Completed Document Type:	Phase 1
Completed Date:	08/30/1995
Comments:	Pursuant to the MOU, DTSC has prepared a Phase I Environmental Assessment for the North County Health Services (NCHS). The subject properties are vacant, undeveloped lots owned by NCHS which are located in the city of San Marcos. No development of the lots is being proposed at this time. A Phase I Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

Target Property Map:	5641320 SAN MARCOS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

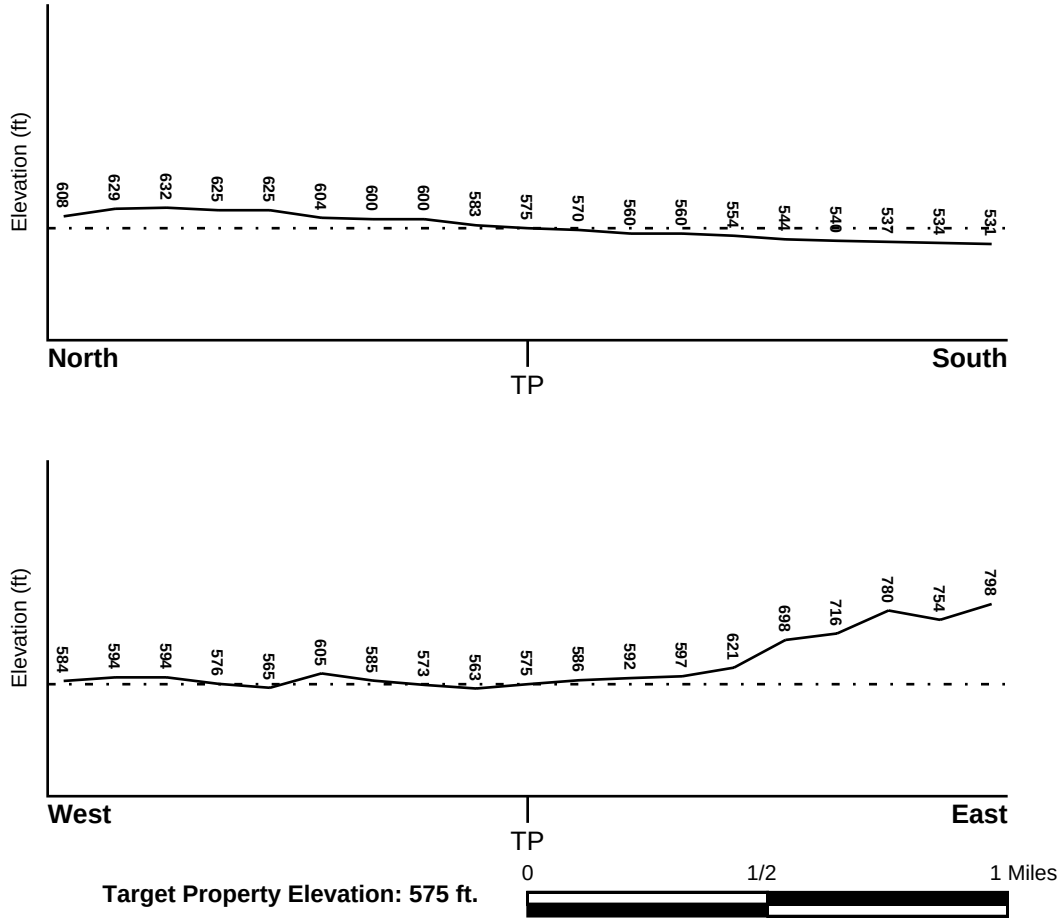
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
34	1/4 - 1/2 Mile SSW	Not Reported
B39	1/4 - 1/2 Mile West	SSE
51	1/4 - 1/2 Mile SE	S
S213	1/2 - 1 Mile SW	NE
S215	1/2 - 1 Mile SW	E
218	1/2 - 1 Mile SSE	Not Reported

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

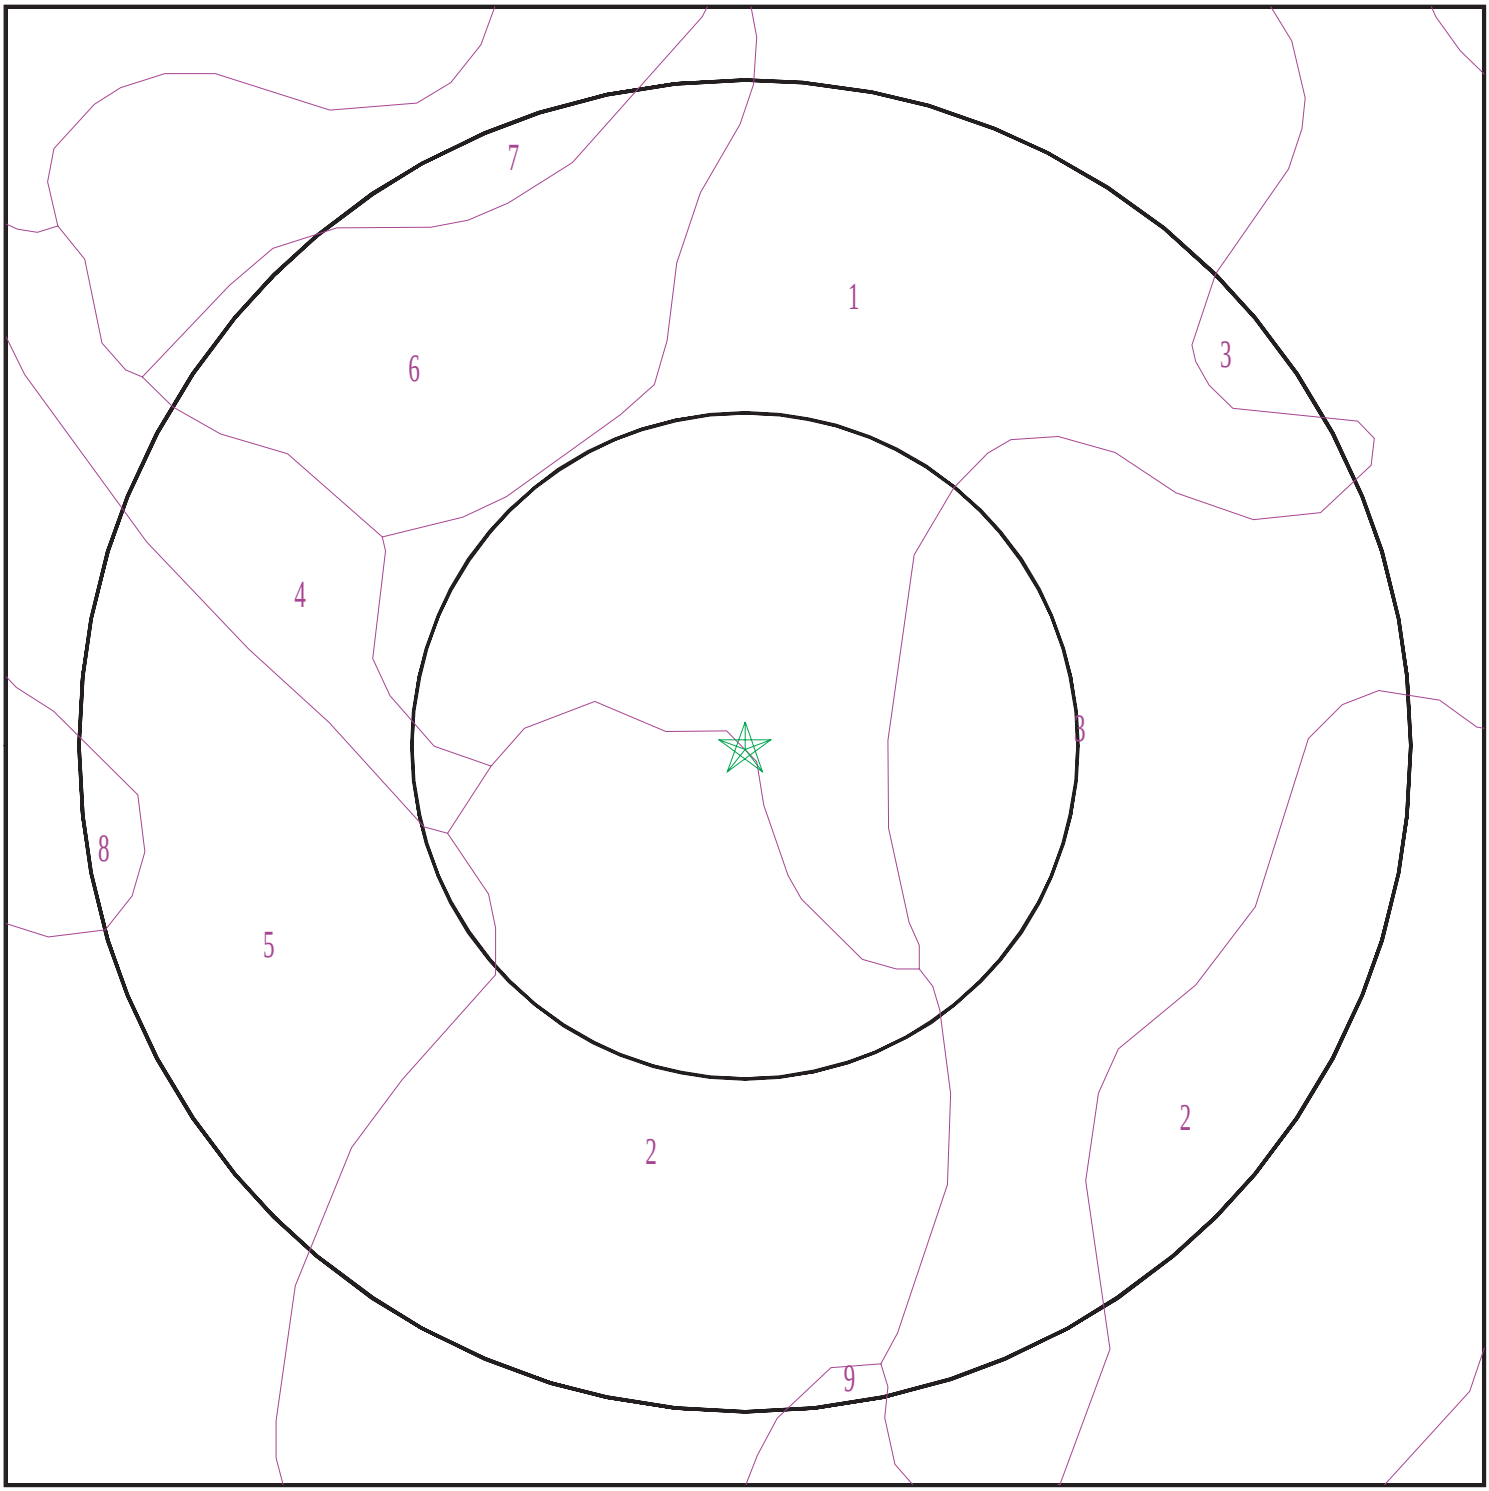
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Mesozoic
System:	Lower Jurassic and Upper Triassic
Series:	Lower Mesozoic
Code:	lMze *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HUERHUERO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
2	11 inches	55 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
3	55 inches	72 inches	stratified sand to sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

Soil Map ID: 2

Soil Component Name: PLACENTIA

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.9
2	12 inches	33 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.9
3	33 inches	62 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: FALLBROOK

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
2	5 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
3	11 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
4	27 inches	46 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
5	46 inches	51 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:

Soil Map ID: 4

Soil Component Name: ESCONDIDO

Soil Surface Texture: very fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 86 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:
2	7 inches	33 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: Min:	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Ken Zheng - Lab Director

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Jenny Jiang, Project Manager at 951.779.0310. You may also contact Ken Zheng, President at office@arlaboratories.com.

The data and information on this, and other accompanying documents, represent only the sample(s) analyzed and is rendered upon condition that it is not to be reproduced, wholly or in part, for advertising or other purposes without approval from the laboratory.

RE: Environmental Files:

APN#: 219-121-15-00 and
219-121-15-00

Dear Sir/Madam:

Hillmann Consulting, LLC is conducting an environmental investigation of the above referenced property. We would like to request any information your office has regarding this property such as environmental files (UST, groundwater, wells, etc.). If any records are located, we would like to obtain copies or schedule a file review. If no records are available, please contact me to confirm. Thank you for your assistance.

Sincerely,

Aaron Alvarez
Environmental Project Manager

PUBLIC RECORDS REQUEST FORM

ATTENTION REQUESTOR: To expedite your request for District records, please fill out this form completely, and identify specifically the type of records you are requesting. Please limit your request to one facility or one site address for each request form filed. Additional forms or pages can be used if requesting information for more than one facility or for records not identified on this form. Requests should reasonably describe identifiable records prepared, owned, used, or retained by the District. District Public Records staff is available to assist you in identifying those records in the District's possession. The District is not required by law to create a new record.

San Diego Air Pollution Control District
INSTRUCTIONS FOR REQUESTING RECORDS

1. In order to expedite your request, requests for records should be in writing. Requests will be processed in the order received. A form is available on the APCD's web page at http://www.sdapcd.org. Requests may be submitted by facsimile to (858) 586-2601, or by email to apcdpermits@sdcounty.ca.gov.

2. Requests must be for records prepared, owned, used, or retained by the District. Requests should be for clearly identifiable records. If necessary, the District will assist the requestor in making a request that describes reasonably identifiable records. Copies will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

    i. Facility Name, Address, or Identification Number;
    ii. Facility Application Number, or Permit to Operate Number; or
    iii. Facility Notice of Violation/Notice to Comply Number.

4. You will be notified in writing within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency.

4. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

5. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's trade secret process.

6. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

Direct costs of duplication are the following:

Paper copies: $.20 first page of each separate document plus $.05 per page for subsequent pages.

Scanned copies: $.20 first page of each separate document plus $.02 per page for subsequent pages, plus $10.00 for each CD.

Electronic copies (provided in an electronic format already maintained by the District) may be provided for free if sent electronically, or for the cost of each CD as specified above.

In addition, when records are requested in electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. [Gov. Code Sec. 6253.9(b)] The District will provide an invoice for charges due along with the copied records. These charges are due and payable upon receipt of the invoice and the copied records. Non-payment of invoices could result in a requirement that requests for records be pre-paid in person before releasing the requested documents.

If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records staff at **(858) 586-2600, Monday through Friday, 8:00 a.m. to 5:00 p.m. Our Fax number is (858) 586-2601. Our email address is apcdpermits@sdcounty.ca.gov.**

City of San Marcos

REQUEST FOR PUBLIC RECORDS

[ ]

Every person has the right to inspect and obtain a copy of identifiable public records not exempt from disclosure. The City will make every attempt to provide the record at the time of request. However, compilation or retrieval of documents not immediately accessible by staff will require a written request be submitted to the City Clerk Department for processing. The City may take up to ten (10) days to respond. The cost for copies are:

- **$.25/pg – 8 ½ x 11 (B/W)**
- **$.30/pg - 8 ½ X11 (Color)**
- **$.35/pg - 11 x 17**
- **$.25/pg - Document Imaging/Scanning**
- **$ 0.50/pg – Microfilm 8 ½ x 11 (B/W)**
- **$ 8.00/sheet – Oversized drawings 18 x 24**
- **$11.00/sheet – Oversized drawings larger than 18 x 24**

Copy requests exceeding a cost of $50.00 will require a 50% deposit prior to production of copies. Payment in full is required prior to release of copies.

Dear Mr. Krum:

RE: UNAUTHORIZED RELEASE #T1037/H02919-001
1329 W. MISSION ROAD., SAN MARCOS, CA 92069-1311

The site remediation information submitted to this agency by Nutech Enterprises, Inc. summarizing the site characterization and mitigation activities at the above referenced location has been reviewed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

This information has also been discussed with staff of the Regional Water Quality Control Board (RWQCB). Based on the information submitted and current requirements, the RWQCB concurs with the determination of this agency that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

Thank you for your efforts in resolving this matter. Please contact the Hazardous Materials Management Division, Pamela Villa Clay, at (619) 338-2497, if you require additional assistance.

Sincerely,

CHUCK PRYATEL, Assistant Chief
Environmental Health Services

DISPOSAL AND REMEDIATION

CAUSE AND TYPE OF RELEASE: UST (gasoline/diesel) Unauthorized Release
QTY OF SOIL/PRODUCT DISPOSED: N/A MANIFESTS PROVIDED? N/A
DISPOSAL LOCATION: N/A
CLEANUP LEVELS ESTABLISHED: 100 mg/kg TPH in soil; 1 µg/l benzene in water.

TYPE OF REMEDIATION USED AT SITE: Excavation and above-ground treatment of petroleum hydrocarbon-contaminated soil. Pump and disposal to sanitary sewer.

MAXIMUM CONCENTRATIONS REMAINING IN SOILS ON SITE:

HALOGENATED ORG.	BTXE	VOLATILE ORG.
	< detection limits	

SEMIVOLATILE ORG.	PESTICIDES & PCB's	8015/DHS - TPH
		5 mg/kg

ORGANIC LEAD	418.1 - TRPH	
< 0.1 mg/kg		

ADDITIONAL COMMENTS:

Case orignated on June 8, 1988 following observation of contamination (several holes in tank and stained/odiferous soils; water observed in excavation) during the removal of two underground storage tanks (2000 gallon diesel; 1000 gallon gasoline) under HMMD permit. A total of 980 cubic yards of conatminated soil was excavated, stockpiled, and treated in an above-ground bio-treatment cell. Treated soil was sampled and results (<10 mg/kg TPH; <det. limits for BEX; T: 0.11 and 0.17 µg/kg) were acceptable for use as backfill material (approval 2/91). Final confirmation samples for excavation were obtained May 1991. A total of five monitoring wells were installed (two wells, PM-2 and PM-3 were ordered by HMMD to be destroyed due to improper construction). Water samples from well PM-5 revealed elevated TPH and BTEX values. Groundwater was intermittently pumped from well PM-5 from approx. 8/90 to 6/91. Purge water and pumped water from PM-5 (approx. 248 gallons) were approved by Vallecitos Water District for discharge to the sanitary sewer system. The wells were monitored after pumping ceased on a quarterly-annual basis from December 1991 to September 1992 and laboratory results were less than detection limits (<0.5 µg/l) for BTEX compounds.

Site is currently a vacant dirt lot. Future property use will be light industrial.

Dear Responsible Parties:

UNAUTHORIZED RELEASE #H25233-001
SAN MARCOS GAS
1290 WEST MISSION ROAD, SAN MARCOS, CA

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code, and that no further action related to the petroleum releases at the site is required.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact Tony Sawyer, at (858) 505-6802, if you have questions regarding this matter.

Sincerely,

JACK MILLER, Director

Dear Mr. Kresky:

UNAUTHORIZED RELEASE H10646-004
EDCO DISPOSAL CORPORATION
224 S. LAS POSAS RD., SAN MARCOS, CA 92069

This letter confirms the completion of a site investigation and corrective action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tanks is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tanks site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code. Please contact Danny Martinez, at (619) 338-2456, if you have questions regarding this matter.

Sincerely,

GARY W. ERBECK, Director

Case Closure Summary
Leaking Underground Fuel Storage Tank Program

III. RELEASE AND SITE CHARACTERIZATION INFORMATION (Continued) H10646-004

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS	MAXIMUM	REMAINING
SOIL		
Gasoline	< 10 mg/kg	< 10 mg/kg
Diesel	= 11375 mg/kg	= 11375 mg/kg
Benzene	< 0.05 mg/kg	< 0.05 mg/kg
Toluene	< 0.05 mg/kg	< 0.05 mg/kg
Ethyl benzene	= 0.5 mg/kg	= 0.5 mg/kg
Xylene (individual isomers or total)	= 1.4 mg/kg	= 1.4 mg/kg
WATER		
Diesel	= 800000 µg/l	= 134000 µg/l
Benzene	= 5 µg/l	< 0.6 µg/l
Toluene	= 0.9 µg/l	= 0.9 µg/l
Ethyl benzene	= 90 µg/l	= 4.5 µg/l
Xylene (individual isomers or total)	= 156 µg/l	= 1 µg/l
Methyl-tert-butyl ether (MTBE)	= 570 µg/l	= 79 µg/l
tert-Butyl Alcohol (TBA)	= 270 µg/l	< 6.2 µg/l
tert-Amyl-methyl ether (TAME)	= 65 µg/l	= 1.1 µg/l
Napthalene	= 112 µg/l	= 16 µg/l

Comments:

This case was opened after analytical results for soil samples collected during a product piping/dispenser upgrade indicated diesel contamination. As part of the site assessment, 13 Geoprobe borings were advanced on the property. Laboratory analysis of these samples indicates that soil contamination is located in a 30 by 40 foot area near the westernmost dispensers at a depth between approximately 5 and 10feet below ground surface. The consultant estimated that approximately 100 cubic yards of diesel contaminated soil remain onsite with concentrations exceeding 1000 mg/kg.

Prior to installing permanent groundwater monitoring wells, five soil borings were advanced at locations surrounding the area of highest soil contamination. Temporary wells were constructed and groundwater samples were collected from all five locations. Upon intepreting the analytical data from these temporary wells, three permanent groundwater monitoring wells were installed.

Analytical groundwater data collected from the permanent wells show that groundwater is impacted by the diesel release. Liquid phase hydrocarbon (free product) is intermittently detected in the well nearest the source of the release. Free product removal has been ongoing since August, 2003, and approximately 67 ounces of free product have been removed to date. MTBE has been detected in one of the downgradient wells. However, the consultant states that this contaminant is not associated with the diesel release because this site has never stored gasoline in the USTs. The consultant concludes that the MTBE source may be surface infiltration from an unpaved wash rack area that is located adjacent to the monitoring well where the MTBE has been detected. MTBE analytical data from this well shows a decreasing trend, and the consultant estimates that it will take approximately 3.5 years for MTBE to reach maximum contaminant levels.

A sensitive receptor survey was performed for an area within approximately a half mile from the release. No water supply wells were detected within the area surveyed. Additionally, the local water purveyor (Vallecitos Water District) was contacted and they stated that there are no plans to use the groundwater in this area.

Because groundwater in this area is designated as having beneficial uses, a Corrective Action Plan was prepared. Natural attenuation was selected as the most cost effective cleanup alternative for this release. The selection of this cleanup alternative is based on the Site Conceptual Model (SCM) prepared by the consultant. In this SCM the consultant concludes that the free product is intermittently detected in the most upgradient well, and the gradient is toward the facility. The free product is not mobile as evidenced by non-detect diesel concentrations in the downgradient wells, there are no dissolved VOCs associated with the free product, and the groundwater is not being used in this area.

From the data available from the assessment conducted on this site the consultant concludes that there are no additional risks to humans or the environment associated with this unauthorized release. DEH concurs with the consultant's conclusions.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? NO - CONTAMINANT LEVELS EXCEED MCL'S, HOWEVER THESE LEVELS WILL BE MET WITHIN A REASONABLE TIME.

Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? NO - CONTAMINANT LEVELS EXCEED MCL'S, HOWEVER THESE LEVELS WILL BE MET WITHIN A REASONABLE TIME.

Does corrective action protect public health for current land use? YES

Case oversight completed based upon the following site use: INDUSTRIAL

Site Management Requirements:
ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

Case Closure Summary
Leaking Underground Fuel Storage Tank Program

Should corrective action be reviewed if land use changes? YES		
Monitoring Wells Decommissioned: NO	Number Decommissioned: 0	Number Retained: 3 ***
List Actions Taken: NOTICE OF REIMBURSEMENT / LOCAL		
List Enforcement Actions Rescinded: NONE

Re: Change of Address effective June 1, 2003

Dear Ms. Lopez:

This is to inform you that effective June 1, 2003, Hitachi Home Electronics (America), Inc. will be moving there office location to the following address:

900 Hitachi Way
Chula Vista, CA 91914-3556

Our main telephone number will be: (619) 591-5200, fax number (619) 591-5201. As outlined in the County requirements, we are hereby enclosing a revised copy of the Hazardous Waste Materials Emergency Response Plan for the new building.

Should you have any questions or concerns regarding the above, you can reach me at the above-referenced number.

Very truly yours,

Susan Carrillo, Assistant Manager

HAZARDOUS WASTE SOURCE REDUCTION AND MANAGEMENT REVIEW ACT OF 1989 (SB-14) SUMMARY PROGRESS REPORT (SPR) – REVIEW OF EXEMPTION CLAIMS

Dear Ms. Carrillo:

The California Department of Toxic Substance Control (DTSC) has received Information and/or a certificate signed by you or your representative indicating that Hitachi Home Electronics of America **is not subject to SB-14 SPR requirements.** However, DTSC's Hazardous Waste Tracking System indicates that your company generated in excess of the threshold quantity of applicable hazardous waste in 1998, and/or generated wastestreams that did not qualify for exemption under SB-14.

Please re-evaluate your determination and provide DTSC, within 60 days of the receipt of this letter, either of the following:

1. A Summary Progress Report as required by California Health and Safety Code, (Health & Safety Code) Section 25244.19(b)(10); or

2. Supporting data and/or other information to justify your exemption claim.

Your response should be sent to:

Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, California 90630
Attn: Mr. Nabil H. Yacoub
Senior Hazardous Substances Scientist

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption For a list of simple ways you can reduce demand and cut your energy costs, see our Web-site at www.dtsc.ca.gov.

Printed on Recycled Paper

To assist you in this determination, you may wish to review the guidance document: "Summary Progress Report for Complying with SB-14". This guidance document and other SB-14 general information can be obtained by calling DTSC's regional Public and Business Liaisons at (800) 72TOXIC, or through DTSC's website at: www.dtsc.ca.gov/PollutionPrevention/.

Failure to respond to this notice in a timely manner may result in DTSC taking further administrative enforcement action to obtain compliance with SB-14 requirements.

If you have any questions regarding SB-14 compliance, or would like to request a copy of your company's records from DTSC's Hazardous Waste Tracking System, please contact Mr. Nabil H. Yacoub at (714) 484-5389. Thank you for your cooperation in this matter.

Sincerely,

for Stephen W. Lavinger, Chief
Southern California Branch
State Regulatory Programs Division

CITY/ZIP SAN DIEGO 92154

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

FEB 14 2001

ROUTINE INSPECTION

HEALTH PERMIT: on site and valid. Expires 11/30/01

TRAINING RECORDS: On site and reviewed. Training is well documented and held at least once a year.

OBSERVATION: There was no Contingency Plan or Business Plan available for review.
CORRECTIVE ACTION: Provide an Emergency Contingency Plan or Business Plan to HMD and keep a copy on site for review.

REMARKS: No manufacturing done here. Only Haz Waste observed at this time is approx 10 TV (cathode ray) tubes - last pick up 3/29/00. Haz. Waste Hauler changed to Safety Kleen for these CRT's.

BUSINESS ADDRESS: 1855 DORNOCH CT

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- [ ] Health Permit not obtained SDCC 68.905 — V0108 W____
- [ ] No EPA Identification Number 66262.12 — V0105 W____
- [ ] Waste Manifests/Receipts not on-site for 3 years 66262.40 — V0118 W____
- [ ] Manifest not properly completed 66262.23 — V0120 W____
- [ ] Manifest copy not sent to DTSC 66262.23 — V0115 W____
- [ ] TSDF signed-manifest not on-site 66262.40 — V0121 W____
- [ ] Biennial report not sent to DTSC 66262.41 — V0122 W____
- [ ] LDR Documentation not available 66268.7 — V0123 W____
- [ ] Exception Rpt. not filed with DTSC 66262.42 — V0116 W____
- [ ] Operating TSDF without authorization 25201 — V0124 W____

STORAGE AND HANDLING

- [ ] Waste stored longer than 90, 180, or 270 days 66262.34 — V0221 W____
- [ ] Failure to clean up hazwaste off of floor surface 66262.10b — V0313 W____
- [ ] Waste container missing/improperly labeled 66262.34 — V0222 W____
- [ ] Haz Materials not properly labeled 25124 — V0223 W____
- [ ] Waste container not kept closed 66265.173 — V0202 W____
- [ ] Waste container in poor condition 66265.171 — V0205 W____
- [ ] Waste container(s) not properly managed 66265.173 — V0210 W____
- [ ] Damaged container not repackaged 66265.171 — V0226 W____
- [ ] Container incompatible with waste 66265.172 — V0207 W____
- [ ] Incompatibles in the same container 66265.177 — V0224 W____
- [ ] Incompatibles not stored separately 66265.177 — V0213 W____
- [ ] Ignitible Waste less than 50 feet 66265.176 — V0214 W____
- [ ] Ignitible Waste not grounded 66265.31 — V0215 W____
- [ ] Storage area not inspected weekly 66265.174 — V0216 W____

DISPOSAL AND TRANSPORTATION

- [ ] Unauth. disposal of waste to _____ 25189.5 — V0313 W____
- [ ] Waste determination not made 66262.11 — V0319 W____
- [ ] Unlawful transport of haz. waste 25163 — V0315 W____
- [ ] Waste transported without manifest 66262.20 — V0316 W____
- [ ] Extremely Haz Waste Permit not obtained 25205.7 — V0317 W____

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- [ ] Training records unavailable 66265.16 — V0405 W____
- [ ] Training program not adequate 66265.16 — V0406 W____
- [ ] Facility not designed to minimize release 66265.31 — V0501 W____
- [ ] Spill control equip not available 66265.32 — V0508 W____
- [ ] Aisle space is obstructed 66265.35 — V0509 W____
- [X] Contingency plan not prepared and/or on file 66265.51, 66265.53 — V0609 W✓

MISCELLANEOUS

- [ ] Waste oil contaminated 25250.7 — V0225 W____
- [ ] Used oil filters improperly managed 66266.130 — V0701 W____
- [ ] Damaged batteries improperly managed 66266.81 — V0702 W____
- [ ] Facility has failed to notify local CUPA and DTSC of onsite treatment of hazardous waste (tiered permitting) — V0125 W____
- [ ] Onsite treatment of waste without authorization 25201 — V0125 W____

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

- [ ] Health Permit not obtained 68.1005, 25284 — V3002 T____
- [ ] Repair/modify/close permit not obtained 68.1005 — V3007 T____
- [ ] UST Permit Application not submitted 25286(a) — V3010 T____
- [ ] Operating permit conditions violated 2712 — V3011 T____
- [ ] Failed to notify HMMD of changes 25284 — V3012 T____
- [ ] No owner/operator agreement 25284 — V3005 T____
- [ ] No records of financial coverage 25292.2 — V3013 T____
- [ ] No maint/monit/calib records available 2712(b), 2641(j) — V3001 T____
- [ ] Monitoring Equip. not tested annually 2630, 2641 — V3003 T____

MONITORING REQUIREMENTS (SINGLE WALL)

- [ ] Leak Detection Method does not meet performance standards 2643 — V3014 T____
- [ ] Integrity test not conducted 25292 — V3015 T____
- [ ] Copy of tank test not submitted to HMMD within 30 days 2643 — V3016 T____
- [ ] Manual tank gauging (<2000 gal) 2645 not done properly — V3017 T____
- [ ] Reconciliation not done properly 2646 — V3018 T____
- [ ] Reconciliation not approved for facility 2646 — V3019 T____
- [ ] Dispenser meter(s) not calib annually 2646 — V3020 T____
- [ ] Improper liquid measurements 2646 — V3021 T____
- [ ] Stick in poor condition 2646 — V3022 T____
- [ ] Improper monthly reconciliation 2646 — V3023 T____
- [ ] Failed to report excessive variation 2646 — V3024 T____
- [ ] Pressurized Product Piping Leak Device not tested annually 25292 — V3025 T____
- [ ] No written monitoring procedure 2641 — V3027 T____
- [ ] No written emergency response plan 2641 — V3027 T____
- [ ] SIR reporting incorrectly done 2646.1 — V3004 T____

MONITORING REQUIREMENTS (DOUBLE WALL)

- [ ] Monitoring system not functional 2632 — V3026 T____
- [ ] No written monitoring procedure 2632 — V3027 T____
- [ ] Written emergency response plan not available 2632 — V3028 T____
- [ ] Spill/Overfill equip. not maintained or installed 2635 — V3029 T____

RELEASE REPORTING

- [ ] Failure to report an unauthorized release 25295 — V3009 T____
- [ ] Release record log not available 2651, 2650 — V3030 T____
- [ ] No leak report/investigation/action 2652 — V3031 T____

CLOSURE

- [ ] Temporary closure req. not completed 2671 — V3006 T____
- [ ] Unused tank not properly closed 25298 — V3032 T____
- [ ] Permanent closure req. not completed 2672 — V3033 T____
- [ ] Failed to apply for temporary closure 25298 — V3008 T____

III HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS:

RECORD KEEPING

- [ ] Health Permit not obtained SDCC 68.1105 — V2001 W____
- [X] Business Plan not established/implemented 25503.5 — V2002 W____
- [ ] Business Plan not submitted to HMMD 25505 — V2007 W____
- [ ] Business Plan not amended 25505 — V2003 W____
- [ ] Personnel Training Records not available 19 CCR 2732 — V2302 W____

RELEASE REPORTING

- [ ] Failure to report a release/threatened release 25507 — V2008 W____

BUSINESS PLAN ELEMENTS

- [ ] Emergency Response Plan inadequate 25504 — V2201 W____
- [ ] Emergency Contacts not provided/current 25509 — V2203 W____
- [ ] Personnel Training Program inadequate 25504 — V2301 W____
- [ ] Inventory is incomplete 25504 — V2005 W____
- [ ] Site Map is not sufficient 25509 — V2202 W____
- [ ] Acutely Haz. Mat. not registered 25533 — V2009 W____

ALL VIOLATIONS MUST BE CORRECTED. PLEASE CALL (619) 338-2222 OR YOUR INSPECTOR IF YOU HAVE ANY QUESTIONS.

Case Closure Summary
Leaking Underground Fuel Storage Tank Program

I. AGENCY INFORMATION

DATE: July 12, 2013

Agency Name: County of San Diego, Environmental Health, SAM	Address: P.O. Box 129261
City/State/Zip: San Diego, CA 92112-9261	Phone: (858) 505-6802
Responsible Staff Person: Tony V. Sawyer	Title: Hydrogeologist

II. CASE INFORMATION

Site Facility Name: San Marcos Gas		
Site Facility Address: 1290 West Mission Road, San Marcos, CA 92069		
RB LUSTIS Case No: N/A	Local Case No: H25233-001	LOP Case No: N/A
URF Filing Date: 4/15/03	SWEEPS No: N/A	

Responsible Parties	Address	Phone Number
Brad Napier	Las Posas Partners, 5505 Cancha De Golf, Rancho Santa Fe, CA 92091	
Albert and Samy Colucci	1255 East Vista Way, Vista, CA 92084	

Tank No.	Size in Gal.	Contents	Status	Date
N/A – piping upgrade only				

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause of Release: Leak at fitting	Substance Released: Gasoline	
Site Characterization complete? Yes	Date Approved By Oversight Agency: 1-20-12	
Monitoring Wells Installed? No	Number: 0	Proper Screened Interval? N/A
Highest GW Depth B.G. Surface: Unknown	Lowest Depth:Unknown	Flow Direction: Unknown

Most Sensitive Current Use: Existing Beneficial Groundwater Use: MUN, IND, AGR
Existing Beneficial Surface Water Use: AGR, REC1, REC2, WARM, WILD, and Potential MUN

Are Drinking Water Wells Affected? No	Aquifer Name: Richland HAS, Carlsbad Hydrologic Unit 904.52
Is Surface Water Affected? No	Nearest SW name: San Marcos Creek (intermittent, >5000 feet south of site)
Off-Site Beneficial Use Impacts (addresses/locations): None	
Report(s) on file? Yes	Where is Report(s) Filed? County of San Diego, Environmental Health

III. RELEASE AND SITE CHARACTERIZATION INFORMATION (Continued)

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal)	Date
Soil (over-excavation)	Unknown	Disposed at landfill in San Diego, CA	3/17/03
Piping	250 feet	Disposed at landfill in San Diego, CA	3/17/03

Case Closure Summary
Leaking Underground Fuel Storage Tank Program

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS	MAXIMUM	REMAINING
SOIL (mg/kg)		
Total Petroleum Hydrocarbons (Gasoline)	125	ND(<0.2)
Total Petroleum Hydrocarbons (Diesel)	24.9	24.9
Benzene	ND(<0.1)	ND(<0.001)
Ethylbenzene	0.5	0.005
Toluene	0.31	ND(<0.001)
Total Xylenes (o, p & x isomers)	3.5	0.026
Methyl-tert-butyl ether (MTBE)	0.47	0.009
Tert-butyl alcohol (TBA)	<0.25	0.067

Comments:
This case was opened following the discovery of a potential unauthorized release from the UST piping at the time of piping upgrade. Analysis of soil samples collected at the upgrade revealed TPH concentrations of up to 125 mg/kg in the soil. Minor over-excavation work was performed during the piping upgrade operation. A subsequent phase of site assessment found that the soil contamination was very limited in extent and the majority of it was removed by over-excavating in the piping trench area. Groundwater underlies the site at a depth of 20 or more feet.

Based upon the available information, DEH concurs with the consultant's conclusion that the minor amount of remaining soil contamination underlying this active gasoline station does not present a threat to public health and the environment and that it is appropriate to close this case.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes. Contaminant concentrations in the soil do not present a potential threat to groundwater.

Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes. Contaminant concentrations in the soil do not present a potential threat to groundwater.

Does corrective action protect public health for current land use? Yes
Case oversight completed based upon the following site use: Commercial – retail facility

Site Management Requirements:
Any Contaminated Soil Excavated As Part Of Subsurface Construction Work Must Be Managed In Accordance With The Legal Requirements At That Time.

Should corrective action be reviewed if land use changes? Yes

Monitoring Wells Decommissioned: N/A	Number Decommissioned: N/A	Number Retained: N/A

List Actions Taken: Notice Of Reimbursement/Local

List Enforcement Actions Rescinded: NONE

APPENDIX G

PROJECT PERSONNEL QUALIFICATIONS

HILLMANN
CONSULTING

Shilpa Sunil

Environmental
Project Manager

EDUCATION:

M.S. Environmental Engineering
University of California, Irvine

B.S. Environmental Engineering
University of Mysore (SJCE), Mysore, India

CERTIFICATIONS:

OSHA/ 10-hr Certification

CEQA Certification

YEARS OF EXPERIENCE:

With Hillmann: 1 years

Total: 9 years

PROFESSIONAL EXPERIENCE:

Ms. Sunil is an Environmental Professional with 9 years of experience in Environmental Engineering. Ms. Sunil is experienced in supporting several areas of Hillmann's practice including coordination of projects, project scope creation, investigatory projects, and corrective plan implementation.

As an Environmental Project Manager, Ms. Sunil has experience writing reports for site remediation for commercial property owners and preparing respective groundwater monitoring reports. She also writes Phase I and Phase II Environmental Site Assessments and Investigation reports as well as Supplemental Site Investigation Reports. She has experience working in a variety of buildings including multifamily residential properties, commercial office buildings, retail shopping centers, gasoline service stations, hotels, dry cleaning plants, auto repair shops, industrial buildings, aerospace manufacturers, plating facilities, and various manufacturing operations.

Representative experience includes:

Environmental Engineer, John L. Hunter and Associates, Inc: From 2015 to 2017, Ms. Sunil worked as an Environmental Engineer for John L. Hunter and Associates. Her responsibilities included reviewing Water Quality Management Plans, grading & drainage plans and conducting site verification inspections. She reviewed Standard Urban Storm Water Mitigation Plans; utilized SWRCB SMARTS database, assisted in Industrial Waste Plan review. She performed detailed review of grading plans, design specifications, hydro modifications analysis, and Storm Water Best Management Practice (BMP) calculations. She assisted with annual report preparation as part of NPDES permit requirements. Additionally, Ms. Sunil was responsible for reviewing work of private Professional Engineers for compliance with City standards and she assisted in determining engineering requirements for new developments.

Engineering Tech II, Orange County Public Works- OC Engineering: From July 2013 to December 2014, Ms. Sunil worked as an Engineer for Orange County Public Works. In this position, she reviewed permits requests, provided support of capital improvement and maintenance projects, and integrated environmental values into capital improvement projects by verifying the implementation of the federal National Environmental Policy Act (NEPA) and the California Environmental Quality Act (CEQA).

Staff Aid II, Orange County Public Works- OC Road, Capital Projects: From July 2012- July 2013, Ms. Sunil served as a Staff Aid for Orange County. In this position, she was responsible for the preparation of Water Quality Management Plans and Micro Station Drafting. She provided detailed review of grading plans, design specifications, hydro modification analysis, and Storm Water Best Management Practice Calculations. She assisted with annual report preparation as part of NPDES permit requirements.

HILLMANN
CONSULTING

Staff Aid II, Orange County Road, Traffic Engineering: From March 2010 to July 2012, Ms. Sunil was a Staff Aid for the Orange County Road and Traffic Engineering team. She performed traffic investigation, assisted the traffic committee and aided in work order preparation. She analyzed traffic flows, parking issues, and intersection capacities. Ms. Sunil provided written and verbal responses to residents of unincorporated Orange County.

Assistant Engineer, RBF Consulting, Irvine, CA: From August 2007 to January 2010, Ms. Sunil was an Assistant Engineer at RBF Consulting where she conducted comprehensive evaluations of watersheds including National Pollution Discharge Elimination Systems (NPDES) compliance, incorporated BMPs, assisted public and private sector clients with NPDES compliance services, and prepared and reviewed Storm Water Pollution Prevention Plans and Water Quality Management Plans.

HILLMANN
CONSULTING

J. Ryan Terwilliger

Operational Manager, West Coast

EDUCATION:

B.S. Environmental Science, University of Southern California, Los Angeles, CA

CERTIFICATION:

Cal-OSHA Certified Asbestos Consultant
CDPH Accredited Lead Inspector/Assessor/ Project Monitor

CA Certified Site Surveillance Technician

OSHA 40 - Hr HAZWOPER

YEARS OF EXPERIENCE:

With Hillmann: 4 years

Total: 8 years

PROFESSIONAL EXPERIENCE:

Mr. Terwilliger is responsible for business operations, fiscal management and field staff management for Hillmann's California Office. He also performs asbestos surveys and investigations to identify asbestos and lead materials associated with occupational hazards. He supervises work practices and controls in accordance with job specifications, current EPA, OSHA and State Regulations for Asbestos remediation projects in commercial, industrial and multi-family residential buildings. Mr. Terwilliger performs IAQ, mold and moisture investigations in commercial, industrial and residential facilities nationwide. He also performs awareness training for asbestos, lead and microbial agents. Mr. Terwilliger provides litigation support consultation.

Representative Experience Includes:

Tishman Speyer Properties, Various locations: Hillmann has provided the complete environmental program for Tishman Speyer's properties since 1987. Our services include environmental health and safety, industrial hygiene, phase I environmental site assessments, asbestos surveys, air monitoring, bid administration, O&M programs and indoor air quality programs on various commercial, industrial and multi-family residential properties. Mr. Terwilliger is an Environmental Scientist on this contract, conducting on-site environmental services including phase I site assessments and NPDES water quality testing.

Westfield – Environmental Program, Various locations: Since 2000, Hillmann has been providing an environmental program encompassing environmental health and safety, Phase I environmental site assessments, asbestos and lead surveys, air monitoring, bid administration and O&M programs, industrial hygiene and indoor air quality programs, and hazardous materials assessments on their mall properties throughout the county. Mr. Terwilliger is an Environmental Scientist on this contract performing industrial hygiene services that include indoor air quality monitoring, Phase I environmental site assessments, asbestos and lead surveys.

Brookfield Office Properties, Various sites, CA: Hillmann has been providing hazardous materials surveys, development abatement specifications, and managing the oversight activities during the abatement at various Brookfield owned sites throughout California. Mr. Terwilliger functions as a Project Manager for this contract.

California Department of Transportation, Central Valley and Northern CA: Hillmann has been performing asbestos and Lead-based Paint Surveys for the California Department of Transportation. Performed comprehensive asbestos containing materials and lead-based paint surveys of residential and commercial buildings that were slated for demolition and generated report of findings in order to aid the Department of Transportation (DOT) in facilitating the road improvement programs and building renovations throughout the

HILLMANN CONSULTING

Central Valley area. Also during the abatement of asbestos from DOT owned buildings, provided contractor oversight and air monitoring services for regulatory compliance.

Verizon, Various Sites, CA. Hillmann conducted hazardous materials surveys, development abatement specifications, and project monitoring during abatement at various Verizon owned sites throughout California. Mr. Terwilliger functioned as the Project Manager.

Public Storage, Los Angeles, CA: Hillman preformed comprehensive asbestos, lead-based paint and universal waste materials survey of commercial and industrial buildings throughout Southern California. Hazardous materials surveys were conducted prior to renovation for the storage units. Mr. Terwilliger developed abatement specifications and managed the abatement activities during the renovations of the buildings. He functioned as the Project Manager on this contract.

CHAPTER 1 EXECUTIVE SUMMARY

1.1 Introduction

Gran Vista project is located at the northwest intersection of North Las Posas Road and West Mission Road in the City of San Marcos, California (See the Vicinity Map below). The *Gran Vista* proposes 120 three story, townhome units (Occupancy: R3 Townhome/U; Construction Type V-B) with a maximum permitted density of 15.7 units per acre. The site will also include common recreational spaces, underground vaults, sidewalks, access road and private driveways.

The project is bound by a drainage channel and single-family neighborhoods to the north and west, North Las Posas Road to the east, and West Mission Road and a commercial parcel to the south. The commercial parcel has been developed with a single-story CVS building and associated pharmacy drive through and surface parking. *The project* and the CVS parcel share two common access points: (1) a driveway at the signalized intersection of North Las Posas Road and Palm Road and (2) a driveway on West Mission Road that allow left-in and right-in/right-out traffic movements. Both driveways have been improved with enhanced paving and landscaping.

This drainage report will quantify the proposed runoff for the 100-year frequency storm event and provide calculations demonstrating that the post-developed flows will not exceed the capacity of the existing downstream drainage facilities. Proposed facilities include storm drain, curb inlets, catch basins, water quality/ flow control (hydromodification) and detention underground vaults. The proposed two Vaults for

Gran Vista project will not only act as peak flow attenuation but also address water quality and hydromodification concerns. A separate report has been prepared which details the proposed treatment and flow control features for the *Gran Vista* project. Refer to the *Stormwater Quality Management Plan (SWQMP) for Gran Vista* prepared by Hunsaker & Associates San Diego, Inc. (August 2021).

Per FEMA Map Panel 06073C0789H effective date 05/16/2012, the project site is mostly located outside any FEMA 100-year floodplain zone. However, a small portion of slope grading, an underground vault and connecting to an existing storm drain southwest of the site are proposed within Zone X, which is defined as areas determined to be outside the 0.2% annual chance floodplain. In addition, a very minimal slope grading is proposed southwest of the site, along the northeast edge of Mission Rd, within Zone AE which is defined as areas that have a 1% probability of flooding every year. The Base flood elevation along the northern edge of Mission Rd (which is approximately at 565.63 ft per the Las Posas LOMR 12-09-1988P eff 2013), is actually not reaching to the top of the regraded slope 570 ft. The minimal slope grading and filling won't have any impact on the WSE. the LOMR or CLOMR will be required for the project. However, a HEC-RAS Hydraulic analysis is provided for the portion where filling is proposed within Zone AE to compare between the Base Flood Elevation in the existing and proposed conditions (for the small portion south of the site along the Mission Road edge. Please see Chapter 6 for the HEC-RAS analysis and results.

Sections 401 and 404 of the Clean Water Act are not applicable to the site since the property does not have waters of the U.S. onsite and since the project does not intend to discharge dredged or filled material into waters of the United States.

As mentioned above, water quality study has separately been prepared for this site to address potential stormwater pollutants, site design, and proposed structural BMPs for water quality and hydromodification compliance. Refer to the *Stormwater Quality Management Plan (SWQMP) for Gran Vista* prepared by Hunsaker & Associates San Diego, Inc. (August 2021).

Per County of San Diego drainage criteria, the Modified Rational Method can be used to determine peak design flowrates when the contributing drainage area is less than 1.0 square mile. Since the total watershed area discharging from the site is less than 1.0 square mile, the AES-2015 computer software was used to model the runoff response per the Modified Rational Method. Methodology used for the computation of design rainfall events, runoff coefficients, and rainfall intensity values are consistent with criteria set forth in the "County of San Diego 2003 Hydrology Manual." A more detailed explanation of methodology used for this analysis is listed in Chapter 2 of this report

1.2 Summary of Existing Conditions

In existing condition, the 7.6-ac Gran Vista project site consists of two-mass graded pads. The pad located in the northerly portion of the planning is elevated above North Las Posas Road and is higher than the remaining portion of the planning area. The

lower pad, located in the southerly portion of the site, is elevated above West Mission Road. Vegetation on the site is limited to grasses and small shrubs. A few trees are located along the periphery of the site, adjacent to the channel and North Las Posas Road.

The runoff from the project site, in its existing conditions, flows from the north and the east to the southwest corner where it is routed via an existing 12" CMP riser to a 12" existing corrugated metal pipe. After comingling with the total flow from the commercial parcel south of the project, total flow is conveyed to the storm channel west via 12" pipe. The storm channel ultimately discharges into Posas Creek south. Per the Hydrology & Hydraulic Study for CVS Pharmacy prepared by Excel Engineering and dated February 9, 2009, the 100 year peak flow from the 8.474 acres is 6.75 cfs.

However, the site in its pre-development conditions consists approximately of 8.68 acres of watershed area with a total flow of 11.09 cfs at the discharge point into the storm channel west of the site (i.e. 12" storm drain). Please refer to the Hydrology & Hydraulic Study for CVS Pharmacy prepared by Excel Engineering and dated February 9, 2009 in Chapter 3

TABLE 1 - Summary of Pre-development Q100

Attachment*	Node Number on Exhibit	Discharge Location	Drainage Area (ac)	Tc (min)	100-Year Peak Flow (cfs)
H Pre-development	3	southwest corner	8.681	19	11.09

* Per the Hydrology & Hydraulic Study for CVS Pharmacy prepared by Excel Engineering and dated February 9, 2009

P6 = 3.3 inch
Runoff factor C = 0.35 (assuming Soil Type D for the entire site)

1.3 Summary of Developed Conditions

The post-developed condition of the site will consist of 120 three story, townhome units (Occupancy: R3 Townhome/U; Construction Type V-B) with a maximum permitted density of 15.7 units per acre, streets and associated utilities including a storm drain system necessary to convey site runoff through the project area. In addition, two underground vaults located southwest and southeast of the site will be constructed for hydromodification, and peak flow detention purposes. The vaults will be used as upstream storage units to store the 1.5 DCV and release in an appropriate flow rate to the volume based modular wetland units downstream of the vaults to address water quality requirements. One flow based modular wetland was proposed south of the site to replace the sand filter and address the water quality requirement for the Existing Drive. For additional discussion and sizing calculations for the treatment unit, please

reference the *Stormwater Quality Management Plan (SWQMP) for Gran Vista* prepared by Hunsaker & Associates San Diego, Inc. (August 2021).

The stormwater runoff will be collected by inlets, and routed towards the vaults. The vaults will come with an internal riser which will have a low orifice that has been sized to drawdown the water quality volume (1.5 DCV) in 36 hrs, and an internal weir to separate the water quality flows form the rest of the HMP and peak flows.
The rest of the riser's orifices have been sized to moderate discharge flows to comply with flow-control (HMP) requirements and at the same time allow peak flows to exit the vault in a rate that doesn't exceed the capacity of the existing downstream drainage facilities.

Runoff coefficients of 0.71 has been used based on High Density Residential Land use of 24.0 DU\A or less (the site's maximum permitted density is 15.7 units per acre), and soil type D was assumed for the entire site for simplicity and being more conservative.

Per the County of San Diego rainfall isopluvial maps, the design 100-year rainfall depth for the project site is 3.3 inch.

The Proposed Condition Hydrology Map (Exhibit 1) in Chapter 7 shows the developed site with its subareas to each inlet, or catch basin location. Table-2 below summarizes the Q100 Unmitigated flow at the POC.

TABLE 2 - Summary of Unmitigated Developed Flows

Exhibit	Node Number on Exhibit	Discharge Location	Drainage Area (ac)	Tc (min)	100-Year Peak Flow (cfs)
1	108	Vault 2 east	4.0	10.86	15.12
1	204	Vault 1 West	1.9	9.07	8.07
1	1	Discharge into storm channel at southwest corner of the site	8.3	11.65	24.58

Due to the increased flow associated with the development of *Gran Vista*, peak flow attenuation will be achieved by the proposed vaults. The risers within the vaults will be sized and include orifices along their height necessary to achieve outlet flow less than the pre-development flow shown on Table 1 above. The resultant discharge at Node 1 will continue downstream and confluence with Posas Creek and then to Lake San Marcos. Since this project is subject to comply with hydromodification requirements, the

design of all vaults have been coordinated with those calculations which are part of the *SWQMP for Gran Vista*.

.

Table-3 below summarizes the Q100 Mitigated flow at Node 1.

TABLE 3 - Summary of Mitigated Developed Flows

Exhibit	Node Number on Exhibit	Discharge Location	Drainage Area (ac)	Tc (min)	100-Year Peak Flow (cfs)
1	108	Vault 2 east	4.0	18.6	6.68
1	204	Vault 1 West	1.9	17.07	2.94
1	1	Discharge into storm channel at southwest corner of the site	8.3	19.83	11.18

1.4 Summary of Results

Conveyance of the Q100 runoff flows through the Gran Vista site required storm drain system to route flows to the underground storage vaults and MWS units to address water quality, hydromodification and peak flow attenuation. The 12”pipe at the discharge location will be replaced with a 24” pipe 9see chapter 6 for the capacity calculations for the proposed 24’ pipe at the discharge location).

Design for the storm drain system and hydraulic calculations will be conducted as part of the final engineering drainage study.

Two permanent detention underground vaults were included in the design of the site for hydromodification, peak flow attenuation, and to provide the required storage for the water quality design captured volume. The two vaults and two Modular Wetland units address the water quality requirements. Per the hydrologic and detention analysis conducted as part of this study, the detention analysis for all vaults is included in Chapter 5 of this report. The table below summarizes the flow reductions at the discharge location.

The flow from the site is attenuated to make sure that the post-developed flows will not exceed the capacity of the existing downstream drainage facilities (post development flows compared to the pre-development flows at the point of compliance southeast corner of the project (POC-1/ Node 1). See table 4 below

TABLE 4 – Pre-development Condition vs. Post-development Condition

Discharge Location	Pre-development Condition Area (ac)	Post-development Condition Area (ac)	Pre-development: 100-Year Peak Flow (cfs)	Post-development: 100-Year Peak Flow (cfs)	Q100 Flow Difference (cfs)
southeast corner	8.681	8.3	11.09	11.18	0.09

Conclusion

The proposed development of *Gran Vista* can be roughly graded and improved with storm drain to accommodate the ultimate expected flows from development. In addition, with the proposed drainage facilities such as curb inlets, storm drain, water quality, flow control and detention vaults, runoff can be mitigated to accepted San Diego County standards.

The proposed project will not substantially alter the existing drainage pattern of the site. There will be a slight increase in the peak discharge from the site. The increase is negligible, at 0.8%, and will not impact downstream properties or drainage facilities.

CHAPTER 2
METHODOLOGY

2-1 Modified Rational Method Hydrologic Analysis

Computer Software Package – AES-2015

Design Storm - 100- year return interval

Land Use – High Density Residential

Soil Type – Per the NRCS Web Soil Survey, the site soil consists of Hydrologic soil group C and D. For simplicity and to be more conservative, Group D was assumed for the entire Site. Group D soils have very slow infiltration rates when thoroughly wetted. Consisting chiefly of clay soils with a high swelling potential, soils with a high permanent water table, soils with clay pan or clay layer at or near the surface, and shallow soils over nearly impervious materials, Group D soils have a very slow rate of water transmission.

Runoff Coefficient - In accordance with the County of San Diego standards, runoff coefficients were based on land use, and Soil Type per San Diego County Hydrology Manual.
For proposed conditions, Runoff coefficients of 0.71 has been used based on High Density Residential Land use of 24.0 DU\A or less (the site's maximum permitted density is 15.7 units per acre)

Rainfall Intensity- The rainfall intensity is determined per the San Diego County Hydrology Manual based on 6-hour precipitation amounts and calculated time of concentrations. Six-hour precipitations are taken from the San Diego County Hydrology Manual isopluvials. P6=3.3 inch

Method of Analysis – The Rational Method is the most widely used hydrologic model for estimating peak runoff rates. Applied to small urban and semi-urban areas with drainage areas less than 1.0 square miles, the Rational Method relates storm rainfall intensity, a runoff coefficient, and drainage area to peak runoff rate. This relationship is expressed by the equation:

Q = CIA, where:

- Q = The peak runoff rate in cubic feet per second at the point of analysis.
- C = A runoff coefficient representing the area - averaged ratio of runoff to rainfall intensity.
- I = The time-averaged rainfall intensity in inches per hour corresponding to the time of concentration.
- A = The drainage basin area in acres.

To perform a node-link study, the total watershed area is divided into subareas which discharge at designated nodes.

