Notice of Preparation (NOP), Initial Study, and NOP Comments

City of Downey

ORIGINAL FILED

MAR 29 2022

LOS ANGELES, COUNTY CLERK

Date: March 25, 2022
To: Interested Agencies and Organizations
From: City of Downey

SUBJECT: NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT (EIR) AND NOTICE OF EIR SCOPING MEETING

Lead Agency:	City of Downey	**Contact:**	Alfonso Hernandez
Street Address:	11111 Brookshire Avenue	**Phone:**	(562) 904-7154
City/State/Zip:	Downey, CA 90241	**Email:**	ashernandez@downeyca.org

The **CITY OF DOWNEY** is the Lead Agency and will prepare an environmental impact report (EIR) for the project identified below. This Notice of Preparation (NOP) is issued to inform trustees and responsible agencies, as well as the public, of the decision to undertake preparation of an EIR. The purpose of this NOP is to describe the Proposed Project and its potential environmental effects to those who may wish to comment about the scope and content of the information to be considered in the EIR. Agencies should comment on such information as it relates to their statutory responsibilities in connection with the Proposed Project.

The project's description, location, and potential environmental effects are contained in the attached materials. A copy of the Initial Study Checklist (☒ is ☐ is not) attached.

Agencies and the public are invited to provide comments on the scope and content of the environmental review, the potential mitigation strategies, and the Project alternatives by 5:30 p.m. on Thursday, ***April 27, 2022***.

Please send your response to Alfonso Hernandez at the address shown above. You must provide name, agency (if applicable), and contact information.

Project Title:	Prologis Stewart & Gray Road Warehouse Project
Project Applicant:	City of Downey
Project Location:	9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart and Gray Road, City of Downey, County of Los Angeles

Scoping Meeting: A scoping meeting will be held on Monday, April, 18 2022 at 6:00 p.m. The meeting is an opportunity for the public and agencies to provide input on specific topics they believe should be addressed in the environmental analysis. The meeting will be held inside the City Council Chamber located at 11111 Brookshire Ave., Downey CA 90241.

Project Description: The proposed Project would include the demolition of the existing five buildings (totaling approximately 433,000 square feet) and the construction of an approximately 510,110 square foot (sf) industrial concrete tilt-up building for warehouse/logistics uses, and a 25,000-sf ancillary truck workshop facility, together

totaling 535,110 square feet. The Project would include 614 auto parking spaces, 215 trailer and/or container parking spaces and 109 dock loading doors. The warehouse building would have a 40-foot interior clear height.

The new industrial building is intended to be used for logistics and distribution purposes, and specifically as a fulfillment center and for cold storage. The facility will also include an office and mezzanine area. On-site activities will include the following: general industrial/warehouse with refrigeration and cold storage component for the purposes of receiving, storing, shipping of food and/or beverage products, storage, distribution, and/or consolidation of manufactured goods, and last-mile fulfillment and delivery. The office space is intended to be used for office uses ancillary to the warehouse operations. The 25,000-sf truck workshop building would be ancillary to the warehouse/distribution/logistics operation for purposes of maintaining a truck or van fleet, trailers, and associated equipment operating the facility. The proposed facility is intended to operate 24 hours a day, 7 days a week.

The main proposed industrial building would reach a maximum height of 55 feet above grade. The building would include concrete tilt up panels on all sides of the building. The southeast and/or southwest side of the building would be the entrance to the office component and would include glazed windows, metal side paneling, enhanced exterior building materials and building modulation. All exterior and interior glazing would be tempered with vision glass and spandrel glass at the main entryways and around the perimeter of the building. In addition, the Project would include enhanced exterior building materials, landscaping totaling 10.2 percent of the site area, and a perimeter screen wall.

1.0 Introduction

1.1 Initial Study Information Sheet

1.	Project title:	Prologis Stewart and Gray Road Warehouse Project
2.	Lead agency name and address:	City of Downey; 11111 Brookshire Avenue, Downey, CA 90241
3.	Contact person and phone number:	Alfonso Hernandez, Senior Planner (562) 904-7154
4.	Project location:	9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart and Gray Road, in Downey, CA
5.	Project sponsor's name and address:	Prologis, Inc.; 2141 Rosecrans Avenue, Suite 1151, El Segundo, CA 90245
6.	General plan designation:	GM – General Manufacturing
7.	Zoning:	M-2 – General Manufacturing Zone

8. Surrounding land uses and setting:

The Prologis Stewart and Gray Road Warehouse Project (Project) is located in the City of Downey (City), in Los Angeles County, at the northwest corner of the intersection of Stewart and Gray Road and Woodruff Ave (see Figure 1, *Regional Location,* and Figure 2, *Aerial Photograph*). The 29.16-acre Project site consists of five parcels (APN's: 6284-019-013, 6284-019-014, 6284-019-015, 6284-019-017, and 6284-019-016), located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart and Gray Road. The Project site is currently improved with five industrial buildings located along Stewart and Gray Road to the south and Hall Road to the north, totaling approximately 433,000 square feet (sf).

The five existing industrial buildings and related improvements are currently utilized by the following industrial tenants: EJ Lauren (Furniture Manufacturing), 88 Logistics/88 Transportation (Biotechnology/ Pharmaceutical Logistics), Western Pacific Pulp & Paper (Paper Recycler), OmniTeam (Commercial Kitchen Manufacturer) and Duray (Commercial Kitchen Manufacturer). The existing improvements were likely developed in the mid-1970s. The Project site currently has two driveway entrances off Stewart and Gray Road and three driveway entrances off Hall Road that lead to private internal roads, which connect around the separate buildings. These internal roads provide parking for employees, parking for trailers and containers, recycling equipment and storage of heavy operation equipment.

The site is currently zoned M-2 (General Manufacturing Zone). The Project site has a General Plan Land Use Designation of GM (General Manufacturing). The Project site is bordered by industrial uses to the east, west and south, and commercial uses to the north. Residential uses are present further to the west and northwest but are buffered by other industrial sites bordering the Project site.

9. Description of project:

The proposed Project would include the demolition of the existing five buildings (totaling approximately 433,000 sf) and the construction of an approximately 510,110-sf industrial concrete tilt-up building for warehouse/logistics uses, and a 25,000-sf ancillary truck workshop facility, together totaling 535,110 sf (see Figure 3, *Site Plan*). The Project would include 614 auto parking spaces, 215 trailer and/or container parking spaces and 109 dock loading doors. The warehouse would have a 40-foot interior clear height and maximum building height of 55 feet above grade.

The new industrial building is intended to be used for logistics and distribution purposes, and specifically as a fulfillment center and for cold storage. The facility will also include an office and mezzanine area. On-site activities will include the following: general industrial/warehouse with refrigeration and cold storage component for the purposes of receiving, storing, shipping of food and/or beverage products, storage, distribution, and/or consolidation of manufactured goods, and last-mile fulfillment and delivery. The office space is intended to be used for office uses ancillary to the warehouse operations. The 25,000-sf truck workshop building would be ancillary to the warehouse/distribution/logistics operation for purposes of maintaining a truck or van fleet, trailers, and associated equipment operating the facility. The proposed facility is intended to operate 24 hours a day, 7 days a week.

The building would include concrete tilt up panels on all sides of the building. The southeast and/or southwest side of the building would be the entrance to the office component and would include glazed windows, metal side paneling, enhanced exterior building materials and building modulation. All exterior and interior glazing would be tempered with vision glass and spandrel glass at the main entryways and around the perimeter of the building. In addition, the Project would include enhanced exterior building materials, landscaping totaling 10.2 percent of the site area, and a perimeter screen wall.

Construction of the Project would begin in Fall 2022 and would involve demolition and removal of all existing on-site structures, paving, and other improvements, which would occur for approximately five months. Following demolition and site preparation, construction of the proposed new buildings would begin in Spring 2023 and continue for approximately 10 months, with completion of the construction activities in late 2023.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement:

None

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code Section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

As part of the CEQA process, the City will solicit consultation requests from potentially affected tribal governments in the area pursuant to Assembly Bill (AB) 52.

1.2 Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" or "Less than Significant with Mitigation Incorporated" as indicated by the checklist on the following pages.

■ Aesthetics	☐ Agriculture and Forestry Resources	■ Air Quality
☐ Biological Resources	■ Cultural Resources	■ Energy
■ Geology and Soils	■ Greenhouse Gas Emissions	■ Hazards and Hazardous Materials
■ Hydrology and Water Quality	■ Land Use and Planning	☐ Mineral Resources
■ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	■ Transportation	■ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	■ Mandatory Findings of Significance

1.3 Determination

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that, although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that, although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature	Date: 3/23/22

2.0 Environmental Initial Study Checklist

The lead agency has defined the column headings in the environmental checklist as follows:

A. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

B. "Less Than Significant with Mitigation Incorporated" applies where the inclusion of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." All mitigation measures are described, including a brief explanation of how the measures reduce the effect to a less than significant level. Mitigation measures from earlier analyses may be cross-referenced.

C. "Less Than Significant Impact" applies where the project does not create an impact that exceeds a stated significance threshold.

D. "No Impact" applies where a project does not create an impact in that category. "No Impact" answers do not require an explanation if they are adequately supported by the information sources cited by the lead agency which show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project specific screening analysis).

I. Aesthetics

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	■
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	■
c) Substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	■	☐	☐	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	■	☐	☐	☐

a) Have a substantial adverse effect on a scenic vista?

No Impact. Scenic vistas are generally defined as public viewpoints that provide expansive or notable views of a highly valued landscape and are typically identified in planning documents, such as a general plan, but can also include locally known areas or locations where high-quality public views are available. The City's General Plan does not identify or otherwise designate scenic vistas or protected viewsheds (City 2005). The Project site is currently developed and surrounded by other industrial or commercial developments that prevent expansive views that could be considered scenic vistas. No impacts to scenic vistas would occur and no further analysis is required in the EIR.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. The Project site does not currently contain scenic resources such as trees, rock outcroppings, or historic buildings. There are no eligible or designated state scenic highways in the City or surrounding cities. Given that the Project site is not visible from an officially designated state scenic highway and no unique scenic resources exist on-site, the Project would not result in an impact to scenic resources within a state scenic highway. No impacts would occur, and no further analysis is required in the EIR.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Potentially Significant Impact. Public Resources Code 21071 defines the term "urbanized area" for the purpose of CEQA to mean an incorporated city that has a population of at least 100,000 persons or has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons. U.S. Bureau of the Census (U.S. Census Bureau) data from 2020 indicates that the City has a population of 114,355 and is therefore an urbanized area that should be evaluated relative to applicable zoning and other regulations governing scenic quality (U.S. Census Bureau 2020). The Project site parcels are zoned as M-2 (General Manufacturing Zone) and subject to the zoning regulations outlined in Municipal Code Section 9318.06.

The applicable Municipal Code sections include standards regulating building height, setbacks, landscaping, and other building components that address scenic quality. The proposed Project would comply with the setback, landscaping, and other development standards, but would exceed the 45-foot height limit for the zoning district. The Project aims to develop the Project site with buildings that will enhance the look and feel of this a dated manufacturing commercial corridor with both enhanced exterior building materials, landscaping treatments and a perimeter screen wall. However, given potential conflicts with existing zoning standards regarding building height and changes to the visual character of the site relative to existing conditions, impacts are potentially significant and will be further discussed in the EIR.

d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Potentially Significant Impact. The Project site is in a developed area surrounded primarily by commercial and industrial uses. The proposed building would include concrete tilt up panels on all sides and would include glazed windows. All exterior and interior glazing would be tempered with vision glass and spandrel glass at the main entryways and around the perimeter of the building. Section 9520.06 of the Municipal Code provides further specifics for outdoor lighting standards, such as height, direction, and intensities. The Project may create a new source of substantial light or glare that would adversely affect the area. Impacts are potentially significant and will be analyzed further in the EIR.

II. Agriculture and Forestry Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	■

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b)	Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	■
c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	■
d)	Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	■
e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non- forest use?	☐	☐	☐	■

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The Farmland Mapping and Monitoring Program (FMMP) is a statewide program that designates farmland among several categories, including Prime Farmland, Unique Farmland, and Farmland of Statewide Importance. The FMMP is maintained by the California Department of Conservation (DOC), the agency responsible for overseeing farmland classification throughout the state. According to the FMMP online mapping database, the Project site is classified as Urban and Built-Up Land (DOC 2018). Furthermore, the Project site is not used for agricultural production and would not convert existing farmland to a non-agricultural use. No impact would occur, and no further analysis is required in the EIR.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The Williamson Act, also known as the California Land Conservation Act of 1965, enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land to agricultural or related open space use; in return, landowners receive property tax assessments which are much lower than normal because they are based upon farming and open space uses as opposed to full market value. The Williamson Act is only applicable to parcels within an established agricultural preserve consisting of at least 20 acres of Prime Farmland, or at least 40 acres of land not designated as Prime Farmland. As stated above, the Project site is already classified as Urban and Built-Up Land where no active farmland nor agricultural resources are present and would not be eligible for a Williamson Act contract. The Project would have no impact in relation to zoning for agricultural use or a Williamson Act contract, and no further analysis is required in the EIR.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

No Impact. Public Resources Code Section 12220(g) defines "forest land" as land that can support 10 percent native cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits. Based on this definition, no forest land occurs within or adjacent to the Project site. There is no concentration of trees within the site that would constitute a forest. Moreover, there is no land zoned as forest land or timberland that exists within the Project site or within its vicinity (City 2012). Therefore, the proposed Project would not conflict with existing zoning for forest land or timberland. No impact would occur in relation to this issue and no further analysis is required in the EIR.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. As stated in Item II.c, there is no concentration of trees on the site that would constitute a forest. The site has not been historically and is not currently used or planned to be used for forest land. As such, implementation of the proposed Project would not result in the loss of forest land or conversion of forest land to non-forest use. Therefore, no impact would occur in relation to this issue and no further analysis is required in the EIR.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. As stated in Items II.a-d, the Project site is located in an area classified as Urban and Built-Up land where no agricultural resources or forest land are present. Therefore, implementation of the Project would not result in the conversion of Farmland, to nonagricultural use or conversion of forest land to non-forest use. No impact would occur in relation to this issue and no further analysis is required in the EIR.

III. Air Quality

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	■	☐	☐	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	■	☐	☐	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	■	☐	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	■	☐

a) Conflict with or obstruct implementation of the applicable air quality plan?

Potentially Significant Impact. Air quality at the Project site is regulated by the South Coast Air Quality Management District's (SCAQMD's) Air Quality Management Plan (AQMP). The SCAQMD develops rules and regulations; establishes permitting requirements for stationary sources; inspects emissions sources; and enforces such measures through educational programs or fines, when necessary. The Southern California Association of Governments (SCAG) has prepared the Regional Transportation Plan/ Sustainable Communities Strategy, a long-range transportation plan based on growth forecasts, which forms the basis for land use and transportation control portions of the AQMP. Air quality impacts for the project will be detailed in the Air Quality and Greenhouse Gas Report that will be prepared for the Project. Impacts related to the air quality plans are potentially significant and will require further analysis in the EIR.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non- attainment under an applicable federal or state ambient air quality standard?

Potentially Significant Impact. In accordance with CEQA Guidelines Section 15064(h)(3), the SCAQMD's approach for assessing cumulative impacts is based on the AQMP forecasts of attainment of ambient air quality standards in accordance with the requirements of the federal and State Clean Air Acts. If a project is not consistent with the AQMP, which is intended to bring the SCAB into attainment for all criteria pollutants, that project can be considered cumulatively considerable. Additionally, if the mass regional emissions calculated for a project exceed the applicable SCAQMD daily significance thresholds that are designed to assist the region in attaining the applicable state and national ambient air quality standards, that project can be considered cumulatively considerable. The Project has the potential to result in a significant impact related to SCAQMD criteria air pollutant emissions thresholds. An Air Quality and Greenhouse Gas Report and a Health Risk Assessment (HRA) will be prepared for the Project to determine if there would be any impacts related to this issue. Impacts are potentially significant and will be further analyzed in the EIR.

c) Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact. Impacts to sensitive receptors would have the potential to occur because criteria pollutant and toxic air contaminant (TAC) emissions would be generated during Project construction and operation. An Air Quality and Greenhouse Gas Technical Report and HRA will be

prepared to determine if there would be impacts to sensitive receptors. Impacts are potentially significant and will be further analyzed in the EIR.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. Land uses generally associated with odor complaints include the following: agricultural uses (livestock and farming); wastewater treatment plants; food processing plants; chemical plants; composting operations; refineries; landfills; dairies; and fiberglass molding facilities. The Project would not involve these land uses typically associated with emitting objectionable odors. Other potential odor sources associated with the Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the Project construction and operations are not expected to result in adverse effects. Impacts would be less than significant, and no further analysis is required in the EIR.

IV. Biological Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	■
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	☐	■
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	■	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	■	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	■
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	■

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. The Project site and its surroundings consist of numerous structures and paved lots associated with industrial land uses. No native vegetation exists onsite, and any remaining vegetation due to landscaping is ornamental and not a special status species. Given the lack of habitat and industrial site use, no wildlife species are expected to occur at the Project site. As such, no direct impact would occur and there would be no potential for habitat modification. No impacts would occur to candidate, sensitive, or special status species, and no further analysis in the EIR is required.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. The Project includes the construction and operation of a warehouse and truck workshop as a replacement to existing industrial operations with no native habitat onsite. No riparian or other sensitive habitat is located at the site or its immediate surroundings. As such, the Project would not have adverse effects on riparian or other sensitive vegetation communities. No impact would occur, and no further analysis is required in the EIR.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less than Significant Impact. The Project site is developed and paved. No wetlands or protected waters are located at the Project site. The riverine habitat 0.5 mile southwest of the Project is the nearest habitat identified in the National Wetlands Inventory (USFWS 2021). As discussed further in section VII, the Project would be subject to BMPs and permit conditions to prevent potentially adverse indirect effects due to grading and construction. No direct impacts would occur, as there are no wetlands at the Project site. Impacts would be less than significant, and no further analysis is required in the EIR.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less than Significant Impact. Los Angeles County designates land as Significant Ecological Areas (SEAs) where important habitat linkages and wildlife corridors can be maintained by limiting development. No SEA is located within the City of Downey, and thus the Project site is not in or near a SEA. The Project site and its surroundings are disturbed and developed with little to no natural habitat that could be utilized by migratory or nesting wildlife. Implementation of the Project would involve demolition of multiple industrial buildings and construction of a new, larger warehouse, which would maintain similar biological conditions as the existing site. The Project would not interfere with wildlife movement, established corridors, or nursery sites. Impacts would be less than significant, and no further analysis in the EIR is required.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. The City's tree protection ordinances apply only to City-owned trees on public streets and do not regulate trees on private property. The General Plan's Conservation Chapter encourages the preservation of mature landscaping on private property but does not regulate it (City 2005). The Project site contains very few trees and conditions would be improved by the landscaping of the proposed Project, which would cover 10.2 percent of the site. The Project would not conflict with any local policies or ordinances protecting existing biological resources, as the trees are located on private property. No impact would occur, and no further analysis is required in the EIR.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. There are no Habitat Conservation Plans, Natural Community Conservation Plans, or otherwise applicable habitat conservation plans in the City of Downey and therefore the Project site. The Project site is disturbed and urbanized, as is most of the City. No impact would occur in relation to conservation plans and no further analysis is required in the EIR.

V. Cultural Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	■	☐	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	■	☐	☐	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	■	☐	☐	☐

a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Potentially Significant Impact. Implementation of the Project could cause ground disturbance that has the potential to cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5. A Cultural Resources Report will be prepared for the proposed Project. The Cultural Resources Report will include a records search, Sacred Lands File search, Native American outreach, a review of historic aerial photographs and maps, and a pedestrian survey of the Project site. A review of the directories maintained by the California Historical Resources, the state Office of Historic Preservation (OHP), and the National Register of Historic Places (NRHP) will also be conducted to determine the presence or absence of historic resources in the Project area. Impacts are potentially significant and will be analyzed further in the EIR.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Potentially Significant Impact. As stated above, a Cultural Resources Report will be prepared for the proposed Project. Since there is the potential for buried cultural remains/resources to be present within the Project site boundaries, ground-disturbing activities could affect such resources. Therefore, the Project could result in a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5 of the CEQA Guidelines. Impacts are potentially significant and further analysis of this issue will be provided in the EIR.

c) Disturb any human remains, including those interred outside of dedicated cemeteries?

Potentially Significant Impact. The Project site is not located within or near a formal cemetery and is not known to be located on a burial ground. However, there is the potential for unknown buried human remains to be present within the Project area and ground-disturbing activities could disturb human remains. Impacts are potentially significant and further analysis of this issue will be provided in the EIR.

VI. Energy

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	■	☐	☐	☐
b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	■	☐	☐	☐

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Potentially Significant Impact. The construction and operation of the proposed Project would involve the consumption of energy for lighting, heating, cooling, and other Project needs. An Air Quality and Greenhouse Gas Report will be prepared to determine if the Project would have significant impacts related to energy consumption. The report will include projections for increases in energy use for construction and operation. Impacts are potentially significant and will be analyzed further in the EIR.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Potentially Significant Impact. Several levels of government have implemented regulatory programs in response to reducing GHG emissions, which consequently serve to increase energy efficiency. Many of the measures these programs are beyond the ability of any future development to implement and are implemented at the utility provider or the manufacturer level. The Project would comply with CCR Title 24, as required to further assure energy efficiency. Title 24 regulates green building practices and includes standards for planning and design, water efficiency, material conservation and resource efficiency, and environmental quality. Regulations for non-residential development set forth the standards for bicycle parking, light pollution reduction, electric vehicle charging spaces, low flow faucets, and toilets, irrigation, and weather protection; all with the goal of increasing energy efficiency. Further discussion of the Project's consistency with state and local plans will be included in the Air Quality and Greenhouse Gas Report and EIR. Impacts are potentially significant and will be further analyzed in the EIR.

VII. Geology and Soils

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	■	☐
ii. Strong seismic ground shaking?	■	☐	☐	☐
iii. Seismic-related ground failure, including liquefaction?	■	☐	☐	☐
iv. Landslides?	☐	☐	☐	■
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	■	☐

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c)	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	■	☐	☐	☐
d)	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	■	☐	☐	☐
e)	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	■
f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	■

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. The City, like the rest of southern California, is located within a seismically active region as a result of being located near the active margin between the North American and Pacific tectonic plates. The Alquist-Priolo Earthquake Fault Zoning Act requires the State Geologist to identify earthquake fault zones along traces of both recently and potentially active major faults. Cities and counties that contain such zones must inform the public regarding the location of these zones, which are usually one-quarter mile or less in width. Proposed development plans within these earthquake fault zones must be accompanied by a geotechnical report prepared by a qualified geologist describing the likelihood of surface rupture. The Project site is not within an Alquist-Priolo Fault Zone. The La Habra Fault Zone is the nearest Alquist-Priolo Earthquake Fault Zone and is located approximately 7.5 miles east of the Project site. Due to this distance, it is unlikely that the Project would be subjected to fault rupture associated with the La Habra Fault Zone. Impacts would be less than significant, and no further analysis is required in the EIR.

ii. Strong seismic ground shaking?

Potentially Significant Impact. The Project site is located within the seismically active southern California region and would be expected to experience effects related to earthquakes, such as ground shaking. A Geotechnical Report will be prepared in order to assess the potential for the Project to have adverse effects during strong seismic ground shaking. Impacts are potentially significant and will be analyzed further in the EIR.

iii. Seismic-related ground failure, including liquefaction?

Potentially Significant Impact. Liquefaction is a phenomenon that occurs when soil undergoes transformation from a solid state to a liquefied condition when subjected to high intensity ground shaking. This typically occurs where susceptible soils (particularly the medium sand to silt range) are located over a high groundwater table (within 50 feet of the surface). Affected soils lose all strength during liquefaction and foundation failure can occur. The City's General Plan Safety Chapter and the DOC's Earthquake Hazards Map indicate that the combination of a susceptible soil type and high groundwater table makes the City, including the Project site, vulnerable to liquefaction (City 2005; DOC 2021). A Geotechnical Report will be prepared in order to further assess the potential for impacts related to liquefaction to occur. Impacts are potentially significant and will be analyzed further in the EIR.

iv. Landslides?

No Impact. The Project site is relatively flat and there are no hillsides or steep topographic features at the site or in surrounding areas that could contribute to landslides. According to the DOC's Earthquake Hazards Map the Project site is not located in a landslide zone (DOC 2021). No impacts related to landslides would occur and no further analysis is required in the EIR.

b) Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. The Project site has previously been altered by grading and construction, however soil exposed by construction activities could be subject to erosion if exposed to heavy rain, winds, or other storm events. Compliance with the SCAQMD Rule 403 (Fugitive Dust) would include implementation of soil stabilization measures, such as daily watering, and compliance with the National Pollution Discharge Elimination System (NPDES) General Construction Permit would include implementation of BMPs deemed applicable to the Project's construction activities. The CBC requires an erosion control and grading plans prior to issuance of a grading permit as a means to minimize soil erosion to the extent practicable during both construction and operational phases. Once operational the Project would consist of paved surfaces that would not expose soils to conditions that contribute to erosion. Compliance with the various permits and plans would reduce Project impacts to less than significant in relation to this issue and no further evaluation is required in the EIR.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Potentially Significant Impact. As discussed in section VII.a.iii-iv, the Project site is not likely to experience landslides, but is in a liquefaction hazard zone. A Geotechnical Report will be prepared in order to further assess the potential for impacts related to the geologic unit and soil at the Project site. Impacts are potentially significant and will be analyzed further in the EIR.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Potentially Significant Impact. Expansive soils are those that have greater potential for shrinking and swelling when exposed to dry or wet conditions. Soil testing that will be conducted as part of the geological and soils report will indicate the expansion potential of the Project site's soils and any design

features necessary to accommodate such soils. Impacts are potentially significant and will be analyzed further in the EIR.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. The proposed Project does not include the implementation of septic tanks or alternative wastewater disposal systems. No impacts would occur, and no further analysis is required in the EIR.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

No Impact. The City's General Plan EIR indicates that no impacts related to paleontological resources are expected in the City due to its lack of undisturbed land and no history of finding paleontological resources (City 2004). The Project site has been previously graded and is currently paved land, making it unlikely that construction activities would uncover paleontological resources. No impacts to paleontological resources would occur and no further analysis is required in the EIR.

VIII. Greenhouse Gas Emissions

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	■	☐	☐	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	■	☐	☐	☐

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impacts. The Project has the potential to generate greenhouse gas emissions, both directly and indirectly, that may have a significant impact on the environment. An Air Quality and Greenhouse Gas Report will be prepared to determine if the Project would have significant impacts related to greenhouse gas emissions. Impacts are potentially significant and will be analyzed further in the EIR.

b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impacts. The Project has the potential to conflict with a plan, policy, or regulation adopted to reduce emissions of greenhouse gases. An Air Quality and Greenhouse Gas Report will be prepared to determine if the Project would have significant impacts related to greenhouse gas reduction policies. Impacts are potentially significant and will be analyzed further in the EIR.

IX. Hazards and Hazardous Materials

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	■	☐
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	■	☐	☐	☐
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	■
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	■	☐	☐	☐
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	■
f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	■	☐
g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	■	☐	☐	☐

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. Small amounts of potentially hazardous materials (e.g., fuel, lubricants, and solvents) may be used during construction activities. Hazardous materials used during Project construction would be transported, used, and stored in accordance with state and federal regulations regarding hazardous materials. In addition, materials such as paints, adhesives, solvents, and other substances typically used in building construction would be in the Project area during construction. Improper use, storage, or transportation of hazardous materials can result in accidental releases or spills, potentially posing health risks to workers, the public, and the environment. This is a standard risk on all construction sites, and there would be no greater risk for improper handling, transportation, or spills associated with the Project than would occur on any other similar construction site. Construction

contractors would be required to comply with all applicable federal, State, and local laws and regulations regarding the transport, use, and storage of hazardous construction-related materials, including but not limited to requirements imposed by the United States Environmental Protection Agency (USEPA), the California Department of Toxic Substances Control (DTSC), SCAQMD, and the Los Angeles Regional Water Quality Control Board (RWQCB). With mandatory compliance to applicable hazardous materials regulations, the Project would not create a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials during the construction phase.

The new industrial building is intended to be used for logistics and distribution purposes, specifically as a fulfillment center and for cold storage. Operation would involve the use of materials common to urban development that are labeled hazardous (e.g., solvents and commercial cleansers; petroleum products; and pesticides, fertilizers, and other landscape maintenance materials). There is the potential for routine use, storage, or transport of other hazardous materials; however, the precise materials are not known, as the tenants are not yet defined. If hazardous materials, other than those common materials described above, are associated with future warehouse operations, the hazardous materials would only be stored and transported to and from the building sites. Manufacturing and other chemical processing would not occur within the proposed warehouse uses.

Exposure of people or the environment to hazardous materials during operation of the Project may result from (1) the improper handling or use of hazardous substances; (2) transportation accidents; or (3) an unforeseen event (e.g., fire, flood, or earthquake). The severity of any such exposure is dependent upon the type and amount of the hazardous material involved; the timing, location, and nature of the event; and the sensitivity of the individuals or environment affected. As previously discussed, the U.S. Department of Transportation prescribes strict regulations for hazardous materials transport, as described in Title 49 of the Code of Federal Regulations (i.e., the Hazardous Materials Transportation Act); these are implemented by Title 13 of the California Code of Regulations. It is possible that vendors may transport hazardous materials to and from the Project; and the drivers of the transport vehicles must comply with the Hazardous Materials Transportation Act. Hazardous materials or wastes stored on site are subject to requirements associated with accumulation time limits, amounts, and proper storage locations and containers, and proper labeling. The number of materials that would be handled at any one time for the proposed warehouse operations would be relatively small. Additionally, for removal of hazardous waste from the site, hazardous waste generators are required to use a certified hazardous waste transportation company which must ship hazardous waste to a permitted facility for treatment, storage, recycling, or disposal. With compliance with applicable regulations, operation of the Project would not result in a significant risk to the public or the environment through the potential routine transport, use, or disposal of hazardous materials. Impacts would be less than significant, and no further evaluation is required in the EIR.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Potentially Significant Impact. Hazardous materials releases can occur if there are existing hazardous materials at the Project site that would be disturbed by Project construction or operation, or if future Project construction or operation activities involve the handling of substantial amounts of hazardous materials with a potential to result in upset and accident conditions. As discussed above, the Project does not propose handling substantial amounts of hazardous materials in the future. However, there are hazardous materials onsite that could be disturbed by the Project. A Phase I Environmental Site

Assessment and Phase II Investigation Report were conducted at the Project site in 2017 and indicated the existence of contamination onsite (SCS 2017a; SCS 2017b). Mitigation measures and regular monitoring of the site have been occurring since the site became a Cleanup Program Site under RWQCB in 2018. The impacts of the proposed Project with respect to exposing the public or the environment to hazardous materials through upset and accident conditions are potentially significant and will be analyzed further in the EIR.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No Impact. The Project site is not located within one-quarter mile of a school, as the school nearest to the Project site, A.L. Gauldin Elementary School, is approximately 0.7 mile south of the Project site. No impact related to the handling of hazardous materials within one-quarter mile of a school would occur and no further evaluation is required in the EIR.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Potentially Significant Impact. Pursuant to Government Code Section 65962.5 (Cortese List) requirements, the State Water Resources Control Board (SWRCB) GeoTracker database (SWRCB 2021) and the California Department of Toxic Substances Control (DTSC) EnviroStor database (DTSC 2021) were searched for hazardous materials sites within the Project area. The adjacent parcel at 9236 E. Hall Road has an EnviroStor listing related to a tiered permit. No information or data was available on the types and concentrations of VOCs associated with the release (SCS 2017a). The Project site (Downey Industrial Center) has an active cleanup site. These listings indicate there may be a hazard to the public or environment because of a hazardous materials site. Impacts are potentially significant and further analysis will be included in the EIR.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The Project site is not within the planning area for any airport land use plan (LA County 2022). The nearest airport to the project site is the Compton Woodley Airport, located 11.3 miles southwest of the Project site. No impacts related to a safety hazard or excessive noise from an airport would occur and no further analysis in the EIR is required.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Potentially Significant Impact. The City's General Plan Safety Chapter outlines emergency response plans that are coordinated at the federal, state, and local level to ensure adequate emergency response. The City maintains an Emergency Operation Plan for local emergencies and is a member of mutual aid agreements with nearby cities, as coordinated by the Los Angeles County Office of Disaster Preparedness (City 2005). The casualty collection points during emergencies would be the Rio Hondo Golf Course and Apollo Park, which are located 3 miles northwest and 3 miles west of the Project site, respectively. The Project would not physically interfere with these evacuation plans. To determine the Project's potential impacts on emergency access during operation, a Traffic Impact Analysis will be

prepared for the proposed Project. Impacts are potentially significant and will be further analyzed in the EIR.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less Than Significant Impact. According to the Very High Fire Hazard Severity Zones (VHFHSZ) in LRA Map prepared by California Department of Forestry and Fire Protection (CAL FIRE) for Los Angeles County, the Project site is not in a VHFHSZ (CAL FIRE 2011). The City's Safety Chapter of the General Plan recognizes structure fires as the main threat in the City due to the lack of undeveloped land with vegetation (City 2005). There are no wildland areas adjacent to the Project that would contribute to a wildland fire. The proposed Project would comply with the fire code in Municipal Code Article III Chapter 3, including adopting the latest CBC standards, and the California Fire Code to minimize impacts related to wildland fires. The proposed Project is not anticipated to expose people or structures to wildland fires. Impacts would be less than significant, and no further evaluation is required in the EIR.

X. Hydrology and Water Quality

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	■	☐	☐	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	■	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site?	■	☐	☐	☐
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off- site?	■	☐	☐	☐
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff?	■	☐	☐	☐
iv. Impede or redirect flood flows?	☐	☐	■	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	■	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	■	☐	☐	☐

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Potentially Significant Impact. The Los Angeles Regional Water Quality Control Board sets water quality standards for all ground and surface waters within the Project's region. Activities associated with the construction of the proposed Project would include grading, which may have the potential to release pollutants (e.g., oil from construction equipment, cleaning solvents, paint) and silt off-site which could impact water quality. The Project would prepare a Water Quality Management Plan (WQMP) to illustrate how low impact development Best Management Practices (BMPs) have been incorporated into Project construction and design. The WQMP would incorporate BMPs in accordance with the California Stormwater BMPs Handbook and the City's BMP Design Manual to control erosion and protect the quality of surface water runoff.

As required under the NPDES, a SWPPP would be created specifically for construction of the proposed Project. The plan would address erosion control measures that would be implemented to avoid or minimize erosion impacts to exposed soil associated with construction activities. Implementation of the appropriate BMPs is expected to reduce or eliminate the discharge of potential pollutants. However, impacts are potentially significant and further analysis will be provided in the EIR.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant Impact. The Project is located within the Central Groundwater Basin, which is recharged at the Whittier Narrows Dam, Rio Hondo Spreading Grounds, San Gabriel Coastal Spreading Grounds, Lower San Gabriel River, and Alamitos Barrier Project (CBMWD 2021). The Central Groundwater Basin is very low priority under the Sustainable Groundwater Management Act (SGMA), and therefore is not required to create a Groundwater Sustainability Plan (GSP; DWR 2020).

Groundwater is the primary supply source of water for Downey via the Central Basin Municipal Water District (CBMWD). According to the CBMWD's Urban Water Management Plan (UWMP), there is sufficient water resources to serve the member agencies (including the City of Downey) through 2045 in normal, dry, and multiple dry years (CBMWD 2021). The Project would not substantially decrease groundwater supplies.

The Project site is currently occupied by industrial uses and consists primarily of impermeable surfaces, such as building roofs and paved internal roads. With implementation of the Project, conditions would remain mostly impermeable, but with the addition of landscaping features (covering 10.2 percent of the Project site) that could facilitate some percolation and groundwater recharge. There would not be a

substantial interference with groundwater recharge as a result of the Project. Impacts would be less than significant, and no further evaluation is required in the EIR.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or siltation on- or off-site?

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off- site?

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff?

Potentially Significant Impact. The Project has the potential to change runoff patterns through changes to impervious surfaces but does not include alteration of a stream or river. BMPs would be established to prevent substantial erosion. A Drainage Study will be prepared to determine if there would be on- or off-site flooding impacts, stormwater drainage capacity overload, or substantial polluted runoff. The WQMP, applicable BMPs, and the Drainage Study will be discussed in the EIR to determine impacts related to drainage patterns. Impacts are potentially significant and will be analyzed in the EIR.

iv. Impede or redirect flood flows?

Less than Significant Impact. According to the Federal Emergency Management Agency (FEMA) Flood Map Service Center, the Project site is within Zone X (shaded; FEMA 2008). According to the FEMA glossary these “are the areas between the limits of the base flood and the 0.2-percent-annual-chance (or 500-year) flood.” The USACE raised local channel levees in 2000 such that no properties in Downey remain within the 100-year floodplain. Therefore, the Project would not significantly impede or redirect flood flows. Impacts are less than significant and will be analyzed further in the EIR.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Less than Significant Impact. As discussed above, the Project site is not within the 100-year floodplain and does not have a significant risk of flood. The Project site is located roughly 12 miles inland from the Pacific Ocean and is not at risk of inundation from a tsunami. Seiche zones require closed or semi-closed bodies of water; while an existing above-ground water tank is located on the south side of Stewart and Gray Road southwest of the Project site, failure of this facility and subsequent inundation of the Project site is not anticipated to result in the release of pollutants because any existing contamination on-site would be remediated prior to Project completion and operations. Once operational, the Project would not involve notable amounts of hazardous materials or other pollutant sources such that incidental inundation by tank failure would release substantial quantities of pollutants into the environment. The Project would not be at risk of floods, tsunamis, or seiches, and therefore would not release pollutants due to inundation. Impacts are less than significant and do not require further analysis in the EIR.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Potentially Significant Impact. As discussed in section X.a, implementation of the Project has the potential to impact water quality. However, as discussed in section X.b, there is no GSP for the Project area, so there would be no conflicts with a sustainable groundwater management plan. Water quality control plan consistency will be determined based on further information to be provided in a Hydrology/Drainage study and WQMP. Impacts regarding a water quality control plan are potentially significant and will be analyzed further in the EIR.

XI. Land Use and Planning

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a)	Physically divide an established community?	☐	☐	☐	■
b)	Cause significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	■	☐	☐	☐

a) Physically divide an established community?

No Impact. The Project would develop a new warehouse and truck repair facility on an existing industrial site. The surrounding land uses are commercial and other industrial site. Implementation of the proposed Project would maintain the existing land use and would not add any features that would physically divide an established community. No impacts would occur, and no further evaluation is required in the EIR.

b) Cause significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Potentially Significant Impact. The Project site is zoned as M-2 (General Manufacturing Zone) and planned for the GM (General Manufacturing) land use. Warehouse and truck repair uses are permitted in the M-2 zone pursuant to Municipal Code Section 9318.04. The change in site use from industrial to a distribution center may cause significant environmental impact related to the General Plan and Zoning Code. Consistency with these policies will be discussed in the EIR. Therefore, impacts are potentially significant and will be further analyzed in the EIR.

XII. Mineral Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	■
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	■

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. According to the City's General Plan EIR, their review of the state of California's mineral resource maps indicated that there are no known mineral resources located within the City (City 2004). Therefore, the Project would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. No impact would occur, and no further analysis is required in the EIR.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

No Impact. As stated above in Item XII.a, the City's General Plan EIR does not recognize any mineral resource areas in the City. Additionally, the Project area is not used for mineral extraction and is not known as a locally important mineral resource recovery site. No impact would occur and no further analysis in required in the EIR.

XIII. Noise

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	■	☐	☐	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	■	☐	☐	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	■

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact. The Project's construction and operational activities could cause significant ambient noise level impacts in the vicinity of the Project site and will be evaluated in a Noise Study. Impacts are potentially significant and will be analyzed further in the EIR.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Potentially Significant Impact. The Project's construction and operational activities could result in a potentially significant vibration impact. To determine the Project's construction and operational vibration, a Noise Study will be prepared for the proposed Project. Impacts are potentially significant and will be analyzed further in the EIR.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The Project site is not within the planning area for any airport land use plan (LA County 2022). The nearest airport to the project site is the Compton Woodley Airport, located 11.3 miles southwest of the Project site. No impacts related to airport noise would occur and no further analysis in the EIR is required.

XIV. Population and Housing

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	■	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	■

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The proposed Project does not include residential development that would directly or indirectly affect the number of residents in the area and would not contribute to the creation of additional housing in the City. The proposed Project would include a warehouse building and truck workshop, which would replace existing industrial buildings with similar business uses. Once operational, the Project is expected to hire from the existing population and has no other features that would directly or indirectly induce population growth. Impacts would be less than significant in relation to this issue and no further analysis is required in the EIR.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The proposed Project includes demolition of industrial buildings and construction of a warehouse building and truck workshop. The existing development does not contain housing; thus, the Project would not remove housing or displace people, necessitating the construction of replacement housing. No impact would occur, and no further analysis is required in the EIR.

XV. Public Services

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a) Fire protection?	☐	☐	■	☐
b) Police protection?	☐	☐	■	☐
c) Schools?	☐	☐	☐	■
d) Parks?	☐	☐	☐	■

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Other public facilities?	☐	☐	☐	■

a) Fire protection?

Less than Significant Impact. The Project would involve the demolition of five existing industrial buildings (totaling approximately 433,000 sf) and the construction of a new warehouse and truck workshop (totaling 535,110 sf). The Downey Fire Department operates four stations with four corresponding service districts. The Project site is in District 2 and serviced by Fire Station #2, which is located at 9556 Imperial Highway, approximately 1 mile south of the Project site. In addition to the City's four fire stations, the City is a member of mutual aid agreements with nearby cities that assist the other jurisdictions as necessary (City 2005). The Project would not include a land use that would require unique or expanded fire protection services. The Project would require fire protection services comparable to the existing conditions at the site and would not result in an increase in services such that new facilities or resources would need to be added to the Fire Department's capacity. Impacts are less than significant, and no further analysis is required in the EIR.

b) Police protection?

Less than Significant Impact. The proposed Project would include the construction and operation of a warehouse and truck workshop that would replace existing industrial facilities. The Downey Police Department would service the Project site and is headquartered at 10911 Brookshire Avenue, 1.1 miles northwest of the Project site. The Project would require police protection services however, no new uses that would increase the City's population or would require unique police protection services would be involved. As such, the Project would not result in the need for expanded facilities. Impacts are less than significant, and no further analysis is required in the EIR.

c) Schools?

No Impact. The Project would involve demolition of existing industrial facilities and construction of a warehouse and truck workshop. New residents would not be introduced to the area and therefore would not require additional schools. No impact would occur, and no further analysis is required in the EIR.

d) Parks?

No Impact. The Project would involve demolition of existing industrial facilities and construction of a warehouse and truck workshop. It is not anticipated to result in increased use or demand on parks that would require the construction or expansion of additional park and recreational facilities. No impact would occur, and no further analysis is required in the EIR.

e) Other public facilities?

No Impact. Other public facilities may include libraries, senior centers, community centers, and pools, all of which are intended to serve the general public. The proposed Project involves the construction and operation of a warehouse and truck workshop site and would not result in a change of demand on these services. Therefore, there would be no need for the construction or expansion of other public facilities. Therefore, no impact would occur, and no further analysis is required in the EIR.

XVI. Recreation

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	■
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	■

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The proposed Project consists of construction and operation of a warehouse site. The Project would not increase the use of or create the need for new parks and recreational facilities. Therefore, the proposed Project would not result in physical deterioration of an existing open space area or any recreation facilities. No impact would occur, and no further analysis is required in the EIR.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

No Impact. The proposed Project consists of construction and operation of a warehouse site. It would not include recreational facilities or require the construction of new recreational facilities. No impacts would occur, and no further analysis is required in the EIR.

XVII. Transportation

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	■	☐	☐	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	■	☐	☐	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	■	☐	☐	☐
d) Result in inadequate emergency access?	■	☐	☐	☐

a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Potentially Significant Impact. To determine the Project's circulation system impacts, a Traffic Impact Analysis will be prepared for the proposed Project, as the Project has the potential to conflict with circulation plans. Impacts are potentially significant and will be further analyzed in the EIR.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Potentially Significant Impact. To determine the Project's vehicle miles traveled and consistency with CEQA Guidelines section 15064.3, a Traffic Impact Analysis will be prepared. Impacts are potentially significant and will be further analyzed in the EIR.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Potentially Significant Impact. A Traffic Impact Analysis will be prepared for the proposed Project to determine if there would be any hazards or incompatible uses as a result of the Project. Impacts are potentially significant and will be further analyzed in the EIR.

d) Result in inadequate emergency access?

Potentially Significant Impact. To determine the Project's potential impacts on emergency access, a Traffic Impact Analysis will be prepared for the proposed Project. Impacts are potentially significant and will be further analyzed in the EIR.

XVIII. Tribal Cultural Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	■	☐	☐	☐
ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	■	☐	☐	☐

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?

ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Potentially Significant Impact. Construction and operation of the proposed Project would result in land disturbance and other activities that could result in a potentially significant impact to a tribal cultural resource. A Cultural Resources Study will be prepared for the proposed Project site. As part of the EIR preparation process, the City will offer consultation to California Native American tribes that are traditionally and culturally affiliated with the area pursuant to AB 52.

Through its implementing regulations, AB 52 requires that lead agencies consult with California Native American tribes that are traditionally and culturally affiliated with the geographic area of the Proposed Project and who have requested in writing to be informed by the lead agency of proposed projects in the tribe's geographic area (Public Resources Code Section 21080.3.1(b) and (d)). Pursuant to AB 52, as the CEQA Lead Agency, the City, will notify tribes of the Project and solicit consultation. The conclusion of the AB 52 process and the Cultural Resources Study will be discussed in the EIR.

XIX. Utilities and Service Systems

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	■	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	■	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	■	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	■	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	■	☐

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less than Significant Impact. The proposed Project is in a developed area with existing infrastructure related to water, wastewater, stormwater, electricity, natural gas, and telecommunications facilities. The Project site has connections to these utilities related to the existing buildings and would make connections to the utilities during construction. Connections would not require relocation or construction of the related facilities. Impacts would be less than significant, and no further analysis is required in the EIR.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Less than Significant Impact. The City's 2015 UWMP evaluates the adequacy of the City's water supply and determined that the City can meet demands during normal, single dry, and multiple dry years for the following 20 years (City 2018). The City is a retailer of water purchased from the CBMWD, which is reliant on water imported from the Metropolitan Water District of Southern California (MWD). The CBMWD's UWMP demonstrated the ability to meet the demands of their member agencies, through MWD supplies, in normal, dry, and multiple dry years through 2045 (CBMWD 2021). Water conservation regulations are also included in City Municipal Code Sections 7350 and 7353 to ensure adequate water resources are available to all customers in the City. The Project would have sufficient water supplies available given that the City's water demands can be supplied during normal, dry, and multiple dry year. Impacts would be less than significant, and no further analysis will be provided in the EIR.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less than Significant Impact. The City of Downey does not currently have a wastewater facility within its jurisdiction, but utilizes recycled water provided by CBMWD and treated by the Los Angeles County Sanitation District (LACSD) at the Los Coyotes Water Reclamation Plant in Cerritos. According to the CBMWD UWMP, the Los Coyotes Water Reclamation Plant is operating at 50 percent below capacity. Wastewater is also currently generated by the existing facilities at the Project site and would not be expected to substantially increase with implementation of the proposed Project. Therefore, the Project would not result in a demand increase such that the wastewater treatment provider would be unable to fulfill its existing commitments. Impacts would be less than significant, and no further analysis will be required in the EIR.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less than Significant Impact. Solid waste disposal services in the City of Downey are provided by CalMet Services, Inc, which transports waste to the Downey Area Recycling and Transfer Facility, which is owned by the County Sanitation Districts of Los Angeles County. Policies and programs listed under Utilities and Service Systems in Appendix A of the City's General Plan EIR require recycling and waste reduction, educational programs, and waste reporting (City 2004). With implementation of these programs and policies, solid waste capacity was determined to be a less than significant impact with mitigation in the City's General Plan EIR (City 2004). Information would be provided to the Project tenants by the City regarding solid waste reduction. Impacts would be less than significant, and no further analysis will be included in the EIR.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less than Significant Impact. Federal, State, and local statutes and regulations regarding solid waste generation, transport, and disposal are intended to decrease solid waste generation through mandatory reductions in solid waste quantities (e.g., through recycling and composting of green waste) and the safe and efficient transport of solid waste. The proposed Project would be required to comply with applicable practices enacted by the City under the California Integrated Waste Management Act of 1989

(AB 939) and any other applicable local, State, and federal solid waste management regulations. AB 939 requires all counties to prepare a County Integrated Waste Management Plan (CIWMP). The County of Los Angeles adopted its CIWMP in 1997 and is in the process of updating its Countywide Siting Element as of January 2022.

Article V, Chapter 8 (Ordinance No. 09-1252) of the Downey Municipal Code requires that 100 percent of inert debris and at least 50 percent of the remaining construction and demolition debris generated during a construction or demolition project, be diverted from landfill, unless the applicant is exempt under Section 5870. Covered applicants are required to complete a Construction and Demolition Waste Management Plan (Form A) that details anticipated diversion practices, and materials to be recycled or reused. The Waste Management Plan Compliance Report (Form B) must be submitted 30 days after the completion of the project. The proposed Project would comply with all regulatory requirements regarding solid waste. Impacts would be less than significant, and no further analysis is required in the EIR.

XX. Wildfire

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	■	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	■
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	■
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	■	☐

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact. The City's General Plan Safety Chapter outlines emergency response plans that are coordinated at the federal, state, and local level to ensure adequate emergency response. The City maintains an Emergency Operation Plan for local emergencies and is a member of mutual aid agreements with nearby cities, as coordinated by the Los Angeles County Office of Disaster Preparedness (City 2005). The casualty collection points during emergencies would be the Rio Hondo

Golf Course and Apollo Park, which are located three miles northwest and three miles west of the Project site, respectively. The Project would not physically interfere with evacuation plans.

In the event of an emergency, Project site would be accessible via the three driveways along Hall Road or the two driveways along Stewart and Gray Road. Fire lanes 26 feet wide would be available on all four sides of the building. Project impacts would be less than significant, and no further evaluation is required in the EIR.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. According to the VHFHSZ in LRA Map prepared by CAL FIRE for Los Angeles County, the Project site is not in a VHFHSZ (CAL FIRE 2011). The City's Safety Chapter of the General Plan recognizes structure fires as the main threat in the City due to the lack of undeveloped land with vegetation (City 2005). The proposed Project would comply with the fire code in Municipal Code Article III Chapter 3, including adopting the latest CBC standards, and the California Fire Code to minimize impacts related to fires. The proposed Project would not exacerbate wildfire risks due to slope, prevailing winds, or other factors, and thereby would not expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. No impacts would occur, and no further evaluation is required in the EIR.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No Impact. The proposed Project would not include the installation of infrastructure that would exacerbate fire risks. The Project would be required to comply with the California Fire Code and Municipal Code Article III, Chapter 3, which stipulate the standards for access, fire hydrants, water pressure, fire lanes, etc. Therefore, the Project would have no impact in relation to this issue. No further analysis is required in the EIR.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less Than Significant Impact. The Project site is flat and is not identified as an area subject to landslides (City 2005). Flooding is also not likely to result, as the Project area is flat and free of slopes, such that there would be risks to structures or the environment. Impacts would be less than significant, and no further analysis is required in the EIR.

XXI. Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	■	☐	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of past, present, and probable future projects)?	■	☐	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	■	☐	☐	☐

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Potentially Significant Impact. The proposed Project consists of demolition of existing manufacturing and industrial uses, and the subsequent construction and operation of a new warehouse/distribution facility. As discussed in section IV, the site is developed and does not contain native habitat that is endangered or could support endangered species. As such, issues related to fish, wildlife, and sensitive or endangered plant communities are less than significant. Impacts related to history will be addressed in a Cultural Resources Study and further analyzed in the EIR. For the purposes of this Initial Study, impacts associated with these issues are identified as potentially significant.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of past, present, and probable future projects)?

Potentially Significant Impact. State CEQA Guidelines Section 15130 requires a discussion of the cumulative impacts of a project when the project's incremental effect is "cumulatively considerable," meaning that the project's incremental effects are considerable when viewed in connection with the

effects of past, current, and probable future projects. Because the proposed Project has the potential for significant impacts to occur, cumulative impacts may also be significant. A cumulative impact analysis will be provided in the EIR.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Impact. The proposed Project may cause adverse effects on humans, as identified in the potentially significant issue areas. The EIR will further analyze the necessary issue areas to determine their impact on human beings, either directly or indirectly.

Re: 2022030738, Prologis Steward and Gray Road Warehouse Project, Los Angeles County

Dear Mr. Hernandez:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:

a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.

b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.

b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.

c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

RE: Prologis Stewart and Gray Road Warehouse Project – Notice of Preparation of an Environmental Impact Report (NOP)
SCH # 2022030738
GTS # 07-LA-2022-03898

Dear Alfonso Hernandez:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced NOP. The proposed Project would include the demolition of five existing buildings and the construction of an approximately 510,110 square foot (sf) industrial concrete tilt-up building for warehouse/logistics uses, and a 25,000-sf ancillary truck workshop facility. The Project would include 614 auto parking spaces, 215 trailer and/or container parking spaces and 109 dock loading doors. The warehouse building would have a 40-foot interior clear height and would reach a maximum height of 55 feet above grade. The City of Downey is the Lead Agency under the California Environmental Quality Act (CEQA).

The Project is located in the City of Downey at the northwest corner of the intersection of Stewart and Gray Road and Woodruff Avenue. The Project is in vicinity of Interstate 605 (I-605) and Interstate 105 (I-105). The NOP finds that Transportation impacts may be potentially significant, therefore a Traffic Impact Analysis will be prepared for the proposed Project to be further analyzed in the Environmental Impact Report (EIR). We look forward to reviewing the Project's Traffic Impact Analysis.

As a reminder, Senate Bill 743 (2013) mandates that Vehicle Miles Traveled (VMT) be used as the primary metric in identifying transportation impacts of all future projects under CEQA, starting July 1, 2020. For information on determining transportation impacts in terms of VMT on the State Highway System, see the Technical Advisory on Evaluating Transportation Impacts in CEQA by the California Governor's Office of Planning and Research (OPR), dated December 2018. Caltrans has published the VMT-focused Transportation Impact Study Guide (TISG), dated May 20, 2020, and the Caltrans Interim Local Development and Intergovernmental Review (LD-IGR) Safety Review Practitioners Guidance, prepared on December 18, 2020. Caltrans' new TISG is largely based on the OPR 2018 Technical Advisory. You can review these resources online at:

- http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf
- https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/sb743/2020-05-20-approved-vmt-focused-tisg-a11y.pdf
- https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/sb743/2020-12-22-updated-interim-ldigr-safety-review-guidance-a11y.pdf

We encourage the Lead Agency to evaluate the potential of Transportation Demand Management (TDM) strategies and Intelligent Transportation System (ITS) applications to better manage the transportation network, as well as transit service and bicycle or pedestrian connectivity improvements. For TDM strategies, please refer to the Federal Highway Administration's Integrating Demand Management into the Transportation Planning Process: A Desk Reference (Chapter 8). This reference is available online at: http://www.ops.fhwa.dot.gov/publications/fhwahop12035/fhwahop12035.pdf

Caltrans also encourages lead agencies to promote alternative transportation. This will increase accessibility and decrease Greenhouse Gas Emissions, which supports Caltrans' mission to provide a safe and reliable transportation network that serves all people and respects the environment. For additional strategies that will promote equity and environmental preservation, please refer to the 2010 Quantifying Greenhouse Gas Mitigation Measures report by the California Air Pollution Control Officers Association (CAPCOA), which is available online at: http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf

Finally, any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State Highways will need a Caltrans transportation permit. Caltrans recommends that the Project limit construction traffic to off-peak periods to minimize the potential impact on State facilities. If construction traffic is expected to cause issues on any State facilities, including I-105 and I-605, please submit a construction traffic control plan detailing these issues for Caltrans' review.

If you have any questions regarding these comments, please contact Ronnie Escobar, the project coordinator, at Ronnie.Escobar@dot.ca.gov, and refer to GTS # 07-LA-2022-03898.

Sincerely,

Miya Edmonson

Ref. DOC 6503232

Mr. Alfonso Hernandez, Senior Planner
City of Downey
11111 Brookshire Avenue
Downey, CA 90241

Dear Mr. Hernandez:

NOP Response to Prologis Stewart & Gray Road Warehouse Project

The Los Angeles County Sanitation Districts (Districts) received a Notice of Preparation (NOP) of a Draft Environmental Impact Report for the subject project on April 1, 2022. The proposed project is located within the jurisdictional boundaries of District No. 2. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' East Compton Boulevard Extension Trunk Sewer, located in Woodruff Avenue, south of Stewart and Gray Road. The Districts' 15-inch diameter trunk sewer has a capacity of 1.8 million gallons per day (mgd) and conveyed a peak flow of 0.5 mgd when last measured in 2016.

2. The wastewater generated by the proposed project will be treated at the Los Coyotes Water Reclamation Plant located in the City of Cerritos, which has a capacity of 37.5 mgd and currently processes an average flow of 23.1 mgd.

3. The expected increase in average wastewater flow from the project site, described in the Initial Study as 510,110 square feet of warehouse; 598 square feet of potential office space; and 25,000 square feet of truck workshop facility, is 4,547 gallons per day, after the structures on the project site are demolished. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, under Services, then Wastewater Program and Permits, select Will Serve Program, and scroll down to click on the Table 1, Loadings for Each Class of Land Use link.

4. The Districts are empowered by the California Health and Safety Code to charge a fee to connect facilities (directly or indirectly) to the Districts' Sewerage System or to increase the strength or quantity of wastewater discharged from connected facilities. This connection fee is used by the Districts for its capital facilities. Payment of a connection fee may be required before this project is permitted to discharge to the Districts' Sewerage System. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, under Services, then Wastewater (Sewage) and select Rates & Fees. In determining the impact to the Sewerage System and applicable connection fees, the Districts will determine the user category (e.g. Condominium, Single Family Home, etc.) that best represents the actual or anticipated use of the parcel(s) or facilities on the parcel(s) in the development. For more specific information regarding the connection fee application procedure and fees, the developer should contact the Districts' Wastewater Fee Public Counter at (562) 908-4288, extension 2727.

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CAA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise the developer that the Districts intend to provide this service up to the levels that are legally permitted and to inform the developer of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2743, or mandyhuffman@lacsd.org.

Very truly yours,

Mandy Huffman

Notice of Preparation of an Environmental Impact Report for the Prologis Stewart and Gray Road Warehouse Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Environmental Impact Report (EIR). Please send a copy of the EIR upon its completion and public release directly to South Coast AQMD as copies of the EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website[1] as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod[2] land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds[3] and localized significance thresholds (LSTs)[4] to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road

[1] South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook.
[2] CalEEMod is available free of charge at: www.caleemod.com.
[3] South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.
[4] South Coast AQMD's guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA ***operational*** thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment[5].

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

The California Air Resources Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*[6] is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process with additional guidance on strategies to reduce air pollution exposure near high-volume roadways available in CARB's technical advisory[7].

South Coast AQMD staff is concerned about potential public health impacts of siting warehouses within close proximity of sensitive land uses, especially in communities that are already heavily affected by the existing warehouse and truck activities. The South Coast AQMD's Multiple Air Toxics Exposure Study (MATES V), completed in August 2021, concluded that the largest contributor to cancer risk from air pollution is diesel particulate matter (DPM) emissions[8]. According to the MATES V Carcinogenic Risk interactive Map, the area surrounding the Proposed Project has an estimated cancer risk over 562 in one million[9]. Operation of warehouses generates and attracts heavy-duty diesel-fueled trucks that emit DPM. When the health impacts from the Proposed Project are added to those existing impacts, residents living in the communities surrounding the Proposed Project will possibly face an even greater exposure to air pollution and bear a disproportionate burden of increasing health risks.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook[1], South Coast AQMD's Mitigation Monitoring and

[5] South Coast AQMD's guidance for performing a mobile source health risk assessment can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis.

Reporting Plan for the 2016 Air Quality Management Plan[10], and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy[11].

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should consider in the EIR may include the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule[12] and the Heavy-Duty Low NOx Omnibus Regulation[13], ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentive the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year[14] that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.
- Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

[10] South Coast AQMD's 2016 Air Quality Management Plan can be found at: http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf (starting on page 86).
[11] Southern California Association of Governments' 2020-2045 RTP/SCS can be found at: https://www.connectsocal.org/Documents/PEIR/certified/Exhibit-A_ConnectSoCal_PEIR.pdf.
[12] CARB. June 25, 2020. *Advanced Clean Trucks Rule.* Accessed at: https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks.
[13] CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: https://ww2.arb.ca.gov/rulemaking/2020/hdomnibuslownox.
[14] CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm.

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the EIR may include the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, day care centers, etc.).
- Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.
- Design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing outside.
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of a 510,110-square-foot building for warehouse uses, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation[15]. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or waire-program@aqmd.gov.

[15] South Coast AQMD Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program. Accessed at: http://www.aqmd.gov/docs/default-source/rule-book/reg-xxiii/r2305.pdf.

For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage[16].

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at lsun@aqmd.gov.

Sincerely,

RE: Public Records Act and Mailing List Request Regarding Prologis Stewart and Gray Road Warehouse Project (SCH #: 2022030738).

Dear Ms. Duarte and Mr. Hernandez,

On behalf of Southwest Regional Council of Carpenters ("**SWRCC**" or "**Southwest Carpenters"**) and its members, this Office requests that the City of Downey ("**City**") provide any and all information referring or related to the **Prologis Stewart and Gray Road Warehouse Project** ("**Project**") pursuant to the California Public Records Act ("**PRA**"), Cal. Government ("**Gov't**") Code §§ 6250–6270 (collectively "**PRA Request**").

Moreover, SWRCC requests that City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act ("**CEQA**"), Cal Public Resources Code ("**PRC**") § 21000 *et seq*, and the California Planning and Zoning Law ("**Planning and Zoning Law**"), Cal. Gov't Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

The Southwest Regional Council of Carpenters is a labor union representing more than 50,000 union carpenters in six states, including California, and has a strong

interest in well-ordered land use planning and addressing the environmental impacts of development projects, such as the Project.

I. PUBLIC RECORDS ACT REQUEST.

Southwest Carpenters is requesting any and all information referring or related to the Project.

The Public Records Act defines the term "public record" broadly as "any writing containing information relating to the conduct of the public's business . . . regardless of physical form and characteristics." Gov't Code § 6252(d). "Records" includes all communications relating to public business regardless of physical form or characteristics, including but not limited to any writing, picture, sound, or symbol, whether paper, magnetic, electronic, text, other media, or written verification of any oral communication. Included in this request are any references in any appointment calendars and applications, phone records, or text records. These "records" are to include, but are not limited to correspondences, e-mails, reports, letters, memorandums, and communications by any employee or elected official of City concerning the Project.

Please include in your response to this request the following examples of "records," as well as any similar physical or electronic forms of communication: any form of writing such as correspondence, electronic mail records ("email"), legal and factual memoranda, facsimiles, photographs, maps, videotapes, film, data, reports, notes, audiotapes, or drawings. Cal. Government Code § 6252(g) (defining a writing to including "any record thereby created, regardless of the manner in which the record has been stored"). Responsive correspondence should include, inter alia, emails, text messages, or any other form of communication regardless of whether they were sent or received on public or privately-owned electronic devices "relating to the conduct of the public's business." Cal. Government Code § 6252(e); *Citizens for Ceres v. Super. Ct.* ("*Ceres*") (2013) 217 Cal. App. 4th 889, 909; *Citizens for Open Gov't v. City of Lodi ("Lodi")* (2012) 205 Cal.App.4th 296, 307, 311; *City of San Jose v. Superior Court* (2017) 2 Cal. 5th 608, 625 (finding that a public employee or officer's "writings about public business are not excluded" from the California Public Records Act "simply because they have been sent, received, or stored in a personal account.") .

This Office requests any and all information referring or related to the Project, including but not limited to:

(1) All Project application materials;

(2) All staff reports and related documents prepared by the City with respect to its compliance with the substantive and procedural requirements of the California Environmental Quality Act, Public Resources Code § 21000 et seq., and the CEQA Guidelines, title 14, California Code of Regulations, § 15000 et seq. (collectively "**CEQA**") and with respect to the action on the Project;

(3) All staff reports and related documents prepared by the City and written testimony or documents submitted by any person relevant to any findings or statement of overriding considerations adopted by the agency pursuant to CEQA;

(4) Any transcript or minutes of the proceedings at which the decisionmaking body of the City heard testimony on, or considered any environmental document on, the Project, and any transcript or minutes of proceedings before any advisory body to the public agency that were presented to the decisionmaking body prior to action on the environmental documents or on the Project;

(5) All notices issued by the City to comply with CEQA or with any other law governing the processing and approval of the Project;

(6) All written comments received in response to, or in connection with, environmental documents prepared for the Project, including responses to the notice of preparation;

(7) All written evidence or correspondence submitted to, or transferred from, the City with respect to compliance with CEQA or with respect to the Project;

(8) Any proposed decisions or findings submitted to the decisionmaking body of the City by its staff, or the Project proponent, Project opponents, or other persons;

(9) The documentation of the final City decision and approvals, including the final environmental impact report, mitigated negative declaration, negative declaration, or notice of exemption, and all documents, in addition to those referenced in paragraph (3), cited

or relied on in the findings or in a statement of overriding considerations adopted pursuant to CEQA;

(10) Any other written materials relevant to the public agency's compliance with CEQA or to its decision on the merits of the Project, including the initial study, any drafts of any environmental document, or portions thereof, that have been released for public review, and copies of studies or other documents relied upon in any environmental document prepared for the Project and either made available to the public during the public review period or included in the City 's files on the Project, and all internal agency communications, including staff notes and memoranda related to the Project or to compliance with CEQA; and

(11) The full written record before any inferior administrative decisionmaking body whose decision was appealed to a superior administrative decisionmaking body prior to the filing of any litigation.

Please respond within 10 days from the date you receive this request as to whether this request specifies identifiable records not exempt from disclosure under the PRA or otherwise privileged or confidential, and are therefore subject to disclosure. This Office understands that this time may be extended up to 14 days for unusual circumstances as provided by Cal. Government Code § 6253(c), and that we will be notified of any extension and the reasons justifying it.

We request that you provide all documents in electronic format and waive any and all fees associated with this Request. SWRCC is a community-based organization. Please notify and obtain express approval from this Office before incurring any duplication costs.

<u>If any of the above requested documents are available online, please provide us with the URL web address at which the documents may be downloaded. If any of the requested documents are retained by the City in electronic computer-readable format such as PDF (portable document format), please provide us with pdf copies of the documents via email, or inform us of the location at which we can copy these documents electronically.</u>

In preparing your response, please bear in mind that you have an obligation under Government Code section 6253.1 to (1) identify all records and information responsive to our request or the purpose of our request; (2) describe the information technology and physical location in which the records exist; and (3) provide suggestions for overcoming any practical basis for denying access to the records or information sought.

In responding to this request, please bear in mind that any exemptions from disclosure you may believe to be applicable are to be narrowly construed. *Marken v. Santa Monica-Malibu Unif. Sch. Dist.* (2012) 202 Cal. App. 4th 1250,1262; and may be further narrowed or eliminated by the adoption of Proposition 59, which amended article I, section 3(b)(2) of the California Constitution to direct that any "statute ... or other authority ... [that] limits the right of access" to "information concerning the conduct of the people's business" must be "narrowly construed."

As for any records that you nonetheless decline to produce on the grounds of an exemption, please bear in mind that the case law under the Public Records Act imposes a duty on you to distinguish between the exempt and the non-exempt portion of any such records, and to attempt in good faith to redact the exempt portion and to disclose the balance of such documents.

Please bear in mind further that should you choose to withhold any document from disclosure, you have a duty under Government Code section 6255, subd. (a) to "justify withholding any record by demonstrating that the record in question is exempt under express provisions" of the Public Records Act or that "the public interest served by not disclosing the record clearly outweighs the public interest served by disclosure of the record."

Finally, please note that you must retain and not destroy any and all records, notwithstanding any local record retention or document destruction policies. As the Court noted in *Golden Door Properties, LLC v. Superior Court of San Diego County* (2020) 53 Cal.App.5th 733 that a public agency "must retain '[a]ll written evidence or correspondence submitted to, or transferred from' . . . with respect to" CEQA compliance or "with respect to the project."

II. NOTICE LIST REQUEST.

We also ask that you put this Office on its notice list for any and all notices issued under the CEQA and the Planning and Zoning Law.

In particular, we request that City send by mail or electronic mail notice of any and all actions or hearings related to activities undertaken, authorized, approved, permitted, licensed, or certified by the City and any of its subdivision for the Project, or supported, in whole or in part, through permits, contracts, grants, subsidies, loans, or other forms of approvals, actions or assistance, including but not limited to the following:

- Notices of any public hearing held in connection with the Project; as well as
- Any and all notices prepared pursuant to CEQA, including but not limited to:
- Notices of determination that an Environmental Impact Report ("EIR") or supplemental EIR is required for a project, prepared pursuant to Public Resources Code Section 21080.4;
- Notices of availability of an EIR or a negative declaration for a project prepared pursuant to Public Resources Code Section 21152 and Section 15087 of Title 14 of the California Code of Regulations;
- Notices of approval or determination to carry out a project, prepared pursuant to Public Resources Code Section 21152 or any other provision of law;
- Notice of approval or certification of any EIR or negative declaration prepared pursuant to Public Resources Code Section 21152 or any other provision of law;
- Notice of exemption from CEQA prepared pursuant to Public Resources Code section 21152 or any other provision of law; and
- Notice of any Final EIR prepared pursuant to CEQA.

This Office is requesting notices of any approvals or public hearings under CEQA and the California Planning and Zoning Law. This request is filed pursuant to California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 requiring agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

Please send notice by regular and electronic mail to:

RE: City of Downey's Prologis Stewart and Gray Road Warehouse Project (SCH#: 2022030738).

Dear Alfonso Hernandez and Maria Alicia Duarte,

On behalf of the Southwest Regional Council of Carpenters ("**SWRCC**" or "**Southwest Carpenters**"), my Office is submitting these comments on the City of Downey's ("**City**" or "**Lead Agency**") Notice of Preparation of a Draft Environmental Impact Report ("**NOP**") for the Prologis Stewart and Gray Road Warehouse Project (SCH#: 2022030738) ("**Project**").

The Southwest Carpenters is a labor union representing more than 50,000 union carpenters in six states, including California, and has a strong interest in well-ordered land use planning, addressing the environmental impacts of development projects and equitable economic development.

Individual members of the Southwest live, work and recreate in the area and surrounding communities and would be directly affected by the Project's environmental impacts.

SWRCC expressly reserve the right to supplement these comments at or prior to hearings on the Project, and at any later hearings and proceedings related to this

Project. Cal. Gov. Code § 65009(b); Cal. Pub. Res. Code § 21177(a); *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal. App. 4th 1184, 1199-1203; see *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal. App. 4th 1109, 1121.

SWRCC incorporate by reference all comments raising issues regarding the environmental impact report ("**EIR**") submitted prior to certification of the EIR for the Project. *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal. App. 4th 173, 191 (finding that any party who has objected to the Project's environmental documentation may assert any issue timely raised by other parties).

Moreover, SWRCC request that the Lead Agency provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act ("**CEQA**"), Cal Public Resources Code ("**PRC**") § 21000 *et seq*, and the California Planning and Zoning Law ("**Planning and Zoning Law**"), Cal. Gov't Code §§ 65000–65010. California Public Resources Code Sections 21092.2, and 21167(f) and Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

The City should require community benefits such as requiring local hire and use of a skilled and trained workforce to build the Project. The City should require the use of workers who have graduated from a Joint Labor Management apprenticeship training program approved by the State of California, or have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state approved apprenticeship training program or who are registered apprentices in an apprenticeship training program approved by the State of California.

Community benefits such as local hire and skilled and trained workforce requirements can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project Site can reduce the length of vendor trips, reduce greenhouse gas emissions and providing localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the

> reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Skilled and trained workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the UC Berkeley Center for Labor Research and Education concluded:

> . . . labor should be considered an investment rather than a cost – and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

Recently, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program or a skilled and trained workforce with a local hire component" can result in air pollutant reductions.[2]

Cities are increasingly adopting local skilled and trained workforce policies and requirements into general plans and municipal codes. For example, the City of Hayward 2040 General Plan requires the City to "promote local hiring . . . to help achieve a more positive jobs-housing balance, and reduce regional commuting, gas consumption, and greenhouse gas emissions."[3]

In fact, the City of Hayward has gone as far as to adopt a Skilled Labor Force policy into its Downtown Specific Plan and municipal code, requiring developments in its Downtown area to requiring that the City "[c]ontribute to the stabilization of regional

construction markets by spurring applicants of housing and nonresidential developments to require contractors to utilize apprentices from state-approved, joint labor-management training programs, . . .”[4] In addition, the City of Hayward requires all projects 30,000 square feet or larger to “utilize apprentices from state-approved, joint labor-management training programs.”[5]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.[6]

In addition, local hire mandates as well as skill training are critical facets of a strategy to reduce vehicle miles traveled. As planning experts Robert Cervero and Michael Duncan noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions since the skill requirements of available local jobs must be matched to those held by local residents.[7] Some municipalities have tied local hire and skilled and trained workforce policies to local development permits to address transportation issues. As Cervero and Duncan note:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing.” The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than

> 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

The City should consider utilizing skilled and trained workforce policies and requirements to benefit the local area economically and mitigate greenhouse gas, air quality and transportation impacts.

If the City has any questions or concerns, feel free to contact my Office.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	**16.47**	**11.17**
Minimum	**10.80**	**10.80**
Maximum	**19.80**	**14.70**
Range	**9.00**	**3.90**

[9] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

[11] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.
[12] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.
[13] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

[14] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Village South Specific Plan (Proposed)

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

RE: NOP Comments for Stewart & Gray Road Warehouse Project

Dear Mr. Hernandez,

On behalf of Coalition for Responsible Equitable Economic Development ("CREED LA") thank you for the opportunity to provide comments on the Notice of Preparation ("NOP") for environmental review of the Stewart & Gray Road Warehouse Project (the "Project").

The proposed Project would include the demolition of existing five buildings and the construction of an approximately 510,110 square foot industrial concrete tilt-up building for warehouse/logistics uses, and a 25,000 square foot ancillary truck workshop facility.

The Initial Study ("IS") identifies the Project's potentially significant impacts under CEQA to include Aesthetics, Air Quality, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Transportation, Tribal Cultural Resources, and Mandatory Findings of Significance. CREED LA respectfully requests, under CEQA complete analysis of these impacts, imposition of all feasible mitigation and study of a reasonable range of alternatives to the Project.

