Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Description:	Caller states they had a minor ammonia leak in the engine room of their facility due to unknown causes. Currently, Downey Fire Dept is on scene and is working with the responsible party to contain the leak. Four fleet mechanics that discovered the leak evacuated the area to report the ammonia release.

Site History:	The former Astro Pak facility is located at 8700-8706 Cleta Street in Downey, California. The property occupies two rectangular parcels that are together approximately 180 feet by 280 feet. Cleta Street borders the site on the north, commercial/industrial properties border the site on the east and west, and residential properties border the site on the south. The facility was used for conducting high-precision industrial components cleaning operations. A vapor degreaser was used during early operations at the site with solvents mainly perchloroethylene (PCE) and trichloroethene (TCE). Site investigations conducted at the site since 1991 indicated that the soil and groundwater beneath the site were impacted with volatile organic compounds (VOCs), mainly PCE and TCE. Various remedial measures have been implemented athe site to remediate the impacted soil and groundwater. In the former degreaser area, approximately 520 tons of soil was removed from an approximate 15-foot by 18-foot area to depths of 25 to 45 feet below ground surface (bgs) by large-diameter bucket auger from December 2002 to January 2003. In the former staging area, approximately 280 tons of shallow soil was removed from an approximate 23-foot by 35-foot area to a depth of 6 feet bgs by excavator in July 2003. From July 2003 through June 2013, a soil vapor extraction (SVE) system operated at the site and removed approximately 26,400 pounds of VOCs from the impacted soil. In November 2004, potassium and sodium permanganate was injected onsite and offsite for groundwater remediation. The injection of ozone gas between July 2008 and July 2010 was applied as a follow-up application of in]situ chemical oxidation (ISCO) for groundwater remediation at and downgradient of the site. Semi-annual groundwater monitoring is being conducted at the site.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Description:	The property is actually a concrete building of approximately 1,150 sq. ft. of floor area. The site is located in the City of Downey, Los Angeles County, California. The site is an old, unsuitable building

AIR FORCE PLANT #16 (NASA) (Continued) **1012129632**

	that is no longer required for use by the National Aeronautic and Space Administration/Rockwell International.
Current Program:	Not reported
History:	Building No. 125 was constructed of reinforced concrete (12 in. thick roof and walls) in 1941. Its original use was a bomb shelter constructed during World War II by the U.S. Army Air Corps. During 1940 and 1941, the Air Force acquired the property by direct purchase. It was later used as a hazardous materials testing laboratory. It has now been abandoned in place. The General Services Administration concurred with NASA plans to demolish the building in accordance with federal property management regulations. Air Force Plant #16 was transferred to NASA in July of 1964. The facility was renamed NASA Industrial Plant, Downey, California. At this time NASA assumed status as the holding agency. Since 9 August 1972 RI was contracted to be custodian of building #125 and other property.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern:	Not reported
Site History:	The former NASA Industrial Plant (site) occupies approximately 155 acres in Downey, California, and is bound to the north by Stewart and Gray Road, to the south by Imperial Highway, to the west by Lakewood Boulevard and to the east by Bellflower Boulevard. The site was used for aircraft, and later, aerospace manufacturing by a series of entities from 1929 through 1999. The site was government owned and contractor operated. NASA utilized the plant for manufacture of Apollo and Space Shuttle components. Site activities included the use and storage of chlorinated solvents in support of various manufacturing processes. In 1986 the government declared the property excess to its needs and site manufacturing operations ceased at the site. During the fourth quarter of 2003, the property was transferred from NASA to the City of Downey, California. Following early transfer from NASA to the City of Downey, the various portions of the property were redeveloped. International Risk Assumption-Downey LLC assumed the role of responsible party as part of the early transfer arrangements between NASA, the State of California, and the City of Downey. Site assessments conducted at the site indicated that the soil and groundwater were impacted with volatile organic compounds (VOCs) mainly perchloroethylene (PCE), trichloroethene (TCE) and Freon 113. A soil vapor extraction (SVE) system was installed and operated at various locations of the site from 2000 to 2008 to cleanup the soil. During the period of operation, the system removed approximately 6,000 pounds of VOCs. Sodium permanganate solution was injected into a silt layer at the 40 to 45 feet bgs interval below former Building 244 for in situ remediation to cleanup the residual VOCs in the silt layer of the vadose zone. In February 2012, the Regional Board issued a No Further Action (NFA) for site soils. Groundwater beneath the site has been subjected to in situ bioremediation using Enhanced Reductive Dechlorination (ERD) to address the dissolved phase PCE and TCE as well as the subsequent breakdown products from the remedial activities. The ERD process involved the injection of approximately 14,000,000 gallons of dilute carbohydrate solution at 174 points across the site beginning in November 2005. In October 2010, a de-halogenating bacteria was added to the solution injected in the southernmost site locations to enhance the remediation of VOCs at this location. Active injections of carbohydrate solution were stopped after first quarter 2012.

NASA INDUSTRIAL PLANT- KAISER (Continued) **S104564877**

Post-remediation groundwater monitoring is being conducted at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016
Date Made Active in Reports: 04/15/2016

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016
Date Made Active in Reports: 04/15/2016

Next Scheduled EDR Contact: 01/16/2017
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016
Date Made Active in Reports: 04/15/2016
Number of Days to Update: 10

Next Scheduled EDR Contact: 01/16/2017
Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/14/2016
Date Data Arrived at EDR: 10/04/2016
Date Made Active in Reports: 10/21/2016
Number of Days to Update: 17

Next Scheduled EDR Contact: 01/16/2017
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016

Next Scheduled EDR Contact: 01/30/2017
Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/21/2016
Date Data Arrived at EDR: 06/30/2016

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/21/2016

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

West Map:	5633765 SOUTH GATE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

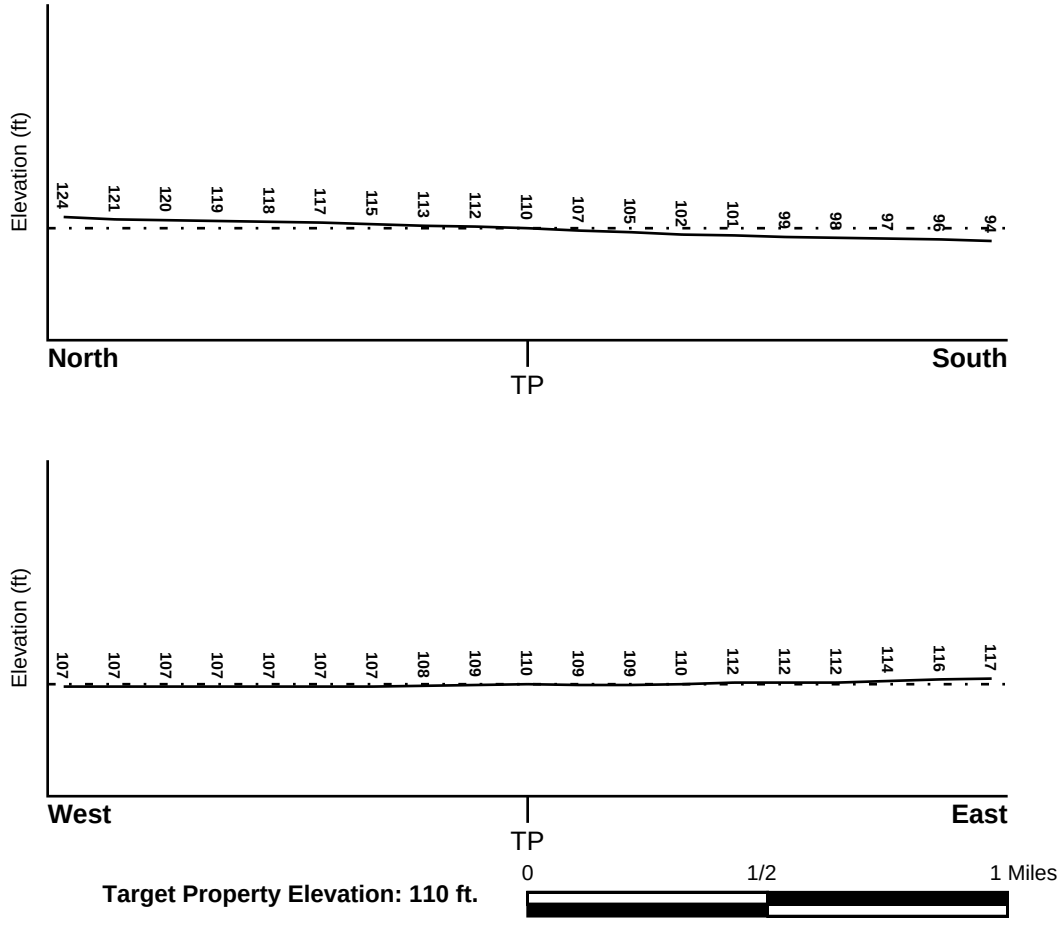
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1840F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1810F	FEMA FIRM Flood data

06037C1820F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITTIER	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AES Due Diligence, Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported
Hydric Status:	Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:	loam clay silt loam loamy sand sandy loam fine sand clay loam gravelly - sandy loam coarse sand gravelly - sand sand
Surficial Soil Types:	loam clay silt loam loamy sand sandy loam fine sand clay loam gravelly - sandy loam coarse sand gravelly - sand sand
Shallow Soil Types:	fine sandy loam gravelly - loam sand silty clay
Deeper Soil Types:	stratified clay loam silty clay loam gravelly - sandy loam coarse sand sand weathered bedrock very fine sandy loam

RECORD SOURCES AND CURRENCY

To maintain currency of the following databases, EDR contacts the appropriate agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

PRP: Potentially Responsible Parties
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

A listing of verified Potentially Responsible Parties

Date of Government Version: 10/25/2013
Number of Days to Update: 3
Last EDR Contact :11/07/2016
Source: EPA
Telephone: 202-564-6023

RMP: Risk Management Plans
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 08/01/2016
Number of Days to Update: 81
Last EDR Contact :11/18/2016
Source: Environmental Protection Agency
Telephone: 202-564-8600

ALAMEDA CO. UST: Underground Tanks
Standard Environmental Record Source: State and tribal registered storage tank lists
Underground storage tank sites located in Alameda county.

Date of Government Version: 07/07/2016
Number of Days to Update: 27
Last EDR Contact :10/07/2016
Source: Alameda County Environmental Health Services
Telephone: 510-567-6700

AST: Aboveground Petroleum Storage Tank Facilities
Standard Environmental Record Source: State and tribal registered storage tank lists
Search Distance: Property

A listing of aboveground storage tank petroleum storage tank locations.

Date of Government Version: 07/06/2016
Number of Days to Update: 69
Last EDR Contact :11/21/2016
Source: California Environmental Protection Agency
Telephone: 916-327-5092

Alameda County CS: Contaminated Sites
Standard Environmental Record Source: State and tribal leaking storage tank lists
Search Distance: 0.333 Mile

A listing of contaminated sites overseen by the Toxic Release Program (oil and groundwater contamination from chemical releases and spills) and the Leaking Underground Storage Tank Program (soil and ground water contamination from leaking petroleum USTs).

Date of Government Version: 10/12/2016
Number of Days to Update: 35
Last EDR Contact :10/07/2016

Source: Alameda County Environmental Health Services
Telephone: 510-567-6700

BROWNFIELDS: Considered Brownfieds Sites Listing

Standard Environmental Record Source: State and tribal Brownfields sites
Search Distance: 0.333 Mile

A listing of sites the SWRCB considers to be Brownfields since these are sites have come to them through the MOA Process.

Date of Government Version: 02/29/2016
Number of Days to Update: 58
Last EDR Contact :09/26/2016

Source: State Water Resources Control Board
Telephone: 916-323-7905

CA BOND EXP. PLAN: Bond Expenditure Plan

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/1989
Number of Days to Update: 6
Last EDR Contact :05/31/1994

Source: Department of Health Services
Telephone: 916-255-2118

CA FID UST: Facility Inventory Database

Standard Environmental Record Source: State and tribal registered storage tank lists
Search Distance: Property

The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

Date of Government Version: 10/31/1994
Number of Days to Update: 24

DEED: Deed Restriction Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Search Distance: 0.333 Mile

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

HAZNET: Facility and Manifest Data

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.25 Mile

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SEMS: Superfund Enterprise Management System

Standard Environmental Record Source: Federal CERCLIS

Search Distance: 0.333 Mile

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

UMTRA: Uranium Mill Tailings Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.125 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: 02/20/2007

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

UNDERGROUND STORAGE TANK CASE CLOSURE
WSTERN PACIFIC PULP & PAPER
9350 HALL ROAD, DOWNEY (I-13583)

Dear Mr. Wunderlich,

This letter confirms the completion of the site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location.

Based on the available information and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2721(e).

Please contact our office if you have any questions regarding this matter.

Sincerely,

ROBERT P. GHIRELLI, D. Env.

Downey, California 90241
Project No. 70001016-1

Dear Ms. Bachmeier:

In accordance with our accepted proposal, AES is providing two Asbestos Operations and Maintenance Plans for the above-referenced site and three compact discs are provided for your use. AES is not affiliated with the borrower or any other parties to this transaction.

We appreciate this opportunity to provide professional consulting services to you. Should you have any questions, please do not hesitate to call.

Very truly yours,

AES DUE DILIGENCE, INC.

Robert Presta
Registered Environmental Assessor

Asbestos Operations and Maintenance (O&M) Program
Downey Industrial Center
9300, 9350, 9400 Hall Road and 9301 Stewart and Gray Road
Downey, California 90241
Project No. 70001016-1

I. INTRODUCTION

AES Due Diligence (AES) has prepared an Asbestos Operations and Maintenance Plan based on a Phase I Environmental Report on the Downey Industrial Center completed by AES Due Diligence, Inc. (AES) dated April 13, 2007. Based on the construction date of 1951, and our observations, the present buildings are suspect for materials containing asbestos. The suspect materials include: spray acoustical ceiling materials, vinyl floor tiles, floor or roof mastic, drywall, insulation and transite materials. The suspected materials are both friable and non-friable. No sampling or analytical testing of ASTM Non-Scope items was completed. AES recommends the implementation of an asbestos operation and maintenance plan to manage the ACM.

The observed ACM appeared to be in good condition. Due to the age of the original structures (c. 1951), AES recommends the implementation of an Operations and Maintenance (O&M) Plan for asbestos-containing materials (ACM).

The identified materials were observed to be in generally good condition and can be managed in-place with an Asbestos Operations and Maintenance (O&M) Program. In accordance with accepted practices, any other building materials that are presumed to be asbestos-containing materials (PACM) should be tested to verify the actual percentage of asbestos content by weight prior to renovation, demolition, or maintenance activities. A licensed asbestos abatement contractor in accordance with state and federal regulations should remove any damaged and friable ACM from the subject site prior to demolition.

The purpose of this Asbestos Operations and Maintenance (O&M) Program is to implement practices and procedures that periodically inspect and maintain the suspect ACM at the project site and allow the suspect ACM to remain in-place until the suspect ACM materials are removed. In accordance with the United States Department of Safety and Health Administration (OSHA) an employer and/or building owner may demonstrate, for OSHA purposes, that no ACM is present by having an inspection and testing performed pursuant to the requirements of paragraph (k)(5) of 29 CFR 1926.1101.

Background of Asbestos

Asbestos is the common name for a group of naturally occurring mineral silicates, which are resistant to heat, and chemicals. Asbestos minerals are particularly useful as acoustical materials, insulating, fireproofing and strengthening additives for construction materials. The unique characteristics of asbestos have resulted in a very diverse use of the material over the years. Typical uses of materials containing asbestos include: spray-applied fire-proofing, boiler/mechanical equipment insulation, architectural ceiling fixtures, ceiling tile, floor tile, textured paint, steam and water pipe insulation and transite panels on cooling towers.

Exposure to asbestos can potentially result in various diseases. Asbestosis, mesothelioma and lung cancer are all associated with asbestos exposure. Asbestos diseases have a latency period ranging from 10 to 30 years after initial exposure.

Federal, state, and local governments have addressed the issue of asbestos exposure. Remedial options include removal, enclosure, encapsulation, or an Asbestos O&M Program. If any option other than removal is chosen then an Asbestos O&M Program, which serves to reduce exposure potential to asbestos materials should be implemented. Even if removal is planned, an O&M Program is recommended as an interim control measure.

An O&M Program is a detailed approach to controlling the disturbance of ACM. An O&M Program will affect maintenance, cleaning and contractor personnel who may need to work in close proximity to these materials. Also, the O&M Program affects all the building occupants to varying degrees.

Purpose of the Asbestos O&M Program

The purpose of the Asbestos O&M Program being developed for the Downey Industrial Center is to comply with the Occupational Safety and Health Administration (OSHA) Regulations found in 29 CFR 1926.1101 and 29 CFR 1910.1001 and to implement a satisfactory approach to controlling the disturbance of ACM. The O&M Program is designed to:

1. Facilitate cleanup of previously released asbestos fibers;

2. Reduce future release by minimizing ACM disturbance or damage;

3. Control renovation activities to prevent uncontrolled disturbance of ACM; and

4. Monitor the condition of ACM.

The O&M Program should provide for the notification of building staff as to the location of ACM or suspect ACM, the training of maintenance personnel in proper cleaning and maintenance procedures, the implementation of special cleaning methods, the establishment of a process that lessens the possibility of the ACM or suspect ACM being disturbed in an

uncontrolled manner during building repairs and renovations, and the periodic inspection of areas where ACM has been identified.

Summary of O&M Program

This O&M program is composed of the following elements:

- Employee training
- Addressing low, moderate, high and immediate hazards
- Initial cleaning procedures
- Normal maintenance activities
- Work by outside contractors
- Minor fiber release episodes
- Major fiber release episodes
- Proper disposal of asbestos wastes
- Re-evaluation of ACM
- Record keeping

Other facets involved with the proper implementation of the O&M program include training of maintenance personnel in addition to informing building tenants of the practices and procedures to be used when dealing with ACM at the subject site.

II. PARTICIPATION AND ROLE DEFINITION

The success of the O&M Program depends on the active participation of many persons. Each of these persons should clearly know their role in the O&M Program, including building management, maintenance workers and contractors in the building. Participation and role definitions for this O&M Program are as follows:

O&M Program Coordinator

The O&M Program Coordinator is responsible for implementing the O&M program at the complex, including serving as the contact for outside contractors performing maintenance, repair, or renovation work at the facility. The O&M Coordinator will be the primary contact for employees and tenants that may have questions regarding ACM and/or the O&M Program. Activities which involve the disturbance of ACM should be brought to the attention of the O&M Coordinator. Proper procedures for dealing with these materials should be implemented by the O&M Coordinator. Activities involving disturbance or potential disturbance to ACM should be documented by the O&M Coordinator when they occur.

The O&M Coordinator has the responsibility for implementation of the O&M Program and the coordination of activities related to ACM. The O&M Coordinator should attend the Asbestos Awareness Program and the Personal Protection and Work Practice Control Training Program. Also, the O&M Coordinator has responsibility for coordinating activities involving potential ACM disturbance, ACM abatement, and construction activities in the complex. Where ACM exists in the facility, the O&M Coordinator should inform Contractors of the location of ACM in each work area, as indicated in the Asbestos Survey included in Appendix A. When required by this document or directed by the Environmental Consultant, the work should be performed by an Asbestos Abatement Contractor.

The O&M Program Coordinator for the Downey Industrial Center has been designated as:

Name _____ Date _____

On-site Management Personnel

This person is the on-site manager who should serve as a liaison between the tenants and the O&M Coordinator. The on-site manager should also assist engineering personnel with ACM questions or situations and immediately contact the O&M Coordinator should a problem arise.

Engineering Personnel

These persons are employees who perform engineering and maintenance work at the complex. The Engineering Personnel should have attended the 2-hour Asbestos Awareness Training provided by the Environmental Consultant which includes recognizing ACM and damage to ACM and be advised in the special techniques and procedures required in working around ACM. They should notify the O&M Coordinator if they discover, disturb, or damage ACM or material they believe to be ACM.

Asbestos Abatement Contractor

This is an independent contractor performing work in the building that involves abatement, encapsulation, disturbance, containment, spot removal, minimization cleaning and disposal of ACM or that otherwise requires such contractor to be licensed under applicable state and federal laws to perform the work in an area containing ACM. The Asbestos Abatement Contractor should be licensed and should furnish a copy of such license to the O&M Coordinator to be kept on file at the complex. Each Asbestos Abatement Contractor should report to the O&M Coordinator through the Environmental Consultant. Each Asbestos Abatement Contractor should perform his work in the building in accordance with Abatement Specification issued by the Environmental Consultant and this document, as well as in accordance with applicable state and federal laws, rules, and regulations.

General Contractors

These are independent contractors other than the Asbestos Abatement Contractors, whether employed by the building or another contractor, and are engaged to perform work in the form of construction, alteration, renovation, demolition or other work in the building. In as much as Contractors by the performance of such work may come into contact with ACM or otherwise disturb ACM in the building, all Contractors are required to report to the O&M Coordinator prior to beginning any work in the building. Also, the scope of the work to be performed by the Contractor should be discussed with the O&M Coordinator and obtain authorization to proceed from the O&M Coordinator. The Contractor **should not** perform:

(I) any work in any portion of the building containing ACM unless the O&M Coordinator or the Environmental Consultant has determined that the Contractor's work, if properly performed, will not disturb known ACM.

(ii) asbestos abatement or encapsulation or containment work unless they qualify as an Asbestos Abatement Contractor or such work area has previously been abated of ACM so that such work can be performed without disturbance to the ACM. Contractors should not disturb or damage known ACM unless trained to perform activities involving ACM and should report to the O&M Coordinator any disturbances of ACM, or a material believed to be ACM, and any discovery of ACM or a material believed to be ACM in a location, circumstances or condition other than as identified in the Asbestos Survey included as Appendix A.

Environmental Consultant

This is an independent contractor who is a knowledgeable environmental engineering company. The consultant advises the O&M Coordinator in recommended techniques and procedures. The consultant also advises the O&M Coordinator on modifications to the O&M Program, serves as a liaison between O&M Coordinator and the Asbestos Abatement Contractors, and, to the extent necessary, between the O&M Coordinator and general contractors. The consultant also prepares and issues Abatement Specifications and performs bulk sample surveys, analysis, and air monitoring in the complex as needed. The consultant may also conduct education and training programs outlined under this O&M Program and conduct annual visual inspections of the ACM in the complex.

The contractor coordinates with, consults with and observes the work of the Asbestos Abatement Contractor to the extent necessary to see that work is performed in compliance with this document, all applicable laws, rules, and regulations, and if applicable, the Abatement Specification and other specifications, if any, issued by the Environmental Consultant. The consultant should be available on an as needed basis to advise and assist the O&M Coordinator and to answer questions regarding the Asbestos Survey or specific questions regarding the O&M Program.