The procedure for the subarea summation model is as follows:

(1) Subdivide the watershed into subareas with the initial subarea being less than 10 acres in size (generally 1 lot will do), and subsequent subareas gradually increasing in size. Assign upstream and downstream nodal numbers to each subarea to correlate calculations to the watershed map.

(2) Estimate an initial T_c by using the appropriate nomograph or overland flow velocity estimation.

(3) Using the initial T_c, determine the corresponding values of I. Then Q = CIA.

(4) Using Q, estimate the travel time between this node and the next by Manning's equation as applied to the particular channel or conduit linking the two nodes. Then, repeat the calculation for Q based on the revised intensity (which is a function of the revised time of concentration)

The nodes are joined together by links, which may be street gutter flows, drainage swales, drainage ditches, pipe flow, or various channel flows. The AES-2003 computer subarea menu is as follows:

SUBAREA HYDROLOGIC PROCESS

1. Confluence analysis at node.
2. Initial subarea analysis (including time of concentration calculation).
3. Pipeflow travel time (computer estimated).
4. Pipeflow travel time (user specified).
5. Trapezoidal channel travel time.
6. Street flow analysis through subarea.
7. User - specified information at node.
8. Addition of subarea runoff to main line.
9. V-gutter flow through area.
10. Copy main stream data to memory bank
11. Confluence main stream data with a memory bank
12. Clear a memory bank

At the confluence point of two or more basins, the following procedure is used to combine peak flow rates to account for differences in the basin's times of concentration. This adjustment is based on the assumption that each basin's hydrographs are triangular in shape.

(1). If the collection streams have the same times of concentration, then the Q values are directly summed,

$Q_p = Q_a + Q_b$; $T_p = T_a = T_b$

(2). If the collection streams have different times of concentration, the smaller of the tributary Q values may be adjusted as follows:

(i). The most frequent case is where the collection stream with the longer time of concentration has the larger Q. The smaller Q value is adjusted by the ratio of rainfall intensities.

$Q_p = Q_a + Q_b \ (I_a/I_b)$; $T_p = T_a$

(ii). In some cases, the collection stream with the shorter time of concentration has the larger Q. Then the smaller Q is adjusted by a ratio of the T values.

$Q_p = Q_b + Q_a \ (T_b/T_a)$; $T_p = T_b$

Underground storm drains are analyzed in a similar way. Flow data obtained from the surface model for inlets and collection points are input into the nodes representing those structures. Design grades and lengths are used to compute the capacity of the storm drains and to model the downstream travel times.

2-3 Hydraulic Model Analysis

In order to provide adequate flood control, increases in peak flow rates at the outfall location for this site were mitigated using the proposed Vaults.

The hydrology calculations discussed above provide peak flowrates for the vaults' inflow, which are entered into a separate program called RickRatHydro. The RickratHydro was used to produce an inflow hydrograph for the project drainage areas to each vault, based on the area, time of concentration, P6 value, runoff coefficient, and peak flow rate.

Mitigation within the each vault was modeled using SWMM 5.1. The Hydrograph that was generated from RickRatHydro was used as an input data for the inflows to the storage unit in the SWMM model. The riser was modeled using stage discharge table (Rating Curve in SWMM), and the volume was modeled using the storage stage table 9Storage Curve). The initial depth within the vaults was set at the depth that is associated with the water quality volume.

To approve that regarding the slope within the floodway will not have any impact on the WSE and will not change the BFE, HEC-RAS analysis was provided for the existing conditions and proposed conditions. For the existing conditions, the HEC-RAS analysis for the cross sections 1200 and 1100 per the Las Posas LOMR 12-09-1988P eff 2013 was used. The said results were compared to the output from the HEC-RAS analysis for the cross sections at the same locations in the proposed conditions

San Diego County Hydrology Parameters

2.3 Selection of Hydrologic Method and Design Criteria

Design Frequency – The flood frequency for determining the design storm discharge is 50 years for drainage that is upstream of any major roadway and 100 years frequency for all design storms at a major roadway, crossing the major roadway and thereafter. The 50-year storm flows shall be contained within the pipe and not encroach into the travel lane. For the 100-year storm this includes allowing one lane of a four-lane road (four or more lanes) to be used for conveyance without encroaching onto private property outside the dedicated street right-of-way. Natural channels that remain natural within private property are excluded from the right-of-way guideline.

Design Method – The choice of method to determine flows (discharge) shall be based on the size of the watershed area. For an area 0 to approximately 1 square mile the Rational Method or the Modified Rational Method shall be used. For watershed areas larger than 1 square mile the NRCS hydrologic method shall be used. Please check with the governing agency for any variations to these guidelines.

SECTION 3
RATIONAL METHOD AND MODIFIED RATIONAL METHOD

3.1 THE RATIONAL METHOD

The Rational Method (RM) is a mathematical formula used to determine the maximum runoff rate from a given rainfall. It has particular application in urban storm drainage, where it is used to estimate peak runoff rates from small urban and rural watersheds for the design of storm drains and small drainage structures. The RM is recommended for analyzing the runoff response from drainage areas up to approximately 1 square mile in size. It should not be used in instances where there is a junction of independent drainage systems or for drainage areas greater than approximately 1 square mile in size. In these instances, the Modified Rational Method (MRM) should be used for junctions of independent drainage systems in watersheds up to approximately 1 square mile in size (see Section 3.4); or the NRCS Hydrologic Method should be used for watersheds greater than approximately 1 square mile in size (see Section 4).

The RM can be applied using any design storm frequency (e.g., 100-year, 50-year, 10-year, etc.). The local agency determines the design storm frequency that must be used based on the type of project and specific local requirements. A discussion of design storm frequency is provided in Section 2.3 of this manual. A procedure has been developed that converts the 6-hour and 24-hour precipitation isopluvial map data to an Intensity-Duration curve that can be used for the rainfall intensity in the RM formula as shown in Figure 3-1. The RM is applicable to a 6-hour storm duration because the procedure uses Intensity-Duration Design Charts that are based on a 6-hour storm duration.

3.1.1 Rational Method Formula

The RM formula estimates the peak rate of runoff at any location in a watershed as a function of the drainage area (A), runoff coefficient (C), and rainfall intensity (I) for a duration equal to the time of concentration (T_c), which is the time required for water to

flow from the most remote point of the basin to the location being analyzed. The RM formula is expressed as follows:

$$Q = CIA$$

Where: Q = peak discharge, in cubic feet per second (cfs)

C = runoff coefficient, proportion of the rainfall that runs off the surface (no units)

I = average rainfall intensity for a duration equal to the T_c for the area, in inches per hour (Note: If the computed T_c is less than 5 minutes, use 5 minutes for computing the peak discharge, Q)

A = drainage area contributing to the design location, in acres

Combining the units for the expression CIA yields:

$$\left(\frac{1\,\text{acre}\times\text{inch}}{\text{hour}}\right)\left(\frac{43{,}560\,\text{ft}^2}{\text{acre}}\right)\left(\frac{1\,\text{foot}}{12\,\text{inches}}\right)\left(\frac{1\,\text{hour}}{3{,}600\,\text{seconds}}\right) \Rightarrow 1.008\,\text{cfs}$$

For practical purposes the unit conversion coefficient difference of 0.8% can be ignored.

The RM formula is based on the assumption that for constant rainfall intensity, the peak discharge rate at a point will occur when the raindrop that falls at the most upstream point in the tributary drainage basin arrives at the point of interest.

Unlike the MRM (discussed in Section 3.4) or the NRCS hydrologic method (discussed in Section 4), the RM does not create hydrographs and therefore does not add separate subarea hydrographs at collection points. Instead, the RM develops peak discharges in the main line by increasing the T_c as flow travels downstream.

Characteristics of, or assumptions inherent to, the RM are listed below:

- The discharge flow rate resulting from any I is maximum when the I lasts as long as or longer than the T_c.

- The storm frequency of peak discharges is the same as that of I for the given T_c.

- The fraction of rainfall that becomes runoff (or the runoff coefficient, C) is independent of I or precipitation zone number (PZN) condition (PZN Condition is discussed in Section 4.1.2.4).

- The peak rate of runoff is the only information produced by using the RM.

3.1.2 Runoff Coefficient

Table 3-1 lists the estimated runoff coefficients for urban areas. The concepts related to the runoff coefficient were evaluated in a report entitled *Evaluation, Rational Method "C" Values* (Hill, 2002) that was reviewed by the Hydrology Manual Committee. The Report is available at San Diego County Department of Public Works, Flood Control Section and on the San Diego County Department of Public Works web page.

The runoff coefficients are based on land use and soil type. Soil type can be determined from the soil type map provided in Appendix A. An appropriate runoff coefficient (C) for each type of land use in the subarea should be selected from this table and multiplied by the percentage of the total area (A) included in that class. The sum of the products for all land uses is the weighted runoff coefficient (Σ[CA]). Good engineering judgment should be used when applying the values presented in Table 3-1, as adjustments to these values may be appropriate based on site-specific characteristics. In any event, the impervious percentage (% Impervious) as given in the table, for any area, shall govern the selected value for C. The runoff coefficient can also be calculated for an area based on soil type and impervious percentage using the following formula:

$$C = 0.90 \times (\% \text{ Impervious}) + C_p \times (1 - \% \text{ Impervious})$$

Where: C_p = Pervious Coefficient Runoff Value for the soil type (shown in Table 3-1 as Undisturbed Natural Terrain/Permanent Open Space, 0% Impervious). Soil type can be determined from the soil type map provided in Appendix A.

The values in Table 3-1 are typical for most urban areas. However, if the basin contains rural or agricultural land use, parks, golf courses, or other types of nonurban land use that are expected to be permanent, the appropriate value should be selected based upon the soil and cover and approved by the local agency.

3.1.3 Rainfall Intensity

The rainfall intensity (I) is the rainfall in inches per hour (in/hr) for a duration equal to the T_c for a selected storm frequency. Once a particular storm frequency has been selected for design and a T_c calculated for the drainage area, the rainfall intensity can be determined from the Intensity-Duration Design Chart (Figure 3-1). The 6-hour storm rainfall amount (P_6) and the 24-hour storm rainfall amount (P_{24}) for the selected storm frequency are also needed for calculation of I. P_6 and P_{24} can be read from the isopluvial maps provided in Appendix B. An Intensity-Duration Design Chart applicable to all areas within San Diego County is provided as Figure 3-1. Figure 3-2 provides an example of use of the Intensity-Duration Design Chart. Intensity can also be calculated using the following equation:

$$I = 7.44\, P_6\, D^{-0.645}$$

Where: P_6 = adjusted 6-hour storm rainfall amount (see discussion below)
D = duration in minutes (use T_c)

Note: This equation applies only to the 6-hour storm rainfall amount (i.e., P_6 cannot be changed to P_{24} to calculate a 24-hour intensity using this equation).

The Intensity-Duration Design Chart and the equation are for the 6-hour storm rainfall amount. In general, P_6 for the selected frequency should be between 45% and 65% of P_{24} for the selected frequency. If P_6 is not within 45% to 65% of P_{24}, P_6 should be increased or decreased as necessary to meet this criteria. The isopluvial lines are based on precipitation gauge data. At the time that the isopluvial lines were created, the majority of precipitation gauges in San Diego County were read daily, and these readings yielded 24-hour precipitation data. Some 6-hour data were available from the few recording gauges distributed throughout the County at that time; however, some 6-hour data were extrapolated. Therefore, the 24-hour precipitation data for San Diego County are considered to be more reliable.

3.1.4 Time of Concentration

The Time of Concentration (T_c) is the time required for runoff to flow from the most remote part of the drainage area to the point of interest. The T_c is composed of two components: initial time of concentration (T_i) and travel time (T_t). Methods of computation for T_i and T_t are discussed below. The T_i is the time required for runoff to travel across the surface of the most remote subarea in the study, or "initial subarea." Guidelines for designating the initial subarea are provided within the discussion of computation of T_i. The T_t is the time required for the runoff to flow in a watercourse (e.g., swale, channel, gutter, pipe) or series of watercourses from the initial subarea to the point of interest. For the RM, the T_c at any point within the drainage area is given by:

$$T_c = T_i + T_t$$

Methods of calculation differ for natural watersheds (nonurbanized) and for urban drainage systems. When analyzing storm drain systems, the designer must consider the possibility that an existing natural watershed may become urbanized during the useful life of the storm drain system. Future land uses must be used for T_c and runoff calculations, and can be determined from the local Community General Plan.

3.1.4.1 Initial Time of Concentration

The initial time of concentration is typically based on sheet flow at the upstream end of a drainage basin. The Overland Time of Flow (Figure 3-3) is approximated by an equation developed by the Federal Aviation Agency (FAA) for analyzing flow on runaways (FAA, 1970). The usual runway configuration consists of a crown, like most freeways, with sloping pavement that directs flow to either side of the runway. This type of flow is uniform in the direction perpendicular to the velocity and is very shallow. Since these depths are ¼ of an inch (more or less) in magnitude, the relative roughness is high. Some higher relative roughness values for overland flow are presented in Table 3.5 of the *HEC-1 Flood Hydrograph Package User's Manual* (USACE, 1990).

The sheet flow that is predicted by the FAA equation is limited to conditions that are similar to runway topography. Some considerations that limit the extent to which the FAA equation applies are identified below:

- Urban Areas – This "runway type" runoff includes:
  1) Flat roofs, sloping at 1% ±
  2) Parking lots at the extreme upstream drainage basin boundary (at the "ridge" of a catchment area).
     Even a parking lot is limited in the amounts of sheet flow. Parked or moving vehicles would "break-up" the sheet flow, concentrating runoff into streams that are not characteristic of sheet flow.
  3) Driveways are constructed at the upstream end of catchment areas in some developments. However, if flow from a roof is directed to a driveway through a downspout or other conveyance mechanism, flow would be concentrated.
  4) Flat slopes are prone to meandering flow that tends to be disrupted by minor irregularities and obstructions. Maximum Overland Flow lengths are shorter for the flatter slopes (see Table 3-2).

- Rural or Natural Areas - The FAA equation is applicable to these conditions since (.5% to 10%) slopes that are uniform in width of flow have slow velocities consistent with the equation. Irregularities in terrain limit the length of application.
  1) Most hills and ridge lines have a relatively flat area near the drainage divide. However, with flat slopes of .5% ±, minor irregularities would cause flow to concentrate into streams.
  2) Parks, lawns and other vegetated areas would have slow velocities that are consistent with the FAA Equation.

The concepts related to the initial time of concentration were evaluated in a report entitled *Initial Time of Concentration, Analysis of Parameters* (Hill, 2002) that was reviewed by the Hydrology Manual Committee. The Report is available at San Diego County Department of Public Works, Flood Control Section and on the San Diego County Department of Public Works web page.

Note that the Initial Time of Concentration should be reflective of the general land-use at the upstream end of a drainage basin. A single lot with an area of two or less acres does not have a significant effect where the drainage basin area is 20 to 600 acres.

Table 3-2 provides limits of the length (Maximum Length (L_M)) of sheet flow to be used in hydrology studies. Initial T_i values based on average C values for the Land Use Element are also included. These values can be used in planning and design applications as described below. Exceptions may be approved by the "Regulating Agency" when submitted with a detailed study.

Table 3-2

MAXIMUM OVERLAND FLOW LENGTH (L_M) & INITIAL TIME OF CONCENTRATION (T_i)

Element*	DU/	.5%		1%		2%		3%		5%		10%

*See Table 3-1 for more detailed description

3.1.4.1A Planning Considerations

The purpose of most hydrology studies is to develop flood flow values for areas that are not at the upstream end of the basin. Another example is the Master Plan, which is usually completed before the actual detailed design of lots, streets, etc. are accomplished. In these situations it is necessary that the initial time of concentration be determined without detailed information about flow patterns.

To provide guidance for the initial time of concentration design parameters, Table 3-2 includes the Land Use Elements and other variables related to the Time of Concentration. The table development included a review of the typical "layout" of the different Land Use Elements and related flow patterns and consideration of the extent of the sheet flow regimen, the effect of ponding, the significance to the drainage basin, downstream effects, etc.

3.1.4.1B Computation Criteria

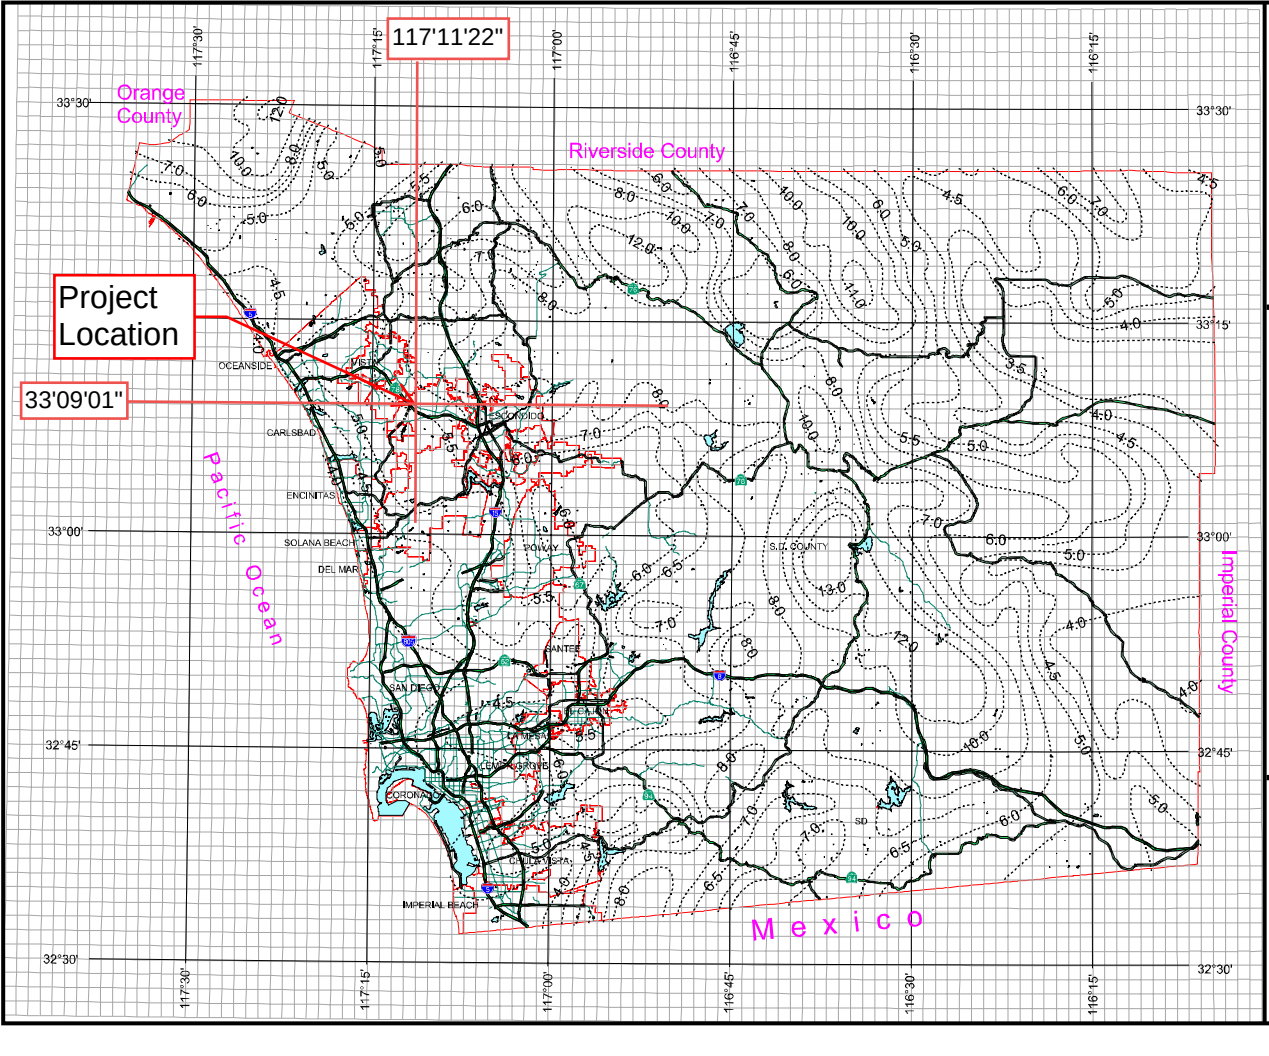
(a) Developed Drainage Areas With Overland Flow - T_i may be obtained directly from the chart, "Rational Formula – Overland Time of Flow Nomograph," shown in Figure 3-3 or from Table 3-2. This chart is based on the Federal Aviation Agency (FAA) equation (FAA, 1970). For the short rain durations (<15 minutes) involved, intensities are high but the depth of flooding is limited and much of the runoff is stored temporarily in the overland flow and in shallow ponded areas. In developed areas, overland flow is limited to lengths given in Table 3-2. Beyond these distances, flow tends to become concentrated into streets, gutters, swales, ditches, etc.

(b) Natural Or Rural Watersheds – These areas usually have an initial subarea at the upstream end with sheet flow. The sheet flow length is limited to 50 to 100 feet as specified in Table 3-2. The Overland Time of Flow Nomograph, Figure 3-3, can be used to obtain T_i. The initial time of concentration can excessively affect the magnitude of flow further downstream in the drainage basin. For instance, variations in the initial time of concentration for an initial subarea of one acre can change the flow further downstream where the area is 400 acres by 100%. Therefore, the initial time of concentration is limited (see Table 3-2).

The Rational Method procedure included in the original Hydrology Manual (1971) and Design and Procedure Manual (1968) included a 10 minute value to be added to the initial time of concentration developed through the Kirpich Formula (see Figure 3-4) for a natural watershed. That procedure is superceded by the procedure above to use Table 3-2 or Figure 3-3 to determine T_i for the appropriate sheet flow length of the initial subarea. The values for natural watersheds given in Table 3-2 vary from 13 to 7 minutes, depending on slope. If the total length of the initial subarea is greater than the maximum length allowable based on Table 3-2, add the travel time based on the Kirpich formula for the remaining length of the initial subarea.

3.1.4.2 Travel Time

The T_t is the time required for the runoff to flow in a watercourse (e.g., swale, channel, gutter, pipe) or series of watercourses from the initial subarea to the point of interest. The T_t is computed by dividing the length of the flow path by the computed flow velocity. Since the velocity normally changes as a result of each change in flow rate or slope, such as at an inlet or grade break, the total T_t must be computed as the sum of the T_t's for each section of the flow path. Use Figure 3-6 to estimate time of travel for street gutter flow. Velocity in a channel can be estimated by using the nomograph shown in Figure 3-7 (Manning's Equation Nomograph).



(a) Natural Watersheds – This includes rural, ranch, and agricultural areas with natural channels. Obtain T_t directly from the Kirpich nomograph in Figure 3-4 or from the equation. This nomograph requires values for length and change in elevation along the effective slope line for the subarea. See Figure 3-5 for a representation of the effective slope line.

This nomograph is based on the Kirpich formula, which was developed with data from agricultural watersheds ranging from 1.25 to 112 acres in area, 350 to 4,000 feet in length, and 2.7 to 8.8% slope (Kirpich, 1940). A maximum length of 4,000 feet should be used for the subarea length. Typically, as the flow length increases, the depth of flow will increase, and therefore it is considered a concentration of flow at points beyond lengths listed in Figure 3-2. However, because the Kirpich formula has been shown to be applicable for watersheds up to 4,000 feet in length (Kirpich, 1940), a subarea may be designated with a length up to 4,000 feet provided the topography and slope of the natural channel are generally uniform.

Justification needs to be included with this calculation showing that the watershed will remain natural forever. Examples include areas located in the Multiple Species Conservation Plan (MSCP), areas designated as open space or rural in a community's General Plan, and Cleveland National Forest.

(b) Urban Watersheds - Flow through a closed conduit where no additional flow can enter the system during the travel, length, velocity and T_t are determined using the peak flow in the conduit. In cases where the conduit is not closed and additional flow from a contributing subarea is added to the total flow during travel (e.g., street flow in a gutter), calculation of velocity and T_t is performed using an assumed average flow based on the total area (including upstream subareas) contributing to the point of interest. The Manning equation is usually used to determine velocity. Discharges for small watersheds typically range from 2 to 3 cfs per acre, depending on land use, drainage area, and slope and rainfall intensity.

Note: The MRM should be used to calculate the peak discharge when there is a junction from independent subareas into the drainage system.

Directions for Application:

(1) From precipitation maps determine 6 hr and 24 hr amounts for the selected frequency. These maps are included in the County Hydrology Manual (10, 50, and 100 yr maps included in the Design and Procedure Manual).

(2) Adjust 6 hr precipitation (if necessary) so that it is within the range of 45% to 65% of the 24 hr precipitation (not applicaple to Desert).

(3) Plot 6 hr precipitation on the right side of the chart.

(4) Draw a line through the point parallel to the plotted lines.

(5) This line is the intensity-duration curve for the location being analyzed.

Application Form:

(a) Selected frequency _____ year

(b) P_6 = 3.30 in., P_{24} = 5.60, $\frac{P_6}{P_{24}} = \frac{3.30}{5.60}$ %(2) 59%

(c) Adjusted $P_6^{(2)}$ = 3.30 in.

(d) t_x = _____ min.

(e) I = _____ in./hr.

Note: This chart replaces the Intensity-Duration-Frequency curves used since 1965.

Post Development for Las Posas Site

*The values associated with 0% impervious may be used for direct calculation of the runoff coefficient as described in Section 3.1.2 (representing the pervious runoff coefficient, Cp, for the soil type), or for areas that will remain undisturbed in perpetuity. Justification must be given that the area will remain natural forever (e.g., the area is located in Cleveland National Forest).
DU/A = dwelling units per acre
NRCS = National Resources Conservation Service

LAS POSAS - Post-project Condition

08/28/1951 06:00:00

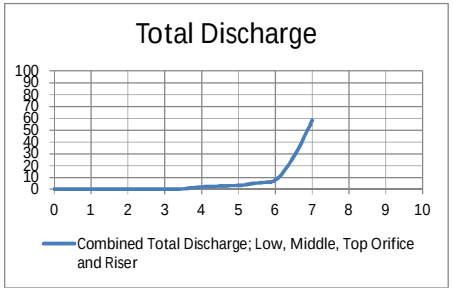
Storage Unit Node108

Property	Value
Name	Node108
X-Coordinate	1760.803
Y-Coordinate	7842.048
Description	
Tag	
Inflows	YES
Treatment	NO
Invert El.	0
Max. Depth	7
Initial Depth	2.6
Surcharge Depth	0
Evap. Factor	0
Seepage Loss	NO
Storage Curve	TABULAR
Functional Curve	
Coefficient	1000
Exponent	0
Constant	0
Tabular Curve	
Curve Name	Vault-2



Click to specify any external inflows received at the storage unit

Chapter 7
FEMA MAP

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations (BFEs) shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) Zone 11. The **horizontal datum** was NAD83, GRS1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

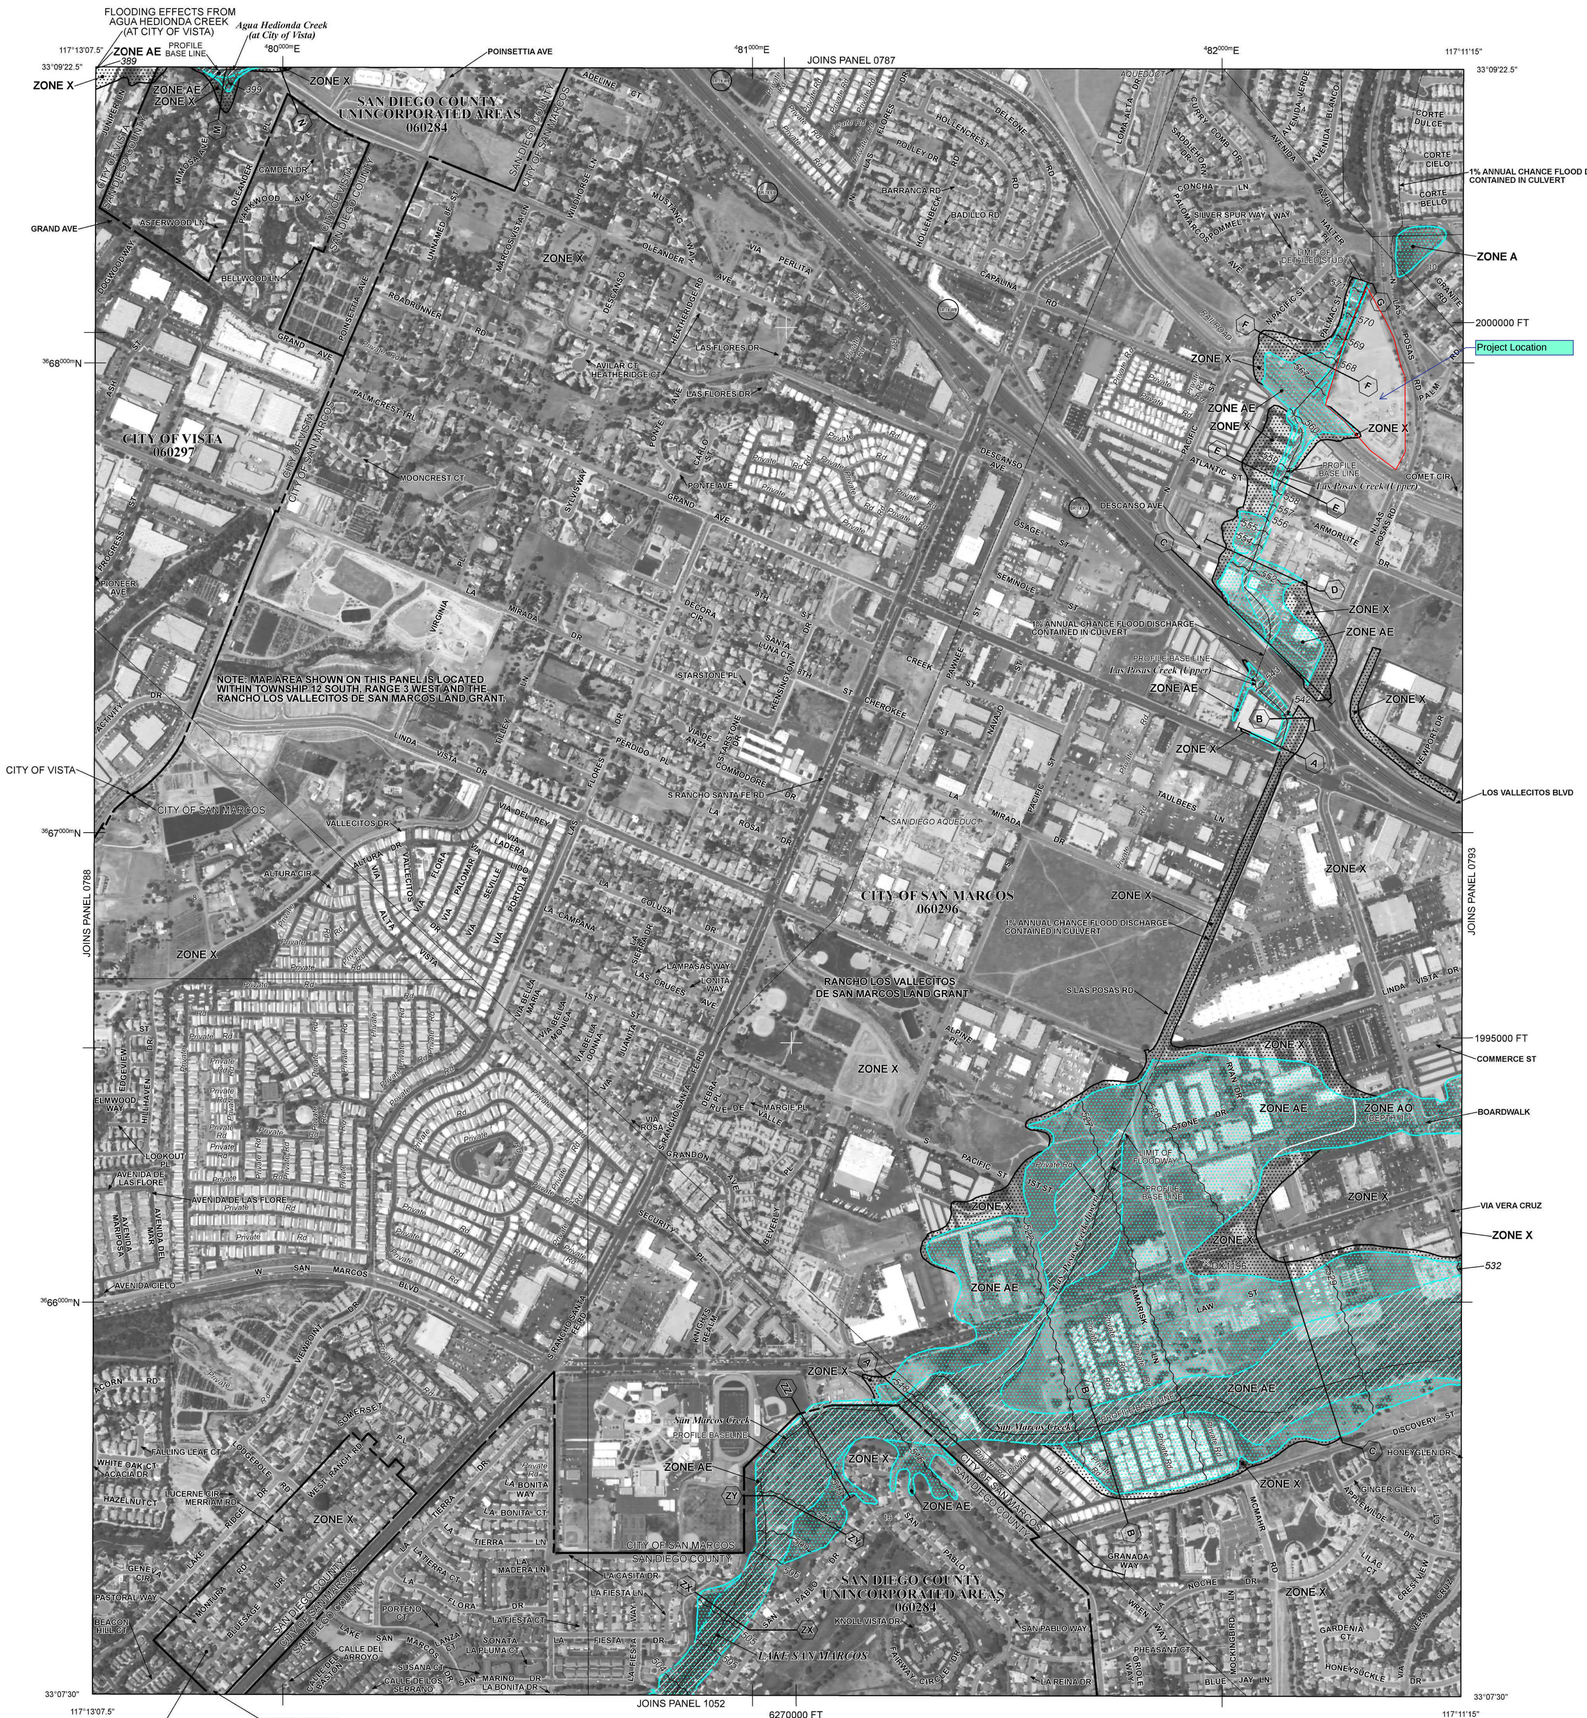
Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242** or visit its website at http://www.ngs.noaa.gov/.

Base map information shown on this FIRM was provided in digital format by the USDA National Agriculture Imagery Program (NAIP). this information was photogrammetrically compiled at a scale of 1:24,000 from aerial photography dated 2009.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables *in the Flood Insurance Study report (which contains authoritative hydraulic data)* may reflect stream channel distances that differ from what is shown on this map.

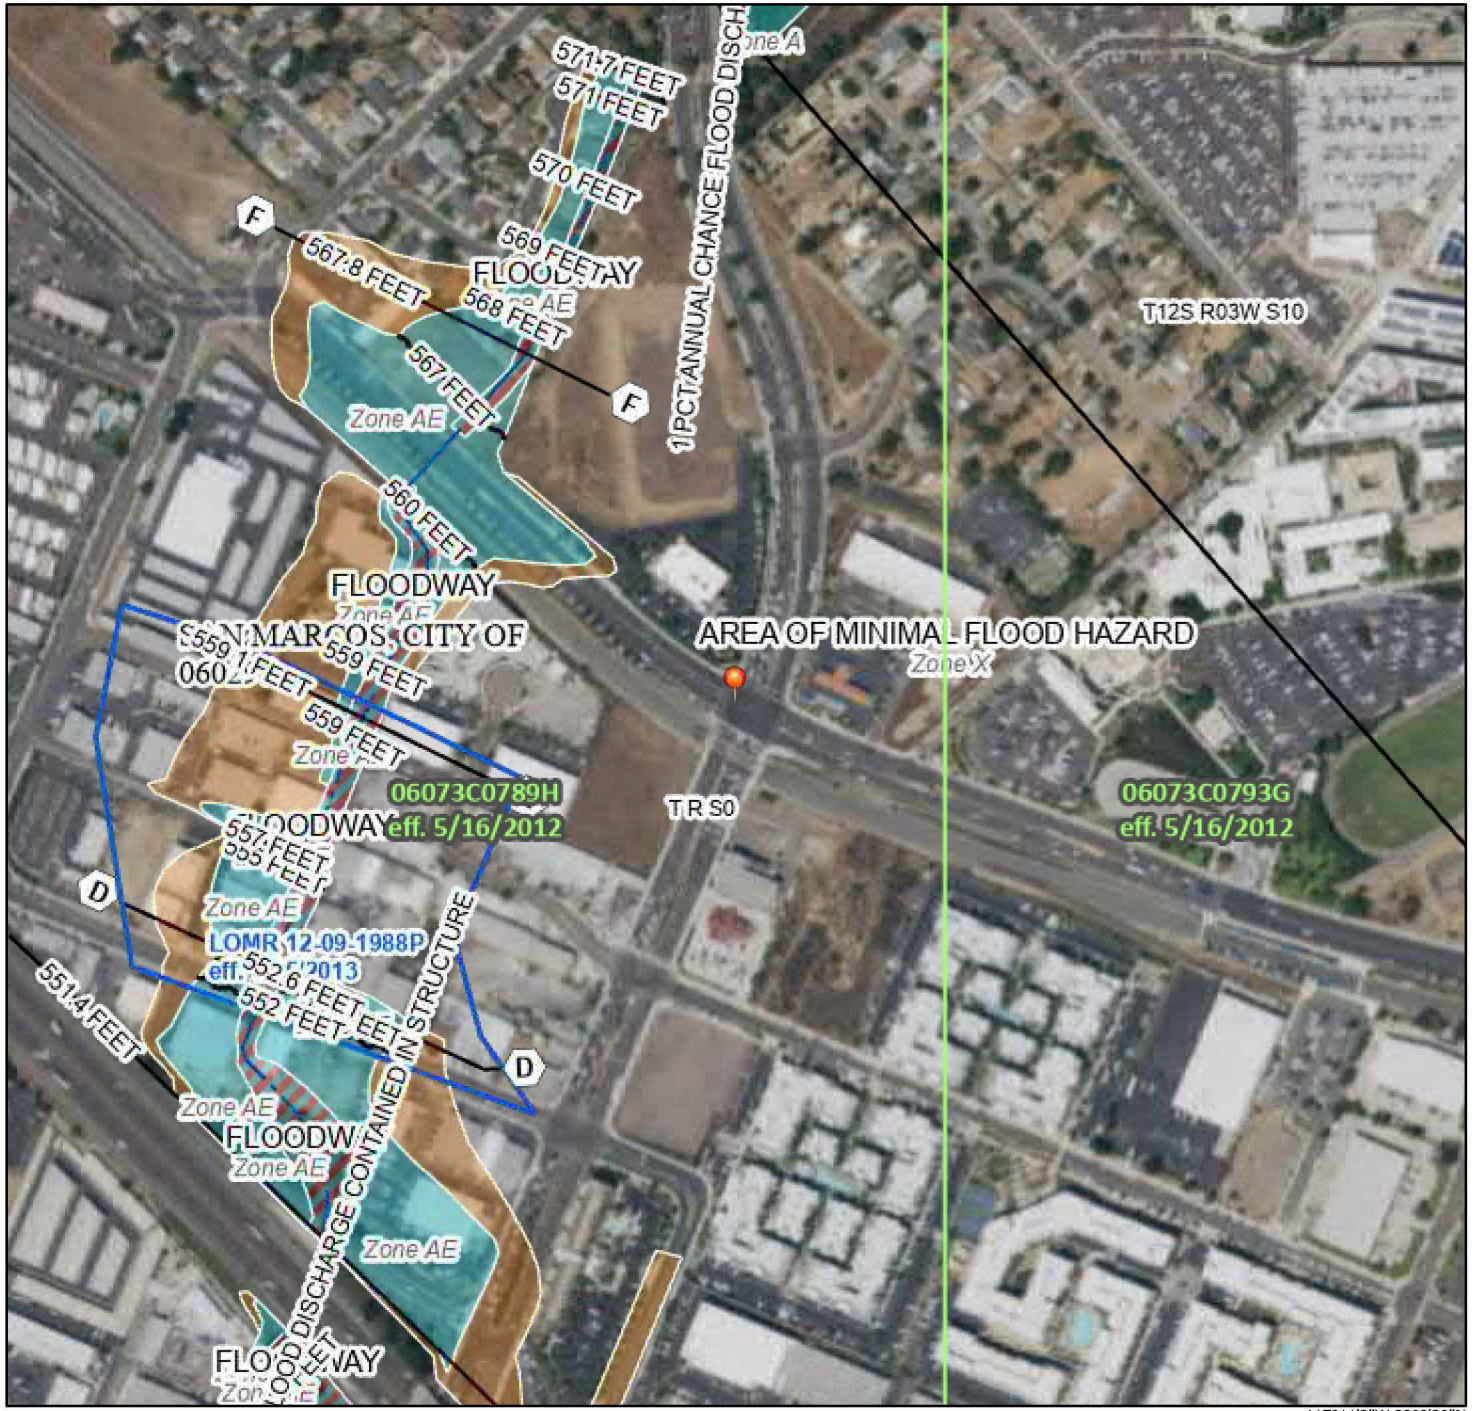


Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-877-FEMA MAP (1.877-336-2627) for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://msc.fema.gov/.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip/.



The **"profile base lines"** depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the "profile base line", in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/28/2021 at 3:23 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Revision 1: January 13, 2009
Revision 2: February 9, 2009

6.3 Runoff Calculation using Rational Method

Runoff coefficient is obtained using Table 3-1 of San Diego County Hydrology Manual 2003, C= 0.35 is used for the undeveloped area and C= 0.79 for soil type D and commercial/Industrial area.

Figure A. Flow scheme for Pre-Development

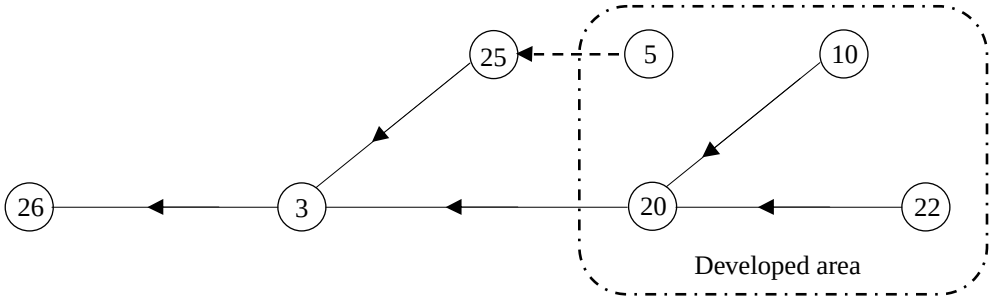

Figure B. Flow scheme for Post-Development

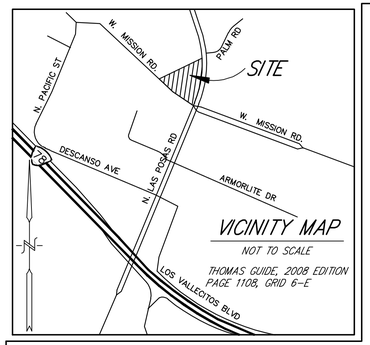
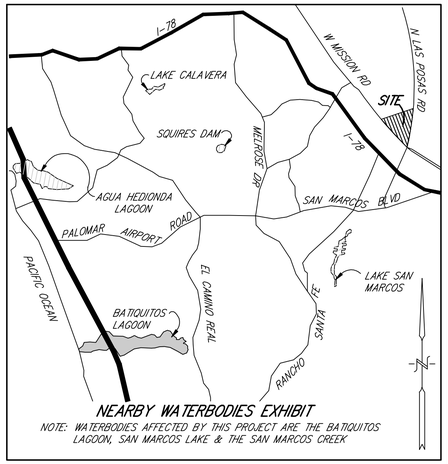
Schemes above show a simplified run-off flow node to node, node 10 represents flow from node 7 to 17 (1.50 acre), node 22 represents node 21 to 22 (0.257 acre). Node 25 represents flow from node 1 to 2 (6.717 acre =6.218 existing + 0.499 acre developed) which is the undeveloped area and combined with flow from the developed area nodes 4, 5 and 25 (0.499 acre). Please see "Existing Conditions Q100 Calculations" in Attachment H for the pre-development conditions and see "Existing + Project Conditions Q100 Calculations" in Attachment I for the post-development conditions.

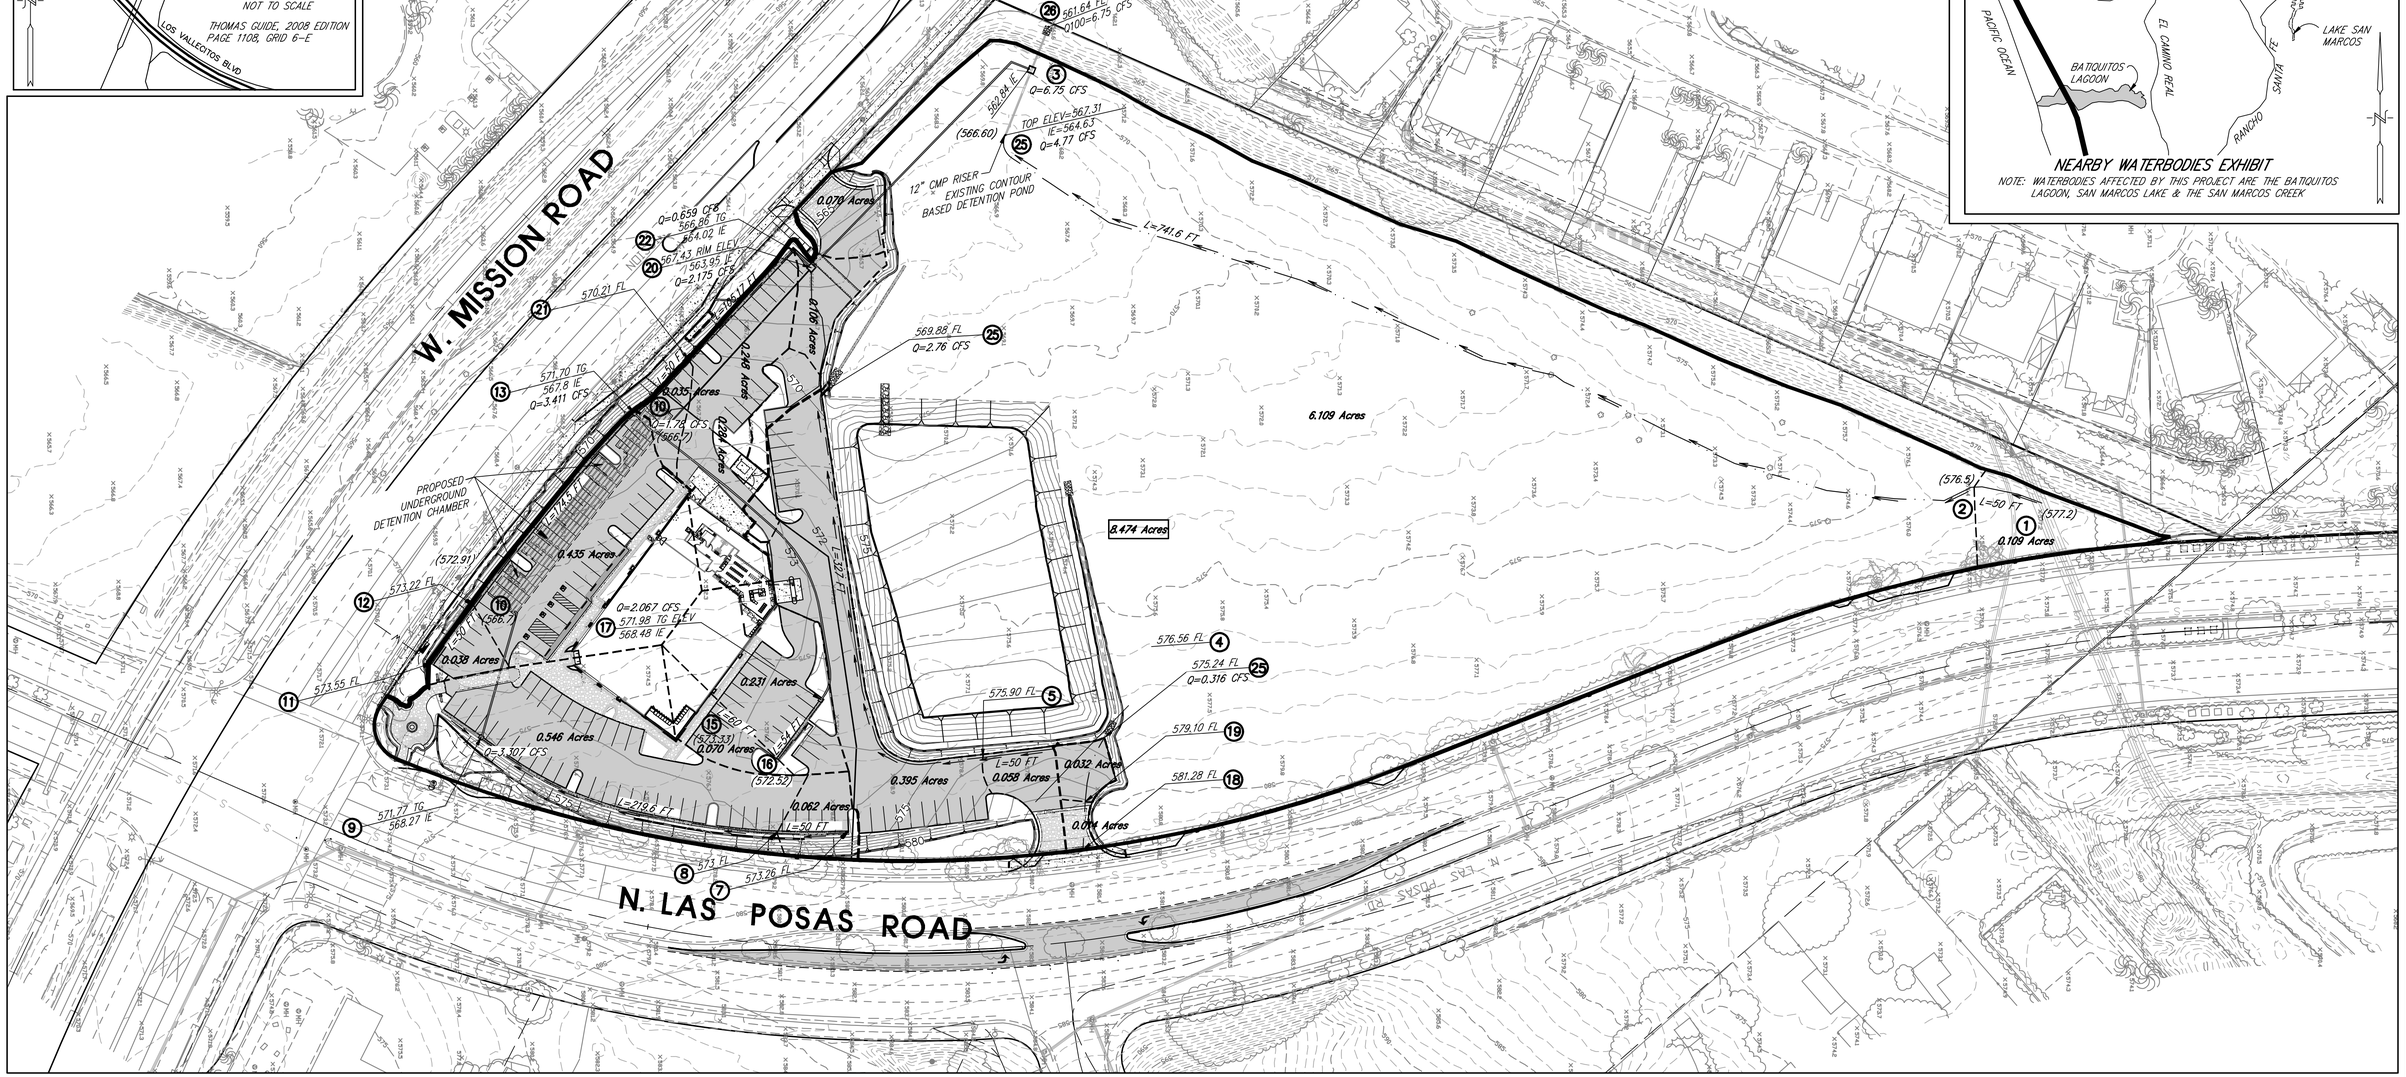
EXISTING CONDITIONS Q100



NODE	AREA (Ac)	Tc(MINS)	I (in/Hr)	C	Q (cfs)
3	8.681	19	3.649	0.35	**11.09**



EXISTING + PROJECT CONDITIONS Q100



NODE	AREA (Ac)	Tc(MINS)	I (in/Hr)	C	Q (cfs)
10	1.500	50	1.98	0.6	1.78
22	0.257	22	3.25	0.79	0.659
20	CONFLUENCE NODE 10 AND 22				2.17
25	6.717	60	1.751	0.406	4.77
3	CONFLUENCE NODE 25 AND 20				6.75
26	8.474	52	-	-	**6.75**

RUNOFF DECREASE 4.34

Decrease of runoff is due to the implementation of sand filter and the StormChamber™.

PDP SWQMP PREPARER'S CERTIFICATION PAGE

Project Name: Gran Vista

Permit Application Number: TSM21-0003 | MFS21-0001 | SP 21-0003

PREPARER'S CERTIFICATION

I hereby declare that I am the Engineer in Responsible Charge of design of storm water best management practices (BMPs) for this project, and that I have exercised responsible charge over the design of the BMPs as defined in Section 6703 of the Business and Professions Code, and that the design is consistent with the PDP requirements of the [INSERT AGENCY NAME] BMP Design Manual, which is a design manual for compliance with local [INSERT AGENCY NAME] and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

I have read and understand that the [City Engineer] has adopted minimum requirements for managing urban runoff, including storm water, from land development activities, as described in the BMP Design Manual. I certify that this PDP SWQMP has been completed to the best of my ability and accurately reflects the project being proposed and the applicable BMPs proposed to minimize the potentially negative impacts of this project's land development activities on water quality. I understand and acknowledge that the plan check review of this PDP SWQMP by the [City Engineer] is confined to a review and does not relieve me, as the Engineer in Responsible Charge of design of storm water BMPs for this project, of my responsibilities for project design.

Permit Application Number: TSM21-0003 | MFS21-0001 | SP 21-0003

PROJECT OWNER'S CERTIFICATION

This PDP SWQMP has been prepared for WPI-LAS POSAS/MISSION, LLC by Hunsaker and Associates SD, Inc.. The PDP SWQMP is intended to comply with the PDP requirements of the City of San Marcos BMP Design Manual, which is a design manual for compliance with local City of San Marcos and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2015-0100) requirements for storm water management.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan. Once the undersigned transfers its interests in the property, its successor-in-interest shall bear the aforementioned responsibility to implement the best management practices (BMPs) described within this plan, including ensuring on-going operation and maintenance of structural BMPs. A signed copy of this document shall be available on the subject property into perpetuity.

Form I-1
[March 15, 2016]

Project Identification

Project Name: Gran Vista

Description: Proposes 120 three story, for-sale townhome units (Occupancy: R3 Townhome/U; Construction Type V-B) with a maximum permitted density of 15.7 units per acre with associated parking areas, streets and utilities.

Permit Application Number (if applicable): TSM21-0003 | MFS21-0001 | SP 21-0003 | Date: 8/25/2021

Project Address: 219-121-15-00 and 219-121-16-00

Determination of Requirements

This form is required as part of the City's application process. The purpose of this form is to identify potential land development planning storm water requirements that apply to development projects.

Development projects are defined as construction, rehabilitation, redevelopment, or reconstruction of any public or private projects. In addition, the identification of a development project, as it relates to storm water regulations, would truly apply to development and redevelopment activities that have the potential to contact storm water and contribute a source of pollutants, or reduce the natural absorption and infiltration abilities of the land.

To access the BMP Design Manual, Storm Water Quality Management Plan (SWQMP) templates, and other pertinent information related to this program please refer to:
http://www.san-marcos.net/departments/development-services/stormwater/development-planning

Please answer each of the following steps below, starting with Step 1 and progressing through each step until reaching "Stop".