I. Background on CEQA EIRs

CEQA advances three related purposes. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project. 14 Cal. Code Regs. ("Guidelines") § 15002(a)(1). "Its purpose is to inform the public and its responsible officials of the environmental consequences of their decisions before they are made. Thus, the EIR 'protects not only the environment but also informed self-government.'" *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

Second, CEQA requires public agencies to avoid or reduce environmental damage when "feasible" by requiring implementation of "environmentally superior" alternatives and all feasible mitigation measures. Guidelines § 15002(a)(2) and (3); *Citizens of Goleta Valley*, 52 Cal.3d at 564. If the project will have a significant effect on the environment, the agency may approve the project only if it finds that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns." Pub. Res. Code § 21081; Guidelines § 15092(b)(2)(A) and (B).

Third, CEQA compels disclosing "to the public the rationale for governmental approval of a project that may significantly impact the environment." *California Building Industry Assn. v. Bay Area Air Quality Management Dist*. (2015) 62 Cal.4th 369, 382.

Although the courts review an EIR using an "abuse of discretion" standard, "the reviewing court is not to 'uncritically rely on every study or analysis presented by a project proponent in support of its position.' A 'clearly inadequate or unsupported study is entitled to no judicial deference.'" *Berkeley Keep Jets Over the Bay v. Bd. of Port Comm'rs*. (2001) 91 Cal.App.4th 1344, 1355 (quoting *Laurel Heights Improvement Ass'n v. Regents of Univ. of Cal*., 47 Cal.3d 376, 409 n. 12 (1988)). Substantial evidence in the record must support any foundational assumptions used for the impact analyses in the EIR. *Citizens of Goleta Valley*, 52 Cal.3d at 568 (EIR must contain facts and analysis, not just bare conclusions); *Laurel Heights*, 47 Cal.3d at 392-93 (agency's conclusions must be supported with substantial evidence).

II. Comments on Initial Study

Hazards and Hazardous Materials

The IS contends that the Project would have a less than significant impact to the public or environment through the routine transport, use, or disposal of hazardous materials. However, the conclusion is not apparent from the discussion, facts, and circumstances.

The conclusion relies on compliance with applicable regulations and the fact that "the number of materials that would be handled at any one time for the proposed warehouse operations would be relatively small" (IS p. 20). However, the proposed over 500,000 square foot last-mile fulfillment warehouse has capacity to handle more than 'a relatively small number of materials.' Furthermore, the IS concedes that the tenant and thereby the nature and amount of goods to be transported, stored, processed, and shipped is unknown. To meet CEQA's informational purposes, the City should further evaluate the issue in the DEIR.

III. General Comments

i) Air Quality & Public Health: CREED LA has a particular interest in air quality and public health. Estimates of the significance of air quality impacts must be consistent with current epidemiological studies regarding the effects of pollution and various kinds of environmental stress on public health. The proposed Project would be exclusively truck-served and operate 24-hours a day, 365 days a year in day and night shifts. In addition, since the facility will be a last-mile fulfillment center, we can reasonably expect high frequency high impact diesel truck traffic due to loading and unloading of products at the warehouse.

Therefore, even if the immediate project area has few nearby residences, the DEIR must include a Health Risk Assessment (HRA). This is particularly important because of the adverse impact of logistics facilities on community health including carbon dioxide emissions caused by storage and material handling processes in warehouses.[1] We must not ignore the unjust consequences of toxic pollution on surrounding communities and workers.

ii) Transportation Analysis: In order to reflect a good faith effort at full disclosure, the transportation analysis must consider all reasonably foreseeable uses for the Project. Since the Project is a "speculative building" with no specific identified tenant, the DEIR analysis should include higher intensity uses. The analysis must also include heavy truck traffic in its VMT analysis.

iii) Cold Storage Industrial Use: Since the Project includes a cold storage, it is likely that trucks and trailers going in and out of the Project site would be equipped with transport refrigeration units (TRU). The TRUs would emit large quantities of diesel exhaust while operating within the Project site. The City should model air pollutant emissions from on-site TRUs in the DEIR and include potential cancer risks to nearby residences and other sensitive receptors from on-site TRUs in the HRA.

iv) Mitigation measures: Mitigation measures must be effective and enforceable. Every effort must be made to incorporate modern technology in the mitigation measures and MMRP. For example, a requirement that all off-road equipment and trucks using the site during construction and operations be zero emission, near-zero emissions or alternative-fueled vehicle would both reduce and/or eliminate air pollution impacts and CO2 emissions.

A requirement to utilize natural refrigerant alternatives would reduce the Project's impact on greenhouse gas emissions (GHG). As more cold storage warehouses are built, the use of refrigerants with potent greenhouse gas emissions is growing, as is their contribution to global climate change.

Mitigation measures can also include requirements to install cool roofs to reduce operational energy demand, solar canopies on the parking lot, provision of EV charging infrastructure including electrification of loading docks, and measures to reduce urban heat island effect impacts.

[1] For example, https://envhealthcenters.usc.edu/wp-content/uploads/2016/11/Storing-Harm.pdf https://earthjustice.org/sites/default/files/files/warehouse_research_report_4.15.2021.pdf

v) Substantial Evidence: We expect that the DEIR analysis will refrain from unsupported assumptions and utilize substantial evidence in its analysis of various environmental considerations.

vi) Full Disclosure: Provide all sources and referenced materials when the DEIR is made available.

III. Conclusion

Thank you for the opportunity to submit NOP comments. Again, CREED LA respectfully requests under CEQA full analysis of the environmental impacts, feasible mitigation, and reasonable alternatives to the Project.

We look forward to reviewing and commenting on the DEIR.

Sincerely,

Jeff Modrzejewski
Executive Director

RE: Public Records Act Request and Request for Mailed Notice of Public Hearings and Actions –Stewart and Gray Warehouse, Stewart & Gray Rd and Woodruff Ave. Downey, CA 90241

Dear Mr. Hernandez,

CREED LA is writing to request a copy of any and all records related to the project, the Stewart and Gray Warehouse, located at Stewart & Gray Road and Woodruff Avenue in Downey. The project will be the construction and operation of an industrial concrete tilt-up building for warehouse and logistics use with 510,000 square feet of space. We are also writing to request copies of and mailed notice of any and all hearings and/or actions related to the Project.

Our request for mailed notice of all hearings includes hearings, study sessions and community meetings related to the Project, certification of the MND (or recirculated DEIR), and approval of any Project entitlements. This request is made pursuant to Public Resources Code Sections 21092.2, 21080.4, 21083.9, 21092, 21108 and 21152 and Government Code Section 65092, which require local agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. Our request includes notice to any City actions, hearings or other proceedings regarding the Project, Project approvals and any actions taken, or additional documents released pursuant to the California Environmental Quality Act.

Our request for all records related to the Project is made pursuant to the California Public Records Act. (Government Code § 6250 et seq.) This request is also made pursuant to Article I, section 3(b) of the California Constitution, which provides a constitutional right of access to information concerning the conduct of government. Article I, section 3(b) provides that any statutory right to information shall be broadly construed to provide the greatest access to government information and further requires that any statute that limits the right of access to information shall be narrowly construed.

We will pay for any direct costs of duplication associated with filling this request up to $200. However, please contact me at (877) 810-7473 with a cost estimate before copying/scanning the materials.

Pursuant to Government Code Section 6253.9, if the requested documents are in electronic format and are 10 MB or less (or can be easily broken into sections of 10 MB or less), please email them to me as attachments.

My contact information is:

RE: Prologis Stewart and Gray Road Warehouse Project

This letter is submitted on behalf of the members of Teamsters Local 396 and their families, who live and work throughout Downey. The Teamsters represent hundreds of thousands of workers in the logistics industry. These members not only work in the logistics industry, but very often live in communities impacted by this industry. The Teamsters membership has committed to actively improving the industry not only through improved working conditions, wages, benefits and safety, but also by mitigating and eventually eliminating its negative impacts on the quality of life of our members, their families, and their communities. Teamsters are committed to making sure their workplace is safe and healthy not only for themselves, but for their families and neighbors.

This comment covers matters raised in the Initial Study and recommends areas of concentration for the Environmental Impact Report (EIR) proposed for the above-named project.

Prologis (Applicant) is proposing demolishing five buildings, approximately 433,000 square feet of floor area, to construct a 510,110 industrial concrete tilt-up logistics facility and approximately 25,000 additional square feet of ancillary uses (collectively the Project). The property, at the northwest corner of Stewart and Gray Road and Woodruff Avenue (the Site), sits approximately 700 feet from a fairly dense residential neighborhood to the west, beginning on the east side of Coldbrook Avenue. The facility would include cold-storage capacity, allowing for delivery of groceries and other fresh and frozen foodstuffs.

Vehicle Miles Traveled and Traffic

The Initial Study (IS) found that there are potentially significant impacts throughout the area of transportation and traffic. Because of this, the IS calls for preparation of an EIR and therefore a traffic study. We would hope that this traffic study uses existing like facilities, or comparable facilities, to conduct this study, rather than relying exclusively or primarily on Institute of Transportation Engineers (ITE) Trip Generation Manual categorical codes. This is because a facility that will be permitted to allow e-commerce style fulfillment and deliveries, particularly one with cold-storage capacity, will not be adequately understood through use of these categories.

For example, the ITE manual's category for warehouses with cold storage capacity provides a per-unit (i.e., per 1,000 square foot) trip-generation multiplier of 0.12. In other words, for every 10,000 square feet of cold-storage warehouse there is an assumption of 1.2 trips per day.

This rubric however is more appropriate for warehouses that deliver bulk goods to retail grocers and wholesalers, rather than an e-commerce facility that uses cold storage capacity to fulfill consumers' orders on a rolling basis throughout the day, seven days a week.

There is a similar issue with the non-cold storage elements of the Project. E-commerce represents a fundamentally new use from traditional warehouses uses, and in particular those currently extant on the site. E-commerce delivery stations generate a different type of traffic, and therefore vehicle miles, than traditional warehouses. The ITE Manual predicates its assumptions in large part on the number of warehouse employees per square footage of floor space, plus freight deliveries to and from the site of the warehouse. However this is not the character of e-commerce facilities: while there are of course warehouse workers who come to work at the beginning of the shift and do not leave until the end of their shift, there are a considerable number–likely a larger number–of workers who pick up packages, even in passenger vehicles, for delivery directly to consumers throughout the day. This not only significantly increases traffic activity at and around the site, but also impacts residential areas where these vehicles are delivering packages. Not only does it increase the number of vehicles passing through these neighborhoods (and therefore the numbers of vehicle miles traveled) but it also changes traffic patterns in these neighborhoods because of the behavior of vehicles performing numerous deliveries: frequent stopping, driving at lower speeds, idling, and taking up curb space or double parking.

While a particular end user may not have yet been identified, these are all potential uses because they would be permitted within this zoning designation. It is the purpose of CEQA that reasonably foreseeable uses that can result from approval of a discretionary project be studied. We therefore urge the city to include within its transportation analysis all of the foregoing, with particular attention paid to the need to study actually-existing e-commerce style uses, including with cold storage capacity, to accurately understand the impacts of this new type of use.

<u>Economic Impact Study/Urban Decay</u>

While economic impact and urban decay was not outlined in the IS, we believe it warrants future study given the novel form of this use and adverse impact on “brick-and-mortar” (physical location) retailers, and the potential for long-term “dark” (empty) retail space resulting in urban decay which impacts the physical environment, including by contributing to longer vehicle trips and therefore vehicle miles traveled.

We concede that this is a complex question, because the addition of significant amounts of e-commerce delivery capacity to the city has the potential to alter consumer behavior and have a snowballing or cumulative impact on existing retailers over time. For example, particularly given the persistence of COVID-19 pandemic conditions and the related explosion in e-commerce same-day delivery, the ability of e-commerce retailers to satisfy same-day delivery demands of consumers for household goods and groceries that are typically the provenance of brick-and-mortar retailers will steadily increase. In turn, consumer behavior will turn away from brick-and-mortar facilities, causing closures and fewer shopping options (contributing to longer drive times for fewer stores). Once this consumer pattern becomes widely adopted, retail store closures risk becoming persistent and urban decay could result.

We encourage the City to undertake some degree of at least preliminary study of this question.

<u>Air Quality/Energy Consumption</u>

Given the size and intensity of this facility, its potential e-commerce character, and its proximity to several densely populated residential neighborhoods, it is particularly important that the City pay close attention to indirect-source emissions from delivery vehicles, the potential aggravation of existing health effects in the surrounding community, and contemporary, available technologies that can significantly reduce energy consumption. These areas need to be studied with particularity for the environmental impact report to adequately account for the potentially significant impacts of this facility.

Sincerely,

Victor Mineros

Director of Organizing
Teamsters Local 396

EXECUTIVE SUMMARY

This report presents an assessment of potential air quality and greenhouse gas (GHG) emission impacts resulting from implementation of the Prologis Stewart and Gray Road Warehouse Project (project) located in the City of Downey (City). The project would replace the existing businesses on the project site, remove five existing buildings totaling approximately 433,000 square feet (SF), and construct and operate an approximately 535,685 SF industrial building for warehouse/logistics uses.

The project would be consistent with the General Manufacturing (GM) land use designation in the Downey General Plan Vision 2025. Therefore, the project contribution to regional employment growth would be accounted for in regional planning documents (e.g., general plans, Regional Transportation Plan/Sustainable Communities Strategy) used to develop control measures in the South Coast Air Quality Management District's (SCAQMD) Air Quality Management Plan (AQMP). The project would not conflict with the 2022 AQMP.

The project would result in emissions of criteria air pollutants during construction and operation. In accordance with SCAQMD Rule 403, fugitive dust control measures would be required. Project emissions of criteria pollutants and precursors during construction or operation would not exceed the SCAQMD emissions thresholds. Impacts related to cumulatively considerable net increases of criteria pollutants in the region would be less than significant.

Project-generated traffic would not result in a carbon monoxide hot spot. Construction and operation of the project would not result in exposure of sensitive receptors to significant quantities of toxic air contaminants or substantial localized criteria pollutant and precursor concentrations, as analyzed following SCAQMD's Localized Significance Thresholds (LTSs) Methodology. A health risk assessment (HRA) was conducted to evaluate potential community health risks from exposure to diesel particulate matter (DPM) emitted by off-road construction equipment, construction haul trucks, and trucks related to operation of the proposed warehouse. Community cancer risk, chronic health risk, and cancer burden would not exceed the SCAQMD thresholds. Impacts related to exposure of sensitive receptors to substantial pollutant concentrations would be less than significant.

The project would not generate other emissions (such as those leading to odors) that would affect a substantial number of people.

GHG emissions resulting from construction and operation of the project would not exceed the SCAQMD's screening threshold for non-industrial facilities. The project would not conflict with any applicable GHG emission reduction plans. Impacts related to GHG emissions and conflicts with GHG emission reduction plans and policies would be less than significant.

This page intentionally left blank

1.0 INTRODUCTION

This report presents an assessment of potential air quality and greenhouse gas (GHG) emission impacts resulting from construction and operation of the proposed Prologis Stewart and Gray Road Warehouse Project (project). This report has been prepared to support an Environmental Impact Report (EIR) in accordance with the California Environmental Quality Act (CEQA; California Public Resources Code [PRC] §21000 et seq.); State CEQA Guidelines (California Code of Regulations [CCR], Title 14, §15000 et seq.).

1.1 PROJECT LOCATION

The approximately 29.16-acre project site is located in the southeastern portion of the City of Downey (City) in southwestern Los Angeles County. The project site is located approximately ten miles southeast of downtown Los Angeles and nine miles northwest of the County of Orange. Regional access is provided via the following freeways: the Santa Ana Freeway (Interstate 5 [I-5]), the San Gabriel Freeway (I-605), the Century Freeway (I-105), and the Long Beach Freeway (I-710). Primary vehicular access to the project site is provided by Stewart and Gray Road, Woodruff Avenue, and Hall Road. The project site is within the western Los Angeles County portion of the South Coast Air Basin (SCAB). Air quality in the project area is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). See Figure 1, *Regional Location*, and Figure 2, *Aerial Photograph*.

1.2 PROJECT DESCRIPTION

The project would remove existing buildings totaling approximately 433,000 square feet (SF) on the project site, and construct and operate an approximately 535,685-SF industrial concrete tilt-up building for warehouse/logistics uses. The project would include 683 auto parking spaces, 255 trailer and/or container parking spaces and 109 dock loading doors. The new industrial building would be used for logistics and distribution purposes, and specifically as a fulfillment center and for cold storage. Approximately 95 percent of the warehouse (484,605 SF) would be high cube fulfillment and the remaining 5 percent (26,785 SF) would be for cold storage (i.e., refrigerated warehouse space). The facility would also include 20,000 SF of office area and 25,000 SF of mezzanine area within the 535,685-SF building. On-site activities would include storage, distribution, and/or consolidation of manufactured goods, and last-mile fulfillment and delivery; and general industrial/warehouse with refrigeration and cold storage component for the purposes of receiving, storing, shipping of food and/or beverage products. The office space would be used for office uses ancillary to the warehouse operations. See Figure 3, *Site Plan*. The proposed facility would operate 24 hours a day, seven days a week. The project would also include off-site improvements within the right-of-way of Hall Road and Stewart and Gray Road along the project's roadway frontage. Off-site improvements would include underground utilities, project site driveway access, sidewalks, curbs and gutters, landscaping, and lighting.

1.3 CONSTRUCTION ACTIVITIES AND PHASING

Construction of the project would begin in Spring 2024 with demolition/site preparation to remove all existing on-site structures, paving, and other improvements. Demolition/site preparation would last approximately 4 to 5 months. Following demolition/site preparation, grading, off-site improvements, construction of the proposed new building, and paving would begin in late spring 2024 and continue for approximately 14 months. Construction activities would finish in Spring 2025. Demolition and site

preparation would include the removal of the existing structures on the site totaling approximately 433,000 SF. Approximately 75,000 cubic yards (CY) of soil would be exported from the site during grading. As described in the project draft environmental impact report (DEIR), Section 4.7, Hazards and Hazardous Materials, asbestos containing material (ACM) and lead based paint (LBP) has been identified in existing buildings on the project site. In addition, soil vapor testing has identified volatile organic compounds (VOCs) exceeding Department of Toxic Substances Control (DTSC) screening levels. Material handling requirements for demolition activities and disturbance of contaminated soil, and potential impacts to sensitive receptors, are discussed in the Air Quality Impact Analysis, Section 5.3, below.

Project construction would be required to implement all applicable fugitive dust best available control measures specified in Table 1 of the SCAQMD Rule 403, Fugitive Dust (SCAQMD 2005), including, but not limited to: the use of an on-site water truck to wet down exposed areas at least twice daily, and limiting vehicle speeds to 25 miles per hour (mph).

2.0 REGULATORY SETTING

2.1 AIR QUALITY

The project site is located within the SCAB. Air quality in the SCAB is regulated by the U.S. Environmental Protection Agency (USEPA) at the federal level, by the California Air Resources Board (CARB) at the state level, and by the SCAQMD at the regional level.

2.1.1 Air Pollutants of Concern

2.1.1.1 Criteria Pollutants

Criteria pollutants are defined by state and federal law as a risk to the health and welfare of the general public. In general, criteria air pollutants include the following compounds:

- Ozone (O_3)
- Carbon monoxide (CO)
- Nitrogen dioxide (NO_2)
- Particulate matter (PM), which is further subdivided:
  - Coarse PM, 10 microns or less in diameter (PM_{10})
  - Fine PM, 2.5 microns or less in diameter ($PM_{2.5}$)
- Sulfur dioxide (SO_2)
- Lead (Pb)

Criteria pollutants can be emitted directly from sources (primary pollutants; e.g., CO, SO_2, PM_{10}, $PM_{2.5}$, and lead), or they may be formed through chemical and photochemical reactions of precursor pollutants in the atmosphere (secondary pollutants; e.g., ozone, NO_2, PM_{10}, and $PM_{2.5}$). PM_{10} and $PM_{2.5}$ can be both primary and secondary pollutants. The principal precursor pollutants of concern are reactive organic gases ([ROGs] also known as volatile organic compounds [VOCs])[1] and nitrogen oxides (NO_X).

[1] CARB defines and uses the term ROGs while the USEPA defines and uses the term VOCs. The compounds included in the lists of ROGs and VOCs and the methods of calculation are slightly different. However, for the purposes of estimating criteria pollutant precursor emissions, the two terms are often used interchangeably.

Site Plan

Figure 3

The descriptions of sources and general health effects for each of the criteria air pollutants are shown in Table 1, *Common Sources and Human Health Effects of Criteria Air Pollutants*, based on information provided by the California Air Pollution Control Officers Association ([CAPCOA] 2022). Specific adverse health effects on individuals or population groups induced by criteria pollutant emissions are highly dependent on a multitude of interconnected variables such as cumulative concentrations, local meteorology and atmospheric conditions, and the number and characteristics of exposed individuals (e.g., age, gender). Criteria pollutant precursors (ROG and NO_X) affect air quality on a regional scale, typically after significant delay and distance from the pollutant source emissions. Health effects related to ozone and NO_2 are, therefore, the product of emissions generated by numerous sources throughout a region. Emissions of criteria pollutants from vehicles traveling to or from the project site (mobile emissions) are distributed nonuniformly in location and time throughout the region, wherever the vehicles may travel. As such, specific health effects from these criteria pollutant emissions cannot be meaningfully correlated to the incremental contribution from the project.

Table 1
COMMON SOURCES AND HUMAN HEALTH EFFECTS OF CRITERIA AIR POLLUTANTS

Pollutant	Major Man-Made Sources	Human Health Effects
Carbon Monoxide (CO)	An odorless, colorless gas formed when carbon in fuel is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
Nitrogen Dioxide (NO_2)	A reddish-brown gas formed during fuel combustion for motor vehicles and industrial sources. Sources include motor vehicles, electric utilities, and other sources that burn fuel.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Contributes to climate change and nutrient overloading, which deteriorates water quality. Causes brown discoloration of the atmosphere.
Ozone (O_3)	Formed by a chemical reaction between reactive organic gases (ROGs) and nitrogen oxides (NO_X) in the presence of sunlight. Common sources of these precursor pollutants include motor vehicle exhaust, industrial emissions, gasoline storage and transport, solvents, paints, and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing, and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield. Damages rubber, some textiles, and dyes.
Particulate Matter (PM_{10} and $PM_{2.5}$)	Produced by power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles, and other sources.	Increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).
Sulfur Dioxide (SO_2)	A colorless, nonflammable gas formed when fuel containing sulfur is burned, when gasoline is extracted from oil, or when metal is extracted from ore. Examples are petroleum refineries, cement manufacturing, metal processing facilities, locomotives, and ships.	Respiratory irritant. Aggravates lung and heart problems. In the presence of moisture and oxygen, sulfur dioxide converts to sulfuric acid, which can damage marble, iron, and steel. Damages crops and natural vegetation. Impairs visibility. Precursor to acid rain.

Pollutant	Major Man-Made Sources	Human Health Effects
Lead	Metallic element emitted from metal refineries, smelters, battery manufacturers, iron and steel producers, use of leaded fuels by racing and aircraft industries.	Anemia, high blood pressure, brain and kidney damage, neurological disorders, cancer, lowered IQ. Affects animals, plants, and aquatic ecosystems.

2.1.1.2 Toxic Air Contaminants

The Health and Safety Code (§39655, subd. (a).) defines a toxic air contaminant (TAC) as "an air pollutant which may cause or contribute to an increase in mortality or in serious illness, or which may pose a present or potential hazard to human health." A substance that is listed as a hazardous air pollutant pursuant to subsection (b) of Section 112 of the Federal Clean Air Act (CAA) (42 United States Code Section 7412[b]) is a TAC. Under State law, the California Environmental Protection Agency (CalEPA), acting through CARB, is authorized to identify a substance as a TAC if it determines the substance is an air pollutant that may cause or contribute to an increase in mortality or an increase in serious illness, or that may pose a present or potential hazard to human health.

Diesel Particulate Mater

Diesel engines emit a complex mixture of air pollutants, including both gaseous and solid material. The solid material in diesel exhaust is referred to as diesel particulate matter (DPM). Almost all DPM is 10 microns or less in diameter, and 90 percent of DPM is 2.5 microns or less in diameter (CARB 2023b). Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung. In 1998, CARB identified DPM as a TAC based on published evidence of a relationship between diesel exhaust exposure and lung cancer and other adverse health effects. DPM has a notable effect on California's population—it is estimated that about 70 percent of total known cancer risk related to air toxics in California is attributable to DPM (CARB 2023b).

Asbestos Containing Material

Asbestos is a mineral fiber that naturally occurs in some rock and soil. Long-term exposure to airborne asbestos fibers has been linked to major health effects including lung cancer; mesothelioma, a rare form of cancer that is found in the thin lining of the lung, chest and the abdomen and heart; and asbestosis, a serious progressive, long-term, non-cancer disease of the lungs (USEPA 2023c). Because of its fiber strength and heat resistance, asbestos has been used in a variety of building construction materials for insulation and as a fire retardant, primarily in buildings constructed before 1979. Asbestos fibers may be released into the air by the disturbance of ACM during demolition activities. ACMs may be present in building materials such as walls, ceilings, insulation, or fireproofing in older (pre-1979) buildings.

Lead Based Paint

Lead is a naturally occurring metallic element that is found in small amounts in the earth's crust. In addition to its status as a criteria pollutant, lead is listed as a TAC because, depending on the level and duration of exposure, lead can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems, and the cardiovascular system. There is also a probable link between lead exposure and kidney cancer, brain cancer (gliomas), and lung cancer (USEPA 2023d). Lead particulate matter can be emitted during demolition activities that disturb material that contains lead-based paint (LBP), most typically found in structures built before 1978.

Toxics Best Available Control Technology

Diesel powered on-road (highway) trucks are a potential source of DPM. In addition, some transport refrigeration units (TRUs) are powered by a small diesel engine and are a potential source of DPM. TRUs provide cooling for trucks and/or trailers which transport goods requiring refrigeration. The Toxics Best Available Control Technology (T-BACT) for operation of diesel internal combustion engines is compliance with USEPA and CARB emissions standards. All heavy-duty diesel powered on-road vehicles manufactured since 2010 are required to meet USEPA emissions standards, including reductions of emissions of DPM by approximately 90 percent compared to unregulated engines (USEPA 2023c). Diesel powered TRUs are considered nonroad equipment. The USEPA has promulgated multiple tiers of emissions standard (with Tier 4 being the most stringent) for nonroad diesel engines manufactured, depending on engine horsepower and application. CARB regulations require diesel engines used in TRUs, with 25 or more horsepower, sold in California since 2012 to be USEPA Tier 4 Interim certified (CARB 2011).

2.1.2 Federal Air Quality Regulations

2.1.2.1 Federal Clean Air Act

Air quality is defined by ambient air concentrations of specific pollutants identified by the USEPA to be of concern with respect to health and welfare of the general public. The USEPA is responsible for enforcing the CAA of 1970 and its 1977 and 1990 Amendments. The CAA required the USEPA to establish National Ambient Air Quality Standards (NAAQS), which identify concentrations of pollutants in the ambient air below which no adverse effects on the public health and welfare are anticipated. In response, the USEPA established both primary and secondary standards for several criteria pollutants. Table 2, *Ambient Air Quality Standards*, shows the federal and state ambient air quality standards for these pollutants.

Table 2
AMBIENT AIR QUALITY STANDARDS

Pollutant	Averaging Time	California Standards	Federal Standards Primary[1]	Federal Standards Secondary[2]
O_3	1 Hour	0.09 ppm (180 µg/m^3)	–	–
	8 Hour	0.070 ppm (137 µg/m^3)	0.070 ppm (137 µg/m^3)	Same as Primary
PM_{10}	24 Hour	50 µg/m^3	150 µg/m^3	Same as Primary
	AAM	20 µg/m^3	–	Same as Primary
$PM_{2.5}$	24 Hour	–	35 µg/m^3	Same as Primary
	AAM	12 µg/m^3	12.0 µg/m^3	15.0 µg/m^3
CO	1 Hour	20 ppm (23 mg/m^3)	35 ppm (40 mg/m^3)	–
	8 Hour	9.0 ppm (10 mg/m^3)	9 ppm (10 mg/m^3)	–
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)	–	–
NO_2	1 Hour	0.18 ppm (339 µg/m^3)	0.100 ppm (188 µg/m^3)	–
	AAM	0.030 ppm (57 µg/m^3)	0.053 ppm (100 µg/m^3)	Same as Primary
SO_2	1 Hour	0.25 ppm (655 µg/m^3)	0.075 ppm (196 µg/m^3)	–
	3 Hour	–	–	0.5 ppm (1,300 µg/m^3)
	24 Hour	0.04 ppm (105 µg/m^3)	–	–

Pollutant	Averaging Time	California Standards	Federal Standards Primary[1]	Federal Standards Secondary[2]
Lead	30-day Avg.	1.5 µg/m^3	–	–
	Calendar Quarter	–	1.5 µg/m^3	Same as Primary
	Rolling 3-month Avg.	–	0.15 µg/m^3	Same as Primary
Visibility Reducing Particles	8 Hour	Extinction coefficient of 0.23 per km – visibility ≥ 10 miles (0.07 per km – ≥30 miles for Lake Tahoe)	No Federal Standards	No Federal Standards
Sulfates	24 Hour	25 µg/m^3	No Federal Standards	No Federal Standards
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	No Federal Standards	No Federal Standards
Vinyl Chloride	24 Hour	0.01 ppm (26 µg/m^3)	No Federal Standards	No Federal Standards

Source: CARB 2016

1 National Primary Standards: The levels of air quality necessary, within an adequate margin of safety, to protect the public health.

2 National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

O_3 = ozone; ppm: parts per million; µg/m^3 = micrograms per cubic meter; PM_{10} = particulate matter 10 microns or less in diameter; AAM = Annual Arithmetic Mean; $PM_{2.5}$ = fine particulate matter 2.5 microns or less in diameter; CO = carbon monoxide; mg/m^3 = milligrams per cubic meter; NO_2 = nitrogen dioxide; SO_2 = sulfur dioxide; km = kilometer; – = No Standard

The USEPA has classified air basins (or portions thereof) as being in "attainment," "nonattainment," "maintenance," or "unclassified" for each criteria air pollutant, based on whether or not the NAAQS have been achieved. Upon attainment of a standard for which an area was previously designated nonattainment, the area will be classified as a maintenance area. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for a nonattainment or attainment designation. The project site is located within the Los Angeles County portion of the SCAB and, as such, is in an area designated as a nonattainment area for certain pollutants that are regulated under the CAA. Table 3, *South Coast Air Basin Attainment Status*, lists the federal and state attainment status of the SCAB for the criteria pollutants. With respect to federal air quality standards, the USEPA classifies the SCAB as in attainment for PM_{10}, CO, NO_2, SO_2, and lead, and in nonattainment for 8-hour ozone and $PM_{2.5}$.

Table 3
SOUTH COAST AIR BASIN ATTAINMENT STATUS

Criteria Pollutant	Federal Designation	State Designation
Ozone (O_3) (1-hour)	(No federal standard)	Nonattainment
Ozone (O_3) (8-hour)	Extreme Nonattainment	Nonattainment
CO (Carbon Monoxide (CO)	Attainment (Maintenance)	Attainment
Respirable Particulate Matter (PM_{10})	Attainment (Maintenance)	Nonattainment
Fine Particulate Matter ($PM_{2.5}$)	Serious Nonattainment	Nonattainment
Nitrogen Dioxide (NO_2)	Attainment (Maintenance)	Attainment
Sulfur Dioxide (SO_2)	Unclassifiable/Attainment	Unclassifiable/Attainment
Lead	Attainment	Attainment
Sulfates	(No federal standard)	Attainment
Hydrogen Sulfide	(No federal standard)	Attainment
Visibility	(No federal standard)	Attainment

2.1.3 California Air Quality Regulations

2.1.3.1 California Clean Air Act

The federal CAA allows states to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. CARB, a part of the CalEPA, is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the California Ambient Air Quality Standards (CAAQS). CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

In addition to primary and secondary AAQS, the state has established a set of episode criteria for ozone, CO, NO_2, SO_2, and PM. These criteria refer to episode levels representing periods of short-term exposure to air pollutants that actually threaten public health. Table 3, above, lists the state attainment status of the SCAB for the criteria pollutants. Under state designation, the SCAB is currently in attainment for CO, NO_2, SO_2, and lead; and in nonattainment for ozone, PM_{10}, and $PM_{2.5}$.

2.1.3.2 State Implementation Plan

The CAA requires areas with unhealthy levels of ozone, inhalable particulate matter, carbon monoxide, nitrogen dioxide, and sulfur dioxide to develop plans, known as State Implementation Plans (SIPs). SIPs are comprehensive plans that describe how an area will attain the NAAQS. The 1990 amendments to the CAA set deadlines for attainment based on the severity of an area's air pollution problem.

SIPs are not single documents—they are a compilation of new and previously submitted plans, programs (e.g., monitoring, modeling, permitting), district rules, state regulations and federal controls. Many of California's SIPs rely on a core set of control strategies, including emission standards for cars and heavy trucks, fuel regulations and limits on emissions from consumer products. State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB forwards the SIP revisions to the USEPA for

approval and publication in the Federal Register. The Code of Federal Regulations (CFR) Title 40, Chapter I, Part 52, Subpart F, Section 52.220 lists all of the items that are included in the California SIP (CARB 2023c). At any one time, several California submittals are pending USEPA approval.

2.1.3.3 California Energy Code

California Code of Regulations (CCR) Title 24 Part 6, California's Energy Efficiency Standards for Residential and Nonresidential Buildings, were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. Energy-efficient buildings require less electricity, natural gas, and other fuels. Electricity production from fossil fuels and on-site fuel combustion (typically for space and water heating) results primarily in GHG emissions. The California Energy Code is discussed in further detail in Section 2.2.4, below.

2.1.4 Local Regulations

2.1.4.1 South Coast Air Quality Management District

Air quality in the SCAB portion of Los Angeles County is regulated by the SCAQMD. As a regional agency, the SCAQMD works directly with the Southern California Association of Governments (SCAG), County transportation commissions, and local governments and cooperates actively with all federal and state government agencies. The SCAQMD develops rules and regulations; establishes permitting requirements for stationary sources; inspects emissions sources; and enforces such measures through educational programs or fines, when necessary.

Air Quality Management Plan

The SCAQMD is directly responsible for reducing emissions from stationary (area and point), mobile, and indirect sources. It has responded to this requirement by preparing a sequence of Air Quality Management Plans (AQMP).

On December 2, 2022, the SCAQMD adopted the 2022 AQMP, which is a regional and multi-agency effort (SCAQMD, CARB, SCAG, and USEPA). The 2022 AQMP represents a comprehensive analysis of emissions, meteorology, atmospheric chemistry, regional growth projections, and the impact of existing control measures. The plan seeks to achieve multiple goals in partnership with other entities promoting reductions in criteria pollutant, GHGs, and toxic risk, as well as efficiencies in energy use, transportation, and goods movement. Included in the 2022 AQMP are updated strategies and control measures to address the designation of the SCAB as an "extreme" nonattainment area for the 2015 NAAQS 8-hour ozone standard. To meet the 2015 NAAQS ozone standard, an additional 67 percent reduction of NO_X will be required compared to the reductions forecast to occur by 2037 (as required by current adopted rules and regulations). Achieving the NO_X reductions will require extensive use of zero emission technologies across all stationary and mobile sources. The overwhelming majority of NO_X emissions are from heavy-duty trucks, ships and other State and federally regulated mobile sources that are mostly beyond the SCAQMD's control. The region will not meet the NAAQS ozone standard absent significant federal action. In addition to federal action, the 2022 AQMP requires substantial reliance on future deployment of advanced technologies to meet the NAAQS ozone standard (SCAQMD 2022).

The AQMP, in combination with those from all other California nonattainment areas with serious (or worse) air quality problems, is submitted to CARB, which develops the California SIP. The SIP relies on the same information from SCAG to develop emission inventories and emission reduction strategies that

are included in the attainment demonstration for the air basin. The current federal and state attainment status for the SCAB is presented above, in Table 3.

Rules and Regulations

The following rules promulgated by the SCAQMD would be applicable to construction and/or operation of the project.

Rule 401 – Visible Emissions: Limits the allowable opacity of air contaminant emissions from any single source (SCAQMD 2001a).

Rule 402 – Nuisance: Prohibits the discharge of air contaminants, including odors, which cause injury, detriment, nuisance, or annoyance to any considerable number of persons (SCAQMD 1976).

Rule 403 – Fugitive Dust: Requires actions to prevent, reduce or mitigate anthropogenic fugitive dust emissions, including emissions from construction activities. Project construction would be required to implement all applicable fugitive dust best available control measures specified in Table 1 in the rule (SCAQMD 2005).

Rule 1113 – Architectural Coating: Establishes VOC limits for architectural coatings (e.g., paints, stains, preservatives). Effective January 1, 2019, building interior and exterior paint is limited to a maximum VOC content of 50 grams per liter (SCAQMD 2016b).

Rule 1166 – Volatile Organic Compound Emissions from Decontamination of Soil: Sets requirements to control the emission of VOCs from excavating, grading, handling, and treating VOC-contaminated soil as a result of leakage from storage or transfer operations, accidental spillage, or other deposition (SCAQMD 2001b).

Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities: Specifies work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of ACM. The requirements for demolition and renovation activities include asbestos surveying, notification, ACM removal procedures and time schedules, ACM handling and clean-up procedures, and storage, disposal, and landfilling requirements for asbestos-containing waste materials (SCAQMD 2007).

Rule 2305 – Warehouse Indirect Source Rule: Requires owners and operators of warehouses with 100,000 SF or more of indoor floor space in a single building to directly reduce NO_X and PM emissions, or to otherwise facilitate emission and exposure reductions of these pollutants in nearby communities (SCAQMD 2021a).

2.2 GREENHOUSE GASES

2.2.1 Climate Change Overview

Global climate change refers to changes in average climatic conditions on Earth including temperature, wind patterns, precipitation, and storms. Global temperatures are moderated by atmospheric gases. These gases are commonly referred to as GHGs because they function like a greenhouse by letting sunlight in but preventing heat from escaping, thus warming the Earth's atmosphere.

GHGs are emitted by natural processes and human (anthropogenic) activities. Anthropogenic GHG emissions are primarily associated with: (1) the burning of fossil fuels during motorized transport, electricity generation, natural gas consumption, industrial activity, manufacturing, and other activities; (2) deforestation; (3) agricultural activity; and (4) solid waste decomposition.

The temperature record shows a decades-long trend of warming, with 2016 and 2020 global surface temperatures tied for the warmest year on record since 1880 (National Aeronautics and Space Administration [NASA] 2023a). The newest release in long-term warming trends announced 2022 ranked as tied with 2015 for the sixth warmest year on record with an increase of 1.6 degrees Fahrenheit compared to the 1951-1980 average (NASA 2023b). GHG emissions from human activities are the most significant driver of observed climate change since the mid-20th century (United Nations Intergovernmental Panel on Climate Change [IPCC] 2013). The IPCC constructed several emission trajectories of GHGs needed to stabilize global temperatures and climate change impacts. The statistical models show a "high confidence" that temperature increase caused by anthropogenic GHG emissions could be kept to less than two degrees Celsius relative to pre-industrial levels if atmospheric concentrations are stabilized at about 450 parts per million (ppm) carbon dioxide equivalent (CO_2e) by the year 2100 (IPCC 2014).

2.2.2 Types of Greenhouse Gases

The GHGs defined under California's AB 32 include carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).

Carbon Dioxide. CO_2 is the most important and common anthropogenic GHG. CO_2 is an odorless, colorless GHG. Natural sources include the decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungi; evaporation from oceans; and volcanic outgassing. Anthropogenic sources of CO_2 include burning fuels, such as coal, oil, natural gas, and wood. Data from ice cores indicate that CO_2 concentrations remained steady prior to the current period for approximately 10,000 years. The atmospheric CO_2 concentration in 2010 was 390 ppm, 39 percent above the concentration at the start of the Industrial Revolution (approximately 280 ppm in 1750).As of August 2023, the CO_2 concentration exceeded 419 ppm, a 51 percent increase since 1750 (National Oceanic and Atmospheric Administration [NOAA] 2023).

Methane. CH_4 is the main component of natural gas used in homes. A natural source of methane is from the decay of organic matter. Geological deposits known as natural gas fields contain methane, which is extracted for fuel. Other sources are from decay of organic material in landfills, fermentation of manure, and cattle digestion.

Nitrous Oxide. N_2O is produced by both natural and human-related sources. N_2O is emitted during agricultural and industrial activities, as well as during the combustion of fossil fuels and solid waste. Primary human-related sources of N_2O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuel, adipic (fatty) acid production, and nitric acid production.

Hydrofluorocarbons. Fluorocarbons are gases formed synthetically by replacing all hydrogen atoms in methane or ethane with chlorine and/or fluorine atoms. Chlorofluorocarbons (CFCs) are nontoxic, nonflammable, insoluble, and chemically nonreactive in the troposphere (the level of air at Earth's surface). CFCs were first synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning

solvents. They destroy stratospheric ozone; therefore, their production was stopped as required by the 1989 Montreal Protocol.

Sulfur Hexafluoride. SF_6 is an inorganic, odorless, colorless, nontoxic, nonflammable gas. SF_6 is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semi-conductor manufacturing, and as a tracer gas for leak detection.

GHGs have long atmospheric lifetimes that range from one year to several thousand years. Long atmospheric lifetimes allow for GHG emissions to disperse around the globe. Because GHG emissions vary widely in the power of their climatic effects, climate scientists have established a unit called global warming potential (GWP). The GWP of a gas is a measure of both potency and lifespan in the atmosphere as compared to CO_2. For example, a gas with a GWP of 10 is 10 times more potent than CO_2 over 100 years. CO_2e is a quantity that enables all GHG emissions to be considered as a group despite their varying GWP. The GWP of each GHG is multiplied by the prevalence of that gas to produce CO_2e.

Historically, GHG emission inventories have been calculated using the GWPs from the IPCC's Second Assessment Report (SAR). In 2007, IPCC updated the GWP values based on the latest science at the time in its Fourth Assessment Report (AR4). The updated GWPs in the IPCC AR4 have begun to be used in recent GHG emissions inventories. In 2013, IPCC again updated the GWP values based on the latest science in its Fifth Assessment Report (AR5) (IPCC 2013). However, United Nations Framework Convention on Climate Change (UNFCCC) reporting guidelines for national inventories require the use of GWP values from the AR4. To comply with international reporting standards under the UNFCCC, official emission estimates for California and the U.S. are reported using AR4 GWP values, and statewide and national GHG emission inventories have not yet updated their GWP values to the AR5 values. Project GHG emissions in this analysis are reported using the AR4 GWP values.

By applying the GWP ratios, project related CO_2e emissions can be tabulated in metric tons per year. Typically, the GWP ratio corresponding to the warming potential of CO_2 over a 100-year period is used as a baseline. The atmospheric lifetime and GWP of selected GHGs are summarized in Table 4, *Global Warming Potentials and Atmospheric Lifetimes*.

Table 4
GLOBAL WARMING POTENTIALS AND ATMOSPHERIC LIFETIMES

Greenhouse Gas	Atmospheric Lifetime (years)	IPCC SAR GWP	IPCC AR4 GWP	IPCC AR5 GWP
Carbon Dioxide (CO_2)	50-200	1	1	1
Methane (CH_4)	12	21	25	28
Nitrous Oxide (N_2O)	114	310	298	265
HFC-134a	14	1,300	1,430	1,300
PFC: Tetraflouromethane (CF_4)	50,000	6,500	7,390	6,630
PFC: Hexafluoroethane (C_2F_6)	10,000	9,200	12,200	11,100

2.2.3 Federal Greenhouse Gas Regulations

2.2.3.1 Federal Clean Air Act

The U.S. Supreme Court ruled on April 2, 2007, in Massachusetts v. U.S. Environmental Protection Agency that CO_2 is an air pollutant, as defined under the CAA, and that the USEPA has the authority to regulate emissions of GHGs. The USEPA announced that GHGs (including CO_2, CH_4, N_2O, HFC, PFC, and SF_6) threaten the public health and welfare of the American people (USEPA 2023d). This action was a prerequisite to finalizing the USEPA's GHG emissions standards for light-duty vehicles, which were jointly proposed by the USEPA and the United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA).

On June 30, 2022, the U.S. Supreme Court decision published in West Virginia v. U.S. Environmental Protection Agency overturned the USEPA's Clean Power Plan rule which cited Section 111(d) of the CAA for authority to set limits on CO_2 emissions from existing coal- and natural-gas-fired power plants. The June 30, 2022 decision does not overturn the April 2, 2007 decision; however, it may limit the USEPA's authority to develop rules limiting GHG emissions without clear congressional authorization.

2.2.3.2 Light-Duty Vehicle Greenhouse Gas Emissions Standards and Corporate Average Fuel Economy Standards

The USEPA and the NHTSA worked together on developing a national program of regulations to reduce GHG emissions and to improve fuel economy of light-duty vehicles. The USEPA established the first-ever national GHG emissions standards under the CAA, and the NHTSA established Corporate Average Fuel Economy (CAFE) standards under the Energy Policy and Conservation Act. On April 1, 2010, the USEPA and NHTSA announced a joint Final Rulemaking that established standards for 2012 through 2016 model year vehicles. This was followed up on October 15, 2012, when the agencies issued a Final Rulemaking with standards for model years 2017 through 2025. In March 2022, the agencies finalized standards for model years 2024 through 2026 and established an industry-wide fleet average of approximately 49 miles per gallon (mpg) for passenger cars and light trucks in model year 2026.

2.2.4 California Greenhouse Gas Regulations

2.2.4.1 California Code of Regulations, Title 24, Part 6

CCR Title 24 Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. Energy-efficient buildings require less electricity, natural gas, and other fuels. Electricity production from fossil fuels and on-site fuel combustion (typically for space or water heating) results in GHG emissions.

The Title 24 standards are updated approximately every three years to allow consideration and possible incorporation of new energy efficiency technologies and methods. The 2022 Title 24 standards became effective on January 1, 2023. The 2022 update to the Building Energy Efficiency Standards focuses on several key areas to improve the energy efficiency of newly constructed buildings and additions and alterations to existing buildings. New for the 2022 Title 24 standards are non-residential on-site photovoltaic (solar panels) electricity generation requirements, including for new warehouse buildings (California Energy Commission [CEC] 2022).

The standards are divided into three basic sets. First, there is a basic set of mandatory requirements that apply to all buildings. Second, there is a set of performance standards—the energy budgets—that vary by climate zone (of which there are 16 in California) and building type; thus, the standards are tailored to local conditions. Finally, the third set constitutes an alternative to the performance standards, which is a set of prescriptive packages that are basically a recipe or a checklist compliance approach.

2.2.4.2 California Green Building Standards Code

The California Green Building Standards Code (CALGreen; CCR Title 24, Part 11) is a code with mandatory requirements for all nonresidential buildings (including industrial buildings) and residential buildings for which no other state agency has authority to adopt green building standards. The 2019 Standards for new construction of, and additions and alterations to, residential and nonresidential buildings became effective on January 1, 2020, and the 2022 Standards will become effective on January 1, 2023 (California Building Standards Commission [CBSC] 2022).

The development of CALGreen is intended to (1) cause a reduction in GHG emissions from buildings; (2) promote environmentally responsible, cost-effective, healthier places to live and work; (3) reduce energy and water consumption; and (4) respond to the directives by the Governor. In short, the code is established to reduce construction waste; make buildings more efficient in the use of materials and energy; and reduce environmental impact during and after construction.

CALGreen contains requirements for storm water control during construction; construction waste reduction; indoor water use reduction; material selection; natural resource conservation; site irrigation conservation; and more. The code provides for design options allowing the designer to determine how best to achieve compliance for a given site or building condition. The code also requires building commissioning, which is a process for the verification that all building systems, like heating and cooling equipment and lighting systems, are functioning at their maximum efficiency. CALGreen also contains two levels of voluntary measures (Tier 1 and Tier 2) which go beyond minimum State code requirements. Categories of Tier 1 and Tier 2 measures include: Electric vehicle (EV) designated parking; EV charging infrastructure; cool roofs; efficient outdoor lighting; dock door seals; potable water use reductions; recycled building material content; and resilient flooring.

2.2.4.3 Executive Order S-3-05

On June 1, 2005, Executive Order (EO) S-3-05 proclaimed that California is vulnerable to climate change impacts. It declared that increased temperatures could reduce snowpack in the Sierra Nevada, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To avoid or reduce climate change impacts, EO S-3-05 calls for a reduction in GHG emissions to the year 2000 level by 2010, to year 1990 levels by 2020, and to 80 percent below 1990 levels by 2050.

2.2.4.4 Assembly Bill 32 – Global Warming Solution Act of 2006

The California Global Warming Solutions Act of 2006, widely known as AB 32, requires that CARB develop and enforce regulations for the reporting and verification of statewide GHG emissions. CARB is directed by AB 32 to set a GHG emission limit, based on 1990 levels, to be achieved by 2020. The bill requires CARB to adopt rules and regulations in an open public process to achieve the maximum technologically feasible and cost-effective GHG emission reductions.

2.2.4.5 Executive Order B-30-15

On April 29, 2015, EO B-30-15 established a California GHG emission reduction target of 40 percent below 1990 levels by 2030. The EO aligns California's GHG emission reduction targets with those of leading international governments, including the 28 nation European Union. California is on track to meet or exceed the target of reducing GHGs emissions to 1990 levels by 2020, as established in AB 32. California's new emission reduction target of 40 percent below 1990 levels by 2030 will make it possible to reach the goal established by EO S-3-05 of reducing emissions 80 percent under 1990 levels by 2050.

2.2.4.6 Senate Bill 32

Senate Bill (SB) 32, Amendments to the California Global Warming Solutions Action of 2006, extends California's GHG emission reduction programs beyond 2020. SB 32 amended the Health and Safety Code to include Section 38566, which contains language to authorize CARB to achieve a statewide GHG emission reduction of at least 40 percent below 1990 levels by no later than December 31, 2030. SB 32 codified the targets established by EO B-30-15 for 2030, which set the next interim step in the State's continuing efforts to pursue the long-term target expressed in EO B-30-15 of 80 percent below 1990 emissions levels by 2050.

2.2.4.7 Assembly Bill 197

A condition of approval for SB 32 was the passage of AB 197. AB 197 requires that CARB consider the social costs of GHG emissions and prioritize direct reductions in GHG emissions at mobile sources and large stationary sources. AB 197 also gives the California legislature more oversight over CARB through the addition of two legislatively appointed members to the CARB Board and the establishment a legislative committee to make recommendations about CARB programs to the legislature.

2.2.4.8 Assembly Bill 1493 – Vehicular Emissions of Greenhouse Gases

AB 1493 (Pavley) requires that CARB develop and adopt regulations that achieve "the maximum feasible reduction of GHGs emitted by passenger vehicles and light-duty truck and other vehicles determined by CARB to be vehicles whose primary use is noncommercial personal transportation in the State." On September 24, 2009, CARB adopted amendments to the Pavley regulations that intend to reduce GHG emissions in new passenger vehicles from 2009 through 2016. The amendments bind California's enforcement of AB 1493 (starting in 2009), while providing vehicle manufacturers with new compliance flexibility. In January 2012, CARB approved a new emissions-control program for model years 2017 through 2025. The program combines the control of smog, soot, and global warming gases and requirements for greater numbers of zero-emission vehicles into a single packet of standards called Advanced Clean Cars (CARB 2023d).

2.2.4.9 Assembly Bill 341

The state legislature enacted AB 341 (California Public Resource Code Section 42649.2), increasing the diversion target to 75 percent statewide. AB 341 requires all businesses and public entities that generate 4 cubic yards or more of waste per week to have a recycling program in place. The final regulation was approved by the Office of Administrative Law on May 7, 2012 and went into effect on July 1, 2012.

2.2.4.10 Executive Order S-01-07

This EO, signed by Governor Schwarzenegger on January 18, 2007, directs that a statewide goal be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by the year 2020. It orders that a Low Carbon Fuel Standard (LCFS) for transportation fuels be established for California and directs CARB to determine whether a LCFS can be adopted as a discrete early action measure pursuant to AB 32. CARB approved the LCFS as a discrete early action item with a regulation adopted and implemented in April 2010. Although challenged in 2011, the Ninth Circuit reversed the District Court's opinion and rejected arguments that implementing LCFS violates the interstate commerce clause in September 2013. CARB is therefore continuing to implement the LCFS statewide.

2.2.4.11 Senate Bill 350

Approved by Governor Brown on October 7, 2015, SB 350 increases California's renewable electricity procurement goal from 33 percent by 2020 to 50 percent by 2030. This will increase the use of Renewables Portfolio Standard eligible resources, including solar, wind, biomass, and geothermal. In addition, large utilities are required to develop and submit Integrated Resource Plans to detail how each entity will meet their customers resource needs, reduce GHG emissions, and increase the use of clean energy.

2.2.4.12 Senate Bill 375

SB 375, the Sustainable Communities and Climate Protection Act of 2008, supports the State's climate action goals to reduce GHG emissions through coordinated transportation and land use planning with the goal of more sustainable communities.

Under the Sustainable Communities Act, CARB sets regional targets for GHG emissions reductions from passenger vehicle use. In 2010, CARB established these targets for 2020 and 2035 for each region covered by one of the State's metropolitan planning organizations (MPOs). CARB periodically reviews and updates the targets, as needed.

Each of California's MPOs must prepare a Sustainable Communities Strategy (SCS) as an integral part of its regional transportation plan (RTP). The SCS contains land use, housing, and transportation strategies that, if implemented, would allow the region to meet its GHG emission reduction targets. Once adopted by the MPO, the RTP/SCS guides the transportation policies and investments for the region. CARB must review the adopted SCS to confirm and accept the MPO's determination that the SCS, if implemented, would meet the regional GHG emission targets. If the combination of measures in the SCS would not meet the regional targets, the MPO must prepare a separate alternative planning strategy (APS) to meet the targets. The APS is not a part of the RTP. Qualified projects consistent with an approved SCS or Alternative Planning Strategy categorized as "transit priority projects" would receive incentives to streamline CEQA processing.

2.2.4.13 Senate Bill 100

Approved by Governor Brown on September 10, 2018, SB 100 extends the renewable electricity procurement goals and requirements of SB 350. SB 100 requires that all retail sale of electricity to California end-use customers be procured from 100 percent eligible renewable energy resources and zero-carbon resources by the end of 2045.

2.2.4.14 Executive Order N-79-20

EO N-79-20, signed by Governor Newsom on September 23, 2020, establishes three goals for implementation of zero emissions vehicles in California: first, 100 percent of in-state sales of new passenger cars and trucks will be zero-emissions by 2035; second, 100 percent of medium- and heavy-duty vehicles in the state will be zero-emissions vehicles by 2045 for all operations where feasible, and by 2035 for drayage trucks; and third, 100 percent of off-road vehicles and equipment will be zero emissions by 2035 where feasible.

2.2.4.15 Assembly Bill 1279

Approved by Governor Newsom on September 16, 2022, AB 1279, the California Climate Crisis Act, declares the policy of the State to achieve net zero GHG emissions as soon as possible, but no later than 2045, and achieve and maintain net negative GHG emissions thereafter, and to ensure that by 2045, statewide anthropogenic GHG emissions are reduced to at least 85 percent below the 1990 levels. AB 1279 anticipates achieving these policies through direct GHG emissions reductions, removal of CO_2 from the atmosphere (carbon capture), and almost complete transition away from fossil fuels.

2.2.4.16 Senate Bill 905

Approved by Governor Newsom on September 16, 2022, SB 905, Carbon sequestration: Carbon Capture, Removal, Utilization, and Storage Program, requires CARB to establish a Carbon Capture, Removal, Utilization, and Storage Program to evaluate the efficacy, safety, and viability of carbon capture, utilization, or storage technologies and CO_2 removal technologies and facilitate the capture and sequestration of CO_2 from those technologies, where appropriate. SB 905 is an integral part of achieving the state policies mandated in AB 1279.

2.2.4.17 California Air Resources Board: Scoping Plan

The Scoping Plan is a strategy CARB develops and updates at least one every five years, as required by AB 32. It lays out the transformations needed across California society and economy to reduce emissions and reach climate targets. The current 2022 Scoping Plan is the third update to the original plan that was adopted in 2008. The initial 2008 Scoping Plan laid out a path to achieve the AB 32 mandate of returning to 1990 levels of GHG emissions by 2020, a reduction of approximately 15 percent below business as usual. The 2008 Scoping Plan included a mix of incentives, regulations, and carbon pricing, laying out the portfolio approach to addressing climate change and clearly making the case for using multiple tools to meet California's GHG emission targets. The 2013 Scoping Plan assessed progress toward achieving the 2020 mandate and made the case for addressing short-lived climate pollutants (SLCPs). The 2017 Scoping Plan also assessed the progress toward achieving the 2020 limit and provided a technologically feasible and cost-effective path to achieving the SB 32 mandate of reducing GHGs by at least 40 percent below 1990 levels by 2030.

On December 15, 2022, CARB approved the 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan). The 2022 Scoping Plan lays out a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels no later than 2045, as directed by Assembly Bill 1279. The actions and outcomes in the plan will achieve significant reductions in fossil fuel combustion by deploying clean technologies and fuels; further reductions in SLCPs; support for sustainable development; increased action on natural and working lands to reduce emissions and sequester carbon; and the capture and storage of carbon (CARB 2022).

2.2.5 Regional GHG Emission Policies and Plans

2.2.5.1 Southern California Association of Governments

SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties, and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG coordinates with various air quality and transportation stakeholders in Southern California to ensure compliance with the federal and state air quality requirements. Pursuant to California Health and Safety Code Section 40460, SCAG has the responsibility of preparing and approving the portions of the AQMP relating to the regional demographic projections and integrated regional land use, housing, employment, and transportation programs, measures, and strategies. SCAG is required by law to ensure that transportation activities "conform" to, and are supportive of, the goals of regional and state air quality plans to attain the NAAQS. The RTP/SCS includes transportation programs, measures, and strategies generally designed to reduce vehicle miles traveled (VMT), which are contained in the AQMP. The SCAQMD combines its portion of the AQMP with those prepared by SCAG. The RTP/SCS and Transportation Control Measures, included as Appendix IV-C of the 2016 AQMP for the Air Basin, are based on SCAG's 2016-2040 RTP/SCS. On September 3, 2020, SCAG's Regional Council adopted the 2020-2045 RTP/SCS. On October 30, 2020, CARB accepted SCAG's determination that the SCS meets the applicable state GHG emissions targets.

3.0 EXISTING CONDITIONS

The project site is currently completely developed with existing industrial uses comprised of four primary structures, associated parking areas, storage yards, and canopy areas. The existing structures were built between about 1952 and 1973. The project site is surrounded by the following land uses:

- **North**: Hall Road and Union Pacific Railroad (UPRR) rail corridor, beyond which are commercial and industrial uses.
- **South:** Stewart and Gray Road, beyond which are industrial and public utility uses; multi-family residential uses are located further to the southwest.
- **East:** Adjacent commercial and industrial uses, Woodruff Avenue, additional commercial and industrial uses further east; multi-family residential uses are located further to the northeast beyond the UPRR rail corridor.
- **West:** Industrial uses, beyond which are multi-family residential uses.

As discussed in the DEIR Section 4.3, due to the historic use of the project site for manufacturing activities, and associated use of hazardous materials in various manufacturing processes, the soil and groundwater beneath the site have been exposed to various constituents that are now the subject of a voluntary cleanup effort by the property owner. More specifically, extensive sampling conducted at the project site indicated the presence of various constituents in each of these media, including VOCs in soil vapor; VOCs, organochlorine pesticides (OCPs), total petroleum hydrocarbons (TPH), and metals in soil; and VOCs in groundwater. In order to address these conditions, the property owner is currently in the process of remediating the existing contamination in cooperation with the Los Angeles Regional Water Quality Control Board (RWQCB) through operation of an on-site soil vapor extraction (SVE) system. The SVE system is intended to remove those constituents that exceed allowable concentration limits to

allow for future redevelopment of the property. Monitoring of soil vapor and groundwater conditions on-site is ongoing with oversight by the RWQCB, and quarterly monitoring reports are submitted to the RWQCB for review to track the progress of the remediation effort. In addition, testing of materials in the existing buildings has shown the presence of ACMs and LBP.

3.1 CLIMATE AND METEOROLOGY

The project site is in the SCAB, which consists of all or part of four counties: Los Angeles, San Bernardino, Riverside, and Orange. The distinctive climate of the SCAB is determined by its terrain and geographic location. The SCAB is a coastal plain with connecting broad valleys and low hills. It is bound by the Pacific Ocean to the southwest and high mountains around the rest of its perimeter. The general region lies in the semi-permanent high-pressure zone of the eastern Pacific, resulting in a mild climate tempered by cool sea breezes with light, average wind speeds.

The usually mild climatological pattern is interrupted occasionally by periods of extremely hot weather, winter storms, or Santa Ana winds. Winds in the project area are usually driven by the dominant land/ sea breeze circulation system. Regional wind patterns are dominated by daytime onshore sea breezes. At night, the wind generally slows and reverses direction traveling toward the sea. Local canyons can also alter wind direction, with wind tending to flow parallel to the canyons. The vertical dispersion of air pollutants in the SCAB is hampered by the presence of persistent temperature inversions. High pressure systems, such as the semi-permanent high-pressure zone in which the SCAB is located, are characterized by an upper layer of dry air that warms as it descends, restricting the mobility of cooler marine-influenced air near the ground surface, and resulting in the formation of subsidence inversions. Such inversions restrict the vertical dispersion of air pollutants released into the marine layer and, together with strong sunlight, can produce worst-case conditions for the formation of photochemical smog. The basin-wide occurrence of inversions at 3,500 feet above mean sea level or less averages 191 days per year (SCAQMD 1993).

The predominant wind direction in the vicinity of the project site is from the southwest and the average wind speed is approximately 4.7 mph, as measured at the Fullerton Municipal Airport, approximately 9 miles southeast of the project site (Iowa Environmental Mesonet [IEM] 2022). The annual average maximum temperature in the project area, as measured at the Montebello climatic station, approximately 6 miles north of the project site, is approximately 79.1 degrees Fahrenheit (°F), and the annual average minimum temperature is approximately 55.7°F. Total precipitation in the project area averages approximately 14.8 inches annually. Precipitation occurs mostly during the winter and relatively infrequently during the summer (Western Regional Climate Center [WRCC] 2022).

3.2 SENSITIVE RECEPTORS

CARB and the Office of Environmental Health Hazard Assessment (OEHHA) have identified the following groups of individuals as the most likely to be affected by air pollution: adults over 65, children under 14, infants (including in utero in the third trimester of pregnancy), and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis (CARB 2005; OEHHA 2015). Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved and are referred to as sensitive receptor locations. Examples of these sensitive receptor locations are residences, schools, hospitals, and daycare centers. Following OEHHA guidance for health risk assessments, the health impacts are analyzed for individual residents assumed to be standing in their primary outdoor spaces closest to the source of TACs from 17 to 21 hours per day

(depending on the age group) every day for 30 years and for individual off-site workers assumed to be working with moderate intensity outside of a commercial or industrial building for 8 hours per day, 260 days per year. Because of these and other assumptions, health risk assessment are, by design, conservative (health protective).

The closest existing sensitive receptor location to the project site is a single-family home located approximately 240 feet east of the project site, across Hall Road, Woodruff Avenue, and the UPRR corridor. In addition, multi-family residences are located approximately 250 feet southwest of the project site, across Stewart and Gray Road; single-family residences are located approximately 300 feet west of the project site beyond a row of industrial businesses; and multi-family residences are located approximately 320 feet east of the project site, across Woodruff Avenue and the UPRR corridor. The closest school to the project site is the A L Gauldin Elementary School, approximately 2,600 feet (0.5 mile) south of the project site.

3.3 EXISTING AIR QUALITY

3.3.1 Criteria Pollutants

3.3.1.1 Attainment Designations

Attainment designations are discussed in Section 2.1 and Table 2. The SCAB is a federal and state nonattainment area for 8-hour ozone and $PM_{2.5}$. The SCAB is also a state nonattainment area for 1-hour ozone and PM_{10}.

3.3.1.2 Monitored Air Quality

The SCAQMD maintains monitoring stations to measure ambient concentrations of pollutants in the SCAB. The nearest monitoring station, approximately 5.2 miles southwest project site, is the Compton-700 North Bulls Road monitoring station. The closest monitoring station with data for PM_{10} is the South Long Beach monitoring station, approximately 9.9 miles southwest of the project site. Table 5, *Air Quality Monitoring Data*, presents a summary of the ambient pollutant concentrations monitored at the two air quality monitoring stations during the most recent three years (2020 through 2022) for which the SCAQMD has reported data.

Table 5
AIR QUALITY MONITORING DATA

Pollutant Standard	2020	2021	2022
Ozone (O_3) – Compton Station			
Maximum concentration 1-hour period (ppm)	0.152	0.085	0.111
Maximum concentration 8-hour period (ppm)	0.115	0.76	0.085
Days above 1-hour state standard (>0.09 ppm)	3	0	1
Days above 8-hour state/federal standard (>0.070 ppm)	4	1	1
Coarse Particulate Matter (PM_{10}) – South Long Beach Station			
Maximum 24-hour concentration (µg/m^3)	68.7	49.7	50.3
Measured Days above 24-hr state standard (>50 µg/m^3)	3	0	0
Measured Days above 24-hr federal standard (>150 µg/m^3)	0	0	0
Annual average (µg/m^3)	*	23.6	*
Exceed state annual standard (20 µg/m^3)	*	Yes	*
Fine Particulate Matter ($PM_{2.5}$) – Compton Station			
Maximum 24-hour concentration (µg/m^3)	67.5	102.1	52.8
Measured Days above 24-hour federal standard (>35 µg/m^3)	19	12	6
Annual average (µg/m^3)	14.7	14.4	14.0
Exceed state and federal annual standard (12 µg/m^3)	Yes	Yes	Yes
Nitrogen Dioxide (NO_2) – Compton Station			
Maximum 1-hour concentration (ppm)	0.072	0.068	0.065
Days above state 1-hour standard (0.18 ppm)	0	0	0
Days above federal 1-hour standard (0.100 ppm)	0	0	0
Annual average (ppm)	0.014	0.014	0.014
Exceed annual federal standard (0.053 ppm)	No	No	No
Exceed annual state standard (0.030 ppm)	No	No	No

Source: CARB 2023e
ppb = parts per billion; ppm = parts per million; µg/m^3 = micrograms per cubic meter, * = insufficient data available.

As shown in Table 5, the 1- and 8-hour ozone, PM_{10}, and $PM_{2.5}$ standards were exceeded numerous times in each of the sample years. Data for NO_2 showed no exceedances.

3.3.1.3 Existing Land Use Criteria Pollutant Emissions

Emissions resulting from operation of the industrial businesses on the project site were analyzed using the California Emissions Estimator Model (CalEEMod), as described in Section 4.1, below. The calculated existing land use operational criteria pollutant and precursor emissions are shown in Table 6, *Existing Land Use Maximum Daily Emissions*.

Table 6
EXISTING LAND USE MAXIMUM DAILY EMISSIONS

Category	Pollutant Emissions (pounds per day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Area	12.9	<0.1	18.9	<0.1	<0.1	<0.1
Energy	0.2	3.0	2.5	<0.1	0.2	0.2
Mobile	5.1	31.6	52.7	0.3	15.9	4.4
Total Existing Use Daily Emissions[1, 2]	**18.2**	**34.5**	**74.0**	**0.3**	**16.1**	**4.6**

Source: CalEEMod (output data is provided in Appendix A)

[1] Totals may not sum due to rounding.

[2] Maximum daily emissions of VOC, CO, SO_X, PM_{10}, and $PM_{2.5}$ occur during summer, maximum daily emissions of NO_X occur during winter.

VOC = volatile organic compounds; NO_X = nitrogen oxides; CO = carbon monoxide; SO_X = sulfur oxides;
PM_{10} = particulate matter 10 microns or less in diameter; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter

3.3.2 Community Health Risks

The SCAQMD has conducted studies on carcinogenic risk from exposure to air toxics in the SCAB. The most recent is the Multiple Air Toxics Exposure Study V (MATES V). According to the MATES Data Visualization interactive tool, the area around the project site has a cumulative cancer risk from toxic air contaminants of 569 in 1 million. 68 percent of the existing cumulative cancer risk from toxic air contaminants is from DPM (SCAQMD 2023b).

3.3.3 Greenhouse Gases

In 2020, total GHG emissions worldwide were estimated at 50,510 million metric tons (MMT) of CO_2e emissions (Climate Watch 2023). By country, the U.S. contributed the second largest portion (10.5 percent) of global GHG emissions, behind China with 24.4 percent of global emissions. The total U.S. GHG emissions was 5,290 MMT CO_2e in 2020 (Climate Watch 2023). On a national level, approximately 90 percent of GHG emissions were associated with energy, including transportation energy (Climate Watch 2023).

CARB performed statewide inventories for the years 1990 to 2020, as shown in Table 7, *California Greenhouse Gas Emissions by Sector*. The inventory is divided into five broad sectors of economic activity: agriculture, commercial and residential, electricity generation, industrial, and transportation. Emissions are quantified in MMT CO_2e.

Table 7
CALIFORNIA GREENHOUSE GAS EMISSIONS BY SECTOR

Sector	Emissions (MMT CO_2e)			
	1990	2000	2010	2020
Agriculture and Forestry	18.9 (4%)	30.8 (8%)	33.6 (8%)	31.6 (8%)
Commercial and Residential	44.1 (10%)	44.2 (10%)	46.0 (10%)	38.7 (11%)
Electricity Generation	110.5 (26%)	104.7 (20%)	90.3 (20%)	59.5 (16%)
Industrial	105.3 (24%)	93.0 (20%)	87.8 (20%)	73.3 (20%)
Transportation	150.6 (35%)	175.7 (37%)	162.9 (37%)	135.8 (37%)
Unspecified Remaining	1.3 (<1%)	13.4 (5%)	21.6 (5%)	30.2 (8%)
Total	**430.7**	**461.8**	**442.2**	**369.1**

Source: CARB 2007 and CARB 2023f
MMT = million metric tons; CO_2e = carbon dioxide equivalent

As shown in Table 7, statewide GHG source emissions totaled 431 MMT CO_2e in 1990, 462 MMT CO_2e in 2000, 442 MMT CO_2e in 2010, and 369 MMT CO_2e in 2020. Transportation-related emissions consistently contribute the most GHG emissions, followed by electricity generation and industrial emissions (CARB 2007 and CARB 2023f).

3.3.3.1 Existing Land Use GHG Emissions

Emissions resulting from operation of the industrial businesses on the project site were analyzed using CalEEMod, as described in Section 4.1, below. The calculated existing land use operational criteria pollutant and precursor emissions are shown in Table 8, *Existing Land Use Annual GHG Emissions*.

Table 8
EXISTING LAND USE ANNUAL GHG EMISSIONS

Emission Sources	2024 Emissions (MT CO_2e)
Area	8.8
Energy	1,803
Vehicular (Mobile)	5,552
Solid Waste	166
Water	242
Refrigerants	18.0

[1] Totals may not sum due to rounding.
GHG = greenhouse gas; MT = metric tons; CO_2e = carbon dioxide equivalent

4.0 METHODOLOGY AND SIGNIFICANCE CRITERIA

4.1 METHODOLOGY

Criteria pollutant and GHG emissions for both the proposed project and the existing industrial land use were calculated using CalEEMod, version 2022.1.1.18 CalEEMod is a computer model used to estimate air emissions resulting from land development projects throughout the state of California. CalEEMod

was developed by CAPCOA in collaboration with the California air quality management and pollution control districts, primarily the SCAQMD. The calculation methodology, source of emission factors used, and default data is described in the CalEEMod User's Guide, and Appendices C, D, and G (CAPCOA 2022).

In brief, CalEEMod is a computer model that estimates criteria air pollutant and greenhouse gas emissions from mobile (i.e., vehicular) sources, area sources (fireplaces, woodstoves, and landscape maintenance equipment), energy use (electricity and natural gas used in space heating, ventilation, and cooling; lighting; and plug-in appliances), water use and wastewater generation, solid waste disposal, and refrigerants. Emissions are estimated based on land use information input to the model by the user.

In the first module, the user defines the specific land uses that will occur at the project site. The user also selects the appropriate land use setting (urban or rural), operational year, location, climate zone, and utility provider. The input land uses, size features, and population are used throughout CalEEMod in determining default parameters and calculations in each of the subsequent modules. The input land use information consists of land use subtypes (such as the residential subtypes of single-family residential and multi-family medium-rise residential) and their unit or square footage quantities.

Subsequent modules include construction (including off-road vehicle emissions), mobile (on-road vehicle emissions), area sources (architectural coatings [painting], consumer products [cleansers, aerosols, solvents]), water and wastewater, solid waste, and refrigerants. Each module comprises multiple components including an associated mitigation module to account for further reductions in the reported baseline calculations. Other inputs include trip generation rates, trip lengths, vehicle fleet mix (percentage autos, trucks, etc.), trip distribution (percent work to home, etc.), duration of construction phases, construction equipment usage, grading areas, season, and ambient temperature, as well as other parameters.

In various places the user can input additional information and/or override the default assumptions to account for project- or location-specific parameters. For this assessment, the default parameters were not changed unless otherwise noted. The CalEEMod output files are included in Appendix A to this report.

4.1.1 Construction Emissions

CalEEMod has the capability to calculate reductions in construction emissions from the effects of dust control, diesel-engine classifications, and other selected emissions reduction measures. In compliance with SCAQMD Rule 403, fugitive dust emissions calculations assume application of water on exposed surface a minimum of two times per day and a speed limit of 25 mph enforced for vehicles traveling on unpaved surfaces.

CalEEMod estimates construction emissions for each year of construction activity based on the annual construction equipment profile and other factors determined as needed to complete all phases of construction by the target completion year. As such, each year of construction activity has varying quantities of GHG emissions. Per SCAQMD guidance, total construction GHG emissions resulting from the project are amortized over 30 years (the anticipated period before the project building would require replacement or significant renovation) and added to operational GHG emissions.

4.1.1.1 Construction Activities

Construction emissions were estimated based on the timeline provided by the project applicant, which assumes construction would commence with demolition/site preparation in February 2024. Off-site improvements, paving, and architectural coatings (e.g., painting) occur concurrently with building construction. The quantity, duration, and intensity of construction activity influence the amount of construction emissions and related pollutant concentrations that occur at any one time. As such, the emission forecasts provided herein reflect a specific set of conservative assumptions based on the expected construction scenario wherein a relatively large amount of construction activity is occurring in a relatively intensive manner. Because of this conservative assumption, actual emissions could be less than those forecasted. If construction is delayed or occurs over a longer time period, emissions could be reduced because of: (1) a more modern and cleaner-burning construction equipment fleet mix than assumed in CalEEMod; and/or (2) a less intensive buildout schedule (i.e., fewer daily emissions occurring over a longer time interval).