III. ASBESTOS IDENTIFICATION

The following sections discuss materials that have been identified as suspect asbestos containing materials at the Downey Industrial Center.

Friable ACM

Our site observations identified spray acoustical ceiling materials as friable potential asbestos-containing materials (PACM) to be present in the subject sites.

Non-Friable ACM

Site observations identified non-friable presumed asbestos-containing materials (PACM) to be present on the subject sites in the form of vinyl floor tiles, floor or roof mastic, drywall, insulation and transite materials.

IV. AIR MONITORING

Background Air Monitoring

Background air sampling should be collected and analyzed by Phase Contrast Microscopy (PCM) to document air quality in areas where friable and/or damaged ACM exists.

It should be noted that the EPA "clean air level" is currently at 0.01 fibers per cubic centimeter of air (f/cc). If this level is exceeded during background air monitoring, then Transmission Electron Microscopy (TEM) air samples should be collected and analyzed. TEM is asbestos fiber specific whereas PCM analyzes all fibers. Should the TEM samples be above the current EPA "clean air level" then the area should be decontaminated by a qualified, licensed Asbestos Abatement Contractor.

Annual air monitoring should be conducted to obtain a record of the air quality inside the buildings as long as ACM exists in the facility.

Employee Air Monitoring

Maintenance personnel should be periodically monitored for potential asbestos exposure during O&M activities, which may disturb the ACM. The Environmental Consultant should conduct this monitoring.

Initial sampling should be conducted during these maintenance activities, until a history of potential exposure during each type of activity is established. Samples should be analyzed using PCM according to NIOSH Consulting Method 7400. The analytical laboratory utilized for analysis of the sampled should be a successful participant in the NIOSH Proficiency Analytical Testing (PAT) program.

Results of the air samples should be made available to maintenance workers and should be retained by the O&M Coordinator to be included in the O&M Program.

V. EVALUATION OF EXISTING MATERIAL CONDITIONS

AES Due Diligence, Inc. assessed the identified suspect PACM at the Downey Industrial Center on April 9, 2007. The likelihood that the material could be disturbed in the future is related to (1) the frequency with which service workers or building occupants need to work near the materials; (2) its location with respect to sources of vibration; and (3) the potential for air erosion. The evaluation is used to classify the material with respect to its potential for disturbance.

- Low Potential – Service workers work in the vicinity of the material less than once per month, or the materials are visible but not within reach of building occupants. There is no vibration (motors, engines, intrusive noises). There is no high velocity or noticeable air movement (fan room, air shaft, ventilation air stream).

- Significant (Potential for Damage) – Service workers work in the vicinity of the material once per month to once per week, or the material is in a room or office and accessible to the occupants. Motors or engines are present but not obtrusive (e.g. ducts vibrating but no fan in the area), or occasional loud sounds (e.g. music room). Noticeable movement of air (e.g. air shaft, ventilator air stream).

- High (Potential for Significant Damage) – Service workers work in the vicinity of the material more than once per week, or the material is in a room or office and accessible to the occupants. Loud motors or engines are present (e.g. fan rooms), or intrusive noises or easily sensed vibrations (e.g. major airports or highways). High velocity air (e.g. elevator shaft, fan room).

Friable and all thermal system insulation are placed in one of the following categories:

1. Damaged or significantly damaged thermal system insulation.
2. Damaged friable surfacing ACM.
3. Significantly damaged friable surfacing ACM.
4. Damaged or significantly damaged friable miscellaneous ACM.
5. ACBM with potential for damage.
6. ACBM with potential for significant damage.
7. Any remaining friable ACBM or friable suspected ACBM.

Low Potential

• The materials that are suspect are: spray acoustical ceiling materials, vinyl floor tiles, floor or roof mastic, drywall, insulation and transite materials.

Significant Potential

- None was observed.

High Potential

- None was observed.

Addressing Low Potential Materials

These materials should be maintained in-place and periodically re-inspected and re-classified as necessary. If these materials become damaged, it may require that renovations and/or repairs be conducted.

Addressing Significant Potential Materials

The guidelines listed above for addressing Low Potential Materials should be followed when addressing materials classified as a moderate hazard. In addition, caution should be taken not to disturb these materials if maintenance activities require work to be conducted in close proximity to the materials.

Addressing High Potential Materials

The guidelines listed above for addressing Significant Potential Materials should be followed when addressing materials classified as a high hazard. In addition, these materials should be repaired and/or removed by a licensed and qualified Asbestos Abatement Contractor.

VI. INITIAL CLEANING

Initial cleaning is a set of procedures such as wet-wiping and vacuuming with specialized high efficiency particulate air (HEPA) vacuums specifically designed for asbestos clean-up, which lowers the potential for excessive airborne fiber concentrations resulting from the disturbance of asbestos-contaminated surfaces. Under certain conditions, minimization cleaning procedures should be used.

VII. TRAINING

Training will be provided to all employees who may contact, disturb or abate ACM as a part of their work duties. Class I through Class IV work activities require different levels of training. It is possible for building owners to contract for outside services to meet the requirements of this document.

Class I Asbestos Work – Activities involving the removal of thermal system insulation and surfacing ACM and Presumed Asbestos Containing Materials (PACM).

Class II Asbestos Work – Activities involving the removal of ACM, which is not thermal system insulation or surfacing material. This includes, but is not limited to, the removal of asbestos-containing wallboard, floor tile and sheeting, roofing and siding shingles, and construction mastics.

Class III Asbestos Work - Repair and maintenance activities where ACM, including thermal system insulation and surfacing ACM and PACM, is likely to be disturbed.

Class IV Asbestos Work – Maintenance and custodial activities during which employees contact but do not disturb ACM or PACM and activities to clean up dust, waste and debris resulting from Class I, II, and III activities.

There are three levels of asbestos training:

1. Awareness Training (2 hours)
2. O&M Training (16 hours)
3. Abatement Worker Training (40 hours)

Awareness Training

The names of subject site employees who have attended a 2-hour asbestos awareness training program to all employees who may contact ACM as a part of their duties. Form 1 in Appendix B documents their participation. The topics covered in this training include:

- Asbestos forms and uses
- Identification and location of ACM at the Downey Industrial Center.
- Health effects associated with asbestos exposure
- Recognition of potentially hazardous conditions including damage, delamination, and deterioration to ACM
- Procedures for reporting hazardous or potentially hazardous situations associated with the ACM to the O&M Program Coordinator
- Review of the O&M program
- Awareness Quiz

New employees should receive this awareness training within 60 days of employment.

Attendance sheets and records of training activities should be maintained by the O&M Program Coordinator and attached to the O&M Program. These forms are included in Appendix B.

Video awareness training programs or on-site training programs are available through environmental consulting firms. These programs generally meet the OSHA awareness training requirements.

O&M Training

Maintenance and custodial employees whose work involves disturbance of ACM may attend O&M Training. This training should cover the following areas:

- Proper methods for working with and around ACM
- Training for proper use of respiratory protection, personal protective equipment, and use of the O&M procedures
- Respiratory protection requirements
- EPA and OSHA regulations regarding asbestos
- O&M Training Quiz

This training may be accomplished through the attendance of an EPA-approved training course that will also include the awareness training. Workers who have completed this training will be qualified for periodic surveillance of ACM.

Attendance sheets and other records of training activities should be maintained by the O&M Coordinator and attached to this O&M Program using Form 2 in Appendix B.

This training should be approximately 16 hours.

Abatement Worker Training

Employees whose work will involve the actual abatement of ACM should attend Abatement Worker Training. This program should cover the following areas:

- Pre-asbestos abatement work activities
- Work area preparation
- Establishing decontamination units
- Personal protection, including respiratory equipment selection, use, fit-testing, and protective clothing
- Worker decontamination procedures
- Safety considerations in the abatement work area
- A series of practical hands-on exercises
- Proper handling and disposal of ACM wastes
- Asbestos Abatement Worker Training Quiz

This training may be accomplished through the attendance of an EPA-approved training course. Attendance sheets and other records of training activities should be maintained by the O&M Program Coordinator and attached to this O&M Program using Form 4 in Appendix B.

This training should be 40 hours.

VIII. WORKER PROTECTION

Various worker protection programs and guidelines may be required to be implemented as part of this O&M Program. These include the following:

- Establishment of a Medical Surveillance Program
- Establishment of a Respiratory Protection Program
- Use of Personnel Protective Clothing and Equipment

The following sections outline these various worker protection programs and guidelines.

Medical Surveillance Program

Occupational Safety and Health Administration (OSHA) regulations require the implementation of a Medical Surveillance Program for employees for a combined total of 30 or more days per year are engaged in Class I, Class II and III work or are exposed at or above a permissible exposure limit.

This program includes a pre-employment physical, annual physical re-examinations, and an exit physical when leaving the company. The physical should include the following:

- Complete medical history
- Pulmonary function tests
- Chest X-rays (administered at the discretion of the physician)

A Medical Surveillance Program is also required by OSHA for all employees who wear a negative pressure respirator. A baseline examination, annual examinations for the duration of employment, and a termination examination are all elements of a Medical Surveillance Program.

Records should be maintained on file for at least 30 years and be available to each employee participating in the Medical Surveillance Program. Copies of medical records should be stored separately from personnel files and access to these medical records should be restricted to only designated personnel.

The examining physician should be notified that he or she will be the primary holder of medical records and the records should contain the hard copy of the x-ray. Prior to the disposal of any of these records, the O&M Coordinator should be notified.

Respiratory Protection Program

OSHA Regulations 29 CFR 1910.134 and 1910.1001 and 29 CFR 1926.1101 require a Respiratory Protection Program. Since the program should be administered by an appropriately trained administrator, outside services may be contracted. Employees will be provided with respiratory protection whenever performing the following: O&M activities were thermal system insulation or surfacing material is being disturbed, activities were a negative exposure

assessment has not been performed, whenever fiber concentrations exceed the permissible exposure limit, or when working in a regulated area where respiratory protection is required.

The program should include provisions for the following:

- Procedures for selecting respirators for use in the workplace;
- Medical evaluations of employees required to use the respirators;
- Fit testing procedures for tight-fitting respirators;
- Procedures for proper use in routine and reasonably foreseeable emergency situations;
- Procedures and schedule for cleaning, disinfecting, storing, inspecting, repairing, discarding and maintaining respirators;
- Training of employees in the respiratory hazards for routine and emergency situations; and
- Training of employees in the proper use of respirators.

Respirators used should be selected from National Institute for Occupational Safety and Health (NIOSH) certified respirator.

The Potential Hazard's Asbestos

For the purpose of this program, the only hazard considered is airborne asbestos fibers. Accordingly, during any asbestos abatement project directly disturbing material that is known to contain asbestos or is presumed to contain asbestos, proper respirators should be worn.

Surveillance

Only those individuals who are medically able to wear respiratory protective equipment shall be issued such equipment. Before being issued a respirator, the employee should receive pertinent tests for medical and physical conditions.

Respirator Fit-Tests

Each employee determined medically fit to wear a respirator should be qualitatively fit-tested upon receiving the equipment and semi-annually thereafter. The type of fit-test conducted depends on the respirator type.

Problems in fitting a respirator may result if facial hair, corrective lenses with temple or straps or other facial characteristics of apparatus prevents a good seal from forming between the skin and sealing the surface.

Respirator Assignment and Maintenance
Respirators should be assigned to individual workers for their exclusive use. A system of record-keeping should be established to document employees who have respiratory protection equipment and the regular inspection of this equipment. Respirators should be regularly cleaned and disinfected

Respiratory Training Program

A training session with required employee attendance, should be conducted by the qualified personnel to ensure that employees understand the limitations, use, and maintenance of respiratory equipment, and other important aspects of the Respiratory Protection Program.

Surveillance of Working Conditions

Air sampling should be conducted before, during and after selected projects requiring respiratory equipment. Respiratory equipment used should be suitable for the asbestos concentrations expected to occur in the work area. Employees should be instructed to immediately leave the work area should they experience physical stress such as difficulty in breathing or dizziness.

Respiratory Program Supervision

The Respirator Program should be evaluated at least annually with program adjustments, as appropriate, made to reflect the evaluation results. Compliance wit the following points of the program should be reviewed; respirator selection purchase of approved equipment, medical screening of employees, fit-testing, issuance of equipment and associated maintenance, storage, repair, inspection, and appropriate surveillance of work area conditions.

Attention should be given to proper record-keeping regarding the Respirator Program Supervision. Records which should be kept include: a list of the employees who are trained in respirator use; documentation of the care and maintenance of respirators; medical records of each respirator user; airborne concentrations of asbestos fiber before, during and after work is conducted; and any problems encountered during renovation activities.

Personal Protective Clothing and Equipment

A variety of other safety and personal protective equipment may be required as part of the O&M Program. This equipment would be used for work activities which create a potential for ACM disturbance. This equipment includes:

- Disposable coveralls with hoods and booties
- Impervious gloves, such as PVC, nitrile, or polyethylene
- HEPA-filtered vacuum
- Asbestos 6 mil waste disposal bags with appropriate labels
- 6 mil polyethylene sheeting (used as drop cloths and barriers)

IX. ABATEMENT PROCEDURES

Activities resulting in the disturbance of asbestos-containing materials will be supervised by a competent person. The competent person will be responsible for conducting exposure assessments prior to ACM disturbance, and ensuring that employees are not exposed to asbestos created during work procedures. Under no circumstances shall an employee or tenant of this facility intentionally remove ACM or PACM in an uncontrolled manner.

Any project where disturbance of over 3 linear or 3 square feet of asbestos-containing material is likely will be performed by EPA accredited/ state licensed personnel in conformance with applicable state and federal regulations. Any persons performing activities which may result in contact or disturbance of less than 3 linear or 3 square feet of ACM, may be exempt from certain rules in California.

All Class I, Class II and Class III asbestos work shall be conducted within a regulated area. In addition, any other work where there is a reasonable possibility that the permissible exposure limit will be exceeded will be conducted in a regulated area.

If ACM or suspect ACM is found in an area where work is to be performed, the O&M Coordinator should be notified and the potential for disturbance of the ACM be evaluated by the O&M Program Coordinator prior to any maintenance work.

The work area should be inspected for ACM prior to the work which has the potential to disturb suspected ACM. The O&M Coordinator should authorize the affected areas as asbestos free, or develop procedures to limit the disturbance of ACM if identified.

If material is suspected of being ACM and is disturbed, fallen or displaced, appropriate decontamination should be conducted such as HEPA vacuuming and wet wiping of contaminated surfaces.

The following paragraphs describe general guidelines for the areas and activities identified. It the job activity is not described in this section, then the O&M Coordinator should conduct an inspection and designate the appropriate precautionary measures.

- Do not disturb or damage materials that are suspected of or known to contain asbestos or deemed to be contaminated with asbestos.
- Under no circumstances should removal of ACM be undertaken without utilizing a licensed asbestos abatement contractor. Nor should ACM removal be undertaken without proper procedural review and appropriate precautions to prevent exposure and contamination of adjoining areas.

The areas of damaged ACM should be repaired as by a licensed asbestos abatement contractor. This contractor should:

- Wear proper protective clothing and respiratory protection.
- Limit access to the area.
- Thoroughly wet the debris with amended water and double bag the ACM in appropriately labeled 6-mil asbestos disposal bags to await proper disposal.
- Repair the damaged areas with a non-asbestos material, or sealed with an encapsulating material.
- Debris, cleaning materials, filters, etc. should be disposed of as asbestos waste.

Remodeling or renovation work to be performed should be discussed with O&M Coordinator. How these activities may affect the ACM should be evaluated, and proper actions should be taken to alleviate this situation prior to conducting work. If necessary, further sampling and analysis of suspect materials may be required to verify asbestos content.

If at any time, unknown materials are encountered, work should stop immediately and the O&M Coordinator should be notified. Upon review of the inspection report, if the asbestos content of the material is still unknown, it should be assumed to be ACM until laboratory analysis yields otherwise.

Renovation, maintenance, construction or other activities that may disturb ACM should be approved by the O&M Coordinator. The following steps should be followed if these activities are scheduled:

- Restrict access to the work area by posting warning signs and erecting barriers.
- Workers should use appropriate personal protective equipment, including respirators and disposable clothing.
- A HEPA vacuum should be available to clean up debris that may be created.
- Wet methods should be used to clean up the possible release of fibers.
- Asbestos debris and cleaning materials should be disposed of as asbestos waste.
- Air monitoring should be conducted to document airborne fiber levels, unless a documented history of airborne fiber levels below 0.1 f/cc has been established for the type of work being conducted.
- Intentional removal of ACM for the sole purpose of asbestos abatement should not be performed by employees or tenants of the facility. If maintenance personnel are to conduct small scale short duration asbestos maintenance activities, they must be licensed under California law.

The O&M Coordinator should maintain records of maintenance activities, which might disturb ACM. These records should include a description of work, the workers involved, controls used to reduce the potential of exposure, the results of any exposure monitoring, and disposal records for asbestos wastes. Forms 7 and 8 in Appendix B should be completed for each maintenance-related activity which may disturb ACM. Maintenance activities routinely performed by the subject site employees should be reviewed in order to assign levels of protection for these various work tasks. It is recommended that the O&M Coordinator develop a description of work activities to be performed by the building staff.

X. WORK BY OUTSIDE CONTRACTORS

Outside contractors performing maintenance, repair, or renovation work at the Downey Industrial Center should meet with the O&M Coordinator before performing any work. Outside contractors should be provided with information about the locations of ACM that they might come in contact with and be allowed to examine this O&M Program.

Outside contractors are required to follow proper work procedures to minimize potential disturbance to ACM. Such work procedures should be outlined and approved by the O&M Coordinator. A sign in/sign out record should be used to document that outside contractors receive this information, and this record should be kept by the O&M Program Coordinator.

Contractors, other than approved, licensed and qualified Asbestos Abatement Contractors, are not authorized to disturb ACM at the Downey Industrial Center.

Maintenance activities that directly affect ACM or PACM should not be performed by untrained or unlicensed personnel. Maintenance activities should be approved by the O&M Program Coordinator. This includes activities conducted by employees or tenants of the complex.

XI. RELEASE EPISODES

Minor Fiber Release Episodes

All Class I, Class II and Class III work must be performed in a regulated area. All other operations shall be conducted in a regulated area where airborne concentrations of asbestos exceed or there is a reasonable possibility they may exceed a permissible exposure limit. A minor release episode is defined as "the falling or dislodging of three square feet or less of ACM." The following steps should be taken in the event of minor fiber release episode:

- Access to the area should be restricted.
- ACM debris should be thoroughly wetted with amended water and double-bagged in properly labeled 6 mil asbestos disposal bags.
- The damaged area should be repaired with a non-asbestos material, or sealed with an encapsulating material.
- Debris, cleaning materials, filters, etc. should be disposed of as asbestos waste.

A minor fiber release episode should be reported to the O&M Coordinator immediately. The coordinator will keep records indicating the date of the release, the areas affected, actions taken, and chain-of-custody manifests for the disposal of the waste materials generated.

Major Fiber Release Episodes

All Class I, Class II and Class III work must be performed in a regulated area. A major fiber release episode is defined as "the falling or dislodging of three square feet or more of ACM." The following steps should be taken in the event of a major fiber release episode:

- The area should be secured and sealed utilizing polyethylene sheeting as necessary to create a regulated area. Individuals not directly involved in the maintenance work should leave the area. The HVAC system in the area should be shut down and secured to prevent distribution of fibers generated during the episode. Clean-up and/or abatement activities, as needed, should be performed only by a licensed and approved asbestos abatement personnel.
- The O&M Program should be contacted immediately. An inspection and report of the episode specifying actions taken should be recorded.
- Persons entering the area should wear two disposable coveralls and an approved air purifying respirator with HEPA cartridges.
- After completion of the work, the outer coverall should be removed before leaving the secured and sealed area. The outer coverall should then be placed with other contaminated materials in an appropriately labeled 6 mil asbestos disposable bag.
- The inner coverall should be HEPA vacuumed and wet wiped. The individual can then proceed to a change room or to an area deemed "clean" (i.e. uncontaminated).

- Upon task completion, ladders and tools should be wet wiped while inside the secured and sealed area. Rags should be disposed of with other contaminated equipment in appropriately labeled 6 mil asbestos disposal bags. All waste materials should be double-bagged.
- Additional asbestos related precautions may be necessary and can be provided by the O&M Coordinator. Precautions to prevent personnel exposure and contamination of adjacent areas should be utilized.

Actions taken in the event of a major fiber release episode should be documented, with records maintained by the O&M Coordinator. Forms 10 and 12 in Appendix B should be completed.

XII. PERIODIC SURVEILLANCE

The condition of the ACM should be inspected and noted annually by the Environmental Consultant. Routine monitoring should be performed at least monthly by qualified personnel. This will serve to re-evaluate the condition of the materials with regard to changes in friability and potential fiber release.

Conditions such as damage due to physical abrasion, vandalism, or water damage should be observed and documented, and appropriate response actions delineated. This documentation should include notes, photographs and written reports which should be kept in the records held by the O&M Program Coordinator.

ACM that has been abated should also be noted. Form 7 is included in Appendix B and should be completed during the surveillance.

XIII. DISPOSAL PROCEDURES

Asbestos-containing waste resulting from asbestos activities should be stored in a secure location in accordance with EPA and OSHA regulations. Waste should be disposed of at an EPA approved landfill and waste manifests used to track disposal. For each load of asbestos waste that is regulated under the National Emission Standards for Hazardous Air Pollutants (NESHAP), a waste shipment record must be maintained.

Asbestos wastes should be thoroughly wetted and double-bagged in appropriately labeled asbestos disposal bags. Bags should be sealed airtight while the material is still wet. Bag tops should be twisted and sealed with duct tape, then bent over and sealed again with at least three wraps of duct tape. If waste materials are not immediately disposed of, properly trained personnel may establish a restricted area to store ACM as long as the area is secured and the ACM is stored in the proper containers (i.e. double bags or drums).

Additional material should not be added to bags, and bags should not be reopened after they have been sealed.

Asbestos wastes should be transported in a covered truck and disposed of at a landfill approved for asbestos.

A manifest document should be completed and signed by the O&M Program Coordinator.

XIV. NOTIFICATION AND WARNING

Employee and Tenant Notification

The communication of asbestos hazards is vital to prevent exposure. Most asbestos-related construction involves previously installed building materials. Building owners often are the only or best source of information concerning them. The owners and employers of potentially exposed employees have specific duties under federal and state regulations.

Under OSHA's Hazard Communication Standard, employees who may contact ACM as a part of their duties must be trained so as to properly protect themselves from unnecessary health risks.

