likely hinder its success as a transplant.

In summary, the 11 street trees will likely need to be removed if the sidewalk and surrounding infrastructure are altered. Of the six pine trees considered for relocation, three are highly suitable, two are moderately suitable, and one is not recommended for transplant. These findings provide an overview of the tree conditions and may offer a path forward for the development project.

Recommendation

Following my site visit and analysis of the trees within the project area, I offer the following recommendations to help ensure the health and longevity of the trees, as well as the success of the site redevelopment:

Street Trees: I recommend that Culver City consider preserving the existing curb, gutter, and sidewalk infrastructure rather than removing and replacing them, as doing so would minimize disturbance to the 11 street trees located along the perimeter of the project area. By keeping these features in place, the root zones of the trees will experience minimal disruption, allowing the trees to remain healthy and stable throughout the construction process.

9032 Olive Drive, Spring Valley, CA 91977 | T 619.463.1707 F 619.463.1961 | CA Contractor's Lic. #593660 |

However, should the city choose to move forward with the removal and replacement of the curb, gutter, and/or sidewalk, it will be important to carefully evaluate the potential and actual impact on the trees' root systems. The city should establish clear guidelines and thresholds for acceptable levels of root disturbance during construction activities. This proactive approach will help determine whether the existing trees can be preserved without compromising their stability or long-term health. If the anticipated root disturbance exceeds these thresholds, the city should consider the removal of the affected trees to mitigate the risk of future structural failure or hazardous conditions, such as falling limbs or toppled trees. Establishing these parameters ensures a balanced approach to tree preservation and public safety.

On-Site Relocation of Pine Trees: Regarding the six Canary Island pine trees being considered for on-site relocation within the parking lot, I recommend that the five trees identified as having good or fair transplant suitability be preserved and relocated on the redeveloped site. These trees exhibit adequate health and structural integrity, making them positive candidates for transplantation. Relocating these trees to a suitable location within the new development would help maintain the site's natural landscape and provide long-term benefits for both the environment and the community.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Ron Matranga

6201 BRISTOL PARKWAY PROJECT

Historic Resource Assessment

Introduction

Executive Summary

Environmental Science Associates (ESA) has been retained by Bristol Parkway Propco, LLC (Applicant) to conduct a historic resources assessment of the Project Site to identify and evaluate the potential impacts to historical resources associated with the proposed Project in support of a Categorical Exemption under the California Environmental Quality Act (CEQA) for the proposed development of a mixed-use residential and commercial Project on an approximately 7.049-acre (307,054 square foot) site (Project Site) located at 6201-6299 Bristol Parkway within the Fox Hills neighborhood of Culver City. The Project Site is located on Assessor Parcel Numbers (APN) 4134-018-004, 4134-018-005 and 4134-018-006. The scope of work for this assessment included a cultural resources records search through the California Historical Resource Inventory System (CHRIS) at the South Central Coastal Information Center (SCCIC), land use and property history research, other archival research, and pedestrian surveys of the Project Site.

An archival resources records search was conducted on January 13, 2025, by staff at the SCCIC housed at California State University, Fullerton. The results of the archival records search determined that no previously recorded historic architectural resources exist within a half-mile radius of the Project site. An intensive pedestrian survey of the Project Site was conducted by a qualified ESA architectural historian to determine whether the Project Site or immediate vicinity contained any previously unevaluated potential historical resources, and to analyze the potential for the Project to impact such resources, if any, in the Project vicinity (i.e., 500 feet radius).

A review of aerial photographs shows that the Chase Bank Building (6201 Bristol Parkway) was originally constructed ca. 1974; however, the original bank building was demolished in 2013 and entirely rebuilt in 2013-2014 as a contemporary bank building for Chase Bank, currently exhibiting no indication of its original structure, design, or materials. As it does not meet the 45-year age cut-off to be considered a potential historic resource pursuant to CEQA, no further evaluation and analysis of this building is presented.

During the pedestrian survey, ESA identified one potential historic architectural resource within the Project Site, 6221-6229 Bristol Parkway- the Fox Hills Plaza Shopping Center (Fox Hills Plaza) (constructed in 1974), and one potential historical resource in the Project vicinity, Hillside Memorial Park (founded in 1941). Based on the results of the survey and research investigations and significance evaluation conducted for these potential resources and presented in this report, the Fox Hills Shopping Center does not meet the threshold of eligibility for listing in the National Register, California Register,

or as a Culver City Landmark and does not qualify as a historical resource in accordance CEQA Guidelines Section 15064.5(a)(1) or (2). Therefore, impacts to it from the Project do not constitute a significant impact on the environment, and no further work or mitigation is required.

Furthermore, the Project is located across Bristol Parkway from the Hillside Memorial Park and would not demolish or materially alter any of the character-defining features that contribute to the potential eligibility of Hillside Memorial Park as a historical resource under CEQA. Upon Project completion, the Hillside Memorial Park would retain its eligibility as a potential historical resource in accordance CEQA Guidelines Section 15064.5(a)(1) or (2). Thus, the Project would have no adverse indirect impact to Hillside Memorial Park as a potential historical resource and no further work or mitigation is required.

In summary, impacts from the Project on historic architectural resources do not constitute a significant impact on the environment, and no further work or mitigation is required.

Project Description

Environmental Science Associates (ESA) has been retained by Bristol Parkway Propco, LLC. (the "Applicant") to prepare a historic resources assessment to identify potential impacts to historic architectural resources associated with the proposed Project for the purpose of complying with the California Environmental Quality Act (CEQA). This assessment also serves to support the Environmental Impact Report (EIR) for the Project. The Applicant. proposes development of a mixed-use residential and commercial Project on an approximately 7.049-acre (307,054 square foot) site (Project Site) located at 6201-6299 Bristol Parkway within the Fox Hills neighborhood of Culver City. The Project Site is located on Assessor Parcel Numbers (APN) 4134-018-004, 4134-018-005 and 4134-018-006. The City of Culver City (the "City") is the CEQA lead agency for the Project.

The Project would demolish the existing structures and construct a new 8-story (up to a height of 90-feet) mixed-use building over two levels of subterranean parking with a total of 846 residential units (including 36 very low-income affordable units) and approximately 11,406 sf of community-serving commercial space. The Project would contain 84,600 square feet of open space that features an 8,460 square foot publicly accessible plaza at the corner of Green Valley Circle and Bristol Parkway, 53,644 square feet of common exterior open space for residents that include multiple courtyards, pool, and roof deck, 12,720 square feet of private resident balconies, and 9,776 square feet of interior common spaces that include a resident lobby and amenity areas.

The Project would include a total of 1,220 vehicular parking spaces (1,162 residential and 58 commercial) within an internal parking structure, with two subterranean levels and eight partial above-grade levels wrapped by the residential units, commercial spaces, and resident amenity spaces that would shield the parking from public view. Three points of vehicular access would be provided to the Project Site, including a residential-only driveway along Green Valley Circle and a commercial and residential driveway along Bristol Parkway. The Project would also provide 249 bicycle spaces, consisting of 34 short-term and 215 long-term bicycle parking spaces in compliance with Culver City Municipal Code (CCMC) requirements.

Project Location

The Project site is located within the southernmost portion of Culver City in the community of Fox Hills (**Figure 1**). The Project Site is located on Assessor Parcel Numbers (APN) 4134-018-004, 4134-018-005 and 4134-018-006. The Project Site is comprised of two parcels that are developed with a vacant one-story commercial building formerly occupied by a Chase bank and a vacant one-story multi-tenant commercial strip building formerly anchored by a Marshall's store, which combined comprises 68,610 square feet along with associated surface parking. The existing uses consist of commercial floor area, surface parking lots, and landscaping. The Project Site is bound by Green Valley Circle to the north, Bristol Parkway to the east, a 12-story hotel and associated surface parking to the south, and an 8-story hotel and associated surface parking to the west. (**Figure 2**). As shown of Figure 2, the Project site is surrounded by commercial, residential, and hotel uses. More specifically, the Project site is located within Section 19 of Township 2 South, Range 14 West, on the Venice, CA 7.5-minute topographic quadrangle map (**Figure 3**).

Research and Field Methodology

This Report was prepared by a team of ESA's architectural historians—including Shannon L. Papin, M.A., Architectural History Program Manager for Southern California; Antonette Hrycyk, M.S., Architectural Historian; and Valerie Smith, M.S., Architectural Historian—whom meet and exceed the *Secretary of the Interior's Professional Qualification Standards* in history and architectural history. Professional qualifications are provided in **Appendix A**.

ESA conducted research on the Subject Property's construction and occupancy history and analyzed its history within the context of the development of Culver City, specifically the subdivision of the Rancho La Baloona, Rancho Rincon de los Bueyes, Tract Numbers 9883 and 30946, and Parcel Map Number 3773 of Culver City within Los Angeles County (see tract maps in **Appendix B** and Building Permits in **Appendix C**).

Ms. Smith conducted a site survey of the Project Site and Subject Properties on April 10, 2025. This survey documented the existing conditions of the Subject Property and vicinity. As part of the survey, the Subject Property was documented with digital photography and recorded on California Department of Parks and Recreation (DPR) forms (see **Appendix D**).

Preparation of the Report also involved a review of the National Register of Historic Places and its annual updates, the California Register of Historical Resources, the California Built Environment Resources Database (BERD) maintained by the State Office of Historic Preservation (OHP), the Culver City General Plan, and the 1990 Culver City Historic Preservation Advisory Committee Report and Survey and its subsequent updates. These sources were utilized to identify previously recorded properties within or near the Subject Property. An intensive-level pedestrian survey was also undertaken to document the existing conditions of the Subject Property and its vicinity. In addition, other tasks performed for the study included:

- Field inspections of the Subject Property utilizing the survey methodology of the State OHP.
- Photography of the Subject Property and associated landscape features and examination of other properties in the vicinity that exhibited potential architectural and/or historical associations.
- Site-specific research on the property utilizing building permits from the Culver City Building Safety Division, City directories, historical photographs, Online Archive of California, Calisphere, Los Angeles Public Library Photo Collection, Culver City Julian Dixon Library, University of Southern California (USC) Digital Collections, the historical *Los Angeles Times*, and other published sources.
- Records searches were conducted through the South Central Coastal Information Center (SCCIC), the BERD, and the Culver City Historic Preservation Advisory Committee Report and Survey Inventory to identify historic resources within 0.25-miles of the Subject Property.
- Review and analysis of ordinances, statutes, regulations, bulletins, and technical materials relating to federal, state, and local historic preservation, designation assessment processes, and related programs.
- Evaluation of potential historical resources based upon criteria used by the National Register and California Register.

Regulatory Framework

Historical resources fall within the jurisdiction of the federal, state, and local designation programs. Federal laws provide the framework for the identification of historical resources, and in certain instances, protection. State and local jurisdictions play active roles in the identification, documentation, and protection of such resources within their communities. The National Historic Preservation Act (NHPA) of 1966, as amended, and the California Public Resources Code (PRC), Section 5024.1, are the primary federal and state laws governing the evaluation and significance of historical resources of national, state, regional, and local importance in the state of California. The 1991 Culver City Historic Preservation Ordinance governs the evaluation of historical resources in Culver City. Descriptions of these relevant laws and regulations are presented below.

Federal Eligibility Criteria and Integrity Aspects

National Register of Historic Places

The National Register was established by the NHPA as "an authoritative guide to be used by Federal, State, and Local governments, private groups and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment."[1] The National Register recognizes properties that are significant at the national, state, and/or local levels.

To be eligible for listing in the National Register, a resource must be significant in American history, architecture, archaeology, engineering, or culture. Four criteria for evaluation have been established to determine the significance of a resource. They include the following:

Criterion A. Associated with events that have made a significant contribution to the broad patterns of our history;

Criterion B. Associated with the lives of persons significant in our past;

Criterion C. Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction;

Criterion D. Yields, or may be likely to yield, information important in prehistory or history.[2]

Districts, sites, buildings, structures, and objects that are 50 years in age or older must meet one or more of the above criteria ***and*** retain integrity of location, design, setting, materials, workmanship, feeling, and association to be eligible for listing.

Within the concept of integrity, the National Register recognizes seven aspects or qualities that, in various combinations, define integrity: Location, Design, Setting, Materials, Workmanship, Feeling, and Association:

[1] 36 CFR Section 60.2.

[2] "Guidelines for Completing National Register Forms," in National Register Bulletin 16, U.S. Department of Interior, National Park Service, September 30, 1986. This bulletin contains technical information on comprehensive planning, survey of cultural resources and registration in the NRHP.

Location is the place where the historic property was constructed or the place where the historic event occurred. The relationship between the property and its location is often important to understanding why the property was created or why something happened. The actual location of a historic property, complemented by its setting, is particularly important in recapturing the sense of historic events and persons. Except in rare cases, the relationship between a property and its historic associations is destroyed if the property is moved.

Design is the combination of elements that create the form, plan, space, structure, and style of a property. It results from conscious decisions made during the original conception and planning of a property (or its significant alteration) and applies to activities as diverse as community planning, engineering, architecture, and landscape architecture. Design includes such elements as organization of space, proportion, scale, technology, ornamentation, and materials. A property's design reflects historic functions and technologies, as well as aesthetics. It includes such considerations as the structural system; massing; arrangement of spaces; pattern of fenestration; textures and colors of surface materials; type, amount and style of ornamental detailing; and arrangement and type of plantings in a designed landscape.

Setting is the physical environment of a historic property. Whereas location refers to the specific place where a property was built or an event occurred, setting refers to the *character* of the place in which the property played its historic role. It involves *how*, not just where, the property is situated and its relationship to surrounding features and open space.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. It is the evidence of artisans' labor and skill in constructing or altering a building, structure, object, or site. Workmanship can apply to the property as a whole or to its individual components.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.

The choice and combination of materials reveal the preferences of those who created the property and indicate the availability of particular types of materials and technologies. A property must retain key exterior materials dating from the period of its historic significance.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, taken together, convey the property's historic character.

Association is the direct link between an important historic event or person and historic property. A property retains association if it is the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer.[3]

To retain historic integrity, a property will always possess most of the aspects described above. Depending upon its significance, retention of specific aspects of integrity may be paramount for a property to convey its

[3] National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation, 44–45, accessed April 3, 2025, https://www.nps.gov/subjects/nationalregister/upload/NRB-15_web508.pdf.

significance.[4] Determining which of these aspects are most important to a particular property requires knowing why, where and when a property is significant.[5] For properties that are considered significant under National Register Criteria A and B, *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation (National Register Bulletin 15)* explains, "a property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s)."[6] In assessing the integrity of properties that are considered significant under National Register Criterion C, *National Register Bulletin 15* states, "a property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique."[7]

Under the National Register, alterations to a structure do not necessarily disqualify a property from a potential listing. A property can be significant not only for the way it was originally constructed, but also for the way it was adapted at a later period, or for the way it illustrates changing tastes, attitudes, and uses over a period of time.[8]

State Register and Eligibility Criteria

California Register of Historical Resources

The California Register was created by Assembly Bill 2881 which was signed into law on September 27, 1992. The California Register is "an authoritative listing and guide to be used by state and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change."[9] The criteria for eligibility for the California Register are based upon National Register criteria.[10]

The California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally Determined Eligible for the National Register; [11]

---

4 The National Register defines a property as an "area of land containing a single historic resource or a group of resources and constituting a single entry in the National Register of Historic Places." A "Historic Property" is defined as "any prehistoric or historic district, site, building, structure, or object at the time it attained historic significance." Glossary of National Register Terms, accessed April 3, 2025, https://www.nps.gov/subjects/nationalregister/upload/NRB16A-Complete.pdf

5 National Register Bulletin 15, p. 44.

6 "A property retains association if it is the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer. Like feeling, association requires the presence of physical features that convey a property's historic character. Because feeling and association depend on individual perceptions, their retention alone is never sufficient to support eligibility of a property for the National Register." National Register Bulletin 15, p. 46.

7 "A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style." National Register Bulletin 15.

8 National Register Bulletin 15, p. 19.

9 PRC Section 5024.1(a).

10 PRC Section 5024.1(b).

11 PRC Section 5024.1(d).

- California Registered Historical Landmarks from No. 770 onward;
- Those California Points of Historical Interest (PHI) that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.[12]

Other resources which may be nominated to the California Register include:

- Individual historical resources;
- Historical resources contributing to historic districts;
- Historical resources identified as significant in historical resources surveys which meet California OHP procedures and requirements and have been determined to have a significance ratings of Category 1 through 5 on a Department of Parks and Recreation (DPR) Form 523;
- Historical resources designated or listed as city or county landmarks or historic properties or districts pursuant to any city or county ordinance;
- Historic resources designated under any municipal or county ordinance.[13]

To be eligible for the California Register, a historical resource must be significant at the local, state, or national level, under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

Additionally, a historical resource eligible for listing in the California Register must meet one or more of the criteria of significance described above and retain enough of its historic character or appearance to be recognizable as a historical resource and to convey the reasons for its significance. Historical resources that have been rehabilitated or restored may be evaluated for listing. Integrity is evaluated with regard to the retention of seven aspects of integrity similar to the National Register (location, design, setting, materials, workmanship, feeling, and association). Also like the National Register, it must be judged in context to the particular criteria under which a resource is proposed for eligibility. Alterations over time to a resource or historic changes in its use may themselves have historical, cultural, or architectural significance.

Also implemented at the state level, the California Environmental Quality Act (CEQA) requires Projects to identify any substantial adverse impacts which may affect the significance of identified historical resources.

[12] PRC Section 5024.1(d).

[13] PRC Section 5024.1(e)

Local Ordinance and Eligibility Criteria

City of Culver City Cultural Resources

Culver City enacted a Historic Preservation Ordinance in 1991 which defines Cultural Resources. The Historic Preservation Ordinance (Chapter 15.05 of the City's Municipal Code) is administered through the City's Community Development Department by Cultural Affairs staff.[14] The Cultural Affairs Commission has the authority to recommend to the City Council the designation of structures as cultural resources. Any alterations to the exterior of "Landmark" or "Significant" structures require Cultural Affairs staff comment as part of the review process. The Ordinance outlines a designation process, criteria, and procedures for altering or modifying designated Cultural Resources. Pursuant to the City's Ordinance, a Cultural Resource is a property that has aesthetic, cultural, architectural, or historical significance to the city, state, or nation, and may have been designated as a Landmark Structure, Significant Structure, or Recognized Structure. After satisfying at least one of the threshold criteria, classification is based on a ranking system, currently outlined in Resolution No. 91-R015.

A **Landmark Structure** is defined as a structure designated as an exceptional example of the highest architectural, historical, or cultural significance of the community. A Landmark structure or district may be designated without owner consent.

A **Significant Structure** is defined as a structure designated as being of substantial architectural, historical, or cultural significance to the community. If residential, a "Significant" structure or district shall be designated with written consent of the owner, provided that the consent of only a majority of the owners shall be required for a "Significant district" designation. Once the designation has been made and the designation document has been filed for recondition, owner consent is irrevocable. If the owner consent is not obtained, a residential structure or district may be designated "Recognized." If nonresidential, a structure may be designated without owner consent.

All structures with "Landmark" or "Significant" designations are required to display a plaque identifying that building or district as either "Landmark" or "Significant."

A **Recognized Structure** is defined as a structure designated as being of architectural, historical, or cultural interest. A structure or district may be designated as "Recognized" without the consent of the owner. No other requirements apply to Recognized structures.

The Ordinance also identifies historic districts as falling into one of three different types: a "Landmark District," a "Significant District," or a "Recognized District," with similar criteria for designation for each one. A historic district is described as a designated area consisting of one or more contiguous parcels improved with structures at which events occurred that made a significant contribution to the city, state, or national history or culture, or an area that contains structures that are collectively significant examples of period, style, or method of construction that provide distinguishing characteristics of the architectural type or period represented.

[14] "Historic Preservation Program," City of Culver City, Accessed April 3, 2025, https://www.culvercity.org/Explore/Arts-Culture/Preservation.

The Culver City Historic Preservation Ordinance (Section 15.02.020) establishes criteria for designating local historical resources and districts as Cultural Resources. To be considered for designation, a structure must be at least 50 years old, and the exterior of the structure is accessible or visible to the public, or the structure or district has special importance to the City.

A. Threshold criteria. To be considered for designation, the structure(s) must meet one of the following criteria:
    1. The structure(s) is at least 50 years old and the exterior of the structure is accessible or visible to the public; or
    2. The structure or district has special importance to the City.

B. Assessment criteria. After satisfying the threshold criteria, a structure or district shall be reviewed for compliance with one or more of the following criteria, as defined under Section 15.05.010 of this Chapter:
    1. Is the structure(s) of "architectural significance"?
    2. Is the structure(s) of "historical or cultural significance"?
    3. Do the structures in the district collectively meet 1. or 2. above?

Structures and districts which meet the requirements of Section 15.05.020, above, shall be classified as "recognized," "significant," or "landmark." Each structure or district shall be so classified by applying a ranking system which shall be adopted by resolution of the City Council.

Culver City General Plan 2045

Cultural resources are discussed in Element 10: Conservation of the 2045 Culver City General Plan, adopted October 4, 2024.[15]

> ***Goal C-1: Cultural resources.*** *Culver City's cultural resources are protected and enhanced through proactive measures.*[16]
>
> C-1.1: **Cultural resource catalog.** Maintain a catalog of cultural resources within the city.
>
> C-1.2: **Cultural and historic resource inventory**. Continue to inventory at regular intervals cultural and historical resources, including buildings, structures, districts, objects, and sites.
>
> C-1.3: **Historic resources in databases**. Continue to work with Building and Planning Divisions and with the County Recorder's Office to ensure all historical resources are flagged in relevant databases.

[15] "General Plan 2045," City of Culver City, Accessed April 21, 2025, https://www.culvercity.org/Services/Building-Development/General-Plan

[16] City of Culver City, *Final 2045 General Plan*, Approved August 26, 2024, https://www.culvercity.org/files/content/public/v/12/have-your-say/general-plan-2045/general-plan-2045.pdf.

C-1.4: **Historic materials cataloging**. Encourage that historic materials are cataloged and available for public access.

C-1.5: **Building plaques**. Continue to work with the Cultural Affairs Division to ensure plaques are positioned on newly-designated cultural resources.

C-1.6: **Historic sign ordinance**. Continue implementation of the historic sign ordinance.

C-1.7: **Cultural resource funding**. Identify and acquire funding to preserve cultural resources.

C-1.8: **Incentives for developers**. Promote the use of incentives for developers to maintain, restore, rebuild, or rehabilitate historic structures within commercial and residential areas.

C-1.9: **Cultural resource preservation**. Preserve the city's cultural resources.

C-1.10: **Maintain and preserve historic structures and artifacts**. Encourage maintenance and preservation of historic structures and artifacts and develop disincentives to demolish historic buildings or destroy artifacts.

C-1.11: **Preservation in the planning and development review process**. Coordinate with the Cultural Affairs Division to integrate preservation into the planning and development review process to ensure that cultural heritage concerns are identified at an early stage and addressed, as warranted, throughout the process. Encourage ordinances and policies that contribute to preservation goals and amend codes, where necessary, to reflect preservation goals.

C-1.12: **Historic standards and building codes**. Apply the Secretary of the Interior's Standards and/or the alternative building codes, such as the Uniform Code for Building Conservation (UCBC) and/or the State Historic Building Code, to qualified historic properties.

C-1.13: **Demolition of historic structures**. Expand existing laws and regulations as necessary to prevent demolition of historically significant structures by neglect.

C-1.14: **Historic property protection in natural disasters**. Comply with California Public Resources Code Section 5028 (Natural Disaster Damage to Historic Property).

C-1.15: **Public knowledge promotion**. Promote public knowledge and understanding of cultural resources (including archaeological, tribal cultural resources, historic resources, and paleontological resources) present within the city.

C-1.16: **Tribal consultation**. Continue to consult with Native American groups in accordance with Senate Bill 18 and Assembly Bill 52 to identify Tribal Cultural Resources.

C-1.17: **Educational institution cooperation**. Cooperate with the educational institutions and other interested parties to build awareness of the legacy of the city's past and the necessity of its retention.

C-1.18: **Historical Preservation Program awareness**. Continue to expand information on the Historic Preservation Program available via the City's website.

C-1.19: **Historic resource information for property owners**. Provide technical information that will help property owners in planning new additions that are complementary to the existing historic structures and conform with the Secretary of the Interior's Standards.

C-1.20: **Document and resource sharing**. Solicit residents to share or donate historic documents relating to Culver City to the historical society archives or other appropriate institutional oral history program.

C-1.21: **Protect Archaeological, Paleontological, and Tribal Cultural Resources**. Promote programs and policies to protect known archaeological and paleontological sites and Tribal Cultural Resources.

C-1.22: **Preserve government agency historic properties**. Encourage government agencies to maintain historic properties they own in the city

Identification of Potential Historical Resources within the Subject Property and Surrounding Area

Previous Evaluations of the Subject Properties

The extant buildings on the Project Site have not been identified in any previous surveys, nor were they documented in the State's BERD, or in Culver City's 1990 Historic Preservation Advisory Committee Report or in any of its subsequent updates, nor is the Subject Property mentioned in the Culver City 2045 General Plan.

Archival Research

Methods

ESA cultural resource specialists conducted a cultural resources records search on January 13, 2025, at the CHRIS-SCCIC, housed at California State University, Fullerton. The SCCIC record search provides the basis for an assessment of archaeological resources and covers a 0.50-mile radius but was also used to identify historic architectural resources within a 0.25-mile radius used in this report for consideration of potential indirect impacts on historic resources. A 0.25-mile radius is a standard distance for identifying nearby historic resources in a dense, urban environment that could potentially result in indirect impacts from development Projects.

An additional records search was conducted by ESA staff on April 3, 2025, through the BERD. The records search included a review of all previously documented historic architectural resources and studies

on or within a 0.25-mile radius of the Project Site. ESA staff also reviewed the 1990 Culver City Historic Preservation Advisory Committee Report (HPAC) and its subsequent updates, which identified all structures in Culver City that have been classified as "Landmark," "Significant," or "Recognized," to identify any structures within a 0.25-mile radius of the Project Site.

Results

A review of the 1990 Culver City HPAC and its subsequent updates reveals that there are no recognized locally designated resources within 0.25 miles, nor did a review of the BERD reveal any previously surveyed resources within 0.25 miles. Additionally, the SCCIC records search did not reveal any previously recorded historical resources within 0.25 miles of the Project site.

Environmental Setting

Historic Setting

Development and Incorporation of Culver City

The land encompassing modern-day Culver City was first settled with the implementation of Spanish land grants in the 1800s. These grants allowed Mexican ranchos and later Anglo settlers to settle and cultivate the land, usually for agricultural purposes. The two major ranchos constituting present-day Culver City were the *Rancho La Ballona* and the *Rancho Rincon de los Bueyes*.[17] In the early 1900s, oil was discovered in the area and soon became the area's primary industry.[18] By 1912, developers began to subdivide the land in the *Rancho La Ballona*. The early subdivisions created the boundaries of what would become Culver City. Its accessibility via electric railways helped expand light industry and housing in the area, and a city sprang out of what had previously been 200 acres of barley fields.[19]

Culver City did not receive its name, however, until 1913. The namesake was its founder, Harry H. Culver (1880–1946), born in Milford, Nebraska, on January 22, 1880. The middle child of five, Culver was raised on a farm by his father, Jacob Hazel Culver, a brigadier general in the National Guard and a strict disciplinarian. Culver followed in his father's footsteps, enlisting in the military during the Spanish-American War. He studied at Duane College before spending 3 years at the University of Nebraska. In 1901, Culver traveled to the Philippines, where he worked in the mercantile business as a reporter for the *Manila Times* and served as a special agent for the customs department. After more than 3 years in the Philippines, Culver returned to the United States, and continued working for the customs department in Detroit and Saint Louis. He moved to California in 1910 and worked for real estate giant I.N. Van Nuys. "As the story goes, after Van Nuys offered to make him a manager because of his exemplary work, Culver decided to venture out on his own. After intense study, Harry Culver pinpointed the area between Los Angeles and Abbot Kinney's resort of Venice for his city."[20]

20 Julie Lugo Cerra, *Culver City Chronicles*, (Charleston: History Press, 2013).

At the California Club in 1913, Harry Culver announced his plans to develop a city west of downtown Los Angeles. Culver saw an opportunity to capitalize on the excitement generated by Abbot Kinney's "Venice of America" development along the California coast south of Santa Monica. Between Venice and Los Angeles sat open land, and, as the relationship between Los Angeles and Venice took shape, Culver saw a spot in between that was ideal for a new town site. Culver stated in a speech to potential investors: "If you draw a line from the Story Building to the Ocean Front at Venice, at the halfway mark you will find three intersecting electric lines—the logical center for where we propose to develop a townsite."[21] The Venice Short Line, the Del Rey Line, and the Santa Monica Air Line all converged at Washington, National, and Venice Boulevards.

Culver's argument was a convincing one, and investors and developers began to purchase and develop lots in the area. Culver continued to promote his new community by holding special events like "prettiest baby" contests and an annual marathon race, and newspaper advertisements exclaimed, "All Roads Lead to Culver City!" Culver City's prime location, as well as these aggressive advertising campaigns, helped spur the area's quick development, and Culver City was officially established in October 1913.[22] In 1914, nearby Palms voted to become a part of Los Angeles. Culver City, however, voted to remain independent, and continued to grow exponentially over the years. [23] Originally established on 93 acres with 250 residential lots in 1914, the city had grown to 770 acres by 1917, the year it was officially incorporated.[24] Over the years, more than forty annexations increased the size of the city from 1.2 square miles to about 5 square miles.[25]

The early economics of Culver City were supported by movie studios. Harry Culver reportedly had a particular interest in Culver City being a hub for the motion picture industry, personally petitioning Thomas Ince, a silent film era producer and actor, to open his studios in Culver City. Ince agreed and constructed Ince/Triangle Studios at what became Washington Boulevard at Jasmine Avenue (present-day Culver Studios; Culver City Historic Site #7; 9336 Washington Boulevard; extant).[26] The studio subsequently became the Metro-Goldwyn-Mayer Studio (MGM). In 1922, Hal Roach constructed his studio at 8822 Washington Boulevard (demolished). The film industry was such an important early economic driver of Culver City that the city became known as the "heart of screenland."[27] Residential development also occurred rapidly, in part as a result of the Hoover administration's push for residential construction via the nationwide "Better Homes Program."[28]

The city grew outward from the downtown commercial area and adjacent film studios in the 1920s and 1930s, during which time commercial development proliferated, notably along Culver and Washington Boulevards. Downtown Culver City was centered on a main street (Washington Boulevard), anchored by a six-story hotel, fire and police departments, a city hall, banks, restaurants, and stores. During prohibition

of the 1920s and 1930s, Culver City was more permissive of night-life activities than other parts of Los Angeles. While alcohol consumption was banned in the city of Los Angeles, Culver City allowed night clubs and bars to open, with a concentration on Washington Boulevard. Night clubs included the "London Club Roadhouse" at 8747 Washington Boulevard; Fatty Arbuckle's Plantation, formerly located at 11700 Washington Boulevard; and the Green Mill.[29] Industry first arrived with the Western Stove Company in 1922, and then the Helms Bakeries on Washington Boulevard in 1930.[30]

Commercial development spread from Culver Boulevard to Washington Boulevard in the 1940s and 1950s. In addition to this industry expansion, the type of commercial businesses occupying Washington Boulevard began to change in the 1950s. To promote job growth in the post–World War II economy, and in response to disinvestment after the production needs from the war effort subsided, Washington Boulevard was developed with numerous car dealerships and associated businesses. The area was still a hub for the motion picture industry, and the Desilu Studios, owned by Lucille Ball and her husband Desi Arnaz, opened a second studio site at 9336 Washington Boulevard in 1957 (located at present-day Culver Studios).[31] The 1960s saw development of condominiums and new, larger-scale housing throughout the city, as well as the closing of several notable local businesses like Helms Bakery, which shuttered in 1969.[32]

Additional notable changes to Culver City occurred in the 1970s, when the Culver City Redevelopment Agency was established, resulting in many large-scale commercial properties, including Fox Hills Mall.[33] Also in 1970, Desilu Studios officially became Culver Studios, which was bought by Laird International Studios in 1977.[34] In the 1980s, Culver City Park was developed. Additional changes included the construction of the Filmland Corporate Center (1985; today, Sony Pictures Plaza; 10202 Washington Boulevard).[35]

The 1990s saw the loss of major industries in the city, resulting in the abandonment of many buildings and the loss of jobs.[36] To help combat these issues, Culver City's government began to offer economic development and tax incentives, which helped to facilitate increased investment in the city. Over the succeeding decades, Culver City has rebounded from this downturn and has become a hub for technology and the arts, facilitated in part by the construction of a metro line connecting Culver City with Los Angeles proper in 2012.[37] The city has attracted large companies such as Amazon and Apple and continues to develop and evolve.

History of Project Site

Fox Hills

The Project site is located within the Fox Hills neighborhood of Culver City, which was annexed to the city in 1964, and contains just over 300 acres of undeveloped land.[38] The land contained lush open space, the Fox Hills Country Club, Red Riding Stables, and two cemeteries, including the B'nai Memorial Park (now Hillside Memorial Park). B'nai Memorial Park was founded in 1941 by Lazare F. Bernhard and brothers Robert and Harry Groman to meet the funerary needs of Los Angeles' expanding Jewish population.[39] The cemetery is comprised of 35 acres of rolling hills and features the Jolson Memorial designed by Master architect Paul R. Williams.[40] The cemetery is one of the remaining early developed areas in the Fox Hills area and has become a prominent landmark (**Figure 6**).

The Project site is located on the western boundary of the Fox Hills Country Club's golf course, which opened in 1926 and at one time contained 45 holes. The golf course was one of the most competitive courses in Southern California and hosted the L.A. Open in 1954.[41] Due to its proximity to the new highways that were constructed in the 1960s, most notably Interstate-405 and State Route 90, the land was sold for development by the Home Savings and Loan Association to the Upland Industries Corporation, an Omaha-based subsidiary of Union Pacific Corporation.[42] Once the land was sold for development, the new owners planned to spend $75 to 80 million to construct 4,000 apartments on the golf course lands.[43] (**Figure 7**). The Home Savings and Loan Association sold all but 15 acres (including the Project site), which was earmarked for commercial development, such as neighborhood businesses and grocery stores.

Development of Fox Hills progressed from the southern and eastern edge of the annexation, beginning with garden apartments and condominium complexes in the 1960s and the Fox Hills Shopping Plaza and Fox Hills Mall opening in 1974 and 1975, respectively.[44] The Culver City Redevelopment Agency, formed in 1971, took an active role in developing Fox Hills, and the remaining undeveloped parcels were primarily developed as office parks throughout the 1980s.[45] In the 2010s, the Fox Hills neighborhood was a focus of the controversial 6122 Bristol Parkway redevelopment, a high-rise, high-density development Project which was ultimately withdrawn after resident criticism.[46]

Fox Hills Plaza Shopping Center

The Project site was first developed in from 1970 to 1971 with an eight-story Howard Johnson motor lodge and restaurant, designed by the Miami, Florida architecture firm of Charles Giller Associates with Stephson Pacific serving as the contractor.[47] The hotel featured 300 guest rooms and parking for 300

cars.[48] Development of the 11-acre Fox Hills Plaza Shopping Center began in 1973 and was completed in July 1974.[49] The Plaza featured a 12-story Ramada Inn, now a Courtyard Marriot, with 266 rooms, in addition to a 68,000-square foot shopping center.[50] The Plaza was a co-venture between architect Robert Clements and Associates, based in Los Angeles, and Stewart Stein, the vice president of the architecture department for Ramada Development Company.[51] The Fox Hills Plaza Shopping Center followed the contemporary design trends and site layout of many shopping centers developed in the 1960s, with a main retailer or anchor store and smaller independent stores and services that were setback from the road with ample parking at the front.[52] The Fox Hills Plaza also featured a 10,700-square foot Bank of America Branch, designed by Robert Clements & Associates for the Ramada Development Company for a cost of $480,000.[53]

Historic Context: Postwar Neighborhood Shopping Centers and the Automobile, 1936-1975

The emergence of the automobile in the 1910s shaped the layout of Culver City and the greater Los Angeles County shifting development patterns from an agricultural landscape with pockets of development to a sprawling metropolis. During this period there was a gradual transition away from rail to automobile transportation. After the post-World War II period, Los Angeles County went through a significant population boom due to the influx of veterans arriving home and the growth of new jobs in the area. The population increase lead to the demand for more housing in underdeveloped areas such as the Fox Hills. As the area developed, many public infrastructure projects were undertaken, thanks in large part to the Collier-Burns Highway Act in 1947 that allowed a fuel tax.[54] This fuel tax provided highway funding, which helped to fund the construction of State Road 90 and the 405 in the 1960s.[55]

Along these corridors, new neighborhood shopping centers were created that were different than their predecessors in design and layout. Early neighborhoods shopping centers in the 1930s and 1940s, which catered to customers arriving both by rail and automobile, were transitional in their layouts, as they combined traditional storefronts for pedestrian traffic from streetcars with automobile parking in the rear for their other customers arriving by car.[56] One example of a transitional shopping center from the 1940s period was the Westchester Business Center, located West of Culver City, which followed the Los Angeles Department of City Planning scheme for an ideal neighborhood. Construction for Westchester

began in 1942 and was completed in 1947. When completed it contained stores flush to the street, with plenty of parking in the rear for customers.[57]

After World War II, the focus shifted from parking at the rear of the neighborhood shopping center to parking at the front, to better accommodate increasing automobile traffic. One of the earliest examples in Los Angeles Country is the Plaza Arcade Shopping Center at 6651 Laurel Canyon Boulevard in the neighborhood of North Hollywood built between 1951 and 1952 (**Figure 8**).

In 1951, a pivotal book was published on the design of neighborhood shopping center. Written by Geoffrey Baker and Bruno Funero, *Shopping Centers: Design and Operation* recommended that a shopping center should contain a supermarket, drugstore, and smaller retailers such as hair dressers, variety stores, and shoe repairs.[58] One early example of this site plan is the Baldwin Hills Village built between 1948 and 1953.[59] Many neighborhood shopping centers during the post-World War II period were designed and organized in this manner. Shopping centers followed popular architectural trends and usually had a unified architectural design. They usually featured one or two anchor stores that were architecturally distinct along with any number of smaller shops, all setback from the street with parking in the front. After the 1960s, and 1970s, many shopping centers evolved to include limited street front parking or offer parking structures, underground parking and multi-stories of shops.[60]

Project Site Development and Construction Chronology

Historic Map and Aerial Photograph Review

Historic maps and aerial photographs were examined to provide historical information about prior land uses at the Project site and to contribute to an assessment of the Project site's archaeological sensitivity with respect to its potential to retain buried archaeological resources. The available historic topographic map includes the USGS 1924 Inglewood and the USGS 1934 Venice 7.5-minute quadrangles. Available historic aerials from 1924, 1952, 1953, 1963, and 1972 were also reviewed.[61]

Review of the 1924 historic map indicates that the Project site was undeveloped and was located within a steep slope area. Two drainages (Centinela Creek and an unnamed drainage) are also depicted on this map as located 0.15 to 0.50 miles south of the Project site. Review of the 1934 historic map indicates that the Project site was located approximately 1.35 miles east of Ballona Creek.

Review of the 1952, 1953, and 1963 historic aerials indicates that the Project site is still undeveloped by this time. However, the 1972 historic aerial shows that buildings and a parking lot are present by this time in the adjacent property located immediately to the west. The 1980 historic aerial depicts the Project site as developed with a large rectangular building on the western portion, a small building on the northeast corner, and a large parking lot in between the two buildings. A review of the draft of the Comprehensive Plan submitted to the City indicates that the on-site buildings at the Project site were constructed in 1973.

Building Permits

The original building permits for the construction of the Fox Hills Plaza were issued to Ramada Inns, Inc. on October 20, 1972. The contractor was RADCO Construction. The first permit called for a 60,268 square foot two-story shopping center with a drug store valued at $800,000 with a slump stone and stucco exterior and tile roof. **Table 1** summarizes the building permits for the Shopping Center. A detailed construction history is included below. Copies of the building permits are provided in **Appendix D** of this report.

TABLE 1
6201 AND 6221-6299 BRISTOL PARKWAY
CULVER CITY BUILDING SAFETY DIVISION PERMITS[62]

Address	Issued	Permit	Owner	Contractor/ Engineer/ Architect	Valuation ($)	Description
6221-6299	10/20/72	Permit #a18430	Ramada Inns, Inc.	RADCO Construction	$800,000	Shopping center including drug store to be 60,268 square feet. Soil B/V=2000 pounds per square foot at 18" minimum. Structural engineers are Robert Clements and Associates.
6201	10/26/73	Permit #a18913	Bank of America	-	$300,000	Construction of a new bank to be 65'x116 square feet with a second floor.
6221	10/27/73	Permit #a18951	Safeway Stores	Heath & Co.	$2,700	Wall signs: "SAFEWAY" individual letters 3 feet high, sing is 46 feet long. "Vonde Kamps" 2'6"x6'1"; Liquor sign 2' X 8'1"
6201	2/27/74	Permit #a19071	Bank of America	Brite Lite Neon	-	Install signs: two 5'6"x8'10" pole signs, two sets of 17' non-illuminated letters, and one non-illuminated logo
6221	5/31/74	Permit #a19446	Ramada Inns Inc.	Ramada Development Company	$5,000	
6201	6/28/74	Permit # a19297	Ramada Inns, Inc.	Ramada Development Co.	-	Block wall
6221	7/12/74	Permit #a19337	Safeway	Heath & Co.	$500	Wall signs
6201	8/2/74	Permit #a19373	Ramada Inns, Inc.	Ramada Development Co.	-	Construction of a new trash enclosure f
6201	8/7/74	Permit #a19388	Ramada Inn	So.Calif. Flagpole Maint	-	Flag poles
6221-6295	1/22/75	Permit #a19699	Ramada Inn	Heath & Co.	$1,200	Wall sign: 19'6"x3' 4 ¾" rear wall sign- 8' in from corner of Tenant Plaza and 2' below top of parapet wall
6221-6299	2/7/75	Permit #A-19730	Ramada Inn	Heath & Co.	$400	2 sigs; 5' high, 2'x3 ½ ", single face, non-illuminated tenant directory signs
6221-6299	7/8/75	Permit #a20068	Ramada Inn	Heath & Co.	$4,000	Director signs
6201	9/28/76	Permit #a20969	Continental Service Co.	-	-	Add interior fixtures and re-work night deposit receptacles for the bank building.
6201	6/13/80	Permit #a24279	Bank of America	A-1 Steel Rence Co	-	Build ornamental iron security fence

[62] Documentation exists for all permits and certificates of occupancy listed in this table.