Construction is assumed to occur five days per week with equipment operating up to eight hours per day. The construction schedule assumed in the modeling is shown in Table 9, *Anticipated Construction Schedule*.

Table 9
ANTICIPATED CONSTRUCTION SCHEDULE

Construction Activity	Construction Period Start	Construction Period End	Number of Working Days
Demolition/Site Preparation	2/9/2024	5/23/2024	75
Grading/ Underground Utilities	5/24/2024	7/18/2024	40

Paving	2/7/2025	3/6/2025	20

Source: CalEEMod (complete data is provided in Appendix A)

4.1.1.2 Construction Off-Road Equipment

Construction would require the use of heavy off-road equipment. Construction equipment estimates for other activities estimates are based on default values in CalEEMod, with additional equipment added for excavation for underground utilities (based on assumptions used for similar projects). Table 10, *Construction Equipment Assumptions*, presents a summary of the assumed equipment that would be involved in each stage of construction.

Source: CalEEMod (complete data is provided in Appendix A)

4.1.1.3 Construction On-Road Trips

Worker commute trips and vendor delivery trips were modeled based on CalEEMod defaults. Worker trips are anticipated to vary between 10 and 228 trips per day, depending on construction activity. Vendor delivery trips would be 90 per day during building construction. Based on model defaults and an estimated 433,000 SF of exiting building area, approximately 2,490 loads (4,980 trips) of debris would be exported during demolition. Based on estimates from the project off-site improvement plan, approximately 31 loads (62 trips) of soil and debris would be exported and approximately 31 loads (62 trips) of aggregate and concrete would be imported during oof-site street improvements. Based on the model default of 16 CY per load, exporting 75,000 CY of soil during grading would require 4,688 loads (9,376 trips). Based on the paved areas shown on the site plan, approximately 1,053 loads (2,106 trips) of aggregate/asphalt would be imported to the project site during paving. The CalEEMod

default worker, vendor, and haul trip distances were used in the model. Due to the size of the project site, 1,000 feet of every haul truck trip (1 percent of each trip) was assumed to be on an unpaved on-site access road.

4.1.2 Operation Emissions

Operational impacts were estimated using CalEEMod. Operational sources of emissions include area, energy, transportation, water use, solid waste, and refrigerants. Operational emissions are calculated for the earliest anticipated full year of operation—2026.

4.1.2.1 Area Source Emissions

Area sources include emissions from landscaping equipment, the use of consumer products, the reapplication of architectural coatings for maintenance, and hearths. Emissions associated with area sources were estimated using the CalEEMod default values and SCAQMD Rule 1113 architectural coatings VOC of 50 g/L for building envelope coatings and interior flat coatings and 100 g/L for pavement marking.

4.1.2.2 Energy Emissions

Development within the project would use electricity for lighting, heating, and cooling. Direct emissions from the burning of natural gas may result from furnaces, hot water heaters, and appliances. Electricity generation typically entails the combustion of fossil fuels, including natural gas and coal, which is then transmitted to end users. A building's electricity use is thus associated with the off-site or indirect emission of GHGs at the source of electricity generation (power plant). The 2022 Title 24 standards include the requirement for on-site solar electricity generation which would be applicable to the project. The minimum amount of solar electricity generated to meet the 2022 Tile 24 standards is based on climate zone and the building's conditioned floor area (the floor space that would include heating or air conditioning). Because the amount of project warehouse space that would be conditioned was uncertain at the time of this analysis, to be conservative, no energy use reductions resulting from project solar panels were included in the modeling. The project's and the existing land use's energy use was modeled using CalEEMod defaults.

The project would include EV charging infrastructure in accordance with CalGreen requirements. Including EV infrastructure in a development project is generally accepted as a GHG emission reduction measure. Adding EV charging infrastructure to a development project would not result in increased GHG emissions in the region. Without the project including EV infrastructure, EV owners would either charge their vehicles somewhere else, resulting in similar electricity use, or they would choose to use conventional vehicles, resulting in higher GHG emissions. Therefore, project electricity use for EV charging is not included in this analysis.

4.1.2.3 Vehicular (Mobile) Sources

Operational emissions from mobile source emissions are associated with project-related vehicle trip generation and trip length. Based on the trip generation rate from the Transportation Impact Study (TIS) prepared for the project, the project fulfillment center warehouse (including the office and mezzanine space) would generate 3,277 average daily trips (ADT; 3,179 passenger car trips and 98 truck trips) and the project cold storage warehouse space would generate 57 ADT (Linscott Law & Greenspan [LLG] 2023). Passenger car trip purposes and distances were modeled using CalEEMod defaults. The TIS

reported that project high-cube fulfillment center truck ADT would consist of 16 two-axle trucks, 20 three-axle trucks, and 62 four or more axle trucks. Two-axle trucks were assumed to be light-heavy duty (LHDT2; 10,000 to 14,000 pounds gross vehicle weight [GVW]). Three-axle trucks were assumed to be medium-heavy duty (MHDT; 14,000 to 33,000 GVW). Four or more axle trucks were assumed to be heavy-heavy duty (HHDT; greater than 33,000 GVW). The TIS did not analyze truck percentages for the cold storage warehouse trips. The cold storage warehouse truck trips were determined from data in the study High-Cube Warehouse Vehicle Trip Generation Analysis, prepared for SCAQMD, which reports that the cold-storage warehouse average vehicle mix is approximately 39.5 percent trucks (Institute of Transport Engineers 2016). The fleet mix for project truck trips was set in CalEEMod to match the TIS and SCAQMD analysis truck mix. All truck trips were assumed to be primary (no diverted or pass-by trip reductions). Truck trip distances were modeled using the SCAQMD recommended distance of 40 miles for warehouse projects, assuming that only the local portion of each trip (local delivery or highway access) would result in new VMT to the region (SCAQMD 2021b).

Trip generation for the existing industrial land use was modeled using the trip generation presented in the TIS which concluded that the existing land use generates 2,109 ADT. The existing land use trips consist of 1,291 passenger car trips and 818 truck trips (90 2-axle truck trips, 294 3-axle truck trips, and 434 4- or more axle truck trips; LLG 2023). The CalEEMod default trip distances were used for the exiting land use trips.

4.1.2.4 Solid Waste Sources

The disposal of solid waste produces GHG emissions from anaerobic decomposition in landfills, incineration, and transportation of waste. CalEEMod determines the GHG emissions associated with disposal of solid waste into landfills. Portions of these emissions are biogenic. CalEEMod methods for quantifying GHG emissions from solid waste are based on the IPCC method using the degradable organic content of waste.

4.1.2.5 Water Sources

Water-related GHG emissions are from the conveyance and treatment of water. CalEEMod uses the CEC's 2006 Refining Estimates of Water-Related Energy Use in California to establish default water-related emission factors.

4.1.2.6 Refrigerants

Refrigerants are substances used in equipment for air conditioning and refrigeration. Most of the refrigerants used today are HFCs or blends of gases containing HFCs. CalEEMod quantifies refrigerant emissions from leaks during regular operation and routine servicing over the equipment lifetime.

4.1.3 Localized Significance Threshold Methodology

As part of the SCAQMD's environmental justice program, more attention has been focused on localized air quality effects. Also, while regional impact analysis is based on attaining or maintaining regional emissions standards, localized impact analysis compares the concentration of a pollutant at a receptor site to a health-based standard.

SCAQMD has developed a localized significance threshold (LST) methodology and mass rate look-up tables by source receptor area (SRA) that can be used by public agencies to determine whether a project

may generate significant adverse localized air quality impacts. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard; they are developed based on the ambient concentrations of that pollutant for each SRA (SCAQMD 2009). The LST methodology translates the concentration standards into emissions thresholds that are a function of project site area, source to receptor distance, and the location within the SCAB. The LST methodology is recommended to be limited to projects of 5 acres or less and to avoid the need for complex dispersion modeling. For projects that exceed 5 acres, such as the proposed project, the 5-acre LST look-up values can be used as a screening tool to determine which pollutants require detailed analysis. This approach is conservative as it assumes that all on-site emissions would occur within a 5-acre area and over-predicts potential localized impacts (i.e., more pollutant emissions occurring within a smaller area and within closer proximity to potential sensitive receptors). If a project exceeds the LST look up values, then the SCAQMD recommends that project-specific localized air quality modeling be performed.

The proposed project is within SRA 5, Southeast Los Angeles County. The closest sensitive receptor is a single-family residence 240 feet east of the project site. Therefore, the LSTs in SRA 5 for project sites of 5 acres with receptors located between 50 and 100 meters (164 to 328 feet) are used in this analysis.

4.1.4 Health Risk Assessment

A health risk assessment (HRA) was prepared to analyze potential health risks to nearby sensitive receptors and off-site workers from the emission of DPM during construction and operation of the proposed warehouse in accordance with applicable portions of the OEHHA Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015), and applicable portions of the SCAQMD's Modeling Guidance for AERMOD (SCAQMD 2023b). HRA modeling inputs and outputs are included in Appendix B, HRA Modeling, to this report.

4.1.4.1 TAC Emissions

Available air quality models and complications of emissions factors do not include DPM emissions. However, because nearly all DPM consists of particles 10 microns in diameter or less, DPM emissions are approximately equal to PM_{10} exhaust emissions from diesel engines. All DPM emissions calculations used in the project HRA were based on PM_{10} exhaust emissions.

Calculations of off-road construction DPM were based on CalEEMod reported PM_{10} exhaust emissions reported for each construction activity. Emissions of DPM from trucks traveling to and from the project warehouse were calculated using emission factors from CARB's EMFAC2021 version 1.0.2 online database (CARB 2023g) and the haul tuck trips described in Section 4.1.1, above. All haul trucks were assumed to be heavy-heavy duty (HHDT; greater than 33,000 GVR). Trucks on public road surrounding the project site were assumed to be traveling at the posted speed limit (35 mph for Hall Road and 40 mph for Stewart and Gray Road). In addition, each haul truck entering the project site was assumed to idle for the maximum allowable 5 minutes (per California Code of Regulations [CCR] Title 13, Section 2485). Haul truck idling emissions were assumed to be approximately equivalent to truck emissions at 5 mph.

Calculations of operational DPM emissions were based on the project truck trip generation estimate and the project truck trip distribution described in the project TIS (LLG 2023). All trucks were assumed be traveling at the average posted speed limit for each modeled roadway segment. Trucks entering and

exiting the project driveways and circulating within the project site were assumed to be traveling at 15 mph. All trucks were assumed to idle at the loading docks for the maximum allowable 5 minutes after arriving and again before leaving the project site, plus two additional minutes corresponding to low-speed maneuvering in the loading dock areas. Truck idling emissions were assumed to be approximately equivalent to truck emissions at 5 mph.

Emissions of DPM from trucks traveling to and from the project warehouse were calculated using emission factors from CARB's EMFAC2021 version 1.0.2 online database (CARB 2023g). The truck fleet mix was estimated from the project TIS which reported that the project high-cube fulfillment center truck ADT would consist of 16 two-axle trucks, 20 three-axle trucks, and 62 four or more axle trucks (LLG 2023). Two-axle trucks were assumed to be light-heavy duty (LHDT2; 10,000 to 14,000 pounds gross vehicle weight [GVW]). Three-axle trucks were assumed to be medium-heavy duty (MHDT; 14,000 to 33,000 GVR). Four or more axle trucks were assumed to be HHDT. The TIS did not analyze truck percentages for the cold storage warehouse trips. The cold storage warehouse truck trips were determined from data in the study *High-Cube Warehouse Vehicle Trip Generation Analysis,* prepared for SCAQMD, which reports that the cold-storage warehouse average vehicle mix is approximately 39.5 percent trucks (Institute of Transport Engineers 2016), or 23 ADT (20 trucks would be HHDT and the remaining were assumed to be MHDT).

All trucks associated with the project's cold-storage warehouse space (23 ADT) were assumed to be equipped with a TRU. Although a small percentage of TRUs currently in service are capable of running off of batteries, to be conservative (health protective), all TRUs were assumed to be directly powered by a diesel engine or be electrically powered and supplied by a diesel-powered generator mounted on the truck or trailer.

Emissions of DPM for TRUs were calculated using emission factors from CARB's OFFROAD2021 version 1.0.5 online database (CARB 2023g). OFFROAD 2021 contains population and emission data for TRUs directly powered by a diesel engine, and for TRUs supplied by a diesel-powered generator. TRUs were assumed to operate for an average total of 4 hours at the loading dock before and/or after unloading/loading.

4.1.4.2 Dispersion Modeling

Localized concentrations of DPM were modeled using Lakes AERMOD View version 10.2.1. The Lakes program utilizes the USEPA's AERMOD gaussian air dispersion model version 2111. Plot files from AERMOD using unitized emissions (one gram per second) for each DPM source were imported into CARB's Hotspots Analysis and Reporting Program (HARP), Air Dispersion Modeling and Risk Tool (ADMRT) version 22118. The ADMRT calculated ground-level concentrations of DPM utilizing the imported plot files and the annual and hourly emissions inventory. The modeling input and output are included in Appendix B to this report

Source Parameters

Because most of the off-road diesel equipment anticipated to be used for project emissions are mobile and exact location of use on the project site cannot be reasonably determined, off-road equipment emissions and haul truck idling emissions were modeled as an area source corresponding to the project site minus a 2-meter (6.5 feet) setback from the property line (to account for a portion of the equipment width). Off-road equipment emissions were assumed to be emitted at an average height of 3 meters (9.8 feet) corresponding to the typical exhaust stack height for heavy off-road construction equipment.

Construction haul trucks and operational warehouse trucks traveling streets around the project site, on project driveways, and within the project site were modeled as line volume sources following methodology/calculations recommended in the USEPA Haul Road Workgroup Final Report, using an average truck height of 4 meters (13.1 feet), the average road width for on-street travel, and an average truck width of 2.6 meters (8.5 feet) for driveways and on-stie circulation (USEPA 2011). Two construction haul routes were modeled assuming haul trucks would access I-605 from Firestone Avenue: 50 percent of truck entering/leaving the project site east on Hall Road, turning north on Woodruff Avenue, then turning southeast on Firestone Boulevard; and 50 percent of trucks entering/leaving the project site east on Stewart and Gray Road, then turning southeast on Firestone Boulevard. Operational warehouse trucks were modeled traveling on the routes extending up to 500 meters from the project site (0.3 mile), as identified in the TIS: Hall road from the northwest project driveway to Woodruff Avenue; Woodruff Avenue from Hall road to Firestone Boulevard; Firestone Boulevard from Woodruff Avenue to southeast approximately 300 meters (0.2 mile); Stewart and Gray Road from the west project driveway to approximately 300 meters (0.2) mile west of the project site; Stweart and Gray Road along the project frontage; Stewart and Gray Road from the project east driveway to approximately 300 meters (0.2 mile) east of Woodruff Avenue; and Woodruff Avenue to approximately 300 meters (0.2 mile) south of Stewart and Gray Road.

Trucks parked in the loading dock area and parking area were modeled as volume sources with a 25-meter (82-foot) wide base and a height of 4 meters (13.1 feet). Five identical volume sources were placed in the project building loading dock areas: two on the east side, two on the west side, and one on the north side.

Emissions of DPM would not be constant throughout the day. For construction emissions, variable emissions were used assuming construction would occur from 7 a.m. to 4 p.m. Monday through Friday. For operational emissions, the volume of trucks entering and exiting the site would vary by hour of the day and day of the week. However, since the project is assumed to operate 24 hours per day, 7 days per week, the truck volume was assumed to be steady throughout all hours of the day and week. This modeling assumption is generally conservative (health protective).

Meteorological Data

SCAQMD provides pre-processed meteorological data suitable for use with AERMOD (SCAQMD 2017). The available data set recommended by SCAQMD for the project area was from the Pico Rivera station, approximately 4 miles northeast of the project site. A wind rose for the Pico Rivera station shows an average wind speed of 4.5 mph from the southwest (SCAQMD 2017). The wind rose graphics are included in Appendix B to this report. The Pico Rivera station set includes 5 years of data collected between 2010 and 2016. Urban dispersion coefficients with a Los Angeles County population of 9,818,605 were selected in the model in accordance with SCAQMD modeling recommendations (SCAQMD 2023b).

Terrain Data

United States Geological Survey (USGS) National Elevation Dataset (NED) files with a 10-meter resolution covering an area approximately one kilometer by one kilometer around the project site were used in the model to cover the analysis area. Terrain data was imported to the model using AERMAP, a terrain preprocessing program for AERMOD.

Receptor Modeling

To develop risk isopleths (linear contours showing equal level of risk), receptors were placed in a cartesian grid 1,300 meters by 1,300 meters (approximately 0.8 mile by 0.8), centered on the project site with a grid spacing of 50 meters (164 feet), in accordance with the SCAQMD guide recommendations (SCAQMD 2023b). To ensure the area of maximum off-site impact was captured, receptors were placed along the project boundary at 20-meter (66 feet) intervals. Additional discrete receptors were placed at the closest primary outdoor spaces for the 8 closest residences around the project site (including residences near the project ruck routes on Hall Road and Woodruff Avenue) and 7 closest worker locations (commercial or industrial buildings). See Figure 4, *Receptor Locations*, for the modeled discrete receptor locations relative to the project site and modeled sources.

4.1.4.3 Risk Determination

Health risks resulting from localized concentration of DPM were estimated using the ADMRT. The latest cancer slope factors and chronic Reference Exposure Limits (RELs), and exposure paths for all TACs designated by CARB are included in ADMRT. For the residential cancer risk, an exposure duration of 30 years was selected in accordance with the OEHHA (2015) guidelines.

The model conservatively assumes that residents would be standing and breathing outdoors at the location of the property line closest to the project every day between 17 and 21 hours per day (depending on the age group, starting with infants in utero in the third trimester of pregnancy) for 30 years. The Risk Management Policy (RMP) using the derived method for the intake rate percentile was selected in accordance with the SCAQMD guide recommendations (SCAQMD 2023b). For off-site worker cancer risk, an exposure duration of 25 years was selected with an assumption of 8 hours per day, 5 days per week of exposure while standing outside with moderate intensity breathing rates, in accordance with the OEHHA guidelines. Because DPM only has an inhalation cancer slope factor and an inhalation chronic REL, only the cancer risk and chronic risk from exposure to DPM was evaluated (acute risk and 8-hour chronic risk would be zero), and only the inhalations pathway was evaluated. The risk modeling input and output is included in Appendix B to this report.

Because the most intensive use of heavy construction equipment would occur during demolition/site preparation and grading activities, potential health risks for construction were modeled in two periods: construction period 1 (demolition/site preparation and grading) is anticipated to last 5.3 months and was modeled using the minimum exposure duration of 6 months (0.5 year) available in the ADMRT, starting with infants in utero in the third trimester of pregnancy for residential risks and age 16 for worker risks; and construction period 2 (off-site improvements, building construction, architectural coatings, and paving)) is anticipated to last 8.3 months and was modeled using an exposure duration of 0.7 year starting at age 0 for residential risks and age 16 for worker risks. The remaining exposure period was modeled using operational emissions starting in 2026 and lasting 29 years for residential risks starting at age 1, and 24 years for worker risks starting at age 17. Total health risks were calculated by summing the construction period 1, construction period 2, and operational risks for each receptor.

Cancer burden evaluates an overall population's increased cancer risk and is defined as the increases in cancer cases in the population due exposure to TACs from a project. Cancer burden is calculated differently from individual risk. Per OEHHA, cancer burden uses a 70-year exposure to evaluate population-wide cancer risk, and the cancer burden only evaluates residential exposure (not worksites). Cancer burden is calculated by multiplying the number of residents exposed to an incremental excess

cancer risk of 1 in 1 million or greater by the estimated incremental excess cancer risk of the maximally exposed individual resident (MEIR).

4.2 SIGNIFICANCE CRITERIA

4.2.1 Air Quality

Thresholds used to evaluate potential air quality and odor impacts are based on applicable criteria in the State's California Environmental Quality Act (CEQA) Guidelines Appendix G. A significant air quality and/or odor impact could occur if the implementation of the proposed project would:

1. Conflict with or obstruct implementation of the SCAQMD Air Quality Management Plan, or applicable portions of the SIP; or

2. Result in a cumulatively considerable net increase of any criteria pollutant for which the SCAB is non-attainment under an applicable NAAQS or CAAQS; or

3. Expose sensitive receptors to substantial pollutant concentrations; or

4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Appendix G of the State CEQA Guidelines states that the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the above determinations. The SCAQMD has established significance thresholds to assess the regional and localized impacts of project-related air pollutant emissions. The significance thresholds are updated, as needed, to appropriately represent the most current technical information and attainment status in the SCAB. Table 11, *SCAQMD Thresholds of Significance*, presents the most current significance thresholds, including regional daily thresholds for short-term construction and long-term operational emissions; maximum incremental cancer risk and hazard indices for TACs; and maximum ambient concentrations for exposure of sensitive receptors to localized pollutants. A project with daily emission rates, risk values, or concentrations below these thresholds is generally considered to have a less than significant effect on air quality.

VOC = volatile organic compound; NO_X = nitrogen oxides; CO = carbon monoxide; PM_{10} = respirable particulate matter with a diameter of 10 microns or less; $PM_{2.5}$ = fine particulate matter with a diameter of 2.5 microns or less; SO_X = sulfur oxides; TACs = toxic air contaminants; GHG = greenhouse gas; MT/yr = metric tons per year; CO_2e = carbon dioxide equivalent; NO_2 = nitrogen dioxide; ppm = parts per million; µg/m^3 = micrograms per cubic meter

4.2.2 Greenhouse Gases

Given the relatively small levels of emissions generated by a typical development in relationship to the total amount of GHG emissions generated on a national or global basis, individual development projects are not expected to result in significant, direct impacts with respect to climate change. However, given the magnitude of the impact of GHG emissions on the global climate, GHG emissions from new development could result in significant, cumulative impacts with respect to climate change. Therefore, the potential for a significant GHG emissions impact is limited to cumulative impacts.

According to Appendix G of the CEQA Guidelines, a project would have a significant environmental impact if it would:

(1) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or

(2) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

The determination of significance is governed by CEQA Guidelines 15064.4, entitled "Determining the Significance of Impacts from Greenhouse Gas Emissions." CEQA Guidelines Section 15064.4(a) states, "[t]he determination of the significance of greenhouse gas emissions calls for a careful judgment by the lead agency consistent with the provisions in Section 15064. A lead agency should make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project. A lead agency shall have discretion to determine, in the context of a particular project, whether to … [use a quantitative model or qualitative model]" (emphasis added). In turn, CEQA Guidelines Section 15064.4(b) clarifies that a lead agency should consider "Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project." Therefore, consistent with CEQA Guidelines Section 15064.4, the GHG emissions analysis for the project appropriately relies upon a threshold based on the exercise of careful judgement and believed to be appropriate in the context of this project.

On December 5, 2008, the SCAQMD Governing Board adopted their Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans for projects where the SCAQMD is the lead agency. The SCAQMD's interim GHG significance threshold uses a tiered approach to determining significance. Tier 1 consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA. Tier 2 consists of determining whether or not the project is consistent with a GHG emission reduction plan that may be part of a local general plan, for example. Tier 3 establishes a screening significance threshold level to determine significance using a 90 percent emission capture rate approach. Tier 4, to be based on performance standards, is yet to be developed. Under Tier 5 the project proponent would allow offsets to reduce GHG emission impacts to less than the proposed screening level.

For industrial projects with emissions primarily from stationary sources, the SCAMD has adopted a threshold of 10,000 MT CO_2e per year. The SCAQMD has continued to consider adoption of significance thresholds for residential and general development projects. The most recent proposal issued in September 2010 uses the following tiered approach to evaluate potential GHG emission impacts from various uses. Under option 1, separate screening thresholds are proposed for residential projects (3,500 MT CO_2e/year), commercial projects (1,400 MT CO_2e/year), and mixed-use projects (3,000 MT CO_2e/year). Under option 2, a single numerical screening threshold of 3,000 MT CO_2e/year would be used for all non-industrial projects. These thresholds have not been adopted by the SCAQMD or distributed for widespread public review and comment, and the working group tasked with developing the thresholds has not met since September 2010. The future schedule and likelihood of threshold adoption is uncertain.

If the CARB adopts statewide significance thresholds, SCAQMD staff plans to report back to the SCAQMD Governing Board regarding any recommended changes or additions to the SCAQMD's interim threshold.

As the City does not currently have any approved quantitative thresholds related to GHG emissions, the quantitative analysis provided herein relies upon the SCAQMD proposed screening threshold for non-industrial facility projects of 3,000 MT CO_2e (SCAQMD 2008). Even though a warehouse land use is considered an industrial use, the emissions are primarily from mobile sources (cars and trucks), not stationary sources. Therefore, to be conservative, the project emissions are compared to the much lower non-industrial screening threshold.

5.0 AIR QUALITY IMPACT ANALYSIS

This section evaluates potential direct impacts of the proposed project related to the air pollutant emissions. Project-level air quality modeling was completed as part of this analysis. Complete modeling results are included as Appendix A of this report.

5.1 ISSUE 1: CONFLICTS WITH AIR QUALITY PLANS

5.1.1 Impacts

SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties, and addresses regional issues relating to transportation, economy, community development, and environment. With regard to air quality planning, SCAG has prepared the RTP/SCS, a long-range transportation plan that uses growth forecasts to project trends out over a 20-year period to identify regional transportation strategies to address mobility needs. These growth forecasts form the basis for the land use and transportation control portions of the AQMP. These documents are utilized in the preparation of the air quality forecasts and consistency analysis included in the AQMP. Both the RTP/SCS and AQMP are based, in part, on regional population and employment growth projections originating with County and City General Plans.[2]

Projects that are consistent with the land use designation for their project site are generally consistent with the population and growth assumptions used in the AQMP. The project does not have a residential component and would not result in regional population growth. The project site is designated General Manufacturing (GM) in the Downey General Plan Vision 2025. The project's proposed warehouse uses (fulfillment center and cold storage) are consistent with the GM land use designation. As such, employment growth in the City as a result of the project, and the related changes in regional emissions, are accounted for in the AQMP, which is crafted to bring the basin into attainment for all criteria pollutants. Therefore, the proposed project would not conflict with or obstruct implementation of the AQMP.

5.1.2 Significance of Impacts

Implementation of the project would not conflict with or obstruct implementation of the SCAQMD's AQMP, and the impact would be less than significant.

5.1.3 Mitigation Framework

Impacts would be less than significant; therefore, no mitigation measures are required.

5.1.4 Significance After Mitigation

Impacts related to conflicts with the applicable air quality plan would be less than significant.

[2] SCAG serves as the federally designated metropolitan planning organization for the southern California region.

5.2 ISSUE 2: CUMULATIVELY CONSIDERABLE NET INCREASE OF NONATTAINMENT CRITERIA POLLUTANTS

By its very nature, air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development within the SCAB. The region is a federal and/or state nonattainment area for ozone, PM_{10} and $PM_{2.5}$. In accordance with CEQA Guidelines Section 15064(h)(3), the SCAQMD's approach for assessing cumulative impacts is based on the AQMP forecasts of attainment of ambient air quality standards in accordance with the requirements of the federal and State Clean Air Acts. If a project conflicts with the AQMP, which is intended to bring the SCAB into attainment for all criteria pollutants, that project can be considered cumulatively considerable. Additionally, if the mass regional emissions calculated for a project exceed the applicable SCAQMD daily significance thresholds that are designed to assist the region in attaining the applicable state and national ambient air quality standards, that project can be considered cumulatively considerable. As discussed in Issue 1, above, the project would not conflict with or obstruct implementation of the AQMP.

5.2.1 Impacts

The project would generate criteria pollutants and precursors in the short-term during construction and the long-term during operation. To determine whether a project would result in cumulatively considerable emissions that would violate an air quality standard or contribute substantially to an existing or projected air quality violation, a project's emissions are evaluated based on the quantitative emission thresholds established by the SCAQMD (as shown in Table 11).

5.2.1.1 Construction

The project's construction emissions were estimated using the CalEEMod model as described in Section 4.1.1. Additional details of phasing, selection of construction equipment, and other input parameters, including CalEEMod data, are included in Appendix A.

The results of the calculations for project Phase 1 and Phase 2 construction are shown in Table 12, *Maximum Daily Construction Emissions*. The data are presented as the maximum anticipated daily emissions for comparison with the SCAQMD thresholds.

Table 12
MAXIMUM DAILY CONSTRUCTION EMISSIONS

Activity	Pollutant Emissions (pounds per day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Demolition/Site Preparation	3.0	32.6	26.8	<0.1	27.8	4.0
Grading/ Underground Utilities	4.2	56.6	41.3	0.2	78.9	11.2
Concurrent Grading and Off-site Improvements	4.7	60.8	48.0	0.2	79.2	11.3
Concurrent Off-site Improvements and Building Construction	3.0	21.4	40.1	<0.1	4.6	1.6
Building Construction	2.5	17.6	30.9	<0.1	4.3	1.5
Concurrent Building Construction, Architectural Coatings, and Paving	65.2	34.2	47.8	0.1	7.5	2.5
Maximum Daily Emissions	**65.2**	**60.8**	**48.0**	**0.2**	**79.2**	**11.3**
SCAQMD Threshold	*75*	*100*	*550*	*150*	*150*	*55*
Significant Impact?	***No***	***No***	***No***	***No***	***No***	***No***

Source: CalEEMod (output data is provided in Appendix A)
VOC = volatile organic compounds; NO_X = nitrogen oxides; CO = carbon monoxide; SO_X = sulfur oxides;
PM_{10} = particulate matter 10 microns or less in diameter; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter

As shown in Table 12, construction period emissions of criteria pollutants and precursors would not exceed the SCAQMD significance thresholds.

5.2.1.2 Operation

The project's operational emissions were estimated using the CalEEMod model as described in Section 4.1.2. Model outputs are provided in Appendix A. Table 13, *Maximum Daily Operational Emissions*, compares the project's net maximum daily operational emissions (project emissions minus existing land use emissions) with the SCAQMD thresholds. Detailed modeled existing land use emissions are shown in Section 3.3, above.

Table 13
MAXIMUM DAILY OPERATIONAL EMISSIONS

Category	Pollutant Emissions (pounds per day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Area	16.2	<0.1	<0.1	<0.1	<0.1	<0.1
Energy	0.2	2.9	2.4	<0.1	0.2	0.2
Mobile	11.0	24.6	95.6	0.3	26.5	7.0
Project Total Daily Emissions[1]	**27.4**	**27.5**	**98.0**	**0.4**	**26.7**	**7.3**
Existing Use Daily Emissions	(18.2)	(34.5)	(74.0)	(0.3)	(16.1)	(4.6)
Project Net Daily Emissions[2]	**9.2**	**-7.0**	**24.0**	**0.1**	**10.6**	**2.7**
SCAQMD Threshold	*55*	*55*	*550*	*150*	*150*	*55*
Significant Impact?	***No***	***No***	***No***	***No***	***No***	***No***

Source: CalEEMod (output data is provided in Appendix A)
[1] Totals may not sum due to rounding.
[2] Maximum daily emissions of VOC, SO_X, PM10, and PM2.5 occur during summer, maximum daily emissions of NO_X and CO occur during winter.
VOC = volatile organic compounds; NO_X = nitrogen oxides; CO = carbon monoxide; SO_X = sulfur oxides;
PM_{10} = particulate matter 10 microns or less in diameter; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter

As shown in Table 13, both the project actual daily emissions and the project net emissions (project emissions minus exiting use emissions) during operation of the project would not exceed the daily thresholds set by the SCAQMD. The decrease in NO_X emissions as a result of project implementation would be primarily due to the decrease in truck trips from 818 ADT to 123 ADT, as reported in the TIS (LLG 2023).

5.2.2 Significance of Impacts

Short-term construction and long-term operation of the project would not result in criteria pollutant and precursor pollutant emissions that would exceed the SCAQMD significance thresholds, and the impact would be less than significant.

5.2.3 Mitigation Framework

Project emissions would not exceed the SCAQMD thresholds, would be less than significant, and no mitigation measures would be required.

5.2.4 Significance After Mitigation

The project would not result in a cumulatively considerable net increase of any criteria pollutant for which the SCAB is non-attainment, and the impact would be less than significant.

5.3 ISSUE 3: IMPACTS TO SENSITIVE RECEPTORS

5.3.1 Impacts

5.3.1.1 Construction Activities

Criteria Pollutants

The localized effects from the on-site portion of daily construction emissions were evaluated at sensitive receptor locations potentially impacted by the project according to the SCAQMD's LST method, described above. The proposed project is within SRA 5, Southeast Los Angeles County. Consistent with the LST guidelines, when quantifying mass emissions for localized analysis, only emissions that occur on site are considered. Emissions related to off-site delivery/haul truck activity and construction worker trips are not considered in the evaluation of construction-related localized impacts, as these mobile emissions are spread along area roadways and are not localized. The closest sensitive receptor is the single-family residence approximately 240 feet east of the project site. Therefore, the LSTs in SRA 5 for project sites of 5 acres with receptors located between 50 and 100 meters (164 to 328 feet) are used in this analysis. Table 14, *Maximum Localized Daily Construction Emissions*, shows the localized construction emissions.

Table 14
MAXIMUM LOCALIZED DAILY CONSTRUCTION EMISSIONS

Activity	Pollutant Emissions (pounds per day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition/Site Preparation	26.4	23.2	1.1	1.6
Grading/ Underground Utilities	35.8	31.7	5.1	2.8
Building Construction	12.8	14.6	0.6	0.5
Architectural Coatings	0.9	1.1	0.0	0.0
Paving	7.5	10.0	0.4	0.3
Concurrent 2025 Building Construction, Paving and Architectural Coating	20.1	25.6	0.9	0.8
Maximum Daily Emissions	**35.8**	**31.7**	**5.1**	**2.8**
SCAQMD LST Thresholds (100 meters)	*176*	*2,437*	*60*	*15*
Exceed LST (100 meters)?	***No***	***No***	***No***	***No***

Source: CalEEMod (output data is provided in Appendix A)
NO_X = nitrogen oxides; CO = carbon monoxide; PM_{10} = particulate matter 10 microns or less in diameter; $PM_{2.5}$ = particulate matter 2.5 microns or less in diameter

As shown in Table 14, localized emissions for all criteria pollutants would remain below their respective SCAQMD LSTs. Therefore, construction of the project would not result in exposure of sensitive receptors to substantial localized concentrations of criteria pollutants and precursors.

Asbestos Containing Material and Lead Based Paint

As described in the project DEIR, Section 4.7, Hazards and Hazardous Materials, ACM and LBP have been identified in existing buildings on the project site. The DEIR identified mitigation measures HAZ-2, Asbestos-Containing Material Removal, and HAZ-3, Lead-Based Paint Removal, to ensure the removal, handling, transport, and disposal of ACM and LBP during project demolition activities comply with federal, state, and SCAQMD regulations to prevent airborne asbestos and lead emissions which may affect sensitive receptors or workers in the area. The mitigation measures require removal of ACM by a licensed State of California asbestos abatement contractor, compliance with state asbestos handling regulations (CCR Tile 8, Section 1529), state hazardous waste disposal requirements (CCR Title 22, Division 4.5), and the State Lead Accreditation, Certification and Work Practice Requirements (CCR Title 17, Division 1, Chapter 8), and SCAQMD Rule 1403.

VOC Contaminated Soil

As described in the project DEIR, Section 4.7, Hazards and Hazardous Materials, soil vapor testing on the project site has identified VOCs exceeding DTSC screening levels. The DEIR identified mitigation measures HAZ-1, VOC-Contaminated Soil, to monitor for signs of contaminated soil during project demolition and construction activities, identify and test potentially and isolate contaminated, and ensure adequate dust suppressions is employed and ensure the safe removal, handling, transport, and disposal of contaminated soil. DEIR mitigation measure HAZ-1 and compliance with applicable federal and state regulations would ensure VOC emissions from contaminated soil would not adversely affect sensitive receptors and workers in the area.

Diesel Particulate Matter

Implementation of the project would result in the use of heavy-duty construction equipment, haul trucks, on-site generators, and construction worker vehicles. These vehicles and equipment could generate the TAC DPM. Generation of DPM from construction projects typically occurs in a localized area (e.g., at the project site) for a short period of time. Because construction activities and subsequent emissions vary depending on the phase of construction (e.g., grading, building construction), the construction-related emissions to which nearby receptors are exposed to would also vary throughout the construction period. During some equipment-intensive phases such as grading, construction-related emissions would be higher than other less equipment-intensive phases such as building construction. An HRA was completed to evaluate potential community health risks from exposure to project DPM emissions, as described in Section 4.1.4, above.

The dose (of TAC) to which receptors are exposed is the primary factor used to determine health risk. Dose is a function of the concentration of a substance in the environment and the extent of exposure a person has with the substance; a longer exposure period to a fixed quantity of emissions would result in higher health risks. Current models and methodologies for conducting cancer health risk assessments are associated with longer-term exposure periods (typically 30 years for individual residents based on guidance from OEHHA) and are best suited for evaluation of long duration TAC emissions with predictable schedules and locations. Cancer potency factors are based on animal lifetime studies or worker studies where there is consistent long-term exposure to the carcinogenic agent. There is considerable uncertainty in trying to evaluate the cancer risk from activities such as short-term construction, that will only last a small fraction of a lifetime (OEHHA 2015).

The incremental increased cancer risk is an estimate of the chance a person exposed to a specific source of a TAC may have of developing cancer from that exposure beyond the individual's risk of developing cancer from existing background levels of TACs in the ambient air. For context, the average cancer risk from TACs in the ambient air for an individual living in an urban area of California is 830 in 1 million (CARB 2015). Cancer risk estimates do not mean, and should not be interpreted to mean, that a person will develop cancer from estimated exposures to toxic air pollutants. The results of the construction period HRA incremental excess cancer risks are compared to the SCAQMD threshold in Table 15, *Construction Incremental Increased Cancer Risk*. The complete HRA results and output are included in Appendix B to this report.

Table 15
CONSTRUCTION INCREMENTAL INCREASED CANCER RISK

Receptor	Construction Period 1 (chances per million)[1]	Construction Period 2 (chances per million)[2]	Total Construction Risk (chances per million)	SCAQMD Threshold (chances per million)	Exceed Threshold?
R1	1.4	1.1	2.4	10	No
R2	2.4	0.6	3.0	10	No
R3	2.3	1.2	3.5	10	No
R4	3.5	1.7	5.1	10	No
R5	0.8	0.6	1.4	10	No
R6	1.4	1.1	2.5	10	No
R7	1.5	1.2	2.7	10	No
R8	1.4	1.1	2.5	10	No
W1	<0.1	<0.1	0.1	10	No
W2	0.1	<0.1	0.1	10	No
W3	0.1	0.1	0.1	10	No
W4	0.1	0.1	0.2	10	No
W5	0.1	<0.1	0.1	10	No
W6	0.1	0.1	0.1	10	No
W7	0.1	0.1	0.1	10	No

Source: Lakes AERMOD View and CARB ADMRT. See Appendix B for the complete HRA results and output.

[1] Construction Period 1 = demolition/site preparation and grading (0.5 years).

[2] Construction Period 2 = off-site improvements, building construction, architectural coatings, and paving (0.7 years).

As shown in Table 15, the incremental excess cancer risk for off-site modeled residents and workers from exposure to project DPM emissions would not exceed the SCAQMD threshold. The total combined project construction and operational health risks are discussed in the Operational Activities section, below.

Health risks associated with non-cancer chronic effects from TAC exposure are quantified using the maximum hazard index. A hazard index is the potential exposure to a substance divided by the REL (the level at which no adverse effects are expected). A hazard index of less than one indicates no adverse health effects are expected from the potential exposure to the substance. The maximum hazard index is the sum of hazard indices for pollutants with non-cancer health effects that target the same body organ or system. The results of the HRA show that the maximum residential non-cancer chronic maximum hazard index would be 0.01, far below the SCAQMD hazard index threshold of 1. The complete HRA results and output are included in Appendix B to this report.

5.3.1.2 Operational Activities

Criteria Pollutants

As discussed in Section 4.1.3, SCAQMD has developed the LST methodology that can be used by public agencies to determine whether a project may generate significant adverse localized air quality impacts from on-site emissions of NO_X, CO, PM_{10} and $PM_{2.5}$. For project operational activities, emissions of NO_X and CO are associated with truck and passenger vehicle emissions which primarily occur off-site. The portion of truck and passenger vehicle emissions which occur on-site are limited to low-speed circulation and idling and would be a small portion of the project operational emissions of 28 pounds

per day of NO_X and 98 pounds per day of CO, far below the applicable LST thresholds of 176 pounds per day NO_X and 2,437 pounds per day CO. Operational PM_{10} and $PM_{2.5}$ emissions from areas sources (primarily landscape equipment exhaust) and energy sources (natural gas combustion exhaust) would be negligible—less than 0.3 pound per day (see Appendix A). The only remaining on-site operational source of PM emissions would be low-speed circulation and idling exhaust emissions from trucks. The total exhaust PM emissions produced on or near the project site by project-related truck trips would be approximately 1.2 pounds per year (less than 0.001 pounds per day) of PM_{10} and $PM_{2.5}$ (see Appendix B), far below the LST threshold of 15 pounds per day for PM_{10} and 4 pounds per day for $PM_{2.5}$. Therefore, operation of the project would not result in exposure of sensitive receptors to substantial localized concentrations of NO_X or CO. Impacts related to exposure of sensitive receptors to project operational emissions of PM (primarily DPM) are discussed and evaluated below.

CO Hotspots

Vehicle exhaust is the primary source of CO. In an urban setting, the highest CO concentrations are generally found in close proximity to congested intersections. Under typical meteorological conditions, CO concentrations tend to decrease as distance from the emissions source (e.g., congested intersection) increases. Project-generated traffic has the potential of contributing to localized "hotspots" of CO off site. Because CO is a byproduct of incomplete combustion, exhaust emissions are worse when fossil fueled vehicles are operated inefficiently, such as in stop-and-go traffic or through heavily congested intersections. Because CO disperses rapidly, hotpots are most likely to occur in areas with limited vertical mixing such as tunnels, long underpasses, or below-grade roadways.

The analysis prepared for CO attainment in the SCAB by SCAQMD can be used as a screening tool in evaluating the potential for CO exceedances in the SCAB, and any potential need for further modeling. CO attainment was thoroughly analyzed as part of SCAQMD's 2003 AQMP where the results of a CO hotspot analysis was conducted for the four worst-case scenario intersections in the Los Angeles metropolitan area at the peak morning and afternoon time periods. The intersections evaluated included (1) Long Beach Boulevard and Imperial Highway (Lynwood); (2) Wilshire Boulevard and Veteran Avenue (Westwood); (3) Sunset Boulevard and Highland Avenue (Hollywood); and (4) La Cienega Boulevard and Century Boulevard (Inglewood). These analyses did not predict a violation of CO standards. The peak modeled CO concentrations due to vehicle emissions occurred at the intersection of Wilshire Boulevard and Veteran Avenue, which has a daily traffic volume of approximately 100,000 vehicles per day. The 2003 AQMP estimated the 1-hour concentration for this intersection at 4.6 ppm, which indicates the most stringent 1-hour CO standard (20.0 ppm) would not likely be exceeded until the daily traffic at the intersection exceeded more than 400,000 vehicles per day (SCAQMD 2003).[3] Therefore, if a project intersection does not exceed 400,000 vehicles per day, then the project does not need to prepare a detailed CO hot spot analysis.

According to the intersection analysis contained in the TIS, the highest volume project-affected intersection would be the intersection of Firestone Boulevard and the I-605 northbound ramps. Based on the peak hour conditions of the intersection under the "Future with Project Conditions," as provided in the project TIS, the intersection would carry a PM peak hour volume of 4,288 and a daily volume of approximately 45,000 vehicles (LLG 2022), significantly below the daily traffic volumes of 400,000 vehicles per day that would be expected to generate CO concentration exceedances. Based on the studies undertaken for the 2003 AQMP, there is no reason unique to the SCAB meteorology or unique to

[3] Based on the ratio of the CO standard (20.0 ppm) and the modeled value (4.6 ppm).

any project-affected intersection to conclude that the CO concentrations any project-affected intersection would exceed the 1-hour CO standard. Therefore, the project does not trigger the need for a detailed CO hotspots model and the project would not expose sensitive receptors to substantial concentrations of CO.

Operational DPM Emissions

Implementation of the project would result in emissions of DPM from operation of a warehouse facility. To evaluate potential impacts to sensitive receptors from the operational DPM emissions, a HRA was completed, as described in Section 4.1.4, above. According to the trip generation analysis presented in the TIS, the project would result in fewer daily truck trips than the existing industrial land uses on the project site (LLG 2023). However, to be conservative (health protective), the HRA does not consider the DPM emissions from the existing land use, or the community health benefits, that would result from removing the existing industrial land use on the project site.

The maximum estimated community incremental excess cancer risks due to exposure to the project combined 30 year construction and operational DPM emissions are presented in Table 16, *Maximum Incremental Cancer Health Risk*. These estimates are conservative (health protective) and assume that the resident or worker is outdoors for the entire exposure period (17 to 21 hours per day, every day for 30 years for residents, and 8 hours per day, 260 days per year for 25 years for workers).

Table 16
MAXIMUM INCREMENTAL CANCER HEALTH RISK

Receptor	Construction Risk (chances per million)	Operational Risk (chances per million)[2]	Total 30-Year Risk (chances per million)[3]	SCAQMD Threshold (chances per million)	Exceed Threshold?
R1	2.4	0.1	2.5	10	No
R2	3.0	0.2	3.2	10	No

Source: Lakes AERMOD View and CARB ADMRT. See Appendix B for the complete HRA results and output.

[1] Construction exposure duration 1.2 years.

[2] Operation exposure duration 29.

[3] Totals may not sum due to rounding.

As shown in Table 16, the project's incremental increased cancer risk would not exceed the SCAQMD's threshold of 10 in 1 million. The maximum chronic health risk hazard index for all modeled receptors would be than 0.012 and would not exceed the SCAQMD's threshold of 1.

The maximally exposed individual resident (MEIR) would be receptor R4, located along Woodruff Avenue across the railroad tracks from Hall Road, and would have an incremental increased cancer risk of 5.3 in 1 million. The maximally exposed individual worker (MEIW) would be receptor W4, located outside the commercial building on the northeast side of the project site, and would have an incremental increased cancer risk of 0.3 in 1 million. The point of maximum impact (PMI) would be located at Universal Transverse Mercator (UTM) coordinates zone 11, 396614 meters east, 3755019 meters north, midway along the project's northeastern property line on the shoulder of Hall Road. No residents or workers are anticipated to be located at the PMI for extended periods. If a receptor were to be located at the PMI for 30 years, the residential cancer risk would be 20.8 in 1 million.

Cancer burden evaluates an overall population's increased cancer risk and is defined as the increases in cancer cases in the population due exposure to TACs from a project. Cancer burden is calculated differently from individual risk. Per OEHHA, cancer burden uses a 70-year exposure to evaluate population-wide cancer risk, and the cancer burden only evaluates residential exposure (not worksites). Cancer burden is calculated by multiplying the number of residents exposed to an incremental excess cancer risk of 1 in 1 million or greater by the estimated incremental excess cancer risk of the maximum exposed individual resident (MEIR). The population exposed to the 1 in 1 million or greater cancer risk was estimated by overlaying the 1 in million 70-year risk isopleth on an aerial images and counting the number of single and multi-family residential building within or touching the isopleth. 92 single family residences and 80 multi-family buildings were identified within or touching the isopleth. The multi-family building ranges in size from duplexes to 40-unit apartment buildings. To be conservative (not underestimating the population), all single-family residences were assumed to house 10 residents, and all multifamily buildings were assumed to have 40 units with 5 residents per unit (200 residents per building), for a total estimated population of 16,920. The 70-year residential cancer risk for the MEIR would be 5.5 in 1 million (5.5×10^{-6}). Therefore, the estimated cancer burden from a 1.2 year exposure to project construction emissions plus a 70 year exposure to project operational DPM emissions would be 0.09, below the SCAQMD threshold of 0.5. The cancer burden 1 in 1 million isopleth is included in Appendix B to this report.

5.3.2 Significance of Impacts

Construction of the project would not result in significant localized concentrations of criteria pollutants or TACs. Long-term operation of the project would not result in significant localized concentrations of CO. Long-term combined project construction and operational DPM emissions would not result in cancer risk, chronic health risk, and cancer burden exceeding the respective SCAQMD thresholds. Therefore, implementation of the project would not expose sensitive receptors to substantial pollutant concentrations, and the impact less than significant.

5.3.3 Mitigation Framework

Impacts would be less than significant; therefore, no mitigation measures are required.

5.3.4 Significance After Mitigation

Implementation of the project would not expose sensitive receptors to substantial pollutant concentrations, and the impact would be less than significant.

5.4 ISSUE 4: OTHER EMISSIONS (SUCH AS THOSE LEADING TO ODORS)

5.4.1 Impacts

According to the SCAQMD CEQA Air Quality Handbook, land uses associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting activities, refineries, landfills, dairies, and fiberglass molding operations (SCAQMD 1993). The project, involving a warehouse facility development, would not include any of these uses nor are there any of these land uses in the project vicinity.

Emissions from construction equipment, such as diesel exhaust, and VOCs from architectural coatings and paving activities may generate odors; however, these odors would be temporary, intermittent, and not expected to affect a substantial number of people. Additionally, noxious odors would be confined to the immediate vicinity of construction equipment. Furthermore, short-term construction-related odors are expected to cease upon the drying or hardening of the odor-producing materials. Long-term operation of the project would not be a substantial source of objectionable odors. Therefore, the project would not create objectionable odors affecting a substantial number of people, and the impact would be less than significant.

5.4.2 Significance of Impacts

Implementation of the project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people, and the impact would be less than significant.

5.4.3 Mitigation Framework

Impacts would be less than significant; therefore, no mitigation measures are required.

5.4.4 Significance After Mitigation

Implementation of the project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people, and the impact would be less than significant.

6.0 GREENHOUSE GAS EMISSIONS IMPACT ANALYSIS

This section evaluates potential impacts of the proposed project related to the generation of GHG emissions. Complete modeling results are included as Appendix A of this report.

6.1 ISSUE 1: GREENHOUSE GAS EMISSIONS

6.1.1 Construction Emissions

Project construction GHG emissions were estimated using the CalEEMod model as described in Section 4.1. Project-specific input was based on general information provided in Section 1.0 and default model settings to estimate reasonably conservative conditions. Additional details of phasing, selection

of construction equipment, and other input parameters, including CalEEMod data, are included in Appendix A.

Emissions of GHGs related to the construction of the project would be temporary. As shown in Table 17, *Estimated Construction GHG Emissions*, total GHG emissions associated with construction of the project are estimated at 1,721 MT CO_2e. For construction emissions, SCAQMD guidance recommends that the emissions be amortized (i.e., averaged) over 30 years and added to operational emissions. Averaged over 30 years, the proposed construction activities would contribute approximately 57.4 MT CO_2e emissions per year.

Table 17
ESTIMATED CONSTRUCTION GHG EMISSIONS

Year	Emissions (MT CO_2e)
2024	1,355
2025	366
Total[1]	**1,721**
Phase 1 Amortized Construction Emissions[2]	*57.4*

Source: CalEEMod (output data is provided in Appendix A)
1 Totals may not sum due to rounding.
2 Construction emissions are amortized over 30 years in accordance with SCAQMD guidance.
GHG = greenhouse gas; MT = metric tons; CO_2e = carbon dioxide equivalent

6.1.2 Operational Emissions

The project's operational GHG emissions were estimated using CalEEMod model as described in Section 4.1. The project's net annual GHG emissions, including amortized annual construction emissions and subtracting the existing land use GHG emissions, are shown in Table 18, *Net Operational GHG Emissions*. Detailed GHG emissions for the existing land use are shown in Section 3.3, above. Appendix A contains the CalEEMod output files for the project and existing land use.

Table 18
NET OPERATIONAL GHG EMISSIONS

Emission Sources	2024 Emissions (MT CO_2e)
Area	11
Energy	1,158
Vehicular (Mobile)	6,436
Solid Waste	157
Water	300
Refrigerants	118
Subtotal[1]	**8,180**
Construction (Annualized over 30 years)	57
Project Total[1]	**8,237**
Existing Land Use Total	(7,790)
Net Project Total[1]	**447**
SCAQMD Screening Threshold	**3,000**
Exceed Threshold?	**No**

Source: CalEEMod (output data is provided in Appendix A)
[1] Totals may not sum due to rounding.
GHG = greenhouse gas; MT = metric tons; CO_2e = carbon dioxide equivalent

As shown in Table 18, the net project emissions, including amortized construction emissions, would be approximately 447 MT CO_2e per year and would not exceed the non-industrial facility SCAQMD GHG screening threshold of 3,000 MT CO_2e per year.

6.1.3 Significance of Impacts

Project GHG emissions, including amortized construction emissions would not exceed the SCAQMD industrial screening threshold, and the impact would be less than significant.

6.1.4 Mitigation Framework

Impacts would be less than significant; therefore, no mitigation measures are required.

6.1.5 Significance After Mitigation

Implementation of the project would not generate GHG emissions that may have a significant impact on the environment, and the impact would be less than significant.

6.2 ISSUE 2: CONFLICT WITH APPLICABLE PLANS ADOPTED FOR THE PURPOSE OF REDUCING GHG EMISSIONS

6.2.1 Impacts

There are numerous State plans, policies, and regulations adopted for the purpose of reducing GHG emissions. The principal overall State plan and policy is AB 32, the California Global Warming Solutions Act of 2006. The quantitative goal of AB 32 is to reduce GHG emissions to 1990 levels by 2020. SB 32 would require further reductions of 40 percent below 1990 levels by 2030. AB 1279 establishes a state

goal of net zero GHG emissions by 2045. Statewide plans and regulations such as GHG emissions standards for vehicles (AB 1493), the LCFS, and regulations requiring an increasing fraction of electricity to be generated from renewable sources are being implemented at the statewide level; as such, compliance at the project level is not addressed. Therefore, the proposed project would not conflict with those plans and regulations.

The project does not have a residential component and would not result in regional population growth and (as discussed in Section 6.1, above) project GHG emissions would decrease compared to the existing land use emissions. Therefore, the project would not conflict with or obstruct implementation of an applicable GHG emissions reduction plan.

6.2.2 Significance of Impacts

The project would not conflict with applicable GHG emission reduction plans including the SCAG's RTP/SCS and the City's CAP, and the impact would be less than significant.

6.2.3 Mitigation Framework

Impacts would be less than significant, and no mitigation would be required.

6.2.4 Significance After Mitigation

The project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, and the impact would be less than.

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	10.4	annual days of extreme heat

Extreme Precipitation	4.50	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.0
AQ-PM	87.9
AQ-DPM	86.1
Drinking Water	53.1
Lead Risk Housing	70.1
Pesticides	53.1

Toxic Releases	91.9
Traffic	66.3
Effect Indicators	—
CleanUp Sites	61.4
Groundwater	86.6
Haz Waste Facilities/Generators	88.5
Impaired Water Bodies	33.2
Solid Waste	78.1
Sensitive Population	—
Asthma	30.8
Cardio-vascular	58.9
Low Birth Weights	76.8
Socioeconomic Factor Indicators	—
Education	69.6
Housing	69.9
Linguistic	63.3
Poverty	70.7
Unemployment	33.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	22.78968305
Employed	58.03926601
Median HI	26.26716284
Education	—

Bachelor's or higher	12.6780444

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	89.0
Healthy Places Index Score for Project Location (b)	26.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Land Use	Building and lot areas per Site Plan and project description. Unrefrigerated warehouse SF includes 25 KSF of mezzanine space. Parking lot = all other impervious spaces (parking, loading dock areas, driveways, sidewalks). Other Asphalt Surfaces = Off-site street improvements per project Street Improvements plan.
Construction: Construction Phases	Construction schedule per project applicant.
Construction: Off-Road Equipment	Off-Highway truck = water truck used for dust control up to 4 hours per day, other off-road equipment per defaults.
Construction: Trips and VMT	Estimated 1,053 loads (2,106 one-way trips) of aggregate/asphalt/concrete imported during paving.
Construction: Architectural Coatings	Building envelope and flat coating VOC limit 50 g/l per SCAQMD Rule 1113.
Operations: Vehicle Data	Trip generation per traffic study. Refrigerated warehouse truck% per SCAQMD High Cube Study. All passenger car trips assigned to the office land use. All truck trips assigned to the warehouse land uses, 40 miles per SCAQMD.
Operations: Fleet Mix	Refrigerated warehouse truck fleet mix from SCAQMD High Cube Study. Unrefrigerated warehouse truck fleet mix from traffic study.
Operations: Architectural Coatings	Building envelope and flat coating VOC limit 50 g/l per SCAQMD Rule 1113.
Construction: On-Road Fugitive Dust	0.2 miles of each haul trip for demolition and grading assumed to be on unpaved on-site access roads.

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Downey Prologis Existing R2
Operational Year	2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.30
Precipitation (days)	8.00
Location	33.92906578780298, -118.1193666234409
County	Los Angeles-South Coast
City	Downey
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4855
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.19

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Office Building	16.0	1000sqft	0.37	16,000	9,000	—	—	—

Industrial Park	417	1000sqft	9.57	417,000	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	10.4	annual days of extreme heat
Extreme Precipitation	4.50	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	0	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	0	0	0	N/A
Wildfire	0	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	47.0
AQ-PM	87.9
AQ-DPM	86.1
Drinking Water	53.1

Lead Risk Housing	70.1
Pesticides	53.1
Toxic Releases	91.9
Traffic	66.3
Effect Indicators	—
CleanUp Sites	61.4
Groundwater	86.6
Haz Waste Facilities/Generators	88.5
Impaired Water Bodies	33.2
Solid Waste	78.1
Sensitive Population	—
Asthma	30.8
Cardio-vascular	58.9
Low Birth Weights	76.8
Socioeconomic Factor Indicators	—
Education	69.6
Housing	69.9
Linguistic	63.3
Poverty	70.7
Unemployment	33.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	22.78968305
Employed	58.03926601

Median HI	26.26716284
Education	—
Bachelor's or higher	12.6780444

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	89.0
Healthy Places Index Score for Project Location (b)	26.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Operations: Vehicle Data	Trips generation per traffic study, passenger car trips assigned to office land use and truck trips assigned to industrial land use.
Operations: Fleet Mix	Truck trip fleet mix per traffic study.
Operations: Architectural Coatings	Building envelope and flat coating VOC limit 50 g/l per SCAQMD Rule 1113.

EXECUTIVE SUMMARY

HELIX Environmental Planning, Inc. (HELIX) was contracted by the City of Downey to provide cultural resources services for the Prologis Stewart and Gray Road Warehouse Project (project) in the City of Downey, Los Angeles County, California. The project is a proposed redevelopment of the approximately 29-acre property to construct a concrete tilt-up building for warehouse/logistics, and an ancillary truck workshop facility. A cultural resources study, including a records search, Sacred Lands File search, Native American outreach, and a review of historic aerial photographs and maps, was conducted for the project area. This report details the methods and results of the cultural resources study and has been prepared to comply with the California Environmental Quality Act (CEQA).

The records search was requested from the South Central Coastal Information Center (SCCIC) on February 17, 2022 and received on March 11, 2022. It indicated that 18 previous cultural resources studies have been conducted within one mile of the project area, none of which occurred within the project area itself. The records search results also indicated that a total of 10 cultural resources have been previously recorded within one mile of the project area, all of them historic in age; however, no sites have been recorded within the project area.

Due to the developed nature of the project site and complete lack of exposed ground surface, the investigations did not include an intensive pedestrian survey of the project area; however, archival research, including a review of historic aerials, topographic maps, parcel maps, plat maps, assessor data, and historic directories, was undertaken.

Based on the results of the current study, no archaeological resources will be affected by the Prologis Stewart and Gray Road Warehouse Project; historic built environment resources are addressed in a separate study. However, the original ground surface could not be observed, as the property has been completed developed for decades. Additionally, the project area is located within alluvial soils, where there is a potential for buried cultural resources. Based on this, it is recommended that an archaeological and Native American monitoring program be implemented for ground-disturbing activities. The monitoring program would include attendance by the archaeologist and Native American monitor at a preconstruction meeting with the grading contractor and the presence of archaeological and Native American monitors during initial ground-disturbing activities on site. Both archaeological and Native American monitors would have the authority to temporarily halt or redirect grading and other ground-disturbing activity in the event that cultural resources are encountered. If significant cultural material is encountered, the project archaeologist will coordinate with the Monitoring Tribes, the applicant, and City of Downey staff to develop and implement appropriate treatment measures to avoid or mitigate impacts.

1.0 INTRODUCTION

The City of Downey (City) contracted HELIX Environmental Planning, Inc. (HELIX) to provide cultural resources services for the Prologis Stewart and Gray Road Warehouse Project (project) in the City of Downey, Los Angeles County, California. The project is a proposed redevelopment of the approximately 29-acre property to construct a concrete tilt-up building for warehouse/logistics, and an ancillary truck workshop facility. A cultural resources study, including a records search, Sacred Lands File search, Native American outreach, and a review of historic aerial photographs and maps, was conducted for the project area. This report details the methods and results of the cultural resources study and has been prepared to comply with the California Environmental Quality Act (CEQA).

1.1 PROJECT LOCATION

The project is located in the City of Downey, in Los Angeles County, west of Interstate (I)-5 and I-605 and north of I-105 (Figure 1, *Regional Location*), at the northwest corner of the intersection of Stewart and Gray Road and Woodruff Avenue (Figure 2, *USGS Topography*). The 29.16-acre project site consists of five parcels (Assessor's Parcel Numbers: 6284-019-013, 6284-019-014, 6284-019-015, 6284-019-017, and 6284-019-016), located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart and Gray Road. The project is bordered by Hall Road to the north, commercial buildings to the east, Stewart and Gray Road to the south, and industrial buildings to the west (Figure 3, *Aerial Photograph*).

1.2 PROJECT DESCRIPTION

The proposed project would include the demolition of the existing five buildings (totaling approximately 433,000 square feet) and the construction of an approximately 510,110-square foot industrial concrete tilt-up building for warehouse/logistics uses and a 25,000-square foot ancillary truck workshop facility, together totaling 535,110 square feet. The project would include 614 auto parking spaces, 215 trailer and/or container parking spaces, and 109 dock loading doors.

The new industrial building is intended to be used for logistics and distribution purposes, and specifically as a fulfillment center and for cold storage. The facility will also include an office and mezzanine area. On-site activities will include the following: general industrial/warehouse with refrigeration and cold storage components for the purposes of receiving, storing, shipping of food and/or beverage products, storage, distribution, and/or consolidation of manufactured goods, and last-mile fulfillment and delivery. The office space is intended to be used for office uses ancillary to the warehouse operations. The 25,000-square foot truck workshop building would be ancillary to the warehouse/distribution/ logistics operation for purposes of maintaining a truck or van fleet, trailers, and associated equipment operating the facility.

1.3 REGULATORY FRAMEWORK

Cultural resources are defined as buildings, sites, structures, or objects, each of which may have historical, architectural, archaeological, cultural, and/or scientific importance. Significant resources are those resources that have been found eligible for the California Register of Historical Resources (CRHR) or National Register of Historic Places (NRHP), as applicable.

1.3.1 Federal

Federal regulations that would be applicable to the project if there is a federal nexus (e.g., permitting or funding from a federal agency) consist of the National Historic Preservation Act (NHPA) and its implementing regulations (16 United States Code 470 et seq., 36 Code of Federal Regulations [CFR] Part 800). Section 106 of the NHPA requires federal agencies to take into account the effects of their undertakings on "historic properties", that is, properties (either historic or archaeological) that are eligible for the NRHP. To be eligible for the NRHP, a historic property must be significant at the local, state, or national level under one or more of the following four criteria:

A. associated with events that have made a significant contribution to the broad patterns of our history;

B. associated with the lives of persons significant in our past;

C. embodies the distinctive characteristics of a type, period, or method of construction, or that represents the work of a master, or that possesses high artistic values, or that represents a significant and distinguishable entity whose components may lack individual distinction; and/or

D. has yielded, or may be likely to yield, information important in prehistory or history.

1.3.2 State

The California Environmental Quality Act (CEQA), Public Resources Code (PRC) 21084.1, and California Code of Regulations (CCR) Title 14 Section 15064.5, address determining the significance of impacts to archaeological and historic resources and discuss significant cultural resources as "historical resources," which are defined as:

- resource(s) listed or determined eligible by the State Historical Resources Commission for listing in the CRHR (14 CCR Section 15064.5[a][1])

- resource(s) either listed in the National Register of Historic Places (NRHP) or in a "local register of historical resources" or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the PRC, unless "the preponderance of evidence demonstrates that it is not historically or culturally significant" (14 CCR Section 15064.5[a][2])

- resources determined by the Lead Agency to meet the criteria for listing on the CRHR (14 CCR Section 15064.5[a][3])

For listing in the CRHR, a historical resource must be significant at the local, state, or national level under one or more of the following four criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States;

2. It is associated with the lives of persons important to local, California, or national history;

3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values;

4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

Under 14 CCR Section 15064.5(a)(4), a resource may also be considered a "historical resource" for the purposes of CEQA at the discretion of the lead agency.

1.3.3 Integrity

All resources that are eligible for listing in the NRHP or CRHR must have integrity, which is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Resources, therefore, must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. In an archaeological deposit, integrity is assessed with reference to the preservation of material constituents and their culturally and historically meaningful spatial relationships. A resource must also be judged with reference to the particular criteria under which it is proposed for nomination.

1.3.4 Native American Heritage Values

California State Assembly Bill 52 (AB 52) revised PRC Section 21074 to include Tribal Cultural Resources (TCRs) as an area of CEQA environmental impact analysis. As a general concept, a TCR is similar to the federally defined termed Traditional Cultural Properties (TCP); however, it incorporates consideration of local and state significance and required mitigation under CEQA. According to Patricia L. Parker and Thomas F. King (1998), "Traditional" in this context refers to those beliefs, customs, and practices of a living community of people that have been passed down through the generations, usually orally or through practice. The traditional cultural significance of a historic property, then, is derived from the role the property plays in a community's historically rooted beliefs, customs, and practices.

A TCR may be considered significant if it is (i) included in a local or state register of historical resources; (ii) determined by the lead agency to be significant pursuant to criteria set forth in PRC Section 5024.1; (iii) a geographically defined cultural landscape that meets one or more of these criteria; (iv) a historical resource described in PRC Section 21084.1 or a unique archaeological resource described in PRC Section 21083.2; or (v) a non-unique archaeological resource if it conforms with the above criteria.

1.4 PROJECT PERSONNEL

Kassie Sugimoto, M.A. served as principal investigator and cultural resources project manager for the cultural resources study. Trevor Gittelhough, M.A. RPA, served as the primary author of this report. Mary Robbins-Wade, M.A., RPA, provided senior technical oversight. Mx. Gittelhough, Ms. Sugimoto, and Ms. Robbins-Wade all meet the professional qualifications of the Secretary of Interior's Standard and Guidelines for Archaeology.

2.0 PROJECT SETTING

2.1 NATURAL SETTING

The project area is situated within the Los Angeles Basin, a broad, level plain bounded by the Pacific Ocean to the west, the Santa Monica Mountains and Puente Hills to the north, and the Santa Ana Mountains and San Joaquin Hills to the south. It is drained by several major watercourses, including the Los Angeles, Rio Hondo, San Gabriel, and Santa Ana Rivers. The project is located at an elevation of approximately 108 feet above mean sea level (AMSL).

The Los Angeles Basin developed as a result of tectonic forces and the San Andreas fault zone, with subsidence occurring 3 to 18 million years ago (mya) (Critelli et al. 1995). While sediments dating back to the Cretaceous (66 mya) are preserved in the Los Angeles Basin, continuous sedimentation began in the middle Miocene (around 13 mya) (Yerkes et al. 1965). Since that time, sediments have been eroded into the Los Angeles Basin from the surrounding highlands, resulting in thousands of feet of accumulation (Yerkes et al. 1965). Most of these sediments are marine, until the sea level dropped in the Pleistocene, and the deposition of the alluvial sediments that compose the uppermost units in the Los Angeles Basin began.

The surficial geology of the project site is comprised of younger alluvium, which consists of unconsolidated silt, sand, and gravel eroded from the mountains surrounding the Los Angeles Basin and deposited beginning in the Holocene (Yerkes 1960; Yerkes and Campbell 2005). Soils in the vicinity consist primarily of Hueneme, San Emigdio, and Pico series; Hueneme series sediments are comprised of greyish brown loamy fine sand and sandy loam with few rock fragments; San Emigdio series sediments consist of light brownish grey fine sandy loam; Pico series sediments are comprised of greyish brown sandy loam (Natural Resources Conservation Service [NRCS] 1997, 1999, and 2003). All three soil series support grasslands and cultivated agriculture.

2.2 CULTURAL SETTING

2.2.1 Prehistoric Period

Proposed dates for the earliest human occupation in California vary from around 20,000 years ago to 10,000 years ago. Several researchers have argued for the presence of much earlier Pleistocene humans in California (Carter 1957, 1978, 1980; Minshall 1976); however, these sites identified as Pleistocene "early man" are all controversial. The material from the sites is generally considered non-artifactual, and the investigative methodology is often questioned (Moratto 1984). Several chronological sequences have been developed as aids to understanding cultural changes within southern Californian prehistory. By focusing on data synthesis and building upon previous studies, Wallace (1955, 1978) developed a prehistoric chronology for the coastal region of southern California that continues to be used today, while also being applicable to near-coastal and inland areas. Wallace organized his sequence into four periods: Early Man, Milling Stone, Intermediate, and Late Prehistoric. While Wallace's earlier sequence lacked chronological precision due to a paucity of absolute dates, the work of southern California researchers over the past four decades has provided thousands of radiocarbon dates that have alleviated that issue (Byrd and Raab 2007:217). Since his original sequence, there have been several revisions to Wallace's (1955) synthesis using those radiocarbon dates as well as data provided by projectile point assemblages (e.g., Koerper and Drover 1983; Koerper et al. 2002; Mason and Peterson

1994). The regional prehistoric cultural chronology is summarized below in Table 1, *Prehistoric Cultural Chronology* (adapted from Wallace 1955, 1978).

Table 1
PREHISTORIC CULTURAL CHRONOLOGY

Period	Key Characteristics	Date Range
Early Prehistoric	• Diverse mixture of hunting and gathering • Greater emphasis on hunting	Circa 10,000–8,600 BC
Milling Stone	• Subsistence strategies centered on collecting plant foods and small animals • Extended and loosely flexed burials	8,600–1,300 BC
Intermediate	• Shift toward a hunting and maritime subsistence strategy, along with a wider use of plant foods • Trend toward greater adaptation to regional or local resources • Fully flexed burials, placed face-down or face-up, and oriented toward the north or west	1,300 BC–AD 500
Late Prehistoric	• Increase in the use of plant food resources in addition to an increase in land and sea mammal hunting • Increase in the diversity and complexity of material culture • Increased usage of the bow and arrow Increase in population size accompanied by the advent of larger, more permanent villages	AD 500–Historic Contact

The best example of Early Prehistoric Period archaeological evidence in Southern California is in the San Dieguito complex of San Diego County, dating to over 10,000 years ago (Warren 1967; Warren et al. 2004). The San Dieguito Tradition is thought by most researchers to have an emphasis on big game hunting and coastal resources (Warren 1967). The material culture of the San Dieguito complex consists primarily of scrapers, scraper planes, choppers, large blades, and large projectile points. In some areas of California, the Early Prehistoric Period is often referred to as the Paleo-Indian period and is associated with the last Ice Age occurring during the Terminal Pleistocene (pre-10,000 years ago) and the Early Holocene, beginning circa 10,000 years ago (Erlandson 1994, 1997).

The Millingstone Horizon, or Archaic Period, dates from 7,000-8,600 to 1,300-3,000 years ago and is generally consistent with the Oak Grove complex of Santa Barbara, the Topanga complex of Los Angeles, and the La Jolla complex of San Diego (Warren et al. 2004). The Millingstone Horizon is also referred to as the Encinitas Tradition (Warren 1968). The Encinitas tradition is generally "recognized by millingstone assemblages in shell middens, often near sloughs and lagoons" (Moratto 1984:147). According to Wallace, "a changeover from hunting to the collection of seed foods is clearly reflected in the archaeological record for the period between 6000 and 3000 B.C. The importance of seeds in the diet of the prehistoric peoples can be seen in the numbers of food-grinding implements present at their settlements" (Wallace 1978:28). Basin metates, manos, discoidals, a small number of Pinto series and Elko series points, and flexed burials are also characteristic. Most of the archaeological evidence for Archaic Period occupation in southern California is derived from sites located in near-coastal valleys, and around estuaries that are present along the San Diego coast (Warren et al. 2004). In Riverside County, the Archaic Period occupation is represented by diagnostic artifacts and radiocarbon dates identified at

sites situated the within Perris and Domenigoni valleys (Bettinger 1974; Goldberg 2001; Robinson 2001). Archaeological excavations conducted for the Perris Reservoir Project in Perris Valley yielded radiocarbon dates of circa 2,200 Before Present (BP) (Bettinger 1974), and several sites identified during archaeological studies conducted for the Eastside Reservoir (Diamond Valley Lake) Project dated to what the researchers termed the Middle Archaic (7,000 to 4,000 years ago) and Late Archaic (4,000 to 1,500 years ago) periods (Goldberg 2001).

Dates for the Intermediate Horizon vary by locale but can generally be dated to between 2,000 BC and AD 500 (Elsasser 1978). The Intermediate Horizon is consistent with the Hunting Culture of Santa Barbara County and is characterized by the presence of Pinto style points, named after the Pinto Basin in Riverside County, an increased use of the mortar and pestle, and the consumption of fleshier foods such as acorns, as opposed to small, hard seeds (Stickel 1978). This change resulted in the adoption of a more sedentary lifestyle, as seen in the presence of seasonal habitation sites (Van Horn 1980).

The Late Prehistoric period in southern California is characterized by the incursion of Uto-Aztecan-speaking people who occupied large portions of the Great Basin and an area stretching from southern Arizona and northwest and central Mexico into Nevada, Oregon, and Idaho (Miller 1986). The expansion of the Takic group into southern California is unrefined, but several scholars have hypothesized as to when and how the so-called “Uto-Aztecan wedge” occurred. Sutton (2009) argues that the Takic group expanded into southern California from the San Joaquin Valley about 3,500 years ago. Moratto (1984) also proposes that Takic expansion into the Southern Coast region correlates to the end of the Early Period (Late Archaic) circa 3,200 to 3,500 years ago, while Golla (2007) suggests an expansion of Uto-Aztecan speakers into southern California at approximately 2,000 years ago. While the exact chronology of Takic-speaking groups’ immigration to southern California remains uncertain, the beginning of the Late Prehistoric Period is marked by evidence of a number of new tool technologies and subsistence shifts in the archaeological record and is characterized by higher population densities and intensification of social, political, and technological systems. The changes include the production of pottery and the use of the bow and arrow for hunting instead of atlatl and dart, a reduction of shellfish gathering in some areas, an increase in the storage of foodstuffs such as acorns, and new traits such as the cremation of the dead (Gallegos 2002; McDonald and Eighmey 1998).