Step	Answer	Progression
Step 1: Based on the above, Is the project a "development project" (See definition above)? See Section 1.3 of the BMP Design Manual for further guidance if necessary.	☒ Yes	Go to Step 2.
	☐ No	Permanent BMP requirements do not apply. No SWQMP will be required. Provide brief discussion below. STOP.
Discussion / justification if the project is not a "development project" (e.g., the project includes only interior remodels within an existing building):		
Step 2: Is the project a Standard Project, Priority Development Project (PDP), or exception to PDP definitions? To answer this item, complete Form I-2, Project Type Determination. See Section 1.4 of the BMP Design Manual in its entirety for guidance. In addition to Section 1.4, please refer to the City's SWQMP Submittal Requirements form.	☐ Standard Project	Only Standard Project requirements apply, including Standard Project SWQMP. STOP.
	☒ PDP	Standard and PDP requirements apply, including PDP SWQMP. Go to Step 3 on the following page.
	☐ Exception to PDP definitions	Standard Project requirements apply, and any additional requirements specific to the type of project. Provide discussion and list any additional requirements below. Prepare Standard Project SWQMP. STOP.

Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:		

Form I-1 Page 2, Form Date: March 15, 2016		
Step 3 (PDPs only). Please answer the list of questions in this section to determine if hydromodification requirements reply to the proposed PDP. Does the project:		
Step 3a. Discharge storm water runoff directly to the Pacific Ocean?	☐ Yes	STOP. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3b.
Step 3b. Discharge storm water runoff directly to an enclosed embayment, not within protected areas?	☐ Yes	STOP. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3c.
Step 3c. Discharge storm water runoff directly to a water storage reservoir or lake, below spillway or normal operating level?	☐ Yes	STOP. Hydromodification requirements do not apply.
	☒ No	Continue to Step 3d.
Step 3d. Discharge storm water runoff directly to an area identified in WMAA?	☐ Yes	STOP. Hydromodification requirements do not apply.
	☒ No	Hydromodification requirements apply to the project. Go to Step 4.
Discussion / justification if hydromodification control requirements do <u>not</u> apply:		

Step 4 (PDPs subject to hydromodification control requirements only). Does protection of critical coarse sediment yield areas apply based on review of WMAA Potential Critical Coarse Sediment Yield Area Map? See Section 6.2 of the BMP Design Manual for guidance.	☐ Yes	Management measures required for protection of critical coarse sediment yield areas (Chapter 6.2). Stop.
	☒ No	Management measures not required for protection of critical coarse sediment yield areas. Provide brief discussion below. Stop.

Project Type Determination Checklist			Form I-2 [March 15, 2016]
Project Information			
Project Name/Description: Gran Vista/ 120 three story residential units			
Permit Application Number (if applicable): TBD			Date: 8/25/2021
Project Address:			
Project Type Determination: Standard Project or Priority Development Project (PDP)			
The project is (select one): ☒ New Development ☐ Redevelopment			
The total proposed newly created or replaced impervious area is: 188530 sf (4.328 ac)			
Is the project in any of the following categories, (a) through (f)?			
Yes ☒	No ☐	(a)	New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ☐	No ☒	(b)	Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ☒	No ☐	(c)	New and redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site), and support one or more of the following uses: (i) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (Standard Industrial Classification (SIC) code 5812). (ii) Hillside development projects. This category includes development on any natural slope that is twenty-five percent or greater. (iii) Parking lots. This category is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce. (iv) Streets, roads, highways, freeways, and driveways. This category is defined as any paved impervious surface used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

<table>
<tr><th colspan="4">Form I-2 Page 2, Form Date: March 15, 2016</th></tr>
<tr><td>Yes
☐</td><td>No
☒</td><td>(d)</td><td>New or redevelopment projects that create and/or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharging directly to an Environmentally Sensitive Area (ESA). “Discharging directly to” includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands).
Note: ESAs are areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Board and San Diego Water Board; State Water Quality Protected Areas; water bodies designated with the RARE beneficial use by the State Water Board and San Diego Water Board; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees. See BMP Design Manual Section 1.4.2 for additional guidance.</td></tr>
<tr><td>Yes
☐</td><td>No
☒</td><td>(e)</td><td>New development projects, or redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface, that support one or more of the following uses:
(i) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following SIC codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.
(ii) Retail gasoline outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.</td></tr>
<tr><td>Yes
☒</td><td>No
☐</td><td>(f)</td><td>New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction.
Note: See BMP Design Manual Section 1.4.2 for additional guidance.</td></tr>
<tr><td colspan="4">Does the project meet the definition of one or more of the Priority Development Project categories (a) through (f) listed above?
☐ No – the project is <u>not</u> a Priority Development Project (Standard Project).
☒ Yes – the project is a Priority Development Project (PDP).</td></tr>
<tr><td colspan="4">The following is for redevelopment PDPs only:

The area of existing (pre-project) impervious area at the project site is: ft^2 (A)
The total proposed newly created or replaced impervious area is ft^2 (B)
Percent impervious surface created or replaced (B/A)*100: __%
The percent impervious surface created or replaced is (select one based on the above calculation):
☐ less than or equal to fifty percent (50%) – only new impervious areas are considered PDP
OR
☐ greater than fifty percent (50%) – the entire project site is a PDP</td></tr>
</table>

Site Information Checklist For PDPs	Form I-3B (PDPs) [March 15, 2016]
Project Summary Information	
Project Name	Gran Vista
Project Address	
Assessor's Parcel Number(s) (APN(s))	219-121-15-00, 219-121-16-00
Permit Application Number	TSM21-0003\MFS21-0001\ SP 21-0003
Project Hydrologic Unit	Select One: ☐ Santa Margarita 902 ☐ San Luis Rey 903 ☒ Carlsbad 904 ☐ San Dieguito 905 ☐ Penasquitos 906 ☐ San Diego 907 ☐ Pueblo San Diego 908 ☐ Sweetwater 909 ☐ Otay 910 ☐ Tijuana 911
Project Watershed (Complete Hydrologic Unit, Area, and Subarea Name with Numeric Identifier)	San Marcos Creek-Frontal Gulf of Santa Catalina, Carlsbad, San Marcos, Richland #904.52
Parcel Area (total area of Assessor's Parcel(s) associated with the project)	7.59 Acres (330,787 Square Feet)
Area to be Disturbed by the Project (Project Area)	6.12 Acres (266,737 Square Feet)
Project Proposed Impervious Area (subset of Project Area)	4.36 Acres (190,295 Square Feet)
Project Proposed Pervious Area (subset of Project Area)	1.76 Acres (76,666 Square Feet)
Note: Proposed Impervious Area + Proposed Pervious Area = Area to be Disturbed by the Project. This may be less than the Parcel Area.	

Description of Existing Site Condition

Current Status of the Site (select all that apply):

- ☐ Existing development
- ☒ Previously graded but not built out
- ☐ Demolition completed without new construction
- ☐ Agricultural or other non-impervious use
- ☒ Vacant, undeveloped/natural

Description / Additional Information:
The site is previously graded into two separate development pads. The pad located in the northerly portion of the planning is elevated above North Las Posas Road and is higher than the remaining portion of the planning area. The lower pad, located in the southerly portion of the site, is elevated above West Mission Road.

Existing Land Cover Includes (select all that apply):

- ☒ Vegetative Cover
- ☒ Non-Vegetated Pervious Areas
- ☐ Impervious Areas

Description / Additional Information:
Vegetation on the site is limited to grasses and small shrubs. A few trees are located along the periphery of the site, adjacent to the channel and North Las Posas

Underlying Soil belongs to Hydrologic Soil Group (select all that apply):

- ☐ NRCS Type A
- ☐ NRCS Type B
- ☒ NRCS Type C
- ☒ NRCS Type D

Approximate Depth to Groundwater (GW):

- ☐ GW Depth < 5 feet
- ☐ 5 feet < GW Depth < 10 feet
- ☒ 10 feet < GW Depth < 20 feet
- ☐ GW Depth > 20 feet

Existing Natural Hydrologic Features (select all that apply):

- ☐ Watercourses
- ☐ Seeps
- ☐ Springs
- ☐ Wetlands
- ☒ None

Description / Additional Information:
There is no hydrologic feature onsite

Description of Existing Site Drainage Patterns

How is storm water runoff conveyed from the site? At a minimum, this description should answer:
(1) whether existing drainage conveyance is natural or urban;
(2) Is runoff from offsite conveyed through the site? if yes, quantify all offsite drainage areas, design flows, and locations where offsite flows enter the project site, and summarize how such flows are conveyed through the site;
(3)Provide details regarding existing project site drainage conveyance network, including any existing storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels; and
(4) Identify all discharge locations from the existing project site along with a summary of conveyance system size and capacity for each of the discharge locations. Provide summary of the pre-project drainage areas and design flows to each of the existing runoff discharge locations.

Describe existing site drainage patterns:

.

The runoff from the project site, in its existing conditions, flows from the north and the east to the southwest corner where it is routed via an existing 12" CMP riser to a 12" existing corrugated metal pipe. After comingling with the total flow from the commercial parcel south of the project, total flow is conveyed to the storm channel west via 12" pipe which ultimately discharges into Lake San Marcos

The existing drainage conveyance is natural and there is no runoff from offsite conveyed through the site. Runoff onsite is mostly sheet flow discharging into the channel along the western boundary of the project site

Description of Proposed Site Development

Project Description / Proposed Land Use and/or Activities:
The post-developed condition of the site will consist of 120 three story, townhome units (Occupancy: R3 Townhome/U; Construction Type V-B) with a maximum permitted density of 15.7 units per acre, streets and associated utilities including a storm drain system necessary to convey site runoff through the project area. In addition, two underground vaults located southwest and southeast of the site will be constructed for hydromodification, and peak flow detention purposes.

List/describe proposed impervious features of the project (e.g., buildings, roadways, parking lots, courtyards, athletic courts, other impervious features):

The impervious features onsite will consist of the building roofs, roads, sidewalks and parking lots .

List/describe proposed pervious features of the project (e.g., landscape areas):

Landscaped areas

Does the project include grading and changes to site topography?
☒ Yes
☐ No

Description / Additional Information:

The site topography will be very close to the existing conditions. However, a cut of approximately 9,335 CY and fill of 9,335 CY will be needed for the earthwork

Description of Proposed Site Drainage Patterns

Does the project include changes to site drainage (e.g., installation of new storm water conveyance systems)?

☒ Yes

☐ No

If yes, provide details regarding the proposed project site drainage conveyance network, including storm drains, concrete channels, swales, detention facilities, storm water treatment facilities, natural or constructed channels, and the method for conveying offsite flows through or around the proposed project site. Identify all discharge locations from the proposed project site along with a summary of the conveyance system size and capacity for each of the discharge locations. Provide a summary of pre- and post-project drainage areas and design flows to each of the runoff discharge locations. Reference the drainage study for detailed calculations.

Describe proposed site drainage patterns::

The stormwater runoff will be collected by inlets , and routed via storm drain pipes towards the vaults and Modular wetland units.

Identify whether any of the following features, activities, and/or pollutant source areas will be present (select all that apply):

- ☒ On-site storm drain inlets
- ☐ Interior floor drains and elevator shaft sump pumps
- ☒ Interior parking garages
- ☒ Need for future indoor & structural pest control
- ☒ Landscape/Outdoor Pesticide Use
- ☐ Pools, spas, ponds, decorative fountains, and other water features
- ☐ Food service
- ☒ Refuse areas
- ☐ Industrial processes
- ☐ Outdoor storage of equipment or materials
- ☐ Vehicle and Equipment Cleaning
- ☐ Vehicle/Equipment Repair and Maintenance
- ☐ Fuel Dispensing Areas
- ☐ Loading Docks
- ☒ Fire Sprinkler Test Water
- ☐ Miscellaneous Drain or Wash Water
- ☒ Plazas, sidewalks, and parking lots

Description / Additional Information:

Identification and Narrative of Receiving Water and Pollutants of Concern

Describe flow path of storm water from the project site discharge location(s), through urban storm conveyance systems as applicable, to receiving creeks, rivers, and lagoons as applicable, and ultimate discharge to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable):

The site will discharge to an existing channel at the southwest corner of the site. The discharge from the site will enter the enclosed storm drain system via 3X8 box culvert that runs southerly crossing W Mission Rd. The site discharge will be conveyed via lined channels and enclosed storm drain to ultimately discharges into the HMP exempted Lake San Marcos , except for a small portion of unlined open channel with a medium erosion susceptibility. The Channel analysis was prepared by Delane Engineering and approved by the City. The study is saved in the City files.

List any 303(d) impaired water bodies within the path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable), identify the pollutant(s)/stressor(s) causing impairment, and identify any TMDLs and/or Highest Priority Pollutants from the WQIP for the impaired water bodies:

303(d) Impaired Water Body	Pollutant(s)/Stressor(s)	TMDLs / WQIP Highest Priority Pollutant
San Marcos Creek	Benthic Community Effects, DDE, Indicator Bacteria, Phosphorus, Selenium, Toxicity	Bacteria and Nutrients
Batiquitos Lagoon	Toxicity	Bacteria and Nutrients

Identification of Project Site Pollutants*

*Identification of project site pollutants is only required if flow-thru treatment BMPs are implemented onsite in lieu of retention or biofiltration BMPs (note the project must also participate in an alternative compliance program unless prior lawful approval to meet earlier PDP requirements is demonstrated)

Identify pollutants expected from the project site based on all proposed use(s) of the site (see BMP Design Manual Appendix B.6):

Pollutant	Not Applicable to the Project Site	Expected from the Project Site	Also a Receiving Water Pollutant of Concern
Sediment			
Nutrients			
Heavy Metals			
Organic Compounds			
Trash & Debris			
Oxygen Demanding Substances			
Oil & Grease			
Bacteria & Viruses			
Pesticides			

Hydromodification Management Requirements

Do hydromodification management requirements apply (see Section 1.6 of the BMP Design Manual)?

- ☒ Yes, hydromodification management flow control structural BMPs required.
- ☐ No, the project will discharge runoff directly to existing underground storm drains discharging directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.
- ☐ No, the project will discharge runoff directly to conveyance channels whose bed and bank are concrete-lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.
- ☐ No, the project will discharge runoff directly to an area identified as appropriate for an exemption by the WMAA for the watershed in which the project resides.

Description / Additional Information (to be provided if a 'No' answer has been selected above):

Critical Coarse Sediment Yield Areas*

*This Section only required if hydromodification management requirements apply

Based on the maps provided within the WMAA, do potential critical coarse sediment yield areas exist within the project drainage boundaries?

- ☐ Yes
- ☒ No, No critical coarse sediment yield areas to be protected based on WMAA maps

If yes, have any of the optional analyses presented in Section 6.2 of the BMP Design Manual been performed?

- ☐ 6.2.1 Verification of Geomorphic Landscape Units (GLUs) Onsite
- ☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment
- ☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite
- ☒ No optional analyses performed, the project will avoid critical coarse sediment yield areas identified based on WMAA maps

If optional analyses were performed, what is the final result?

- ☐ No critical coarse sediment yield areas to be protected based on verification of GLUs onsite
- ☐ Critical coarse sediment yield areas exist but additional analysis has determined that protection is not required. Documentation attached in Attachment 2.b of the SWQMP.
- ☐ Critical coarse sediment yield areas exist and require protection. The project will implement management measures described in Sections 6.2.4 and 6.2.5 as applicable, and the areas are identified on the SWQMP Exhibit.

Discussion / Additional Information:

Flow Control for Post-Project Runoff*

*This Section only required if hydromodification management requirements apply

List and describe point(s) of compliance (POCs) for flow control for hydromodification management (see Section 6.3.1). For each POC, provide a POC identification name or number correlating to the project's HMP Exhibit and a receiving channel identification name or number correlating to the project's HMP Exhibit.

There will be one point of compliance (POC 1) located at the southwest corner of the site at the Box Culvert

Has a geomorphic assessment been performed for the receiving channel(s)?

☐ No, the low flow threshold is 0.1Q2 (default low flow threshold)

☐ Yes, the result is the low flow threshold is 0.1Q2

☒ Yes, the result is the low flow threshold is 0.3Q2

☐ Yes, the result is the low flow threshold is 0.5Q2

If a geomorphic assessment has been performed, provide title, date, and preparer:

The site will discharge to an existing channel at the southwest corner of the site. The discharge from the site will enter the enclosed storm drain system via 3X8 box culvert that runs southerly crossing W Mission Rd. The site discharge will be conveyed via lined channels and enclosed storm drain to ultimately discharges into the HMP exempted Lake San Marcos , except for a small portion of unlined open channel with a medium erosion susceptibility. The Channel analysis was prepared by Delane Engineering and approved by the City. The study is saved in the City files.

Discussion / Additional Information: (optional)

Other Site Requirements and Constraints
When applicable, list other site requirements or constraints that will influence storm water management design, such as zoning requirements including setbacks and open space, or local codes governing minimum street width, sidewalk construction, allowable pavement types, and drainage requirements.

Optional Additional Information or Continuation of Previous Sections As Needed
This space provided for additional information or continuation of information from previous sections as needed.

Source Control BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)	Form I-4 [March 15, 2016]

Project Identification

Project Name: Gran Vista

Permit Application Number: TBD

Source Control BMPs

All development projects must implement source control BMPs SC-1 through SC-6 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement source control BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the source control BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project has no outdoor materials storage areas). Discussion / justification may be provided.

Source Control Requirement	Applied?		
SC-1 Prevention of Illicit Discharges into the MS4	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-1 not implemented:			
SC-2 Storm Drain Stenciling or Signage	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-2 not implemented:			
SC-3 Protect Outdoor Materials Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☒ N/A
Discussion / justification if SC-3 not implemented:			
SC-4 Protect Materials Stored in Outdoor Work Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☒ N/A
Discussion / justification if SC-4 not implemented:			

Source Control Requirement	Applied?		
SC-5 Protect Trash Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-5 not implemented:			
SC-6 Additional BMPs Based on Potential Sources of Runoff Pollutants (must answer for each source listed below)			
☐ On-site storm drain inlets	☒ Yes	☐ No	☐ N/A
☐ Interior floor drains and elevator shaft sump pumps	☒ Yes	☐ No	☐ N/A
☐ Interior parking garages	☒ Yes	☐ No	☐ N/A
☐ Need for future indoor & structural pest control	☒ Yes	☐ No	☐ N/A
☐ Landscape/Outdoor Pesticide Use	☒ Yes	☐ No	☐ N/A
☐ Pools, spas, ponds, decorative fountains, and other water features	☐ Yes	☐ No	☒ N/A
☐ Food service	☐ Yes	☐ No	☒ N/A
☐ Refuse areas	☒ Yes	☐ No	☐ N/A
☐ Industrial processes	☐ Yes	☐ No	☒ N/A
☐ Outdoor storage of equipment or materials	☐ Yes	☐ No	☒ N/A
☐ Vehicle and Equipment Cleaning	☐ Yes	☐ No	☒ N/A
☐ Vehicle/Equipment Repair and Maintenance	☐ Yes	☐ No	☒ N/A
☐ Fuel Dispensing Areas	☐ Yes	☐ No	☒ N/A
☐ Loading Docks	☐ Yes	☐ No	☒ N/A
☐ Fire Sprinkler Test Water	☒ Yes	☐ No	☐ N/A
☐ Miscellaneous Drain or Wash Water	☐ Yes	☐ No	☒ N/A
☐ Plazas, sidewalks, and parking lots	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-6 not implemented. Clearly identify which sources of runoff pollutants are discussed. Justification must be provided for all "No" answers shown above.			

Site Design BMP Checklist for All Development Projects (Standard Projects and Priority Development Projects)	Form I-5 [March 15, 2016]

Project Identification

Project Name: Gran Vista

Permit Application Number: TBD

Site Design BMPs

All development projects must implement site design BMPs SD-1 through SD-8 where applicable and feasible. See Chapter 4 and Appendix E of the Model BMP Design Manual for information to implement site design BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the site design BMP as described in Chapter 4 and/or Appendix E of the Model BMP Design Manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project site has no existing natural areas to conserve). Discussion / justification may be provided.

Site Design Requirement	Applied?		
SD-1 Maintain Natural Drainage Pathways and Hydrologic Features	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-1 not implemented:			
SD-2 Conserve Natural Areas, Soils, and Vegetation	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-2 not implemented: Where applicable			
SD-3 Minimize Impervious Area	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-3 not implemented:			
SD-4 Minimize Soil Compaction	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-4 not implemented: Where applicable			
SD-5 Impervious Area Dispersion	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-5 not implemented: Impervious areas throughout the site will be collected via inlets per SD-6 below. Dispersion will occur at the discharge location.			

Form I-5 Page 2 of 2, Form Date: March 15, 2016			
Site Design Requirement	Applied?		
SD-6 Runoff Collection	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-6 not implemented:			
SD-7 Landscaping with Native or Drought Tolerant Species	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-7 not implemented: Where applicable			
SD-8 Harvesting and Using Precipitation	☐ Yes	☐ No	☒ N/A
Discussion / justification if SD-8 not implemented:			

Summary of PDP Structural BMPs	Form I-6 (PDPs) [March 15, 2016]
Project Identification	
Project Name: Gran Vista	
Permit Application Number: TBD	
PDP Structural BMPs	

All PDPs must implement structural BMPs for storm water pollutant control (see Chapter 5 of the BMP Design Manual). Selection of PDP structural BMPs for storm water pollutant control must be based on the selection process described in Chapter 5. PDPs subject to hydromodification management requirements must also implement structural BMPs for flow control for hydromodification management (see Chapter 6 of the BMP Design Manual). Both storm water pollutant control and flow control for hydromodification management can be achieved within the same structural BMP(s).

PDP structural BMPs must be verified by the local jurisdiction at the completion of construction. This may include requiring the project owner or project owner's representative and engineer of record to certify construction of the structural BMPs (see Section 1.12 of the BMP Design Manual). PDP structural BMPs must be maintained into perpetuity, and the local jurisdiction must confirm the maintenance (see Section 7 of the BMP Design Manual).

Use this form to provide narrative description of the general strategy for structural BMP implementation at the project site in the box below. Then complete the PDP structural BMP summary information sheet (page 3 of this form) for each structural BMP within the project (copy the BMP summary information page as many times as needed to provide summary information for each individual structural BMP).

Describe the general strategy for structural BMP implementation at the site. This information must describe how the steps for selecting and designing storm water pollutant control BMPs presented in Section 5.1 of the BMP Design Manual were followed, and the results (type of BMPs selected). For projects requiring hydromodification flow control BMPs, indicate whether pollutant control and flow control BMPs are integrated or separate.

STEP 1: Evaluate at DMA Scale

1a: After delineating the DMAs, SM-C has been identified as a self mitigating area (landscaped area that drains directly offsite and to the public Storm drain), and it meets all the requirements per section 5.2.1 from the BMP manual, and 208 sft of de minims sidewalk at the entrance has been delineated and meets the requirements per section 5.2.2.

Determine and delineate the remain areas the DMAs are not "Self-mitigating" or "De minimis" or "Self-retaining", to 1b.

1b: Break down pervious and impervious area, DCV for all DMAs were calculated using worksheet B.2-1. To Step 2.

STEP 2: Harvest and use is infeasible according to Form I-7. To Step 3.

STEP 3:

3a: Using Form I-8 to conduct a prelimary feasibility screening determined that no infiltration to be feasible.

3b: volume-based Proprietary Biofiltration MWS BMPs and flow-based Modular wetland (or equivalent) chosen.

3c: using Worksheet B.2.1 to calculate the DCV from each DMA.

For the proprietary biofiltration BMP, an underground storage is proposed upstream of the BMP to provided the 1.5 DCV for DMA-1 and DMA-2 . B-5-2 was used to calculate min retention

The MWS units BF-3-1 and BF-3-2 were sized to provide the required 1.5 design captured volume and to drawdown in 36 hrs. The unit is hydraulicly disconnected to the vaults

The generated flow from DMA-1 and DMA-2 will be routed to the vaults which have internal riser.

The vaults are utilized as a storage for the water qulaity design captured volume (1.5 DCV), in addition to the required storage for HMP and peak flow attenuation. The very low orifice in the risers is sized to draw down the 1.5 DCV (design captured volume) in 36 hrs. The flow from this orifice will be directed to a downstream volume based MWS unit to address water quality requirements. An internal surface control weir will be built inside the riser with an invert elevation set at the water surface elevation associated with the water quality volume in the vault. The riser internal weir will divert the flows below its invert towards the modular wetland unit downstream of the vault.

The low flow orifice that directs the flow to the MWS unit is modeled in the SWMM with a rating table up to the water quality HGL in the vault and labeled as WQ orifice.

The BF-3-3 flow-based is sized using B.6-1 Worksheet to replace the sand filter whic was treating the exisitng Drive (DMA3-C EX and DMA3-D-EX) and treat additional 0.09 acres (treat the undisturbed area that commingles with the proposed area)

BF-3-4 flow-based is sized using B.6.1 to treat WQ flow that is generated from DMA 4

BF-3-5 flow-based sized to treat flow from the onsite area DMA-5

STEP 4:

4a: Proposed BMPs treats 1.5 DCV and drawdown n 36 hrs and the flowbased unit treat 1.5 of the required water quality flow. Project meets pollutant control standards. To Step 6.

STEP 6: SWQMP prepared as step 6.

STEP 7:HMP volumes provided within proposed vaults and SWMM model has been prepared for the project

(Page reserved for continuation of description of general strategy for structural BMP implementation at the site)

(Continued from page 1)

Runoff generated from DMA 2 will be directed toward the underground Vault HMP-2 east and a volume based MWS unit BF-3-2 for pollutant control, HMP and detention, then conveyed west to commingle with the treated flow from DMA-5.

The flow from DMA-5 will be treated via MWS BF-3-5 which will address the pollutant control requirements, and will meet the hydromodification and detention requirements when measured at POC-1 by over detaining in the proposed two vault . The treated flow will be conveyed west to commingle with the treated flow from vault HMP-1\BF-3-1.

Runoff generated from DMA 1 will be directed towards the underground Vault HMP-1 and a volume based MWS unit BF-3-1 to address pollutant control, HMP and detention requirements, then conveyed to commingle with the treated flows from Vault HMP-2\ BF-3-2 and BF-3-5.

The flow then continues westerly to commingle with the existing treated and bypassed flows, and the treated flow from BF-3-3.

The BF-3-3 will treat the flow that is generated from the proposed DMA3 which includes sidewalk and driveways drain southerly and the existing undisturbed drive that was previously treated via sand filter. The sand filter will be removed and the flows from the DMA3-EX will commingle with the DMA3 proposed and drains towards the BF-3-3 that will treat the total generated runoff (Existing and proposed) and connects to the existing storm drain.

The flow from the DMA 4 (driveway, sidewalk and existing pavement that commingles with it) is routed via proposed BF-3-4 which will treat the WQ flow generated from the newly proposed area and existing area that commingles with it. The discharge from the site and the proposed BF-3-4 will continue towards the historical discharge location on the Las Posas Creek POC1.

Continues Simulation analysis (SWMM) has been provided at the POC1 location to confirm that the proposed project meets the HMP requirements.

Structural BMP Summary Information
(Copy this page as needed to provide information for each individual proposed structural BMP)

Structural BMP ID No. BF-3-1

Construction Plan Sheet No. TBD

Type of structural BMP:
- ☐ Retention by harvest and use (HU-1)
- ☐ Retention by infiltration basin (INF-1)
- ☐ Retention by bioretention (INF-2)
- ☐ Retention by permeable pavement (INF-3)
- ☐ Partial retention by biofiltration with partial retention (PR-1)
- ☐ Biofiltration (BF-1)
- ☐ Biofiltration with Nutrient Sensitive Media Design (BF-2)
- ☒ Proprietary Biofiltration (BF-3) meeting all requirements of Appendix F
- ☐ Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below)
- ☐ Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below)
- ☐ Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below)
- ☐ Detention pond or vault for hydromodification management
- ☐ Other (describe in discussion section below)

Purpose:
- ☒ Pollutant control only
- ☐ Hydromodification control only
- ☐ Combined pollutant control and hydromodification control
- ☐ Pre-treatment/forebay for another structural BMP
- ☐ Other (describe in discussion section below)

Who will certify construction of this BMP? Provide name and contact information for the party responsible to sign BMP verification forms if required by the [City Engineer] (See Section 1.12 of the BMP Design Manual)	Alisa S. Vialpando, RCE #47945 Hunsaker & Associates San Diego, Inc. 9707 Waples Street San Diego, CA 92121 Telephone: (858) 558-4500
Who will be the final owner of this BMP?	WPI-Las Posas/Mission, LLC Andrew Sun c/o World Premier Investments, Inc.
Who will maintain this BMP into perpetuity?	WPI-Las Posas/Mission, LLC Andrew Sun c/o World Premier Investments, Inc.
What is the funding mechanism for maintenance?	HOA

Structural BMP ID No. BF-3-1

Construction Plan Sheet No. TBD

Discussion (as needed):
Using B-2-1, DCV has been calculated to be 3,441 CFT
1.5 DCV = 5,161 CFT'
Vault1 (HMP1) provides the required volume with 2.5 ft associated WSE
1.6" water quality orifice in the riser within the vault1 at elevation 0 (measured form the vault's bottom) has been sized to drawdown the 1.5 DCV in 36 hrs.
The flow from this orifice will be directed to a downstream volume based MWS unit BF-3-1 to address water quality requirements. An internal surface control weir will be built inside the riser with an invert elevation set at the water surface elevation associated with the water quality volume in the vault. The riser internal weir will divert the flows below its invert towards the modular wetland unit downstream of the vault.
The BF-3-1 has been sized to be L-8-8 per the sizing letter and MWS detail from bioclean see attachment 1e.

Structural BMP Summary Information
(Copy this page as needed to provide information for each individual proposed structural BMP)

Structural BMP ID No. BF-3-2

Construction Plan Sheet No. TBD

Type of structural BMP:
- ☐ Retention by harvest and use (HU-1)
- ☐ Retention by infiltration basin (INF-1)
- ☐ Retention by bioretention (INF-2)
- ☐ Retention by permeable pavement (INF-3)
- ☐ Partial retention by biofiltration with partial retention (PR-1)
- ☐ Biofiltration (BF-1)
- ☐ Biofiltration with Nutrient Sensitive Media Design (BF-2)
- ☒ Proprietary Biofiltration (BF-3) meeting all requirements of Appendix F
- ☐ Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below)
- ☐ Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below)
- ☐ Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below)
- ☐ Detention pond or vault for hydromodification management
- ☐ Other (describe in discussion section below)

Purpose:
- ☒ Pollutant control only
- ☐ Hydromodification control only
- ☐ Combined pollutant control and hydromodification control
- ☐ Pre-treatment/forebay for another structural BMP
- ☐ Other (describe in discussion section below)

Who will certify construction of this BMP? Provide name and contact information for the party responsible to sign BMP verification forms if required by the [City Engineer] (See Section 1.12 of the BMP Design Manual)	Alisa S. Vialpando, RCE #47945 Hunsaker & Associates San Diego, Inc. 9707 Waples Street San Diego, CA 92121 Telephone: (858) 558-4500
Who will be the final owner of this BMP?	WPI-Las Posas/Mission, LLC Andrew Sun c/o World Premier Investments, Inc.
Who will maintain this BMP into perpetuity?	WPI-Las Posas/Mission, LLC Andrew Sun c/o World Premier Investments, Inc.
What is the funding mechanism for maintenance?	HOA

Structural BMP ID No. BF-3-2

Construction Plan Sheet No. TBD

Discussion (as needed):

Using B-2-1, DCV has been calculated to be 5,859 CFT

1.5 DCV = 8,789 CFT'

Vault2 (HMP2) provides the required volume with 2.6 ft associated WSE

2.3" water quality orifice in the riser within the vault1 at elevation 0 (measured form the vault's bottom) has been sized to drawdown the 1.5 DCV in 36 hrs.

The flow from this orifice will be directed to a downstream volume based MWS unit BF-3-2 to address water quality requirements. An internal surface control weir will be built inside the riser with an invert elevation set at the water surface elevation associated with the water quality volume in the vault. The riser internal weir will divert the flows below its invert towards the modular wetland unit downstream of the vault.

The BF-3-2 has been sized to be L-8-12 per the sizing letter and MWS detail from bioclean. see attachment 1e

☐ Biofiltration with Nutrient Sensitive Media Design (BF-2)
☐ Proprietary Biofiltration (BF-3) meeting all requirements of Appendix F
☐ Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below)
☐ Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below)
☐ Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below)
☒ Detention pond or vault for hydromodification management
☐ Other (describe in discussion section below)

Purpose:
☐ Pollutant control only
☒ Hydromodification control only
☐ Combined pollutant control and hydromodification control
☐ Pre-treatment/forebay for another structural BMP
☐ Other (describe in discussion section below)

Who will certify construction of this BMP? Provide name and contact information for the party responsible to sign BMP verification forms if required by the [City Engineer] (See Section 1.12 of the BMP Design Manual)	Alisa S. Vialpando, RCE #47945 Hunsaker & Associates San Diego, Inc. 9707 Waples Street San Diego, CA 92121 Telephone: (858) 558-4500
Who will be the final owner of this BMP?	WPI-Las Posas/Mission, LLC Andrew Sun c/o World Premier Investments, Inc.
Who will maintain this BMP into perpetuity?	WPI-Las Posas/Mission, LLC Andrew Sun c/o World Premier Investments, Inc.
What is the funding mechanism for maintenance?	HOA

Structural BMP ID No. HMP-2

Construction Plan Sheet No. TBD

Discussion (as needed):
SWMM 5.1 Was used to size the vault to meet flow control requirements. Vault-2 has been sized to detain the flows from DMA-2 and over detain for DMA-5,4 and 3, so the proposed project meets the HMP requirements when measures at the POC1.

ATTACHMENT 1
BACKUP FOR PDP POLLUTANT CONTROL BMPS

This is the cover sheet for Attachment 1.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 1a	DMA Exhibit (Required) See DMA Exhibit Checklist on the back of this Attachment cover sheet.	☒ Included
Attachment 1b	Tabular Summary of DMAs Showing DMA ID matching DMA Exhibit, DMA Area, and DMA Type (Required)* *Provide table in this Attachment OR on DMA Exhibit in Attachment 1a	☒ Included on DMA Exhibit in Attachment 1a ☐ Included as Attachment 1b, separate from DMA Exhibit
Attachment 1c	Form I-7, Harvest and Use Feasibility Screening Checklist (Required unless the entire project will use infiltration BMPs) Refer to Appendix B.3-1 of the BMP Design Manual to complete Form I-7.	☒ Included ☐ Not included because the entire project will use infiltration BMPs
Attachment 1d	Form I-8, Categorization of Infiltration Feasibility Condition (Required unless the project will use harvest and use BMPs) Refer to Appendices C and D of the BMP Design Manual to complete Form I-8.	☒ Included ☐ Not included because the entire project will use harvest and use BMPs
Attachment 1e	Pollutant Control BMP Design Worksheets / Calculations (Required) Refer to Appendices B and E of the BMP Design Manual for structural pollutant control BMP design guidelines	☒ Included

Use this checklist to ensure the required information has been included on the DMA Exhibit:

The DMA Exhibit must identify:

☒ Underlying hydrologic soil group
☒ Approximate depth to groundwater
☒ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
☒ Critical coarse sediment yield areas to be protected
☒ Existing topography and impervious areas
☒ Existing and proposed site drainage network and connections to drainage offsite
☒ Proposed demolition
☒ Proposed grading
☒ Proposed impervious features
☒ Proposed design features and surface treatments used to minimize imperviousness
☒ Drainage management area (DMA) boundaries, DMA ID numbers, and DMA areas (square footage or acreage), and DMA type (i.e., drains to BMP, self-retaining, or self-mitigating)
☒ Potential pollutant source areas and corresponding required source controls (see Chapter 4, Appendix E.1, and Form I-3B)
☒ Structural BMPs (identify location, type of BMP, and size/detail)

FORM I-7, HARVEST AND USE FEASIBLITY SCREENING CHECKLIST

Worksheet B.3-1. Harvest and Use Feasibility Screening

Harvest and Use Feasibility Screening	Worksheet B.3-1

1. Is there a demand for harvested water (check all that apply) at the project site that is reliably present during the wet season?

☑ Toilet and urinal flushing
☑ Landscape irrigation
☐ Other:_____

2. If there is a demand; estimate the anticipated average wet season demand over a period of 36 hours. Guidance for planning level demand calculations for toilet/urinal flushing and landscape irrigation is provided in Section B.3.2.

land use: Residential use. 36 hr: 9.3 gal/per resident* 120 * 3 people/unit = 3348 gal = 447.5 cubic feet

Generate landscape: moderate plant use. 1470 gal/ac * 1.71ac = 2514 gal = 336 cubic feet

Total = 447.5+336 = 783.5 cubic-feet

3. Calculate the DCV using worksheet B-2.1.

DCV = 10,955 cubic-feet
0.25 DCV = 2,714 cubic-feet

3a. Is the 36-hour demand greater than or equal to the DCV?	3b. Is the 36-hour demand greater than 0.25DCV but less than the full DCV?	3c. Is the 36-hour demand less than 0.25DCV?
Yes / (No) ⇨	Yes / (No) ⇨	(Yes) ⇩
Harvest and use appears to be feasible. Conduct more detailed evaluation and sizing calculations to confirm that DCV can be used at an adequate rate to meet drawdown criteria.	Harvest and use may be feasible. Conduct more detailed evaluation and sizing calculations to determine feasibility. Harvest and use may only be able to be used for a portion of the site, or (optionally) the storage may need to be upsized to meet long term capture targets while draining in longer than 36 hours.	Harvest and use is considered to be infeasible.

ATTACHMENT 1d

FORM I-8, CATEGORIZATION OF INFILTRATION FEASIBILITY CONDITION

Categorization of Infiltration Feasibility Condition	Worksheet C.4-1

Part 1 - Full Infiltration Feasibility Screening Criteria

Would infiltration of the full design volume be feasible from a physical perspective without any undesirable consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
1	**Is the estimated reliable infiltration rate below proposed facility locations greater than 0.5 inches per hour?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.		X

Based on the USDA Web Soil Survey, Soil C and D has low infiltration rate.& BASED ON INFILTRATION TESTING PER GEOTECHNICAL REPORT DATED 7/15/21.

2	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X

Provide basis:

BASED ON INFILTRATION TESTING PER GEOTECHNICAL REPORT DATED 7/15/21.

Worksheet C.4-1 Page 2 of 4			
Criteria	Screening Question	**Yes**	**No**
3	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of groundwater contamination (shallow water table, storm water pollutants or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
BASED ON INFILTRATION TESTING PER GEOTECHNICAL REPORT DATED 7/15/21.			
4	**Can infiltration greater than 0.5 inches per hour be allowed without causing potential water balance issues such as change of seasonality of ephemeral streams or increased discharge of contaminated groundwater to surface waters?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	X	
Provide basis: BASED ON INFILTRATION TESTING PER GEOTECHNICAL REPORT DATED 7/15/21.			
Part 1 Result*	If all answers to rows 1 - 4 are "**Yes**" a full infiltration design is potentially feasible. The feasibility screening category is **Full Infiltration** If any answer from row 1-4 is "**No**", infiltration may be possible to some extent but would not generally be feasible or desirable to achieve a "full infiltration" design. Proceed to Part 2		Full Infiltration not Feasible

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by the City to substantiate findings.

Worksheet C.4-1 Page 3 of 4

Part 2 – Partial Infiltration vs. No Infiltration Feasibility Screening Criteria

Would infiltration of water in any appreciable amount be physically feasible without any negative consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
5	**Do soil and geologic conditions allow for infiltration in any appreciable rate or volume?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.		X

BASED ON INFILTRATION TESTING PER GEOTECHNICAL REPORT DATED 7/15/21.

6	**Can Infiltration in any appreciable quantity be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level**? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X

Site is underlain by soil type C and D that has low infiltration characteristics, which could result in lateral migration of water into the adjacent roadway improvements and utilities causing settlement and water movement through utility lines.

Worksheet C.4-1 Page 4 of 4			
Criteria	Screening Question	**Yes**	**No**
7	**Can Infiltration in any appreciable quantity be allowed without posing significant risk for groundwater related concerns (shallow water table, storm water pollutants or other factors)?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.		X
8	**Can infiltration be allowed without violating downstream water rights**? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	X	
Part 2 Result*	If all answers from row 1-4 are yes then partial infiltration design is potentially feasible. The feasibility screening category is **Partial Infiltration.** If any answer from row 5-8 is no, then infiltration of any volume is considered to be **infeasible** within the drainage area. The feasibility screening category is **No Infiltration.**		Infiltration Not Feasible

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by the City to substantiate findings.

DMA 3-EX
FLOW BASED BMP SIZING CALCULATION

DMA 3-EX: Flow Based BMP Design Flows (BF-3-3)		Worksheet B.6-1		
1	DCV	DCV	909	cubic-feet
2	DCV Retained (Treewell Reduction)	DCV Retained	0	cubic-feet
3	DCV Biofiltered	DCV Biofiltered	0.00	cubic-feet
4	DCV requiring flow-thru (Line 1 - Line 2 - 0.67*Line 3)	DCV flow-thru	909	cubic-feet
5	Adjustment Factor (Line 4 / Line1)	AF=	1.00	unitless
6	Design rainfall intensity	i=	0.20	in/hr
7	Area tributary to BMP(s)	A=	0.45	acres
8	Area-weighted runoff factor (estimate using Appendix B.2)	C=	0.79	unitless
9	Calculate Flow Rate = AF x (C x i x A)x1.5*	Q=	0.107	cfs

1) Adjustment factor shall be estimated considering only retention and biofiltration BMPs located upstream of flow-thru BMPs. That is, if the flow-thru BMP is upstream of the project's retention and biofiltration BMPs then the flow-thru BMP shall be sized using an adjustment factor of 1.

2) Volume based (e.g., dry extended detention basin) flow-thru treatment control BMPs shall be sized to the volume in Line 4 and dlow based)e.g., vegetated swales) shall be sized to flow rate in Line 9. Sand filter and media filter can be designed by either volume in :ie 4 or flow rate in Line 9

3) Propietary BMPs, if used, shall provide certified treatment capacity equal to or greater than the

4) Flow-thru treatment control BMPs shall be sized to filter or treat the maximum flow rate of runoff produced from a rainfaill intensity of 0.2 inch of rainfall per hour or each hour of every storm event

*1.5 Times Flow Rate Safety Factor

Bio Clean

Bio Clean
A Forterra Company

To Whom It May Concern,

The MWS Linear will be sized in accordance with its TAPE GULD approval. The system is approved at a loading rate of 1 gpm/sq ft. The MWS Linear has General Use Level Designation at this loading rate for TSS (Basic), phosphorous and dissolved metals (Enhanced). For this project design, sizing, loading will be reviewed by a Modular Wetland representative for final approval to ensure the system is sized appropriately.

For this project we are sizing two of the MWS units to treat a volume and three units to treat a flow rate.

BF-3-1 Due to the volume treatment requirements of this unit, we are sizing these units with a loading rate of 0.52 gpm/sf. This amount is well below our TAPE GULD approved loading rate of 1 gmp/sq ft.
BF-3-2: Due to the volume treatment requirements of this unit, we are sizing these units with a loading rate of 0.67 gpm/sf. This amount is well below our TAPE GULD approved loading rate of 1 gmp/sq ft.

BF-3-3, BF-3-4, and BF-3-5: These units are sized to our TAPE GULD approved loading rate of 1gpm/sq ft.

All five of the MWS units use internal bypass for peak bypass flows. The MWS Linear unit uses the standard equations below for flow over a rectangular weir and orifice sizing as shown below:

HEAD OVER RECTANGULAR WEIR

$$Given\ that: Q = VA;\ \ Q = peak\ flow\ rate, V = c_d\sqrt{2gh}, A = W(dh)$$

$$c_d\ is\ the\ discharge\ coefficent, W\ is\ the\ width\ of\ the\ weir\ \&\ h\ is\ the\ peak\ HGL$$

$$dQ = c_d\sqrt{2gh}\,(W)(dh)$$

$$\int_0^Q dQ = c_d W\sqrt{2g}\int_0^h h^{1/2}\,dh$$

$$Q = c_d W\sqrt{2g}\,\frac{2}{3}\,h^{3/2}$$

$$h = \left(\frac{Q}{\frac{2}{3}c_d W\sqrt{2g}}\right)^{2/3}$$

Volume Based Sizing

36 Hr

Many states require treatment of a water quality volume and do not offer the option of flow based design. The MWS Linear and its unique horizontal flow makes it the only biofilter that can be used in volume based design installed downstream of ponds, detention basins, and underground storage systems.

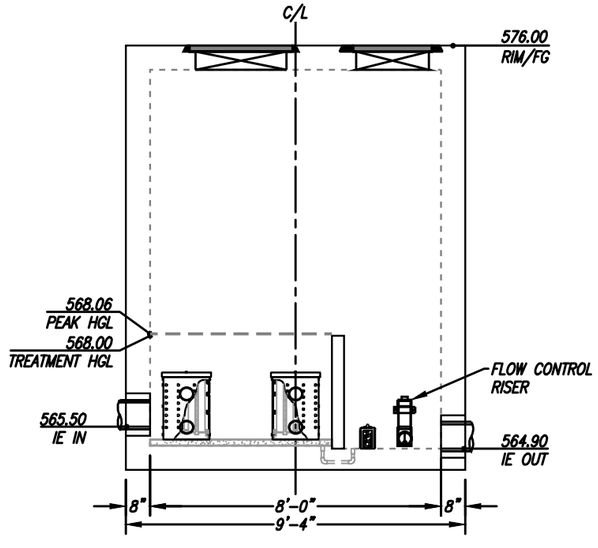
INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS' SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE FOR VERIFYING PROJECT ENGINEER'S RECOMMENDED BASE SPECIFICATIONS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATERTIGHT PER MANUFACTURER'S STANDARD CONNECTION DETAIL.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL PIPES, RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO USE GROUT AND/OR BRICKS TO MATCH COVERS WITH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. VEGETATION SUPPLIED AND INSTALLED BY OTHERS. ALL UNITS WITH VEGETATION MUST HAVE DRIP OR SPRAY IRRIGATION SUPPLIED AND INSTALLED BY OTHERS.
7. CONTRACTOR RESPONSIBLE FOR CONTACTING BIO CLEAN FOR ACTIVATION OF UNIT. MANUFACTURER'S WARRANTY IS VOID WITHOUT PROPER ACTIVATION BY A BIO CLEAN REPRESENTATIVE.

GENERAL NOTES



1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT BIO CLEAN.

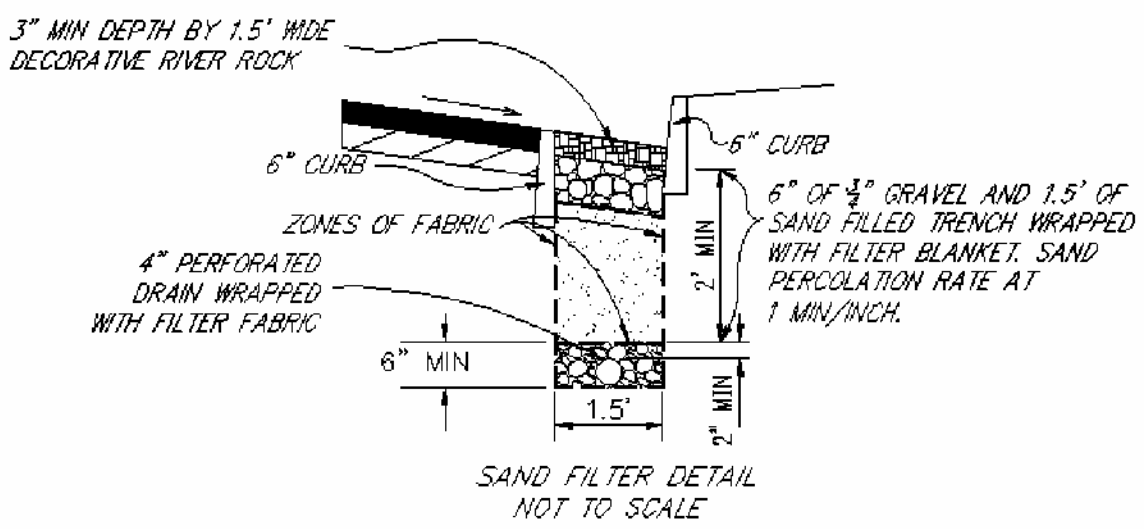
PLOT DATE: Jul 13, 2009 - 10:54am

9.1.1.2 Proposed design of Sand Filter

The sand filter proposed in this project is located on one side of the parking lot. The street section has a 1% min slope from the high side to the lower side. Instead of a curb & gutter on the lower side, this project will implement a sand filter. This filter is design to be over the minimum requirements for water quality.

TABLE OF REQUIRED MINIMUM CONFIGURATIONS OF THE SAND FILTERS AND WHAT THE PROJECT IS PROVIDING



Nodes	Volume Required (cubic ft)	Min Bottom Area (sq. ft)	Min Length of 1.5 ft Wide Filter (ft)	Length Provided (ft)	Remarks
7 to 20	4,326.770	432.677	288.45	689.00	Exceeds min req.
15 to 17	699.170	69.917	46.61	54.00	Exceeds min req.
4 to 25	1,275.240	127.524	85.02	86.00	Exceeds min req.

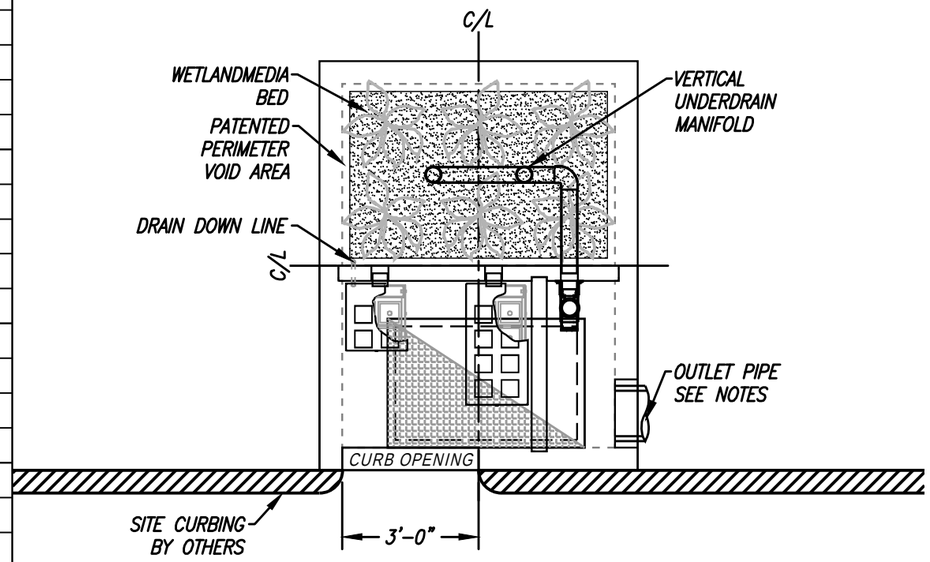
9.1.2 Calculation of 85th percentile discharge rates

Use P=0.81 inch the precipitation 85th percentile storm event, and $I=7.44P\ Tc^{-0.645}$. The discharge rates that enter to each BMP are:

Tc(mins)	**C**	**I** (in/hr)	**A** (acre)	**Q** (cfs)	**Flow direction**
6.74	0.79	1.7602	0.453	0.630	Node 4 to 25
8.07	0.79	1.5672	0.608	0.753	Node 7 to 9
7.12	0.79	1.6991	0.591	0.793	Node 11 to 13
4.99	0.79	2.1369	0.257	0.434	Node 14 to 22
5.11	0.79	2.1044	0.301	0.500	Node 15 to17

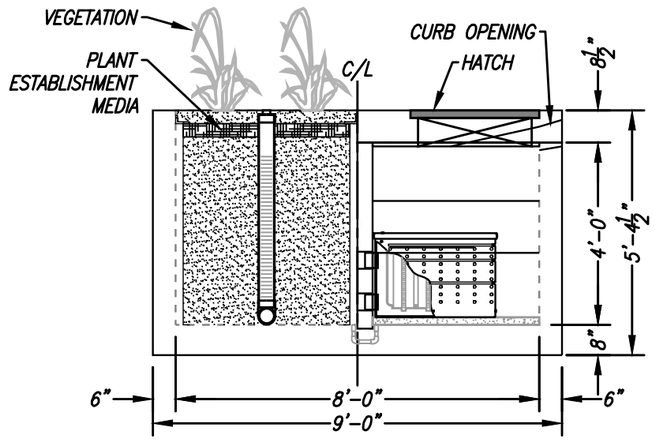
Note: Please refer to BMP site plan for flow direction nodes

MWS Linear | *Sizing Options*



Flow Based Sizing

The MWS Linear can be used in stand alone applications to meet treatment flow requirements. Since the MWS Linear is the only biofiltration system that can accept inflow pipes several feet below the surface it can be used not only in decentralized design applications but also as a large central end-of-the-line application for maximum feasibility.



Model #	Dimensions	WetlandMEDIA Surface Area	Treatment Flow Rate (cfs)
MWS-L-4-4	4′ x 4′	23 sq. ft.	0.052
MWS-L-4-6	4′ x 6′	32 sq. ft.	0.073
MWS-L-4-8	4′ x 8′	50 sq. ft.	0.115
MWS-L-4-13	4′ x 13′	63 sq. ft.	0.144
MWS-L-4-15	4′ x 15′	76 sq. ft.	0.175
MWS-L-4-17	4′ x 17′	90 sq. ft.	0.206
MWS-L-4-19	4′ x 19′	103 sq. ft.	0.237
MWS-L-4-21	4′ x 21′	117 sq. ft.	0.268
MWS-L-6-8	7′ x 9′	64 sq. ft.	0.147
MWS-L-8-8	8′ x 8′	100 sq. ft.	0.230

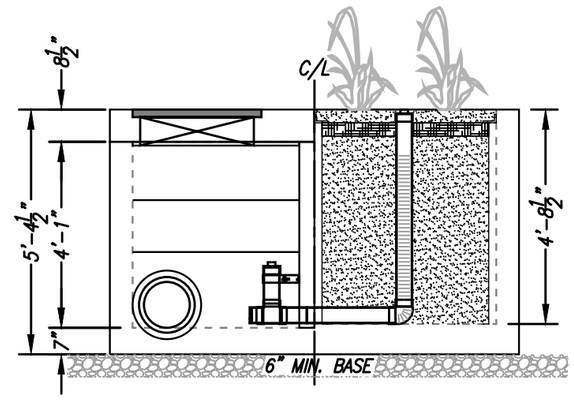
INSTALLATION NOTES



1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS' SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE FOR VERIFYING PROJECT ENGINEER'S RECOMMENDED BASE SPECIFICATIONS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL PIPES SHALL BE SEALED WATERTIGHT PER MANUFACTURER'S STANDARD CONNECTION DETAIL.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL PIPES, RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO USE GROUT AND/OR BRICKS TO MATCH COVERS WITH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. VEGETATION SUPPLIED AND INSTALLED BY OTHERS. ALL UNITS WITH VEGETATION MUST HAVE DRIP OR SPRAY IRRIGATION SUPPLIED AND INSTALLED BY OTHERS.
7. CONTRACTOR RESPONSIBLE FOR CONTACTING BIO CLEAN FOR ACTIVATION OF UNIT. MANUFACTURER'S WARRANTY IS VOID WITHOUT PROPER ACTIVATION BY A BIO CLEAN REPRESENTATIVE.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT BIO CLEAN.

BACKUP FOR PDP HYDROMODIFICATION CONTROL MEASURES

This is the cover sheet for Attachment 2.