Address	Issued	Permit	Owner	Contractor/ Engineer/ Architect	Valuation ($)	Description
6221	12/20/83	Permit#b02778	Safeway Stores	Henderson Refrigeration	$6,000	
6221	9/13/85	Permit #b08324	Best Products Inc.	Frank Lucas & Associates Inc.	$120,000	Remove interior partitions
6221	10/25/85	Permit #b08772	Marshall's Dept. Store	Tony Crawford Construction	$2,600	Screening for roof top AC Units: Red wood and metal siding to match existing
6221	10/30/85	Permit #b08811	Marshall's	Tony Crawford Construction	$3,000	Trash container enclosure
6221	11/11/85	Permit #b08900	Marshall's Dept. Store	American Sign & Lighting	$6,500	Install channel letters; one set 5'x3' and two pylon inserts: Above marquee 4' (max) high by 30' long as proposed.
6221	12/33/85	Permit # B09238	Marshall's Dept. Store	American Sign & Lighting	$5,300	2 sets, channel letters 4'6" for north elevations
6221	5/33/86	Permit # b10367	Marshall's Dept. Store	Ad/Art Inc.	$3,451	Install face wall sign
6201	6/20/86	Permit #b10507	Centinela Hospital Medical Center	Garcia-Bently Construction, Hillman, Biddison & Loevenquth Engineers, and Parkin Architects	$90,000	Interior tenant improvements for a medical urgent care center
6201	8/19/86	Permit #b10984	Centinela Hospital Medical Center	Garcia-Bently Construction, Hillman, Biddison & Loevenquth Engineers, and Parkin Architects	$20,000	Tenant improvement Phase II of previously checked plans
6201	11/28/86	Permit #b11720	Centinela Hospital Medical Center	Shore Signs and Parkin Architects	$95,000	Two sets of letters E&N elevations, one monument sign, all illuminated. South elevation non-illuminated set of letters and two non-illuminated signs
6201	12/12/86	Permit #b11881	Centinela Valley Health Services	Garcia Bentley Contractors, Brad Hawn Engineer, Omar G. Siller, AIA	$20,000	New ceiling, wall addition, and repair on second floor: no additional square feet, just tenement interior improvements in corner section to medical center. Site improvements
6221	2/17/87	Permit#b12319	Marshall's Dept. Store	Brusan Corp	$40,000	reroofing
6201	3/2/87	Permit #b12425	Centinela Health Services	Don Shores Signs, Inc.	$3,000	One set of individually illuminated channel letters
6201	8/19/87	Permit #b13869	Centinela Hospital Medical Center	Don Shores Signs	$6,000	Two sets of letters on E&N elevations

Address	Issued	Permit	Owner	Contractor/ Engineer/ Architect	Valuation ($)	Description
6201	7/13/90	Permit #b22066	Centinela Medical Center Fox Hills	Don Shore Signs	$6,000	Remove and replace existing signs in same location
6221	2/18/93	Permit #b50584 (?)	Leeds & Strouss Enterprises	Full Spectrum Communications	$1,500	Satellite dish on roof of building
6221	9/30/93	Permit #b32515	Marshall's Dept Store	Risou Construction	$10,500	Add 67' slat wall; frame two walls for lay away, frame steel false wall 17'x67'
6221	4/22/97	Permit #043214	The Marmaxx Group	Contractor: Gluck Development co. Engineer: L Liston & Associates	$250,000	Remove bearing wall and replace with frame and other structural miscellaneous
6221	4/24/97	Permit #043233	The Marmaxx Group	Gluck Development Company	$145,000	Internal renovation
6221	5/13/97	Permit #043358	Marmaxx Group	Gluck Development Company	$13,000	Proposed closure of 3 storefronts to match existing slump stone design and material of existing building façade. Planters to be provided to soften the slump stone façade. All roof top equipment shall be screened and material and design of screening to match existing design and color of respective color of walls.
6227	11/6/07	Permit #71019	Center Business MGMT	Nite-Lite Signs, Inc.	$6,500	Installing 1 13'x12' double sided freestanding pole sign. Sign is 20' to top of sign to grade. Sign to replace sign blown down in winds.*
6221	10/26/09	Permit #76247	Center Business MGMT	S.B.R., Inc.	$118,000	Reroof of commercial shopping center. Remove roof over Marshall's, lay 2nd layer over remainder of complex, install class APP modified roof system.
6221	3/8/10	Permit #76424	Matthew Strauss	Owner/builder	$275,000	Façade remodel and minor site improvements
6221	10/12/10	Permit #77820	M.C. Strauss Co.	Jacor Const., Inc. Engineer: Gary Electric		Replacing/relocating exterior lighting/39 electrical devices
6221	11/16/10	Permit #78415	Centers Business MGMT	The Signs and Services Company	$7,000	1 illuminated wall sign
6221	12/6/10	Permit #78517	Centers Business MGMT	Signs & Services Co.	$6,000	Installation of one illuminated channel letter wall sign
6221	9/30/11	Permit #80363	CBM MGMT Inc.	Don Meyers Construction	$3,000	2 illuminated wall signs*

Address	Issued	Permit	Owner	Contractor/ Engineer/ Architect	Valuation ($)	Description
6221	2/21/13	Permit #83732	TJX Companies	Murray Woodcraft Inc.	$28,000	Tenant improvement (675 sq. ft.) Renovate existing dressing room area, ADA compliant

6299	11/10/10	Permit #78383	Strauss, Matthew C CO TR	Reyner Sign and Lighting	$2,800	1 channel letter illuminated sign

Construction History

The original building permits for the construction of the Fox Hills Plaza were issued to Ramada Inns, Inc. on October 20, 1972. The contractor was RADCO Construction. The first permit called for a 60,268 two-story square foot shopping center with a drug store valued at $800,000 with a slump stone and stucco exterior and tile roof.

Fox Hills Plaza, which encompasses the addresses of 6221 – 6299 Bristol Parkway, has seen many commercial tenants come and go over the years resulting in many interior tenant improvements, the signage has been replaced many times, the exterior has been remodeled and updated, and the buildings reroofed. There have been many building permits issued since the shopping center's construction in 1972 that document these alterations. An early permit for 6221 Bristol Parkway was issued for the installation of a wall sign reading "SAFEWAY" in 1973. In 1975, new wall signs and a tenant directory sign were permitted. In 1984, there was a permit issued for new screening for rooftop air conditioning units and a trash container enclosure. In 1985, two new channel letter signs were installed. In 1987, building 1 was permitted for a reroof and in 1993, a satellite dish was installed on the roof. In 1997, three storefronts were closed and faced with slump stone to match the existing design and material of the existing building facades and all rooftop equipment was screened in material to match existing design and color of respective walls. In 2007, a permit was issued for a new pole sign to replace a previous sign that had blown down in winds. The shopping center was permitted for a reroof in 2009. In 2010, a permit was issued for a façade remodel with minor site improvements and exterior lights and 39 electrical devices were replaced and relocated. Two new illuminated wall signs were permitted in 2010 and one in 2011. A new sign was installed on the existing pole in 2015. Tenant improvements and interior renovations were permitted in 1985, 1993, 1997, and 2013.

In 1975, 6223 Bristol Parkway was permitted for a new plex sign. In 1976, 6225 Bristol Parkway was issued a permit for ten signs; and permits for interior work in 1975 and 1994. The store at 6227 Bristol Parkway had permits for leasing the space in 1975 and 1976. The store at 6229 Bristol Parkway was issued two permits for signs in 1974. At 6237 Bristol Parkway permits were issued in 1975 for a pool and a foot spa and two under canopy signs. In 1982, there was a permit issued for a new sign and to cut in one new door. Interior improvement permits were issued in 1974, 1976, and 1982. In 1975, 6245 Bristol

Parkway was issued three permits for interior improvements, and another was issued in 1976. The store at 6251 Bristol Parkway was issued a permit for a new sign in 1974 and 2004. Interior work and tenant improvement permits were issued in 1974, 1977, and 1978. The store at 6257 Bristol Parkway was permitted in 1974 for interior and façade work and a new sign. New interior walls were approved in 1976. In 2007, a new screen for an exhaust fan was installed, and in 2012, a new sign was installed on the building. In 1974, 6261 Bristol Parkway was issued permits for interior and façade work and a new plex sign. In 1975, 6267 Bristol Parkway was permitted for interior partitions. The store at 6271 Bristol Parkway was issued permits for interior improvements in 1974, and two in 1976. There were several interior remodel permits issued in 1974 and 1975 for the stores at 6237, 6281, 6283, 6285, and 6287 Bristol Parkway. In 1984, 6287 was issued a permit for a door location change. In 1974, 6295 Bristol Parkway was issued a new S/F sign permit and a permit for interior and façade work. Four new sign permits were issued for 6299 Bristol Parkway: in 1986 for a new storefront illuminated sign reading "CVS/Pharmacy"; in 1992 for refacing signs; in 2006 for illuminated channel letter signs and the refacing of 5 existing signs; and in 2010 for a channel letter illuminated sign. A permit for a roof satellite antenna was issued in 1993. Permits for interior work were issued in 1986 and 2006.

The original building permit for 6201 Bristol Parkway was for the construction of a bank building issued to Bank of America on October 26, 1973. There was no contractor listed. The first permit called for a 65'x116 square foot, one an ½ story tall building valued at $300,000 with a stucco exterior and tile roof. A permit for signs was issued in 1974. A permit for a block wall and a permit for new wall signs were issued in 1974 to Ramada Inns, Co. A new trash enclosure and new flag poles were also constructed that year. In 1976, a permit was issued to Continental Service Co. for new interior fixtures and the reworking of night deposit receptacles for the bank building. In 1980, an ornamental iron security fence was constructed on the site.

In 1986, the structure was converted into a medical center and urgent care center. A permit was issued on June 20, 1986 and a permit was issued for phase II on August 19, 1986 for interior tenant improvements. Permits for new signage were issued in 1986 and 1987.

New permits were not issued until May 8, 2013 when a permit was issued to install new signs. In August of 1913, permits were issued for the demolition of the existing building at 6201 Bristol Parkway and the construction of a new 4,275 square foot one-story bank building for Chase Bank. A new trash enclosure, new drive through ATM with canopy and onsite light posts were also issued in the same permit.

Architect-Engineers: Robert Clements & Associates

Robert Clements was Principal of Robert Clements & Associates, Architects-Engineers, which designed the Fox Hills Shopping Plaza and the related buildings at 6201 Bristol Parkway and 6333 Bristol Parkway. Born in Los Angeles in 1918, Robert Oliver Clements was the son of architect Stiles Oliver Clements who founded the firm. Stiles moved from his native Maryland to Los Angeles in 1911 to practice architecture, and was a partner in the firm Morgan, Walls and Clements along with Los Angeles architects Octavius Morgan, Senior, and John A. Walls.[63] Stiles then opened his own firm, Stiles O. Clements and Associates, in 1937. Robert attended the University of Southern California School of

[63] "Stiles Oliver Clements (Architect)," Pacific Coast Architectural Database, https://pcad.lib.washington.edu/person/116/, Accessed April 3, 2025.

Architecture and while at USC, Robert helped found the university's architectural guild.[64] After graduating with the Bachelor of Architecture in 1941, Robert served in the Marine Corps in World War II.[65] He was also a member of the Southern California chapter of the American Institute of Architects (AIA) from 1949 until his death in 1987.[66]

Robert joined his father's firm in 1945 and worked as a designer until 1955.[67] From 1955 to 1966, he was the partner to his father at Stiles & Robert Clements Architects until his father's death in 1966.[68] Their firm specialized in commercial architecture such as the Norwalk Square Shopping Center in Norwalk.[69] He succeeded his father in 1966 as Principal of the newly renamed Robert Clements & Associates, Architects-Engineers, until 1987.[70] Robert's firm continued to specialize in commercial architecture. According to Robert's obituary in the *Los Angeles Times*, "the firm designed a number of Sears and Montgomery Ward Department Stores as well as grocery stores for the chains Safeway/Vons, Hughes, and Ralphs."[71] A sample of other projects designed by Robert Clements & Associates by decade include Zodys Department Store in Anaheim (1966) (**Figure 9**); Sears, Roebuck and Co. Department Store in El Centro (1968); the Security Pacific Bank Building in Riverside (1973) (**Figure 10**); and the Harbor Bank Building in Long Beach (1983) (**Figure 11**). While Morgan, Walls & Clements and Stiles Clements are significant in the world of architecture, they are best known for their work on larger, less vernacular projects in the Los Angeles area, such as the Mayan Theater, the Wiltern Theater, and the Richfield Tower. Robert Clements is best represented in their high-quality commercial projects that provided a standard of commercial design enjoyed by generations, but he cannot be considered a significant architect in his own right.

Architectural Description

A historic architectural resources survey of the Project site was conducted on April 10, 2025, by ESA Architectural Historian Valerie Smith, M.S. The survey was conducted to identify potential historic architectural resources within or immediately adjacent to the Project. Existing on-site buildings and structures, as well as the immediate surroundings, were photographed. In addition, a pedestrian survey of the surrounding Project area, which included photographic documentation of potential historic architectural resources, was conducted in order to assess the potential for a historic district and to assist in the assessment of indirect impacts (**Figure 12**). All resources meeting the OHP's 45-year age threshold were documented on California Department of Parks and Recreation (DPR) 523 forms (**Appendix E**).

One historic architectural resource identified as the "The Fox Hills Plaza Shopping Center" was identified within the Project site as a result of the survey. It is further described and evaluated for significance in the following sections in this report. One potential historic architectural resource was identified within 500 feet of the Project site; the Hillside Memorial Park. This resource is also described below. The Chase bank building at 6201 Bristol Parkway was constructed in 2013/2014 and is therefore not a historic resource.

Fox Hills Plaza Shopping Center

The Fox Hills Plaza Shopping Center is located at the southwest corner of Bristol Parkway and Green Valley Circle and occupies two parcels (APNs 4134-018-005 and -006). It contains the two subject buildings (Building 1 and Building 2) and a large, paved parking lot (**Figure 13**). Vehicular access to the parking lot is provided by two driveways on Green Valley Circle and one more extensive driveway on Bristol Parkway. The parking lot is bordered by sidewalks and planted areas with mature trees and shrubs. There are several islands within the parking lot in geometric and irregular shapes. Building 2 is nested within a U-shaped area on the east façade of Building 1. A pathway separates the two buildings within the U-shaped area.

The two subject buildings and associated parking lot and landscape comprise a commercial center that is designed in a modern Commercial Vernacular style with some Mediterranean-inspired details. The vast majority of retail spaces are vacant, and the Project Site is fenced in to prevent unauthorized access.

Figure 12
Project site (outlined in yellow), indirect impacts study area (outlined in red).

Source: Google Earth

Figure 13
Aerial of the Fox Hills Plaza Shopping Center and site. Oriented north. Buildings labeled by number

Building 1

Building 1 occupies both subject parcels and features an irregular plan (previously referenced **Figure 13**). It is capped by stepped flat roofs covered by built-up roofing, and some of the rooftop mechanical equipment is obscured from view behind faux-mansard enclosures. It is one story in height with horizontal massing. It has a concrete foundation and a steel structural system.

The primary (east) façade of Building 1 is composed of three components: a south and north component, which were both previously occupied by anchor stores such as CVS Pharmacy and Marshall, and a center component, which is recessed between the other two components and partially obscured from view by Building 2.

The south component of the east façade is dominated by an entrance colonnade consisting of a monumental rectangular arch over the main entrance doors, and stone veneer at its base (alteration). The entrance colonnade also comprises a sheltered pedestrian walkway that is supported by six concrete piers, also with stone veneer at the base, and covered by a wood trellis and hipped roofs (alteration –building permit #76247). The wall behind the colonnade is a slump stone and stucco exterior, and the northernmost expanse of wall is also clad in painted concrete masonry units (**Figure 14**). The primary entry is located in the center of the façade. The recessed entry is composed of a pair of glazed aluminum doors with a fixed transom flanked by fixed windows within a wood frame. South of the entry is a bank of six fixed

windows within a wood frame. At the north end of the façade is a bank of fixed, multi-light windows with a transom above. The façade terminates in metal coping at the roofline.

The north component of the east façade is similar to the south component (**Figure 15**). Notable differences are that the north component features a recessed entry composed of two pairs of glazed aluminum doors flanked by large banks of fixed windows within wood frames, a single glazed pedestrian door is located north of the recessed entry, and a flush metal pedestrian door is located south of the recessed entry. The façade terminates in metal coping at the stepped roofline.

The center component of the east façade is composed of three walls that face pedestrian walkways and Building 2 (Figure 14/aerial image). The walls are clad in oversized painted brick with painted concrete masonry units above. Each wall features either single or pairs of glazed aluminum doors flanked by fixed windows within wood frames. Covered walkways span the three walls, and timber trellises are supported by rectangular concrete piers with stone veneer at the base (**Figure 16**).

The north façade faces a paved parking lot accessed from Green Valley Circle. The façade is clad in oversized painted brick and terminates in metal coping at the roofline (**Figure 17**). A single flush metal door accessed by brick and concrete steps is located near the west end of the façade. In 1997, three store fronts were closed and were covered with the same slump stone design of the rest of the building (alteration-building permit #043358).

The rear (west) façade faces a utility driveway along the western property line (**Figure 18**). The northernmost portion of the façade is clad in oversized painted brick, and the remainder of the façade is clad in painted concrete masonry units. It features pairs and single flush metal pedestrian doors that are variously accessed by single concrete steps or by concrete ramps. A loading dock with a roll-up metal door and a single flush metal door accessed by concrete steps is located at the north end of the façade. There are three rectangular areas below the roofline (likely former window or vent openings) that have been infilled with concrete masonry units. The façade terminates in metal coping at the roofline.

The south façade faces a utility driveway along the southern property line. The façade is clad in oversized painted brick and terminates in metal coping at the roofline (**Figure 19**). There are no window or door openings on the façade.

Building 2

Building 2 occupies part of a rectangular inset on the east side of Building 1 (Figure 13/aerial image). It is one-story, rectangular in plan, and capped by a hipped roof covered in composition shingles. It has a steel structural system and a concrete foundation. The lower two-thirds of the exterior walls are clad in oversized painted brick in a stretcher (or running) bond; the upper one-third of the walls are clad in painted concrete masonry units.

The primary (east) elevation faces the main parking lot of the shopping center. The east façade features four banks of storefront windows composed of fixed, multi-light, wood-frame windows (**Figure 20**). An entrance colonnade with six rectangular concrete piers supporting timber trellises covers the pedestrian entrance and walkway. Like those of Building 1, the stone piers have stone veneer at the base. The entrance is marked by a parapet wall above the three center bays of the colonnade. Two of the banks of windows have angled fabric awnings above. The façade terminates in metal coping below the edge of the hipped roof. Mechanical equipment is mounted above the covered walkway and is obscured from view by parapet walls clad in stucco.

The north façade is accessed by a pedestrian walkway (**Figure 21**) and features two storefront assemblies with single glazed pedestrian doors and three fixed, multi-light, wood-frame windows with transoms above. One of the storefronts has two angled fabric awnings above. The façade terminates in metal coping below the edge of the hipped roof.

The rear (west) elevation faces a pedestrian walkway (**Figure 22**) and features a storefront with four banks of windows composed of fixed, multi-light, three-part wood-frame windows with transoms above. Two banks of windows also have single, glazed pedestrian doors. The façade terminates in metal coping below the edge of the hipped roof.

The south elevation faces a pedestrian walkway and an outdoor dining area (**Figure 23**) and features two storefront assemblies with single, glazed pedestrian doors and fixed, multi-light, wood-frame windows with transoms above. The façade terminates in metal coping below the edge of the hipped roof.

Hillside Memorial Park

The Hillside Memorial Park (cemetery) (formerly B'nai Memorial Park) was founded in 1941 by Lazare F. Bernhard, and Robert and Harry Groman. The cemetery, which consists of 35 acres of rolling hills, features the Jolson Memorial designed by master architect Paul R. Williams. The Hillside Memorial Park is located within 100 feet southeast of the Project site and has a direct view of the Project site from the northeast corner of the cemetery as shown in **Figure 24**. The cemetery was recorded on Department of Parks and Recreation (DPR) Primary Form, Building Structure, Object (BSO) form and is included in **Appendix E** of this report.

Significance Evaluation

The Fox Hills Plaza Shopping Center designed by architect Robert Clements in 1973 for the Ramada Inn Company was part of the larger redevelopment of Culver City in the 1960s and 1970s, which was initiated by the City's newly formed Redevelopment agency (CCRA) after the City fell on economic hardship after MGM closed their studio. The Fox Hills Plaza Shopping Center, which was very similar to many other neighborhood shopping centers of the time period, was designed with a large parking lot for automobiles, with the shopping plaza set back from the main road. The Fox Hills Plaza Shopping Plaza is a modest example of the modern Commercial Vernacular style, with minor Mediterranean style influences. The Fox Hills Plaza Shopping Center, which opened to the public in 1974, served the neighborhood of Fox Hills, in addition to the guests of the Ramada Inn and Howard Johnson, while benefiting from the automobile traffic from the I-405 and U.S. Route 90.

The property history, architectural description, and historic contexts included in this report provide the background necessary to evaluate the historic and architectural significance of Fox Hills Plaza Shopping Center, including the history of their construction and alterations. ESA also researched the Project Site's occupancy history. To be eligible as a historical resource under CEQA, an existing property must have both significance and integrity. ESA evaluated the Fox Hills Plaza Shopping Center as an individual resource against the criteria for listing in the National Register and the California Register, as well as for its eligibility under the Culver City's criteria (see Section 2.0). As the Fox Hills Plaza Shopping Center is over 50 years of it and consequently meets Culver City's Threshold Criteria A-1, it will be evaluated below under Culver City's Assessment Criteria B-1 and B-2.

Broad Patterns of History

When examining the Subject Property in the context of broad patterns of history, the following are the relevant criteria:

- **National Register Criterion A:** Is associated with events that have made a significant contribution to the broad patterns of our history.
- **California Register Criterion 1:** Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- **Culver City Assessment Criterion B-1:** Is the structure(s) of "historical or cultural significance"?

Incorporated in 1913, Culver City's commercial center was first established in the downtown core in the 1920s and spread to Washington Boulevard in the 1940s and 1950s. Fox Hills was later annexed to Culver City in 1964 when over 300 acres of land were sold by the Home Savings and Loan Company, making large tracts of land available for new development. Due to its location near the Los Angeles International Airport (LAX), Howard Johnson and Ramada Inn saw the opportunity to invest in commercial development. The Ramada Inn Company purchased eleven acres from the Home Savings and Loans Company to develop a hotel, shopping plaza, and bank near the 405 and Marine Highway within the Fox Hills area. At the heart of Screenland, the economic health of Culver City has always been strongly tied to the movie industry. Following the closure of MGM Studios, the City was looking for ways to spur economic development. The Fox Hills Plaza shopping center was the first Project to be supported by Culver City's newly installed Redevelopment Agency (CCRA).

In 1973 when Ramada Inn developed a hotel, bank and the Fox Hills Plaza Shopping Center, it was the second commercial development to be built among several others during the Post-World War II period. The Fox Hills Plaza shopping center was later superseded by more recent shopping centers (Westfield, Platform etc.) that are now more popular and have been renovated and/or newly built while the Fox Hills Plaza shopping center has remained primarily a neighborhood shopping center due to its location on the outskirts of the City and outmoded design. The Fox Hills Plaza shopping center was an important neighborhood shopping center for the area after its development in the early 1970s. The Fox Hills Shopping Center reflected contemporary trends in commercial design at the time, but it does not appear to have made a significant contribution to the larger economic or commercial development of Culver City which had already been well established by the 1970s.

Therefore, the Fox Hills Plaza Shopping Center does not appear to meet the thresholds of significance for individual eligibility under National Register Criterion A, California Register Criterion 1, or Culver City Assessment Criterion B-2.

Significant Persons

Regarding associations with important persons, the following are the relevant criteria:

- **National Register Criterion B:** Is associated with the lives of persons significant in our past.
- **California Register Criterion 2:** Is associated with the lives of persons important in our past.
- **Culver City Assessment Criterion B-1:** Is the structure(s) of "historical or cultural significance"?

There does not appear to be any evidence to suggest that the Shopping Center is associated with the productive lives of historic personages. The original owners of the Shopping Center were the Ramada Inn Company, who leased the two anchor stores (now Marshalls and CVS) and other stores to small businesses.

Therefore, the Fox Hills Plaza Shopping Center does not appear to meet the thresholds of significance for individual eligibility under National Register Criterion B, California Register Criterion 2, or Culver City Assessment Criterion B-2.

Architecture

Regarding the Subject Property's architecture, design, or construction, the following are the relevant criteria:

- **National Register Criterion C:** Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.
- **California Register Criterion 3:** Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- **Culver City Assessment Criterion B-2:** Is the structure(s) of "architectural significance"?

The Fox Hills Plaza Shopping Center was evaluated for potential eligibility as an example of a property type, a Post War Neighborhood Shopping Center, and as a work of a master architect, engineer, or builder.

The Fox Hills Shopping Center was designed by well-known Los Angeles architect Robert Clements, Principal of the firm founded by his father, master architect Stiles O. Clements. The firm was well known, especially for its commercial projects, and achieved continued success under Robert's leadership. The Fox Hills Plaza Shopping Center, completed in 1973 in the Modern Vernacular style, was a low-cost utilitarian design. While it followed the prevailing ideas in commercial design and layout, it was not trend-setting or influential in the development of commercial architecture in Culver City or among the works of Robert Clements. One of his first neighborhood shopping Projects was the Norwalk Square Shopping Center in Norwalk, California (1957, extant). Another extant and earlier example of his work is the old Zody's Shopping Center in Anaheim (now occupied by Walmart). Both of these examples

incorporated contemporary shopping mall design, including stores set back from the road and large parking areas at the front of the stores. Clements completed numerous commercial Projects for Sears and Montgomery Ward Department Stores, as well as grocery stores for the chains Safeway/Vons, Hughes, and Ralphs, all across Southern California. The Fox Hills Shopping Center is not an outstanding, distinctive, or significant example of his work. Among his most well-known Projects are those in the Corporate International style, including the Harbor Bank Building in Long Beach and the Security Pacific Bank Building in downtown Riverside. While Morgan, Walls & Clements and Stiles Clements are significant in the world of architecture, they are best known for their work on larger, less vernacular projects in the Los Angeles area, such as the Mayan Theater, the Wiltern Theater, and the Richfield Tower. Robert Clements is best represented in their high-quality commercial projects discussed above,, he cannot be considered a significant architect in his own right.

The Fox Hills Shopping Center follows the basic design principles of the post war neighborhood shopping center, as outlined by Geoffrey Baker and Bruno Funero in their 1951 book *Shopping Centers: Design and Operation*, including anchor stores and smaller retailers, a shopping plaza setback from the road, and a large parking lot at the front shopping plaza. Although it follows the popular design trends of the time, it was not an influential or trend setting shopping center at the time it was completed. It was not published in any architectural journals and did not win any design awards, and it is not referenced in any publications on the history of commercial architecture. Furthermore, it was not one of the earliest shopping centers in the city or region and did not influence the designs of later shopping centers. One of the earliest neighborhood shopping centers was Culver Center off of Venice Boulevard (built 1949); another example is the Plaza La Cienega (built in 1970) at 1801 La Cienega Boulevard, northeast of Culver City. As such, the Fox Hills Plaza Shopping Center does not possess sufficient architectural merit as an outstanding or distinctive example of its type or style or significance in the history of design to reach the threshold of significance as a historical resource either individually or as contributing members of potential district, under any of the applicable federal, state or local eligibility criteria.

Therefore, the Fox Hills Plaza Shopping Center does not appear to meet eligibility requirements for individual eligibility under National Register Criterion C, California Register Criterion 3, or Culver City Assessment Criterion B-2.

Data

- **National Register Criterion D:** It yields, or may be likely to yield, information important in prehistory or history.
- **California Register Criterion 4:** Has yielded, or may be likely to yield, information important in prehistory or history.

While most often applied to archaeological districts and sites, Criterion D/4 can also apply to buildings, structures, and objects that contain important information. For these types of properties to be eligible under Criterion D/4, they themselves must be, or must have been, the principal source of the important information. The Fox Hills Plaza Shopping Center does not appear to yield significant information that would expand our current knowledge or theories of design, methods of construction, operation, or other information that is not already known about the period in which they were constructed, their method of construction, or their design. The Fox Hills Plaza Shopping Center reflects common building practices and materials of the early 20th century, which have already been well documented.

Therefore, the Fox Hills Plaza Shopping Center does not meet the eligibility requirements under National Register Criterion D or California Register Criterion 4.

Integrity Analysis

Since the Fox Hills Plaza Shopping Center were not identified as significant under any of the applicable National Register, California Register, or Culver City Assessment criteria, an integrity analysis was not conducted.

Indirect Impact Evaluation

ESA conducted an analysis of the Project's potential indirect impacts to determine if the Project would result in a substantial material change to the integrity and significance of historical resources or their contributing setting within 500 feet of the Project site. To identify known resources within the Project site or vicinity, ESA reviewed the cultural resources records search conducted through the SCCIC and Culver City's list of historical resources and properties identified in historical resources surveys. No recorded historical resources were identified in this search; however, one potential historical resource was identified by ESA during the pedestrian survey - the Hillside Memorial Park. It is discussed in the following section.

Hillside Memorial Park (Cemetery)

The only potential indirect impact from the Project would be a change in setting at the northeast corner of the Hillside Memorial Park, as the new Project would introduce a new visual element directly across the road. However, due to the natural landscape of the cemetery (the rolling hills), a large portion of the Project would not be visible from important historical architectural aspects of the cemetery. Most importantly, the Project Site would not be visible from the main entrance of the cemetery. Furthermore, the built environment surrounding the cemetery has been substantially compromised by the construction of the I-405, and infill development from the 1960s and 1970s, which surrounds the cemetery. Finally, the Project would not demolish or materially alter any character-defining features that contribute to the potential eligibility of Hillside Memorial Park as a historical resource. Upon Project completion, the Hillside Memorial Park would retain its eligibility as a potential National Register, California Register, or local designation. Therefore, no indirect impact to the cemetery would result from the construction of the Project.

Summary of Results and Recommended Mitigation Measures

During the assessment, ESA identified one potential historic architectural resource within the Project site - the Fox Hills Plaza Shopping Center. ESA evaluated the resource under National Register, California Register, and Culver City local criteria to determine whether the resource constituted a historical resource under CEQA as an individual resource and as a contributor to a potential historic district.

Fox Hills Plaza Shopping Center does not appear to meet eligibility requirements for individual eligibility under National Register Criteria A, B, C, or D; California Register Criteria 1, 2, 3, or 4. While the Fox Hills Plaza Shopping Center meets the age eligibility requirements for individual eligibility under Culver City Assessment Criterion A, it does not appear to meet the eligibility requirements for individual

eligibility under Culver City Assessment Criteria B-1 or B-2. ESA has assigned the Fox Hills Plaza Shopping Center the California Historical Resource Status Code of 6Z, meaning it was found ineligible for National Register, California Register, and/or local designation through survey evaluation. As such, the Fox Hills Shopping Center does not qualify as a historical resource in accordance CEQA Guidelines Section 15064.5(a)(1) or (2) and; therefore, impacts to it from the Project do not constitute a significant impact on the environment and no further work or mitigation is required.

Furthermore, ESA identified one potential historic architectural resource within 500 feet of the Project site - the Hillside Memorial Park. However, upon Project completion, the Hillside Memorial Park would retain its eligibility as a potential historical resource for designation at the federal, state, and local levels. As such, the Project would not demolish or materially alter any of the character-defining features that contribute to the potential eligibility of Hillside Memorial Park as a historical resource and no mitigation measures to prevent impacts to any historic resources are needed.

In summary, impacts from the Project on historic architectural resources do not constitute a significant impact on the environment, and no further work or mitigation is required.

National Trust for Historic Preservation and NTHP Forum, Member

Preservation Action, Member

Shannon L. Papin is a Senior Architectural Historian and Cultural Resource Specialist with 25 years of professional experience in architectural history, historic resource management, and historic preservation planning, policy, and economics. Her qualifications meet and exceed the Secretary of the Interior's Professional Qualification Standards in History and Architectural History. Shannon has a proven track record of historic resources management and preservation consultation services for all stages of project development, preparation of required documentation for environmental compliance, project review and permitting, and implementation of mitigation measures. She has authored numerous historic resource assessments, State and National Register Nominations, historic structure reports, CEQA Impacts Analysis, historic resource technical reports, feasibility studies, LAHCM nominations, and HABS/HAER reports. She has managed and conducted planning and technical studies for a broad range of clients and projects throughout Southern California, New Mexico, and South Dakota.

Previous Experience

California Environmental Quality Act

Alhambra Health Center, Historic Resource Assessment and Focused EIR, Alhambra, California. *Project Manager for Historic Resource/Principal Architectural Historian.* Shannon led the historic resource analysis for the Alhambra Health Center EIR, prepared by ESA for the City of Alhambra. The project would redevelop a 23,000-sf medical facility constructed in 1930 and found eligible for the National Register of Historic Places. ESA's environmental analysis found the project would result in a significant and unavoidable impact. In addition to the initial assessment of the building, Shannon was responsible for developing a range of feasible alternatives to avoid or reduce impacts, authoring architectural studies on the adaptive reuse and rehabilitation of the structure, and assisting in the public review process including conducted several public outreach meetings with community stakeholders and preservation advocates.

West San Gabriel Valley Area Plan, San Gabriel Valley, California. *Project Manager for Historic Resource/Principal Architectural Historian.* Shannon led the preparation of a historic context and reconnaissance level architectural survey of eight areas of unincorporated Los Angeles County in the West San Gabriel Valley. She also was responsible for crafting the Historic Preservation element of the Area Plan.

Culver Crossings Historic Resource Assessment and EIR, Culver City and Los Angeles, California. *Senior Architectural Historian.* Shannon authored a historic resource assessment of a large industrial site located on the border of Los Angeles and Culver City for a proposed redevelopment. Work involved research on the property and its history as well as an evaluation of the site's eligibility and CEQA impacts analysis for the Project, including the National Register eligible Helms Bakery Complex located immediately adjacent.

Shannon L. Papin (Continued)

Architectural History Program Manager, Southern California

Silver Lake Reservoir Complex EIR and Impacts Analysis, Los Angeles, CA. *Senior Architectural Historian.* Shannon conducted research on the historic development of the Silver Lake Reservoir Complex and identified all previously identified historic resources within 0.25-mile of the perimeter of the site to conduct a direct, indirect, and cumulative impacts analysis for the Complex's proposed master plan.

615 East Ocean Boulevard, Historic Resource Assessment and MND, Long Beach, California. *Senior Architectural Historian.* Shannon authored a historic resource assessment of a restaurant located in Long Beach for a proposed redevelopment. Work involved research on the property and its history and an evaluation of the site's eligibility and impact assessment for a historic apartment building adjacent to the site.

1715 – 1739 Bronson Avenue, CEQA Impacts Analysis, Los Angeles, CA. *Project Manager.* Shannon analyzed the potential impacts of construction of a 24-story, mixed-use project in Hollywood, adjacent to the historic Lombardi House for compliance with CEQA impacts threshold and for conformance with the SOI Standards.

3623 Hayden Place Historic Resource Assessment and MND, Culver City, California. *Senior Architectural Historian.* Shannon authored a historic resource assessment of three former industrial buildings in the Hayden Tract of Culver City for a proposed demolition. Work involved research on the properties, their history, construction and alterations, and the significant tenants that originally constructed the building. The report included an evaluation of the site's eligibility and potential impacts on adjacent historic resources.

3550 Hayden Place Historic Resource Assessment and MND, Culver City, California. *Senior Architectural Historian.* Shannon authored a historic resource assessment of a large industrial site located in the Hayden Tract of Culver City for demolition. Work involved research on the property and its history as well as an evaluation of the site's eligibility and potential impacts on adjacent historical resources.

1600 Naud and 1635 – 1639 Main Street Historic Resource Assessment and MND, Los Angeles, CA. *Senior Architectural Historian*. Shannon managed cultural portion of CEQA environmental review process for a former Carnation milk and ice cream campus as a potential historic district, as well as four individual eligibility evaluations, analysis of projects impacts and recommendations on adaptive reuse and mitigation.

Section 106 and NEPA

San Manuel Land Exchange, San Bernardino National Forest, Big Bear, California. *Senior Architectural Historian.* Shannon managed the Historic portion of a multi-year project that entailed a land swap between the U.S. Forest Service and the San Manuel tribe. She authored historic resource assessments of multiple rural land parcels in the San Bernardino National Forest. Work involved research on the mining and recreational history of the region as well as an evaluation of the site's eligibility.

LA River Phase IV Bike Path CEQA/NEPA, Los Angeles, California. *Senior Architectural Historian.* Shannon managed the Historic portion of a project developing a bike and pedestrian path located in Griffith Park and areas of South Burbank. She worked with CalTrans and the City of Los Angeles to manage the project approvals for work within historic Griffith Park and the equestrian community of Burbank.

Union Pacific Railroad, Crestmore Cement Plant, Riverside, CA

Shannon authored a historic resource assessment of rail spur located on the site of a 1908 cement plant in Riverside, CA.

EWMP Addendum, Compton Boulevard Historic Survey, Compton, CA. *Project Manager.* Shannon conducted an architectural survey of a seven square mile area in Compton, including the identification of potentially significant resources for state, local, and national eligibility, integrity evaluation, and research and writing of an accompanying historical context. The Report included a CEQA impacts analysis in preparation for a planned streetscape project.

Historic Preservation

Isadore House Significance Evaluation and Historic Structure Report, Isadore House, Los Angeles, CA. *Project Manager.* Shannon prepared a structural assessment, documentation, and evaluation of Isadore House, a historic property owned by the Recreation and Parks of the City of Los Angeles. The Report included a CEQA impacts analysis in preparation for a planned redevelopment.

Sunshine House Historic Structure Report, Los Angeles, CA. *Project Manager.* Shannon prepared a structural assessment, documentation, and evaluation of the Sunshine House, the former caretaker's residence at the Silver Lake Reservoir Complex, owned by LADWP.

Garvanza Pump Station, Historic Structure Report, Los Angeles, CA. *Project Manager.* Shannon prepared a structural assessment, documentation, and evaluation of the Garvanza Pump Station, a historic building associated with the former Garvanza Reservoir in northeast Los Angeles, owned by LADWP.

Hermon Park Building Evaluations, Los Angeles, CA. *Project Manager.* Shannon prepared a memorandum that included structural assessments, documentations, and evaluations of two fire-damaged buildings located within Hermon Park, a National Register-eligible property that is part of the Arroyo Seco Park system and owned by the City of Los Angeles. This project was done under an on-call contract with City of Los Angeles Recreation and Parks.

Seismic Retrofit Project, Lockwood Elementary School, Los Angeles, CA. *Project Manager*. Shannon managed a documentation project for LAUSD campus in Hollywood in preparation for a planned seismic retrofit. Project deliverables includes character-defining matrixes and California DPR forms for multiple historical resources.

Seismic Retrofit Project, First Street Elementary School, Los Angeles, CA. *Project Manager*. Shannon managed a documentation project for LAUSD campuses in Boyle Heights in preparation for a planned seismic retrofit. Project deliverables includes character-defining matrixes and California DPR forms for multiple historical resources.

Historic Structure Report, New Mexico Veteran's Home, Truth or Consequences. *Project Manager.* Shannon served as the Project Manager on the preparation of an Historic Structure Report for a 1937 hospital for crippled children, including historic narrative and context, evaluation of significance, documentation of original construction and later modifications, and historic preservation recommendations.

Historic Resource Assessments

3916 Martin Luther King Jr. Boulevard Historic Resource Assessment, Los Angeles, California. *Project Director.* Shannon managed and authored a historic resource assessment of the historic office building of the first African-American-owned bank in Los Angeles for a proposed redevelopment. Work involved research on the property and its history and an evaluation of the site's eligibility. Associated historic contexts included the history of financial services in the African-American community of Los Angeles.

1038 Venice Boulevard Historic Resource Assessment, Los Angeles, California. *Project Manager.* Shannon authored a historic resource assessment of a 1920 commercial office building in Los Angeles for a proposed redevelopment. Work

involved research on the property and its history as well as an evaluation of the site's eligibility and potential impacts on the adjacent historic district.

1000 – 1018 Croft Avenue Historic Resource Assessment, Hollywood, California. *Project Manager.* Shannon managed historic resource assessments for four historic multi-family properties located on the border of West Hollywood. Work involved research on the properties and their histories as well as an evaluation of the sites' eligibility.

133 Vieudelou Avenue, Historic Resource Assessment, Avalon, CA. *Project Manager.* Shannon authored a documentation and evaluation of the oldest private residence in the City of Avalon, Catalina, a Folk Victorian style single-family residence constructed in 1888.

301 Beacon Street, Historic Resource Assessment, Avalon, CA. *Project Manager.* Shannon prepared a documentation and evaluation of a 1923 Mediterranean Revival apartment building located in the City of Avalon, Catalina.

High Desert Hospital, Historic Resource Assessment, Lancaster, CA. *Project Manager.* Shannon authored a documentation and evaluation of High Desert Hospital and Coroner's Office, a historic property owned by the LADPW. The Report included a CEQA impacts analysis in preparation for a planned redevelopment.

Mayfield Junior School Historic Resource Evaluation, Pasadena, CA. *Project Manager.* Shannon surveyed entire campus and prepared an evaluation of three historic resources under an on-call contract with the City of Pasadena including CEQA impacts analysis for a proposed master plan.

8025 Santa Monica Boulevard Historic Resource Assessment and CEQA Impacts Analysis, West Hollywood, CA. *Project Manager.* Shannon analyzed the potential impacts of construction of a 24-story, mixed-use project in Hollywood, adjacent to the historic Lombardi House for compliance with CEQA impacts threshold and for conformance with the SOI Standards.

910 North Roxbury Drive Historic Resource Assessment, Beverly Hills, CA. *Project Manager Shannon* assessed the eligibility of an American Colonial Revival residence designed by master architect Robert V. Derrah in Beverly Hills. The report involved digital and archival research and an assessment of the home's integrity using historic plans and images.

1707 Tropical Drive Historic Resource Assessment, Beverly Hills, CA. *Architectural Historian.* Claire assessed the eligibility of an American Colonial Revival residence built by Carleton Lyle Burgess and occupied by Edward Paul Dentzel. Research included construction chronology and identification of alterations, research on the builder and occupants, and analysis of neighborhood integrity.

448 West Cypress Historic Resource Assessment, Glendale, CA. *Project Manager* Shannon authored a Historic Resource Assessment of an industrial warehouse constructed in the Tropico neighborhood of Glendale in 1908. Research included an integrity evaluation, research on Tropico's history as an early agricultural center, and the strawberry industry.

28307 Agoura Road Historic Resource Assessment, Agoura Hills, CA. *Project Manager.* Shannon authored a Historic Resource Assessment for a 1940s commercial property in Agoura Hills. Work involved researching the rural character and history of Agoura Hills, conducting research at the Agoura Hills Library and Building Division, identifying occupants of the structure, and assessing the property's eligibility.

Nominations

Shannon L. Papin (Continued)

Architectural History Program Manager, Southern California

Kun House II Los Angeles Historic Cultural Monument Nomination, Los Angeles, CA. *Project Manager.* Shannon prepared LAHCM nomination for the Joseph Kun House II, 1950 residence designed by Richard Neutra and presented the nomination to the Cultural Heritage Commission.

1828 Edgemont Street Los Angeles Historic Cultural Monument Nomination, Hollywood, CA. *Project Manager.* Shannon prepared LAHCM nomination for a 1940 Garden Apartment complex in Hollywood and presented the nomination to the Cultural Heritage Commission.

Pasadena Avenue Historic District, Pasadena, CA. *Project Manager.* Shannon completed re-survey and prepared State and National Register Nomination of historic district that included approximately 130 residential resources.

State & National Register Nomination, Ashley Pond Residence (535 East Palace Avenue), Santa Fe, NM. *Project Manager.* Shannon prepared State and National Register nomination of a 1925 residence and compound designed by John Gaw Meem.

Multiple Property Documentation Form for the Cañon neighborhood, Taos, NM. *Project Manager.* Shannon performed the initial neighborhood survey, individual nominations for three resources, and associated historic context. The properties listed included a residential compound, a guesthouse/hotel and a community chapel.

Architectural Surveys

Architectural Survey of the Sioux Falls Historic District & Pettigrew Heights neighborhood, Sioux Falls, SD. *Project Manager.* Shannon served as the Project Manager on the re-survey of a 1974 National Register district, including approximately 240 residential resources. New survey of an adjoining neighborhood with approximately 120 residential resources. She also prepared survey reports with recommendations on district expansion and new district possibilities.

County-wide Architectural Surveys, South Dakota. *Project Manager.* Shannon served as the Project Manager on four county-wide architectural surveys, including integrity evaluation, identification of potentially significant resources for inclusion in the National Register of Historic Places; research and writing of an accompanying historic context.

- Tripp County: 1,617 square miles, 351 surveyed resources.
- McPherson County: 1,152 square miles, 168 surveyed resources.
- Walworth County: 745 square miles, 211 surveyed resources.
- Moody County: 521 square miles, 204 surveyed resources

Cultural Resource Surveys. Shannon performed cultural resource surveys for a variety of compliance documents including Environmental Impacts Reports, Section 106, Section 4F, and NEPA compliance. Project duties included consultation with states, local municipalities, tribes and planning consultants, as well as overseeing the archaeological portion of the survey.

- Cold War Era Properties Survey, Shaw Air Force Base, Sumter, SC
- Property Surveys for EA, Fort Bliss Army Base, El Paso, TX
- Portales Railroad Depot Focus Area, Portales, NM
- Washington Avenue Pedestrian Improvements, Lovington, NM
- Environmental Assessment, Water Control Facilities, Montezuma, NM
- Interstate 25 Landscape Improvements, Glorieta/Rowe, NM
- 12.68-mile Pipeline Expansion, Bosque, NM
- Housing Rehabilitation Project, Santo Domingo Pueblo
- NM Visual Impact Assessment, various Plateau Cell Towers, NM

Shannon L. Papin (Continued)

Architectural History Program Manager, Southern California

- Construction at Day School Complex, Picuris Pueblo, Penasco, NM
- Santa Fe County Courthouse, Santa Fe, NM

Historic American Building Surveys, Walker Air Force Base, Roswell, NM. *Project Manager*. Shannon prepared the building documentation (HABS Level III standard) of three buildings at the former Walker Air Force Base as well as the former Roswell Airfield Terminal Building

Historic American Building Surveys, Kirtland Air Force Base, Albuquerque, NM. *Project Manager*. Shannon prepared the building documentation (HABS Level II standard) of the 21st EOD Headquarters at Kirtland Air Force Base.

Historic American Building Surveys, White Sands Missile Range, Alamogordo, New Mexico. *Architectural Historian*. Shannon prepared the building documentation (HABS Level II standards) of the old Officer's Club at White Sands Missile Range.

National Conference of State Historic Preservation Officers,Washington D.C. *Director of Communications and State Services.* Shannon served as the primary liaison and resource for all fifty-nine State Historic Preservation Offices and represented NCSHPO to Congress and the federal government as well as the press, partner organizations and general public. Worked extensively with the National Park Service and the Advisory Council onHistoric Preservation and served on task forces dealing with the Section 106 review process, the Secretary of the Interior's Standards for Rehabilitation of Historic Buildings, and National Register Criteria and Processes.

CarrAmerica Urban Development, Inc., Washington, DC. *Development Associate.* Shannon was the assistant for multiple downtown development projects including a mixed-use project of approximately 450,000 square feet combining office, residential, andpreferred arts retail in the redevelopment of three historic buildings. Duties included assistance with project approvals, design review, due diligence,acquisition and development documents, pro forma analysis as well as workingwith public and private groups to garner support and necessary approvals.