Native American population figures in the region substantially increased toward the end of the Late Prehistoric Period. After AD 1600, a change occurred in settlement and subsistence patterns, and land use intensified in the region, which was reflected into the ethnohistoric period (Bean et al. 1991; Goldberg 2001; Wilke 1974, 1978).

2.2.2 Ethnohistory

2.2.2.1 Gabrieleño

The project site is located within the region that has traditionally been occupied by the Gabrieleño people (also spelled as Gabrieleno or Gabrielino; Bean and Smith 1978:538; Kroeber 1925: Plate 57). Other Indigenous groups in the surrounding areas include the Chumash to the north and northwest, the Tataviam/Alliklik to the north, the Serrano to the east, and the Luiseño and Juaneño to the south. Interactions between these groups are well-documented, comprised primarily of trade and intermarriage.

The name Gabrieleño identifies the Indigenous people who were administered by the Spanish missionaries settled at Mission San Gabriel. This group is now considered to have a regional dialect of the Gabrielino language, along with the Santa Catalina Island and San Nicolas Island dialects (Bean and Smith 1978:538). In the post-European contact period, Mission San Gabriel included natives of the greater Los Angeles area, while also including members of surrounding Indigenous groups from other areas such as Kitanemuk, Serrano, and Cahuilla. There is little evidence that the people we call Gabrieleño had a broad term for their group (Dakin 1978:222); rather, they identified themselves as an inhabitant of a specific community with locational suffixes (e.g., a resident of Yaanga was called a Yabit, much the same way that a resident of New York is called a New Yorker; Johnston 1962:10).

Several native words have been suggested as labels for the broader group of Indigenous people from the Los Angeles region. These include Tongva (or Tong-v; Merriam 1955:7–86) and Kizh (Kij or Kichereno; Heizer 1968:105), though evidence indicated that these terms referred to local places or smaller groups of people within the larger group that we now call Gabrieleño. Nevertheless, many present-day descendants of these people have taken on Tongva as a preferred group name because it has a native rather than Spanish origin (King 1994:12). Thus, the term Gabrieleño /Tongva is used in the remainder of this report when discussing the Indigenous people of the Los Angeles Basin and their descendants.

The Gabrieleño/Tongva subsistence economy was centered on hunting and gathering. Due to the rich and varied nature of their environment, the Indigenous population exploited mountains, foothills, valleys, deserts, riparian, estuarine, and open and rocky coastal eco-niches. Acorns served as the staple food, supplemented by the roots, leaves, seeds, and fruits of a variety of flora (e.g., islay, cactus, yucca, sages, and agave). Freshwater and saltwater fish, shellfish, birds, reptiles, and insects, as well as both large and small mammals, were also hunted or collected and served as a large part of their diet (Bean and Smith 1978:546; Kroeber 1925:631–632; McCawley 1996:119–123, 128–131).

A wide variety of tools and implements were used by the Gabrieleño/Tongva to gather and collect food resources. These included the bow and arrow, traps, nets, blinds, throwing sticks and slings, spears, harpoons, and hooks for hunting and fishing. Those groups located near the ocean used oceangoing plank canoes, or ti'at, and tule balsa canoes for fishing, travel, and trade between the mainland and the Channel Islands (McCawley 1996:7). Gabrieleño/Tongva people processed their resources with a variety of tools, including hammerstones and anvils, mortars and pestles, manos and metates, strainers, leaching baskets and bowls, knives, bone saws, and wooden drying racks. Food was likewise consumed from a variety of vessels, with Catalina Island steatite used to make ollas and cooking vessels (Blackburn 1963; Kroeber 1925:629; McCawley 1996:129–138).

At the time of Spanish contact, the basis of Gabrieleño/Tongva religious life was the Chinigchinich cult, centered on the last of a series of heroic mythological figures. Chinigchinich gave instruction on laws and institutions, and also taught the people how to dance, the primary religious act for this society. He later withdrew into heaven, where he rewarded the faithful and punished those who disobeyed his laws (Kroeber 1925:637–638). The Chinigchinich religion seems to have been relatively new when the Spanish arrived. It was spreading south into the southern Takic groups even as Christian missions were being built, and may represent a mixture of native and Christian beliefs and practices (McCawley 1996:143-144).

The burial practices of the Gabrieleño/Tongva included both burials and cremations, with inhumation the more common practice on the Channel Islands and the adjacent mainland coastal areas, while cremation was the primary practice on the remainder of the coast and through the inland areas

(Harrington 1942; McCawley 1996:157). Remains were buried in distinct burial areas, sometimes associated with villages and sometimes with no clear village association (Altschul et al. 2007). Cremation ashes have been found in archaeological contexts buried within stone bowls and in shell dishes (Ashby and Winterbourne 1966:27), as well as scattered among broken ground stone implements (Cleland et al. 2007). Archaeological data corresponds with ethnographic descriptions of an elaborate mourning ceremony that occurred over several days and included a variety of offerings, such as seeds, stone grinding tools, animal skins, baskets, wood tools, shell beads, bone and shell ornaments, and projectile points and knives. Offerings varied, both with the sex of the deceased individual and their status (Dakin 1978:234–365; Johnston 1962:52–54; McCawley 1996:155–165).

2.2.3 Historical Background

The post-contact history of California has been generally divided into three distinct periods, defined primarily by political and socioeconomic control of the region; the Spanish period (1769–1822), the Mexican period (1822–1848), and the American period (1848–present). While explorers from Spain, Russia, and Britain visited California for brief periods of time between 1529 and 1769, it was the establishment of the mission system, beginning with Mission San Diego de Alcalá, which served as the starting point of the Spanish period. Independence from Spain, marked by the signing of the Treaty of Córdoba 1822 and recognition by Isabella II in 1836, is the beginning of the Mexican period, while the signing of the Treaty of Guadalupe Hidalgo in 1848 and the end of the Mexican-American War, signals the beginning of the American period, with California becoming a United States Territory.

2.2.3.1 Spanish Period

Spanish explorers made sailing expeditions along the coast of Southern California between the mid-1500s and mid-1700s. Juan Rodríguez Cabríllo was the first, stopping in 1542 at present-day San Diego Bay. Cabríllo and his crew explored the shorelines of present Catalina Island as well as San Pedro and Santa Monica bays. After Cabrillo, the Spanish naval officer Sebastián Vizcaíno recorded most of the present California and Oregon coastline in the following half-century. Vizcaíno's crew also landed on Santa Catalina Island and at San Pedro and Santa Monica Bays, which is the origin of each of their names. It was based on these explorations by Cabrillo and Vizcaíno that the Spanish crown laid claim to California (Bancroft 1886:96–99; Gumprecht 2001:35).

It took more than 200 years before Spain began the colonization and inland exploration of Alta California. This was marked by the 1769 overland expedition of Captain Gaspar de Portolá, marking the beginning of California's Historic period, which occurred immediately after the King of Spain installed the Franciscan Order to direct religious and colonization matters in assigned territories of the Americas. With a band of 64 soldiers, missionaries, Baja (lower) California Native Americans, and Mexican civilians, Portolá established the Presidio of San Diego, a fortified military outpost, as the first Spanish settlement in Alta California. In July 1769, while Portolá was exploring Southern California, Franciscan Fr. Junípero Serra founded Mission San Diego de Alcalá at Presidio Hill, the first of the 21 missions that would be established in Alta California by the Spanish and the Franciscan Order between 1769 and 1823.

The Portolá expedition reached the present-day boundaries of Los Angeles in August of 1769, marking the first entrance of Europeans to the area. Father Juan Crespí, a member of the expedition, named the campsite by the river Nuestra Señora la Reina de los Angeles de la Porciúncula or "Our Lady the Queen of the Angeles of the Porciúncula." Two years later, Fr. Junípero Serra established another Catholic mission, Mission San Gabriel Arcángel, on September 8, 1771 (Engelhardt 1927). Only a decade later,

a group of Mexican families traveled from Mission San Gabriel Arcángel to establish a new pueblo called El Pueblo de la Reyna de Los Angeles ("the Pueblo of the Queen of the Angels").

2.2.3.2 Mexican Period

The primary emphasis of the Spanish period in California was the construction of missions and their associated presidios in the attempt to integrate the Native American population into Catholicism and communal enterprise. While the crown provided incentives to bring settlers to pueblos or towns, only three pueblos were established during the Spanish period, of which only two were successful and remained as California cities (San José and Los Angeles). Growth within Alta California was kept to a minimum due to several factors, such as the threat of invasion, political dissatisfaction, and unrest among the indigenous population. After more than a decade of intermittent rebellion, New Spain (Mexico and the California territory) won independence from Spain in 1821. The following year the Mexican legislative body in California ended the isolationist policies established by the crown in order to keep Spain's monopoly on trade, and opened California ports to foreign merchants.

Extensive land grants were established in the interior during the Mexican period, in part to increase the population inland from the more settled coastal areas where the Spanish had first concentrated their colonization efforts. Rancho Los Nietos had been granted to Manuel Nieto by Governor Pedro Fages in 1784, during the Spanish Period. Originally containing 43,119 acres, Rancho Los Nietos was the first and largest grant deeded by the King of Spain during this period, containing present-day Anaheim, Artesia, Bellflower, Buena Park, Cerritos, Cypress, Downey, Fullerton, Garden Grove, Huntington Beach, Lakewood, Long Beach, Los Alamitos, Naples, Norwalk, Santa Fe Springs, Seal Beach, Sunset Beach, and Whittier (Clay and Troesken 2005). In 1833, Nieto's heirs petitioned for Rancho Los Nietos to be partitioned into six separate ranchos. The secularization of the missions following Mexico's independence from Spain resulted in the subdivision of former mission lands and the establishment of many additional ranchos throughout California.

During the primacy of the ranchos (1834–1848), landowners focused almost exclusively on the cattle industry, devoting large tracts to grazing. Cattle hides became a primary southern California export, providing a commodity to trade for goods from the east and other areas in the United States and Mexico. The number of non-native inhabitants increased during this period because of the influx of explorers, trappers, and ranchers associated with the land grants. The rising California population contributed to the introduction and rise of diseases foreign to the Native American population, who had none of the immunities to these diseases.

2.2.3.3 American Period

With the Battle of Chino in 1846, war between Mexico and the United States began, starting as a clash between resident Californios and Americans in the San Bernardino area. This battle, was a defeat for the Americans, bolstering the Californios' resolve against American rule and emboldening them to continue the offensive in later battles at Dominguez Field and in San Gabriel (Beattie 1942). Americans, however, were ultimately the victors of this two-year war. The Mexican-American War officially ended with the Treaty of Guadalupe Hidalgo in 1848, which resulted in the annexation of California, bringing California into its American period.

California officially became a state with the Compromise of 1850, which also designated Utah and New Mexico (with present-day Arizona) as U.S. Territories (Waugh 2003). Horticulture and livestock would

continue to dominate the California economy due to the ranchos' supremacy and dependence on cattle through the 1850s. The Gold Rush began in 1848, and with the influx of people seeking gold, cattle were no longer desired mainly for their hides but also as a source of meat and other goods. During the 1850s cattle boom, rancho vaqueros drove large herds from southern to northern California to feed that region's burgeoning mining and commercial boom. Cattle were at first driven along major trails or roads such as the Gila Trail or Southern Overland Trail but were then transported by trains as the railroads began to expand through the state. The cattle boom ended for southern California as neighboring states and territories drove herds to northern California at reduced prices. Operation of the huge ranchos became increasingly difficult, and droughts severely reduced their productivity (Cleland 2005:102–103).

The settlement called El Pueblo de la Reyna de Los Angeles (the Pueblo of the Queen of the Angels) was established in 1781 by 11 Mexican families traveling from Mission San Gabriel. It consisted of a small group of adobe-brick houses and streets and would eventually be known as the Ciudad de Los Angeles (City of Angels), which became incorporated on April 4, 1850, only two years after the Mexican–American War and five months prior to California's achieving statehood. The County of Los Angeles had been previously established on February 18, 1850, as one of the 27 counties established in the months prior to California's acquiring official statehood in the United States. After the United States took possession of California, many of the Mexican ranchos in Los Angeles county stayed intact, as stipulated by the Treaty of Guadalupe Hidalgo; however, a severe drought in the 1860s, as well as expensive fees in proving ownership, resulted in many of the ranchos' being sold or otherwise acquired by Americans. The majority of these were then subdivided into agricultural parcels or towns (Dumke 1944). By 1876, Los Angeles County reportedly had a population of 30,000 (Dumke 1944).

2.2.3.4 Project Vicinity

The project site is located with the large boundaries of what was originally Rancho Los Nietos; however, the ranch was split into six ranchos in 1834, per the petition of Nieto's heirs to Mexican governor José Figueroa: Rancho Los Alamitos, Rancho Las Bolsas, Rancho Los Cerritos, Rancho Los Coyotes, Rancho Palo Alto, and Rancho Santa Gertrudes. The project site is within what became Rancho Santa Gertrudes, granted to Josefa Cota and sold to Lemuel Carpenter in 1843 (Hoffman 1862). A patent was filled by Lemuel Carpenter in 1852, as required by the Land Act of 1851, but he died in 1859. Due to Carpenter's debt at his death, the rancho was sold to John Downey and James McFarland at a sheriff's auction, and the grant was patented to McFarland and Downey in 1870 (Willey 1886). A smaller portion of the rancho was previously filed by Thomas Sanchez Colima in 1852 and was patented to him in 1877 (Willey 1886).

Two settlements were established in the mid-nineteenth century along the Rio Honda River, College Settlement and Gallatin, with Gallatin located where Paramount Boulevard and Florence Avenue cross. In 1873, Downey subdivided 96 acres of the Rancho Santa Gertrudes land he purchased with McFarland and established the city of Downey. In 1883, businessmen of those three settlements were able to convince the Southern Pacific Railroad to route through Downey. The arrival of the Southern Pacific Railroad sparked a boom in development, though it stayed primarily agricultural in nature into the twentieth century. This eventually united the three settlements into a larger settlement of Downey, with the rail depot serving as the center of town. The agricultural focus was citrus, harkening back to John Downey's importation of several orange varieties, but grain, corn, and castor beans were also grown. After World War II, Downey began to shift from its rural origins to a suburban city of industry with a focus on aviation. Factories from Vultee Aircraft had been constructed in the city during World War II, and manufacturing continued after its purchase by North American Aviation, then Rockwell International, and finally Boeing. Before being purchased by Boeing, Rockwell International was a

subcontractor of the National Aeronautics and Space Administration (NASA), and its Downey factory was involved with the development of the Apollo and space shuttle programs. The City was incorporated in 1956, which was followed by the institution of a charter government in 1964.

A historic study was conducted for the project to evaluate the significance of built environment resources. The historic study, which includes the development history of the project site and surrounding area, was submitted to the City and is available separately from this cultural resources report.

3.0 METHODS

3.1 ARCHIVAL RESEARCH AND CONTACT PROGRAM

HELIX requested a records search of the project site and a one-mile radius from the South Central Coastal Information Center (SCCIC) at the University of California, Fullerton, on February 17, 2022. The records search, received on March 11, 2022, covered a one-mile radius around the project area and included the identification of previously recorded cultural resources and the locations and citations for previous cultural resources studies. A review of the California Historical Resources and the state Office of Historic Preservation (OHP) historic properties directories, and Local Register, was also conducted. The records search maps are included as Appendix B (confidential, bound separately) to this report. Historic maps and aerial photographs were reviewed as well.

The Native American Heritage Commission (NAHC) was contacted on February 17, 2022, for a Sacred Lands File search and list of Native American contacts, which were received on April 11, 2022. Letters were sent on April 14, 2022 to the contacts listed by the NAHC. Native American correspondence is included as Appendix C (confidential, bound separately) to this report.

Due to the developed nature of the project site and the total lack of exposed ground surface, a field survey was not undertaken.

4.0 RESULTS

4.1 RECORDS SEARCH

The record search of the California Historical Resources Information System (CHRIS) received from SCCIC in March 2022 covered a one-mile radius around the project area and included the identification of previously recorded cultural resources and information regarding previous cultural resources studies. The records search summary and map are included as Appendix B (Confidential Appendices, bound separately).

4.1.1 Previous Surveys

The records search results identified 18 previous cultural resource studies within the record search limits, none of which occurred within the project site (Table 2, *Previous Studies within One Mile of the Project Area*).

Table 2

4.1.2 Previously Recorded Resources

The SCCIC has a record of ten previously recorded cultural resources within a one-mile radius of the project, but none have been recorded within the project area (Table 3, *Previously Recorded Resources within One Mile of the Project Area*). All the resources recorded within the one-mile search radius are of historic age and consist of historic structures and buildings and one historic refuse deposit.

Table 3
PREVIOUSLY RECORDED RESOURCES WITHIN ONE MILE OF THE PROJECT AREA

Primary Number (P-19-#)	Trinomial (CA-LAN-#)	Age	Description	Recorder, Date
004777	--	Historic	Refuse scatter	Bizzell, 2016
186110	--	Historic	Union Pacific Railroad and Hobart Tower	Ashkar, 1999; Livingstone and Hamilton, 2002; Smith and Harper, 2007; Feldman, 2018; Kachour, 2019
186947	--	Historic	Historic single-family home at 12406 Lakewood Blvd	Tomes, 2003
186949	--	Historic	Historic single-family home at 12419 Lakewood Blvd	Tomes, 2003
186950	--	Historic	Historic single-family home at 12423 Lakewood Blvd	Tomes, 2003
186951	--	Historic	Historic single-family home at 12427 Lakewood Blvd	Tomes, 2003
188509	--	Historic	T-Mobil LA33719D tower	Crawford, 2009
188775	--	Historic	Consolidated Vultee Aircraft Corporation building	McKenna et al., 2010
190639	--	Historic	The Downey YMCA building	Crawford, 2013
192830	--	Historic	Shree Pashupatinath Foundation building	Lattig, 2018

4.2 BUILT ENVIRONMENT RESOURCE DIRECTORY

HELIX also reviewed the Built Environment Resource Directory (BERD), which contains information on historic-era built environment resources that have been documented in the OHP inventory of non-archaeological resources. The OHP inventory only contains information on resources that have been processed by the office itself, such as those reviewed for eligibility to the NRHP, CRHR, and the California Historic Landmarks programs. This review identified over 100 historic structures within one mile of the project area, none of which were located within the project area, and the vast majority of which are located more than 0.5 mile from the project area.

4.3 OTHER ARCHIVAL RESEARCH

Various additional archival sources were also consulted, including historic topographic maps, aerial imagery, parcel history data, and city directories. These include historic aerials from 1932, 1952, 1953, 1963, and 1972 (UCSB 2022; NETR Online 2022) and several historic USGS topographic maps, including the 1896 and 1902 Downey (1:62,500), the 1923 and 1936 Bell (1:24,000), 1943 Downey (1:62,500), and the 1951 Whittier (1:24,000), as well as the 1965 and 1972 Whittier (1:24,000) topographic maps. Other maps reviewed include the Los Angeles Land Use Maps (Huntington 2022). The purpose of this research was to identify historic structures and land use in the area, as well as the history of development and past disturbances.

The 1896 Downey quadrangle (1:62,500) shows two buildings within the project area, along with two additional buildings that may overlap with the project area's western boundary. These structures are also noted on the 1902 Downey quadrangle (1:62,500). The 1923 Bell quadrangle (1:24,000) shows one building that may overlap in the northwestern corner of the project area, as well as a drainage that runs northeast/southwest through the project area. This drainage is also noted in the 1936 Bell quadrangle (1:24,000), and, in addition to the structure in the northwest, the map also shows the structure in the northeast that is recorded in the 1896 and 1902 Downey quadrangles. The 1943 Downey quadrangle (1:62,500) represents the project area as agriculture and has both structures still present. The 1951 Whittier quadrangle (1:24,000) shows the growth of the area with numerous buildings surrounding the project site, but only two structures, previously noted, are present within the project area itself. The 1965 Whittier quadrangle (1:24,000) further shows the development of the area, with the entire city developed and all but four of the structures currently within the project area noted on the map. By the 1972 Whittier quadrangle (1:24,000), all the structures currently in the project area are recorded.

A review of the Los Angeles Land Use Maps, created by the Los Angeles City Regional Planning Commission, was also undertaken. The 1937 Los Angeles Land Use Map denoted the entire project area as agricultural and showed a home in the northeast portion of the project area. This continues to be true for the 1949 and 1950 maps, though the 1950 Land Use Map has the addition of an old barn being noted near the home in the northeast portion of the project area.

Investigations into the parcel history of the project area identified that the extant buildings were constructed between 1951 and 1979, as per the Los Angeles County Assessor's office public portal. A review of city directories between 1951 and 1968 identified the structures at the address as belonging to Aerojet General Corporation, beginning in 1959, while a review of Parcel Map No. 15573, created in 1983, denoted several easements belonging to the Aerojet General Corporation along the boundaries of the project area.

4.4 NATIVE AMERICAN CONTACT PROGRAM

HELIX contacted the Native American Heritage Commission (NAHC) on February 17, 2022, for a Sacred Lands File search and a list of Native American contacts for the project area. The NAHC indicated in a response dated April 11, 2022, that no known sacred lands or Native American cultural resources are within the project area, but that the area may be sensitive for cultural resources. The NAHC recommended contacting the representatives of eight Native American groups and provided appropriate contact information. Letters were sent on April 14, 2022, to Native American representatives and interested parties identified by the NAHC. As of the time of completion of this report, no responses have been received. If any responses are received, they will be forwarded to City staff.

5.0 SUMMARY AND MANAGEMENT RECOMMENDATIONS

A study was undertaken to identify cultural resources that are present in the Prologis Stewart and Gray Road Warehouse project area and to determine the effects of the project on historical resources. The cultural resources survey did not identify any cultural resources within the project area; therefore, no impacts to cultural resources are anticipated.

The entire project area has been disturbed by nineteenth and twentieth-century agricultural activities, irrigation systems, road construction, transportation (railway) and utility (transmission and gas line) installation, and manufacturing uses; the entire project site is currently developed and has been since the 1950s. Two buildings were identified in the archival research as being present in the project area between 1896 and 1951, both likely associated with the agricultural use of the project area. These were demolished and replaced with the extant buildings, beginning in the early 1950s, with the first structures constructed in 1951 and the latest circa 1967. These facilities were used first by Rheem Manufacturing and then by Aero Jet General Corporation beginning as early as 1959.

5.1 MANAGEMENT RECOMMENDATIONS

The project area is completely developed with no exposed ground surface; thus, the natural ground surface could not be examined for the presence of archaeological resources. The project site is located within younger alluvial sediments, where there is a potential for buried cultural resources. Furthermore, considering the extended presence of parking lots and limited change in the project area since 1952, it is possible that there are cultural resources associated with the small structure identified in the archival research as having been in the northwest corner present under the asphalt. There is also the possibility of similar resources present in the northeast corner, but the large construction in that area of the project area has likely destroyed or heavily impacted any possible resources there.

Due to this potential for buried resources, it is recommended that an archaeological and Native American monitoring program be implemented. The monitoring program would include attendance by the archaeologist and Native American monitor at a pre-construction meeting with the grading contractor and the presence of archaeological and Native American monitors during initial ground-disturbing activities on site. Both archaeological and Native American monitors would have the authority to temporarily halt or redirect grading and other ground-disturbing activity in the event that cultural resources are encountered. If significant cultural material is encountered, the project archaeologist will

coordinate with the Monitoring Tribe, the applicant, and City of Downey staff to develop and implement appropriate avoidance, treatment, or mitigation measures.

In the event that human remains are discovered, the County Coroner shall be contacted. If the remains are determined to be of Native American origin, the Most Likely Descendant, as identified by the NAHC, shall be contacted in order to determine proper treatment and disposition of the remains. All requirements of Health & Safety Code §7050.5 and PRC §5097.98 shall be followed.

Should the project limits change to incorporate new areas of proposed disturbance, an archaeological survey of these areas will be required.

TREVOR GITTELHOUGH, RPA

Cultural Resources Assistant Project Manager

Mx. Gittelhough is an archaeologist and assistant project manager with 11 years of experience. They specialize in underwater cultural resources, with experience in archaeology, cultural resources management, site monitoring, surveys and excavations, laboratory sorting, cataloging and analysis, and conservation. They have conducted environmental, paleontological, and cultural resources work throughout California in support of compliance with the California Environmental Quality Act (CEQA), National Environmental Policy Act (NEPA), and Sections 106 and 110 of the National Historic Preservation Act (NHPA) for public and private sector clients. Mx. Gittelhough has experience in team management in the terrestrial and underwater archaeological management sectors, with expertise in implementing mitigation and monitoring projects, report production, and coordination with Indigenous groups. Their technical skills include terrestrial and submerged archaeological survey, excavation, and site testing. They have authored numerous site records and technical reports detailing the results of cultural resources work, as well as academic articles. They have also had thorough training in artifact analysis and specializes in lithic analysis and maritime conservation. Mx. Gittelhough meets the Secretary of Interior Professional Qualifications Standards in History and Archaeology.

Enchanted Hills Park Project. Cultural Resource Specialist for a 22.5-acre neighborhood park project in the City of Perris, Riverside County. Provided cultural resource monitoring during initial site work and prepared monitoring letter report. Work performed for the City of Perris.

Dam Maintenance Program. Cultural Resource Specialist for the City of San Diego Dam Maintenance Program in San Diego County. Assisted in preparing an archaeological and historic resources assessment in compliance with state and federal regulations. Scope included a cultural resource records search, review of historic maps and aerials, and preparation of a technical report. Work performed for the City of San Diego Public Utilities Department.

Bouquet Canyon Road Project. Cultural Resource Specialist for a private residential development project in the City of Santa Clarita, Los Angeles County. Monitored all ground-disturbing activities associated with geotechnical studies, such as drilling and trenching. Provided monitoring during ground-penetrating radar studies of portions of the project area. Produced monitoring report. Work performed for Integral Communities.

Lake Morena Oak Shores/Lake Morena Views Mutual Water Company Consolidation. Cultural Resource Specialist for a cultural resources study in support of a proposed water district consolidation project in eastern San Diego County. Assisted with the preparation of a cultural resources technical report in compliance with state and federal regulations and State Water Resources Control Board. Scope included a cultural

resource records search, review of historic maps and aerials, and assistance with the preparation of a technical report. Work performed for Lake Morena Oak Shores Mutual Water Company and Lake Morena Views Mutual Water Company as a subconsultant to NV5.

Shady View Residential Project Environmental Impact Report. Cultural Resource Specialist for a housing development project in the City of Chino Hills in San Bernardino County. The project involves the development of 159 single-family homes, open space and recreational amenities, and associated street, utility/infrastructure, and drainage improvements. Assisted in the preparation of the technical report in compliance with state and federal regulations. Project scope included a cultural resource records search, review of historic maps and aerials, field survey, and preparation of a technical report. Work performed for the City of Chino Hills.

California Crossings. Cultural Resource Specialist for a 29-acre industrial development in Otay Mesa, San Diego County. Conducted a cultural resources study in support of biological mitigation measures (burrowing owl habitat creation). Prepared an archaeological resources assessment in compliance with state and federal regulations. Scope included a cultural resources records search, review of historic maps and aerials, and preparation of a technical report. Work performed for Sudberry Development, Inc. with County of San Diego as the lead agency.

Oceanside Mission Basin Groundwater Purification Facility Well Expansion and Brine Minimization Design. Cultural Resource Specialist for a proposed groundwater wells and brine minimization project to improve water production at an existing groundwater purification facility in the City of Oceanside, San Diego County. Assisted with the preparation of the cultural resources technical report in compliance with state and federal regulations. Project scope included a cultural resources records search, tribal outreach, field survey, monitoring of geotechnical borings, preparation of a constraints memo, and preparation of a technical report. Work performed for the City of Oceanside Water Utilities Department as a subconsultant to GHD, Inc.

611 Island Ave Residential Tower. Cultural Resource Specialist for a residential tower project in the downtown area of the City of San Diego. The project plans include incorporating the existing historic façade into the new 32-story building. Assisted with the preparation of an archaeological and historic resources assessment in compliance with CEQA. Scope included a cultural resource records search, review of historic maps and aerials, and preparation of a technical report with a sensitivity assessment. Work performed for Cresleigh Homes.

EMWD Quail Valley III Regional Water Tank Environmental Consulting. Cultural Resource Specialist for a new water tank and associated piping and facilities in Riverside County. Prepared the technical report to summarize a records search, Native American outreach, archaeological survey, and research into the historic land uses of the project lands. Work performed for Pulte Group, with Eastern Municipal Water District as the CEQA lead agency.

Cactus II Feeder Pipeline Biological and Cultural Construction Monitoring. Cultural Resource Specialist for construction monitoring of the installation of a sewer line and associated facilities. Work performed for Eastern Municipal Water District.

Pasadena Water & Power Sunset Reservoir Replacement Historical Resources Evaluation. Cultural Resource Specialist for a reservoir replacement project in the City of Pasadena. Prepared a cultural resources technical analysis to support an EIR and provided support to the City of Pasadena for tribal consultation. Work performed as a subconsultant to Kennedy Jenks, with the City of Pasadena as the lead agency under CEQA.

Athletic Facility Borings Cultural Resources Monitoring. Cultural Resource Specialist for a cultural resource monitoring program in support of the proposed project on the Palomar College San Marcos Campus, San Diego County. Provided monitoring of ground disturbing activities in compliance with CEQA, resulting in the completion of a cultural resources monitoring letter report.

Arrow 32N Residential. Senior Cultural Resource Specialist for a cultural resources study in support of the proposed Project in the City of Upland, San Bernardino County. Co-authored an archaeological technical report and assisted with a historic resources assessment report in compliance with Section 106 and CEQA. Scope included a cultural resources records search, review of historic maps and aerials, preparation of a technical report and evaluation of historic resources for inclusion to the NRHP and CRHR.

Garland Battery Energy Storage System. Senior Cultural Resource Specialist for a cultural resources study in support of the proposed Project in the County of Los Angeles. Prepared an archaeological resources assessment and provided monitoring for all ground disturbing activities a in compliance with CEQA. Scope included a cultural resources records search, review of historic maps and aerials, pedestrian survey, preparation of a technical report, monitoring, and the preparation of a monitoring report.

EXECUTIVE SUMMARY

PURPOSE AND SCOPE

The City of Downey (City; lead agency) retained HELIX Environmental Planning, Inc. (HELIX) to provide historic resources consulting services in support of the Prologis Stewart and Gray Road Warehouse Project (project) in the City of Downey, Los Angeles County, California. Located in the City, at the northwest corner of the intersection of Stewart and Gray Road and Woodruff Avenue (Assessor's Parcel Numbers [APNs] 6284-019-013, 6284-019-014, 6284-019-015, 6284-019-016, and 6284-019-017), the extant buildings located at 9300, 9350, and 9400 Hall Road and 9301, 9333 (or 9363), and 9399 (9401) Stewart and Gray Road are used as manufacturing and warehouse facilities by multiple tenants (furniture assembly, paper recycling, etc.)

The proposed project would include the demolition of the existing four buildings (totaling approximately 433,000 square feet) and the construction of an approximately 535,110-square-foot industrial concrete tilt-up building for warehouse/logistics uses. All four buildings are older than 50 years old and require evaluation for historical significance and eligibility for listing in the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR), as required under the California Environmental Quality Act (CEQA) (14 California Code of Regulations [CCR] Section 15064.5).

The purpose of this report is to provide the substantial evidence necessary to determine whether any of the of-age components of the extant buildings, in whole or in part, meet federal, state, or local eligibility criteria as a historic landmark, and therefore qualify as a historical resource pursuant to CEQA. This intensive-level historic resource evaluation report (HRER) assesses the subject properties in accordance with the criteria of the NRHP and the CRHR. This evaluation includes an analysis of the historic integrity of the buildings, the establishment of a period of significance, and the recordation of the resource on the appropriate California Department of Parks and Recreation (DPR) Series 523 forms. This report does not include a project-specific impacts analysis, mitigation measures, or alternatives analysis.

All activities were conducted in accordance with the requirements of the Public Resources Code (PRC) and CEQA, as well as applicable best practices and regulations. The City of Downey is the lead agency under CEQA.

DATES OF INVESTIGATION

HELIX staff requested a record search of the California Historical Resources Information System (CHRIS) from the South Central Coastal Information Center (SCCIC) on February 17, 2022. On June 10, 2022, HELIX Senior Architectural Historian Marina Khrustaleva, M.A., and HELIX Archaeologist James Turner, M.A., conducted an intensive-level pedestrian survey and inspection of the subject buildings. Ms. Khrustaleva meets and exceeds the Secretary of the Interior's Professional Qualification Standards for architectural history, as codified in 36 Code of Federal Regulations (CFR) Part 61. Field notes included resource descriptions, current conditions, alterations/integrity, and character-defining features. On August 3 and August 24, 2022, Ms. Khrustaleva conducted archival research at the City of Downey Planning Department, the Downey Historical Society, and the Downey City Library. She evaluated the historical significance of the buildings based on in-depth historical background research and by applying the NRHP/CRHR eligibility criteria. All evaluation results were documented in this report; the compiled DPR set follows this report in Appendix A, and key staff resumes follow as Appendix B.

SUMMARY OF FINDINGS

Historical background research demonstrates that industrial buildings at 9300, 9350, and 9400 Hall Road and 9301, 9333 (9363), and 9399 (9401) Stewart and Gray Road are not associated with any significant historic events or person(s). The buildings were not designed by master architects, nor are they exemplary embodiments of an architectural style. All four buildings were found not historically significant and, therefore, not eligible for the NRHP/CRHR. Therefore, the buildings at 9300, 9350, and 9400 Hall Road and 9301, 9333 (9363), and 9399 (9401) Stewart and Gray Road are not considered historical resources for the purposes of CEQA.

A copy of this report and DPR 523 forms documenting the subject buildings will be placed on file at the SCCIC for inclusion in the CHRIS. The DPR forms are attached as Appendix A.

Based on the results of the current study, no historic properties will be affected by the Prologis Stewart and Gray Road Warehouse Project.

1.0 INTRODUCTION

The City of Downey (City; lead agency) retained HELIX Environmental Planning, Inc. (HELIX) to provide historic resources consulting services in support of the Prologis Stewart and Gray Road Warehouse Project (project) in the City of Downey, Los Angeles County, California. Located in the City, at the northwest corner of the intersection of Stewart and Gray Road and Woodruff Avenue (Assessor's Parcel Numbers [APNs] 6284-019-013, 6284-019-014, 6284-019-015, 6284-019-016, and 6284-019-017), the extant buildings were operated as industrial and warehouse facilities from 1951 to the present. The proposed project would include the demolition of the existing four buildings (totaling approximately 433,000 square feet) and the construction of an industrial concrete tilt-up building for warehouse/logistics uses and an ancillary truck workshop facility.

The purpose of this report is to provide the substantial evidence necessary to determine whether any of the of-age components of the extant buildings, in whole or in part, meet federal, state, or local eligibility criteria as a historic landmark and therefore qualify as a historical resource pursuant to the California Environmental Quality Act (CEQA). This intensive-level historic resource evaluation report (HRER) assesses the subject properties in accordance with the criteria of the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR). This evaluation includes an analysis of the historic integrity of the buildings, the establishment of a period of significance, and the recordation of the resource on the appropriate California Department of Parks and Recreation (DPR) Series 523 forms (Appendix A). This report does not include a project-specific impacts analysis, mitigation measures, or alternatives analysis.

All activities were conducted in accordance with the requirements of the Public Resources Code (PRC) and California Environmental Quality Act, as well as applicable best practices and regulations. The City of Downey is the lead agency under CEQA.

1.1 PROJECT LOCATION

The project site is located in the City of Downey, in Los Angeles County (Figure 1, *Regional Location*), at the northwest corner of the intersection of Stewart and Gray Road and Woodruff Avenue (Figure 2, *USGS Topography*, and Figure 3, *Aerial Photograph*). The site is bordered by Hall Road to the north, commercial buildings to the east, Stewart and Gray Road to the south, and industrial buildings to the west. The 29.165-acre project site consists of five parcels (APNs 6284-019-013, 6284-019-014, 6284-019-015, 6284-019-016, and 6284-019-017) and includes four buildings:

- Building A (9400 (9350) Hall Road and 9399 (9401) Stewart and Gray Road);
- Building B (9300 Hall Road and 9301 Stewart and Gray Road);
- Building C (9350 (9400) Hall Road);
- Building D (9333 (9363) Stewart and Gray Road).

The numbering of the buildings and their parts is inconsistent between the Los Angeles County Assessor's Portal and the postal addresses used by current tenants.

1.2 PROJECT DESCRIPTION

The proposed project would include the demolition of the existing four buildings (totaling approximately 433,000 square feet) and the construction of an approximately 535,110-square-foot industrial concrete tilt-up building for warehouse/logistics uses.

The new industrial building is intended to be used for logistics and distribution purposes, and specifically as a fulfillment center and for cold storage. The facility will also include an office and mezzanine area. On-site activities will include the following: general industrial/warehouse with refrigeration and cold storage components for the purposes of receiving, storing, shipping of food and/or beverage products, storage, distribution, and/or consolidation of manufactured goods, and last-mile fulfillment and delivery. The office space is intended to be used for office uses ancillary to the warehouse operations.

2.0 REGULATORY FRAMEWORK

This section describes the applicable regulatory framework considered in this study.

2.1 FEDERAL

2.1.1 National Register of Historic Places

The National Register of Historic Places was established by the National Historic Preservation Act (NHPA) of 1966 as "an authoritative guide to be used by Federal, State, and local governments, private groups and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment" (CFR 36 CFR 60.2). The NRHP recognizes properties that are significant at the national, state, and local levels. To be eligible for listing in the NRHP, a resource must be significant in American history, architecture, archaeology, engineering, or culture. A property is eligible for the NRHP if it:

Criterion A Is associated with events that have made a significant contribution to the broad patterns of our history; or

Criterion B Is associated with the lives of persons significant in our past; or

Criterion C Embodies the distinctive characteristics of a type, period, or method of installation, or represents the work of a master, possesses high artistic values, or represents a significant and distinguishable entity whose components may lack individual distinction; or

Criterion D Has yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting these criteria, a property must retain historic integrity, which is defined in National Register Bulletin 15 as the "ability of a property to convey its significance" (National Park Service 1990). In order to assess integrity, the National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity.

To retain integrity, a property must possess several, if not all, of these seven qualities, which are defined in the following manner in National Register Bulletin 15:

HELIX Environmental Planning

Aerial Photograph

Figure 3

1. **Location.** The place where the historic property was constructed or the place where the historic event occurred.

2. **Design.** The combination of elements that create the form, plan, space, structure, and style of a property.

3. **Setting.** The physical environment of a historic property.

4. **Materials** are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.

5. **Workmanship.** The physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.

6. **Feeling.** A property's expression of the aesthetic or the historic sense of a particular period of time.

7. **Association.** The direct link between an important historic event or person and a historic property.

Some aspects of integrity may be accorded more weight than others, depending on the type of resource being evaluated and the applicable eligibility criteria. Integrity can be assessed only after it has been concluded that a resource is significant.

2.1.2 Secretary of the Interior's Standards for Rehabilitation

In accordance with the National Park Service and CEQA Guidelines, projects that comply with the *Secretary's Standards for the Treatment of Historic Properties* and the *Secretary's Standards for Rehabilitation* (*Secretary's Standards*) are projects that retain the historic integrity of the resource. According to CEQA Guidelines, a project that complies with the *Secretary's Standards* is generally considered to be a project that will not cause a significant adverse impact to a historical resource.

The goal of the *Secretary's Standards* is to outline treatment approaches that allow for the retention of and/or sensitive changes to the distinctive materials and features that lend a historical resource its significance. The *Secretary's Standards* and Guidelines offer general recommendations for preserving, maintaining, repairing, and replacing historical materials and features, as well as designing new additions or making alterations. These standards also provide guidance on new construction adjacent to historic districts and properties, in order to ensure that there are no indirect adverse impacts to historic properties.

Rehabilitation is the most flexible treatment approach of the *Secretary's Standards*. The ten *Secretary's Standards for Rehabilitation* are:

1. A property shall be used for its historic purpose or be placed in a new use that requires minimal change to the defining characteristics of the building and its site and environment.

2. The historic character of a property shall be retained and preserved. The removal of historic materials or the alteration of features and spaces that characterize a property shall be avoided.

3. Each property shall be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other buildings, shall not be undertaken.

4. Most properties change over time; those changes that have acquired historic significance in their own right shall be retained and preserved.

5. Distinctive features, finishes, and construction techniques or examples of craftsmanship that characterize a property shall be preserved.

6. Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires the replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.

7. Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means possible.

8. Significant archeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken.

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.

10. New additions and adjacent or related new construction shall be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

The *Secretary's Standards and Guidelines* offer general recommendations for preserving, maintaining, repairing, and replacing historical materials and features, as well as designing new additions or making alterations. The *Secretary's Standards for Rehabilitation* also provide guidance on new construction adjacent to historic districts and properties in order to ensure that there are no adverse indirect impacts to integrity as a result of a change in setting. Applying the *Secretary's Standards* to new construction adjacent to historic resources helps ensure the avoidance of indirect impacts and the retention of the setting and feeling of the historic resource and its surrounding environment.

Secretary's Standards compliance begins with the identification and documentation of the "character-defining," or historically significant, features of the historical resource. According to Preservation Brief 17, *Architectural Character: Identifying the Visual Aspects of Historic Buildings as an Aid to Preserving Their Character*, there is a three-step process to identifying character-defining features (Nelson, 1982). Step 1 involves assessing the physical aspects of the building exterior as a whole, including its setting, shape and massing, orientation, roof and roof features, projections, and openings. Step 2 looks at the building more closely—at materials, trim, secondary features, and craftsmanship. Step 3 encompasses the interior, including individual spaces, relations or sequences of spaces (floor plan), surface finishes and materials, exposed structure, and interior features and details. Alterations

and replacement of character-defining features over time can impair a historic property's integrity and result in a loss of historic status. Therefore, to ensure that a historic property remains eligible after the implementation of projects, character-defining features should be identified and preserved.

2.2 STATE

The policies of the NHPA are implemented at the state level by the California Office of Historic Preservation, a division of the California Department of Parks and Recreation. The Office of Historic Preservation is also tasked with carrying out the duties described in the PRC and maintaining the California Historic Resources Inventory and CRHR. The state-level regulatory framework also includes CEQA, which requires the identification and mitigation of substantial adverse impacts that may affect the significance of eligible historical and archaeological resources.

2.2.1 California Register of Historical Resources

Created in 1992 and implemented in 1998, the CRHR is "an authoritative guide in California to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Sections 21083.2 and 21084.1). Certain properties, including those listed in or formally determined eligible for listing on the NRHP and California Historical Landmarks numbered 770 and higher, are automatically included on the CRHR.

According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

Criterion 1: It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

Criterion 2: It is associated with the lives of persons important in our past;

Criterion 3: It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values;

Criterion 4: Has yielded, or may be likely to yield, information important in prehistory or history.

Properties that do not retain sufficient integrity for NRHP listing can still qualify for listing in the CRHR. Historical resources eligible for listing in the California Register must meet one of the criteria of significance described above and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance.

2.2.2 California Environmental Quality Act

CEQA requires a lead agency to analyze whether historic and/or archaeological resources may be adversely impacted by a proposed project. Under CEQA, a "project that may cause a substantial adverse change in the significance of a historic resource is a project that may have a significant effect on the environment" (PRC Section 21084.1). Answering this question is a two-part process: first, the determination must be made as to whether the proposed project involves cultural resources. Second, if

cultural resources are present, the proposed project must be analyzed for a potential "substantial adverse change in the significance" of the resource.

According to CEQA Guidelines Section 15064.5, historic resources are:

1. A resource listed in, or formally determined eligible for listing in, the California Register of Historical Resources (PRC 5024.1, Title 14 CCR, Section 4850 et seq);

2. A resource included in a local register of historical resources, as defined in PRC Section 5020.1(k), or identified as significant in a historic resources survey meeting the requirements of PRC Section 5024.1(g);

3. Any building, structure, object, site, or district that the lead agency determines eligible for national, state, or local landmark listing; generally, a resource shall be considered by the lead agency to be historically significant (and therefore a historic resource under CEQA) if the resource meets the criteria for listing on the California Register (as defined in PRC Section 5024.1, Title 14 CCR, Section 4852).

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity (as defined in the previous section) does not meet NRHP criteria may still be eligible for listing in the CRHR.

According to CEQA, the fact that a resource is not listed in or determined eligible for listing in the California Register or is not included in a local register or survey shall not preclude the lead agency from determining that the resource may be a historical resource (PRC Section 5024.1). Pursuant to CEQA, a project with an effect that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment (CEQA Guidelines, Section 15064.5(b).

CEQA Guidelines specify that "substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired" (CEQA Guidelines, Section 15064.5). Material impairment occurs when a project alters in an adverse manner or demolishes "those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion" or eligibility for inclusion in the NRHR, CRHR, or local register. In addition, pursuant to CEQA Guidelines Section 15126.2, the "direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects."

2.3 LOCAL

2.3.1 City of Downey General Plan

The City of Downey adopted the General Plan (Vision 2025) on January 25, 2005. It states that "cultural amenities, including those of a historical, architectural, and archaeological nature, greatly enrich a community's quality of life by displaying a strong positive and distinct image, linking the past to the present, and boosting civic pride" (City of Downey, 2005: 8-12). The Goals and Policies include three policies related to City's cultural resources:

- Goal 8.4. Enhance Downey's cultural resources.
  - Policy 8.4.1. Identify the city's cultural resources.
    - Program 8.4.1.1. Conduct a survey to identify historic and architecturally significant structures, locations, and archeological resources.
    - Program 8.4.1.2. Seek listing for appropriate properties on the National Register of Historic Places and the California State Register of Historic Resources.
    - Program 8.4.1.3. List significant historic resources in a Downey Register of Historic Places.
    - Program 8.4.1.4. Establish a Council-appointed commission to address cultural resources issues, such as public art, historical preservation, and architectural resources.
    - Program 8.4.1.5. Promote public information through the local schools, churches, and other organizations, which explains the benefits of historic preservation and enhancement of cultural resources.
    - Program 8.4.1.6. Recognize Downey's historic significance as a premier locale for post-World War II and 1950s-style architecture.
    - Program 8.4.1.7. Support and recognize individuals and groups, such as the Downey History Center, which work to preserve Downey's historic resources.
  - Policy 8.4.2. Preserve the city's cultural resources.
    - Program 8.4.2.1. Adopt a historic preservation ordinance that would require a permit to demolish or modify a historic resource.
    - Program 8.4.2.2. Provide incentives for property owners for historic preservation and resource protection and continue to add more incentives as opportunities arise.
    - Program 8.4.2.3. Promote the preservation and restoration of older structures.
    - Program 8.4.2.4. Encourage adaptive reuse of older structures.
    - Program 8.4.2.5. Reuse existing historic architectural elements in new construction when the preservation of historic resources is not feasible.
    - Program 8.4.2.6. Discourage the relocation of historic resources, or if necessary, relocate the historic resource within Downey.
    - Program 8.4.2.7. Preserve and/or relocate significant archeological resources.
  - Policy 8.4.3. Enhance the city's existing cultural resources.
    - Program 8.4.3.1. Develop an ordinance to fund and/or require public art as part of new development.
    - Program 8.4.3.2. Support and encourage community events, such as the Downey Street Faire, Holiday Lane Parade, and ARC Walk.
    - Program 8.4.3.3. Support and encourage groups, such as the Downey Museum of Art, Downey Civic Light Opera, Downey Symphonic Society, Downey Historical Society, and Downey Rose Float Association.

- Program 8.4.3.4. Encourage cultural uses to be more centrally located - preferably in the downtown area.
- Program 8.4.3.5. Develop a museum/learning center as part of the Downey Landing development.

The General Plan recognized six landmarks as significant historical resources: the Rives Home (1911), Casa de Parley Johnson (1926), McDonald's Restaurant (1953), the Dismuke's House (1887), Rancho Los Amigos Medical Center (Harriman Building, 1932), and the Historical Arch located along the bend of Civic Center Drive.

2.3.2 City of Downey Municipal Code

The City of Downey Municipal Code does not include a Historic Preservation Ordinance. The City of Downey currently does not have a Historic Resources Inventory, a Historic Context Statement, or a Citywide Historic Resources Survey.

3.0 METHODS

3.1 RECORDS SEARCH

HELIX requested a record search of the California Historical Resources Information System (CHRIS) from the South Central Coastal Information Center (SCCIC) on February 17, 2022. The records search covered a one-mile radius around the proposed project area and included the identification of previously recorded cultural resources (archaeological and historical resources), the locations and citations for previous cultural resources studies, and a review of the State Office of Historic Preservation (OHP) Historic Resources Inventory. No previously documented historic resources within the project area were on file with the SCCIC. The properties present within the project area are not included in the California Built Environment Resources Directory (BERD) / State Historic Resources Inventory, nor are they included on a register or inventory of designated or eligible landmarks in the City of Downey. For a detailed summary of the records search results for the project, please refer to the separate cultural resources report produced by HELIX for this project (Gittelhough and Robbins-Wade 2023:11-14).

3.2 BUILT ENVIRONMENT RESOURCE DIRECTORY

HELIX also reviewed the BERD, which contains information on historic-era built environment resources that have been documented in the OHP inventory of non-archaeological resources. The OHP inventory only contains information on resources that have been processed by the office itself, such as those reviewed for eligibility to the NRHP, CRHR, and the California Historic Landmarks programs. This review identified over 100 historic structures within one mile of the project area, none of which were located within the project area, and the vast majority of which are located more than 0.5 mile from the project area.

3.3 FIELD SURVEY

HELIX Senior Architectural Historian Marina Khrustaleva, M.A., and HELIX Archaeologist James Turner, M.A., conducted an intensive-level pedestrian survey and inspection of the project site on June 10, 2022. Ms. Khrustaleva meets and exceeds the Secretary of the Interior's Professional Qualification

Standards for architectural history, as codified in 36 CFR Part 61. Field investigation consisted of an examination and the photography of the exterior and interior of four historic buildings within the project site. Field notes included resource descriptions, current conditions, alterations, character-defining features, and integrity analysis.

3.4 ARCHIVAL RESEARCH

Research conducted by HELIX for this study included a variety of primary and secondary sources. HELIX consulted a number of online sources for this study, including the Los Angeles Public Library, the Huntington Digital Library, USC Digital Library, Los Angeles County Assessor's Portal, U.S. Geological Survey (USGS) Historical Topographic Map Explorer, Nationwide Environmental Title Research (NETR), University of California Santa Barbara (UCSB) Aerial Photo Collection, David Rumsey Map Collection, Online Archive of California, California State Library, Calisphere.com, American Institute of Architects (AIA) Historical Directory of American Architects, Pacific Coast Architecture Database (PCAD), Ancestry.com, Newspapers.com, California Digital Newspaper Collection, Google Books, and city directories.

Historic topographic maps and aerial imagery included historic aerials from 1932, 1952, 1953, 1963, and 1972 (UCSB 2022; NETR Online 2022) and several historic USGS topographic maps, including the 1896 and 1902 Downey (1:62,500), the 1923 and 1936 Bell (1:24,000), 1943 Downey (1:62,500), and the 1951 Whittier (1:24,000) (USGS 2022), as well as the 1965 and 1972 Whittier (1:24,000) topographic maps. Other maps reviewed include the Los Angeles Land Use Maps (Huntington 2022). The purpose of this research was to identify historic structures and land use in the area.

On August 3 and August 24, 2002, Ms. Khrustaleva conducted in-person archival research at the City of Downey Planning Department, the Downey Historical Society, and the Downey City Library, reviewing archived building records, aerial photography, Downey Chamber of Commerce publications, and other documents. Robert Thompson of the Downey Historical Society provided valuable photographs, printed materials, and oral history information.

3.5 PROJECT PERSONNEL

HELIX Senior Architectural Marina Khrustaleva, M.A., served as the principal investigator and author of this study. HELIX Cultural Resources Group Manager Mary Robbins-Wade, M.A., RPA, provided QA/QC review and strategic oversight. Ms. Khrustaleva meets and exceeds the Secretary of Interior's Professional Standards for architectural history and history. Resumes for key HELIX project personnel are presented in Appendix B.

4.0 HISTORIC SETTING AND CONTEXT

National Register Bulletin 24, *Guidelines for Local Surveys*, states that the historic context developed in support of historic resource surveys should analyze and describe the "broad pattern of historical development in a community or its region that may be represented by historic resources" (U.S. Department of the Interior 1985: 14). Developing a historic context for survey areas is described in the National Park Service (NPS) guidelines as vital for providing the basis for a survey effort, helping researchers successfully identify all significant resources, and helping eliminate unintended biases. Through a review of the history and prehistory of the state and region under consideration, the historic

context should define important patterns of development that may be reflected in the area's historic resources.

The National Register further defines context as "a body of information about our history according to the stages of development occurring at various times and places" (U.S. Department of the Interior 1997: 7). Theme, place, and time are the basic elements that define a historic context.

Historic context is linked to the built environment through the concept of property type. A property type is "a grouping of individual properties based on a set of shared physical or associative characteristics. Physical characteristics may relate to structural forms, architectural styles, building materials, or site type. Associative characteristics may relate to the nature of associated events or activities, to associations with a specific individual or group of individuals" (U.S. Department of the Interior 1985: 14). Historic contexts, therefore, become useful tools for gauging the relative importance and integrity of properties.

In order to provide a contextual framework for the assessment of the subject properties, this section provides the historic setting and context for the property, divided chronologically and according to themes of significance. Given the history of the subject properties, the context and theme that apply most closely include the following evaluative framework:

Context: Early Settlement and Development in Downey
Theme: Aerospace Industry in Downey
Property Type: Industrial

The following sections briefly summarize Downey's early history, followed by descriptions of the context/theme used in the evaluation of the subject properties. This focused historic context section draws on original research, as well as information on the history of the City of Downey, available on the City's online resources. Additional sources utilized in this section and report are included in Section 9, *References*.

4.1 MEXICAN RANCHOS AND EARLY AMERICAN PERIOD

In 1784, the first and largest land grant was deeded by Spanish Governor Pedro Fages to Manuel Nieto, a former sergeant in the Spanish Army; at the time, the Rancho Los Nietos was the largest land grant in Alta California, originally totaling 300,000 acres. During a dispute with Mission San Gabriel in 1790, the grant was reduced to 167,00 acres, stretching from just north of Whittier to the sea and from the Los Angeles River to the Santa Ana River (Buena Park Historical Society 2006; Downey Historical Society n.d.; Rancho Los Cerritos Historic Site n.d.). As with other ranchos, large tracts of Rancho Los Nietos were dedicated almost exclusively to cattle grazing; at the time, cattle hides had become a primary export from southern California. Following Nieto's death in 1804, the Rancho was passed to his wife and four children.

Although Mexico gained its independence from Spain in 1821, Spanish patterns of culture and influence remained for a time. The missions continued to operate as they had in the past, and laws governing the distribution of land were also retained in the 1820s. Following the secularization of the missions in 1834, large ranchos were granted to prominent and well-connected individuals, ushering in the Rancho Era, with the society making a transition from one dominated by the church and the military to a more

civilian population, with people living on ranchos or in pueblos. With the numerous new ranchos in private hands, cattle ranching expanded and prevailed over agricultural activities

In 1833, Governor Jose Figueroa split Rancho Nietos into six parts, one for each heir: Rancho Los Alamitos, Los Cerritos, Los Coyotes, Los Bolsas, Palo Alto, and Santa Gertrudes. The City of Downey lies in the area granted as Rancho Santa Gertrudes, which was granted to Josefa Cota, the widow of Manuel Nieto's son, Antonio Nieto (City of Downey n.d.; Downey Historical Society n.d.). In 1843, the grant was purchased from Cota by Lemuel Carpenter, the husband of her niece Maria de Los Angeles Dominguez. Carpenter, born in Kentucky, established a soap business at *Chokishgna*, a Tongva-Gabrieleño village on the San Gabriel River (Dyson 1927).

American governance began in 1848, when Mexico signed the Treaty of Guadalupe Hidalgo, ceding California to the United States at the conclusion of the Mexican–American War. A great influx of settlers to California and the Los Angeles region occurred during the American Period, resulting from several factors, including the discovery of gold in the state in 1848, the end of the Civil War, and the availability of free land through the passage of the Homestead Act. The increase in American and European populations quickly overwhelmed many of the Spanish and Mexican cultural traditions and greatly increased the rate of population decline among Native American communities.

While the American system required that the newly acquired land be surveyed prior to settlement, the Treaty of Guadalupe Hidalgo bound the United States to honor the land claims of Mexican citizens who were granted ownership of ranchos by the Mexican government. The Land Act of 1851 established a board of commissioners to review land grant claims, and land patents for the land grants were issued throughout the following years. Lemuel Carpenter filed a claim for part of Rancho Santa Gertrudes in 1852 (Willey 1886). At some point in 1852, Carpenter took out a $5,000 loan from John Gately Downey, an Irish immigrant who came to California during the Gold Rush and succeeded to become the state's first governor. This loan would later balloon to more than $100,000 by 1859. Unable to pay this debt, Carpenter killed himself (Santa Fe Springs Library n.d.). The grant was then sold at a sheriff's auction to Downey and James P. McFarland and patented to the men in 1870 (Willey 1884).

Initially sworn in as the lieutenant governor, Downey assumed the governorship of California in 1860 after Governor Milton Latham resigned after being elected to fill the Senate vacancy left by David C. Broderick, who was killed in a duel the year prior (Brady 1905). Following the end of his term as governor, Downey returned to southern California and began subdividing Rancho Santa Gertrudes into small farms along the banks of the San Gabriel River (City of Downey n.d.). The following decades would see these farms prospering from the area's excellent soil. Like other portions of southern California during this time, citrus would become a large part of the area's exports, in part due to the importing of several varieties by Downey himself.

4.2 EARLY URBAN DEVELOPMENT OF DOWNEY

Two settlements were established in the mid-1800s within the area that would become the City of Downey: The College Settlement and Gallatin. While no records indicate where the College Settlement was located, based on the original roadways seen in early topographic maps, it likely was in the southwestern area of modern-day Downey. Gallatin was located where modern-day Paramount Boulevard and Florence Avenue cross, approximately 1.5 miles to the northwest of the project area (Pierce 2010). In 1873, these settlements would be joined by a third, when Downey subdivided 96 acres of the Rancho Santa Gertrudes to establish a community, which would later be known as "Downey City"

(Downey Chamber of Commerce n.d.). It was located 10 miles from the ocean and 10 miles from Los Angeles.

The opening of the Southern Pacific Railroad in the 1870s and the completion of the Southern Pacific Transcontinental rail line in the early 1880s resulted in an increased flow of settlers from the east coast arriving in the west coast. As such, the population of Los Angeles County boomed, requiring an increase in development. By 1883, the Southern Pacific Railroad had built a route that passed through Downey City; as a result, families and businesses from Gallatin and the College Settlement began moving closer to the railroad (Pierce 2010). This eventually united the three settlements into the larger settlement of Downey, with the new Southern Pacific Railroad Depot built in 1888 serving as the center of town.

Agriculture continued to be the primary focus of Downey over the following decades; approximately 90 percent of present-day Downey was used for agriculture–citrus, grain, corn, and castor beans were the community's chief exports (Bruce 2017). In 1903, the Downey Board of Trade (later renamed the Downey Chamber of Commerce) was organized. In 1906, an effort to incorporate Downey into a City failed; the boundaries used in the process were "remarkably unsophisticated" (Downey Historical Society n.d.). However, the growing Downtown Downey contained a number of businesses: a Sunkist packing plant, a department store, banks, restaurants, and mercantile shops. It was also the site of Downey Union High School and Downey Grammar School.

4.3 AEROSPACE INDUSTRY IN DOWNEY

The seeds of the aerospace industry in Downey were planted by E.M. Smith, a wealthy industrialist and inventor, whose family had reaped a fortune from a drill bit patent for oil exploration. In 1929, he purchased approximately 73 acres of land one mile south of the depot from James Hughan, a castor bean and orange farmer. Smith developed the area into two runways and an assembly plant, which would later house the Emsco Aircraft Corporation (City of Downey 2022).

In 1940, Downey's population was still only 12,000. Orange groves remained visible in the downtown area, with dairies located along the banks of the two rivers. During World War II, the aerospace industry became a significant economic factor in Downey. Several years earlier, in 1936, Gerard "Jerry" Vultee, Smith's chief design engineer, leased his old airstrip from Baker Oil Tools Company, which had purchased the facility following the Great Depression. Vultee Aircraft Division, later Consolidated Vultee Aircraft Corporation, or "Convair," located near Lakewood Boulevard and Alameda Street, was Downey's largest employer during the war, producing nearly 15 percent of America's military aircraft by 1941 (City of Downey 2022; Parker 2013). During the war, the plant built 13,000 airplanes (Latimer 2010: 111). The company was a pioneer in the use of women in manufacturing positions and was the first aircraft company to build airplanes on a powered assembly line (City of Downey n.d.).

Following World War II, Downey began to shift from its rural origins to a suburban city of industry with a focus on aviation. By the late 1950s, most of the agricultural areas were replaced by residential subdivisions, commercial centers, and industrial developments. Downey again tried to become an incorporated city in 1956; this time, the attempt was a success (Downey Historical Society n.d.). In December 1956, the City of Downey, with a population of approximately 90,000 people living within an area of 11.5 square miles, was incorporated as a general law city; in 1965, it became a charter city.

Shortly after its incorporation in 1962, Glen Bell opened the first Taco Bell in Downey; the first restaurant would close in 1986, and the building was set for demolition in 2015. Fortunately, the building was saved and moved 45 miles to the Taco Bell Corporate Office in Irvine (Nichols 2015; Parvini 2015).

In the late 1940s, the Vultee plant was converted from plane to ballistic missile technology. In the 1950s, it became North American Aviation's Downey Plant, known as Air Force Plant 16, shifting its focus from aircraft manufacturing to supersonic aerodynamics and rocket propulsion. (Latimer 2010: 118). After President John F. Kennedy committed in the early 1960s to landing a person on the moon before the end of the decade, Downey became home to the Project Apollo Spacecraft Development Program, involving over 23,000 employees (Blackburn 2009: 8). In 1967, North American Aviation, Inc. would merge with Rockwell International, and together bid and win the NASA contract to build the new Space Shuttle Orbiter Vehicle in 1972 (City of Downey 2022). For the next two decades, Downey's Rockwell plant would produce and test many of the 20th century's space, aviation, and missile endeavors that would become benchmarks for manned spacecraft engineering.

By the early 1970s, the Rockwell International facilities encompassed some 1,700,000 square feet of enclosed area over more than 200 acres. Following the Cold War, however, Downey was hit hard by cutbacks in the defense budget. Rockwell International, which once had more than 30,000 employees, had fewer than 5,000 in 1992. In 1996, the Rockwell International site was purchased by the Boeing Company, but two years later, Boeing decided to leave Downey. The 70-year history of airplane and space vehicle manufacturing in Downey came to an end when the plant closed in 1999. The property was purchased by the City of Downey and underwent a series of redevelopment projects. A total of 26 buildings were demolished in the early 2000s.

As of 2009, 23 original structures were still remaining on-site. The central parcel, including Building 1 (the Vultee and North American production facility), Building 6 (North American Rockwell design facility), and Building 290 (Apollo and shuttle final assembly areas), has been preserved and used by the Downey Studios (Blackburn 2009: 85; Harrison 2006: 6). More demolitions followed in the 2010s. In 2023, only a portion of historic Building 1 at 12214 Lakewood Boulevard and 8855 Apollo Way remains in place. The rest of the site became host to the Columbia Memorial Space Sciences Learning Center (built in 2009), the Downey Landing shopping center, a Kaiser Permanente hospital, and a city recreation park (City of Downey n.d.). None of the Vultee/North American Aviation structures have been designated as historic landmarks.

5.0 HISTORY OF THE PROJECT SITE

The analysis of historic topographic maps, aerial imagery, and parcel history data shows that the entire project area was agricultural from the late 19th century until 1950 (Gittelhough and Robbins-Wade 2023:14). In 1951, the industrial development of the area was started by the Rheem Corporation. Originally, Rheem's property included adjacent parcels 6284-019-010 and 6284-019-011 to the east (11711 Woodruff Avenue and 11899 Woodruff Avenue) and parcel 6284-019-068 to the west (9236-9244 Hall Road) (Plates 1 and 2). Select building permits for the project site are included as Appendix C.

5.1 RHEEM MANUFACTURING COMPANY

Rheem Manufacturing Company was established by brothers Richard “R.S.” Rheem and Donald “D.L.” Rheem, in Emeryville, CA, in 1925. The founders were the sons of William S. Rheem, former Standard Oil Company of California president. Rheem is still in existence and has produced a variety of products in its nearly 100 years of operation. According to the company’s website, Rheem is currently the only manufacturer in the world that produces heating, cooling, water heating, pool and spa heating, and commercial refrigeration products, and it is the largest manufacturer of water heating products in North America (Rheem 2022a). Initially, Rheem Manufacturing Co. created galvanized steel oil drums; in 1930, it began full-scale manufacturing of water heaters, boilers, and tanks at its plants in California, Texas, Ohio, New Jersey, Illinois, Louisiana, Maryland, and Australia. In the following decades, it added shipping containers, bathroom fixtures, musical instruments, automotive parts, and war equipment (Rheem 2022b).

During World War II, much of the company’s efforts went towards wartime production, including building ships and aircraft parts. In 1942, Rheem purchased the former American Radiator and Standard Sanitary Corp. plant in Birmingham, Alabama, to produce ordnance materials. In 1944, Rheem acquired a substantial interest in Piatt-LePage Aircraft Company of Eddystone, Pennsylvania, which manufactured helicopters. In 1945, seven Rheem plants received Army-Navy "E" awards and several renewal stars for outstanding excellence in production. After the war, Rheem began an extensive reconversion program to modernize and streamline operations for peacetime production, shifting back to consumer markets (Rheem 2022c).

However, Rheem did not abandon military production. In 1951, it formed the Government Products Division to resume aircraft and ordnance work. The same year, Rheem Manufacturing Co. received a letter of intent from Northrop Aircraft for the fabrication and assembly of components for the Scorpion F-89 all-weather interceptor. Los Angeles Daily News reported that preliminary work started at Rheem’s South Gate plant, but actual fabrication and assembly were to continue at the new Downey factory (Los Angeles Daily News 1951). Another commission came from Lockheed Jet Aircraft (Long Beach Press Telegram 1951: 33).

In 1951, the $2,000,000 steel aircraft part manufacturing plant in Downey was constructed in record time on a 50-acre site at 11711 South Woodruff Avenue in Downey (the address of the Rheem Administration Building that later became a separate property outside of the project site). That year, the Los Angeles Times classified pages printed Rheem’s ads for employment on a weekly basis. The Aircraft Division was hiring tool designers, inspectors, aircraft schedulers, machinery engineers, keypunch operators, clerks, and secretaries (The Los Angeles Times 1951: 47). The original employment goal was between 800 and 1000 workers; in 1958, the Downey plant had 3,500 employers.

RHEEM MANUFACTURING. Rheem Manufacturing was another aerospace company in Downey. The Defense and Technical Products Division of Rheem Manufacturing built this SD-2 surveillance drone for the U.S. Army.

Components of DEFENSE

The power plant operation of the Defense and Technical Products Division of Rheem Manufacturing Company in Downey, California, is one of the largest west of the Rocky Mountains devoted to the manufacture of power plant components. The power plant facility has in excess of 200,000 square feet of area under roof devoted exclusively to manufacture of units for aircraft turbine engines, solid and liquid propellant rocket engines and related products. This view shows work on components, and the modern machines used in processing all grades of stainless steels, titanium, nickel base alloys and cobalt base alloys.

At the very heart of modern aircraft manufacture are the critical component parts and assemblies which the final assembly manufacturer fits into his finished product. The design and manufacture of these components is among the most difficult and critical work of all.

Such is the sort of work performed by the 400 engineers and 3,500 shop employees of Rheem Manufacturing Company's Aircraft Division in Downey. Working in a plant with the most modern facilities and 600,000 square feet of plant area, these men and women meet exacting standards of sheet metal and machine shop manufacture. The engineering staff takes on the difficult problems of research and design.

The Downey plant of Rheem currently engages in three principal types of production. For missiles, they produce such components as control surfaces, empennage, nose and fuselage sections, and other parts. Work also includes production of components for the nation's newest high priority aircraft.

Above: Rheem has been an active and advanced manufacturer of ordnance weapons for the armed forces. Current work includes a wide range of testing, engineering and manufacturing programs. This development, much of which includes classified jobs, consists of warhead systems, fusing systems, ballistic studies, practice bombs, explosive research, mines, and mining techniques. This photograph shows high production handling of missile components in the Defense and Technical Products Division plant at Downey.

Components of Defense

(Continued From Page One Hundred Six)

A second major activity of the company is production of components for power plants for aircraft and missiles.

The Division makes a specialty of the so-called "hot" components such as after-burners, turbine nozzles, guide vanes and diffusers. The Division's components are used for motors in the entire rocket motor field.

The Division's third major activity is production of components for many weapons of ordinance. These components include warheads, fusing systems, and some complete weapons systems.

While potentially destructive, these products are the necessary weapons in the arsenal of freedom today.

Exterior view of Rheem's Building.

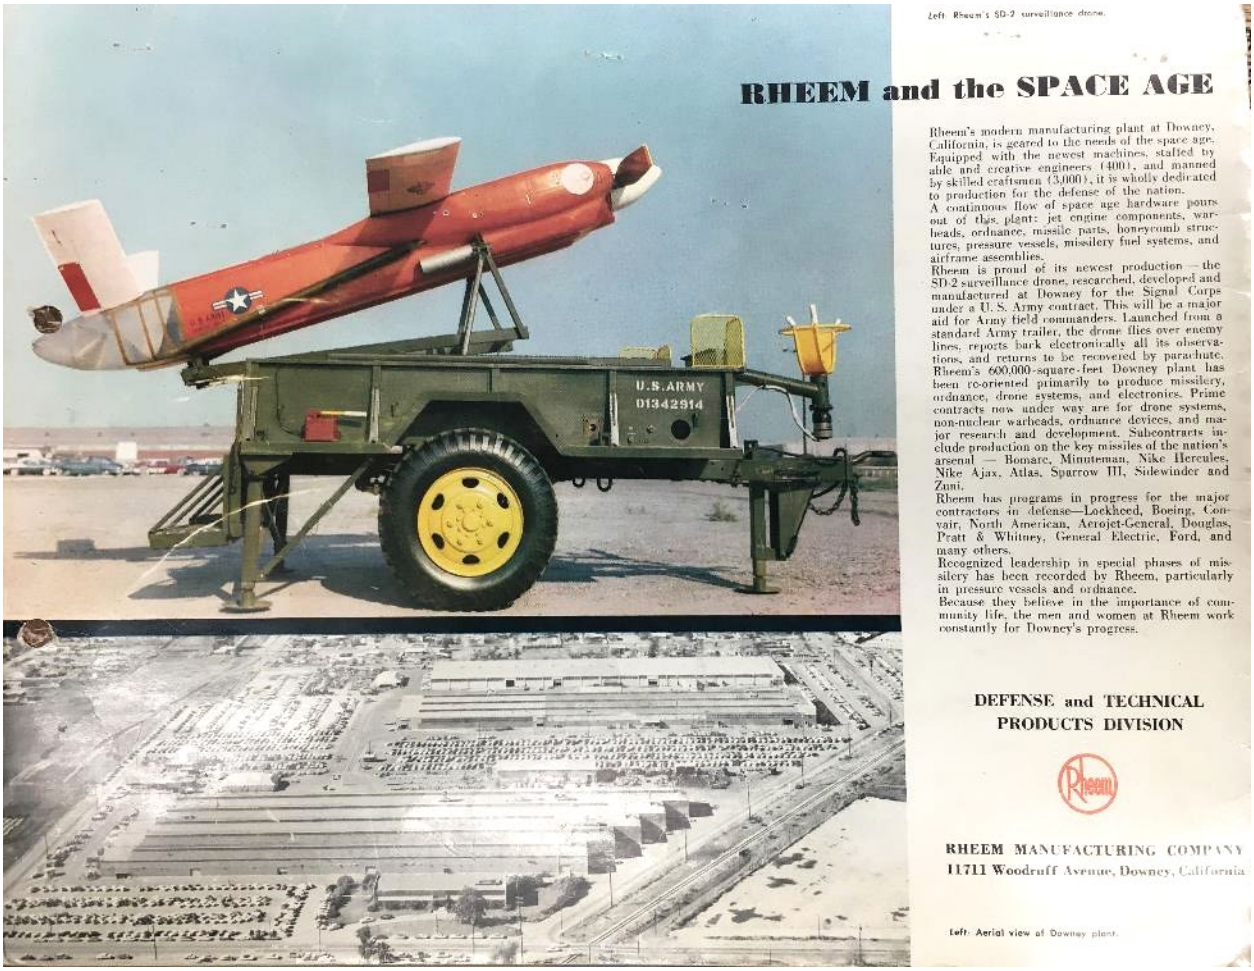

Plate 12. Downey: Gracious Living, Future Unlimited. Downey Chamber of Commerce, 1958. P. 106, 108, 109 Courtesy of the Downey Historical Society.

The most promoted product of Rheem's plant in Downey was the AN/USD-2 surveillance drone designed and manufactured for the Signal Corps. The plant also produced jet engine components and airframe parts, along with fuses, rockets, practice bombs, grenades, land and underwater mines, non-nuclear warheads, and other explosives.

Rheem Aircraft Plant in Downey became an important staple for the community. It was a popular site for school field trips, such as the Lowell Cub Scouts visit in January 1953, which was a part of their study of transportation. Each boy received a packet of colored pictures and watched the aircraft parts being assembled (La Habra Star 1953). In the late 1950s, Rheem Corporation regularly appeared in newspapers because of workers' strikes and labor union disputes.

In 1958, Richard and Donald Rheem resigned from the Board of Directors of Rheem Manufacturing Company. The same year, Rheem received a 1.2 million dollar contract from the U.S. Army Ordnance District for the fabrication of warheads and fuses for the Nike-Hercules missile. The production was supposed to be done at the Downey plant and at the newly built Ordnance Loading facility in Riverside, California (South Gate Press 1958: 1). However, in the next year (1959), both plants had been sold to Aerojet General Corporation (San Bernardino Sun 1959).