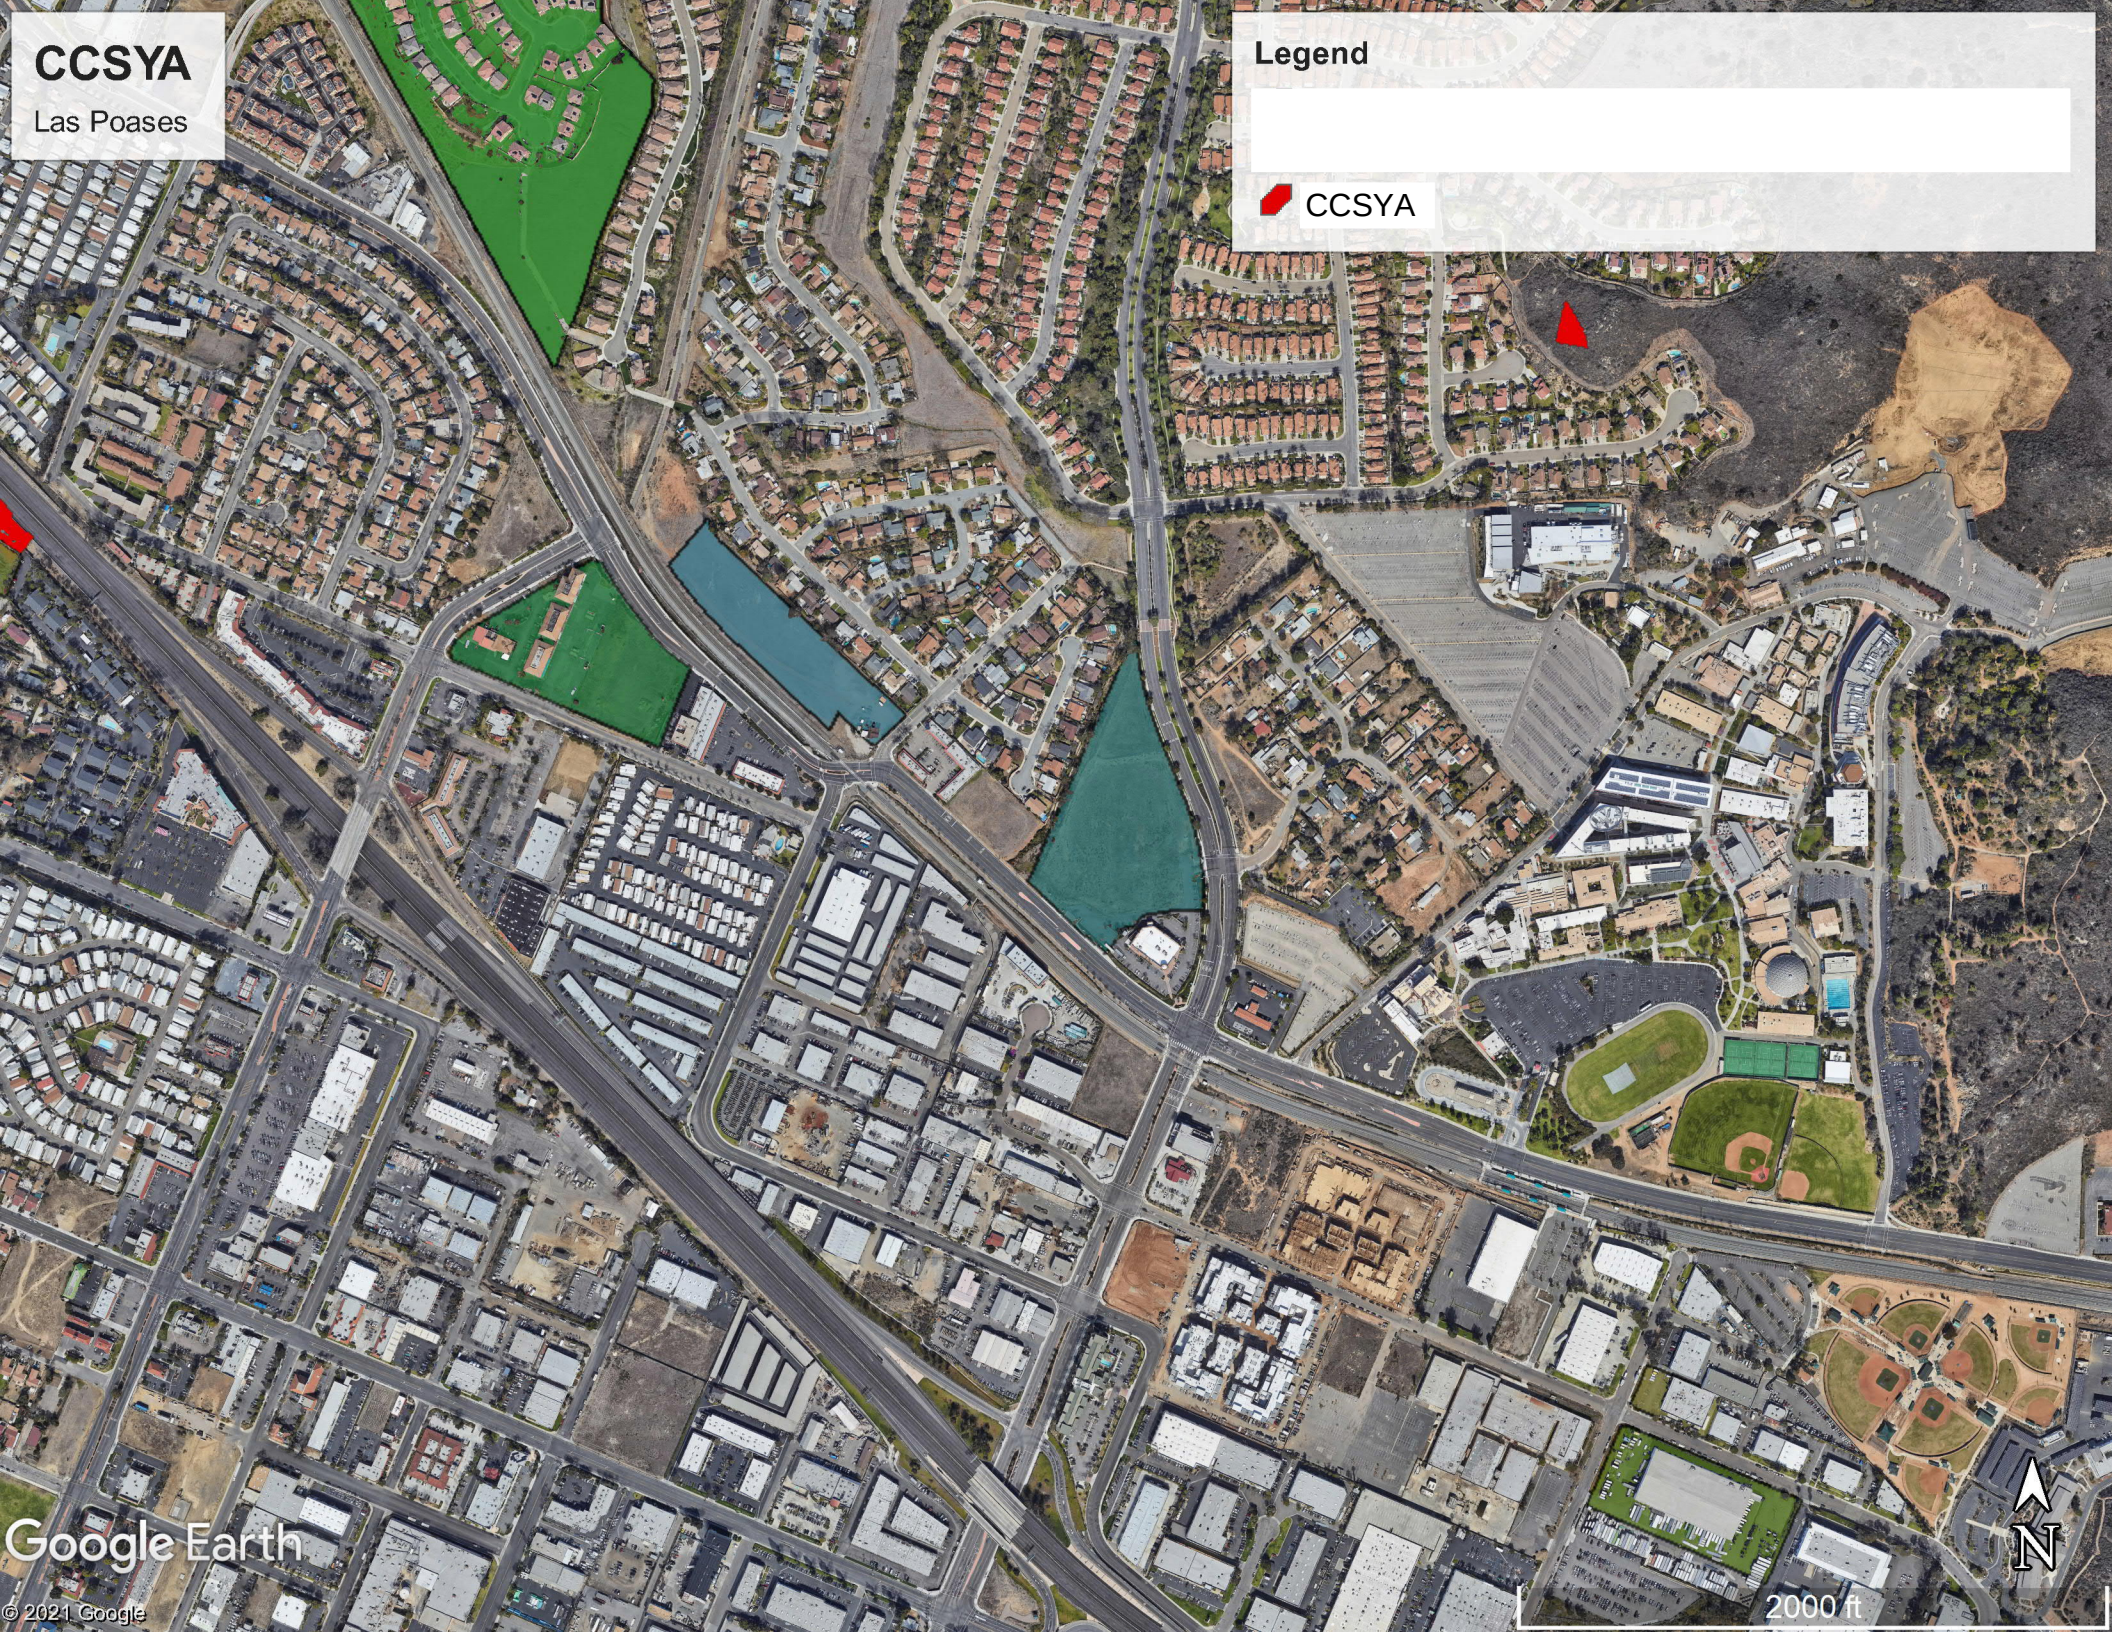
☒ Mark this box if this attachment is empty because the project is exempt from PDP hydromodification management requirements.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 2a	Hydromodification Management Exhibit (Required)	☒ Included See Hydromodification Management Exhibit Checklist on the back of this Attachment cover sheet.
Attachment 2b	Management of Critical Coarse Sediment Yield Areas (WMAA Exhibit is required, additional analyses are optional) See Section 6.2 of the BMP Design Manual.	☒ Exhibit showing project drainage boundaries marked on WMAA Critical Coarse Sediment Yield Area Map (Required) Optional analyses for Critical Coarse Sediment Yield Area Determination ☐ 6.2.1 Verification of Geomorphic Landscape Units Onsite ☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment ☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite
Attachment 2c	Geomorphic Assessment of Receiving Channels (Optional) See Section 6.3.4 of the BMP Design Manual.	☐ Not performed ☐ Included ☐ Submitted as separate stand-alone document
Attachment 2d	Flow Control Facility Design, including Structural BMP Drawdown Calculations and Overflow Design Summary (Required) See Chapter 6 and Appendix G of the BMP Design Manual	☒ Included ☐ Submitted as separate stand-alone document
Attachment 2e	Vector Control Plan (Required when structural BMPs will not drain in 96 hours)	☐ Included ☒ Not required because BMPs will drain in less than 96 hours

Use this checklist to ensure the required information has been included on the Hydromodification Management Exhibit:

The Hydromodification Management Exhibit must identify:



- ☐ Underlying hydrologic soil group
- ☐ Approximate depth to groundwater
- ☐ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
- ☐ Critical coarse sediment yield areas to be protected
- ☐ Existing topography
- ☐ Existing and proposed site drainage network and connections to drainage offsite
- ☐ Proposed grading
- ☐ Proposed impervious features
- ☐ Proposed design features and surface treatments used to minimize imperviousness
- ☐ Point(s) of Compliance (POC) for Hydromodification Management
- ☐ Existing and proposed drainage boundary and drainage area to each POC (when necessary, create separate exhibits for pre-development and post-project conditions)
- ☐ Structural BMPs for hydromodification management (identify location, type of BMP, and size/detail)

1.0 Introduction

A new brewery with tasting room, garden, food truck staging areas, and an associated parking lot is being proposed by Karl Strauss Brewing Company on a 1.51 acre site at Los Posas Road and Los Vallecitos Blvd in the City of San Marcos. Runoff from the site is discharged via lateral into an existing 72" pipe recently constructed as part of the adjacent Palomar Station development. The 72" pipe is part of the public storm drain system that flows in a generally southerly direction before discharging into a vegetated channel, referred to herein as Los Posas Creek. See **Attachment A** for vicinity map showing project site in relation to Los Posas Creek.

The project is subject to hydromodification requirements as described in Chapter 6 of the City of San Marcos BMP Design Manual, the purpose of which is to minimize the potential of storm water discharges from the MS4 from causing altered flow regimes and excessive downstream erosion in receiving waters. To meet this requirement the project must provide flow control for post-project runoff to meet the flow control performance standard. The flow control performance standard covers flow rates ranging from a lower flow threshold of 10 percent, 30 percent or 50 percent of the pre-development 2-year runoff event ($0.1Q_2$, $0.3Q_2$, or $0.5Q_2$) up to the pre-development 10-year runoff event (Q10). The determination of the low flow threshold depends on the erosion susceptibility of the receiving stream with $0.1Q_2$ for projects discharging to streams with high susceptibility to erosion (also the default when a channel susceptibility study has not been prepared), $0.3Q_2$ for projects discharging to streams with medium susceptibility to erosion, and $0.5Q_2$ for projects discharging to streams with low susceptibility to erosion

As described in section 6.3.4 of the San Marcos BMP Manual, the use of a higher low flow threshold of $0.3Q_2$ or $0.5Q_2$ must be supported by a channel screening report based on a tool developed by the Southern California Coastal Water Research Project (SCCWRP), documented in SCCWRP's Technical Report 606 (TR 606), dated March 2010, "Hydromodification Screening Tools: Field Manual for Assessing Channel Susceptibility." This study follows the methodology of the SCCWRP in order to determine the susceptibility of Los Posas Creek, the results of which can be used to establish the required flow control sizing for the project.

2.0 Office Assessment

Although the screening tool presented in TR 606 is predominantly designed for field-based assessment, it requires some preparatory office work to provide context and familiarity with the site prior to conducting the field evaluation. A satellite image is provided in **Attachment A** which shows features of the overall setting such as vegetation coverage, grade-control locations, human influences, and existing infrastructure.

CIVIL ENGINEERING | STORMWATER | DESIGN BUILD
www.DelaneEngineering.com | Info@DelaneGroup.com
4909 Murphy Canyon Road, STE 330, San Diego, CA 92123 | P. 619.787.5566 | F. 866.579.6415

The office assessment also requires an initial desktop analysis, the results of which are provided on Form 1 in **Attachment C**. Inputs for the drainage area and mean annual precipitation where determined from StreamStats, a Web-based GIS application that provides users access to USGS Data (StreamStats report provided in **Attachment C**). The valley width and valley slope were determined from City of San Marcos bare earth elevation contour information (2-ft) from 2009.

3.0 Analysis Domain

As defined in the San Marcos BMP Manual, the receiving stream is the location where runoff from the project is discharged to natural or un-lined channels. This occurs at the outfall of Los Posas Creek from a triple box culvert on the west side of Los Posas Road, approximately 500ft south of the intersection of Linda Vista Drive. This is the upstream limit of analysis as it is where the open, unlined channel begins (*Photos 1, 2*).

Per criteria in TR 606, the downstream extent of analysis is determined to be the closest of the following:

- At least one reach downstream of the first grade-control point
- Tidal backwater/lentic waterbody
- Equal order tributary
- A 2-fold increase in drainage area

The nearest lentic waterbody is Lake San Marcos, approximately 5,000 ft downstream and an equal order tributary/2-fold increase in drainage area does not occur until the confluence with San Marcos Creek approximately 2,000 ft downstream. The first grade control point is approximately 400 ft downstream where a small channel discharges from the east and the main channel shows distinct changes, in particular to bank slope. Although analysis is only required for one reach downstream of this location, the downstream extent selected was the crossing beneath San Marcos Boulevard (*Photo 14*) as this is a logical divide which may offer grade control, cause discontinuities in the conveyance of water or sediment, etc.

Although the 1,200 ft analysis domain is longer than the 656 feet (200m) maximum reach length for assigning a susceptibility rating per TR 606, this section of Los Posas Creek is an engineered channel which aerial photos and field reconnaissance show to be relatively uniform. Dividing the analysis domain into additional subreaches will not produce significantly different results.

4.0 Field Screening

A field assessment of the analysis domain was done on November 8, 2019. Much of the study area contained dense vegetation (*Photos 2, 11*) which limited access to some areas of the channel. The areas of the channel that were accessible for assessment were typically moderately vegetated (*Photo 12*). Evaluating just these

CIVIL ENGINEERING | STORMWATER | DESIGN BUILD
www.DelaneEngineering.com | Info@DelaneGroup.com
4909 Murphy Canyon Road, STE 330, San Diego, CA 92123 | P. 619.787.5566 | F. 866.579.6415

areas errs conservative as additional vegetation helps hold soil together and reduces flow velocity, further reducing susceptibility to erosion. Aerial photographs of the area dating back over 20 years show that vegetation coverage along the channel has increased with time.

The field screening tool uses a combination of relatively simple, but quantitative field indicators as input parameters to a set of decision trees. These decision trees, along with checklists, tables and calculations, follow a logical progression for assigning a susceptibility rating of Low, Medium, High, or Very High to the channel reach being assessed. susceptibility ratings are assigned independently to the vertical and lateral conditions, the more conservative of which is used to determine the erosion susceptibility of the channel. Vertical stability is a prerequisite for lateral stability because a stream that incises can increase bank heights to the point of collapse and channel widening. Accordingly, vertical susceptibility is assessed first because it affects the lateral rating in most instances.

Vertical Susceptibility

The decision tree and associated checklists and calculations for determining a vertical susceptibility rating (Form 3 from TR 606) are in **Attachment D**. The purpose of the vertical susceptibility decision tree is to assess the state of the channel bed with a particular focus on the risk of incision. There are three potential states of bed material based on broad classes of armoring potential, described in TR 606 as follows:

- *Labile Bed* – sand-dominated bed, little resistant substrate
- *Transitional/Intermediate Bed* – bed typically characterized by gravel/small cobble, intermediate level of resistance of the substrate and uncertain potential for armoring
- *Threshold Bed (Course/Armored Bed)* – armored with large cobbles or larger bed material or highly-resistant bed substrate

The decision tree includes a photographic supplement to help make the determination of bed material. Through field observation it was determined that the bed was not sand-dominated nor sufficiently armored. Although the channel is not consistently armored, some larger cobble was observed along the banks adjacent to the initial discharge location into the channel (*Photos 3, 4*). Concrete armoring of the bed was observed upstream of the culvert crossing beneath San Marcos Blvd, at the downstream end of the analysis domain (*Photos 13, 14*). For the majority of the analysis domain, a surface veneer and dense vegetation cause uncertainty in the potential for armoring. Penetration of the soil was difficult and the limited substrate bed material that was able to be observed contained gravel (*Photo 5*), both of which are consistent with a Transitional/Intermediate Bed.

CIVIL ENGINEERING | STORMWATER | DESIGN BUILD
www.DelaneEngineering.com | Info@DelaneGroup.com
4909 Murphy Canyon Road, STE 330, San Diego, CA 92123 | P. 619.787.5566 | F. 866.579.6415

Intermediate beds require the following additional risk factors to be examined before a vertical rating can be assigned.

- *Armoring Potential* – The channel was determined to have intermediate armoring potential based on Form 3 Checklist 1. This is a result of the unknown condition of the substrate due to surface veneer and vegetation.

- *Grade Control* – The channel was determined to have intermediate grade control based on Form 3 Checklist 2. Man-made grade control is present at each end of the analysis domain in the form of culverts. Both appear in good condition with no apparent undermining, flanking, etc. The dense vegetation between functions as a continuous natural grade control and the flat valley slope determined as part of the desktop analysis mean that grade control will have an affect across a longer distance. The determination of intermediate instead of effective grade control was made to err conservative due to potential evidence of erosion observed on a few short stretches of bank along the channel (*Photo 6*)

- *Proximity to incision/braiding threshold* – The channel was determined to have a screening index score of B per Form 3 Table 1 as the surface veneer and vegetation result in hardpan/d_{50} that is indeterminate.

The results of the additional risk factors were translated to numeric values and used as inputs into a formula for coming up with an overall vertical rating as shown at the end of Form 3. The vertical rating was determined to be 6, which falls into the range of MEDIUM VERTICAL SUSCEPTIBILITY.

Lateral Susceptibility

The decision tree for determining a lateral susceptibility rating (Form 4 from TR 606) is in **Attachment E**. The purpose of the lateral decision tree is to assess the state of the channel banks with a particular focus on the risk of widening. Although the channel is straight and linear, it is laterally adjustable due to lack of armoring. However, the field assessment found no evidence of lateral adjustments occurring.

The banks were found to be moderately to highly consolidated based on the criteria in TR 606. They are hard when dry with little evidence of crumbling and bank material stratification is not prevalent or contributing to failure. Although there was no evidence of extensive mass wasting occurring along the channel, TR 606 methodology requires that the probability of mass wasting bank failure be analyzed to determine whether the risk of bank failure is less than or greater than 10%.

This risk threshold determination was made using the Probability Mass Wasting diagram in **Attachment F** (Form 6 Figure 1 from TR 606). The inputs for bank angle and height were determined based on measurements taken in the field (*Photos 7-10*). Assessment was done in several locations along the analysis

domain with generally consistent results, with the more conservative of the measurements being used as inputs. Even erring conservation, it was determined that the probability of mass wasting bank failure is less than 10%.

The vertical rating is medium and the VWI (Valley Width Index) was calculated to be greater than 2 during the initial desktop analysis. As a result, the channel was determined to have MEDIUM LATERAL SUSCEPTIBILITY.

5.0 Conclusion

The methodology in the SCCWRP's Technical Report 606 was used to analyze the section of Los Posas Creek from the initial discharge into an unlined channel west of Los Posas Road to the culvert crossing beneath San Marcos Blvd. Results of the analysis indicate that the channel has medium vertical and lateral susceptibility. As such, the Karl Straus San Marcos project should design flow control facilities based on a maximum low flow threshold of 0.3Q2 which is indicative of a receiving channel with MEDIUM SUSCEPTIBILITY to erosion.

FORM 3: VERTICAL SUSCEPTIBILITY FIELD SHEET

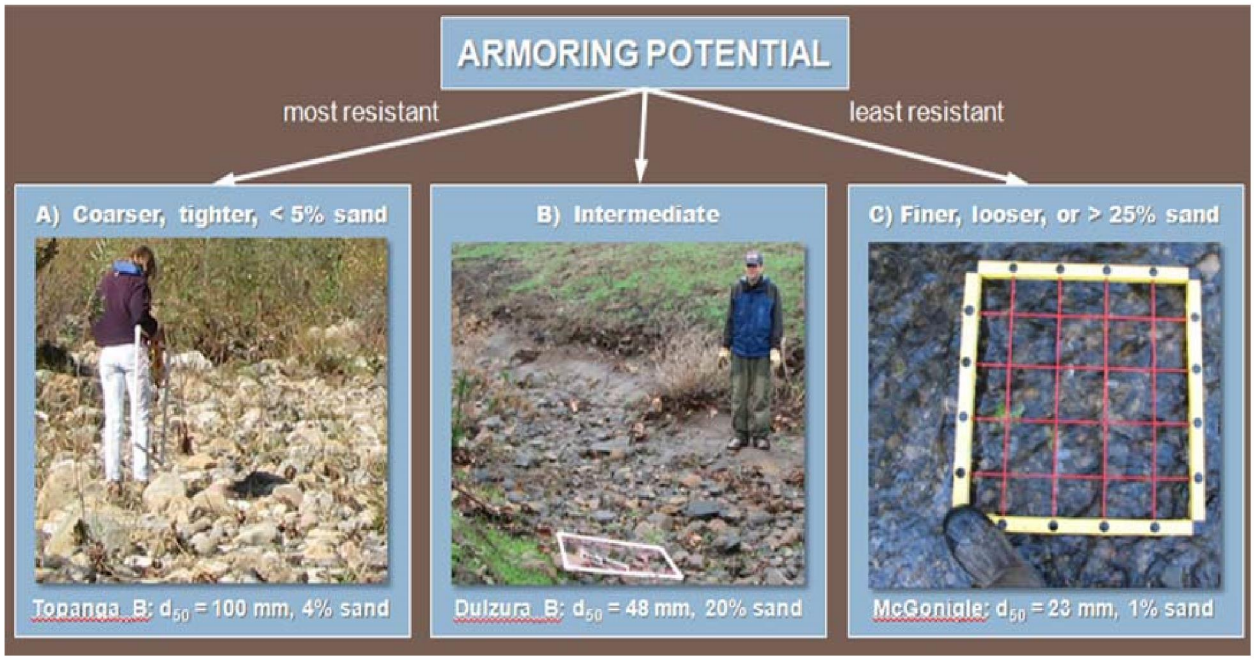
Circle appropriate nodes/pathway for proposed site.

Form 3 Figure 1. Vertical Susceptibility photographic supplement to be used in conjunction with Form 3 Bed Resistance above.



(Sheet 1 of 4)

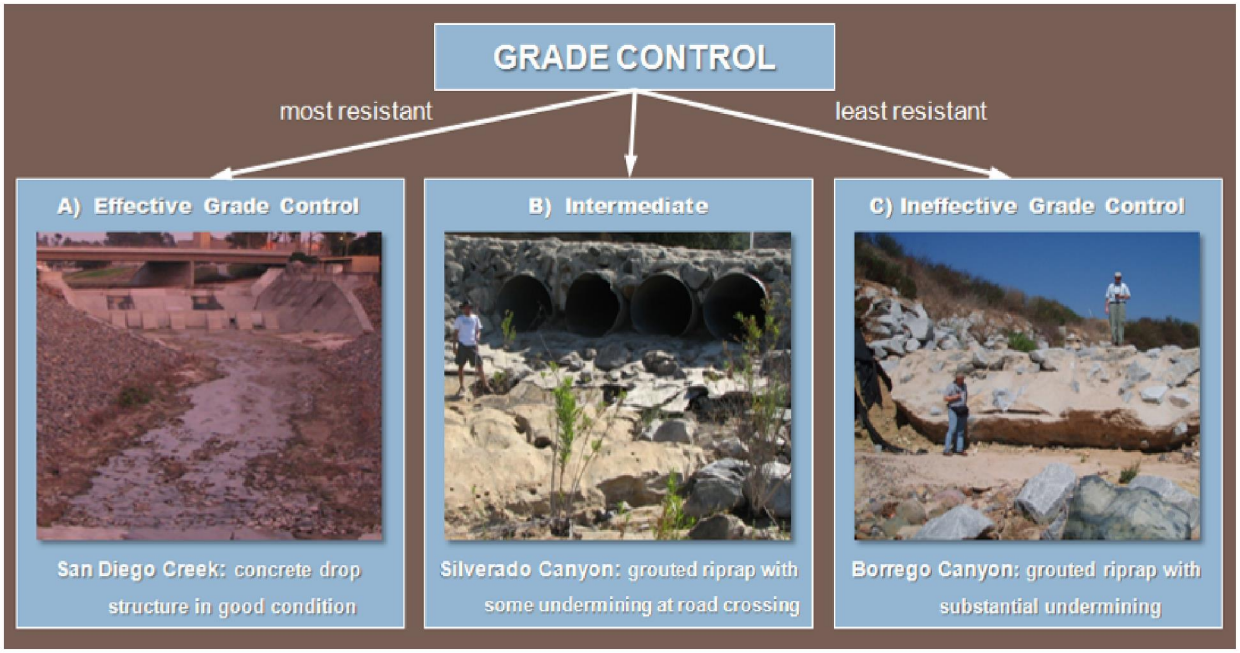
Form 3 Support Materials

Form 3 Checklists 1 and 2, along with information recording in Form 3 Table 1, are intended to support the decisions pathways illustrated in Form 3 Overall Vertical Rating for Intermediate/Transitional Bed.

Form 3 Checklist 1: Armoring Potential

□	A	A mix of coarse gravels and cobbles that are tightly packed with <5% surface material of diameter <2 mm
X	B	Intermediate to A and C or hardpan of unknown resistance, spatial extent (longitudinal and depth), or unknown armoring potential due to surface veneer covering gravel or coarser layer encountered with probe
□	C	Gravels/cobbles that are loosely packed or >25% surface material of diameter <2 mm

Form 3 Figure 2. Armoring potential photographic supplement for assessing intermediate beds (16 < d_{50} < 128 mm) to be used i**n conjunction with Form 3 Checklist 1.**

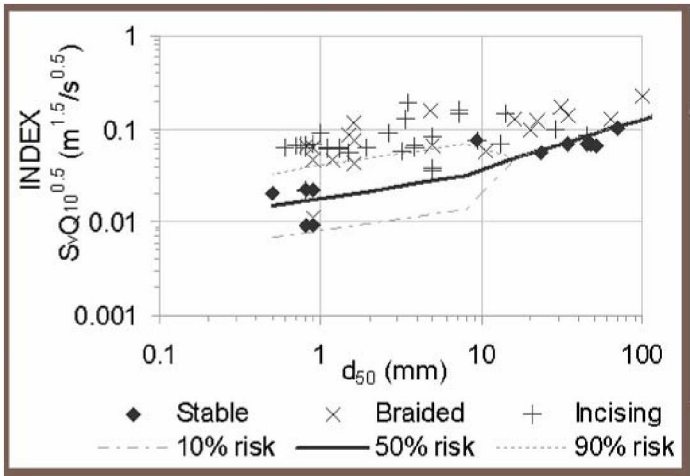


Form 3 Checklist 2: Grade Control

□ A Grade control is present with spacing <50 m or $2/S_v$ m

- No evidence of failure/ineffectiveness, e.g., no headcutting (>30 cm), no active mass wasting (analyst cannot say grade control sufficient if mass-wasting checklist indicates presence of bank failure), no exposed bridge pilings, no culverts/structures undermined
- Hard points in serviceable condition at decadal time scale, e.g., no apparent undermining, flanking, failing grout
- If geologic grade control, rock should be resistant igneous and/or metamorphic; For sedimentary/hardpan to be classified as 'grade control', it should be of demonstrable strength as indicated by field testing such as hammer test/borings and/or inspected by appropriate stakeholder

☒ B Intermediate to A and C – artificial or geologic grade control present but spaced 2/Sv m to 4/Sv m or potential evidence of failure or hardpan of uncertain resistance



□ C Grade control absent, spaced >100 m or $>4/S_v$ m, or clear evidence of ineffectiveness

Form 3 Figure 3. Grade-control (condition) photographic supplement for assessing intermediate beds ($16 < d_{50} < 128$ mm) to be used in conjunction with Form 3 Checklist 2.

Regionally-Calibrated Screening Index Threshold for Incising/Braiding

For transitional bed channels (d_{50} between 16 and 128 mm) or labile beds (channel not incised past critical bank height), use Form 3 Figure 3 to determine Screening Index Score and complete Form 3 Table 1.

Model Type	d_{50} (mm)	50% Risk $S_vQ_{10}^{0.5}$ ($m^{1.5}/s^{0.5}$)
Logistic Regression $d_{50} \geq 16$ mm	128	0.145
	96	0.125
	80	0.114
	64	0.101
	48	0.087
	32	0.070
	16	0.049
Logistic Reg. $d_{50} < 16$ mm	8	0.031
	4	0.026
	2	0.022
	1	0.018
	0.5	0.015

Form 3 Figure 4. Probability of incising/braiding based on logistic regression of Screening Index and d_{50} to be used in conjunction with Form 3 Table 1.

Form 3 Table 1. Values for Screening Index Threshold (probability of incising/braiding) to be used in conjunction with Form 3 Figure 4 (above) to complete Form 3 Overall Vertical Rating for Intermediate/Transitional Bed (below).. Screening Index Score: A = <50% probability of incision for current Q_{10}, valley slope, and d_{50}; B = Hardpan/d_{50} indeterminate; and C = ≥50% probability of incising/braiding for current Q_{10}, valley slope, and d_{50}.

d_{50} (mm) *From Form 2*	**$S_v*Q_{10}^{0.5}$ ($m^{1.5}/s^{0.5}$)** *From Form 1*	**$S_v*Q_{10}^{0.5}$ ($m^{1.5}/s^{0.5}$)** *50% risk of incising/braiding from table in Form 3 Figure 3 above*	**Screening Index Score (A, B, C)**
	0.016	n/a (d50 indeterminate)	B

Overall Vertical Rating for Intermediate/Transitional Bed

Calculate the overall Vertical Rating for Transitional Bed channels using the formula below. Numeric values for responses to Form 3 Checklists and Table 1 as follows: A = 3, B = 6, C = 9.

B=6 B=6 B=6

$$Vertical\ Rating = \sqrt{\{(\sqrt{armoring} * grade\ control) * screening\ index\ score\}}$$

Vertical Susceptibility based on Vertical Rating: <4.5 = LOW; 4.5 to 7 = MEDIUM; and >7 = HIGH.

(Sheet 4 of 4)

Vertical Rating = $\sqrt{\sqrt{6 \times 6} \times 6} = 6$

(Sheet 1 of 1)

Attachment 2d
Flow Control Facility Design

INTRODUCTION

This HMP analysis for flow control summarizes the approach used to model the proposed Gran Vista project in San Marcos, CA using the Environmental Protection Agency (EPA) Storm Water Management Model 5.1 (SWMM). SWMM models were prepared for the pre and post developed conditions at the site in order to determine if the proposed hydromodification/detention vault facilities have sufficient footprint and volume potential to meet the current Hydromodification Management Plan (HMP) requirements from the Regional Water Quality Control Board (RWQCB).

This HMP analysis addresses areas shown on the Existing and Proposed Condition exhibits located in Attachment 2a.

POC1 is located at the Southwest corner of the project boundary (Discharge location into the 3X8 Box Culvert) as shown on the hydromodification exhibits.

The discharge from the site will enter the enclosed storm drain system via 3X8 culvert per IP-1219 crossing W Mission Rd. The discharge will be routed southerly via concrete lined channels and enclosed storm drain, except for a small portion of an unlined open channel that was analyzed to have a medium erosion susceptibility per an approved susceptibility analysis prepared by Delane Engineering and saved in the City files. The flow from the site will ultimately discharge into the HMP exempted Lake San Marcos.

The discharge location is not exempt from flow-control hydromodification since the site does not directly discharge to Lake San Marcos. However, the open unlined channel in the flow-path from the site to the exempt body was determined to have a medium erosion susceptibility. Therefore, 0.3 Q2 was used as the lower flow threshold for the receiving stream for the project site. POC1 is discussed in the following sections of this Attachment.

SWMM MODEL DEVELOPMENT

Two (2) SWMM models were prepared for this study for POC1, one for pre-developed conditions and the second for the proposed condition. SWMM was used since we have found it to be more comparable to San Diego area watersheds than the more widely used San Diego Hydrology Model (SDHM). For both SWMM models, flow duration curves were prepared to determine if the proposed hydromodification/detention vault facilities were sufficient to meet the current HMP requirements.

The inputs required to develop SWMM models include rainfall, watershed characteristics, and BMP configurations. The Oceanside Rain Gage from the Project Clean Water website was used for this study since it is the most representative of the project site precipitation among the available gages based on the site location and topograpy.

Evaporation for the site is modeled using average monthly values from the San Diego County hourly dataset (Zone 4). The site was modeled with hydrologic soil groups C and D soils as determined from USGS Survey web-based Soil Survey Map. Other SWMM inputs for the subareas are discussed in the subsections to this document where the selection of the parameters is explained in detail.

HYDROMODIFICATION MODELING

Developed storm water runoff is routed through the proposed treatment facilities consisting of Two (2) hydromodification and detention vaults, located southeast and southwest of the project site. Flows from the proposed project drain to these vaults, location of vaults can be found on the Proposed Hydromodification Map. Onsite flow will exit this site to 3x8 Box Culvert at the southwest corner of the site, which is the chosen point of compliance (POC-1).

DMA Discussion:

Runoff from approximately

1. 1.92 acres at the western portion of the project (DMA-1) is directed towards the proposed Vault HMP-1, and BF-3-1 Volume based MWS unit to address water quality

2. 3.46 acres (including 0.023 acres of the existing driveway) at the eastern portion of the project (DMA-2) is directed towards the proposed Vault HMP-2, and BF-3-2 Volume based MWS unit to address water quality

3. 0.11 acres of the developed area is routed to the flow-based MWS unit to address water quality and directly to the POC-1 (DMA-4).

4. 0.44 acres of the developed area is routed to the flow-based MWS unit to address water quality and directly to poc-1

5. 0.11 ac of the self mitigating pervious slopes (per section 5.2.2 from the BMP manual), 0.005 (208 sf) of de minimis area is routed directly to the POC-1

6. 0.453 ac of the undisturbed existing parking and driveway south of the project (DMA3-EX) with additional 0.09 ac of the proposed driveways and sidewalks (DMA-3) will be routed to the flow-based MWS unit to address water quality and directly connected to the POC-1.

Vaults HMP-1 and HM-2 are sized to detain for the direct flows from DMA-1 and DMA-2 and to over-detain for DMA-3,4,5, self mitigation and de minimis areas to meet HMP requirements when measured at POC1

Vault Discussion:

Vaults' detaining characteristics have been included in the proposed condition hydromodifcation SWMM model per this report. The vaults will consist of storage (for water quality and HMP volume). Flow control in the vaults is achieved using multiple orifices on a concrete riser box. The size, number and location of the orifices are presented in the vault Table below. Flow will exit the vaults via a 3' x 2' and 4'X3' risers

with a rim elevation of 5.4' for Vault1 and 5.9' for Vault 2 above the vault base. The emergency overflow riser is utilized in storm events equal to or larger than the 100 year storm. Once flows exceed the rim elevation of the riser, runoff will drain over the riser rim and enter discharge pipe. Sizing and further peak flow discussion is in the Drainage Study.

.

Basin Table

	HMP-1 (POC-1)	HMP-2 (POC-1)
Weir Height (ft.)*	5.4	5.9

Diameter (in)	1.6	2.3

*to the volume based MWS unit

Once flows have been routed through the respective vaults, flows discharges southwest to the existing 3x8 box culvert which is chosen as POC-1.

FLOW DURATION CURVE COMPARISON

The Flow Duration Curve (FDC) for the site was compared at the Point of Compliance (POC1) by exporting the hourly runoff time series results from SWMM to a spreadsheet. FDC was

compared between 30% of the existing condition Q_2 (based on accepting an assumption of medium susceptibility for downstream channel erosion as approved by the susceptibility analysis that was prepared by Delane Engineering for the unlined portion of the channel and saved in the City files) up to the existing condition Q_{10}. The Q_2 and Q_{10} were determined using a partial duration statistical analysis of the runoff time series in an Excel spreadsheet using the Cunnane plotting position method (which is the preferred plotting methodology in the HMP Permit). The range between 30% of Q_2 and Q_{10} was divided into 100 equal time intervals; the number of hours that each flow rate was exceeded was counted from the hourly series. Additionally, the intermediate peaks with a return period "i" were obtained (Q_i with i=3 to 9). For the purpose of the plot, the values were presented as percentage of time exceeded for each flow rate.

FDC comparison at POC1 is illustrated in Figure 1 in logarithmic scale. POC1 corresponds with the point located downstream of the discharge of the discharge pipe. Attachment 10 provides detailed drainage exhibit for the post-developed condition.

As can be seen in Figure 1, the FDC for the proposed condition is within 110% of the curve for the existing condition. The additional runoff volume generated from developing the site will be released to the downstream storm drain at a flow rate below the 30% Q_2 lower threshold. Additionally, the project will also not increase peak flow rates between the Q_2 and the Q_{10}, as shown in the graphic and also in the attached table.

SUMMARY

The total project area to POC-1 is identical in pre and post project condition. The proposed biofiltration and hydromodification/detention facilities mitigate increased flow frequencies as a result of development.

Area Summary

	Existing (AC)	Proposed (AC)
POC 1	6.598	6.598

KEY ASSUMPTIONS

1. C and D Soils are representative of the existing condition site.

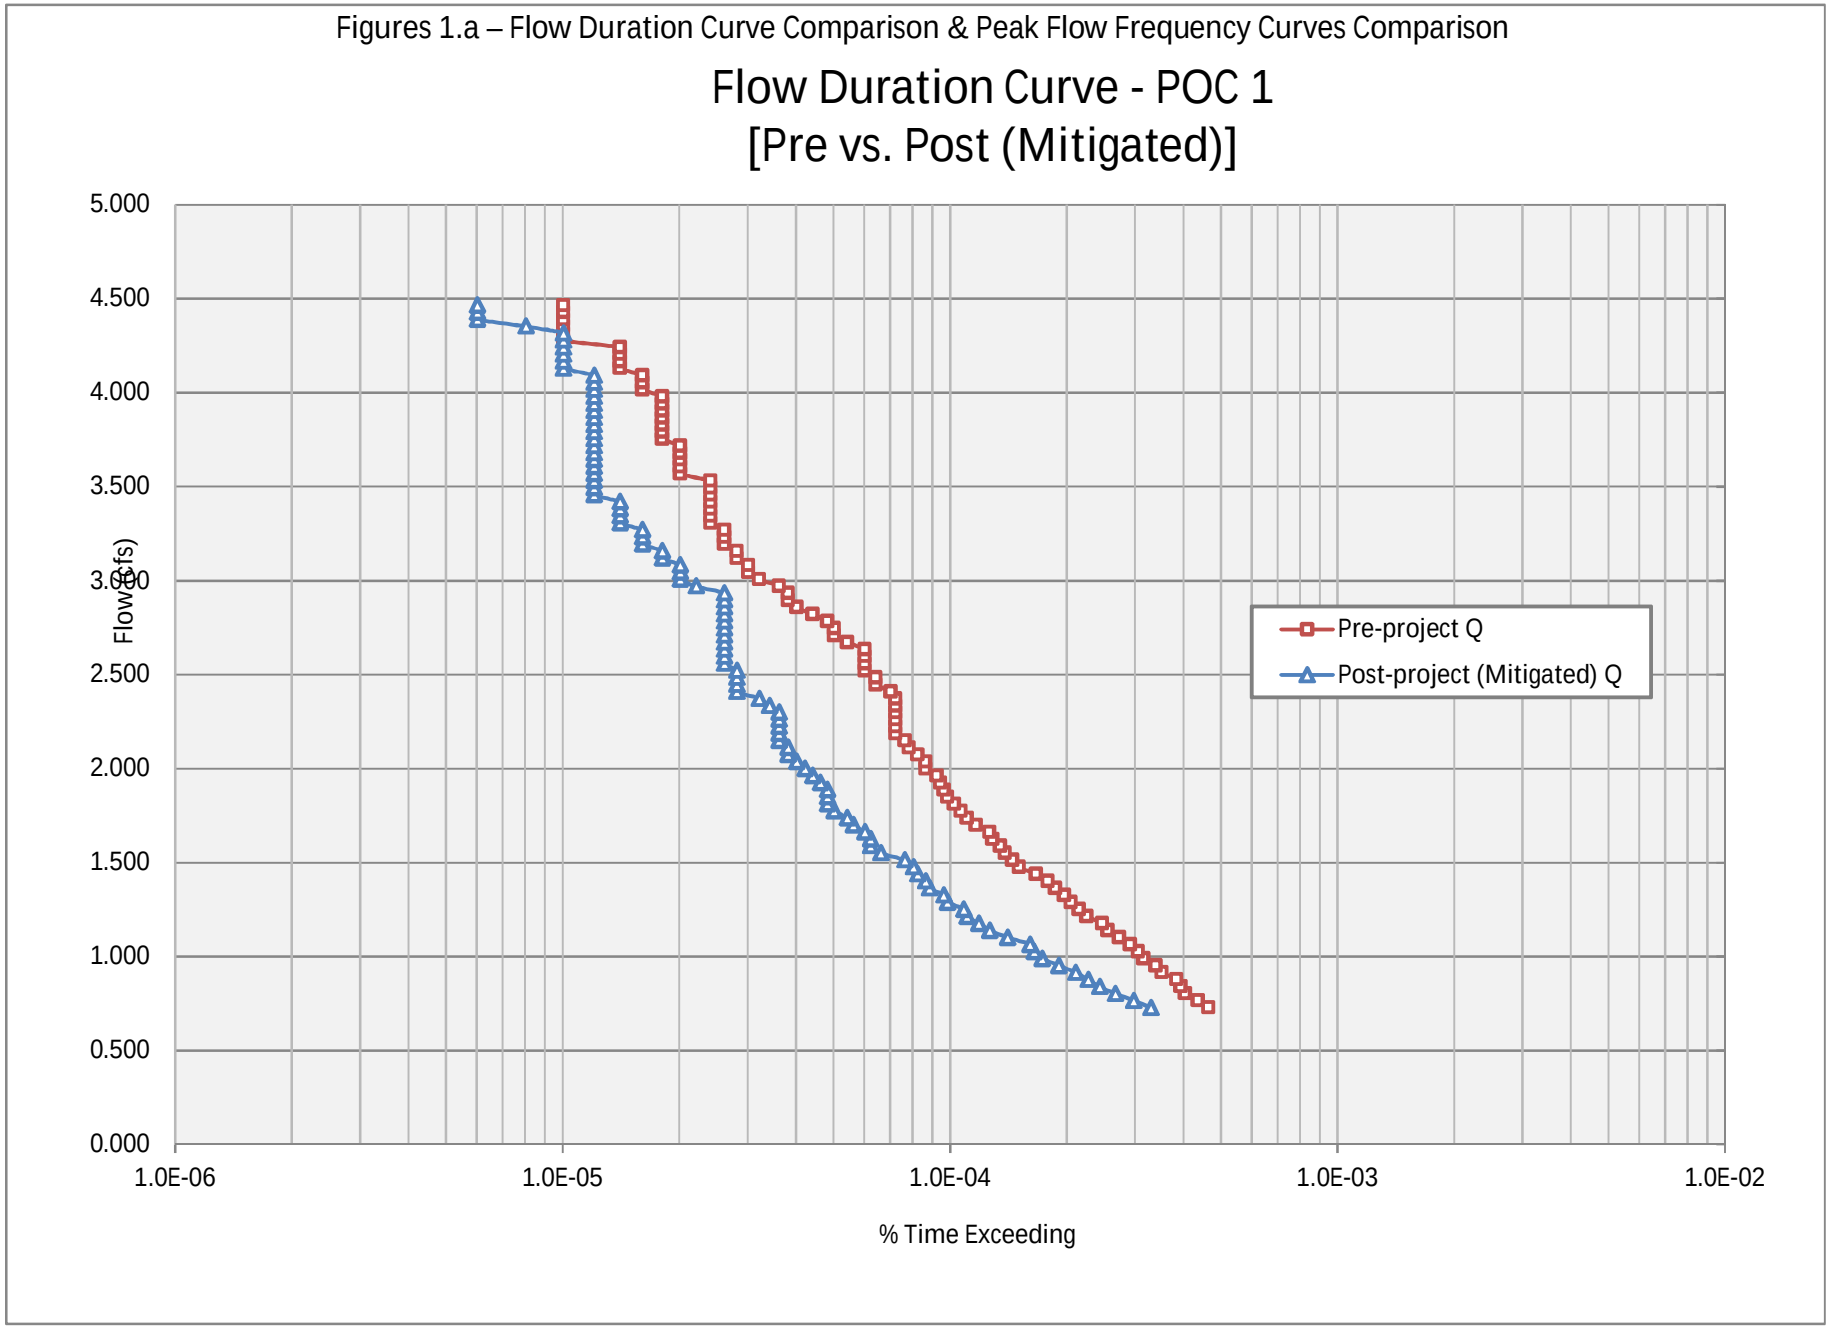
Flow Duration Curve Analysis, Plot & Table

Flow duration curve shall not exceed the existing conditions by more than 10% neither in peak flow nor duration.

The figure on the following page illustrates that the flow duration curve in post-development conditions after the proposed BMPs is below the existing flow duration curve. The flow duration curve table following the curve shows that if the interval 0.30Q 2 – Q 10 is divided in 100 sub-intervals, then a) the post development divided by pre-development durations are never larger than 110% (the permit allows up to 110%); and b) there are no more than 10 intervals in the range 101%-110% which would imply an excess over 10% of the length of the curve (the permit allows less than 10% of excesses measured as 101-110%).

Consequently, the design passes the hydromodification test.

It is important to note that the flow duration curve can be expressed in the "x" axis as percentage of time, hours per year, total number of hours, or any other similar time variable. As those variables only differ by a multiplying constant, their plot in logarithmic scale is going to look exactly the same and compliance can be observed regardless of the variable selected. The selection of a logarithmic scale in lieu of the normal scale is preferred, as differences between the pre-development and post-development curves can be seen more clearly in the entire range of analysis. Both graphics are presented for reference.



In terms of the "y" axis, the peak flow value is the variable of choice. As an additional analysis performed by H&A, not only the range of analysis is clearly depicted (30% of Q 2 to Q 10) but also all intermediate flows are shown (30% of Q 2, 50% of Q 2, Q 2, Q 3, Q 4, Q 5, Q 6, Q 7, Q 8 and Q 9) in order to demonstrate compliance at any range Q x – Q x+1. It must be pointed out that one of the limitations of both the SWMM and SDHM models is that the intermediate analysis is not performed (to obtain Qi from i = 2 to 10). H&A performed the analysis using the Cunnane Plotting Position Method (the preferred method in the HMP permit) from the "n" largest independent peak flows obtained from the continuous time series.

The largest "n" peak flows are attached in this appendix, as well as the values of Q_i with a return period "i", from i=2 to 10. The Q i values are also added into the flow-duration plot.

ATTACHMENT 2 - Elevation vs. Area Curves vs. Discharge Curves to be used in SWMM

Elevation vs Area

For the receiving detention vault, a storage node is used to route the hydrographs. The elevation vs area curve in the model is calculated in Excel and imported into the model at a 0.1 ft. interval range.

Elevation vs Discharge

The total discharge peak flow is imported from an Excel spreadsheet that calculated the elevation vs discharge of the multiple outlet system.

The orifices have been selected to maximize their size while still restricting flows to conform to the required 30% of the Q2 event flow as mandated in the Final Hydromodification Management Plan by Brown & Caldwell, dated March 2011. While we acknowledge that these orifices are small, to increase the size of these outlets would impact the vaults' ability to restrict flows beneath the HMP thresholds, thus preventing the BMP from conformance with HMP requirements.

In order to prevent blockage of the orifice, a debris screen will be fitted to the base invert of the lower orifices located within the detention basin. Regular maintenance of the riser and orifices will be performed to ensure potential blockages are minimized. A detail of the orifice and riser structures is provided in Section 5 of this Attachment. The stage-storage and stage-discharge calculations have been provided on the following pages.

Vault #1 WQ Discharge to the MWS BF-3-1 (was not included in detention calcs)

ATTACHMENT 5 - SWMM Explanation of Significant Variables

In the prior section the viewer can view the associated input and output parameters within the EPA-SWMM Model in both pre-development and post-development conditions. Each portion, i.e., sub-catchments, outfalls, storage units, ponding in the vaults (modeled as a storage unit), weir as a discharge, and outfalls (point of compliance), are also shown.

Variables for modeling are associated with typical recommended values by the EPA-SWMM model, typical values found in technical literature (such as Maidment's Handbook of Hydrology). Recommended values for the SWMM model have been attained from the City of San Marcos BMP manual Appendix G.

Soil characteristics of the existing soils were determined from the USGS sources.

Some values incorporated within the SWMM model have been determined from the professional experience of H&A using conservative assumption that have a tendency to increase the size of the needed BMP and also generate a long-term runoff as a percentage of rainfall similar to those measured in gage stations in Southern California by the USGS.

Description of model parameters and assumptions:

N-Imperv – Manning's N for impervious surfaces

0.012 (typical)

N-Perv – Manning's N for pervious surfaces

0.15 (typical)

Dstore-Imperv – Depth of depression storage on impervious area (in)

0.05 (typical)

Dstore-Perv – Depth of depression storage on pervious area (in)

0.10 (typical)

%Zero-Imperv – Percentage of impervious area with no depression storage (%)

25 (typical)

Suction Head – Soil capillary suction head (in)

Conductivity – Soil saturated hydraulic conductivity (in/hr)

-75% of these values if sub catchment is graded/compacted

Initial Deficit – Initial moisture deficit (fraction)

Soil Type	Suction Head	Conductivity	Initial Deficit
A	1.5	0.3	0.30
B	3	0.2	0.31
C	6	0.1	0.32
D	9	0.025	0.33

NOTE: These values are based on City of San Marcos BMP Manual Effective February 2016 in Appendix G.

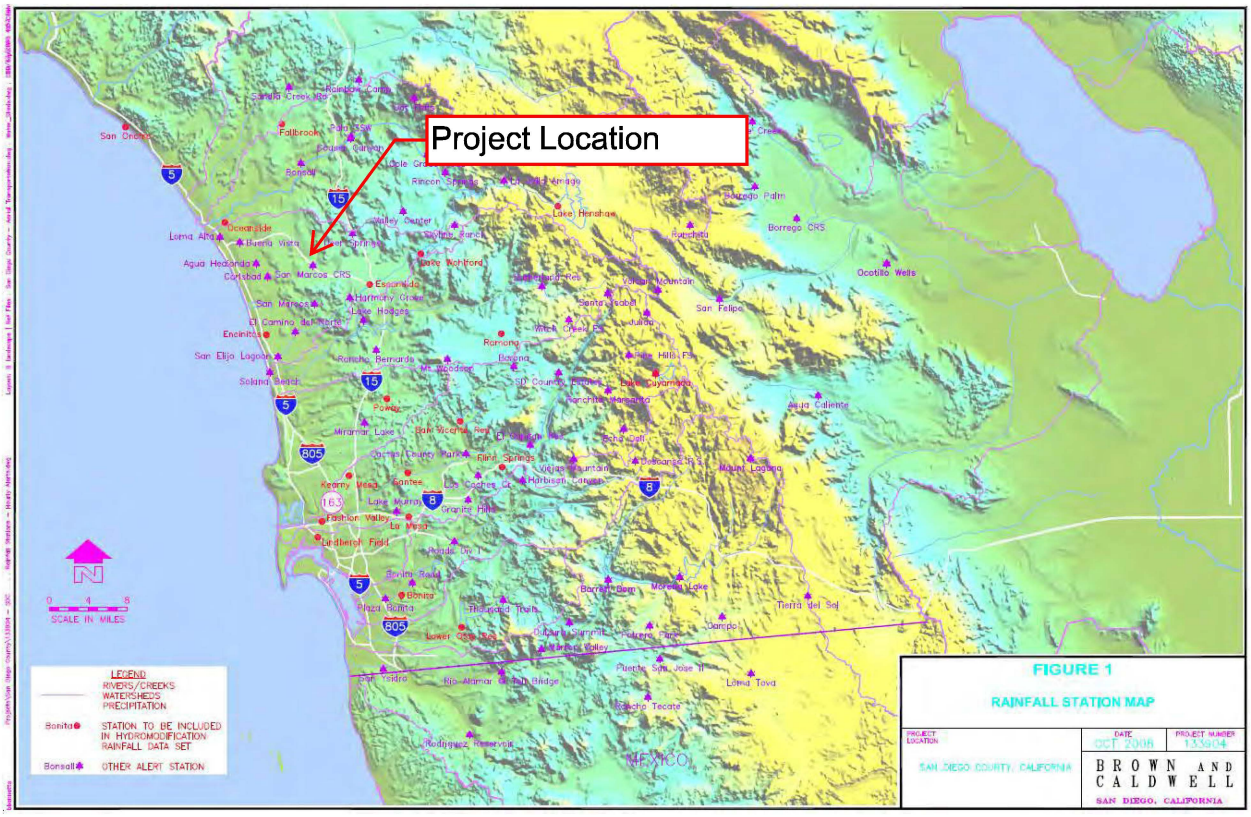

Figure G.1-1: Rainfall Station Map

Project applicants preparing continuous simulation models shall select the most appropriate rainfall data set from the rainfall record files provided on the Project Clean Water website. For a given project location, the following factors should be considered in the selection of the appropriate rainfall data set:

- In most cases, the rainfall data set in closest proximity to the project site will be the appropriate choice (refer to the rainfall station map).
- In some cases, the rainfall data set in closest proximity to the project site may not be the most applicable data set. Such a scenario could involve a data set with an elevation significantly different from the project site. In addition to a simple elevation comparison, the project proponent may also consult with the San Diego County's average annual precipitation isopluvial map, which is provided in the San Diego County Hydrology Manual (2003). Review of this map could provide an initial estimate as to whether the project site is in a similar rainfall zone as compared to the rainfall stations. Generally, precipitation totals in San Diego County increase with increasing elevation.
- Where possible, rainfall data sets should be chosen so that the data set and the project location are both located in the same topographic zone (coastal, foothill, mountain) and

Parameters within SDHM are documented in "San Diego Hydrology Model User Manual," prepared by Clear Creek Solutions, Inc. (as of the development of the Manual, the current version of the SDHM User Manual is dated January 2012). Parameters established for SDHM represent "grass" (non-turf grasslands), "dirt," "gravel," and "urban" cover. The documented PERLND and IMPLND parameters for the various land covers and soil types have been pre-loaded into SDHM. SDHM users shall use the parameters that have been pre-loaded into the program without modification unless the preparer can provide documentation to substantiate use of other parameters.