Association for Preservation Technology (APT), Member

Valerie Smith is an architectural historian with experience in historic preservation that includes archival research, historic resource assessments, historic preservation consulting such as plan reviews and construction monitoring, feasibility studies, resource surveys, conservation projects, conditions assessment reports, and knowledge of materials science. Valerie's Master's Thesis was about architect-designed house plans and model houses from the 1920s. Her focused research and interest in the small house typology have resulted in extensive knowledge of single-family houses from 1920-1945. Research projects and her coursework at Columbia University in Paris and New York City gave her extensive knowledge of Modernist architecture, which she has continued to expand upon in Los Angeles. Valerie's studio art background and photography training have proven helpful for onsite documentation and HABS photography. In addition to historic preservation and photography, Valerie has 18 years of professional experience in finance and investor relations, with strong client and project management skills.

Relevant Experience

AGBU Manoogian-Demirdjian School Improvements, Categorical Exemption, Canoga Park, CA. *Architectural Historian*. Valerie provided research, wrote historical contexts, conducted a site visit, and compiled a Department of Parks and Recreation form 523 and Notice of Exemption for an Armenian American school in Canoga Park. The school is operated by the Armenian General Benevolent Union (AGBU), and the organization purchased the parcel in 1985. The campus was originally an LAUSD campus, and the AGBU has made improvements to accommodate the Armenian student body occupying the campus. The buildings are a mixture of 1962 Mid-Century Modern and post-1996 buildings.

Lake Elsinore Historic Resources Inventory Update and Historic Context Statement, Lake Elsinore, CA (underway). *Architectural Historian*. Valerie participated in tasks for ESA's update to the Lake Elsinore Historic Resource Inventory, created in 1991. This effort involved a systematic historic survey of over 3000 parcels within the City of Lake Elsinore and its sphere of influence, documentation of potentially historic structures, and a re-evaluation of all structures previously evaluated. Valerie helped evaluate residential and commercial properties for architectural significance and wrote architectural descriptions compiled in DPR forms for each property.

West San Gabriel Valley, Historic Context Statement, Los Angeles County, CA. *Architectural Historian*. Valerie authored the residential section of the West San Gabriel Historic Context Statement which involved extensive research, and the development of architectural context narratives and residential resource registration requirements. Valerie conducted an archival record search at the South Central Coastal Information Center (SCCIC) to determine the presence of cultural resources in eight unincorporated study areas.

Valerie Smith (Continued)

Architectural Historian

Inglewood High School Historic Resource Assessment, Inglewood, CA (underway). *Architectural Historian.* Valerie co-authored a Historic Resource Assessment which determined the eligibility of the high school campus buildings as a district and for individual eligibility. The campus contains a variety of architectural styles including a fine arts building that was given a "facelift" after the 1933 Long Beach Earthquake from a Classical Revival facade to the PWA Moderne style. Other buildings include Mid-century modern classrooms and a daylight factory shop building by master architect H.L. Gogerty. Valerie conducted archival research on the campus building construction, site development, and three master architects. She conducted an extensive survey and documented the campus with photography and wrote architectural descriptions for sixteen campus buildings.

Fairview Affordable Housing Project, Section 106 Historic Resource Assessment, Burbank, CA. *Architectural Historian.* Valerie served as the deputy project manager and author of a Section 106 Historic Resource Assessment in Burbank. The project was to demolish four parcels of seven buildings to construct affordable housing in the northwest portion of Burbank. Valerie researched the area history, evaluated the buildings, conducted an impacts analysis, and coordinated project workflow both internally and externally with HUD and the City of Burbank.

The Groves (Fred Nelles), Preservation Consulting, Whittier, CA. *Architectural Historian*. ESA served as a historic preservation consultant to the City of Whittier and the contractor who renovated the former Fred Nelles School for Boys as part of an adaptive reuse project. The project converted Tudor Revival-style buildings from the 1920s to commercial properties including a coffee shop and bank. Valerie evaluated proposed tenant improvement modifications and reviewed proposed plans for Secretary of Interior Standards compliance. Valerie conducted construction monitoring visits to document and review the progress and a final walk-through once the project was completed. Valerie wrote preliminary and final completion reports that enabled the contractor to receive a Certificate of Appropriateness and provided guidance on a management plan for future tenant improvements.

1101 N Vermont Avenue, Preservation Consulting/ Historic Resource Assessment and Plan Review, Los Angeles, CA. *Architectural Historian.* Valerie was the lead researcher and author of a character-defining features assessment, and plan review for the Priester Building, a historic commercial property in Hollywood that was constructed in 1924. The report included a CEQA impacts analysis and a renovation plan review at various stages of the project to ensure historic features were retained as part of a planned redevelopment. Valerie and the team worked closely with the architects and client to guide them through the process of restoring a historic building in accordance with the Secretary of Interior Standards for Rehabilitation.

1000-1018 N. Croft Avenue, Historic Resource Assessment, Los Angeles, CA. *Architectural Historian*. Valerie provided research, wrote historical contexts, and compiled a Historic Resource Assessment for four multi-family properties in Hollywood. One property was designed in a Mediterranean Style using a house stock plan from the local company Bungalowcraft. Two of the properties are Spanish Colonial Revival duplexes constructed in the 1920s and 1930s. The fourth property was designed in 1940 by a notable Los Angeles architect who became known for his unique window treatment and Minimal Traditional designs. The four properties were found significant as early dwellings in the Hollywood Scenic Tract under Criterion A, and as excellent examples of three different architectural styles applied multi-family properties under Criterion C.

Single-Family Residence, Preservation Consulting/Plan Review, Venice, CA (underway). *Architectural Historian.* Valerie prepared a character-defining features assessment, documentation, and evaluation of a Dutch Colonial Revival single-family residence constructed in 1907. The report included a CEQA impacts analysis and a renovation plan review

at various stages of the project to ensure historic features were retained as part of a planned redevelopment. Valerie served as the project manager and worked closely with the architects and client to guide them through the process of constructing an addition and restoring the historic building in accordance with the Secretary of Interior Standards for Rehabilitation.

Los Angeles Central Library, Preservation Consulting/Plan Review, Los Angeles, CA (underway) *Architectural Historian.* Valerie catalogued the historic features of the Goodhue wing of the Los Angeles Central Library and authored a character-defining features matrix and plan review memo that included the history and analyzed the proposed changes for the first and fourth floor of the library. The building consists of an original 1924 wing and an addition, the Tom Bradley Wing. ESA reviewed the rehabilitation plans and recommendations were given to ensure the historic features are retained in accordance with the Secretary of Interior Standards for Rehabilitation.

Single-family residence, Preservation Consulting/ Plan Review, Hancock Park, Los Angeles, CA. *Architectural Historian.* Valerie authored a Plan Review for compliance with the Hancock Park HPOZ Preservation Plan and Historical Resource CEQA Impacts Analysis for a proposed project located at 252 S. June Street. The lot was improved with a two-story single-family residence constructed in 1933 in the Monterey Revival style that was badly damaged by fire and was to be demolished for a new residence. The new residence was designed in a contemporary style with Tudor Revival references. ESA made some recommendations of modifications to the plans that would allow the new construction to fit more seamlessly into the historic neighborhood.

Single-family residence, California Register Nomination, Orange County, CA. *Architectural Historian*. Valerie provided architectural historian services which included research, the development of historical contexts, and the preparation of a nomination for the California Register of Historical Resources for a property in Emerald Bay. The property was constructed in a planned coastal “garden suburb” that was developed beginning in 1929. The community was designed by renowned landscape architect Mark Daniels and notable Pasadena architects such as Roland Coate and H. Palmer Sabin. The house in Emerald Bay contributed to the early development of the neighborhood and is one of the last remaining intact examples of the Mediterranean Revival aesthetic developed by the architectural review board and original developer. Valerie presented at Orange County zoning and planning meetings on behalf of the client in support of the nomination of the property to the California Register.

Emma Wicker Auditorium, Preservation Consulting/Plan Review, Whittier, CA. *Architectural Historian.* Valerie authored a character-defining features and conditions assessment document for the historic East Whittier School Auditorium, now the Emma Wicker Auditorium. Valerie assisted and the team met with the architects to help develop recommendations in compliance with the Secretary of Interior Standards to sensitively guide ongoing preservation efforts.

Alamitos Energy Station, CEQA Historic Resource Assessment, Long Beach, CA. *Architectural Historian.* Valerie authored a Historic Resource Assessment for a power plant in Long Beach that was constructed in the 1950s. She conducted a record search at the CHRIS center in Fullerton and surveyed the site for eligible buildings on site and in the surrounding area.

UWCD Extraction Barrier and Brackish Water Treatment Project, Section 106 Historic Resource Assessment, Ventura, CA. *Architectural Historian.* Valerie authored a section 106 report with the archeology team Historic Resource to determine the significance of resources at the Point Mugu naval base. The project was to construct a groundwater

extraction well field to intercept the intrusion of seawater. The report effort involved the survey, documentation, and evaluation of the buildings and structures located on the naval base within the APE.

LADWP Stormwater Capture Section 106/CEQA Historic Resource Assessment, Los Angeles, CA. *Architectural Historian.* Valerie served as the lead historic researcher and author of a Historic Resource Assessment for nine Los Angeles County parks. The project was developed to capture stormwater surface flows at the parks some of which were historic districts or were situated near historic resources. Valerie wrote an extensive impacts analysis to ensure sensitivity for a number of designated and eligible historic resources including the North Hollywood Library, and the associated historic park district.

LA River Bike Trail, Section 106/CEQA Historic Resource Assessment, Los Angeles, CA. *Architectural Historian.* Valerie served as the lead historic researcher and author of a combined Cultural Resources Evaluation Assessment for resources within the Project Site and adjacent to the Los Angeles River Channel. The project was developed to implement a bike and pedestrian path located in Griffith Park and areas of South Burbank. Valerie worked with CALTRANS and the City of Los Angeles to gain project approvals for work within historic Griffith Park and within the equestrian community of Burbank. Valerie wrote an extensive impacts analysis to ensure sensitivity for a number of designated and eligible historic resources including the Los Angeles River Channel and contributors to the Griffith Park historic district.

San Diego and Barranca Trail, CEQA Historic Resource Assessment, Irvine, CA. *Architectural Historian.* Valerie authored a Historic Resource Assessment to determine the significance of a flood channel in Irvine, CA. The report effort involved the survey, documentation, and impacts analysis of the concrete channel, bridges, culverts, and planned communities alongside the linear channel. The project will update the bike path that extends parallel to the flood channel.

Rancho Lilac, Cultural Resource Management Plan, San Diego County Dept. of Parks & Recreation, San Diego County, CA *Architectural Historian.* Valerie served as an author of a cultural resource management plan report for a historic ranch property in east San Diego County. She coordinated efforts to document the rural historic district which included 28 built resources comprising a former ranching complex. Valerie surveyed and documented the ranch buildings and structures with photographs and compiled character-defining features report which will guide future preservation and management efforts.

3916 Martin Luther King Jr, Historic Resource Assessment, Los Angeles, CA. *Architectural Historian.* Valerie co-authored the production of a Historic Resource Evaluation (HRA) to establish the building's historic significance in the Crenshaw neighborhood of Los Angeles. Valerie's research provided context for a 1962 bank building in the International Style that was occupied by a Black-owned savings and loan company for over twenty years. The founder, Peter Dauterive was instrumental in race relations in Los Angeles and provided financial services to underserved communities, served on the board of various foundations, and started a scholarship fund at USC for minority students.

Single-family residence, Historic Resource Assessment, Catalina Island, CA. *Architectural Historian*. Valerie researched the oldest house in Avalon, Catalina Island and compiled a Historic Resource Assessment. The house belonged to a family who settled on the island during the early days of development into a resort town. The house is Folk Victorian style and constructed in 1888. The property was found eligible for the National Register and California Register for its significance under Criterion A, B, and C.

Multi-family residence, Historic Resource Assessment, Catalina Island, CA. *Architectural Historian*. Valerie researched a multi-family property on Beacon Street in Avalon, Catalina Island and compiled a Historic Resource Assessment. The

dwelling has been owned by the same family who constructed it in 1923. The style is vernacular with elements of Italianate and Mediterranean Revival. It was called the White House Apartments and housed the original family and other short-term guests visiting the island. The property was found eligible as a rare example of a multi-family property from the 1920s in Avalon, Catalina Island.

Single-family residence, Peer Review, Laguna Beach, CA. *Architectural Historian*. Valerie peer-reviewed a California Register of Historical Resources nomination that had been drafted by other historians for a house in Laguna Beach. As part of the peer review, Valerie wrote a historic context statement for modernist architecture in Laguna Beach, focusing on 1960s and 1970s expressionist /organic single-family properties. The house was representative of a local, regional, and national trend for the design of houses by architects practicing in a modernist style. Valere drafted a script and provided guidance to the client and team for the presentation to the California State Historical Resources Commission at the quarterly meeting.

Eastmont Theatre, Historic Resource Evaluation, Oakland, CA. *Architectural Historian*. Valerie provided research, wrote historical contexts, and compiled a Historic Resource Evaluation for the Eastmont Theatre. The Eastmont Theatre was constructed in 1926 during the rise of Art Deco theaters in the United States. The theater is a modest version of the movie palaces of the era and was evaluated for its significance in the city of Oakland and the larger context of Art Deco theaters.

615 E. Ocean Boulevard, Historic Resource Assessment, and Impacts, Long Beach, CA. *Architectural Historian.* Valerie researched and evaluated a 1970s commercial vernacular restaurant that was originally a Copper Penny Family Restaurant. The building design was a modest interpretation of the Late Hollywood Regency style and consisted of a simple box design capped with a mansard roof.

448 West Cypress Street, Historic Resource Evaluation, Glendale, CA. *Architectural Historian.* Valerie provided research, wrote historic contexts, and compiled the Historic Resource Assessment report for the property at 448 West Cypress Street. 448 West Cypress was identified as a historic vernacular warehouse from c. 1907 located in the Tropico section of Glendale, CA.

Single-family residence, Historic Resource Assessment and Impacts, Laguna Beach, CA. *Architectural Historian.* Valerie provided research and updated an existing impact assessment for a 1918 Beach Cottage on Cliff Drive with a Craftsman-influenced style in Laguna Beach. Valerie evaluated the property using the new Laguna Beach Historic Preservation Ordinance and assessed the impact of a pending addition to the property's historic fabric.

Single-family residence, Historic Resource Assessment and Impacts, Laguna Beach, CA. *Architectural Historian.* Valerie provided research and updated an existing impact assessment for a 1920s Beach Cottage on Marine Drive with a Craftsman-influenced style in Laguna Beach. Valerie evaluated the property using the new Laguna Beach Historic Preservation Ordinance and assessed the impact of a pending addition to the property's historic fabric.

Ventura County Transportation Commission, US 101 Improvement Project, Ventura County, CA. *Architectural Historian*. While working for ICF, Valerie assisted with a large-scale Cultural Heritage Survey as part of the US 101 Improvement Project. The project included the survey of over 100 buildings in the study area located throughout San Buenaventura (Ventura), Camarillo and Oxnard, California. As part of this effort, Valerie wrote historic context statements on various property types and architectural styles including manufactured homes, post-war restaurants, commercial buildings, and Mid-Century Modern-style architecture. She researched, documented, and evaluated the individual properties and prepared compliance reports and DPR forms.

Valerie Smith (Continued)

Architectural Historian

Los Angeles Housing Department (LAHD), Section 106 Reviews, Los Angeles County, CA. *Architectural Historian*. At a previous firm, Valerie surveyed and researched buildings within areas of potential effect for various projects as part of the Section 106 requirements for the City of Los Angeles. She drafted DPR documents and completed deliverables for development projects. As part of her responsibilities, she wrote building descriptions, conducted site visits, conducted research, and evaluated buildings located in the vicinity of development projects.

Venice Coastal Zone Survey, Los Angeles County, CA. *Architectural Historian***.** At a previous firm, Valerie expanded on existing research included in SurveyLA to evaluate contributing/non-contributing members of the Millwood Historic district of Venice, CA. Survey, documentation, and research was conducted on a large number of bungalow-style homes within the historic district.

Columbia University, The Harlem Renaissance: Preservation, Spatial Encounter, and Anti-Racism, Harlem, NY. *Architectural Historian/Student*. As a graduate student, Valerie contributed to a group research report that examined the legacy of the Harlem Renaissance, its significance in anti-Black racism histories and its place-based associations. This included an in-depth study of the era, Harlem as the Black mecca, and the exploration of preservation through an innovative community lens. The goal of the report was to instrumentalize the heritage of the Harlem Renaissance toward anti-racism and social justice while also identifying and preserving key assets for the Black community.

Columbia University, Historic Paint Sample Analysis, Jay Heritage Center. *Architectural Historian/Student*. As a graduate student, Valerie contributed to a group conservation project that examined the layers of paint in the historic Jay Estate. The Jay Estate requested that Columbia's Historic Preservation graduate students help date various parts of the 1838 Greek Revival mansion. Paint samples were collected, and the multiple layers of paint and architectural finishes were examined using microscopes in the historic preservation laboratory at the University.

Columbia University, National Register Nomination, Bronx, NY. *Architectural Historian/Student*. As a graduate student Valerie wrote a National Register Nomination for a church in the Bronx. The nomination is in review by the New York State Historic Preservation Office. The nomination detailed the history and significance of Creston Avenue Baptist, a historically black church constructed c. 1905, and designed in a Chateauesque style.

Columbia University, Woodlawn Cemetery Research Report, Bronx, NY. *Architectural Historian/Student*. As a graduate student, Valerie wrote a section of a group report for the Woodlawn Cemetery in the Bronx. The report included a detailed evaluation of the materials, stained glass window, and biographical family account of the Livingston mausoleum. One key goal was to determine if the window was created by Louis Comfort Tiffany's company, and the other was to construct a vital historical account needed to create a preservation plan for the historic mausoleum.

Photography

Trained as a photographer, with a B.A. in Studio Art from Hope College, Valerie has 23 years of photography experience. She has a large portfolio of architectural photographs from site visits, college courses and fine art photography exploration. She completed an architectural photography course at UCLA in 2018, and she is currently being trained as a Historic American Buildings Survey (HABS) photographer.

California Historical Resources Information System (CHRIS) – Authorized Researcher

Valerie is authorized to perform record searches to uncover archeological and historic resources at one of the twelve Information Centers managed by the California Office of Historic Preservation. Valerie has been trained to review 7.5

- e. Other Locational Data: Los Angeles County Assessor Parcel Numbers (APN) 4134-018-005 and 4134-018-006.

***P3a. Description:** The Fox Hills Plaza Shopping Center is located at the southwest corner of Bristol Parkway and Green Valley Circle and occupies two parcels (APNs 4134-018-005 and -006). It contains the two subject buildings (Building 1 and Building 2) and a large, paved parking lot. Vehicular access to the parking lot is provided by two driveways on Green Valley Circle and one larger driveway on Bristol Parkway. The parking lot is bordered by sidewalks and planted areas with mature trees and shrubs. There are several islands within the parking lot in geometric and irregular shapes. Building 2 is nested within a U-shaped area on the east façade of Building 1. A pathway separates the two buildings within the U-shaped area.

The two subject buildings and associated parking lot and landscape comprise a commercial center that is designed in a modern Commercial Vernacular style with some Mediterranean-inspired details. The vast majority of retail spaces are vacant and the Project Site is fenced in to prevent unauthorized access.

*P3a. Description: (Continued from page 1)

Building 1

Building 1 occupies both subject parcels and features an irregular plan. It is capped by stepped flat roofs covered by built-up roofing, and some of the rooftop mechanical equipment is obscured from view behind faux-mansard enclosures. It is one story in height with horizontal massing. It has a concrete foundation and a steel structural system.

The primary (east) façade of Building 1 is composed of three components, a south component and north component, which both were previously occupied by anchor stores such as CVS Pharmacy and Marshall, and a center component, which is recessed between the other two components and is partially obscured from view by Building 2.

The south component of the east façade is dominated by an entrance colonnade consisting of a monumental rectangular arch over the main entrance doors, and stone veneer at its base (alteration). The entrance colonnade also comprises a sheltered pedestrian walkway that is supported by six concrete piers, also with stone veneer at the base, and covered by a wood trellis and hipped roofs (alteration –building permit #76247). The wall behind the colonnade is slump stone and stucco exterior; and the northernmost expanse of wall is also clad in painted concrete masonry units (**Figure 1**). The primary entry is located in the center of the façade. The recessed entry is composed of a pair of glazed aluminum doors with a fixed transom flanked by fixed windows within a wood frame. South of the entry is a bank of six fixed windows within a wood frame. At the north end of the façade is a bank of fixed, multi-light windows with a transom above. The façade terminates in metal coping at the roofline.

The north component of the east façade is similar to the south component (**Figure 2**). Notable differences are that the north component features a recessed entry composed of two pairs of glazed aluminum doors flanked by large banks of fixed windows within wood frames, a single glazed pedestrian door is located north of the recessed entry, and a flush metal pedestrian door is located south of the recessed entry. The façade terminates in metal coping at the stepped roofline.

The center component of the east façade is composed of three walls that face pedestrian walkways and Building 2.The walls are clad in oversized painted brick with painted concrete masonry units above. Each wall features either single or pairs of glazed aluminum doors flanked by fixed windows within wood frames. Covered walkways span the three walls, and timber trellises are supported by rectangular concrete piers with stone veneer at the base (**Figure 3**).

The north façade faces a paved parking lot that is accessed from Green Valley Circle. The façade is clad in oversized painted brick and terminates in metal coping at the roofline (**Figure 4**). A single flush metal door accessed by brick and concrete steps is located near the west end of the façade. In 1997, three store fronts were closed and were covered with the same slump stone design of the rest of the building (alteration-building permit #043358).

The rear (west) façade faces a utility driveway along the western property line (**Figure 5**). The northernmost portion of the façade is clad in oversized painted brick, and the remainder of the façade is clad in painted concrete masonry units. It features pairs and single flush metal pedestrian doors that are variously accessed by single concrete steps or by concrete ramps. A loading dock with a roll-up metal door and a single flush metal door accessed by concrete steps is located at the north end of the façade. There are three rectangular areas below the roofline (likely former window or vent openings) that have been infilled with concrete masonry units. The façade terminates in metal coping at the roofline.

The south façade faces a utility driveway along the southern property line. The façade is clad in oversized painted brick and terminates in metal coping at the roofline (**Figure 6**). There are no window or door openings on the façade.

Building 2

Building 2 occupies part of a rectangular inset on the east side of Building 1. Building 2 is one-story, rectangular in plan and is capped by a hipped roof covered in composition shingles. It has a steel structural system and a concrete foundation. The lower two-thirds of the exterior walls are clad in oversized painted brick in a stretcher (or running) bond; the upper one-third of the walls are clad in painted concrete masonry units.

The primary (east) elevation faces the main parking lot of the shopping center. The east façade features four banks of storefront windows composed of fixed, multi-light, wood-frame windows (**Figure 7**). An entrance colonnade with six rectangular concrete piers supporting timber trellises covers the pedestrian entrance and walkway. Like those of Building 1, the stone piers have stone veneer at the base. The entrance is marked by a parapet wall above the three center bays of the colonnade. Two of the banks of windows have angled fabric awnings above. The façade terminates in metal coping below the edge of the hipped roof. Mechanical equipment is mounted above the covered walkway and is obscured from view by parapet walls clad in stucco.

The north façade is accessed by a pedestrian walkway (**Figure 8**) and features two storefront assemblies with single glazed pedestrian doors and three fixed, multi-light, wood-frame windows with transoms above. One of the storefronts has two angled fabric awnings above. The façade terminates in metal coping below the edge of the hipped roof.

The rear (west) elevation faces a pedestrian walkway (**Figure 9**) and features a storefront with four banks of windows composed of fixed, multi-light, three-part wood-frame windows with transoms above. Two banks of windows also have single, glazed pedestrian doors. The façade terminates in metal coping below the edge of the hipped roof.

The south elevation faces a pedestrian walkway and an outdoor dining area (**Figure 10**) and features two storefront assemblies with single, glazed pedestrian doors and fixed, multi-light, wood-frame windows with transoms above. The façade terminates in metal coping below the edge of the hipped roof.

***B6. Construction History:**

The original building permits for the construction of the Fox Hills Plaza were issued to Ramada Inns, Inc. on October 20, 1972. The contractor was RADCO Construction. The first permit called for a 60,268 two-story square foot shopping center with a drug store valued at $800,000 with a slump stone and stucco exterior and tile roof.

Fox Hills Plaza, which encompasses the addresses of 6221 – 6299 Bristol Parkway, has seen many commercial tenants come and go over the years resulting in many interior tenant improvements, the signage has been replaced many times, the exterior has been remodeled and updated, and the buildings reroofed. There have been many building permits issued since the shopping center's construction in 1972 that document these alterations. An early permit for 6221 Bristol Parkway was issued for the installation of a wall sign reading "SAFEWAY" in 1973. In 1975, new wall signs and a tenant directory sign were permitted. In 1984, there was a permit issued for new screening for rooftop air conditioning units and a trash container enclosure. In 1985, two

new channel letter signs were installed. In 1987, building 1 was permitted for a reroof and in 1993, a satellite dish was installed on the roof. In 1997, three storefronts were closed and faced with slump stone to match the existing design and material of the existing building facades and all rooftop equipment was screened in material to match existing design and color of respective walls. In 2007, a permit was issued for a new pole sign to replace a previous sign that had blown down in winds. The shopping center was permitted for a reroof in 2009. In 2010, a permit was issued for a façade remodel with minor site improvements and exterior lights and 39 electrical devices were replaced and relocated. Two new illuminated wall signs were permitted in 2010 and one in 2011. A new sign was installed on the existing pole in 2015. Tenant improvements and interior renovations were permitted in 1985, 1993, 1997, and 2013.

In 1975, 6223 Bristol Parkway was permitted for a new plex sign. In 1976, 6225 Bristol Parkway was issued a permit for ten signs; and permits for interior work in 1975 and 1994. The store at 6227 Bristol Parkway had permits for leasing the space in 1975 and 1976. The store at 6229 Bristol Parkway was issued two permits for signs in 1974. At 6237 Bristol Parkway permits were issued in 1975 for a pool and a foot spa and two under canopy signs. In 1982, there was a permit issued for a new sign and to cut in one new door. Interior improvement permits were issued in 1974, 1976, and 1982. In 1975, 6245 Bristol Parkway was issued three permits for interior improvements, and another was issued in 1976. The store at 6251 Bristol Parkway was issued a permit for a new sign in 1974 and 2004. Interior work and tenant improvement permits were issued in 1974, 1977, and 1978. The store at 6257 Bristol Parkway was permitted in 1974 for interior and façade work and a new sign. New interior walls were approved in 1976. In 2007, a new screen for an exhaust fan was installed, and in 2012, a new sign was installed on the building. In 1974, 6261 Bristol Parkway was issued permits for interior and façade work and a new plex sign. In 1975, 6267 Bristol Parkway was permitted for interior partitions. The store at 6271 Bristol Parkway was issued permits for interior improvements in 1974, and two in 1976. There were several interior remodel permits issued in 1974 and 1975 for the stores at 6237, 6281, 6283, 6285, and 6287 Bristol Parkway. In 1984, 6287 was issued a permit for a door location change. In 1974, 6295 Bristol Parkway was issued a new S/F sign permit and a permit for interior and façade work. Four new sign permits were issued for 6299 Bristol Parkway: in 1986 for a new storefront illuminated sign reading “CVS/Pharmacy”; in 1992 for refacing signs; in 2006 for illuminated channel letter signs and the refacing of 5 existing signs; and in 2010 for a channel letter illuminated sign. A permit for a roof satellite antenna was issued in 1993. Permits for interior work were issued in 1986 and 2006.

The original building permit for 6201 Bristol Parkway was for the construction of a bank building issued to Bank of America on October 26, 1973. There was no contractor listed. The first permit called for a 65’x116 square foot, one an ½ story tall building valued at $300,000 with a stucco exterior and tile roof. A permit for signs was issued in 1974. A permit for a block wall and a permit for new wall signs were issued in 1974 to Ramada Inns, Co. A new trash enclosure and new flag poles were also constructed that year. In 1976, a permit was issued to Continental Service Co. for new interior fixtures and the reworking of night deposit receptacles for the bank building. In 1980, an ornamental iron security fence was constructed on the site.

In 1986, the structure was converted into a medical center and urgent care center. A permit was issued on June 20, 1986 and a permit was issued for phase II on August 19, 1986 for interior tenant improvements. Permits for new signage were issued in 1986 and 1987.

New permits were not issued until May 8, 2013 when a permit was issued to install new signs. In August of 1913, permits were issued for the demolition of the existing building at 6201 Bristol Parkway and the construction of a new 4,275 square foot one-story bank building for Chase Bank. A new trash enclosure, new drive through ATM with canopy and onsite light posts were also issued in the same permit.

Building Permits obtained from the City of Culver City are summarized below.

Address	Issued	Permit	Owner	Contractor/ Engineer/ Architect	Valuation ($)	Description
6221-6299	10/20/72	Permit #a18430	Ramada Inns, Inc.	RADCO Construction	$800,000	Shopping center including drug store to be 60,268 square feet. Soil B/V=2000 pounds per square foot at 18” minimum. Structural engineers are Robert Clements and Associates.
6201	10/26/73	Permit #a18913	Bank of America	-	$300,000	Construction of a new bank to be 65’x116 square feet with a second floor.

Address	Issued	Permit	Owner	Contractor/ Engineer/ Architect	Valuation ($)	Description
6221	10/27/73	Permit #a18951	Safeway Stores	Heath & Co.	$2,700	Wall signs: “SAFEWAY” individual letters 3 feet high, sing is 46 feet long. “Vonde Kamps” 2’6”x6’1”; Liquor sign 2’ X 8’1”
6201	2/27/74	Permit #a19071	Bank of America	Brite Lite Neon	-	Install signs: two 5’6”x8’10” pole signs, two sets of 17’ non-illuminated letters, and one non-illuminated logo
6221	5/31/74	Permit #a19446	Ramada Inns Inc.	Ramada Development Company	$5,000	
6201	6/28/74	Permit # a19297	Ramada Inns, Inc.	Ramada Development Co.	-	Block wall
6221	7/12/74	Permit #a19337	Safeway	Heath & Co.	$500	Wall signs
6201	8/2/74	Permit #a19373	Ramada Inns, Inc.	Ramada Development Co.	-	Construction of a new trash enclosure f
6201	8/7/74	Permit #a19388	Ramada Inn	So.Calif. Flagpole Maint	-	Flag poles
6221-6295	1/22/75	Permit #a19699	Ramada Inn	Heath & Co.	$1,200	Wall sign: 19’6”x3’ 4 ¾” rear wall sign- 8’ in from corner of Tenant Plaza and 2’ below top of parapet wall
6221-6299	2/7/75	Permit #A-19730	Ramada Inn	Heath & Co.	$400	2 sigs; 5’ high, 2’x3 ½ “, single face, non-illuminated tenant directory signs
6221-6299	7/8/75	Permit #a20068	Ramada Inn	Heath & Co.	$4,000	Director signs
6201	9/28/76	Permit #a20969	Continental Service Co.	-	-	Add interior fixtures and re-work night deposit receptacles for the bank building.
6201	6/13/80	Permit #a24279	Bank of America	A-1 Steel Rence Co	-	Build ornamental iron security fence
6221	12/20/83	Permit#b02778	Safeway Stores	Henderson Refrigeration	$6,000	
6221	9/13/85	Permit #b08324	Best Products Inc.	Frank Lucas & Associates Inc.	$120,000	Remove interior partitions
6221	10/25/85	Permit #b08772	Marshall’s Dept. Store	Tony Crawford Construction	$2,600	Screening for roof top AC Units: Red wood and metal siding to match existing
6221	10/30/85	Permit #b08811	Marshall’s	Tony Crawford Construction	$3,000	Trash container enclosure
6221	11/11/85	Permit #b08900	Marshall’s Dept. Store	American Sign & Lighting	$6,500	Install channel letters; one set 5’x3’ and two pylon inserts: Above marquee 4’ (max) high by 30’ long as proposed.

Address	Issued	Permit	Owner	Contractor/ Engineer/ Architect	Valuation ($)	Description
6221	12/33/85	Permit # B09238	Marshall's Dept. Store	American Sign & Lighting	$5,300	2 sets, channel letters 4'6" for north elevations
6221	5/33/86	Permit # b10367	Marshall's Dept. Store	Ad/Art Inc.	$3,451	Install face wall sign
6201	6/20/86	Permit #b10507	Centinela Hospital Medical Center	Garcia-Bently Construction, Hillman, Biddison & Loevenquth Engineers, and Parkin Architects	$90,000	Interior tenant improvements for a medical urgent care center
6201	8/19/86	Permit #b10984	Centinela Hospital Medical Center	Garcia-Bently Construction, Hillman, Biddison & Loevenquth Engineers, and Parkin Architects	$20,000	Tenant improvement Phase II of previously checked plans
6201	11/28/86	Permit #b11720	Centinela Hospital Medical Center	Shore Signs and Parkin Architects	$95,000	Two sets of letters E&N elevations, one monument sign, all illuminated. South elevation non-illuminated set of letters and two non-illuminated signs
6201	12/12/86	Permit #b11881	Centinela Valley Health Services	Garcia Bentley Contractors, Brad Hawn Engineer, Omar G. Siller, AIA	$20,000	New ceiling, wall addition, and repair on second floor: no additional square feet, just tenement interior improvements in corner section to medical center. Site improvements
6221	2/17/87	Permit#b12319	Marshall's Dept. Store	Brusan Corp	$40,000	reroofing
6201	3/2/87	Permit #b12425	Centinela Health Services	Don Shores Signs, Inc.	$3,000	One set of individually illuminated channel letters
6201	8/19/87	Permit #b13869	Centinela Hospital Medical Center	Don Shores Signs	$6,000	Two sets of letters on E&N elevations
6201	7/13/90	Permit #b22066	Centinela Medical Center Fox Hills	Don Shore Signs	$6,000	Remove and replace existing signs in same location
6221	2/18/93	Permit #b50584 (?)	Leeds & Strouss Enterprises	Full Spectrum Communications	$1,500	Satellite dish on roof of building
6221	9/30/93	Permit #b32515	Marshall's Dept Store	Risou Construction	$10,500	Add 67' slat wall; frame two walls for lay away, frame steel false wall 17'x67'
6221	4/22/97	Permit #043214	The Marmaxx Group	Contractor: Gluck Development co. Engineer: L	$250,000	Remove bearing wall and replace with frame and other structural miscellaneous

Address	Issued	Permit	Owner	Contractor/ Engineer/ Architect	Valuation ($)	Description
				Liston & Associates		
6221	4/24/97	Permit #043233	The Marmaxx Group	Gluck Development Company	$145,000	Internal renovation
6221	5/13/97	Permit #043358	Marmaxx Group	Gluck Development Company	$13,000	Proposed closure of 3 storefronts to match existing slump stone design and material of existing building façade. Planters to be provided to soften the slump stone façade. All roof top equipment shall be screened and material and design of screening to match existing design and color of respective color of walls.
6227	11/6/07	Permit #71019	Center Business MGMT	Nite-Lite Signs, Inc.	$6,500	Installing 1 13'x12' double sided freestanding pole sign. Sign is 20' to top of sign to grade. Sign to replace sign blown down in winds.*
6221	10/26/09	Permit #76247	Center Business MGMT	S.B.R., Inc.	$118,000	Reroof of commercial shopping center. Remove roof over Marshall's, lay 2nd layer over remainder of complex, install class APP modified roof system.
6221	3/8/10	Permit #76424	Matthew Strauss	Owner/builder	$275,000	Façade remodel and minor site improvements
6221	10/12/10	Permit #77820	M.C. Strauss Co.	Jacor Const., Inc. Engineer: Gary Electric		Replacing/relocating exterior lighting/39 electrical devices

***B10. Significance:** (Continued from page 2)

Fox Hills Plaza Shopping Center

The project site was first developed in from 1970 to 1971 with an eight-story Howard Johnson motor lodge and restaurant, designed by the Miami, Florida architecture firm of Charles Giller Associates with Stephson Pacific serving as the contractor.[1] The hotel featured 300 guest rooms and parking for 300 cars.[2] Development of the 11-acre Fox Hills Plaza Shopping Center began in 1973 and was completed in July of 1974.[3] The Plaza featured a 12-story Ramada Inn, now a Courtyard Marriot, with 266 rooms, in addition to a 68,000-square foot shopping center.[4] The Plaza was a co-venture between architect Robert Clements and Associates, based in Los Angeles, and Stewart Stein, the vice president of the architecture department for Ramada Development Company.[5] The Fox Hills Plaza Shopping Center followed the contemporary design trends and site layout of many shopping centers developed in the 1960s, with a main retailer or anchor store and smaller independent stores and services that were setback from the road with ample parking at the front.[6] The Fox Hills Plaza also featured a 10,700-square foot Bank of America Branch, designed by Robert Clements & Associates for the Ramada Development Company for a cost of $480,000.[7]

Architect-Engineers: Robert Clements & Associates

Robert Clements was Principal of Robert Clements & Associates, Architects-Engineers, which designed the Fox Hills Shopping Plaza and the related buildings at 6201 Bristol Parkway and 6333 Bristol Parkway. Born in Los Angeles in 1918, Robert Oliver Clements was the son of architect Stiles Oliver Clements who founded the firm. Stiles moved from his native Maryland to Los Angeles in 1911 to practice architecture, and was a partner in the firm Morgan, Walls and Clements along with Los Angeles architects Octavius Morgan, Senior, and John A. Walls.[8] Stiles then opened his own firm, Stiles O. Clements and Associates, in 1937. Robert attended the University of Southern California School of Architecture and while at USC, Robert helped found the university's architectural guild.[9] After graduating with the Bachelor of Architecture in 1941, Robert served in the Marine Corps in World War II.[10] He was also a member of the Southern California chapter of the American Institute of Architects (AIA) from 1949 until his death in 1987.[11]

Robert joined his father's firm in 1945 and worked as a designer until 1955.[12] From 1955 to 1966, he was the partner to his father at Stiles & Robert Clements Architects until his father's death in 1966.[13] Their firm specialized in commercial architecture such as the Norwalk Square Shopping Center in Norwalk.[14] He succeeded his father in 1966 as Principal of the newly renamed Robert Clements & Associates, Architects-Engineers, until 1987.[15] Robert's firm continued to specialize in commercial architecture. According to Robert's obituary in the *Los Angeles Times*, "the firm designed a number of Sears and Montgomery Ward Department Stores as well as grocery stores for the chains Safeway/Vons, Hughes, and Ralphs."[16] A sample of other projects designed by Robert Clements & Associates by decade include Zodys Department Store in Anaheim (1966) (**Figure 11**); Sears, Roebuck and Co. Department Store in El Centro (1968); the Security Pacific Bank Building in Riverside (1973) (**Figure 12**); and the Harbor Bank Building in Long Beach (1983) (**Figure 13**). The legacy of Stiles and Robert Clements is best represented in their high-quality commercial projects that provided a standard of commercial design enjoyed by generations.

The Fox Hills Plaza Shopping Center designed by architect Robert Clements in 1973 for the Ramada Inn Company was part of the larger redevelopment of Culver City in the 1960s and 1970s, which was initiated by the City's newly formed Redevelopment agency (CCRA) after the City fell on economic hardship after MGM closed their studio. The Fox Hills Plaza Shopping Center, which was very similar to many other neighborhood shopping centers of the time period, was designed with a large parking lot for automobiles, with the shopping plaza setback from the main road. The Fox Hills Plaza Shopping Plaza is a very modest example of the modern Commercial Vernacular style, with minor Mediterranean style influences. The Fox Hills Plaza Shopping Center, which opened to the public in 1974, served the neighborhood of Fox Hills, in addition to the guests of the Ramada Inn and Howard Johnson, while benefitting from the automobile traffic from the I-405 and U.S. Route 90.

The property history, architectural description, and historic contexts included in this report provide the background necessary to evaluate the historic and architectural significance of Fox Hills Plaza Shopping Center, including the history of their construction and alterations. ESA also conducted research on the Project Site's occupancy history. To be eligible as a historical resource under CEQA, an existing property must have both significance and integrity. ESA evaluated the Fox Hills Plaza Shopping Center as an individual resource against the criteria for listing in the National Register and the California Register, as well as for its eligibility under the Culver City's criteria (see Section 2.0). As the Fox Hills Plaza Shopping Center is over 50 years of it and consequently meets Culver City's Threshold Criteria A-1, it will be evaluated below under Culver City's Assessment Criteria B-1 and B-2.

Broad Patterns of History

When examining the Subject Property in the context of broad patterns of history, the following are the relevant criteria:

- National Register Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history.
- California Register Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- Culver City Assessment Criterion B-1: Is the structure(s) of "historical or cultural significance"?

Incorporated in 1913, the City's commercial center was first established in the downtown core in the 1920s and spread to Washington Boulevard in the 1940s and 1950s. Fox Hills was later annexed to Culver City in 1964 when over 300 acres of land was sold by the Home Savings and Loan Company making large tracts of land available for new development. Due to its location near the Los Angeles International Airport (LAX), Howard Johnson and Ramada Inn saw the opportunity to invest in commercial development. The Ramada Inn Company purchased eleven acres from the Home Savings and Loans Company to develop a hotel, shopping plaza, and bank near the 405 and Marine Highway within the Fox Hills area. At the heart of Screenland, the economic health of Culver City has always been strongly tied to the movie industry. Following the closure of MGM Studios, the City was looking for ways to spur economic development. The Fox Hills Plaza shopping center was the first project to be supported by Culver City's newly installed Redevelopment Agency (CCRA).

***Recorded by:** A. Hrycyk, Environmental Science Associates ***Date:** April 2025 ☒ Continuation ☐ Update

In 1973 when Ramada Inn developed a hotel, bank and the Fox Hills Plaza Shopping Center, it was the second commercial development to be built among several others during the Post-World War II period. The Fox Hills Plaza shopping center was later superseded by more recent shopping centers (Westfield, Platform etc.) that are now more popular and have been renovated and/or newly built while the Fox Hills Plaza shopping center has remained primarily a neighborhood shopping center due to its location on the outskirts of the City and outmoded design. The Fox Hills Plaza shopping center was an important neighborhood shopping center for the area after its development in the early 1970s. The Fox Hills Shopping Center reflected contemporary trends in commercial design at the time, but it does not appear to have made a significant contribution to the larger economic or commercial development of Culver City which had already been well established by the 1970s.

Therefore, the Fox Hills Plaza Shopping Center does not appear to meet the thresholds of significance for individual eligibility under National Register Criterion A, California Register Criterion 1, or Culver City Assessment Criterion B-2.

Significant Persons

Regarding associations with important persons, the following are the relevant criteria:

- National Register Criterion B: Is associated with the lives of persons significant in our past.
- California Register Criterion 2: Is associated with the lives of persons important in our past.
- Culver City Assessment Criterion B-1: Is the structure(s) of "historical or cultural significance"?

There does not appear to be any evidence to suggest that the Shopping Center is associated with the productive lives of historic personages. The original owners of the Shopping Center were the Ramada Inn Company, who leased the two anchor stores (now Marshalls and CVS) and other stores to small businesses.

Therefore, the Fox Hills Plaza Shopping Center does not appear to meet the thresholds of significance for individual eligibility under National Register Criterion B, California Register Criterion 2, or Culver City Assessment Criterion B-2.

Architecture

Regarding the Subject Property's architecture, design, or construction, the following are the relevant criteria:

- National Register Criterion C: Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.
- California Register Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- Culver City Assessment Criterion B-2: Is the structure(s) of "architectural significance"?

The Fox Hills Plaza Shopping Center was evaluated for potential eligibility as an example of a property type, a Post War Neighborhood Shopping Center, and as a work of a master architect, engineer or builder.

The Fox Hills Shopping Center was designed by well-known Los Angeles architect, Robert Clements, Principal of the firm founded by his father, master architect Stiles O. Clements. The firm was well known, especially for their commercial projects and achieved continued success under Robert's leadership. The Fox Hills Plaza Shopping Center completed in 1973 in the Modern Vernacular style was a low-cost utilitarian design. While it followed the prevailing ideas in commercial design and layout it was not trend setting or influential in the development of commercial architecture in Culver City or among the works of Robert Clements. One of his first neighborhood shopping projects was the Norwalk Square Shopping Center in Norwalk, California in 1957 (extant). Another extant and earlier example of his work is the old Zody's Shopping Center in Anaheim (now occupied by Walmart). Both of these examples incorporated contemporary shopping mall design including stores set back from the road and large parking areas at the front of the stores. Clements completed numerous commercial projects for Sears and Montgomery Ward Department Stores as well as grocery stores for the chains Safeway/Vons, Hughes, and Ralphs all across Southern California. The Fox Hills Shopping Center is not an outstanding, distinctive or significant example of his work. Among his most well-known projects are those in the Corporate International style, including the Harbor Bank Building in Long Beach, and the Security Pacific Bank Building in downtown Riverside.

***Recorded by:** A. Hrycyk, Environmental Science Associates ***Date:** April 2025 ☒ Continuation ☐ Update

The Fox Hills Shopping Center follows the basic design principals of the post war neighborhood shopping center, as outlined by Geoffrey Baker and Bruno Funero in their 1951 book *Shopping Centers: Design and Operation*, including anchor stores and smaller retailers, a shopping plaza setback from the road, and a large parking lot at the front shopping plaza. Although it follows the popular design trends of the time, it was not an influential or trend setting shopping center at the time it was completed. It was not published in any architectural journals and did not win any design awards, and it is not referenced in any publications on the history of commercial architecture. Furthermore, it was not one of the earliest shopping centers in the city or region and did not influence the designs of later shopping centers. One of the earliest neighborhood shopping centers was Culver Center off of Venice Boulevard (built 1949); another example is the Plaza La Cienega (built in 1970) at 1801 La Cienega Boulevard, northeast of Culver City. As such, the Fox Hills Plaza Shopping Center does not possess sufficient architectural merit as an outstanding or distinctive example of its type or style or significance in the history of design to reach the threshold of significance as a historical resource either individually or as contributing members of potential district, under any of the applicable federal, state or local eligibility criteria.