Notification shall be provided to employers and employees working with the Downey Industrial Center. Notification will be accomplished by the following means:

- Employees and Contractors will be notified that asbestos is present within the facility during new employee and during contractor site-specific training within the work site.
- Before performing work which may contact/disturb asbestos, employees and employers of employees will be provided information on the presence, location and quantity of asbestos containing materials within the work area.
- Known and presumed asbestos-containing materials have been labeled whenever feasible to notify personnel of asbestos-containing materials before disturbance may occur.
- Employees and contractors will be required to notify the program coordinator whenever disturbance of asbestos-containing or potentially asbestos-containing materials may occur, or when asbestos content is unknown.
- Employees and employers of employees working within the facility shall treat all thermal system insulation, surfacing material, and floor tile installed prior to 1980 as if it contains asbestos, unless documentation exists which states otherwise.
- Employers of employees who will perform asbestos related work shall inform the building owner and employers working in the area of the location and quantity of ACM in the area and precautions to be taken to protect adjacent persons from asbestos exposure.

All employers discovering asbestos-containing materials on a worksite must notify the building owner and other employers onsite within 24 hours of its presence, location, quantity, and the precautions taken to confine airborne asbestos.

At the entrance to mechanical rooms or areas containing thermal system insulation and surfacing asbestos-containing materials, the building owner must post signs identifying the material presence, location, and appropriate work practices.

Employers must attach warning labels to products and containers of asbestos, including waste containers, and installed asbestos products, when possible. Labels must be printed in large bold letters on a contrasting background and contain a warning statement against breathing asbestos fibers and contain the following legend:

DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD

Regulatory Agency Notification

The Environmental Protection Agency must be notified whenever supporting structure demolition is to take place or when an amount of regulated asbestos-containing material greater than 160 square feet, 260 lineal feet or 15 cubic feet is to be removed. If it is an emergency situation, the agency need not be notified in advance but must be notified no more than 48 hours after the project begins. The requirement for notification is reduced to cover projects of three square feet of friable material if the work will involve state or local government employees. The following information should be supplied:

- Name and address of the building owner or manager
- Description, size, and location of the building
- Name and address of the abatement contractor
- Estimated amount of regulated ACM to be removed
- Scheduled starting and completion dates of ACM removal
- Description of the planned removal and containment methods
- Name, address, and location of disposal site

In addition to the EPA, the individual state's environmental management office must also be notified and proper state documentation forms completed.

XV. RECORD KEEPING

Records of information concerning the presence, location, and quantity of asbestos-containing materials and presumed asbestos-containing materials installed within the facility must be maintained. In addition, records shall be kept of the following activities:

- Records will be maintained of any activities requiring the disturbance of ACM performed within the facility
- Records will be maintained of persons receiving 2 hour awareness training or 16 hour O&M training
- Records will be maintained of any persons required to wear a respirator as part of their work.
- Records will be maintained of any air monitoring data performed during asbestos related activities.
- Records will be maintained as to storage and disposal locations of ACM.
- Medical records

The O&M Coordinator should maintain records for at least 30 years.

ASBESTOS AWARENESS QUIZ

ASBESTOS AWARENESS QUIZ

NAME_____ DATE_____
DEPARTMENT _____

1. Circle the materials which are considered friable:

Floor Tile Mastic	Floor Tiles
Fire-proofing	Roofing Tars
Paint	Spray-Applied Ceilings
Ceiling Tiles	Damaged Texture
Damaged Pipe Insulation	Wall Texture

2. ACM stands for:

   a) Asbestos-Containing Material
   b) Amosite-Chrysotile Material
   c) Asbestos-Cement Mixture

3. A dust mask is allowed to remove small quantities of asbestos.

   a) True b) False

4. Asbestos is man made.

   a) True b) False

5. An Operations and Maintenance (O&M) Program provides:

   a) Training Information
   b) Asbestos Handling Procedures
   c) Surveillance of Existing Asbestos
   d) All of the above.

6. The short term exposure limit is:

   a) 0.2 f/cc
   b) 0.1 f/cc
   c) 1.0 f/cc
   d) 0.5 f/cc

7. The permissible exposure limit (PEL) is:

   a) 0.2 f/cc
   b) 2.0 f/cc

c) 0.1 f/cc
d) 0.05 f/cc

8. Wet-methods should be used when removing asbestos:

a) True b) False

9. To determine the concentration of asbestos fibers in the air one may:

a) Conduct air sampling.
b) Remove the asbestos present in the building.
c) Aggressively blow the air.
d) Spray water in the air.

10. The employees at the Office Building may remove ACM as long as:

a) A respirator is worn while drilling.
b) The ACM is non-friable.
c) The ACM is wet.
d) the ACM should be removed by a qualified contractor.

11. Breathing large quantities of asbestos over long periods of time may cause health problems:

a) True b) False

12. Circle parts of the O&M Program:

a) Work Practices
b) Re-insulation
c) Training
d) Surveillance
e) Notification
f) Liabilities
g) Record Keeping
h) Installation Methods

13. Water-damaged asbestos should be:

a) Kept secret to avoid lawsuits.
b) Painted to remove the water stain.
c) Reported to the O&M Program Coordinator immediately.
d) None of the above.

14. If asbestos debris is found, it should be:

a) Cleaned with a vacuum.
b) Cleaned with a broom.
c) Reported to O&M Program Coordinator.
d) Ignored.

15. People who work with asbestos should:

a) Know its hazards.
b) Be alarmed.
c) Not smoke.
d) Both a and c.

16. Maintenance work which is scheduled to be performed on unknown material should be:

a) Removed without disturbing the public.
b) Assumed ACM until sampled.
c) Performed by the O&M Coordinator.
d) Assumed non-ACM and proceed with the maintenance work.

17. The employees at the Office Building:

a) Should be alarmed of the ACM present in this facility.
b) Shall not intentionally disturb ACM.
c) Should smoke.
d) May remove ACM for the purpose of asbestos abatement.

18. Routine monitoring of the ACM:

a) May be conducted depending on finances available.
b) Should be done by the tenants.
c) Should be done annually.
d) May create asbestos hazards.

19. Air samples may be analyzed by:

a) TEM or PCM.
b) SAC or PCM.
c) PCM or ACM.
d) ACM or SAC.

20. Federal agencies who regulate asbestos are:

a) EPA and SAC.
b) PCM and OSHA.
c) OSHA and EPA.
d) EPA and ACM.

Answers to Asbestos Abatement Quiz

1. Fire-proofing, ceiling tiles, damaged pipe insulation spray-applied ceilings, damaged tile.
2. a
3. b
4. b
5. d
6. c
7. c
8. a
9. a
10. d
11. a
12. a, c, d, e, g
13. c
14. c
15. d
16. b
17. b
18. c
19. a
20. c

SCORING

All questions are worth 5 points with the exception of Questions 1 and 12, which are worth 1 point for each correct choice.

Total score is 100 points.

Re: Phase I Environmental Assessment Report Addendum
Downey Industrial Center
9300, 9350, 9400 Hall Road and 9301 Stewart and Gray Road
Downey, CA 90241
Project No. 70001016

Dear Ms. Bachmeier:

As requested, AES Due Diligence Inc. conducted a walk-through observation of the above-referenced site on July 24, 2008 to view the status of the known asbestos containing materials (ACM) on the subject site noted in our Phase I Environmental Assessment dated April 13, 2007. During the site visit AES visited each of the four tenant spaces and was escorted through them by tenant personnel. The suspect materials include: spray acoustical ceiling materials, vinyl floor tiles, floor or roof mastic, drywall, insulation and transite materials. There does not appear to be any changes in the status of the suspect ACM in the building and Ms. Morrison indicated that no work has been done in the suspect areas since the original site visit. There does not appear to be any changes in the status of the ACM at the subject site at this time.

We appreciate this opportunity to provide professional consulting services to you. Should you have any questions, please contact me.

Very truly yours,

AES DUE DILIGENCE INC.

Downey, CA 90241
Project No. 70001016

Dear Mr. Bachmeier:

In accordance with our accepted proposal, AES performed a walk-through survey of the above-referenced property on April 9, 2007. There are three original Reports and three compact discs provided for your use. AES Due Diligence, Inc., is not affiliated with the client or any other parties to this transaction.

We appreciate the opportunity to provide consulting services to you. If you have any questions, please contact our Orange County Regional office at (714) 996-7395 or our Corporate Office at (858) 569-0211.

Very truly yours,

AES DUE DILIGENCE, INC.

Environmental Professional Statement

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a site of the nature, history, and setting of the subject site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

II OBJECTIVE AND SCOPE

Objective

The purpose of this Phase I Environmental Site Assessment is to identify recognized environmental conditions that may have an impact on the subject site, using readily available sources of information, interviews and field observations. It is our understanding the Client intends to finance the site.

Procedures

This Assessment is a Phase I Environmental Site Assessment (ESA) for the improvements located at 9300, 9350, 9400 Hall Road and 9301 Stewart and Gray Road in Downey, CA 90241, performed in general accordance with ASTM Designation E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and following the Scope of Work outlined in AES Due Diligence, Inc.'s proposal. AES Due Diligence, Inc. (AES) conducted on-site observations on April 9, 2007, interviewed site operations personnel and observed adjacent properties. Environmental Data Resources, Inc. (EDR) conducted database searches following ASTM guidelines. Such searches are generally limited to a radius of one mile from the subject site. Additionally, ASTM Non-Scope items are addressed in this Assessment, including Asbestos, Lead-Based Paint, Radon Gas, Mold, Wetlands and Lead in Drinking Water. No testing was completed for ASTM Non-Scope items.

Limitations

The purpose of the Phase I ESA of the site is to address the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. If requested by the Client, certain non-scope business environmental risks are addressed in the Assessment. The Phase I ESA is intended to allow the Client to satisfy one of the requirements to qualify for the innocent landowner defense, contiguous property Owner or bona fide prospective purchaser limitations on CERCLA liability: i.e. the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 USC § 9601(35)(B). The Phase I ESA does not address whether requirements in addition to appropriate inquiry were met in order to qualify for CERCLA's innocent landowner defense.

The objectives of the Phase I ESA are as follows:

1. Evaluate if recognized environmental conditions (REC), historic recognized environmental conditions (HREC) or *de minimis* conditions are present on the site.

2. Provide sufficient documentation of sources, records and resources utilized in conducting the Phase I ESA.

3. Prepare a professional opinion regarding the presence of RECs at the site.

Special Terms and Conditions

The Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the site.

A Phase I ESA attempts to identify the environmental conditions of the site and vicinity. Environmental conditions and regulations are subject to change and re-interpretation. Current conditions or regulatory requirements should not be assumed to continue to represent conditions at some future time. This Assessment represents AES's professional judgments and opinions based on information presented in this Assessment and no warranty, either expressed or implied, are contained herein.

Limitations and Exceptions of Assessment

The surface conditions of the site were noted by visual observations or information obtained during interviews. No physical testing, soil/groundwater sampling or laboratory analysis was included unless otherwise noted in the Assessment.

The executive summary was prepared for the convenience of the users of this Assessment. This summary does not contain all the information presented in this Assessment and, therefore, the entire Assessment should be read to assure all pertinent information is transmitted.

AES performed the Phase I ESA of the site in substantial conformance with the scope and limitations of ASTM E 1527-05, Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* unless otherwise noted in the Assessment. Certain environmental conditions may exist on a site that are beyond the scope of the Standard, but may warrant consideration. Per the Standard, this environmental site assessment is presumed to be valid for a specific time limit as defined in ASTM Designation E-1527-05.

AES utilized the following methods to complete the reconnaissance of the site. AES observed the site and adjoining properties for indicators of existing or potential recognized environmental conditions. The site walkover consisted of walking the site boundary and several transects across the site. For a site with buildings, the accessible areas of the buildings were entered and observed. Please note that AES did not look under floors, above ceilings or inside walls. The adjoining properties were observed from the periphery of the site, if possible. The observations were documented with representative photographs. No limiting conditions were encountered during the course of the Phase I ESA.

Documents

Our Assessment represents our professional experience and judgment, and a good faith effort to obtain all available information. Documents and data provided by the Client, its designated representatives, or other interested parties, and consulted in the preparation of this Assessment, have been reviewed and may be referenced herein, with the understanding that AES assumes no responsibility or liability for their accuracy or for the withholding by any of the involved parties of any assessments or other information that could affect the transaction.

Intended Use

AES Due Diligence, Inc. is not affiliated with the borrower or any other parties to this transaction. This Assessment is intended to be used in its entirety. No portion of it may be deleted or used out of context without the written consent of AES. The opinions and information contained in this Assessment are time sensitive and represent our evaluation of the environmental site conditions at the time the services were provided. This Assessment was prepared for a limited use involving a single transaction, as set forth herein, and may not be used for any other purpose without the written consent of AES.

Proprietary Information

Field data, field notes, and other data and documents assembled by AES to produce this Assessment represent the work product of AES's training, experience and professional skill. This information belongs to and remains the property of AES Due Diligence, Inc.

Reliance

This Report is for the exclusive use of RiverSource Life Insurance Company, and Pacific Southwest Realty Services. No other party shall have the right to rely on any service provided by AES Due Diligence, Inc. without prior written consent.

Definitions

ASTM defines a Recognized Environmental Condition (REC) as "the presence or likely presence of any Hazardous Substances or Petroleum Products on a site under conditions that indicate an existing release, a past release, or a material threat of release of any Hazardous Substance or Petroleum Products into structures on the site or into the ground, groundwater or surface water of the site." The term includes hazardous substances or petroleum products even under conditions in compliance with laws.

A Historic Recognized Environmental Condition (HREC) is defined as an environmental condition which in the past would have been a REC, but which may or may not be considered a REC currently.

A *de minimis* environmental condition generally does not present a threat to human health or

the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be *de minimis* are not a REC.

Business Environmental Risk (BER) is a risk, which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of the site, not necessarily limited to those environmental issues investigated in this Phase I ESA. BER often necessitates that an environmental professional complete one or more of the non-scope considerations identified by ASTM.

III PROPERTY DESCRIPTION

Site Visit and Interviews

On April 9, 2007, AES visited the subject site and reviewed the fixed facility. The tenants typically provided an escort that accompanied Richard E. Darwicki of AES during the interior viewing portions of the site visit.

AES observed the interiors and contents of representative occupied tenant spaces, common areas and maintenance areas and noted operations and activities at the subject site. AES looked for suspect asbestos-containing building materials, stored chemicals, underground and aboveground storage tanks, unusual surface appearance, wetlands and other issues that may indicate environmental conditions on the subject site. AES noted the location of on-site electrical power transformers and storm drainage structures where these were encountered. AES observed sites adjoining the subject site and areas within the immediate vicinity of the subject site.

AES photographed selected features at or near the subject site to support this written Assessment. The photographs are identified, described and appended to this Assessment.

Subject Site

The project is situated on a tract of land estimated to be approximately 29.16 acres. The property consists of three parcels generally bounded by Hall Road on the northeast, Stewart and Gray Road on the south and Woodruff Avenue to the east, not including the parcels that front Woodruff Avenue. All buildings are within the City of Downey, California. The original improvements were reportedly completed in 1951.

The topography of the site is nearly level and slopes to the south. The site has a maximum surface elevation difference of approximately three feet. Additional slopes are provided around the improvements for storm water drainage. On-site storm water drainage is by sheet flow to catch basins or curb inlets connected to the Downey storm sewer system.

The parking and driveway areas are generally asphaltic concrete paved. Entry driveway aprons, rubbish dumpster pads, and public and private sidewalks are concrete paved.

Pad-mounted, utility company owned electrical transformers are provided on site. The Southern California Edison Company is the electrical supplier and is responsible for transformer-related incidents. Natural gas service is provided by the Southern California Gas Company. The site is provided with municipal water and sanitary sewer services from buried utilities along the adjacent thoroughfares.

Buildings

The property has four primary single-story buildings. The Owner indicates that there are a total of 461,593 square feet (sf) of net rentable floor area. The center is occupied by multiple tenants. The original improvements were reportedly completed in 1951.

Three light steel industrial buildings and one wood framed office building are on site and are supported on shallow foundations. The painted exterior walls of the buildings covered with various finishes including stucco, corrugated steel, CMU and brick veneer. No basements are provided at the project. The roofing consists of a gradient sloped, built-up bituminous roofing system with a mineralized capsheet as a surfacing material. The roofing materials at the pitched portions consist of corrugated metal panels mechanically fastened to the roof and covered with built-up roofing. The buildings are provided with pad-mounted and roof-mounted HVAC units. There is a hydraulically driven elevator in Building 9300.

Adjoining Properties

Properties immediately adjoining the subject site are listed in the following table. The adjoining properties are located in Downey, CA 90241.

Adjoining Properties			
Name	**Operation**	**Direction from Site**	**Concerns**
Railroad tracks	Transportation	Northeast	None
Industrial Buildings 9368-9420 Stewart and Gray Road	Industrial Uses	South	None
Industrial Buildings 11711-11911 Woodruff Road	Industrial Uses	East	None
9236 Hall Road	Vacant Land	West	None

Because of the controlled surface drainage and the predominantly non-hazardous uses on the adjoining properties, they do not, in our opinion, pose a significant environmental risk to the subject site.

Vicinity

AES observed other properties located near the subject site for current uses or conditions that might be environmentally significant. The local area properties observed by AES did not appear to be engaged in environmentally significant activities.

Topography and Hydrogeology

AES reviewed the United States Geological Survey (USGS) Topographic Map, which indicates that the subject site is approximately 110 feet above mean sea level. AES observed that the general drainage flows in a southerly direction across the surface of the site. No substantial grade changes appear to have been made to the subject site when compared to the topography of surrounding sites. A copy of the USGS topographic map that covers the subject site is appended.

Geology and Surficial Soils

The subject site is located above Cenozoic era stratified sequence bedrock. The depth to bedrock is unknown.

According to the information obtained through the EDR Report, subject site is located in an area of loamy soils. These soil types have moderate permeability and would be expected to have moderate susceptibility as a result of surface spreading of wastes, depending upon local soil conditions.

Surface and Ground Water Flow

The regional surface water flows in a southerly direction. The ground water flow in the area is assumed to be to the south. The depth to ground water is unknown.

IV SITE HISTORY

No prior Environmental Reports were provided to AES for review. AES conducted a limited historical review regarding the subject site. The following summarizes AES's review of readily available historical records and maps gathered from government agencies and commercial enterprises regarding the subject site history and use. This should not be considered a listing of all available information.

Interviews

Mr. Hilands had personal knowledge of the uses of the subject site prior to the construction of the current improvements in 1951. He indicated that the site was previously used as vacant land, a munitions factory and Aerojet General manufacturing facilities.

Building Department Records Review

The original building shell permits and current Certificates of Occupancy are not on file at the city. The buildings were constructed before the city was incorporated and the records may have been lost or misplaced.

Aerial Photograph and Historical Map Review

Aerial photographs are reviewed to identify past site use and areas of environmental concern on the subject site. AES has reviewed aerial photographs of the subject site. The photographs were obtained from GeoSearch. Copies of the aerial photographs that were obtained and reviewed by AES are appended. Please see chart below for the specific dates and description summary.

Beginning in the 1860s, the Sanborn Fire Insurance Company, and others, prepared maps that depict site improvements and commercial activities in many metropolitan areas in the United States. AES attempted to obtain fire insurance maps, specific to the site, to review as part of this Phase I Environmental Site Assessment. No Sanborn map coverage is available for the area.

Historical maps provide information concerning historical site boundaries and improvements. Historic Topographic Maps were reviewed for the site, please see the chart below for enumeration of years and findings.

The historical maps reviewed were obtained from GeoSearch, and are appended.

Site History Summary		
Date	**Record Type**	**Land Use**
1928	Aerial Photograph	Agricultural uses
1936	Historical Topographic Map	Undeveloped land
1938	Aerial Photograph	Agricultural uses
1947	Aerial Photograph	Agricultural uses
1952	Aerial Photograph	Current structures
1960	Aerial Photograph	Current structures
1965	Historical Topographic Map	Current structures
1968	Aerial Photograph	Current structures
1972	Historical Topographic Map	Current structures
1976	Aerial Photograph	Current structures
1981	Historical Topographic Map	Current structures
1982	Aerial Photograph	Current structures
1994	Aerial Photograph	Current structures
2002	Aerial Photograph	Current structures

Based on AES's interpretation of the available documentation noted above the first developed and historic site use was primarily agricultural and industrial uses. No evidence of long-term fill activity, surface scarring, staining or other issues of environmental concern were visible in the aerial photographs during the review process.

Directories

City directories provide information concerning historical site ownership and use. City Directories were reviewed for the years 1971 thru 2005 and no significant information was found.

Title Records Review

A title records review, or chain-of-title, can be used to identify prior ownership of a property and to evaluate previous activities or operations in terms of environmental significance. Significant easements, covenants, restrictions and environmental liens may be indicated in title records. A chain-of-title regarding the subject site was not provided to AES for review as part of this Phase I Environmental Site Assessment.

Document Review

With the exception of a 1996 A.L.T.A. survey, no documents were provided for review.

V ENVIRONMENTAL SITE ASSESSMENT

Fixed Facilities Review

The improvements observed by AES on April 9, 2007, were reported to have been completed in 1951. Minor repair activities to meet maintenance requirements and tenant needs are ongoing. Recent improvements have included tenant space build outs and painting, according to Mr. Hilands.

Mr. Hilands indicated that no asbestos containing materials or lead based paint were utilized in the above noted improvements. In addition, he stated that landscape maintenance services are performed by outside contractors. No landscape equipment is stored on the subject site. Landscape equipment and automotive maintenance is performed at the subject site.

Site Tenant Activities

AES reviewed the current tenant for operations that may use regulated materials or generate waste products. AES observed the accessible interior and exterior common areas and maintenance areas. The site is 100% occupied by multiple tenants

AES confirmed the nature of tenant activities in the building, which primarily consists of industrial and warehouse uses. AES entered and observed the activities at sample areas of the building, including the Hudd, Duray, OmniTemp and Western Pacific areas. Also visited were common areas, mechanical rooms and the roofs.

Upon review of the activities at the above locations, AES found no specific environmental concerns regarding these operations.

On-Site Chemical and Petroleum Product Storage

AES looked for chemicals, hazardous substances, petroleum-based fuels and lubricants, and janitorial and cleaning supplies stored on the subject site. Small amounts of used machine oil, lacquer thinner, solvents, truck filters, antifreeze, used motor oil are disposed of intermittently. No other chemicals or hazardous substances were observed on the subject site other than shelf quantities of commonly available janitorial and cleaning supplies.

Waste Disposal Practices

AES identified the current wastes generated at the subject site. According to AES's observations, general and recycled wastes are disposed of from the subject site. Areas of waste storage appeared to be well kept and free of debris.

General wastes are collected, placed in a dumpster, removed from the subject site on an as-needed basis, and disposed of by city contracted firms.