5.2 ALBEN RANDOLF FROBERG

Rheem Manufacturing Company was a fast-developing and progressive business. For designing its new plants, Rheem invited experienced industrial architects and engineers and used modern technologies. The South Gate Manufacturing Plant at 4361 Firestone Boulevard in South Gate, CA, just five miles away from Downey, was designed in the mid-1940s by the prominent architectural company of Wurdeman and Becket (Arts & Architecture 1950: 2; Online Archives of California [OAC] 2022a). Walter Wurdeman and Welton David Becket would later become famous for the Bullock's Department Store in Pasadena. Landscape plans for the South Gate plant were prepared by a notable landscape designer Ruth Patricia Shellhorn (OAC 2022b).

The primary architect of Rheem's plant in Downey was Alben Randolf Froberg of Oakland (City of Downey Building Records; AIA 1953). Froberg specialized in "industrial structures of any size and dollar value" (AIA 1953: 3). Most of his projects were implemented in the Bay Area; Rheem's Downey plant seems to be his only commission in Southern California. The clue to this commission can be the long-term acquaintance between Froberg and the Rheem brothers. In 1931, the architect designed Richard S. Rheem's residence at 20 Bellevue Avenue in Piedmont, California (Olds 1931: 69-71).

Alben Randolf Froberg (1890-1968) was born in Eureka, California, in a family of Finnish background. In 1913, he graduated from the University of California in Berkeley with a B.S. degree in Architecture and Civil Engineering; he obtained his architect's license in August 1915. The 1920 city directory lists him working as a draftsman in San Francisco for Frederick Whitton; in 1925, he established his own practice. Froberg was a member of the AIA and the President of the East Bay Chapter in 1946 (Ancestry.com; PCAD 2022). His early projects represent features of the Art Deco and Streamline Moderne styles. His work includes:

- Laher Auto Spring Company Factory, 2619-25 Magnolia Street, Oakland, CA (1925)
- Gray Shop (women's clothing), 2000 Broadway, Oakland, CA (1930, demolished)
- R.S. Rheem's Residence, 20 Bellevue Avenue, Piedmont, CA (1931)
- Commercial building, 1771-1775 Broadway, Oakland, CA (1932)
- Marshall Steel Company Cleaning Plant, 5427 Telegraph Avenue, Oakland, CA (1934)
- Williams and Slade Building (remodel), 2029 Broadway, Oakland, CA (1935, demolished)
- Office building, 2398 Valley Street, Oakland, CA (1938)
- United Engineering Company Shipyard, General Engineering & Drydock, Building 19, 2900 Main Street, Alameda, CA
- Consolidated Freightways Warehouse, 1700 24th Street, Oakland, CA (1940-41)
- Pacific Steel Casting Co. Foundry, 1333 Second Street, Berkeley, CA (1943)
- Frozen Food Storage Distribution Plant, 955 57th Street, Oakland, CA (1945)
- Frank Werner Company (women's shoes), 2020 Broadway, Oakland, CA (1946, demolished)
- Connell Motor Company, Oldsmobile Dealership, 3093 Broadway, Oakland, CA (1946-1947, demolished)

- Challenge Cream and Butter Association Plant, 708 Addison Street, Berkeley, CA (1947)
- Kawneer Manufacturing Co. (addition), 2547 Eighth Street, Berkeley, CA (1947-1950)
- I.B.'s Hoagies & Cheesesteaks, 1601 San Pablo Avenue, Oakland, CA (1950)
- Architect's own house, 5700 La Salle Avenue, Oakland, CA (1953)

In 1951-52, concurrently with Rheem's plant in Downey, Froberg designed a number of projects in Oakland: a waxed paper plant, a filter manufacturing plant, a Greyhound bus depot, a storefront factory, as well as a research building in Whittier and an ordnance plant in Richmond (the last two, most probably, also for Rheem) (AIA 1953: 4).

Although many of Froberg's industrial and commercial structures have been demolished over the years, he has gained certain recognition in the Bay Area. The General Engineering & Drydock, Building 19 in the United Engineering Company Shipyard historic district in Alameda has been determined eligible for the National Register of Historic Places, and the Kawneer Manufacturing Co. building is designated as the City of Berkeley Landmark (both historic resources include earlier structures from the 1910s). However, Froberg is practically unknown in South California and has not been recognized as a local master architect in any of the historic context statements.

5.3 AEROJET GENERAL CORPORATION

Aerojet General Corporation purchased Rheem's plants in Downey and Riverside in May 1959. According to some accounts, the Rheem brothers "lost control of Rheem Manufacturing through an unfriendly take-over" (Moraga Historical Society 2022). Guy Charles Throner Jr., an engineer at Aerojet, explained that the two companies had been in competition for most of the 1950s. In 1959, Aerojet was looking for a new space to manufacture metal parts for Polaris and Minuteman rocket motors. They found Rheem's buildings in Downey, with 600,000 square feet under the roof, suitable for the task. As a side effect of the property purchase, Aerojet took over Rheem's Ordnance operation. The merger of the two companies was not flawless, and there was a great deal of tension between the two groups of employees (Throner Jr. 2014: 157).

Aerojet Engineering Corporation was established in 1941 by a group of enthusiasts from the California Institute of Technology. The founders were professors Theodore von Karman, Frank Malina, Jack Parsons, Edward S. Forman, Martin Summerfield, and Andrew Haley. It was renamed Aerojet General in 1953. During World War II, Aerojet was producing jet-assisted takeoff (JATO) rockets. The first plant was located in Pasadena, California. Aerojet became the first major U.S. company to develop expertise in both liquid and solid propellant rockets. The Aerobee class rocket launched in 1947 became the first in the U.S. to probe the edge of space. Aerojet designed and built a total of 1,182 engines for all four incarnations of the Titan rockets, which were used for civilian projects ranging from Gemini's manned flights to solar system explorations, including Viking, Voyager, and Cassini (Aerojet General n.d.). In 1969, rocket motors manufactured by Aerojet helped Apollo 11 transport astronauts to the moon. Aerojet and North American Aviation / Rockwell International plants in Downey were collaborating on a number of projects.

The documentary "Aerojet General Missile & Rocket Engines," presenting the company's facilities in Rancho Cordova, Fullerton, Chino, Canoga Park, Azuza, and Downey, praises the Ordnance Division in Downey as "devoted to sophisticated manipulation of force" (Aerojet General n.d.: 18:14). The division developed aircraft rocket engines, T-45 and T-46 warheads for the Nike-Hercules ground to air missiles, chambers for the Hawk air defense weapon, and the Thor Able system. Aerojet continued developing SD-2 multipurpose drones for the Army launched by Rheem. Drones carried optical, radar, and infrared sensors that were supposed to gather, store, and transmit battlefield surveillance information. Built in limited numbers, SD-2 drones never saw operational service (Aerojet General n.d.: 20:02).

The 1961 Downey Chamber of Commerce booklet called Aerojet General Corporation one of the "Big Three" manufacturers in town, with 4,400 employees. Aerojet was booming during the Reagan era with its defense priorities. In October 1969, Ronald Reagan visited the Aerojet General plant in Downey with his gubernatorial campaign speech (National Archives Catalog 1969). In 1989, NASA chose Aerojet and Lockheed Corporation to produce solid fuel rocket motors for the Space Shuttle program.

Aerojet General Corporation went through a series of reorganization steps in the early 1990s (Aerojet Rocketdyne Holdings 2022). The Aerojet Ordnance Division in Downey was in operation until the mid-1990s. It was gradually reducing its scale over the years – City of Downey Building Records show other users of the property. In the 1970s, Building B at 9300 Hall Road / 9301 Stuart and Gray Road belonged to Terminal Industrial Center, Ltd. Tenants included Mini Bus Inc., Boman Astrosonix (car radios, speakers, and accessories manufacturer), and Duray Inc. (sheet metal contractor).

RADIO-CONTROLLED DRONE. Local Downey high school students learn about a radio-controlled drone manufactured by Aerojet General Corporation. C. W. Sanders explains its operation to, from left to right, Esther Alexander, Rita Thomas, and Jim Kobzeff in 1958.

6.0 ARCHITECTURAL DESCRIPTION

The following section provides an architectural description of the portions of the subject properties evaluated in this study. An overview of the facility is provided, followed by detailed descriptions of each of the four evaluated structures and features.

6.1 OVERVIEW OF SUBJECT PROPERTIES

The project site is located in the City of Downey, at the northwest corner of the intersection of Stewart and Gray Road and Woodruff Avenue. It is bordered by Hall Road to the north, commercial buildings to the east, Stewart and Gray Road to the south, and industrial buildings to the west. The 29.165-acre irregularly shaped project site consists of five parcels (APNs 6284-019-013, 6284-019-014, 6284-019-015, 6284-019-016, and 6284-019-017) and includes four buildings:

- Building A (9400 (9350) Hall Road and 9399 (9401) Stewart and Gray Road), built in 1951;
- Building B (9300 Hall Road and 9301 Stewart and Gray Road), built in 1951-1956;
- Building C (9350 (9400) Hall Road), built in 1951-1957;
- Building D (9333 (9363) Stewart and Gray Road), built c. 1967.

Originally, the property included adjacent parcels to the east and to the west:

- 6284-019-010 (11711 Woodruff Avenue), original Rheem Manufacturing Company Administrative Building built in 1951;
- 6284-019-011 (11899 Woodruff Avenue);
- 6284-019-068 (9236-9244 Hall Road), original Rheem Manufacturing Company Research & Development Laboratories (demolished and replaced with a new building in 2008).

The numbering of the buildings and their parts is inconsistent between the Los Angeles County Assessor's Portal and postal addresses used by current tenants (see Figure 1 and Plates 1 and 2). The project site has multiple canopy structures that are not considered to be permanent buildings and are not described in this section.

6.2 BUILDING ONE

The main manufacturing facility, Building A, was built in 1951 in the east portion of the current project site (parcel 6284-019-013). The north portion of the building is addressed as 9400 (9350) Hall Road; the south portion of the building is addressed as 9399 (9401) Stewart and Gray Road. The building area is 244,664 square feet (per Los Angeles [LA] County Assessor's Portal).

The building features an irregular rectangular floor plan and consists of five aisles oriented north-south. The width of the building is 300 feet, and the length along the longer west side is about 825 feet. The primary north elevation follows the angle of Hall Road, with each aisle stepping back by approximately 35 feet, with loading docks on the face of four aisles (excluding the west one). A pedestrian access door is present on the east elevation. A concrete loading ramp with a metal canopy runs along the southmost half of the west elevation with multiple openings.

North elevation from Hall Road, loading docks (southeast perspective)

East elevation, pedestrian entrance (southwest perspective)

West elevation, southern half of the building (southeast perspective)

West elevation, northern and southern portions meet (east perspective)

Interior, roof view (south perspective)

West elevation, loading ramp (north perspective)

Plates 21-26. Building A. 9400 (9350) Hall Road.

The walls are built of red brick (painted white in the interior). The upper portion of the walls (besides a rear part of the west elevation) is clad with non-original golden-tone corrugated metal. The southern part of the building reveals narrow horizontal windows in the upper part of the wall filled in with glass blocks. In the southmost part of the building, original glass blocks are replaced with new windows.

The height of the building is 19’ 8”. A saw-tooth roof is comprised of five ridges covering individual aisles, with west slopes glazed to admit daylight. The corrugated metal roof is supported by metal trusses resting on steel I-beams and posts. The interior is divided into two parts by a demising wall.

6.3 BUILDING TWO

The manufacturing/warehouse facility, Building B, was built in 1951 in the west portion of the current project site (parcel 6284-019-015). The north portion of the building is addressed as 9300 Hall Road; the south portion of the building, added by 1956, is addressed as 9301 Stewart and Gray Road. The building area is 153,884 square feet (per LA County Assessor's Portal).

The building features a rectangular floor plan and consists of three aisles oriented north-south. The width of the building is 180 feet, and the length along the west side is about 830 feet. The northern portion of the building facing Hall Road accommodates two-story offices. The primary north elevation is clad with red brick veneer and smooth stucco on the upper part. A wide horizontal stucco parapet screens the roof gables. Two rows of square windows are divided by fluted partitions to create a feeling of transparency. The windows have narrow steel frames with divided lights.

The central portion of the façade features a projecting entry area with glass doors and an overhanging canopy. Originally, the sides of the entry area were open, and the canopy was supported by round posts; the sides were filled in with brick later. The 1961 Downey Chamber of Commerce booklet called it an "entry to one of Aerojet-General's handsome buildings" (see Plate 17).

The side elevations past the front area feature brick walls on the bottom and steel ribbon windows with divided lights on the upper part (mostly, painted over). The east elevation is relatively unremarkable. The west elevation features multiple openings, loading docks with rolling doors, ramps, temporary canopies, and sheds. The south (rear) elevation features large sliding barn doors under three roof gables.

A saw-tooth roof is comprised of three ridges covering individual aisles, with west slopes glazed to admit daylight. The corrugated metal roof is supported by metal trusses resting on steel I-beams and posts. The interior is divided into two parts by a demising wall. The rear (southern) portion of the building features a two-story built-in wood office structure.

Interior, rear part, built-in office
(southwest perspective)

Plates 27-33. Building B. 9300 Hall Road and 9301 Stewart and Gray Road.

6.4 BUILDING THREE

The warehouse facility, Building C, was built in 1951 in the central portion of the current project site (parcel 6284-019-013). The south portion of the building was added by 1957. The building is addressed as 9350 or 9400 Hall Road. The building area is 24,788 square feet (per LA County Assessor's Portal).

The building features a rectangular floor plan and a gabled roof. The height of the building is 19' 8". The width of the building is 61 feet, and the length is 341 feet. The walls and the roof are made of corrugated metal; the roof is supported with steel trusses. A pedestrian access door and several random openings are present on the east elevation.

A large metal shed with paper pulp recycling equipment is present on the west side of the rear portion of the building. The shed is not original to the project site.

East elevation, older part of the building (northwest perspective)

East elevation, later addition (west perspective)

Interior (south perspective)

South elevation, metal shed to the west (north perspective)

Plates 34-37. Building C. 9350 (9400) Hall Road.

6.5 BUILDING FOUR

The office facility, Building D, was built circa 1967 in the south portion of the current project site (parcel 6284-019-017). The building is addressed as 9333 or 9363 Stewart and Gray Road. The building area is 6,924 square feet (per LA County Assessor's Portal). One of the 1980s site plans indicates that the building was used as a hospital and a fire house.

The one-story building features a rectangular floor plan and a flat roof. The width of the building is 38 feet, and the length is 190 feet. The walls are stucco. The primary east elevation features an entry door, two windows, and a rolling garage door. Three cast concrete benches of Mid-century design are present at the front of the building.

7.0 EVALUATION

This section includes historical significance evaluations for the property under the NRHP and CRHR significance criteria, as well as integrity considerations.

7.1 SIGNIFICANCE CRITERIA A/1

NRHP Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history

Criterion 1: It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage

The subject property **does not appear eligible** under Criteria A/1. Although Rheem Manufacturing Company and Aerojet General Corporation were important for the development of the aerospace industry in Downey, their role was secondary in comparison with the role of a much larger industrial site – Vultee Aircraft Division / North American Aviation / Rockwell International plant, once located only two blocks away. Being the ordnance plant closely connected with the U.S. Army, Rheem / Aerojet facilities remained more secretive and censored than their famous neighbor. Aerojet Ordnance Division ceased its activity by the mid-1990s; the original equipment and memorabilia were removed from the property. During the redevelopment of the Vultee / North American Aviation site, none of the structures have been considered valuable or designated as historic landmarks. The City of Downey chose to commemorate its aerospace industry history by creating Columbia Memorial Space Sciences Learning Center. The structures on the subject property also do not appear significant to the broad patterns of national or state history.

Therefore, the property **does not appear eligible for listing in the NRHP or CRHR under Criteria A/1**.

7.2 SIGNIFICANCE CRITERIA B/2

NRHP Criterion B: Is associated with the lives of persons significant in our past.

Criterion 2: It is associated with the lives of persons important in our past.

The subject property does not appear eligible under Criteria B/2. Research conducted for this study did not suggest that the subject properties, either in whole or in part, are significant for an association with important individuals who made significant contributions at the local, state, or national level. Richard S. Rheem and Donald L. Rheem, founders of Rheem Manufacturing Company, were prominent businessmen and residents of the Bay Area; however, they do not appear to be historically significant individuals on the state or national level, and they did not play a significant role at the local level.

Therefore, the property **does not appear eligible for listing in the NRHP or CRHR under Criteria B/2**.

7.3 SIGNIFICANCE CRITERIA C/3

NRHP Criterion C: Embodies the distinctive characteristics of a type, period, or method of installation, or represents the work of a master, possesses high artistic values, or represents a significant and distinguishable entity whose components may lack individual distinction.

Criterion 3: It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

The subject property does not appear eligible under Criteria C/3. Buildings A and B were designed by an Oakland architect, Alben Randolf Froberg. Froberg specialized in industrial structures; his early projects represent features of the Art Deco and Streamline Moderne styles. Froberg was a member of the AIA and the President of the East Bay Chapter in 1946. Despite his active work in the Bay Area, Froberg is practically unknown in Southern California and has not been recognized as a local master architect in any historic context statements for the area. Rheem's Downey plant seems to be his only commission in Southern California.

Although buildings A and B incorporate characteristic elements of industrial architecture from the early 1950s (stepped floor plan, brick walls, saw-tooth roof with steel trusses, windows with divided lights and glass blocks), its design and construction method are typical of industrial buildings of similar age in the region. They are neither distinctive nor representative enough to render the buildings as important examples of properties of their type. They do not reflect outstanding or distinctive design, the work of a master, method of construction, or possess high artistic value. Additionally, both buildings have undergone significant alterations compromising their integrity of design, materials, workmanship, and feeling. Buildings C and D are utilitarian structures and do not possess any architectural value.

Therefore, the subject property **does not appear eligible for listing in the NRHP or CRHR under Criteria C/3**.

7.4 SIGNIFICANCE CRITERIA D/4

NRHP Criterion D: It has yielded, or may be likely to yield, information important in prehistory or history.

Criterion 4: It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

The subject property does not appear eligible under Criterion D/4. This Criterion is most relevant for archaeological sites, but it can be applied to historic built-environment resources if further study has the potential to yield information that cannot be obtained from other sources. However, historical information about industrial buildings operating after 1951 is prevalent, and further study of the property would not add any new information to the historic record.

Therefore, the subject property **does not appear eligible for listing in the NRHP or CRHR under Criterion D/4.**

8.0 CONCLUSION

As noted previously, the proposed project would include the demolition of the existing four buildings (totaling approximately 433,000 square feet) and the construction of an approximately 535,110-square-foot industrial concrete tilt-up building for warehouse/logistics uses.

As a result of this intensive-level evaluation, the subject property **does not appear eligible for federal or state listing**. Historical background research demonstrates that industrial buildings at 9300, 9350, and 9400 Hall Road and 9301, 9333 (9363), and 9399 (9401) Stewart and Gray Road are not associated with any significant historic events or person(s). The buildings were not designed by master architects nor are they exemplary embodiments of an architectural style. All four buildings were found not historically significant and, therefore, **not eligible for the NRHP/CRHR**. Therefore, the buildings at 9300, 9350, and 9400 Hall Road and 9301, 9333 (9363), and 9399 (9401) Stewart and Gray Road **do not qualify as historical resources for the purposes of CEQA**.

A copy of this report and DPR 523 forms documenting the subject buildings will be placed on file at the SCCIC for inclusion in the California Historical Resources Information System. The DPR forms are attached as Appendix A.

Based on the results of the current study, no historic properties will be affected by the Prologis Stewart and Gray Road Warehouse Project.

***P3a. Description:**

This resource consists of the following four rectangular buildings: Building A (9400 (9350) Hall Road and 9399 (9401) Stewart and Gray Road), built in 1951; Building B (9300 Hall Road and 9301 Stewart and Gray Road), built in 1951-1956; Building C (9350 (9400) Hall Road), built in 1951-1957; Building D (9333 (9363) Stewart and Gray Road), built c. 1967.

The buildings consist of one manufacturing facility (Building A), an office facility (Building D), and two warehouse facilities (Buildings B and C). While all four structures are over the age of 50 years, none are eligible for listing on the NRHP or CRHR, and do not qualify as historical resources for the purposes of CEQA.

BUILDING, STRUCTURE, AND OBJECT RECORD

***Resource Name or #:** SGR1-4, Building A ***NRHP Status Code:** 6Z

B1. Historic Name: _____ B2. Common Name: 9400 Hall Road and 9399 Stewart and Gray Road
B3. Original Use: Manufacturing Facility B4. Present Use: Same
***B5. Architectural Style:** Industrial
***B6. Construction History:**
Building A, located at 9400 Hall Road, was built in 1951 by the Rheem Corporation. In 1959, the property was sold to the Aerojet General Corporation who owned and operated the facility until the 1990s.

***B7. Moved?** ■**No** □**Yes** □**Unknown Date:** _____ **Original Location:** _____
***B8. Related Features:**
Related features include structures built by the Rheem Manufacturing Company or Aerojet General Corporation, such as Building B (9300 Hall Road and 9301 Stewart and Gray Road), built in 1951-1956; Building C (9350 (9400) Hall Road), built in 1951-1957; and Building D (9333 (9363) Stewart and Gray Road), built c. 1967.

Architect: Alben Randolf Froberg b. Builder: Unknown
***B10. Significance: Theme**: Industry **Area:** LA County
Period of Significance: _____ **Property Type**: _____ **Applicable Criteria:** None

Significance Criteria A/1: The subject property does not appear eligible under Criteria A/1. Although Rheem Manufacturing Company and Aerojet General Corporation were important for the development of the aerospace industry in Downey, their role was secondary in comparison with the role of a much larger industrial site – Vultee Aircraft Division / North American Aviation / Rockwell International plant, once located only two blocks away. Aerojet Ordnance Division ceased its activity by the mid-1990s; the original equipment and memorabilia was removed from the property. The structures on the subject property also do not appear significant to the broad patterns of national or state history. Therefore, the property does not appear eligible for listing in the NRHP or CRHR under Criteria A/1.

Significance Criteria B/2: The subject property does not appear eligible under Criteria B/2. Research conducted for this study did not suggest that the subject properties, either in whole or in part, are significant for an association with important individuals who made significant contributions at the local, state, or national level. Richard S. Rheem and Donald L. Rheem, founders of Rheem Manufacturing Company, were prominent businessmen and residents of the Bay Area; however, they do not appear to be historically significant individuals on the state or national level, and they did not play a significant role at the local level. Therefore, the property does not appear eligible for listing in the NRHP or CRHR under Criteria B/2.

Significance Criteria C/3: The subject property does not appear eligible under Criteria C/3. While the building was designed Alben Randolf Froberg, Froberg is practically unknown in Southern California and has not been recognized as a local master architect in any historic context statements for the area. Rheem's Downey plant seems to be his only commission in Southern California. Additionally the building's design and construction method are typical of industrial buildings of similar age in the region. They are neither distinctive nor representative enough to render the buildings as important examples of properties of their type. They do not reflect outstanding or distinctive design, the work of a master, method of construction, or possess high artistic value. Additionally, it has undergone significant alterations compromising their integrity of design, materials, workmanship, and feeling. Therefore, the subject property does not appear eligible for listing in the NRHP or CRHR under Criteria C/3.

Significance Criteria D/4: The subject property does not appear eligible under Criterion D/4. Historical information about industrial buildings operating after 1951 is prevalent, and further study of the property would not add any new information to the historic record. Therefore, the subject property does not appear eligible for listing in the NRHP or CRHR under Criterion D/4.

Resumes of Key Personnel

Marina Khrustaleva, MA

Architectural Historian

HELIX Environmental Planning

Summary of Qualifications

Ms. Khrustaleva is a qualified Historian and Architectural Historian with more than 20 years of experience preparing historic background information and historic contexts, and evaluating buildings and structures under federal, state, and local regulatory requirements. Her expertise includes applying the Secretary of the Interior's Standards for the Treatment of Historic Properties, archival research, historic surveys, significance evaluations, landmark designations, and historic districts documentation. She has completed studies for residential, commercial, military, and industrial properties across California and abroad. She has prepared numerous technical reports including Historical Resources Evaluation Reports (HRERs), Historic Property Survey Reports (HPSRs), Landmark Nomination Forms, and Mills Art Applications to satisfy compliance requirements under California Environmental Quality Act (CEQA) and local governments preservation ordinances. Ms. Khrustaleva has worked for government agencies, non-profit organizations, and private clients in California. She has served as a guest lecturer at the University of Southern California, the University of California at Los Angeles, Caltech, and University of Erasmus (Rotterdam).

Selected Experience

Downey Big Box Historic Resources Evaluation Report (HRER), City of Downey, Downey, California (2023). Architectural Historian for the preparation of an HRER for the Prologis Stewart and Gray Road Warehouse Project in Downey. The subject structures operated as manufacturing and warehouse facilities for Rheem Manufacturing Company and Aerojet General Corporation from 1951 through the early 1990s. Managed an intensive-level HRER that relied on a literature review, archival research, site inspection, and an evaluation of the property in accordance with applicable eligibility criteria. Evaluation included a historic context research for the aerospace industry development in Downey, an analysis of the historic integrity of the complex and its components, and recordation of the resource on the appropriate California Department of Parks and Recreation (DPR) Series 523 forms. Work performed for the City of Downey/Prologis Inc.

Hicks Canyon Channel Restoration Project Historic Resources Evaluation Report, Irvine, Orange County, California (2022). Architectural Historian for the preparation of an HRER for the improvement of a 13.5-acre portion of the existing Hicks Canyon Wash stormwater conveyance, including bank remediation for stability and access, storm drain extensions, and landscaping. Managed an intensive-level HRER that relied on a literature review, archival research, a site inspection, and an evaluation of the property in accordance with applicable eligibility criteria. Documented

Education

Master of Arts in Cultural Management/ Historic Preservation, Moscow Higher School of Social and Economic Sciences /University of Manchester, UK (2003)

Master of Arts, Russian State University of Humanities, Art History/ Architectural History (2000)

Bachelor of Arts, Russian State University of Humanities, Art History/Architectural History (1999)

Professional Certification

International Visitors Leadership Program in Heritage Preservation, USA, 2011

Professional Affiliations

California Preservation Foundation

South Pasadena Preservation Foundation

Getty Research Institute

the subject structures on California Department of Parks and Recreation (DPR) Series 523 forms. Work performed for BFK Engineers.

Pure Water Southern California Project Cultural Resources Survey/Constraints Analysis, Los Angeles County, California (2022). As Architectural Historian, conducted a historic built environment constraints analysis to support the construction of water purification facilities, a new backbone conveyance system (including pipeline and pump stations), and various appurtenant facilities as required to convey purified water. Conducted a reconnaissance-level survey to examine and photo-document the exterior of potential historic buildings and structures falling within the Pure Water project area. Prepared resource descriptions, details of architectural style and sub-style, modern modifications and additions, and information on current condition and integrity. Work performed for Metropolitan Water District of Southern California.

Frank Gehry Catalogue Raisonné, Volumes 2 and 3 (2022). As Architectural Historian, researched Frank Gehry's archive at the Getty Research Institute Special Collections to identify visual materials to be included into the printed catalog and analyzed written documents to reconstruct the history of each project, for the period of 1978-1989. Work performed for Editions Cahiers d'Art (France).

South Pasadena's Design Standards and Design Guidelines for ADUs on Historic Properties (2021). As City of South Padadena's Interim Associate Planner, coordinated the development of Design Standards and Design Guidelines for accessory dwelling units on historic properties. The project was a part of the State Office of Historic Preservation CLG grant program (grants for Certified Local Governments). It was implemented with the help of a consultant, Architectural Resources Group, and received the California Preservation Award in 2022. Work performed for the City of South Pasadena.

South Pasadena Local Landmark Nominations (2019-2023). As Architectural Historian, prepared HRERs, Landmark Nomination forms, Mills Act contract applications for a number of historic resources in South Pasadena, including Rollin Craftsman Cluster historic district and the mid-century Cox Residence by John Galbraith. Work performed for private clients.

Moscow Re:Industrial Report (2017-2019). Principal Historic Resources Analyst and Project Manager for a city-wide context statement on historic industrial resources. Identified and mapped over 150 industrial sites developed between 1850 and 1950; created an overview of their architectural and manufacturing history; analyzed current redevelopment strategies; and suggested best practices for adaptive reuse. The report received Golden Section award by the Moscow Union of Architects in 2021. Work performed for CENTER Agency for Strategic Development.

Historic Resources Surveys for Cities under 25,000 Residents in Russia. As Architectural Historian, prepared historic context statements and reconnaissance-level historic resources surveys for small historic cities in the Moscow Region (cities of Klin and Ruza, 2014-2015) and Irkutsk Region, Siberia (cities of Tulun, Nizhneudinsk, Zheleznogorsk-Ilimsky, 2020-2021). Surveys were conducted as a part of Specific Plan updates leading to downtown redevelopment projects. Work performed for local governments and redevelopment agencies.

TREVOR GITTELHOUGH, RPA

Cultural Resources Assistant Project Manager

Mx. Gittelhough is an archaeologist and assistant project manager with 11 years of experience. They specialize in underwater cultural resources, with experience in archaeology, cultural resources management, site monitoring, surveys and excavations, laboratory sorting, cataloging and analysis, and conservation. They have conducted environmental, paleontological, and cultural resources work throughout California in support of compliance with the California Environmental Quality Act (CEQA), National Environmental Policy Act (NEPA), and Sections 106 and 110 of the National Historic Preservation Act (NHPA) for public and private sector clients. Mx. Gittelhough has experience in team management in the terrestrial and underwater archaeological management sectors, with expertise in implementing mitigation and monitoring projects, report production, and coordination with Indigenous groups. Their technical skills include terrestrial and submerged archaeological survey, excavation, and site testing. They have authored numerous site records and technical reports detailing the results of cultural resources work, as well as academic articles. They have also had thorough training in artifact analysis and specializes in lithic analysis and maritime conservation. Mx. Gittelhough meets the Secretary of Interior Professional Qualifications Standards in History and Archaeology.

Enchanted Hills Park Project. Cultural Resource Specialist for a 22.5-acre neighborhood park project in the City of Perris, Riverside County. Provided cultural resource monitoring during initial site work and prepared monitoring letter report. Work performed for the City of Perris.

Dam Maintenance Program. Cultural Resource Specialist for the City of San Diego Dam Maintenance Program in San Diego County. Assisted in preparing an archaeological and historic resources assessment in compliance with state and federal regulations. Scope included a cultural resource records search, review of historic maps and aerials, and preparation of a technical report. Work performed for the City of San Diego Public Utilities Department.

Bouquet Canyon Road Project. Cultural Resource Specialist for a private residential development project in the City of Santa Clarita, Los Angeles County. Monitored all ground-disturbing activities associated with geotechnical studies, such as drilling and trenching. Provided monitoring during ground-penetrating radar studies of portions of the project area. Produced monitoring report. Work performed for Integral Communities.

Lake Morena Oak Shores/Lake Morena Views Mutual Water Company Consolidation. Cultural Resource Specialist for a cultural resources study in support of a proposed water district consolidation project in eastern San Diego County. Assisted with the preparation of a cultural resources technical report in compliance with state and federal regulations and State Water Resources Control Board. Scope included a cultural

resource records search, review of historic maps and aerials, and assistance with the preparation of a technical report. Work performed for Lake Morena Oak Shores Mutual Water Company and Lake Morena Views Mutual Water Company as a subconsultant to NV5.

Shady View Residential Project Environmental Impact Report. Cultural Resource Specialist for a housing development project in the City of Chino Hills in San Bernardino County. The project involves the development of 159 single-family homes, open space and recreational amenities, and associated street, utility/infrastructure, and drainage improvements. Assisted in the preparation of the technical report in compliance with state and federal regulations. Project scope included a cultural resource records search, review of historic maps and aerials, field survey, and preparation of a technical report. Work performed for the City of Chino Hills.

California Crossings. Cultural Resource Specialist for a 29-acre industrial development in Otay Mesa, San Diego County. Conducted a cultural resources study in support of biological mitigation measures (burrowing owl habitat creation). Prepared an archaeological resources assessment in compliance with state and federal regulations. Scope included a cultural resources records search, review of historic maps and aerials, and preparation of a technical report. Work performed for Sudberry Development, Inc. with County of San Diego as the lead agency.

Oceanside Mission Basin Groundwater Purification Facility Well Expansion and Brine Minimization Design. Cultural Resource Specialist for a proposed groundwater wells and brine minimization project to improve water production at an existing groundwater purification facility in the City of Oceanside, San Diego County. Assisted with the preparation of the cultural resources technical report in compliance with state and federal regulations. Project scope included a cultural resources records search, tribal outreach, field survey, monitoring of geotechnical borings, preparation of a constraints memo, and preparation of a technical report. Work performed for the City of Oceanside Water Utilities Department as a subconsultant to GHD, Inc.

611 Island Ave Residential Tower. Cultural Resource Specialist for a residential tower project in the downtown area of the City of San Diego. The project plans include incorporating the existing historic façade into the new 32-story building. Assisted with the preparation of an archaeological and historic resources assessment in compliance with CEQA. Scope included a cultural resource records search, review of historic maps and aerials, and preparation of a technical report with a sensitivity assessment. Work performed for Cresleigh Homes.

EMWD Quail Valley III Regional Water Tank Environmental Consulting. Cultural Resource Specialist for a new water tank and associated piping and facilities in Riverside County. Prepared the technical report to summarize a records search, Native American outreach, archaeological survey, and research into the historic land uses of the project lands. Work performed for Pulte Group, with Eastern Municipal Water District as the CEQA lead agency.

Cactus II Feeder Pipeline Biological and Cultural Construction Monitoring. Cultural Resource Specialist for construction monitoring of the installation of a sewer line and associated facilities. Work performed for Eastern Municipal Water District.

Pasadena Water & Power Sunset Reservoir Replacement Historical Resources Evaluation. Cultural Resource Specialist for a reservoir replacement project in the City of Pasadena. Prepared a cultural resources technical analysis to support an EIR and provided support to the City of Pasadena for tribal consultation. Work performed as a subconsultant to Kennedy Jenks, with the City of Pasadena as the lead agency under CEQA.

Athletic Facility Borings Cultural Resources Monitoring. Cultural Resource Specialist for a cultural resource monitoring program in support of the proposed project on the Palomar College San Marcos Campus, San Diego County. Provided monitoring of ground disturbing activities in compliance with CEQA, resulting in the completion of a cultural resources monitoring letter report.

Arrow 32N Residential. Senior Cultural Resource Specialist for a cultural resources study in support of the proposed Project in the City of Upland, San Bernardino County. Co-authored an archaeological technical report and assisted with a historic resources assessment report in compliance with Section 106 and CEQA. Scope included a cultural resources records search, review of historic maps and aerials, preparation of a technical report and evaluation of historic resources for inclusion to the NRHP and CRHR.

Garland Battery Energy Storage System. Senior Cultural Resource Specialist for a cultural resources study in support of the proposed Project in the County of Los Angeles. Prepared an archaeological resources assessment and provided monitoring for all ground disturbing activities a in compliance with CEQA. Scope included a cultural resources records search, review of historic maps and aerials, pedestrian survey, preparation of a technical report, monitoring, and the preparation of a monitoring report.

Gentlemen:

In accordance with your request, we have performed a geotechnical investigation at the subject site. We are pleased to present this report summarizing the conclusions and recommendations developed from our investigation.

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

1.0 EXECUTIVE SUMMARY

Presented below is a brief summary of the conclusions and recommendations of this investigation. Since this summary is not all inclusive, it should be read in complete context with the entire report.

Geotechnical Design Considerations

- The results of the liquefaction evaluation indicate that some of the on-site soils are susceptible to liquefaction during a major seismic event. Based on the liquefaction evaluation, total dynamic settlements ranging from 2.1± to 2.6± inches could occur at the site during the design seismic event concurrent with historically high groundwater levels.
- Based on the predicted total settlements, the dynamic differential settlements are expected to be on the order of 1.3± inches.
- Undocumented fill soils were encountered at most of the boring locations extending to depths of 2½ to 4½± feet below the existing site grades. The near surface native alluvial soils are variable in composition and loose.
- Remedial grading will be required to remove and replace the undocumented fill soils, and a portion of the underlying compressible native alluvial soils, as compacted structural fill.

Site Preparation

- Demolition of the existing structures and any associated improvements will be necessary to facilitate construction of the new building. Demolition procedures should include all foundations, floor slabs, utilities, the existing pavements, any septic systems, and any other subsurface improvements that will not remain in place for use with the new development. Debris resultant from demolition activities should be disposed of off-site. Alternatively, concrete and asphalt debris may be crushed to a maximum 2-inch particle size and re used in structural fills.
- Initial site preparation should include stripping of the existing grass, trees, and weed growth present in the landscape planter areas. Stripping should also include removal of any tree root masses.
- Remedial grading is recommended to be performed within the proposed building pad area. The excavation should extend to a depth of at least 5 feet below existing grade, and to a depth of at least 4 feet below proposed building pad subgrade elevation. Within the foundation influence zones, the overexcavation should extend to a depth of at least 3 feet below proposed foundation bearing grade. The overexcavation should also extend to a depth sufficient to remove all of the existing artificial fill soils (and any soils disturbed during demolition) from the proposed building pad area.
- After the overexcavation has been completed, the resulting subgrade soils should be evaluated by the geotechnical engineer to identify any additional soils that should be overexcavated. The resulting subgrade should then be scarified to a depth of 12 inches, and moisture conditioned or air dried to a moisture content of 0 to 4 percent above optimum. The previously excavated soils may then be replaced as compacted structural fill.
- The new parking area subgrade soils are recommended to be scarified to a depth of 12± inches, thoroughly moisture conditioned and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

Building Foundations

- Conventional shallow foundations, supported in newly placed compacted fill.
- 2,500 lbs/ft^2 maximum allowable soil bearing pressure.
- Reinforcement consisting of at least six (6) No. 5 rebars (3 top and 3 bottom) in strip footings due to the presence of potentially liquefiable soils. Additional reinforcement may be necessary for structural considerations.

Building Floor Slabs

- Conventional Slabs-on-Grade, 6 inches thick.
- Modulus of Subgrade Reaction: k = 125 psi/in
- Reinforcement consisting of No. 3 rebars at 18 inches on center in both directions due to the presence of liquefiable soils. The actual floor slab reinforcement should be determined by the structural engineer, based on the imposed slab loading.

2.0 SCOPE OF SERVICES

The scope of services performed for this project was in accordance with our Proposal No. 21P145, dated February 4, 2021. The scope of services included a visual site reconnaissance, subsurface exploration, field and laboratory testing, and geotechnical engineering analysis to provide criteria for preparing the design of the building foundations, building floor slab, and parking lot pavements along with site preparation recommendations and construction considerations for the proposed development. Based on the location of this site, this investigation also included a site-specific liquefaction evaluation. The evaluation of the environmental aspects of this site was beyond the scope of services for this geotechnical investigation.

3.0 SITE AND PROJECT DESCRIPTION

3.1 Site Conditions

The subject site consists of several parcels located on the north side of Stewart and Gray Road, approximately 160 feet west of Woodruff Avenue in Downey, California. The parcels are referenced by the street addresses of 9300, 9350 and 9400 Hall Road, and 9301 and 9399 Stewart and Gray Road. The site is bounded to the north and northeast by Hall Road, to the east and west by commercial/industrial developments, and to the south by Stewart and Gray Road. The general location of the site is illustrated on the Site Location Map, included as Plate 1 of this report.

The overall site is an irregular shaped property, approximately 28.97 acres in size. The site is presently developed with several separate commercial/industrial businesses. The existing facilities include four (4) buildings ranging in size from 7,000 to 235,000± ft² in size. The two largest buildings are located in the eastern and western portions of the property. The two smaller buildings are located in the central portion of the property. The buildings are surrounded by asphaltic concrete pavement for automobile and truck traffic, with areas of Portland cement concrete pavement in some of the loading dock areas. The asphaltic concrete pavements are in poor condition with moderate to severe cracking throughout. Limited areas of landscaped planters with trees are present in the northern portion of the site.

Detailed topographic information was not available at the time of this report. Based on elevations obtained from Google Earth and visual observations made at the time of the subsurface investigation, the site slopes gently to the south at a gradient of less than 1± percent.

3.2 Proposed Development

A conceptual site plan was provided to our office by the client. Based on this plan, the site will be developed with one (1) new commercial/industrial building, 512,160± ft^2 in size, located in the central area of the site. Dock-high doors will be constructed along a portion of the east and west building walls. The building is expected to be surrounded by asphaltic concrete pavements in the parking and drive areas, Portland cement concrete pavements in the truck court areas, and limited areas of concrete flatwork and landscape planters throughout.

Detailed structural information has not been provided. It is assumed that the new building will be a single-story structure of tilt-up concrete construction, supported on a conventional shallow foundation system with a concrete slab-on-grade floor. Based on the assumed construction, maximum column and wall loads are expected to be on the order of 100 kips and 4 to 7 kips per linear foot, respectively.

No significant amounts of below grade construction, such as basements or crawl spaces, are expected to be included in the proposed development. Based on the assumed topography, cuts and fills of up to 1 to 2± feet are expected to be necessary to achieve the proposed site grades.

4.0 SUBSURFACE EXPLORATION

4.1 Scope of Exploration/Sampling Methods

The subsurface exploration conducted for this project consisted of eight (8) borings advanced to depths of 10 to 50± feet below the existing site grades. Two of these borings were advanced to a depth of 50± feet as a part of the liquefaction evaluation. In addition to the borings, four (4) Cone Penetration Test (CPT) soundings were advanced to depths of 50± feet at the site as part of the liquefaction evaluation. All of the borings and CPT soundings were logged during drilling by a member of our staff.

Hollow Stem Auger Borings

The borings were advanced with hollow-stem augers, by a conventional truck-mounted drilling rig. Representative bulk and relatively undisturbed soil samples were taken during drilling. Relatively undisturbed soil samples were taken with a split barrel "California Sampler" containing a series of one inch long, 2.416± inch diameter brass rings. This sampling method is described in ASTM Test Method D-3550. Samples were also taken using a 1.4± inch inside diameter split spoon sampler, in general accordance with ASTM D-1586. Both of these samplers are driven into the ground with successive blows of a 140-pound weight falling 30 inches. The blow counts obtained during driving are recorded for further analysis. Bulk samples were collected in plastic bags to retain their original moisture content. The relatively undisturbed ring samples were placed in molded plastic sleeves that were then sealed and transported to our laboratory.

Cone Penetration Test (CPT) Soundings

The CPT soundings were performed by Kehoe Testing and Engineering (KTE) under the supervision of an SCG engineer. The cone system used for this project was manufactured by Vertek. The CPT soundings were performed in general accordance with ASTM standards (D-5778). The cone penetrometers were pushed using 30-ton CPT rig. The cones used during the program recorded the cone resistance, sleeve friction, and dynamic core pressure at 2.5-centimeter depth intervals. Both of the CPT soundings were advanced to depths of 100± feet. A more complete description of the CPT program as well as the results of the data interpretation are provided in the report prepared by KTE, enclosed in Appendix F of this report. The CPT soundings do not result in any recovered soil samples. However, correlations have been developed that utilize the cone resistance and the sleeve friction to estimate the soil type that is present at each 2.5-centimeter interval in the subsurface profile. These soil classifications are presented graphically in the CPT report, dated May 4, 2021, enclosed in Appendix F. CPT Data obtained during the geotechnical feasibility study is also presented in a separate report prepared by KTE, dated March 20, 2019, enclosed in Appendix F of this report.

The data generated by the cone penetrometer equipment has been reduced using CPeT-IT, V2.0, published by Geologismiki Geotechnical Software. The CPeT-IT program output as well as more

details regarding the interpretation procedure are presented a report prepared by KTE, which is provided in Appendix F of this report.

General

Based on information provided by the client and the project environmental consultant, we understand that the subject site is an environmentally sensitive area. Therefore, the cuttings generated by the drilling and sampling activities were contained within 55-gallon drums and transported to the three areas of the site for holding. In addition, the boreholes were backfilled with bentonite grout.

The approximate locations of the borings and CPT soundings are indicated on the Boring and CPT Location Plan, included as Plate 2 in Appendix A of this report. The Boring Logs, which illustrate the conditions encountered at the boring locations, as well as the results of some of the laboratory testing, are included in Appendix B. The results of the CPT soundings are presented in two reports prepared by KTE, included in Appendix F of this report.

4.2 Geotechnical Conditions

Pavements

Asphaltic concrete pavements were encountered at the ground surface of all boring locations, except Boring No. B-5. The pavement sections generally consist of 3 to 8± inches of asphalt, underlain by 2 to 6± inches of aggregate base. Portland cement concrete, 7± inches thick, was encountered at the ground surface of Boring No. B-5.

Boring No. B-8 encountered multiple layers of asphaltic concrete separated by layers of soil or aggregate base. Asphaltic concrete was encountered at the ground surface, approximately 4± inches thick, directly underlain by 2± inches of soil. Beneath the soil, another 2± inch-thick layer of asphalt was encountered, underlain by 3± inches of aggregate base. Beneath the base layer, a third layer of asphaltic concrete was present, 3±-inches-thick.

Artificial Fill

Artificial fill soils were encountered beneath the pavements at all of the boring locations, except Boring No. B-6. The fill soils extend to depths of 2½ to 4½± feet below ground surface, at the boring locations where fill soils were encountered. The fill soils generally consist of loose to medium dense silty fine sands and fine sands. The fill soils possess a disturbed and mottled appearance, resulting in their classification as artificial fill.

Alluvium

Native alluvium was encountered beneath the pavements at Boring No. B-6 and beneath the fill soils at all of the other boring locations, extending to at least the maximum depth explored of 50± feet below ground surface. The alluvial soils encountered in the upper 8 to 17± feet generally consist of loose silty fine sands with occasional soft to stiff fine sandy clay layers and stiff to very

stiff clayey silt layers. At greater depths, the native alluvial soils predominately consist of loose to medium dense silty sands with interbedded layers of medium dense fine sands and sandy silts. Medium stiff to very stiff silty clay and clayey silt layers were also encountered at Boring Nos. B-4, between depths of 37± and 47± feet. Most of the alluvial soils possess trace to little iron oxide staining and calcareous veining and nodules were observed in some of the samples.

Groundwater

Free water was not encountered during drilling of any of the borings. Based on the lack of any water within the borings, and the moisture contents of the recovered soil samples, the static groundwater table is considered to have existed at a depth in excess of 50± feet at the time of the subsurface exploration.

As part of our research, we reviewed available groundwater data in order to determine the historic high groundwater level for the site. The primary reference used to determine the historic groundwater depths in this area is the California Geological Survey (CGS) Seismic Hazard Zone Report (037) for the Whittier 7.5-Minute Quadrangle, which indicates that the historic high groundwater level for the site is about 7± feet below the ground surface.

Recent water level data was obtained from the California State Water Resources Control Board, GeoTracker, website, https://geotracker.waterboards.ca.gov/. Several monitoring wells on record are located within the subject site. Water level readings within these monitoring wells indicate a high groundwater level of 81± feet below the ground surface in December 2020.

5.0 LABORATORY TESTING

The soil samples recovered from the subsurface exploration were returned to our laboratory for further testing to determine selected physical and engineering properties of the soils. The tests are briefly discussed below. It should be noted that the test results are specific to the actual samples tested, and variations could be expected at other locations and depths.

Classification

All recovered soil samples were classified using the Unified Soil Classification System (USCS), in accordance with ASTM D-2488. Field identifications were then supplemented with additional visual classifications and/or by laboratory testing. The USCS classifications are shown on the Boring Logs and are periodically referenced throughout this report.

Dry Density and Moisture Content

The density has been determined for selected relatively undisturbed ring samples. These densities were determined in general accordance with the method presented in ASTM D-2937. The results are recorded as dry unit weight in pounds per cubic foot. The moisture contents are determined in accordance with ASTM D-2216, and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

Consolidation

Selected soil samples have been tested to determine their consolidation potential, in accordance with ASTM D-2435. The testing apparatus is designed to accept either natural or remolded samples in a one-inch high ring, approximately 2.416 inches in diameter. Each sample is then loaded incrementally in a geometric progression and the resulting deflection is recorded at selected time intervals. Porous stones are in contact with the top and bottom of the sample to permit the addition or release of pore water. The samples are typically inundated with water at an intermediate load to determine their potential for collapse or heave. The results of the consolidation testing are plotted on Plates C-1 through C-8 in Appendix C of this report.

Maximum Dry Density and Optimum Moisture Content

Two (2) representative bulk samples were tested for their maximum dry density and optimum moisture content. The results were obtained using the Modified Proctor procedure, per ASTM D-1557 and is presented on Plates C-9 and C-10 in Appendix C of this report. This test is generally used for comparison with the in-situ densities of undisturbed field samples, and for later compaction testing. Additional testing of other soil types or soil mixes may be necessary at a later date.

Grain Size Analysis

Limited grain size analyses have been performed on several selected samples, in accordance with ASTM D-1140. These samples were washed over a #200 sieve to determine the percentage of

fine-grained material in each sample, which is defined as the material which passes the #200 sieve. The weight of the portion of the sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of these laboratory tests are shown on the attached boring logs.

Expansion Index

The expansion potential of the on-site soils was determined in general accordance with the California Building Code (CBC). The testing apparatus is designed to accept a 4-inch diameter, 1-inch high, remolded sample. The sample is initially remolded to 50± 1 percent saturation and then loaded with a surcharge equivalent to 144 pounds per square foot. The sample is then inundated with water, and allowed to swell against the surcharge. The resultant swell or consolidation is recorded after a 24-hour period. The results of the EI testing are as follows:

Sample Identification	Expansion Index	Expansive Potential
B-1 @ 0 to 5 feet	4	Very Low

Soluble Sulfates

Representative samples of the near-surface soils were submitted to a subcontracted analytical laboratory for determination of soluble sulfate content. Soluble sulfates are naturally present in soils, and if the concentration is high enough, can result in degradation of concrete which comes into contact with these soils. The results of the soluble sulfate testing are presented below, and are discussed further in a subsequent section of this report.

Sample Identification	Soluble Sulfates (%)	ACI Classification
B-1 @ 0 to 5 feet	0.004	Not Applicable (S0)
B-7 @ 0 to 5 feet	0.005	Not Applicable (S0)

Corrosivity Testing

Representative bulk samples of the near-surface soils were submitted to a subcontracted analytical laboratory for determination of electrical resistivity, pH, and chloride concentrations. The resistivity of the soils is a measure of their potential to attack buried metal improvements such as utility lines. The results of the resistivity and pH testing are presented below:

Sample Identification	Resistivity (ohm-cm)	pH	Chlorides (mg/kg)	Nitrates (mg/kg)
B-1 @ 0 to 5 feet	5,200	7.8	8.7	19
B-7 @ 0 to 5 feet	4,800	7.6	7.1	12

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of our review, field exploration, laboratory testing and geotechnical analysis, the proposed development is considered feasible from a geotechnical standpoint. The recommendations contained in this report should be taken into the design, construction, and grading considerations.

The recommendations are contingent upon all grading and foundation construction activities being monitored by the geotechnical engineer of record. The recommendations are provided with the assumption that an adequate program of client consultation, construction monitoring, and testing will be performed during the final design and construction phases to verify compliance with these recommendations. Maintaining Southern California Geotechnical, Inc., (SCG) as the geotechnical consultant from the beginning to the end of the project will provide continuity of services. The geotechnical engineering firm providing testing and observation services shall assume the responsibility of Geotechnical Engineer of Record.

The Grading Guide Specifications, included as Appendix D, should be considered part of this report, and should be incorporated into the project specifications. The contractor and/or owner of the development should bring to the attention of the geotechnical engineer any conditions that differ from those stated in this report, or which may be detrimental for the development.

6.1 Seismic Design Considerations

The subject site is located in an area which is subject to strong ground motions due to earthquakes. The performance of a site-specific seismic hazards analysis was beyond the scope of this investigation. However, numerous faults capable of producing significant ground motions are located near the subject site. Due to economic considerations, it is not generally considered reasonable to design a structure that is not susceptible to earthquake damage. Therefore, significant damage to structures may be unavoidable during large earthquakes. The proposed structure should, however, be designed to resist structural collapse and thereby provide reasonable protection from serious injury, catastrophic property damage and loss of life.

Faulting and Seismicity

Research of available maps indicates that the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, SCG did not identify any evidence of faulting during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered to be low.

Seismic Design Parameters

The California Building Code (CBC) provides procedures for earthquake resistant structural design that include considerations for on-site soil conditions, occupancy, and the configuration of the structure including the structural system and height. The seismic design parameters presented

below are based on the soil profile and the proximity of known faults with respect to the subject site.

Based on standards in place at the time of this report, the proposed development is expected to be designed in accordance with the requirements of the 2019 edition of the California Building Code (CBC), which was adopted on January 1, 2020.

The 2019 CBC Seismic Design Parameters have been generated using the SEAOC/OSHPD Seismic Design Maps Tool, a web-based software application available at the website www.seismicmaps.org. This software application calculates seismic design parameters in accordance with several building code reference documents, including ASCE 7-16, upon which the 2019 CBC is based. The application utilizes a database of risk-targeted maximum considered earthquake (MCE_R) site accelerations at 0.01-degree intervals for each of the code documents. The tables below were created using data obtained from the application. The output generated from this program is included as Plate E-1 in Appendix E of this report.

The 2019 CBC requires that a site-specific ground motion study be performed in accordance with Section 11.4.8 of ASCE 7-16 for Site Class D sites with a mapped S_1 value greater than 0.2. However, Section 11.4.8 of ASCE 7-16 also indicates an exception to the requirement for a site-specific ground motion hazard analysis for certain structures on Site Class D sites. The commentary for Section 11 of ASCE 7-16 (Page 534 of Section C11 of ASCE 7-16) indicates that "In general, this exception effectively limits the requirements for site-specific hazard analysis to very tall and or flexible structures at Site Class D sites." **Based on our understanding of the proposed development, the seismic design parameters presented below were calculated assuming that the exception in Section 11.4.8 applies to the proposed building proposed for this site. However, the structural engineer should verify that this exception is applicable to the proposed building.** Based on the exception, the spectral response accelerations presented below were calculated using the site coefficients (F_a and F_v) from Tables 1613.2.3(1) and 1613.2.3(2) presented in Section 16.4.4 of the 2019 CBC.

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter		Value
Mapped Spectral Acceleration at 0.2 sec Period	S_S	1.680
Mapped Spectral Acceleration at 1.0 sec Period	S_1	0.603
Site Class	---	D*
Site Modified Spectral Acceleration at 0.2 sec Period	S_{MS}	1.680
Site Modified Spectral Acceleration at 1.0 sec Period	S_{M1}	1.025
Design Spectral Acceleration at 0.2 sec Period	S_{DS}	1.120
Design Spectral Acceleration at 1.0 sec Period	S_{D1}	0.683

*The 2019 CBC requires that Site Class F be assigned to any profile containing soils vulnerable to potential failure or collapse under seismic loading, such as liquefiable soils. For Site Class F, the site *coefficients* are to be determined in accordance with Section 11.4.7 of ASCE 7-16. However, Section 20.3.1 of ASCE 7-16 indicates that for sites with structures having a fundamental period of vibration equal to or less than 0.5 seconds, the site coefficient factors (F_a and F_v) may be determined using the standard procedures. The seismic design parameters tabulated above were calculated using the site coefficient factors for Site Class D, assuming that the fundamental period of the structure is less than 0.5 seconds. However, the results of the liquefaction evaluation indicate that the

subject site is underlain by potentially liquefiable soils. Therefore, if the proposed building has a fundamental period greater than 0.5 seconds, a site-specific seismic hazard analysis will be required and additional subsurface exploration will be necessary.

It should be noted that the site coefficient F_v and the parameters S_{M1} and S_{D1} were not included in the SEAOC/OSHPD Seismic Design Maps Tool output for the 2019 CBC. We calculated these parameters-based on Table 1613.2.3(2) in Section 16.4.4 of the 2019 CBC using the value of S_1 obtained from the Seismic Design Maps Tool, assuming that a site-specific ground motion hazards analysis is not required for the proposed building at this site.

Ground Motion Parameters

For the purposes of the liquefaction analysis performed for this study, we utilized a site acceleration consistent with maximum considered earthquake ground motions, as required by the 2019 CBC. The peak ground acceleration (PGA) was determined in accordance with Section 11.8.3 of ASCE 7-16. The parameter PGA_M is the maximum considered earthquake geometric mean (MCE_G) PGA, multiplied by the appropriate site coefficient from Table 11.8-1 of ASCE 7-16. The web-based software application SEAOC/OSHPD Seismic Design Maps Tool (described in the previous section) was used to determine PGA_M, which is 0.791g. A portion of the program output is included as Plate E-1 of this report. An associated earthquake magnitude was obtained from the USGS Unified Hazard Tool, Interactive Deaggregation application available on the USGS website. The deaggregated mean magnitude is 6.88, based on the peak ground acceleration and soil classification D.

Liquefaction

Research of the Seismic Hazards Zones Map for the Whittier Quadrangle, published by the California Geological Survey (CGS) indicates that the site subject site is located within a liquefaction hazard zone. Based on this mapping, and the subsurface conditions encountered at the borings, the scope of this investigation included a detailed liquefaction evaluation in order to determine the site-specific liquefaction potential.

Liquefaction is the loss of strength in generally cohesionless, saturated soils when the pore-water pressure induced in the soil by a seismic event becomes equal to or exceeds the overburden pressure. The primary factors which influence the potential for liquefaction include groundwater table elevation, soil type and plasticity characteristics, relative density of the soil, initial confining pressure, and intensity and duration of ground shaking. The depth within which the occurrence of liquefaction may impact surface improvements is generally identified as the upper 50 feet below the existing ground surface. Liquefaction potential is greater in saturated, loose, poorly graded fine sands with a mean (d_{50}) grain size in the range of 0.075 to 0.2 mm (Seed and Idriss, 1971). Non-sensitive clayey (cohesive) soils which possess a plasticity index of at least 18 (Bray and Sancio, 2006) are generally not considered to be susceptible to liquefaction, nor are those soils which are above the historic static groundwater table.

The liquefaction analysis was conducted in accordance with the requirements of Special Publication 117A (CDMG, 2008), and currently accepted practice (SCEC, 1997). The liquefaction potential of the subject site was evaluated using the empirical method developed by Boulanger and Idriss (Boulanger and Idriss, 2008, 2014). This method predicts the earthquake-induced liquefaction potential of the site based on a given design earthquake magnitude and peak ground acceleration at the subject site. This procedure essentially compares the cyclic resistance ratio

(CRR) [the cyclic stress ratio required to induce liquefaction for a cohesionless soil stratum at a given depth] with the earthquake-induced cyclic stress ratio (CSR) at that depth from a specified design earthquake (defined by a peak ground surface acceleration and an associated earthquake moment magnitude). CRR is determined as a function of the corrected CPT tip stress, q_{c1N-cs}. The factor of safety against liquefaction is defined as CRR/CSR. Based on Special Publication 117A, a factor of safety of at least 1.3 is required in order to demonstrate that a given soil stratum is non-liquefiable. Additionally, in accordance with Special Publication 117A, clayey soils which do not meet the criteria for liquefiable soils defined by Bray and Sancio (2006), loose soils with a plasticity index (PI) less than 12 and moisture content greater than 85 percent of the liquid limit, are considered to be insusceptible to liquefaction. Non-sensitive soils with a PI greater than 18 are also considered non-liquefiable.

As part of the liquefaction evaluation, CPT-1 through CPT-4, inclusive, were extended to depths of 50± feet. Boring Nos. B-1 and B-4 were also drilled to a depth of 50± feet in order to provide physical samples for further analysis and support of the CPT data. The liquefaction potential for the on-site soils was evaluated the computer program CLiq V3.0.3.2, which was developed by Geologismiki, copyright 2007. The analysis is based on the method derived by Boulanger and Idriss, 2014. The liquefaction potential of the site was analyzed utilizing a PGA_M of 0.791g for a magnitude 6.88 seismic event. The historic high groundwater table of 7± feet was used to model the groundwater conditions for the site during the design-level earthquake. The potential settlements that could occur as a result of liquefaction for each of the potentially liquefiable layers was calculated. A copy of the program output is presented in Appendix G of this report. It should be noted that the mapped historic high groundwater level used in the liquefaction evaluation is very conservative with respect to recent groundwater data for the site which is readily available at www.geotracker.ca.gov (discussed in Section 4.2 of this report).

Conclusions and Recommendations

The results of the liquefaction analysis have identified potentially liquefiable soils at all four (4) of the CPT soundings performed at the site. Soils which are located above the historic groundwater table or possess factors of safety of at least 1.3 are considered non-liquefiable. Several clayey strata encountered between depths of 7 and 50± feet are considered to be non-liquefiable due to their cohesive characteristics, as interpreted by the CPT, and based on the results of Atterberg Limits testing. Settlement analyses were performed for each of the potentially liquefiable strata. The total dynamic settlement for each of the CPT locations, based on the results of the dynamic settlement analyses are presented below:

- CPT-1: 2.14± inches
- CPT-2: 2.24± inches
- CPT-3: 2.28± inches
- CPT-4: 2.59± inches

In accordance with Special Publication 117A, the associated differential settlements are considered to be about ½ of the total settlement. Therefore, differential settlements of up to 1.3± inches are expected to occur during the design-level seismic event. The estimated differential settlement could be assumed to occur across a distance of 50 feet, indicating a maximum angular distortion of about 0.002± inches per inch.

Based on our understanding of the proposed development, it is considered feasible to support the proposed structure on shallow foundations. Such a foundation system can be designed to resist the effects of the anticipated differential settlements, to the extent that the structure would not catastrophically fail. Designing the proposed structure to remain completely undamaged during a major seismic event is not considered to be economically feasible. Based on this understanding, the use of a shallow foundation system is considered to be the most economical means of supporting the proposed structure.

In order to support the proposed building on shallow foundations (such as spread footings) the structural engineer should verify that the structure would not catastrophically fail due to the predicted dynamic differential settlements. Any utility connections to the structure should be designed to withstand the estimated differential settlements. It should also be noted that minor to moderate repairs, including re-leveling, restoration of utility connections, repair of damaged drywall and stucco, etc., would likely be required after occurrence of the liquefaction-induced settlements.

The use of a shallow foundation system, as described in this report, is typical for buildings of the type planned for this site, where they are underlain by the extent of liquefiable soils encountered at this site. The post-liquefaction damage that could occur within the building proposed for this site will also be typical of similar buildings in the vicinity of this project. However, if the owner determines that this level of potential damage is not acceptable, other geotechnical and structural options are available, including the use of ground improvement, deep foundations, or a mat foundation.

6.2 Geotechnical Design Considerations

General

Artificial fill soils were encountered at most of the boring locations, extending to depths of 2½ to 4½± feet below the existing site grades. The fill soils generally consist of loose sands and silty sands. Based on their relatively low strengths, disturbed appearance, and the lack of any documentation regarding the placement or compaction of the fill soils, the existing fill materials are considered to represent undocumented fill soils.

The fill soils are underlain by native alluvium consisting of loose sands and silty sands with occasional sandy clay and sandy silt layers. The results of consolidation testing on samples of on-site soils from the upper 10± feet indicate that these soils are subject to minor consolidation settlement when loaded. Based on the presence of undocumented fill soils and loose, low strength native alluvium within the foundation influence zones of the proposed building, the near-surface soils, in their present state are not considered suitable to support the foundations and floor slabs of the proposed building. Remedial grading is considered warranted in order to remove the artificial fill soils in their entirety and a portion of the near surface alluvial soils in order to replace these materials as compacted structural fill.

As discussed in the previous section of this report, potentially liquefiable soils were identified at this site. The presence of the recommended layer of newly placed compacted structural fill above these liquefiable soils will help to reduce any surface manifestations that could occur as a result of liquefaction. The foundation design recommendations presented in the subsequent sections of this report also contain recommendations to provide additional rigidity in order to reduce the potential effects of differential settlement that could occur as a result of liquefaction.

Settlement

The recommended remedial grading will remove the existing undocumented fill soils and a portion of the near surface alluvium and replace these materials as compacted structural fill. The native soils that will remain in place below the recommended depth of overexcavation will not be subject to significant load increases from the foundations of the new building. Provided that the recommended remedial grading is completed, the post-construction static settlement of the proposed building is expected to be within tolerable limits.

Soluble Sulfates

The results of the soluble sulfate testing indicate that the selected samples of the on-site soils contain concentrations of soluble sulfates that correspond to Class S0 with respect to the American Concrete Institute (ACI) Publication 318-14 Building Code Requirements for Structural Concrete and Commentary, Section 4.3. Therefore, specialized concrete mix designs are not considered to be necessary, with regard to sulfate protection purposes. It is, however, recommended that additional soluble sulfate testing be conducted at the completion of rough grading to verify the soluble sulfate concentrations of the soils which are present at pad grade within the building area.

Expansion

The near-surface soils at this site generally consist of silty sands, fine sands, and occasional sandy silts. The results of expansion index testing indicate that the tested soils possess a very low expansive potential (EI = 4). Therefore, no design considerations related to expansive soils are considered warranted for this site. It is recommended that expansion index testing be conducted at the completion of rough grading to verify the expansion potential of the as-graded building pad.

Corrosion Potential

The results of the electrical resistivity and pH testing indicate that the tested samples of the near-surface soils have resistivity values of 4,800 and 5,200 ohm-cm, and pH values of 7.6 and 7.8. These test results have been evaluated in accordance with guidelines published by the Ductile Iron Pipe Research Association (DIPRA). The DIPRA guidelines consist of a point system by which characteristics of the soils are used to quantify the corrosivity characteristics of the site. Resistivity and pH are two of the five factors that enter into the evaluation procedure. Redox potential, relative soil moisture content and sulfides are also included. Although sulfide testing was not part of the scope of services for this project, we have evaluated the corrosivity characteristics of the on-site soils using resistivity, pH and moisture content. Based on these factors, and utilizing the DIPRA procedure the on-site soils are not considered to be corrosive to ductile iron pipe. It should

be noted that SCG does not practice in the field of corrosion engineering, and therefore, the client may also wish to contact a corrosion engineer to provide a more thorough evaluation.

Relatively low concentrations of chlorides, 7.1 and 8.7 mg/kg, were detected in the samples submitted for corrosivity testing. In general, soils possessing chloride concentrations in excess of 500 parts per million (ppm) are considered to be corrosive with respect to steel reinforcement within reinforced concrete. Based on the relatively low chloride concentration in the tested sample, the site is considered to have a C1 chloride exposure in accordance with the American Concrete Institute (ACI) Publication 318 Building Code Requirements for Structural Concrete and Commentary. Therefore, a specialized concrete mix design for protection against chloride exposure is not considered warranted.

Nitrates present in soil can be corrosive to copper tubing at concentrations greater than 50 mg/kg. The tested samples possess nitrate concentrations of 12 and 19 mg/kg. Based on these test results, the on-site soils are not considered to be corrosive to copper pipe with respect to their nitrate concentrations.

Shrinkage/Subsidence

Removal and recompaction of the near surface fill soils and alluvium is estimated to result in an average shrinkage of 7 to 17 percent. Minor ground subsidence is expected to occur in the soils below the zone of removal, due to settlement and machinery working. The subsidence is estimated to be 0.10± feet. This estimate may be used for grading in areas that are underlain by native alluvial soils.

These estimates are based on previous experience and the subsurface conditions encountered at the boring locations. The actual amount of subsidence is expected to be variable and will be dependent on the type of machinery used, repetitions of use, and dynamic effects, all of which are difficult to assess precisely.

The potential shrinkage estimate is based on dry density testing performed on small-diameter samples taken at the boring locations. If a more accurate and precise shrinkage estimate is desired, SCG can perform a shrinkage study involving several excavated test-pits where in-place densities are determined using in-situ testing methods instead of laboratory density testing on small-diameter samples. Please contact SCG for details and a cost estimate regarding a shrinkage study, if desired.

Grading and Foundation Plan Review

No grading or foundation plans were available at the time of this report. It is therefore recommended that we be provided with copies of the preliminary plans, when they become available, for review with regard to the conclusions, recommendations, and assumptions contained within this report.

6.3 Site Grading Recommendations

The grading recommendations presented below are based on the subsurface conditions encountered at the boring locations and our understanding of the proposed development. We recommend that all grading activities be completed in accordance with the Grading Guide Specifications included as Appendix D of this report, unless superseded by site-specific recommendations presented below.

Site Stripping and Demolition

It is anticipated that the existing structures and associated improvements will be demolished. Any existing subsurface improvements that will not remain in place for use with the new development should be removed in their entirety. This should include all foundations, slabs, septic systems, utilities, and any other subsurface improvements associated with the existing structure and associated improvements. Debris resultant from demolition should be disposed of offsite in accordance with any applicable regulations. Alternatively, concrete and asphalt debris may be crushed to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills or it may be crushed and processed into CMB, if desired.

Initial site stripping should also include removal of any surficial vegetation from the site. At the time of drilling, some trees were present in isolated landscape planter areas located in the northern portion of the site. This should include any weeds, grasses, shrubs, and trees. Root masses associated with the trees should be removed in their entirety, and the resultant excavations should be backfilled with compacted structural fill soils. The actual extent of site stripping should be determined in the field by the geotechnical engineer, based on the organic content and stability of the materials encountered.

Treatment of Existing Soils: Building Pad

Remedial grading should be performed within the proposed building area to remove all of the existing undocumented fill materials, which extend to depths of 2½ to 4½± feet at the boring locations. In order to provide more uniform support characteristics for the proposed structure and to remove a portion of the compressible soils from the foundation influence zones, the overexcavation should extend to a depth of at least 5 feet below the existing site grades and to a depth of at least 4 feet below the proposed building pad grades. Within the influence zones of the new foundations, the overexcavation should extend to a depth of at least 3 feet below proposed foundation bearing grade.

The overexcavation areas should extend at least 5 feet beyond the building perimeters and foundations, and to an extent equal to the depth of fill below the new foundations. If the proposed structure incorporates any exterior columns (such as for a canopy or overhang) the overexcavation should also encompass these areas.

Following completion of the overexcavation, the subgrade soils within the building area should be evaluated by the geotechnical engineer to verify their suitability to serve as the structural fill subgrade, as well as to support the foundation loads of the new structure. This evaluation should include proofrolling and probing to identify any soft, loose or otherwise unstable soils that must

be removed. Some localized areas of deeper excavation may be required if additional fill materials or loose, porous, or low-density native soils are encountered at the base of the overexcavation.

Based on the conditions encountered at the exploratory boring locations, very moist soils will be encountered at or near the base of the recommended overexcavation in some areas. Stabilization of the exposed overexcavation subgrade soils may be necessary. Scarification and air drying of these materials may be sufficient to obtain a stable subgrade, but it is expected that an extended period of drying may be required. If highly unstable soils are identified, and/or if the construction schedule does not allow for delays associated with drying, mechanical stabilization, usually consisting of coarse crushed stone or geotextile, will likely be necessary. In this event, the geotechnical engineer should be contacted for supplementary recommendations. Typically, an unstable subgrade can be stabilized using a suitable geotextile fabric, such as Mirafi RS580I, and/or a 12 to 18-inch thick layer of coarse (2 to 4-inch particle size) crushed stone. Crushed asphalt and concrete debris resultant from demolition may be used as a subgrade stabilization material. Other options, including lime or cement treatment are also available. Typically, an unstable subgrade may be stabilized by treating the upper 12 inches of subgrade material with cement to a concentration of 5 percent (by dry weight of soil).

After a suitable overexcavation subgrade has been achieved, the exposed soils should be scarified to a depth of at least 12 inches, thoroughly moisture conditioned, and recompacted. Overexcavation bottoms should be thoroughly moisture conditioned to achieve a moisture content of 0 to 4 percent above the optimum moisture content. The previously excavated soils may then be replaced as compacted structural fill.

Treatment of Existing Soils: Retaining Walls and Site Walls

The existing soils within the areas of proposed retaining and non-retaining site walls should be overexcavated to a depth of at least 3 feet below foundation bearing grade and replaced as compacted structural fill as discussed above for the proposed building pad. Any undocumented fill soils within the foundation areas should be removed in their entirety. The overexcavation areas should extend horizontally beyond the foundation perimeters to a distance equal to the depth of fill below the new foundations. These overexcavation recommendations also apply to any erection pads for tilt-up concrete walls, since these pads are part of the foundation system. The overexcavation subgrade soils should be evaluated by the geotechnical engineer prior to scarifying, moisture conditioning, and recompacting the upper 12 inches of exposed subgrade soils, as discussed for the building area. The previously excavated soils may then be replaced as compacted structural fill. If the recommended lateral and/or vertical extents of overexcavation are not achievable for the retaining walls or site walls, as may occur along the property lines, then additional recommendations including, but not limited to reduced design bearing pressures may be required. Additionally, specialized grading techniques such as slot cutting or shoring may be required in order to facilitate construction.

Treatment of Existing Soils: Flatwork, Parking and Drive Areas

Based on economic considerations, overexcavation of the existing undocumented fill soils and the lower strength, compressible, native alluvium in the new parking and flatwork areas is not considered warranted, with the exception of areas where lower strength or unstable soils are identified by the geotechnical engineer during grading.

Subgrade preparation in the new parking and flatwork areas should initially consist of removal of all soils disturbed during stripping and demolition operations. The geotechnical engineer should then evaluate the subgrade to identify any areas of additional unsuitable soils. The subgrade soils should then be scarified to a depth of 12± inches, moisture conditioned to 0 to 4 percent above optimum, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. Based on the presence of variable strength alluvial soils throughout the site, it is expected that some isolated areas of additional overexcavation may be required to remove zones of lower strength, unsuitable soils.

The grading recommendations presented above for the proposed flatwork, parking and drive areas assume that the owner and/or developer can tolerate minor amounts of settlement within the proposed parking and flatwork areas. The grading recommendations presented above do not mitigate the extent of potentially compressible and low expansive soils and undocumented fill soils in the parking, drive and flatwork areas. As such, some movement settlement and associated pavement distress could occur. Typically, repair of such distressed areas involves significantly lower costs than completely mitigating these soils at the time of construction. If the owner cannot tolerate the risk of such settlements, the parking and drive areas should be overexcavated to a depth of 2 feet below proposed pavement subgrade elevation, with the resulting soils replaced as compacted structural fill.

Fill Placement

- Fill soils should be placed in thin (6± inches), near-horizontal lifts, moisture conditioned to 0 to 4 percent above the optimum moisture content, and compacted.
- On-site soils may be used for fill provided they are cleaned of any debris to the satisfaction of the geotechnical engineer. **Drying of some of the on-site soils may be necessary to achieve a moisture content suitable for recompaction.** Additionally, highly organic material should be stripped from the site.
- All grading and fill placement activities should be completed in accordance with the requirements of the 2019 CBC and the grading code of the city of Downey.
- All new structural fill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Fill soils should be well mixed.
- Compaction tests should be performed periodically by the geotechnical engineer as random verification of compaction and moisture content. These tests are intended to aid the contractor. Since the tests are taken at discrete locations and depths, they may not be indicative of the entire fill and therefore should not relieve the contractor of his responsibility to meet the job specifications.