Therefore, the Fox Hills Plaza Shopping Center does not appear to meet eligibility requirements for individual eligibility under National Register Criterion C, California Register Criterion 3, or Culver City Assessment Criterion B-2.

Data

- National Register Criterion D: It yields, or may be likely to yield, information important in prehistory or history.
- California Register Criterion 4: Has yielded, or may be likely to yield, information important in prehistory or history**.**

While most often applied to archaeological districts and sites, Criterion D/4 can also apply to buildings, structures, and objects that contain important information. For these types of properties to be eligible under Criterion D/4, they themselves must be, or must have been, the principal source of the important information. The Fox Hills Plaza Shopping Center does not appear to yield significant information that would expand our current knowledge or theories of design, methods of construction, operation, or other information that is not already known about the period in which they were constructed, their method of construction, or their design. The Fox Hills Plaza Shopping Center reflects common building practices and materials of the early 20th century, which have already been well documented.

Therefore, the Fox Hills Plaza Shopping Center does not meet the eligibility requirements under National Register Criterion D or California Register Criterion 4.

Integrity Analysis

Since the Fox Hills Plaza Shopping Center were not identified as significant under any of the applicable National Register, California Register, or Culver City Assessment criteria, an integrity analysis was not conducted.

The Hillside Memorial Park was identified as a potential historic resource in the area of potential impacts from the 6201 Bristol Parkway Project. The only potential indirect impact from the project would be a change in setting at the northeast corner of the Hillside Memorial Park, as the new project would introduce a new visual element directly across the road. However, due to the natural landscape of the cemetery (the rolling hills), a large portion of the Project would not be visible from important historical architectural aspects of the cemetery. Most importantly, the Project Site would not be visible from the main entrance of the cemetery. Furthermore, the built environment setting surrounding the cemetery has been substantially compromised by infill development from the 1960s and 1970s, which surrounds the cemetery and the construction of the I-405. Finally, the Project would not demolish or materially alter any of the character-defining features that contribute to the potential eligibility of Hillside Memorial Park as a historical resource. Upon Project completion the Hillside Memorial Park would retain its eligibility as a potential National Register, California Register, or local designation. Therefore, no indirect impact to the cemetery would result from construction of the Project.

Subject: Archaeological Resources Assessment for the 6201 Bristol Parkway Project; City of Culver City, Los Angeles County, California.

This letter report presents the methods, results, and recommendations of an archaeological resources assessment conducted by Environmental Science Associates (ESA) to comply with the California Environmental Quality Act (CEQA) for the 6201 Bristol Parkway Project (Project) on a7.049-acre property (Project Site).

The City of Culver City (City) certified a programmatic Environmental Impact Report (Programmatic EIR) to evaluate the potential environmental impacts of approving the Culver City General Plan 2045 and Zoning Code Update Project in September 2024. The General Plan 2045 and Zoning Code Update Program EIR (State Clearinghouse No. 2022030144) (Programmatic EIR or Certified PEIR) evaluated the anticipated future development within the City, including the anticipated development on the Project Site. Section 15168(c) of the CEQA Guidelines sets forth criteria to utilize a Program EIR for "later activities" within the scope of a Program EIR. This archaeological assessment included a cultural resources records search through the South Central Coastal Information Center (SCCIC), a Sacred Lands File (SLF) search through the Native American Heritage Commission (NAHC), a pedestrian survey, land use history research, and a subsurface sensitivity assessment for archaeological resources.

This report was prepared by ESA Cultural Resources Specialist/Archaeologist Fatima Clark, B.A. Contributions to the report were made by Salpi Bocchieriyan, M.A., RPA. ESA Principal Archaeologist, Kyle Garcia, M.A., RPA, provided senior review of this report. Mr. Garcia is a Registered Professional Archaeologist and meets the Secretary of the Interior's Professional Qualification Standards for prehistoric and historic archaeology. ESA GIS Analyst Chance Scott created the figures contained in this document. Resumes of key personnel are provided in **Appendix A**.

Project Location and Description

The Project Site is located within the southeastern part of Culver City in the community of Fox Hills (**Figure 1**). The Project Site encompasses approximately 7.049 acres and three lots [Assessor Parcel Numbers (APN) 4134-018-004, 4134-018-005 and 4134-018-006] and is prominently located at the southwest corner of Bristol Parkway and Green Valley Circle (**Figure 2**). More specifically, the Project Site is located within Section 19 of Township 2 South, Range 14 West, on the Venice, California 7.5-minute topographic quadrangle map (**Figure 3**).

Project Description

Bristol Parkway Propco, LLC, the Applicant, proposes the development of a mixed-use residential and commercial project on the approximately 7.049-acre Project Site. The Project Site is comprised of two parcels that are developed with a vacant one-story commercial building formerly occupied by a Chase bank and a vacant one-story multi-tenant commercial strip building formerly anchored by a Marshall's store along with associated surface parking. The Project would demolish the existing structures and construct a new 8-story mixed-use building over two levels of subterranean parking and community serving commercial space. The Project would contain open space that features a publicly accessible plaza at the corner of Green Valley Circle and Bristol Parkway, common exterior open space for residents that include multiple courtyards, pool, and roof deck, private resident balconies, and interior common spaces that include a resident lobby and amenity areas. The Project would require excavation to accommodate two levels of subterranean parking, footings, and foundations. Earthwork would require a net export of approximately 66,838 cubic yards (cy) of soil. The Project would excavate to a maximum depth of 39 feet below ground surface (bgs).

Regulatory Framework

Cultural resources fall within the jurisdiction of several levels of government. The framework for the identification and, in certain instances, protection of cultural resources is established at the federal level, while the identification, documentation, and protection of such resources are often undertaken by state and local governments. As described below, the principal State, and local laws governing and influencing the preservation of cultural resources of national, State, regional, and local significance include the following:

1. The California Environmental Quality Act
2. The California Register of Historical Resources
3. The California Health and Safety Code
4. The California Public Resources Code
5. City of Culver City General Plan

State

California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified in Public Resources Code (PRC) Section 21000 et seq. CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on historical or unique archaeological resources. Under CEQA Section 21084.1, a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment.

CEQA Guidelines Section 15064.5 recognizes that historical resources include: (1) resources listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of

Historical Resources; (2) resources included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); and (3) any objects, buildings, structures, sites, areas, places, records, or manuscripts which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's determination is supported by substantial evidence in light of the whole record.

If a lead agency determines that an archaeological site is a historical resource, the provisions of PRC Section 21084.1 and CEQA Guidelines Section 15064.5 apply. If an archaeological site does not meet the criteria for a historical resource contained in the CEQA Guidelines, then the site may be treated in accordance with the provisions of PRC Section 21083, if it meets the criteria of a unique archaeological resource. As defined in PRC Section 21083.2, a unique archaeological resource is an archaeological artifact, object, or site, about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information;
- Has a special and particular quality such as being the oldest of its type or the best available example of its type; or
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

If an archaeological site meets the criteria for a unique archaeological resource as defined in PRC Section 21083.2, then the site is to be treated in accordance with the provisions of PRC Section 21083.2, which state that if the lead agency determines that a project would have a significant effect on unique archaeological resources, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place.[1] If preservation in place is not feasible, mitigation measures shall be required. The CEQA Guidelines note that if an archaeological resource is neither a unique archaeological nor a historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment.[2]

A significant effect under CEQA would occur if a project results in a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5(a). Substantial adverse change is defined as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired".[3] According to CEQA Guidelines Section 15064.5(b)(2), the significance of a historical resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics that:

---

1 California Public Resources Code Section 21083.1(a), http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=21083.2. Accessed February 9, 2021.

2 State CEQA Statute and Guidelines, Section 15064.5(c)(4).

3 State CEQA Guidelines, Section 15064.5(b)(1).

A. Convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

B. Account for its inclusion in a local register of historical resources pursuant to PRC Section 5020.1(k) or its identification in a historical resources survey meeting the requirements of PRC Section 5024.1(g) Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

C. Convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a Lead Agency for purposes of CEQA.

In general, a project that complies with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings is considered to have impacts that are less than significant.[4]

California Register of Historical Resources

The California Register of Historical Resources (California Register) is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change."[5] The California Register was enacted in 1992, and its regulations became official on January 1, 1998. The California Register is administered by the California Office of Historic Preservation (OHP). The criteria for eligibility for the California Register are based upon National Register of Historic Places (National Register) criteria.[6] Certain resources are determined to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register. To be eligible for the California Register, a precontact or historic-period property must be significant at the local, State, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above, and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to

---

4 State CEQA Guidelines, 15064.5(b)(3).

5 California Public Resources Code, Section 5024.1[a]. http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=5024.1. Accessed February 9, 2021.

6 California Public Resources Code, Section 5024.1[b] http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=5024.1. Accessed February 9, 2021.

meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;
- California Registered Historical Landmarks from No. 770 onward; and,
- Those California Points of Historical Interest that have been evaluated by the State Office of Historic Preservation (OHP) and have been recommended to the State Historical Resources Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historic districts; and,
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone.

California Health and Safety Code

California Health and Safety Code Sections 7050.5, 7051, and 7054 address the illegality of interference with human burial remains (except as allowed under applicable PRC Sections), and the disposition of Native American burials in archaeological sites. These regulations protect such remains from disturbance, vandalism, or inadvertent destruction, and establish procedures to be implemented if Native American skeletal remains are discovered during construction of a project, including treatment of the remains prior to, during, and after evaluation, and reburial procedures.

California Public Resources Code (PRC)

California PRC Section 5097.98, as amended by Assembly Bill 2641, provides procedures in the event human remains of Native American origin are discovered during project implementation. PRC Section 5097.98 requires that no further disturbances occur in the immediate vicinity of the discovery, that the discovery is adequately protected according to generally accepted cultural and archaeological standards, and that further activities take into account the possibility of multiple burials. PRC Section 5097.98 further requires the Native American Heritage Commission (NAHC), upon notification by a County Coroner, designate and notify a Most Likely Descendant (MLD) regarding the discovery of Native American human remains. Once the MLD has been granted

access to the site by the landowner and inspected the discovery, the MLD then has 48 hours to provide recommendations to the landowner for the treatment of the human remains and any associated grave goods. In the event that no descendant is identified, or the descendant fails to make a recommendation for disposition, or if the landowner rejects the recommendation of the descendant, the landowner may, with appropriate dignity, reinter the remains and burial items on the property in a location that will not be subject to further disturbance.

Local

City of Culver City General Plan

The City's General Plan 2045 approved in August 26, 2024 has one goal (Goal C-1) for cultural resources (including archaeological resources), which indicates that "cultural resources are protected and enhanced through proactive measures" (City of Culver City, 2024:248). Measures C-1.15, C-1.16, and C-1.21 provided below are focused on the protection of archaeological resources.

- **C-1.15: Public knowledge promotion.** Promote public knowledge and understanding of cultural resources (including archaeological, tribal cultural resources, historic resources, and paleontological resources) present within the city.
- **C-1.16: Tribal consultation.** Continue to consult with Native American groups in accordance with Senate Bill 18 and Assembly Bill 52 to identify Tribal Cultural Resources.
- **C-1.21: Protect Archaeological, Paleontological, and Tribal Cultural Resources.** Promote programs and policies to protect known archaeological and paleontological sites and Tribal Cultural Resources.

The City's General Plan also includes the following implementation actions for the preservation of archaeological resources.

- **IA.C-8: Historic discretionary review.** Require that projects subject to discretionary review are screened to Cultural Affairs to determine if further evaluation by cultural affairs is warranted and, if so, require that projects undergo historic, archaeological, and paleontological assessments and are documented in technical studies by qualified experts to identify the potential for resources to be negatively affected during project implementation and to ensure steps are taken, where warranted, to protect resources.
- **IA.C-10: Standard conditions of development approval.** Continue to implement standard conditions of approval that require and specify the steps to be taken to avoid damage and promote preservation if unknown archaeological or paleontological resources, or Tribal Cultural Resource are uncovered during construction.

Precontact Setting

The chronology of Southern California is typically divided into three general time periods: the Early Holocene (9,600 cal B.C. to 5,600 cal B.C.), the Middle Holocene (5,600 cal B.C. to 1,650 cal B.C.), and the Late Holocene

(1,650 cal B.C. to cal A.D. 1769). This chronology is manifested in the archaeological record by particular artifacts and burial practices that indicate specific technologies, economic systems, trade networks, and other aspects of culture.

While it is not certain when humans first came to California, their presence in Southern California by about 9,600 cal B.C. has been well documented. At Daisy Cave, on San Miguel Island, cultural remains have been radiocarbon dated to between 9,150 and 9,000 cal B.C. (Byrd and Raab, 2007). During the Early Holocene (9,600 cal B.C. to 5,600 cal B.C.), the climate of Southern California became warmer and more arid and the human populations, who were represented by small hunter gathers until this point and resided mainly in coastal or inland desert areas, began exploiting a wider range of plant and animal resources (Byrd and Raab, 2007).

During the Late Holocene (1,650 cal B.C. to cal A.D. 1769), many aspects of Millingstone culture persisted, but a number of socioeconomic changes occurred (Erlandson, 1994; Wallace 1955; Warren, 1968). The native populations of Southern California were becoming less mobile and populations began to gather in small sedentary villages with satellite resource-gathering camps. Increasing population size necessitated the intensified use of existing terrestrial and marine resources (Erlandson, 1994). Evidence indicates that the overexploitation of larger, high-ranked food resources may have led to a shift in subsistence, towards a focus on acquiring greater amounts of smaller resources, such as shellfish and small-seeded plants (Byrd and Raab, 2007). Between about A.D. 800 and A.D. 1350, there was an episode of sustained drought, known as the Medieval Climatic Anomaly (MCA) (Jones et al., 1999). While this climatic event did not appear to reduce the human population, it did lead to a change in subsistence strategies in order to deal with the substantial stress on resources.

Given the increasing sedentism and growing populations during the Late Holocene, territorial conscription and competition became acute. Primary settlements or village sites were typically established in areas with available freshwater, and where two or more ecological zones intersected (McCawley, 1996). This strategic placement of living space provided a degree of security in that when subsistence resources associated with one ecological zone failed, the resources of another could be exploited (McCawley, 1996). Villages typically claimed and carefully defended fixed territories that may have averaged 30-square miles in size encompassing a variety of ecological zones that could be exploited for subsistence resources (McCawley, 1996).

The Late Holocene marks a period in which specialization in labor emerged, trading networks became an increasingly important means by which both utilitarian and non-utilitarian materials were acquired, and travel routes were extended. Trade during this period reached its zenith as asphaltum (tar), seashells, and steatite were traded from Catalina Island (*Pimu* or *Pimugna)* and coastal Southern California to the Great Basin. Major technological changes appeared as well, particularly with the advent of the bow and arrow sometime after cal A.D. 500, which largely replaced the use of the dart and atlatl (Byrd and Raab, 2007).

Ethnographic Setting

The Project Site is located in a region traditionally occupied by the Gabrielino. The term “Gabrielino” is a general term that refers to those Native Americans who were administered by the Spanish at the Mission San Gabriel

Arcángel. Prior to European colonization, the Gabrielino occupied a diverse area that included: the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Kroeber, 1925). Their neighbors included the Chumash and Tataviam to the north, the Juañeno to the south, and the Serrano and Cahuilla to the east. The Gabrielino language was part of the Takic branch of the Uto-Aztecan language family.

The Gabrielino Indians were hunter-gatherers and lived in permanent communities located near the presence of a stable food supply. Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game was hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith, 1978). The primary plant resources were the acorn, gathered in the fall and processed in mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly-leafed cherry. Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. The Gabrielino are estimated to have had a population numbering around 5,000 in the pre-contact period (Kroeber, 1925).

The Late Precontact period, spanning from approximately 1,500 years B.P. to the Mission Era, is the period associated with the florescence of the Gabrielino (Wallace, 1955). Coming ashore near Malibu Lagoon or Mugu Lagoon in October of 1542, Juan Rodriguez Cabrillo was the first European to make contact with the Gabrielino Indians. The Gabrielino are reported to have been second only to their Chumash neighbors in terms of population size, regional influence, and degree of sedentism (Bean and Smith, 1978).

Maps produced by early explorers indicate that at least 26 Gabrielino villages were within proximity to known Los Angeles River courses, while an additional 18 villages were reasonably close to the river (Gumprecht, 2001). The closest named settlements to the Project Site are *Saa'anga* and *Waachnga.* Review of a map titled *Gabrielino Communities Located on the Los Angeles-Santa Ana Plain* by William McCawley (1996) indicates that the settlement of *Saa'anga* was located approximately 1.5 miles from the Project Site, while the settlement of *Waachnga* was situated approximately 0.80 miles away. Both of these settlements are depicted as located close to Ballona Creek.

Archival Research

SCCIC Records Search

A cultural resources records search was conducted on January 13, 2025 at the SCCIC housed at California State University, Fullerton. The records search included a review of all recorded archaeological resources and previous investigations within a 0.50-mile radius of the Project Site.

Previous Cultural Resources Investigations

The records search results indicate that 33 cultural resources studies have been previously conducted within a 0.50 radius of the Project Site. Approximately less than 50 percent of the half-mile records search radius has been included in these studies. None of the 33 previous studies have encompassed the Project Site.

Previously Recorded Cultural Resources

The records search results indicate that a total of four archaeological resources have been previously recorded within the 0.50-mile radius of the Project Site (**Table 1**). The archaeological resources consist of three precontact archaeological sites (CA-LAN-59, -60, and -216) and one multi-component resource[7] (CA-LAN-2768/H). However, none of these resources are located within the Project Site.

TABLE 1
PREVIOUSLY RECORDED CULTURAL RESOURCES WITHIN 0.50-MILE RADIUS OF THE PROJECT SITE

P-Number (P-19/CA-LAN-)	Description	Date Recorded/ Updated	Eligibility
000059/59	Precontact archaeological resource: village site with artifacts such as a steatite bowl, a clear quartz crystal point, “arrowpoints”, mortar and steatite fragments, manos, pestles, shell, hammerstones, scrapers, and perforated pebbles.	1950	unknown
000060/60	Precontact archaeological site: described as a camping area with artifacts such as “chips”, mortar fragments, hammerstones, choppers, and pieces of steatite.	1950	unknown
000216/216	Precontact archaeological site: described as consisting of mortars	1953	unknown
002768/2768/H	Multi-component site: precontact components include three human burials with 79 thermal or non-thermal rock clusters, including hearth cleanouts. The artifacts from the features include lithic materials, fire-affected rock, manuports, ground stone artifacts (manos, metates, pestles, mortars and bowl fragments), chipped stone tools, debris (core, flakes, flaked stone tools). Historic-period components include structural remains, trash pits, and artifacts (ceramics, glass, metal, bottle fragments).	1999; 2000-2007; 2013; 2014	unknown

Other Research

Additional archaeological resources (the report for which have not yet been archived at the SCCIC as it is still in progress) were identified approximately 2.8-miles from the Project Site during ground disturbing activities in connection with a development project in Downtown Culver City (ESA, 2022). These include two isolated

[7] A multicomponent resource can contain precontact and historic-period archaeological components and/or built environment components.

precontact metates that were recovered in the upper six feet of disturbed fill sediments in an area of the property that had been previously developed with a large warehouse building.

Sacred Lands File Search

The NAHC maintains a confidential SLF database which contains sites of traditional, cultural, or religious value to the Native American community. The NAHC was contacted by ESA on December 24, 2024 to request a search of the SLF database. On January 16, 2025, the NAHC indicated that the results of the SLF search yielded negative results but mentioned that the absence of specific site information does not mean absence of cultural resources in a project (**Appendix B**).

Land Use History Research

Historic maps and aerial photographs were examined to understand the development of the Project Site and vicinity and to contribute to an assessment of the Project Site's potential to retain buried archaeological resources. Available topographic maps include the 1896 Redondo 15-minute topographic quadrangle, 1924 Inglewood 7.5-minute topographic quadrangle and the 1930 Venice 7.5-minute topographic quadrangle (TopoView, 2025). Available historic aerials from 1952, 1953, 1963, 1972, and 1980 were also reviewed (Historicaerials.com, 2025).

Review of the 1896 historic map shows the Project Site as undeveloped. The 1924, 1930, and 1948 historic maps indicate that the Project Site was undeveloped and that portions of the Project Site (northern and eastern portions) exhibited a hilly terrain. An unnamed drainage is depicted as located 500 feet southeast of the Project Site and Centinela Creek is depicted as situated 0.35 miles south of the Project Site on the 1924 map (**Figure 4**). Reviews of the 1952, 1953, 1963, and 1972 aerial photographs indicate that the Project Site was still undeveloped by at time these maps were published. However, the 1980 aerial photograph shows the Project Site developed with a large rectangular building on the western portion, a small building on the northeast corner, and a large parking lot between the two buildings.

SOURCE: TopoView, 2025

Figure 4
Overview of Project Site (in red) on the 1924 topographic map.

Geologic Map Review

Geologic mapping by Dibblee and Minch (2007) at a scale of 1:24,000 indicates the surficial geology of the Project Site consists of younger alluvium (**Qa**) in the south and older alluvium (**Qoa**) in the north. The Paleosol in Baldwin Hills (**Qop**) is mapped on the north edge of the Project Site. **Qa** is described as "alluvial gravel, sand, and clay, derived mostly from the Santa Monica Mountains," (Dibblee and Minch, 2007). **Qoa** is described as "Older alluvium of gray to light brown pebble-gravel, sand, and silt-clay, elevated and dissected; in Baldwin Hills designated as Baldwin Hills sandy gravel," (Dibblee and Minch, 2007). **Qop** is described as the "Paleosol in Baldwin Hills… [and consisting of a] "gray to rusty brown, sandy, locally pebbly, moderately indurated "hard pan" on **Qoa**" (Dibblee and Minch, 2007). The first mention of the paleosol was by Weber et al. (1982) who named it the Fox Hills relict paleosol. No exposures of marine sediments are mapped in the immediate area of the Project, but marine fossils were found very near to the Project Site at a shallow depth. **Qop** could occur within the Project's northern region. Where **Qop** does occur, it lies atop the **Qoa**.

Bandy and Marinkovich (1973) documented marine deposits in the Baldwin Hills dated at 36,200 ±2,750 radiocarbon years and 28,450 ±2,600 radiocarbon years. Thus, the uplift of the Baldwin Hills postdates those dates. The **Qa** and **Qop** certainly postdate the beginning of the uplift. If the **Qoa** unit encompasses marine sediments as well as non-marine, some parts of Qoa could predate, while other parts of Qoa could postdate the 28,000-year radiocarbon date.

Geotechnical Report Review

Review of the geotechnical report by Geocon West, Inc. (2024) indicates that a total of nine 8-inch-diameter borings were excavated at the Project Site. The borings were drilled to a depth ranging between 10.5 and 60.5 feet bgs using a truck-mounted hollow-stem auger drilling machine and target locations throughout the Project Site (Geocon West, Inc. 2024). Artificial fill materials (consisting of a mixture of silt, silty sand, clayey sand and sandy clay) were found to depths ranging between 3 and 17.5 feet bgs. It was noted that deeper fill could be present in unexplored areas of the Project Site. Two strata of native alluvial soils (consisting of poorly graded sands, silts, and clays) were found beneath the fill. Immediately underlying the fill, younger alluvium was encountered up to 32.5 feet bgs. Beneath the younger alluvium and fill, Pleistocene-age older alluvium deposits were encountered to the maximum depth of excavations at 60.5 feet bgs (Geocon West, Inc. 2024). No attempt was made to assign any of these sediments to known geologic formations discussed in the previous section.

Pedestrian Survey

A cultural resources pedestrian survey of the Project Site was conducted on February 12, 2025, by ESA Cultural Resources Specialist Vincent Gentile, B.A. The survey aimed at identifying archaeological resources within the Project Site. A systematic survey was not possible given the developed nature of the majority of the Project Site and lack of ground visibility. Approximately 10 percent of the Project Site was subject to an opportunistic survey, which targeted small sections of land with exposed ground surface (e.g., landscape areas). The remaining 90 percent of the Project Site is paved and developed with buildings, parking lots, and lacked ground surface visibility. Ground surface visibility for the surveyed portion of the Project Site was poor and ranged from 0 to 10 percent due the leaf litter, sod, and other vegetation that obstructed the surveyor’s view of the ground surface . No archaeological resources were observed during the survey. **Figures 5-7** depict the existing conditions of the Project Site at the time of the pedestrian survey.

Subsurface Sensitivity Assessment

Precontact Archaeological Analysis

Results of the SCCIC records search have indicated that three precontact archaeological resources and one multicomponent resource (with a precontact component and historic-period component) have been recorded within a 0.50-mile radius of the Project Site. These precontact resources include villages or camp sites with human burials, lithic materials, ground stone, etc. Additionally, two Native American villages (*Saa'anga* and *Waachnga*) are situated in the general vicinity of the Project Site. The review of historic maps indicates that an unnamed creek was located approximately 500 feet away and Centinela Creek approximately 0.35 miles away from the Project Site. These bodies of water would have attracted precontact inhabitants to the area for fresh water sources, along with floral and faunal resources. Geologic mapping by Dibblee and Minch (2007) indicates the surficial geology of the Project Site consists of younger alluvium (**Qa**) in the south and older alluvium (**Qoa**) in the north. The Paleosol in Baldwin Hills (**Qop**) is mapped on the north edge of the Project Site (and may or may not be present within the Project Site) and it is likely that Qop is younger than 28,000 years in age. Review of the geotechnical report indicates that artificial fill materials were found to depths ranging between 3 and 17.5 feet bgs, followed by younger alluvium to 32.5 feet bgs. Beneath the younger alluvium and fill, Pleistocene-aged older alluvium deposits were encountered to the maximum depth of excavations at 60.5 feet bgs. The Pleistocene-aged older alluvium deposits

(which could be potentially unearthed in the Project Site) are too old to be conducive to the preservation of precontact archaeological deposits. However, the Paleosol soils (**Qop**) and younger Quaternary alluvium (**Qa**) currently have an unknown age and could date to the Late Pleistocene or Early Holocene – a period for which there is widely accepted evidence for human occupation of Southern California (Byrd and Raab, 2007)- and; therefore, has the potential to yield buried precontact archaeological deposits. Moreover, precontact archaeological resources can become intermixed within historic fill materials such as in the case with two precontact metate artifacts that were encountered during monitoring in connection with a development project in Downtown Culver City located approximately 2.8 miles from the Project Site. For these reasons and those stated above (e.g., four known archaeological resources in the vicinity, the former presence of a fresh water source nearby, and former presence of Native American villages in the vicinity), the potential to encounter buried precontact archaeological resources within the Project Site is considered moderate to high.

Historical Archaeological Analysis

Results of the SCCIC records search have indicated that one multicomponent resource with a historic-period component [including structural remains, trash pits, and artifacts (ceramics, glass, metal, bottle fragments)] has been recorded within a 0.50-mile radius of the Project Site. However, the land use history research (review of historic topographic maps and aerial photographs) indicates that no historic period uses existed within the Project Site or immediate vicinity. Based on the lack of previous historic period uses within the Project Site, the potential to encounter historic-period archaeological resources within the Project Site is considered low.

Summary of Results and Recommended Mitigation Measures

The archaeological sensitivity assessment has indicated that the potential for encountering precontact archaeological resources is moderate to high across the Project Site, while the potential for historic-period archaeological resources is considered low. Therefore, impacts to previously unknown buried archaeological resources would be potentially significant, and the following mitigation measures are recommended in order to reduce impacts to archaeological resources to a less-than-significant level under CEQA.

- **Mitigation Measure CUL-1**: Prior to the issuance of a demolition permit, the Applicant shall retain an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology (Qualified Archaeologist) to oversee an archaeological monitor who shall be present during initial Project construction work such as site demolition (e.g., building footings/foundations, subsurface utilities, surface parking lots, sidewalks, etc.), clearing/grubbing, grading, trenching, or related moving of soils within the Project Site (collectively, ground disturbing activities); provided, however, that ground disturbing activities shall not include any moving of soils after they have been initially disturbed or displaced by Project-related construction. The Qualified Archaeologist shall determine the frequency of monitoring based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated, and the depth of excavation, and if found, the abundance and type of archaeological resources encountered. The frequency of monitoring can be reduced to part-time inspections or ceased entirely if determined appropriate by the Qualified Archaeologist. Prior to commencement of excavation activities, an Archaeological and Cultural Resources Sensitivity Training shall be given for construction personnel. The

training session shall be carried out by the Qualified Archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

- **Mitigation Measure CUL-2**: In the event that historic or precontact archaeological resources are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. After consulting with the Applicant, the Qualified Archeologist shall establish an appropriate buffer in accordance with industry standards, reasonable assumptions regarding the potential for additional discoveries in the vicinity, and safety considerations for those making an evaluation and potential recovery of the discovery. This buffer area shall be established around the discovery where construction activities shall not be allowed to continue. Work within the buffer area shall only be allowed to continue after the evaluation and recovery efforts are completed. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by Project construction activities shall be evaluated by the Qualified Archaeologist. If the Qualified Archaeologist determines the find to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the Qualified Archaeologist shall coordinate with the Applicant and the City of Culver City (City) to develop a formal treatment plan that would serve to reduce impacts to the resources and that provides for or the adequate recovery of the scientifically consequential information contained in the resources along with subsequent laboratory processing, analysis, evaluation, and reporting. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. The treatment plan shall also include measures regarding the curation of the recovered resources that may include curation at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the resources, they may be donated to a local school or historical society in the area (such as the Culver City Historical Society) for educational purposes.

- **Mitigation Measure CUL-3**: The Qualified Archaeologist shall prepare a final report and appropriate California Department of Parks and Recreation Site Forms at the conclusion of archaeological monitoring. The report shall include a description of resources unearthed, if any, treatment of the resources, results of the artifact processing, analysis, and research, and evaluation of the resources with respect to the California Register of Historical Resources and CEQA. The report and the Site Forms shall be submitted by the Applicant to the City, the South Central Coastal Information Center, and representatives of other appropriate or concerned agencies to signify the satisfactory completion of the Project and required mitigation measures.

Society for American Archaeology

Society for California Archaeology

Pacific Coast Archaeological Society

Kyle Garcia has over 21 years of experience in the archaeology and prehistory of southern California, and meets and exceeds the Secretary of Interior Standards qualificaitons for a prehistoric and historic archaeolgoist. During his career, he has authored or contributed to more than 800 projects subject to the requirements of the California Environmental Quality Act, the National Environmental Policy Act (NEPA), and regulations implementing Section 106 of the National Historic Preservation Act (Section 106 of the NHPA). He is well-versed in the archaeological resources of California's coastal, interior, and island settings. He is skilled in evaluation historic and prehistoric archaeological resources; agency and Native American consultation; pedestrian surveys, testing and evaluation excavations as well as archaeological and paleontological construction monitoring, and laboratory processing. During his tenure, he has authored or contributed to more than 400 technical reports and sections to support all levels of CEQA and NEPA documents. Kyle's portfolio of projects includes energy, water, and transportation infrastructure as well as residential, commercial, mixed-use, institutional, and urban redevelopment serving public and private sector clients. Kyle has conducted archaeological work throughout California and is a certified archaeologist and paleontologist in Riverside, Santa Barbara, and Orange counties.

Relevant Experience

Archaeological/Paleontological Monitoring. Kyle has managed more than 120 archaeological and/or paleontological construction monitoring projects in Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. He has a commanding knowledge of the procedures to implement in the event of an inadvertent discovery during construction, and how to navigate an applicant or lead agency though that process to ensure compliance with the project's mitigation measures or conditions of approval and to reach consensus on treatment of the discovery, especially if the discovery is Native American in origin.

Paleontology. In addition to his archaeological work, Kyle has been cross-trained in paleontological mitigation monitoring and assisted in the excavations of a Miocene whale fossil near Irvine and a new species of extinct tuna in Laguna Niguel, California. Kyle has also managed or conducted more than 200 paleontological assessments and 40 paleontological monitoring projects throughout southern California. He has assisted ESA's paleontologists with the preparation of paleontological reports in compliance with CEQA and local paleontological guidelines, including guidelines for the Society for Vertebrate Paleontology.

Project Experience

Archaeological and Paleontological Monitoring for the LAX Crossfield Taxiway Improvements, Los Angeles, CA. *Project Manager/Archaeological Monitor.* Between 2009-2010, Kyle performed archaeological and paleontological monitoring services during

earthmoving operations associated with the development of the Crossfield Taxiway project in accordance with established mitigation measures from the LAX Crossfield Taxiway Project (CFTP) EIR. PCR conducted archaeological and paleontological field visits, paleontological sediment sampling, and monitoring of earthmoving operations associated with the construction of CFTP until activities requiring monitoring ended. These operations included excavations for filter boxes, water pipeline installation, and the realignment of World Way West. In addition to monitoring, Kyle performed an archaeology and paleontology training session for appropriate project personnel involved with construction of the project. The training session focused on how to identify archaeological and paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. No resources were identified during the monitoring effort and these findings were summarized in a report that was submitted to Los Angeles World Airports. Kyle served as project director/manager, crew chief, monitor, and co-author of the final report.

University High School Beautification Project, Los Angeles, CA. *Archaeologist*. Kyle performed archaeological monitoring during earth-moving activities on the campus. The archaeological monitoring program ensured the protection of the village site and springs, and resulted in the discovery of remains of the original portico of the Administration Building which was destroyed by the Long Beach Earthquake of 1933.

Rancho Campana High School and Performing Arts Center Construction Monitoring, Camarillo, CA. *Project Manager*. Kyle led the archaeological and paleontological monitoring for the project as a part of ESA's on-call contract with Oxnard Union High School. He managed and coordinated the effort and prepared the associated report. ESA identified two archaeological resources (56-001512/CA-VEN-1512 and 56-001513/CA-VEN-1513H) during monitoring efforts and several paleontological localities during the monitoring and sediment screening activities and worked together with the Ventureño Chumash regarding treatment for the archaeological resources. Although several archaeological and paleontological resources were encountered during the construction monitoring efforts, the resources were treated in accordance with the mitigation measures and, as a result, the impacts to the resources were reduced to a less than significant level pursuant to the CEQA.

Citron (Stella Park) Townhome Development, Escondido, CA: *Project Manager.* Kyle served as the project manager responsible for overseeing the archaeological and Native American monitoring at the project in accordance with the Conditions of Approval. The project included the construction of a 65-unit townhome development on a vacant 2.29-acre site in the City of Escondido.

Archaeological Monitoring, Test Excavations, and Data Recovery Excavations During Construction of the Crystal Geyser Roxane Cabin Bar Ranch Water Bottling Facility, Olancha, Inyo County, CA. *Principal Investigator/Project Director/Manager/Crew Chief.* Kyle managed/directed archaeological construction monitoring services in accordance with the Cultural Resources mitigation measures in the Mitigation Monitoring and Reporting Program (MMRP) of the EIR for the project. During initial clearing and grubbing activities associated with the project, five prehistoric archeological resources were encountered. Kyle assisted the Applicant in developing a cultural resources treatment plan to address identify, evaluate, and mitigate project impacts to these resources to a less than significant level. Pursuant to the MMRP, this treatment plan was developed in coordination with ESA (Kyle), the County, CG Roxane, and the Lone-Pine Pauite-Shoshone Reservation. The treatment plan included measures for resource avoidance, additional survey, and the excavation of nine controlled excavation units and multiple mechanical backhoe trenches across the project site. More than a 1,000 artifacts have been recovered from this project. This project began in 2015 and continues today.

Fatima Clark

Archaeologist

EDUCATION

BA, Anthropology, California State University, Fullerton

17 YEARS' EXPERIENCE

CERTIFICATIONS/ REGISTRATION

Orange County Certified Archaeologist

HAZWOPER Certified

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima has 17 years of hands-on archaeological experience and is practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona, and Peru. Fatima has written California Environmental Quality Act (CEQA)-level technical reports, Environmental Impact Report (EIR) sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to California Department of Transportation (Caltrans) requirements. She is also experienced in performing archaeological testing, site recordation, laboratory analysis, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects, including mixed-use, residential, and energy, water, and road infrastructure projects. In addition to her archaeology background, Fatima has been cross-trained in conducting paleontological surveys and monitoring and has co-authored and managed associated reports.

Relevant Experience

Los Angeles Department of Water and Power, Fort Independence Travel Plaza Power Project, Independence (Owens Valley), CA. *Project Manager*. Fatima is in the process of preparing the cultural resources assessment in compliance with NEPA, Section 106, and CEQA. LADWP proposes to install 13 new temporary poles, one (1) anchor, and replace one (1) existing pole for a 34.5 kV line extension to provide power during construction of a new Travel Center at 141 N. Highway 395 in Fort Independence, Inyo County, California.

Landify ECT Corporation, Lower Sweetwater Park Project, City of Chula Vista, CA. *Project Manager*. Fatima has prepared a cultural resources assessment in compliance with CEQA. The Project proposes to redevelop the existing 21.3 acre Project Site with sports facilities within the City of Chula Vista.

County of Los Angeles, Department of Public Works, Whittier Boulevard Underground Utility Project, Los Angeles County, CA. *Project Co-Manager.* Fatima prepared the cultural resources assessment in support of a Class 2 Categorical Exemption. The project consists of the removal of utility poles and overhead lines, and the excavation for underground utility lines along Whittier Boulevard right-of-way. One historical resource, the early-to-mid 20th century Los Angeles Railway (or Yellow Cars), was identified in the project area as a result of archival research and geotechnical investigations. Fatima also managed the archaeological monitoring of construction activities and prepared the monitoring report.

City of Carson, Avocet Energy Storage System Project, City of Carson, CA. *Archaeologist.* Fatima managed the preparation of the archaeological and paleontological resources assessment reports in compliance with CEQA. The proposed Project includes the development of an approximately 200-megawatt battery energy storage system on a

6.96-acre site (BESS site), improvements and upgrades to the existing SCE Hinson Substation (SCE Hinson Substation site), the construction of a gen-tie line to connect to substation to the BESS site (proposed gen-tie line route), and other associated improvements. The proposed gen-tie route would cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach.

Storm Properties, Inc. Storm Hill Lane Project, Rolling Hills, CA. *Project Manager.* Fatima managed the day-to-day coordination for the monitoring and preparation of the archaeological/paleontological monitoring report pursuant to CEQA. As a result of the monitoring, several fossils were identified and these are currently being analyzed. The Project requires the reconstruction and expansion of Storm Hill Lane from the currently addressed and developed lot at 4 Storm Hill Lane to the three undeveloped lots.

Kiewit Infrastructure West Co., Ballona Wetlands Sequence 1 & 2 Restoration, Culver City, CA. *Project Manager.* Fatima managed the coordination for the monitoring with the archaeological and biological monitors, as well as coordination with the client. ESA's monitors were present during trenching and grading within portions of Ballona Creek in Culver City.

Southern California Association of Governments (SCAG) 2024 Connect SoCal Program PEIR, Los Angeles, Riverside, San Bernardino, Orange, Imperial and Ventura, CA. *Deputy Project Manager.* Fatima led the preparation of the PEIR Sections (cultural, paleontological, and tribal resources), as well as coordinated the Native American consultation efforts. Connect SoCal 2024 is a long-range comprehensive plan for the region's multi-modal transportation system. Preparing the Plan is one of SCAG's primary statutory responsibilities under federal and state law. A regional transportation plan (RTP) is the mechanism used in California by both metropolitan planning organizations and regional transportation planning agencies to conduct long-range (at least 20-year) planning in their regions. SCAG must adopt an RTP and update it every four years, or more frequently, if the region is to receive federal and state transportation dollars for public transit, streets/roads, and bicycle and pedestrian improvements.

Culver City, Crossings Campus (Culver City & City of Los Angeles, CA). *Deputy Project Manager.* Fatima led the preparation of the archaeological resources report and coordinated the preparation of the paleontological resources report. Fatima also led the preparation of the EIR sections (cultural, paleo, tribal). Culver Crossings Properties LLC, the Applicant, proposes to develop an office project (Project) on an approximately 4.46-acre site (Project Site) comprised of two properties: one 1.63-acre parcel is located in the City of Culver City (City), while the second 2.83-acre parcel is located in the City of Los Angeles.

County of San Diego Department of Parks and Recreation, Sweetwater Campground Geotech Boring Monitoring, San Diego County, CA. *Project Co- Manager.* Fatima co-managed the archaeological monitoring and coordinated with Red Tail for Native American monitoring and the County of San Diego Department of Parks and Recreation during Geotech borings for the Project.

Los Angeles County Department of Regional Planning, East San Gabriel Valley Area Plan (ESGVAP) Program EIR, Eastern Portion of Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The ESGVAP is part of the Los Angeles County 2035 General Plan, which will require an amendment. The ESGVAP is a long-range policy document developed to guide long-term growth of the area through development of a guiding vision, goals, policies, and implementation actions for the unincorporated communities in the East San Gabriel Valley. The ESGVAP's planning area consists of 24 unincorporated islands and communities and encompasses a total land area of 210.5 square miles.

Fatima Clark (Continued)

Archaeologist

Los Angeles County Department of Regional Planning, Los Angeles County 2045 Climate Action Plan (CAP) Update and PEIR, Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The County adopted the *Unincorporated Los Angeles County Community Climate Action Plan 2020* (2020 CCAP) in 2015 as a component of the Air Quality Element of the General Plan. The 2020 CCAP aligned with General Plan goals, policies, and programs, as well as several other existing programs in Los Angeles County. The 2020 CCAP was the first attempt to set greenhouse gas (GHG) emissions reduction goals in Los Angeles County. Although the targets for the 2020 CCAP were ultimately not fully met, the plan provided a road map for implementing the County's GHG reduction measures. The 2020 CCAP actions were implemented through County Code amendments and programs related to climate action. The Draft 2045 CAP builds on previous work and defines new reduction targets beyond the year 2020.

Eastern Municipal Water District, San Jacinto Valley Groundwater Treatment Facility Project, San Jacinto, CA. *Archaeologist.* Fatima assisted with the Phase II archaeological testing for the Project. The site was the location of the region's first trading post/general store, established ca. 1868. It later became the Palma Hotel, constructed by Henry T. Hewitt. The hotel was also used as a Riverside County hospital before it was destroyed in an earthquake in 1899.

San Manuel Band of Mission Indians, Sand Canyon Flood Control Permitting Project, San Bernardino County, CA. *Archaeologist.* Fatima was in charge of preparing the cultural resources assessment in compliance with Section 106. Fatima also conducted the pedestrian survey. The San Manuel Band of Mission Indians is considering taking over operation and maintenance of a concrete-lined channel and debris basin (known as Sand Creek) along Sand Canyon, within unincorporated San Bernardino County.

City of Long Beach, 615 E. Ocean Boulevard Project, Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in support of an addendum to the Certified City of Long Beach Downtown Plan Program Environmental Impact Report. The Project would develop a 21-story high-rise residential building on an approximately 0.4-acre site located at 615 East Ocean Boulevard within the City's limits (Project site).

City of Long Beach Department of Development Services, Planning Bureau, 7250 Carson Street Project, City of Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in compliance with CEQA. The Project Applicant proposes to subdivide a 20-acre parcel into two parcels (Parcel A and Parcel B). Other than the approval of the tentative parcel map to subdivide the existing parcel, no proposed improvements or development for Parcel A are included as part of the Project. Development of Parcel B (Project Site) would include the development of two fast-food restaurants and parking spaces.

City of Diamond Bar, Crooked Creek Residential Subdivision Project, Los Angeles County, CA. *Archaeologist.* Fatima conducted the archaeological and paleontological resources assessments in compliance with CEQA and the City of Diamond Bar General Plan Policy RC-P-42. The studies included records searches, pedestrian survey, and subsurface sensitivity assessments. No cultural resources were identified in the project site, but the area was found to have the potential to contain subsurface prehistoric archaeological resources and paleontological resources. The project consisted of the development of seven single-family residences and associated infrastructure on approximately 2.5 acres. The project required approval of a Vesting Tentative Tract Map, Conditional Use Permit, Tree Permit, and Development Review.

BLM California CRUP # CA-21-27

Salpi Bocchieriyan is a cultural resources specialist with over 8 years of experience working on archaeological surveys, data recovery, and monitoring projects. Salpi is experienced at planning fieldwork and leading field teams in survey, data collection, and resource recordation. She regularly prepares site forms, conducts presence/absence and evaluation testing efforts and data recovery excavation, and prepares technical reports documenting those efforts and presenting them to clients. Salpi has experience with energy and water infrastructure and other development projects across southern California, western Arizona, southern Nevada, and Texas and is an expert in identifying and documenting resources in these geographies. She is familiar with the National Historic Preservation Act Section 106 (Section 106), National Environmental Protection Act (NEPA), and California Environmental Quality Act (CEQA) cultural resource compliance processes and has worked closely with federal and state agencies, private developers, tribes, and other stakeholders in implementing cultural resources requirements.