G.1.4.2 Rainfall Loss Parameters for SWMM

In SWMM, rainfall loss parameters (parameters that describe processes occurring when rainfall lands on pervious lands and impervious lands) are entered in the "subcatchment" module. In addition to specifying parameters, the SWMM user must also select an infiltration model.

The SWMM Manual provides details regarding the subcatchment parameters and summary tables of possible ranges of these parameters. For SWMM studies for hydromodification management in San Diego, subcatchment parameters shall fall within the range provided in the SWMM Manual. Some of the parameters depend on the selection of the infiltration model. For consistency across the San Diego region, SWMM users shall use the Green-Ampt infiltration model for hydromodification management studies. Table G.1-4 presents SWMM subcatchment parameters for use in hydromodification management studies in the San Diego region.

Table G.1-4: Subcatchment Parameters for SWMM Studies for Hydromodification Management in San Diego

SWMM Parameter Name	Unit	Range	Use in San Diego
Name X-Coordinate Y-Coordinate Description Tag Rain Gage Outlet	N/A	N/A – project-specific	Project-specific
Area	acres (ac)	Project-specific	Project-specific
Width	feet (ft)	Project-specific	Project-specific
% Slope	percent (%)	Project-specific	Project-specific
% Imperv	percent (%)	Project-specific	Project-specific
N-imperv	--	0.011 – 0.024 presented in Table A.6 of SWMM Manual	default use 0.012 for smooth concrete, otherwise provide documentation of other surface consistent with Table A.6 of SWMM Manual
N-Perv	--	0.05 – 0.80 presented in Table A.6 of SWMM Manual	default use 0.15 for short prairie grass, otherwise provide documentation of other surface consistent with Table A.6 of SWMM Manual
Dstore-Imperv	inches	0.05 – 0.10 inches presented in Table A.5 of SWMM Manual	0.05
Dstore-Perv	inches	0.10 – 0.30 inches presented in Table A.5 of SWMM Manual	0.10
%ZeroImperv	percent (%)	0% – 100%	25%
Subarea routing	--	OUTLET IMPERVIOUS PERVIOUS	Project-specific, typically OUTLET
Percent Routed	%	0% – 100%	Project-specific, typically 100%
Infiltration	Method	HORTON GREEN_AMPT CURVE_NUMBER	GREEN_AMPT

SWMM Parameter Name	Unit	Range	Use in San Diego
Suction Head (Green-Ampt)	Inches	1.93 – 12.60 presented in Table A.2 of SWMM Manual	Hydrologic Soil Group A: 1.5 Hydrologic Soil Group B: 3.0 Hydrologic Soil Group C: 6.0 Hydrologic Soil Group D: 9.0
Conductivity (Green-Ampt)	Inches per hour	0.01 – 4.74 presented in Table A.2 of SWMM Manual by soil texture class 0.00 – ≥0.45 presented in Table A.3 of SWMM Manual by hydrologic soil group	Hydrologic Soil Group A: 0.3 Hydrologic Soil Group B: 0.2 Hydrologic Soil Group C: 0.1 Hydrologic Soil Group D: 0.025 Note: reduce conductivity by 25% in the post-project condition when native soils will be compacted. Conductivity may also be reduced by 25% in the pre-development condition model for redevelopment areas that are currently concrete or asphalt but must be modeled according to their underlying soil characteristics. For fill soils in post-project condition, see Section G.1.4.3.
Initial Deficit (Green-Ampt)		The difference between soil porosity and initial moisture content. Based on the values provided in Table A.2 of SWMM Manual, the range for completely dry soil would be 0.097 to 0.375	Hydrologic Soil Group A: 0.30 Hydrologic Soil Group B: 0.31 Hydrologic Soil Group C: 0.32 Hydrologic Soil Group D: 0.33 Note: in long-term continuous simulation, this value is not important as the soil will reach equilibrium after a few storm events regardless of the initial moisture content specified.
Groundwater	yes/no	yes/no	NO
LID Controls			Project Specific
Snow Pack Land Uses Initial Buildup Curb Length			Not applicable to hydromodification management studies

EXPLANATION OF SELECTED VARIABLES

Parameters for the pre- and post-developed models include soil type C and D in accordance with the San Diego County Hydrology Manual and the USGS Soil Survey Map (attached at the end of this appendix). Suction head, conductivity and initial deficit corresponds to average values expected for soils type B, C and D, according to sources consulted, professional experience, and approximate values obtained by City of San Marcos BMP manual.

Selection of a Kinematic Approach: As the continuous model is based on hourly rainfall, and the time of concentration for the pre-development and post-development conditions is significantly smaller than 60 minutes, precise routing of the flows through the impervious surfaces, the underdrain pipe system, and the discharge pipe was considered unnecessary. The truncation error of the precipitation into hourly steps is much more significant than the precise routing in a system where the time of concentration is much smaller than 1 hour.

Sub-catchment Defined:
DMA1: Newly developed portion of the site which will be directed through Vault HMP-1 for detention and flow control (hydromod) requirements .
DMA2: Newly developed portion of the site a small portion of the exisitng driveway which will be directed through the vault HMP-2 for detention and flow control (hydromod) requirements .
DMA3: Newly developed portion of the site (very small portion of the driveways and sidewalks from the souther townhomes that can be routed t o the vaults) which will be directed through flowbased MWS unit BF-3-3 and will be counted for by over detaining within the proposed vaults.

DMA-3-EX: Offsite Exisitng driveway and parking areas that has been treated via sand filter in the existng conditions. The sand filter will be removed in the developed conditions and a flowbased MWS unit will be proposed to treat this area instead BF-3-3
Selfmitigating: Pervious slope areas which won't be directed through any vaults
DMA-4: A portion of the driveway by Mission Road south, that can't be routed to the vaults. which will be directed through flowbased MWS unit BF-3-3 and will be counted for by over detaining within the proposed vaults.
DMA5: Newly developed portion of the site which will be directed through flowbased MWS unit BF-3-5 and will be counted for by over detaining within the proposed vaults.

Note: Subcatchments have been divided into minor subcatchments to represent each soil type in the major subcatchment
DMA-Subcatchment number- Soil type

Note: The generated flow from DMA-1 and DMA-2 will be routed to the vaults which have internal riser.
The vaults are utilized as a storage for the water qulaity design captured volume (1.5 DCV), inaddition to the required storage for HMP and peak flow attenuation. The very low orifice in the risers is sized to draw down the 1.5 DCV (design captured volume) in 36 hrs. The flow from this orifice will be directed to a downstream volume based MWS unit to address water quality requirements. An internal surface control weir will be built inside the riser with an invert elevation set at the water surface elevation associated with the water quality volume in the

vault. The riser internal weir will divert the flows below its invert towards the modular wetland unit downstream of the vault.
The low flow orifice that directs the flow to the MWS unit is modeled in the SWMM with a rating table up to the water quality HGL in the vault and labeled as WQ orifice.

Note:
The complete storage and rating curves and the respective explanation is shown at the end of this appendix. A variable area vs. elevation storage curve was used for the final model, and a discharge that is a function of the outlet structure in the surface was used also.

ATTACHMENT 6 - Drying Time of the Surface Layer of Bio-retention cells

The discharge of the lower Water quality orifice when the surface layer is at the WQ HGL is considered submerged.

The drying time interval between an elevation yi and another elevation $yi - \Delta y$ can be obtained by:

$$\Delta t_i(hours) = \frac{(Q(yi)+Q(yi-\Delta y))}{7200\ (V(yi)-V(yi-\Delta y))} = \frac{Q_{ave}}{3600\ \Delta V}$$

$$t - \sum_{i=1}^{n} \Delta t_i\ (hours)$$

Q_{ave} represents the average discharge between elevation y_i and y_{i+1} obtained by $\frac{Q(yi)+Q(yi-\Delta y)}{2}$ where ΔV represents the fraction of the volume that must be discharged at a peak flow $Q_{ave}(V(yi) - V(yi - \Delta y))$.

The volume and the discharge change as the elevation changes; the calculation takes into account this change.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Diego County Area, California
Survey Area Data: Version 15, May 27, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 24, 2020—Feb 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
HrC	Huerhuero loam, 2 to 9 percent slopes	D	4.3	42.8%
PeC	Placentia sandy loam, 2 to 9 percent slopes, warm MAAT, MLRA 19	C	5.7	57.2%
Totals for Area of Interest			**10.0**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

ATTACHMENT 3
Structural BMP Maintenance Information

This is the cover sheet for Attachment 3.

Indicate which Items are Included behind this cover sheet:

Attachment Sequence	Contents	Checklist
Attachment 3a	Structural BMP Maintenance Thresholds and Actions (Required)	☒ Included See Structural BMP Maintenance Information Checklist on the back of this Attachment cover sheet.
Attachment 3b	Draft Maintenance Agreement (when applicable)	☐ Included ☐ Not Applicable

Use this checklist to ensure the required information has been included in the Structural BMP Maintenance Information Attachment:

☒ Preliminary Design / Planning / CEQA level submittal:

Attachment 3a must identify:

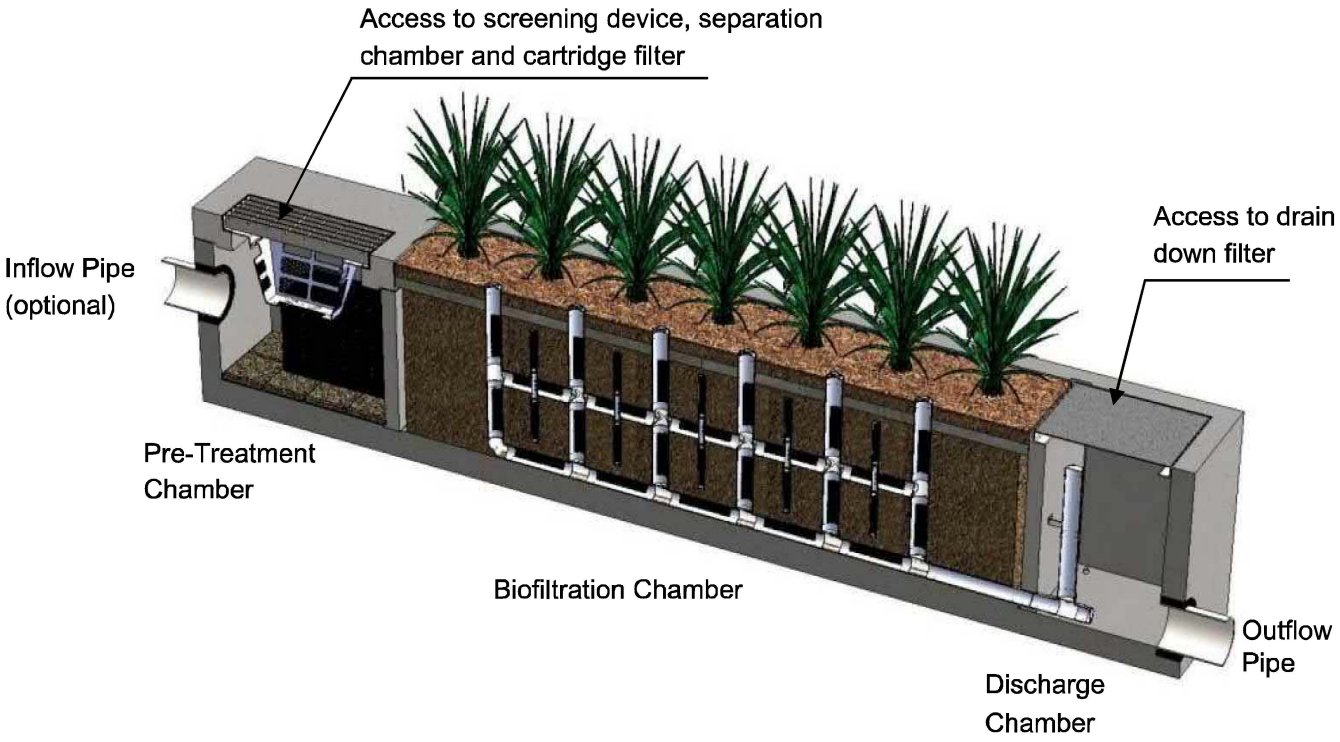
- ☒ Typical maintenance indicators and actions for proposed structural BMP(s) based on Section 7.7 of the BMP Design Manual

Attachment 3b is not required for preliminary design / planning / CEQA level submittal.

☐ Final Design level submittal:

Attachment 3a must identify:

- ☐ Specific maintenance indicators and actions for proposed structural BMP(s). This shall be based on Section 7.7 of the BMP Design Manual and enhanced to reflect actual proposed components of the structural BMP(s)
- ☐ How to access the structural BMP(s) to inspect and perform maintenance
- ☐ Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
- ☐ Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
- ☐ Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
- ☐ Recommended equipment to perform maintenance
- ☐ When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management



Attachment 3b: For private entity operation and maintenance, Attachment 3b shall include a draft maintenance agreement in the local jurisdiction's standard format (PDP applicant to contact the [City Engineer] to obtain the current maintenance agreement forms).

Maintenance Guidelines for Modular Wetland System - Linear

Maintenance Summary

- Remove Trash from Screening Device – average maintenance interval is 6 to 12 months.
  - (*5 minute average service time*).
- Remove Sediment from Separation Chamber – average maintenance interval is 12 to 24 months.
  - (*10 minute average service time*).
- Replace Cartridge Filter Media – average maintenance interval 12 to 24 months.
  - (*10-15 minute per cartridge average service time*).
- Replace Drain Down Filter Media – average maintenance interval is 12 to 24 months.
  - (*5 minute average service time*).
- Trim Vegetation – average maintenance interval is 6 to 12 months.
  - (*Service time varies*).

System Diagram

Maintenance Procedures

Screening Device

1. Remove grate or manhole cover to gain access to the screening device in the Pre-Treatment Chamber. Vault type units do not have screening device. Maintenance can be performed without entry.
2. Remove all pollutants collected by the screening device. Removal can be done manually or with the use of a vacuum truck. The hose of the vacuum truck will not damage the screening device.
3. Screening device can easily be removed from the Pre-Treatment Chamber to gain access to separation chamber and media filters below. Replace grate or manhole cover when completed.

Separation Chamber

1. Perform maintenance procedures of screening device listed above before maintaining the separation chamber.
2. With a pressure washer spray down pollutants accumulated on walls and cartridge filters.
3. Vacuum out Separation Chamber and remove all accumulated pollutants. Replace screening device, grate or manhole cover when completed.

Cartridge Filters

1. Perform maintenance procedures on screening device and separation chamber before maintaining cartridge filters.
2. Enter separation chamber.
3. Unscrew the two bolts holding the lid on each cartridge filter and remove lid.
4. Remove each of 4 to 8 media cages holding the media in place.
5. Spray down the cartridge filter to remove any accumulated pollutants.
6. Vacuum out old media and accumulated pollutants.
7. Reinstall media cages and fill with new media from manufacturer or outside supplier. Manufacturer will provide specification of media and sources to purchase.
8. Replace the lid and tighten down bolts. Replace screening device, grate or manhole cover when completed.

Drain Down Filter

1. Remove hatch or manhole cover over discharge chamber and enter chamber.
2. Unlock and lift drain down filter housing and remove old media block. Replace with new media block. Lower drain down filter housing and lock into place.
3. Exit chamber and replace hatch or manhole cover.

Maintenance Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

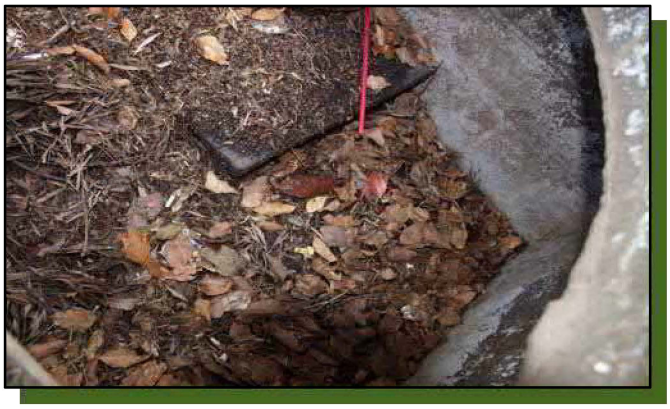
3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may require irrigation.

Maintenance Procedure Illustration



Screening Device

The screening device is located directly under the manhole or grate over the Pre-Treatment Chamber. It's mounted directly underneath for easy access and cleaning. Device can be cleaned by hand or with a vacuum truck.

Separation Chamber

The separation chamber is located directly beneath the screening device. It can be quickly cleaned using a vacuum truck or by hand. A pressure washer is useful to assist in the cleaning process.

Cartridge Filters

The cartridge filters are located in the Pre-Treatment chamber connected to the wall adjacent to the biofiltration chamber. The cartridges have removable tops to access the individual media filters. Once the cartridge is open media can be easily removed and replaced by hand or a vacuum truck.

Drain Down Filter

The drain down filter is located in the Discharge Chamber. The drain filter unlocks from the wall mount and hinges up. Remove filter block and replace with new block.

Trim Vegetation

Vegetation should be maintained in the same manner as surrounding vegetation and trimmed as needed. No fertilizer shall be used on the plants. Irrigation per the recommendation of the manufacturer and or landscape architect. Different types of vegetation requires different amounts of irrigation.

Weather Condition _____ Additional Notes _____

Inspection Checklist

Modular Wetland System Type (Curb, Grate or UG Vault): _____ Size (22', 14' or etc.): _____

Structural Integrity:	**Yes**	**No**	**Comments**
Damage to pre-treatment access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Damage to discharge chamber access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?			
Does the MWS unit show signs of structural deterioration (cracks in the wall, damage to frame)?			
Is the inlet/outlet pipe or drain down pipe damaged or otherwise not functioning properly?			
Working Condition:			
Is there evidence of illicit discharge or excessive oil, grease, or other automobile fluids entering and clogging the unit?			
Is there standing water in inappropriate areas after a dry period?			
Is the filter insert (if applicable) at capacity and/or is there an accumulation of debris/trash on the shelf system?			
Does the depth of sediment/trash/debris suggest a blockage of the inflow pipe, bypass or cartridge filter? If yes, specify which one in the comments section. Note depth of accumulation in in pre-treatment chamber.			Depth:
Does the cartridge filter media need replacement in pre-treatment chamber and/or discharge chamber?			Chamber:
Any signs of improper functioning in the discharge chamber? Note issues in comments section.			
Other Inspection Items:			
Is there an accumulation of sediment/trash/debris in the wetland media (if applicable)?			
Is it evident that the plants are alive and healthy (if applicable)? Please note Plant Information below.			
Is there a septic or foul odor coming from inside the system?			

Waste:	**Yes**	**No**
Sediment / Silt / Clay		
Trash / Bags / Bottles		
Green Waste / Leaves / Foliage		

Recommended Maintenance	
No Cleaning Needed	
Schedule Maintenance as Planned	
Needs Immediate Maintenance	

Plant Information	
Damage to Plants

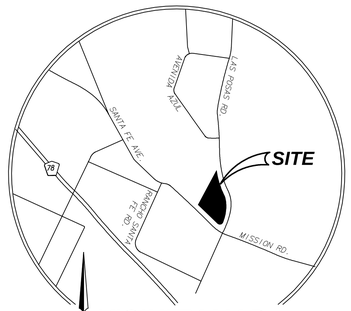
ATTACHMENT 4
Copy of Plan Sheets Showing Permanent Storm Water BMPs



This is the cover sheet for Attachment 4.

Use this checklist to ensure the required information has been included on the plans:

The plans must identify:

☒ Structural BMP(s) with ID numbers matching Form I-6 Summary of PDP Structural BMPs
☒ The grading and drainage design shown on the plans must be consistent with the delineation of DMAs shown on the DMA exhibit
☒ Details and specifications for construction of structural BMP(s)
☒ Signage indicating the location and boundary of structural BMP(s) as required by the [City Engineer]
☒ How to access the structural BMP(s) to inspect and perform maintenance
☒ Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
☒ Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
☒ Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
☒ Recommended equipment to perform maintenance
☒ When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management
☒ Include landscaping plan sheets showing vegetation requirements for vegetated structural BMP(s)
☒ All BMPs must be fully dimensioned on the plans
☒ When proprietary BMPs are used, site-specific cross section with outflow, inflow, and model number shall be provided. Photocopies of general brochures are not acceptable.

1 Introduction

1.1 Report Purpose and Scope

The purpose of this technical report is to assess the potential noise impacts associated with construction and operation of the Gran Vista project (project). This analysis uses the significance thresholds in Appendix G of the California Environmental Quality Act (CEQA) Guidelines (14 CCR 15000 et seq.).

1.2 Regional and Local Setting

The site is located in the land use jurisdictions of both the City of San Marcos (City) and the County of San Diego (County); however, it is proposed to be annexed into the City of San Marcos. The site is located at the southeastern portion of the City of San Marcos, bordering the City of Escondido to the east and unincorporated County of San Diego lands to the south. The project site is bounded by Las Posas Road along the eastern boundary, W. Mission Road along the southwest boundary, an existing CVS store to the south, and existing single-family residential development to the west/northwest (Figure 1, Project Location). Nearby land uses in the vicinity of the project site include industrial and commercial uses to the west on the other side of W. Mission Road, the Santa Fe Hills residential community to the north, and Palomar College approximately half a mile to the east. The project site is comprised of Assessor's Parcel Numbers (APNs) 219-121-1500 and 219-121-1600.

1.3 Project Description

The residential component of the Project consists of 120 townhomes, a mix of 2- and 3-bedroom units. The project includes approximately 148,297 square feet of recreation area on-site and up to 198 square feet of private open space per unit (Figure 2, Site Plan). Amenities on site would include tot lots and recreational areas, a dog park, a community garden, and a landscaped pedestrian path along the Las Posas Road frontage. The project would include two points of entry: one off N. Las Posas Road, and the other off of W. Mission Road. A total of 264 parking spaces would be provided for the total residential dwelling units, including 20 new guest spaces. Existing spaces on the project site will meet the remaining guest parking requirements. The project site is currently zoned for Commercial (C) use with an existing General Plan designation of Commercial and is within the City's General Plan Neighborhood College area. The project proposes a General Plan and Zoning Amendment to change the land use designation to Specific Plan Area (SPA).

1.4 Fundamentals of Noise and Vibration

The following is a brief discussion of fundamental noise concepts and terminology.

1.4.1 Sound, Noise, and Acoustics

Sound is actually a process that consists of three components: the sound source, sound path, and sound receiver. All three components must be present for sound to exist. Without a source to produce sound, there is no sound. Similarly, without a medium to transmit sound pressure waves, there is no sound. Finally, sound must be received; a hearing organ, sensor, or object must be present to perceive, register, or be affected by sound or noise. In most

situations, there are many different sound sources, paths, and receptors rather than just one of each. Acoustics is the field of science that deals with the production, propagation, reception, effects, and control of sound. Noise is defined as sound that is loud, unpleasant, unexpected, or undesired.

1.4.2 Sound Pressure Levels and Decibels

The amplitude of a sound determines its loudness. Loudness of sound increases with increasing amplitude. Sound pressure amplitude is measured in units of micronewton per square meter, also called micropascal. One micropascal is approximately one-hundred billionth (0.00000000001) of normal atmospheric pressure. The pressure of a very loud sound may be 200 million micropascals, or 10 million times the pressure of the weakest audible sound. Because expressing sound levels in terms of micropascal would be very cumbersome, sound pressure level in logarithmic units is used instead to describe the ratio of actual sound pressure to a reference pressure squared. These units are called Bels. To provide a finer resolution, a Bel is subdivided into 10 decibels (dB).

1.4.3 A-Weighted Sound Level

Sound pressure level alone is not a reliable indicator of loudness. The frequency, or pitch, of a sound also has a substantial effect on how humans will respond. Although the intensity (energy per unit area) of the sound is a purely physical quantity, the loudness, or human response, is determined by the characteristics of the human ear.

Human hearing is limited not only in the range of audible frequencies, but also in the way it perceives the sound in that range. In general, the healthy human ear is most sensitive to sounds between 1,000 and 5,000 hertz, and it perceives a sound within that range as more intense than a sound of higher or lower frequency with the same magnitude. To approximate the frequency response of the human ear, a series of sound level adjustments is usually applied to the sound measured by a sound level meter. The adjustments (referred to as a weighting network) are frequency-dependent.

The A-scale weighting network approximates the frequency response of the average young ear when listening to ordinary sounds. When people make judgments about the relative loudness or annoyance of a sound, their judgments correlate well with the A-scale sound levels of those sounds. Other weighting networks have been devised to address high noise levels or other special situations (e.g., B-scale, C-scale, D-scale), but these scales are rarely used in conjunction with most environmental noise. Noise levels are typically reported in terms of A-weighted sound levels. All sound levels discussed in this report are A-weighted decibels (dBA). Examples of typical noise levels for common indoor and outdoor activities are depicted in Table 1.

Table 1. Typical Sound Levels in the Environment and Industry

Common Outdoor Activities	Noise Level (dB)	Common Indoor Activities
—	110	Rock band
Jet fly over at 300 meters (1,000 feet)	100	—
Gas lawn mower at 1 meter (3 feet)	90	—
Diesel truck at 15 meters (50 feet), at 80 kilometers per hour (50 miles per hour)	80	Food blender at 1 meter (3 feet); garbage disposal at 1 meter (3 feet)
Noisy urban area, daytime; gas lawn mower at 30 meters (100 feet)	70	Vacuum cleaner at 3 meters (10 feet)
Commercial area; heavy traffic at 90 meters (300 feet)	60	Normal speech at 1 meter (3 feet)
Quiet urban, daytime	50	Large business office; dishwasher next room
Quiet urban, nighttime	40	Theater; large conference room (background)
Quiet suburban, nighttime	30	Library
Quiet rural, nighttime	20	Bedroom at night; concert hall (background)
—	10	Broadcast/Recording studio
Lowest threshold of human hearing	0	Lowest threshold of human hearing

1.4.4 Human Response to Changes in Noise Levels

Under controlled conditions in an acoustics laboratory, the trained, healthy human ear is able to discern changes in sound levels of 1 dBA when exposed to steady, single-frequency signals in the mid-frequency range. Outside such controlled conditions, the trained ear can detect changes of 2 dBA in normal environmental noise. It is widely accepted that the average healthy ear, however, can barely perceive noise level changes of 3 dBA. A change of 5 dBA is readily perceptible, and a change of 10 dBA is *perceived* as twice (if a gain) or half (if a loss) as loud. A doubling of sound energy results in a 3-dBA increase in sound, which means that a doubling of sound energy (e.g., doubling the volume of traffic on a road) would result in a barely perceptible change in sound level.

1.4.5 Noise Descriptors

Additional units of measure have been developed to evaluate the long-term characteristics of sound. The energy-equivalent sound level (L_{eq}) is also referred to as the time-average sound level. It is the equivalent steady-state or constant sound level that in a stated period of time would contain the same acoustical energy as the time-varying sound level during the same time period. For instance, the 1-hour A-weighted equivalent sound level, $L_{eq}(h)$, is the energy average of the A-weighted sound levels occurring during a 1-hour period, and is the basis for most of the County Noise Ordinance standards.

People are generally more sensitive to and thus potentially more annoyed by noise occurring during the evening and nighttime hours. Hence, another noise descriptor used in community noise assessments—the community noise equivalent level (CNEL)—represents a time-weighted, 24-hour average noise level based on the A-weighted sound level. However, unlike an unmodified 24 hour L_{eq} value, the CNEL descriptor accounts for increased noise sensitivity during the evening (7 p.m. to 10 p.m.) and nighttime (10 p.m. to 7 a.m.) by adding 5 dBA and 10 dBA, respectively, to the average sound levels occurring during these defined hours within a 24-hour period.

1.4.6 Sound Propagation

Sound propagation (i.e., the traverse of sound from a noise emission source position to a receiver location) is influenced by multiple factors that include geometric spreading, ground absorption, atmospheric effects, and occlusion by natural terrain and/or features of the built environment.

Sound levels attenuate (or diminish) geometrically at a rate of approximately 6 dBA per doubling of distance from an outdoor point-type source due to the spherical spreading of sound energy with increasing distance travelled. The effects of atmospheric conditions such as humidity, temperature, and wind gradients are typically distance-dependent and can also temporarily either increase or decrease sound levels measured or perceived at a receptor location. In general, the greater the distance the receiver is from the source of sound emission, the greater the potential for variation in sound levels at the receptor due to these atmospheric effects. Additional attenuation can result from sound path occlusion and diffraction due to intervention of natural (ridgelines, dense forests, etc.) and built features (such as solid walls, buildings and other structures).

1.4.7 Groundborne Vibration Fundamentals

Groundborne vibration is fluctuating or oscillatory motion transmitted through the ground mass (i.e., soils, clays, and rock strata). The strength of groundborne vibration attenuates rapidly over distance. Some soil types transmit vibration quite efficiently; other types (primarily sandy soils) do not. Several basic measurement units are commonly

used to describe the intensity of ground vibration. The descriptors used by the Federal Transit Administration (FTA) are peak particle velocity (PPV), in units of inches per second (ips), and velocity decibel (VdB) that is based on a root-mean square (RMS) of the vibration signal magnitude. The calculation to determine PPV at a given distance is as follows:

$$PPV_{distance} = PPV_{ref}*(25/D)^{1.5}$$

Where:

$PPV_{distance}$ = the peak particle velocity in inches per second of the equipment adjusted for distance

PPV_{ref} = the reference vibration level in inches per second at 25 feet

D = the distance from the equipment to the receiver

INTENTIONALLY LEFT BLANK

2 Regulatory Setting

2.1 Federal

In its Transit Noise and Vibration Impact Assessment guidance manual, the Federal Transit Administration (FTA) recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an 8-hour period (FTA 2018) when detailed construction noise assessments are performed to evaluate potential impacts to community residences surrounding a project. Although this FTA guidance is not a regulation, it can serve as a quantified standard in the absence of such noise limits at the state and local jurisdictional levels.

2.2 State

2.2.1 California Code of Regulations, Title 24

Title 24 of the California Code of Regulations sets standards that new development in California must meet. According to Title 24, interior noise levels are not to exceed 45 dBA CNEL in any habitable room (ICC 2019).

2.2.2 California Department of Health Services Guidelines

The California Department of Health Services has developed guidelines of community noise acceptability for use by local agencies (OPR 2017). Selected relevant levels are listed here:

- Below 60 dBA CNEL: normally acceptable for low-density residential use
- 50 to 70 dBA: conditionally acceptable for low-density residential use
- Below 65 dBA CNEL: normally acceptable for high-density residential use and transient lodging
- 60 to 70 dBA CNEL: conditionally acceptable for high-density residential, transient lodging, churches, educational, and medical facilities

The normally acceptable exterior noise level for high-density residential use is up to 65 dBA CNEL. Additionally, this exterior noise level limit is consistent with the City of Chula Vista General Plan Noise Element, which considers multi-family unit noise-sensitive land uses.

2.2.3 California Department of Transportation

In its Transportation and Construction Vibration Guidance Manual (Caltrans 2020), the California Department of Transportation (Caltrans) recommends 0.5 ips PPV as a threshold for the avoidance of structural damage to typical newer residential buildings exposed to continuous or frequent intermittent sources of groundborne vibration. For transient vibration events, such as blasting, the damage risk threshold would be 1.0 ips PPV (Caltrans 2020) at the same type of newer residential structures. For older structures, these guidance thresholds would be more stringent: 0.3 ips PPV for continuous/intermittent vibration sources, and 0.5 ips PPV for transient vibration events. With respect to human annoyance, Caltrans guidance indicates that building occupants exposed to continuous groundborne vibration in the range of 0.2-0.6 ips PPV would find it “unpleasant or “annoying” and thus a likely significant impact. Although these Caltrans guidance thresholds are not regulations, they can serve as quantified standards in the absence of such limits at the local jurisdictional level.

2.3 Local

2.3.1 Noise Ordinance

San Marcos Municipal Code Chapter 10.24.020.b.9 addresses construction activity, with exemption from chapter provisions between 7:00 a.m. and 6:00 p.m. Monday through Friday and on Saturdays from 8:00 a.m. to 5:00 p.m. (City of San Marcos 2017). The Municipal Codes does not set noise limits on construction activities; however, on occasion the City of San Marcos has adopted the County of San Diego's Noise Ordinance noise limit of 75 dBA L_{eq} (8-hour average) attributed to construction activities as received by an occupied property.

Section 20.300.070.E from the City of San Marcos Municipal Code describes exterior noise limits as reproduced in Table 2. Allowable decibel increases from what appears in Table 2 are based on duration, such as +5 dBA for up to a cumulative duration of 15 minutes in an hour (City of San Marcos 2017).

Table 2. City of San Marcos Exterior Noise Standards by Zone

Zone	Allowable Noise Level (dBA L_{eq}) Measured from the Property Line
Single-Family Residential (A, R-1, R-2) [1, 2]	
7 a.m. to 10 p.m. (daytime)	60
10 p.m. to 7 a.m. (overnight)	50
Multifamily Residential (R-3) [1, 2]	
7 a.m. to 10 p.m. (daytime)	65
10 p.m. to 7 a.m. (overnight)	55
Commercial (C, O-P, SR) [3]	
7 a.m. to 10 p.m. (daytime)	65
10 p.m. to 7 a.m. (overnight)	55
Industrial	
7 a.m. to 10 p.m. (daytime)	65
10 p.m. to 7 a.m. (overnight)	60

Source: San Marcos 2017 (Table 20.300-4)

Notes:

1 For single-family detached dwelling units, the "exterior noise level" is defined as the noise level measured at an outdoor living area which adjoins and is on the same lot as the dwelling, and which contains at least the following minimum net lot area: (i) for lots less than 4,000 square feet in area, the exterior area shall include 400 square feet, (ii) for lots between 4,000 square feet to 10 acres in area, the exterior area shall include 10 percent of the lot area; (iii) for lots over 10 acres in area, the exterior area shall include 1 acre.

2 For all other residential land uses, "exterior noise level" is defined as noise measured at exterior areas which are provided for private or group usable open space purposes. "Private Usable Open Space" is defined as usable open space intended for use of occupants of one dwelling unit, normally including yards, decks, and balconies. When the noise limit for Private Usable Open Space cannot be met, then a Group Usable Open Space that meets the exterior noise level standard shall be provided. "Group Usable Open Space" is defined as usable open space intended for common use by occupants of a development, either privately owned and maintained or dedicated to a public agency, normally including swimming pools, recreation courts, patios, open landscaped areas, and greenbelts with pedestrian walkways and equestrian and bicycle trails, but not including off-street parking and loading areas or driveways.

3 For non-residential noise sensitive land uses, exterior noise level is defined as noise measured at the exterior area provided for public use.

With respect to vibration, Section 20.300.070 of the Performance Standards also indicates that "no person or use shall create, maintain, or cause ground vibration that is discernible without instruments to a person of normal sensitivity at any point on a property that is adjacent to the property of the vibration source. The ground vibration caused by moving vehicles, trains, aircraft, or temporary construction or demolition is exempted." Due to these exemptions, vibration due to construction of the proposed project, or vibration from nearby roads and rail received by new buildings or its occupants associated with the proposed project would be compatible with these City standards.

2.3.2 General Plan Noise Element

To control transportation related noise sources such as arterial roads, freeways, airports, and railroads, the City of San Marcos has established guidelines for acceptable community noise levels in the Noise Element of the General Plan (San Marcos 2012). For noise sensitive rural and single family residential uses, schools, libraries, parks and recreational areas the City Noise Element requires an exterior noise levels of less than 60 dBA CNEL for outdoor usable area. For multi-family developments the standard is 65 dBA CNEL and a standard of 70 dBA CNEL is typically applied to commercial uses. The City has also established an interior noise limit of 45 dBA CNEL for all residential uses.

INTENTIONALLY LEFT BLANK

3 Existing Conditions

SPL measurements were conducted near the proposed project site on April 26, 2022, to quantify and characterize the existing outdoor ambient sound levels. Table 3 provides the location, date, and time period at which these baseline noise level measurements were performed by an attending Dudek field investigator using a Rion-branded Model NL-52 sound level meter (SLM) equipped with a 0.5 inch, pre-polarized condenser microphone with pre-amplifier. The SLM meets the current American National Standards Institute standard for a Type 1 (Precision Grade) sound level meter. The accuracy of the SLM was verified using a field calibrator before and after the measurements, and the measurements were conducted with the microphone positioned approximately 5 feet above the ground.

Four (4) short-term (ST) noise level measurement locations (ST1–ST4) that represent existing noise-sensitive receivers were selected on and near the proposed project site. These locations are depicted as receivers ST1–ST4 on Figure 3, Noise Measurement Locations. The measured L_{eq} and L_{max} noise levels are provided in Table 3. The primary noise sources at the sites identified in Table 3 consisted of traffic along adjacent roadways, the sounds of leaves rustling, and birdsong. As shown in Table 3, the measured SPL ranged from approximately 47.3 dBA Leq at ST4 to 64.2 dBA Leq at ST1. Beyond the summarized information presented in Table 3, detailed noise measurement data is included in Appendix A, Baseline Noise Measurement Field Data.

Table 3. Measured Baseline Outdoor Ambient Noise Levels

Site	Location/Address	Date/Time	L_{eq} (dBA)	L_{max} (dBA)
ST1	Southwest in CVS Parking Lot	2022-04-26, 04:00 PM to 04:10 PM	64.2	73.6
ST2	Northern boundary of CVS Parking Lot	2022-04-26, 04:20 PM to 04:30 PM	63.5	74.5
ST3	In dirt lot, west of Property at 1333 Granite Road, San Marcos CA, 92069, east of N Las Posas Road	2022-04-26, 04:40 PM to 04:50 PM	60.2	68.5
ST4	Front yard of 389 Palmac St, San Marcos, CA 92069	2022-04-26, 05:00 PM to 05:10 PM	47.3	58.1

Source: Appendix A.
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); L_{max} = maximum sound level during the measurement interval; dBA = A-weighted decibels; ST = short-term noise measurement locations.

Generally, the measured samples of daytime L_{eq} agree with expectations: ST1, ST2, and ST3 L_{eq} values are above 60 dBA due largely to proximity to Mission Boulevard and/or N. Las Posas Road that are major roadways; ST4, however, is behind residential walls west of the western boundary of the proposed project and more distant from these sources of roadway traffic noise, which results in a substantially lower sampled L_{eq} value.

4 Thresholds of Significance

The following significance criteria are based on Appendix G of the California Environmental Quality Act Guidelines (14 CCR 15000 et seq.) and will be used to determine the significance of potential noise and vibration impacts. Impacts associated with noise and vibration would be significant if the proposed project would result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
- Generation of excessive groundborne vibration or groundborne noise levels.
- Expose people residing or working in the project area to excessive noise levels (for a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within 2 miles of a public airport or public use airport).

In light of these above significance criteria, this analysis uses the following standards to evaluate potential noise and vibration impacts.

- Construction noise –the City has adopted the County threshold for construction equipment noise, which must not exceed an eight-hour L_{eq} value of 75 dBA L_{eq} when assessed at an occupied property. Construction shall only occur between the hours of 7:00 a.m. through 6:00 p.m., Monday through Friday, and after 8:00 a.m. through 5:00 p.m. on Saturday.
- Off-site project-attributed transportation noise – For purposes for this analysis, a direct roadway noise impact would be considered significant if increases in roadway traffic noise levels attributed to the proposed project were greater than 3 dBA CNEL at an existing noise-sensitive land use.
- Off-site project-attributed stationary noise – For purposes for this analysis, a noise impact would be considered significant if noise from typical operation of heating, ventilation, and air conditioning and other electro-mechanical systems associated with the proposed project exceeded the following:
  - 60 dBA hourly Leq at the property line of an offsite single-family residence from 7:00 a.m. to 10:00 p.m., and 50 dBA hourly Leq from 10:00 p.m. to 7:00 a.m.; and
  - 65 dBA hourly Leq at the property line of an offsite commercial land use from 7:00 a.m. to 10:00 p.m., and 55 dBA hourly Leq from 10:00 p.m. to 7:00 a.m.
- Construction vibration – Although exempted by the City, guidance from Caltrans indicates that a vibration velocity level of 0.2 ips PPV received at a structure would be considered annoying by occupants within (Caltrans 2020). As for the receiving structure itself, aforementioned Caltrans guidance from Section 2 recommends that a vibration level of 0.3 ips PPV would represent the threshold for building damage risk.

For purposes of disclosure, since current CEQA noise criteria listed above do not consider it, this analysis also evaluates compatibility of on-site traffic noise exposure levels with the City of San Marcos exterior and interior noise standards of 65 dBA CNEL and 45 dBA CNEL, respectively.

INTENTIONALLY LEFT BLANK

5 Impact Discussion

Potential noise and vibration impacts attributed to project construction and operation are studied in the following subsections that are categorized by the CEQA Guidelines Appendix G significance for noise.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Short-Term Construction

Construction noise and vibration are temporary phenomena, with emission levels varying from hour to hour and day to day, depending on the equipment in use, the operations performed, and the distance between the source and receptor. Equipment that would be in use during construction would include, in part, graders, backhoes, rubber-tired dozers, loaders, cranes, forklifts, pavers, rollers, and air compressors. The typical maximum noise levels at a distance of 50 feet from various pieces of construction equipment and activities anticipated for use on the proposed project site are presented in Table 4. Note that the equipment noise levels presented in Table 4 are maximum noise levels. Usually, construction equipment operates in alternating cycles of full power and low power, producing average noise levels over time that are less than the maximum noise level. The average sound level of construction activity also depends on the amount of time that the equipment operates and the intensity of construction activities during that time.

Table 4. Typical Construction Equipment Maximum Noise Levels

Equipment Type	Typical Equipment (L_{max}, dBA at 50 Feet)
All Other Equipment > 5 HP	85
Backhoe	78
Compressor (air)	78
Concrete Saw	90
Crane	81
Dozer	82
Excavator	81
Flat Bed Truck	74
Front End Loader	79
Generator	72
Grader	85
Man Lift	75
Paver	77
Roller	80
Scraper	84
Welder / Torch	73

Source: DOT 2006.
Note: L_{max} = maximum sound level; dBA = A-weighted decibels.

Aggregate noise emission from proposed project construction activities, broken down by sequential phase, was predicted at two evaluation distances to the nearest existing noise-sensitive receptor: 1) from the nearest position of the construction site boundary and 2) from the geographic center of the construction site, which serves as the time-averaged location or geographic *acoustical centroid* of active construction equipment for the phase under study. The intent of the former distance is to help evaluate anticipated construction noise from a limited quantity of equipment or vehicle activity expected to be at the boundary for some period of time, which would be most appropriate for phases such as site preparation, grading, and paving. The latter distance is used in a manner similar to the general assessment technique as described in the FTA guidance for construction noise assessment, when the location of individual equipment for a given construction phase is uncertain over some extent of (or the entirety of) the construction site area. In this studied scenario, because of the equipment location uncertainty, all the equipment for a construction phase is assumed to operate—on average—from the acoustical centroid position. Table 5 summarizes these two distances to the apparent closest noise-sensitive receptor for each of the seven sequential construction phases. At the site boundary, this analysis assumes that up to only one piece of equipment of each listed type per phase will be involved in the construction activity for a limited portion of the 8-hour period. In other words, at such proximity, the operating equipment cannot "stack" or crowd the vicinity and still operate. For the acoustical centroid case, which intends to be a geographic average position for all equipment during the indicated phase, this analysis assumes that the equipment may be operating up to all 8 hours per day.

Table 5. Estimated Distances between Construction Activities and the Nearest Noise-sensitive Receptors

Construction Phase (and Equipment Types Involved)	Distance from Nearest Noise-Sensitive Receptor to Construction Site Boundary (Feet)	Distance from Nearest Noise-Sensitive Receptor to Acoustical Centroid of Site (Feet)
Demolition (concrete saw, backhoe, dozer)	80	160
Site Preparation (grader, scraper, backhoe)	80	160
Grading (grader, dozer, backhoe)	80	160
Building construction (crane, man-lift, generator, backhoe, welder)	80	160
Paving (paver, roller, concrete mixer truck)	80	160
Architectural Coating (compressor)	80	160

A Microsoft Excel–based noise prediction model emulating and using reference data from the Federal Highway Administration Roadway Construction Noise Model (RCNM) (FHWA 2008) was used to estimate construction noise levels at the nearest occupied noise-sensitive land use. (Although the RCNM was funded and promulgated by the Federal Highway Administration, it is often used for non-roadway projects, because the same types of construction equipment used for roadway projects are often used for other types of construction.) Input variables for the predictive modeling consist of the equipment type and number of each

(e.g., two graders, a loader, a tractor), the duty cycle for each piece of equipment (e.g., percentage of time within a specific time period, such as an hour, when the equipment is expected to operate at full power or capacity and thus make noise at a level comparable to what is presented in Table 4), and the distance from the noise-sensitive receiver. The predictive model also considers how many hours that equipment may be on site and operating (or idling) within an established work shift. Conservatively, no topographical or structural shielding was assumed in the modeling. The RCNM has default duty-cycle values for the various pieces of equipment, which were derived from an extensive study of typical construction activity patterns. Those default duty-cycle values were used for this noise analysis, which is detailed in Appendix B, Construction Noise Modeling Input and Output, and produce the predicted results displayed in Table 6.

Table 6. Predicted Construction Noise Levels per Activity Phase

Construction Phase (and Equipment Types Involved)	8-Hour L_{eq} at Nearest Noise-Sensitive Receptor to Construction Site Boundary (dBA)	8-Hour L_{eq} at Nearest Noise-Sensitive Receptor to Acoustical Centroid of Site (dBA)
Demolition (concrete saw, backhoe, dozer)	74.8	71.6
Site Preparation (grader, scraper, backhoe)	74.2	70.3
Grading (grader, dozer, backhoe)	73.5	70.0
Building construction (crane, man-lift, generator, backhoe, welder)	68.5	67.1
Paving (paver, roller, concrete mixer truck)	70.3	67.1
Architectural Coating (compressor)	62.6	59.1

Notes: L_{eq} = equivalent noise level; dBA = A-weighted decibels.

As presented in Table 6, the highest estimated construction noise levels are predicted to stay below 75 dBA L_{eq} over an 8-hour period at the nearest existing residences (as close as 80 feet away) when demolition activities take place near the western project boundaries. Note that these estimated noise levels at a source-to-receiver distance of 80 feet would only occur when noted pieces of heavy equipment would each operate for a cumulative period of up to 2 hours a day. By way of example, a grader might make multiple passes on site that are this close to a receiver; but, for the remaining time during the day, the grader is sufficiently farther away, performing work at a more distant location, or simply not operating.

Should operation of construction equipment and processes be sufficiently proximate to the project's western boundary for greater than 2 hours a day, construction activity noise levels might exceed an 8 hour L_{eq} value of 75 dBA L_{eq} and thereby exceed the City's adopted daytime threshold for construction noise exposure at an occupied property. Therefore, the following suggested practices would be incorporated into the project's construction program as project design features:

- Administrative controls (e.g., reduce operating time of equipment and/or prohibit usage of equipment type[s] within certain distances).
- Engineering controls (upgrade noise controls, such as install better engine exhaust mufflers).

- Install noise abatement on the site boundary fencing (or within, as practical and appropriate) in the form of sound blankets or comparable temporary barriers to occlude construction noise emission between the site (or specific equipment operation as the situation may define) and offsite noise-sensitive receptor(s) of concern.
- At the outset of a project construction activity, an unattended noise level monitor might be deployed onsite to measure and document that noise exposure levels attributed to project construction activity at adjacent offsite sensitive receptors are in conformance with the 75 dBA 8 hour L_{eq} threshold.

The above design features would be implemented as site conditions may warrant. Proper application of temporary noise barriers or comparable sound abatement can feasibly reduce noise levels by at least 5 dB due to direct path occlusion between the noise source and receptor.

In summary, daytime construction noise would not exceed the City's 75 dBA threshold and Thus, temporary construction-related noise impacts would be considered **less than significant.**

Long-Term Operational

Off-Site Traffic Noise Exposure

The proposed project would result in the creation of additional vehicle trips on local arterial roadways (i.e., Mission Boulevard and N. Las Posas Road), which could result in increased traffic noise levels at adjacent noise-sensitive land uses. Appendix C, Traffic Noise Modeling Input and Output, contains a spreadsheet with traffic volume data (average daily traffic) for Mission Boulevard and N. Las Posas Road. In particular, the proposed project would create additional traffic along N. Las Posas Road, which according to the Traffic Impact Assessment prepared for the proposed project (CR Associates, 2022) would add 960 total average daily trips to adjacent to the project site.

Potential noise effects from vehicular traffic were assessed using the Federal Highway Administration's Traffic Noise Model version 2.5 (FHWA 2004). Information used in the model included the roadway geometry, existing (year 2022), existing plus project, near-term (opening day) and near-term (opening day) plus project traffic volumes and posted traffic speeds. Noise levels were modeled at representative noise-sensitive receivers ST1 through ST4, as shown in Figure 3. The receivers were modeled to be 5 feet above the local ground elevation. The noise model results are summarized in Table 7. Based on results of the model, implementation of the proposed project would not result in readily perceptible increases in traffic noise.

Table 7. Roadway Traffic Noise Modeling Results

Modeled Receiver No.	Existing (2022) Noise Level (dBA CNEL)	Existing with Project Noise Level (dBA CNEL)	Near-Term (Opening Day) without Project Noise Level (dBA CNEL)	Near-Term (Opening Day) with Project Noise Level (dBA CNEL)	Horizon (2050) without Project Noise Level (dBA CNEL)	Horizon (2050) with Project Noise Level (dBA CNEL)	Maximum Project-Related Noise Level Increase (dB)
ST1	68.3	68.3	68.6	68.6	69.4	69.4	0.0

Source: Appendix C.
Notes: dBA = A-weighted decibel; CNEL = community noise equivalent level; dB = decibel.
*Noise level change is negative.

Table 7 shows that at all four listed representative receivers, the addition of proposed project traffic to the roadway network would result in an increase in the CNEL of less than 3 dB, which is below the discernible level of change for the average healthy human ear. Thus, a less-than-significant impact is expected for proposed project-related off-site traffic noise increases affecting existing residences in the vicinity.

On-site Traffic Interior Noise Exposure

Aside from exposure to aviation traffic noise, current CEQA noise-related guidelines at the state level do not require an assessment of exterior-to-interior noise intrusion, environmental noise exposure to occupants of newly-created project residences, or environmental noise exposure to exterior non-residential uses attributed to the development of the proposed project. Nevertheless, the City's General Plan and the California Building Code requires that interior background noise levels not exceed a CNEL of 45 dB within habitable rooms. Hence, the following predictive analysis of traffic noise exposure at the exteriors of occupied residences and outdoor living areas is provided below.

In addition to the prediction results presented in Table 7, the FHWA TNM software was also used to predict the Horizon-with-project scenario traffic noise levels at multiple on-site exterior areas, as listed in Table 8. These on-site modeled receptor locations, which appear in Figure 3 and in the Appendix C isometric view of the modeled TNM space, include representative positions for the exteriors of multiple floors and positions of six of the proposed project building facades. Predicted exterior sound levels presented in Table 8 that are higher than 65 dBA CNEL indicate locations where an exterior-to-interior noise analysis should be performed for the proximate occupied residential unit.

Table 8. Future Ambient Noise Levels at Residential Facades

Modeled Receptor	Predicted Noise Level (A-weighted CNEL)		
	1st Floor	2nd Floor	3rd Floor
M1–1	65	65	65
M1–2	64	64	64
M2–1	58	60	60
M2–2	62	63	63

Table 8. Future Ambient Noise Levels at Residential Facades

Modeled Receptor	Predicted Noise Level (A-weighted CNEL)		
	1st Floor	2nd Floor	3rd Floor
M3–1	56	59	59
M3–2	58	60	61
M4–1	64	65	65
M5–1	61	62	62
M5–2	65	65	65
M6–1	68	69	68
M6–2	68	68	68
OS–1	65		
OS–2	65		

The prediction results from Table 8 indicate that future traffic noise levels would not exceed 69 dBA CNEL. With the 45 dBA CNEL interior background sound level limit, this means the minimum composite sound transmission class (STC) rating for the exterior shell separating the habitable interior space from the outdoor sound level should be at least 24. The composite STC rating for the portion of a building shell that separates an interior space from the outdoors is calculated from the area-dependent contributions of its elements: windows, wall assemblies, and doors.

Many of the residential units feature porches or balconies on the 1st or 2nd floor, for which access would likely be provided by single-panel, out-swing fiberglass French doors with hinges comparable to a Milgard Essence series model (or similar from another manufacturer). Alternately, they could be a sliding door type. For purposes of this analysis, either of these patio/balcony door design styles are assumed to feature a dual-pane glazing system similar to a standard residential window assembly (i.e., two 1/8"-thick glass panes separated by a 3/8" wide airgap) in narrow-perimeter frames compatible with modern thermal insulation (and thus energy conserving) design. The analysis also assumes that these door products feature good seals and related hardware, so that when closed, the effective sound insulating performance is represented by the glass. Viracon data indicates that such glazing should demonstrate an STC rating of 31 (Viracon 2019).

This study further assumes an exterior wall assembly that includes: one layer of 5/8" gypsum wallboard (GWB) on the interior-facing side, 2"x4" wood studs, glass fiber batt insulation in the stud cavities, and a dual-layer of 5/8" GWB on the exterior-facing side. Acoustical transmission loss (TL) data is available on this representative assembly (Halliwell 1998), and is used as part of estimating the composite STC ratings reported herein. For purposes of this analysis, the dual-layer GWB on the exterior surface approximates the mass and solidity of what may be other approved material options as determined by the Project architect, such as cement fiber siding panels, brick masonry veneer, or cement plaster attached to layers of fiberglass mat sheathing and plywood sheathing.

Table 9 summarizes the calculated noise levels after applying the STC ratings for a set of studied occupied room facades that are anticipated to be exposed to predicted exterior noise levels greater than 60 dBA CNEL. Details of these calculations that account for the façade surface area and its composite areas of exterior wall assembly and windows appear in Appendix D.

Clearly, an open window or open door to an adjoining patio or balcony greatly compromises the sound insulation performance of the façade wall assembly, as presented for the sample units appearing in Table 9. However, when such windows and doors are closed, all facades are anticipated to exhibit a predicted STC rating of at least 35, and thus would provide sufficient exterior-to-interior sound insulation from outdoor traffic noise to yield interior background sound levels that are less than 45 dBA CNEL and thus compliant with the City and state standards. Recall that none of the predicted exterior traffic noise levels at the studied receptor locations exceeded 69 dBA CNEL; thus, the STC rating value (for closed windows and doors) subtracted from these exterior noise values must result in interior noise levels of less than 45 dBA CNEL (e.g., 69 – 35 = 34 dBA CNEL, which is less than 45). This apparent requirement for closed windows and doors means that the design of these habitable rooms should feature mechanical ventilation or an air-conditioning system to provide interior comfort of the occupants. Detailed transmission loss data is included in Appendix D, Transmission Loss Predictions. Thus, the City's threshold of 45 dB CNEL within habitable rooms would not be exceeded and thus demonstrates expected project compliance with this standard.

Table 9. Predicted Net Sound Transmission Class of Occupied Room Façade

Occupied Room Facade	Predicted Net Sound Transmission Class (STC) for Scenario	
	Closed Window(s) and Door *	Open Window(s) and Closed French Door*
1st floor living room w/ porch, eastern facade	35	6
2nd floor living room w/ balcony, eastern Façade	35	6
3rd floor Bedroom, eastern Façade	38	15

Notes:
n/a = not applicable
* Doors are only modeled for scenarios that contain the balcony door.

Open Space and Balconies

Where predicted exterior noise levels exceed 65 dBA CNEL proximate to shared or common usable outdoor space, and such space would count towards the outdoor usable space associated with the project, according to the City's General Plan, feasible noise reduction techniques should be analyzed and incorporated to make the outdoor activities acceptable at locations that are currently above the City's 65 dBA CNEL standard. With the implementation of project design feature **PDF-1**, the resultant exterior noise levels would meet the City's exterior noise standard of 65 dBA CNEL.

PDF-1: Where exterior noise levels are predicted to exceed 65 dBA CNEL at useable open space areas, the project should install noise-reducing features external to or upon the useable open space areas (or within, as practical and appropriate) in the form of sound walls, fencing, landscape berms, or similarly performing barriers to occlude incoming roadway traffic noise.

For proposed project residential units that feature patios or balconies expected as outdoor useable areas, predicted future traffic noise exposure levels presented in Table 8 suggest that up to 4 dBA of noise reduction would be needed to keep sound on such balconies at levels below the 65 dBA CNEL compatibility

standard. With the implementation of project design feature **PDF-2**, the resultant exterior noise levels would meet the City's exterior noise standard of 65 dBA CNEL.

PDF-2: Residential unit patios or balconies along roadway-facing building facades predicted to be exposed to external noise levels in excess of 65 A-weighted decibels community noise equivalent level shall feature railings or other partial-height barriers comprising sufficiently solid and dense materials (e.g., acrylic, glass, wood, etc. that exhibits a sound transmission class rating of at least 20) and of a 42-inch minimum height (from floor or deck of the balcony surface) that occludes direct sound path from the noise-producing roadway of concern and a seated patio or balcony occupant.