Imported Structural Fill

All imported structural fill should consist of very low expansive (EI < 50), well graded soils possessing at least 10 percent fines (that portion of the sample passing the No. 200 sieve). Additional specifications for structural fill are presented in the Grading Guide Specifications, included as Appendix D.

Utility Trench Backfill

In general, all utility trench backfill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. As an alternative, a clean sand (minimum Sand Equivalent of 30) may be placed within trenches and compacted in place (jetting or flooding is not recommended). It is recommended that materials in excess of 3 inches in size not be used for utility trench backfill. Compacted trench backfill should conform to the requirements of the local grading code, and more restrictive requirements may be indicated by city of Downey. All utility trench backfills should be witnessed by the geotechnical engineer. The trench backfill soils should be compaction tested where possible; probed and visually evaluated elsewhere.

Utility trenches which parallel a footing, and extending below a 1h:1v plane projected from the outside edge of the footing should be backfilled with structural fill soils, compacted to at least 90 percent of the ASTM D-1557 standard. Pea gravel backfill should not be used for these trenches.

6.4 Construction Considerations

Excavation Considerations

The near surface soils generally consist of sands, silty sands, and sandy silts. These materials will likely be subject to caving within shallow excavations. Where caving occurs within shallow excavations, flattened excavation slopes may be sufficient to provide excavation stability. On a preliminary basis, the inclination of temporary slopes should not exceed 2h:1v. Deeper excavations may require some form of external stabilization such as shoring or bracing. Maintaining adequate moisture content within the near-surface soils will improve excavation stability. All excavation activities on this site should be conducted in accordance with Cal-OSHA regulations.

Moisture Sensitive Subgrade Soils

Most of the near surface soils possess appreciable silt content and may become unstable if exposed to significant moisture infiltration or disturbance by construction traffic. In addition, based on their granular content, some of the on-site soils will also be susceptible to erosion. The site should, therefore, be graded to prevent ponding of surface water and to prevent water from running into excavations.

As noted previously, some of the soils that are expected to be encountered at or slightly below the anticipated overexcavation subgrade elevation possess elevated moisture contents. Based on their silt content, these materials may be subject to significant subgrade instability, especially if exposed to rubber-tire grading equipment. **Therefore, it may be necessary to use track-mounted grading equipment on unstable overexcavation subgrade areas to reduce the potential for "pumping" and/or creating further subgrade instability.**

If the construction schedule dictates that site grading will occur during a period of wet weather, allowances should be made for costs and delays associated with drying the on-site soils or import

of a drier, less moisture sensitive fill material. Grading during wet or cool weather may also increase the depth of overexcavation in the pad area.

Groundwater

Ground water was not encountered during the drilling of any of the borings, which were advanced to depths of 10 to 50± feet below the ground surface. Groundwater is therefore not expected to impact the grading or foundation construction activities.

6.5 Foundation Design and Construction

Based on the preceding grading recommendations, it is assumed that the new building pad will be underlain by structural fill soils used to replace the undocumented fill soils and near-surface alluvial soils. These new structural fill soils are expected to extend to depths of at least 3 feet below proposed foundation bearing grades, underlain by 1± foot of additional soil that has been densified in place. Based on this subsurface profile, and based on the design considerations presented in Section 6.1 of this report, the proposed structure may be supported on conventional shallow foundations.

Foundation Design Parameters

New square and rectangular footings may be designed as follows:

- Maximum, net allowable soil bearing pressure: 2,500 lbs/ft^2.
- Minimum wall/column footing width: 14 inches/24 inches.
- Minimum longitudinal steel reinforcement within strip footings: Six (6) No. 5 rebars (3 top and 3 bottom) in strip footings, due to the presence of potentially liquefiable soils.
- Minimum foundation embedment: 12 inches into suitable structural fill soils, and at least 18 inches below adjacent exterior grade. Interior column footings may be placed immediately beneath the floor slab.
- It is recommended that the perimeter building foundations be continuous across all exterior doorways. Any flatwork adjacent to the exterior doors should be doweled into the perimeter foundations in a manner determined by the structural engineer.

The allowable bearing pressures presented above may be increased by 1/3 when considering short duration wind or seismic loads. The minimum steel reinforcement recommended above is based on standard geotechnical practice. Additional rigidity may be necessary for structural considerations, or to resist the effects of the liquefaction-induced differential settlements, as discussed in Section 6.1. The actual design of the foundations should be determined by the structural engineer.

Foundation Construction

The foundation subgrade soils should be evaluated at the time of overexcavation, as discussed in Section 6.3 of this report. It is further recommended that the foundation subgrade soils be evaluated by the geotechnical engineer immediately prior to steel or concrete placement. Soils suitable for direct foundation support should consist of newly placed structural fill, compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Any unsuitable materials should be removed to a depth of suitable bearing compacted structural fill, with the resulting excavations backfilled with compacted fill soils. As an alternative, lean concrete slurry (500 to 1,500 psi) may be used to backfill such isolated overexcavations.

The foundation subgrade soils should also be properly moisture conditioned to 0 to 4 percent above the Modified Proctor optimum, to a depth of at least 12 inches below bearing grade. Since it is typically not feasible to increase the moisture content of the floor slab and foundation subgrade soils once rough grading has been completed, care should be taken to maintain the moisture content of the building pad subgrade soils throughout the construction process.

Estimated Foundation Settlements

Post-construction total and differential static settlements of shallow foundations designed and constructed in accordance with the previously presented recommendations are estimated to be less than 1.0 and 0.5 inches, respectively. Differential movements are expected to occur over a 30-foot span, thereby resulting in an angular distortion of less than 0.002 inches per inch. These settlements are in addition to the liquefaction-induced settlements previously discussed in Section 6.1 of this report. However, the likelihood of these two settlements combining is considered remote. The static settlements are expected to occur in a relatively short period of time after the building loads being applied to the foundations, during and immediately subsequent to construction. It should be noted that the projected potential dynamic settlement is related to a major seismic event with a return period of about 2,475 years.

Lateral Load Resistance

Lateral load resistance will be developed by a combination of friction acting at the base of foundations and slabs and the passive earth pressure developed by footings below grade. The following friction and passive pressure may be used to resist lateral forces:

- Passive Earth Pressure: 275 lbs/ft^3
- Friction Coefficient: 0.29

These are allowable values, and include a factor of safety. When combining friction and passive resistance, the passive pressure component should be reduced by one-third. These values assume that footings will be poured directly against compacted structural fill. The maximum allowable passive pressure is 2500 lbs/ft^2.

6.6 Floor Slab Design and Construction

Subgrades which will support the new floor slabs should be prepared in accordance with the recommendations contained in the ***Site Grading Recommendations*** section of this report. Based on the anticipated grading which will occur at this site, and based on the design considerations presented in Section 6.1 of this report, the floor of the proposed structure may be constructed as a conventional slab-on-grade supported on newly placed structural fill, extending to a depth of at least 4 feet below proposed finished pad grade. Based on geotechnical considerations, the floor slab may be designed as follows:

- Minimum slab thickness: 6 inches, due to the liquefaction potential of the on-site soils.

- Modulus of Subgrade Reaction: k = 125 psi/in.

- Minimum slab reinforcement: No. 3 bars at 18 inches on-center, in both directions, due to the presence of potentially liquefiable soils at the site. The actual floor slab reinforcement should be determined by the structural engineer, based on the imposed loading, and the liquefaction-induced settlements.

- Slab underlayment: If moisture sensitive floor coverings will be used then minimum slab underlayment should consist of a moisture vapor barrier constructed below the entire slab area where such moisture sensitive floor coverings are expected. The moisture vapor barrier should meet or exceed the Class A rating as defined by ASTM E 1745-97 and have a permeance rating less than 0.01 perms as described in ASTM E 96-95 and ASTM E 154-88. A polyolefin material such as Stego® Wrap Vapor Barrier or equivalent will meet these specifications. The moisture vapor barrier should be properly constructed in accordance with all applicable manufacturer specifications. Given that a rock free subgrade is anticipated and that a capillary break is not required, sand below the barrier is not required. The need for sand and/or the amount of sand above the moisture vapor barrier should be specified by the structural engineer or concrete contractor. The selection of sand above the barrier is not a geotechnical engineering issue and hence outside our purview. Where moisture sensitive floor coverings are not anticipated, the vapor barrier may be eliminated.

- Moisture condition the floor slab subgrade soils to 0 to 4 percent above the Modified Proctor optimum moisture content, to a depth of 12 inches. The moisture content of the floor slab subgrade soils should be verified by the geotechnical engineer within 24 hours prior to concrete placement.

- Proper concrete curing techniques should be utilized to reduce the potential for slab curling or the formation of excessive shrinkage cracks.

The actual design of the floor slabs should be completed by the structural engineer to verify adequate thickness and reinforcement. The steel reinforcement recommendations presented above are based on standard geotechnical practice, given the magnitude of predicted liquefaction-induced settlements, and the structure type proposed for the site. Additional rigidity may be

necessary for structural considerations, or to resist the effects of the liquefaction-induced differential settlements discussed in Section 6.1.

6.7 Retaining Wall Design and Construction

Although not indicated on the site plan, some small (less than 6 feet in height) retaining walls may be required to facilitate the new site grades and in the dock-high area of the building. The parameters recommended for use in the design of these walls are presented below.

Retaining Wall Design Parameters

Based on the soil conditions encountered at the boring locations, the following parameters may be used in the design of new retaining walls for this site. We have provided parameters assuming the use of on-site soils for retaining wall backfill. The near-surface soils generally consist of sands, silty sands, and sandy silts. Based on their classification, silty sand and sandy silt materials are expected to possess a friction angle of at least 29 degrees when compacted to at least 90 percent of the ASTM D-1557 maximum dry density.

If desired, SCG could provide design parameters for an alternative select backfill material behind the retaining walls. The use of select backfill material could result in lower lateral earth pressures. In order to use the design parameters for the imported select fill, this material must be placed within the entire active failure wedge. This wedge is defined as extending from the heel of the retaining wall upwards at an angle of approximately 60° from horizontal. If select backfill material behind the retaining wall is desired, SCG should be contacted for supplementary recommendations.

RETAINING WALL DESIGN PARAMETERS

Design Parameter		Soil Type
		On-site Silty Sands and Sandy Silts
Internal Friction Angle (ϕ)		29°
Unit Weight		125 lbs/ft^3
Equivalent Fluid Pressure:	Active Condition (level backfill)	43 lbs/ft^3
	Active Condition (2h:1v backfill)	73 lbs/ft^3
	At-Rest Condition (level backfill)	65 lbs/ft^3

The walls should be designed using a soil-footing coefficient of friction of 0.29 and an equivalent passive pressure of 275 lbs/ft^3. The structural engineer should incorporate appropriate factors of safety in the design of the retaining walls.

The active earth pressure may be used for the design of retaining walls that do not directly support structures or support soils that in turn support structures and which will be allowed to

deflect. The at-rest earth pressure should be used for walls that will not be allowed to deflect such as those which will support foundation bearing soils, or which will support foundation loads directly.

Where the soils on the toe side of the retaining wall are not covered by a "hard" surface such as a structure or pavement, the upper 1 foot of soil should be neglected when calculating passive resistance due to the potential for the material to become disturbed or degraded during the life of the structure.

Seismic Lateral Earth Pressures

In addition to the lateral earth pressures presented in the previous section, retaining walls which are more than 6 feet in height should be designed for a seismic lateral earth pressure, in accordance with the 2019 CBC. Based on the current site plan, it is not expected that any walls in excess of 6 feet in height will be required for this project. If any such walls are proposed, our office should be contacted for supplementary design recommendations.

Retaining Wall Foundation Design

The retaining wall foundations should be supported within newly placed compacted structural fill, extending to a depth of at least 3 feet below the proposed bearing grade. Foundations to support new retaining walls should be designed in accordance with the general Foundation Design Parameters presented in a previous section of this report.

Backfill Material

On-site sands, silty sands and sandy silts may be used to backfill the retaining walls. All backfill material placed within 3 feet of the back-wall face should have a particle size no greater than 3 inches. The retaining wall backfill materials should be well graded.

It is recommended that a minimum 1-foot thick layer of free-draining granular material (less than 5 percent passing the No. 200 sieve) be placed against the face of the retaining walls. This material should extend from the top of the retaining wall footing to within 1 foot of the ground surface on the back side of the retaining wall. This material should be approved by the geotechnical engineer. In lieu of the 1-foot thick layer of free-draining material, a properly installed prefabricated drainage composite such as the MiraDRAIN 6000XL (or approved equivalent), which is specifically designed for use behind retaining walls, may be used. If the layer of free-draining material is not covered by an impermeable surface, such as a structure or pavement, a 12-inch thick layer of a low permeability soil should be placed over the backfill to reduce surface water migration to the underlying soils. The layer of free draining granular material should be separated from the backfill soils by a suitable geotextile, approved by the geotechnical engineer.

All retaining wall backfill should be placed and compacted under engineering-controlled conditions in the necessary layer thicknesses to ensure an in-place density between 90 and 93 percent of the maximum dry density as determined by the Modified Proctor test (ASTM D1557). Care should be taken to avoid over-compaction of the soils behind the retaining walls, and the use of heavy compaction equipment should be avoided.

Subsurface Drainage

As previously indicated, the retaining wall design parameters are based upon drained backfill conditions. Consequently, some form of permanent drainage system will be necessary in conjunction with the appropriate backfill material. Subsurface drainage may consist of either:

- A weep hole drainage system typically consisting of a series of 4-inch diameter holes in the wall situated slightly above the ground surface elevation on the exposed side of the wall and at an approximate 8-foot on-center spacing. The weep holes should include a 2 cubic foot pocket of open graded gravel, surrounded by an approved geotextile fabric, at each weep hole location.

- A 4-inch diameter perforated pipe surrounded by 2 cubic feet of gravel per linear foot of drain placed behind the wall, above the retaining wall footing. The gravel layer should be wrapped in a suitable geotextile fabric to reduce the potential for migration of fines. The footing drain should be extended to daylight or tied into a storm drainage system.

Weep holes or a footing drain will not be required for building stem walls.

6.8 Pavement Design Parameters

Site preparation in the pavement areas should be completed as previously recommended in the ***Site Grading Recommendations*** section of this report. The subsequent pavement recommendations assume proper drainage and construction monitoring, and are based on either PCA or CALTRANS design parameters for a twenty (20) year design period. However, these designs also assume a routine pavement maintenance program to obtain the anticipated 20-year pavement service life.

Pavement Subgrades

It is anticipated that the new pavements will be primarily supported on a layer of compacted structural fill, consisting of scarified, thoroughly moisture conditioned and recompacted existing soils. The near-surface soils consist of various soil materials including fine sands, silty sands, and fine sandy silts. These soils are considered to possess good pavement support characteristics with estimated R-values ranging from 40 to 50. The subsequent pavement design is therefore based upon an assumed R-value of 40. Any fill material imported to the site should have support characteristics equal to or greater than that of the on-site soils and be placed and compacted under engineering-controlled conditions. It is recommended that R-value testing be performed after completion of rough grading. Depending upon the results of the R-value testing, it may be feasible to use thinner pavement sections in some areas of the site.

Asphaltic Concrete

Presented below are the recommended thicknesses for new flexible pavement structures consisting of asphaltic concrete over a granular base. The pavement designs are based on the traffic indices (TI's) indicated. The client and/or civil engineer should verify that these TI's are representative of the anticipated traffic volumes. If the client and/or civil engineer determine that

the expected traffic volume will exceed the applicable traffic index, we should be contacted for supplementary recommendations. The design traffic indices equate to the following approximate daily traffic volumes over a 20-year design life, assuming six operational traffic days per week.

Traffic Index	No. of Heavy Trucks per Day
4.0	0
5.0	1
6.0	3
7.0	11
8.0	35
9.0	93

For the purpose of the traffic volumes indicated above, a truck is defined as a 5-axle tractor trailer unit with one 8-kip axle and two 32-kip tandem axles. All of the traffic indices allow for 1,000 automobiles per day.

ASPHALT PAVEMENTS (R = 40)					
Materials	**Thickness (inches)**				
	Auto Parking and Auto Drive Lanes (TI = 4.0 to 5.0)	Truck Traffic			
		TI = 6.0	TI = 7.0	TI = 8.0	TI = 9.0
Asphalt Concrete	3	3½	4	5	5½
Aggregate Base	4	6	7	8	10
Compacted Subgrade	12	12	12	12	12

The aggregate base course should be compacted to at least 95 percent of the ASTM D-1557 maximum dry density. The asphaltic concrete should be compacted to at least 95 percent of the Marshall maximum density, as determined by ASTM D-2726. The aggregate base course may consist of crushed aggregate base (CAB) or crushed miscellaneous base (CMB), which is a recycled gravel, asphalt and concrete material. The gradation, R-Value, Sand Equivalent, and Percentage Wear of the CAB or CMB should comply with appropriate specifications contained in the current edition of the "Greenbook" Standard Specifications for Public Works Construction.

Portland Cement Concrete

The preparation of the subgrade soils within concrete pavement areas should be performed as previously described for proposed asphalt pavement areas. The minimum recommended thicknesses for the Portland Cement Concrete pavement sections are as follows:

PORTLAND CEMENT CONCRETE PAVEMENTS (R = 40)				
Materials	**Thickness (inches)**			
	Autos and Light Truck Traffic (TI = 6.0)	Truck Traffic		
		TI = 7.0	TI = 8.0	TI = 9.0
PCC	5	5½	6½	8
Compacted Subgrade (95% minimum compaction)	12	12	12	12

The concrete should have a 28-day compressive strength of at least 3,000 psi. Any reinforcement within the PCC pavements should be determined by the project structural engineer. The maximum joint spacing within all of the PCC pavements is recommended to be equal to or less than 30 times the pavement thickness.

7.0 GENERAL COMMENTS

This report has been prepared as an instrument of service for use by the client, in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, civil engineer, and/or structural engineer. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The client(s)' reliance upon this report is subject to the Engineering Services Agreement, incorporated into our proposal for this project.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between boring locations and sample depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted.

The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

COLUMN DESCRIPTIONS

DEPTH: Distance in feet below the ground surface.

SAMPLE: Sample Type as depicted above.

BLOW COUNT: Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

POCKET PEN.: Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

GRAPHIC LOG: Graphic Soil Symbol as depicted on the following page.

DRY DENSITY: Dry density of an undisturbed or relatively undisturbed sample in lbs/ft^3.

MOISTURE CONTENT: Moisture content of a soil sample, expressed as a percentage of the dry weight.

LIQUID LIMIT: The moisture content above which a soil behaves as a liquid.

PLASTIC LIMIT: The moisture content above which a soil behaves as a plastic.

PASSING #200 SIEVE: The percentage of the sample finer than the #200 standard sieve.

UNCONFINED SHEAR: The shear strength of a cohesive soil sample, as measured in the unconfined state.

SOIL CLASSIFICATION CHART

MAJOR DIVISIONS			SYMBOLS		TYPICAL DESCRIPTIONS
			GRAPH	LETTER	
COARSE GRAINED SOILS MORE THAN 50% OF MATERIAL IS LARGER THAN NO. 200 SIEVE SIZE	GRAVEL AND GRAVELLY SOILS MORE THAN 50% OF COARSE FRACTION RETAINED ON NO. 4 SIEVE	CLEAN GRAVELS (LITTLE OR NO FINES)		GW	WELL-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
				GP	POORLY-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
		GRAVELS WITH FINES (APPRECIABLE AMOUNT OF FINES)		GM	SILTY GRAVELS, GRAVEL - SAND - SILT MIXTURES
				GC	CLAYEY GRAVELS, GRAVEL - SAND - CLAY MIXTURES
	SAND AND SANDY SOILS MORE THAN 50% OF COARSE FRACTION PASSING ON NO. 4 SIEVE	CLEAN SANDS (LITTLE OR NO FINES)		SW	WELL-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
				SP	POORLY-GRADED SANDS, GRAVELLY SAND, LITTLE OR NO FINES
		SANDS WITH FINES (APPRECIABLE AMOUNT OF FINES)		SM	SILTY SANDS, SAND - SILT MIXTURES
				SC	CLAYEY SANDS, SAND - CLAY MIXTURES
FINE GRAINED SOILS MORE THAN 50% OF MATERIAL IS SMALLER THAN NO. 200 SIEVE SIZE	SILTS AND CLAYS	LIQUID LIMIT LESS THAN 50		ML	INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS OR CLAYEY SILTS WITH SLIGHT PLASTICITY
				CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
				OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
	SILTS AND CLAYS	LIQUID LIMIT GREATER THAN 50		MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SAND OR SILTY SOILS
				CH	INORGANIC CLAYS OF HIGH PLASTICITY
				OH	ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS
HIGHLY ORGANIC SOILS				PT	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS

NOTE: DUAL SYMBOLS ARE USED TO INDICATE BORDERLINE SOIL CLASSIFICATIONS

APPENDIX D

GRADING GUIDE SPECIFICATIONS

These grading guide specifications are intended to provide typical procedures for grading operations. They are intended to supplement the recommendations contained in the geotechnical investigation report for this project. Should the recommendations in the geotechnical investigation report conflict with the grading guide specifications, the more site specific recommendations in the geotechnical investigation report will govern.

General

- The Earthwork Contractor is responsible for the satisfactory completion of all earthwork in accordance with the plans and geotechnical reports, and in accordance with city, county, and applicable building codes.

- The Geotechnical Engineer is the representative of the Owner/Builder for the purpose of implementing the report recommendations and guidelines. These duties are not intended to relieve the Earthwork Contractor of any responsibility to perform in a workman-like manner, nor is the Geotechnical Engineer to direct the grading equipment or personnel employed by the Contractor.

- The Earthwork Contractor is required to notify the Geotechnical Engineer of the anticipated work and schedule so that testing and inspections can be provided. If necessary, work may be stopped and redone if personnel have not been scheduled in advance.

- The Earthwork Contractor is required to have suitable and sufficient equipment on the job-site to process, moisture condition, mix and compact the amount of fill being placed to the approved compaction. In addition, suitable support equipment should be available to conform with recommendations and guidelines in this report.

- Canyon cleanouts, overexcavation areas, processed ground to receive fill, key excavations, subdrains and benches should be observed by the Geotechnical Engineer prior to placement of any fill. It is the Earthwork Contractor's responsibility to notify the Geotechnical Engineer of areas that are ready for inspection.

- Excavation, filling, and subgrade preparation should be performed in a manner and sequence that will provide drainage at all times and proper control of erosion. Precipitation, springs, and seepage water encountered shall be pumped or drained to provide a suitable working surface. The Geotechnical Engineer must be informed of springs or water seepage encountered during grading or foundation construction for possible revision to the recommended construction procedures and/or installation of subdrains.

Site Preparation

- The Earthwork Contractor is responsible for all clearing, grubbing, stripping and site preparation for the project in accordance with the recommendations of the Geotechnical Engineer.

- If any materials or areas are encountered by the Earthwork Contractor which are suspected of having toxic or environmentally sensitive contamination, the Geotechnical Engineer and Owner/Builder should be notified immediately.

- Major vegetation should be stripped and disposed of off-site. This includes trees, brush, heavy grasses and any materials considered unsuitable by the Geotechnical Engineer.

- Underground structures such as basements, cesspools or septic disposal systems, mining shafts, tunnels, wells and pipelines should be removed under the inspection of the Geotechnical Engineer and recommendations provided by the Geotechnical Engineer and/or city, county or state agencies. If such structures are known or found, the Geotechnical Engineer should be notified as soon as possible so that recommendations can be formulated.

- Any topsoil, slopewash, colluvium, alluvium and rock materials which are considered unsuitable by the Geotechnical Engineer should be removed prior to fill placement.

- Remaining voids created during site clearing caused by removal of trees, foundations basements, irrigation facilities, etc., should be excavated and filled with compacted fill.

- Subsequent to clearing and removals, areas to receive fill should be scarified to a depth of 10 to 12 inches, moisture conditioned and compacted

- The moisture condition of the processed ground should be at or slightly above the optimum moisture content as determined by the Geotechnical Engineer. Depending upon field conditions, this may require air drying or watering together with mixing and/or discing.

Compacted Fills

- Soil materials imported to or excavated on the property may be utilized in the fill, provided each material has been determined to be suitable in the opinion of the Geotechnical Engineer. Unless otherwise approved by the Geotechnical Engineer, all fill materials shall be free of deleterious, organic, or frozen matter, shall contain no chemicals that may result in the material being classified as “contaminated,” and shall be very low to non-expansive with a maximum expansion index (EI) of 50. The top 12 inches of the compacted fill should have a maximum particle size of 3 inches, and all underlying compacted fill material a maximum 6-inch particle size, except as noted below.

- All soils should be evaluated and tested by the Geotechnical Engineer. Materials with high expansion potential, low strength, poor gradation or containing organic materials may require removal from the site or selective placement and/or mixing to the satisfaction of the Geotechnical Engineer.

- Rock fragments or rocks less than 6 inches in their largest dimensions, or as otherwise determined by the Geotechnical Engineer, may be used in compacted fill, provided the distribution and placement is satisfactory in the opinion of the Geotechnical Engineer.

- Rock fragments or rocks greater than 12 inches should be taken off-site or placed in accordance with recommendations and in areas designated as suitable by the Geotechnical Engineer. These materials should be placed in accordance with Plate D-8 of these Grading Guide Specifications and in accordance with the following recommendations:

    - Rocks 12 inches or more in diameter should be placed in rows at least 15 feet apart, 15 feet from the edge of the fill, and 10 feet or more below subgrade. Spaces should be left between each rock fragment to provide for placement and compaction of soil around the fragments.

    - Fill materials consisting of soil meeting the minimum moisture content requirements and free of oversize material should be placed between and over the rows of rock or

concrete. Ample water and compactive effort should be applied to the fill materials as they are placed in order that all of the voids between each of the fragments are filled and compacted to the specified density.

- Subsequent rows of rocks should be placed such that they are not directly above a row placed in the previous lift of fill. A minimum 5-foot offset between rows is recommended.

- To facilitate future trenching, oversized material should not be placed within the range of foundation excavations, future utilities or other underground construction unless specifically approved by the soil engineer and the developer/owner representative.

- Fill materials approved by the Geotechnical Engineer should be placed in areas previously prepared to receive fill and in evenly placed, near horizontal layers at about 6 to 8 inches in loose thickness, or as otherwise determined by the Geotechnical Engineer for the project.

- Each layer should be moisture conditioned to optimum moisture content, or slightly above, as directed by the Geotechnical Engineer. After proper mixing and/or drying, to evenly distribute the moisture, the layers should be compacted to at least 90 percent of the maximum dry density in compliance with ASTM D-1557-78 unless otherwise indicated.

- Density and moisture content testing should be performed by the Geotechnical Engineer at random intervals and locations as determined by the Geotechnical Engineer. These tests are intended as an aid to the Earthwork Contractor, so he can evaluate his workmanship, equipment effectiveness and site conditions. The Earthwork Contractor is responsible for compaction as required by the Geotechnical Report(s) and governmental agencies.

- Fill areas unused for a period of time may require moisture conditioning, processing and recompaction prior to the start of additional filling. The Earthwork Contractor should notify the Geotechnical Engineer of his intent so that an evaluation can be made.

- Fill placed on ground sloping at a 5-to-1 inclination (horizontal-to-vertical) or steeper should be benched into bedrock or other suitable materials, as directed by the Geotechnical Engineer. Typical details of benching are illustrated on Plates D-2, D-4, and D-5.

- Cut/fill transition lots should have the cut portion overexcavated to a depth of at least 3 feet and rebuilt with fill (see Plate D-1), as determined by the Geotechnical Engineer.

- All cut lots should be inspected by the Geotechnical Engineer for fracturing and other bedrock conditions. If necessary, the pads should be overexcavated to a depth of 3 feet and rebuilt with a uniform, more cohesive soil type to impede moisture penetration.

- Cut portions of pad areas above buttresses or stabilizations should be overexcavated to a depth of 3 feet and rebuilt with uniform, more cohesive compacted fill to impede moisture penetration.

- Non-structural fill adjacent to structural fill should typically be placed in unison to provide lateral support. Backfill along walls must be placed and compacted with care to ensure that excessive unbalanced lateral pressures do not develop. The type of fill material placed adjacent to below grade walls must be properly tested and approved by the Geotechnical Engineer with consideration of the lateral earth pressure used in the design.

Foundations

- The foundation influence zone is defined as extending one foot horizontally from the outside edge of a footing, and proceeding downward at a ½ horizontal to 1 vertical (0.5:1) inclination.

- Where overexcavation beneath a footing subgrade is necessary, it should be conducted so as to encompass the entire foundation influence zone, as described above.

- Compacted fill adjacent to exterior footings should extend at least 12 inches above foundation bearing grade. Compacted fill within the interior of structures should extend to the floor subgrade elevation.

Fill Slopes

- The placement and compaction of fill described above applies to all fill slopes. Slope compaction should be accomplished by overfilling the slope, adequately compacting the fill in even layers, including the overfilled zone and cutting the slope back to expose the compacted core

- Slope compaction may also be achieved by backrolling the slope adequately every 2 to 4 vertical feet during the filling process as well as requiring the earth moving and compaction equipment to work close to the top of the slope. Upon completion of slope construction, the slope face should be compacted with a sheepsfoot connected to a sideboom and then grid rolled. This method of slope compaction should only be used if approved by the Geotechnical Engineer.

- Sandy soils lacking in adequate cohesion may be unstable for a finished slope condition and therefore should not be placed within 15 horizontal feet of the slope face.

- All fill slopes should be keyed into bedrock or other suitable material. Fill keys should be at least 15 feet wide and inclined at 2 percent into the slope. For slopes higher than 30 feet, the fill key width should be equal to one-half the height of the slope (see Plate D-5).

- All fill keys should be cleared of loose slough material prior to geotechnical inspection and should be approved by the Geotechnical Engineer and governmental agencies prior to filling.

- The cut portion of fill over cut slopes should be made first and inspected by the Geotechnical Engineer for possible stabilization requirements. The fill portion should be adequately keyed through all surficial soils and into bedrock or suitable material. Soils should be removed from the transition zone between the cut and fill portions (see Plate D-2).

Cut Slopes

- All cut slopes should be inspected by the Geotechnical Engineer to determine the need for stabilization. The Earthwork Contractor should notify the Geotechnical Engineer when slope cutting is in progress at intervals of 10 vertical feet. Failure to notify may result in a delay in recommendations.

- Cut slopes exposing loose, cohesionless sands should be reported to the Geotechnical Engineer for possible stabilization recommendations.

- All stabilization excavations should be cleared of loose slough material prior to geotechnical inspection. Stakes should be provided by the Civil Engineer to verify the location and dimensions of the key. A typical stabilization fill detail is shown on Plate D-5.

- Stabilization key excavations should be provided with subdrains. Typical subdrain details are shown on Plates D-6.

Subdrains

- Subdrains may be required in canyons and swales where fill placement is proposed. Typical subdrain details for canyons are shown on Plate D-3. Subdrains should be installed after approval of removals and before filling, as determined by the Soils Engineer.

- Plastic pipe may be used for subdrains provided it is Schedule 40 or SDR 35 or equivalent. Pipe should be protected against breakage, typically by placement in a square-cut (backhoe) trench or as recommended by the manufacturer.

- Filter material for subdrains should conform to CALTRANS Specification 68-1.025 or as approved by the Geotechnical Engineer for the specific site conditions. Clean ¾-inch crushed rock may be used provided it is wrapped in an acceptable filter cloth and approved by the Geotechnical Engineer. Pipe diameters should be 6 inches for runs up to 500 feet and 8 inches for the downstream continuations of longer runs. Four-inch diameter pipe may be used in buttress and stabilization fills.

SUMMARY

OF

CONE PENETRATION TEST DATA

1. INTRODUCTION

This report presents the results of a Cone Penetration Test (CPT) program carried out for the project located at 9300 Hall Road in Downey, California. The work was performed by Kehoe Testing & Engineering (KTE) on May 4, 2021. The scope of work was performed as directed by Southern California Geotechnical, Inc. personnel.

2. SUMMARY OF FIELD WORK

The fieldwork consisted of performing CPT soundings at four locations to determine the soil lithology. A summary is provided in **TABLE 2.1**.

LOCATION	DEPTH OF CPT (ft)	COMMENTS/NOTES:
CPT-1	50	
CPT-2	50	
CPT-3	50	
CPT-4	50	

TABLE 2.1 - Summary of CPT Soundings

3. FIELD EQUIPMENT & PROCEDURES

The CPT soundings were carried out by **KTE** using an integrated electronic cone system manufactured by Vertek. The CPT soundings were performed in accordance with ASTM standards (D5778). The cone penetrometers were pushed using a 30-ton CPT rig. The cone used during the program was a 15 cm^2 cone and recorded the following parameters at approximately 2.5 cm depth intervals:

- Cone Resistance (qc)
- Sleeve Friction (fs)
- Dynamic Pore Pressure (u)
- Inclination
- Penetration Speed

The above parameters were recorded and viewed in real time using a laptop computer. Data is stored at the KTE office for up to 2 years for future analysis and reference. A complete set of baseline readings was taken prior to each sounding to determine temperature shifts and any zero load offsets. Monitoring base line readings ensures that the cone electronics are operating properly.

4. CONE PENETRATION TEST DATA & INTERPRETATION

The Cone Penetration Test data is presented in graphical form in the attached Appendix. These plots were generated using the CPeT-IT program. Penetration depths are referenced to ground surface. The soil behavior type on the CPT plots is derived from the attached CPT SBT plot (Robertson, "Interpretation of Cone Penetration Test…", 2009) and presents major soil lithologic changes. The stratigraphic interpretation is based on relationships between cone resistance (qc), sleeve friction (fs), and penetration pore pressure (u). The friction ratio (Rf), which is sleeve friction divided by cone resistance, is a calculated parameter that is used along with cone resistance to infer soil behavior type. Generally, cohesive soils (clays) have high friction ratios, low cone resistance and generate excess pore water pressures. Cohesionless soils (sands) have lower friction ratios, high cone bearing and generate little (or negative) excess pore water pressures.

The CPT data files have also been provided. These files can be imported in CPeT-IT (software by GeoLogismiki) and other programs to calculate various geotechnical parameters.

It should be noted that it is not always possible to clearly identify a soil type based on qc, fs and u. In these situations, experience, judgement and an assessment of the pore pressure data should be used to infer the soil behavior type.

If you have any questions regarding this information, please do not hesitate to call our office at (714) 901-7270.

Sincerely,

KEHOE TESTING & ENGINEERING

Steven P. Kehoe
President

Total estimated settlement: 2.14

Abbreviations

$Q_{tn,cs}$:	Equivalent dean sand normalized cone resistance
FS:	Factor of safety against liquefaction
e_v (%):	Post-liquefaction volumentric strain
DF:	e_v depth weighting factor
Settlement:	Calculated settlement

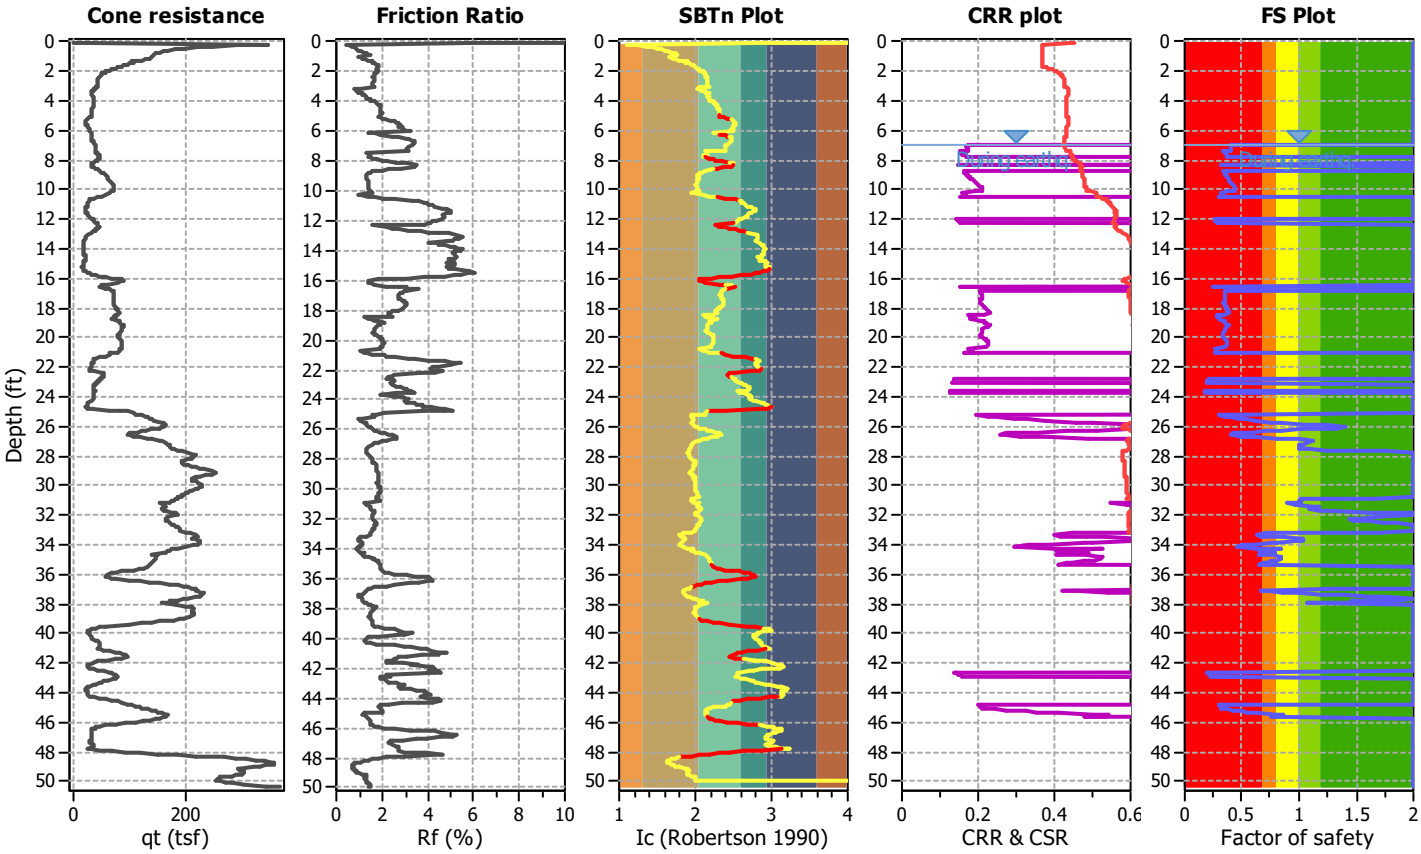
LIQUEFACTION ANALYSIS REPORT

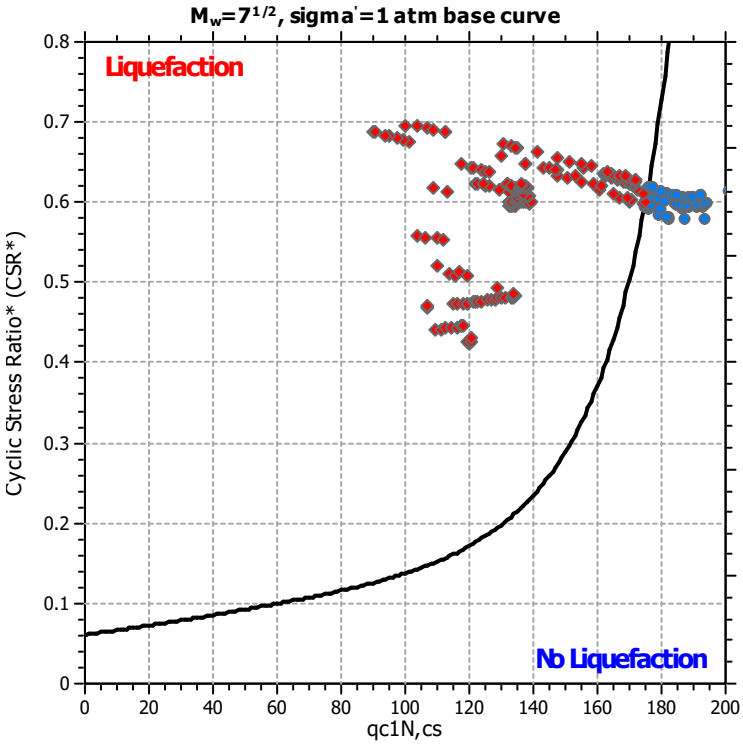
Project title : Southern California Geotechnical **Location : 9300 Hall Rd, Downey, CA**

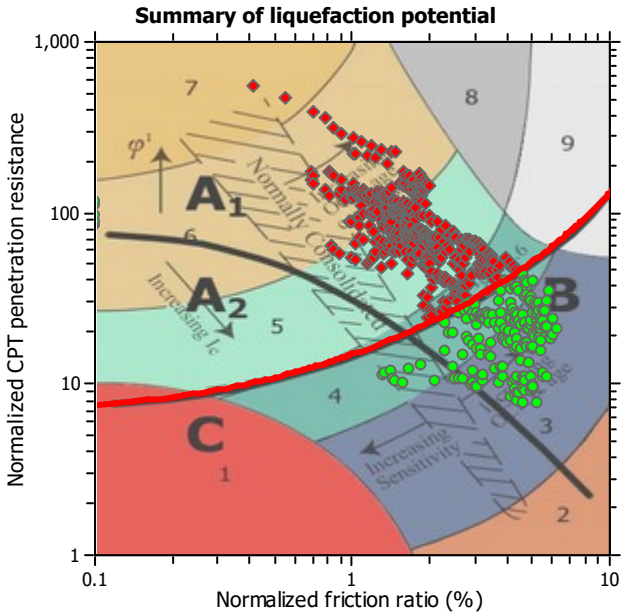
CPT file : CPT-2

Input parameters and analysis data

Analysis method:	B&I (2014)	G.W.T. (in-situ):	80.00 ft	Use fill:	No	Clay like behavior applied:	Sands only
Fines correction method:	B&I (2014)	G.W.T. (earthq.):	7.00 ft	Fill height:	N/A	Limit depth applied:	No
Points to test:	Based on Ic value	Average results interval:	1	Fill weight:	N/A	Limit depth:	N/A
Earthquake magnitude M_w:	6.88	Ic cut-off value:	2.60	Trans. detect. applied:	Yes	MSF method:	Method based
Peak ground acceleration:	0.79	Unit weight calculation:	Based on SBT	K_σ applied:	Yes		

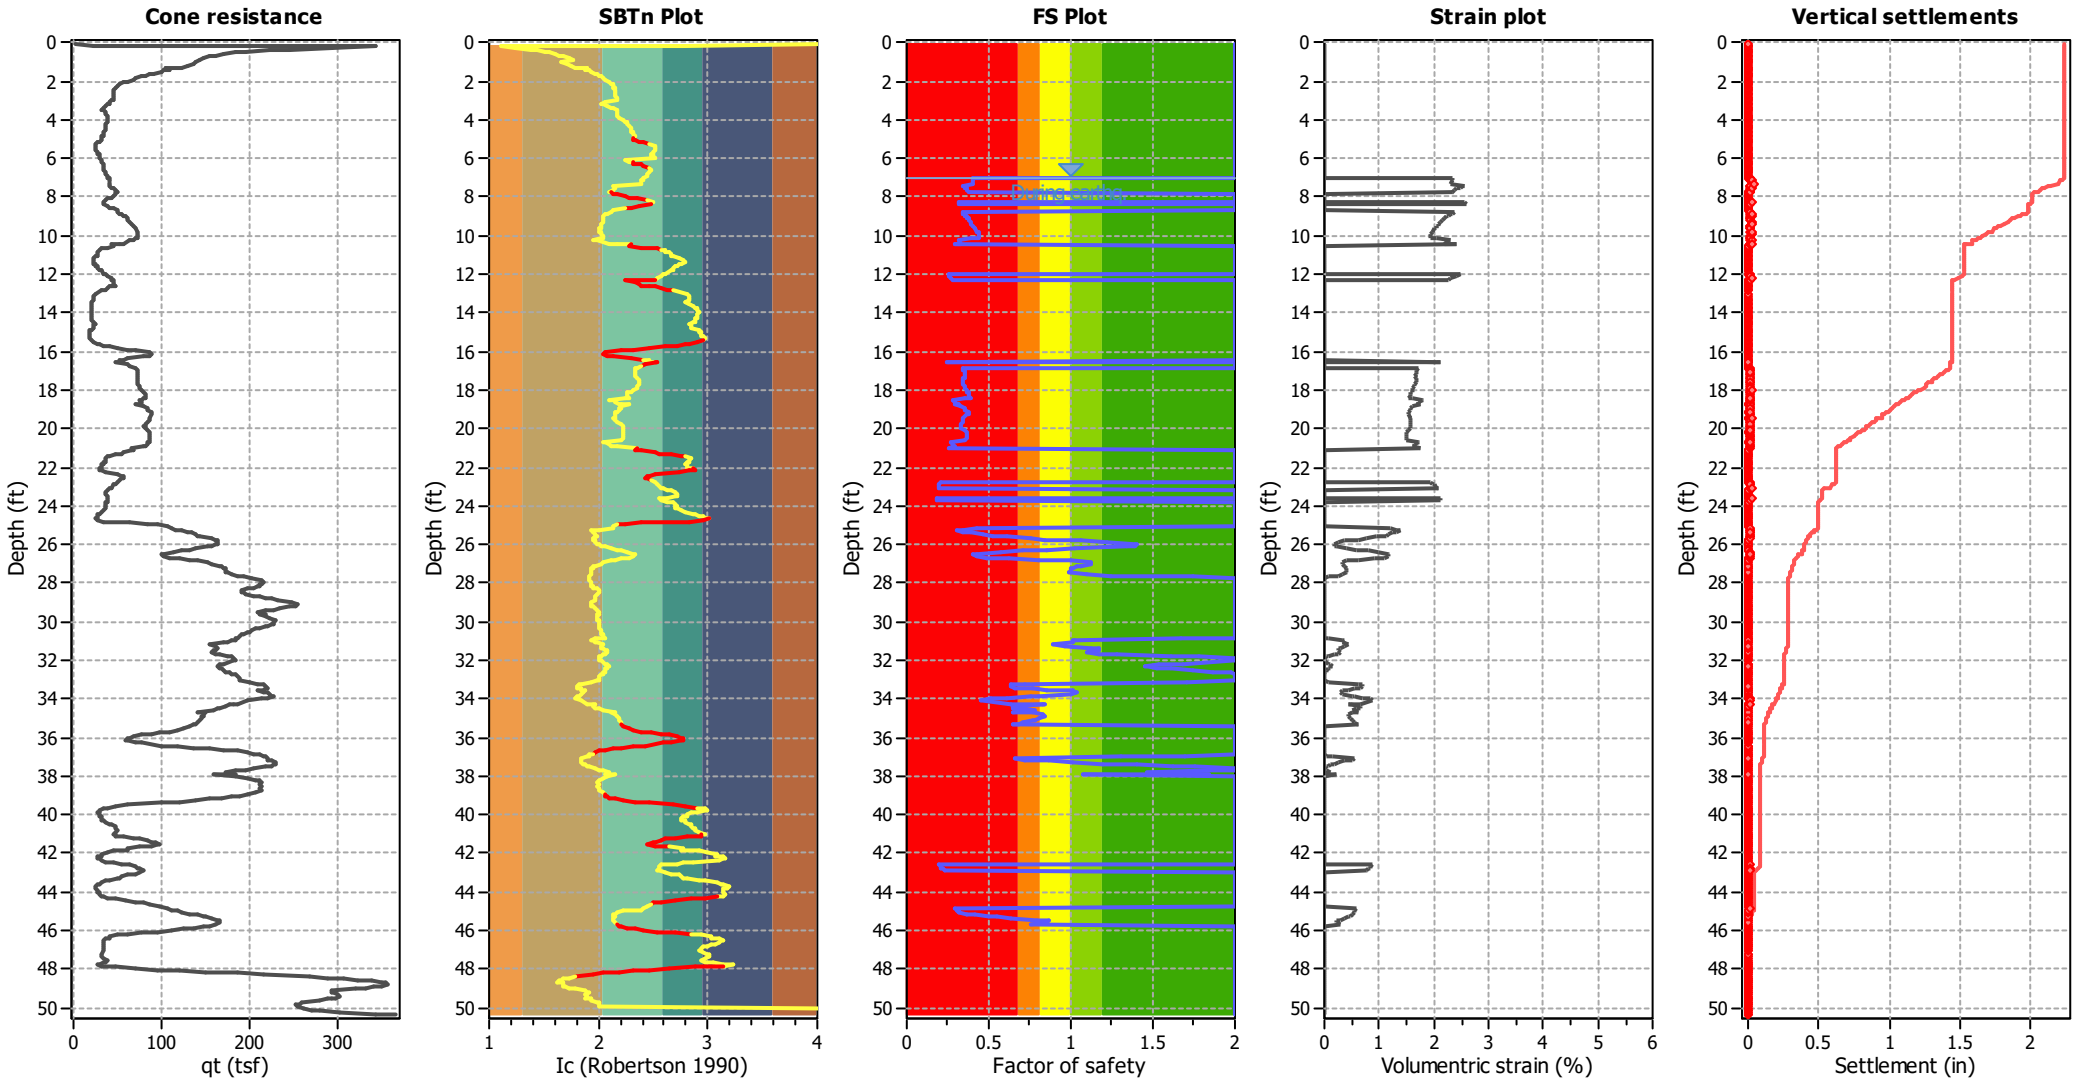






Zone A_1: Cyclic liquefaction likely depending on size and duration of cyclic loading
Zone A_2: Cyclic liquefaction and strength loss likely depending on loading and ground geometry
Zone B: Liquefaction and post-earthquake strength loss unlikely, check cyclic softening
Zone C: Cyclic liquefaction and strength loss possible depending on soil plasticity, brittleness/sensitivity, strain to peak undrained strength and ground geometry

Estimation of post-earthquake settlements



Abbreviations

q_t:	Total cone resistance (cone resistance q_c corrected for pore water effects)
I_c:	Soil Behaviour Type Index
FS:	Calculated Factor of Safety against liquefaction
Volumentric strain:	Post-liquefaction volumentric strain

:: Post-earthquake settlement due to soil liquefaction ::

Total estimated settlement: 2.24

Abbreviations

$Q_{tn,cs}$:	Equivalent dean sand normalized cone resistance
FS:	Factor of safety against liquefaction
e_v (%):	Post-liquefaction volumentric strain
DF:	e_v depth weighting factor
Settlement:	Calculated settlement

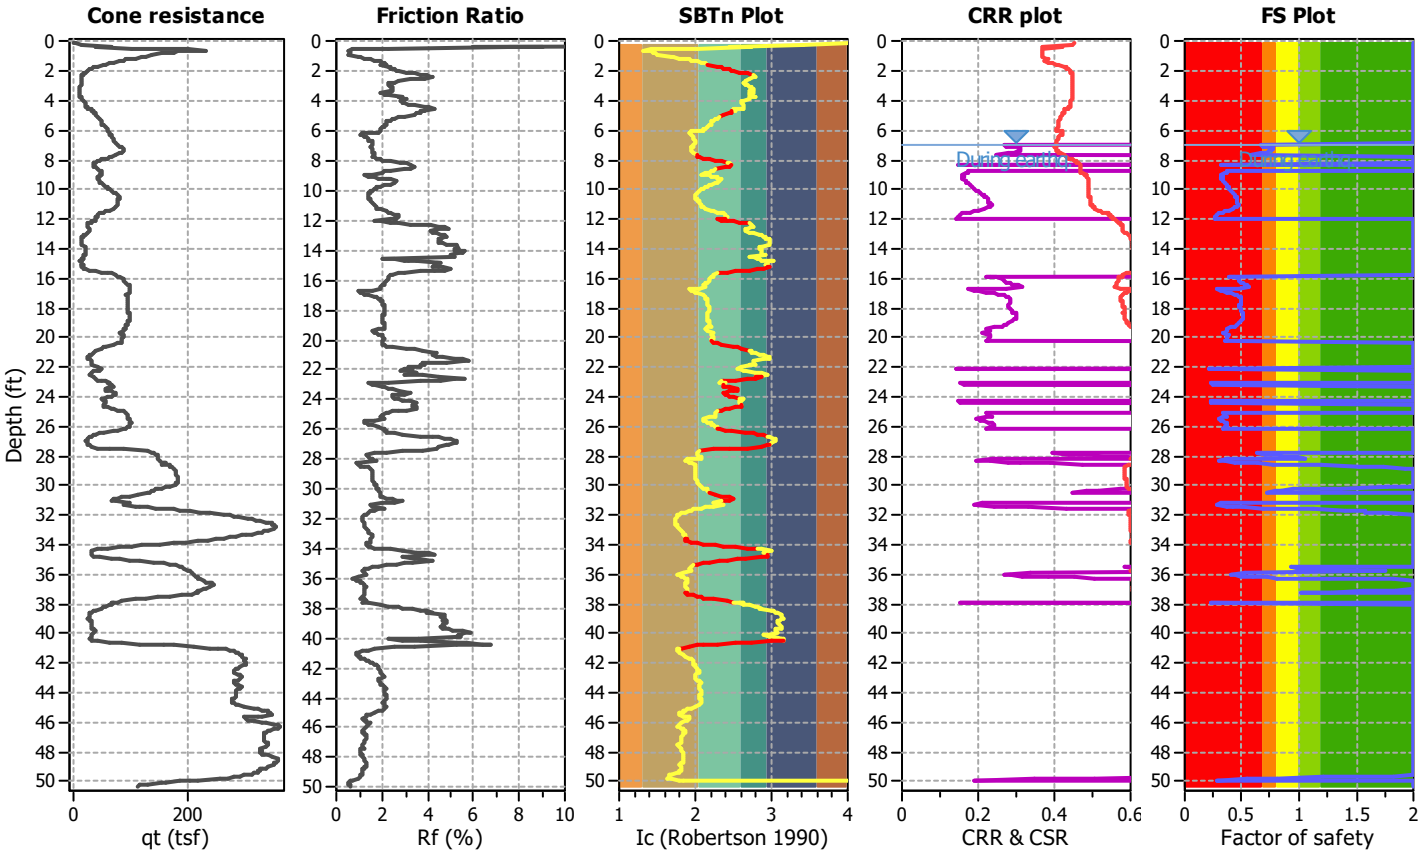
LIQUEFACTION ANALYSIS REPORT

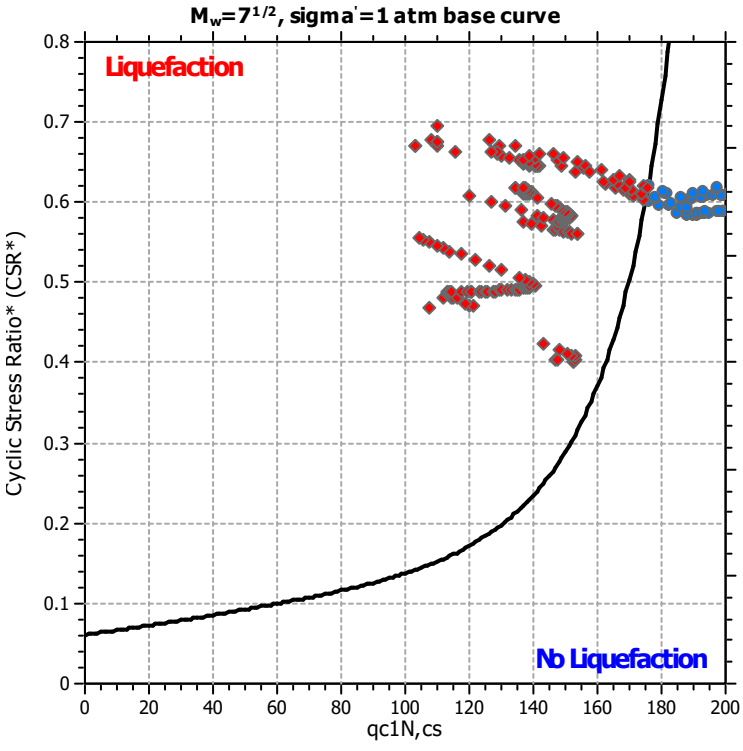
Project title : Southern California Geotechnical **Location : 9300 Hall Rd, Downey, CA**

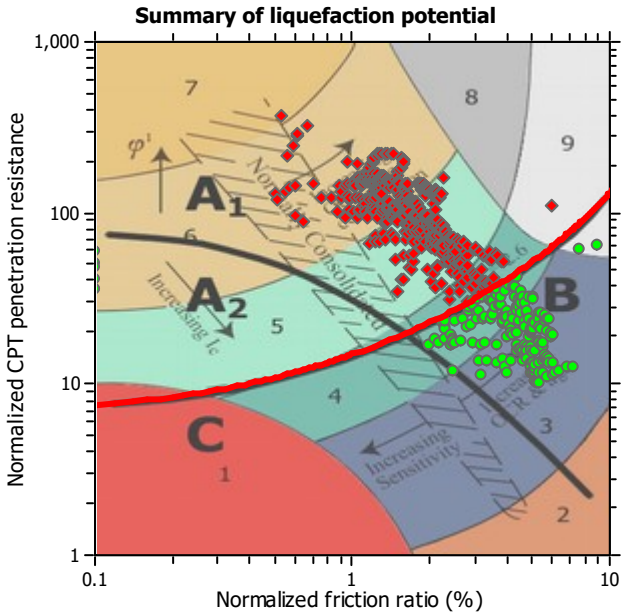
CPT file : CPT-3

Input parameters and analysis data

Analysis method:	B&I (2014)	G.W.T. (in-situ):	80.00 ft	Use fill:	No	Clay like behavior applied:	Sands only
Fines correction method:	B&I (2014)	G.W.T. (earthq.):	7.00 ft	Fill height:	N/A	Limit depth applied:	No
Points to test:	Based on Ic value	Average results interval:	1	Fill weight:	N/A	Limit depth:	N/A
Earthquake magnitude M_w:	6.88	Ic cut-off value:	2.60	Trans. detect. applied:	Yes	MSF method:	Method based
Peak ground acceleration:	0.79	Unit weight calculation:	Based on SBT	K_σ applied:	Yes		

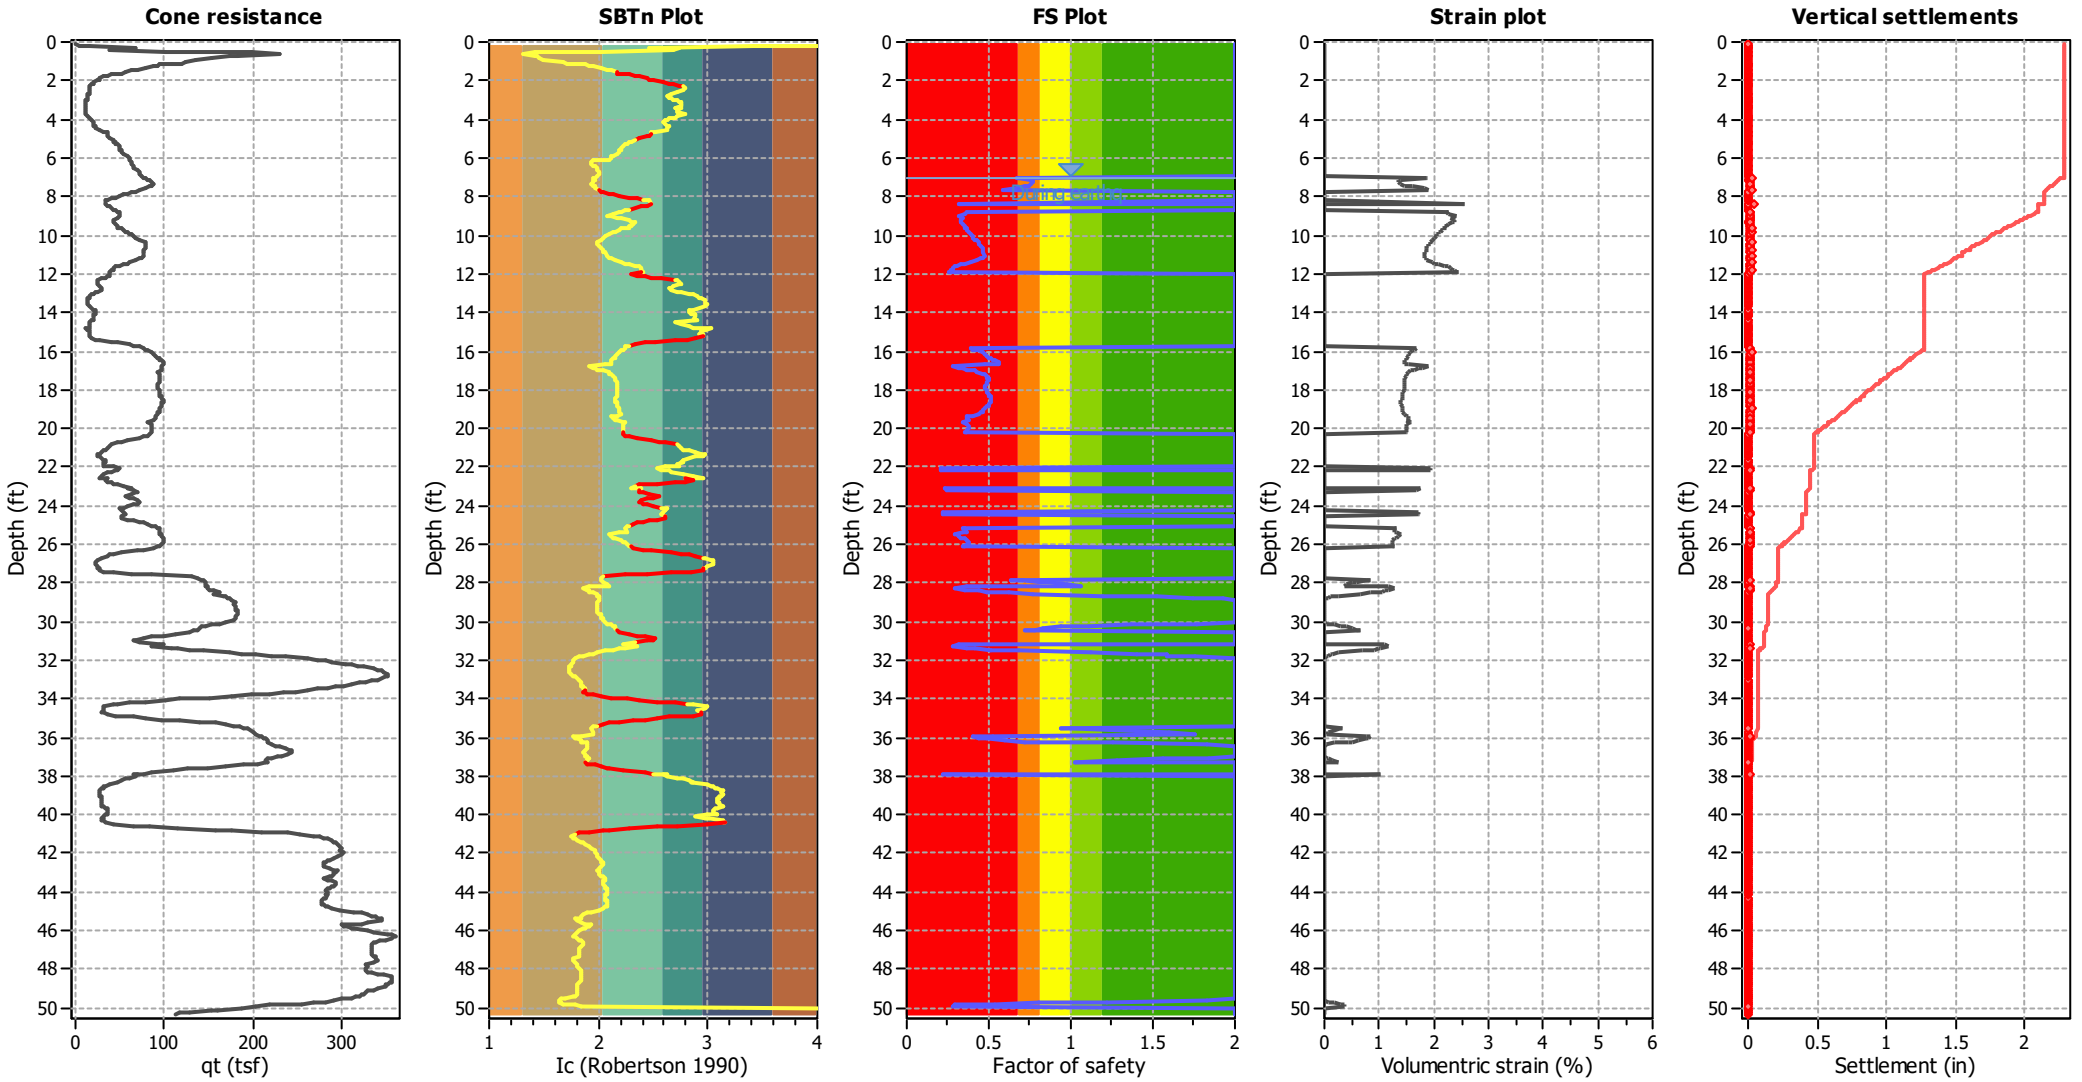






Zone A_1: Cyclic liquefaction likely depending on size and duration of cyclic loading
Zone A_2: Cyclic liquefaction and strength loss likely depending on loading and ground geometry
Zone B: Liquefaction and post-earthquake strength loss unlikely, check cyclic softening
Zone C: Cyclic liquefaction and strength loss possible depending on soil plasticity, brittleness/sensitivity, strain to peak undrained strength and ground geometry

Estimation of post-earthquake settlements



Abbreviations

q_t:	Total cone resistance (cone resistance q_c corrected for pore water effects)
I_c:	Soil Behaviour Type Index
FS:	Calculated Factor of Safety against liquefaction
Volumentric strain:	Post-liquefaction volumentric strain

:: Post-earthquake settlement due to soil liquefaction ::

Total estimated settlement: 2.28

Abbreviations

$Q_{tn,cs}$:	Equivalent dean sand normalized cone resistance
FS:	Factor of safety against liquefaction
e_v (%):	Post-liquefaction volumentric strain
DF:	e_v depth weighting factor
Settlement:	Calculated settlement

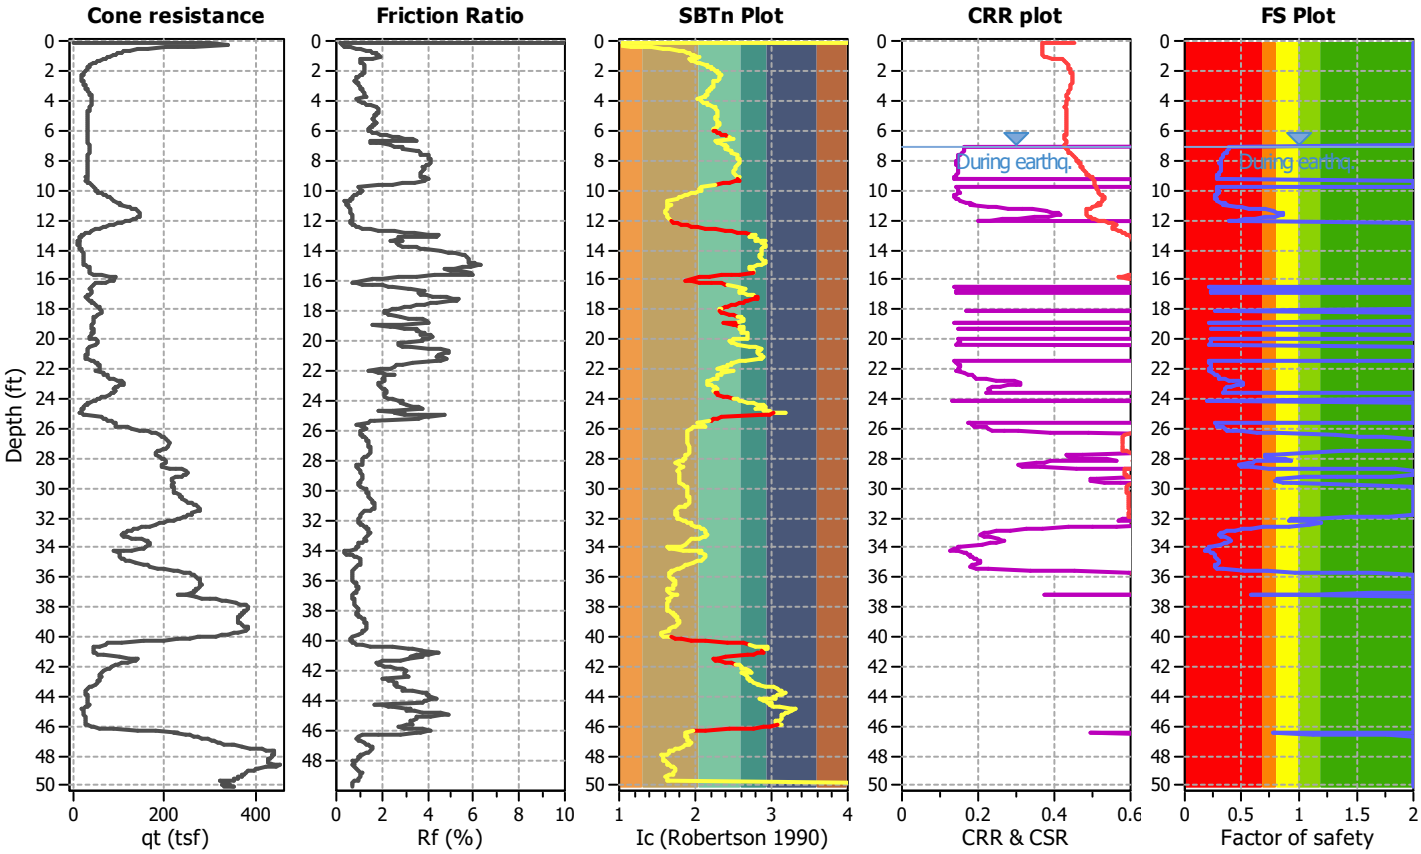
LIQUEFACTION ANALYSIS REPORT

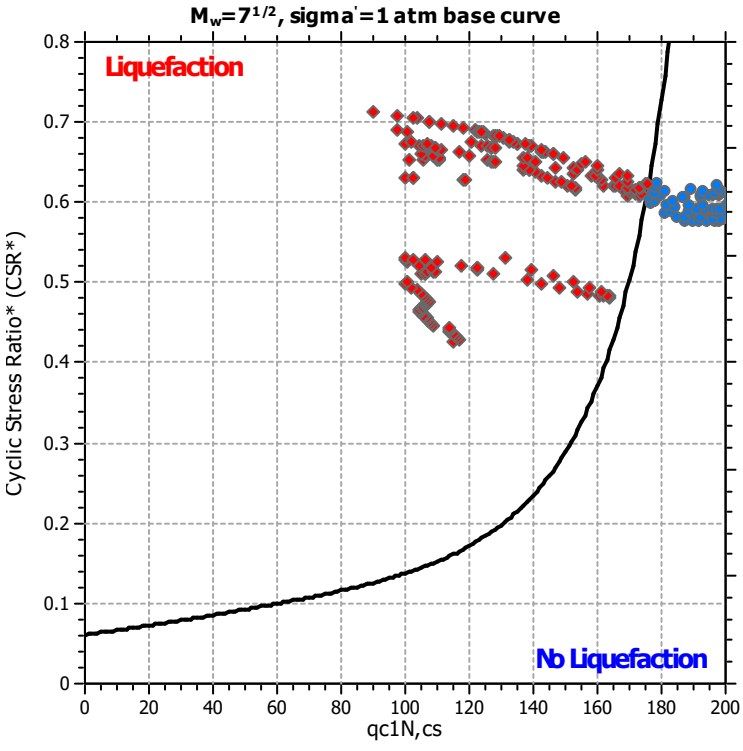
Project title : Southern California Geotechnical **Location : 9300 Hall Rd, Downey, CA**

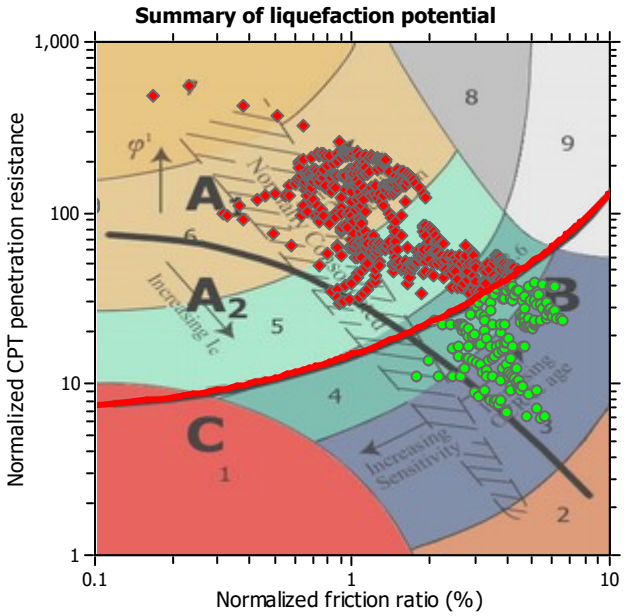
CPT file : CPT-4

Input parameters and analysis data

Analysis method:	B&I (2014)	G.W.T. (in-situ):	80.00 ft	Use fill:	No	Clay like behavior applied:	Sands only
Fines correction method:	B&I (2014)	G.W.T. (earthq.):	7.00 ft	Fill height:	N/A	Limit depth applied:	No
Points to test:	Based on Ic value	Average results interval:	1	Fill weight:	N/A	Limit depth:	N/A
Earthquake magnitude M_w:	6.88	Ic cut-off value:	2.60	Trans. detect. applied:	Yes	MSF method:	Method based
Peak ground acceleration:	0.79	Unit weight calculation:	Based on SBT	K_σ applied:	Yes		

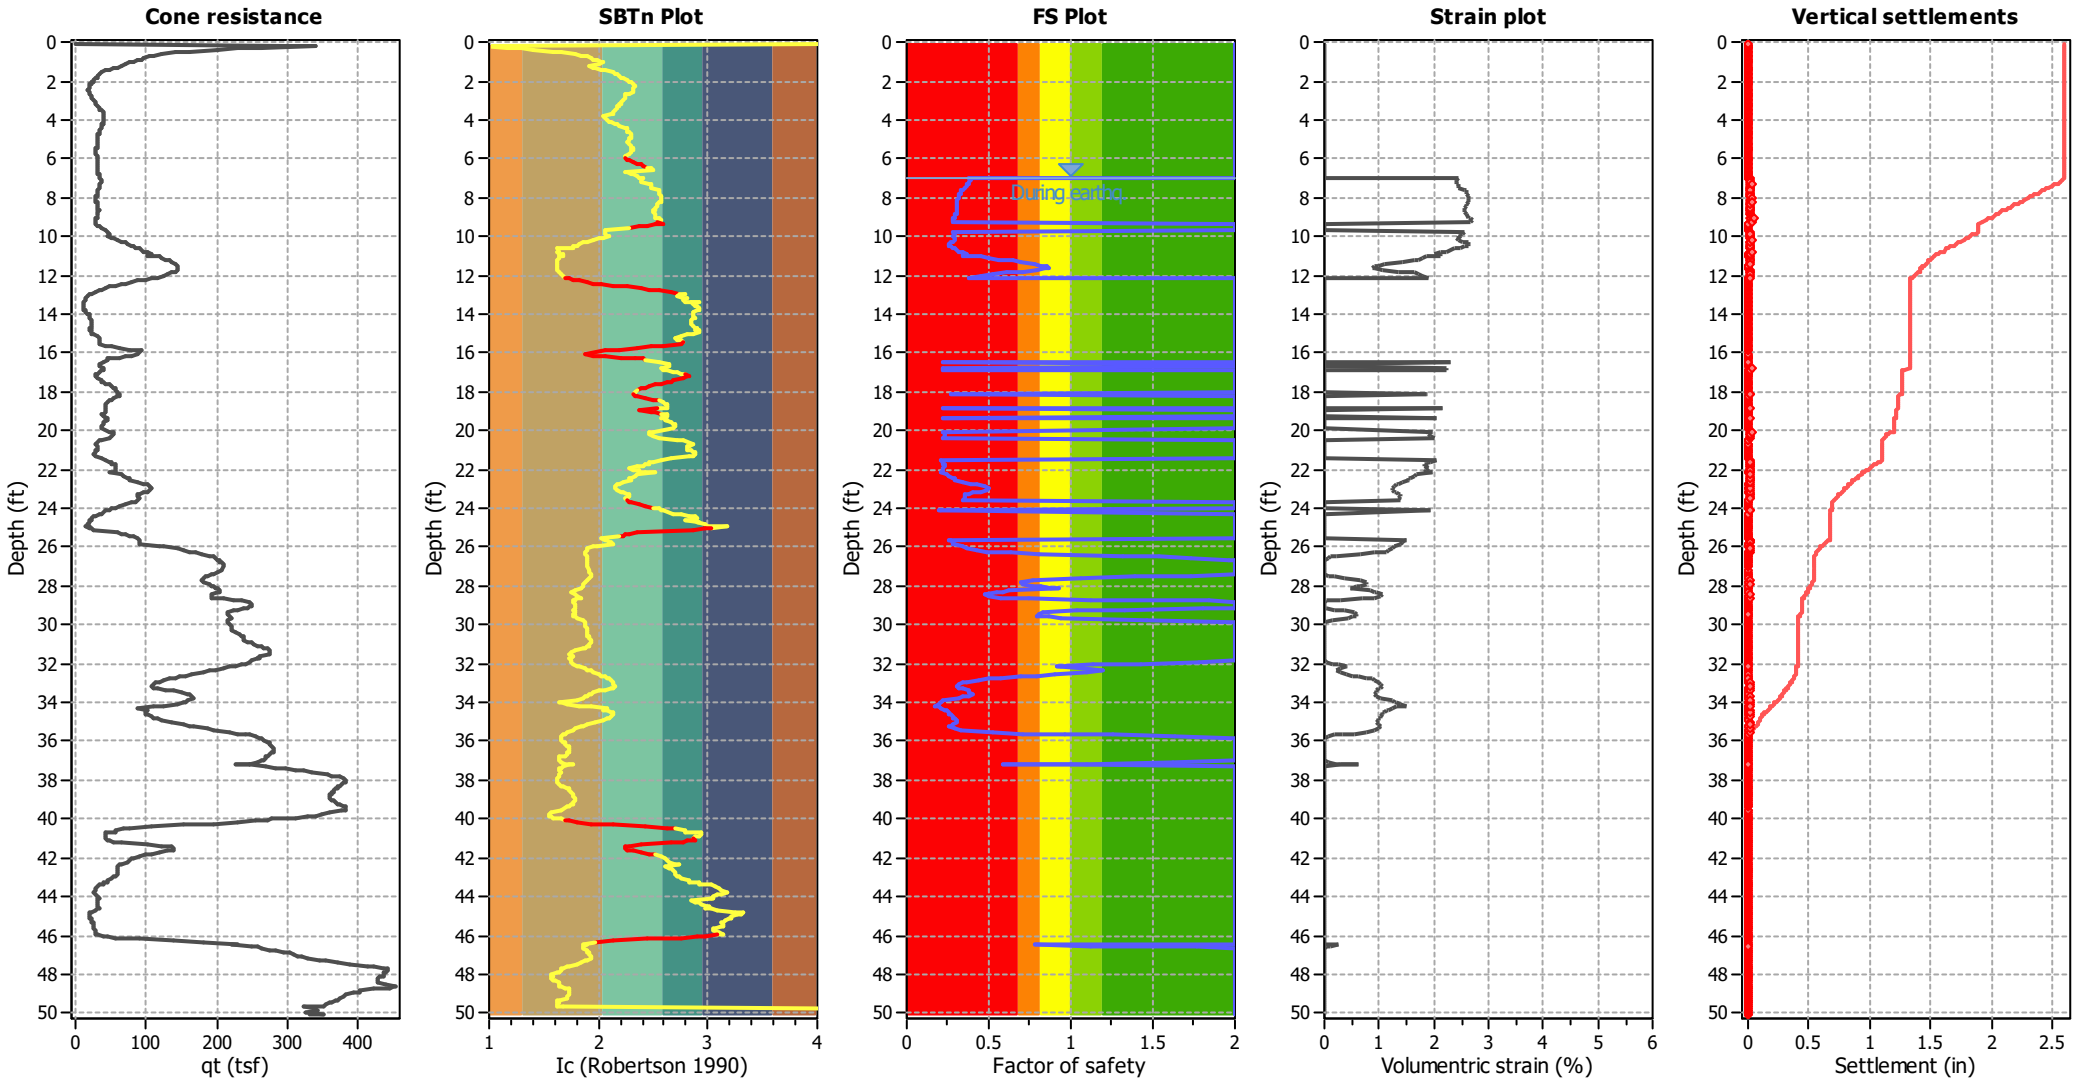






Zone A_1: Cyclic liquefaction likely depending on size and duration of cyclic loading
Zone A_2: Cyclic liquefaction and strength loss likely depending on loading and ground geometry
Zone B: Liquefaction and post-earthquake strength loss unlikely, check cyclic softening
Zone C: Cyclic liquefaction and strength loss possible depending on soil plasticity, brittleness/sensitivity, strain to peak undrained strength and ground geometry

Estimation of post-earthquake settlements



Abbreviations

q_t:	Total cone resistance (cone resistance q_c corrected for pore water effects)
I_c:	Soil Behaviour Type Index
FS:	Calculated Factor of Safety against liquefaction
Volumentric strain:	Post-liquefaction volumentric strain

:: Post-earthquake settlement due to soil liquefaction ::

Liquefaction Potential Index (LPI) calculation procedure

Calculation of the Liquefaction Potential Index (LPI) is used to interpret the liquefaction assessment calculations in terms of severity over depth. The calculation procedure is based on the methology developed by Iwasaki (1982) and is adopted by AFPS.