Relevant Experience

California State Coastal Conservancy/The Nature Conservancy/City of Oxnard, Ormond Beach Restoration and Public Access Plan, Ventura County, CA. *Senior Cultural Resources Specialist. (July 2024- Present)* ESA is preparing an archaeological resources assessment for the Ormond Beach Restoration and Public Access Plan in compliance with Section 106. The project involves a restoration and access plan that balances habitat restoration and protection of sensitive plant and animal species with improved and increased public access. The cultural resources component includes supporting the California State Coastal Conservancy, The Nature Conservancy, and the City of Oxnard with tribal outreach and consultation. The project is statutorily exempt from CEQA. Salpi drafted outreach letters, planned and led pedestrian surveys, and assisted with archival research. Salpi served as a primary report author.

Rancon Group, San Pedro Farm Residential Development Project Addendum, Riverside County, CA. *Project Manager. (March 2024- August 2024)* ESA prepared an archaeological resources assessment addendum in compliance with CEQA. The project involved archival research as well as pedestrian survey, coordination with Pechanga and Soboba throughout the project, and coordination with the County of Riverside regarding identified resources. Salpi served as the Project Manager, surveyor, and report author for this project.

Bureau of Land Management (Carson City District Office), Pine Nut Range Fuels Treatments, Carson City, NV. *Senior Cultural Resources Specialist (August 2024- January 2025).* ESA prepared a Class III Cultural Inventory for the Pine Nut Range Fuels Treatments Project in compliance with Section 106. The project involved intensive pedestrian survey and a desktop study of archival materials and maps. Salpi planned and led a portion of the

survey efforts, documented and evaluated over 30 sites and coordinated and drafted much of the final report.

Delaney Colorado River Transmission LLC, Ten West Link Transmission Line Project, Riverside County, CA and La Paz County, AZ. *Senior Cultural Resources Specialist (November 2022 – May 2024).* ESA provided archaeological monitoring during construction as well as perform archaeological and historic architectural resource documentation and evaluation in compliance with Section 106, NEPA, and CEQA requirements. The project involves the construction of 125 miles of high voltage electrical transmission line from Tonopah, AZ, to Blythe, CA. The corridor spans numerous federal, state, and private jurisdictions with varied cultural resource requirements necessitating sophisticated tracking and implementation of numerous agency jurisdiction–specific mitigations. The project passes through many Abandoned Mine Land areas and ESA's team has identified, documented, and evaluated a wide array of historic mining and mining related features such as prospects, cairns and claim markers, roads and trails, mine openings, can and other refuse scatters, and other mining related infrastructure. The project footprint also encompasses culturally sensitive areas important to multiple tribes including the Colorado River Indian Tribes (CRIT). ESA's team is working alongside the construction contractor, tribal monitors from multiple tribes, and with the BLM in two states. Salpi serves as the Field Lead and Deputy Project Manager for the Project where she co-directs a crew of up to 20 archaeogists and coordinates with up to 10 CRIT tribal monitors.

City of Carson, Avocet Battery Energy Storage System Project, Carson, CA. *Senior Cultural Resources Specialist (September 2023 – December 2023).* ESA prepared the Initial Study to support a Mitigated Negative Declaration for the Avocet Energy Storage Project in Carson, California. This project aims to establish a 200-megawatt battery energy storage system on a nearly 7-acre site, designed to efficiently capture and manage renewable energy in a cost-effective and commercially viable manner. By storing energy from the grid and discharging it when needed, the project will help California achieve its greenhouse gas emission reduction targets for 2020 and 2030. ESA prepared a comprehensive suite of technical studies, including assessments of air quality, cultural resources, greenhouse gas emissions, noise, energy, and addressed community fire concerns. Salpi authored the archaeological testing plan.

Related Bristol Specific Plan Project, City of Santa Ana, CA. *Senior Cultural Resources Specialist (October 2022 – January 2023).* Environmental Science Associates (ESA) was retained by RCR Bristol, LLC to conduct an archaeological resources inventory for Related Bristol Specific Plan (Project) pursuant to the California Environmental Quality Act (CEQA). The proposed Project would redevelop a 41.1-acre Project Site in Santa Ana for a walkable mixed-use neighborhood of residential, retail, hotel and senior living uses under a Specific Plan entitlement process in the City of Santa Ana. Salpi served as co-author and surveyor for cultural resources inventory.

Newport Center Project, Orange County, CA. *Senior Cultural Resources Specialist (October 2021).* Environmental Science Associates (ESA) has been retained by the Lyon Living Development Company to prepare an EIR addendum by providing historic, cultural, and biological resources technical evaluations, as well as California Environmental Quality Act (CEQA) consultation services. Salpi completed the records search requests for this project.

Norwalk Bicycle Master Plan Project, City of Norwalk, CA. *Senior Cultural Resources Specialist (October 2021 – December 2021).* Environmental Science Associates (ESA) has been retained by Kittelson & Associates to completed a streamlined Initial Study (completion of the CEQA Environmental Checklist Form), leading to a Negative Declaration. Salpi prepared the record search requests and completed the record search result portion of the report.

Re: 6201 Bristol Parkway Project, Los Angeles County

To Whom It May Concern:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: melina.carlos@nahc.ca.gov

Sincerely,

Melina Carlos

Newport Beach, CA 92660

Subject: GEOTECHNICAL INVESTIGATION
PROPOSED MULTI-FAMILY RESIDENTIAL DEVELOPMENT
6201 BRISTOL PARKWAY
CULVER CITY, CALIFORNIA

Dear Mr. Johnson:

In accordance with your authorization of our proposal dated July 22, 2024, we have performed a geotechnical investigation for proposed multi-family residential development located at 6201 Bristol Parkway in the City of Culver City, California. The accompanying report presents the findings of our study and our conclusions and recommendations pertaining to the geotechnical aspects of proposed design and construction. Based on the results of our investigation, it is our opinion that the site can be developed as proposed, provided the recommendations in this report are followed and implemented during design and construction.

If you have any questions regarding this report, or if we may be of further service, please contact the undersigned.

Very truly yours,

GEOCON WEST, INC.

GEOTECHNICAL INVESTIGATION

1. PURPOSE AND SCOPE

This report presents the results of a geotechnical investigation for the proposed multi-family residential development located at 6201 Bristol Parkway in the City of Culver City, California (see Vicinity Map, Figure 1). The purpose of the investigation was to evaluate subsurface soil and geologic conditions underlying the site and, based on conditions encountered, to provide conclusions and recommendations pertaining to the geotechnical aspects of proposed design and construction.

The scope of this investigation included a site reconnaissance, field exploration, laboratory testing, engineering analysis, and the preparation of this report. The site was explored on July 29 and 30, 2024, by excavating nine 8-inch-diameter borings using a truck-mounted hollow-stem auger drilling machine to depths ranging between approximately 10½ and 60½ feet beneath the ground surface. Supplemental site exploration was performed on January 14 and 15, 2025, by excavating eight 8-inch diameter borings using a truck-mounted hollow-stem auger drilling machine to depths between approximately 8 and 61 feet below the ground surface. The approximate locations of the exploratory borings are depicted on the Site Plan (see Figure 2A). A detailed discussion of the field investigation, including boring logs, is presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to determine pertinent physical and chemical soil properties. Appendix B presents a summary of the laboratory test results.

The recommendations presented herein are based on analysis of the data obtained during the investigation and our experience with similar soil and geologic conditions. References reviewed to prepare this report are provided in the *List of References* section.

If project details vary significantly from those described herein, Geocon should be contacted to determine the necessity for review and possible revision of this report.

2. SITE AND PROJECT DESCRIPTION

The subject site is located at 6201 Bristol Parkway in the City of Culver City, California. The site is currently occupied by a shopping plaza with two single-story commercial structures and associated asphalt parking lots. The site is bounded by Green Valley Circle to the north, hotels with associated parking lots to the west and south, and Bristol Parkway to the east. The site is comprised of two terraced pads that gently slope towards to the west with approximately 39 feet of total relief across the site. A 5- to 10-foot-high slope separates the upper pad in the northeast corner from the lower pad on the west. A 15- to 20-foot-high slope descends from the subject site to the adjacent property to the west. Surface water drainage at the site appears to be by sheet flow along the existing ground contours to the city streets. Vegetation consists of grass lawn and trees located in planter areas.

Based on the information provided by the Client, it is our understanding that the proposed development consists of 4 to 8 levels of multi-family residential housing units with ground floor commercial retail wrapped around an 8-story parking structure. A rooftop pool, gym, and amenity area will also be constructed. Due to the gently sloping nature of the site, it is anticipated that the proposed structure will be tucked into the existing site grade. Based on the plans provided to us, it is anticipated that the lowest level will be constructed on the west side at an approximate elevation of 46 feet above mean sea level (MSL), which is approximately 5 to 12 feet below the existing site grade and up to 20 feet below proposed site grade. It is our understanding the finished grade will be approximately 51½ feet MSL. The northeastern portion of the site will be constructed near existing site grade at approximately the same elevation as Green Valley Circle and Bristol Parkway. The proposed development is shown on the Site Plan (see Figure 2A). The proposed development with assumed artificial fill depth contours is shown in Figure 2B.

Based on the preliminary nature of the design at this time, wall and column loads were not available. It is anticipated that column loads for the proposed residential structures will be up to 700 kips and wall loads will be up to 7 kips per linear foot. It is anticipated that column loads for the proposed parking structure will be up to 1050 kips and wall loads will be up to 10 kips per linear foot.

Once the design phase and foundation loading configuration proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Any changes in the design, location or elevation of any structure, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

3. GEOLOGIC SETTING

The site is located in the western region of the Los Angeles Basin. The Los Angeles Basin is a coastal plain between the Santa Monica Mountains to the north, the Elysian Hills and Repetto Hills to the northeast, the Puente Hills and Whittier Fault to the east, the Palos Verdes Peninsula and Pacific Ocean on the west and south, and the Santa Ana Mountains and San Joaquin Hills on the southeast. Regionally, the site is located within the Peninsular Ranges geomorphic province, characterized by northwest-trending physiographic and geologic structures such as the nearby Whittier Fault and Newport-Inglewood Fault Zone.

4. SOIL AND GEOLOGIC CONDITIONS

Based on published geologic maps of the area, the site is underlain by younger Holocene age alluvium and older alluvium of Pleistocene age that consists of grey to light brown pebble-gravel, sand, and silt-clay (Dibblee 2007). Detailed stratigraphic profiles of the materials encountered at the site are provided on the boring logs in Appendix A.

4.1 Artificial Fill

The depth of artificial fill encountered varied between approximately 3 and 17½ feet below the existing ground surface. The artificial fill generally consists of brown to dark brown silt to silty sand with clayey sand to sandy clay. The fill soil can be characterized as slightly moist and loose to dense. The fill is likely the result of past grading or construction activities at the site. Deeper fill may exist between excavations and in other portions of the site that were not directly explored.

4.2 Younger Alluvium

Younger alluvium was encountered beneath the artificial fill to depths up to 32½ feet below grade. The younger alluvium consists of brown to dark brown silty and poorly graded sands, silts, and clays, which are slightly moist and generally medium dense or firm to stiff.

4.3 Older Alluvium

Pleistocene age alluvial fan deposits were encountered beneath the fill and younger alluvium to the maximum depth explored of 61 feet below grade. The older alluvium generally consists of thickly bedded poorly graded sand, silty sand, silt, and clay, which is predominantly brown to yellow brown, with localized greyish brown fine grained layers. These soils can be characterized as slightly moist to moist, medium dense to very dense or stiff to hard.

5. GROUNDWATER

Review of the Seismic Hazard Zone Report for the Venice Quadrangle (California Division of Mines and Geology [CDMG], 1998) indicates that the historically highest groundwater level in the area is approximately 30 to 40 feet beneath the existing ground surface. Groundwater information presented in this document is generated from data collected in the early 1900's to the late 1990s.

Groundwater was encountered in our borings at depths of approximately 54, 60, 51, and 46½ feet beneath the ground surface in borings B3, B5A, B6A, and B7 respectively. Based on the depth of groundwater in our borings, the reported historic high groundwater levels in the immediate area (CDMG, 1998), and the depth of proposed construction, static groundwater is neither expected to be encountered during construction, nor have a detrimental effect on the project. However, it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed (especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall), groundwater seepage levels encountered during construction may be actually higher than those encountered during our investigation. In addition, recent requirements for storm water infiltration could result in shallower seepage conditions in the region. Proper surface drainage of irrigation and precipitation will be critical for the future performance of the project. Recommendations for drainage are provided in the *Surface Drainage* section of this report (see Section 7.26).

6. GEOLOGIC HAZARDS

6.1 Surface Fault Rupture

The numerous faults in Southern California include Holocene-active, pre-Holocene, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS, formerly known as CDMG) for the Alquist-Priolo Earthquake Fault Zone Program (CGS, 2018). By definition, a Holocene-active fault is one that has had surface displacement within Holocene time (about the last 11,700 years). A pre-Holocene fault has demonstrated surface displacement during Quaternary time (approximately the last 1.6 million years) but has had no known Holocene movement. Faults that have not moved in the last 1.6 million years are considered inactive.

The site is not within a state-designated Alquist-Priolo Earthquake Fault Zone (CGS, 2024a; 2024b) for surface fault rupture hazards. No Holocene-active or pre-Holocene faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low. However, the site is located in the seismically active Southern California region and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The faults in the vicinity of the site are shown in Figure 3, Regional Fault Map.

The closest trace of a Holocene-active fault to the site is the Newport-Inglewood fault located approximately 1.6 miles to the east (Jennings & Bryant, 2010). Other nearby active faults are the Santa Monica Fault, Hollywood Fault, Raymond Fault, Palos Verdes Fault, and the Whittier Fault located 5 miles northwest, 7 miles northeast, 15 miles northeast, 16 miles south, and 23 miles east, respectively. The active San Andreas Fault Zone is located approximately 41 miles northeast of the site.

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Basin at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987, Mw 5.9 Whittier Narrows earthquake and the January 17, 1994, Mw 6.7 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. These thrust faults and others in the greater Los Angeles area are not exposed at the surface and do not present a potential surface fault rupture hazard at the site; however, these deep thrust faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the site.

6.2 Seismicity

As with all of Southern California, the site has experienced historic earthquakes from various regional faults. The seismicity of the region surrounding the site was formulated based on research of an electronic database of earthquake data. The epicenters of recorded earthquakes with magnitudes equal to or greater than 5.0 in the site vicinity are depicted on Figure 4, Regional Seismicity Map. A partial list of moderate to major magnitude earthquakes that have occurred in the Southern California area within the last 100 years is included in the following table.

LIST OF HISTORIC EARTHQUAKES

Earthquake (Oldest to Youngest)	Date of Earthquake	Magnitude	Distance to Epicenter (Miles)	Direction to Epicenter
Long Beach	March 10, 1933	6.4	35	SE
Tehachapi	July 21, 1952	7.5	79	NW
San Fernando	February 9, 1971	6.6	30	N
Whittier Narrows	October 1, 1987	5.9	19	ENE
Sierra Madre	June 28, 1991	5.8	29	NE
Landers	June 28, 1992	7.3	113	E
Big Bear	June 28, 1992	6.4	91	E
Northridge	January 17, 1994	6.7	18	NW
Hector Mine	October 16, 1999	7.1	128	ENE
Ridgecrest China Lake Fault	July 5, 2019	7.1	131	NNE

The site could be subjected to strong ground shaking in the event of an earthquake. However, this hazard is common in Southern California and the effects of ground shaking can be minimized if the proposed structures are designed and constructed in conformance with current building codes and engineering practices.

6.3 Seismic Design Criteria

The following table summarizes the site-specific design criteria obtained from the 2022 California Building Code (CBC; Based on the 2021 International Building Code [IBC] and ASCE 7-16), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the online application U.S. Seismic Design Maps, provided by the Structural Engineers Association of California (SEAOC). The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.2.2 of the 2022 CBC and Table 20.3-1 of ASCE 7-16. The values presented on the following page are for the risk-targeted maximum considered earthquake (MCE_R).

2022 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2022 CBC Reference
Site Class	D	Section 1613.2.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	1.893g	Figure 1613.2.1(1)
MCE_R Ground Motion Spectral Response Acceleration – Class B (1 sec), S_1	0.667g	Figure 1613.2.1(3)
Site Coefficient, F_A	1	Table 1613.2.3(1)
Site Coefficient, F_V	1.7	Table 1613.2.3(2)
Site Class Modified MCE_R Spectral Response Acceleration (short), S_{MS}	1.893g	Section 1613.2.3 (Eqn 16-20)
Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	1.133g*	Section 1613.2.3 (Eqn 16-21)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.262g	Section 1613.2.4 (Eqn 16-22)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.755g*	Section 1613.2.4 (Eqn 16-23)

*Per Supplement 3 of ASCE 7-16, a ground motion hazard analysis (GMHA) shall be performed for projects on Site Class "D" sites with 1-second spectral acceleration (S_1) greater than or equal to 0.2g, which is true for this site. However, Supplement 3 of ASCE 7-16 provides an exception stating that that the GMHA may be waived provided that the parameter S_{M1} is increased by 50% for all applications of S_{M1}. The values for parameters S_{M1} and S_{D1} presented above have not been increased in accordance with Supplement 3 of ASCE 7-16.

The table on the following page presents the mapped maximum considered geometric mean (MCE_G) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-16.

ASCE 7-16 PEAK GROUND ACCELERATION

Parameter	Value	ASCE 7-16 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.81g	Figure 22-9
Site Coefficient, F_{PGA}	1.1	Table 11.8-1
Site Class Modified MCEG Peak Ground Acceleration, PGA_M	0.891g	Section 11.8.3 (Eqn 11.8-1)

Deaggregation of the Maximum Considered Earthquake (MCE) peak ground acceleration was performed using the USGS online Unified Hazard Tool, 2014 Conterminous U.S. Dynamic edition (v4.2.0). The result of the deaggregation analysis indicates that the mean earthquake contributing to the MCE peak ground acceleration is characterized as a 6.68 magnitude event occurring at a hypocentral distance of 8.65 kilometers from the site.

Deaggregation was also performed for the Design Earthquake (DE) peak ground acceleration, and the result of the analysis indicates that the mean earthquake contributing to the DE peak ground acceleration is characterized as a 6.6 magnitude occurring at a hypocentral distance of 12.45 kilometers from the site.

Conformance to the criteria in the above tables for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

6.4 Liquefaction Potential

Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations.

The current standard of practice, as outlined in the “Recommended Procedures for Implementation of DMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California” and “Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California” requires liquefaction analysis to a depth of 50 feet below the lowest portion of the proposed structure. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine- to medium-grained, primarily sandy soil. In addition to the requisite soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to induce liquefaction.

A review of the State of California Seismic Hazard Zone Map for the Venice Quadrangle indicates that the site is located within an area designated as having a potential for liquefaction.

Liquefaction analysis of the soils underlying the site was performed using the 1996 NCEER method of analysis with the updates by Youd et al. (2001). This semi-empirical method is based on a correlation between values of Standard Penetration Test (SPT) resistance and field performance data. In order to supplement the SPT blow count data, select California Modified Sampler blow count data were converted to equivalent SPT blow counts based on a correlation factor of 0.55 (Rogers, 2006).

The liquefaction analysis was performed for a Design Earthquake level by using a high groundwater table of 30 feet below the ground surface, a magnitude 6.60 earthquake, and a peak horizontal acceleration of 0.594g (⅔PGA_M). The enclosed liquefaction analyses, included herein for borings B3 and B7, indicate that the alluvium below the historic high groundwater level would be susceptible to up to approximately 0.2 inch of liquefaction settlement during a Design Earthquake ground motion (see enclosed calculation sheets, Figures 5 through 8).

It is our understanding that the intent of the Building Code is to maintain "Life Safety" during Maximum Considered Earthquake level events. Therefore, additional analysis was performed to evaluate the potential for liquefaction during a MCE event. The structural engineer should evaluate the proposed structure for the anticipated MCE liquefaction induced settlements and verify that anticipated deformations would not cause the foundation system to lose the ability to support the gravity loads and/or cause collapse of the structure.

The liquefaction analysis was also performed for Maximum Considered Earthquake levels by using a historic high groundwater table of 30 feet below the ground surface, a magnitude 6.68 earthquake, and a peak horizontal acceleration of 0.891g (PGA_M). The enclosed liquefaction analyses, included herein for borings B3 and B7, indicate that the alluvium below the historic high groundwater level would be susceptible to up to approximately 0.3 inch of liquefaction settlement during Maximum Considered Earthquake ground motion, (see enclosed calculation sheets, Figures 9 through 12).

6.5 Slope Stability

The topography at the site is relatively level and the topography in the immediate site vicinity slopes very gently to the south-southwest. The site is not within an area identified as having a potential for slope stability hazards or seismic slope instability hazards (CDMG, 1999). There are no known landslides near the site, nor is the site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely affect the proposed development is considered low.

6.6 Earthquake-Induced Flooding

Earthquake-induced flooding is inundation caused by failure of dams or other water-retaining structures due to earthquakes. A review of the California Department of Water Resources, Dam Breach inundation Map Web Publisher indicates that the site is not located within the inundation boundaries of upgradient dams, rivers, creeks, or reservoirs. The probability of earthquake-induced flooding is considered very low.

6.7 Tsunamis, Seiches, and Flooding

The site is located approximately 3¾ miles from the Pacific Ocean at an average elevation of approximately 58 feet above mean sea level. Due to the site elevation, tsunamis are not considered a significant hazard at the site.

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Therefore, flooding resulting from a seismically induced seiche is considered unlikely.

The site is not within an area of minimal flooding (Zone X) as defined by the Federal Emergency Management Agency (FEMA, 2024; LADPW, 2024).

6.8 Oil Fields & Methane Potential

Based on a review of the California Geologic Energy Management Division (CalGEM) Well Finder Website, the site is not located within an oil field. However, a “plugged” oil & gas well is located approximately 1,000 feet north of the site. The well record indicates this well was abandoned and closed in 1926 (CalGEM, 2024). Due to the voluntary nature of record reporting by the oil well drilling companies, wells may be improperly located or not shown on the location map and undocumented wells could be encountered during construction. Any wells encountered during construction will need to be properly abandoned in accordance with the current requirements of the CalGEM.

Since the site is not located within the boundaries of a known oil field, the potential for the presence of methane or other volatile gases at the site is considered low. However, should it be determined that a methane study is required for the proposed development it is recommended that a qualified methane consultant be retained to perform the study and provide mitigation measures as necessary.

6.9 Subsidence

Subsidence occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. The site is not located within an area of known ground subsidence (CDWR, 2024). Subsidence related to groundwater pumping commonly occurs in such small magnitudes and over such large areas that it is generally imperceptible at an individual locality. Accordingly, it affects only regionally extensive structures sensitive to slight elevation changes, such as canals and pipelines. The rate of elevation change is usually uniform over a large enough area that it does not result in differential settlements that would cause damage to individual buildings. Therefore, the potential for subsidence to adversely impact the proposed project is considered low.

7. CONCLUSIONS AND RECOMMENDATIONS

7.1 General

7.1.1 It is our opinion that neither soil nor geologic conditions were encountered during the investigation that would preclude the construction of the proposed development provided the recommendations presented herein are followed and implemented during design and construction.

7.1.2 In general, up to 6½ feet of existing artificial fill was encountered during the site investigation. Locally, up to 7½ feet of existing artificial fill was encountered at the location of boring B6, and within the southwest corner of the site, existing artificial fill was encountered at depths up to 15 feet at the location of boring B14, 16½ feet at the location of boring B13, 17 feet at the location of boring B10, and 17½ feet at the location of boring B3. The existing fill is believed to be the result of past grading and/or construction activities at the site. Deeper fill may exist in other areas of the site that were not directly explored. It is our opinion that the existing fill, in its present condition, is not suitable for direct support of the proposed foundations and slabs. The existing fill and site soils are suitable for re-use as engineered fill provided the recommendations in the *Grading* section of this report are followed (see Section 7.4).

7.1.3 The enclosed liquefaction analyses indicate that the alluviums underlying the site could be susceptible to approximately 0.2 inch of total settlement as a result of the Design Earthquake peak ground acceleration (PGA_M). The resulting differential settlement at the ground surface is anticipated to be less than 0.1 inch over a distance of 30 feet. The foundation recommendations presented herein are intended to reduce the effects of settlement on proposed improvements.

7.1.4 Excavations for subterranean levels are anticipated to penetrate through the existing artificial fill and expose undisturbed alluvium throughout the excavation bottom.

7.1.5 Based on these considerations, the proposed structures may be supported on a conventional foundation system. At the subterranean levels, the conventional foundation system may derive support in competent alluvium generally found at and below a depth of 6 feet. For on-grade portions of the structure, the conventional foundation system may derive support in newly placed engineered fill. The transition area for the on-grade portion to the subterranean portion of the structure should be more heavily reinforced to resist differential settlement stresses which could cause cracking. All foundation excavations must be observed and approved in writing by the Geotechnical Engineer prior to placement of steel or concrete. Recommendations for the design of a conventional foundation system are provided in Section 7.5.

7.1.6 As a minimum, it is recommended that the upper 6 feet of existing earth materials within the proposed on-grade building footprint areas be excavated and properly compacted for foundation and slab support. Deeper excavations should be conducted as necessary to remove existing artificial fill or soft soils at the direction of the Geotechnical Engineer (a representative of Geocon). The excavation should extend laterally a minimum distance of 3 feet beyond the building footprint area, including building appurtenances, or for a distance equal to the depth of fill below the foundation, whichever is greater. The limits of existing fill and/or soft soil removal will be verified by the Geocon representative during site grading activities. Recommendations for earthwork are provided in the *Grading* section of this report (see Section 7.4).

7.1.7 The contractor should be aware that 6½, 7½, 15, 16½, 17, and 17½ feet of existing artificial fill was encountered at the locations of borings B12, B6, B14, B13, B10, and B3, respectively; therefore, deeper excavations will be required to reach competent alluvium.

7.1.8 Where excavation and grading cannot be accomplished due to property line constraints, conventional foundations should be deepened as necessary to derive support in competent alluvium generally found at and below a depth of 6 feet.

7.1.9 Due to the presence of deep artificial fill within the southwest corner of the site (at the locations of borings B3, B10, B13, and B14), if complete excavation and proper compaction of the existing fill is not performed then the proposed structure may be supported on drilled, cast-in-place friction piles deriving support in competent alluvium. Recommendations for the design and construction of a deepened foundation system are provided in Sections 7.6 and 7.7 of this report.

7.1.10 It is the intent of the Geotechnical Engineer to allow foundations to derive support in both competent alluvium and newly placed engineered fill for this project, if project conditions warrant such an occurrence. All foundation excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing steel or concrete.

7.1.11 All excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon). Prior to placing any fill or foundation construction, the excavation bottom must be proof-rolled with heavy equipment in the presence of the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.1.12 Where miscellaneous subterranean improvements are planned (elevator pits and swimming pool/spa), these structures may be supported on a conventional foundation system deriving support in competent alluvium generally found at and below a depth of 6 feet. If necessary, these miscellaneous improvements may derive support in a combination of newly placed engineered fill and competent alluvium. It is the intent of the Geotechnical Engineer to allow miscellaneous subterranean structures to derive support in both engineered fill and competent alluvium if project conditions warrant such an occurrence. Recommendations for swimming pool and elevator pit design are provided in Sections 7.15 and 7.16 of this report, respectively.

7.1.13 Excavations up to 15 feet in vertical height are anticipated for construction of the subterranean levels, including foundation depths. Due to the depth of the excavation and the proximity to the property lines, city streets and adjacent offsite structures, excavation of the proposed subterranean level will likely require sloping and shoring measures in order to provide a stable excavation. Where shoring is required, it is recommended that a soldier pile shoring system be utilized. In addition, where the proposed excavation will be deeper than and adjacent to an offsite structure, the proposed shoring should be designed to resist the surcharge imposed by the adjacent offsite structure. Recommendations for shoring are provided in Section 7.19 of this report.

7.1.14 Due to the nature of the proposed design and intent for a subterranean level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method which would provide protection to subterranean walls, floor slabs and foundations.

7.1.15 Foundations for small outlying structures, such as block walls up to 6 feet high, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations bearing on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and proper compaction cannot be performed, foundations may derive support directly in undisturbed alluvium and should be deepened as necessary to maintain a minimum of 12-inch embedment into recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soft soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved in writing by a Geocon representative.

7.1.16 Where new paving is to be placed, it is recommended that all existing fill and soft soils be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing fill and soft soils in the area of new paving is not required; however, paving constructed over existing uncertified fill or unsuitable soil may experience increased settlement and/or cracking and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of subgrade soil should be scarified and properly compacted for paving support. Paving recommendations are provided in the *Preliminary Pavement Recommendations* section of this report (see Section 7.11).

7.1.17 Based on the results of the percolation testing, a stormwater infiltration system is considered feasible for this project. Recommendations for infiltration are provided in the *Stormwater Infiltration* section of this report (see Section 7.25).

7.1.18 Once the design and foundation loading configuration for the proposed structures proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Based on the final foundation loading configurations, the potential for settlement should be re-evaluated by this office.

7.1.19 Any changes in the design, location or elevation, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

7.1.20 The most recent ASTM standards apply to this project and must be utilized, even if older ASTM standards are indicated in this report.

7.2 Soil and Excavation Characteristics

7.2.1 The in-situ soils can be excavated with moderate effort using conventional excavation equipment. Caving should be anticipated in unshored excavations, especially where granular soils are encountered.

7.2.2 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable OSHA rules and regulations to maintain safety and maintain the stability of existing adjacent improvements.

7.2.3 All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load. Penetrations below this 1:1 projection will require special excavation measures such as sloping or shoring. Excavation recommendations are provided in the *Temporary Excavations* section of this report (see Section 7.18).

7.2.4 The upper five feet of existing site soils encountered during the investigation are considered to have a “very low” (EI = 0) to “low” (EI = 26) expansive potential and are classified as “non expansive” to “expansive” in accordance with the 2022 California Building Code (CBC) Section 1803.5.3. The recommendations presented herein assume that foundations and slabs will derive support in the “low” expansive materials.

7.3 Minimum Resistivity, pH, and Water-Soluble Sulfate

7.3.1 Potential of Hydrogen (pH) and resistivity testing as well as chloride content testing were performed on representative samples of soil to generally evaluate the corrosion potential to surface utilities. The tests were performed in accordance with California Test Method Nos. 643 and 422 and indicate that the soils are considered "moderately corrosive" to "corrosive" with respect to corrosion of buried ferrous metals on site. The results are presented in Appendix B (Figure B44) and should be considered for design of underground structures. Due to the corrosive potential of the soils, it is recommended that PVC, ABS or other approved plastic piping be utilized in lieu of cast-iron when in direct contact with the site soils.

7.3.2 Laboratory tests were performed on representative samples of the on-site soil to measure the percentage of water-soluble sulfate content. Results from the laboratory water-soluble sulfate tests are presented in Appendix B (Figure B44) and indicate that the on-site soil possess a sulfate exposure class of "S0" to concrete structures as defined by 2022 CBC Section 1904 and ACI 318-19 Chapter 19.

7.3.3 Geocon West, Inc. does not practice in the field of corrosion engineering and mitigation. If corrosion sensitive improvements are planned, it is recommended that a corrosion engineer be retained to evaluate corrosion test results and incorporate the necessary precautions to avoid premature corrosion of buried metal pipes and concrete structures in direct contact with the soils.

7.4 Grading

7.4.1 A preconstruction conference should be held at the site prior to the beginning of excavation operations with the owner, contractor, civil engineer, geotechnical engineer, and building official in attendance. Special soil handling requirements can be discussed at that time.

7.4.2 Earthwork should be observed, and compacted fill tested by representatives of Geocon West, Inc. The existing fill and alluvium encountered during exploration is suitable for re-use as an engineered fill, provided any encountered oversize material (greater than 6 inches) and any encountered deleterious debris is removed.

7.4.3 Grading should commence with the removal of all existing improvements from the area to be graded. Deleterious debris such as wood and root structures should be exported from the site and should not be mixed with the fill soils. Asphalt and concrete should not be mixed with the fill soils unless approved by the Geotechnical Engineer. All existing underground improvements planned for removal should be completely excavated and the resulting depressions properly backfilled in accordance with the procedures described herein. Once a clean excavation bottom has been established it must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.4.4 The proposed structures may be supported on conventional foundation systems. At the subterranean levels, the conventional foundation system may derive support in competent alluvium generally found at and below a depth of 6 feet. For on-grade portions of the structure, the conventional foundation system may derive support in either newly placed engineered fill or competent alluvium generally found at and below a depth of 6 feet.

7.4.5 As a minimum, it is recommended that the upper 6 feet of existing earth materials in the proposed on-grade building footprint areas be excavated and properly compacted for foundation and slab support. Deeper excavations should be conducted as necessary to remove deeper artificial fill or soft soil at the direction of the Geotechnical Engineer (a representative of Geocon). The excavation should extend laterally a minimum distance of 3 feet beyond the building footprint area, including building appurtenances, or for a distance equal to the depth of fill below the foundation, whichever is greater. The limits of existing fill and/or soft soil removal will be verified by the Geocon representative during site grading activities.

7.4.6 The contractor should be aware that 6½, 7½, 15, 16½, 17, and 17½ feet of existing artificial fill was encountered at the locations of borings B12, B6, B14, B13, B10, and B3, respectively; therefore, deeper excavations will be required to reach competent alluvium.

7.4.7 Where excavation and grading cannot be accomplished due to property line constraints, conventional foundations should be deepened as necessary to derive support in competent alluvium generally found at and below a depth of 6 feet.

7.4.8 All excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon). Prior to placing any fill or foundation construction, the excavation bottom must be proof-rolled with heavy equipment in the presence of the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.4.9 All fill and backfill soils should be placed in horizontal loose layers approximately 6 to 8 inches thick, moisture conditioned to near optimum moisture content, and properly compacted to a minimum 90 percent of the maximum dry density in accordance with ASTM D 1557 (latest edition).

7.4.10 Conditions could change seasonally. If the soils are in excess of 3 percent above optimum moisture content at the time of construction, the soils will likely require some spreading and drying activities in order to achieve proper compaction.

7.4.11 All imported fill shall be observed, tested, and approved by Geocon West, Inc. prior to bringing soil to the site. Import fill should consist of the characteristics presented in the table below. Import soils placed in the building area should be placed uniformly across the building pad or in a manner that is approved by the Geotechnical Engineer (a representative of Geocon).

SUMMARY OF IMPORT FILL RECOMMENDATIONS

Soil Characteristic	Values
Expansion Potential	"Low" (Expansion Index of 50 or less)
Particle Size	Maximum Dimension Less Than 6 Inches
	Free of Debris
Corrosivity	Equal to or Less Detrimental Than Existing Onsite Soils (see Figure B44)

7.4.12. Where new paving is to be placed, it is recommended that all existing fill and soft soils be excavated and properly compacted for paving support. As a minimum, the upper 12 inches of soil should be scarified, moisture conditioned to near optimum moisture content, and compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Paving recommendations are provided in the *Preliminary Pavement Recommendations* section of this report (see Section 7.11).

7.4.13 Foundations for small outlying structures, such as block walls up to 6 feet high, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and proper compaction cannot be performed, foundations may derive support directly in undisturbed alluvium and should be deepened as necessary to maintain a minimum 12-inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.4.14 Utility trenches should be properly backfilled in accordance with the following requirements. The pipe should be bedded with clean sands (Sand Equivalent greater than 30) to a depth of at least 1 foot over the pipe, and the bedding material must be inspected and approved in writing by the Geotechnical Engineer (a representative of Geocon). The use of gravel is not acceptable unless used in conjunction with filter fabric to prevent the gravel from having direct contact with soil. The remainder of the trench backfill may be derived from onsite soil or approved import soil, compacted as necessary, until the required compaction is obtained. The use of minimum 2-sack slurry as backfill is also acceptable. Prior to placing any bedding materials or pipes, the excavation bottom must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon).

7.4.15 All trench and foundation excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing bedding materials, fill, steel, gravel, or concrete.

7.5 Conventional Foundation Design

7.5.1 At the subterranean levels, the conventional foundation system may derive support in competent alluvium generally found at and below a depth of 6 feet. Subsequent to the recommended grading the on-grade portions of the structure may be supported by a conventional foundation system deriving support in either newly placed engineered fill or competent alluvium generally found at and below a depth of 6 feet. The transition area for the on-grade portion to the subterranean portion of the structure should be more heavily reinforced to resist differential settlement stresses which could cause cracking. All foundation excavations must be observed and approved in writing by the Geotechnical Engineer prior to placement of steel or concrete.

7.5.2 The contractor should be aware that 6½, 7½, 15, 16½, 17, and 17½ feet of existing artificial fill was encountered at the locations of borings B12, B6, B14, B13, B10, and B3, respectively; therefore, deeper excavations will be required to reach competent alluvium.

7.5.3 Where excavation and grading cannot be accomplished due to property line constraints, conventional foundations should be deepened as necessary to derive support in competent alluvium generally found at and below a depth of 6 feet.

7.5.4 It is the intent of the Geotechnical Engineer to allow foundations to derive support in both competent alluvium and newly placed engineered fill for this project, if project conditions warrant such an occurrence. All foundation excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing steel or concrete.

7.5.5 Conventional shallow spread foundations for the proposed residential structures should consist of continuous strip footings and/or isolated spread footings and should be designed using the parameters in the table on the following page.

SUMMARY OF FOUNDATION RECOMMENDATIONS
PROPOSED RESIDENTIAL STRUCTURES

Parameter	Value
Minimum Continuous Foundation Width	12 Inches
Minimum Isolated Foundation Width	24 Inches
Minimum Foundation Depth	18 Inches Below Lowest Adjacent Grade & 12 Inches into Recommended Bearing Material
Minimum Steel Reinforcement	4 No. 4 Bars, 2 Top and 2 Bottom
Allowable Bearing Pressure – Continuous Foundation	2,250 psf
Allowable Bearing Pressure – Isolated Foundation	2,750 psf
Bearing Pressure Increase	250 psf per Foot of Width
	500 psf per Foot of Depth
Maximum Allowable Bearing Pressure	4,000 psf
Estimated Static Settlement	1¼ Inches
Estimated Seismic Settlement	¼ Inch
Estimated Combined Differential Settlement	¾ Inch over 20 Feet

7.5.6 Conventional shallow spread foundations for the proposed parking structures should consist of continuous strip footings and/or isolated spread footings and should be designed using the parameters in the following table.

SUMMARY OF FOUNDATION RECOMMENDATIONS
PROPOSED PARKING STRUCTURE

Parameter	Value
Minimum Continuous Foundation Width	12 Inches
Minimum Isolated Foundation Width	24 Inches
Minimum Foundation Depth	18 Inches Below Lowest Adjacent Grade & 12 Inches into Recommended Bearing Material
Minimum Steel Reinforcement	4 No. 4 Bars, 2 Top and 2 Bottom
Allowable Bearing Pressure – Continuous Foundation	2,250 psf
Allowable Bearing Pressure – Isolated Foundation	2,750 psf
Bearing Pressure Increase	250 psf per Foot of Width
	500 psf per Foot of Depth
Maximum Allowable Bearing Pressure	5,000 psf
Estimated Static Settlement	1¼ Inches
Estimated Seismic Settlement	¼ Inch
Estimated Combined Differential Settlement	¾ Inch over 20 Feet

7.5.7 The above foundation dimensions and minimum reinforcement recommendations are based on soil conditions and building code requirements only and are not intended to be used in lieu of those required for structural purposes.

7.5.8 The allowable bearing pressures may be increased by one-third for transient loads due to wind or seismic forces.

7.7.9 If depth increases are utilized for the exterior wall footings, this office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.5.9 Once the design and foundation loading configurations for the proposed structures proceeds to a more finalized plan, the estimated settlements presented in this report should be reviewed and revised, if necessary. If the final foundation loading configurations are greater than the assumed loading conditions, the potential for settlement should be reevaluated by this office.

7.5.10 If side-by-side construction is planned for the residential structure and parking structure, it is recommended that the parking structure be constructed prior to the adjacent residential structure in order to allow the majority of the static settlement to occur in the parking structure. This will help to minimize differential settlements between the two structures. It is recommended that either a seismic separation or flexible connection be utilized where the residential structures and parking structure may be attached. The design of the connection is at the discretion of the project structural engineer. Additional settlement analyses should be performed once the foundation loading configuration for the proposed structures is established to further evaluate the potential for differential settlement between the residential structure and parking structure. The transition area for the on-grade portion to the subterranean portion of the structure, and between the residential structure and concrete parking garage, should be more heavily reinforced to resist differential settlement stresses which could cause cracking. The utilization of a lesser bearing value or increasing the thickness of engineered fill below the foundations, would further reduce the anticipated settlements and could be evaluated once the design becomes more finalized.

7.5.11 No special subgrade presaturation is required prior to placement of concrete. However, the moisture in the foundation subgrade should be sprinkled as necessary to maintain a moist condition at the time of concrete placement.

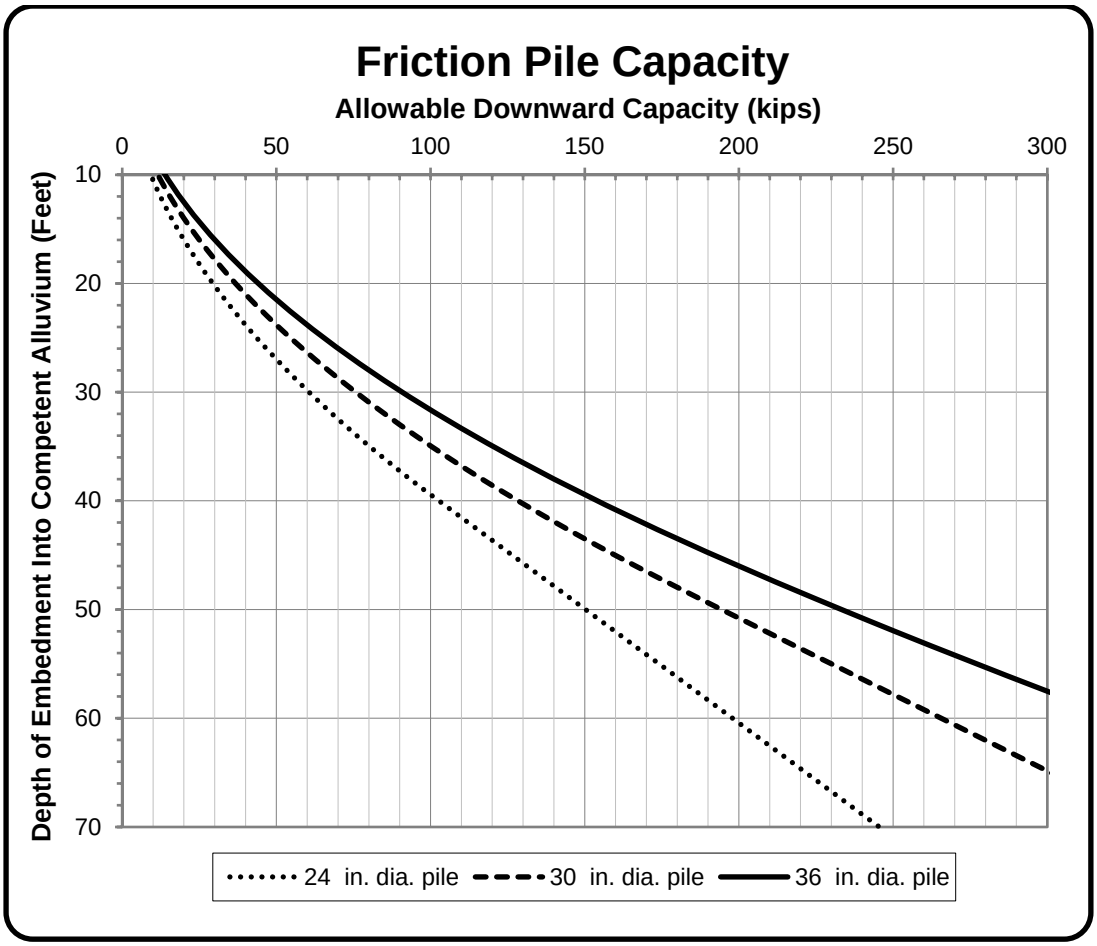
7.5.12 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

7.5.13 This office should be provided with a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.6 Deepened Foundation Design

7.6.1 Due to the presence of deep artificial fill within the southwest corner of the site (at the locations of borings B3, B10, B13, and B14), if complete excavation and proper compaction of the existing fill is not performed then the proposed structure may be supported on drilled, cast-in-place friction piles deriving support in competent alluvium. It is the intent of the Geotechnical Engineer to allow foundations to derive support on both shallow and deep foundations systems, provided anticipated differential settlements are within the allowable structural tolerance.

7.6.2 For preliminary design purposes, 18-, 24-, and 36-inch diameter drilled cast-in-place friction piles have been evaluated. Friction piles should be embedded a minimum of 10 feet into competent alluvium. The allowable axial capacities for pile embedment into competent alluvium are provided in the following chart.



7.6.3 Uplift capacity may be assumed to be ½ the axial capacity in compression. The allowable downward capacity and allowable uplift capacity may be increased by one-third when considering transient wind or seismic loads.

7.6.4 The maximum expected static settlement for a structure supported on friction piles is estimated to be less than ½ inch. Differential settlement between adjacent pile foundations is not expected to exceed ¼ inch. Differential settlement between conventional foundations and pile foundations is expected to be less than ¾ inch.