Stationary Noise Sources

The incorporation of new multi-family homes and a mix of open space uses attributed to development of the proposed project will add a variety of noise-producing electro-mechanical equipment that include those presented and discussed in the following paragraphs. Most of these noise-producing equipment or sound sources would be considered stationary, or limited in mobility to a defined area. Using a Microsoft Excel–based outdoor sound propagation prediction model, project-attributed operational noise at nearby community receptors was predicted using several assumptions:

- Treatment of exposed patio air-cooled condensing units as point-type sound emission sources; and,
- Point-source sound propagation (i.e., 6 dB per doubling of distance) that conservatively ignores acoustical absorption from atmospheric and ground surface effects.

Please see Appendix E for quantitative details of the inputs and outputs that form the basis of the following assessment presentations.

Residential Unit Heating, Ventilation, and Air Conditioning Noise

For purposes of this analysis, each of the new occupied residential units would be expected to feature a split-system type air-conditioning unit, with an air-cooled refrigeration (2-ton capacity) condenser unit in the patio area as currently depicted by the site plan (dated June 24, 2020).

Assuming each condenser unit has an SPL of 68 dBA at 3 feet based on available data from a likely manufacturer (Carrier 2012), the site plan suggests that these condenser units would generally be installed near the patio (i.e., apparent "front porch"). Therefore, the closest existing noise-sensitive residential receptor to the west of the proposed project's westernmost unit would be as close as 90 horizontal feet to the nearest of these condenser units. However, due to the 6 foot tall property line wall proposed along the western property boundary, the predicted sound emission level from the combination of all eight operating condenser units as received by this offsite single-family home would be 46 dBA L_{eq} and thus be compliant with the City's nighttime threshold of 50 dBA hourly L_{eq}. Under such conditions, the operation of residential air-conditioning units would result in a **less-than-significant noise impact**.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Construction activities may expose persons to excessive groundborne vibration, causing a potentially significant impact. Caltrans has collected groundborne vibration information related to construction activities (Caltrans 2020). Information from Caltrans indicates that continuous vibrations with a PPV of approximately 0.2 ips is considered "annoying." For context, heavier pieces of construction equipment, such as a bulldozer that may be expected on the project site, have peak particle velocities of approximately 0.089 ips or less at a reference distance of 25 feet (DOT 2006).

Groundborne vibration attenuates rapidly—even over short distances. And when groundborne vibration encounters a building foundation, a coupling loss occurs depending on the mass and design. For typical wood-framed houses, like those near the proposed project, this coupling loss is 5 vibration velocity decibels according to FTA guidance (FTA 2006). The attenuation of groundborne vibration as it propagates from source to receptor through intervening soils and rock strata can be estimated with expressions found in FTA and Caltrans guidance. By way of example, for a bulldozer operating on site and as close as the western project boundary (that is 80 feet from the nearest receiving sensitive land use) the estimated vibration velocity level would be 0.024 ips and thus no greater than the annoyance threshold recommended by Caltrans. Therefore, vibration-induced annoyance to occupants of nearby existing homes would be less than significant.

Construction vibration, at sufficiently high levels, can also present a building damage risk. However, anticipated construction vibration from conventional heavy equipment associated with this proposed project would not yield levels that surpass this risk. Per Caltrans, the recommended PPV threshold for newer residential structures is 0.5 ips and 0.3 ips for older residential structures—both of which are less stringent that the aforementioned threshold to annoy occupants of such structures; thus vibration damage risk to nearby structures is considered less than significant.

Once operational, the proposed project would not be expected to feature major producers of groundborne vibration. Anticipated mechanical systems like heating, ventilation, and air-conditioning units are designed and manufactured to feature rotating (fans, motors) and reciprocating (compressors) components that are well-balanced with isolated vibration within or external to the equipment casings. On this basis, vibration due to proposed project operation should be less than significant.

C) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

There are no private airstrips within the vicinity of the project site. The closest airport to the proposed project site is the McClellan-Palomar Airport, approximately 5 miles west southwest of the site and would therefore not expose people residing or working in the project area to excessive noise levels. Impacts would be **less than significant.**

INTENTIONALLY LEFT BLANK

6 Summary of Findings

This noise report was conducted for the proposed project. The results indicate that potential impacts during construction would **be less than significant**; nevertheless, construction best practices that incorporate noise reduction techniques would be incorporated into the project construction process. Noise impacts due to operation of the proposed project (including traffic noise) would be **less than significant**, with project design features PDF-1 and PDF-2 offered to reduce exterior noise intrusion to project outdoor spaces. No noise and vibration mitigation measures are anticipated at this time.

$Source_{elev}$	5.0	A_{horiz}	24.0	A	25.0
$Receiver_{elev}$	10.0	B_{horiz}	38.0	B	38.1
C	62.2	C_{horiz}	62.0		
P	0.85				
$Barrier_{elev}$	12				
Abarr	12.3				

The above calculations, refering to inputs from the figure at right, helps a user estimate what barrier attenuation (Abarr) to expect (i.e., up to 15 per formula to right) based upon source height (above grade), barrier height, and receiver height, and the horizontal distances between the source and receiver to the barrier. The FTA-based formula in the worksheets use these path length (P) and Abarr values to determine the barrier's insertion loss.

Barrier Parameter P

P= A+B-C

For all other barriers, and for protrusion of terrain above the line of sight:	$A_{barrier} = \min\left\{15 or\left[20\times\log\left(\frac{2.51\sqrt{P}}{\tanh\left[4.46\sqrt{P}\right]}\right)+5\right]\right\}$
Barrier Insertion Loss	$IL_{barrier} = \max\left\{0 or\left[A_{barrier} - 10(G_{NB} - G_B)\log\left(\frac{D}{50}\right)\right]\right\}$

D = closest distance between the receiver and the source, in feet
P = path length difference, in feet (see figure below)
G_{NB} = Ground factor G computed *without barrier* (see Figure 6-5)
G_B = Ground factor G computed *with barrier* (see Figure 6-5)

† The term "tanh(variable)" stands for hyperbolic tangent, available on many scientific calculators. If "tanh" is not available, then compute E = exp(variable), and set tanh(variable) = (E - 1/E) / (E + 1/E), where exp(variable) is the "exponential" function, also written as e^x on calculator keypads.

Environmental Noise Control

Keeping Outside Noises Out

The reason for measuring the sound transmission loss and sound absorption coefficients of building materials or assemblies is to provide a means of predicting the expected noise level within a space. The noise in a given space or room may come from a noise source located in that space or from a noise source in an adjacent space. Previous discussions under Sound Transmission Loss and Sound Absorption have explained how the data can be used when designing interior spaces. This section will deal with noise sources generated outside of a building.

Determining the Influence of Outside Sources

The following equation can be used to predict the noise level in a building interior when the room is exposed to an outside noise source such as roadway traffic.

$$L_{p(int)} = L_{p(ext)} - TL + 10 \log S/A + ADJ$$

Where:
- $L_{p(int)}$ = predicted average sound pressure level in the building interior at a particular frequency, dB.
- $L_{p\ (ext)}$ = measured or predicted average sound pressure level at the building exterior for a particular frequency band, dB.
- TL = the sound transmission loss of the exterior wall or roof at a particular frequency band, dB.
- S = total exposed exterior surface area of the room of interest, sq.ft.
- A = total sabins of absorption in the room of interest at a particular frequency band.

The term ADJ is an adjustment factor which takes into consideration certain characteristics of the sound source. In general, for aircraft traverses or for sufficiently long lines of vehicle traffic, the sound field incident on the building façade is a reasonable approximation to the reverberant field condition in which the TL values were measured. For this case, the term ADJ=3 dB, which adjusts the exterior noise level for the effects of the building façade when constructed.

The term ADJ is equal to 3 dB only when the sound field incident on the façade approximates a reverberant field condition. For those instances when this is not true, the term ADJ takes a more general form. Thus, ADJ=3 dB +G. "G" (in dB) is an air adjustment for the geometrical arrangement of the noise source relative to the building façade. The sound transmission loss of a building component is dependent on the angle of incidence of the sound wave striking the component. Since TL is determined with random incidence sound, adjustments must be made for the situations where the sound is incident from fixed angels, such as from a stationary source. Table 3 shows the value of "G" that should be used for different angles of incidence, with the angle being taken relative to the perpendicular of the building façade.

Table 3:

Adjustment "G" to allow for Primary Angles of Sound Incidence

Angle of Incidence, deg.	Adjustment (G), dB
0-30	-3
30-60	-1
Random	0
60-80	+2

Design Considerations

For the purpose of screening proposed façade constructions, a simplified equation for predicting interior noise levels can be used. In place of transmission loss (TL) values, the STC value of a construction can be used. In addition, other noise level descriptors such as "A"-weighted dB levels, day-night average level (Ldn, or community noise equivalent level (CNEL) may be used for the exterior noise levels (LP(ext)) in the

Equation for screening proposed façade constructions

$$L_{(int)} = L_{(ext)} - STC + 10 \log S/A + ADJ$$

Where:
- $L_{(int)}$ = approximate interior noise level in the same unit as used for $L_{(ext)}$.
- $L_{(ext)}$ = approximate exterior noise level in dB, dBA, Ldn or CNEL.
- STC = sound transmission class of the exterior façade construction
- ADJ = 3+G+F

Where:
- G = values given in Table 3.
- F = adjustment for frequency spectrum characteristics of the noise source, see Table 4.

Table 4:

Adjustment "F" to allow for the spectrum shape of common outdoor noise sources.

Noise Source	Adjustment (-dB
Jet Aircraft (less than 500 ft. from observer	0
Trains wheel-rail noise	2
Road traffic (neighbhr trucks)	4
Jet Aircraft (at 3000 ft or more from observer	5
Road Traffic (more than 10% trucks)	6
Diesel-electric locomotives	6

The factor 10 log S/A can be approximated using Table 5 to determine the value "A"

This expression for determining interior noise levels is only an approximation and should be used only as a screening tool for design considerations. Engineering calculations for compliance with code requirements may necessitate the services of an acoustical consultant.

Table 5:

Multiplicative factors for estimating room absorption from the floor area; these factors are multiplied by the floor area to obtain the estimated total absorptions in the room.

	Type of office furnishings			
	Hard: sound reflective walls, floor and ceiling, no drapes	Standard: reflective walls, acoustical ceiling, hard floor	Soft: acoustical ceiling, carpet or drapes	Very Soft: acoustical ceiling, carpet or drapes and wall furniture
Factor for multiplying floor area to obtain normal absorption	0.3	0.8	0.9	1.0

FIRE RESPONSE TECHNICAL MEMORANDUM

To:	
From:	Dudek Fire Protection Planning Team, Michael Huff, Principal
Subject:	Gran Vista Los Posas Project Fire and Medical Response Analysis
Date:	June 23, 2022
cc:	N/A
Attachment(s):	1. San Marcos Fire Department Fire Station 1 Modeled Response Time 2. San Marcos Fire Department Fire Station 2 Modeled Response Time

The following technical memorandum provides a summary of Dudek's fire service response analysis for the San Marcos Gran Vista Los Posas Project (Project) in San Marcos, California. This letter provides a preliminary summary of the existing San Marcos Fire Department's (SMFD) nearby resources, their modeled travel time responses into the Project. The goal is to determine whether the Project can be served within the SMFD's internal response time standards.

1 Assignment

Dudek's assignment was to:

- Conduct evaluation of existing, nearby SMFD fire station travel times to the project site; and
- Analyze generated information to determine if any of the Project site cannot be reached within the City's response time goal; and
- Evaluate the Project's emergency call generation volume and analyze the potential impact on SMFD.

2 Project Description

The proposed Project is the development of a vacant approximately 7.6-acre site located in the undeveloped northwest corner of the intersection of Las Posas Road and W. Mission Road in the City of San Marcos, California. There is a CVS store just southeast of the site, of which the parking lot overlaps the Project site. The Project site is located on the 7.5-minute San Marcos quadrangle map on Sections 3 and 10, in Township 12 South, Range 3 West of the San Bernardino Base and Meridian. It comprises Tax Assessor parcel numbers – APN 219-121-15-00 and 219-121-16-00. The site is General Plan designated C-Commercial (City of San Marcos 2012).

The Project involves the construction of a residential development. The residential units would include 122 townhome units, 244 garage spaces, 21 guest parking spaces, and 19,400 square feet of open space areas.

The Project is located within the jurisdiction of the SMFD. The fire department provides structural fire protection and advanced life support-level emergency medical services within the City limits; unincorporated territory adjacent to the city's northern boundary (Project Area); discontinuous, unincorporated areas between the City of San Marcos and the City of Escondido; and the community of Lake San Marcos. The fire department operates two primary Fire Stations (Stations 1 and 2) that would respond to an incident at the proposed Project site, with first-due response likely from Station 1 given its closer location and greater coverage in a faster timeframe. Station 2 would respond as necessary. Table 1 presents a summary of the location, equipment, and staffing levels for the two SMFD stations responding to the site.

Table 1
SMFD Responding Fire Stations Summary

Fire Station	Location	Equipment	Staffing
Station 1	180 W. Mission Road San Marcos, California 92069	Paramedic Engine Co. Paramedic Truck Co. Wildland Fire Engine Paramedic Ambulance Battalion Chief Vehicle	On duty: 9
Station 2	1250 S. Rancho Santa Fe Rd San Marcos, California 92069	Paramedic Engine Co. Paramedic Ambulance	On-duty: 5

3 Methods

3.1 Travel Time Response Modeling

Dudek conducted a GIS-based travel time coverage modeling effort in order to determine if the project meets the SMFD's response goal. The SMFD indicates "the average initial total response standard in the City of San Marcos is to arrive within seven minutes for 90% of the emergency calls received, and within 10 minutes for 90% of the non-emergency calls received[1]."

Travel time is one part of the overall response time and is based largely on the distance from the fire station to the project. The analysis that follows evaluates travel time and assumes the dispatch and turnout times as a constant i.e., 2 minutes and 30 seconds, total.

[1] 2021 Call volume, response standard, and fire station statistics provided by Jason Nailon, SMFD Fire Marshal, via e-mail communication. 2021

3.2 GIS Response Travel Time Modeling

Following compilation of all necessary data layers received from project applicant and acquired via publicly available sources, Dudek verified that all data layers were in the correct State Plane Zone coordinate system with units in feet. A network data set was then created utilizing ESRI's Network Analyst extension in the Arc Catalog module. The data set was created by merging the existing centerline street layer with the proposed Gran Vista Los Posas Project centerline street data, provided by project applicants, and assigning parameters to the created data set. Several parameters are available during the creation of a network data set and include elevation constraints, U-turn capabilities, curb approach direction and travel impedance.

Due to the emergency nature of the response scenarios modeled in this analysis, U-turns were permitted on every road. Curb approach determines on which side of the street the vehicle needs to approach and includes three options, left, right, or either. The 'either' option was selected for all roads in this analysis based on the emergency nature of the response situations. Finally, travel impedance was utilized to include the effect of speed limits on response travel time. A custom impedance value was created for each road segment and was a function of road segment distance (miles) divided by speed (mph). This value was utilized in Network Analyst calculations for both modeling types and reflected the time necessary for a vehicle to cover the distance of the road segment. Speed was set at 35 mph, consistent with National Fire Protection Association (NFPA) 1142 Table C.11(b) and the Insurance Services Office (ISO) travel time formula (T=0.65 +1.7D).

Once the network data set parameters were finalized, the route analysis was run using the Network Analyst extension in ArcGIS 10.2.2. This function determines the best route between a minimum of two points based on the parameters chosen. The analysis includes response from SMFD Fire Stations 1 and 2, which are the closest stations to the Project. A route analysis procedure was then run using Network Analyst with each respective fire station as the starting point, and a remote location within the Project as the destination. The maps depicting each Station travel time coverage area are presented in Attachments 1 and 2.

3.3 Modeling Results

As indicated in Table 2 and Attachments 1 and 2, response to the project site from the closest existing SMFD fire station (Station 1) would arrive at the Project's primary entrance off W. Mission Road within 3 minutes, 23seconds travel time (5minutes 53 seconds total response time). The most remote units within the Project arereached within 3 minutes 36 seconds travel time, or 6 minutes 06 seconds total response time. This analysis indicates that the entire Project is within the SMFD's internal response timeframes with up to 54 seconds of additional time available. This analysis also indicates that Station 2 is not close enough to meet the 7 minute response time, but does arrive within 5 minutes 33 seconds (8 minutes 03 seconds total response time).

Table 2
SMFD Fire Station Response Time to Project

Call Response Times	Estimated Percent of San Marcos Restaurant Row Project Achievable			
	Fire Station 1		*Fire Station 2*	
	Travel Time	*Total Response Time*	*Travel Time*	*Total Response Time*
Less than 7 minutes	100%	100%	100%	0%

3.4 Response Time Capability Assessment

The Project includes a substantial number of new residential structures. Service level requirements could, in the absence of fire facilities and resources improvements, cause a decline in the SMFD response times and capabilities for existing residents. However, it is clear that from a response time perspective, the project does comply with the City's total response time standard.

4 Call Volume Analysis

4.1 Estimated Calls and Demand for Service from the Project

The SMFD estimates approximately 11,486 total annual calls (Nailon, J. 2021) and a City population of approximately 95,000 (SMFD 2021). The per capita call volume is roughly .12 for the City of San Marcos. The Project plans for 122 new dwelling units. As a conservative approach, this analysis assumes a per dwelling unit population of 3 persons per unit.

A population of 366 persons would generate approximately 44 calls per year, most of which are expected to be medical-related calls, consistent with typical emergency call statistics.

The closest SMFD fire stations, Stations 1 and 2 currently responds to roughly 16 to 18 calls per day (up to 6,570 calls per year) in their primary service areas. These are busy fire stations and adding calls can cumulatively create an impact and result in longer response times or stacked calls requiring assistance from more distant fire stations. It is anticipated that the Project's contributions, along with other projects' contributions to fire service and availability fees through property taxes and/or other avenues provide funding needed to augment service capabilities such that an impact is not experienced. Despite the current busy call load, an addition of 44 calls per year, or 1 call every 8 days, is not expected to significantly impact service level requirements given the measures that can be implemented by SMFD with provided ongoing funding from new development.

5 Discussion and findings

5.1 Emergency Response

As presented, Station 1 is well-within the City's time response goal for first-in fire engine and medic ambulance to the entire Project site.

5.2 Call Volume/Load

The Project would generate emergency calls, primarily medical, proportionally with its population. At build out, there may be as many as 44 calls per year generated by the on-site population. The addition of one call per 8 days or to a station that is currently running approximately 17 to 18 calls per day is not considered a significant increase. Based on the information provided by SMFD, the Project's additional call volume should not cause a significant stress on the response capabilities. However, SMFD would make the final determination, based on specific fire station call volumes (which were not provided for this analysis), whether the station would incur delayed response times or an increase in call volume that could not be absorbed.

6 Recommendations

The following Recommendation is provided based on the preceding analysis:

It is recommended that SMFD provide emergency response to the proposed Project from Station 1. Factors supporting this recommendation are the absorbable number of calls that would be anticipated as the Project is built and the response time that is within range of local and national standards.

Please feel free to contact me if you have any questions or need any additional information. I look forward to continuing to work with you on this project's fire safety considerations.

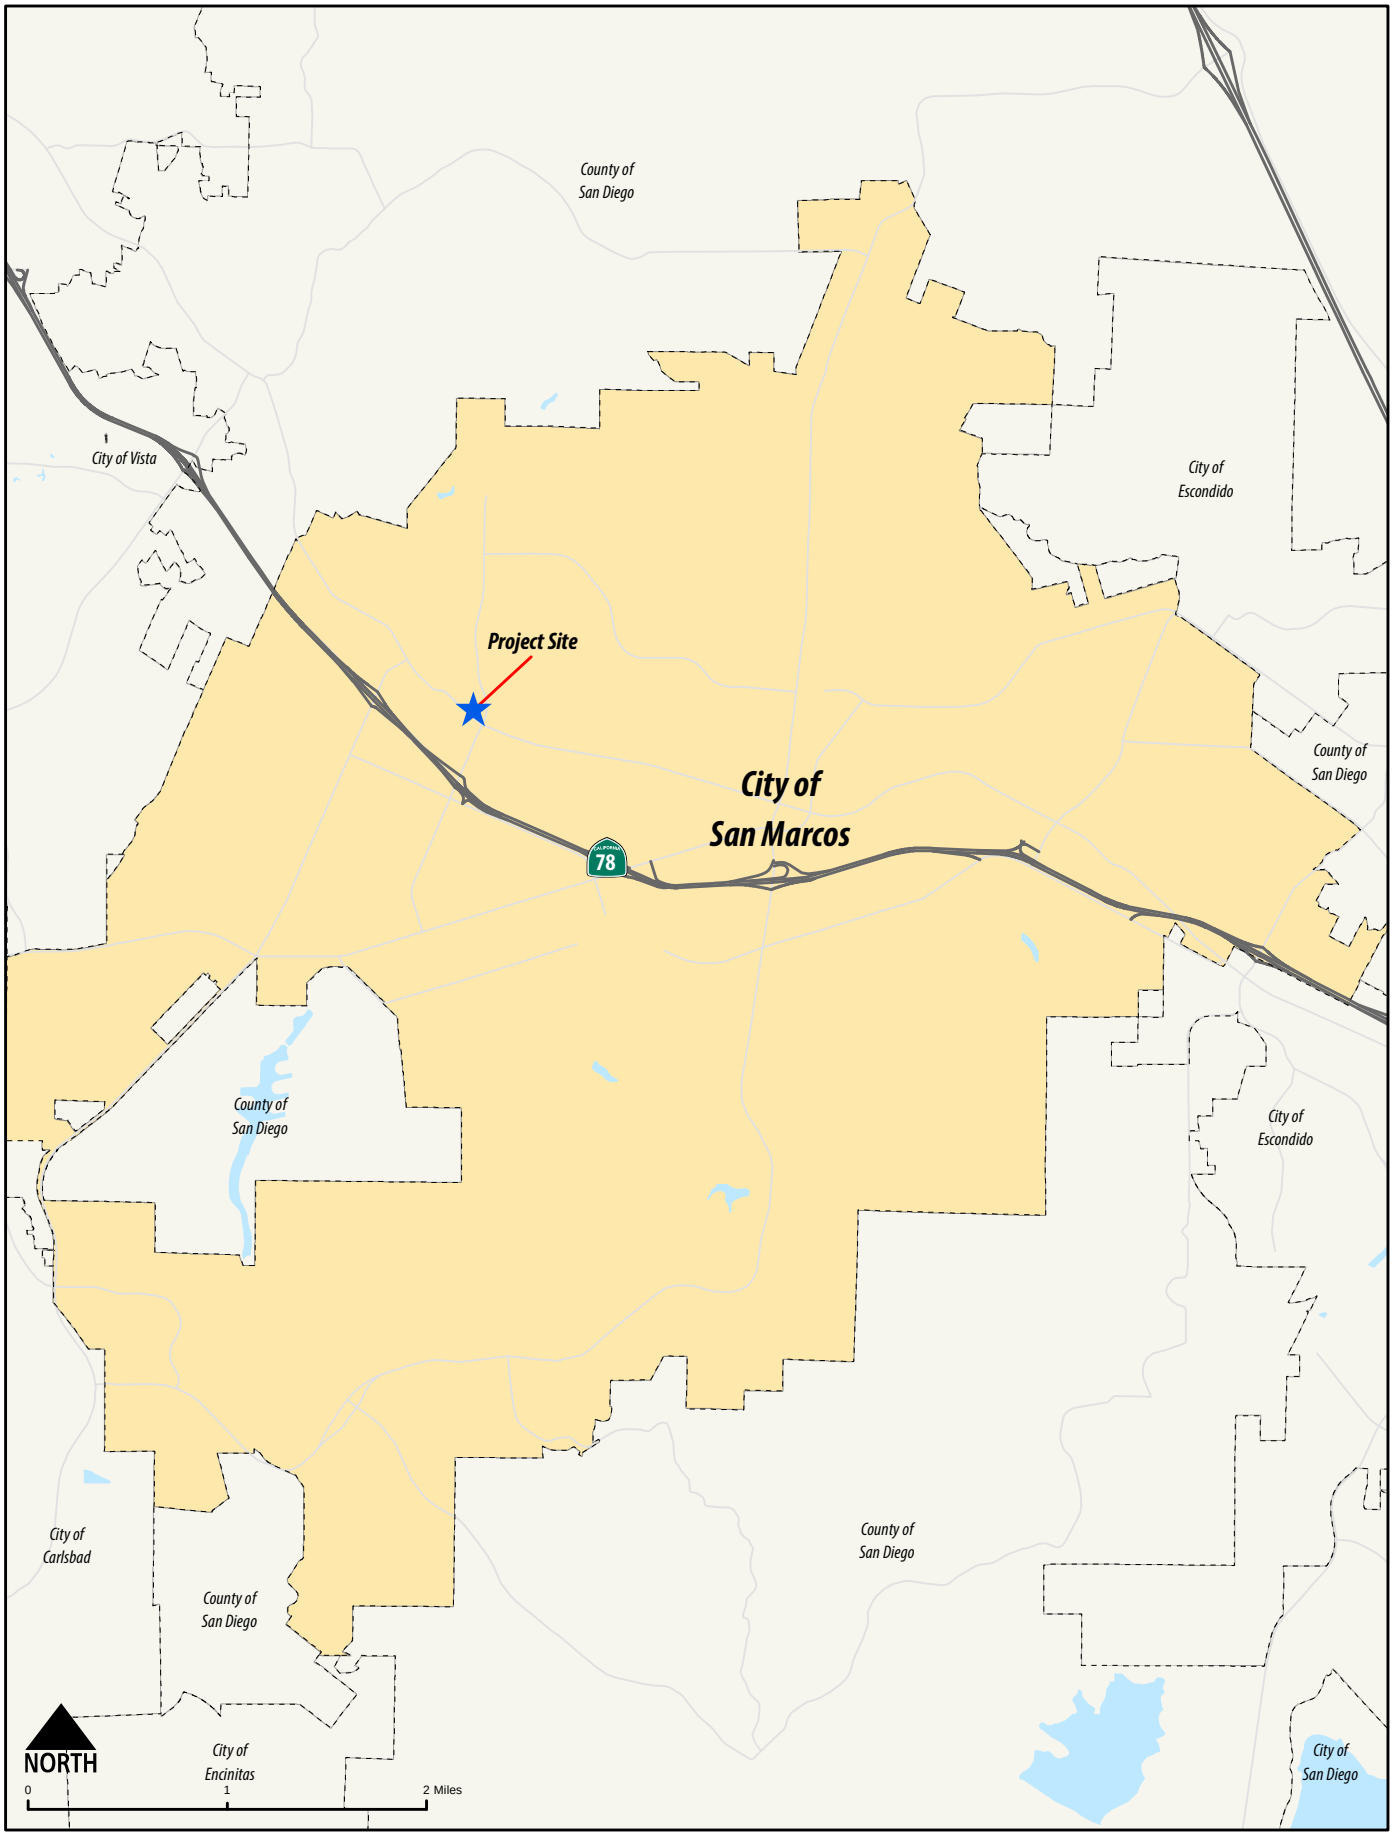
RE: Gran Vista Multi-Family – Vehicle Miles Traveled (VMT) Analysis Technical Memorandum

---



This technical memorandum documents the results of the SB-743 compliant transportation impact analysis conducted for the proposed Gran Vista Multi-Family project (the "Proposed Project"). The analysis is based on the recently revised (January 2019) State California Environmental Quality Act (CEQA) Guidelines and the City of San Marcos Transportation Impact Analysis (TIA) Guidelines dated November 16, 2020.

Project Description

The Proposed Project seeks to construct 120 multi-family dwelling units on a vacant property approximately 250 feet northwest of the West Mission Road and North Las Posas Road intersection in the City of San Marcos. The property is bordered by North Las Posas Road on the northeast side, West Mission Road on the southwest side, single family dwelling units on the northwest side, and a CVS pharmacy to the south. Per the City's General Plan, the site is designated as a Commercial (C) land use.

The Proposed Project will share two existing driveways with the adjacent CVS pharmacy with one located off North Las Posas Road and the other off West Mission Road. The access off North Las Posas Road is via a signalized intersection at North Las Posas Road / Palm Road (Driveway 1), and the access off West Mission Road is via a side-street (the CVS driveway) stop controlled intersection that does not allow left-turn out movement (Driveway 2). The assumed opening year of the Proposed Project is 2024.

Figure 1 displays the Proposed Project regional location, while **Figure 2** displays the project site plan.

Gran Vista Multi-Family
VMT Analysis

C+R

Figure 1
Project Regional Location

Three-Story Townhomes
- For-sale attached townhomes provide an efficient use of land and a more financially attainable housing solution that is compatible with adjacent single family uses
- Located near SPRINTER light rail line (nearest stop is 0.4 miles) to support transit use, promote walkabilty, and potentially reduce VMT and emissions
- Withing walking dictance of retail, parks, schools and other everyday services
- Implements Policy LU-2.1 of the 2020 Climate Action Plan to "Promote compact development patterns that reduce air pollution and automobile dependence and facilitate walking, bicycling, and transit use".

Las Posas Road Frontage/Paseos
- Varied building orientation breaks up massing and provides for an eclectic and interesting street scene
- Paseo access and landscaped pedestrian pathways provide connectivity to existing sidewalks to promote walkability
- Shade trees and landscaping soften the street scene and provide pedestrian comfort

Typical Tot Lot/Excercise Station
- Tot lots with play equipment (three areas shown in red) provided throughout site area are located adjacent to barbecues and other amenities to encourage family and community gathering
- Outdoor excercise equipment (three areas shown in blue) provides an exercise loop through the community to encourage and support fitness

Community Garden
- Raised planter beds with decompsed granite pathways encourage healthy eating and wellness
- Enhanced with a potting table and storage benches

Dog Park
- Off-leash dog area for residents to excercise and enjoy pets
- Fenced with tublar steel fencing to provide an "open" appearance
- Artificial turf surface for durability and easy maitenance
- Dog clean-up station, double gated entry, and other amenities

Primary Community Entry
- Maintains existing site access at signalized intersection
- Provides front doors facing entry for a welcoming street scene
- Enhanced paving and landscaping to be designed by landscape architect

Project Summary

Gross Area: 7.6 Acres

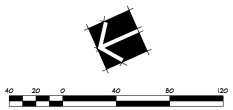
Total Units: 120 Homes
- 30 - Plan 2532: 1,213 Sq.Ft., 2 Bed, side-by-side garage
- 45 - Plan 1633: 1,505 Sq.Ft., 3 Bed, tandem garage
- 45 - Plan 1636: 1,802 Sq.Ft., 3 Bed, side-by-side garage

Total Open Space:
- 17,550 Sq.Ft. of Private Open Space
- 44,548 Sq.Ft. of Open space with grades of 10% or more
- 92,645 Sq.Ft. of Common Recretaion Area
- 154,743 Sq.Ft. Total

Parking
- 240 Garage Spaces (Includes 45 Tandem)
- 20 Guest Spaces (Includes 2 ADA Spaces and 2 EV Spaces)
- 37 Existing Spaces (Existing on-site spaces adjacent to CVS)
- 297 Total Spaces (including existing spaces)

Notes:
1. APNs 219-121-15 & 16
2. Existing General Plan Designation: Commercial (C)
3. Proposed General Plan Designation: Specific Plan Area (SPA)
4. Existing Zoning Designation: Commercial (C)
5. Proposed Zoning Designation: Specific Plan Area (SPA)
6. Total building square footage: 185,205 SF
7. Required common open space: 24,431 SF
8. Required private open space: 6,000 SF

Central Recreation Area
- Centrally located near the primary entry to provide a focal point for the community
- Amenities include lawn game area with artificial turf, barbecue counter with bar, seating, and more
- Located adjacent to a tot lot to promote family and social gathering
- Underground vaults provide storm water treatment



Children's Play Area
- Larger play area with multi-age play equipment
- Located adjacent to barbecue counter and seating area to promote family and social gathering

Secondary Community Entry
- Maintains existing site access with left/right in and right-out only turning movements
- Enhanced by adjacent open space areas, special paving and landscaping

Turf Play Area
- Open artificial turf play area
- Can be used for badminton, pick-up soccer, Frisbee and other informal games
- Underground vaults provide storm water treatment

Neighborhood Edge
- Buildings oriented to minimize windows
- Landscape planting designed to provide additional screening to maximize privacy of existing single-family homes

Project Trip Generation

Per the City's TIAG, trip generation rates were derived from the SANDAG's (not so) Brief Guide to Vehicular Traffic Generation Rates for the San Diego Region (April 2002). **Table 1** displays the projected daily, as well as AM and PM peak hour, project trip generation.

Table 1 - Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM Peak Hour					PM Peak Hour				
				%	Trips	Split	In	Out	%	Trips	Split	In	Out
Multi-Family (6-20 DU/acre)	120 DU	8/DU	960	8	77	2:8	15	62	10	96	7:3	67	29

Source: SANDAG (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002)

Notes:
ADT = Average Daily Traffic
DU = Dwelling Unit

As shown in Table 1, the Proposed Project is anticipated to generate 960 daily trips, including 77 trips (15-in/62-out) during the AM peak hour and 96 (67-in/29-out) trips during the PM peak hour.

Analysis Methodology

On September 27, 2013, Governor Edmund G. Brown, Jr. signed SB-743 into law, starting a process that fundamentally changes the way transportation impact analysis is conducted under CEQA. Related revisions to the State's CEQA Guidelines include elimination of auto delay, level of service (LOS), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts, and replacement with Vehicle Miles Traveled (VMT) as the preferred CEQA transportation metric.

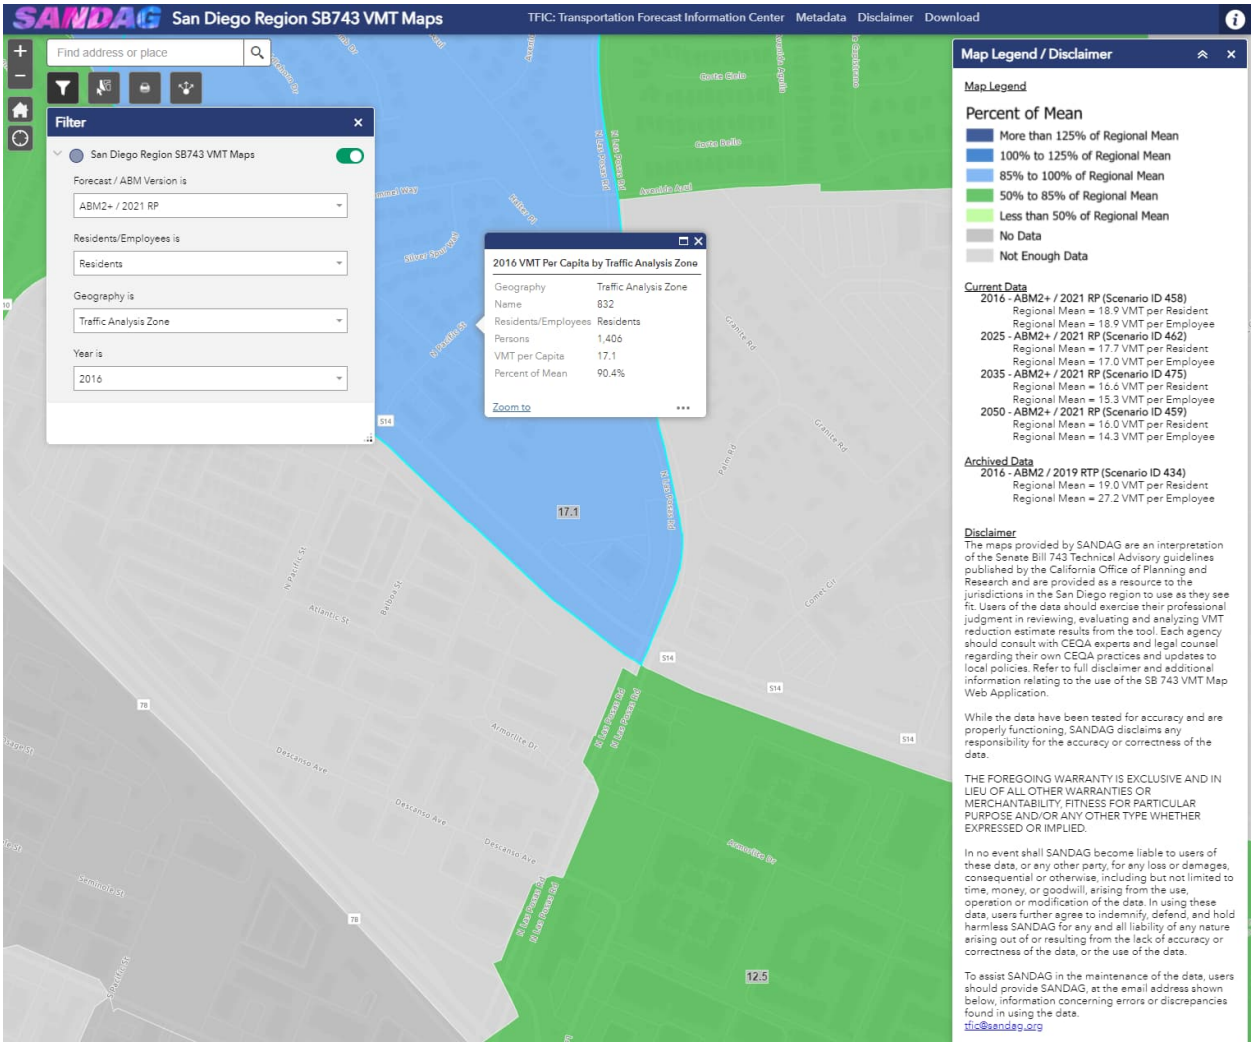
In December 2018, the California Resources Agency certified and adopted revised CEQA Guidelines, including the new section 15064.3. Under Section 15064.3, vehicle miles traveled (VMT), which includes the amount and distance of automobile traffic attributable to a project, is identified as the "most appropriate measure of transportation impacts." As of July 1, 2020, all CEQA lead agencies must analyze a project's transportation impacts using VMT. On November 16, 2020, the City of San Marcos adopted its Transportation Impact Analysis Guidelines.

Screening Thresholds

Many agencies use these screening thresholds to quickly identify when a project should be expected to cause a less-than-significant impact without conducting a detailed study. The City of San Marcos TIA Guidelines suggest that a detailed transportation VMT analysis applies to all land development projects, except those that meet at least one of the screening criteria. Relevant screening criteria for the Proposed Project is described below:

- *Presumption of Less Than Significant Impact for Affordable Residential Development* – Residential projects with 100 percent deed restricted affordable housing can be presumed to have a less-than-significant transportation impact and would not require a detailed VMT analysis. If a project contains less than 100 percent affordable housing, the portion that is

affordable should be screened out of requiring a detailed VMT analysis. Projects can only be screened out if they are located in parts of the city that have been identified by SANDAG and the City as Smart Growth Opportunity Areas. For mixed-use projects, this screening criteria should be applied to the residential component separately to determine if that portion of the project screens out of a detailed VMT analysis.



- *Local-Serving Retail* - Retail projects that have 50,000 square feet gross floor area or less can be presumed to have a less than-significant transportation impact and would not require a detailed VMT analysis. For a mixed-use project, this screening criteria should be applied to the retail/commercial component separately to determine if that portion of the project screens out of a detailed VMT analysis.
- *Map-Based Screening for Residential and Office Projects* – Residential and employment projects that are proposed in areas that generate VMT below adopted City thresholds can be presumed to have a less-than-significant transportation impact and would not require a detailed VMT analysis. This determination must be made using SANDAG's online residential and employment VMT maps for existing year or model baseline year VMT (whichever is available at the time analysis is being conducted), which show census tracts in the city where the VMT is below the regional average. The following types of projects could be screened out using this approach:
    - Residential projects proposed in census tracts with residential VMT per capita below the City's threshold of exceeding 85 percent of the SANDAG regional average.

  In order to utilize this screening approach, the project must incorporate similar land use characteristics to other projects in the census tract. For mixed-use projects, this screening criteria should be applied to the residential and employment components separately to determine if any portions of the project screen out of a detailed VMT analysis.

Based upon the screening criteria presented above, the Proposed Project would not be screened out from completing a detailed VMT analysis for the following reasons:

- *Screening Threshold for Small Projects* – The Proposed Project generates more than 110 daily trips.
- *Map-Based Screening for Residential and Office Projects* – The Proposed Project is located in an area that generates VMT per capita above the adopted City threshold as displayed in Figure 3.
- *Presumption of Less Than Significant Impact for Affordable Residential Development* - The Proposed Project consists of 120 multi-family dwelling units which does not provide for any affordable housing.
- *Presumption of Less Than Significant Impact Near Transit Stations* - Although the Proposed Project is within a high-quality transit area, it is inconsistent with the City's current general plan.

Figure 3 - Project Location within SANDAG VMT Map

VMT Analysis

Analysis Metrics

Consistent with the City's TIAG, the residential portion of the Proposed Project shall be analyzed by the following VMT metric:

- VMT/Capita which includes, for all San Diego County residents, all vehicle-based resident travel grouped and summed to the home location of the individual. It includes all resident vehicle travel: home-based and non-home-based. The VMT for each individual is then summed for all individuals residing in a particular census tract and divided by the population of that census tract to arrive at Resident VMT/Capita. A significant impact will occur if the project generates VMT per resident greater than 85 percent of the regional average.

The regional average VMT was determined using the SANDAG Series 14 ABM2+/2021 RP Year 2016 Base model. **Table 2** summarizes the VMT analysis results.

Table 2 - VMT Impact Analysis - Residential

Metric	VMT per Resident
Regional Average	18.90[1]
Significant Impact Threshold (85%)	16.07[2]
Proposed Project	17.10[1]
Significant Impact	Yes

Source: CR Associates (2022)

Notes:
[1] Source = SANDAG Series 14 ABM2+/2021 RP Year 2016 Base Model
[2] Regional Average x 85%

As shown in Table 2, the Proposed Project is anticipated to generate a VMT per resident of 17.10 miles, which exceeds the significance threshold of 16.07 miles. Therefore, the Proposed Project would have a significant VMT impact and mitigation measures are required to reduce the VMT per resident.

VMT Mitigation

The proposed project's VMT per Capita is not anticipated to fall under the significance threshold as the project site is located in a suburban area that includes single-family homes with higher automobile ownership as compared to the region. While the proposed project is located on an infill site and is consistent with Climate Action Plan and SANDAG's Regional Plan, impacts related to VMT per Capita would not be reduced to 85% of the regional average. **It is important to note that this impact is primarily a result of the geographic location of the proposed project in a suburban neighborhood, as trip characteristics of the surrounding residential land uses are used as a surrogate to estimate proposed project trip characteristics, regardless of the inherent differences between the land uses**.

Nonetheless, the Proposed Project would have a significant VMT impact and mitigation measures are required to reduce the VMT per resident. The Proposed Project's total VMT per Capita is 17.1 miles. To mitigate the Proposed Project's VMT to less than significant levels, mitigation measures would need to reduce the total VMT per Capita by 6.02% from 17.1 miles to 16.07 miles.

To reduce the average VMT per Capita, it is recommended that the Proposed Project implement a Transportation Demand Management (TDM) Program. A TDM program would facilitate increased opportunities for walking and bicycling, as well as provide the resources, means and incentives for ridesharing and carpooling. The SANDAG Mobility Management Guidebook/VMT Reduction Tool was taken into consideration initially, however, this tool does not provide strategies that are applicable to project. Therefore, the methods and strategies contained in the California Air Pollution Control Officers Association (CAPCOA) Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (CAPCOA Report).

Based on discussions with the project applicant, the Proposed project will implement the following mitigation measure:

1. Provide subsidized transit passes (10%) for 100% of all residents (CAPCOA T-9: Implement Subsidized or Discounted Transit Program = **0.10% VMT reduction**).

See **Attachment A** for details on the VMT reduction calculations and excerpts from the CAPCOA Report.

Additionally, the CAPCOA Report provides for mitigation measures that are considered non-quantifiable for the Proposed Project due to the implementation requirements or measure description in relation to Proposed Project's land use (i.e., a residential project rather than an employment project). The Proposed Project will implement the following non-quantifiable VMT reduction strategies to encourage alternative modes of transportation:

2. Creation and distribution of a "new resident" information packet addressing alternative modes of transportation (CAPCOA T-7: Implement Commute Trip Reduction Marketing).
3. Provide on-site bike parking (CAPCOA T-10: Provide End-of-Trip Bicycle Facilities).

See Attachment A for full list of VMT mitigation measures taken into consideration and determination of feasibility for the Proposed Project.

The CAPCOA Report notes that when determining the overall VMT reduction associated with a project, the VMT reduction for each individual strategy should be dampened, that is adjusted to reflect the fact that some of the strategies may be redundant or applicable to the same populations. The CAPCOA report provides the following dampening formula:

Overall % VMT Reduction = 1 – (1 - First Strategy) * (1 - Second Strategy) * (1 – Third Strategy) ...

The Proposed Project would have the following overall VMT reduction:

Overall VMT Reduction = 1 - (1 - 0.001)

Overall VMT Reduction = 0.10%

Table 3 summarizes the Proposed Project's trip reductions and mitigation results.

Table 3 - Proposed Project VMT Mitigation

VMT / Resident[1]	Threshold VMT / Resident[2]	Mitigation Measures (% Reduction)	VMT / Resident Reduction	Net VMT / Resident[3]	M?
17.1	16.07	CAPCOA T-9 (.10%)	-0.10%	17.08	No

Source: CR Associates (2022)

Notes:

[1] SANDAG Series 14 ABM2+/2021 RP Year 2016 Base Model (Figure 3)

[2] Regional Average x 85%

[3] [Net VMT per Resident] = [VMT per Resident] X [VMT per Resident Reduction]

M? = Mitigated?

Based on the VMT reduction results, implementation of the TDM Program is anticipated to reduce the VMT per capita generated by 0.10 percent. Thus, with implementation of the TDM Program, the Proposed Project is anticipated to generate 17.08 VMT per Capita (17.1 VMT per Capita * (1 - 0.001)). The resulting 17.08 miles per resident exceeds the 16.07 miles threshold. Therefore, since the mitigation measures would not reduce the VMT per resident to less than significant levels, the impact is only partially mitigated, and the Proposed Project is considered to have a significant and partially mitigated impact.

Attachment A - VMT Mitigation Reduction Calculations and Full List of VMT Mitigation Measures Taken into Consideration

VMT Reduction	=	Subsidy Amount / Average Transit Fare	Elasticity (Transit boardings with respect to transit fare)	% residents eligible	% VMT generated from residents	Transit Mode Share (Table T-9.1)	% of Trips otherwise made by vehicle	Conversion Factor
-0.102%	=	10%	-0.43	100%	100%	4.74%	50%	1

GHG Reduction Formula

$$A = \frac{C}{B} \times G \times D \times E \times F \times H \times I$$

GHG Calculation Variables

If subsidies or discounts target employees, the GHG reduction from this measure may be limited to work-related employee trips only (i.e., home-to- work) and work-to-other, where at least one trip end is work). If residents are targeted, the GHG reductions extend to all trips.

ID	Variable	Value	Unit	Source
Output				
A	Percent reduction in GHG emissions from employee/resident vehicles accessing the site	0–5.5	%	calculated
User Inputs				
B	Average transit fare without subsidy	[ ]	$	user input
C	Subsidy amount	[ ]	$	user input
D	Percent of employees/residents eligible for subsidy	0–100	%	user input
E	Percent of project-generated VMT from employees/residents	0–100	%	user input
Constants, Assumptions, and Available Defaults

VMT Reduction Mitigation Measures

Mitigation Measure (from CAPCOA Report)	Feasibility
TDM-T-7-Implement Commute Trip Reduction Marketing	Yes - However, not quantifiable for the Proposed Project due to the implementation requirements or measure description in relation to Proposed Project's land use (i.e., a residential project rather than an employment project).
TDM-T-8-Provide Ridesharing Program	No - Not financially feasible for project to host and implement a ridesharing program.
TDM-T-9-Implement Subsidized or Discounted Transit Program	Yes - Providing 10% subsidized transit passes.
TDM-T-10-Provide End-of-Trip Bicycle Facilities	Yes - However, not quantifiable for the Proposed Project due to the implementation requirements or measure description in relation to Proposed Project's land use (i.e., a residential project rather than an employment project).
TDM-T-14-Provide Electric Vehicle Charging Infrastructure	No - Although project is providing EV ready infrastructure as well as several EV charging ready visitor guest parking, these only meet the City's minimum requirements. Additionally, EV charging infrastructure only reduces gas emissions and does not reduce VMT.
TDM-T-15-Limit Residential Parking Supply	No - Not feasible to reduce parking for this residential project.
TDM-T-18-Provide Pedestrian Network Improvement	No - Although the project is providing pedestrian improvements within project site and project frontage, it is not financially feasible to provide pedestrian network improvements beyond the project site.
TDM-T-21-A-Implement Conventional Carshare Program	No - Not financially feasible for project to implement a carshare program.
TDM-T-21-B-Implement Electric Carshare Program	No - Not financially feasible for project to implement an electric carshare program.
TDM-T-22-A-Implement Pedal (Non-Electric) Bikeshare Program	No - Not financially feasible for project to implement a pedal bikeshare program.
TDM-T-22-B-Implement Electric Bikeshare Program	No - Not financially feasible for project to implement an electric bikeshare program.
TDM-T-22-C-Implement Scootershare Program	No - Not financially feasible for project to implement a scootershare program.

Executive Summary

Project Description and Setting

The Proposed Project seeks to construct 120 multi-family dwelling units on a vacant property approximately 250 feet northwest of the West Mission Road and North Las Posas Road intersection in the City of San Marcos. The property is bordered by North Las Posas Road on the northeast side, West Mission Road on the southwest side, single family dwelling units on the northwest side, and a CVS pharmacy to the south. Per the City's General Plan, the site is designated as a Commercial (C) land use.

The Proposed Project will share two existing driveways with the adjacent CVS pharmacy with one located off North Las Posas Road and the other off West Mission Road. The access off North Las Posas Road is via a signalized intersection at North Las Posas Road / Palm Road (Driveway 1), and the access off West Mission Road is via a side-street (the CVS driveway) stop controlled intersection that does not allow left-turn out movement (Driveway 2). The assumed opening year of the Proposed Project is 2024.

Per the City's Transportation Impact Analysis Guidelines (TIAG), trip generation rates were derived from the SANDAG's (not so) Brief Guide to Vehicular Traffic Generation Rates for the San Diego Region (April 2002).

The Proposed Project is anticipated to generate 960 daily trips, including 77 trips (15-in/62-out) during the AM peak hour and 96 (67-in/29-out) trips during the PM peak hour.

The following four (4) roadway segments and three (3) intersections were included for analysis:

Roadway Segments

- North Las Posas Road, between Palm Road and West Mission Road
- North Las Posas Road, between West Mission Road and Armorlite Drive
- West Mission Road, between Pacific Street and North Las Posas Road
- West Mission Road, between North Las Posas Road and Palomar College Driveway

Intersections

1. North Las Posas Road & Project Driveway #1/Palm Road (Signal)
2. West Mission Road & Project Driveway #2 (Side-Street Stop-Controlled)
3. North Las Posas Road & West Mission Road (Signal)

The level of service (LOS) analysis conducted as a part of this study was used to evaluate the effects of the Proposed Project on the circulation network. Per the City of San Marcos Transportation Impact Analysis Guidelines (TIAG), the City of San Marcos strives to maintain intersection and roadway segment operations based on LOS standards outlined in the General Plan Mobility Element. Improvements should be identified for any study facilities that do not meet City LOS standards to increase performance to acceptable or pre-project conditions.

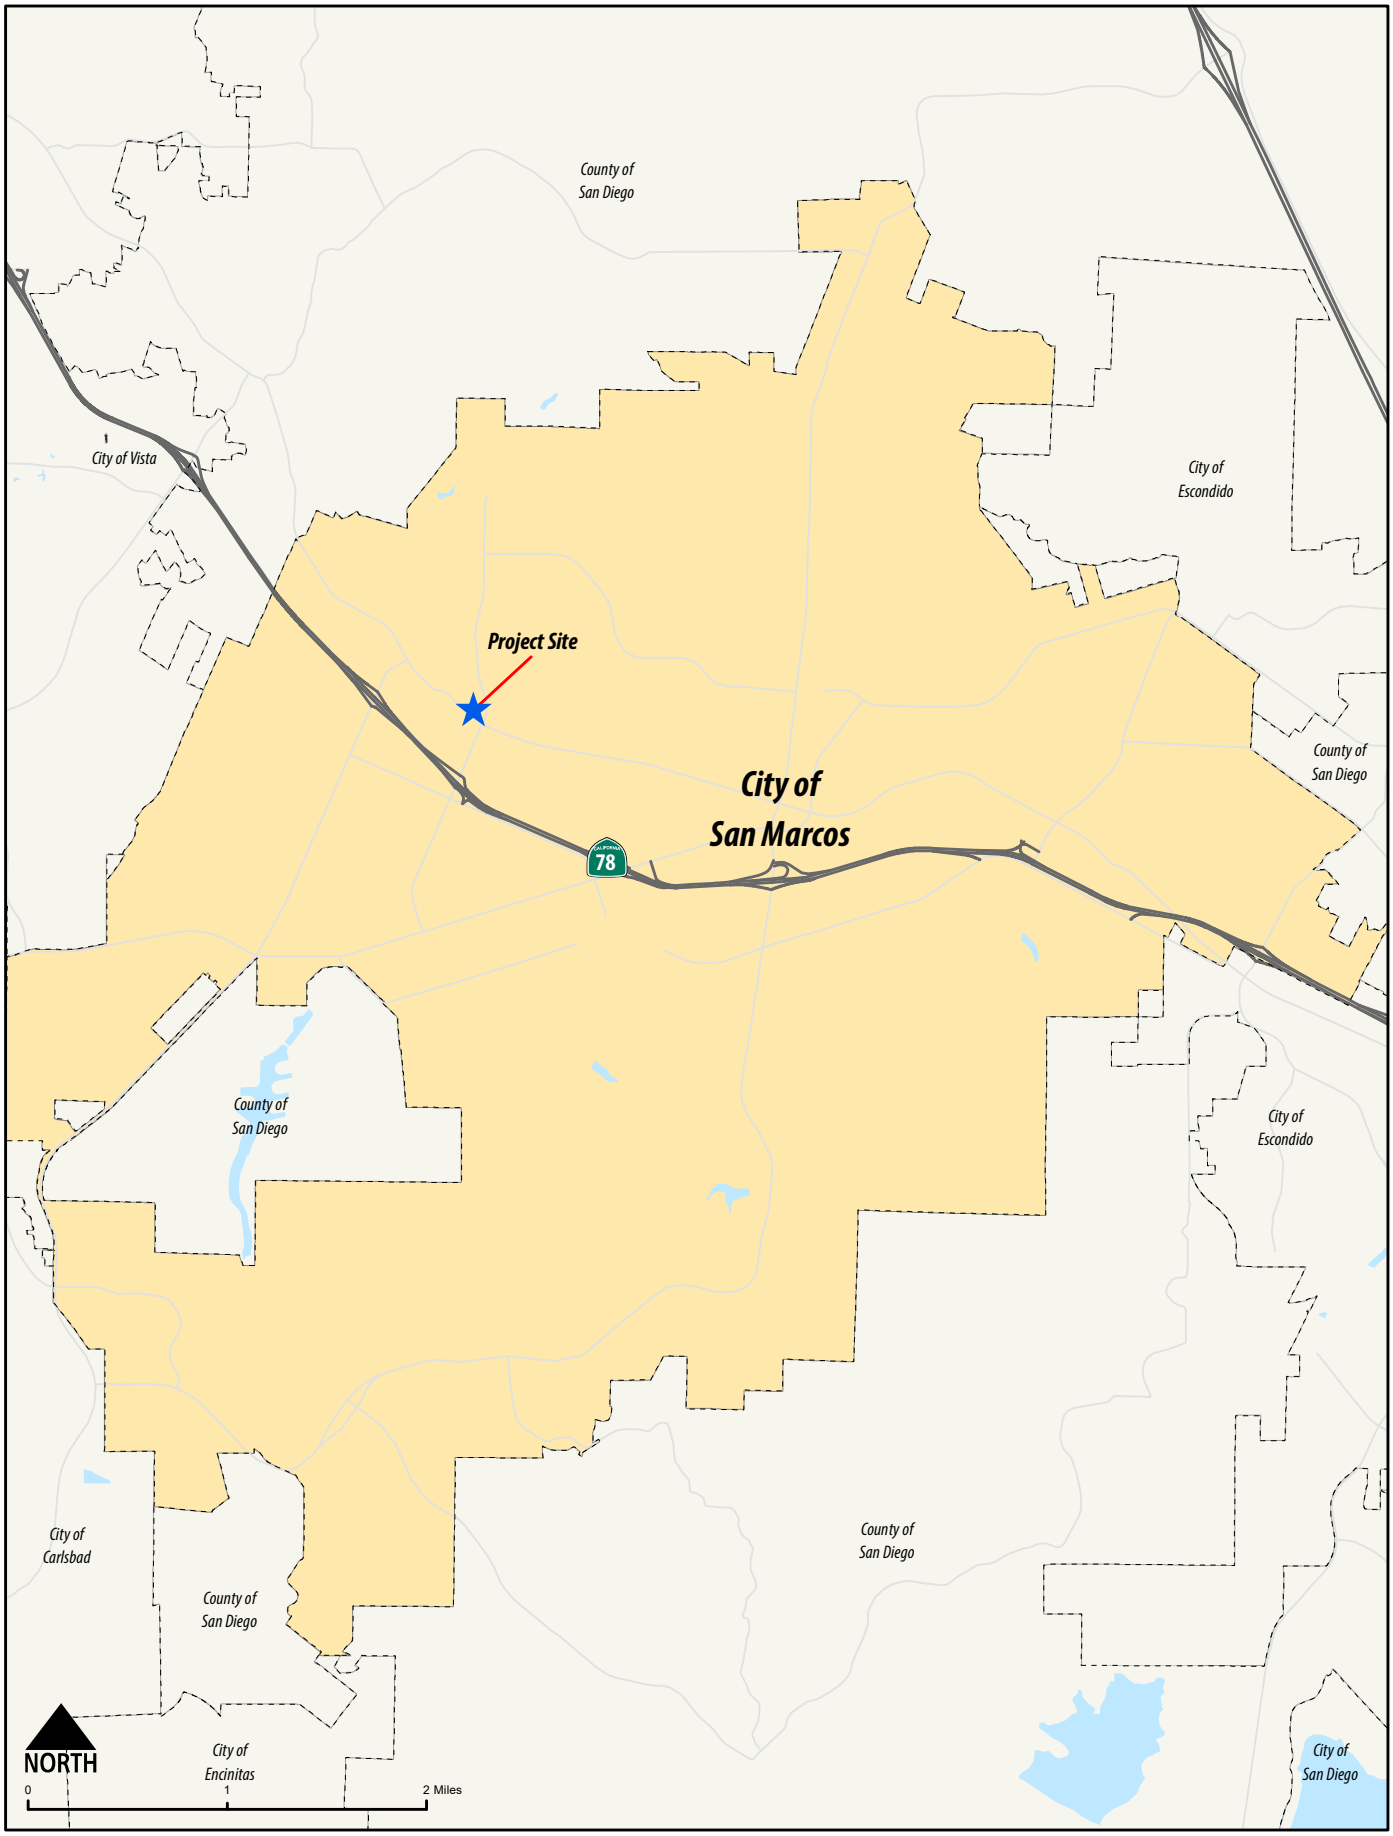
1.0 Introduction



The purpose of this Local Transportation Analysis is to identify and document the effects on the circulation network associated with the Gran Vista Multi-Family project (the "Proposed Project"), and to recommend improvements, as necessary.