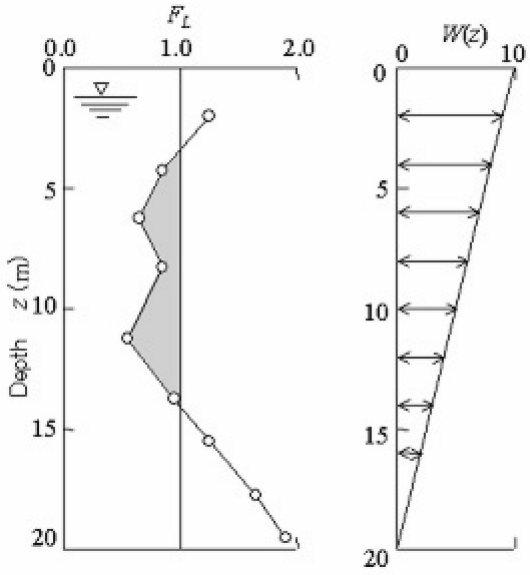
To estimate the severity of liquefaction extent at a given site, LPI is calculated based on the following equation:

$$\mathbf{LPI} = \int_0^{20} (10 - 0{,}5z) \times F_L \times dz$$

where:
F_L = 1 - F.S. when F.S. less than 1
F_L = 0 when F.S. greater than 1
z depth of measurment in meters

Values of LPI range between zero (0) when no test point is characterized as liquefiable and 100 when all points are characterized as susceptible to liquefaction. Iwasaki proposed four (4) discrete categories based on the numeric value of LPI:

- LPI = 0 : Liquefaction risk is very low
- 0 < LPI <= 5 : Liquefaction risk is low
- 5 < LPI <= 15 : Liquefaction risk is high
- LPI > 15 : Liquefaction risk is very high



Graphical presentation of the LPI calculation procedure

Shear-Induced Building Settlement (Ds) calculation procedure

The shear-induced building settlement (Ds) due to liquefaction below the building can be estimated using the relationship developed by Bray and Macedo (2017):

$$Ln(Ds) = c1 + c2 * LBS + 0.58 * Ln\left(Tanh\left(\frac{HL}{6}\right)\right) + 4.59 * Ln(Q) - 0.42 * Ln(Q)^2 - 0.02 * B + 0.84 * Ln(CAVdp) + 0.41 * Ln(Sa1) + \varepsilon$$

where Ds is in the units of mm, c1= -8.35 and c2= 0.072 for LBS ≤ 16, and c1= -7.48 and c2= 0.014 otherwise. Q is the building contact pressure in units of kPa, HL is the cumulative thickness of the liquefiable layers in the units of m, B is the building width in the units of m, CAVdp is a standardized version of the cumulative absolute velocity in the units of g-s, Sa1 is 5%-damped pseudo-acceleration response spectral value at a period of 1 s in the units of g, and ε is a normal random variable with zero mean and 0.50 standard deviation in Ln units. The liquefaction-induced building settlement index (LBS) is:

$$LBS = \sum W * \frac{\varepsilon_{shear}}{z} dz$$

where z (m) is the depth measured from the ground surface > 0, W is a foundation-weighting factor wherein W = 0.0 for z less than Df, which is the embedment depth of the foundation, and W = 1.0 otherwise. The shear strain parameter (ε_shear) is the liquefaction-induced free-field shear strain (in %) estimated using Zhang et al. (2004). It is calculated based on the estimated Dr of the liquefied soil layer and the calculated safety factor against liquefaction triggering (FSL).

This Phase I Environmental Site Assessment Report for Downey Industrial Center located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road, Downey, California, dated January 31, 2017, was prepared by Ashley Hutchens and reviewed by Kevin Green.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. The resumes for the individuals below are included in **Appendix G**. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Prologis, Inc. (Prologis) to prepare a Phase I Environmental Site Assessment (ESA) of Downey Industrial Center located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road, Downey, California (the "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, in general conformance with ASTM E1527-13, and in accordance with the Master Services Agreement between SCS and Prologis. The Phase I ESA identified the following Recognized Environmental Conditions (RECs):

- Numerous patch areas and steel plated vault/trenches were observed in the larger warehouse buildings. A well was observed at the south end of Building 1A. No information could be provided to SCS regarding the well. The subsurface features observed within the structures represent a REC.

- Numerous tenants have occupied the Property including various manufacturing facilities, carpets, furniture, cabinetry, printing, logistics, pulp and paper recycling, etc. Chemical use by these historical tenants is unknown. The presence of various historic manufacturing operations with unknown chemical use on the Property constitutes a REC.

- Available records on the SCAQMD's Facility Information Detail (FIND) database indicate the use of degreasers containing chlorinated solvents on the parcel directly adjacent to the west (9236 Hall Road) by two former occupants, Aerojet and General Dynamics. One of these former neighbors, Aerojet, also occupied (prior to 1971) the portion of the Property located at 9300 Hall Road and thus may have conducted operations on the Property. Permits for the adjacent site at 9236 Hall Road indicated that both Aerojet and General Dynamics operated a 1,1,1-trichloroethane degreaser, a perchloroethylene degreaser, a Freon degreaser, scrubbers, wastewater treating equipment, a spray booth (paint and solvent), and other equipment related to aerospace manufacturing activities. The use of chlorinated solvents adjacent to, and potentially on the Property, constitutes a REC.

- Los Angeles County Department of Public Works (LACDPW) records indicated that Aerojet occupied the adjacent parcel to the west from at least 1971 to 2003, and leased the building at 9300 Hall Road for use, including aerospace machining operations, for a period of time up to 1971. A number of subsurface features were used during this time, including a 10,000 gallon diesel underground storage tank (UST; unknown installation date) and various concrete sumps and/or clarifiers. The UST was removed and some of the sump/clarifiers were abandoned in place in 1986. A no further action letter was issued by the LACDPW on February 28, 1986 for certain concrete oil, grease, and water "tanks;" the 10,000-gallon UST was not included in this closure letter. Other subsurface features (drain lines, pit, sump, clarifier, etc.) were listed in the LACDPW records and it is anticipated these remain in place. Samples collected in 1985, from the contents of these features (both those removed and those that are anticipated to remain) revealed elevated concentrations of metals, total petroleum hydrocarbons (TPH), and oil and grease (analysis for volatile organic compounds [VOCs] was not conducted). The highest metals concentrations were detected in a sample collected from a "dirt pit." The disposition of the clarifiers, pits, sumps and other facilities contents from which samples were collected

is unknown. The presence of these subsurface features, some of which currently appear to remain and some of which were abandoned in place, along with the former aerospace machining operations, are considered a REC.

- Two USTs (a 1,000 gallon gasoline and a 15,000 gallon diesel) were formerly located at the Western Pacific Paper and Pulp facility at 9350 Hall Road. A release of up to 18,200 (presumably mg/kg, however the units were not reported) of TPH was summarized on an unauthorized release report that referred the case from the LACDPW to the Los Angeles Regional Water Quality Control Board (LARWQCB). Although the LARWQCB issued a no further action letter in 1996, there is no record that any remediation was conducted, therefore the presence of the former USTs and associated release constitute a REC.

- In 1995, Heger Reality disposed of tank bottom wastes (based on the date, this may be associated with the USTs removed at 9350 Hall Road) and halogenated solvents from the address of 9400 Hall Road. The disposal of tank bottom wastes (indicating the presence of former UST[s]) and halogenated solvents is considered a REC.

In addition, the following business environmental risk (BER) was identified:

- During the site inspection, it was brought to SCS' attention that an underground storage area or bunker may exist at the northwest corner of the Property, in the area of the Duray (9301 Stewart and Gray Road) and Omniteam (9300 Hall Road) facilities. Comments by tenants at these businesses suggested the bunker was used during World War II and that it housed chemicals. No evidence regarding the presence of this feature was observed during the site inspection, and its current or past existence has not been confirmed.

Conclusions

Based on the identified RECs at the Property, additional investigation is recommended.

Data Gaps

The following data gaps were encountered:

- The first development of the Property was unable to be determined.
- An information request for building permit records was made with the City of Downey City Clerk and as of the date of this report, had not been received.

Based on the available information these data gaps are not considered significant.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Prologis, Inc. (the "User") to prepare a Phase I Environmental Site Assessment (ESA) of Downey Industrial Center located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road, Downey, California (the "Property"). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-13, and the Master Services Agreement between SCS and Prologis dated July 14, 2015.

2 PURPOSE

The purpose of this investigation was to identify conditions indicative of releases or threatened releases of hazardous substances as defined in CERCLA section 101, and petroleum products, on, at, in, or to the Property.

This assessment is intended to constitute appropriate inquiry into the previous ownership and uses of the property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA) and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

If known or suspected contamination is identified, Users seeking to maintain LLPs have responsibilities in addition to completion of an AAI-compliant Phase I ESA. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances during the term of property ownership. In addition to these requirements under Federal law, there are different requirements under state law with respect to liability protections. On request, SCS Engineers can provide support for clients with continuing obligations, as appropriate.

3 SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspections of the Property and adjoining properties performed on January 10, 2017.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, existing reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel and review of agency files review of available documents, interviews with other knowledgeable persons).

- Degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

4 SPECIAL TERMS AND CONDITIONS

This Phase I ESA for Downey Industrial Center, 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road, Downey, California has been prepared specifically for Prologis, Inc. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk. Third party reliance letters may be issued on request to SCS subject to approval of Prologis, Inc. and payment to SCS of a fee for such letters.

5 LIMITATIONS AND ASSUMPTIONS

The investigation focused on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the Federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., groundwater). Materials that may contain substances which are not currently deemed hazardous by the federal or state of California EPA were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered to be of concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS Engineers assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. Unless obviously inaccurate or if information exists to the contrary, SCS Engineers assumes that

information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The following information is the responsibility of the User (40 CFR 312.22) and was verbally discussed with the User:

- Specialized knowledge or experience of the User.
- The relationship of the purchase price to the fair market value of the Property. The purchaser of a Property is required to consider whether any differential between the purchase price and the fair market value of the Property is due to the presence of releases or potential releases of hazardous substances at the Property.

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – Access to the Property was readily available.
- Physical Obstructions to Observations – Numerous businesses currently operate at the Property and equipment, storage of materials, etc. may have limited observation of all areas.
- Outstanding Information Requests – None
- Historical Data Sources Failure – The date of first development of the Property was unable to be determined.
- Other Limitations – None

6 GENERAL SITE CHARACTERISTICS

SITE LOCATION

The Property is located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road and is located between Hall Road (to the north) and Steward and Gray Road (to the south) on the block bounded to the east by Woodruff Avenue and to the west by Coldbrook Avenue. The Property consist of five parcels that have been assigned Assessor's Parcel Numbers (APNs) 6284-019-013 through -017. An APN map is provided as **Figure 2**.

GENERAL SITE DESCRIPTION

The Property is approximately 29 acres of commercial/industrial land currently developed with four primary structures (two large and 2 small) occupied by five tenants, associated parking areas, storage yards, and canopy areas. The current structures were built between about 1952 and 1973. The two larger structures are each divided into two portions (A and B) and occupied by different tenants, as later discussed.

ADJOINING PROPERTY USE

- North – Hall Road, across which is a railroad easement.
- East – Pacific Elite Collision Centers (11899 Woodruff Avenue) and Onstage Dance Center (11711 Woodruff Avenue)
- South – Stewart and Gray Road, across which is S&G Leadway Plastics Corp (9368 Stewart and Gray Road) and CPL Express Inc. (9340 Stewart and Gray Road)
- West – a multi-tenant commercial office park

7 PHYSICAL SETTING

PHYSIOGRAPHIC SETTING

The Property is located in the Downey Plain of the central Los Angeles basin. Site elevation ranges from approximately 107 to 112 feet above mean sea level. Site topography is generally flat with a slight regional downward slope to the south. The San Gabriel River is located approximately 0.5 miles to the southeast of the Property.

GEOLOGY AND SOILS

Based on the regional geology as outlined in the California Department of Water Resource Bulletin 104 (Planned Utilization of the Groundwater Basins of Los Angeles County, June 1961,) surface sediments in the area consist of Quaternary alluvial deposits of unconsolidated gravel, sand, silt, and clay.

GROUNDWATER

Based on the results of groundwater monitoring at the former Astro Pak facility located approximately 0.5 miles west of the Property (GeoTracker, Site #SL2044E1590), the depth to groundwater in the area is generally 50 to 60 feet below ground surface (bgs). The direction of groundwater flow is generally southerly.

RADON

According to the California Department of Health Service's May 2010 Radon Program report, screening in the area of the Property (90241 zip code) found no locations (out of 14) where buildings had radon levels greater than or equal to 4 pCi/L (the EPA action level). Note that elevated radon levels may also be attributed to other radon sources such as leaking natural gas or numerous building products such as drywall, cinderblock, concrete floors, brick, or stone products. Based on the available information, therefore, elevated radon gas is not expected in the area of the Property.

8 SITE INSPECTION

An inspection of the Property and surrounding area was conducted on January 10, 2017, by Ashley Hutchens of SCS. A sketch map and photographs of the Property are provided in **Appendix B**.

Access to the Property was arranged by Mr. Randy Scott of Heger Industrial (Heger). Heger had managed the Property since 1991. The Property is heavily used for commercial/industrial purposes by five tenants. Mr. Scott arranged access with appropriate persons at each of the tenant spaces each of whom assisted during the site inspection.

There are four main structures on the Property, two of which are large structures divided into two sections, which according to a schematic provided by Heger Industrial (**Figure 3**), include:

- Building 1A – 9300 Hall Road occupied by Omniteam, Inc.
- Building 1B – 9301 Stewart and Gray Road occupied by Duray
- Building 2A – 9400 Hall Road occupied by EJ Lauren
- Building 2B – 9399 Stewart and Gray Road occupied by 88 Logistics
- Building 3 – 9333/9363 Stewart and Gray Road occupied by 88 Logistics (and partners)
- Storage – 9350 Hall Road occupied by Western Pacific Pulp and Paper

Site inspection was conducted by tenant as discussed below. The site map provided in **Appendix B** depicts the areas on the Property occupied by the five various tenants.

Omniteam Inc. (Building 1A)

According to Heger, Omniteam has occupied the Property at 9300 Hall Road since 1985. SCS was assisted by Mr. Jeff McKeown during the site inspection. Omniteam occupies the northern portion of the large structure on the western side of the Property (Building 1A), and fabricates stainless steel and refrigeration restaurant equipment. Operations are divided into various divisions including design, cutting, shaping, welding, refrigeration, etc. Patch areas were observed in the concrete of the warehouse floor. A manhole was observed at the south end of the tenant space that is apparently an electrical vault as later discussed. A "monitoring" well box was also observed near this area, also further discussed below.

During the site visit, personnel were fixing and operating a sump pump to pump rainwater into Hall Road storm drains.

Duray (J.F. Duncan Industries, Inc.) (Building 1B)

According to Heger, Duray has occupied the Property at 9301 Stewart and Gray Road since 1985. SCS was assisted by Mr. Jose Alvaraz of Duray during the site inspection. Duray conducts operations similar to Omniteam, in that they manufacture food service equipment. Several steel plated vault/trench and patch areas were observed in the concrete floor of the warehouse. Mr.

Alvaraz indicated that none of these features are currently or historically associated with Duray's activities and assisted in opening one of the plated areas for inspection. The steel plates housed two pipes within a concrete trench. A small amount of oily liquid was observed in an area where the pipes terminated.

A manhole was observed at the south end of the tenant space that is apparently an electrical vault as later discussed. A cinderblock area was observed in a second story area within the warehouse that Mr. Alvarez indicated was historically used by previous tenant for explosive storage.

Duray conducts minor maintenance of its vehicles and stores the associated materials in the southern portion a metal shed along the east boundary of their lot. In addition, a baghouse, unrelated to Duray's activities (Mr. Alvaraz indicated it was related to a previous wood shop) remained at the northeastern boundary of Duray's lot.

EJ Laurens (Building 2A)

According to Heger, WPPP has occupied the Property at 9400 Hall Road since September 2015. SCS was assisted by Mr. Tony Ocampo, owner, during the site inspection. EJ Laurens manufactures sofas for retail stores. A fire had recently occurred at this facility (December 19, 2016). The fire had been contained to one area at the north end of the structure [Building 2A], which was undergoing renovation at the time of the inspection. The area was boarded up at the exterior and was sealed from the manufacturing area with plastic sheeting and was off limits to employees.

88 Logistics (Buildings 2B and 3)

According to Heger, 88 Logistics has occupied the Property at 9399 Stewart and Gray Road since September 2011, prior to which Performance Freight occupied it from 2010 to 2011 and HUDD Logistics was present from 1984 to 2010. SCS was assisted by Mr. Myron Giron during the site inspection.

Currently the warehouse (Building 2B) is used for storage of materials waiting for shipment, including pallets of drums and other products, some of which included chemical ingredients for manufacture of soaps and detergents. 88 Logistics leases to several subtenants associated with their activities including On the Road Transport and Trans Auto Logistics, which currently occupy the structure at 9333 and 9363 Stewart and Gray Road.

Western Pacific Pulp & Paper (WPPP) (Storage Building)

According to Heger, WPPP has occupied the Property at 9350 Hall Road since 1986. SCS was assisted by Mr. Kevin Duncombe during the site inspection. WPPP has office space in Building 2A, but their facility operations occupy the central and northcentral portion of the Property. WPPP conducts recycling activities consisting primarily of shredding paper, processing, and bailing. Bails are then shipped off to paper mills. Some plastic products are also recycled in similar manners. WPPP also provides recycling containers to facilities and pickup/delivery of those containers for the recycled materials.

During the site inspection, recent rains had made the area slick and messy as a result of the wet pulp/paper that covered the ground. Storm water discharge from this facility could be problematic.

WPPP conducts minor maintenance of its vehicles and stores the associated materials in an area at the south of the structure at 9350 Hall Road, including new and waste fluids stored in a shipping container, diesel exhaust fluid, hydraulic oil, and other unidentified drums. These materials were stored on asphalt or within the shipping container. Drains, staining, spills, leaks, and degraded pavement were not observed.

HAZARDOUS SUBSTANCES

Numerous 55-gallon drums were observed across the Property including one LT100A-Compliant Gun and Equipment Cleaner (acetone), several for waste oil, and a number used for trash. No signs of chlorinated solvent use was observed.

Minor vehicle maintenance operations (oil changes) are conducted at Duray and WPPP. Materials associated with these activities were stored in a trailer container at WPPP and a shed in the eastern storage yard at Duray.

In addition, numerous propane tanks and compressed gas canisters were observed, discussed below, were observed across the Property.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property. Runoff from the Property drains via culverts throughout the Property into storm drains, surrounding streets, and in some cases via a sump pump to surrounding streets.

DISTURBED AREAS

With the exception of one unpaved area at the northwest corner of the Property (at 9300 Hall Road), the 29 acre Property consists entirely of numerous structures and paving associated with storage yards and parking areas.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

One hydraulic elevator was observed in building 1A. The service company and frequency was not known. What appeared to be an oil spot was observed in the elevator room.

WELLS

One 8-inch diameter monitoring well box was observed in building 1A. The well box was opened to inspect contents and a 3-inch PVC casing was observed to be backfilled with bentonite. The purpose of the well was not known by the tenant.

ELECTRICAL EQUIPMENT

Several pad-mounted Southern California Edison (SCE) electrical transformers servicing the Property were observed. SCE has stated that they have never specified the purchase of distribution transformers utilizing PCBs as the insulating/cooling fluid. SCE transformers utilize mineral oil exclusively. In a statistically valid test of over 20,000 SCE distribution transformers, SCE determined that the concentrations of PCBs in the mineral oils was less than 50 parts per million (ppm) in over 96 percent of the units. Based on the available information, no significant environmental impact to the Property is anticipated from transformers.

WASTEWATER

Sanitary sewer service for the Property is provided by the City of Downey Public Works Department, Utilities Division. Potential clarifiers were observed on the west side of the Omniteam facility (Building 1A, 9300 Hall Road) and on the east side of the storage building at 9350 Hall Road. Both features were covered with steel plates and were not accessible for inspection. Neither are used by the current tenants, who also do not have any knowledge regarding the specifications.

DRINKING WATER

Drinking water for the Property is provided by the City of Downey Public Works Department, Utilities Division. Drinking water samples were collected for analysis of lead and will be discussed in a separate report prepared by SCS.

STORAGE TANKS

No evidence of underground storage tanks (USTs) was observed during the site inspection. Numerous propane tanks (used for forklift operation) and compressed gases canisters (including argon, oxygen, carbon dioxide, etc.) were observed on the Property.

ASBESTOS-CONTAINING MATERIALS (ACMS)

An ACM survey was conducted by SCS on January 10 and 11, 2016, the results of which will be summarized in a separate report prepared by SCS.

LEAD-BASED PAINT (LBP)

An LBP survey was also conducted by SCS on January 10 and 11, 2016, the results of which will be summarized in a separate report prepared by SCS.

VISUAL INSPECTION OF ADJOINING SITES

- North – Hall Road, across which is a railroad easement.
- East – Pacific Elite Collision Centers (11899 Woodruff Avenue) and Onstage Dance Center (11711 Woodruff Avenue)

- South – Stewart and Gray Road, across which is S&G Leadway Plastics Corp (9368 Stewart and Gray Road) and CPL Express Inc. (9340 Stewart and Gray Road)
- West – a multi-tenant commercial office park

9 INTERVIEWS

As previously discussed, Mr. Randy Scott of Heger provided SCS with general access to Property; representatives of each tenant provided access and relevant information.

Mr. Scott indicated that Heger has no knowledge nor could find information of hazardous materials usage (including USTs and chlorinated solvents) at the Property. Mr. Scott also reported that the manholes observed in Buildings 1A and 1B are electrical vaults and that Building 2A and 2B also have the same features.

During the site inspection it was brought to SCS' attention that an underground storage area or bunker may exist at the northwest corner of the Property, in the area of the Duray and Omniteam facilities. Comments by tenants at these businesses suggested the bunker was used during World War II and that it housed chemicals. No one knew exactly where the bunker is or how to access it, however several stories about the bunker indicated that it was used during the World War II era and that one employee approached the City of Downey about using the area to store toy trains, however the City would not allow it because it was "full of chemicals." No evidence regarding the presence of this feature was observed during the site inspection, and its existence is unknown at this time.

10 SITE HISTORY

Site history was evaluated from the following sources:

- Historical U.S. Geological Survey (USGS) topographic maps provided by Environmental Data Resources (EDR) (December 29, 2016).
- Historical aerial photographs dating from 1928, 1938, 1952, 1963, 1972, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 provided by Environmental Data Resources (EDR) (December 29, 2016).
- A search was made of EDR-Sanborn collection and no maps of the Property were found.
- City Directory review report provided by EDR (January 3, 2017).

Copies of aerial photographs, city directories, and topographic maps are included in **Appendix C**.

Year	Description	Source

Year	Description	Source
1896/1899 /1902	One structure was depicted at the northeast corner of the Property. A railroad was observed adjacent to the north/northeast and Hall Road was present to the north. Woodruff Avenue was present adjacent to the east. San Gabriel River was present in the vicinity to the east.	Topographic map
1923/1925	No structures were depicted on the Property. A stream or creak appeared to traverse the Property.	Topographic map
1928	The majority of the Property, with the exception of the northeast corner, appeared to be agricultural or fallow land. A dirt road transected the southwest corner of the Property. The northeast corner appeared to be occupied by a dwelling or farm that extended beyond the Property line to the east. The surrounding area appeared to be fallow or agricultural land. A railroad track was present to the north/northeast across which was an orchard.	Aerial Photograph
1936	The map is similar to 1925 map.	Topographic map
1938	The Property and surrounding area appeared similar to the 1928 photo.	Aerial Photograph
1942/1943 /1949/1951	One or two small structures appeared to be located on the northern portion of the Property, along Hall Road. Orchards appeared to be located at the southwest corner of the Property and in the vicinity.	Topographic map
1952	Large structures were present on the Property including Building 1A (northwestern corner) and Buildings 2A/2B (eastern portion of the Property). Two small structures were present between the large ones. The remaining areas appeared to be primarily used for parking. An AST was observed along the southern boundary at the centerline of the Property. The immediately adjacent areas appeared vacant or remained agricultural with the exception of a structure and parking adjacent to the east.	Aerial Photograph

Year	Description	Source
1963	The large structure on the western portion of the Property had been extended to the south with the construction of Building 1B. The Property generally appeared similar to current conditions with the exception that Building 3 was not present and the AST remained. Three main parking areas were observed; between the two large structures and at the northwest and southwest corners of the Property. The immediately surrounding area had been heavily developed for commercial use including the adjacent structure to the west.	Aerial Photograph
1964/1965	Two large structures and six small structures along with a water tank were depicted on the Property.	Topographic map
1971	A listing for C.H. Cochran was present for 9355 Stewart and Gray Rd. through 1985. A manufacturing facilities appeared present adjacent to the south at 9368 (Intrcntntl Sply & Mfg") and 9426 (Boman Astrosonix) Stewart and Gray Rd. Aerojet General Ordnance was listed at 9236 Hall Rd. (through 2003) which is located adjacent to the west, however, as later discussed, there is information that Aerojet conducted activities on the Property.	City Directories
1972	Building 3 had been constructed and the structures appeared similar to current conditions. The topographic map depicted three new mall structures, one of which was Building 3. The water tank was still depicted. The surrounding area appeared similar to the 1964 photo.	Aerial Photograph, Topographic Map
1975	C.H. Cochran remained at 9355 Stewart and Gray. Minibus Inc. was listed for 9301 Stewart and Gray, and All Western Pallet and INPS Printing Co. were listed for 9363 Stewart and Gray. Bowman Plastics was listed at 9375 Steward and Gray and 9379 Stewart and Grey appeared in directory with no occupant listed. Boman Industries, C A R Brands, Cal Auto Radio, and Gibbs Sound Products were listed at 9300 Hall Road. An address of 9380 Hall road appeared on the directory, however no occupant was listed.	City Directories
1977	The Property and surrounding area appeared similar to the 1972 photo.	Aerial Photograph

Year	Description	Source
1980	Duray Inc. and Imperial Installation were listed at 9301 Stewart and Gray (Duray remained present as of the date of this report); Alpine Animal Centers at 9303 Stewart and Gray; C.H. Cochran at 9355 Stewart and Gray; All Pacific Pallet at 9363 Stewart and Gray; Bowman Plastics and Hubbard Carpets at 9375 Stewart and Gray. The Property listings for Hall Road were the same as the 1975 directory.	City Directories
1981	The map appeared similar to the 1964/65 map with the exception that the "NASA Industrial Plant" was depicted approximately 0.25 miles to the southeast.	Topographic map
1983	The Property appeared similar to the previous photo with the exception that the area between the two large structures appeared vacant and the lot at the southwest corner was used for trailer storage.	Aerial Photograph
1985	Changes from the 1980 directory include no occupants listed for addresses of 9303, 9363, 9375, and 9379 Stewart and Gray. Flexi Van Trailers and Craig Robt Corp were listed at 9333 and 9333 ½ Stewart and Gray. Bridgewater Association was listed at 9335 Stewart and Gray. Listings for 9300 Hall Rd. appeared similar to those form 1975-1980. Western Pacific Pulp was listed at 9350 Hall Rd.; no occupant was listed for 9380 Hall Rd.; and Hudd Distribution Service Inc. was listed for 9400 Hall Rd.	City Directories
1989	The Property generally appeared similar to the 1983 photo with the exception that the AST was no longer present and additional trailer storage and storage in the central portion of the Property related to the paper recycling facility.	Aerial Photograph
1992	Property listings included: Bridgewater & Associates, Duray Inc, and Omni Temp Refrigeration at 9301 Stewart and Gray; AJF Leasing at 9333 Stewart and Gray; Hydroquip Pump at 9355 Stewart and Gray; Western Pacific Pulp & Paper at 9350 Hall Rd; and Hudd Distb at 9400 Hall Rd.	City Directories
1994	Less trailers were stored on the Property, otherwise it appeared similar to the 1989 photo.	Aerial Photograph
1995	Property listings included: Duray Inc. and Omni Temp Refrigeration at 9301 Stewart and Gray; Xtra Leasing Inc. at 9333 Stewart and Gray; Hydroquip Pump at 9355 Stewart and Gray; and Hudd Distb at 9400 Hall Rd.	City Directories

Year	Description	Source
1999	Property listings included: Bridgewater & Associates, Duray Inc/JF Duncan Duray, and Omni Temp Refrigeration at 9301 Stewart and Gray; Xtra Lease at 9333 Stewart and Gray; Hydroquip Pump at 9355 Stewart and Gray; Intersection Development Corp at 9300 Hall Rd; Western Pacific Pulp and Paper at 9350 Hall Rd.; and Hudd Distb at 9400 Hall Rd.	City Directories
2002	The Property appeared similar to current conditions. An abundance of trailers were once again stored on the Property.	Aerial Photograph
2003	Property listings included: Duncan Duray at 9301 Stewart and Gray; Western Pacific Pulp and Paper at 9333 Stewart and Gray; Jeffrey McKeown, Omniment Industries Inc., Wesfac Inc. were located at 9300 Hall Rd.; Western Pacific Pulp & Paper at 9350 Hall Rd.; and Cindy Burgos at 9400 Hall Rd. Aerojet General, American Suspension, and General Dynamics were listed at 9236 Hall Rd. (adjacent to west).	City Directories
2005	The Property appeared similar to the 2002 photo.	Aerial Photograph
2008	Property listings included: Duncan/Duray, Glenbank Inc., and Omniteam Inc. at 9301 Stewart and Gray; Hydroquip Pump & Dewatering Corp. at 9355 Stewart and Gray; Omni Temp Refrigeration; US Traffic Corm and Wesfac Inc. were located at 9300 Hall Rd., Western Pacific Pulp & Paper at 9350 Hall Rd.; and Kelly Services at 9400 Hall Rd. No listing was present for 9236 Hall Rd. (adjacent to west).	City Directories
2009/2010	The Property appeared similar to the 2005 photo with the exception that bulk trailer storage was no longer present.	Aerial Photograph
2012	The Property appeared similar to the 2010 photo with some trailer storage once again along the north and south central areas.	Aerial Photograph
2013	Property listings included: JF Duncan Duray Industries Inc. at 9301 Stewart and Gray; Access ingredients LLC and Western Pacific Pulp & Paper 9333 Stewart and Gray; Hydroquip Pump at 9355 Stewart and Gray; 88 Logistics Inc. and MJO staffing at 9401 Stewart and Gray. Omni Team Inc. was listed for 9300 Hall Rd. and Maersk Distribution and Western Pacific Pulp and Paper were listed for 9400 Hall Rd.	City Directories

HISTORICAL USE SUMMARY

One structure was depicted at the northeast corner of the Property as early as 1896. By 1928, the majority of the Property, with the exception of the northeast corner, appeared to be agricultural or fallow land with a dirt road that transected the southwest corner. The northeast corner appeared to be occupied by a dwelling or farm that extended beyond the Property line to the east. An orchard appeared present on a portion of the Property from 1942 through 1951. By 1952 some of the current development had been initiated on the Property including the large structure on the eastern portion and two-thirds of the large structure on the western portion which had been extended to its current conditions by 1963. An AST (water tank) was present along the southern boundary (at the centerline) from at least 1952 through at least 1983. By 1972, all of the existing structures were present on the Property. Numerous tenants have occupied the Property including various manufacturing facilities, carpets, furniture, cabinetry, printing, logistics, pulp and paper recycling, etc.

HISTORICAL USE OF ADJOINING SITES

As early as 1896 a railroad was observed adjacent to the north/northeast and Hall Road was present to the north. Woodruff Avenue was present adjacent to the east. In 1928, the surrounding area appeared to be fallow or agricultural land. A railroad track was present to the north/northeast across which was an orchard. By 1963, a large structure was present adjacent to the west of the Property that was occupied by Aerojet (9236 Hall Rd.) through at least 2003. As later discussed, there is information that Aerojet may have also operated on the Property. General Dynamics also operated at the adjacent site to the west.

11 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

In order to identify commonly known or reasonably ascertainable information about the Property, SCS reviewed previous environmental reports and various regulatory agency files and interviewed regulatory agency personnel. The following information was identified.

PREVIOUS ENVIRONMENTAL REPORTS

Prologis provided the following reports for review:

AES Due Diligence, Inc., April 13, 2007. Phase I Environmental Site Assessment, Downey Industrial Center, 9300, 9350, 9400 Hall Road and 9301 Stewart and Gray Road, Downey, CA 90241.

AES Due Diligence, Inc., December 5, 2016. Phase I Environmental Site Assessment, Downey Industrial Center, 9300, 9350, 9400 Hall Road and 9301, 9333, and 9399 Stewart and Gray Road, Downey, CA 90241.

The two reports prepared by AES were nearly identical. Although original building permits were reportedly not on record at the building department, information obtained during an interview indicated that the current improvements were constructed in 1951, prior to which it was vacant. Prior uses of the Property included a munitions factory and a manufacturing facility by Aerojet General.

AES identified the presence of two USTs (a 1,000-gallon gasoline and a 15,000-gallon diesel) which were reportedly removed and a no further action letter issued. AES identified that the 9300 and 9400 buildings appeared on the HAZNET database listing as having disposed of small amounts of hazardous waste in the past, however the report did not provide any details on types of waste.

AES concluded in their reports that two historical recognized environmental conditions (HREC) were identified, including (1) the historic "UST" that was closed in 1996 (note that AES identified two former USTs) and (2) historic site use as a manufacturing facility. AES also concluded that based on the age of the buildings, asbestos was suspected, which was identified as a REC. In addition, AES identified the potential for lead based paint was a *de minimis* condition. AES recommended no additional investigation.

Copies of these reports are provided as Appendix in **Appendix D**.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were contacted in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal which might have resulted in soil or groundwater contamination within a one-mile radius of the Property. Within the City of Downey, the Los Angeles County Department of Public Works (LACDPW) is the lead enforcement agency for UST compliance. In the event of potential site contamination, the Los Angeles County Fire Department (LACFD) generally assumes oversight. Los Angeles County Department of Public Health (LACDPH) holds records of hazardous materials use and storage. If a tank has leaked and groundwater contamination is suspected, the Los Angeles Regional Water Quality Control Board (LARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

Copies of the records reviewed are included as **Appendix E**.

Los Angeles County Department of Public Works (LACDPW)

Two files are listed on the LACDPW database of files for their hazardous materials system (list compiled in January 2014) including Duncan Duray Industries and Omni Temp Refrigeration located at 9301 Stewart & Gray Road. SCS requested the files for review at the LACDPW at which time SCS was told these files are related to stormwater and no hard files exist.

Los Angeles County Department of Public Health

SCS requested files from LACDPH associated with the Property addresses at the Los Angeles County Public Health Investigation (PHI) offices in Commerce, California. Three files were available and reviewed at the LACDPH as discussed below.

9300 Hall Road

The records in this file were associated with the Aerojet Ordnance Company with a mailing address of 9236 Hall Road (adjacent to the west of the Property), however the facility listing discussed in the records was reported as 9300 Hall Road, which Aerojet was leasing. A background summary dated January 17, 1986 submitted by Aerojet to the LACDPW in order to get a permit indicated the following:

- Aerojet occupied the facility prior to 1971 for machining operations (making aerospace metal casement parts). The facility was vacant from 1971 through 1973 after which it was occupied by Bowman Industries (importer of automotive stereo equipment) until 1983.
- That no records were available regarding processing fluids and fluid disposal, however discussions had revealed that no toxic solutions were used in the manufacturing processes and that Bowman Industries did not use the tanks or sumps that were being permitted for removal.
- Aerojet Rheem Manufacturing Company, both engaged in aerospace machining operations, "required the use of cutting oils and degreasing fluids which are of the standard non-toxic variety used for many years without change."
- From "outward appearances and inspections" Aerojet concluded that there was no evidence of the use of toxic or hazardous chemicals by previous tenants and the building was considered "totally safe and hazard free for renovations and occupancy by Aerojet."

Permit records indicated that one 15 year old, 10,000 gallon diesel UST was removed and five concrete "tanks" (presumably these were sumps and/or clarifiers) were closed in place. They were listed as 20 years old and included a 400, 500, 1,000, and 14,000 gallon capacity for water and oil and a 280 gallon for oil, grease, and water. A figure designated Boman Industries depicted the subsurface feature locations planned for removal (along with others) and noted that they those remaining in place were abandoned by "filling with compacted fill and concrete paving" and samples were collected for analysis for total hydrocarbons and oil and grease.

Five borings were drilled to 40 feet in depth adjacent to the sumps with samples generally collected at 5-foot intervals. A letter by Geosec dated February 13, 1986 concluded chemical analysis revealed no contamination. However, the laboratory report indicated concentrations of oil and grease in 20 samples ranging from 0.8 to 53.1 milligrams per kilogram (mg/kg) and of total petroleum hydrocarbons (TPH) in five soil samples ranging from 1.5 to 333 mg/kg. Additional tabulated data (no laboratory report available) appeared to be related to samples collected from the tank/sump contents (those to be abandoned and other features such as drain lines, pits, sump, clarifier, etc.) and included analysis for metals, oil and grease, and/or TPH. The data indicate that samples of the contents of these features contained significantly elevated concentrations of metals including chromium (up to 2,056 mg/kg), copper (up to 1,065 mg/kg), zinc (up to 3,150 mg/kg), etc. (it should be noted that the sample with the highest concentrations of metals was apparently collected from a dirt pit). Concentrations of oil and grease were up to 52,000 mg/kg, and TPH concentration up to 430,000 mg/kg were reported. It is unknown if the contents were removed and appropriately disposed prior to abandoning some of the features in place, and it us unknown what occurred with the remaining features (such as the dirt pit).

Records included a February 28, 1986 letter from the LACDPW specifying a hazardous materials underground storage closure permit for 9300 Hall Road. The letter indicated that the LACDPW had reviewed soil sample/groundwater laboratory report required as part of the closure procedure and concluded that "no further subsurface investigation" was necessary. Although closure was provided, it appears some features remained in place and, in addition, analysis for VOCs was not conducted. The historical presence of these subsurface features, some of which appear to remain and some of which were abandoned in place, along with the former aerospace machining operations, are considered RECs.

9350 Hall Road

An application to operate a UST was on record for Western Pacific Pulp and Paper to operate a 1,000 gallon gasoline UST and a 15,000 gallon diesel UST; one of the application forms indicated an installation date of 1983. The tanks were removed in November 1994, at which time five soil samples were collected beneath the USTs; with a "slight gasoline odor" observed. An unauthorized release form dated January 17, 1995 was completed by the LACDPW. Under the substances involved, the form lists concentrations of TPH (18,200), benzene (1.59), toluene (0.158), xylenes (2.23), ethylbenzene (1.92), however no units for these concentrations were identified. The form identified Western Pacific Pulp and Paper as the responsible party and indicated that there was no action taken at the time and the site was being referred to the LARWQCB. A no further action letter from the LARWQCB was issued on August 20, 1996. No additional records were available indicating if remediation was conducted prior to closure. The presence of the former USTs at this locations is considered a REC.

9400 Hall Road

Files for this address were associated with Hudd Distribution Services. Inspection reports indicate the facility conducted warehousing and storage operations, was a non-generator and no permit was issued.

Los Angeles Regional Water Quality Control Board Files

The LARWQCB responded that there were no records on file for the addresses associated with the Property.

South Coast Air Quality Management District

The following facilities on and adjacent to the Property were listed in the SCAQMD's Facility Information Detail (FIND) database:

- Boman Industries (9300 Hall Rd.); All Western Ind, Inc. (9363 Stewart and Gray Rd.) – these facilities are listed in the database, however the only information available indicates that they are "out of business."

- Myers Custome Products, Inc. (9300 Hall Rd.) – This facility was issued a permit to operate a "furnace reverb (rotary) aluminum" in 1997 which is now inactive. No other information was available.

- Omniteam, Inc. (9300 Hall Rd.) – This facility has two permits associated with laser cutters and reportedly received a notice to comply (NTC) in 2005 to discontinue use of "L&J Supply Co-Blend LT 36 WC lacquer thinner" for parts cleaning and replace it with a Rule 1171 compliant solvent. A re-inspection was reportedly conducted in early 2006 and the facility was listed as "in compliance."

- Wesfac, Inc. (9300 Hall Rd.) – This facility had two rejected applications for laser cutters in 2000 and later (in 2005) received a NTC and notice of violation (NOV) associated to operating a laser cutter without a permit. The NOV was listed as "case closed" and the NTC status was "in compliance.

- WPPP (9400 Hall Rd.) – This facility received a NTC in Feb 2012 to use best available control measure to minimize fugitive dust. The re-inspection noted the facility was in compliance. No permitted equipment is located at this facility.

- Duray, Inc. (9301 Stewart and Gray Rd.) – This facility received a NTC associated to operating a plasma arc cutter without a permit. Four permits are on record including plasma arc cutter, baghouse, spray booth (paint and solvent).

- LA Cellular Telephone Co (9355 Stewart and Gray Rd.) – This facility is listed as "sold," however a permit was on record for a diesel-fueled emergency generator.

- Aerojet Ordnance Co (9236 Hall Rd.) – As previously discussed, this facility was located adjacent to the west, however, Aerojet also leased space on the Property at 9300 Hall Road. Numerous permits (listed in **Appendix E**) were on record dated 1960 through 1992. Permits indicated the facility operated a 1,1,1-trichloroethane degreaser, a perchloroethylene degreaser, freon degreaser, scrubbers, wastewater treating, spray booth (paint and solvent), among other equipment related to aerospace activities.

- General Dynamics (9236 Hall Rd.) – This facility was located adjacent to the west. Numerous permits (listed in **Appendix E**) were on record dated 1994 through 1998. Permits indicated the facility operated a 1,1,1-trichloroethane degreaser, a perchloroethylene degreaser, freon degreaser, methylene chloride degreaser, scrubbers, wastewater treating, spray booth (paint and solvent), among other equipment related to aerospace activities.

- Brown Boveri Electric (11711 Woodruff Ave.) – This facility is listed for submitting an application for a "storage tank chlorinated & halogenated" however the application is listed as being canceled indicating it was never issued and presumably the tank was never installed and the facility is listed as "out of business".

The historical use of chlorinated solvents/degreasers on adjacent parcels, and Aerojet's potential use of solvents on the Property at 9300 Hall Road, are considered RECs. Available records and relevant permits are provided in **Appendix E**.

12 REVIEW OF FEDERAL, STATE, TRIBAL, AND LOCAL GOVERNMENT DATABASES

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (December 29, 2016). A description of each of the databases searched is included in the report, which is attached as **Appendix F**. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-13.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix F** for further information on these sites.

PROPERTY LISTINGS

Addresses associated with the Property have included 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road, Downey. The Property appears on the database report 22 times, under one or more of these addresses, as follows:

- 9300 Hall Road – Omni Team Inc (Haznet); Intersection Develop (RCRA NonGen/NLR, FINDS, Haznet, ECHO); Aerojet Ordnance Co (Los Angeles Co HMS, Sweeps UST) – Facilities at this address reportedly disposed of waste and mixed oil, alkaline solution, ignitable and reactive waste, detergent waste chemicals, hydrocarbon solvents (benzene, hexane, Stoddard, etc.), off-specification, aged, or surplus organics, other organic solid waste, unspecified solvent mixture. Aerojet Ordnance Co is listed as a “removed” facility

on the LA County HMS database and as a UST site, however the number of tanks was not designated.

- 9350 Hall Road – Western Pacific Pulp (FINDS, LUST, SWEEPS, UST, Haznet, Hist Cortese, RGA LUST, SSTS, Los Angeles Co HMS) – This facility reportedly disposed of other organic solids and waste/mixed oil and had a release of gasoline from a UST into soil. The case (Global ID T0603704078) was closed by the LARWQCB in 1996. No other information is available in the database report or on the GeoTracker website. Information provided from the SWEEPS database indicates there were two USTs at this location. The facility is listed as "removed" from the Los Angeles County HMS database. The former leaking UST and presence of two USTs are considered RECs.

- 9400 Hall Road – Maersk Downey (Haznet); Anderson Trucking Co (Haznet); Heger Reality Ct (Haznet); Western Pacific Pulp & Paper (ICIS, FINDS, Haznet); Hudd Distribution SE (Los Angeles Co HMS) - Facilities at this address reportedly disposed of oxygenated solvents (acetone, butanol, ethyl acetate, etc.), other organic solid waste, unspecified oil-containing waste, unspecified organic liquid mixture, and liquids with halogenated organic compounds greater than 1,000 milligrams per liter. Of specific note, in 1995 Heger Realty disposed of tank bottom waste and halogenated solvents (chloroform, methyl chloride, perchloroethylene). It is likely (since Heger was listed as property owner on the permit) that the tank bottom wastes are related to the removal of the USTs at 9350 Hall Road conducted in November 1994. The LA County HMS status for Hudd Distribution is listed as "open." The disposal of tank bottom wastes (indicating the presence of former UST[s]) and halogenated solvents is considered a REC.

  The Integrated Compliance Information System (ICIS) database is a newer database that is in the process of compiling information from most of EPA's programs. Available information indicates that a notice of violation (NOV) was issued to Western Pacific Pulp & Paper, no other information on the NOV was available.

- 9301 Stewart & Gray Road – Duray Inc (FINDS, EMI); Duray/JF Duncan Indu (Haznet, Los Angeles Co HMS); Omni Temp Refrigerat (Los Angeles Co HMS) – Duray is listed as having had air permits associated with some type of emissions as early as 1987 through 2001 and has disposed of unspecified aqueous solution. The LA County HMS statuses for both facilities are listed as "open."

- 9333 Stewart & Gray Road – Access Ingredients (Haznet) – This facility reportedly disposed of off-specification, aged, or surplus organics.

ADJACENT SITE LISTINGS

Gould-Brown Boveri, 11711 Woodruff Avenue (adjacent to the east) is listed on the RCRA-SQG, FINDS, and ECHO databases. Other than the fact that no violations were found, no additional information was provided. It is not anticipated that this facility would impact the Property.

Holm Industries/Coast Polymers Inc., 9368 Stewart and Gray Road (adjacent to south) is listed on the UST/LUST database and experienced a release of diesel into soil. The case was closed in 2011 and, based on case type and status, is not anticipated to impact the Property.

Primex Technologies/Olin Ordinance/General Dynamics, 9236 Hall Road (adjacent to west) are listed on the SLIC, UST, Envirostor, RCRA-SQG, FINDS, WDS, SWEEPS UST, HIST UST, CA FID UST, EMI, and LA County HMS databases. The facility reportedly has (or had) nine USTs, the status of which is listed as "active." Additional information on the USTs was reviewed on the GeoTracker database indicated that USTs were installed in 1979 and included a 10,000 gallon gasoline tank and various sumps. The UST information is similar (and may be related) to that reviewed in LACDPH files for the Property at 9300 Hall Road where one UST was removed and 8 concrete sumps/clarifiers were abandoned in place by Aerojet who had leased this area of the Property.

The facility reportedly generated and disposed of hazardous wastes including ignitable, corrosive, and reactive wastes, halogenated solvents used in degreasing, spent halogenated and non-halogenated solvents, and wastewater treatment sludge. The SLIC case was reported to be associated with a release of volatile organic compounds (VOCs) and is listed as "completed – case closed" as of 1999. The SLIC (Global ID SLT43200198) and Envirostor cases were reviewed on the associated online databases. The Envirostor listing is related to a tiered permit and no information or data was available on the types and concentrations of VOCs associated with the release; this and the fact that the facility conducted degreasing operations that used and disposed of halogenated solvents, constitutes a REC with respect to the Property.

OTHER DATABASE SITES

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including: 1. standard environmental records, 2. additional environmental records, and 3. high risk historical records. This summary table is provided beginning on page 4 of the EDR report (**Appendix F**). In addition to the Property and adjacent sites listings discussed above, SCS identified the following sites of concern within 0.25 miles of the Property:

- Reed Grain & Milling Co, 11814 Woodruff Avenue (260 feet east) (Drycleaners, Haznet)
- Inco Express Inc, 11941 S. Woodruff Avenue (680 feet south) (LUST, HIST UST)
- Firestone Chrysler Plymouth, 9262 Firestone Boulevard (185 feet north) (RCRA-SQG, SWEEPS UST, HIST UST, FINDS, LA Co HMS, ECHO)
- McGean Chem Co Inc., 9520 E. Cee Bee Drive (525 feet east) (RCRA-SQG, FINDS, ECHO, RCRA-SQG, SWEEPS UST, LA Co HMS, LUST, HIST Cortese)
- SR Maintenance & Management Services Inc, 9525 Stewart and Gray Road (0.13 miles east) (Drycleaners, Haznet)
- Kirkhill Inc., 12021 Woodruff Avenue (0.14 miles south) (RCRA-SQG, LUST, FINDS, HIST Cortese, ECHO)

Based on database listing type and fact that no release has been reported, regulatory status, type of violation, distance, and/or anticipated groundwater gradient, the sites listed above are not anticipated to significantly impact the Property.

> **Shell Service Station,** 9305 Firestone Boulevard (0.15 miles south/southeast) (RCRA-SQG, HIST UST, FINDS, HAZNET, LA Co HMS, ECHO, LUST, SWEEPS UST, CA FID UST) – This facility reportedly had two releases from USTs. One (Global ID T0603703423) release was associated with gasoline in soil and the case was closed in June 1996. The second case (Global ID T0603748443) was reportedly for a release of "other solvent or non-petroleum hydrocarbon into aquifer used for drinking water supply." According to the EDR database report, the status is "pollution characterization," however, information reviewed on the GeoTracker database indicates that the case was closed in 2004. Based on the case status reported by GeoTracker, distance from the Property, and groundwater flow direction (southerly), this facility is unlikely to impact the Property.

The other sites within 0.25 miles of the Property are leaking sites that are downgradient or based on case status are not anticipated to impact the Property. In addition, other sites within 0.25 miles do not have known releases such as RCRA small quantity generators, HAZNET, FINDS, and USTs sites. None are known to have any contamination at this time; therefore, none are anticipated to have impacted the Property. Similarly, none of the sites situated beyond 0.25 miles are anticipated to have impacted the Property.

Unmappable or Orphan Sites

One unmappable site was identified in the EDR Report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable site in relation to the Property, it appears unlikely that the unmappable sites have adversely affected the environmental condition of the Property.

LANDFILLS

A review of the Major Waste Systems Map (June 1972) was conducted to locate any landfills or transfer stations within a one-mile radius of the Property. A privately-owned transfer station was identified approximately 0.20 miles to the southeast of the Property. In addition an inactive Class II landfill was identified approximately 0.40 miles to the northeast with a listing address of 11014 S. Pangborn Avenue.

No additional active or inactive landfills were identified within 0.25 mile of the Property according to the EDR-provided Solid Waste Information System database.

OIL AND GAS WELLS

Available oil and gas well maps from the California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the Digital Online Mapping System (DOMS 2.1), no wells were identified within 0.5 mile of the Property. Based on the available information, no significant environmental impacts to the Property are anticipated from oil and gas wells.

NATIONAL PIPELINE MAPPING SYSTEM (NPMS)

SCS reviewed the NPMS website (https://www.npms.phmsa.dot.gov/PublicViewer/) for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, there are no hazardous materials pipelines within 0.25 miles of the Property.

13 USER PROVIDED INFORMATION

A User Questionnaire was not returned to SCS for inclusion in the report, however the following information was discussed verbally with Prologis.

TITLE RECORDS

No title report was provided to SCS for review.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE

No specialized knowledge regarding the Property was provided to SCS by the User.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The purchase price being paid for the Property reasonable reflects the fair market value.

14 DEGREE OF OBVIOUSNESS OF THE PRESENCE/LIKELY PRESENCE OF CONTAMINATION ON THE PROPERTY

The Property has a complex history of various tenants, many of which conducted manufacturing operations (including aerospace). Information reviewed during the course of this ESA documented the use of chlorinates solvents on and adjacent to the Property, and the presence of three USTs and other subsurface features, all of which constitute RECs with regard to the Property. Based on these RECs, identified above and in the summary of findings below, further investigation is recommended to assess the potential for contamination at the Property.

15 DATA GAPS

A data gap represents an inability on the part of the environmental professional to obtain information required by the standards and practices of 40 CFR 312 to fully identify conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the Property.

The following data gaps were identified:

- The first development of the Property was unable to be determined.
- An information request for building permit records was made with the City of Downey City Clerk and as of the date of this report, had not been received.

Based on the available information these data gaps are not considered significant.

16 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

- The Property consists of approximately 29 acres located between Hall Road (to the north) and Steward and Gray Road (to the south) on the block bounded to the east by Woodruff Avenue and to the west by Coldbrook Avenue. The Property consist of five parcels that have been assigned Assessor's Parcel Numbers (APNs) 6284-019-013 through -017. The Property is commercial/industrial land currently developed with four primary structures (two large and 2 small) occupied by five tenants, associated parking areas, storage yards, and canopy areas.

- The site inspection identified that the Property is divided into five areas each occupied by different tenants (Omniteam, Duray Duncan, Western Pacific Pulp & Paper, EJ Lauren, and 88 Logistics) that manufacturing of commercial grade stainless steel products and sofa's, along with warehousing and logistics, and a paper recycling facility. Two of the five tenants conduct minor maintenance of their vehicle fleets and store associated new and used oils and other vehicle fluids. Numerous patch areas and steel plated vault/trenches were observed in the larger warehouse buildings. A well was observed at the south end of Building 1A. No information could be provided to SCS regarding the well. The subsurface features observed within the structures represent a REC.

- Numerous patch areas and steel plated vault/trenches were observed in the larger warehouse buildings. A well was observed at the south end of Building 1A. No information could be provided to SCS regarding the well. The subsurface features observed within the structures represent a REC.

- Numerous tenants have occupied the Property including various manufacturing facilities, carpets, furniture, cabinetry, printing, logistics, pulp and paper recycling, etc. Chemical use by these historical tenants is unknown. The presence of various historic manufacturing operations with unknown chemical use on the Property constitutes a REC.

- Available records on the SCAQMD's Facility Information Detail (FIND) database indicate the use of degreasers containing chlorinated solvents on the parcel directly adjacent to the west (9236 Hall Road) by two former occupants, Aerojet and General Dynamics. One of these former neighbors, Aerojet, also occupied (prior to 1971) the portion of the Property located at 9300 Hall Road and thus may have conducted operations on the Property. Permits for the adjacent site at 9236 Hall Road indicated that both Aerojet and General Dynamics operated a 1,1,1-trichloroethane degreaser, a perchloroethylene degreaser, a Freon degreaser, scrubbers, wastewater treating equipment, a spray booth (paint and solvent), and other equipment related to aerospace manufacturing activities. The use of chlorinated solvents adjacent to, and potentially on the Property, constitutes a REC.

- Los Angeles County Department of Public Works (LACDPW) records indicated that Aerojet occupied the adjacent parcel to the west from at least 1971 to 2003, and leased the building at 9300 Hall Road for use, including aerospace machining operations, for a period of time up to 1971. A number of subsurface features were used during this time, including a 10,000 gallon diesel underground storage tank (UST; unknown installation date) and various concrete sumps and/or clarifiers. The UST was removed and some of the sump/clarifiers were abandoned in place in 1986. A no further action letter was issued by the LACDPW on February 28, 1986 for certain concrete oil, grease, and water "tanks;" the 10,000-gallon UST was not included in this closure letter. Other subsurface features (drain lines, pit, sump, clarifier, etc.) were listed in the LACDPW records and it is anticipated these remain in place. Samples collected in 1985, from the contents of these features (both those removed and those that are anticipated to remain) revealed elevated concentrations of metals, total petroleum hydrocarbons (TPH), and oil and grease (analysis for volatile organic compounds [VOCs] was not conducted). The highest metals concentrations were detected in a sample collected from a "dirt pit." The disposition of the clarifiers, pits, sumps and other facilities contents from which samples were collected is unknown. The presence of these subsurface features, some of which currently appear to remain and some of which were abandoned in place, along with the former aerospace machining operations, are considered a REC.

- Two USTs (a 1,000 gallon gasoline and a 15,000 gallon diesel) were formerly located at the Western Pacific Paper and Pulp facility at 9350 Hall Road. A release of up to 18,200 (presumably mg/kg, however the units were not reported) of TPH was summarized on an unauthorized release report that referred the case from the LACDPW to the Los Angeles Regional Water Quality Control Board (LARWQCB). Although the LARWQCB issued

a no further action letter in 1996, there is no record that any remediation was conducted, therefore the presence of the former USTs and associated release constitute a REC.

- In 1995, Heger Reality disposed of tank bottom wastes (based on the date, this may be associated with the USTs removed at 9350 Hall Road) and halogenated solvents from the address of 9400 Hall Road. The disposal of tank bottom wastes (indicating the presence of former UST[s]) and halogenated solvents is considered a REC.

In summary, SCS has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Downey Industrial Center located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road, Downey, California. Any exceptions to, or deletions from, this practice are described in Section 5 of this report. In the opinion of the Environmental Professionals, this assessment has revealed evidence of conditions indicative of recognized environmental conditions in connection with the Property, as follows:

- Numerous patch areas and steel plated vault/trenches were observed in the larger warehouse buildings. A well was observed at the south end of Building 1A. No information could be provided to SCS regarding the well. The subsurface features observed within the structures represent a REC.

- Numerous tenants have occupied the Property including various manufacturing facilities, carpets, furniture, cabinetry, printing, logistics, pulp and paper recycling, etc. Chemical use by these historical tenants is unknown. The presence of various historic manufacturing operations with unknown chemical use on the Property constitutes a REC.

- Available records on the SCAQMD's Facility Information Detail (FIND) database indicate the use of degreasers containing chlorinated solvents on the parcel directly adjacent to the west (9236 Hall Road) by two former occupants, Aerojet and General Dynamics. One of these former neighbors, Aerojet, also occupied (prior to 1971) the portion of the Property located at 9300 Hall Road and thus may have conducted operations on the Property. Permits for the adjacent site at 9236 Hall Road indicated that both Aerojet and General Dynamics operated a 1,1,1-trichloroethane degreaser, a perchloroethylene degreaser, a Freon degreaser, scrubbers, wastewater treating equipment, a spray booth (paint and solvent), and other equipment related to aerospace manufacturing activities. The use of chlorinated solvents adjacent to, and potentially on the Property, constitutes a REC.

- Los Angeles County Department of Public Works (LACDPW) records indicated that Aerojet occupied the adjacent parcel to the west from at least 1971 to 2003, and leased the building at 9300 Hall Road for use, including aerospace machining operations, for a period of time up to 1971. A number of subsurface features were used during this time, including a 10,000 gallon diesel underground storage tank (UST; unknown installation date) and various concrete sumps and/or clarifiers. The UST was removed and some of the sump/clarifiers were abandoned in place in 1986. A no further action letter was issued by the LACDPW on February 28, 1986 for certain concrete oil, grease, and water "tanks;" the 10,000-gallon UST was not included in this closure letter. Other subsurface features (drain lines, pit, sump, clarifier, etc.) were listed in the LACDPW records and it

is anticipated these remain in place. Samples collected in 1985, from the contents of these features (both those removed and those that are anticipated to remain) revealed elevated concentrations of metals, total petroleum hydrocarbons (TPH), and oil and grease (analysis for volatile organic compounds [VOCs] was not conducted). The highest metals concentrations were detected in a sample collected from a "dirt pit." The disposition of the clarifiers, pits, sumps and other facilities contents from which samples were collected is unknown. The presence of these subsurface features, some of which currently appear to remain and some of which were abandoned in place, along with the former aerospace machining operations, are considered a REC.

- Two USTs (a 1,000 gallon gasoline and a 15,000 gallon diesel) were formerly located at the Western Pacific Paper and Pulp facility at 9350 Hall Road. A release of up to 18,200 (presumably mg/kg, however the units were not reported) of TPH was summarized on an unauthorized release report that referred the case from the LACDPW to the Los Angeles Regional Water Quality Control Board (LARWQCB). Although the LARWQCB issued a no further action letter in 1996, there is no record that any remediation was conducted, therefore the presence of the former USTs and associated release constitute a REC.

- In 1995, Heger Reality disposed of tank bottom wastes (based on the date, this may be associated with the USTs removed at 9350 Hall Road) and halogenated solvents from the address of 9400 Hall Road. The disposal of tank bottom wastes (indicating the presence of former UST[s]) and halogenated solvents is considered a REC.

In addition, the following business environmental risk (BER) was identified:

- During the site inspection, it was brought to SCS' attention that an underground storage area or bunker may exist at the northwest corner of the Property, in the area of the Duray (9301 Stewart and Gray Road) and Omniteam (9300 Hall Road) facilities. Comments by tenants at these businesses suggested the bunker was used during World War II and that it housed chemicals. No evidence regarding the presence of this feature was observed during the site inspection, and its current or past existence has not been confirmed.

Based on the identified RECs at the Property, additional investigation is recommended.

18 GLOSSARY/DEFINITIONS

AAI -- All Appropriate Inquiry
AUL -- Activity and Use Limitations
BTEX -- benzene, toluene, ethylbenzene, and total xylenes
CERCLA -- Comprehensive, Environmental Response, Compensation, and Liability Act
CERCLIS -- Comprehensive Environmental Response, Compensation, and Liability Information System
CFR -- Code of Federal Regulations
CORRACTS -- Corrective Action Against Responsible Parties at a RCRA site
CREC -- A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, or institutional or engineering controls).
DOGGR -- Department of Oil, Gas, and Geothermal Resources
De Minimis Condition -- A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not RECs or CRECs.
DTSC -- California EPA Department of Toxic Substances Control
EDR -- Environmental Data Resources, Inc.
EPA -- Environmental Protection Agency
ERNS -- Emergency Response Notification System
ESA -- Environmental Site Assessment
FINDS -- Facility Index System
HAZNET -- California EPA Hazardous Waste Facility and Manifest Data
HREC -- Historical Recognized Environmental Condition: A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls
LQG -- Large Quantity Hazardous Waste Generator
LUST -- Leaking Underground Storage Tank
MCL -- Maximum contaminant level
MTBE -- Methyl-tert-butyl-ether
NFA -- No Further Action determination
NFRAP -- No Further Remedial Action Planned
NPL -- National Priority List (Superfund)
PAHs -- Polynuclear aromatic hydrocarbons
PCBs -- Polychlorinated biphenyls
PRGs -- Preliminary Remediation Goals
RCRA -- Resource Conservation and Recovery Act
RCRIS -- Resource Conservation and Recovery Information System

RECs -- R*ecognized environmental conditions* is defined by ASTM E 1527-13 as: "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis conditions* are not *recognized environmental conditions*."

ROD -- Record of Decision

RBSLs -- Risk-based Screening Levels

RWQCB -- Regional Water Quality Control Board

SARA -- Superfund Amendments and Reauthorization Act

SLIC -- Spills, Leaks, Investigations, and Cleanups database

SQG -- Small Quantity Hazardous Waste Generator

SWIS -- Solid Waste Information System

SWLF -- Solid Waste Facility/Landfills

TPH -- Total Petroleum Hydrocarbons

TRIS -- Toxic Release Inventory System

TSD -- Treatment, Storage, and/or Disposal Facility

User -- The person or persons seeking to establish the innocent landowner defense, bona fide prospective purchaser liability protection, and/or contiguous property owner liability protection pursuant to CERCLA sections 101 and 107.

USGS -- United States Geologic Survey

UST -- Underground Storage Tank

VCP -- Voluntary Cleanup Program

VOCs -- Volatile organic compounds

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EDR Historical Topo Map Report

12/29/16

Site Name:

9300, 9350 and 9400 Hall Roa
9301, 9333 and 9399 Stewart &
Downey, CA 90241
EDR Inquiry # 4816690.4

Client Name:

SCS Engineers
3900 Kilroy Airport Way
Long Beach, CA 90806
Contact: Kim Braun

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: 01216368.00

Coordinates:

Latitude:	33.929369 33° 55' 46" North
Longitude:	-118.119214 -118° 7' 9" West
UTM Zone:	Zone 11 North
UTM X Meters:	396555.05
UTM Y Meters:	3754888.59
Elevation:	110.00' above sea level

Maps Provided:

2012	1936
1981	1925
1972	1923
1964, 1965	1902
1951	1899
1949	1896

Environmental Professional Statement

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a site of the nature, history, and setting of the subject site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

II OBJECTIVE AND SCOPE

Objective

The purpose of this Phase I Environmental Site Assessment is to identify recognized environmental conditions that may have an impact on the subject site, using readily available sources of information, interviews and field observations. It is our understanding the Client intends to finance the site.

Procedures

This Assessment is a Phase I Environmental Site Assessment (ESA) for the improvements located at 9300, 9350, 9400 Hall Road and 9301 Stewart and Gray Road in Downey, CA 90241, performed in general accordance with ASTM Designation E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and following the Scope of Work outlined in AES Due Diligence, Inc.'s proposal. AES Due Diligence, Inc. (AES) conducted on-site observations on April 9, 2007, interviewed site operations personnel and observed adjacent properties. Environmental Data Resources, Inc. (EDR) conducted database searches following ASTM guidelines. Such searches are generally limited to a radius of one mile from the subject site. Additionally, ASTM Non-Scope items are addressed in this Assessment, including Asbestos, Lead-Based Paint, Radon Gas, Mold, Wetlands and Lead in Drinking Water. No testing was completed for ASTM Non-Scope items.

Limitations

The purpose of the Phase I ESA of the site is to address the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. If requested by the Client, certain non-scope business environmental risks are addressed in the Assessment. The Phase I ESA is intended to allow the Client to satisfy one of the requirements to qualify for the innocent landowner defense, contiguous property Owner or bona fide prospective purchaser limitations on CERCLA liability: i.e. the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 USC § 9601(35)(B). The Phase I ESA does not address whether requirements in addition to appropriate inquiry were met in order to qualify for CERCLA's innocent landowner defense.

The objectives of the Phase I ESA are as follows:

1. Evaluate if recognized environmental conditions (REC), historic recognized environmental conditions (HREC) or *de minimis* conditions are present on the site.

2. Provide sufficient documentation of sources, records and resources utilized in conducting the Phase I ESA.

3. Prepare a professional opinion regarding the presence of RECs at the site.

Special Terms and Conditions

The Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the site.

A Phase I ESA attempts to identify the environmental conditions of the site and vicinity. Environmental conditions and regulations are subject to change and re-interpretation. Current conditions or regulatory requirements should not be assumed to continue to represent conditions at some future time. This Assessment represents AES's professional judgments and opinions based on information presented in this Assessment and no warranty, either expressed or implied, are contained herein.

Limitations and Exceptions of Assessment

The surface conditions of the site were noted by visual observations or information obtained during interviews. No physical testing, soil/groundwater sampling or laboratory analysis was included unless otherwise noted in the Assessment.

The executive summary was prepared for the convenience of the users of this Assessment. This summary does not contain all the information presented in this Assessment and, therefore, the entire Assessment should be read to assure all pertinent information is transmitted.

AES performed the Phase I ESA of the site in substantial conformance with the scope and limitations of ASTM E 1527-05, Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* unless otherwise noted in the Assessment. Certain environmental conditions may exist on a site that are beyond the scope of the Standard, but may warrant consideration. Per the Standard, this environmental site assessment is presumed to be valid for a specific time limit as defined in ASTM Designation E-1527-05.

AES utilized the following methods to complete the reconnaissance of the site. AES observed the site and adjoining properties for indicators of existing or potential recognized environmental conditions. The site walkover consisted of walking the site boundary and several transects across the site. For a site with buildings, the accessible areas of the buildings were entered and observed. Please note that AES did not look under floors, above ceilings or inside walls. The adjoining properties were observed from the periphery of the site, if possible. The observations were documented with representative photographs. No limiting conditions were encountered during the course of the Phase I ESA.