7.6.5 All drilled pile excavations should be continuously observed by personnel of this firm to verify adequate penetration into the recommended bearing materials. The capacity presented is based on the strength of the soils. The compressive and tensile strength of the pile sections should be checked to verify the structural capacity of the piles.

7.6.6 A continuous grade beam foundation and/or a structural slab may be placed across the top of the pile foundations to tie the piles in two directions, and the appropriate span between caissons should be determined by a qualified structural engineer.

7.6.7 If piles are spaced at least at least 3 diameters on center, no reduction in axial capacity is considered necessary for group effects. If pile spacing is closer than 3 pile diameters, an evaluation for group effects including appropriate reductions should be incorporated into the pile design based on pile dimension, spacing, and the direction of loading.

7.6.8 All drilled pile excavations should be continuously observed by personnel of this firm to verify adequate penetration into the recommended bearing materials. The capacity presented is based on the strength of the soils. The compressive and tensile strength of the pile sections should be checked to verify the structural capacity of the piles.

7.7 Deepened Foundation Installation

7.7.1 Friction piles do not require the complete removal of all loose earth materials from the bottom of the excavation since the end-bearing capacity is not being considered for design. However, a cleanout of the excavation bottom will be required.

7.7.2 Casing may be required if caving occurs during deep drilled excavation. The contractor should have casing available and should be prepared to use it. If casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet. Continuous observation of the drilling and pouring of the piles by the Geotechnical Engineer (a representative of Geocon West, Inc.), is required.

7.7.3 Groundwater was encountered at depths of approximately 46½, 51, 54, and 60 feet below the existing ground surface. The contractor should be prepared for groundwater during pile installation. In addition, local seepage may be encountered during excavations for the proposed piles, especially if conducted during the rainy season. If more than 6 inches of water is present in the bottom of the excavation, a tremie is required to place the concrete into the bottom of the hole. A tremie should consist of a rigid, water-tight tube having a diameter of not less than 6 inches with a hopper at the top. The tube should be equipped with a device that will close the discharge end and prevent water from entering the tube while it is being charged with concrete. The tremie should be supported so as to permit free movement of the discharge end over the entire top surface of the work and to permit rapid lowering when necessary to retard or stop the flow of concrete. The discharge end should be closed at the start of the work to prevent water entering the tube and should be entirely sealed at all times, except when the concrete is being placed. The tremie tube should be kept full of concrete. The flow should be continuous until the work is completed, and the resulting concrete seal should be monolithic and homogeneous. The tip of the tremie tube should always be kept about 5 feet below the surface of the concrete and definite steps and safeguards should be taken to ensure that the tip of the tremie tube is never raised above the surface of the concrete.

7.7.4 A special concrete mix should be used for concrete to be placed below water. The design shall provide for concrete with a strength of 1,000 pounds per square inch (psi) over the initial job specification. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste shall be included. The slump shall be commensurate to any research report for the admixture, provided that it shall also be the minimum for a reasonable consistency for placing when water is present. Extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet. Continuous observation of the drilling and pouring of the piles by a representative of this firm is required.

7.7.5 Closely spaced piles should be drilled and filled alternately, with the concrete permitted to set at least eight hours before drilling an adjacent hole. Pile excavations should be filled with concrete as soon after drilling and inspection as possible; the holes should not be left open overnight.

7.8 Miscellaneous Foundations

7.8.1 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed, foundations may derive support directly in undisturbed alluvium and should be deepened as necessary to maintain a minimum 12-inch embedment into the recommended bearing materials.

7.8.2 If the soils exposed in the excavation bottom are soft, compaction of the soft soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative. Miscellaneous foundations may be designed for a bearing value of 1,500 psf and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material. The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.8.3 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated.

7.9 Lateral Design

7.9.1 Resistance to lateral loading may be provided by friction acting at the base of foundations, slabs and by passive earth pressure. An allowable coefficient of friction of 0.35 may be used with the dead load forces in newly placed engineered fill or undisturbed alluvium.

7.9.2 Passive earth pressure for the sides of foundations and slabs poured against newly placed engineered fill or undisturbed alluvium may be computed as an equivalent fluid having a density of 240 pounds per cubic foot (pcf) with a maximum earth pressure of 2,400 psf. When combining passive and friction for lateral resistance, the passive component should be reduced by one-third. A one-third increase in the passive value may be used for wind or seismic loads.

7.9.3 Ultimate lateral capacities for ¼ inch deflection of fixed and free-head drilled cast-in place piles are presented in the table below. No factors of safety have been applied to the lateral load values calculated to induce ¼-inch lateral deflection. Lateral capacities provided are for 24-, 30-, and 36-inch diameter drilled cast-in-place concrete piles, penetrating the earth materials encountered during the course of this investigation. Assumed as part of these lateral capacity calculations are a concrete modulus of elasticity of at least 3,000,000 psi.

LATERAL LOAD CAPACITIES OF DRILLED CAST-IN-PLACE PILES

FIXED HEAD (NO HEAD ROTATION)

PILE NUMBER	PILE DIAMETER (INCHES)	Lateral Load Capacity "P" (KIPS)	Maximum Positive Moment "Mp" (LAT FORCE =P)	Maximum Negative Moment "Mp" (LAT FORCE =P)	Depth to Max Pos. Moment (Feet)	Depth to Zero Moment (Feet)	Depth to Inflection Point (Feet)	MINIMUM PILE LENGTH FOR APPLICABILITY OF LATERAL DESIGN DATA (FEET)
1	24	**43**	**1.4** P	**-5.1** P	**12**	**23**	**6.4**	**23**
2	30	**61**	**1.7** P	**-6.1** P	**15**	**28**	**7.6**	**28**
3	36	**81**	**1.9** P	**-7.1** P	**17**	**32**	**8.8**	**32**

FREE HEAD (HINGED)

PILE NUMBER	PILE DIAMETER (INCHES)	Lateral Load Capacity "P" (KIPS)	Maximum Moment "Mp" (LAT FORCE =P)	Depth to Zero Moment (Feet)	Depth to Maximum Moment (Feet)
1	24	**17**	**4.3** P	**23**	**7**
2	30	**25**	**5.2** P	**28**	**9**
3	36	**33**	**6.0** P	**32**	**10**

Lateral capacities are based on 1/4-inch deflection.
Moment magnitudes are presented as a function of the applied lateral load "P".
"P" is entered in units of kips and the moment magnitude will be in units of kip-feet.
The maximum negative moment is at the rigid, pile to pile cap or grade beam connection at the top of the pile.

7.10 Concrete Slabs-on-Grade

7.10.1 Exterior concrete slabs-on-grade subject to vehicle loading should be designed in accordance with the recommendations in the *Preliminary Pavement Recommendations* section of this report (Section 7.11).

7.10.2 Unless specifically evaluated and designed by a qualified structural engineer, concrete slabs-on-grade for structures, not subject to vehicle loading, should be a minimum of 4 inches thick and minimum slab reinforcement should consist of No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. The slab-on-grade subject to vehicle loading should be a minimum of 5 inches thick and minimum slab reinforcement should consist of No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. Steel reinforcing should be positioned vertically near the slab midpoint. The finished subgrade must be observed and be approved in writing prior to placement of a vapor retarder, reinforcing steel, or concrete.

7.10.3 Slabs-on-grade at the ground surface that may receive moisture-sensitive floor coverings or may be used to store moisture-sensitive materials should be underlain by a vapor retarder placed directly beneath the slab. The vapor retarder and acceptable permeance should be specified by the project architect or developer based on the type of floor covering that will be installed. The vapor retarder design should be consistent with the guidelines presented in Section 9.3 of the American Concrete Institute's (ACI) Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials (ACI 302.2R-06) well as ASTM E1745 and should be installed in general conformance with ASTM E 1643 (latest edition) and the manufacturer's recommendations. A minimum thickness of 15 mils extruded polyolefin plastic is recommended; vapor retarders which contain recycled content or woven materials are not recommended. The vapor retarder should have a permeance of less than 0.01 perms demonstrated by testing before and after mandatory conditioning. The vapor retarder should be installed in direct contact with the concrete slab with proper perimeter seal. If the California Green Building Code requirements apply to this project, the vapor retarder should be underlain by 4 inches of clean aggregate. It is important that the vapor retarder be puncture resistant since it will be in direct contact with angular gravel. As an alternative to the clean aggregate suggested in the California Green Building Code, it is our opinion that the concrete slab-on-grade may be underlain by a vapor retarder over 4 inches of clean sand (sand equivalent greater than 30), since the sand will serve a capillary break and will minimize the potential for punctures and damage to the vapor barrier.

7.10.4 For seismic design purposes, a coefficient of friction of 0.35 may be utilized between concrete slabs and subgrade soils without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier.

7.10.5 Exterior slabs for walkways and flatwork, not subject to traffic loads, should be at least 4 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions, positioned near the slab midpoint. Prior to construction of slabs, the upper 12 inches of subgrade should be moistened to near optimum moisture content and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Crack control joints should be spaced at intervals not greater than 10 feet and should be constructed using saw-cuts or other methods as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. Construction joints should be designed by the project structural engineer.

7.10.6 The moisture content of the slab subgrade should be maintained and sprinkled as necessary to maintain a moist condition as would be expected in any concrete placement.

7.10.7 The recommendations of this report are intended to reduce the potential for cracking of slabs due to settlement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

7.11 Preliminary Pavement Recommendations

7.11.1 Where new paving is to be placed, it is recommended that all existing fill and soft soils be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing artificial fill and soft soils in the area of new paving is not required; however, paving constructed over existing uncertified fill or unsuitable soils may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of paving subgrade should be scarified, moisture conditioned to near optimum moisture content, and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.11.2 The following pavement sections are based on an assumed R-Value of 35. Once site grading activities are complete an R-Value should be obtained by laboratory testing to confirm the properties of the soils serving as paving subgrade, prior to placing pavement.

7.11.3 The Traffic Indices listed below are estimates. Geocon does not practice in the field of traffic engineering. The actual Traffic Index for each area should be determined by the project civil engineer. If pavement sections for Traffic Indices other than those listed below are required, Geocon should be contacted to provide additional recommendations. Pavement thicknesses were determined following procedures outlined in the *California Highway Design Manual* (Caltrans). It is anticipated that the majority of traffic will consist of automobile and large truck traffic.

PRELIMINARY PAVEMENT DESIGN SECTIONS

Location	Estimated Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)
Automobile Parking and Driveways	4.0	3.0	4.0
Trash Truck & Fire Lanes	7.0	4.0	9.0

7.11.4 Asphalt concrete should conform to Section 203-6 of the "*Standard Specifications for Public Works Construction*" (Green Book). Class 2 aggregate base materials should conform to Section 26-1.02A of the "*Standard Specifications of the State of California, Department of Transportation*" (Caltrans). The use of Crushed Miscellaneous Base (CMB) in lieu of Class 2 aggregate base is acceptable. Crushed Miscellaneous Base should conform to Section 200-2.4 of the "*Standard Specifications for Public Works Construction*" (Green Book).

7.11.5 Unless specifically designed and evaluated by the project structural engineer, where exterior concrete paving will be utilized for support of vehicles, it is recommended that the concrete be a minimum of 6 inches of concrete reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. Concrete paving supporting vehicular traffic should be underlain by a minimum of 4 inches of aggregate base and a properly compacted subgrade. The subgrade and base material should be compacted to 95 percent relative compaction as determined by ASTM Test Method D 1557 (latest edition).

7.11.6 The performance of pavements is highly dependent upon providing positive surface drainage away from the edge of pavements. Ponding of water on or adjacent to the pavement will likely result in saturation of the subgrade materials and subsequent cracking, subsidence and pavement distress. If planters are planned adjacent to paving, it is recommended that the perimeter curb be extended at least 12 inches below the bottom of the aggregate base to minimize the introduction of water beneath the paving.

7.12 Retaining Wall Design

7.12.1 The recommendations presented below are generally applicable to the design of rigid concrete or masonry retaining walls having a maximum height of 20 feet. In the event that walls higher than 20 feet are planned, Geocon should be contacted for additional recommendations.

7.12.2 Retaining wall foundations may be designed in accordance with the recommendations provided in the *Conventional Foundation Design* section of this report (see Section 7.5).

7.12.3 Retaining walls with a level backfill surface that are not restrained at the top should be designed utilizing a triangular distribution of pressure (active pressure). Restrained walls are those that are not allowed to rotate more than 0.001H (where H equals the height of the retaining portion of the wall in feet) at the top of the wall. Where walls are restrained from movement at the top, walls may be designed utilizing a triangular distribution of pressure (at-rest pressure). The table below presents recommended pressures to be used in retaining wall design, assuming that proper drainage will be maintained.

RETAINING WALL WITH LEVEL BACKFILL SURFACE

HEIGHT OF RETAINING WALL (Feet)	ACTIVE PRESSURE EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot)	AT-REST PRESSURE EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot)
Up to 10	43	65
10 – 20	52	65

7.12.4 The wall pressures provided above assume that the retaining wall will be properly drained preventing the buildup of hydrostatic pressure. If retaining wall drainage is not implemented, an at-rest equivalent fluid pressure of 95 pcf should be used in design of undrained, restrained walls for the full height of the wall. The value includes hydrostatic pressures plus buoyant lateral earth pressures. If a partially drained wall is proposed, Geocon should be contacted to provide additional recommendations.

7.12.5 The wall pressures provided above assume that the proposed retaining walls will support relatively undisturbed alluvium or engineered fill derived from onsite soils. If import soil will be used to backfill proposed retaining walls, revised earth pressures may be required to account for the geotechnical properties of the import soil used as engineered fill. This should be evaluated once the use of import soil is established. All imported fill shall be observed, tested, and approved by Geocon West, Inc. prior to bringing soil to the site.

7.12.6 Additional pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures and should be designed for each condition as the project progresses. The surcharge pressure should be evaluated in accordance with the recommendations in Section 7.24 of this report.

7.12.7 In addition to the recommended earth pressure, the upper 10 feet of the retaining wall adjacent to the street or driveway areas should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the wall due to normal street traffic. If the traffic is kept back at least 10 feet from the wall, the traffic surcharge may be neglected.

7.12.8 Seismic lateral forces will be required for any retaining walls in excess of 6 feet. Recommendations for seismic lateral forces are presented in the following section.

7.13 Dynamic (Seismic) Lateral Forces

7.13.1 The structural engineer should determine the seismic design category for the project in accordance with Section 1613 of the CBC. If the project possesses a seismic design category of D, E, or F, proposed retaining walls in excess of 6 feet in height should be designed with seismic lateral pressure (Section 1803.5.12 of the 2022 CBC).

7.13.2 A seismic load of 10 pcf should be used for design of walls that support more than 6 feet of backfill in accordance with Section 1803.5.12 of the 2022 CBC. The seismic load is applied as an equivalent fluid pressure along the height of the wall and the calculated loads result in a maximum load exerted at the base of the wall and zero at the top of the wall. This seismic load should be applied in addition to the active earth pressure. The earth pressure is based on half of two-thirds of PGA_M calculated from ASCE 7-16 Section 11.8.3.

7.14 Retaining Wall Drainage

7.14.1 Where not designed for hydrostatic pressure, retaining walls should be provided with a drainage system extended at least two-thirds the height of the wall. At the base of the drain system, a subdrain covered with a minimum of 12 inches of gravel should be installed, and a compacted fill blanket or other seal placed at the surface (see Figure 13). The clean bottom and subdrain pipe, behind a retaining wall, should be observed by the Geotechnical Engineer (a representative of Geocon), prior to placement of gravel or compacting backfill.

7.14.2 As an alternative, a plastic drainage composite such as Miradrain or equivalent may be installed in continuous, 4-foot wide columns along the entire back face of the wall, at 8 feet on center. The top of these drainage composite columns should terminate approximately 18 inches below the ground surface, where either hardscape or a minimum of 18 inches of relatively cohesive material should be placed as a cap (see Figure 14). These vertical columns of drainage material would then be connected at the bottom of the wall to a collection panel or a 1-cubic-foot rock pocket drained by a 4-inch subdrain pipe.

7.14.3 Subdrainage pipes at the base of the retaining wall drainage system should outlet to an acceptable location via controlled drainage structures. Drainage should not be allowed to flow uncontrolled over descending slopes.

7.14.4 Moisture affecting below grade walls is one of the most common post-construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.15 Swimming Pool / Spa

7.15.1 The proposed swimming pools or spas should be designed as free-standing structures deriving support in newly placed engineered fill and/or the competent alluvium generally found at and below a depth of 6 feet.

7.15.2 Swimming pool or spa foundations and walls may be designed in accordance with the foundation design recommendations below and the retaining wall design recommendations provided in Section 7.12. The proposed pools or spas should be constructed utilizing an expansive soils design, and a hydrostatic relief valve should be considered as part of the pool/spa design unless a gravity drain system can be placed beneath the pool/spa shell.

7.15.3 If a swimming pool is proposed, the spa should be constructed independent of the swimming pool and must not be cantilevered from the swimming pool shell.

7.15.4 A reinforced concrete mat foundation may be utilized for support of the proposed swimming pool or spa. The mat foundation for the pool/spa may derive support in competent alluvium generally found at and below a depth of 6 feet. If necessary, these miscellaneous improvements may derive support in a combination of newly placed engineered fill and competent alluvium.

7.15.5 It is anticipated that the proposed mat foundation will impart an average pressure of less than 1,500 psf. The recommended maximum allowable bearing value is 1,500 psf. The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.15.6 It is recommended that a modulus of subgrade reaction of 150 pounds per cubic inch be utilized for the design of the mat foundation bearing on competent alluvium and/or newly placed engineered fill. This value is a unit value for use with a one-foot square footing. The modulus should be reduced in accordance with the following equation when used with larger foundations:

$$K_R = K\left[\frac{B+1}{2B}\right]^2$$

where: K_R = reduced subgrade modulus
K = unit subgrade modulus
B = foundation width (in feet)

7.15.7 The thickness of and reinforcement for the mat foundation should be designed by the project structural engineer.

7.15.8 Based on the soil overburden load that will be removed during excavation of the swimming pool/spa, anticipated settlements are expected to be small. We estimate the total settlements for a mat foundation to be less than ½ inch, with differential settlements on the order of ¼ inch over a horizontal distance of 40 feet.

7.15.9 Foundation excavations should be observed by Geocon, prior to the placement of reinforcing steel and concrete to verify that the exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

7.16 Elevator Pit Design

7.16.1 The elevator pit slab and retaining wall should be designed by the project structural engineer. Elevator pits may be designed in accordance with the recommendations in the *Conventional Foundation Design* and *Retaining Wall Design* sections of this report (see Sections 7.5 and 7.12).

7.16.2 Additional pressure should be added for a surcharge condition due to sloping ground, vehicular traffic, or adjacent foundations and should be designed for each condition as the project progresses.

7.16.3 If retaining wall drainage is to be provided, the drainage system should be designed in accordance with the *Retaining Wall Drainage* section of this report (see Section 7.14).

7.16.4 Subdrainage pipes at the base of the retaining wall drainage system should outlet to a location acceptable to the building official.

7.16.5 It is suggested that the exterior walls and slab be waterproofed to prevent excessive moisture inside of the elevator pit. Waterproofing design and installation is not the responsibility of the geotechnical engineer.

7.17 Elevator Piston

7.17.1 If a plunger-type elevator piston is installed for this project, a deep drilled excavation will be required. It is important to verify that the drilled excavation is not situated immediately adjacent to a foundation or shoring pile, or the drilled excavation could compromise the existing foundation or pile support, especially if the drilling is performed subsequent to the foundation or pile construction.

7.17.2 Caving could occur in deep drilled excavations. The contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. Continuous observation of the drilling and installation of the elevator piston by the Geotechnical Engineer (a representative of Geocon West, Inc.) is required.

7.17.3 The annular space between the piston casing and drilled excavation wall should be filled with a minimum of 1½-sack slurry pumped from the bottom up. As an alternative, pea gravel may be utilized. The use of soil to backfill the annular space is not acceptable.

7.18 Temporary Excavations

7.18.1 Excavations on the order of 15 feet in height are anticipated for excavation and construction of the proposed subterranean levels and foundation system. The excavations are expected to expose artificial fill and alluvium, which are suitable for vertical excavations up to 5 feet in height where loose soils or caving sands are not present, and where not surcharged by adjacent traffic or structures.

7.18.2 Vertical excavations greater than 5 feet or where surcharged by existing structures will require sloping or shoring measures in order to provide a stable excavation. Where sufficient space is available, temporary unsurcharged embankments could be sloped back at a uniform 1:1 slope gradient or flatter up to a maximum of 10 feet in height. Alternatively, temporary unsurcharged embankments could be sloped back at a uniform 1½:1 slope gradient or flatter up to a maximum of 15 feet in height. A uniform slope does not have a vertical portion. Where space is limited, shoring measures will be required. *Shoring* data is provided in Section 7.19 of this report.

7.18.3 Where temporary construction slopes are utilized, the top of the slope should be barricaded to prevent vehicles and storage loads at the top of the slope within a horizontal distance equal to the height of the slope. If the temporary construction slopes are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. The soils exposed in the cut slopes should be inspected during excavation by our personnel and the contractor's competent person so that modifications of the slopes can be made if variations in the soil conditions occur. All excavations should be stabilized within 30 days of initial excavation.

7.19 Shoring – Soldier Pile Design and Installation

7.19.1 The following information on the design and installation of shoring is preliminary. Review of the final shoring plans and specifications should be made by this office prior to bidding or negotiating with a shoring contractor.

7.19.2 One method of shoring would consist of steel soldier piles, placed in drilled holes and backfilled with concrete. The steel soldier piles may also be installed utilizing high frequency vibration. Where maximum excavation heights are less than 12 feet the soldier piles are typically designed as cantilevers. Where excavations exceed 12 feet or are surcharged, soldier piles may require lateral bracing utilizing drilled tie-back anchors or raker braces to maintain an economical steel beam size and prevent excessive deflection. The size of the steel beam, the need for lateral bracing, and the acceptable shoring deflection should be determined by the project shoring engineer.

7.19.3 The design embedment of the shoring pile toes must be maintained during excavation activities. The toes of the perimeter shoring piles should be deepened to take into account any required excavations necessary for foundation excavations and/or adjacent drainage systems.

7.19.4 The proposed soldier piles may also be designed as permanent piles. The required pile depths, dimensions, and spacing should be determined and designed by the project structural and shoring engineers. All piles utilized for shoring can also be incorporated into a permanent retaining wall system (shotcrete wall) and should be designed in accordance with the earth pressure provided in the *Retaining Wall Design* section of this report (see Section 7.12).

7.19.5 Drilled cast-in-place soldier piles should be placed no closer than 3 diameters on center. The minimum diameter of the piles is 18 inches. Structural concrete should be used for the soldier piles below the excavation; lean-mix concrete may be employed above that level. As an alternative, lean-mix concrete may be used throughout the pile where the reinforcing consists of a wideflange section. The slurry must be of sufficient strength to impart the lateral bearing pressure developed by the wideflange section to the soil. For design purposes, an allowable passive value for the soils below the bottom plane of excavation may be assumed to be 240 psf per foot. Where piles are installed by vibration techniques, the passive pressure may be assumed to mobilize across a width equal to the two times the dimension of the beam flange. The allowable passive value may be doubled for isolated piles spaced a minimum of three times the pile diameter. To develop the full lateral value, provisions should be implemented to assure firm contact between the soldier piles and the undisturbed alluvium.

7.19.6 Groundwater was encountered at depths of approximately 46½, 51, 54, and 60 feet beneath the ground surface. The contractor should be prepared for groundwater during pile installation should the need arise. If more than 6 inches of water is present in the bottom of the excavation, a tremie is required to place the concrete into the bottom of the hole. A tremie should consist of a rigid, water-tight tube having a diameter of not less than 6 inches with a hopper at the top. The tube should be equipped with a device that will close the discharge end and prevent water from entering the tube while it is being charged with concrete. The tremie should be supported so as to permit free movement of the discharge end over the entire top surface of the work and to permit rapid lowering when necessary to retard or stop the flow of concrete. The discharge end should be closed at the start of the work to prevent water entering the tube and should be entirely sealed at all times, except when the concrete is being placed. The tremie tube should be kept full of concrete. The flow should be continuous until the work is completed, and the resulting concrete seal should be monolithic and homogeneous. The tip of the tremie tube should always be kept about 5 feet below the surface of the concrete and definite steps and safeguards should be taken to ensure that the tip of the tremie tube is never raised above the surface of the concrete.

7.19.7 A special concrete mix should be used for concrete to be placed below water. The design should provide for concrete with an unconfined compressive strength pounds per square inch (psi) of 1,000 psi over the initial job specification. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste should be included. The slump should be commensurate to any research report for the admixture, provided that it should also be the minimum for a reasonable consistency for placing when water is present.

7.19.8 Casing may be required if caving is experienced in the drilled excavation. The contractor should have casing available prior to commencement of pile excavation. When casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet. As an alternative, piles may be vibrated into place; however, there is always a risk that excessive vibrations in sandy soils could induce settlements and distress to adjacent offsite improvements. Continuous observation of the drilling and pouring of the piles by the Geotechnical Engineer (a representative of Geocon West, Inc.), is required.

7.19.9 If a vibratory method of solider pile installation is utilized, predrilling may be performed prior to installation of the steel beams. If predrilling is performed, it is recommended that the bore diameter be at least 2 inches smaller than the largest dimension of the pile to prevent excessive loss in the frictional component of the pile capacity. Predrilling should not be conducted below the proposed excavation bottom.

7.19.10 If a vibratory method is utilized, the owner should be aware of the potential risks associated with vibratory efforts, which typically involve inducing settlement within the vicinity of the pile which could result in a potential for damage to existing improvements in the area.

7.19.11 The level of vibration that results from the installation of the piles should not exceed a threshold where occupants of nearby structures are disturbed, despite higher vibration tolerances that a building may endure without deformation or damage. The main parameter used for vibration assessment is peak particle velocity in units of inch per second (in/sec). The acceptable range of peak particle velocity should be evaluated based on the age and condition of adjacent structures, as well as the tolerance of human response to vibration.

7.19.12 Based on Table 19 of the *Transportation and Construction Vibration Guidance Manual* (Caltrans 2020), a continuous source of vibrations (ex. vibratory pile driving) which generates a maximum peak particle velocity of 0.5 in/sec is considered tolerable for modern industrial/commercial buildings and new residential structures. The Client should be aware that a lower value may be necessary if older or fragile structures are in the immediate vicinity of the site.

7.19.13 Vibrations should be monitored and record with seismographs during pile installation to detect the magnitude of vibration and oscillation experienced by adjacent structures. If the vibrations exceed the acceptable range during installation, the shoring contractor should modify the installation procedure to reduce the values to within the acceptable range. Vibration monitoring is not the responsibility of the Geotechnical Engineer.

7.19.14 Geocon offers vibration monitoring services to assist contractors in adhering to established vibration thresholds during construction. Our advanced equipment features live remote sensing and notification capabilities, ensuring immediate alerts if thresholds are exceeded. This technology allows for real-time monitoring of ground vibrations and oscillations, providing essential support for maintaining compliance and reducing potential impacts.

7.19.15 The frictional resistance between the soldier piles and retained soil may be used to resist the vertical component of the load. The coefficient of friction may be taken as 0.35 based on uniform contact between the steel beam and lean-mix concrete and retained earth. The portion of soldier piles below the plane of excavation may also be employed to resist the downward loads. The downward capacity may be determined using a frictional resistance of 440 psf per foot.

7.19.16 Due to the nature of the site soils, it is expected that continuous lagging between soldier piles will be required.

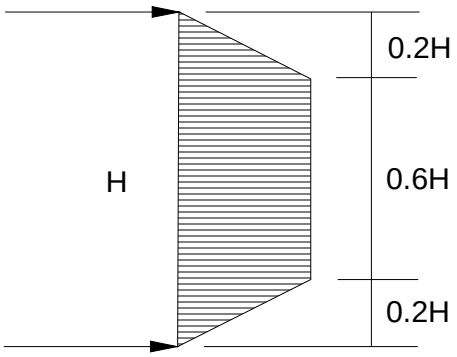
7.19.17 The time between lagging excavation and lagging placement should be as short as possible soldier piles should be designed for the full-anticipated pressures. Due to arching in the soils, the pressure on the lagging will be less. It is recommended that the lagging be designed for the full design pressure but be limited to a maximum of 400 psf.

7.19.18 For the design of shoring, it is recommended that an equivalent fluid pressure based on the following table, be utilized for design. A trapezoidal distribution of lateral earth pressure may be used where shoring will be restrained by bracing or tie-backs. The recommended active and trapezoidal pressure are provided in the following table. A diagram depicting the trapezoidal pressure distribution of lateral earth pressure is provided below the table.

SHORING WITH LEVEL BACKFILL SURFACE

HEIGHT OF SHORING (FEET)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE)	EQUIVALENT FLUID PRESSURE Trapezoidal (Where H is the height of the shoring in feet)
Up to 12	30	19H
12 – 22	40	25H

Trapezoidal Distribution of Pressure



7.19.19 Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination. Additional pressure should be added for a surcharge condition due to sloping ground, vehicular traffic, or adjacent structures and must be determined for each combination. Recommendations for the incorporation of surcharges are provided in Section 7.24 of this report.

7.19.20 In addition to the recommended earth pressure, the upper 10 feet of the shoring adjacent to the street or driveway areas should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the shoring due to normal street traffic. If the traffic is kept back at least 10 feet from the shoring, the traffic surcharge may be neglected.

7.19.21 It is difficult to accurately predict the amount of deflection of a shored embankment. It should be realized that some deflection will occur. It is recommended that the deflection be minimized to prevent damage to existing structures and adjacent improvements. Where public rights-of-way are present or adjacent offsite structures do not surcharge the shoring excavation, the shoring deflection should be limited to less than 1 inch at the top of the shored embankment. Where offsite structures are within the shoring surcharge area it is recommended that the beam deflection be limited to less than ½ inch at the elevation of the adjacent offsite foundation, and no deflection at all if deflections will damage existing structures. The allowable deflection is dependent on many factors, such as the presence of structures and utilities near the top of the embankment, and will be assessed and designed by the project shoring engineer.

7.19.22 Because of the depth of the excavation, some means of monitoring the performance of the shoring system is suggested. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all soldier piles and the lateral movement along the entire lengths of selected soldier piles.

7.19.23 Due to the depth of the excavation and proximity to adjacent structures, it is suggested that prior to excavation the existing improvements be inspected and their present condition be documented. For documentation purposes, photographs should be taken of preconstruction distress conditions and level surveys of adjacent grade and pavement should be considered. During excavation activities, the adjacent structures and pavement should be periodically inspected for signs of distress. In the event that distress or settlement is observed, an investigation should be performed and corrective measures taken so that continued or worsened distress or settlement is mitigated. Documentation and monitoring of the offsite structures and improvements is not the responsibility of the geotechnical engineer.

7.20 Temporary Tie-Back Anchors

7.20.1 Temporary tie-back anchors may be used with the solider pile wall system to resist lateral loads. Post-grouted friction anchors are recommended. For design purposes, it may be assumed that the active wedge adjacent to the shoring is defined by a plane drawn 35 degrees with the vertical through the bottom plane of the excavation. Friction anchors should extend a minimum of 20 feet beyond the potentially active wedge and to greater lengths if necessary to develop the desired capacities. The locations and depths of all offsite utilities should be thoroughly checked and incorporated into the drilling angle design for the tie-back anchors.

7.20.2 The capacities of the anchors should be determined by testing of the initial anchors as outlined in a following section. Only the frictional resistance developed beyond the active wedge would be effective in resisting lateral loads. Anchors should be placed at least 6 feet on center to be considered isolated. For preliminary design purposes, it is estimated that drilled friction anchors constructed without utilizing post-grouting techniques will develop average skin frictions as follows:

- 7 feet below the top of the excavation – 720 pounds per square foot
- 15 feet below the top of the excavation – 1,150 pounds per square foot

7.20.3 Depending on the techniques utilized, and the experience of the contractor performing the installation, a maximum allowable friction capacity of 2.3 kips per linear foot for post-grouted anchors (for a minimum 20-foot length beyond the active wedge) may be assumed for design purposes. Only the frictional resistance developed beyond the active wedge should be utilized in resisting lateral loads.

7.21 Anchor Installation

7.21.1 Tied-back anchors are typically installed between 20 and 40 degrees below the horizontal; however, occasionally alternative angles are necessary to avoid existing improvements and utilities. The locations and depths of all offsite utilities should be thoroughly checked prior to design and installation of the tie-back anchors. Caving of the anchor shafts, particularly within sand and gravel deposits or seepage zones, should be anticipated during installation and provisions should be implemented in order to minimize such caving. It is suggested that hollow-stem auger drilling equipment be used to install the anchors. The anchor shafts should be filled with concrete by pumping from the tip out, and the concrete should extend from the tip of the anchor to the active wedge. In order to minimize the chances of caving, it is recommended that the portion of the anchor shaft within the active wedge be backfilled with sand before testing the anchor. This portion of the shaft should be filled tightly and flush with the face of the excavation. The sand backfill should be placed by pumping; the sand may contain a small amount of cement to facilitate pumping.

7.22 Anchor Testing

7.22.1 All of the anchors should be tested to at least 150 percent of design load. The total deflection during this test should not exceed 12 inches. The rate of creep under the 150 percent test load should not exceed 0.1 inch over a 15-minute period in order for the anchor to be approved for the design loading.

7.22.2 At least 10 percent of the anchors should be selected for "quick" 200 percent tests and three additional anchors should be selected for 24-hour 200 percent tests. The purpose of the 200 percent tests is to verify the friction value assumed in design. The anchors should be tested to develop twice the assumed friction value. These tests should be performed prior to installation of additional tiebacks. Where satisfactory tests are not achieved on the initial anchors, the anchor diameter and/or length should be increased until satisfactory test results are obtained.

7.22.3 The total deflection during the 24-hour 200 percent test should not exceed 12 inches. During the 24-hour tests, the anchor deflection should not exceed 0.75 inches measured after the 200 percent test load is applied.

7.22.4 For the "quick" 200 percent tests, the 200 percent test load should be maintained for 30 minutes. The total deflection of the anchor during the 200 percent quick tests should not exceed 12 inches; the deflection after the 200 percent load has been applied should not exceed 0.25 inch during the 30-minute period.

7.22.5 After a satisfactory test, each anchor should be locked-off at the design load. This should be verified by rechecking the load in the anchor. The load should be within 10 percent of the design load. A representative of this firm should observe the installation and testing of the anchors.

7.23 Internal Bracing

7.23.1 Rakers may be utilized to brace the soldier piles in lieu of tieback anchors. The raker bracing could be supported laterally by temporary concrete footings (deadmen) or by the permanent, interior footings. For design of such temporary footings or deadmen, poured with the bearing surface normal to rakers inclined at 45 degrees, a bearing value of 1,500 psf may be used, provided the shallowest point of the footing is at least one foot below the lowest adjacent grade. The structural engineer should review the shoring plans to determine if raker footings conflict with the structural foundation system. The client should be aware that the utilization of rakers could significantly impact the construction schedule due to their intrusion into the construction site and potential interference with equipment.

7.24 Surcharge from Adjacent Structures and Improvements

7.24.1 Additional pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures and should be designed for each condition as the project progresses.

7.24.2 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where *x* is the distance from the face of the excavation or wall to the vertical line-load, *H* is the distance from the bottom of the footing to the bottom of excavation or wall, *z* is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth *z*.

7.24.3 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H(z) = \sigma_H(z) cos^2(1.1\theta)$$

where *x* is the distance from the face of the excavation/wall to the vertical point-load, *H* is distance from the outrigger/bottom of column footing to the bottom of excavation, *z* is the depth at which the horizontal pressure is desired, *Qp* is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth *z*, *Θ* is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth *z*.

7.25 Stormwater Infiltration

7.25.1 During the site exploration on July 29, 2024, and January 14, 2025, borings B2, B8, B5A, B6A, and B9A were utilized to perform percolation testing. The borings were excavated and backfilled to the approximate depths listed in the following table. Slotted casing was placed in the borings, and the borings were then filled with water to pre-saturate the soils. On July 31, 2024, and January 15, 2025, the casings were refilled with water and percolation test readings were performed after repeated flooding of the cased excavation.

7.25.2 Based on the test results, the measured infiltration rate and design infiltration rate, for the earth materials encountered, are provided in the following table. These values have been calculated in accordance with the Small Diameter Boring Infiltration Test Procedure in the County of Los Angeles Department of Public Works GMED *Guidelines for Geotechnical Investigation and Reporting, Low Impact Development Stormwater Infiltration* (June 2021). Percolation test results are provided on Figures 15 through 19.

Boring	Soil Type	Infiltration Depth (ft)	Measured Percolation Rate (in / hour)	Average Infiltration Rate (in / hour)
B2	Silty Sand (SM)	15 – 30	0.98	0.33
B8	Silty Sand (SM)	10 – 20	5.47	1.82
B5A	Sand (SP) / Silt (ML)	40 – 50	0.20	0.07
B6A	Clayey Sand (SC)	30 – 40	0.65	0.22
B9A	Sandy Silt (ML)	40 – 50	0.24	0.08

7.25.3 Based on the test method utilized (Small Diameter Boring), the reduction factor RF_t may be taken as 1.0 in the infiltration system design. Based on the number zof tests performed and consistency of the soils throughout the site, it is suggested that the reduction factor RF_v be taken as 1.0. In addition, provided proper maintenance is performed to minimize long-term siltation and plugging, the reduction factor RF_s may be taken as 1.0. Additional reduction factors may be required and should be applied by the engineer in responsible charge of the design of the stormwater infiltration system and based on applicable guidelines.

7.25.4 The results of the percolation testing indicate that the soils at the locations of B2 and B8 are conducive to infiltration. It is our opinion that the soil zones encountered at the depths and locations of borings B2 and B8 as listed in the table above are suitable for infiltration of stormwater.

7.25.5 The results of the percolation testing indicate that the soils at the locations of B5A, B6A, and B9A are not conducive to infiltration. The infiltration rate within the alluvial soils at these depths and locations is less than the accepted minimum infiltration rate of 0.3 inches per hour.

7.25.6 It is our opinion that the introduction of stormwater at the depths and locations of borings B2 and B8 will not induce excessive hydro-consolidation (see Figures B15 through B37), will not create a perched groundwater condition, will not affect soil structure interaction of existing or proposed foundations due to expansive soils, will not saturate soils supported by existing or proposed retaining walls, and will not increase the potential for liquefaction. Resulting settlements are anticipated to be less than ¼ inch, if any.

7.25.7 Where infiltration systems will be utilized, it is recommended that a minimum 10-foot horizontal and vertical setback be maintained from existing or proposed foundations. Additional setbacks may be required by the governing jurisdiction and should be incorporated into the stormwater infiltration system design as necessary.

7.25.8 Where the 10-foot horizontal setback cannot be maintained between the infiltration system and an adjacent footing, and the infiltration system penetrates below the foundation influence line, the proposed stormwater infiltration system must be designed to resist the surcharge from the adjacent foundation. The foundation surcharge line may be assumed to project down away from the bottom of the foundation at a 1:1 gradient. The stormwater infiltration system must still be sufficiently deep to maintain the 10-foot vertical offset between the bottom of the footing and the zone of saturation.

7.25.9 Subsequent to the placement of the infiltration system, it is acceptable to backfill the resulting void space between the excavation sidewalls and the infiltration system with minimum two-sack slurry provided the slurry is not placed in the infiltration zone. It is recommended that pea gravel be utilized adjacent to the infiltration zone so communication of water to the soil is not hindered.

7.25.10 Due to the preliminary nature of the project at this time, the type of stormwater infiltration system and location of the stormwater infiltration systems has not yet been determined. The design drawings should be reviewed and approved by the Geotechnical Engineer. The installation of the stormwater infiltration system should be observed and approved by the Geotechnical Engineer (a representative of Geocon).

7.26 Surface Drainage

7.26.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the original designed engineering properties. Proper drainage should be maintained at all times.

7.26.2 All site drainage should be collected and controlled in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. The site should be graded and maintained such that surface drainage is directed away from structures in accordance with 2022 CBC 1804.4 or other applicable standards. In addition, drainage should not be allowed to flow uncontrolled over any descending slope. Discharge from downspouts, roof drains and scuppers are not recommended onto unprotected soils within 5 feet of the building perimeter. Planters which are located adjacent to foundations should be sealed to prevent moisture intrusion into the soils providing foundation support. Landscape irrigation is not recommended within 5 feet of the building perimeter footings except when enclosed in protected planters.

7.26.3 Positive site drainage should be provided away from structures, pavement, and the tops of slopes to swales or other controlled drainage structures. The building pad and pavement areas should be fine graded such that water is not allowed to pond.

7.26.4 Landscaping planters immediately adjacent to paved areas are not recommended due to the potential for surface or irrigation water to infiltrate the pavement's subgrade and base course. Either a subdrain, which collects excess irrigation water and transmits it to drainage structures, or impervious above-grade planter boxes should be used. In addition, where landscaping is planned adjacent to the pavement, it is recommended that consideration be given to providing a cutoff wall along the edge of the pavement that extends at least 12 inches below the base material.

7.27 Plan Review

7.27.1 Grading, foundation, and shoring plans should be reviewed by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to finalization to verify that the plans have been prepared in substantial conformance with the recommendations of this report and to provide additional analyses or recommendations.

LIMITATIONS AND UNIFORMITY OF CONDITIONS

1. The firm that performed the geotechnical investigation for the project should be retained to provide testing and observation services during construction to provide continuity of geotechnical interpretation and to check that the recommendations presented for geotechnical aspects of site development are incorporated during site grading, construction of improvements, and excavation of foundations. If another geotechnical firm is selected to perform the testing and observation services during construction operations, that firm should prepare a letter indicating their intent to assume the responsibilities of project geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for their records. In addition, that firm should provide revised recommendations concerning the geotechnical aspects of the proposed development, or a written acknowledgement of their concurrence with the recommendations presented in our report. They should also perform additional analyses deemed necessary to assume the role of Geotechnical Engineer of Record.

2. The recommendations of this report pertain only to the site investigated and are based upon the assumption that the soil conditions do not deviate from those disclosed in the investigation. If any variations or undesirable conditions are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geocon Incorporated should be notified so that supplemental recommendations can be given. The evaluation or identification of the potential presence of hazardous or corrosive materials was not part of the scope of services provided by Geocon Incorporated.

3. This report is issued with the understanding that it is the responsibility of the owner or his representative to ensure that the information and recommendations contained herein are brought to the attention of the architect and engineer for the project and incorporated into the plans, and the necessary steps are taken to see that the contractor and subcontractors carry out such recommendations in the field.

4. The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they be due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and should not be relied upon after a period of three years.