1.1 Project Description

The Proposed Project seeks to construct 120 multi-family dwelling units on a vacant property approximately 250 feet northwest of the West Mission Road and North Las Posas Road intersection in in the City of San Marcos. The property is bordered by North Las Posas Road on the northeast side, West Mission Road on the southwest side, single family dwelling units on the northwest side, and a CVS pharmacy to the south. Per the City's General Plan, the site is designated as a Commercial (C) land use.

The Proposed Project will share two existing driveways with the adjacent CVS pharmacy with one located off North Las Posas Road and the other off West Mission Road. The access off North Las Posas Road is via a signalized intersection at North Las Posas Road / Palm Road (Driveway 1), and the access off West Mission Road is via a side-street (the CVS driveway) stop controlled intersection that does not allow left-turn out movements (Driveway 2). The assumed opening year of the Proposed Project is 2024. **Figure 1.1** displays the Proposed Project's regional location. **Figure 1.2** displays the site plan for the Proposed Project.

The LOS analysis conducted as a part of this study was used to evaluate the effects of the Proposed Project on the circulation network. Per the City's TIAG, the City of San Marcos strives to maintain intersection and roadway segment operations based on LOS standards outlined in the General Plan Mobility Element. Improvements should be identified for any study facilities that do not meet City LOS standards to increase performance to acceptable or pre-project conditions.

Gran Vista Multi-Family
Local Transportation Analysis

C+R

Figure 1.1
Project Regional Location

Three-Story Townhomes

- For-sale attached townhomes provide an efficient use of land and a more financially attainable housing solution that is compatible with adjacent single family uses
- Located near SPRINTER light rail line (nearest stop is 0.4 miles) to support transit use, promote walkabilty, and potentially reduce VMT and emissions
- Withing walking dictance of retail, parks, schools and other everyday services
- Implements Policy LU-2.1 of the 2020 Climate Action Plan to "Promote compact development patterns that reduce air pollution and automobile dependence and facilitate walking, bicycling, and transit use".

Las Posas Road Frontage/Paseos

- Varied building orientation breaks up massing and provides for an eclectic and interesting street scene
- Paseo access and landscaped pedestrian pathways provide connectivity to existing sidewalks to promote walkability
- Shade trees and landscaping soften the street scene and provide pedestrian comfort

Typical Tot Lot/Excercise Station

- Tot lots with play equipment (three areas shown in red) provided throughout site area are located adjacent to barbecues and other amenities to encourage family and community gathering
- Outdoor excercise equipment (three areas shown in blue) provides an exercise loop through the community to encourage and support fitness

Community Garden

- Raised planter beds with decompsed granite pathways encourage healthy eating and wellness
- Enhanced with a potting table and storage benches

Dog Park

- Off-leash dog area for residents to excercise and enjoy pets
- Fenced with tublar steel fencing to provide an "open" appearance
- Artificial turf surface for durability and easy maitenance
- Dog clean-up station, double gated entry, and other amenities

Primary Community Entry

- Maintains existing site access at signalized intersection
- Provides front doors facing entry for a welcoming street scene
- Enhanced paving and landscaping to be designed by landscape architect

Project Summary

Gross Area: 7.6 Acres

Total Units: 120 Homes
- 30 - Plan 2532: 1,213 Sq.Ft., 2 Bed, side-by-side garage
- 45 - Plan 1633: 1,505 Sq.Ft., 3 Bed, tandem garage
- 45 - Plan 1636: 1,802 Sq.Ft., 3 Bed, side-by-side garage

Total Open Space:
- 17,550 Sq.Ft. of Private Open Space
- 44,548 Sq.Ft. of Open space with grades of 10% or more
- 92,645 Sq.Ft. of Common Recretaion Area
- 154,743 Sq.Ft. Total

Parking
- 240 Garage Spaces (Includes 45 Tandem)
- 20 Guest Spaces (Includes 2 ADA Spaces and 2 EV Spaces)
- 37 Existing Spaces (Existing on-site spaces adjacent to CVS)
- 297 Total Spaces (including existing spaces)

Notes:
1. APNs 219-121-15 & 16
2. Existing General Plan Designation: Commercial (C)
3. Proposed General Plan Designation: Specific Plan Area (SPA)
4. Existing Zoning Designation: Commercial (C)
5. Proposed Zoning Designation: Specific Plan Area (SPA)
6. Total building square footage: 185,205 SF
7. Required common open space: 24,431 SF
8. Required private open space: 6,000 SF

Central Recreation Area

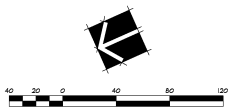
- Centrally located near the primary entry to provide a focal point for the community
- Amenities include lawn game area with artificial turf, barbecue counter with bar, seating, and more
- Located adjacent to a tot lot to promote family and social gathering
- Underground vaults provide storm water treatment

Children's Play Area

- Larger play area with multi-age play equipment
- Located adjacent to barbecue counter and seating area to promote family and social gathering

Secondary Community Entry

- Maintains existing site access with left/right in and right-out only turning movements
- Enhanced by adjacent open space areas, special paving and landscaping



Turf Play Area

- Open artificial turf play area
- Can be used for badminton, pick-up soccer, Frisbee and other informal games
- Underground vaults provide storm water treatment

Neighborhood Edge

- Buildings oriented to minimize windows
- Landscape planting designed to provide additional screening to maximize privacy of existing single-family homes

1.2 Report Organization

Following this introductory chapter, this report is organized into the following chapters:

2. Analysis Methodology – This chapter reviews the methods utilized to evaluate any potential General Plan inconsistencies associated with the implementation of the Proposed Project, as required by the City of San Marcos Transportation Impact Analysis Guidelines (TIAG).
3. Project Traffic - This chapter describes the Proposed Project's land uses and associated trip generation. Additional information such as trip distribution patterns and project trip assignment are also included in this chapter, which is used to determine the project study area.
4. Active Transportation – This chapter describes and evaluates the existing active transportation facilities network at the project frontage and provides improvement recommendations as appropriate.
5. Existing Conditions – This chapter describes and evaluates the existing transportation network. Vehicular operations within the study area are evaluated. LOS analysis results are also provided for existing vehicular traffic conditions.
6. Near-Term Year 2024 Conditions – This chapter describes near-term developments anticipated to generate additional study area trips and establishes a near-term baseline against which traffic generated by the Proposed Project can be compared to at the project opening day, assumed to be Year 2024. LOS analysis results are also provided for Near-Term Year 2024 Base and Near-Term Year 2024 Base with Project vehicular traffic conditions.
7. Horizon Year 2050 Conditions – This chapter describes projected long-range conditions of the transportation network within the study area. Horizon Year 2050 scenario analysis is required per the City's TIAG. LOS analysis results are also provided for Horizon Year 2050 and Horizon Year 2050 with Project vehicular traffic conditions.
8. LOS Deficiencies and Improvement Requirements - This chapter identifies any substandard facilities and provides improvement requirements to improve substandard facilities to acceptable LOS or pre-project conditions.
9. Site Access & Circulation – This chapter addresses access to the Proposed Project site and discusses the functionality of the Proposed Project's internal circulation.
10. Parking – This chapter describes the parking requirements for the project as well as the proposed parking spaces to be provided by the project.
11. Sight Distance – This chapter includes a sight distance analysis at the two project driveways and provides recommendations to improve line-of-sight conditions, as appropriate.

2.0 Analysis Methodology

This study was performed in accordance with the standards and requirements in the City of San Marcos TIAG (November 2020). All analysis assumptions were documented within a scoping agreement memorandum, provided in **Appendix A**, and approved by the City of San Marcos. The following sections describe the analysis methods per the City's TIAG to evaluate the traffic effect as a result of the Proposed Project in relation to LOS.

2.1 Level of Service (LOS) Definition

Level of Service (LOS) is a quantitative measure describing operational conditions within a traffic stream, and the motorist's and/or passengers' perception of operations. A LOS definition generally describes these conditions in terms of such factors as delay, speed, travel time, freedom to maneuver, interruptions in traffic flow, queuing, comfort, and convenience. **Table 2.1** describes generalized definitions of the various LOS categories (A through F) as applied to roadway operations.

Table 2.1 - LOS Definitions

LOS Category	Definition of Operation
A	This LOS represents a completely free-flow condition, where the operation of vehicles is virtually unaffected by the presence of other vehicles and only constrained by the geometric features of the highway and by driver preferences.
B	This LOS represents a relatively free-flow condition, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS A, but drivers have slightly less freedom to maneuver.
C	At this LOS, the influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles.
D	At this LOS, the ability to maneuver is notably restricted due to traffic congestion, and only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
E	This LOS represents operations at or near capacity. LOS E is an unstable level, with vehicles operating with minimum spacing for maintaining uniform flow. At LOS E, disruptions cannot be dissipated readily thus causing deterioration down to LOS F.
F	At this LOS, forced or breakdown of traffic flow occurs, although operations appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

Source: Highway Capacity Manual 6th Edition

2.2 Roadway Segment LOS Standards and Thresholds

Roadway segment LOS standards and thresholds provide the basis for analysis of arterial roadway segment performance. The analysis of roadway segment LOS is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecast Average Daily Traffic (ADT) volumes. **Table 2.2** displays roadway segment capacity standards found in the City's TIAG. The actual capacity of a roadway facility varies according to its physical attributes.

Table 2.2 - Roadway Segment Daily Capacity and LOS Standards

Street Classification	LOS/ADT Thresholds				
	A	B	C	D	E
Expressway (6-lane)	< 30,000	< 42,000	< 60,000	**< 70,000**	< 80,000
Prime Arterial (6-lane)	< 25,000	< 35,000	< 50,000	**< 55,000**	< 60,000
Major Arterial (6-lane, divided)	< 20,000	< 28,000	< 40,000	**< 45,000**	< 50,000
Major Arterial (4-lane, divided)	< 15,000	< 21,000	< 30,000	**< 35,000**	< 40,000
Major Arterial (3-lane, one-way)	< 12,500	< 16,500	< 22,500	**< 25,000**	< 27,500
Major Arterial (2-lane, one-way)	<10,000	<13,000	<17,500	**<20,000**	<22,500
Secondary Arterial / Collector (4-lane w/ center lane)	< 10,000	< 14,000	< 20,000	**< 25,000**	< 30,000
Collector (4-lane w/o center lane)	< 5,000	< 7,000	< 10,000	**< 13,000**	< 15,000
Collector (2-lane w/ continuous left-turn lane)	< 5,000	< 7,000	< 10,000	**< 13,000**	< 15,000
Collector (2-lane no fronting property)	< 4,000	< 5,500	< 7,500	**< 9,000**	< 10,000
Collector (2-lane w/ commercial fronting)	< 2,500	< 3,500	< 5,000	**< 6,500**	< 8,000
Collector (2-lane w/ multi-family)	< 2,500	< 3,500	< 5,000	**< 6,500**	< 8,000
Collector (3-lane, one-way)	< 11,000	< 14,000	< 19,000	**< 22,500**	< 26,000
Collector (2-lane, one-way)	< 7,500	< 9,500	< 12,500	**< 15,000**	< 17,500
Collector (1-lane, one-way)	< 2,500	< 3,500	< 5,000	**< 6,500**	< 7,500
Sub-Collector (2-lane single family)	-	-	**< 2,200**	-	-

Source: City of San Marcos Transportation Impact Analysis Guidelines (November 2020)

Note:
Bold number indicates the ADT thresholds for acceptable LOS.

These standards are generally used as long-range planning guidelines to determine the functional classification of roadways. The actual capacity of a roadway varies according to its physical attributes. Typically, the performance and LOS of a roadway segment is heavily influenced by the ability of its intersections to accommodate peak hour traffic volumes. For the purposes of this traffic analysis, LOS D or better is considered acceptable for circulation element roadway segments.

2.3 Peak Hour Intersection LOS Standards and Thresholds

This section presents the methodologies used to perform peak hour intersection capacity analyses at signalized and unsignalized intersections within the study area. The following assumptions were utilized in conducting all intersection LOS analyses:

- Peak Hour Factor (PHF) – Field-collected PHF for Existing and Near-Term Year 2024 Base Conditions. A PHF of 0.95 was assumed for Horizon Year 2050 analysis.
- Lane Utilization Factor – HCM 6th Edition defaults were used for all scenarios.
- Conflicting Pedestrians/Bicycles – Existing pedestrian and bicycle counts are utilized for all scenarios.
- Signal Timing – Based on existing signal timing plans (as of March 2022), provided in **Appendix B**.

2.3.1 Signalized Intersections

The analysis of signalized intersections utilized the operational analysis procedure as outlined in the Highway Capacity Manual (HCM) 6th Edition signalized (Chapter 19) intersection analysis methodology. This method defines LOS in terms of delay, or more specifically, average stopped delay per vehicle. Delay is a measure of driver and/or passenger discomfort, frustration, fuel consumption and lost travel time. This technique uses 1,900 vehicles per hour per lane (VPHPL) as the maximum saturation volume of an intersection. This saturation volume is adjusted to account for lane width, on-street parking, pedestrians, traffic composition (i.e., percentage trucks) and shared lane movements (i.e., through and right-turn movements originating from the same lane). The LOS criteria used for the analysis of signalized intersections are described in **Table 2.3**, identifying the thresholds of control delays and the associated LOS. The computerized analysis of intersection operations was performed utilizing the Synchro Version 11 traffic analysis software by Trafficware Ltd.

Table 2.3 - Signalized Intersection LOS Operational Analysis Method

Average Stopped Delay Per Vehicle (Seconds)	LOS Characteristics
<10	LOS A describes operations with very low delay. This occurs when progression is extremely favorable, and most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
>10– 20	LOS B describes operations with generally good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.
>20 – 35	LOS C describes operations with higher delays, which may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
>35– 55	LOS D describes operations with high delay, resulting from some combination of unfavorable progression, long cycle lengths, or high volumes. The influence of congestion becomes more noticeable, and individual cycle failures are noticeable.
>55 – 80	LOS E is considered the limit of acceptable delay. Individual cycle failures are frequent occurrences.
>80	LOS F describes a condition of excessively high delay, considered unacceptable to most drivers. This condition often occurs when arrival flow rates exceed the LOS D capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes to such delay.

Source: Highway Capacity Manual 6th Edition

2.3.2 Unsignalized Intersections

Unsignalized intersections were analyzed using the Highway Capacity 6th Edition side-street stop (Chapter 20) and all-way stop (Chapter 21) intersection analysis methodology. The computerized analysis of intersection operations was performed utilizing the Synchro Version 11 traffic analysis software by Trafficware Ltd.

LOS was determined as follows:

- All-way stop intersections: Reported for the entire intersection as an average value
- Side-street stop intersections: Reported for the worst-case movement

The LOS criteria used for the analysis of unsignalized intersections are described in **Table 2.4**.

Table 2.4 - LOS Criteria for Stop-Controlled Unsignalized Intersections

Average Stopped Delay Per Vehicle (Seconds)	LOS
0 – 10	A
>10 – 15	B
>15 – 25	C
>25 – 35	D
>35 – 50	E
> 50	F

Source: Highway Capacity Manual 6th Edition

2.4 Determination of Project Study Area

Per the City's TIAG, the study area was defined using the following criteria:

- Signalized and unsignalized intersections along and adjacent to the project site
- Site access driveways
- Any classified (non-residential) roadway segments that are linked to the intersections that are being studied

2.5 City of San Marcos LOS Standards

This section outlines the Mobility Element Policies that are relevant to the Proposed Project. The City of San Marcos strives to maintain intersection and roadway segment operations LOS standards based on the following policy:

- Policy M-1.4: LOS D or better for Vehicles as a prioritized mode – Generally provides facilities that have minimum vehicle congestion during peak periods. Most motorists are delayed less than 55 seconds at a signal (or less than one signalized cycle).

Based on the policy listed above, LOS D or better is considered acceptable for study roadway segments and intersections. The TIAG provides the following thresholds to determine if the Proposed Project is required provide improvements for study area facilities:

- Implementation of the Proposed Project triggers a roadway segment operating at acceptable LOS to operate at unacceptable LOS and increases the volume/capacity (V/C) ratio by more than 0.02.
- Implementation of the Proposed Project increases the V/C ratio for a study roadway segment that is already operating at unacceptable LOS by more than 0.02.
- Implementation of the Proposed Project triggers an intersection operating at acceptable LOS to operate at unacceptable LOS and increases the average delay per vehicle by more than 2.0 seconds.
- Implementation of the Proposed Project increases the average delay for a study intersection that is already operating at unacceptable LOS by more than 2.0 seconds.

Improvements should be identified to increase performance to acceptable or pre-project conditions under each scenario.

3.0 Project Traffic

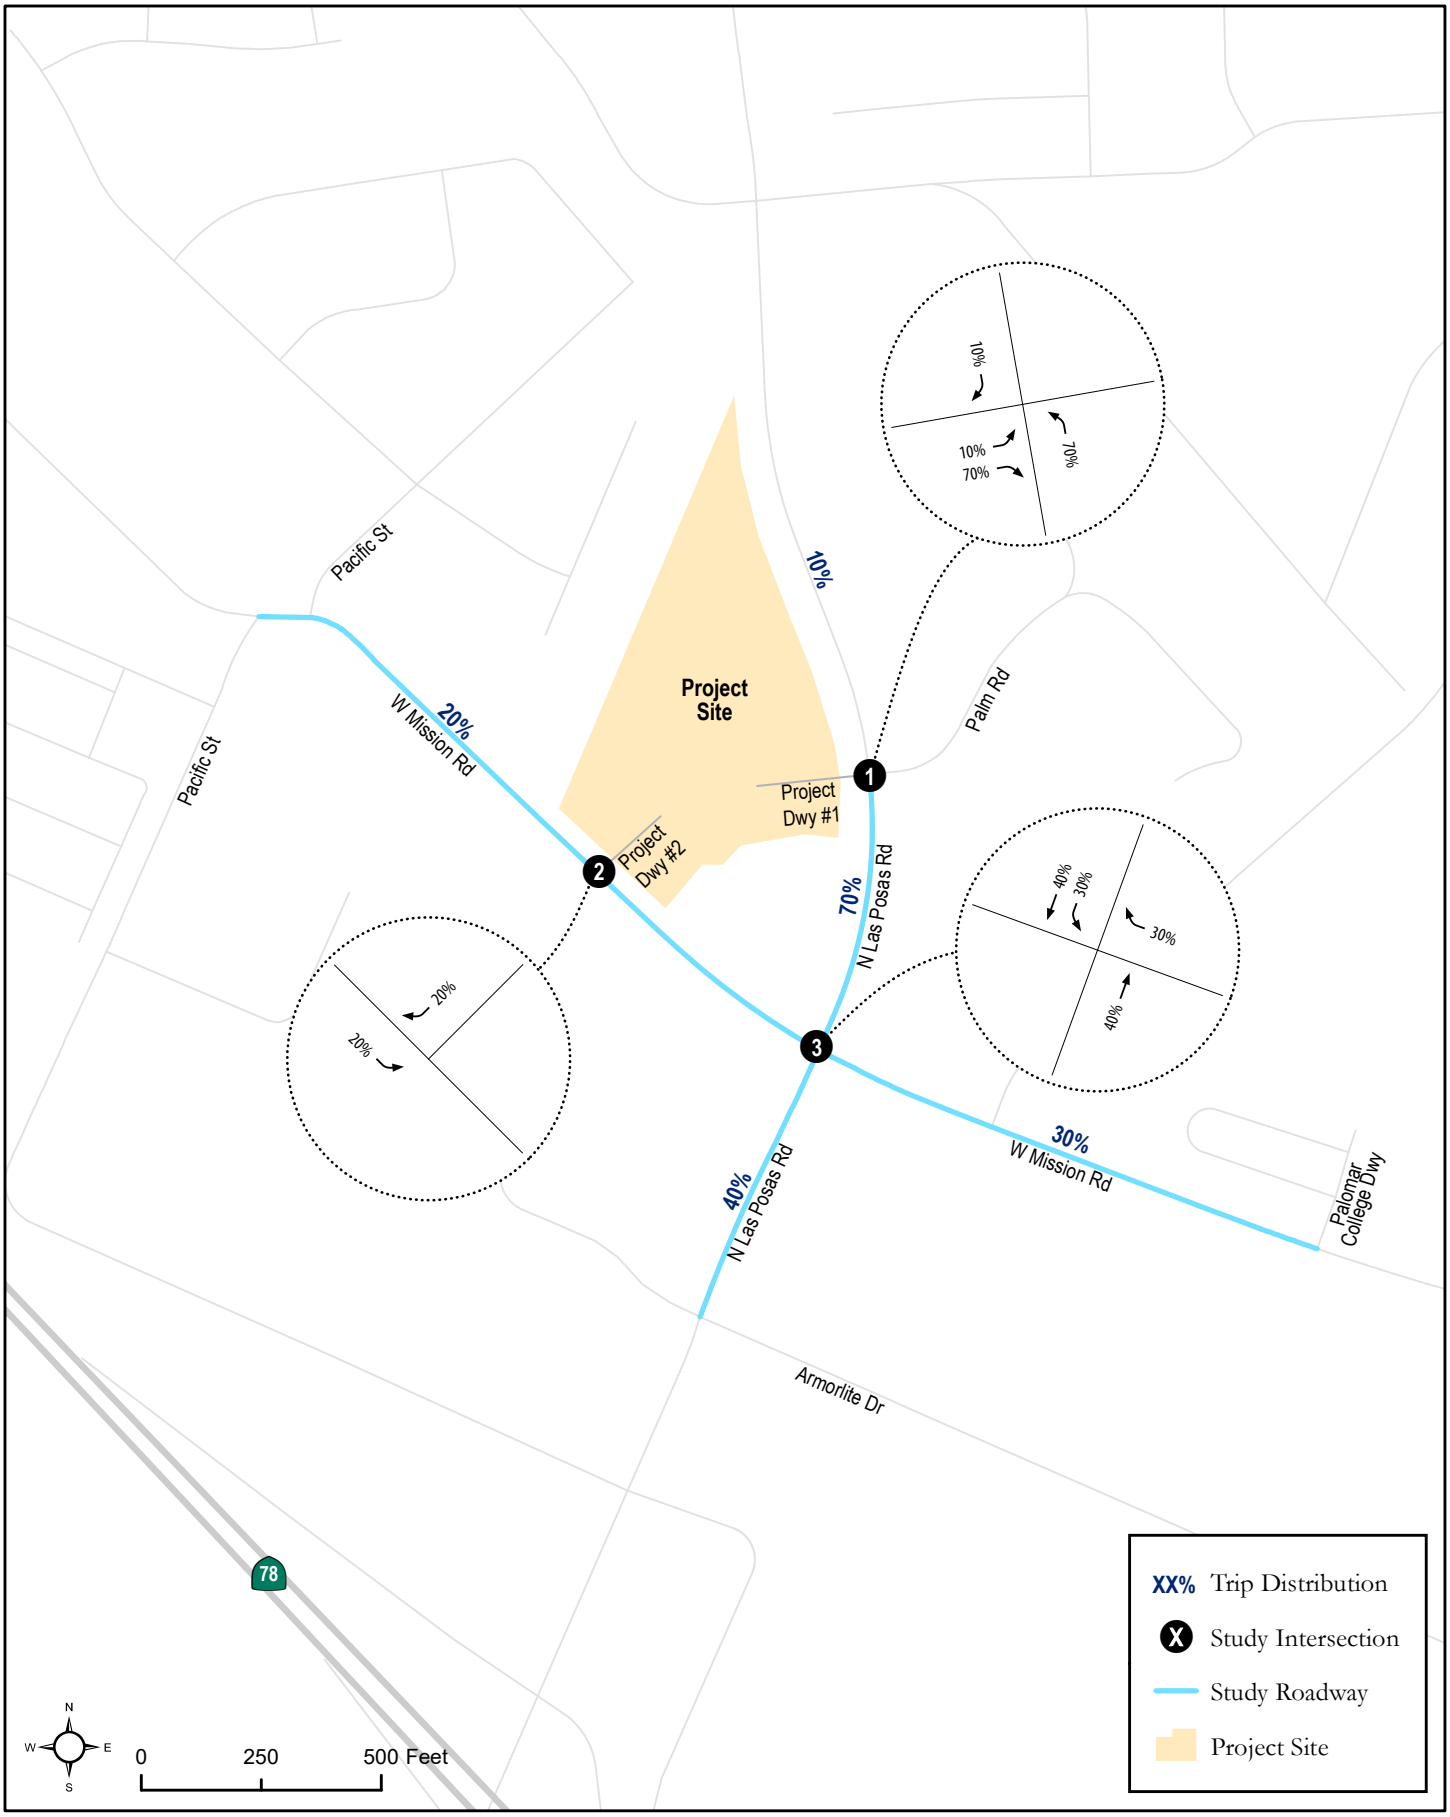
This chapter describes the Proposed Project including the Proposed Project's trip generation, trip distribution patterns, and project trip assignment.

3.1 Project Trip Generation

Per the City's TIAG, trip generation rates were derived from the SANDAG's (not so) Brief Guide to Vehicular Traffic Generation Rates for the San Diego Region (April 2002). **Table 3.1** displays the projected daily, as well as AM and PM peak hour, project trip generation.

Table 3.1 - Project Trip Generation

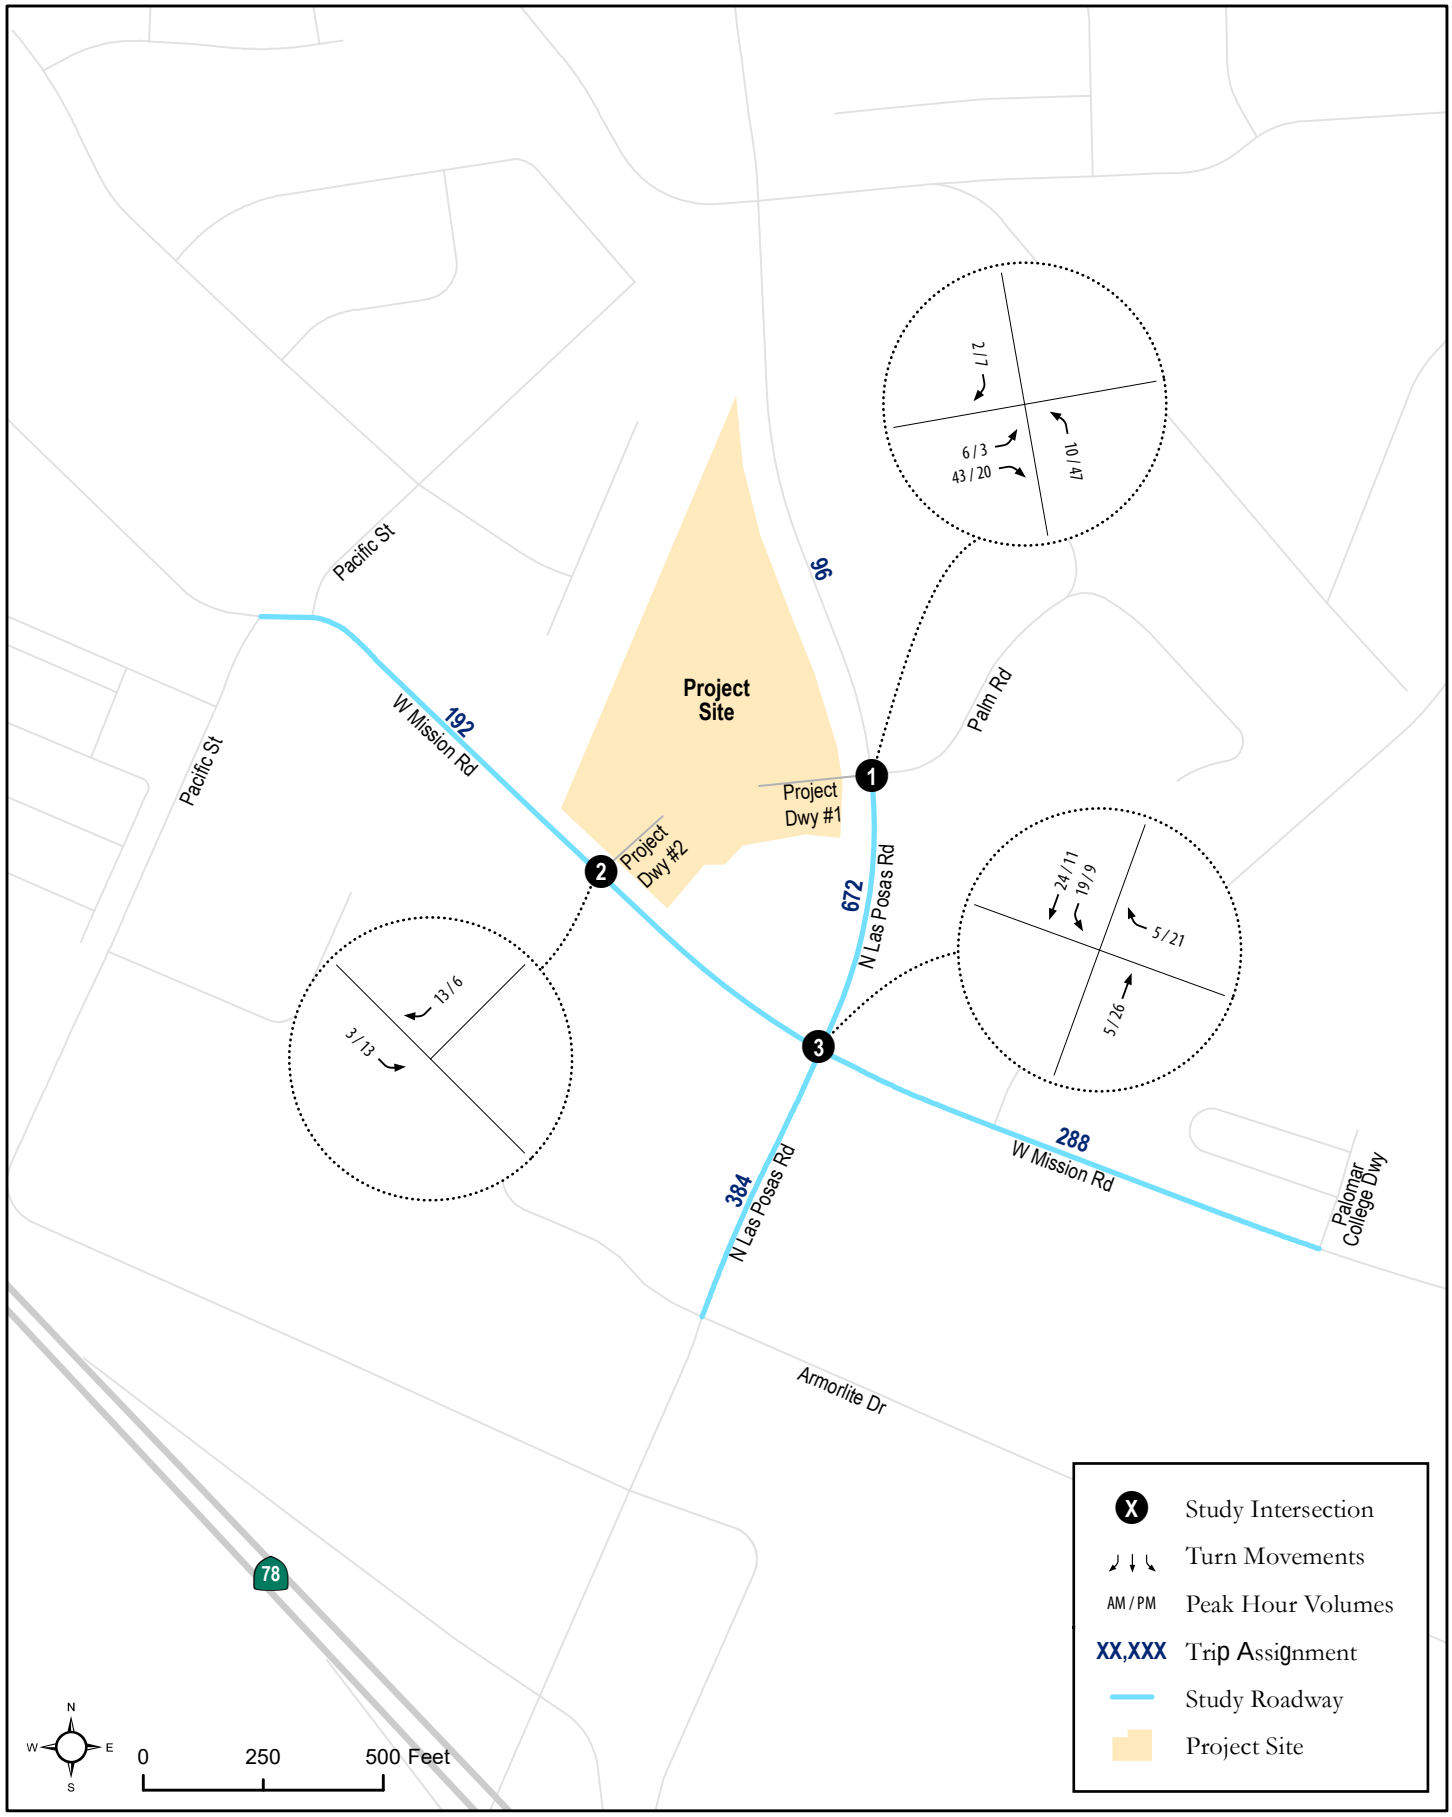
Land Use	Units	Trip Rate	ADT	AM Peak Hour					PM Peak Hour				
				%	Trips	Split	In	Out	%	Trips	Split	In	Out
Multi-Family (6-20 DU/acre)	120 DU	8/DU	960	8	77	2:8	15	62	10	96	7:3	67	29



Source: SANDAG (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002)

Notes:
ADT = Average Daily Traffic
DU = Dwelling Unit

As shown, the Proposed Project is anticipated to generate 960 daily trips, including 77 trips (15-in/62-out) during the AM peak hour and 96 (67-in/29-out) trips during the PM peak hour.



3.2 Project Trip Distribution and Assignment

The project trip distribution was manually developed based on the geographical location of the Project, as well as the characteristics of the proposed and surrounding land uses. **Figure 3.1** displays the regional trip distribution for the Proposed Project. Based upon the project trip distribution patterns, AM/PM peak hour project trips were assigned to the adjacent roadway network. **Figure 3.2** displays the Proposed Project's intersection trip assignment.

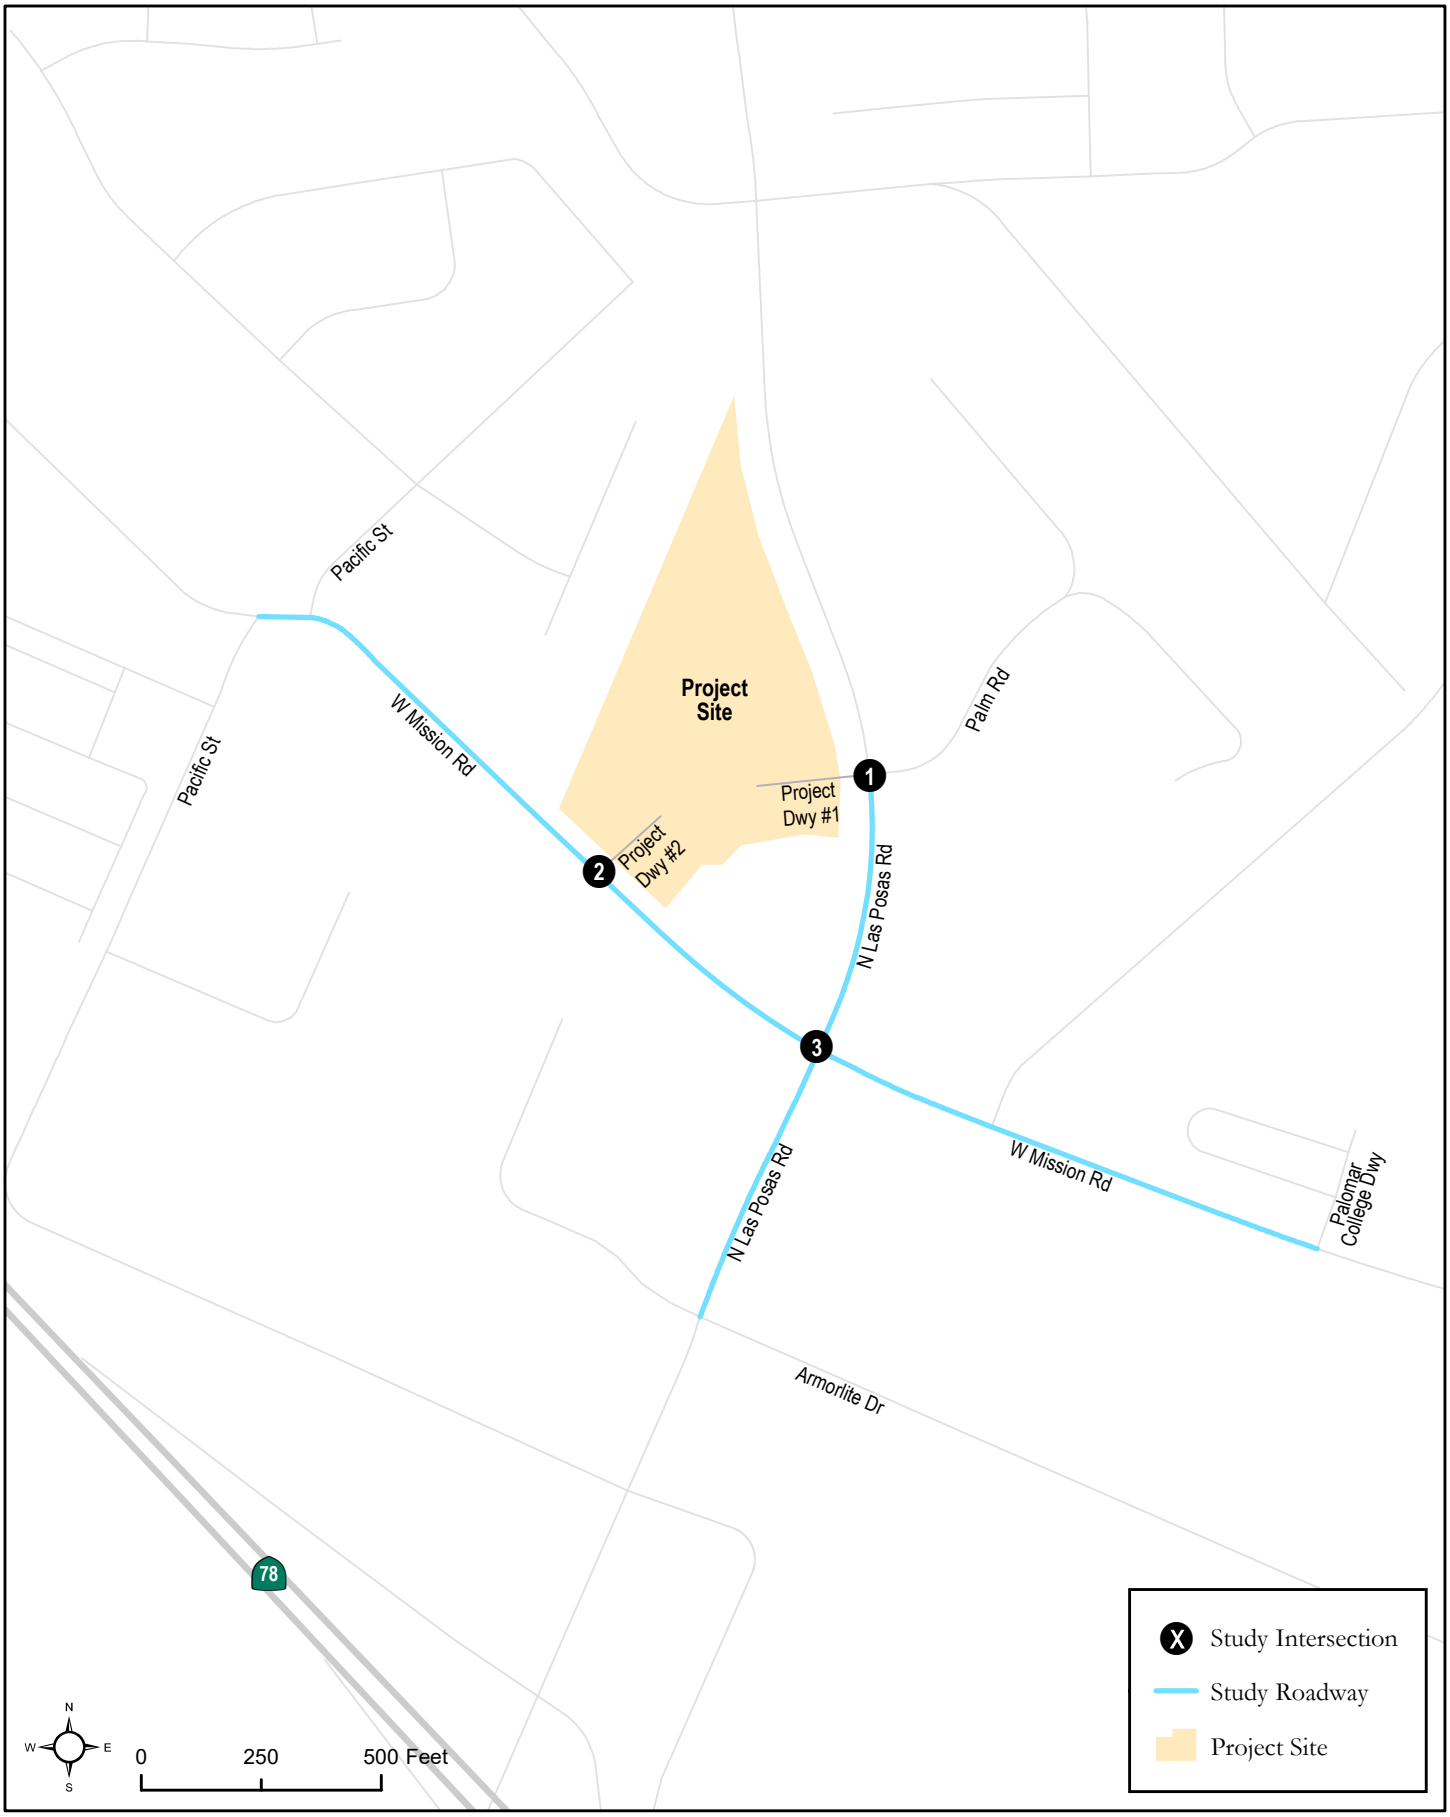
3.3 Project Study Area

Based on the criteria previously outlined in Chapter 2.7, the project trip assignment shown in Figure 3.2, and preliminary project scoping with City of San Marcos, the following four (4) roadway segments and three (3) intersections were included for analysis:



Roadway Segments

- North Las Posas Road, between Palm Road and West Mission Road
- North Las Posas Road, between West Mission Road and Armorlite Drive
- West Mission Road, between Pacific Street and North Las Posas Road
- West Mission Road, between North Las Posas Road and Palomar College Driveway

Intersections

1. North Las Posas Road & Project Driveway #1/Palm Road (Signal)
2. West Mission Road & Project Driveway #2 (Side-Street Stop-Controlled)
3. North Las Posas Road & West Mission Road (Signal)

Figure 3.3 displays the overall project study area.

Local Transportation Analysis

C+R

Figure 3.3
Project Study Area

4.0 Active Transportation

4.1 Active Transportation Evaluation

This section discusses the project site's active transportation modes

4.1.1 Transit Access

The project site is within one half mile of the transit lines serviced by North County Transit District (NCTD) described below:

- Bus Route 304 – This bus route is serviced along West Mission Road in the eastbound/westbound direction within the project study area. This bus route connects the Palomar College Transit Center to the Encinitas Transit Station. Operations starts at 4:53 AM and ends at 8:23 PM between Monday and Friday with 30-minute intervals. On Saturdays, operations start at 6:53 AM and ends at 9:05 PM with 60-minute intervals. This route does not operate on Sundays.
- Bus Route 305 – This bus route is serviced along West Mission Road in the eastbound/westbound direction within the project study area. This bus route connects the Vista Transit Center to the Escondido Transit Center. Operations starts at 4:37 AM and ends at 11:30 PM between Monday and Friday with 30-minute intervals. On Saturdays and Sundays, operations start at 5:34 AM and ends at 11:31 PM with 30-minute intervals.
- Bus Route 347 – This bus route is serviced along West Mission Road and North Las Posas Road within the project study area. This bus route connects the Palomar College Transit Center to the CSU San Marcos SPRINTER Station. Operations starts at 5:31 AM and ends at 7:21 PM between Monday and Friday with 30-minute intervals. On Saturdays, operations start at 7:22 AM and ends at 7:08 PM with 60-minute intervals. This route does not operate on Sundays.
- Bus Route 445 – This bus route is serviced along West Mission Road and North Las Posas Road within the project study area. This bus route connects the Palomar College Transit Center to the Carlsbad Poinsettia Station (COASTER Connection). Between Monday and Friday, operations start at 6:34 AM and ends at 10:19 AM with 30-minute intervals for the morning period. Similarly, between Monday and Friday, operates start at 3:36 PM and ends at 7:19 PM with 30-minutes intervals for the afternoon period. This route does not operate on Saturdays or Sundays.
- SPRINTER – This light rail line runs between Oceanside Transit Center and Escondido Transit Center (eastbound and westbound direction). The nearest stop to the project site is the Palomar College Transit Center. Operation starts at 4:17 AM and ends at 9:10 PM between Monday and Sunday with 30-minute intervals.

Based on the preliminary review of the Proposed Project's site plan, the Proposed Project would not conflict with existing or planned transit facilities and would not result in any impacts to transit facilities.

4.1.2 Bicycle

Under Existing conditions, Class II bicycle facilities exist along the project frontage on North Las Posas Road and West Mission Road. Additionally, a Class I multi-use path exists along the south side of West Mission Road. This Class I multi-use path is identified as the Inland Rail Trail which is a proposed 21-mile facilities that will eventually connect both the City of Oceanside and Escondido while passing through San Marcos, Vista, and unincorporated areas of the San Diego County. The Inland Rail Trail is expected to be fully constructed some time in 2024.

Per the City of San Marcos General Plan, there are no planned bicycle facilities improvements along the project frontage. Based on the preliminary review of the Proposed Project's site plan, the Proposed Project would not conflict with existing bicycle facilities and would not result in any impacts to bicyclist safety and accessibility.

4.1.3 Pedestrian

Sidewalks are proposed along the project frontage along North Las Posas Road and West Mission Road. Sidewalks are also proposed throughout the internal roadways providing direct access to the dwelling units as well as on-site amenities (dog park, community garden, and recreational stations/areas).

Based upon review of the project site plan, the following recommendations are provided:

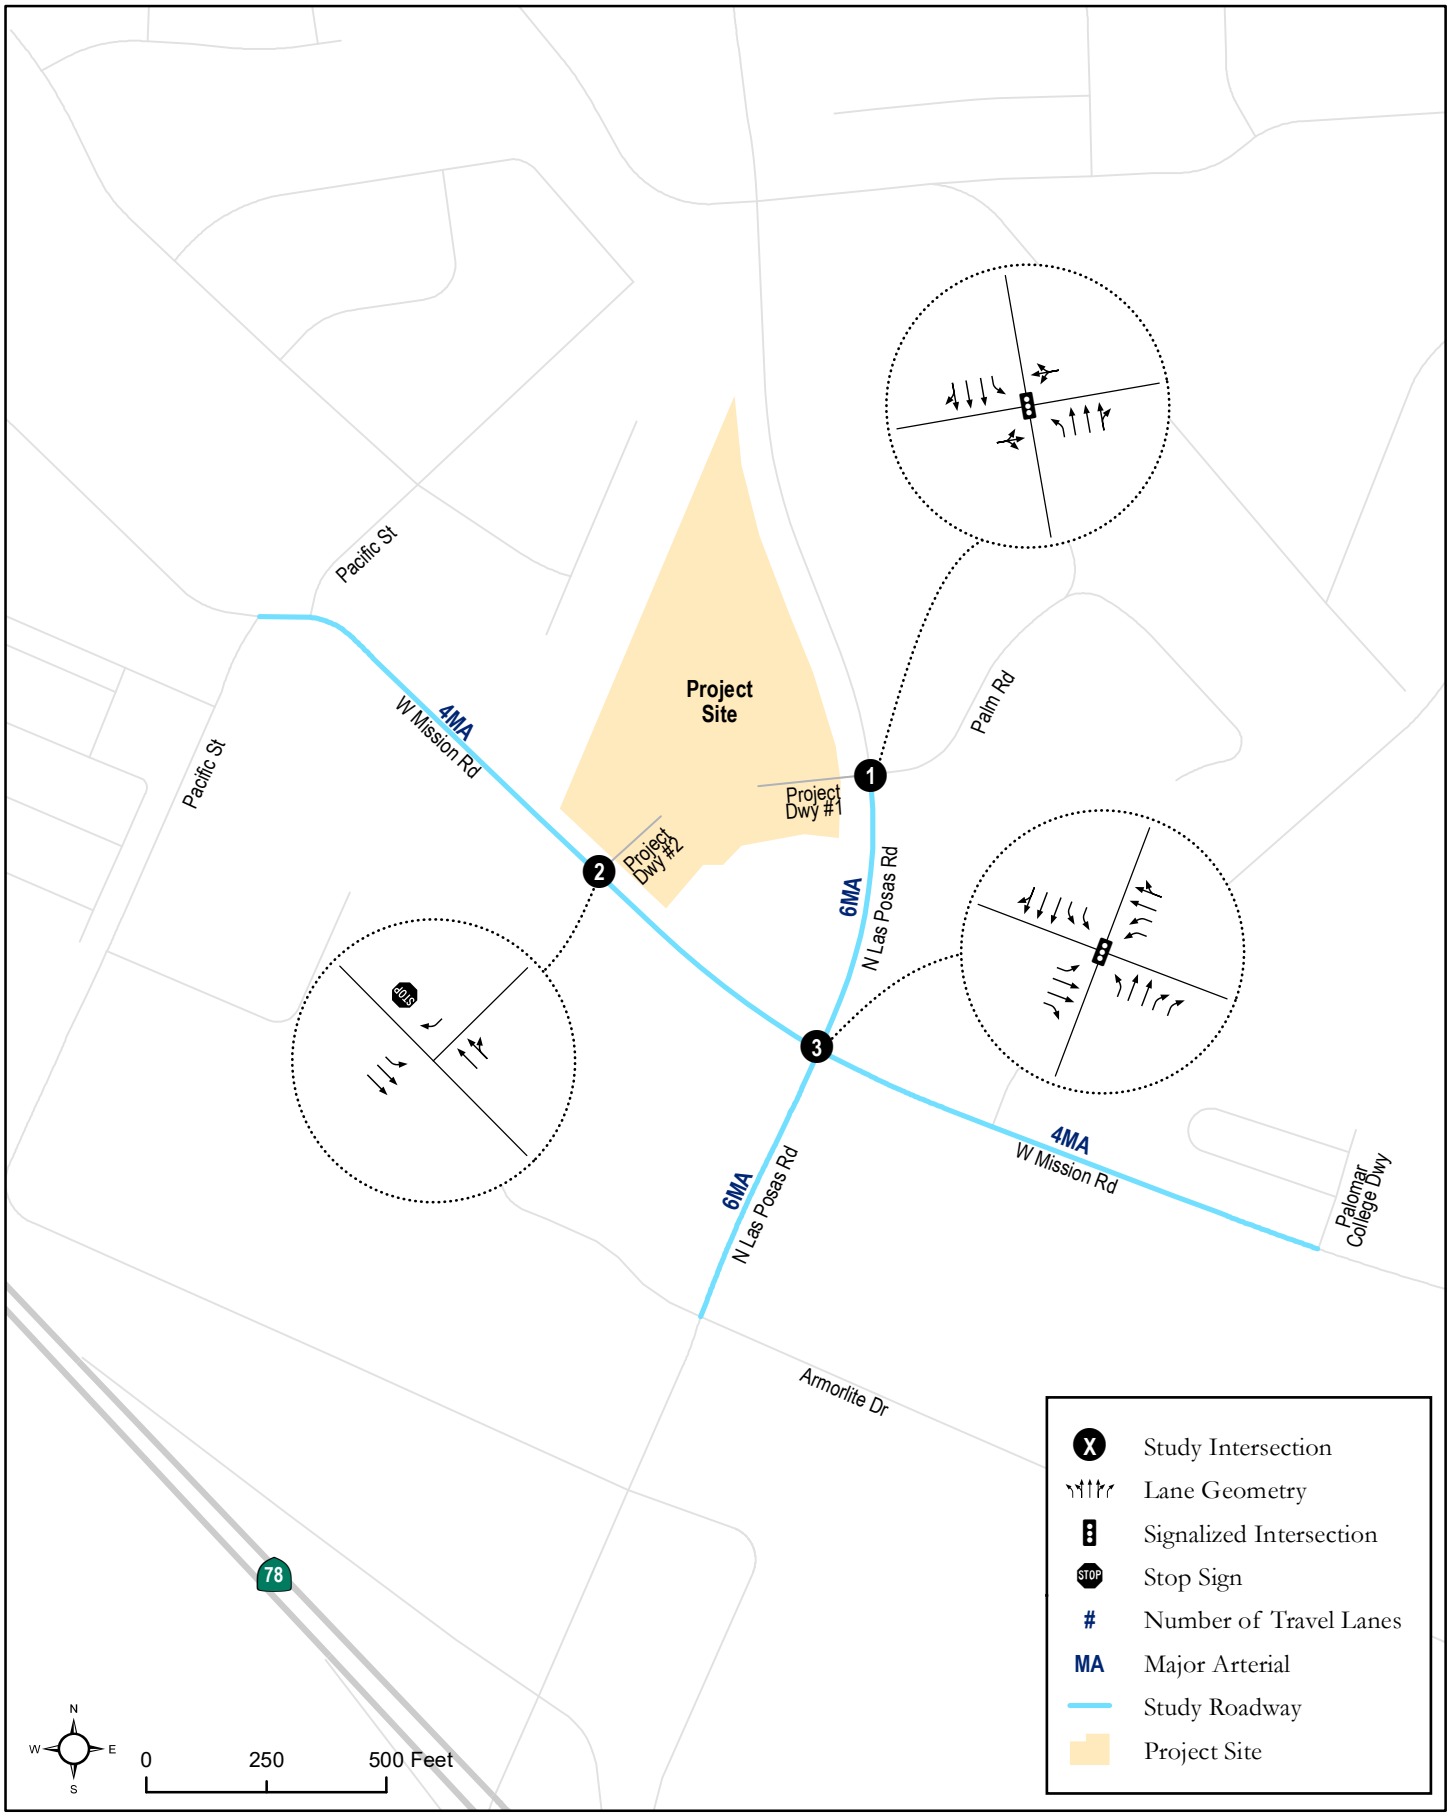
- Curb ramps at the project driveways are recommended to be reconstructed, if needed, with detectable surface warning tactiles (yellow truncated domes) as well as meeting all ADA requirements. Additionally, it is recommended that a continental crosswalk is striped, to the satisfaction of the City Traffic Engineer, at the north leg of the intersection of North Las Posas Road and West Mission Road. For details on the determination of this recommendation (continental crosswalk at north leg of intersection of North Las Posas Road and West Mission Road) see **Appendix C**.