Small amounts of regulated waste haulers are contracted by the Duray/J.F.Duncan and Hudd tenants to dispose of hazardous materials on an as needed basis. Hazardous Waste Manifests were requested from the tenants and have not been received to date.

Underground and Aboveground Storage Tanks

Owners and operators of certain USTs are required to register those USTs with the state agency responsible for administering the federally mandated UST program. A search of the list of registered USTs in California, prepared by EDR, showed that there are no current registered USTs located on the subject site.

AES interviewed Mr. Hilands and various tenant representatives regarding the presence of USTs and ASTs on the subject site. They stated that there are no registered USTs and no hazardous materials registered ASTs located on the subject site. There are no records of USTs and no records of ASTs on the subject site with the exception of propane storage tanks, Refrigerant 404, oxygen cylinders and nitrogen cylinders.

AES interviewed Mr. Hilands regarding the past use of heating fuels on the subject site to ascertain whether USTs or ASTs may have been utilized on site for the storage of heating fuels or oils. Mr. Hilands stated that to his knowledge the improvements have always been heated by electricity or natural gas. AES's observations confirmed the nature of the current heating systems at the subject site.

AES visually observed the subject site for surficial evidence of USTs and ASTs. AES did not observe evidence of USTs or ASTs at the subject site expect as noted above.

Polychlorinated Biphenyls (PCBs)

Federal regulations put into effect following the Toxic Substances Control Act (TSCA) require that electrical transformers be labeled to identify their PCB content. Manufacture and distribution of PCBs was banned in 1979. Transformer owners are responsible for compliance with all applicable regulations governing those transformers, including maintenance of the transformer and any remediation work resulting from a transformer-related incident.

Pad-mounted, utility company owned electrical transformers are provided on site. The observed electrical transformers appeared to be in good condition with no visible leaks. Areas around the electrical transformers exhibited no signs of visible staining or abnormal appearance. AES did not observe any labels on the electrical transformers identifying the PCB content.

Based on utility ownership and no observed leaks, AES recommends no further action with regard to PCBs in transformers.

Exterior Surface Condition

AES observed the exterior surface of the subject site. It is estimated that 98% of the subject site surface was covered by improvements and pavement. AES's observation of the site soil surfaces was therefore limited to the landscaped areas.

None of the historical documentation reviewed, indicated that the subject site was previously utilized as a quarry and/or solid waste disposal facility.

No pits, ponds or lagoons were observed at the subject site during the site visit. No areas of distressed or dead vegetation, surface depressions or surface stains attributed to chronic leaks or spills were observed during the site visit.

Interior Surface Condition

AES observed portions of the interior surfaces of the building for evidence of unusual conditions. We found no evidence of unusual conditions in the areas we observed.

VI DATABASE RECORDS REVIEW

Environmental Records Review

An environmental records database search report dated April 5, 2007, was provided by Environmental Data Resources (EDR). A copy of EDR's report is appended. The following discussion excerpts specific items from the report that deserve additional description.

In addition to the mapped sites in the EDR report, there may also be a list of unmapped sites. These are reported database sites that, due to incomplete addressing information, could not be accurately plotted by EDR. In an attempt to locate all unmappable sites, AES compared each address provided on the unmappable site list to known addresses of the site and vicinity, and attempted to locate unmappable sites during reconnaissance of the vicinity. AES concludes that no unmappable sites were identified that meet the search radius criteria of the scope of work and are considered to be environmentally significant to the subject site.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

Since 1982, the U.S. EPA has maintained lists of contaminated sites under the federal Superfund Program in accord with the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). The U.S. EPA discovers these sites from citizen reports, routine inspection of hazardous waste generators, treatment, storage and disposal facilities, and reporting requirements.

CERCLA Sites

Facility ID No.	Facility Name and Address	Location			Regulatory History and Current Status
		Distance	Direction	Gradient	
0904850	Red Phosphorus Site 11810 Lakewood Blvd.	1/4	W	Cross	Removal site only, cleaned up.
0905602	NASA Industrial Plant	1/4	WSW	Down	Discovery 1998, not on NPL

Review of the CERCLIS list provided by EDR identifies a total of two CERCLIS sites listed within the ASTM standard minimum search distance of one-half mile from the subject site. There are no CERCLIS facilities on the subject site.

The above referenced CERCLIS facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

CERC-NFRAP List

CERCLA sites designated No Further Remedial Action Planned (NFRAP) have been removed from CERCLIS. CERC-NFRAP sites may be where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the National Priorities List (NPL), or the contamination was not serious enough to require Federal Superfund action or NPL consideration. CERC-NFRAP sites, however, may continue to represent a concern to local or state regulators.

CERC-NFRAP Sites					
Facility ID No.	Facility Name and Address	Location			Regulatory History and Current Status
		Distance	Direction	Gradient	
0901455	Peacock Aerospace 10620 Firestone Blvd	½ mi	ESE	Down	Non NPL, no action planned.

Review of the CERC-NFRAP list provided by EDR identifies only one CERC-NFRAP site listed within the ASTM standard minimum search distance of one-half mile from the subject site. There are no CERC-NFRAP facilities on the subject site.

The above referenced CERC-NFRAP facility was evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

National Priorities List

The U.S. EPA maintains this list as a subset of CERCLIS, identifying over 1,200 CERCLA sites for priority cleanup under the Superfund Program. Once sites have been designated on the CERCLIS list, the U.S. EPA uses its Hazard Ranking System to determine the potential risks of those sites to human health and the environment. Only the sites that present the greatest risk are added to the NPL, which qualifies the sites to receive CERCLA remedial funding.

Review of the NPL list provided by EDR identifies no NPL sites within the approximate minimum search distance of one mile from the subject site.

RCRA – Generators

The U.S. EPA's RCRA (Resource Conservation and Recovery Act, 42 U.S.C. '6991 *et seq.*) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. Generators are also listed in the FINDS database.

Review of the RCRA LQ-Generator list provided by EDR identifies a total of 11 RCRA-LQG sites listed. There is one former RCRA-LQG facility shown on the adjoining property to the west and none on the subject property.

The above referenced RCRA LQ-Generator facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Review of the RCRA SQ-Generator list provided by EDR identifies a total of 71 RCRA-SQG sites listed. There is one RCRA-SQG former tenant facility shown on the subject site and there is one RCRA-SQG facility on adjoining properties.

The above referenced RCRA SQ-Generator facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

RCRA - Treatment, Storage, Disposal Facilities (TSD)

The Resource Conservation and Recovery Act Information System (RCRIS) is a compilation of selective information on facilities that generate, store, transport, treat or dispose of hazardous waste. Inclusion of a facility on the RCRIS database is not necessarily an indication of an environmental problem.

Review of the RCRIS-TSD list provided by EDR identifies no RCRIS-TSD sites within the approximate minimum search distance of one mile from the subject site.

Emergency Response Notification System (ERNS)

The ERNS is a compilation of reported releases of hazardous substances into the environment. The database contains information from Spill reports made to federal authorities, including the U.S. EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation.

Review of the ERNS list provided by EDR identifies a total of 10 ERNS sites listed. There are no ERNS facilities on the subject site.

The above referenced ERNS facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Underground Storage Tanks (USTs)

Certain USTs are regulated under the RCRA Act, and must be registered with the state agency responsible for administering the UST program. USTs are also listed in the CA FID database. Inclusion of a facility on the UST database is not necessarily an indication of an environmental problem.

Review of the current list provided by EDR identifies a total of 22 sites within a search radius of 1/4 mile. There are no facilities on the subject site and there is one former facility on adjoining property to the west. Leaking tanks are discussed in the following section.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Leaking Underground Storage Tanks (LUSTs)

LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state. LUSTs are also listed in the CORTESE database.

Review of the list provided by EDR identifies a total of 51 sites. There are 22 facilities within the ASTM standard minimum search distance of one-half mile from the subject site. Of the 51 sites, 45 are down gradient or cross gradient. The remaining six sites are closed cases, including the former LUST listing on the subject site. There are no LUST facility listings on the adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

The on site listing at Western Pulp and Paper, 9350 Hall Road, was a soil only gasoline case discovered during the removal of a 1000 gallon premium unleaded gasoline tank and a 15000 gallon diesel storage tanks in 1994. The case was closed August 20, 1996 and a closure letter from the California Regional Water Quality Control Board is appended.

Solid Waste Facilities/Landfills (SWF/LS)

Solid waste records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Section 2004 criteria for solid waste landfills or disposal sites.

Review of the list provided by EDR identifies a total of three sites within the ASTM standard

minimum search distance of one-half mile from the subject site. There are no facilities on the subject site and there are no facilities on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

EnviroStor

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Review of the list provided by EDR identifies a total of nine sites. There are five sites within the ASTM standard minimum search distance of one mile from the subject site. There are no facilities on the subject site and there are no facilities on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

DEED (Institutional Controls)

Site Mitigation and Brownfield's Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfield's Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed

restriction, or a land use restriction that binds current and future owners.

Review of the list provided by EDR identifies no sites within the approximate minimum search distance of one mile from the subject site.

California Hazardous Material Incident Reporting System (CHMIRS)

The California Office of Emergency Services database contains reported information on incidents involving accidental releases or spills of hazardous materials.

Review of the list provided by EDR identifies a total of five sites. There are no listed facilities on the subject site.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Hazardous Waste and Substances Sites List (CORTESE)

The Cal-EPA publishes a listing of potential and confirmed hazardous waste sites throughout the State of California. Under California Government Code Section 65962.5, these sites are submitted to the Cal-EPA by the State Department of Health Services, State Water Resources Control Board, the Integrated Waste Management Board and the Department of Toxic Substances Control.

The database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release, and all solid waste disposal facilities from which there is a known migration.

Review of the list provided by EDR identifies a total of 34 sites. There are 15 sites within the ASTM standard minimum search distance of one-half mile from the subject site. There are no facilities on the adjoining properties. The former LUST facility at 9350 Hall Road is also listed as a CORTESE site with no details.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

VCP (Voluntary Cleanup Program)

Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Review of the list provided by EDR identifies only one site down gradient and at a lower elevation. There are no facilities on the subject site.

The above referenced facility was evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Hazardous Waste Information System (HAZNET)

The California Department of Health Services, Toxic Substances Control Division, has developed and maintained lists of hazardous waste generators and hazardous waste treatment, storage and disposal facilities in the State of California, in accordance with the Hazardous Waste Control Law (California Health and Safety Code Section 25100 *et seq*.) And the Hazardous Waste Management Act of 1976 (California Health and Safety Code Section 25179.1 *et seq.*). Inclusion of a facility in the HAZNET list is not necessarily an indication of an environmental problem.

Additionally, the California Health and Safety Code requires all counties to prepare and submit hazardous waste management plans. To assist the counties, the Toxic Substances Control Division maintains lists containing hazardous waste generation and disposal data within each county. The Toxic Substances Control Division has assembled this information from manifest reports required from hazardous waste generators. This database currently lists over 20,000 facilities in the State of California.

Review of the list provided by EDR identifies a total of 148 sites. The 9300 Building and 9400 Building at the subject site appear on the list as having disposed of small amounts of hazardous wastes in the past.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Historic USTs

The Hazardous Substance Storage Container Database is a historical listing of former UST sites that are closed and typically not listed with the current UST sites.

Review of the list provided by EDR identifies a total of 65 sites. The SWEEPS list, which is no longer maintained, lists the 9350 Building facility on the subject site. There is one former demised facility listed on the adjoining property to the west.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Dry Cleaners

This database provides a list of drycleaner facilities that have EPA ID numbers. These facilities have certain SIC codes including: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; dry cleaning plants, except rugs; carpet and upholstery cleaning; industrial launderers and laundry and garment services.

Review of the list provided by EDR identifies a total of two sites. There are no facilities on the subject site and there are no facilities on adjoining properties.

The above referenced facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Waste Management Unit Database System (WMUDS/SWAT)

The California Integrated Waste Management Board maintains an inventory list of both open as well as closed and inactive solid waste disposal facilities and transfer stations in accordance with the Solid Waste Management and Resource Recovery Act of 1972, California Government Code Section 2.66790(b). Generally, the California Integrated Waste Management Board learns of locations of disposal facilities through permit applications and from local enforcement agencies. The Waste Management Unit Database System is used by the California Water Resources Control Board and the Regional Water Quality Control Boards for program tracking and inventory of waste management units.

Review of the latest WMUDS/SWAT listing identifies no WMUDS/SWAT facilities within the approximate minimum search distance of ½ mile from the subject site.

Manufactured Gas Plants (MGP)

Manufactured Gas Plants produced combustible gas for urban use prior to the widespread use

and pipeline distribution of natural gas in the 1950s. The main fuels used in production of this gas were coke, coal and oil; the by-products of this manufacturing process include a variety of tars, sludge and other chemicals.

MGP sites tend to have subsurface contamination due to the common practice of disposing of the waste products on site. Review of the MGP list provided by EDR identifies no MGP sites within the approximate minimum search distance of one mile from the subject site.

VII ASTM NON-SCOPE ITEMS

Asbestos

In 1977, the U.S. EPA acted to eliminate friable asbestos from building materials. Friable materials are defined as those that can be crushed or reduced to powder by hand pressure. Materials do not have to be damaged to be identified as friable. Additionally, the United States Occupational Safety and Health Administration (OSHA) now requires certain untested materials to be presumed to contain asbestos for buildings constructed prior to 1981.

During the site visit, AES observed reasonably accessible interior areas of the building for the existence and condition of suspect ACM. No building construction documents were provided for review. Asbestos can be identified only by specialized equipment and not by the unaided human eye. The site visit was not intended to be a comprehensive search for all ACM at the subject site.

Based on the construction date of 1951, and our observations, the present buildings are suspect for materials containing asbestos. The suspect materials include: spray acoustical ceiling materials, vinyl floor tiles, floor or roof mastic, drywall, insulation and transite materials. No sampling or analytical testing of ASTM Non-Scope items was completed. AES recommends the implementation of an asbestos operation and maintenance plan to manage the ACM.

Lead Based Paint

In 1978, the Consumer Product Safety Commission banned the use of lead as an additive in paint. During the site visit, accessible areas were observed for evidence of damaged and/or peeling paint. In general, the painted surfaces appeared to be in good condition. Based on the construction date of 1951, and our on-site observations the present buildings are suspect for containing lead based paint. As the improvements are used for non-residential purposes, the presence of lead based paint is considered to be a de minimis environmental condition.

Potable Water Supply

The subject site is serviced by a municipally operated, public water system, which is regulated by the Safe Drinking Water Act of 1974. This Act requires that public water supplies be tested for the presence of lead in water. AES contacted the local water utility company, the City of Downey, regarding the results of water tests. The utility company reports that the lead content of the water is below the U.S. EPA action level of 0.015 milligrams per liter.

Radon Gas

Radon gas is a naturally occurring, colorless, odorless gas that is the by-product of the decay of radioactive materials found within bedrock and soil. Radon gas enters buildings through

cracks, structural joints, and plumbing openings in floor levels that are in direct contact with the soil. Radon gas, when inhaled, has been found to be carcinogenic in some humans. The U.S. EPA recommended action level for radon gas is 4.0 pCi/L (picoCuries per liter).

The State of California, in conjunction with the U.S. EPA, has conducted residential screening tests in Los Angeles County. The results of that screening indicate that Los Angeles County is predicted to have an average indoor radon screening level of 0.711 pCi/L, with 100% of tests less than 4.0 pCi/L.

AES reviewed the U.S. EPA's Map of Radon Zones for California, which identifies Los Angeles County as being within Radon Zone 2. Counties within Radon Zone 2 have a predicted average indoor radon gas screening level of between 2 and 4 pCi/L.

Based on the literature reviewed, it is our opinion that the risk of radon gas accumulation is not a significant environmental concern at the subject site.

No sampling or analytical testing of ASTM Non-Scope items was completed

Wetlands

AES did not observe ponded water, flowing water, saturated soils or hydrophytic vegetation at the subject site.

Mold

AES observed portions of the exposed exterior and interior material surfaces of the improvements for signs of mold and/or mildew and none was observed. Based on the condition of these surfaces, the general quality of the exterior details to keep moisture out of the building and the general interior air quality observed in the improvements without the assistance of specialized testing equipment, mold and/or mildew were not an environmental concern to the subject property at the time of our site visit.

Please note that AES did not perform any probes behind surface materials, use moisture meters to test materials or use specialized equipment to test air quality for signs of existing mold and/or mildew. If further confirmation is required for determining if mold and/or mildew is present in the subject improvements AES recommends that a qualified Industrial Hygienist be retained to perform the necessary industry standard tests and provide a report of their findings.

VIII CONCLUSIONS

Findings and Opinion

AES completed a Phase I ESA for the site in substantial conformance with the scope and limitations of the Standard. Any exceptions to, or deletions from, the Standard are described in the Assessment.

Historical Recognized Environmental Conditions (HRECs)

Based on site observations, interviews and review of available documents and the database records search, AES concludes that several HRECs were identified at the subject site. The HRECs include the historic UST at the site, the 1994 LUST incident (now closed) and historic site use (manufacturing facility). AES recommends no additional investigation at this time.

Current Recognized Environmental Conditions (RECs)

Based on site observations, interviews and review of available documents and the database records search, AES concludes that one REC was identified at the subject site. Based on the building age, asbestos is suspected at the site. These materials can be managed in place using an asbestos operation and maintenance plan. AES recommends no additional investigation at this time.

de minimis Conditions

Based on site observations, interviews and review of available documents and the database records search, AES concludes that one *de minimis* condition was identified at the subject site. Based on the age of the buildings, lead based paint is suspected at the site. AES recommends no additional investigation at this time.

Conclusions

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations ASTM Practice E 1527-05 of 9300, 9350, 9400 Hall Road and 9301 Stewart and Gray Road, the *property*. Any exceptions to or deletions from, this practice are described in Section II of this *report.* This assessment has revealed no evidence of *recognized environmental conditions* with the *property* except for the following:

Based on age of the buildings, suspect asbestos containing may be present at the site.

X QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Richard E. Darwicki -Mr. Darwicki has over ten years of experience related to environmental assessments and over 30 years experience related to engineering matters. He has completed numerous Phase I Environmental Site Assessments throughout the United States. He is a Licensed Engineer in the State of California and attended Santa Ana College and Fullerton College.

Timothy K. Dahlstrand - Mr. Dahlstrand has over twenty-five years of experience related to environmental and engineering matters. He has completed and supervised hundreds of Phase I Environmental Site Assessments throughout the United States and internationally. He is a Registered Professional Engineer and Professional Geologist and holds a B.A. in Geology and an M.S. in Civil Engineering from Northwestern University.

Environmental Site Assessment Questionnaire

To be completed by a "key site manager" or someone knowledgeable about the subject site.

Site Name: Downey Industrial Center
Site Address: 9300, 9350, 9400 Hall Road/9301, 9363, 9399 Stewart & Gray Road
Date Provided: 11/14/2016

The following Environmental Questionnaire must be completed in its entirety. Do not leave any question unanswered. If a question is not applicable to the site, answer NA.

General Facility Information

Key Personnel

Position	Name	Telephone Number	Years at Site
Owner	Downey Industrial Center, LLC	(323) 727-1144	32
Building Manager	Heger Industrial/Randy Scott	(323) 727-1144	4
Other			

In the following tables describe the physical property, on-site services provided and tenants. Please include a map showing the subject site location and physical location of on-site facilities. Use additional sheets as required.

Property area: 1,270,216 sq. ft. Acres: 29.16

Building Description (for each building)

Address/Number	Age	Square Footage	No. of Floors	Elevator	Number of Tenants
9300 Hall Road 9301 Stewart & Gray Road	65	274,465	2	No	2
9400 Hall Road 9399 Stewart & Gray Road	65	163,049	2	No	2

Environmental Site Assessment Questionnaire

Current Tenant List (attach extra sheets if required)

Tenant Name	Operation	Dates
Omniteam 9300 Hall Road	Manufacturing	1985-Present
Duray 9301 Stewart & Gray	Manufacturing	1985-Present
Western Pacific Pulp & Paper, 9402 Hall Rd.	Recycling	1983-Present
88 Logistics 9399 Stewart & Gray	Storage/Logistics	2011-Present
EJ Lauren LLC 9400 Hall Road	Manufacturing	2015-Present

Former Tenant List (attach extra sheets if required)

Tenant Name	Operation	Dates
Hudd Transportation	Shipping/Logistics	1984-2011

Environmental Site Assessment Questionnaire

Do any of the following specific conditions exist on the site? If yes, please describe the condition.

Site Specific Conditions

Type	Yes	No	If Yes, Describe Location and Identify
Landfill, Dump Area, Junkyard		X	
Surface Impoundment or Retention Ponds		X	
Asbestos Containing Materials		X	
Asbestos O&M Plan		X	
Polychlorinated Biphenyls (PCBs)		X	
Radon		X	
Lead-based Paint (LBP)		X	
Aboveground or Underground Storage Tank(s), including septic		X	
Dry Cleaning		X	
Container/Drum Storage Area(s)		X	
Surface Staining		X	
Wetlands		X	
Flood Zone or Areas Subject to Flooding		X	
Wells (on-site monitoring, water supply or injection)		X	
Incinerator or Open Burning		X	

Has any fire, demolition or construction activity been conducted during the current tenancy (ies)?

Yes No If yes, date and description:
X

Site History

Property purchase date (current owner): 1982

Building construction date: 1951 By:

Building remodeling and addition dates:

List the previous owner(s): Date:

Environmental Site Assessment Questionnaire

Has any environmental work or reporting been conducted at the subject site? Yes No
Type of activity? Phase I
Date: April 13, 2007 By: AES Due Diligence
Date: By:

Has any environmental work or reporting been conducted at neighboring properties? Yes No
Type of activity? Unknown
Date: Address:
Date: Address:

Was any demolition or construction activity required prior to the construction of the current improvements? Yes No
If yes, date and description:

Is there any past experience or operation of any underground or aboveground storage tanks on the subject site? December 1994 Yes No
If yes, please complete the following table:

UST/AST Information					
Material Stored	Size	Age	Leak Detection	Corrosion Protection	Overfill Protection
N/A					

Is there any past existence or operations of an emergency electrical generator and/or fire pump on the subject site? Yes No
Fuel Type?
Describe fuel storage and location:

Is there any past existence or operation of automotive fueling, servicing, repairing, painting or washing activities on the subject site? Yes No
Describe the operations and disposition of waste products:

Environmental Site Assessment Questionnaire

Is there any past existence or operation of hydraulically operated elevators, automobile hoists or truck dock levelers on the subject site? Yes No

Describe location: Unknown

Have any historic operations on the subject site involved the generation, manufacture, processing, transportation, treatment, storage or handling of any of the following:

Petroleum products (fuels, solvents, waste oils, etc.)	Yes	(No)
Asbestos	Yes	(No)
Lead-based Paint	Yes	(No)
Hazardous Materials	Yes	(No)
Biohazardous Materials	Yes	(No)
Polychlorinated Biphenyls (PCBs)	Yes	(No)
If yes, describe the operations:		

Solid/Hazardous Waste Generation and Disposal

Identify all waste materials that the existing facility generates in addition to general municipal waste (garbage). Please identify recycles, hazardous or special waste products including, but not limited to, paper, cardboard, grease, solvents, waste oil, dry-cleaning solvents, medical wastes, photographic and x-ray development chemicals, lead-acid storage batteries, metals, tires, etc.