Documents

Our Assessment represents our professional experience and judgment, and a good faith effort to obtain all available information. Documents and data provided by the Client, its designated representatives, or other interested parties, and consulted in the preparation of this Assessment, have been reviewed and may be referenced herein, with the understanding that AES assumes no responsibility or liability for their accuracy or for the withholding by any of the involved parties of any assessments or other information that could affect the transaction.

Intended Use

AES Due Diligence, Inc. is not affiliated with the borrower or any other parties to this transaction. This Assessment is intended to be used in its entirety. No portion of it may be deleted or used out of context without the written consent of AES. The opinions and information contained in this Assessment are time sensitive and represent our evaluation of the environmental site conditions at the time the services were provided. This Assessment was prepared for a limited use involving a single transaction, as set forth herein, and may not be used for any other purpose without the written consent of AES.

Proprietary Information

Field data, field notes, and other data and documents assembled by AES to produce this Assessment represent the work product of AES's training, experience and professional skill. This information belongs to and remains the property of AES Due Diligence, Inc.

Reliance

This Report is for the exclusive use of RiverSource Life Insurance Company, and Pacific Southwest Realty Services. No other party shall have the right to rely on any service provided by AES Due Diligence, Inc. without prior written consent.

Definitions

ASTM defines a Recognized Environmental Condition (REC) as "the presence or likely presence of any Hazardous Substances or Petroleum Products on a site under conditions that indicate an existing release, a past release, or a material threat of release of any Hazardous Substance or Petroleum Products into structures on the site or into the ground, groundwater or surface water of the site." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.

A Historic Recognized Environmental Condition (HREC) is defined as an environmental condition which in the past would have been a REC, but which may or may not be considered a REC currently.

A *de minimis* environmental condition generally does not present a threat to human health or

the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be *de minimis* are not a REC.

Business Environmental Risk (BER) is a risk, which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of the site, not necessarily limited to those environmental issues investigated in this Phase I ESA. BER often necessitates that an environmental professional complete one or more of the non-scope considerations identified by ASTM.

III PROPERTY DESCRIPTION

Site Visit and Interviews

On April 9, 2007, AES visited the subject site and reviewed the fixed facility. The tenants typically provided an escort that accompanied Richard E. Darwicki of AES during the interior viewing portions of the site visit.

AES observed the interiors and contents of representative occupied tenant spaces, common areas and maintenance areas and noted operations and activities at the subject site. AES looked for suspect asbestos-containing building materials, stored chemicals, underground and aboveground storage tanks, unusual surface appearance, wetlands and other issues that may indicate environmental conditions on the subject site. AES noted the location of on-site electrical power transformers and storm drainage structures where these were encountered. AES observed sites adjoining the subject site and areas within the immediate vicinity of the subject site.

AES photographed selected features at or near the subject site to support this written Assessment. The photographs are identified, described and appended to this Assessment.

Subject Site

The project is situated on a tract of land estimated to be approximately 29.16 acres. The property consists of three parcels generally bounded by Hall Road on the northeast, Stewart and Gray Road on the south and Woodruff Avenue to the east, not including the parcels that front Woodruff Avenue. All buildings are within the City of Downey, California. The original improvements were reportedly completed in 1951.

The topography of the site is nearly level and slopes to the south. The site has a maximum surface elevation difference of approximately three feet. Additional slopes are provided around the improvements for storm water drainage. On-site storm water drainage is by sheet flow to catch basins or curb inlets connected to the Downey storm sewer system.

The parking and driveway areas are generally asphaltic concrete paved. Entry driveway aprons, rubbish dumpster pads, and public and private sidewalks are concrete paved.

Pad-mounted, utility company owned electrical transformers are provided on site. The Southern California Edison Company is the electrical supplier and is responsible for transformer-related incidents. Natural gas service is provided by the Southern California Gas Company. The site is provided with municipal water and sanitary sewer services from buried utilities along the adjacent thoroughfares.

Buildings

The property has four primary single-story buildings. The Owner indicates that there are a total of 461,593 square feet (sf) of net rentable floor area. The center is occupied by multiple tenants. The original improvements were reportedly completed in 1951.

Three light steel industrial buildings and one wood framed office building are on site and are supported on shallow foundations. The painted exterior walls of the buildings covered with various finishes including stucco, corrugated steel, CMU and brick veneer. No basements are provided at the project. The roofing consists of a gradient sloped, built-up bituminous roofing system with a mineralized capsheet as a surfacing material. The roofing materials at the pitched portions consist of corrugated metal panels mechanically fastened to the roof and covered with built-up roofing. The buildings are provided with pad-mounted and roof-mounted HVAC units. There is a hydraulically driven elevator in Building 9300.

Adjoining Properties

Properties immediately adjoining the subject site are listed in the following table. The adjoining properties are located in Downey, CA 90241.

Adjoining Properties			
Name	**Operation**	**Direction from Site**	**Concerns**
Railroad tracks	Transportation	Northeast	None
Industrial Buildings 9368-9420 Stewart and Gray Road	Industrial Uses	South	None
Industrial Buildings 11711-11911 Woodruff Road	Industrial Uses	East	None
9236 Hall Road	Vacant Land	West	None

Because of the controlled surface drainage and the predominantly non-hazardous uses on the adjoining properties, they do not, in our opinion, pose a significant environmental risk to the subject site.

Vicinity

AES observed other properties located near the subject site for current uses or conditions that might be environmentally significant. The local area properties observed by AES did not appear to be engaged in environmentally significant activities.

Topography and Hydrogeology

AES reviewed the United States Geological Survey (USGS) Topographic Map, which indicates that the subject site is approximately 110 feet above mean sea level. AES observed that the general drainage flows in a southerly direction across the surface of the site. No substantial grade changes appear to have been made to the subject site when compared to the topography of surrounding sites. A copy of the USGS topographic map that covers the subject site is appended.

Geology and Surficial Soils

The subject site is located above Cenozoic era stratified sequence bedrock. The depth to bedrock is unknown.

According to the information obtained through the EDR Report, subject site is located in an area of loamy soils. These soil types have moderate permeability and would be expected to have moderate susceptibility as a result of surface spreading of wastes, depending upon local soil conditions.

Surface and Ground Water Flow

The regional surface water flows in a southerly direction. The ground water flow in the area is assumed to be to the south. The depth to ground water is unknown.

IV SITE HISTORY

No prior Environmental Reports were provided to AES for review. AES conducted a limited historical review regarding the subject site. The following summarizes AES's review of readily available historical records and maps gathered from government agencies and commercial enterprises regarding the subject site history and use. This should not be considered a listing of all available information.

Interviews

Mr. Hilands had personal knowledge of the uses of the subject site prior to the construction of the current improvements in 1951. He indicated that the site was previously used as vacant land, a munitions factory and Aerojet General manufacturing facilities.

Building Department Records Review

The original building shell permits and current Certificates of Occupancy are not on file at the city. The buildings were constructed before the city was incorporated and the records may have been lost or misplaced.

Aerial Photograph and Historical Map Review

Aerial photographs are reviewed to identify past site use and areas of environmental concern on the subject site. AES has reviewed aerial photographs of the subject site. The photographs were obtained from GeoSearch. Copies of the aerial photographs that were obtained and reviewed by AES are appended. Please see chart below for the specific dates and description summary.

Beginning in the 1860s, the Sanborn Fire Insurance Company, and others, prepared maps that depict site improvements and commercial activities in many metropolitan areas in the United States. AES attempted to obtain fire insurance maps, specific to the site, to review as part of this Phase I Environmental Site Assessment. No Sanborn map coverage is available for the area.

Historical maps provide information concerning historical site boundaries and improvements. Historic Topographic Maps were reviewed for the site, please see the chart below for enumeration of years and findings.

The historical maps reviewed were obtained from GeoSearch, and are appended.

Site History Summary		
Date	**Record Type**	**Land Use**
1928	Aerial Photograph	Agricultural uses
1936	Historical Topographic Map	Undeveloped land
1938	Aerial Photograph	Agricultural uses
1947	Aerial Photograph	Agricultural uses
1952	Aerial Photograph	Current structures
1960	Aerial Photograph	Current structures
1965	Historical Topographic Map	Current structures
1968	Aerial Photograph	Current structures
1972	Historical Topographic Map	Current structures
1976	Aerial Photograph	Current structures
1981	Historical Topographic Map	Current structures
1982	Aerial Photograph	Current structures
1994	Aerial Photograph	Current structures
2002	Aerial Photograph	Current structures

Based on AES's interpretation of the available documentation noted above the first developed and historic site use was primarily agricultural and industrial uses. No evidence of long-term fill activity, surface scarring, staining or other issues of environmental concern were visible in the aerial photographs during the review process.

Directories

City directories provide information concerning historical site ownership and use. City Directories were reviewed for the years 1971 thru 2005 and no significant information was found.

Title Records Review

A title records review, or chain-of-title, can be used to identify prior ownership of a property and to evaluate previous activities or operations in terms of environmental significance. Significant easements, covenants, restrictions and environmental liens may be indicated in title records. A chain-of-title regarding the subject site was not provided to AES for review as part of this Phase I Environmental Site Assessment.

Document Review

With the exception of a 1996 A.L.T.A. survey, no documents were provided for review.

V ENVIRONMENTAL SITE ASSESSMENT

Fixed Facilities Review

The improvements observed by AES on April 9, 2007, were reported to have been completed in 1951. Minor repair activities to meet maintenance requirements and tenant needs are ongoing. Recent improvements have included tenant space build outs and painting, according to Mr. Hilands.

Mr. Hilands indicated that no asbestos containing materials or lead based paint were utilized in the above noted improvements. In addition, he stated that landscape maintenance services are performed by outside contractors. No landscape equipment is stored on the subject site. Landscape equipment and automotive maintenance is performed at the subject site.

Site Tenant Activities

AES reviewed the current tenant for operations that may use regulated materials or generate waste products. AES observed the accessible interior and exterior common areas and maintenance areas. The site is 100% occupied by multiple tenants

AES confirmed the nature of tenant activities in the building, which primarily consists of industrial and warehouse uses. AES entered and observed the activities at sample areas of the building, including the Hudd, Duray, OmniTemp and Western Pacific areas. Also visited were common areas, mechanical rooms and the roofs.

Upon review of the activities at the above locations, AES found no specific environmental concerns regarding these operations.

On-Site Chemical and Petroleum Product Storage

AES looked for chemicals, hazardous substances, petroleum-based fuels and lubricants, and janitorial and cleaning supplies stored on the subject site. Small amounts of used machine oil, lacquer thinner, solvents, truck filters, antifreeze, used motor oil are disposed of intermittently. No other chemicals or hazardous substances were observed on the subject site other than shelf quantities of commonly available janitorial and cleaning supplies.

Waste Disposal Practices

AES identified the current wastes generated at the subject site. According to AES's observations, general and recycled wastes are disposed of from the subject site. Areas of waste storage appeared to be well kept and free of debris.

General wastes are collected, placed in a dumpster, removed from the subject site on an as-needed basis, and disposed of by city contracted firms.

Small amounts of regulated waste haulers are contracted by the Duray/J.F.Duncan and Hudd tenants to dispose of hazardous materials on an as needed basis. Hazardous Waste Manifests were requested from the tenants and have not been received to date.

Underground and Aboveground Storage Tanks

Owners and operators of certain USTs are required to register those USTs with the state agency responsible for administering the federally mandated UST program. A search of the list of registered USTs in California, prepared by EDR, showed that there are no current registered USTs located on the subject site.

AES interviewed Mr. Hilands and various tenant representatives regarding the presence of USTs and ASTs on the subject site. They stated that there are no registered USTs and no hazardous materials registered ASTs located on the subject site. There are no records of USTs and no records of ASTs on the subject site with the exception of propane storage tanks, Refrigerant 404, oxygen cylinders and nitrogen cylinders.

AES interviewed Mr. Hilands regarding the past use of heating fuels on the subject site to ascertain whether USTs or ASTs may have been utilized on site for the storage of heating fuels or oils. Mr. Hilands stated that to his knowledge the improvements have always been heated by electricity or natural gas. AES's observations confirmed the nature of the current heating systems at the subject site.

AES visually observed the subject site for surficial evidence of USTs and ASTs. AES did not observe evidence of USTs or ASTs at the subject site expect as noted above.

Polychlorinated Biphenyls (PCBs)

Federal regulations put into effect following the Toxic Substances Control Act (TSCA) require that electrical transformers be labeled to identify their PCB content. Manufacture and distribution of PCBs was banned in 1979. Transformer owners are responsible for compliance with all applicable regulations governing those transformers, including maintenance of the transformer and any remediation work resulting from a transformer-related incident.

Pad-mounted, utility company owned electrical transformers are provided on site. The observed electrical transformers appeared to be in good condition with no visible leaks. Areas around the electrical transformers exhibited no signs of visible staining or abnormal appearance. AES did not observe any labels on the electrical transformers identifying the PCB content.

Based on utility ownership and no observed leaks, AES recommends no further action with regard to PCBs in transformers.

Exterior Surface Condition

AES observed the exterior surface of the subject site. It is estimated that 98% of the subject site surface was covered by improvements and pavement. AES's observation of the site soil surfaces was therefore limited to the landscaped areas.

None of the historical documentation reviewed, indicated that the subject site was previously utilized as a quarry and/or solid waste disposal facility.

No pits, ponds or lagoons were observed at the subject site during the site visit. No areas of distressed or dead vegetation, surface depressions or surface stains attributed to chronic leaks or spills were observed during the site visit.

Interior Surface Condition

AES observed portions of the interior surfaces of the building for evidence of unusual conditions. We found no evidence of unusual conditions in the areas we observed.

VI DATABASE RECORDS REVIEW

Environmental Records Review

An environmental records database search report dated April 5, 2007, was provided by Environmental Data Resources (EDR). A copy of EDR's report is appended. The following discussion excerpts specific items from the report that deserve additional description.

In addition to the mapped sites in the EDR report, there may also be a list of unmapped sites. These are reported database sites that, due to incomplete addressing information, could not be accurately plotted by EDR. In an attempt to locate all unmappable sites, AES compared each address provided on the unmappable site list to known addresses of the site and vicinity, and attempted to locate unmappable sites during reconnaissance of the vicinity. AES concludes that no unmappable sites were identified that meet the search radius criteria of the scope of work and are considered to be environmentally significant to the subject site.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

Since 1982, the U.S. EPA has maintained lists of contaminated sites under the federal Superfund Program in accord with the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). The U.S. EPA discovers these sites from citizen reports, routine inspection of hazardous waste generators, treatment, storage and disposal facilities, and reporting requirements.

CERCLA Sites

Facility ID No.	Facility Name and Address	Location			Regulatory History and Current Status
		Distance	Direction	Gradient	
0904850	Red Phosphorus Site 11810 Lakewood Blvd.	1/4	W	Cross	Removal site only, cleaned up.
0905602	NASA Industrial Plant	1/4	WSW	Down	Discovery 1998, not on NPL

Review of the CERCLIS list provided by EDR identifies a total of two CERCLIS sites listed within the ASTM standard minimum search distance of one-half mile from the subject site. There are no CERCLIS facilities on the subject site.

The above referenced CERCLIS facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

CERC-NFRAP List

CERCLA sites designated No Further Remedial Action Planned (NFRAP) have been removed from CERCLIS. CERC-NFRAP sites may be where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the National Priorities List (NPL), or the contamination was not serious enough to require Federal Superfund action or NPL consideration. CERC-NFRAP sites, however, may continue to represent a concern to local or state regulators.

CERC-NFRAP Sites					
Facility ID No.	Facility Name and Address	Location			Regulatory History and Current Status
		Distance	Direction	Gradient	
0901455	Peacock Aerospace 10620 Firestone Blvd	½ mi	ESE	Down	Non NPL, no action planned.

Review of the CERC-NFRAP list provided by EDR identifies only one CERC-NFRAP site listed within the ASTM standard minimum search distance of one-half mile from the subject site. There are no CERC-NFRAP facilities on the subject site.

The above referenced CERC-NFRAP facility was evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

National Priorities List

The U.S. EPA maintains this list as a subset of CERCLIS, identifying over 1,200 CERCLA sites for priority cleanup under the Superfund Program. Once sites have been designated on the CERCLIS list, the U.S. EPA uses its Hazard Ranking System to determine the potential risks of those sites to human health and the environment. Only the sites that present the greatest risk are added to the NPL, which qualifies the sites to receive CERCLA remedial funding.

Review of the NPL list provided by EDR identifies no NPL sites within the approximate minimum search distance of one mile from the subject site.

RCRA – Generators

The U.S. EPA's RCRA (Resource Conservation and Recovery Act, 42 U.S.C. '6991 *et seq.*) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. Generators are also listed in the FINDS database.

Review of the RCRA LQ-Generator list provided by EDR identifies a total of 11 RCRA-LQG sites listed. There is one former RCRA-LQG facility shown on the adjoining property to the west and none on the subject property.

The above referenced RCRA LQ-Generator facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Review of the RCRA SQ-Generator list provided by EDR identifies a total of 71 RCRA-SQG sites listed. There is one RCRA-SQG former tenant facility shown on the subject site and there is one RCRA-SQG facility on adjoining properties.

The above referenced RCRA SQ-Generator facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

RCRA - Treatment, Storage, Disposal Facilities (TSD)

The Resource Conservation and Recovery Act Information System (RCRIS) is a compilation of selective information on facilities that generate, store, transport, treat or dispose of hazardous waste. Inclusion of a facility on the RCRIS database is not necessarily an indication of an environmental problem.

Review of the RCRIS-TSD list provided by EDR identifies no RCRIS-TSD sites within the approximate minimum search distance of one mile from the subject site.

Emergency Response Notification System (ERNS)

The ERNS is a compilation of reported releases of hazardous substances into the environment. The database contains information from Spill reports made to federal authorities, including the U.S. EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation.

Review of the ERNS list provided by EDR identifies a total of 10 ERNS sites listed. There are no ERNS facilities on the subject site.

The above referenced ERNS facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Underground Storage Tanks (USTs)

Certain USTs are regulated under the RCRA Act, and must be registered with the state agency responsible for administering the UST program. USTs are also listed in the CA FID database. Inclusion of a facility on the UST database is not necessarily an indication of an environmental problem.

Review of the current list provided by EDR identifies a total of 22 sites within a search radius of 1/4 mile. There are no facilities on the subject site and there is one former facility on adjoining property to the west. Leaking tanks are discussed in the following section.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Leaking Underground Storage Tanks (LUSTs)

LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state. LUSTs are also listed in the CORTESE database.

Review of the list provided by EDR identifies a total of 51 sites. There are 22 facilities within the ASTM standard minimum search distance of one-half mile from the subject site. Of the 51 sites, 45 are down gradient or cross gradient. The remaining six sites are closed cases, including the former LUST listing on the subject site. There are no LUST facility listings on the adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

The on site listing at Western Pulp and Paper, 9350 Hall Road, was a soil only gasoline case discovered during the removal of a 1000 gallon premium unleaded gasoline tank and a 15000 gallon diesel storage tanks in 1994. The case was closed August 20, 1996 and a closure letter from the California Regional Water Quality Control Board is appended.

Solid Waste Facilities/Landfills (SWF/LS)

Solid waste records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites.

Review of the list provided by EDR identifies a total of three sites within the ASTM standard

minimum search distance of one-half mile from the subject site. There are no facilities on the subject site and there are no facilities on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

EnviroStor

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Review of the list provided by EDR identifies a total of nine sites. There are five sites within the ASTM standard minimum search distance of one mile from the subject site. There are no facilities on the subject site and there are no facilities on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

DEED (Institutional Controls)

Site Mitigation and Brownfield's Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfield's Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed

restriction, or a land use restriction that binds current and future owners.

Review of the list provided by EDR identifies no sites within the approximate minimum search distance of one mile from the subject site.

California Hazardous Material Incident Reporting System (CHMIRS)

The California Office of Emergency Services database contains reported information on incidents involving accidental releases or spills of hazardous materials.

Review of the list provided by EDR identifies a total of five sites. There are no listed facilities on the subject site.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Hazardous Waste and Substances Sites List (CORTESE)

The Cal-EPA publishes a listing of potential and confirmed hazardous waste sites throughout the State of California. Under California Government Code Section 65962.5, these sites are submitted to the Cal-EPA by the State Department of Health Services, State Water Resources Control Board, the Integrated Waste Management Board and the Department of Toxic Substances Control.

The database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release, and all solid waste disposal facilities from which there is a known migration.

Review of the list provided by EDR identifies a total of 34 sites. There are 15 sites within the ASTM standard minimum search distance of one-half mile from the subject site. There are no facilities on the adjoining properties. The former LUST facility at 9350 Hall Road is also listed as a CORTESE site with no details.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

VCP (Voluntary Cleanup Program)

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Review of the list provided by EDR identifies only one site down gradient and at a lower elevation. There are no facilities on the subject site.

The above referenced facility was evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Hazardous Waste Information System (HAZNET)

The California Department of Health Services, Toxic Substances Control Division, has developed and maintained lists of hazardous waste generators and hazardous waste treatment, storage and disposal facilities in the State of California, in accordance with the Hazardous Waste Control Law (California Health and Safety Code Section 25100 *et seq.*) And the Hazardous Waste Management Act of 1976 (California Health and Safety Code Section 25179.1 *et seq.*). Inclusion of a facility in the HAZNET list is not necessarily an indication of an environmental problem.

Additionally, the California Health and Safety Code requires all counties to prepare and submit hazardous waste management plans. To assist the counties, the Toxic Substances Control Division maintains lists containing hazardous waste generation and disposal data within each county. The Toxic Substances Control Division has assembled this information from manifest reports required from hazardous waste generators. This database currently lists over 20,000 facilities in the State of California.

Review of the list provided by EDR identifies a total of 148 sites. The 9300 Building and 9400 Building at the subject site appear on the list as having disposed of small amounts of hazardous wastes in the past.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Historic USTs

The Hazardous Substance Storage Container Database is a historical listing of former UST sites that are closed and typically not listed with the current UST sites.

Review of the list provided by EDR identifies a total of 65 sites. The SWEEPS list, which is no longer maintained, lists the 9350 Building facility on the subject site. There is one former demised facility listed on the adjoining property to the west.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Dry Cleaners

This database provides a list of drycleaner facilities that have EPA ID numbers. These facilities have certain SIC codes including: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; dry cleaning plants, except rugs; carpet and upholstery cleaning; industrial launderers and laundry and garment services.

Review of the list provided by EDR identifies a total of two sites. There are no facilities on the subject site and there are no facilities on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Waste Management Unit Database System (WMUDS/SWAT)

The California Integrated Waste Management Board maintains an inventory list of both open as well as closed and inactive solid waste disposal facilities and transfer stations in accordance with the Solid Waste Management and Resource Recovery Act of 1972, California Government Code Section 2.66790(b). Generally, the California Integrated Waste Management Board learns of locations of disposal facilities through permit applications and from local enforcement agencies. The Waste Management Unit Database System is used by the California Water Resources Control Board and the Regional Water Quality Control Boards for program tracking and inventory of waste management units.

Review of the latest WMUDS/SWAT listing identifies no WMUDS/SWAT facilities within the approximate minimum search distance of ½ mile from the subject site.

Manufactured Gas Plants (MGP)

Manufactured Gas Plants produced combustible gas for urban use prior to the widespread use

and pipeline distribution of natural gas in the 1950s. The main fuels used in production of this gas were coke, coal and oil; the by-products of this manufacturing process include a variety of tars, sludge and other chemicals.

MGP sites tend to have subsurface contamination due to the common practice of disposing of the waste products on site. Review of the MGP list provided by EDR identifies no MGP sites within the approximate minimum search distance of one mile from the subject site.

VII ASTM NON-SCOPE ITEMS

Asbestos

In 1977, the U.S. EPA acted to eliminate friable asbestos from building materials. Friable materials are defined as those that can be crushed or reduced to powder by hand pressure. Materials do not have to be damaged to be identified as friable. Additionally, the United States Occupational Safety and Health Administration (OSHA) now requires certain untested materials to be presumed to contain asbestos for buildings constructed prior to 1981.

During the site visit, AES observed reasonably accessible interior areas of the building for the existence and condition of suspect ACM. No building construction documents were provided for review. Asbestos can be identified only by specialized equipment and not by the unaided human eye. The site visit was not intended to be a comprehensive search for all ACM at the subject site.

Based on the construction date of 1951, and our observations, the present buildings are suspect for materials containing asbestos. The suspect materials include: spray acoustical ceiling materials, vinyl floor tiles, floor or roof mastic, drywall, insulation and transite materials. No sampling or analytical testing of ASTM Non-Scope items was completed. AES recommends the implementation of an asbestos operation and maintenance plan to manage the ACM.

Lead Based Paint

In 1978, the Consumer Product Safety Commission banned the use of lead as an additive in paint. During the site visit, accessible areas were observed for evidence of damaged and/or peeling paint. In general, the painted surfaces appeared to be in good condition. Based on the construction date of 1951, and our on-site observations the present buildings are suspect for containing lead based paint. As the improvements are used for non-residential purposes, the presence of lead based paint is considered to be a de minimis environmental condition.

Potable Water Supply

The subject site is serviced by a municipally operated, public water system, which is regulated by the Safe Drinking Water Act of 1974. This Act requires that public water supplies be tested for the presence of lead in water. AES contacted the local water utility company, the City of Downey, regarding the results of water tests. The utility company reports that the lead content of the water is below the U.S. EPA action level of 0.015 milligrams per liter.

Radon Gas

Radon gas is a naturally occurring, colorless, odorless gas that is the by-product of the decay of radioactive materials found within bedrock and soil. Radon gas enters buildings through

cracks, structural joints, and plumbing openings in floor levels that are in direct contact with the soil. Radon gas, when inhaled, has been found to be carcinogenic in some humans. The U.S. EPA recommended action level for radon gas is 4.0 pCi/L (picoCuries per liter).

The State of California, in conjunction with the U.S. EPA, has conducted residential screening tests in Los Angeles County. The results of that screening indicate that Los Angeles County is predicted to have an average indoor radon screening level of 0.711 pCi/L, with 100% of tests less than 4.0 pCi/L.

AES reviewed the U.S. EPA's Map of Radon Zones for California, which identifies Los Angeles County as being within Radon Zone 2. Counties within Radon Zone 2 have a predicted average indoor radon gas screening level of between 2 and 4 pCi/L.

Based on the literature reviewed, it is our opinion that the risk of radon gas accumulation is not a significant environmental concern at the subject site.

No sampling or analytical testing of ASTM Non-Scope items was completed

Wetlands

AES did not observe ponded water, flowing water, saturated soils or hydrophytic vegetation at the subject site.

Mold

AES observed portions of the exposed exterior and interior material surfaces of the improvements for signs of mold and/or mildew and none was observed. Based on the condition of these surfaces, the general quality of the exterior details to keep moisture out of the building and the general interior air quality observed in the improvements without the assistance of specialized testing equipment, mold and/or mildew were not an environmental concern to the subject property at the time of our site visit.

Please note that AES did not perform any probes behind surface materials, use moisture meters to test materials or use specialized equipment to test air quality for signs of existing mold and/or mildew. If further confirmation is required for determining if mold and/or mildew is present in the subject improvements AES recommends that a qualified Industrial Hygienist be retained to perform the necessary industry standard tests and provide a report of their findings.

VIII CONCLUSIONS

Findings and Opinion

AES completed a Phase I ESA for the site in substantial conformance with the scope and limitations of the Standard. Any exceptions to, or deletions from, the Standard are described in the Assessment.

Historical Recognized Environmental Conditions (HRECs)

Based on site observations, interviews and review of available documents and the database records search, AES concludes that several HRECs were identified at the subject site. The HRECs include the historic UST at the site, the 1994 LUST incident (now closed) and historic site use (manufacturing facility). AES recommends no additional investigation at this time.

Current Recognized Environmental Conditions (RECs)

Based on site observations, interviews and review of available documents and the database records search, AES concludes that one REC was identified at the subject site. Based on the building age, asbestos is suspected at the site. These materials can be managed in place using an asbestos operation and maintenance plan. AES recommends no additional investigation at this time.

de minimis Conditions

Based on site observations, interviews and review of available documents and the database records search, AES concludes that one *de minimis* condition was identified at the subject site. Based on the age of the buildings, lead based paint is suspected at the site. AES recommends no additional investigation at this time.

Conclusions

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations ASTM Practice E 1527-05 of 9300, 9350, 9400 Hall Road and 9301 Stewart and Gray Road, the *property.* Any exceptions to or deletions from, this practice are described in Section II of this *report.* This assessment has revealed no evidence of *recognized environmental conditions* with the *property* except for the following:

Based on age of the buildings, suspect asbestos containing may be present at the site.

X QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Richard E. Darwicki -Mr. Darwicki has over ten years of experience related to environmental assessments and over 30 years experience related to engineering matters. He has completed numerous Phase I Environmental Site Assessments throughout the United States. He is a Licensed Engineer in the State of California and attended Santa Ana College and Fullerton College.

Timothy K. Dahlstrand - Mr. Dahlstrand has over twenty-five years of experience related to environmental and engineering matters. He has completed and supervised hundreds of Phase I Environmental Site Assessments throughout the United States and internationally. He is a Registered Professional Engineer and Professional Geologist and holds a B.A. in Geology and an M.S. in Civil Engineering from Northwestern University.

Environmental Site Assessment Questionnaire

To be completed by a "key site manager" or someone knowledgeable about the subject site.

Site Name: Downey Industrial Center, General Partnership
Site Address: 9300-9350-9400 Hall Road & 9301 Stewart & Grey
Date Provided: 3-26-07

The following Environmental Questionnaire must be completed in its entirety. Do not leave any question unanswered. If a question is not applicable to the site, answer NA.

General Facility Information

In the following tables describe the physical property, on-site services provided and tenants. Please include a map showing the subject site location and physical location of on-site facilities. Use additional sheets as required.

Property area: Acres:

Building Description (for each building)

Address/Number	Age	Square Footage	No. of Floors	Elevator	Number of Tenants
SEE ATTACHED "IMPROVEMENTS"					

C. Improvement Description

Architect: Unavailable

Year Built: Building Nos. 1, 2 and 3 were built in 1951. Building No. 4 was built in 1960.

Property Type: Building Nos. 1, 2 and 3 are metal industrial buildings. Building No. 4 is a wood frame and stucco office building.

Quality: Average

Condition: Average.

No. of Buildings: Four

Building No. 1:

Floor	Office	Mfg. & Whse.	Total
1	3,515	231,803	235,318
2	15,325	0	15,325
Total	18,840 (7.5%)	231,803	250,643

Building No. 2:
Tenant A: (Olin)

Floor	Office	Mfg. & Whse.	Total
1	32,400	56,559	88,959
2	diminished ~~32,400~~ 28,852 ±	15,466	47,866
Total	64,800 (47%)	72,025	136,825

Tenant B: (Duray)

Floor	Office	Mfg. & Whse.	Total
1	4,968	66,572	71,540
2	4,968	0	4,968
Total	9,936 (13%)	66,572	76,508

1	0	21,170	21,170

Building No. 4:

Floor	Office	Mfg. & Whse.	Total
1	3,442	0	3,442
2	3,442	0	3,442
	6,884	0	6,884

Total Project Area:

Office	Mfg. & Whse.	Total
~~100,460~~	391,570	492,030

Source: The subject leases and measurements provided by our client.

Tenant Improvements:

Office

The office improvements consist of wood stud framing with painted gypsum wallboard partitions, fluorescent lighting, wall-to-wall commercial-quality carpeting, and vinyl tile in the restrooms. The office improvements in Building Nos. 2A (Olin Ordinance) and 4 (Western Pacific) are relatively new and in good condition. The office improvements in Building Nos. 1 (Hudd Dist.) and 2B (Duray, Inc.) are older and in average to fair condition. The subject office improvements are generally similar to most industrial properties in the market area.

Warehouse/Manufacturing

The warehouse area is improved with concrete floors, skylights (Bldg. No. 1), sprinklers and either bell-shaped halogen lighting or strip fluorescent lighting. The warehouse improvements are in average condition and are generally similar to most of the older buildings in the market area.

Loading:

Building No.	Ground Level Doors	Dock-High Loading Positions
1	4	72
2A	3	4
2B	2	5
3	3	4

Warehouse Clearance:

The truss height is 23' in Building No. 1 and 20 feet in Buildings Nos. 2 and 3.

Environmental Site Assessment Questionnaire

Do any of the following specific conditions exist on the site? If yes, please describe the condition.

Site Specific Conditions

Type	Yes	No	If Yes, Describe Location and Identify
Landfill, Dump Area, Junkyard		✓	
Surface Impoundment or Retention Ponds		✓	
Asbestos Containing Materials		✓	
Asbestos O&M Plan		✓	
Polychlorinated Biphenyls (PCBs)		✓	
Radon		✓	
Lead-based Paint (LBP)		✓	
Aboveground or Underground Storage Tank(s), including septic		✓	
Dry Cleaning		✓	
Container/Drum Storage Area(s)		✓	
Surface Staining		✓	
Wetlands		✓	
Flood Zone or Areas Subject to Flooding		✓	
Wells (on-site monitoring, water supply or injection)		✓	
Incinerator or Open Burning		✓	

Has any fire, demolition or construction activity been conducted during the current tenancy (ies)?

Yes No If yes, date and description:

Site History

Property purchase date (current owner):

Building construction date: 1951 to 1960 By:

Building remodeling and addition dates:

None To Owners Knowledge

*Provide a copy of the most recent waste disposal records.

Are any former tenants generators of hazardous waste? Yes (No)

If yes, describe the waste and their operation:

Environmental Site Assessment Questionnaire

Does the current owner or operator (or previous owner/operator) perform the following activities?

Discharge wastewater (including storm water, process and nonrocess water or sanitary waste?	Yes	(No)
Identify what is released and quantities:		
Store solid waste?	Yes	(No)
Store hazardous waste?	Yes	(No)
Waste water treatment?	Yes	(No)
Waste disposal operations?	Yes	(No)

Chemical and Material Storage

Chemical and Material Storage

Material/Chemical	Yes	No	MSDS	Quantity Stored	Description and Supplier
Flammable Material					
Gasoline and Fuel					
Dry Cleaning Solvent					
Hydraulic Oil					
Waste Oil					
Automotive Oil					
Grease					
Paints					
Solvents					
Corrosives					

Notification and Compliance

Has the owner of the property taken any of the following actions relative to the subject site?

Prepared a Chemical Safety Contingency Plan?	Yes	(No)
Filed an Emergency and Hazardous Chemical Inventory Form pursuant to the Federal Emergency Planning and Community Right-to-Know Act of 1986.	Yes	(No)
Filed a Toxic Chemical Release Form pursuant to the Federal Emergency Planning and Community Right-to-Know Act of 1986.	Yes	(No)
Maintained Material Safety Data Sheets (MSDS) on site.	Yes	(No)
Prepared a Spill Prevention Control and Countermeasure (SPCC) plan?	Yes	(No)
Conducted leak testing of storage tank piping and piping systems?	Yes	(No)

Please include copies of the above documents with the Questionnaire

Has the owner or operator of any facility on the subject site or the subject site itself been the subject of any of the following state or federal government actions?

Written notification regarding known, suspected or alleged contamination on or emanating from the subject site?	Yes (No)
Environmental enforcement case or lawsuit.	Yes (No)
Environmental Notice of Violation for any activities.	Yes (No)
Names as Potentially Responsible Party (PRP) or Responsible Party in any environmental action.	Yes (No)

If yes to any of the above, include documentation of the action and its resolution.

Environmental Releases during Ownership

Has any situation occurred at this site or neighboring sites that resulted in a reportable "release" of any hazardous substances or petroleum as required under state of federal laws.	Yes (No)
If yes, please describe:	
Have any hazardous substances or petroleum come into direct contact with the ground, ground water or surface water at this site?	Yes (No)
If yes, please describe:	
If the answers to questions above are "Yes", have any of the following actions or events been associated with a release on the subject site or neighboring sites?	Yes (No)
Use of a cleanup contractor to remove or treat materials including soils, pavement or other surficial materials.	Yes No
Designation, by State or Federal EPA of release as "significant".	Yes No
Sampling and analysis of soils, ground or surface water.	Yes No
Temporary or more long-term monitoring of ground water at or near the site.	Yes No
Impaired usage of an on-site or nearby water well because of offensive characteristics of the water.	Yes No
Coping with fumes from subsurface storm drains, sumps or basements, etc.	Yes No
Signs of unusual stains, damaged vegetation or substances leaching out of the ground along the base of slopes or at other low points on or immediately adjacent to the site.	Yes No
Is the facility currently operating under an environmental variance granted by a state of federal regulatory agency?	Yes No
Do you have any environmental concerns regarding the past or current use of the subject or adjoining sites?	Yes No
If yes, describe:

Dear Sir or Madam:

In accordance with our accepted proposal, AES performed a walk-through survey of the above-referenced property on November 22, 2016. There are two original Reports and two compact discs provided for your use. AES Due Diligence, Inc., is not affiliated with the client or any other parties to this transaction.

We appreciate the opportunity to provide consulting services to you. If you have any questions, please contact Bill Peden at our Midwest Regional office at (847) 498-4780 or our Corporate Office at (858) 569-0211.

Very truly yours,

Environmental Professional Statement

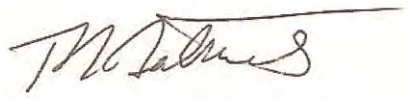
We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a site of the nature, history, and setting of the subject site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Prepared by:

William Peden
Registered Professional Engineer

Reviewed by:

Timothy K. Dahlstrand
Managing Director of Environmental Services



II OBJECTIVE AND SCOPE

Objective

The purpose of this Phase I Environmental Site Assessment is to identify recognized environmental conditions that may have an impact on the subject site, using readily available sources of information, interviews and field observations. It is our understanding the Client intends to sell the site.

Procedures

This Assessment is a Phase I Environmental Site Assessment (ESA) for the improvements located at 9300, 9350 & 9400 Hall Road and 9301 Stewart and Gray Road in Downey, CA 90241, performed in general accordance with ASTM Designation E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and following the Scope of Work outlined in AES Due Diligence, Inc.'s proposal. AES Due Diligence, Inc. (AES) conducted on-site observations on November 22, 2016 and observed adjacent properties. Environmental Data Resources, Inc. (EDR) conducted database searches following ASTM guidelines. Such searches are generally limited to a radius of one mile from the subject site. Additionally, ASTM Non-Scope items are addressed in this Assessment, including Asbestos, Lead-Based Paint, Radon Gas, Wetlands and Lead in Drinking Water.

Limitations

The purpose of the Phase I ESA of the site is to address the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. If requested by the Client, certain non-scope business environmental risks are addressed in the Assessment. The Phase I ESA is intended to allow the Client to satisfy one of the requirements to qualify for the innocent landowner defense, contiguous property Owner or bonafide prospective purchaser limitations on CERCLA liability: i.e. the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 USC § 9601(35)(B). The Phase I ESA does not address whether requirements in addition to appropriate inquiry were met in order to qualify for CERCLA's innocent landowner defense.

The objectives of the Phase I ESA are as follows:

1. Evaluate if recognized environmental conditions (REC), controlled recognized environmental condition (CREC), historic recognized environmental conditions (HREC) or *de minimis* conditions are present on the site.

2. Provide sufficient documentation of sources, records and resources utilized in conducting the Phase I ESA.

3. Prepare a professional opinion regarding the presence of RECs at the site.

Special Terms and Conditions

The Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the site.

A Phase I ESA attempts to identify the environmental conditions of the site and vicinity. Environmental conditions and regulations are subject to change and re-interpretation. Current conditions or regulatory requirements should not be assumed to continue to represent conditions at some future time. This Assessment represents AES's professional judgments and opinions based on information presented in this Assessment and no warranty, either expressed or implied, are contained herein.

Limitations and Exceptions of Assessment

The surface conditions of the site were noted by visual observations or information obtained during interviews. No physical testing, soil/groundwater sampling or laboratory analysis was included unless otherwise noted in the Assessment.

The executive summary was prepared for the convenience of the users of this Assessment. This summary does not contain all the information presented in this Assessment and, therefore, the entire Assessment should be read to assure all pertinent information is transmitted.

AES performed the Phase I ESA of the site in substantial conformance with the scope and limitations of ASTM E 1527-13, Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* unless otherwise noted in the Assessment. Certain environmental conditions may exist on a site that are beyond the scope of the Standard, but may warrant consideration. Per the Standard, this environmental site assessment is presumed to be valid for a specific time limit as defined in ASTM Designation E-1527-13.

AES utilized the following methods to complete the reconnaissance of the site. AES observed the site and adjoining properties for indicators of existing or potential recognized environmental conditions. The site walkover consisted of walking the site boundary and several transects across the site. For a site with buildings, the accessible areas of the buildings were entered and observed. Please note that AES did not look under floors, above ceilings or inside walls. The adjoining properties were observed from the periphery of the site, if possible. The observations were documented with representative photographs. No limiting conditions were encountered during the course of the Phase I ESA.

Documents

Our Assessment represents our professional experience and judgment, and a good faith effort to obtain all available information. Documents and data provided by the Client, its designated representatives, or other interested parties, and consulted in the preparation of this Assessment, have been reviewed and may be referenced herein, with the understanding that AES assumes no responsibility or liability for their accuracy or for the withholding by any of the involved parties of any assessments or other information that could affect the transaction.

Intended Use

AES Due Diligence, Inc. is not affiliated with the borrower or any other parties to this transaction. This Assessment is intended to be used in its entirety. No portion of it may be deleted or used out of context without the written consent of AES. The opinions and information contained in this Assessment are time sensitive and represent our evaluation of the environmental site conditions at the time the services were provided. This Assessment was prepared for a limited use involving a single transaction, as set forth herein, and may not be used for any other purpose without the written consent of AES.

Proprietary Information

Field data, field notes, and other data and documents assembled by AES to produce this Assessment represent the work product of AES's training, experience and professional skill. This information belongs to and remains the property of AES Due Diligence, Inc.

Reliance

This Report is for the exclusive use of Downey Industrial Center, LLC or its assigns, and Heger Industrial. No other party shall have the right to rely on any service provided by AES Due Diligence, Inc. without prior written consent.

Definitions

ASTM defines a Recognized Environmental Condition (REC) as "the presence or likely presence of a hazardous substance or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment."

A Controlled Recognized Environmental Condition (CREC) is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, of meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

A Historic Recognized Environmental Condition (HREC) is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

A *de minimis* environmental condition "generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies." Conditions determined to be *de minimis* are not a REC.

Business Environmental Risk (BER) is a risk, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of the parcel of commercial real estate, not necessarily limited to those environmental issues investigated in this Phase I ESA. Business environmental risk issues may involve addressing one or more non-scope considerations.

III PROPERTY DESCRIPTION

Site Visit and Interviews

On November 22, 2016, AES visited the subject site and reviewed the fixed facility. The property management provided an escort, Mr. Randy Scott, who accompanied William Peden of AES during the interior viewing portions of the site visit.

AES observed the interiors and contents of representative occupied tenant spaces, common areas and maintenance areas and noted operations and activities at the subject site. AES looked for suspect asbestos-containing building materials, stored chemicals, underground and aboveground storage tanks, unusual surface appearance, wetlands and other issues that may indicate environmental conditions on the subject site. AES noted the location of on-site electrical power transformers and storm drainage structures where these were encountered. AES observed sites adjoining the subject site and areas within the immediate vicinity of the subject site.

AES photographed selected features at or near the subject site to support this written Assessment. The photographs are identified, described and appended to this Assessment.

Subject Site

The project is situated on a tract of land estimated to be approximately 29.16-acres. The property consists of three parcels generally bounded by Hall Road on the north and northeast, Stewart and Gray Road on the south and Woodruff Avenue to the east (not including the parcels that front Woodruff Avenue). The property and buildings are within the City of Downey, California. The original improvements were reportedly completed in 1951 and 1960.

According to the EDR Database Report, the topography of the site is nearly level and slopes to the south. The site has a maximum surface elevation difference of approximately three-feet. Additional slopes are provided around the improvements for storm water drainage. On-site, storm water drainage is by sheet flow to catch basins or curb inlets connected to the Downey storm sewer system.

The majority of the parking and driveway areas are generally asphaltic concrete paved, however, several areas have concrete pavement. Entry driveway aprons, rubbish dumpster pads, and public and private sidewalks are concrete paved.

Pad-mounted, utility company owned electrical transformers are provided on site. The Southern California Edison Company is the electrical supplier and is responsible for transformer-related incidents. Natural gas service is provided by the Southern California Gas Company. The site is provided with municipal water and sanitary sewer services from buried utilities along the adjacent thoroughfares.

Buildings

The property has four primary single-story buildings. The Owner indicates that there is a total of 442,405-square feet (sf) of floor area with a total footprint of 411,310-sf. The center is occupied by multiple tenants. The original improvements for buildings 1, 2 and 3 were reportedly completed in 1951. Building 4 was reportedly added in 1960.

Three light steel industrial buildings and one wood framed office building are on site and are supported on shallow foundations. The painted exterior walls of the buildings are covered with various finishes including stucco, corrugated steel, CMU and brick veneer. No basements are provided at the project. The roofing reportedly consists of a gradient sloped, built-up bituminous roofing system with a mineralized capsheet as a surfacing material installed on corrugated metal panels mechanically fastened to the roof structure. The buildings are reportedly provided with pad-mounted and roof-mounted HVAC units. There is a hydraulically driven elevator in Building 9300. The roofs were observed from grade level.

Adjoining Properties

Properties immediately adjoining the subject site are listed in the following table. The adjoining properties are located in Downey, CA 90241.

Adjoining Properties			
Name	**Operation**	**Direction from Site**	**Concerns**
The Ultimate Freight Management & Logistics 9215 Hall Road	Transportation	North	None
Southern Pacific Railroad tracks	Transportation	Northeast	None
9368-9420 Stewart and Gray Road and 11911 Woodruff Avenue	Industrial Uses	South	LUST, UST (9368 Stewart and Gray) RCRA Generator (11911 Woodruff)
11711 & 11911 Woodruff Road	Industrial, Commercial Uses	East	None
9220 - 9268 Hall Road	Commercial, Industrial Uses	West	SLIC, UST, RCRA Generator (9236 Hall Road)

Facilities with environmental concerns will be discussed in the Records Review section of this report. Because of the controlled surface drainage and the predominantly non-hazardous uses on the remaining adjoining properties, they do not, in our opinion, pose a significant environmental risk to the subject site.

Vicinity

AES observed other properties located near the subject site for current uses or conditions that might be environmentally significant. The local area properties observed by AES did not appear to be engaged in environmentally significant activities.

Topography and Hydrogeology

AES reviewed the United States Geological Survey (USGS) Topographic Map, which indicates that the subject site is approximately 110-feet above mean sea level. AES observed that the general drainage flows in a southerly direction across the surface of the site. No substantial grade changes appear to have been made to the subject site when compared to the topography of surrounding sites. A copy of the USGS topographic map that covers the subject site is appended.

Geology and Surficial Soils

According to the EDR Database Report, the subject site is located above Cenozoic era stratified sequence bedrock. The depth to bedrock is unknown.

Also according to the information obtained through the EDR Report, subject site is located in an area of loamy soils. These soil types have moderate permeability and would be expected to have moderate susceptibility as a result of surface spreading of wastes, depending upon local soil conditions.

Surface and Ground Water Flow

The regional surface water flows in a southerly direction, according to the EDR REport. The ground water flow in the area is assumed to be to the south. The depth to ground water is unknown.

IV SITE HISTORY

A prior Environmental Report was provided to AES for review. The prior Environmental Report was produced by AES Due Diligence and a copy is appended. AES also issued an Asbestos Operations and Maintenance Plan in conjunction with the Environmental Report. A copy of the Asbestos Operations and Maintenance Plan is appended. AES conducted a limited historical review regarding the subject site. The following summarizes AES's review of readily available historical records and maps gathered from government agencies and commercial enterprises regarding the subject site history and use. This should not be considered a listing of all available information.

Interviews

Mr. Scott did not have personal knowledge of the uses of the subject site prior to the construction of the current improvements in 1951. The previous ESA indicated that the site was previously used as vacant land, a munitions factory and Aerojet General manufacturing facilities.

Historic Site Tenants

City directory research was not available for the subject site.

Building Department Records Review

The original building shell permits and current Certificates of Occupancy are not on file at the city. The buildings were constructed before the city was incorporated and the records may have been lost or misplaced.

Aerial Photograph and Historical Map Review

Aerial photographs are reviewed to identify past site use and areas of environmental concern on the subject site. AES has reviewed aerial photographs of the subject site. The photographs were obtained from GeoSearch. Copies of the aerial photographs that were obtained and reviewed by AES are appended. Please see chart below for the specific dates and description summary.

Beginning in the 1860s, the Sanborn Fire Insurance Company, and others, prepared maps that depict site improvements and commercial activities in many metropolitan areas in the United States. AES attempted to obtain fire insurance maps, specific to the site, to review as part of this Phase I Environmental Site Assessment. No Sanborn map coverage is available for the area.

Historical maps provide information concerning historical site boundaries and improvements. Historic Topographic Maps were reviewed for the site, please see the chart below for enumeration of years and findings.

The historical maps reviewed were obtained from GeoSearch, and are appended.

Site History Summary		
Date	**Record Type**	**Land Use**
1928	Aerial Photograph	Agricultural uses
1936	Historical Topographic Map	Undeveloped land
1938	Aerial Photograph	Agricultural uses
1947	Aerial Photograph	Agricultural uses
1952	Aerial Photograph	Four current structures and existing roads
1960	Aerial Photograph	Four current structures and existing roads
1965	Historical Topographic Map	Four current structures and existing roads
1968	Aerial Photograph	Current structures, existing roads and some neighboring buildings
1972	Historical Topographic Map	Current structures, existing roads and some neighboring buildings
1976	Aerial Photograph	Current structures, existing roads and some neighboring buildings
1981	Historical Topographic Map	Current structures, existing roads and some neighboring buildings
1982	Aerial Photograph	Current structures, existing roads and some neighboring buildings
1994	Aerial Photograph	Current structures, existing roads and most neighboring buildings
2002	Aerial Photograph	Current structures, existing roads and most neighboring buildings

Based on AES's interpretation of the available documentation noted above the site was undeveloped land since at least 1928 until the first developed use in 1951 with the current improvements. No evidence of long-term fill activity, surface scarring, staining or other issues of environmental concern were visible in the aerial photographs during the review process.

Directories

City directories provide information concerning historical site ownership and use. City Directories were reviewed for the years 1971 through 2010 and no significant information was found.

Title Records Review

A title records review, or chain-of-title, can be used to identify prior ownership of a property and to evaluate previous activities or operations in terms of environmental significance. Significant easements, covenants, restrictions and environmental liens may be indicated in title records. A chain-of-title regarding the subject site was not provided to AES for review as part of this Phase I Environmental Site Assessment.

Document Review

The following were provided for review:

- "Phase I Environmental Site Assessment - Downey Industrial Center 9300, 9350, 9400 Hall Road and 9301, 9333, 9399 Stewart Road Downey, CA 90241" prepare by AES Due Diligence dated April 13, 2007.

  This report was prepared for RiverSource Investments LLC following the guidelines of ASTM 1527-05. The report concluded:

  "Based on site observations, interviews and review of available documents and the database records search, AES concludes that several HRECs were identified at the subject site. The HRECs include the historic UST at the site, the 1994 LUST incident (closed on August 20, 1996) and historic site use (manufacturing facility). AES recommends no additional investigation at this time.

  Based on site observations, interviews and review of available documents and the database records search, AES concludes that one REC was identified at the subject site. Based on the building age, asbestos is suspected at the site. These materials can be managed in place using an asbestos operation and maintenance plan. AES recommends no additional investigation at this time.

  Based on site observations, interviews and review of available documents and the database records search, AES concludes that one *de minimis* condition was identified at the subject site. Based on the age of the buildings, lead based paint is suspected at the site. AES recommends no additional investigation at this time."

- "Underground Storage Tank Case Closure – Western Pacific Pulp and Paper 9350 Hall Road Downey CA" prepared by California Regional Water Quality Control Board dated August 20, 1996.

  This letter was addressed to Mr. Jack Wunderlich. The letter concludes that "based on the information provided and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required."

- An Asbestos O&M Plan, prepared by AES Due Diligence, Inc and dated April 23, 2007. A copy of this report is appended.

- An Asbestos Follow Up Letter prepared by AES Due Diligence, Inc. and dated July 25, 2008. The letter was addressed to RiverSource Investments, LLC.

  This letter describes the status of the suspect Asbestos Containing Material as being unchanged. A copy is appended.

V ENVIRONMENTAL SITE ASSESSMENT

Fixed Facilities Review

The improvements observed by AES on November 22, 2016, were reported to have been completed in 1951 and 1960. Minor repair activities to meet maintenance requirements and tenant needs are ongoing. Recent improvements have included tenant space build outs, exterior façade construction and painting, according to Mr. Scott.

Mr. Scott indicated that no asbestos containing materials or lead based paint were utilized in the above noted improvements. In addition, he stated that landscape maintenance services are performed by outside contractors. No landscape equipment is stored on the subject site. Landscape equipment and automotive maintenance is not performed at the subject site.

Site Tenant Activities

AES reviewed the current tenant for operations that may use regulated materials or generate waste products. AES observed the accessible interior and exterior common areas and maintenance areas. The site is 100% occupied by multiple tenants.

AES confirmed the nature of tenant activities in the buildings, which primarily consists of manufacturing, industrial and warehouse uses. AES entered and observed the activities at sample areas of the buildings, including the EJ Lauren, Duray, Omniteam, 88 Logistics and Western Pacific Pulp & Paper areas. Also visited were common areas and mechanical rooms. Roofs were observed from grade level.

Upon review of the activities at the above locations, AES found no specific environmental concerns regarding these operations.

On-Site Chemical and Petroleum Product Storage

AES looked for chemicals, hazardous substances, petroleum-based fuels and lubricants, and janitorial and cleaning supplies stored on the subject site. Small amounts of used machine oil, lacquer thinner, solvents, truck filters, antifreeze, and used motor oil are disposed of intermittently. No other chemicals or hazardous substances were observed on the subject site other than shelf quantities of commonly available janitorial and cleaning supplies.

Waste Disposal Practices

AES identified the current wastes generated at the subject site. According to AES's observations, general and recycled wastes are disposed of from the subject site. Areas of waste storage appeared to be well kept and free of debris.

General and manufacturing wastes are collected, placed in dumpsters, removed from the subject site on an as-needed basis, and disposed of by contracted firms.

Small amounts of regulated waste haulers are contracted by the Duray/J.F.Duncan and OmniTeam tenants to dispose of hazardous materials on an as needed basis. Hazardous Waste Manifests were requested from the tenants and have not been received to date.

Underground and Aboveground Storage Tanks

Owners and operators of certain USTs are required to register those USTs with the state agency responsible for administering the federally mandated UST program. A search of the list of registered USTs in California, prepared by EDR, showed that there are no current registered USTs located on the subject site.

AES interviewed Mr. Scott and various tenant representatives regarding the presence of USTs and ASTs on the subject site. They stated that there are no registered USTs and no hazardous materials registered ASTs located on the subject site. There are no records of USTs and no records of ASTs on the subject site with the exception of propane storage tanks, Refrigerant 404, oxygen cylinders and nitrogen cylinders. In 1996 a permit was taken out to remove one-15,000-gallon diesel UST and one-1,000-gallon unleaded gasoline UST from 9350 Hall Road, tenant Western Pacific Paper & Pulp. A copy of the No Further Action closure letter and the permit are appended.

AES interviewed Mr. Scott regarding the past use of heating fuels on the subject site to ascertain whether USTs or ASTs may have been utilized on site for the storage of heating fuels or oils. Mr. Scott stated that to his knowledge the improvements have always been heated by electricity or natural gas. AES's observations confirmed the nature of the current heating systems at the subject site.

AES visually observed the subject site for surficial evidence of USTs and ASTs. AES did not observe evidence of USTs or ASTs at the subject site expect as noted above.

Polychlorinated Biphenyls (PCBs)

Federal regulations put into effect following the Toxic Substances Control Act (TSCA) require that electrical transformers be labeled to identify their PCB content. Manufacture and distribution of PCBs was banned in 1979. Transformer owners are responsible for compliance with all applicable regulations governing those transformers, including maintenance of the transformer and any remediation work resulting from a transformer-related incident.

Pad-mounted, utility company owned electrical transformers are provided on site. The observed electrical transformers appeared to be in good condition with no visible leaks. Areas around the electrical transformers exhibited no signs of visible staining or abnormal appearance. AES did not observe any labels on the electrical transformers identifying the PCB content.

Based on utility ownership and no observed leaks, AES recommends no further action with regard to PCBs in transformers.

Exterior Surface Condition

AES observed the exterior surface of the subject site. It is estimated that 98% of the subject site surface was covered by improvements and pavement. AES's observation of the site soil surfaces was therefore limited to the landscaped areas.

None of the historical documentation reviewed, indicated that the subject site was previously utilized as a quarry and/or solid waste disposal facility.

No pits, ponds or lagoons were observed at the subject site during the site visit. No areas of distressed or dead vegetation, surface depressions or surface stains attributed to chronic leaks or spills were observed during the site visit.

Interior Surface Condition

AES observed portions of the interior surfaces of the buildings for evidence of unusual conditions. We found no evidence of unusual conditions in the areas we observed.

Vapor Encroachment Condition (VEC)

A Vapor Encroachment Screening was performed for the subject site following the guidelines of ASTM E2600-10. An initial search of all standard government record databases and EDR's proprietary historical records related to former dry cleaners, gas stations and manufactured gas plants within the 1/3-mile radius (default Area of Concern-AOC) was completed. Based on local ground water flow direction knowledge, AES reduced the AOC by the Buonicore Method. Individual offsite facilities within the remaining AOC were evaluated.

Based on this analysis of off-site facilities, AES concludes that a VEC can be ruled out because a VEC does not exist.

VI DATABASE RECORDS REVIEW

Environmental Records Review

An environmental records database search report dated December 1, 2016, was provided by Environmental Data Resources (EDR). A copy of EDR's report is appended. The following discussion excerpts specific items from the report that deserve additional description.

In addition to the mapped sites in the EDR report, there may also be a list of unmapped sites. These are reported database sites that, due to incomplete addressing information, could not be accurately plotted by EDR. In an attempt to locate all unmappable sites, AES compared each address provided on the unmappable site list to known addresses of the site and vicinity, and attempted to locate unmappable sites during reconnaissance of the vicinity. AES concludes that no unmappable sites were identified that meet the search radius criteria of the scope of work and are considered to be environmentally significant to the subject site.

Superfund Enterprise Management System (SEMS) – Former Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

SEMS tracks hazardous waste sites, potentially hazardous waste sites and remedial activities performed in support of the EPA's Superfund Program. The list was formerly known as CERCLIS and was renamed SEMS by the EPA in 2015. This is a list of contaminated sites under the federal Superfund Program in accord with the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). The U.S. EPA discovers these sites from citizen reports, routine inspection of hazardous waste generators, treatment, storage and disposal facilities, and reporting requirements.

CERCLA Sites					
Facility ID No.	Facility Name and Address	Location			Regulatory History and Current Status
		Distance	Direction	Gradient	
0904850	Red Phosphorus Site 11810 Lakewood Blvd.	1/4	W	Cross	Removal site only, cleaned up.

Review of the CERCLIS list provided by EDR identifies a total of one CERCLIS site listed within the ASTM standard minimum search distance of one-half-mile from the subject site. There are no CERCLIS facilities on the subject site.

The above referenced CERCLIS facility was evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Superfund Enterprise Management System Archive (SEMS-ARCHIVE) – Former CERC-NFRAP List

SEMS-Archive tracks facilities that have no further interest under the Federal Superfund Program. The list was formerly known as CERCLIS-NFRAP but was renamed by the EPA in 2015. Archived facilities have been removed and archived from the inventory of SEMS facilities.
Review of the CERC-NFRAP list provided by EDR identified no CERC-NFRAP sites listed within the ASTM standard minimum search distance of one-half-mile from the subject site. There are no CERC-NFRAP facilities on the subject site.

National Priorities List

The U.S. EPA maintains this list as a subset of CERCLIS, identifying over 1,200 CERCLA sites for priority cleanup under the Superfund Program. Once sites have been designated on the CERCLIS list, the U.S. EPA uses its Hazard Ranking System to determine the potential risks of those sites to human health and the environment. Only the sites that present the greatest risk are added to the NPL, which qualifies the sites to receive CERCLA remedial funding.

Review of the NPL list provided by EDR identifies no NPL sites within the approximate minimum search distance of one-mile from the subject site.

RCRA – Generators

The U.S. EPA's RCRA (Resource Conservation and Recovery Act, 42 U.S.C. '6991 *et seq.*) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. Generators are also listed in the FINDS database.

Review of the RCRA LQ-Generator list provided by EDR identifies a total of one RCRA-LQG site listed. There is one RCRA-LQG facility listed one-quarter-mile to the north northwest and none on the subject property. The Walgreens property is also listed as a RCRA-CESQG (Conditionally Exempt Small Quantity Generator).

The above referenced RCRA LQ-Generator and RCRA-CESQG facility was evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Review of the RCRA SQ-Generator list provided by EDR identifies a total of 20 RCRA-SQG sites listed. There is no RCRA-SQG tenant facility shown on the subject site and there are three RCRA-SQG facilities on adjoining properties.

The above referenced RCRA SQ-Generator facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

RCRA - Treatment, Storage, Disposal (TSD) and CORRACTS Facilities

The Resource Conservation and Recovery Act Information System (RCRIS) is a compilation of selective information on facilities that generate, store, transport, treat or dispose of hazardous waste. Inclusion of a facility on the RCRIS database is not necessarily an indication of an environmental problem.

Review of the RCRIS-TSD list provided by EDR identifies no RCRIS-TSD facility within the approximate minimum search distance of one-half-mile from the subject site.

The CORRACTS database is a list of facilities with RCRA Corrective Action Activity. Review of this database identifies no CORRACTS facility within the approximate minimum search distance of one-mile from the subject site.

Emergency Response Notification System (ERNS)

The ERNS is a compilation of reported releases of hazardous substances into the environment. The database contains information from Spill reports made to federal authorities, including the U.S. EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation.

Review of the ERNS list provided by EDR identifies no ERNS sites listed within the approximate minimum search distance of one-eight-mile from the subject site. There are no ERNS facilities on the subject site.

Facility Index System/Facility Registry System (FINDS)

This database contains both facility information and pointers to other sources that contain more detail. The FINDS database include PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes) and PADS (PCB Activity Data System).

Review of the list provided by EDR identifies one listing for a former tenant at the subject site. Intersection Development Corporation (Display Technologies, Inc.) went out of business in the late 1990's. Intersection Development Corp. was described as a handler; a non-generator that did not generate hazardous waste.

US Brownfields

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields.

Review of the list provided by EDR indicates there are no facilities within the approximate minimum search distance of one-half-mile from the subject site.

Aboveground Storage Tanks (ASTs)

Certain ASTs are regulated under the RCRA Act, and must be registered with the state agency responsible for administering the AST program. Inclusion of a facility on the AST database is not necessarily an indication of an environmental problem.

Review of the current list provided by EDR identifies a total of five sites within a search radius of one-quarter-mile. There are no AST facilities reported on the subject site and there are ASTs reported on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Underground Storage Tanks (USTs)

Certain USTs are regulated under the RCRA Act, and must be registered with the state agency responsible for administering the UST program. USTs are also listed in the CA FID database. Inclusion of a facility on the UST database is not necessarily an indication of an environmental problem. Los Angeles County – HMS also lists underground storage tanks.

Review of the current list provided by EDR identifies a total of six sites within a search radius of one-quarter-mile. There are no facilities on the subject site and there is one facility on an adjoining property to the west and one facility on an adjoining property to the south. Leaking tanks are discussed in the following section.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Leaking Underground Storage Tanks (LUSTs)

LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state. LUSTs are also listed in the CORTESE database.

Review of the list provided by EDR identifies a total of 21 facilities within the ASTM standard minimum search distance of one-half-mile from the subject site. There is one listing on the subject site and one on the adjoining property to the south.

Of the 21 sites, 15 are down gradient or cross gradient. The remaining six sites are closed cases, including the former LUST listing on the subject site.

The on site listing at Western Pulp and Paper, 9350 Hall Road, was a soil only gasoline case discovered during the removal of a 1,000-gallon premium unleaded gasoline tank and a 15,000-gallon diesel storage tank in 1994. The case was closed August 20, 1996 and a closure letter from the California Regional Water Quality Control Board is appended.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Solid Waste Facilities/Landfills (SWF/LS)

Solid waste records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites.

Review of the list provided by EDR identifies a total of three sites within the ASTM standard minimum search distance of one-half-mile from the subject site. There are no facilities on the subject site and there are no facilities on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

EnviroStor

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Review of the list provided by EDR identifies a total of fifteen sites within the ASTM standard minimum search distance of one-mile from the subject site. There are no facilities on the subject site and there are no current facilities on adjoining properties. However, there was a previous tenant, prior to 2000, at the adjoining property to the west.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

DEED (Institutional Controls)

Site Mitigation and Brownfield's Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfield's Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Review of the list provided by EDR identifies no sites within the approximate minimum search distance of one-half-mile from the subject site.

California Hazardous Material Incident Reporting System (CHMIRS)

The California Office of Emergency Services database contains reported information on incidents involving accidental releases or spills of hazardous materials.

Review of the list provided by EDR identifies no facilities on the subject site.

Hazardous Waste and Substances Sites List (CORTESE)

The Cal-EPA publishes a listing of potential and confirmed hazardous waste sites throughout the State of California. Under California Government Code Section 65962.5, these sites are submitted to the Cal-EPA by the State Department of Health Services, State Water Resources Control Board, the Integrated Waste Management Board and the Department of Toxic Substances Control.

The database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release, and all solid waste disposal facilities from which there is a known migration.

Review of the list provided by EDR identifies no sites within the ASTM standard minimum search distance of one-half-mile from the subject site.

VCP (Voluntary Cleanup Program)

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Review of the list provided by EDR identifies no VCP sites within the ASTM standard minimum search distance of one-half-mile from the subject site.

Hazardous Waste Information System (HAZNET)

The California Department of Health Services, Toxic Substances Control Division, has developed and maintained lists of hazardous waste generators and hazardous waste treatment, storage and disposal facilities in the State of California, in accordance with the Hazardous Waste Control Law (California Health and Safety Code Section 25100 *et seq.*) And the Hazardous Waste Management Act of 1976 (California Health and Safety Code Section 25179.1 *et seq.*). Inclusion of a facility in the HAZNET list is not necessarily an indication of an environmental problem.

Additionally, the California Health and Safety Code requires all counties to prepare and submit hazardous waste management plans. To assist the counties, the Toxic Substances Control Division maintains lists containing hazardous waste generation and disposal data within each county. The Toxic Substances Control Division has assembled this information from manifest reports required from hazardous waste generators. This database currently lists over 20,000 facilities in the State of California.

Review of the list provided by EDR identifies a total of three occurrences at the subject site. The 9300 Building and 9400 Building at the subject site appear on the list as having disposed of small amounts of hazardous wastes in the past.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Historic USTs

The Hazardous Substance Storage Container Database is a historical listing of former UST sites that are closed and typically not listed with the current UST sites.

Review of the list provided by EDR identifies a total of ten sites within the ASTM standard minimum search distance of one-half-mile from the subject site.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Dry Cleaners

This database provides a list of drycleaner facilities that have EPA ID numbers. These facilities have certain SIC codes including: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; dry cleaning plants, except rugs; carpet and upholstery cleaning; industrial launderers and laundry and garment services.

Review of the list provided by EDR identifies a total of two sites within the ASTM standard minimum search distance of one-half-mile from the subject site. There are no facilities on the subject site and there are no facilities on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Waste Management Unit Database System (WMUDS/SWAT)

The California Integrated Waste Management Board maintains an inventory list of both open as well as closed and inactive solid waste disposal facilities and transfer stations in accordance with the Solid Waste Management and Resource Recovery Act of 1972, California Government Code Section 2.66790(b). Generally, the California Integrated Waste Management Board learns of locations of disposal facilities through permit applications and from local enforcement agencies. The Waste Management Unit Database System is used by the California Water Resources Control Board and the Regional Water Quality Control Boards for program tracking and inventory of waste management units.

Review of the latest WMUDS/SWAT listing identifies two WMUDS/SWAT facilities within the approximate minimum search distance of one-half-mile from the subject site.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Manufactured Gas Plants (MGP)

Manufactured Gas Plants produced combustible gas for urban use prior to the widespread use and pipeline distribution of natural gas in the 1950s. The main fuels used in production of this gas were coke, coal and oil; the by-products of this manufacturing process include a variety of tars, sludge and other chemicals. MGP sites tend to have subsurface contamination due to the common practice of disposing of the waste products on site.

Review of the MGP list provided by EDR identifies no MGP sites within the approximate minimum search distance of one-mile from the subject site.

US Brownfields

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields.

Review of the list provided by EDR identifies no sites within the approximate minimum search distance of one-half mile from the subject site.

CERCLA Lien Searches

A Federal CERCLA ("Superfund") lien can only exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CRECLIS provides information as to the identity of these sites and properties.

Review of the list provided by EDR identifies no listings at the subject site.

In, addition, there are no Federal, State or non-priority liens on the subject property listed in the EDR Database Report or Activity and Use Limitations (AULs) associated with the subject site.

VII ASTM NON-SCOPE ITEMS

Asbestos

In 1977, the U.S. EPA acted to eliminate friable asbestos from building materials. Friable materials are defined as those that can be crushed or reduced to powder by hand pressure. Materials do not have to be damaged to be identified as friable. Additionally, the United States Occupational Safety and Health Administration (OSHA) now requires certain untested materials to be presumed to contain asbestos for buildings constructed prior to 1981.

During the site visit, AES observed reasonably accessible interior areas of the buildings for the existence and condition of suspect ACM. No building construction documents were provided for review. Asbestos can be identified only by specialized equipment and not by the unaided human eye. The site visit was not intended to be a comprehensive search for all ACM at the subject site.

Based on the construction dates of 1951 and 1960, and our observations, the present buildings are suspect for materials containing asbestos. The suspect materials include: spray acoustical ceiling materials, vinyl floor tiles, floor or roof mastic, drywall, insulation and transite materials. No sampling or analytical testing of ASTM Non-Scope items was completed. There is an existing Asbestos Operations & Maintenance (O&M) Plan in place and AES recommends continue use of the plan. A copy if the O&M Plan is appended to this report.

Lead Based Paint

In 1978, the Consumer Product Safety Commission banned the use of lead as an additive in paint. During the site visit, accessible areas were observed for evidence of damaged and/or peeling paint. In general, the painted surfaces appeared to be in good condition. Based on the construction dates of 1951 and 1960, and our on-site observations, the present buildings are suspect for containing lead based paint. As the improvements are used for non-residential purposes, the presence of lead based paint is considered to be a de minimis environmental condition.

Potable Water Supply

The subject site is serviced by a municipally operated, public water system, which is regulated by the Safe Drinking Water Act of 1974. This Act requires that public water supplies be tested for the presence of lead in water. AES contacted the local water utility company, the City of Downey, regarding the results of water tests. The utility company reports that the lead content of the water is below the U.S. EPA action level of 0.015 milligrams per liter.

Radon Gas

Radon gas is a naturally occurring, colorless, odorless gas that is the by-product of the decay of radioactive materials found within bedrock and soil. Radon gas enters buildings through cracks, structural joints, and plumbing openings in floor levels that are in direct contact with the soil. Radon gas, when inhaled, has been found to be carcinogenic in some humans. The U.S. EPA recommended action level for radon gas is 4.0 pCi/L (picoCuries per liter).

The State of California, in conjunction with the U.S. EPA, has conducted residential screening tests in Los Angeles County. The results of that screening indicate that Los Angeles County is predicted to have an average indoor radon screening level of 0.711 pCi/L, with 98% of tests less than 4.0 pCi/L.

AES reviewed the U.S. EPA's Map of Radon Zones for California, which identifies Los Angeles County as being within Radon Zone 2. Counties within Radon Zone 2 have a predicted average indoor radon gas screening level of between 2 and 4 pCi/L.

Based on the literature reviewed, it is our opinion that the risk of radon gas accumulation is not a significant environmental concern at the subject site.

No sampling or analytical testing of ASTM Non-Scope items was completed.

Wetlands

AES did not observe ponded water, flowing water, saturated soils or hydrophytic vegetation at the subject site.

Mold

AES observed portions of the exposed exterior and interior material surfaces of the improvements for signs of mold and/or mildew and none was observed. Based on the condition of these surfaces, the general quality of the exterior details to keep moisture out of the buildings and the general interior air quality observed in the improvements without the assistance of specialized testing equipment, mold and/or mildew were not an environmental concern to the subject property at the time of our site visit.

Please note that AES did not perform any probes behind surface materials, use moisture meters to test materials or use specialized equipment to test air quality for signs of existing mold and/or mildew. If further confirmation is required for determining if mold and/or mildew is present in the subject improvements AES recommends that a qualified Industrial Hygienist be retained to perform the necessary industry standard tests and provide a report of their findings.

VIII CONCLUSIONS

Findings and Opinion

AES completed a Phase I ESA for the site in substantial conformance with the scope and limitations of the Standard. Any exceptions to, or deletions from, the Standard are described in the Assessment.

Historical Recognized Environmental Conditions (HRECs)

Based on site observations, interviews and review of available documents and the database records search, AES concludes that several HRECs were identified at the subject site. The HRECs include the historic UST at the site, the 1994 LUST incident (now closed) and historic site use (manufacturing facility). AES recommends no additional investigation at this time.

Current Recognized Environmental Conditions (RECs)

Based on site observations, interviews and review of available documents and the database records search, AES concludes that one REC was identified at the subject site. Based on the building age, asbestos is suspected at the site. These materials can be managed in place using the existing asbestos operation and maintenance plan. AES recommends no additional investigation at this time.

Controlled Recognized Environmental Conditions (CREC)

Based on site observations, interviews and review of available documents and the database records search, AES concludes that no CRECs were identified at the subject site. AES recommends no additional investigation at this time.

de minimis Conditions

Based on site observations, interviews and review of available documents and the database records search, AES concludes that one *de minimis* condition was identified at the subject site. Based on the age of the buildings, lead based paint is suspected at the site. As the buildings are used for non-residential purposes, AES recommends no additional investigation at this time.

Conclusions

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations ASTM Practice E 1527-13 of 9300, 9350 & 9400 Hall Road and 9301, 9333, 9399 Stewart and Gray Road, the *property*. Any exceptions to or deletions from, this practice are described in Section II of this *report.* This assessment has revealed no evidence of *recognized environmental conditions* with the *property* except for the following:

Based on age of the buildings, suspect asbestos containing may be present at the site and AES recommends continued use of the existing Asbestos O&M Plan.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 20 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/01/2016 has revealed that there are 15 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 3 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 21 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/21/2016 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist

EXECUTIVE SUMMARY

Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

PENSKE TOYOTA (Continued) **1000314682**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