CULVER CITY, CALIFORNIA

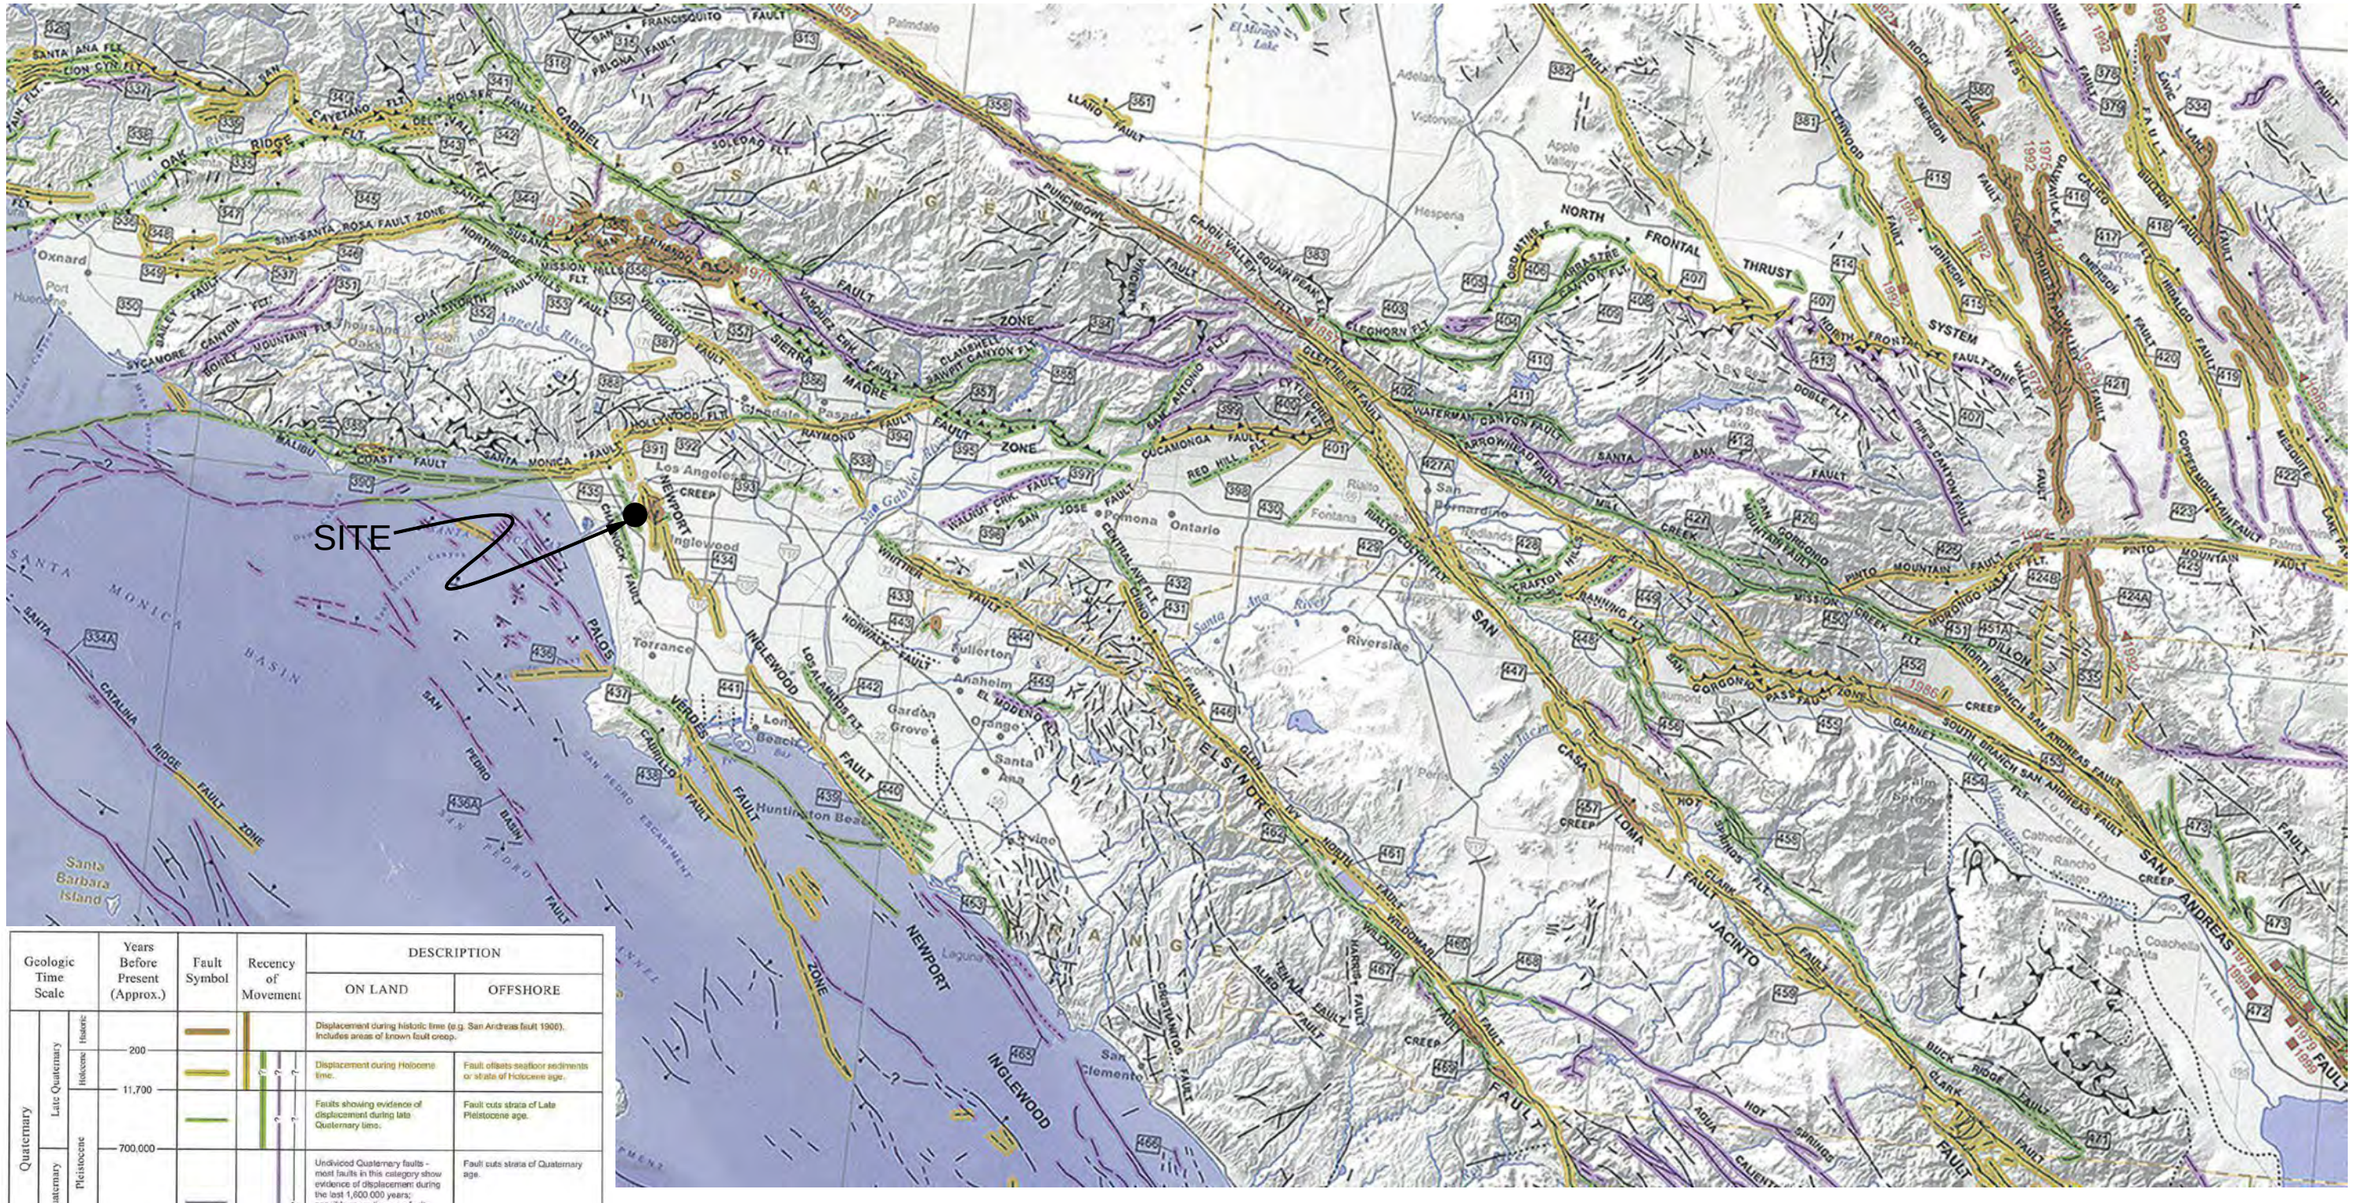
SEPT. 2025	PROJECT NO. W1973-06-01A	FIG. 2B

Reference: Jennings, C.W. and Bryant, W. A., 2010, Fault Activity Map of California, California Geological Survey Geologic Data Map No. 6.



Geologic Time Scale			Years Before Present (Approx.)	Fault Symbol	Recency of Movement	DESCRIPTION	
						ON LAND	OFFSHORE
Quaternary	Late Quaternary	Historic				Displacement during historic time (e.g. San Andreas fault 1906). Includes areas of known fault creep.	
		Holocene	200			Displacement during Holocene time.	Fault offsets seafloor sediments or strata of Holocene age.
			11,700			Faults showing evidence of displacement during late Quaternary time.	Fault cuts strata of Late Pleistocene age.
	Early Quaternary	Pleistocene	700,000			Undivided Quaternary faults - most faults in this category show evidence of displacement during the last 1,600,000 years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age.	Fault cuts strata of Quaternary age.
			1,600,000*			Faults without recognized Quaternary displacement or showing evidence of no displacement during Quaternary time. Not necessarily inactive.	Fault cuts strata of Pliocene or older age.
Pre-Quaternary			4.5 billion (Age of Earth)				

* Quaternary now recognized as extending to 2.6 Ma (Walker and Geissman, 2009). Quaternary faults in this map were established using the previous 1.8 Ma criterion.

EMPIRICAL ESTIMATION OF LIQUEFACTION POTENTIAL
MAXIMUM CONSIDERED EARTHQUAKE

NCEER (1996) METHOD W 2001 UPDATES

EARTHQUAKE INFORMATION:

Earthquake Magnitude:	6.68
Peak Horiz. Acceleration PGA_M (g):	0.891
Magnitude Scaling Factor:	1.345
Historic High Groundwater:	30.0
Groundwater Depth During Exploration:	46.5

ENERGY & ROD CORRECTIONS:

Energy Correction (CE) for N60:	1.25
Rod Len.Corr.(CR) (0-no or 1-yes):	1
Bore Dia. Corr. (CB):	1.00
Sampler Corr. (CS):	1.20
Use Ksigma (0-no or 1-yes):	1

LIQUEFACTION CALCULATIONS:

Unit Wt. Water (pcf): 62.4

RETAINING WALL DRAIN DETAIL

6201 BRISTOL PARKWAY
CULVER CITY, CALIFORNIA

SEPT. 2025	PROJECT NO. W1973-06-01A	FIG. 14

BORING PERCOLATION TEST FIELD LOG

Date:	Wednesday, July 31, 2024	**Boring/Test Number:**	Boring 2 / Test 1	
Project Number:	W1973-06-01	**Diameter of Boring:**	8	inches
Project Location:	6201 Bristol Parkway	**Diameter of Casing:**	2	inches
Earth Description:	SM	**Depth of Boring:**	30	feet
Tested By:	LW	**Depth to Invert of BMP:**	15	feet
Liquid Description:	Water	**Depth to Water Table:**	54	feet
Measurement Method:	Sounder	**Depth to Initial Water Depth (d_1)**	187.7	inches

Start Time for Pre-Soak:	12:30:00 PM on July 30, 2024	**Water Remaining in Boring (Y/N):**	Yes
Start Time for Standard:	8:40 AM	**Standard Time Interval Between Readings:**	10 min

Reading Number	Start Time (hh:mm)	Time End (hh:mm)	Elasped Time Δtime (min)	Water Drop During Standard Time Interval, Δd (in)	Soil Despcription Notes Comments
1	9:45 AM	9:55 AM	10	15.6	
2	9:57 AM	10:07 AM	10	16.9	
3	10:10 AM	10:20 AM	10	16.4	Stabilized Readings
4	10:23 AM	10:33 AM	10	16.4	Achieved with Readings
5	10:35 AM	10:45 AM	10	14.2	4, 5, and 6
6	11:48 AM	11:58 AM	10	12.1	

MEASURED PERCOLATION RATE AND DESIGN INFILTRATION RATE CALCULATIONS*

* Calculations Below Based on Stabilized Readings Only

Boring Radius, r: **4** inches
Test Section Height, h: **172.3** inches

$$Test\ Section\ Surface\ Area, A = 2\pi rh + \pi r^2$$

A= **4381** in^2

$$Discharged\ Water\ Volume, V = \pi r^2 \Delta d$$

$$Percolation\ Rate = \left(\frac{V/A}{\Delta T}\right)$$

Reading 4	V= **826**	in^3	Percolation Rate = 1.13	inches/hour
Reading 5	V= **712**	in^3	Percolation Rate = 0.97	inches/hour
Reading 6	V= **609**	in^3	Percolation Rate = 0.83	inches/hour

Measured Percolation Rate = **0.98** inches/hour

Reduction Factors

Small Diameter Boring, RF_t = 1
Site Variability, RF_v = 1
Long Term Siltation, RF_s = 1

$$Total\ Reduction\ Factor, RF = RF_t + RF_v + RF_s$$

Total Reduction Factor = 3

Design Infiltration Rate

Design Infiltration Rate = **0.33** inches/hour

CULVER CITY, CA

SEPT. 2025	PROJECT NO. W1973-06-01A	FIG. 19

APPENDIX A

APPENDIX A
FIELD INVESTIGATION

The site was explored on July 29 and 30, 2024, by excavating nine 8-inch-diameter borings using a truck-mounted hollow-stem auger drilling machine to depths ranging between approximately 10½ and 60½ feet beneath the ground surface. Supplemental site exploration was performed on January 14 and 15, 2025 by excavating eight 8-inch diameter borings using a truck-mounted hollow-stem auger drilling machine to depths between approximately 8 and 61 feet below the ground surface. Representative and relatively undisturbed samples were obtained by driving a 3-inch, O. D., California Modified Sampler into the "undisturbed" soil mass with blows from a 140-pound auto-hammer falling 30 inches. The California Modified Sampler was equipped with 1-inch by $2^{3}/_{8}$-inch diameter brass sampler rings to facilitate soil removal and testing. Standard Penetration Tests (SPTs) were performed in borings B3 and B7. Bulk samples were also obtained.

The soil conditions encountered in the borings were visually examined, classified and logged in general accordance with the Unified Soil Classification System (USCS). The logs of the borings are presented on Figures A1 through A17. The logs depict the soil and geologic conditions encountered and the depth at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the logs were revised based on subsequent laboratory testing. The approximate locations of the borings are shown on Figure 2A.

APPENDIX B

APPENDIX B
LABORATORY TESTING

Laboratory tests were performed in accordance with “American Society for Testing and Materials (ASTM)”, or other suggested procedures Selected samples were tested for direct shear strength, consolidation and expansion characteristics, maximum dry density and optimum moisture content relationship, in-situ dry density and moisture content. The results of the laboratory tests are summarized in Figures B1 through B44. The in-place dry density and moisture content of the samples tested are presented on the boring logs, Appendix A.

Bristol Parkway Propco, LLC
5979 West 3rd Street, Suite 205
Los Angeles, CA 90036

Subject: Paleontological Resources Assessment for the 6201 Bristol Parkway Project; City of Culver City, Los Angeles County, California.

This letter report presents the methods, results, and recommendations of a paleontological resources assessment conducted by Environmental Science Associates (ESA) to comply with the California Environmental Quality Act (CEQA) for the 6201 Bristol Parkway Project (Project) on a 7.049-acre property (Project Site). The City of Culver City (City) certified a programmatic Environmental Impact Report (Programmatic EIR) to evaluate the potential environmental impacts of approving the Culver City General Plan 2045 and Zoning Code Update Project in September 2024. The General Plan 2045 and Zoning Code Update Program EIR (State Clearinghouse No. 2022030144) (Programmatic EIR or Certified PEIR) evaluated the anticipated future development within the City, including the anticipated development on the Project Site. The Programmatic EIR listed one mitigation measure (GEO-1) for paleontological resources. Section 15168(c) of the CEQA Guidelines sets forth criteria to utilize a Program EIR for "later activities" within the scope of a Program EIR. This assessment has been prepared in compliance with CEQA and Mitigation Measure GEO-1, provided below:

> *Prior to development of individual projects that are subject to CEQA review and involve ground disturbance, the project proponent shall retain a Qualified Paleontologist, defined as an individual meeting the Society of vertebrate Paleontology (SVP) Standard, to conduct a site-specific paleontological resources assessment. This assessment shall include a records search at the Natura History Museum of Los Angeles County and/or other appropriate facilities, geologic map and scientific literature and/or a local register. If a resource is determined to be significant and the Project would cause a potentially significant impact to the resource, then mitigation measures shall be prescribed to reduce impacts from the Project to that resource. An analysis regarding the Project's potential to encounter buried resources during the construction shall be conducted. If there is a potential to encounter resources during construction of the Project, paleontological construction monitoring shall be prescribed as a mitigation measure. The methods and results of the paleontological assessment shall be included in a technical report that is prepared prior to the city's approval of project plans and publication of subsequent CEQA documents.*

The paleontological resources assessment is in partial fulfillment of Mitigation Measure GEO-1 and includes a geologic map review, a literature review, review of the geotechnical report prepared for the Project, a paleontological resources records search through the Natural History Museum of Los Angeles County (NHMLAC), and a paleontological sensitivity analysis.

This report was prepared by ESA Principal Paleontologist J.D. Stewart, Ph.D. and Cultural Resources Specialist/Archaeologist Fatima Clark, B.A. Dr. Stewart meets the Society of Vertebrate Paleontology (SVP) definition for Qualified Professional Paleontologist. ESA Principal Archaeologist, Kyle Garcia M.A., RPA, provided senior review of this report. Resumes of key personnel are provided in **Appendix A**.

Project Location

The Project Site is located in the southeastern part of Culver City in the community of Fox Hills (**Figure 1**). The Project Site encompasses approximately 7.049 acres and three lots [Assessor Parcel Numbers (APN) 4134-018-004, 4134-018-005 and 4134-018-006] and is prominently located at the southwest corner of Bristol Parkway and Green Valley Circle (**Figure 2**). More specifically, the Project Site is located within Section 19 of Township 2 South, Range 14 West, on the Venice, California 7.5-minute topographic quadrangle map (**Figure 3**).

Project Description

Bristol Parkway Propco, LLC, the Applicant, proposes the development of a mixed-use residential and commercial project on the approximately 7.049-acre Project Site. The Project Site is comprised of two parcels that are developed with a vacant one-story commercial building formerly occupied by a Chase bank and a vacant one-story multi-tenant commercial strip building formerly anchored by a Marshall's store along with associated surface parking. The Project would demolish the existing structures and construct a new 8-story mixed-use building over two levels of subterranean parking and community serving commercial space. The Project would contain open space that features a publicly accessible plaza at the corner of Green Valley Circle and Bristol Parkway, common exterior open space for residents that include multiple courtyards, pool, and roof deck, private resident balconies, and interior common spaces that include a resident lobby and amenity areas. The Project would require excavation to accommodate two levels of subterranean parking, footings, and foundations. Earthwork would require a net export of approximately 66,838 cubic yards (cy) of soil. The Project would excavate to a maximum depth of 39 feet below ground surface (bgs).

Regulatory Framework

Paleontological resources are limited, nonrenewable resources of scientific, cultural, and educational value that are afforded protection under state laws and regulations. The following section summarizes the applicable state laws and regulations, as well as professional standards and guidelines related to paleontological resources.

State

California Environmental Quality Act

The CEQA Guidelines (California Code of Regulations Title 14, Chapter 3, Section 15000 et seq.), define the procedures, types of activities, individuals, and public agencies required to comply with CEQA. As part of CEQA's Initial Study process, one of the questions that must be answered by the lead agency relates to paleontological resources: "Will the proposed project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (CEQA Guidelines Appendix G, Section VII, Part f).

The loss of a significant paleontological resource, which includes any identifiable fossil that is unique, unusual, rare, uncommon, diagnostically, or stratigraphically important, and/or those that add to an existing body of knowledge in specific areas—stratigraphically, taxonomically, and/or regionally—would be a significant environmental impact. Direct impacts to paleontological resources primarily concern the potential destruction of nonrenewable paleontological resources and the loss of information associated with these resources. This includes the unauthorized collection of fossil remains. If potentially fossiliferous bedrock or surficial sediments are disturbed, the disturbance could result in the destruction of paleontological resources and subsequent loss of information.

The CEQA threshold of significance for a significant impact to paleontological resources is reached when a project is determined to "directly or indirectly destroy a significant paleontological resource or unique geologic feature" (CEQA Guidelines Appendix G, Section VII, Part f). In general, for project sites that are underlain by paleontologically sensitive geologic units, the greater the amount of ground disturbance, the higher the potential for significant impacts to paleontological resources.

California Penal Code Section 622.5

California Penal Code Section 622.5 provides the following: "Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archeological or historical interest or value, whether situated on private lands or within any public park or place, is guilty of a misdemeanor."

California PRC Section 5097.5

California Public Resources Code (PRC) Section 5097.5 provides protection for paleontological resources on public lands, where Section 5097.5(a) states, in part, that:

> *No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, paleontological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other paleontological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.*

Local

City of Culver City General Plan

The City's General Plan 2045 has one goal (Goal C-1) for cultural resources (including paleontological resources), which indicates that "cultural resources are protected and enhanced through proactive measures" (City of Culver City, 2024:248). Measures C-1.15 and C-1.21 provided below are focused on the protection of paleontological resources.

- **C-1.15: Public knowledge promotion.** Promote public knowledge and understanding of cultural resources (including archaeological, tribal cultural resources, historic resources, and paleontological resources) present within the city.

- **C-1.21: Protect Archaeological, Paleontological, and Tribal Cultural Resources.** Promote programs and policies to protect known archaeological and paleontological sites and Tribal Cultural Resources.

The City's General Plan also includes the following implementation actions for the preservation of paleontological resources.

- **IA.C-8: Historic discretionary review.** Require that projects subject to discretionary review are screened to Cultural Affairs to determine if further evaluation by cultural affairs is warranted and, if so, require that projects undergo historic, archaeological, and paleontological assessments and are documented in technical studies by qualified experts to identify the potential for resources to be negatively affected during project implementation and to ensure steps are taken, where warranted, to protect resources.

- **IA.C-10: Standard conditions of development approval.** Continue to implement standard conditions of approval that require and specify the steps to be taken to avoid damage and promote preservation if unknown archaeological or paleontological resources, or Tribal Cultural Resources are uncovered during construction.

Society for Vertebrate Paleontology Standard Guidelines

The SVP Guidelines (SVP, 2010) outline professional protocols and practices for conducting paleontological resource assessments and surveys, monitoring and mitigation, data and fossil recovery, sampling procedures, specimen preparation, identification, analysis, and curation. Most practicing professional vertebrate paleontologists adhere closely to the SVP's assessment, mitigation, and monitoring requirements as specifically provided in its standard guidelines. Most state and local regulatory agencies accept and use the professional standards set forth by the SVP.

Paleontological Resources Significance Criteria

As defined by the SVP (2010:11), significant nonrenewable paleontological resources are:

> *Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).*

Thus, any identifiable vertebrate fossil older than 5,000 years is considered significant.

Multiple paleontological studies have additional criteria for the assessment of significance for fossil discoveries (e.g., Murphey et al., 2019; Murphey and Daitch, 2007; Scott and Springer, 2003). In general, these studies assess fossils as significant if one or more of the following criteria apply:

1. The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct.
2. The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events therein.
3. The fossils provide data regarding the development of biological communities or interaction between paleobotanical and paleozoological biotas.
4. The fossils demonstrate unusual or spectacular circumstances in the history of life.
5. The fossils are in short supply and/or in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.

In summary, significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, uncommon, or diagnostically important (Murphey et al., 2019; Murphey and Daitch, 2007; Scott and Springer, 2003). Any identifiable vertebrate fossil is significant (SVP, 2010). Significant fossils can include remains of large to very small aquatic and terrestrial vertebrates or remains of plants and animals previously not represented in certain portions of the stratigraphy. Assemblages of fossils that might aid

stratigraphic correlation, particularly those offering data for the interpretation of tectonic events, geomorphologic evolution, and paleoclimatology are also critically important (Scott and Springer, 2003; Scott et al., 2004).

Paleontological Potential

Paleontological potential is defined as the potential for a geologic unit to produce scientifically significant fossils. This is determined by rock type, the past history of the geologic unit in producing significant fossils, and the fossil localities recorded from that unit. Paleontological potential is derived from the known fossil data collected from the entire geologic unit and not just from one specific survey. In its "Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources," the SVP (2010) defines four categories of paleontological sensitivity (potential) for rock units: high, low, undetermined, and no potential.

- **High Potential.** Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rocks units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations and some volcaniclastic formations (e. g., ashes or tephras), and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e. g., middle Holocene and older, fine-grained fluvial sandstones, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstones, fine-grained marine sandstones, etc.).
- **Low Potential.** Reports in the paleontological literature or field surveys by a qualified professional paleontologist may allow determination that some rock units have low potential for yielding significant fossils. Such rock units will be poorly represented by fossil specimens in institutional collections, or based on general scientific consensus only preserve fossils in rare circumstances and the presence of fossils is the exception not the rule, e. g. basalt flows or Recent colluvium. Rock units with low potential typically will not require impact mitigation measures to protect fossils.
- **Undetermined Potential.** Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a qualified professional paleontologist to specifically determine the paleontological resource potential of these rock units is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically located excavations into subsurface stratigraphy.
- **No Potential.** Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites). Rock units with no potential require no protection nor impact mitigation measures relative to paleontological resources.

For geologic units with high potential, full-time monitoring is generally recommended during any project-related ground disturbance. For geologic units with low potential, monitoring will not generally be required. For geologic units with undetermined potential, field surveys by a qualified vertebrate paleontologist should be conducted to specifically determine the paleontological potential of the rock units present within the study area.

Methods

The Project Site was the subject of thorough background research and analysis to assess its paleontological sensitivity. The research included geologic map and literature review, review of the geotechnical report prepared for the Project, and a paleontological records search conducted by the NHMLAC.

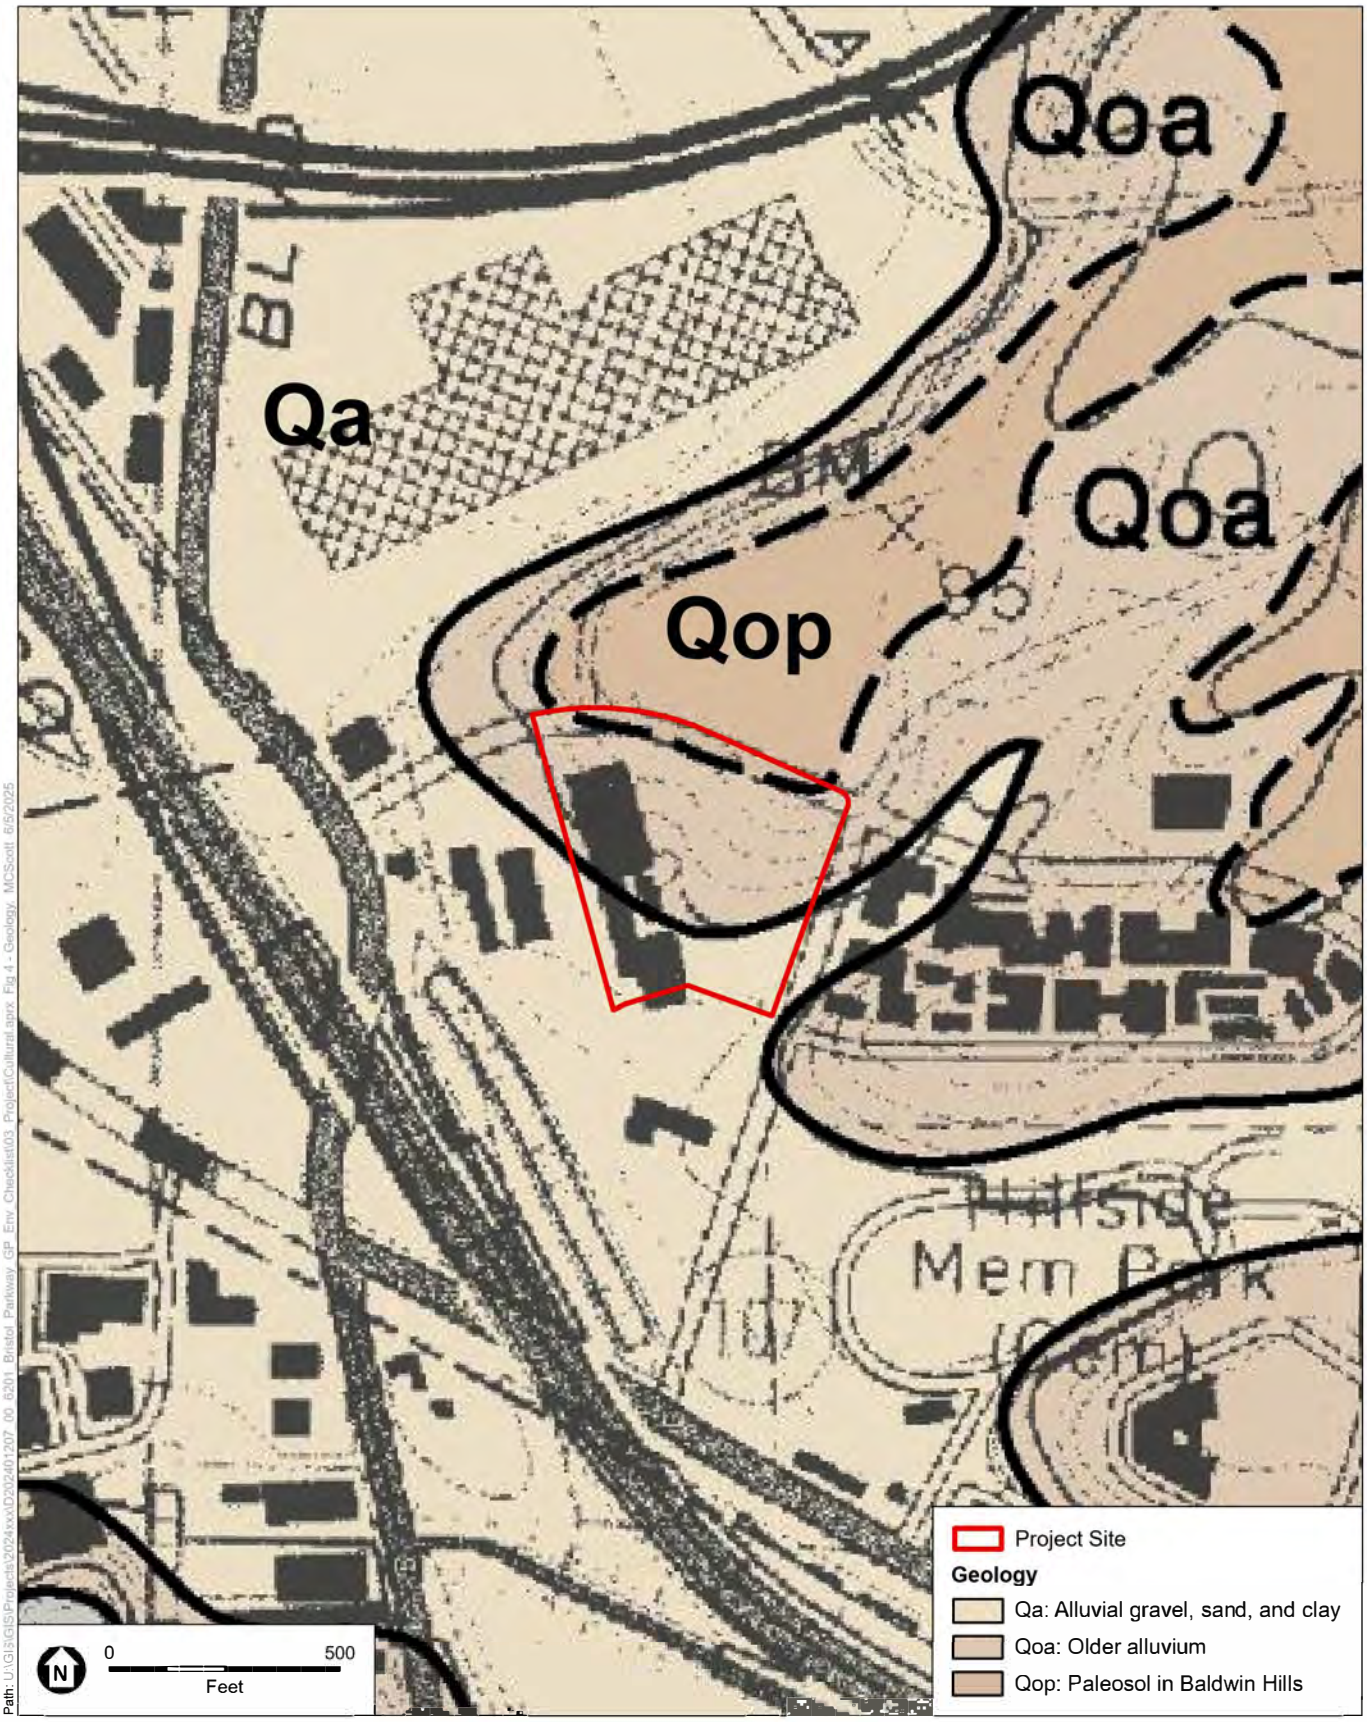
Results

Geologic Setting

The Project Site is situated in the northern portion of the Los Angeles Basin (Basin), a structural depression approximately 50 miles long and 20 miles wide (Yerkes et al., 1965; Ingersoll and Rumelhart, 1999). The Basin is within the Transverse Ranges physiographic-structural province, a series of east-west trending mountains and valleys that interrupt the northwest-southeast orientation of other major California ranges, including the Peninsular Ranges, Coast Ranges, and the Sierra Nevada. The Basin is bounded on the north by the Santa Monica Mountains, the Elysian, Repetto, and Puente Hills and on the east, and by the Santa Ana Mountains and San Joaquin Hills to the southeast. The Basin formed between 18 and 3 million years ago as a result of tectonic subsidence (Critelli et al., 1995). Continuous sedimentation into the Basin began during the middle Miocene around 13 million years ago, as thousands of feet of sediments were deposited in a marine environment (Yerkes et al., 1965). Deposition of terrestrial alluvial sediments commenced during the Pleistocene. Sea level fluctuated during the Pleistocene Epoch, thus exposing, submerging, and re-exposing parts of what is today Culver City.

Geologic Map and Literature Review

Geologic mapping by Dibblee and Minch (2007) at a scale of 1:24,000 indicates the surficial geology of the Project Site consists of younger alluvium (**Qa**) in the south and older alluvium (**Qoa**) in the north. The Paleosol in Baldwin Hills (**Qop**) is mapped on the north edge of the Project Site (**Figure 4**). **Qa** is described as “alluvial gravel, sand, and clay, derived mostly from the Santa Monica Mountains,” (Dibblee and Minch, 2007). **Qoa** is described as “Older alluvium of gray to light brown pebble-gravel, sand, and silt-clay, elevated and dissected; in Baldwin Hills designated as Baldwin Hills sandy gravel,” (Dibblee and Minch, 2007). **Qop** is described as the “Paleosol in Baldwin Hills… [and consisting of a] “gray to rusty brown, sandy, locally pebbly, moderately indurated “hard pan” on **Qoa**” (Dibblee and Minch, 2007). The first mention of the paleosol was by Weber et al. (1982) who named it the Fox Hills relict paleosol. No exposures of marine sediments are mapped in the immediate area of the Project, but marine fossils were found very near to the Project Site at a shallow depth. **Qop** could occur within the Project’s northern region. Where **Qop** does occur, it lies atop the **Qoa**.



SOURCE: ESA, 2024; USGS, 2025; Bedrossian, 2012

6201 Bristol Parkway

Figure 4
Geologic Map

ESA

It is possible that the mapping of **Qoa** includes marine sediments. Bandy and Marinkovich (1973) documented marine deposits in the Baldwin Hills dated at 36,200 ±2,750 radiocarbon years and 28,450 ±2,600 radiocarbon years. Thus, the uplift of the Baldwin Hills postdates those dates. The **Qa** and **Qop** certainly postdate the beginning of the uplift. If the **Qoa** unit encompasses marine sediments as well as non-marine, some parts of Qoa could predate, while other parts of Qoa could postdate the 28,000-year radiocarbon date.

Pebbles of the Santa Monica Schist are common in the Pleistocene sediments found in portions of Culver City. It is probable that these pebbles of the Santa Monica Schist could also be encountered during excavations because the Baldwin Hills were submerged prior to their Late Pleistocene uplift. Dibblee and Minch (2007) maintain that the **Qa** unit contains sediments derived from the Santa Monica Mountains. If this is true, then the **Qoa** unit also has to contain sediments derived from that source because those transported Santa Monica sediments had to be emplaced in that footprint prior to the Baldwin Hills uplift. No natural event could have transmitted the Santa Monica sediments from the source to the Baldwin Hills after the uplift event.

Neither of the compendia of California Pleistocene non-marine vertebrate fossil localities (Jefferson, 1991a, 1991b) have any entries from the Baldwin Hills. Per review of the NHMLAC's records, there are many known vertebrate fossil localities, but all those are in the general vicinity of Culver City, and not specifically within the Baldwin Hills area. It is possible that Pleistocene terrestrial vertebrate fossils could be unearthed in the Baldwin Hills and these could be potentially discovered during screening of sediment samples. Furthermore, marine invertebrate fossils were found near the Project Site at shallow depths. When such marine invertebrate fossils occur in sandy deposits, micro vertebrate fossils can be recovered through wet screening.

There is a growing list of Pleistocene paleosols that have produced vertebrate fossils in southern California. Many of these paleosols have been found in desert settings (Stewart et al., 2012; Raum et al., 2014; Stewart and Hakel, 2016; Stewart and Hakel 2017; Stewart and Hakel, 2019), while others have been found in a coastal setting (Stewart, 2018; 2024). There is no record of paleontologists testing the Paleosol in the Baldwin Hills for fossils.

Review of the Geotechnical Report

Review of the geotechnical report by Geocon West, Inc. (2024) indicates that a total of nine 8-inch-diameter borings were excavated at the Project Site. The borings were drilled to a depth ranging between 10.5 and 60.5 feet bgs, using a truck-mounted hollow-stem auger drilling machine and target locations throughout the Project Site (Geocon West, Inc. 2024). Artificial fill materials (consisting of a mixture of silt, silty sand, clayey sand and sandy clay) were found to depths ranging between 3 and 17.5 feet bgs. It was noted that deeper fill could be present in unexplored areas of the Project Site. Two strata of native alluvial soils (consisting of poorly graded sands, silts, and clays) were found beneath the fill. Immediately underlying the fill, younger alluvium was encountered up to 32.5 feet bgs. Beneath the younger alluvium and fill, Pleistocene-age older alluvium deposits were encountered to the maximum depth of excavations at 60.5 feet bgs (Geocon West, Inc. 2024). No attempt was made to assign any of these sediments to known geologic formations discussed in the previous section.

Paleontological Resources Records Search

A paleontological resources records search was conducted by the NHMLAC on December 30, 2024 (Bell, 2024). The search entailed an examination of current geologic maps and known fossil localities within the Project Site and vicinity. The purpose of the records search was to: (1) determine whether any previously recorded fossil localities occur in the Project Site or vicinity; (2) assess the potential for disturbance of these localities during construction; and (3) assist in evaluating the paleontological sensitivity of the Project.

The results indicate that no fossil localities fall within the Project Site, but that fossil localities do exist nearby from the same sedimentary deposits that occur in the Project Site, either at surface or at depth, in addition to those provided in the previous search conducted in 2017.[1] The fossil localities are described in **Table 1,** below. Localities of invertebrate marine fossils (LACM IP 42394 – 42408) were found in the immediate vicinity of the Project Site. Vertebrate fossil localities (LACM 1180 and 4942) producing horse, mammoth, bison, and rabbit are situated approximately 1.6 miles away from the Project Site. Fossil locality LACM 3789 produced mammoth, rodent, and marine fish fossils located approximately 2.25 miles away from the Project Site. Fossil locality LACM 7332 yielded a fossil baby mammoth located approximately 2.5 miles away from the Project Site while LACM 3264 produced an elephant fossil situated approximately 3 miles away from the Project Site. Lastly, LACM IP 23224 produced a variety of invertebrate fossils located approximately 1.3 miles away from the Project Site. These localities were found at unknown depths and depths ranging from 1.6 to 40 feet bgs. The records search results letter from the NHMLAC is provided in **Appendix B** of this report.

TABLE 1
SUMMARY OF LACM FOSSIL LOCALITIES

Locality Number	Formation	Taxa	Depth
LACM 1180 and 4942	Unknown formation (Older Quaternary Alluvium)	Horse (*Equus*), mammoth (*Mammuthus*), bison (*Bison*), and rabbit (Lepus)	13-16 feet bgs
LACM 3789	Unknown formation (Older Quaternary Alluvium)	mammoth (*Mammuthus*), rodent (Rodentia), and speckled sanddab (*Citharichthys stigmaeus*)	14 feet bgs
LACM 7332	Unknown formation (Older Quaternary Alluvium)	fossil baby mammoth (*Mammuthus*)	40 feet bgs
LACM 3264	Unknown formation (Older Quaternary Alluvium)	elephant (Proboscidea)	25 feet bgs
LACM IP 23224	Unknown formation (Pleistocene)	Cerith (*Lirobittium*), dove snail (*Amphissa*), nutclam (*Acila [Truncacila*]), wentletrap (*Hirtoscala*), bivalve (*Saccella*), slipper shell (*Crepidula*), top snail (*Calliostoma, Norrisia*), scallop (*Leptopecten*), jewel boxes (*Chama*), horn snail (*Bittium*), cardita (*Cyclocardia*), hatchet shell (*Thyasira*), venus clam (*Compsomyax*), tower shell (*Turritella*), nut clam (*Nuculana*)	Unknown

[1] In 2017, a paleontological resources database search was conducted by the NHMLAC for this Project, which did not include a building and parking lot located in the northeast corner of the Project.

Locality Number	Formation	Taxa	Depth
LACM IP 42394 - 42408	Pleistocene terrace deposits	Sponge trace (Entobia), oysters (Ostrea), scallops (Leptopecten, Chlamys), and other unsorted invertebrates	1.6– 9.8 feet bgs

SOURCE: Bell, 2024; McLeod, 2017

Paleontological Sensitivity Analysis

The literature and geologic mapping review and the records search results presented above were used to assign paleontological sensitivity to the geologic units at surface and underlying the Project Site, following the guidelines of the SVP (2010):

- **Fill Material:** As indicated by geotechnical testing (Geocon West, Inc. 2024), fill material is present at the surface of the Project Site and extends to depths between 3 and 17.5 feet bgs. It is unclear as to where the fill material came from and so assigning an age is not possible. Given that the fill is described as artificial and is likely the result of past grading or construction activities at the Project Site, it is unlikely to contain intact fossiliferous deposits. Therefore, this unit is assigned **No Potential** to contain significant paleontological resources.
- **Younger alluvium (Qa).** These sediments consist of unconsolidated gravel, sand, and clay derived from the Santa Monica Mountains (Dibblee and Minch, 2007). These deposits date from recent times to the beginning of the Holocene. Portions of the **Qa** are too young to preserve fossil resources, which have been defined by the SVP as over 5,000 years old (SVP, 2010). However, any parts of the **Qa** that are older than 5,000 years before present are of an age to preserve fossil resources (see below). Therefore, the Qa unit is assigned a **Low Potential** to contain significant paleontological resources in the upper parts, but the potential increases with depth.
- **Paleosol of Baldwin Hills (Qop).** This unit may or may not be present on the northern edge of the Project. This unit is described as gray to rusty brown, sandy, locally pebbly, moderately indurated "hardpan" on **Qoa**. This unit is assigned a High Potential to contain paleontological resources because the SVP guidelines (SVP, 2010) specifically call out calcic[2] paleosols as sensitive. There is no record of paleontologists ever having tested the Paleosol in the Baldwin Hills for fossils. Therefore, the Qop unit is assigned an **Unknown Potential** to contain significant paleontological resources.
- **Older Alluvium (Qoa)**. Dibblee and Minch (2007) describe this unit as "Older alluvium of gray to light brown pebble-gravel, sand, and silt-clay, elevated and dissected; in Baldwin Hills designated as Baldwin Hills sandy gravel by Weber et al., 1982." Many significant fossils have been recovered from **Qoa** in Culver City. Therefore, the Qoa unit is assigned a **High Potential** for significant paleontological resources.
- **Marine Deposits**. Dibblee and Minch (2007) did not map any marine deposits in the vicinity of the Project and the geotechnical report for the Project (Geocon West, Inc. 2024) did not mention any subsurface marine deposits. Additionally, at a nearby project, Geotechnologies, Inc. (2024) also did not mention encountering

[2] Indicates that it may be rich in calcium.

any marine alluvium; however, a fossil locality (LACM IP 42394 – 42408) less than 1500 feet (one block away) from the Project Site produced Pleistocene marine fossils at less than two feet bgs. It is very likely that marine alluvium occurs within the Project Site, but at unknown depths.

Summary of Findings and Recommendations

The geotechnical report (Geocon West, Inc. 2024) for the Project indicates that the surface of the Project Site is underlain by 3-17.5 feet of fill material, which has **No Potential** for significant paleontological resources. Beneath the fill lies the **Qa** sediments. Disturbance of the **Qa** sediments should be spot checked. The Paleosol of Baldwin Hills (**Qop**) which has an **Unknown Potential** to retain paleontological resources could underlie the Qa sediments. Qop is not mapped on the Project Site, but is mapped immediately north of it. Therefore, it is possible that Qop overlaps with the Project footprint. Geotechnical studies indicate that beneath the Qop lies the older alluvium (**Qoa**) which has a high potential for paleontological resources. The **Qoa** units will be monitored for paleontological resources since excavations for the Project are expected to extend to a maximum depth of 39 feet bgs to accommodate two levels of subterranean parking, footings, and foundations. Pleistocene marine fossils could also occur below the **Qoa** because they have been found at shallow depths not far away. Therefore, as the Project could directly or indirectly destroy unique paleontological resources, impacts on buried paleontological resources are considered potentially significant. As such, the following recommendations are provided below in order to reduce impacts to paleontological resources to a less than significant level under CEQA.

1. **Mitigation Measure GEO-1:** Prior to the issuance of demolition and grading permits, the Applicant shall retain a Qualified Paleontologist meeting the Society of Vertebrate Paleontology (SVP) standards for a Professional Paleontologist. The Qualified Paleontologist shall provide technical and compliance oversight of all work as it relates to paleontological resources. The Qualified Paleontologist shall examine construction plans and prepare a Paleontological Resources Impact Mitigation Plan (Plan). This Plan shall include geological and paleontological contextual information, methods for paleontological construction monitoring, protocols for inadvertent discoveries, methods for sediment sampling and screening, including requirements for the radiocarbon dating of specimens or other materials, and final reporting requirements. The Qualified Paleontologist shall attend a pre-construction meeting to discuss the monitoring requirements to construction personnel and shall be responsible for overseeing paleontological monitors (meeting SVP standards) that will observe grading and excavation activities.