Waste Generation and Disposal

Waste Category	Description of Waste	Method of Storage	When Removed	Disposal Contractor
General				
Construction Debris				
Recyclable*				
Dry Cleaning*				
Other Hazardous*				
Waste Oil*				
Solvents*				
Other*				

None to Owners Knowledge

***Provide a copy of the most recent waste disposal records.**

Are any former tenants generators of hazardous waste? Yes (No)

If yes, describe the waste and their operation:

Environmental Site Assessment Questionnaire

Does the current owner or operator (or previous owner/operator) perform the following activities?

Discharge wastewater (including storm water, process and nonprocess water or sanitary waste?	Yes	No
Identify what is released and quantities:		
Store solid waste?	Yes	No
Store hazardous waste?	Yes	No
Waste water treatment?	Yes	No
Waste disposal operations?	Yes	No

Chemical and Material Storage

Chemical and Material Storage

Material/Chemical	Yes	No	MSDS	Quantity Stored	Description and Supplier
Flammable Material					
Gasoline and Fuel					
Dry Cleaning Solvent					
Hydraulic Oil					
Waste Oil					
Automotive Oil					
Grease					
Paints					
Solvents					
Corrosives					

Notification and Compliance

Has the owner of the property taken any of the following actions relative to the subject site?

Prepared a Chemical Safety Contingency Plan?	Yes	No
Filed an Emergency and Hazardous Chemical Inventory Form pursuant to the Federal Emergency Planning and Community Right-to-Know Act of 1986.	Yes	No
Filed a Toxic Chemical Release Form pursuant to the Federal Emergency Planning and Community Right-to-Know Act of 1986.	Yes	No
Maintained Material Safety Data Sheets (MSDS) on site.	Yes	No
Prepared a Spill Prevention Control and Countermeasure (SPCC) plan?	Yes	No
Conducted leak testing of storage tank piping and piping systems?	Yes	No

Please include copies of the above documents with the Questionnaire

Has the owner or operator of any facility on the subject site or the subject site itself been the subject of any of the following state or federal government actions?

Written notification regarding known, suspected or alleged contamination on or emanating from the subject site?	Yes	(No)
Environmental enforcement case or lawsuit.	Yes	(No)
Environmental Notice of Violation for any activities.	Yes	(No)
Names as Potentially Responsible Party (PRP) or Responsible Party in any environmental action.	Yes	(No)

If yes to any of the above, include documentation of the action and its resolution.

Environmental Releases during Ownership

Has any situation occurred at this site or neighboring sites that resulted in a reportable "release" of any hazardous substances or petroleum as required under state of federal laws. Yes (No)

If yes, please describe:

Have any hazardous substances or petroleum come into direct contact with the ground, ground water or surface water at this site? Yes (No)

If yes, please describe:

If the answers to questions above are "Yes", have any of the following actions or events been associated with a release on the subject site or neighboring sites? Yes (No)

Use of a cleanup contractor to remove or treat materials including soils, pavement or other surficial materials.	Yes	No
Designation, by State or Federal EPA of release as "significant".	Yes	No
Sampling and analysis of soils, ground or surface water.	Yes	No
Temporary or more long-term monitoring of ground water at or near the site.	Yes	No
Impaired usage of an on-site or nearby water well because of offensive characteristics of the water.	Yes	No
Coping with fumes from subsurface storm drains, sumps or basements, etc.	Yes	No
Signs of unusual stains, damaged vegetation or substances leaching out of the ground along the base of slopes or at other low points on or immediately adjacent to the site.	Yes	No
Is the facility currently operating under an environmental variance granted by a state or federal regulatory agency?	Yes	No
Do you have any environmental concerns regarding the past or current use of the subject or adjoining sites?	Yes	No

If yes, describe:

Utilities

Utility	Supplier
Electric Company	Southern California Edison
Natural Gas	Southern California Gas
Domestic Water	City of Downey
Irrigation Water	City of Downey
Sewer	City of Downey
Trash	N/A Private

Environmental Site Assessment Questionnaire Addendum:

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

(1.) **Regarding environmental cleanup liens that are filed or recorded against the site**, are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

☑ No
☐ Yes

(2.) **Regarding activity and land use limitations that are in place on the site or that have been filed recorded in a registry**, are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

☑ No
☐ Yes

(3.) **As the user of this ESA do you have any specialized knowledge or experience related to the property nearby properties?** For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☑ No
☐ Yes

(4.) **Regarding the relationship of the purchase price to the fair market value of the property if it were not contaminated,** does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

N/A
☐ No
☐ Yes

(5.) **Regarding commonly known or reasonably ascertainable information about the property,** are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

☑ No
☐ Yes

For example, as user,

(a.) Do you know the past uses of the property?

(b.) Do you know of specific chemicals that are present or once were present at the property?

(c.) Do you know of spills or other chemical releases that have taken place at the property?

(d.) Do you know of any environmental cleanups that have taken place at the property?

(6.) **Regarding the degree of obviousness of the presence of likely presence or contamination at the property, and the ability to detect the contamination by appropriate investigation,** as the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

☑ No
☐ Yes

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE PERMIT(S) NO. 1065B
FACILITY AT: 9300 E. HALL RD., DOWNEY

This office has reviewed the soil sample/groundwater laboratory report submitted on FEBRUARY 18, 1986 required as part of the subject closure procedure.

We find that based on the information submitted, no further subsurface investigation is necessary. The storage tanks listed within the subject permit(s) are considered closed upon disposal of excavated soil (if applicable) as indicated below:

[ ] The use of soils removed during excavation is unrestricted and may be disposed of at an unclassified disposal facility.

[ ] Soils are not suitable as fill material and must be manifested and transported to a hazardous waste disposal facility permitted by the State Department of Health Services (DOHS) unless evidence is presented indicating DOHS has determined that the material may be disposed of at a less restricted facility. Copies of completed manifests shall be submitted to this office indicating legal disposal.

If you have any questions concerning these requirements please contact MIKE DZUBNAR at (213) 226-4015.

Very truly yours,

T.A. TIDEMANSON

Subject: Information Relevant to obtaining a permit from Los Angeles County Department of Public Works Industrial Waste.

Gentlemen:

To obtain the necessary permit(s) from the Los Angeles County Department of public works regarding the Aerojet leased facility at 9300 East Hall Road Downey, CA, we apprise you as follows:

1.0 OCCUPANCY

1973-1983 Bowman Industries, an Electronic Inporter of Automotive Stereo Equipment.

1971-1973 Building was Vacant

Prior 1971 Aerojet, a Manufacturer of Aerospace Metal casement parts. (Machining Operations)

2.0 HISTORY

2.1 Regretably, there are no records available germane to Processing fluids and fluid disposal from any of the tenants, however, discussions with the Landlord and a few remaining Senior Employees revealed that no toxic solutions were used in the Manufacturing Processes by any of the Tenant, and further that the last Tenant, Bowman Industries did not use the tanks or sumps at all.

2.2 Basically, the Occupants prior to Bowman Industries were Aerojet and Rheem Manufacturing Company, both of which were engaged in Aerospace Machining Operations. The Machining Operations presumably, required the use of cutting oils and De-Greasing fluids which are of the Standard Non-Toxic variety used for many years without change.

3.0 OBSERVATIONS

From outward appearances and inspections, by Aerojet's Safety and Industrial Engineering personnel, the conclusions are that there is no evidence of the use of toxic or hazardous chemicals by previous tenants of the facility. The building is considered totally safe and hazard free for renovations and occupancy by Aerojet Ordnance Company.

In the event you require more elaboration or perhaps have other suggestions, please call us at your earliest opportunity.

Regards

Aerojet Ordnance Company

Subject: Test Borings, Areo Jet, Downey

Gentlemen:

On January 29, 1986 and Febraury 6, 1986, five test borings were drilled adjacent to the sumps as per plot plan. The resultant chemcial analysis from the samples reveal no contamination. The results from sample #26861 reflect the presence of asphalt particles contained in the fill material logged.

Thank you.

ATTENTION: Mr. Donald Chance

We have performed total hydrocarbon analyses on five (5) samples submitted by your company on February 6, 1986. The results are tabulated below:

Sample No.	Total Hydrocarbons (ppm) *
26861	333.0
26862	15.8
26863	1.5
26864	18.4
26865	15.5

* Detection limits < 0.5 ppm

The method employed is EPA 418.1 for total petroleum hydrocarbons by IR.

Attention: Mr. Richard Schroeder

Dear Mr. Schroeder:

Smith-Emery Company recommended testing the contents of the underground storage facilities (tank, pits, sumps and clarifiers) at the Boman property based on two factors:

The type of contamination normally expected in a machine shop operation

The analyses required for California disposal sites.

The analyses included tests for heavy metals, pH, oil and grease and flash point.

Please contact me if there are any questions concerning this analysis.

Sincerely,

Jack Carmody

UNDERGROUND STORAGE TANK CASE CLOSURE
WSTERN PACIFIC PULP & PAPER
9350 HALL ROAD, DOWNEY (I-13583)

Dear Mr. Wunderlich,

This letter confirms the completion of the site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location.

Based on the available information and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground storage tank release is required.

This notice is issued pursuant to a regulation contained in Title 23, California Code of Regulations, Division 3, Chapter 16, Section 2721(e).

Please contact our office if you have any questions regarding this matter.

Sincerely,

ROBERT P. GHIRELLI, D. Env.
Executive Officer

DAVID G. DEANER
Acting Assistant Executive Officer
Underground Tanks Section

HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT (HMUSP) REQUEST
FACILITY AT: 9350 HALL ROAD

This office is unable to process your Provisional HMUSP because of deficiencies or omissions in your application. You are required to submit to this office the requirement(s) checked below within 15 days from the date of this letter.

[ ] Complete Permit Application Supplement (Provisional).
[ ] Submit permit fee and/or State surcharge.

[x] Complete a separate Application for Permit to Operate Underground Storage Tank form for each tank.
[ ] Provide verification of present safe storage of each tank. Verification consists of either: (1) results of a recent tank integrity test; (2) records from an inventory control program; or, (3) the owner's signed statement indicating that to the best of the owner's knowledge no unauthorized releases have occurred at the facility and that tank integrity tests will be performed within 90 days of the date of the application.
[ ] Other: _____

Submittal of proposals for Leak Detection/Monitoring programs is not a necessary requirement for issuance of a Provisional HMUSP. However, applicants are advised that acceptable Leak Detection/Monitoring programs must be submitted and implemented within six months from issuance of the Provisional HMUSP.

If you require additional information concerning the Provisional HMUSP, please contact Mr. Martin Moreno at (213) 226-5930.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

Dear Mr. Omafray:

We are in receipt of your March 16th letter regarding Notice of Non-Compliance Hazardous Materials Underground Storage Permit (HMUSP) facility at 9350 Hall Road.

Enclosed is a copy of Mr. Martin Moreno's notice of December 29, 1987 and our response to same. This notice did not require tank integrity tests; however, we did complete the tests in January of 1989, as required by Mr. John Huff's notice of December 14, 1988.

We also completed the required Form A, Form B and sent copies of the Tank Integrity Tests on December 4, 1989, (Copies Enclosed).

We obtained proposals for the LDP and TMP per enclosed copy, but due to the costs involved, have been monitoring the tank levels daily.

We will complete the new Form A and B as required by your April 6, 1992 deadline, but would require an extension to complete the LDP/TMP Installation if the type in the proposal is of minimum requirement.

Please contact me at (310) 803-4401 if the enclosed information is not as you require.

Sincerely,

Jack Wunderlich
Vice President/Administration

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit No.: 112143 B
File No. I- 13583

PART 1 OF 2

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
2A, 2B, 2C, 1A & 1B	2'-4' below tank	TPH, BTEX	8015(M), 8020
under disp.	2' below	"	"
under piping @ 20' intervals start @ disp.	2' below	"	"

Facility INformation Detail (FIND)

NOV/NC Details

Notice Number	C68442	Violation Date	12/14/2000	Issue Date	5/30/2001	Notice Type	NC

Facility ID	4020
Company Name	DURAY INC
Address	9301 STEWART & GRAY DOWNEY, CA 90241
Violation Description	APPLY FOR PERMIT TO OPERATE FOR PLASMA ARC CUTTERS.
Equipment Description	
Status	In Compliance
Re-inspection Date	5/30/2001

Rule No.	Rule Description
203	Permit to Operate

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

PERMIT to OPERATE

9150 FLAIR DRIVE, EL MONTE, CALIFORNIA 91731

M 26176

Operation under this permit must be conducted in compliance with all information included with the initial application and the initial permit conditions. The equipment must be properly maintained and kept in good operating condition at all times. In accordance with Rule 206, this Permit to Operate or copy must be posted on or within 8 meters of equipment.

LEGAL OWNER OR OPERATOR: DURAY, INC.
9301 STEWART & GRAY RD.
EQUIPMENT LOCATED AT: DOWNEY, CALIFORNIA

APPL. NO. C-34833

EQUIPMENT DESCRIPTION AND CONDITIONS:

CUTTING TORCH, PLASMA-ARC TYPE, THERMAL ARC, MODEL NO. 647-C, 30 KW ELECTRICALLY POWERED.

-CONDITION-

THIS EQUIPMENT MUST NOT BE OPERATED UNLESS IT IS VENTED ONLY TO AIR POLLUTION CONTROL EQUIPMENT WHICH IS IN FULL USE AND WHICH HAS BEEN ISSUED AN OPERATING PERMIT BY THE EXECUTIVE OFFICER.

This initial permit must be renewed by 7/01/83 unless the equipment is moved, or changes ownership. If billing for annual renewal fee (Rule 301.f) not received by expiration date, contact office above

This permit does not authorize the emission of air contaminants in excess of those allowed by Division 26 of the Health and Safety Code of the State of California or the Rules of the Air Quality Management District. This permit cannot be considered as permission to violate existing laws, ordinances, regulations or statutes of other government agencies.

PERMIT TO OPERATE

Permit No.
D82595
A/N 292258

This initial permit shall be renewed by 7/01 ANNUALLY unless the equipment is moved, or changes ownership. If the billing for annual renewal fee (Rule 301 f) is not received by the expiration date, contact the District.

Legal Owner Or Operator: **ID 101380**
U.S. ORDNANCE COMPANY, OLIN ORDNANCE DBA
ATTN: DODWELL DE SILVA
9236 E. HALL ROAD
DOWNEY, CALIFORNIA 90241

Equipment located at: SAME AS ABOVE

Equipment Description:

DEGREASER SYSTEM CONSISTING OF:

1. DEGREASER, DETREX, CONVEYORIZED VAPOR, MODEL NO. RV218-40-150, SERIAL NO. 68706-A, 4'-0" L. X 1'-5" W. X 3'-4" H., 2,800,000 BTU/HR GAS HEATED.

2. SOLVENT STILL, DETREX, MODEL NO. SF-60-HW, SERIAL NO. 68706-C, 2'-9" L., X 2'-3" W., (INSIDE DIMENSIONS), 4'-5" H., GAS HEATED, WITH A 1/2 H.P. TRANSFER PUMP.

3. SOLVENT MAKE-UP TANK, 3'-0" W. X 4'-3" L. X 2'-0" H., 190 GALLON CAPACITY.

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. THE TOTAL QUANTITY OF SOLVENT LOSS FROM THIS EQUIPMENT (NOT INCLUDING SALVAGED SOLVENT) SHALL NOT EXCEED 10 GALLONS(S) PER DAY.

4. THE TOTAL QUANTITY OF SOLVENT LOSS FROM THIS EQUIPMENT (NOT INCLUDING SALVAGED SOLVENT) SHALL NOT EXCEED 180 GALLONS(S) PER MONTH.

5. ONLY 1,1,1-TRICHLOROETHANE MAY BE USED AS THE CLEANING SOLVENT IN THIS EQUIPMENT.

6. ORGANIC SOLVENTS USED IN THIS EQUIPMENT SHALL BE CLEARLY LABELED AS NON-PHOTOCHEMICALLY REACTIVE BY THE SUPPLIER OR, FOR BULK SHIPMENTS, SHOWN TO BE NON-PHOTOCHEMICALLY REACTIVE ON BILLS OF LADING OR INVOICES.

FILE COPY

CONTINUATION OF PERMIT TO OPERATE

7. RECORDS SHALL BE MAINTAINED TO PROVE COMPLIANCE WITH DISTRICT RULES, REGULATIONS AND CONDITIONS. THESE RECORDS SHALL BE KEPT IN A FORMAT APPROVED BY THE DISTRICT. THE RECORDS SHALL BE MAINTAINED FOR AT LEAST TWO YEARS, AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

DOWNEY, CA 90241

Inquiry Number:
January 17, 2017

EDR Site Report™

6 Armstrong Road, 4th floor
Shelton, CT 06484
Toll Free: 800.352.0050
www.edrnet.com

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary . . . . . Page 3

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports . . . . . Page 4

All available detailed information from databases where sites are identified.

Section 3: Databases and Update Information. . . . . Page 6

Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SECTION 1: FACILITY SUMMARY

FACILITY AREA	FACILITY 1 **MAERSK DOWNEY** 9400 HALL RD DOWNEY, CA 90241 EDR ID #S113141077
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility is a FUSRAP Site	NO
Facility is a UXO Site	NO
Facility is a FUELS Site	NO
Facility is an DockHWC/ECHO Site	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (SEMS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in other database records (OTHER)	**YES - p4**
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO

SECTION 3: DATABASES AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

DATABASES FOUND IN THIS REPORT

CA HAZNET: Facility and Manifest Data
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2015
Database Release Frequency: Annually

Date of Last EDR Contact: 01/09/2017
Date of Next Scheduled Update: 04/24/2017

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SECTION 3: DATABASES AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

DATABASES FOUND IN THIS REPORT

FINDS: Facility Index System/Facility Registry System
Source: EPA
Telephone: Not reported
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/15/2016
Database Release Frequency: Quarterly
Date of Last EDR Contact: 12/06/2016
Date of Next Scheduled Update: 03/20/2017

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
Source: Environmental Protection Agency
Telephone: 703-308-8895
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 09/12/2016
Database Release Frequency: Varies
Date of Last EDR Contact: 12/28/2016
Date of Next Scheduled Update: 04/10/2017

ECHO: Enforcement & Compliance History Information
Source: Environmental Protection Agency
Telephone: 202-564-2280
ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.

Date of Government Version: 09/18/2016
Database Release Frequency: Quarterly
Date of Last EDR Contact: 12/20/2016
Date of Next Scheduled Update: 04/03/2017

CA HAZNET: Facility and Manifest Data
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2015
Database Release Frequency: Annually
Date of Last EDR Contact: 01/09/2017
Date of Next Scheduled Update: 04/24/2017

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/21/2016 has revealed that there are 20 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/21/2016 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/01/2016 has revealed that there are 15 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 3 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 20 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/21/2016 has revealed that

there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 09/19/2016 has revealed that there is 1 Notify 65 site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Description:	Caller states they had a minor ammonia leak in the engine room of their facility due to unknown causes. Currently, Downey Fire Dept is on scene and is working with the responsible party to contain the leak. Four fleet mechanics that discovered the leak evacuated the area to report the ammonia release.

Site History:	The former Astro Pak facility is located at 8700-8706 Cleta Street in Downey, California. The property occupies two rectangular parcels that are together approximately 180 feet by 280 feet. Cleta Street borders the site on the north, commercial/industrial properties border the site on the east and west, and residential properties border the site on the south. The facility was used for conducting high-precision industrial components cleaning operations. A vapor degreaser was used during early operations at the site with solvents mainly perchloroethylene (PCE) and trichloroethene (TCE). Site investigations conducted at the site since 1991 indicated that the soil and groundwater beneath the site were impacted with volatile

ASTRO PAK CORP. (Continued) **S105520951**

organic compounds (VOCs), mainly PCE and TCE. Various remedial measures have been implemented athe site to remediate the impacted soil and groundwater. In the former degreaser area, approximately 520 tons of soil was removed from an approximate 15-foot by 18-foot area to depths of 25 to 45 feet below ground surface (bgs) by large-diameter bucket auger from December 2002 to January 2003. In the former staging area, approximately 280 tons of shallow soil was removed from an approximate 23-foot by 35-foot area to a depth of 6 feet bgs by excavator in July 2003. From July 2003 through June 2013, a soil vapor extraction (SVE) system operated at the site and removed approximately 26,400 pounds of VOCs from the impacted soil. In November 2004, potassium and sodium permanganate was injected onsite and offsite for groundwater remediation. The injection of ozone gas between July 2008 and July 2010 was applied as a follow-up application of in]situ chemical oxidation (ISCO) for groundwater remediation at and downgradient of the site. Semi-annual groundwater monitoring is being conducted at the site.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Description:	The property is actually a concrete building of approximately 1,150 sq. ft. of floor area. The site is located in the City of Downey, Los Angeles County, California. The site is an old, unsuitable building that is no longer required for use by the National Aeronautic and Space Administration/Rockwell International.
Current Program:	Not reported
History:	Building No. 125 was constructed of reinforced concrete (12 in. thick roof and walls) in 1941. Its original use was a bomb shelter constructed during World War II by the U.S. Army Air Corps. During 1940 and 1941, the Air Force acquired the property by direct purchase. It was later used as a hazardous materials testing laboratory. It has now been abandoned in place. The General Services Administration concurred with NASA plans to demolish the building in accordance with federal property management regulations. Air Force Plant #16 was transferred to NASA in July of 1964. The facility was renamed NASA Industrial Plant, Downey, California. At this time NASA assumed status as the holding agency. Since 9 August 1972 RI was contracted to be custodian of building #125 and other property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WDS:
Facility ID: 4 19I003691
Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 4
Facility Telephone: 3237734949
Facility Contact: Michael Voelz
Agency Name: MANUFACTURERS WIRE COMPANY
Agency Address: Not reported
Agency City,St,Zip: 0
Agency Contact: Not reported
Agency Telephone: Not reported
Agency Type: Private
SIC Code: 3315
SIC Code 2: Not reported
Primary Waste Type: Not reported
Primary Waste: Not reported
Waste Type2: Not reported
Waste2: Not reported
Primary Waste Type: Not reported
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern: Not reported
Site History: The former NASA Industrial Plant (site) occupies approximately 155 acres in Downey, California, and is bound to the north by Stewart and Gray Road, to the south by Imperial Highway, to the west by Lakewood Boulevard and to the east by Bellflower Boulevard. The site was used for aircraft, and later, aerospace manufacturing by a series of entities from 1929 through 1999. The site was government owned and contractor operated. NASA utilized the plant for manufacture of Apollo and Space Shuttle components. Site activities included the use and storage of chlorinated solvents in support of various manufacturing processes. In 1986 the government declared the property excess to its needs and site manufacturing operations ceased at the site. During the fourth quarter of 2003, the property was transferred from NASA to the City of Downey, California. Following early transfer

NASA INDUSTRIAL PLANT- KAISER (Continued) **S104564877**

from NASA to the City of Downey, the various portions of the property were redeveloped. International Risk Assumption-Downey LLC assumed the role of responsible party as part of the early transfer arrangements between NASA, the State of California, and the City of Downey. Site assessments conducted at the site indicated that the soil and groundwater were impacted with volatile organic compounds (VOCs) mainly perchloroethylene (PCE), trichloroethene (TCE) and Freon 113. A soil vapor extraction (SVE) system was installed and operated at various locations of the site from 2000 to 2008 to cleanup the soil. During the period of operation, the system removed approximately 6,000 pounds of VOCs. Sodium permanganate solution was injected into a silt layer at the 40 to 45 feet bgs interval below former Building 244 for in situ remediation to cleanup the residual VOCs in the silt layer of the vadose zone. In February 2012, the Regional Board issued a No Further Action (NFA) for site soils. Groundwater beneath the site has been subjected to in situ bioremediation using Enhanced Reductive Dechlorination (ERD) to address the dissolved phase PCE and TCE as well as the subsequent breakdown products from the remedial activities. The ERD process involved the injection of approximately 14,000,000 gallons of dilute carbohydrate solution at 174 points across the site beginning in November 2005. In October 2010, a de-halogenating bacteria was added to the solution injected in the southernmost site locations to enhance the remediation of VOCs at this location. Active injections of carbohydrate solution were stopped after first quarter 2012. Post-remediation groundwater monitoring is being conducted at the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 09/20/2016

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

West Map:	5633765 SOUTH GATE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

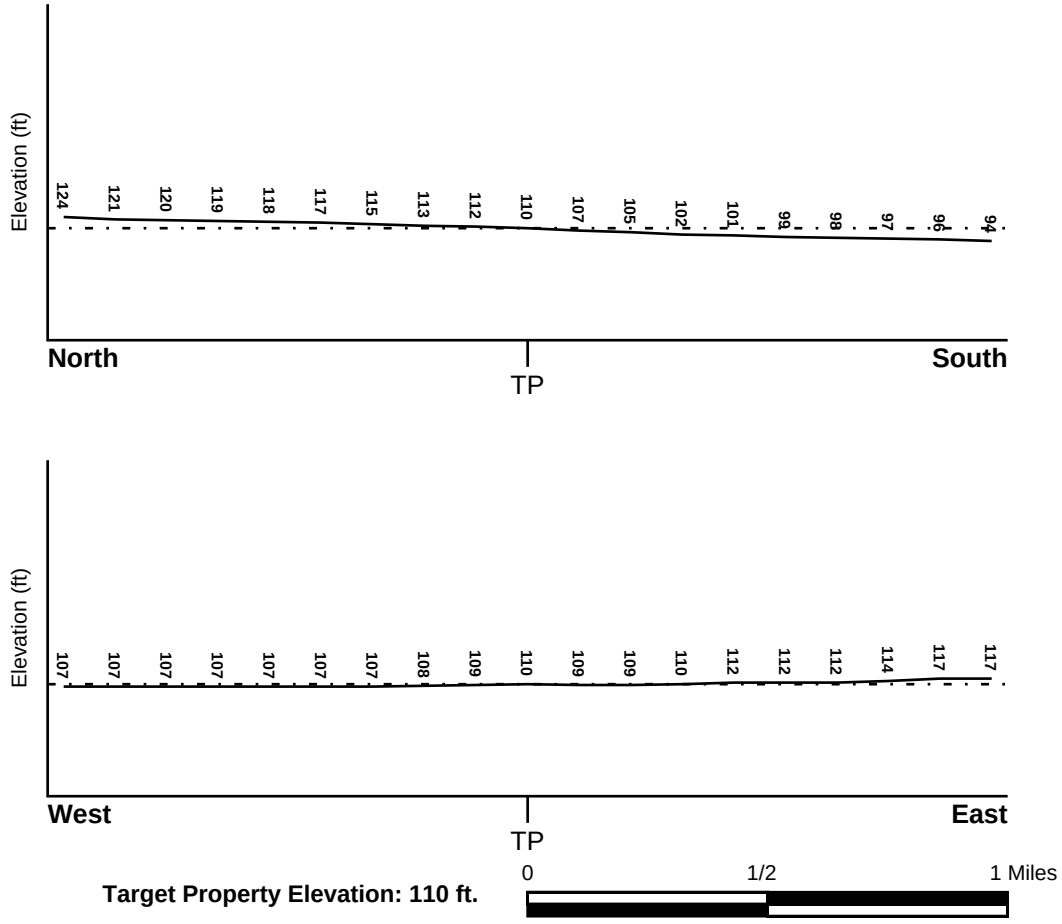
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1840F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1810F	FEMA FIRM Flood data
06037C1830F	FEMA FIRM Flood data
06037C1820F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
WHITTIER	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

OSHA 40-Hour Health and Safety Training for Hazardous Waste Workers
OSHA 8-Hour Hazardous Waste Supervisor Training
8-Hour Annual Refresher Training for Hazardous Waste Site Activities
First-Aid and CPR Training
Leadership Skills to Enhance Client Service

Professional Affiliations

Professional Environmental Marketing Association (PEMA), Member (2011 to Present)
Association for Environmental Health of Soils, Member (2015 to Present)
National Ground Water Association (NGWA), Member (2012)

Professional Experience

Since joining SCS in 2001, Ms. Hutchens has participated in hundreds of site assessment projects related to the investigation and remediation of hazardous chemicals in soils and groundwater. She has a diverse background in environmental sciences, including technical skills related to the collection of soil samples, knowledge of soil classifications and properties, data collection, and analysis and interpretation. As a Project Manager, her work experience includes all project phases, from the development of cost estimates for various site assessment and cleanup programs, to groundwater monitoring and sampling, the preparation of final reports, interfacing with regulatory agencies, and management of all aspects of projects and various subcontractors.

Selected project activities include:

- Involvement with numerous Phase I Environmental Site Assessments (ESAs) completed in accordance with various lender, American Society for Testing and Materials (ASTM), or government guidelines. Activities consisted of evaluating current and past on-site operations, generating historical property use information, identifying potentially contaminated sites in the surrounding areas, reviewing previous reports and/or files maintained by regulatory agencies, and developing conclusions regarding the presence of Recognized Environmental Conditions (RECs) and recommendations for further investigation.

- Involvement with numerous investigations of known or suspected hazardous waste sites to identify and characterize chemicals of concern in soil, soil vapor, and groundwater in accordance with regulatory requirements. Contaminants include a variety of hydrocarbon products, solvents, heavy metals, polychlorinated biphenyls, and pesticides. Activities included preparation of workplans, conduct of soil gas surveys, installation of soil borings and subsequent sampling, and evaluation of applicable remedial alternatives.

- Groundwater well installation and monitoring. Projects involved collection of soil and groundwater samples, installation and development of groundwater wells, evaluation of subsurface contaminants in groundwater in accordance with regulatory requirements or generally accepted guidelines, and evaluation of groundwater remediation alternatives.

- Involvement with numerous soil gas surveys to assess the presence, nature, and extent of volatile organic compounds (VOCs) and/or methane related to contaminated soils, groundwater, and/or landfills. Elements of these projects included assessments of vapor intrusion, protection of structures from subsurface gases, monitoring of indoor air, and health risk assessments (HRAs).

- Numerous projects related to the removal, investigation, and remediation of contamination leaking from underground storage tanks (USTs). In accordance with requirements of the various regulatory agencies throughout Southern California, these UST projects have included soil, soil gas, and groundwater contamination, and such tasks as evaluation of site and regional hydrogeologic conditions; development of workplans and health and safety plans; coordination and completion of tank removals; design of investigative programs; review and selection of potential remedial alternatives; and preparation of summary reports of findings.

- Oversight of projects involving installation of landfill gas mitigation systems and monitoring wells, including lithologic logging and design quality assurance (QA) at numerous landfills across Southern California.

- Characterization of hazardous waste materials, including collection of soil and/or liquid samples to profile waste materials, interpretation of laboratory results, and evaluation of disposal/recycling options to minimize costs and liabilities to clients associated with the removal of wastes.

- Planning, coordination, and supervision of remedial actions that included excavation, transport, and disposal of contaminated soils. Work has included preparation of Remedial Action Plans (RAPs), direction of confirmatory sampling, and interfacing with regulatory agencies.

Project Management

Assessment and Remediation of Numerous Former Dry Cleaning Facilities, Los Angeles and Orange Counties, CA. Investigations were completed at numerous active and former dry

cleaning facilities to assess the potential for releases of solvents. As Project Manager, Ms. Hutchens conducted various investigations that included soil vapor assessments, collection of bulk soil samples, groundwater well installation and monitoring, indoor air sampling, and evaluation of indoor air intrusion risks. Additional evaluations were completed to define the extent of the plume and obtain information to evaluate remedial alternatives. Implemented remedial measures included excavation, soil vapor extraction (SVE), monitored natural attenuation (MNA), in situ groundwater remediation, and risk management. One project included installation of an interim vapor intrusion control system (IVICS), which was installed to introduce sub-slab depressurization to reduce indoor air intrusion risks from a former dry cleaner release. The IVICS was installed on an immediate basis at the request of the client until further investigation could be conducted for design of a full-scale remediation system. Ms. Hutchens coordinated and permitted investigation and remediation efforts through the various regulatory oversight agencies.

Investigation and Remediation for Industrial Facility Redevelopment, Commerce, CA. SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify the environmental issues, and business risks to facilitate the client's successful purchase of property for redevelopment to a commercial warehouse and office. A number of RECs, including former and an existing unpermitted underground fuel storage tanks, were identified. As Project Manager, Ms. Hutchens managed activities conducted concurrently with the redevelopment of the property that included shallow and deep soil along with soil vapor investigations; installation of groundwater monitoring wells and subsequent groundwater sampling; permitting and removal of an existing UST; subsequent remedial excavation under the oversight of the Los Angeles County Fire Department (LACFD) to obtain closure; shallow excavation of the former UST area; installation of SVE and monitoring wells conducted concurrently with redevelopment of the property; SVE under Regional Water Quality Control Board (RWQCB) oversight; and requesting and receiving closure under the Low-Threat UST Case Closure Policy (LTCP) through the State Water Resources Control Board (SWRCB).

Retired Housing Foundation, Site Investigation and Remedial Activities, Los Angeles, CA. As follow-up to a Phase I ESA performed on the property, soil and soil vapor investigations were completed to assess the potential for releases of heavy metals and VOCs based on historical operations at the property. As Project Manager, Ms. Hutchens managed investigation activities that indicated elevated tetrachloroethylene (PCE) and lead in the subsurface exceeding regulatory guidelines. Remediation of the lead-impacted soils was conducted under LACFD oversight. An evaluation of the health risk from PCE in the subsurface was conducted and submitted to the LACFD. Site closure with respect to PCE and lead in the subsurface was approved by LACFD, facilitating the client's submittal for funding and the subsequent construction of the retirement housing development.

Due Diligence Investigations of Manufacturing Facility, Torrance, CA. SCS conducted a series of assessments, including a Phase I ESA, various Phase II investigations, and remedial activities that provided sufficient information to identify the environmental issues and business risks and to facilitate the client's successful sale of the property. A number of RECs, including former and existing underground fuel storage tanks, a machine shop, wastewater treatment sumps and a clarifier, chemical storage, and chlorinated solvent degreasing operations, were identified. As

Project Manager, Ms. Hutchens managed activities that included shallow and deep soil and soil vapor investigations, groundwater sampling, a geophysical survey and excavations to find an existing diesel UST previously closed in place, removal of the UST, remedial excavations under Torrance Fire Department oversight to obtain UST closure, a workplan submitted to the Los Angeles RWQCB, installation of an SVE system and monitoring wells, a long-term SVE pilot test, an SVE Pilot Test Report, and recommendations for further SVE.

City of El Monte, Environmental Investigations, Methane Monitoring, and Remedial Action, El Monte, CA. SCS conducted several phases of work for the redevelopment of property in El Monte, a portion of which overlies a former burn dump. SCS worked with the Department of Toxic Substances Control (DTSC) to obtain and implement an approved Remedial Action Workplan (RAW), which required a public comment period and California Environmental Quality Act (CEQA) review to allow redevelopment of the property for residential use. As Project Manager, Ms. Hutchens applied for a permit to excavate the former burn dump with the South Coast Air Quality Management District (SCAQMD) on behalf of the owner and developer of the site. With the permit in place, SCS provided oversight of excavation activities as development activities commenced. In addition, methane monitoring was conducted to monitor for the presence of methane as a result of the former dumping activities. Ms. Hutchens prepared a Remedial Action Completion Report (RACR) and worked with DTSC to get closure for portions of the property that will undergo development in the near future. Ms. Hutchens continues to work with the Lead Enforcement Agency (LEA) and the California Department of Resources Recycling and Recovery (CalRecycle) to provide long-term probe monitoring for the network, to observe the former dump area after the development is complete.

Environmental Property Evaluation, Whitewright, TX. As Project Manager, Ms. Hutchens conducted an evaluation of the blast pressure that may have resulted from an accidental explosion of ammonium nitrate stored at a facility near a proposed multi-family housing complex. The evaluation was conducted to determine if the proposed housing site would be affected by such an explosion. The evaluation included review of Housing and Urban Development (HUD) guidelines to meet separation distance standards and other state/local multifamily rules, ammonium nitrate explosion and trinitrotoluene (TNT) equivalent evaluation, and calculation of the blast zone radius.

Health and Safety

Ms. Hutchens has participated in a certified health and safety program in compliance with OSHA Standard 29 CFR 1910.120. She is knowledgeable in incident response operations, team functions, personnel safety, and field equipment. She is able to recognize and evaluate potential chemical and physical hazards associate risks in field operations; discuss and use Personal Protective Equipment (PPE), such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines (SOSG) to ensure safe and effective response operations.

KEVIN W. GREEN, PG

Education

BS – Marine Biology, California State University, Long Beach, 1978

Professional Licenses

Professional Geologist – California, 1994 (No. 5906)
Professional Geologist – Wyoming, 2009 (No. PG-3702)

Professional Affiliations

Groundwater Resources Association of California
Association for Environmental Health and Sciences

Professional Experience

Mr. Green has a background in geology and paleontology. Since joining SCS in 1987, he has participated in numerous projects related to the investigation and remediation of hazardous chemicals in soils and groundwater. As a Vice President and Project Director, he currently serves as the Environmental Services Leader for the Long Beach and Las Vegas offices. Selected project activities include:

- Mr. Green has been Project Manager for more than a thousand Phase I Environmental Site Assessments (ESAs). These projects were completed in accordance with various lenders, the American Society for Testing and Materials (ASTM), or government guidelines, and consisted of evaluating current on-site operations, generating historical property use information, identifying potentially contaminated sites in the surrounding areas, reviewing previous reports and/or files maintained by regulatory agencies, and developing conclusions and recommendations regarding the presence of Recognized Environmental Conditions and further investigation. Project sites have varied from private single-use parcels to hundreds of properties involving multiple tenants associated with state and local government right-of-way improvements.

- Mr. Green has conducted hundreds of investigations of known or suspected hazardous waste sites to identify and characterize chemicals of concern in soil, soil vapor, and groundwater in accordance with regulatory requirements. Contaminants include a variety of hydrocarbon products, solvents, heavy metals, polychlorinated biphenyls (PCBs), and pesticides. Regulatory oversight agencies include the US Environmental Protection Agency (EPA), Department of Toxic Substances Control (DTSC), and various Regional Water Quality Control Boards (RWQCBs), County Health or Fire Departments, and city Certified Unified Program Agencies (CUPAs).

- Mr. Green has been Project Manager for numerous soil gas surveys utilized to assess the presence, nature, and extent of volatile organic compounds (VOCs) and/or methane related to contaminated soils, groundwater, and/or landfills. Elements of

these projects have included assessments of vapor intrusion, protection of structures from subsurface gases, monitoring of indoor air, and health risk assessments (HRAs).

- Mr. Green has managed numerous projects related to the removal, investigation, and remediation of contamination from leaking underground storage tanks (LUSTs). In accordance with requirements of the various regulatory agencies throughout Southern California, these LUST projects have included soil, soil gas, and groundwater contamination, and tasks such as evaluation of site and regional hydrogeologic conditions; development work plans and health and safety (H&S) plans; coordination and execution of tank removals; design of the investigative programs; review and selection of potential remedial alternatives; preparation of summary reports of findings; support of legal counsel in cost recovery actions; and support of client in cost recovery actions with the California Underground Storage Tank (UST) Cleanup Fund.

- Mr. Green has been the Project Manager for numerous remediation projects involving various hydrocarbon products, pesticides, chlorinated solvents, and/or heavy metals. Remediation projects included the excavation and disposal of soils; on- and off-site treatment of soils; recovery and treatment/disposal of free product and groundwater; and the design, installation, and operation of vapor extraction systems for soil and groundwater contaminated with VOCs.

- Mr. Green has evaluated environmental conditions at sanitary landfills. As Task Manager, he managed the installation and sampling of groundwater monitoring wells at and adjacent to existing landfills to determine the presence of leachate. This work was done in accordance with state regulations and local ordinances.

- Mr. Green was Project Manager for numerous lead-based paint (LBP) surveys and abatement projects for single- and multifamily residential developments, and commercial and public buildings. These projects consist of determining paint and/or dust sampling methodologies; interpretation of testing results; evaluation and recommendations for appropriate LBP hazards abatement; development of LBP abatement specifications; coordination and selection of licensed LBP abatement subcontractors; collection and analysis of abatement confirmation samples; characterization of waste materials; and preparation of summary reports documenting LBP surveys and the appropriate removal and disposal of LBP-related hazards.

- As a committee member, Mr. Green developed the initial ASTM standard guide (E2600) for vapor encroachment screening on property involved in real estate transactions. He has a decade of experience in evaluating the potential for vapor encroachment and vapor intrusion, along with the methods and protocols for investigation and/or mitigation of buildings affected by known or suspected contamination by VOCs.

- Mr. Green provides expert testimony and research support for litigation related to ESAs, and the investigation and remediation of hazardous waste sites.

His project experience is summarized below.

Vapor Extraction Assessment and Remediation of Former Industrial Dry Cleaning Facility. As Project Manager, Mr. Green's tasks included initial indoor air assessment for Proposition 65 compliance; coordination of equipment, subcontractors, and personnel for the installation of vapor extraction and monitoring wells, header lines, and vapor extraction system (VES), including acid "scrubber" for treated vapors, treatment pad and enclosure, electrical power, natural gas, water supply and wastewater discharge; city, county, and Air Quality Management District (AQMD) permits; operation and maintenance (O&M) of VES; regulatory reporting; and decommissioning of VES upon regulatory closure.

Community Redevelopment Agency of the City of Los Angeles (CRA/LA), General Environmental Consulting Services, Los Angeles, CA. As Project Director with almost 200 work order directives for services over an approximately 20-year period, Mr. Green provided the initial site assessments, asbestos-containing material (ACM) surveys, LBP surveys, soil gas surveys, soils investigations, groundwater investigations, remedial and abatement activities for soils, asbestos, and LBP, second-party reviews of reports and work completed by other environmental consultants, UST removals, groundwater well abandonment, Brownfields consulting, and an environmental audit of hazardous materials handling practices of the client's operations. The projects were completed on vacant, former oil field, residential, commercial, industrial, and manufacturing properties ranging in size from a single lot to a 29-block mixed-use area. In addition to ACMs and LBP, the identified constituents of concern included a variety of petroleum hydrocarbon (TPH) products, chlorinated solvents, heavy metals, PCBs, pesticides, and subsurface combustible gases such as methane and VOCs.

Brownfields Redevelopment Site, Los Angeles, CA. As Project Director, Mr. Green completed several phases of environmental services to facilitate the mixed-use redevelopment of property for a parking garage, childcare center, and affordable housing. Historical machine shop operations resulted in a release of tetrachloroethylene (PCE) to soils. Although some cleanup was conducted in the early 1990s, residual PCE contamination remained. In accordance with current standards and with the proposed goal of affordable housing and childcare center, SCS re-investigated the site under the oversight of the Los Angeles RWQCB. Services provided for this project included investigations of soil and soil gas, HRA and selection of remedial and mitigation options, design of vapor barrier to protect the building from chlorinated solvents, coordination and oversight of remedial excavation, oversight and certification for installation of a sub-building vapor barrier, post-construction monitoring of indoor, background, and sub-slab air to confirm that remediation and mitigation measures have met regulatory goals, and coordination of a No Further Action (NFA) letter from the regulatory authority.

Due Diligence Investigations of Manufacturing Facility, Torrance, CA. As Project Director, Mr. Green conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify environmental issues and business risks and to facilitate the client's successful sale of property. A number of recognized environmental conditions, including former and existing USTs, a machine shop, wastewater treatment sumps and clarifier, paint shop, chemical storage, and chlorinated solvent degreasing operations were identified. Project activities included shallow and deep soil and soil vapor extraction (SVE) investigations, followed by groundwater sampling; geophysical survey and excavations to find

an existing diesel UST previously closed in-place; removal of the UST; remedial excavations under Torrance Fire Department oversight to obtain closure; a long-term SVE pilot test, including a work plan submitted to the Los Angeles RWQCB; installation of SVE and monitoring wells; and development of an SVE Pilot Test Report, and recommendations for further SVE.

Investigation, Abatement, and Subsequent Demolition, Resource, Conservation and Recovery Act (RCRA), CA. Lead-containing dust from a shooting range was found to have contaminated building materials and soils. As Project Manager, Mr. Green was involved the selection of remedial methods and contractors, monitoring of workers to assess exposure to lead-containing dust, monitoring of dust emissions during demolition to confirm compliance, confirmation sampling and analyses, characterization of wastes for disposal, and submittal of a summary report documenting the appropriate remediation and disposal of lead-containing wastes. Efforts were as part of the RCRA for facility closure under the oversight of the California DTSC.