2. **Mitigation Measure GEO-2:** Spot-check paleontological monitoring shall be conducted during construction excavations into undisturbed younger alluvial sediments while full-time paleontological monitoring shall be conducted during excavations into previously undisturbed Baldwin Hills Paleosol materials, older alluvium, and Pleistocene marine sediments. Monitoring shall consist of visually inspecting fresh exposures of sediment for larger fossil remains and, where appropriate, collecting and wet screening sediment samples of promising horizons for smaller fossil remains. The Qualified Paleontologist will regularly process the concentrate samples by inspecting them with a 10x microscope. If significant vertebrate fossils are found by screening, it will be necessary to collect a 6,000-pound sample for screening, per Society of Vertebrate Paleontology guidelines (SVP, 2010) from each geologic unit producing significant fossils. The sample can be collected by construction machinery and stockpiled and processed in a safe location on site or transported to another site for processing. The frequency of monitoring inspections shall be determined by the Qualified Paleontologist

and shall be based on the rate of excavation and grading activities, the materials being excavated, and the depth of excavation, and if found, the abundance and type of fossils encountered. Full-time monitoring can be reduced to part-time inspections, or ceased entirely, if determined adequate by the Qualified Paleontologist. If a potential fossil is found, the Qualified Paleontologist shall have authority to temporarily stop excavation activity or to temporarily divert or redirect grading and excavation activities in the area of the exposed fossil to facilitate evaluation of the discovery. An appropriate buffer area shall be established by the Qualified Paleontologist around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. At the Qualified Paleontologist's discretion, and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock/sediment samples for initial processing and evaluation. If preservation in place is not feasible, the Qualified Paleontologist shall implement a paleontological salvage program to remove the resources from their location.

3. **Mitigation Measure GEO-3:** Any fossils recovered during Project-related excavations shall be prepared to the point of identification. The residue from sediment samples shall be dried and sorted with a binocular dissecting microscope. Both macrofossils and vertebrate microfossils shall be prepared to the point of identification, identified, and curated into an accredited repository, such as the Natural History Museum of Los Angeles County. The Qualified Paleontologist shall prepare a final report summarizing the results of the monitoring and salvaging efforts, the methodology used in these efforts, as well as a description of the fossils collected and their significance. The report shall accompany the specimens to the accredited repository. The report shall also be submitted by the Applicant to the City of Culver City to signify the satisfactory completion of the Project and required mitigation measures.

Dr. J.D. Stewart has more than 40 years' experience in the field of paleontology, with 30 years' experience in California. He has authored or co-authored 40 peer-reviewed articles for scientific journals and books. Within these, he has authored or co-authored descriptions of three new genera and three new species.

He is a recognized authority on fossil fishes of Cretaceous rocks of North America and Cenozoic rocks of the western coast of North America. As a result, Dr. Stewart is often called upon to identify paleontological and archaeological specimens. He has served as expert witness for the U.S. Department of Justice.

Dr. Stewart has extensive experience finding and excavating fossils for county, state, and provincial institutions. His field work includes projects in cooperation with the U.S. Bureau of Land Management, National Parks Service, U.S. Army Corps of Engineers, U.S. Navy, U. S. Department of Energy, Federal Aviation Administration, California Energy Commission, Caltrans, and California State Parks. The Bureau of Land Management's national website features one of his excavations from 2004. He has supervised monitoring of construction activity in numerous California counties and municipalities. In addition to fieldwork, he has experience in the supervision of preparators, surveyors, curatorial assistants, and excavators. He also has extensive experience preparing fossils, and has processed, recovered, and identified thousands of microvertebrate fossils.

Relevant Experience

Salton Sea Mitigation Implementation Plan, Riverside and Imperial Counties, CA. *Paleontologist.* ESA prepared an adaptive management and monitoring plan for the Salton Sea basin for the Salton Sea Management Program, which is a partnership between the California Natural Resources Agency, DWR, and CDFW. The monitoring plan will prioritize and guide monitoring for biological resources, including avian species, fish and invertebrates, as well as water quality, hydrology, air quality, and socioeconomics. The monitoring plan will inform status and trends of resources, as well as the implementation of future habitat and dust suppression projects. JD compiled the paleontological resource mitigation and monitoring plan and prepared the team for monitoring.

California Water Service Company, Palos Verdes Peninsula Water Reliability Project, Rolling Hills Estates, CA. Paleontologist. ESA provided a full suite of environmental services for the Palos Verdes Peninsula Water Reliability project. The proposed project involves the construction of approximately seven miles of buried potable water pipelines and a new booster pump station to replace the current water distribution system serving the Palos Verdes Peninsula. The large 7-mile utility/infrastructure project, which crossed multiple jurisdictions, including the cities of Rolling Hills Estates and Rancho Palos Verdes, and the County of Los Angeles. JD oversaw paleontological monitoring for reaches 3 and 4 and the pump station, coordinating finds, identifying fossils, and processing the fossils at the lab.

J.D. Stewart, Ph.D. (Continued)

Principal Paleontologist

Syphon Reservoir Geotechnical Investigations Project IS/MND, Orange County, CA. *Principal Paleontologist.* IRWD implemented the Geotechnical Investigations Project to characterize the geologic and geotechnical conditions of the Syphon Reservoir site to support the potential development of a future reservoir expansion. The Project included a combination of exploratory test pits, borings, and geophysical surveys to characterize the subsurface conditions of the soil at the Syphon Reservoir site and verified the characteristics of the Center Valley Fault. ESA provided extensive biological surveys and cultural surveys, assisted IRWD with AB 52 process for Tribal consultation. Dr. Stewart supervised paleontological monitoring during geotechnical explorations (including borings, exploratory test pits, and abutment/seismic trenches) at the Syphon Reservoir, as the project is located within geologic formations (Silverado and Sespe/Vaqueros) that have a high paleontological potential for yielding paleontological resources. Sediment sampling was conducted to identify the presence/absence of microvertebrate fossils.

Goetz Road Potable Water Storage Tank and Pipeline Project EIR, Riverside, CA. *Paleontologist.* ESA prepared an EIR and conducted supporting biological, archaeological, and paleontological surveys, as well as prepared visual simulations and a shade and shadow report for the Goetz Road Potable Water Storage Tank and Pipeline project. The project would involve construction and operation of an 8-million-gallon potable water storage tank in the City of Perris. JD led the paleontology survey.

City of Menifee, On-Call Consulting and Peer Review Services, Menifee, CA. *Paleontologist.* For 5 years, ESA has provided on-call peer reviews of more than 30 applicant-prepared cultural resources technical reports. ESA has become a trusted advisor to the City. JD has provided peer review of paleontology sections and reports for the City.

Rosedale-Rio Bravo Water Storage District, Onyx Ranch South Fork Valley Water Project EIR, Kern County, CA. *Paleontologist.* ESA prepared the EIR and associated technical studies to support the Onyx Ranch South Fork Valley Water Project. RRBWSD proposes to change the point of diversion and place of use for the water rights associated with Onyx Ranch and Smith Ranch on the South Fork of the Kern River. The intent of the project is to allow water to be delivered in the RRBWSD service area on the San Joaquin Valley floor and used for irrigation and groundwater recharge. The proposed project would assist the RRBWSD in meeting its sustainability goals under the Sustainable Groundwater Management Act. JD prepared the paleontology report to support the CEQA section.

Guild GC, 8777 Washington Boulevard MND, Culver City, CA. *Paleontologist.* ESA prepared an MND to address the proposed redevelopment of an approximately 1-acre property at 8777 Washington Boulevard north of the intersection at Washington Boulevard and National Boulevard in Culver City. The project is proposing a four-story building up to 56 feet. The project is proposing approximately 128,000 square feet of office space on Levels 2 through 4 and 4,500 square feet of retail/food retail on the ground level. JD provided monitoring oversight, oversaw fossil discovery, and processed fossil samples.

I-805 Managed Lanes South Project, Caltrans District 11, San Diego County, CA. *Paleontologist.* Dr. Stewart supervised the pedestrian survey of the project footprint and wrote the Paleontological Resource Assessment.

I-805 North Corridor Project, Caltrans District 11, San Diego County, CA. *Paleontologist.* Dr. Stewart supervised the pedestrian survey of the project footprint and wrote the Paleontological Resource Assessment.

Crestavilla Retirement and Assisted Living Community Project, Laguna Niguel, CA. *Principal Paleontologist.* Dr. Stewart supervised paleontological monitoring during the construction of a new 224-unit retirement and assisted living facility and an approximately 1,870 square-foot Spiritual Resource Center (Shepherd of the Hills Church) within a four-story structure located over a one-level subterranean parking structure. The monitoring led to the identification of a

remarkable collection of vertebrate fossils, including the first record of a gulper shark (*Centrophorus*) from any Neogene sediments of coastal California and the first reported specimens of the cookie-cutter shark (*Isistius*) from the Capistrano Formation. Additionally, the project yielded the most complete fossil tuna ever found in California and it probably represents a species new to science.

Palos Verdes Peninsula Water Reliability Project, Palos Verdes Peninsula, CA. *Principal Paleontologist.* Dr. Stewart supervised paleontological monitoring during construction of new potable water pipelines and a new booster pump station to replace the current water distribution system serving the Palos Verdes Peninsula. The monitoring led to the identification and salvage of numerous fossils from Altamira Shale deposits of the Monterey Formation, including fossils of leaf imprints, sardine scales, fish parts (vertebrae, dentary, mandible) and the fossil appendage (dactyl) of a type of Mantis shrimp (Stomatopod). The Mantis shrimp specimen is believed to be the only second known occurrence in southern California of *Angelosquilla altamierensis*, and the only one with a known precise locality and provenience.

Oaks at Monte Nido, Santa Monica Mountains, Unincorporated Los Angeles County, CA. *Principal Paleontologist.* Dr. Stewart was in charge of the preparation of the Paleontological Resources Assessment Report, which included a pedestrian survey. The pedestrian survey yielded the identification of a sandstone boulder that contains a fossil impression of the skull of a small-toothed cetacean “dolphin” and the identification of fossilized shells of pelecypods (e.g., bivalves such as clams, mussels, oysters, and cockles) and gastropods (e.g., snails and slugs). The project proposes the development of 15 single-family residences on separate individual recorded parcels within the Monte Nido Community, along the scenic route of Piuma Road.

Heritage Fields/Great Park Paleontological Review, Orange County, CA. *Principal Paleontologist.* Dr. Stewart conducted Phase I and II paleontological assessments at the Heritage Fields / Great Park in Orange County, California where he and his team discovered significant portions of a Miocene-aged (15 million years ago) whale fossil, and a Pleistocene microvertebrate fauna dating to before 28,000 years ago.

Calnev Pipeline Project, San Bernardino County, CA, and Clark County, NV. *Principal Paleontologist.* Dr. Stewart directed paleontological survey of a 234-mile-long project area in San Bernardino County, California and Clark County, Nevada and wrote the paleontological assessment.

Pacific Coast Archaeological Society

Kyle Garcia has over 21 years of experience in the archaeology and prehistory of southern California, and meets and exceeds the Secretary of Interior Standards qualificaitons for a prehistoric and historic archaeolgoist. During his career, he has authored or contributed to more than 800 projects subject to the requirements of the California Environmental Quality Act, the National Environmental Policy Act (NEPA), and regulations implementing Section 106 of the National Historic Preservation Act (Section 106 of the NHPA). He is well-versed in the archaeological resources of California's coastal, interior, and island settings. He is skilled in evaluation historic and prehistoric archaeological resources; agency and Native American consultation; pedestrian surveys, testing and evaluation excavations as well as archaeological and paleontological construction monitoring, and laboratory processing. During his tenure, he has authored or contributed to more than 400 technical reports and sections to support all levels of CEQA and NEPA documents. Kyle's portfolio of projects includes energy, water, and transportation infrastructure as well as residential, commercial, mixed-use, institutional, and urban redevelopment serving public and private sector clients. Kyle has conducted archaeological work throughout California and is a certified archaeologist and paleontologist in Riverside, Santa Barbara, and Orange counties.

Relevant Experience

Archaeological/Paleontological Monitoring. Kyle has managed more than 120 archaeological and/or paleontological construction monitoring projects in Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. He has a commanding knowledge of the procedures to implement in the event of an inadvertent discovery during construction, and how to navigate an applicant or lead agency though that process to ensure compliance with the project's mitigation measures or conditions of approval and to reach consensus on treatment of the discovery, especially if the discovery is Native American in origin.

Paleontology. In addition to his archaeological work, Kyle has been cross-trained in paleontological mitigation monitoring and assisted in the excavations of a Miocene whale fossil near Irvine and a new species of extinct tuna in Laguna Niguel, California. Kyle has also managed or conducted more than 200 paleontological assessments and 40 paleontological monitoring projects throughout southern California. He has assisted ESA's paleontologists with the preparation of paleontological reports in compliance with CEQA and local paleontological guidelines, including guidelines for the Society for Vertebrate Paleontology.

Project Experience

Archaeological and Paleontological Monitoring for the LAX Crossfield Taxiway Improvements, Los Angeles, CA. *Project Manager/Archaeological Monitor.* Between 2009-2010, Kyle performed archaeological and paleontological monitoring services during

earthmoving operations associated with the development of the Crossfield Taxiway project in accordance with established mitigation measures from the LAX Crossfield Taxiway Project (CFTP) EIR. PCR conducted archaeological and paleontological field visits, paleontological sediment sampling, and monitoring of earthmoving operations associated with the construction of CFTP until activities requiring monitoring ended. These operations included excavations for filter boxes, water pipeline installation, and the realignment of World Way West. In addition to monitoring, Kyle performed an archaeology and paleontology training session for appropriate project personnel involved with construction of the project. The training session focused on how to identify archaeological and paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. No resources were identified during the monitoring effort and these findings were summarized in a report that was submitted to Los Angeles World Airports. Kyle served as project director/manager, crew chief, monitor, and co-author of the final report.

University High School Beautification Project, Los Angeles, CA. *Archaeologist*. Kyle performed archaeological monitoring during earth-moving activities on the campus. The archaeological monitoring program ensured the protection of the village site and springs, and resulted in the discovery of remains of the original portico of the Administration Building which was destroyed by the Long Beach Earthquake of 1933.

Rancho Campana High School and Performing Arts Center Construction Monitoring, Camarillo, CA. *Project Manager*. Kyle led the archaeological and paleontological monitoring for the project as a part of ESA's on-call contract with Oxnard Union High School. He managed and coordinated the effort and prepared the associated report. ESA identified two archaeological resources (56-001512/CA-VEN-1512 and 56-001513/CA-VEN-1513H) during monitoring efforts and several paleontological localities during the monitoring and sediment screening activities and worked together with the Ventureño Chumash regarding treatment for the archaeological resources. Although several archaeological and paleontological resources were encountered during the construction monitoring efforts, the resources were treated in accordance with the mitigation measures and, as a result, the impacts to the resources were reduced to a less than significant level pursuant to the CEQA.

Citron (Stella Park) Townhome Development, Escondido, CA: *Project Manager.* Kyle served as the project manager responsible for overseeing the archaeological and Native American monitoring at the project in accordance with the Conditions of Approval. The project included the construction of a 65-unit townhome development on a vacant 2.29-acre site in the City of Escondido.

Archaeological Monitoring, Test Excavations, and Data Recovery Excavations During Construction of the Crystal Geyser Roxane Cabin Bar Ranch Water Bottling Facility, Olancha, Inyo County, CA. *Principal Investigator/Project Director/Manager/Crew Chief.* Kyle managed/directed archaeological construction monitoring services in accordance with the Cultural Resources mitigation measures in the Mitigation Monitoring and Reporting Program (MMRP) of the EIR for the project. During initial clearing and grubbing activities associated with the project, five prehistoric archeological resources were encountered. Kyle assisted the Applicant in developing a cultural resources treatment plan to address identify, evaluate, and mitigate project impacts to these resources to a less than significant level. Pursuant to the MMRP, this treatment plan was developed in coordination with ESA (Kyle), the County, CG Roxane, and the Lone-Pine Pauite-Shoshone Reservation. The treatment plan included measures for resource avoidance, additional survey, and the excavation of nine controlled excavation units and multiple mechanical backhoe trenches across the project site. More than a 1,000 artifacts have been recovered from this project. This project began in 2015 and continues today.

Fatima Clark

Archaeologist

EDUCATION

BA, Anthropology, California State University, Fullerton

17 YEARS' EXPERIENCE

CERTIFICATIONS/ REGISTRATION

Orange County Certified Archaeologist

HAZWOPER Certified

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima has 17 years of hands-on archaeological experience and is practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona, and Peru. Fatima has written California Environmental Quality Act (CEQA)-level technical reports, Environmental Impact Report (EIR) sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to California Department of Transportation (Caltrans) requirements. She is also experienced in performing archaeological testing, site recordation, laboratory analysis, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects, including mixed-use, residential, and energy, water, and road infrastructure projects. In addition to her archaeology background, Fatima has been cross-trained in conducting paleontological surveys and monitoring and has co-authored and managed associated reports.

Relevant Experience

Los Angeles Department of Water and Power, Fort Independence Travel Plaza Power Project, Independence (Owens Valley), CA. *Project Manager*. Fatima is in the process of preparing the cultural resources assessment in compliance with NEPA, Section 106, and CEQA. LADWP proposes to install 13 new temporary poles, one (1) anchor, and replace one (1) existing pole for a 34.5 kV line extension to provide power during construction of a new Travel Center at 141 N. Highway 395 in Fort Independence, Inyo County, California.

Landify ECT Corporation, Lower Sweetwater Park Project, City of Chula Vista, CA. *Project Manager*. Fatima has prepared a cultural resources assessment in compliance with CEQA. The Project proposes to redevelop the existing 21.3 acre Project Site with sports facilities within the City of Chula Vista.

County of Los Angeles, Department of Public Works, Whittier Boulevard Underground Utility Project, Los Angeles County, CA. *Project Co-Manager.* Fatima prepared the cultural resources assessment in support of a Class 2 Categorical Exemption. The project consists of the removal of utility poles and overhead lines, and the excavation for underground utility lines along Whittier Boulevard right-of-way. One historical resource, the early-to-mid 20th century Los Angeles Railway (or Yellow Cars), was identified in the project area as a result of archival research and geotechnical investigations. Fatima also managed the archaeological monitoring of construction activities and prepared the monitoring report.

City of Carson, Avocet Energy Storage System Project, City of Carson, CA. *Archaeologist.* Fatima managed the preparation of the archaeological and paleontological resources assessment reports in compliance with CEQA. The proposed Project includes the development of an approximately 200-megawatt battery energy storage system on a

6.96-acre site (BESS site), improvements and upgrades to the existing SCE Hinson Substation (SCE Hinson Substation site), the construction of a gen-tie line to connect to substation to the BESS site (proposed gen-tie line route), and other associated improvements. The proposed gen-tie route would cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach.

Storm Properties, Inc. Storm Hill Lane Project, Rolling Hills, CA. *Project Manager.* Fatima managed the day-to-day coordination for the monitoring and preparation of the archaeological/paleontological monitoring report pursuant to CEQA. As a result of the monitoring, several fossils were identified and these are currently being analyzed. The Project requires the reconstruction and expansion of Storm Hill Lane from the currently addressed and developed lot at 4 Storm Hill Lane to the three undeveloped lots.

Kiewit Infrastructure West Co., Ballona Wetlands Sequence 1 & 2 Restoration, Culver City, CA. *Project Manager.* Fatima managed the coordination for the monitoring with the archaeological and biological monitors, as well as coordination with the client. ESA's monitors were present during trenching and grading within portions of Ballona Creek in Culver City.

Southern California Association of Governments (SCAG) 2024 Connect SoCal Program PEIR, Los Angeles, Riverside, San Bernardino, Orange, Imperial and Ventura, CA. *Deputy Project Manager.* Fatima led the preparation of the PEIR Sections (cultural, paleontological, and tribal resources), as well as coordinated the Native American consultation efforts. Connect SoCal 2024 is a long-range comprehensive plan for the region's multi-modal transportation system. Preparing the Plan is one of SCAG's primary statutory responsibilities under federal and state law. A regional transportation plan (RTP) is the mechanism used in California by both metropolitan planning organizations and regional transportation planning agencies to conduct long-range (at least 20-year) planning in their regions. SCAG must adopt an RTP and update it every four years, or more frequently, if the region is to receive federal and state transportation dollars for public transit, streets/roads, and bicycle and pedestrian improvements.

Culver City, Crossings Campus (Culver City & City of Los Angeles, CA). *Deputy Project Manager.* Fatima led the preparation of the archaeological resources report and coordinated the preparation of the paleontological resources report. Fatima also led the preparation of the EIR sections (cultural, paleo, tribal). Culver Crossings Properties LLC, the Applicant, proposes to develop an office project (Project) on an approximately 4.46-acre site (Project Site) comprised of two properties: one 1.63-acre parcel is located in the City of Culver City (City), while the second 2.83-acre parcel is located in the City of Los Angeles.

County of San Diego Department of Parks and Recreation, Sweetwater Campground Geotech Boring Monitoring, San Diego County, CA. *Project Co- Manager.* Fatima co-managed the archaeological monitoring and coordinated with Red Tail for Native American monitoring and the County of San Diego Department of Parks and Recreation during Geotech borings for the Project.

Los Angeles County Department of Regional Planning, East San Gabriel Valley Area Plan (ESGVAP) Program EIR, Eastern Portion of Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The ESGVAP is part of the Los Angeles County 2035 General Plan, which will require an amendment. The ESGVAP is a long-range policy document developed to guide long-term growth of the area through development of a guiding vision, goals, policies, and implementation actions for the unincorporated communities in the East San Gabriel Valley. The ESGVAP's planning area consists of 24 unincorporated islands and communities and encompasses a total land area of 210.5 square miles.

Fatima Clark (Continued)

Archaeologist

Los Angeles County Department of Regional Planning, Los Angeles County 2045 Climate Action Plan (CAP) Update and PEIR, Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The County adopted the *Unincorporated Los Angeles County Community Climate Action Plan 2020* (2020 CCAP) in 2015 as a component of the Air Quality Element of the General Plan. The 2020 CCAP aligned with General Plan goals, policies, and programs, as well as several other existing programs in Los Angeles County. The 2020 CCAP was the first attempt to set greenhouse gas (GHG) emissions reduction goals in Los Angeles County. Although the targets for the 2020 CCAP were ultimately not fully met, the plan provided a road map for implementing the County's GHG reduction measures. The 2020 CCAP actions were implemented through County Code amendments and programs related to climate action. The Draft 2045 CAP builds on previous work and defines new reduction targets beyond the year 2020.

Eastern Municipal Water District, San Jacinto Valley Groundwater Treatment Facility Project, San Jacinto, CA. *Archaeologist.* Fatima assisted with the Phase II archaeological testing for the Project. The site was the location of the region's first trading post/general store, established ca. 1868. It later became the Palma Hotel, constructed by Henry T. Hewitt. The hotel was also used as a Riverside County hospital before it was destroyed in an earthquake in 1899.

San Manuel Band of Mission Indians, Sand Canyon Flood Control Permitting Project, San Bernardino County, CA. *Archaeologist.* Fatima was in charge of preparing the cultural resources assessment in compliance with Section 106. Fatima also conducted the pedestrian survey. The San Manuel Band of Mission Indians is considering taking over operation and maintenance of a concrete-lined channel and debris basin (known as Sand Creek) along Sand Canyon, within unincorporated San Bernardino County.

City of Long Beach, 615 E. Ocean Boulevard Project, Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in support of an addendum to the Certified City of Long Beach Downtown Plan Program Environmental Impact Report. The Project would develop a 21-story high-rise residential building on an approximately 0.4-acre site located at 615 East Ocean Boulevard within the City's limits (Project site).

City of Long Beach Department of Development Services, Planning Bureau, 7250 Carson Street Project, City of Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in compliance with CEQA. The Project Applicant proposes to subdivide a 20-acre parcel into two parcels (Parcel A and Parcel B). Other than the approval of the tentative parcel map to subdivide the existing parcel, no proposed improvements or development for Parcel A are included as part of the Project. Development of Parcel B (Project Site) would include the development of two fast-food restaurants and parking spaces.

City of Diamond Bar, Crooked Creek Residential Subdivision Project, Los Angeles County, CA. *Archaeologist.* Fatima conducted the archaeological and paleontological resources assessments in compliance with CEQA and the City of Diamond Bar General Plan Policy RC-P-42. The studies included records searches, pedestrian survey, and subsurface sensitivity assessments. No cultural resources were identified in the project site, but the area was found to have the potential to contain subsurface prehistoric archaeological resources and paleontological resources. The project consisted of the development of seven single-family residences and associated infrastructure on approximately 2.5 acres. The project required approval of a Vesting Tentative Tract Map, Conditional Use Permit, Tree Permit, and Development Review.

Salpi Bocchieriyan is a cultural resources specialist with over 8 years of experience working on archaeological surveys, data recovery, and monitoring projects. Salpi is experienced at planning fieldwork and leading field teams in survey, data collection, and resource recordation. She regularly prepares site forms, conducts presence/absence and evaluation testing efforts and data recovery excavation, and prepares technical reports documenting those efforts and presenting them to clients. Salpi has experience with energy and water infrastructure and other development projects across southern California, western Arizona, southern Nevada, and Texas and is an expert in identifying and documenting resources in these geographies. She is familiar with the National Historic Preservation Act Section 106 (Section 106), National Environmental Protection Act (NEPA), and California Environmental Quality Act (CEQA) cultural resource compliance processes and has worked closely with federal and state agencies, private developers, tribes, and other stakeholders in implementing cultural resources requirements.

Relevant Experience

California State Coastal Conservancy/The Nature Conservancy/City of Oxnard, Ormond Beach Restoration and Public Access Plan, Ventura County, CA. *Senior Cultural Resources Specialist. (July 2024- Present)* ESA is preparing an archaeological resources assessment for the Ormond Beach Restoration and Public Access Plan in compliance with Section 106. The project involves a restoration and access plan that balances habitat restoration and protection of sensitive plant and animal species with improved and increased public access. The cultural resources component includes supporting the California State Coastal Conservancy, The Nature Conservancy, and the City of Oxnard with tribal outreach and consultation. The project is statutorily exempt from CEQA. Salpi drafted outreach letters, planned and led pedestrian surveys, and assisted with archival research. Salpi served as a primary report author.

Rancon Group, San Pedro Farm Residential Development Project Addendum, Riverside County, CA. *Project Manager. (March 2024- August 2024)* ESA prepared an archaeological resources assessment addendum in compliance with CEQA. The project involved archival research as well as pedestrian survey, coordination with Pechanga and Soboba throughout the project, and coordination with the County of Riverside regarding identified resources. Salpi served as the Project Manager, surveyor, and report author for this project.

Bureau of Land Management (Carson City District Office), Pine Nut Range Fuels Treatments, Carson City, NV. *Senior Cultural Resources Specialist (August 2024- January 2025).* ESA prepared a Class III Cultural Inventory for the Pine Nut Range Fuels Treatments Project in compliance with Section 106. The project involved intensive pedestrian survey and a desktop study of archival materials and maps. Salpi planned and led a portion of the

survey efforts, documented and evaluated over 30 sites and coordinated and drafted much of the final report.

Delaney Colorado River Transmission LLC, Ten West Link Transmission Line Project, Riverside County, CA and La Paz County, AZ. *Senior Cultural Resources Specialist (November 2022 – May 2024).* ESA provided archaeological monitoring during construction as well as perform archaeological and historic architectural resource documentation and evaluation in compliance with Section 106, NEPA, and CEQA requirements. The project involves the construction of 125 miles of high voltage electrical transmission line from Tonopah, AZ, to Blythe, CA. The corridor spans numerous federal, state, and private jurisdictions with varied cultural resource requirements necessitating sophisticated tracking and implementation of numerous agency jurisdiction–specific mitigations. The project passes through many Abandoned Mine Land areas and ESA's team has identified, documented, and evaluated a wide array of historic mining and mining related features such as prospects, cairns and claim markers, roads and trails, mine openings, can and other refuse scatters, and other mining related infrastructure. The project footprint also encompasses culturally sensitive areas important to multiple tribes including the Colorado River Indian Tribes (CRIT). ESA's team is working alongside the construction contractor, tribal monitors from multiple tribes, and with the BLM in two states. Salpi serves as the Field Lead and Deputy Project Manager for the Project where she co-directs a crew of up to 20 archaeogists and coordinates with up to 10 CRIT tribal monitors.

City of Carson, Avocet Battery Energy Storage System Project, Carson, CA. *Senior Cultural Resources Specialist (September 2023 – December 2023).* ESA prepared the Initial Study to support a Mitigated Negative Declaration for the Avocet Energy Storage Project in Carson, California. This project aims to establish a 200-megawatt battery energy storage system on a nearly 7-acre site, designed to efficiently capture and manage renewable energy in a cost-effective and commercially viable manner. By storing energy from the grid and discharging it when needed, the project will help California achieve its greenhouse gas emission reduction targets for 2020 and 2030. ESA prepared a comprehensive suite of technical studies, including assessments of air quality, cultural resources, greenhouse gas emissions, noise, energy, and addressed community fire concerns. Salpi authored the archaeological testing plan.

Related Bristol Specific Plan Project, City of Santa Ana, CA. *Senior Cultural Resources Specialist (October 2022 – January 2023).* Environmental Science Associates (ESA) was retained by RCR Bristol, LLC to conduct an archaeological resources inventory for Related Bristol Specific Plan (Project) pursuant to the California Environmental Quality Act (CEQA). The proposed Project would redevelop a 41.1-acre Project Site in Santa Ana for a walkable mixed-use neighborhood of residential, retail, hotel and senior living uses under a Specific Plan entitlement process in the City of Santa Ana. Salpi served as co-author and surveyor for cultural resources inventory.

Newport Center Project, Orange County, CA. *Senior Cultural Resources Specialist (October 2021).* Environmental Science Associates (ESA) has been retained by the Lyon Living Development Company to prepare an EIR addendum by providing historic, cultural, and biological resources technical evaluations, as well as California Environmental Quality Act (CEQA) consultation services. Salpi completed the records search requests for this project.

Norwalk Bicycle Master Plan Project, City of Norwalk, CA. *Senior Cultural Resources Specialist (October 2021 – December 2021).* Environmental Science Associates (ESA) has been retained by Kittelson & Associates to completed a streamlined Initial Study (completion of the CEQA Environmental Checklist Form), leading to a Negative Declaration. Salpi prepared the record search requests and completed the record search result portion of the report.

EXECUTIVE SUMMARY

On behalf of Reda Residential, LLC, Advanced Environmental Concepts, Inc. (AEC) performed a Phase I Environmental Site Assessment (ESA) during September 2024 at the Fox Hills Plaza having street addresses of 6201-6299 Bristol Parkway in Culver City, California. Also, the site is described by three Los Angeles County Assessor's Parcel Numbers (APNs) of 4134-018-004 (0.79-ac), -005 (5.73-ac), and -006 (0.52-ac). In addition, the site is within a small portion of the South Half of the Northwest Quarter of Section 19; Township 2 South, Range 14 West of the San Bernardino Base & Meridian System (SBB&M). The subject 7.04-acre development is bordered to the north by Green Valley Circle, to the east by Bristol Parkway, and to the west and south by hotels.

The subject property is developed with a shopping center described as Fox Hills Plaza consisting of two buildings, a large asphalt-paved parking lot, and landscaped areas. The larger building (approximately 60,268-square feet) is along the west boundary of the site and has current addresses of 6221 to 6299 Bristol Parkway; this building was constructed between 1973-1974 and consists of wood and steel framing with masonry block walls. The interior finishes vary by tenant but generally consist of bare concrete, ceramic tile and/or carpet flooring, painted drywall walls, and acoustical ceiling tiles. The smaller stand-alone building (approximately 4,275-square feet) has an address of 6201 Bristol Parkway and is at the northeast corner of the property. A two-story building was previously developed in the northeast portion of the property during 1973-1974; however, it was demolished during 2013 and replaced with the existing single-story building. This building is constructed with wood and/or steel framing with a stucco exterior. The interior finishes consist of ceramic tile and carpet flooring, painted drywall walls, and acoustical ceiling tiles. Near each building are dumpster enclosures and pad-mounted electrical transformers.

The shopping center includes numerous commercial tenant spaces that have been occupied by a mixture of commercial, retail, professional services, and food service tenants since the site was developed; the majority of the tenant spaces were vacant at the time of AEC's site inspection. Current tenants during this September 2024 Phase I ESA include a staffing agency at 6245 Bristol Parkway (now vacant), an inactive juice bar (Juice Bae) at 6249 Bristol Parkway, an inactive bakery (Varsity Bakers) at 6271 Bristol Parkway, and LA Jiu Jitsu Academy at 6295 Bristol Parkway.

Tenants that recently vacated the shopping center included Marshalls department store at 6221 Bristol Parkway (from the early 1990s until 2020), California Roll & Sushi restaurant at 6251 Bristol Parkway (from the early 2000s until 2023), Quiznos Sub restaurant at 6257 Bristol Parkway (from approximately 2005 to 2023), Mandarin Dish restaurant at 6271 Bristol Parkway (from the early-1990s until around 2020), and CVS Pharmacy at 6299 Bristol Parkway (from the early 1990s until 2022). Also, the building at the northeast corner of the property (6201 Bristol Parkway) is currently vacant but was most recently occupied by Chase Bank (from 2013 until around 2020).

In addition to the tenants described above, some of the long-term (10 years or longer) tenants that historically occupied the site have included Photo Fast at 6247 Bristol Parkway (from the early 1990s to 2004), a dentist office at 6281 Bristol Parkway (from at least 1980 until around 2014), and Regal Liquors at 6295 Bristol Parkway (from 1975 to around 2014). Also, the space at 6223 Bristol Parkway was formerly occupied by a dry cleaner from 1975 to 2021. The dry cleaner was operated by several different individuals, but has primarily been under the same business name of Fox Hills Plaza Cleaners. The use of a dry cleaning plant that incorporated tetrachloroethylene (PCE) as the dry-cleaning solvent has prompted several subsurface investigations at the subject facility and surrounding property.

The ESA process under ASTM (Current Standard E1527-21) was created to identify *recognized environmental conditions* (RECs). The descriptive term "recognized environmental condition" is defined as (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The ESA process additionally identifies *controlled recognized environmental conditions* as a REC resulting from a past release that has been addressed to

the satisfaction of the applicable regulatory authority with hazardous substances allowed to remain in place subject to institutional controls. Also, a *historical recognized environmental condition*, i.e. an HREC is defined as a previous *release* of *hazardous substances* or *petroleum products* affecting the subject *property* that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the *subject property* to any controls (for example, *activity and use limitations* or other *property use limitations*). Finally, a *de minimis condition* is not a recognized environmental condition; however, AEC will identify non-ASTM conditions which are considered de minimis and do not present a material risk of harm to public health or the environment and would not be the subject of an enforcement action if brought to the attention of an appropriate governmental agency.

The results of this investigation have identified no *de minimis conditions,* one *recognized environmental condition (REC),* no *controlled recognized environmental conditions*, and no *historical recognized environmental conditions.*

Recognized Environmental Condition

- The space at 6223 Bristol Parkway was formerly occupied by a dry cleaner from 1975 to 2021. The dry cleaner was operated by several different individuals, but has primarily been under the same business name of Fox Hills Plaza Cleaners. The former use of a dry-cleaning plant incorporating tetrachloroethylene (PCE) as the dry-cleaning solvent has initiated several subsurface investigations at the subject and surrounding property. See Section 9.3 of this report for a discussion of the various investigations and reports prepared for the subject property.

  In short, Volatile Organic Compounds (VOCs) including PCE and trichloroethylene (TCE) have been identified in soil, soil vapor, and groundwater at the subject property. The concentrations in soil and soil vapor exceed multiple screening criteria for residential and/or commercial/industrial-use properties. The higher concentrations of PCE and TCE are identified within an approximately 60' x 60' area in subsurface soil beneath the footprint of the former cleaners between 5' and 25' below ground surface (bgs). However, there are no appreciable soil vapor results below 25' bgs. Also, the plume appears to currently have an areal extent of approximately 250' x 250' although the margins have not been defined to the extent practical.

  Based on the concentrations that have been identified onsite, a Soil Vapor Extraction (SVE) pilot study was performed by Roux Associates, Inc. (Roux) on October 4 and 5, 2022 to confirm the applicability of the remedial technology to reduce concentrations of VOCs, specifically PCE, in soil and soil vapor at the subject property. Roux had previously installed a triple-nested vapor extraction well during September 2022. The well (SVE-1) was constructed with three screen intervals set from 5' to 15' bgs (shallow), 25' to 35' bgs (middle), and 45' to 50' bgs (deep). Roux conducted an SVE stepped-rate test at extraction well SVE-1 using different applied vacuums and flow rates at each of the individual well depths to determine the most effective approach for extracting the contaminant mass. Following completion of the pilot test, Roux concluded that the subject property is an excellent candidate for remediation using SVE technology. AEC concurs that vapor extraction is a viable treatment option.

  During AEC's site inspection on September 4, 2024, water samples were collected from two groundwater monitoring wells observed in the parking lot east of the large shopping center building. One well was labeled MW-2 and is located approximately 100-feet east of the Jiu Jitsu unit (6295 Bristol Parkway) and southeast of the vacant Quiznos Sub (6257 Bristol Parkway). Another well was observed approximately 75-feet east of the northern portion of the former Marshalls (6221 Bristol Parkway); however, this well was not labeled. A subsequent review of a prior Well Log Report identified during this site assessment indicates this well is MW-1. Although no information was provided to AEC regarding the onsite monitoring wells, AEC identified Well Log Reports for the installation of four groundwater monitoring wells onsite (see Appendix H). The Well Log Reports indicate that MW-1, MW-2, MW-3, and MW-4 were drilled by Layne Christensen Company between October 4-15, 2007. Boring logs and a map prepared by Geomatrix are attached to each of the Well Log Reports and indicate that MW-1 was drilled to a total depth of 61.5' bgs and screened from 46.9'-61.3' bgs. MW-2 was drilled to

220 E. TRUXTUN AVENUE BAKERSFIELD, CA 93305 661/395-1646 FAX 661/395-1616

a total depth of 59.5' bgs and screened from 43.9'-58.3' bgs. MW-3 was drilled to a total depth of 56' bgs and screened from 40'-54.4' bgs. This well is described on the figure in the area of the dumpster enclosure along the west side of the southwest portion of the building, however, this well was not identified by AEC during the site inspection. Lastly, MW-4 was drilled to a total depth of 56.5' bgs and screened from 41' to 55.5' bgs; this well is depicted along the south side of the building; again, AEC did not identify this well during the site inspection. As previously stated, AEC has not received any reports regarding this investigation and sampling conducted by Geomatrix during 2007 and only identified this monitoring well information through the Groundwater Ambient Monitoring & Assessment program (GAMA) website under the Well Completion Report Map Application section.

The two water samples collected by AEC from MW-1 (identified in the field by AEC as MW-??) and MW-2 were analyzed for Volatile Organic Compounds (VOCs) by EPA Method 8260B. The water sample collected from MW-2 exhibited non-detectable concentrations of all VOCs analyzed. However, the water sample from MW-1 exhibited detections of Chloromethane (2.4 ug/L), Dichlorodifluoromethane (0.20 J ug/L), PCE (8.4 ug/L), and TCE (1.3 ug/L). Also, AEC re-visited the site on October 14, 2024 and identified the location of MW-3 (west of, and adjacent to the dumpster enclosure wall associated with the former CVS Pharmacy building) and MW-4 (in the asphalt-paved access drive near the south wall of the former CVS-occupied building). AEC measured depth to groundwater (approximately 51.5' bgs); collected samples of groundwater from both wells; and transported the samples to Pace Analytical Laboratories for analysis of VOCs by EPA Method 8260B. The analytical results indicated no detectable concentrations of any VOCs, including the contaminant of concern PCE.

However, the concentrations of PCE in MW-1 exceed multiple screening criteria when compared to the January 2019, Revision 2 San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (SFBRWQCB ESLs) for a direct exposure risk level and groundwater vapor intrusion risk levels for a residential and/or commercial property. TCE also exceeds two of these criteria for a direct exposure tapwater cancer risk and a residential cancer risk from groundwater vapor intrusion. (See attached Table 1 in Appendix C).

It is the opinion of AEC that the groundwater plume has not been adequately defined to the east and west of the footprint of the former dry cleaners. Also, due to the conversion of land-use at this property from commercial to residential, AEC recommends presenting the prior report data to either the DTSC or the RWQCB and enter into the selected-agency Voluntary Cleanup Program. Once the selected agency has reviewed the previously prepared reports, AEC will know if additional investigation is going to be required (most likely groundwater-related) or if the site can go directly to vapor extraction remediation.

AEC has conducted this Phase I Environmental Site Assessment at the Fox Hills Plaza having street addresses of 6201-6299 Bristol Parkway in Culver City, California (the Property) in conformance with the scope and limitations of ASTM Standard E1527-21. Any exceptions to, or deletions from this practice are described in Section 5.0 of this report. This assessment has revealed evidence of a recognized environmental condition in connection with the subject property. Therefore, based on the results of our assessment, AEC recommends further investigation is warranted for the subject property.

1.0 INTRODUCTION

Advanced Environmental Concepts, Inc. (AEC) was retained by Reda Residential, LLC ("User") to prepare this Phase I Environmental Site Assessment at the Fox Hills Plaza having street addresses of 6201-6299 Bristol Parkway in Culver City, California (the "Property"). A location map for the Property is presented as Figure 1 in Appendix A. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and general conformance with ASTM E1527-21.

2.0 PURPOSE

The purpose of this assessment is to identify recognized environmental conditions located at the subject site or adjacent properties which could present material risk of harm to public health or to the environment.

This assessment is intended to constitute appropriate inquiry into the previous ownership and uses of the property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the Landowner Liability Protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA) and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

If known or suspected contamination is identified, Users seeking to maintain Landowner Liability Protections have responsibilities in addition to completing an AAI-compliant Phase I Environmental Site Assessment. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances during the tenure of property ownership. In addition to these requirements under Federal law there are also different requirements under state law with respect to liability protections. On request, Advanced Environmental Concepts, Inc. can provide support for clients with continuing obligations, as appropriate.

3.0 SCOPE OF SERVICES

To evaluate the potential presence of recognized environmental conditions, this preliminary investigation consisted of the following:

- Contacting appropriate regulatory agencies for hazardous materials information concerning the subject site and surrounding areas located within an approximate 1-mile radius of the site boundaries. Inquiries were made regarding documentation of: (a) toxic spills; (b) underground storage tanks; (c) the use, storage (including aboveground storage tanks), generation, and/or disposal of hazardous materials; (d) the presence of disposal wells and/or leach fields, drain fields, and septic systems; and, (e) violations of applicable environmental control standards;

- Conducting interviews and researching historical site usage for information regarding past or present recognized environmental conditions;

- Reviewing selected database reports, maps, and aerial photographs for information pertaining to potential sources or visual indications of soil and groundwater contamination;

- Conducting an on-site inspection and off-site reconnaissance to identify visible evidence of the generation, use, storage, spills, or disposal of hazardous materials;

- Evaluating investigational findings and the preparation of a detailed report inclusive of findings and recommendations.

4.0 SPECIAL TERMS AND CONDITIONS

The information included in this report is intended for use exclusively as a preliminary assessment of potential environmental and human health concerns at the project site. Data is generally obtained through telephone conversations, personal interviews, public records, public information, general maps and aerial photographs. These services have been rendered by Advanced Environmental Concepts, Inc. (AEC) in accordance with generally accepted practices by professional geologists and environmental specialists. Also, the report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. Because of the limited nature of this investigation, the firm is precluded from providing a warranty, expressed or implied, regarding the presence of hazardous materials that could potentially adversely affect the subject site.

This report is provided with the understanding that it is the responsibility of the owner to convey the information and recommendations contained herein, to the appropriate regulatory agencies, as required. The services performed in the scope of this project are for the sole use of our client. Others who seek to rely on the findings contained within this report have a duty to determine the adequacy of the information presented herein, for their time, location, and intended use.

5.0 LIMITATIONS AND ASSUMPTIONS

This report presents the results of a Phase I Environmental Site Assessment conducted by **Advanced Environmental Concepts, Inc.** (**AEC**) for Reda Residential, LLC (client) on the following property:

Fox Hills Plaza
6201 – 6299 Bristol Parkway
County of Los Angeles • Culver City, California

No other properties were included within the scope of this assessment except as required for the off-site reconnaissance and for the regulatory agency database and file review pertaining to potential sources of offsite recognized environmental concerns. Historical information regarding the subject parcels is limited to review of maps, public documents, interviews with people knowledgeable with the past and present uses of the property, and aerial photography review.

The investigation focused on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the Federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., groundwater). Materials that may contain substances which are not currently deemed hazardous by the federal or state of California EPA were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks, (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered to be of concern unless observation determined that hazardous substances are likely to be present in “actionable” concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Quantitative identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

220 E. TRUXTUN AVENUE BAKERSFIELD, CA 93305 661/395-1646 FAX 661/395-1616

AEC assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. AEC assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The information regarding "purchase price" to "fair market value" is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I Environmental Site Assessment Report.

The following limitations/restrictions were placed on AEC:

- There were no limiting factors that impeded access to AEC for the entire property with the exception that AEC did not inspect the interior of all tenant spaces. However, it is the opinion of AEC that the absence of these interior inspections will not alter the conclusions and recommendations presented in this report and does not constitute a significant data gap.