Investigation and Remediation, CA. Chemicals of concern at the former wood treating facility included pentachlorophenol, creosote, diesel fuel, methylene chloride, zinc, copper, and arsenic. As Project Director, Mr. Green managed the Remedial Investigation/Feasibility Study (RI/FS) report for vadose zone soil, including an HRA; Remedial Action Plan (RAP) for impacted soil, which recommended capping as the most feasible remedial alternative; a cone penetrometer (CPT) study aimed at further defining site stratigraphy, evaluating for the presence of nonaqueous phase liquids, and mapping the areal distribution of chemicals of concern; quarterly groundwater monitoring from 16 wells; Storm Water Pollution Prevention Plan (SWPPP) and monitoring; and assistance to client in development and/or sale of the property. The work was done under the oversight of the California DTSC.

Well Investigation Program Compliance. As Project Manager, Mr. Green conducted a well investigation provided to the USEPA to identify Potentially Responsible Parties (PRPs) for the San Fernando Valley Superfund site. On-site operations included 14 USTs; numerous clarifiers, sumps, and drain lines; plating, machining, and painting shops; a jet engine test facility; and solvent, alkaline, and steam cleaning facilities. Approximately 70 exploratory soil borings were drilled and analyzed for chlorinated solvents, heavy metals, cyanide, and various hydrocarbon products, such as gasoline, machining and waste oils, Stoddard solvent, and jet fuel. A soil gas survey of the facility was also conducted to screen for potential contamination by VOCs, including the installation of multi-depth, nested soil vapor monitoring wells. Fate and transport modeling of chlorinated solvents was used to assess the potential for impacts to groundwater. The work was done under RWQCB oversight at a jet engine repair, maintenance, and testing facility. The RWQCB issued an NFA letter for the investigation and remediation of chlorinated solvents at the site. The project also included design, permitting, construction, and O&M of a hot air-assisted SVE system to remediate Jet A-impacted soils. After 1 year of operation, remediation was sufficient to obtain closure with no further requirements from the RWQCB. Furthermore, as a part of the decommissioning and demolition of the facility, a comprehensive survey for ACMs in nine buildings was conducted. SCS prepared plans and specifications for the abatement of ACMs, assisted the client in selection of an abatement contractor, conducted daily oversight of abatement activities, including air monitoring, and prepared a final report documenting the appropriate removal and disposal of ACMs.

Historical Industrial Site Redevelopment and Closure. Prior to acquisition of this property, Mr. Green, as Project Director, conducted a due diligence assessment and several phases of investigation to identify recognized environmental conditions, characterize the nature and extent of contamination, evaluate costs and environmental liabilities, and facilitate the client's successful purchase of the property. Following the acquisition, and as a part of site redevelopment and thereafter, SCS provided additional site characterization and remediation services under regulatory oversight and with closure. Project activities, conducted concurrently with property redevelopment, included:

- Shallow and deep soil and soil vapor investigations for due diligence purposes.
- Oil well abandonment under California Division of Oil, Gas and Geothermal Resources (DOGGR) oversight.
- Permitting and removal of an existing UST and remedial excavation under Los Angeles County Department of Public Works (LACDPW) oversight.
- Under RWQCB oversight, shallow soil excavation of a former UST area, installation and operation of a separate SVE system for deeper soil contamination, and installation and monitoring of groundwater wells.

SCS met with the RWQCB on several occasions to make a case for closure under the State Water Quality Control Board's (SWQCB's) Low-Threat UST Case Closure Policy. Upon completion of a closure investigation in October 2013, and a subsequent meeting to defend the case for closure, the RWQCB concurred with SCS's conclusions and approved the closure process under the Low-Threat Policy. Following SVE and well abandonment activities, the RWQCB issued an NFA letter for the property in July 2014.

Mr. Green has participated in a certified health and safety program in compliance with Occupational Safety and Health Administration (OSHA) Standard 29 CFR 1910.120. He provided his expertise in the incident response operations, team functions, personnel safety, and field equipment. He was able to recognize and evaluate potential chemical and physical hazards and associated risks in field operations; discuss and use personnel protective equipment such as respiratory protection and protective clothing; use and interpret direct-reading instruments; and examine and establish Standard Operating Safety Guidelines to ensure safe and effective response operations.

Mr. Green has been involved in numerous SCS projects related to hazardous waste characterization and management. He has experience in ESA studies, UST investigations and their associated remediation programs, landfill studies, and geologic and hydrogeologic site characterization studies. His work experience includes all project phases from development of cost estimates for various site assessment and cleanup programs, to groundwater monitoring and sampling, to preparation of final reports and interfacing with regulatory agencies.

Litigation Support/Expert Testimony

Mr. Green has provided litigation support and expert testimony to legal counsel, including conducting research, and preparing reports and other supporting documents, in the following environmental cases:

- In August 2013, Mr. Green provided testimony in federal court on behalf of the plaintiff in City of Banning v. Dureau et al., regarding the contractor's emergency response to a waste oil spill that entered the storm drain system. Testimony related to investigative and remedial actions and the applicability of, and compliance with, the National Contingency Plan (NCP). The case was won by the City of Banning, California.

- In October 2012, Mr. Green was retained as an expert witness by the defendant in Clipper Yacht Company, LLC v. Anderson's Boat Yard, Inc., to review documents, consult with legal counsel, and provide expert opinions at deposition and trial regarding contamination at a boat yard and associated marina in Sausalito, California. Specific topics of interest include the adequacy of previous investigations and remediation efforts, the sources of contamination (particularly copper), cleanup levels, and likelihood and estimated costs of additional remediation. This case was settled prior to trial.

- In August 2011, as part of the new property owner's litigation against the former tenant (Alfaville, LLC v. L.A. Signal, Inc.), Mr. Green provided testimony as a percipient witness, primarily as to the source and timing of a prior PCE release. In a Phase I ESA prepared by SCS in 2008, PCE solvent use by the departing property tenant was identified. Several phases of subsequent site investigation confirmed a release of PCE to soil and soil vapor with likely impacts to groundwater. Groundwater monitoring is ongoing under Los Angeles RWQCB oversight. Remediation by soil vapor extraction may be conducted. This case was settled.

- In November 2008, Mr. Green provided an expert report and court testimony on behalf of the plaintiff in Malcolm Carter Enterprise v. Microsemi Real Estate, Inc. At issue was the evaluation of data for a Phase I ESA, identification of Recognized Environmental Concerns (RECs), regional and site-specific groundwater contamination by chlorinated solvents, selection of an appropriate regulatory agency for remedial oversight, and applicability of the NFA letter. This case was won by the plaintiff.

- In 2010, Mr. Green was retained by the defendant in City of Riverside v. Johnson Revocable Trust, et al., to review documents, consult with legal counsel, and provide expert reports and deposition and expert testimony regarding an eminent domain case in Riverside, California. Specific topics of interest included the adequacy of previous investigation, the source or sources of a PCE release, and the likelihood and estimated costs of remediation. This case was settled prior to trial.

- In 2009, Mr. Green conducted a review of the scope of work and fees charged by another environmental consultant conducting expert witness work on a development project in Santa Clarita. A declaration was provided to the Plaintiff's counsel regarding typical consultant fees, and the reasonableness of the time and expenses charged in relation to the final work product.

- In 2006, Mr. Green reviewed documents, consulted with legal counsel, and provided deposition and expert testimony regarding the source and timing of a methyl tertiary butyl ether (MTBE) release at a service station site in Strathmore, California. This case was settled prior to trial.

- In 2003, Mr. Green provided litigation support regarding the scope and limitations of a Phase I ESA as it pertains to a service station site in San Bernardino, California.

- In 1998, Mr. Green provided expert consulting services related to the use, history, and migration of hexavalent chromium and perchloroethene in soil and groundwater at a former plating site and adjacent Los Angeles Unified School District (LAUSD) school property, and proper allocation of responsibility regarding those issues.

- In 1994, Mr. Green provided a client's in-house and outside legal counsel with technical support on a case involving cost recovery/allocation and potential involvement in the Burbank Operable Unit of the San Fernando Valley Superfund site. This project included assessment of the nature, extent, fate, and transport of potential contaminants (chlorinated solvents, fuels, and/or heavy metals), previous and proposed site investigations, possible remedial alternatives and costs, and environmental investigations and/or remediation on properties in the surrounding area.

- Mr. Green has also provided outside legal counsel with technical support for due diligence assessment at a property in Irvine, California. The client's site was located adjacent to a service station that had groundwater impacted with gasoline-related constituents, including MTBE. His work involved obtaining regulatory records, review, and written summary regarding regulatory requirements and anticipated actions, health risks, and necessity of additional site assessment and/or investigation work on the client's property.

- He has also assisted a client and the client's legal counsel with review of information and response to the Los Angeles RWQCB's request for a work plan for investigation of suspected hexavalent chromium impacts to soil and groundwater at the client's former operation, located adjacent to the Burbank Airport and within the Burbank Operable Unit of the San Fernando Valley Superfund Site. The work plan and further investigation were not subsequently required.

- In 1991, Mr. Green provided expert testimony in Azusa Redevelopment Agency v. Exxon, a case involving investigation and remediation of gasoline-contaminated soil at a former Exxon station.

- 1991, Mr. Green provided expert testimony for Art Movers, Inc., in a case involving previous site investigations, proposed remedial activities, and potential risks to groundwater resources from perchloroethene-contaminated soils.

DISCLAIMER

This report has been prepared specifically for Prologis, Inc, with specific application to investigation of soil, soil vapor, and groundwater for the Downey Industrial Center site located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road, Downey, California. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein. No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content or information embedded therein. Third parties use this report at their own risk.

Changes in site conditions may occur due to variation in rainfall, temperature, water usage, or other factors. Additional information that was not available to the consultant at the time of this investigation or changes that may occur on the site or in the surrounding area may result in modification to the site that would impact the summary and recommendations presented herein. This report is not a legal opinion.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Prologis, Inc to conduct a Phase II Investigation consisting of soil, soil vapor, and groundwater sampling at the Downey Industrial Center located at 9300, 9350, and 9400 Hall Road and 9301, 9333, and 9399 Stewart & Gray Road, Downey, California (the "Property"). Investigation activities were conducted in accordance with SCS's proposals dated February 9, 2017 (Proposal No. 010092217R3) and March 6, 2017 (Proposal No. 01216217). A location map for the Property is presented as **Figure 1**.

2 GENERAL BACKGROUND

SCS prepared a Phase I Environmental Site Assessment (ESA) for the Property dated January 31, 2017. The Property is comprised of approximately 29 acres and has a complex aerospace and manufacturing history. The Property is currently developed with four primary structures (two large and 2 small) occupied by five tenants, associated parking areas, storage yards, and canopy areas. The Phase I ESA identified the following Recognized Environmental Conditions (RECs):

- Numerous patch areas and steel plated vault/trenches were observed in the larger structures. A well was observed at the south end of Building 1A. No information could be provided to SCS regarding the well. The subsurface features observed within the structures represent a REC.

- Numerous tenants have occupied the Property including various manufacturing facilities for carpets, furniture, cabinetry, printing, logistics, pulp and paper recycling, etc. Chemical use by these historical tenants is unknown. The presence of various historic manufacturing operations with unknown chemical use on the Property constitutes a REC.

- Available records on the SCAQMD's Facility Information Detail (FIND) database indicate the use of degreasers containing chlorinated solvents on the parcel directly adjacent to the west (9236 Hall Road) by two former occupants, Aerojet and General Dynamics. One of these former neighbors, Aerojet, also occupied (prior to 1971) the portion of the Property located at 9300 Hall Road and thus may have conducted operations on the Property. Permits for the adjacent site at 9236 Hall Road indicated that both Aerojet and General Dynamics operated a 1,1,1-trichloroethane degreaser, a perchloroethylene degreaser, a Freon degreaser, scrubbers, wastewater treating equipment, a spray booth (paint and solvent), and other equipment related to aerospace manufacturing activities. The use of chlorinated solvents adjacent to, and potentially on the Property, constitutes a REC.

- Los Angeles County Department of Public Works (LACDPW) records indicated that Aerojet occupied the adjacent parcel to the west from at least 1971 to 2003, and leased the building at 9300 Hall Road for use, including aerospace machining operations, for a period of time up to 1971. A number of subsurface features were used during this time, including a 10,000 gallon diesel underground storage tank (UST; unknown installation date) and various concrete sumps and/or clarifiers. The UST was removed and some of the sump/clarifiers were abandoned in place in 1986. A no further action letter was issued by the LACDPW on February 28, 1986 for certain concrete oil, grease, and water

"tanks;" the 10,000-gallon UST was not included in this closure letter. Other subsurface features (drain lines, pit, sump, clarifier, etc.) were listed in the LACDPW records and it is anticipated these remain in place. Samples collected in 1985, from the contents of these features (both those removed and those that are anticipated to remain) revealed elevated concentrations of metals, total petroleum hydrocarbons (TPH), and oil and grease (analysis for volatile organic compounds [VOCs] was not conducted). The highest metals concentrations were detected in a sample collected from a "dirt pit." The disposition of the clarifiers, pits, sumps and other facilities contents from which samples were collected is unknown. The presence of these subsurface features, some of which currently appear to remain and some of which were abandoned in place, along with the former aerospace machining operations, are considered a REC.

- Two USTs (a 1,000 gallon gasoline and a 15,000 gallon diesel) were formerly located at the Western Pacific Paper and Pulp facility at 9350 Hall Road. A release of "up to 18,200" (presumably milligrams per kilogram [mg/kg], however the units were not reported) of TPH was listed on an unauthorized release report dated January 1995, that referred the case from the LACDPW to the Los Angeles Regional Water Quality Control Board (LARWQCB). Although the LARWQCB issued a no further action letter in 1996, there is no record that any remediation was conducted in this area, therefore the presence of the former USTs and associated release constitute a REC.

- In 1995, Heger Reality disposed of tank bottom wastes (based on the date, this may be associated with the USTs removed at 9350 Hall Road) and halogenated solvents from the address of 9400 Hall Road. The disposal of tank bottom wastes (indicating the presence of former UST[s]) and halogenated solvents is considered a REC.

In addition, the following business environmental risk (BER) was identified:

- During the site inspection, it was brought to SCS' attention that an underground storage area or bunker may exist at the northwest corner of the Property, in the area of the Duray (9301 Stewart and Gray Road) and Omniteam (9300 Hall Road) facilities. Comments by tenants at these businesses suggested the bunker was used during World War II and that it housed chemicals. No evidence regarding the presence of this feature was observed during the site inspection, and its current or past existence has not been confirmed.

As previously mentioned, the current investigation consisted of soil, soil vapor, and groundwater sampling at locations of historical subsurface features, in areas where potential degreasers were used, and in other locations across the Property to provide site coverage. This report describes results of an initial investigation conducted in February 2017 and additional activities conducted in March 2017 to further define the initial findings.

3 GEOLOGIC AND HYDROGEOLOGIC CONDITIONS

PHYSIOGEOGRAPHIC SETTING

The Property is located in the Downey Plain of the central Los Angeles basin. Site elevation ranges from approximately 107 to 112 feet above mean sea level. Site topography is generally

flat with a slight regional downward slope to the south. The San Gabriel River is located approximately 0.5 miles to the southeast of the Property.

GEOLOGY AND SOILS

Based on the regional geology as outlined in the California Department of Water Resource Bulletin 104 (Planned Utilization of the Groundwater Basins of Los Angeles County, June 1961,) surface sediments in the area consist of Quaternary alluvial deposits of unconsolidated gravel, sand, silt, and clay. Data from on-site soil borings indicates a predominantly silty section extending to a depth of approximately 20 to 40 feet bgs with a predominantly sandy section below this to at least 80 feet bgs.

HYDROGEOLOGY

Based on the results of groundwater monitoring at the former Astro Pak facility located approximately 0.5 miles west of the Property (GeoTracker, Site #SL2044E1590), the depth to groundwater in the area is generally 75 to 80 feet below ground surface (bgs). The results of this Phase II investigation identified groundwater at 80 to 85 feet bgs. The regional direction of groundwater flow is generally southerly.

4 SITE INVESTIGATION AND ANALYTICAL RESULTS

The Phase II Investigation consisted of groundwater, soil, and soil vapor sampling as described below. Investigation activities were conducted on February 13, 14, 15, and 17, and March 13, 14, 16, and 17, 2017. As required by law, SCS pre-marked the proposed sampling points and notified Underground Service Alert (USA) (DigAlert Ticket No. A70320477, A70660834, and A70660836). Prior to sampling, SCS contracted with Goldak, Inc. (Goldak), of Sylmar, California to clear the proposed boring locations prior to initiating drilling activities to avoid any subsurface utilities.

SOIL VAPOR SAMPLING

Under the direction of SCS, H&P Mobile Geochemistry (H&P) of Carlsbad, California installed soil vapor probes to a depth of 5 feet below grade at 50 locations (SV1 through SV50). In addition, nested probes were installed at a number of these locations at the 15- and/or 30-foot depths. At twelve of the 50 locations (SV2, SV3, SV8, SV11, SV12, SV15, SV16, SV23, SV25, SV27, SV35, and SV36) soil vapor probes were installed at 15 feet bgs and at five of the 50 locations (SV3, SV8, SV34, SV35, and SV36) soil vapor probes were installed at 30 feet bgs. An attempt was made to collect a 15-foot sample from SV34, however high vacuum was encountered and a sample was not attainable. Soil vapor locations are shown on **Figure 2**.

Soil vapor sampling equipment consisted of hollow steel rods mechanically driven into subsurface soils to the desired depth using a handheld Roto-hammer or direct-push drill rig. The steel rods were retracted from each boring and new (clean) 1/8-inch diameter Nylaflow tubing, with a polypropylene filter placed on the bottom end, was inserted to the desired depth. Clean #2/12 Monterey sand was placed in a 6-inch vertical interval around each filter. A bentonite seal

was placed above the sand pack for each probe. The remaining annular space was then backfilled with bentonite and hydrated.

Soil vapor sampling was conducted in general accordance with the *Advisory – Active Soil Gas Investigations*, published by the Regional Water Quality Control Board and Department of Toxic Substance Control in July 2015 (the "Guidance"). Following a minimum of 30 minutes after being set, the probes were purged to remove ambient air from the sampling system and ensure that the collected soil vapor sample was representative of soil conditions. A three system purge volume was used for all locations. In addition, prior to collecting samples into glass syringes, a leak-check compound (1,1-difluoroethane) was exposed at the surface. Note that the leak-check compound was not detected in any of the analyzed samples.

A total of 74 soil vapor samples (including one replicate sample per sampling event from SV10, SV12, SV20, SV27, SV34, and SV40) were collected and analyzed for VOCs using EPA Method 8260SV (equivalent to EPA Method 8260B) in an on-site mobile laboratory provided by H&P. H&P is certified by the California Department of Health Services to conduct the specified analysis. Chain-of-custody documentation was completed in order to accurately track the samples from the point of collection through analysis.

After all samples had been collected and the soil vapor analysis completed, the probes were removed and the surface was patched to match the surrounding surface material. No soil cuttings or water requiring disposal were generated during the soil vapor assessment activities.

Soil Vapor Analytical Results

The H&P laboratory reports, chain-of-custody documentation and quality assurance/control (QA/QC) data are included as **Appendix A**.

As summarized in **Table 1,** a total of ten VOCs were detected in soil vapor. Although tetrachloroethene (PCE) was detected in more samples (61 of the 74 samples, including replicates), trichloroethene (TCE) was found at much higher concentrations in most of the 51 samples (including replicates) in which it was detected. TCE was detected at concentrations ranging from 0.13 to 1,300 micrograms per liter (µg/l) and PCE at concentrations ranging from 0.09 to 250 µg/l.

The remaining VOCs detected included chloroform in 15 samples (concentrations ranged from 0.09 to 3.4 µg/l), 1,1,2-trichlorotrifluoroethane (Freon 113) in 12 samples (0.47 to 5.4 µg/l), cis-1,2-dichloroethene (cis-1,2-DCE) in five samples (0.64 to 7.4 µg/l), benzene in three samples (0.08 to 0.99 µg/l), 1,1-dichloroethene (1,1-DCE) in three samples (0.50 to1.2 µg/l), 1,1,1-trichloroethane in two samples (2.7 and 8.3 µg/l), and trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride were each detected in one sample at concentrations of 1.2 and 0.07 µg/l, respectively.

SOIL SAMPLING AND ANALYSIS

Under the direction of SCS, H&P conducted soil sampling using a truck-mounted direct-push drill rig. A total of 20 soil borings were drilled for the collection of soil samples. Soil boring locations are shown on **Figure 2**. Borings at 14 locations (SB1, SB4 through SB13, SB16, SB19, and SB20) extended to a depth of 10 feet bgs, with soil samples collected at the 1-, 5-, and 10-foot depths. Five locations (SB2, SB3, SB15, SB17, and SB18) were drilled to 20 feet bgs with samples collected at 5-foot intervals. Boring SB14 was extended to 15 feet bgs with samples collected at 1, 5, 10, and 15 feet bgs.

Soil borings were drilled using a truck-mounted direct-push drill rig equipped with a hydraulic hammer and a 2-foot long, 1.5-inch diameter sampler. A pointed steel tip was fixed to the head of the solid-spoon sampler and driven to the desired sampling depth. Soil matrix samples were collected by retracting the drive tip through the center of the sampler with an inner rod, and hydraulically hammering the sampler an additional two feet. Soil samples were recovered in two-foot long, 1-inch diameter pre-cleaned plastic acetate sleeves that had been placed inside the sampler. At each sampling depth, an approximately 6- to 12-inch section was cut from the sample sleeve and preserved for subsequent laboratory analysis, as described below.

In addition to the soil borings described above, eight deep borings (designated GW1 through GW8; **Figure 2**) were drilled with a truck-mounted hollow-stem auger drill rig operated by Cascade Environmental (Cascade) of Montclair, California with oversight by SCS on February 13, 14, and 15 and March 13, and 14, 2017. These borings were advanced in order to obtain grab groundwater samples. As further discussed below, groundwater was encountered between approximately 80 and 85 feet bgs. Soil samples were collected for lithological purposes only from GW1 and GW2 (first phase of investigation) and for lithological and laboratory analysis from GW6 and GW7 (second phase of investigation). A truck-mounted hollow-stem auger drill rig was used to drill and collect samples. During drilling of GW1 and GW2, soil samples were collected at 10-foot intervals from a depth of 30 to 80 feet bgs in order to observe lithology since all other borings during the first phase of investigation terminated at a maximum depth of 20 feet bgs. Samples from GW6 and GW7 were at 10 foot intervals from 10 to 80 feet bgs.

Soil samples obtained using the hollow-stem auger drill rig were collected using a split-spoon drive sampler. The sampler was unlined to obtain core samples for lithological observations during sampling of GW1 and GW2 and lined with brass sample tubes for collection of analytical samples during drilling of GW6 and GW7.

All soil samples for laboratory analysis were prepared in the field for analysis of VOCs using EPA Method 5035, which includes the collection of three 5-gram aliquots of soil from each soil sample using a plunger/sub-sampler provided by the laboratory. The three aliquots of soil were immediately placed in 40 milliliter VOA (volatile organic analysis) vials as follows – two aliquots in VOAs with a sodium bisulfate preservative and one in a methanol preservative. The remaining soil in the sleeve was retained for lithology as discussed below. The ends of the sample tubes were covered with Teflon squares, sealed with plastic end caps, and secured with non-volatile tape.

A portion of each sample sleeve was observed for soil classification and to screen samples for indications of potential contamination, such as discoloration and odor. No soil samples collected showed signs of contamination in the field. Boring logs recording the lithology observed are provided in **Appendix B**. After soil sample collection, the shallow borings (20 feet or less) were backfilled with bentonite and hydrated throughout and the deep borings were backfilled with a cement/bentonite slurry. The surface of each boring was patched to match the surrounding surface cover.

The samples were placed in a chilled ice-chest for transport to Chemtek Environmental Laboratories, Inc (Chemtek) of Santa Fe Springs, California. In total, 66 soil samples were analyzed for TPH using EPA Method 8015M, 76 soil samples were analyzed for VOCs by EPA Method 8260B, 30 soil samples were selected for analysis of CAM-metals using EPA Method 6010B/7471A, four soil samples were selected for analysis of hexavalent chromium using EPA Method 7199, and four soil samples were selected for analysis of organochlorine pesticides (OCPs) using EPA Method 8081A.

Chemtek is certified by the California Department of Health Services to conduct the specified analyses. Samples were tracked from the point of collection through the laboratory using proper chain-of-custody protocol.

Soil Analytical Results

The Chemtek laboratory report, chain-of-custody documentation, and quality assurance/quality control (QA/QC) data are included as **Appendix C**. Analytical results for TPH, VOCs, and organochlorine pesticides (OCPs) are summarized in **Table 2** and a summary of metals, including hexavalent chromium, is provided in **Table 3**.

As shown in **Table 2**, TPH as gasoline and light hydrocarbons (TPH-g [carbon-chain range C_4-C_{12}]) was not detected in any soil samples. TPH as diesel (TPH-d [carbon-chain range C_{13}-C_{22}]) was detected in two soil samples, SB5-1' and SB7-5', at concentrations of 127 and 10.5 mg/kg, respectively. Heavy oil-range TPH (TPH-o [carbon-chain range C_{23}-C_{40}]) was detected in three soil samples (SB5-1', SB7-5', and SB18-5') at concentrations of 818, 41.5, and 42.8 mg/kg, respectively.

PCE was detected in 20 of 76 soil samples with concentrations ranging from 1.02 to 10.5 micrograms per kilogram [µg/kg]). TCE was detected in 22 of 76 soil samples with concentrations ranging from 1.01 to 34 µg/kg. Cis-1,2-DCE was detected in one sample (GW7-40) at a concentration of 2.57 µg/kg and 1,1-DCE was detected in two samples GW6-40 and GW7-40 at concentrations of 1.89 and 1.13 µg/kg, respectively. As shown in **Table 2,** of the four samples analyzed for OCPs, one sample (SB4-1') had a detection of 4,4-DDE at a concentration of 5.51 µg/kg.

Analytical results of metals concentrations in selected soil samples are summarized in **Table 3**. The metals detected in samples collected at the Property included arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium, and zinc. With the exception of arsenic in SB18-5, SB18-10, and SB20-1 all other metals were detected at, or below, concentrations typically found in Southern California soils. Four samples (SB14-1, SB14-5, SB16-1, and SB16-5) were analyzed

for hexavalent chromium; one sample (SB14-1) had a detection of 0.329 mg/kg **(Table 3)**, which is below regulatory thresholds.

GROUNDWATER SAMPLING AND ANALYSIS

A permit was obtained from the County of Los Angeles Department of Public Health, Drinking Water Program to collect groundwater samples. A copy of the permit is provided in **Appendix D**.

As previously discussed, eight deep borings were drilled on February 13 through 15 and March 13 and 14, 2017 for the purpose of collecting grab groundwater samples (GW1 through GW8; **Figure 2**). Drilling and soil samples was conducted by Cascade, as discussed above.

Borings were terminated approximately 2 to 3 feet into groundwater which was encountered between approximately 80 and 85 feet bgs. Groundwater "grab" samples were recovered from each boring by placing temporary PVC casing through the hollow stem augers and using a disposable bailer to recover groundwater samples. A 5-foot screen was set in the water column and six feet of #3 Monterey sand was used as a filter pack around the screened interval. Groundwater samples were collected without headspace, in 40 milliliter VOAs preserved with hydrochloric acid.

Upon completion of the groundwater sampling, all auger and sampling materials were removed and the borings were backfilled with a bentonite grout and the surface patched to match the surrounding surface.

Groundwater Analytical Results

The Chemtek laboratory report, chain-of-custody documentation, and quality assurance/quality control (QA/QC) data are included as **Appendix C**.

Analytical results for VOCs in groundwater are summarized in **Table 4.** TCE and cis-1,2-DCE were detected in six out of the eight sample locations at concentrations ranging from 1.34 to 68.9 and 2.50 to 20.5 µg/l, respectively. 1,1-Dichloroethane (1,1-DCA) was detected in four samples at concentrations ranging from 1.05 to 4.47 µg/l. 1,1-DCE was detected in three samples at concentrations between 1.12 and 4.77 µg/l and trans-1,2-DCE and methyl tert-butyl ether (MTBE) were each detected in one sample at concentrations of 1.63 and 3.37 µg/l, respectively. The results are discussed in greater detail in Section 5.0.

DISPOSAL OF INVESTIGATION DERIVED WASTES

Soil cuttings and decontamination water generated during drilling of GW1 through GW8 were placed in 55-gallon steel drums, labeled, and stored on the Property until properly characterized and profiled for disposal. The drums were transported from the Property on February 24 and March 23, 2017 under non-hazardous waste manifest to K-Pure Waterworks, Inc. in Rancho Cucamonga, California. Documentation of the appropriate recycling and/or disposal of waste drums is available upon request.

5 DISCUSSION OF ANALYTICAL RESULTS AND REGULATORY LIMITS

VOCS IN SOIL VAPOR

The California Department of Toxic Substances Control (DTSC), Human and Ecological Risk Office (HERO) has issued Human Health Risk Assessment Note Number 3 (Note No. 3), most recently revised in June 2016. Note No. 3 makes recommendations regarding the methodology and use of the U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSLs; most recently updated in May 2016), and DTSC-modified Screening Levels (SLs) for soil vapor screening under residential and commercial/industrial land use scenarios.

SLs for evaluating soil vapor intrusion are calculated using indoor air SLs and recommended attenuation factors and are referred to by SCS as DTSC-Recommended SLs. These calculated soil vapor screening levels are for samples collected near the source area either for existing buildings or future buildings (Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air, DTSC and CalEPA, October 2011). The term "near the source area" is considered to be at or just above the contaminant source, generally no more than five feet beneath a building foundation. The values calculated using Note No. 3 recommendations are conservative. Chemical concentrations in excess of the calculated DTSC-Recommended SLs are not conclusive evidence of adverse risks to human health. Additional investigation – such as sub-slab sampling, indoor air assessments, site-specific health risk assessments, etc. – may be warranted to further assess site-specific health risks.

The Property is currently used as commercial warehouse and manufacturing space, but may be redeveloped in the future. Therefore soil vapor results from this investigation are compared to the DTSC-Recommended SLs for both **existing** and **future** commercial sites in **Table 1**. Note that the DTSC-Recommend SLs for future buildings are double the DTSC-Recommend SLs for existing buildings.

VOCs in soil vapor samples with concentrations above the DTSC-Recommend SLs for existing and future commercial buildings are as follows:

- TCE was detected in 39 samples above the commercial DTSC-Recommended SL of 3.0 µg/l for existing buildings. TCE was detected in 36 samples above the commercial DTSC-Recommended SLs of 6 µg/l, for future commercial/industrial buildings. Concentrations detected at the Property ranged from 0.55 to 1,300 µg/l.

- PCE was detected in 33 samples above the commercial DTSC-Recommended SL of 2.0 µg/l for existing buildings and in 30 samples above the commercial DTSC-Recommend SL of 4 µg/l, for future buildings. Concentrations detected at the Property ranged from 0.48 to 250 µg/l.

- Chloroform was detected in 9 samples above commercial DTSC-Recommended SL of 0.53 µg/l for existing buildings and in 7 samples above the commercial DTSC-

Recommend SL of 1.1 µg/l, for future buildings. Concentrations detected at the Property ranged from 0.12 to 3.4 µg/l.

- Benzene was detected in one sample above the DTSC-Recommend SLs for commercial existing buildings and commercial future buildings of 0.42,and 0.84 µg/l, respectively.

No other VOCs were detected above their commercial limits. Because the Property is currently commercial, concentrations are not compared to the residential limits for existing buildings.

Figures 3, 4, and 5 show isoconcentration contours of TCE along with vapor concentrations at 5, 15, and 30 feet bgs. **Figures 6, 7,** and **8** depict the same for PCE. As depicted on these figures, the highest concentrations of TCE and PCE are located on the eastern portion of the Property. The concentrations appear to increase with depth at this location with the highest concentrations of TCE (1,300 µg/l) and PCE (250 µg/l) detected at 30 feet bgs in SV36.

In addition, secondary minor releases appear be located on the western side of the Property at 9300 Hall Road and 9301 Stewart and Gray Road. The concentrations of TCE and PCE in these areas are significantly lower.

VOCS AND OCPS IN SOIL

In additional to the soil vapor screening discussed above, Note No. 3 also recommends the use of U.S. EPA Region 9 RSLs for the majority of the regulated chemicals in soil at hazardous waste sites and permitted facilities. However, for certain chemicals and compounds, DTSC has calculated a more stringent SL. Human health risks associated with contact of contaminated soil (dermal, ingestion, etc.) in California can be assessed by comparing concentrations detected at the Property to the most stringent (or conservative) of these values for each chemical, referred to as the DTSC-Recommended SLs and presented on **Table 2**.

As shown in **Table 2**, the concentrations of all VOCs and OCPs detected were well below their corresponding DTSC-Recommended SLs for both residential and commercial sites. Therefore, these VOCs and OCPs for soil do not appear to represent a risk to human health for both residential and industrial/commercial exposure scenarios and would not be a concern to a regulatory agency.

TPH IN SOIL

The Los Angeles Regional Water Quality Control Board (LARWQCB) has established cleanup guidelines, also known as soil screening levels (SSLs), for assessing soils based on the potential for groundwater contamination (LARWQCB, 1996). Based on the depth to groundwater of approximately 80 feet bgs at the Property, the SSLs for petroleum hydrocarbons between 20 and 150 feet above groundwater are:

- TPH-g or gasoline-range hydrocarbons (C_4-C_{12}) – 500 mg/kg
- TPH-d or diesel-range hydrocarbons (C_{13}-C_{22}) – 1,000 mg/kg
- TPH-o or oil/heavy-range hydrocarbons (C_{23}-C_{40}) – 10,000 mg/kg.

As shown in **Table 2,** the TPH concentrations detected do not exceed the corresponding SSLs and are not considered a threat to groundwater.

METALS IN SOIL

Regulatory guidance for metals in soil is based on an evaluation of both background and risk-based concentrations. The Kearney Foundation of Soil Science published a special report of background concentrations of trace and major elements in California soils (Bradford et al, 1996). In addition, human health risks associated with contact of contaminated soil (dermal, ingestion, etc.) in California are assessed by comparing concentrations detected at the Property to the most stringent (or conservative) of the RSLs, DTSC-SLs or other screening level (e.g. California Human Health Screening Level [CHHSL] used for lead), cumulatively referred to in this report as the DTSC-Recommended SLs (see **Table 3).**

As shown in **Table 3**, with the exception of arsenic, the analytical results for all metals in the samples analyzed were below their below or within the typical background concentrations ranges for California soils and below their corresponding DTSC-Recommended SLs for soils at residential and commercial/industrial sites.

With regard to arsenic, the US EPA has acknowledged that in some cases, the predictive risk-based models generate SLs that lie within or even below typical background concentrations. If natural background concentrations are higher than the risk-based SLs, an adjustment of the SL is probably needed. US EPA uses naturally occurring arsenic in soils as an example. Further, the DTSC has acknowledged that the strict use of SLs is impractical and has set acceptable levels of arsenic in soil in the range of 8 to 12 mg/kg for school sites in California. Of the 20 samples analyzed for metals, three (SB18-5, SB18-10, and SB20-1) had arsenic concentrations greater than 12 mg/kg. The 5-foot sample from SB20 (SB20-5) had a significantly lower arsenic concentration (4.39 mg/kg), as did the 15-foot sample from SB18 (SB18-15 at 10.5 mg/kg) and the 20-foot sample from SB18 (SB18-20) was non-detect for arsenic. These latter concentrations are within typical background range and below the acceptable range set by DTSC, indicating that elevated arsenic does not extend vertically as deep as 5 feet bgs at location SB20 and as deep as 15 feet bgs in location SB18.

One sample (SB14-1) contained hexavalent chromium at a concentration of 0.329 mg/kg which is above the residential DTSC-Recommended SL of 0.3 mg/kg but below the commercial DTSC-Recommended SL of 6.3 mg/kg. In addition, the deeper sample (5 feet bgs) from this boring (SB14-5) did not contain a detectable concentration of hexavalent chromium.

VOCS IN GROUNDWATER

The VOCs detected in groundwater are compared to drinking water standards known as the California maximum contaminant levels (MCLs) in **Table 4**.

As shown, TCE exceeded its MCL of 5 µg/l in 5 of the 6 samples in which it was detected (GW2, GW4, GW5, GW6 and GW7). Cis-1,2-DCE was detected in one of 6 samples (GW4) at a concentration above its MCL of 6 µg/l. None of the other four VOCs detected were above their

respective MCLs. In general, the highest concentrations of VOCs were detected in GW4, located adjacent to the southwest corner of the 9399 Stewart and Gray building.

6 CONCLUSIONS AND RECOMMENDATIONS

Two phases of investigation were conducted by SCS on February 13, 14, 15, 17, and on March 13, 14, 16, and 17, 2017, which included soil, soil vapor, and groundwater sampling at the Property. The objectives of these investigations were to assess the RECs identified in the Phase I ESA for Downey Industrial Center (SCS, January 2017) and to further characterize impacts to the Property during the due diligence period. Based on the results of this investigations, SCS concludes the following:

- TCE and PCE were the most prevalent VOCs detected in soil vapor. TCE was detected in 51 of 74 soil vapor samples collected at concentrations up to 1,300 µg/l (at a depth of 30 feet bgs). A total of 39 of these samples were detected above the DTSC-recommended SL of 3.0 µg/l for existing commercial/industrial buildings and 36 of the samples were detected above the DTSC-recommended SL of 6.0 µg/l for a future commercial structure. **Figures 3, 4, and 5** show estimated TCE vapor concentration contours at 5, 15, and 30 feet bgs.

  PCE was detected in 61 of the 74 soil vapor samples collected at concentrations up to 250 µg/l. A total of 33 samples were detected above the DTSC-recommended SL of 2.0 µg/l for an existing commercial/industrial building and in 30 samples above the DTSC-Recommend SL of 4 µg/l for a future commercial/industrial building. **Figures 6, 7, and 8** show estimated PCE vapor concentration contours at 5, 15, and 30 feet bgs.

  As depicted on **Figures 3** through **8**, the distribution of TCE and PCE in soil vapor is in the area of 9399 Stewart and Gray Road on the eastern portion of the Property. In addition, lower concentrations of PCE and TCE were identified at 9300 Hall Road on the western portion of the Property.

- The metals detected in samples collected at the Property included arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium, and zinc. With the exception of arsenic in SB18-5, SB8-10, and SB20-1 all other metals were detected at, or below, concentrations typically found in Southern California soils and below their corresponding DTSC-Recommended SLs. A deeper sample collected at SB20 (SB20-5) had a significantly lower arsenic concentration (4.39 mg/kg), as did a deeper sample at SB18 (SB18-15 at 10.5 mg/kg) within typical background range and below the acceptable range set by DTSC, indicating that elevated arsenic does not extend vertically. One sample (SB14-1) contained hexavalent chromium at a concentration of 0.329 mg/kg which is below the DTSC-Recommended SL of 6.3 mg/kg for commercial sites. The deeper sample at this location (SB14-5) did not contain hexavalent chromium.

- The TPH concentrations detected do not exceed the corresponding SSLs and are not indicative of a potential risk to groundwater. Based on the distribution of the detected petroleum hydrocarbons and the relatively low concentrations, the presence of these

substances does not appear to represent a significant release on the Property and would likely not be a concern to a regulatory agency.

- The concentrations of all VOCs and OCPs detected in soil were well below their corresponding DTSC-Recommended SLs for soil at both residential and commercial sites. Therefore, these VOCs and OCPs in soil do not appear to represent a risk to human health and would not be a concern to a regulatory agency.

- Analysis of eight grab groundwater samples indicates that groundwater beneath the Property has been impacted by VOCs (predominantly TCE and PCE). TCE was detected above its MCL of 5 µg/l in five of the eight samples collected. One sample location had a detection of cis-1,2-DCE that was above the MCL of 6 µg/l.

In addition to the conclusions and recommendations stated above, SCS recommends that future investigations and subsequent remediation work be performed with the oversight of a regulatory agency.

DTSC-Recommended SL = Screening Level as recommended in California Department of Toxic Substances Control (DTSC), Office of Human and Ecological Risk (HERO), Human Health Risk Assessment (HHRA) Note No. 3 - Residential and commercial/industrial land use scenarios at an existing and future building (June 2016, Referencing U.S. Environmental Protection Agency Regional Screening Level Reference Summary Table - May 2016).

Three purge volumes were used for all sampling points.

TABLE 2
SUMMARY OF ANALYTICAL RESULTS FOR SOIL SAMPLES - TPH, VOCS, & OCPS
DOWNEY INDUSTIAL CENTER
9300, 9350, AND 9400 HALL ROAD AND 9301, 9333, AND 9399 STEWART AND GRAY ROAD
DOWNEY, CALIFORNIA 90241

Sample Location	Sample Depth (feet bgs)	Date of Collection	TPH (EPA Method 8015M)			Volatile Organic Compounds (EPA Method 8260B)				Organochlorine Pesticides (EPA Method 8081A)
			TPH as Gasoline-range Hydrocarbons (C4 - C12)	TPH as Diesel-range Hydrocarbons (C13 - C22)	TPH as Motor Oil-range Hydrocarbons (C23 - C40)	Tetrachloroethene (PCE)	Trichloroethene (TCE)	cis-1,2-Dichloroethene (cis-1,2-DCE)	1,1-Dichloroethene (1,1-DCE)	4,4-DDE
			milligrams per kilogram (mg/kg), equivalent to parts per million (ppm)			micrograms per kilogram (µg/kg), equivalent to parts per billion (ppb)

Notes:

bgs = below ground surface

* = Bradford, G.R., Chang, A.C., Page, A.L., Bakhtar, D., Fampton, J.A., and Wright, H., 1996, *Background Concentrations of Trace and Major Elements in California Soils,* Kearney Foundation of Soil Science Special Report, Division of Agriculture and Natural Resources, University of California.

** = Values in milligrams per liter (mg/L)

DTSC-Recommended SL = Screening Level as recommended in California Department of Toxic Substances Control (DTSC), Office of Human and Ecological Risk (HERO), Human Health Risk Assessment (HHRA) Note No. 3 - Residential and industrial/commercial land use scenarios (June 2016 Referencing U.S. Environmental Protection Agency Regional Screening Level Summary Table - May 2016).

TTLC = Total Threshold Limit Concentration as identified in Title 22 of the California Code of Regulations. Wastes with concentrations above this value are considered hazardous for the purposes of disposal under California regulations.

STLC = Soluble Threshold Limit Concentration, in mg/L, as identified in Title 22 of the California Code of Regulations. A concentration of ten times the STLC is sometimes used as a trigger to conduct further analysis (i.e., the soluble analysis) of a sample to determine disposal requirements. Wastes with soluble concentrations above this value are considered hazardous for the purposes of disposal under California regulations.

TCLP = Toxicity Characteristic Leaching Procedure concentration, in mg/L, as identified in the Code of Federal Regulations. Wastes with soluble concentrations above this value are considered hazardous for the purposes of disposal under federal regulations.

H&P LABORATORY REPORT AND CHAIN-OF-CUSTODY DOCUMENTATION

Mobile Geochemistry Inc.

23 February 2017

Ms. Ashley Hutchens
SCS Engineers - Long Beach
3900 Kilroy Airport Way, Suite 100
Long Beach, CA 90806-6816

H&P Project: SCS021417-L6
Client Project: 01216368.03 / Downey

Dear Ms. Ashley Hutchens:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 2/14/2017 -2/17/2017 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP, the National Environmental Laboratory Accreditation Conference (NELAC) and the Department of Defense Accreditation Programs.

Batch EB71701 - February 17, 2017

The percent recoverieis for Dichlorodifluoromethane and Chloromethane fell below the method criteria in the continuing calibration verification. Any results for these analytes for samples included in this batch may be biased low.

Notes and Definitions

QL-1L	The LCS and/or LCSD recoveries fell below the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased low.
QL-1H	The LCS and/or LCSD recoveries fell above the established control specifications for this analyte. Any result for this compound is qualified and should be considered biased high.
LCC	Leak Check Compound
ND	Analyte NOT DETECTED at or above the reporting limit
MDL	Method Detection Limit
%REC	Percent Recovery
RPD	Relative Percent Difference

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP and the ISO 17025 programs, certification number L15-279-R1

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

22 March 2017

Ms. Ashley Hutchens
SCS Engineers - Long Beach
3900 Kilroy Airport Way, Suite 100
Long Beach, CA 90806-6816

H&P Project: SCS031617-L3
Client Project: 01216368.00 T4 / 9300 Hall Rd

Dear Ms. Ashley Hutchens:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 3/16/2017 -3/17/2017 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

SCS Engineers - Long Beach	Project: SCS031617-L3	
3900 Kilroy Airport Way, Suite 100	Project Number: 01216368.00 T4 / 9300 Hall Rd	Reported:
Long Beach, CA 90806-6816	Project Manager: Ms. Ashley Hutchens	22-Mar-17 11:26

Notes and Definitions

LCC	Leak Check Compound
ND	Analyte NOT DETECTED at or above the reporting limit
MDL	Method Detection Limit
%REC	Percent Recovery
RPD	Relative Percent Difference

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

PV Includes: ☒ Tubing ☒ Sand 40% ☒ Dry Bent 50%

Leak Check Compound
A cloth saturated with LCC is placed around tubing connections and probe seal. This is done for all samples unless otherwise noted.