With implementation of the recommendation listed above, the overall pedestrian environment should be enhanced for both walkability and safety and would not result in any impacts to pedestrian facilities.

5.0 Existing Conditions

This chapter provides a qualitative description of the transportation facilities located in the Proposed Project study area. An LOS analysis of the existing operations of the local transportation network facilities is also provided for study roadway segments and intersections.

5.1 Existing Transportation Network



Access to the Proposed Project from the regional transportation network will be provided via California State Route 78 (SR-78) freeway, North Las Posas Road, and West Mission Road. These facilities will either provide a direct connection to Proposed Project, via project driveway, or will provide a critical link between the Proposed Project and the regional transportation network. **Table 5.1** summarizes the existing physical characteristics of roadways within the study area, while **Figure 5.1** displays the roadway classifications and study intersection geometrics under Existing Conditions.

Table 5.1 - Existing Transportation Network Characteristics

Roadway	From	To	Number of Lanes	Median Type	Sidewalk?	Bike lanes?	Transit Route	Posted Speed Limit
North Las Posas Road	North of West Mission Road		3 NB/3 SB	Raised	Both Sides	Class II	None	45 MPH
North Las Posas Road	West Mission Road	Armorlite Drive	2 NB/3 SB	Raised	Both Sides	Class II	347 445	45 MPH
West Mission Road	Pacific Street	630' West of North Las Posas Road	2 EB/2 WB	CLTL	None	Class II Class I Multi-Use (south side only)	304 305	40 MPH

Figure 5.1
Roadway Classification and Intersection Geometrics
Existing Conditions

5.2 Existing Intersection Volumes

The study area intersections and roadway traffic counts were conducted on June 15, 2021 by Elite Traffic Dynamics, LLC. To ensure that current travel patterns reflect traffic conditions prior to the COVID-19 restrictions, a count validation was conducted. Historic counts conducted on March 3, 2020 were obtained from National Data & Surveying Services (NDS). After comparison of recently collected counts with historic counts, it was determined that historic counts were greater than recent counts. Growth rates based on difference between existing and historic were applied to counts collected in 2021 for both peak hour intersection turning movements and daily traffic, where applicable.

Traffic count worksheets and count validation calculations are provided in **Appendix D**. **Figure 5.2** displays both existing daily traffic volumes for study area roadway segments and the AM/PM peak hour turning movements for the study intersections.

5.3 Existing Traffic Conditions

LOS analyses under Existing Conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

5.3.1 Roadway Segment Analysis

Table 5.2 displays roadway segments and LOS analysis results for study roadway segments under Existing conditions.

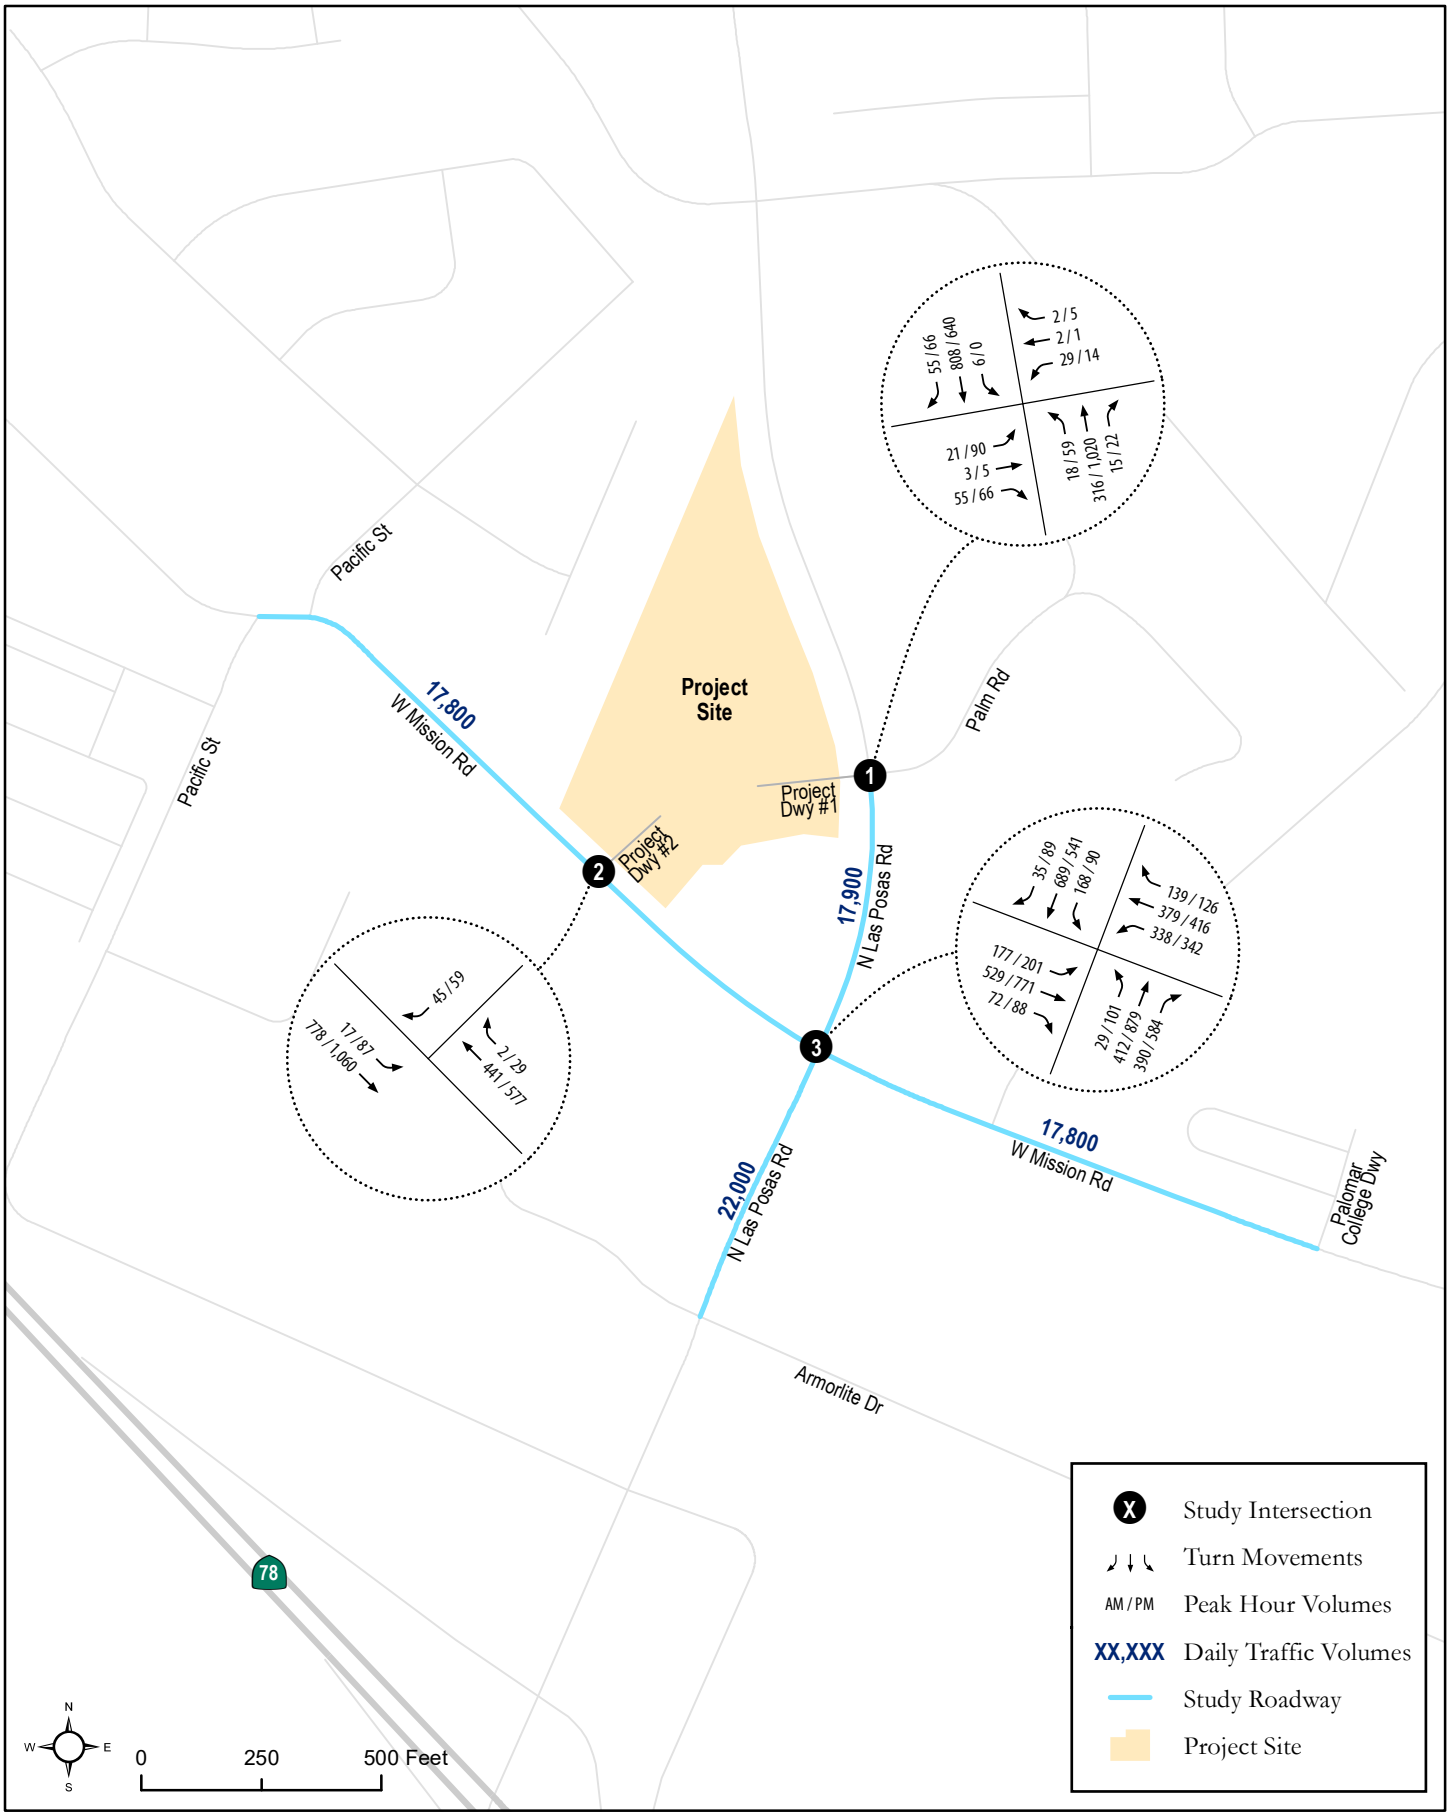

Table 5.2 - Roadway Segment LOS Results – Existing Conditions

Roadway	Segment	Function Classification	Daily Volume	LOS Threshold (LOS E)	V/C	LOS
North Las Posas Road	Palm Road to West Mission Road	6-Lane Major Arterial	17,900	50,000	0.358	A
North Las Posas Road	West Mission Road to Armorlite Drive	6-Lane Major Arterial	22,000	50,000	0.440	B
West Mission Road	Pacific Street and North Las Posas Road	4-Lane Major Arterial	17,800	40,000	0.445	B

#	Intersection	Control Type	AM Peak Hour		PM Peak Hour	
			Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS
1	North Las Posas & Project Driveway #1 / Palm Road	Signal	17.7	B	16.3	B
2	Project Driveway #2 & West Mission Road	SSSC	10.2	B	11.1	B
3	North Las Posas & West Mission Road	Signal	39.6	D	41.2	D

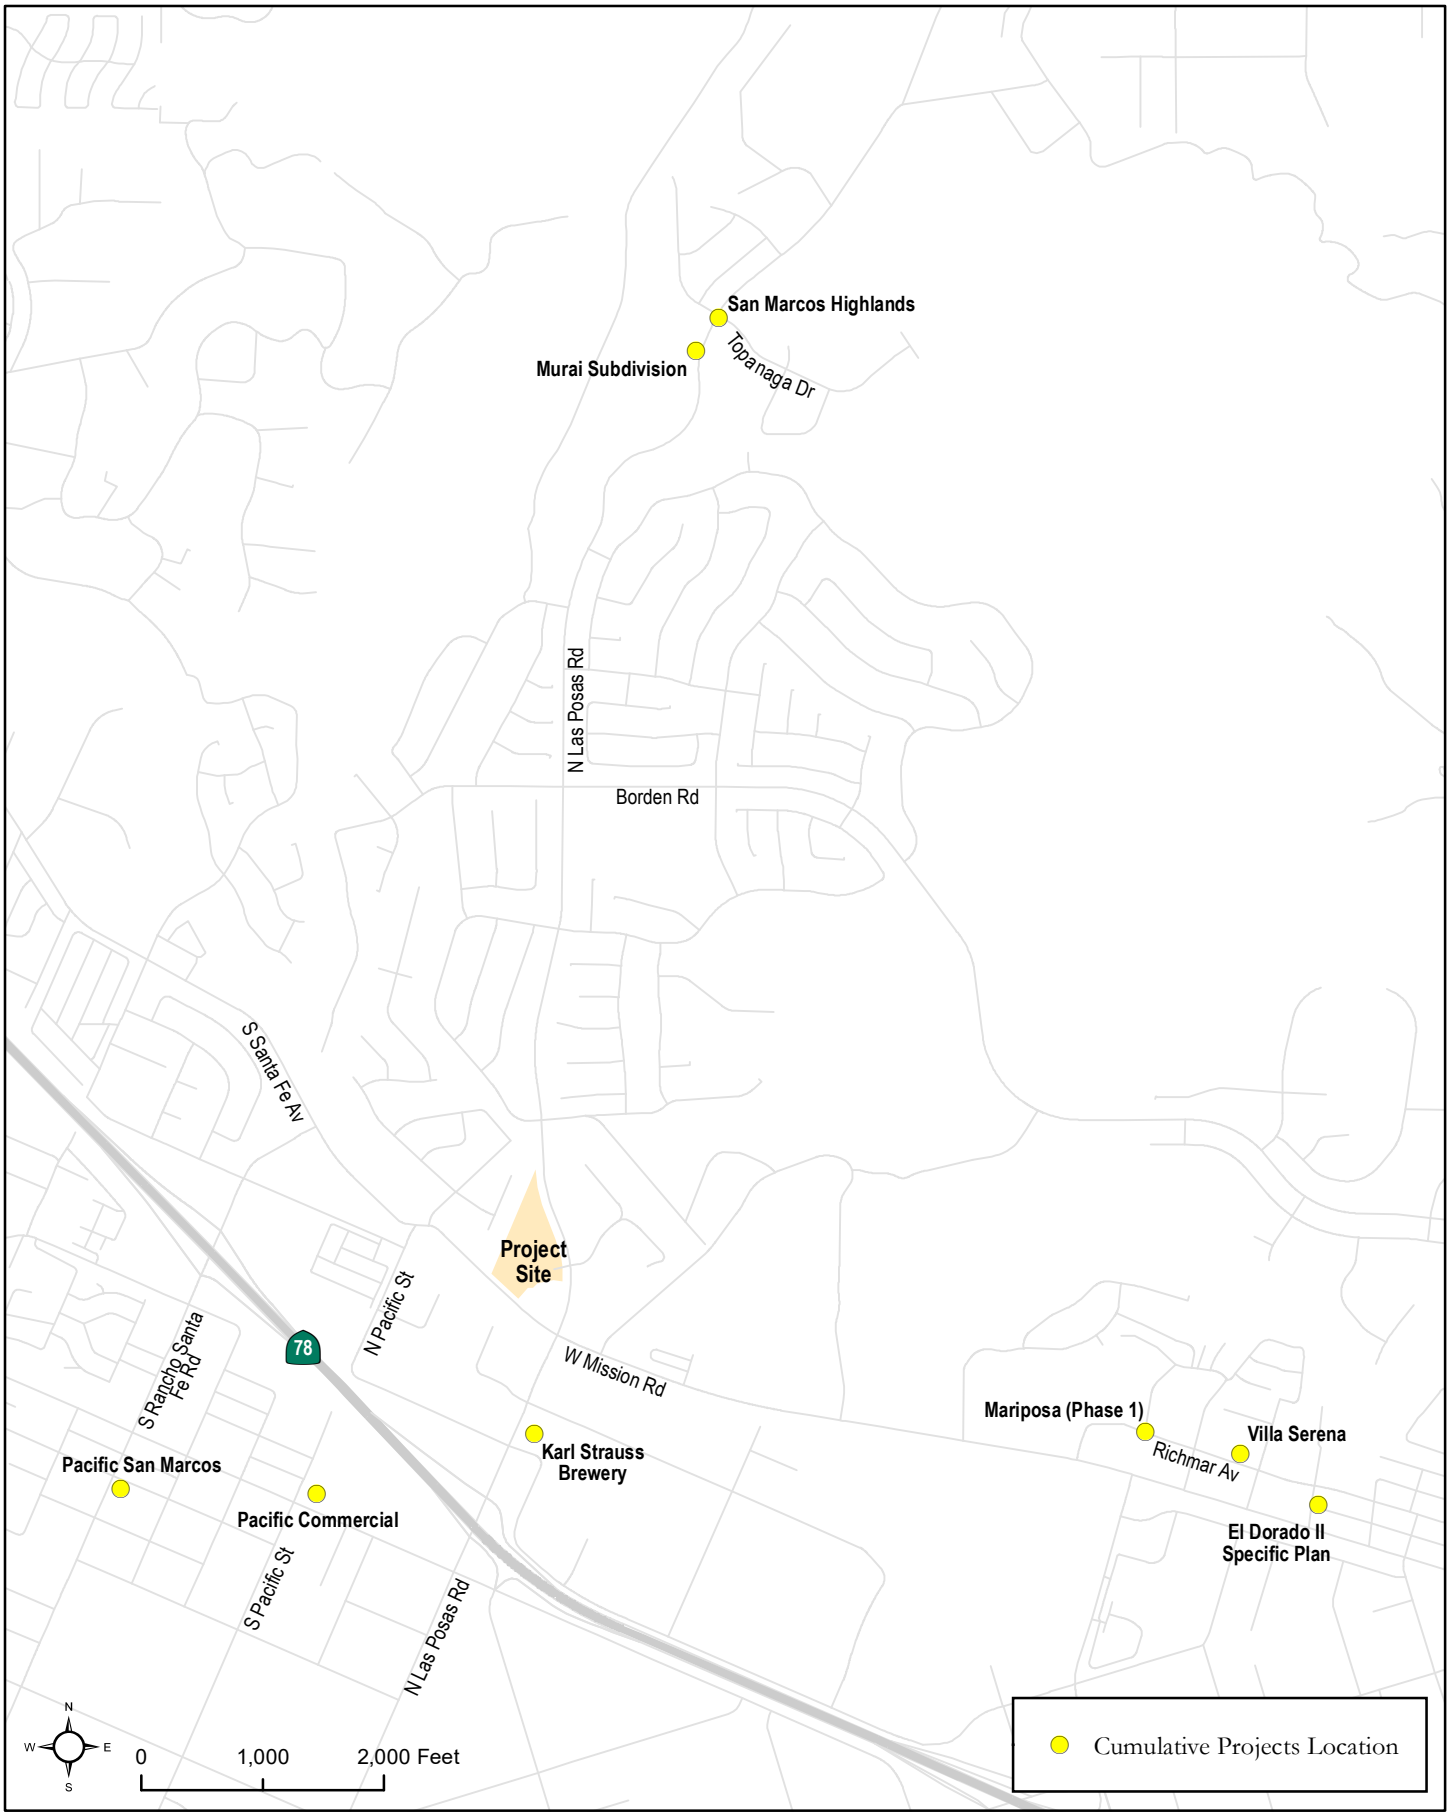
Source: CR Associates (2022)

Note:
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.

As shown in Table 5.3, all study area intersections currently operate at acceptable LOS D or better under Existing Conditions.

6.0 Near-Term Year 2024 Conditions

This section provides an analysis of Near-Term Year 2024 Base traffic conditions both with and without the Proposed Project. The scenarios analyzed in this section include:



- Near-Term Year 2024 Base
- Near-Term Year 2024 Base with Project

6.1 Cumulative Project Traffic

The following eight (8) projects were identified by City of San Marcos staff as cumulative projects, since they are anticipated to contribute traffic within the project study area by the Proposed Project's opening year:

1. Pacific Commercial – This project is located at the northeast corner of the Grand Avenue and Pacific Street intersection. This project proposes to construct a 122-room hotel.
2. San Marcos Highlands – This project is located at the north end of Las Posas Road. This project proposes to construct 187 single-family residential dwelling units as well as a 21.68-acre passive park.
3. El Dorado II Specific Plan – This project is located at the southwest corner of the Richmar Avenue and Pleasant Way intersection. This project proposes to construct 72 multi-family dwelling units as well as 2,000 square feet of specialty retail.
4. Villa Serena – This project is located the northwest corner of the Richmar Avenue and Marcos Street intersection. This project proposes to construct 12 multi-family dwelling units.
5. Mariposa (Phase 1) – This project is located at the northeast corner of the Richmar Avenue and Los Olivos Drive intersection. This project proposes to develop 60 multi-family dwelling units.
6. Murai Subdivision – This project is located at the north end of Las Posas Road. This project proposes to construct 89 single-family residential dwelling units.
7. Pacifica San Marcos – This project is located at the southeast corner of the Rancho Santa Fe Road and 9th Street intersection. This project proposes to construct 31 multi-family dwelling units as well as 4,375 square feet of commercial use.
8. Karl Strauss Brewery – This project is located at the southeast corner of the North Las Posas Road and Armorlite Drive intersection. This project proposes to construct 10,528 square feet of uses that include a tasting room, commercial kitchen, and entertainment room.

The traffic generated from the project listed above was included in the Near-Term Year 2024 Base scenario. **Figure 6.1** displays the location of the cumulative projects identified above.

Cumulative Projects Location

6.2 Cumulative Project Trip Generation

Table 6.1 displays the projected trip generation for the cumulative projects described above. Cumulative project traffic was assigned to the project study area as identified within their respective traffic studies provided by the City of San Marcos. Cumulative project traffic without completed traffic studies were assigned to the project study area utilizing the same methodology used for the Proposed project described in Chapter 3.0, consistent with the City's TIAG. Relevant excerpts from the source of information regarding the cumulative project are provided in **Appendix F**.

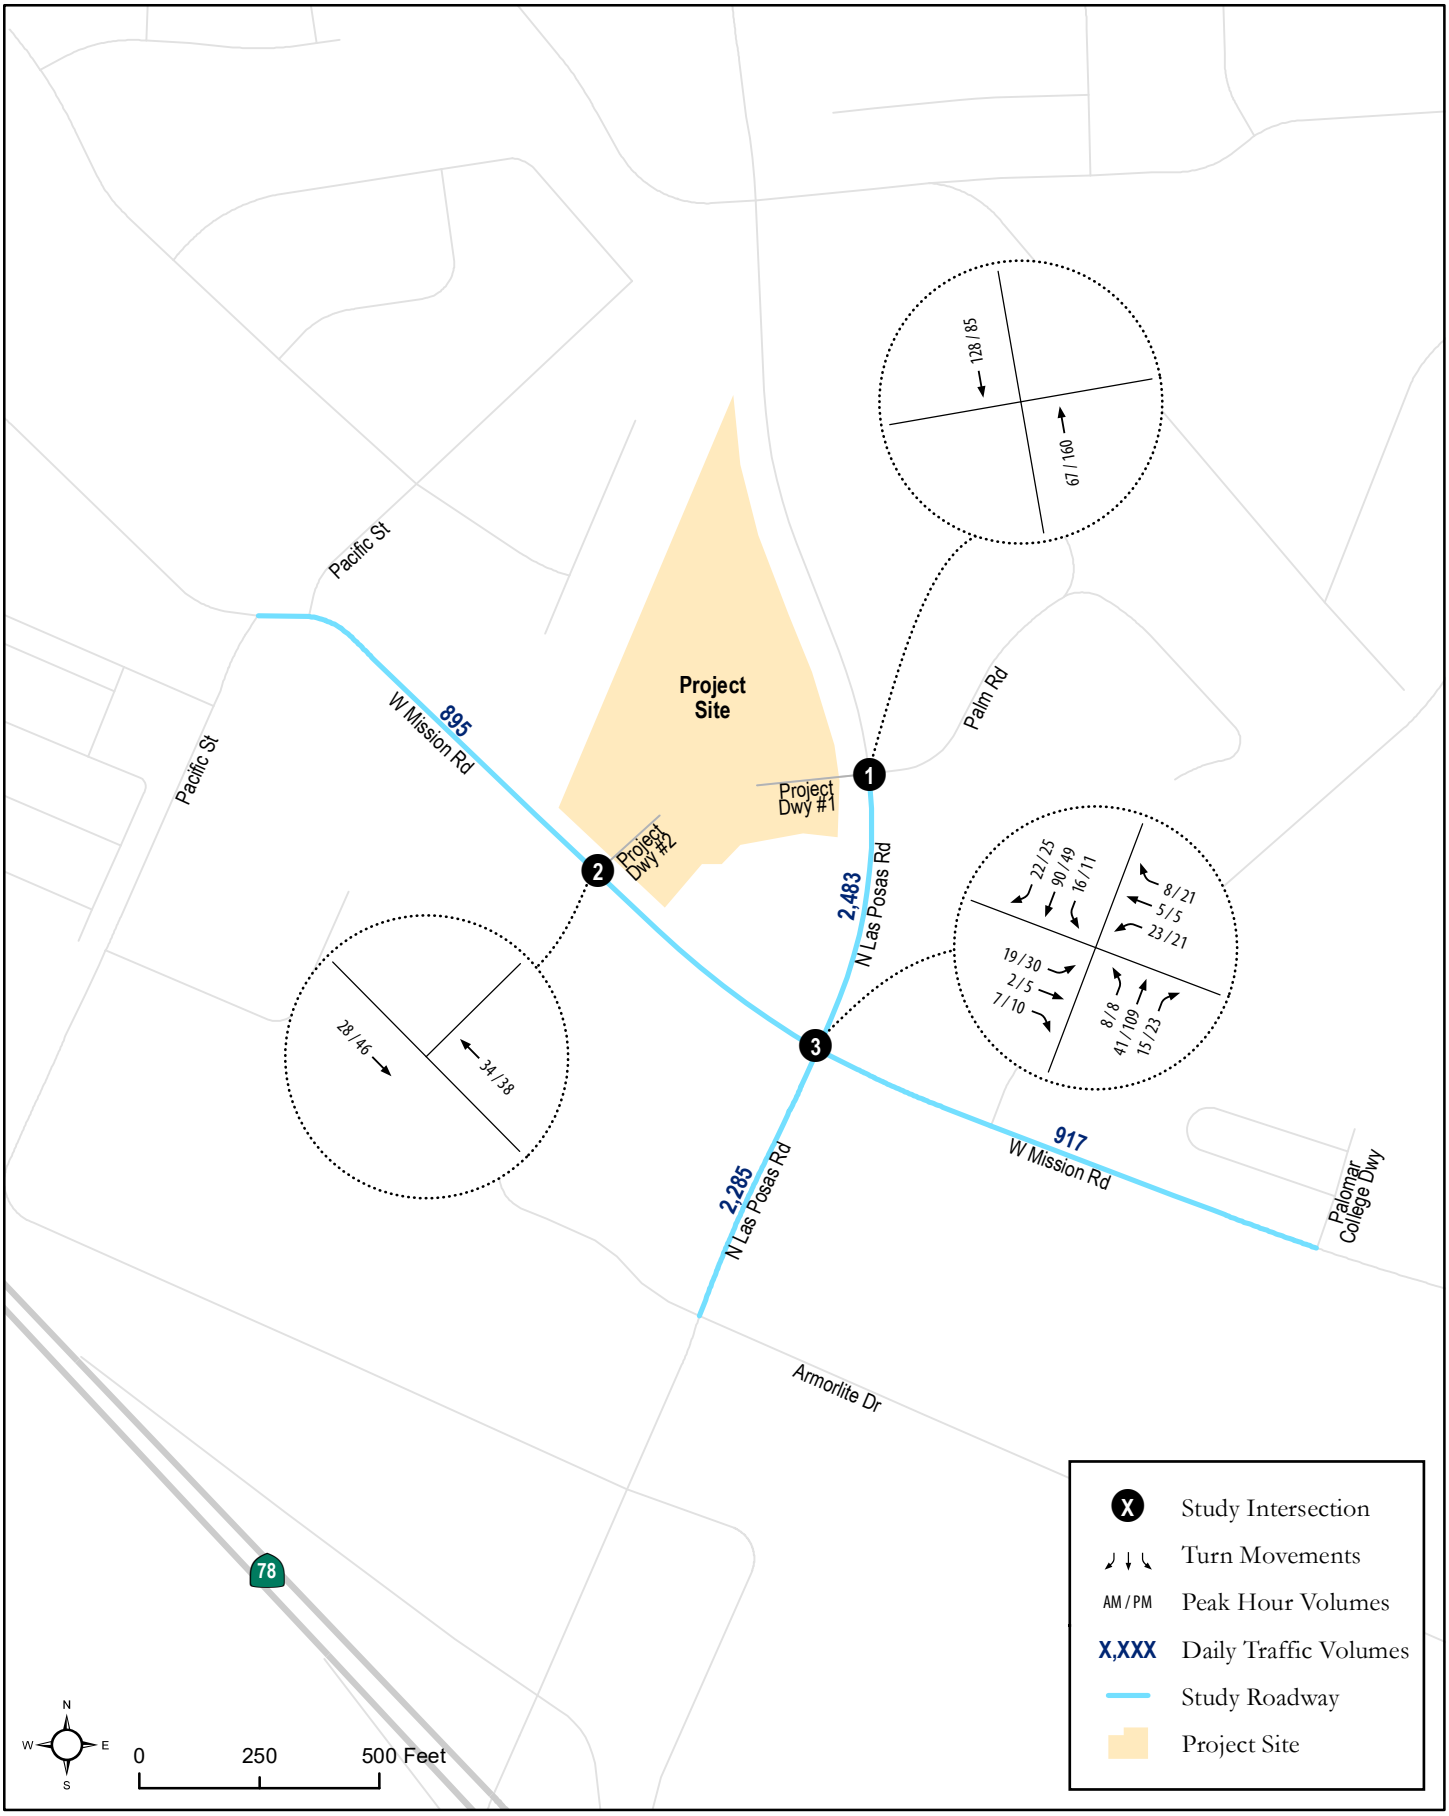

Table 6.1 - Cumulative Project Trip Generation

Cumulative Project	Land Use	Daily Trips	AM Peak Hour (In/Out)	PM Peak Hour (In/Out)
Pacific Commercial	Hotel	854	69 (28-in/41-out)	77 (46-in/31-out)
San Marcos Highlands[1]	Single Family Residential/Passive Park	1,998	165 (52-in/113-out)	199 (137-in/62-out)
El Dorado II Specific Plan	Multi-Family Residential/Specialty Retail	512	38 (9-in/29-out)	47 (31-in/16-out)
Villa Serena	Multi-Family Residential	96	8 (2-in/6-out)	10 (7-in/3-out)
Mariposa (Phase 1)	Multi-Family Residential	360	29 (6-in/23-out)	33 (23-in/10-out)
Murai Subdivision[2]	Single Family Residential	890	71 (21-in/50-out)	89 (62-in/27-out)
Pacifica San Marcos	Multi-Family Residential/Specialty Retail	361	21 (7-in/14-out)	33 (20-in/13-out)
Karl Strauss Brewery	Brewery/Restaurant	1,685	135 (68-in/67-out)	135 (81-in/54-out)
Cumulative Total		**6,756**	**536 (193-in/343-out)**	**623 (407-in/216-out)**

Source: SANDAG (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002

Notes:
[1] Trip generation obtained from the San Marcos Highlands Traffic Impact Analysis Report prepared by RBF Consulting (February 2015)
[2] Trip generation obtained from the Murai Subdivision Traffic Impact Analysis Report prepared by STC Traffic Inc (April 2017)

As shown, the cumulative projects are anticipated to generate 6,756 daily trips, including 536 trips during the AM peak hour and 623 trips during the PM peak hour that will be dispersed throughout the San Marcos community and beyond the Proposed Project's study area. **Figure 6.2** displays the cumulative project trip assignment.

Cumulative Project Trip Assignment

6.3 Near-Term Year 2024 Base Roadway Network and Traffic Volumes

Study area roadway and intersection geometrics under Near-Term Base conditions were assumed to be identical to the existing roadway geometrics, as shown in Figure 5.1. The Near-Term Base scenario traffic volumes were derived by adding the additional trips generated by the cumulative projects listed in Section 6.1 (Figure 6.2) to the existing traffic volumes (Figure 5.2). **Figure 6.3** displays the average daily roadway and peak hour intersection volumes for the study roadway segments and intersections under the Near-Term Base conditions.

6.4 Near-Term Year 2024 Base Traffic Conditions

LOS analyses under Near-Term Year 2024 Base Conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

6.4.1 Roadway Segment Analysis

Table 6.2 displays roadway segments and LOS analysis results for study roadway segments under Near-Term Year 2024 Base conditions.

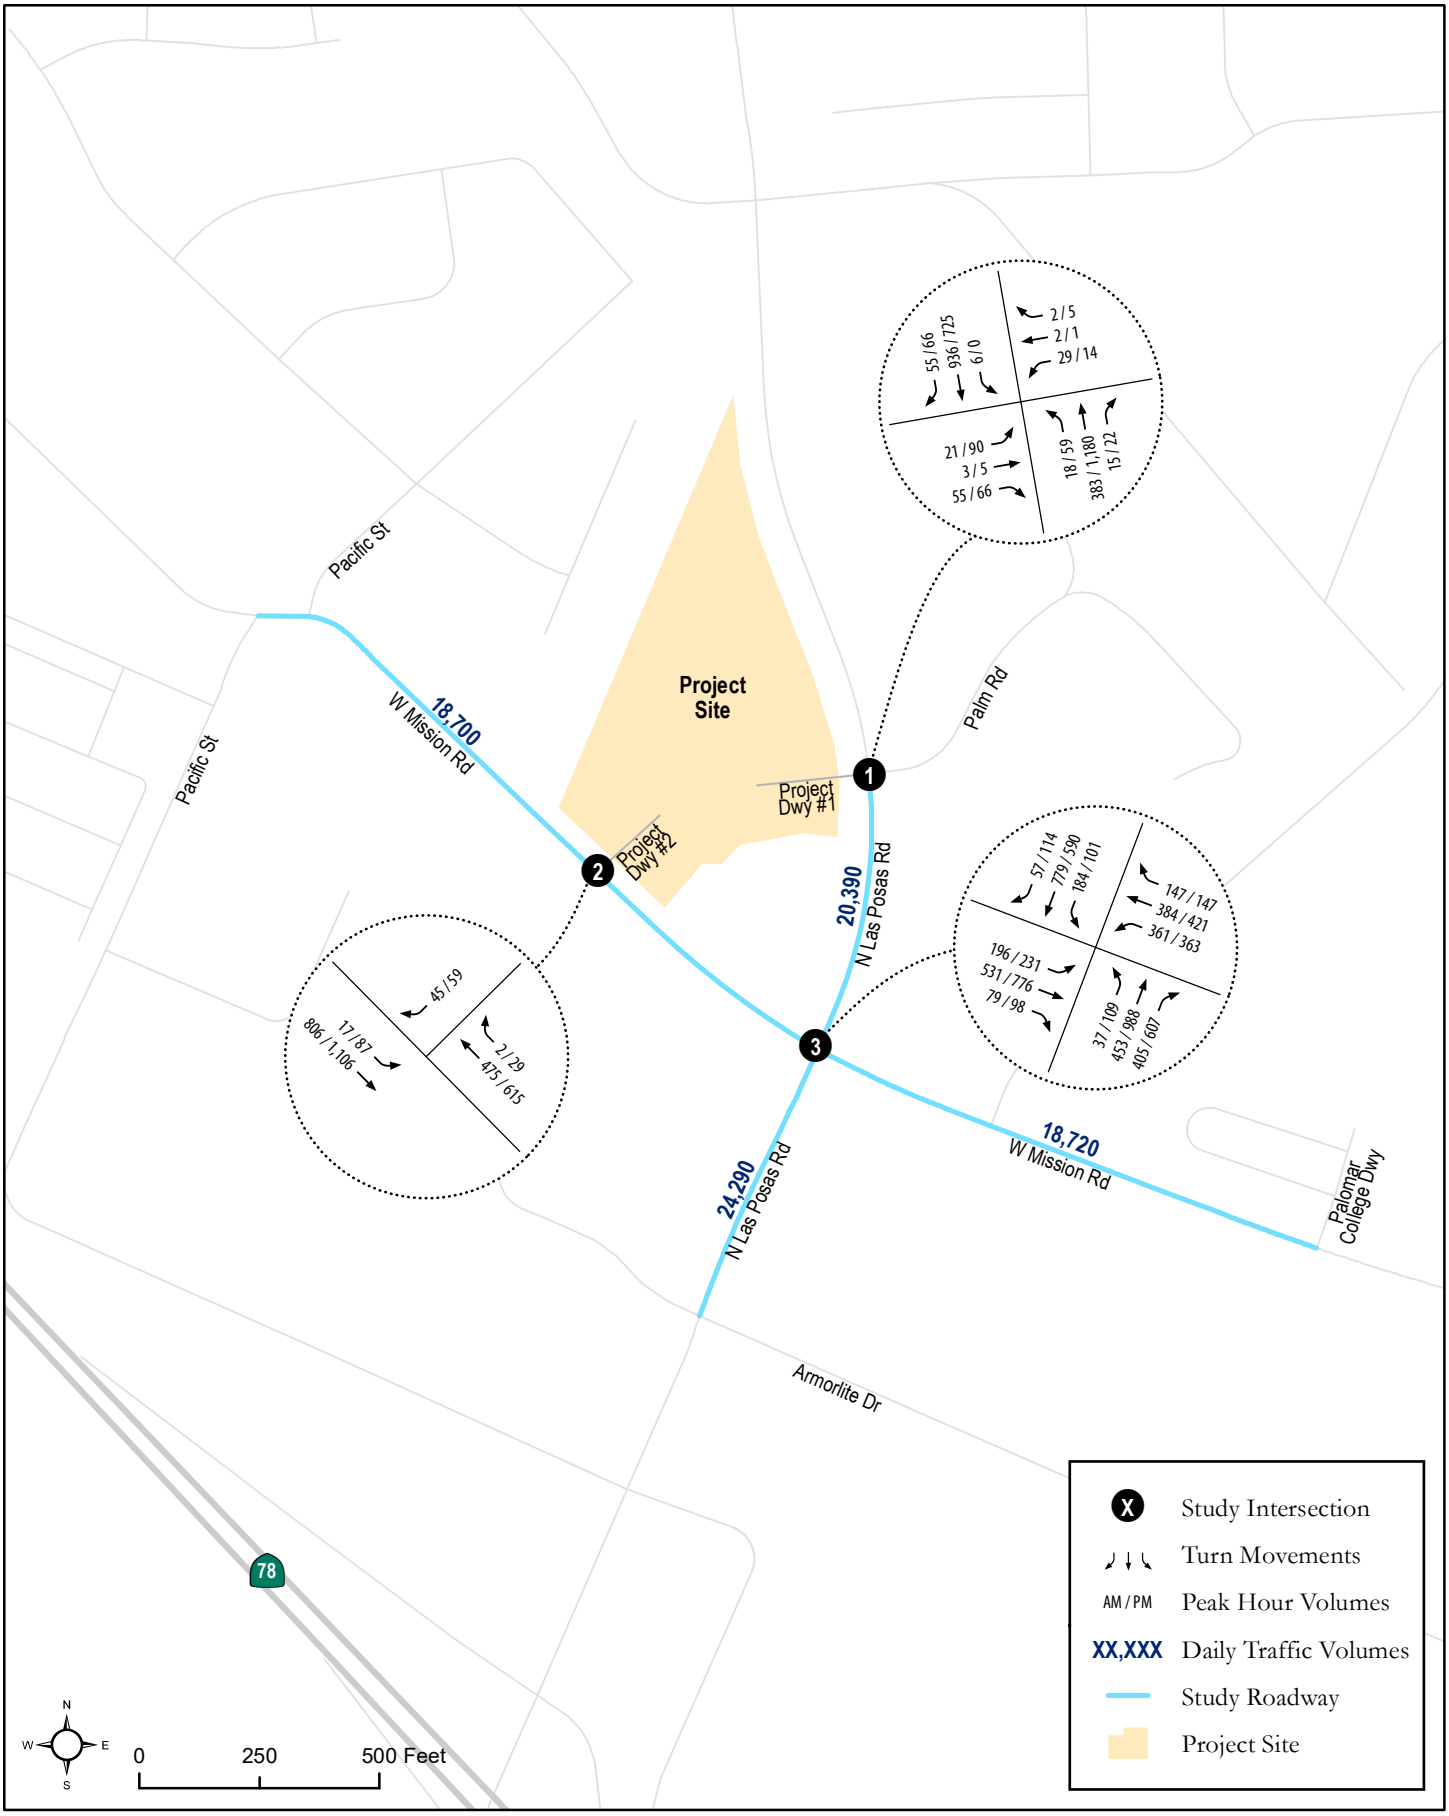

Table 6.2 - Roadway Segment LOS Results – Near-Term Year 2024 Base Conditions

Roadway	Segment	Function Classification	Daily Volume	LOS Threshold (LOS E)	V/C	LOS
North Las Posas Road	Palm Road to West Mission Road	6-Lane Major Arterial	20,390	50,000	0.408	B
North Las Posas Road	West Mission Road to Armorlite Drive	6-Lane Major Arterial	24,290	50,000	0.486	B
West Mission Road	Pacific Street and North Las Posas Road	4-Lane Major Arterial	18,700	40,000	0.468	B

Source: CR Associates (2022)

Note:
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.

As shown in Table 6.3, all study area intersections are projected operate at acceptable LOS D or better under Near-Term Year 2024 Base conditions.

6.5 Near-Term Year 2024 Base with Project Roadway Network and Traffic Volumes

Intersection geometrics under the Near-Term Year 2024 Base with Project conditions were assumed to be identical to the Near-Term Year 2024 Base conditions geometrics.

Peak hour intersection volumes for the Near-Term Year 2024 Base with Project conditions were derived by combining the Proposed Project trips (as previously shown in Figure 3.2) to the Near-Term Year 2024 Base traffic volumes (as previously shown in Figure 6.3). Peak hour intersection volumes for this scenario are displayed in **Figure 6.4**.

Source: CR Associates (2022)

Notes:
V/C = Volume/Capacity
I? = Improvement Required?

As shown in Table 6.4, all study roadway segments are projected to operate at acceptable LOS B under Near-Term Year 2024 Base with Project conditions. Therefore, no study roadway segments are anticipated to degrade in LOS to unacceptable levels with implementation of the Proposed Project and no improvements will be required.

6.6.2 Intersection Analysis

Table 6.5 displays intersection LOS and average vehicle delay results for the key study area intersections under Near-Term Year 2024 Base with Project Conditions. LOS calculation worksheets for Near-Term Year 2024 Base with Project conditions are provided in **Appendix H**.

As shown in Table 6.5, all study area intersections are projected to operate at acceptable LOS D or better under Near-Term Year 2024 Base with Project conditions. Therefore, no study intersections are anticipated to degrade in LOS to unacceptable levels with implementation of the Proposed Project and no improvements will be required.

Table 6.5 - Peak Hour Intersection LOS Results – Near-Term Year 2024 Base with Project Conditions

#	Intersection	Control Type	AM Peak Hour		PM Peak Hour		Delay w/o Project (AM / PM)	LOS w/o Project (AM / PM)	Δ in Delay (AM / PM)	I?
			Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS				
1	North Las Posas & Project Driveway #1 / Palm Road	Signal	20.1	C	18.1	B	18.2 / 16.7	B / B	1.9 / 1.4	N

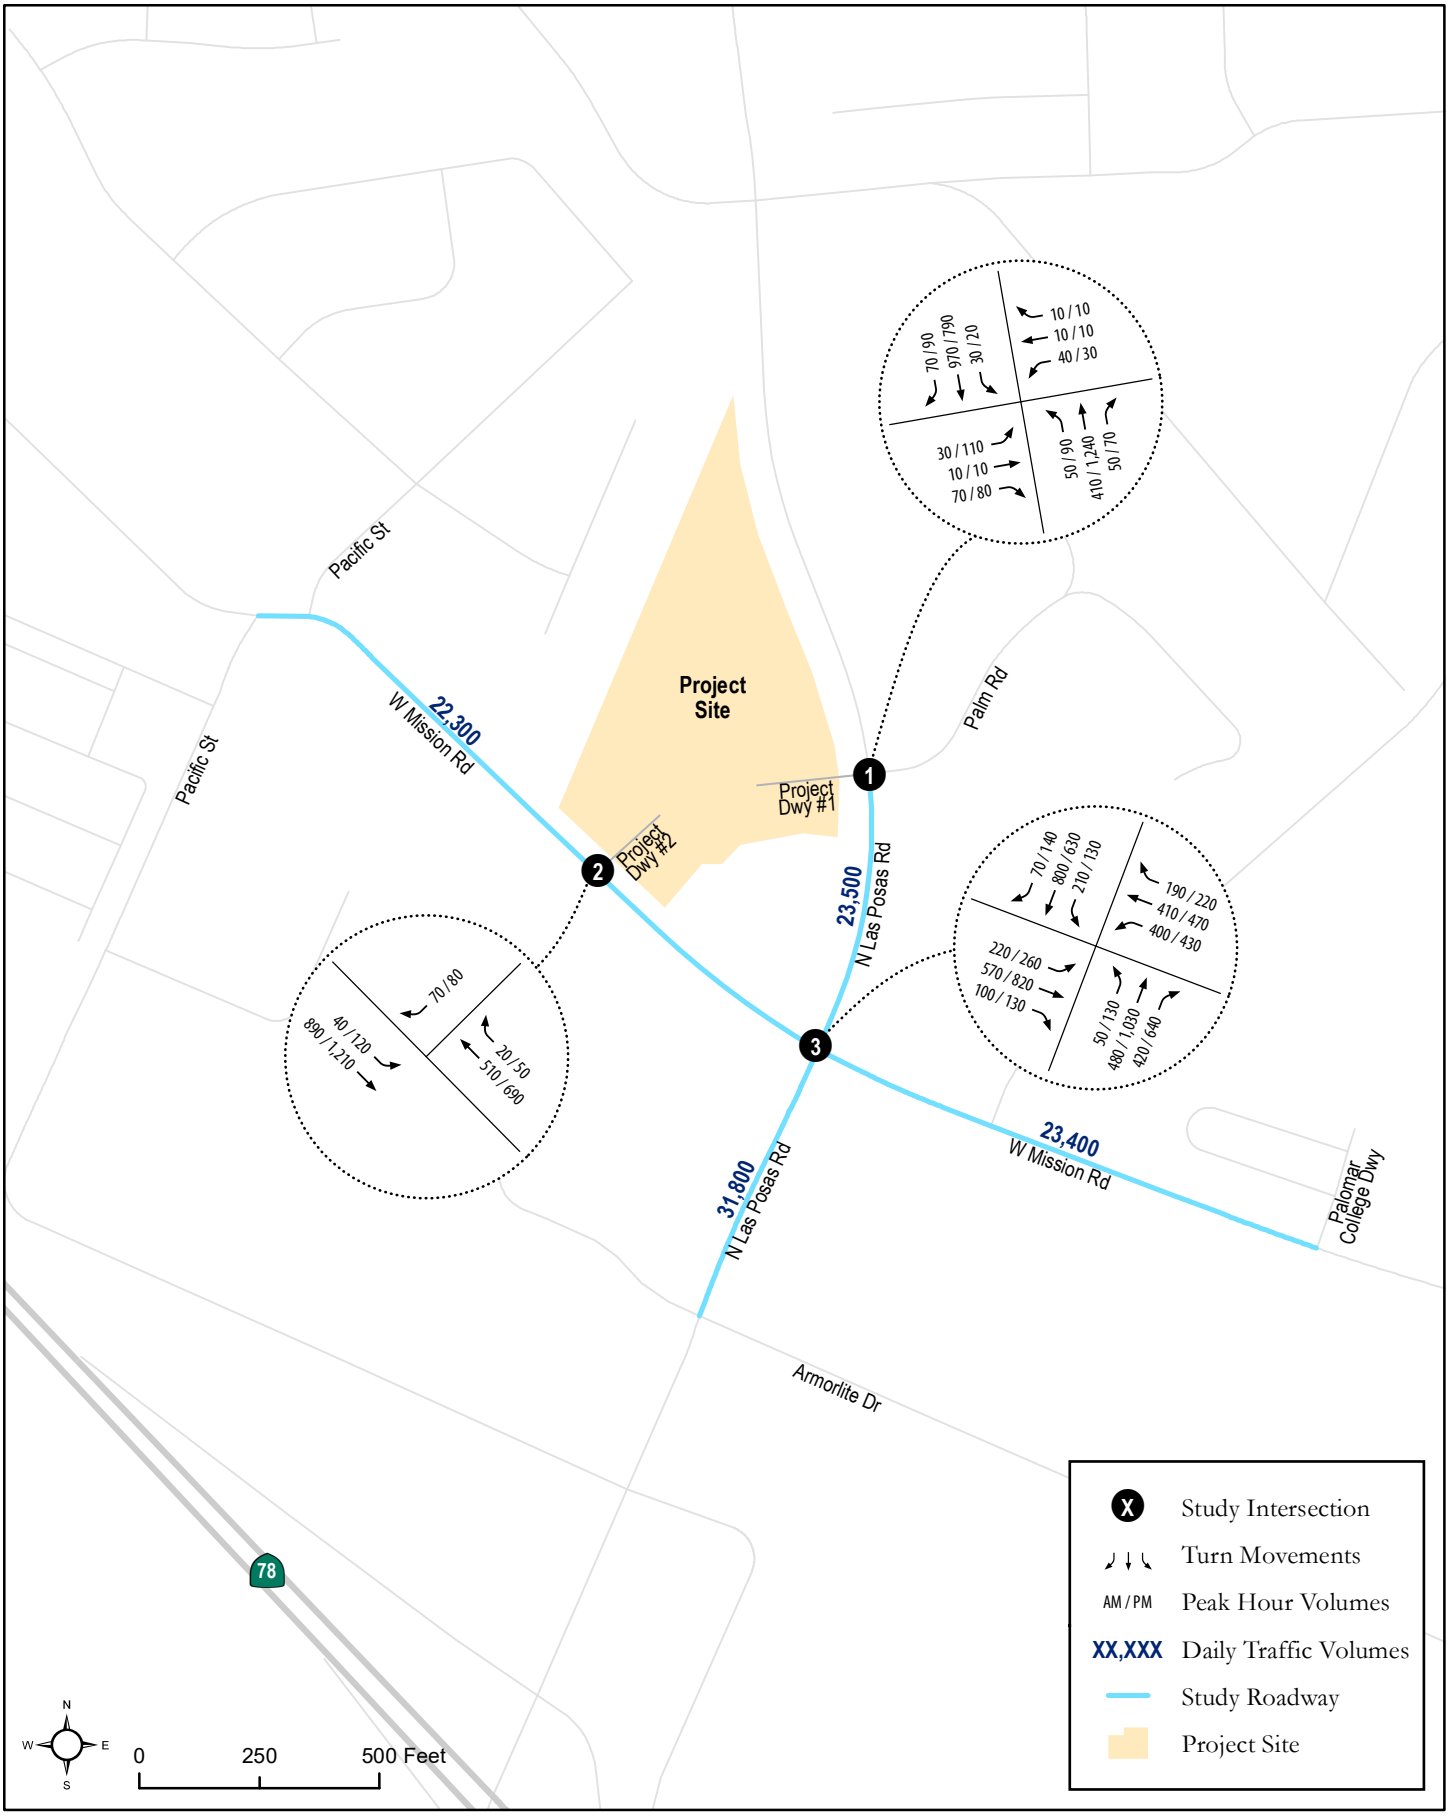
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.
I? = Improvement Required?

7.0 Horizon Year 2050 Conditions

This section provides an analysis of Horizon Year 2050 traffic conditions both with and without the Proposed Project. The scenarios analyzed in this section include:

- Horizon Year 2050
- Horizon Year 2050 with Project



7.1 Horizon Year 2050 Roadway Network and Traffic Volumes

Intersection geometrics under Horizon Year 2050 Conditions were assumed to be identical to the Existing Conditions, as previously shown in Figure 5.1.

Horizon Year 2050 ADT forecasts were obtained from the SANDAG Series 14 ABM2+/2021 RP forecast year 2050 model (scenario ID#459). Any study roadway with Near-Term Year 2024 Base ADT found to be greater than forecasted TFIC ADT were adjusted using growth rates observed between existing and forecasted TFIC ADT for adjacent segments.

Intersection turning movement volumes were developed utilizing the roadway volumes analyzed for the roadway segment analysis. Growth was applied per approach based on existing and forecasted Horizon Year 2040 ADT, distributed based on existing travel patterns, and balanced utilizing engineering judgement.

Details on counts collected from TFIC and growth rates applied are provided in **Appendix I**. Roadway ADT and intersection peak hour volumes for this scenario are displayed in **Figure 7.1**.

Horizon Year 2050 Conditions

7.2 Horizon Year 2050 Traffic Conditions

LOS analyses under Horizon Year 2050 Conditions were conducted using the methodologies described in Chapter 2. Study roadway segment and intersection LOS analysis results are discussed below.

7.2.1 Roadway Segment Analysis

Table 7.1 displays roadway segments and LOS analysis results for study roadway segments under Horizon Year 2050 conditions.

Table 7.1 - Roadway Segment LOS Results – Horizon Year 2050 Conditions

Roadway	Segment	Function Classification	Daily Volume	LOS Threshold (LOS E)	V/C	LOS
North Las Posas Road	Palm Road to West Mission Road	6-Lane Major Arterial	23,500	50,000	0.470	B
North Las Posas Road	West Mission Road to Armorlite Drive	6-Lane Major Arterial	31,800	50,000	0.636	C
West Mission Road	Pacific Street and North Las Posas Road	4-Lane Major Arterial	22,300	40,000	0.558	C
West Mission Road	North Las Posas Road to Palomar College Driveway	4-Lane Major Arterial	23,400	40,000	0.585	C

Source: CR Associates (2022)

Note:
V/C = Volume/Capacity

As shown in Table 7.1, all study roadway segments are projected to operate at acceptable LOS C or better under Horizon Year 2050 conditions.

7.2.2 Intersection Analysis

Table 7.2 displays intersection LOS and average vehicle delay results for the key study area intersections under Horizon Year 2050 Conditions. LOS calculation worksheets for Horizon Year 2050 Conditions are provided in **Appendix J**.

Table 7.2 - Peak Hour Intersection LOS Results – Horizon Year 2050 Conditions

#	Intersection	Control Type	AM Peak Hour		PM Peak Hour	
			Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS
1	North Las Posas & Project Driveway #1 / Palm Road	Signal	22.1	C	25.0	C
2	Project Driveway #2 & West Mission Road	SSSC	10.8	B	12.2	B
3	North Las Posas & West Mission Road	Signal	46.1	D	53.0	D

Source: CR Associates (2022)

Note:
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.

As shown in Table 7.2, all study area intersections are projected operate at acceptable LOS D or better under Horizon Year 2050 Conditions.

7.3 Horizon Year 2050 with Project Roadway Network and Traffic Volumes

Intersection geometrics under the Horizon Year 2050 with Project Conditions were assumed to be identical to the Horizon Year 2050 Conditions geometrics, as previously discussed in Chapter 6.1.

Peak hour intersection volumes for the Horizon Year 2050 with Project Conditions were derived by combining the Proposed Project trips (as previously shown in Figure 3.2) to the Horizon Year 2050 traffic volumes (as previously shown in Figure 7.1). Peak hour intersection volumes for this scenario are displayed in **Figure 7.2**.

7.4 Horizon Year 2050 with Project Traffic Conditions

LOS analyses under Horizon Year 2050 with Project Conditions were conducted using the methodologies described in Chapter 2. Study roadway segment and intersection LOS analysis results are discussed below.

7.4.1 Roadway Segment Analysis

Table 7.3 displays roadway segments and LOS analysis results for study roadway segments under Horizon Year 2050 with Project conditions.

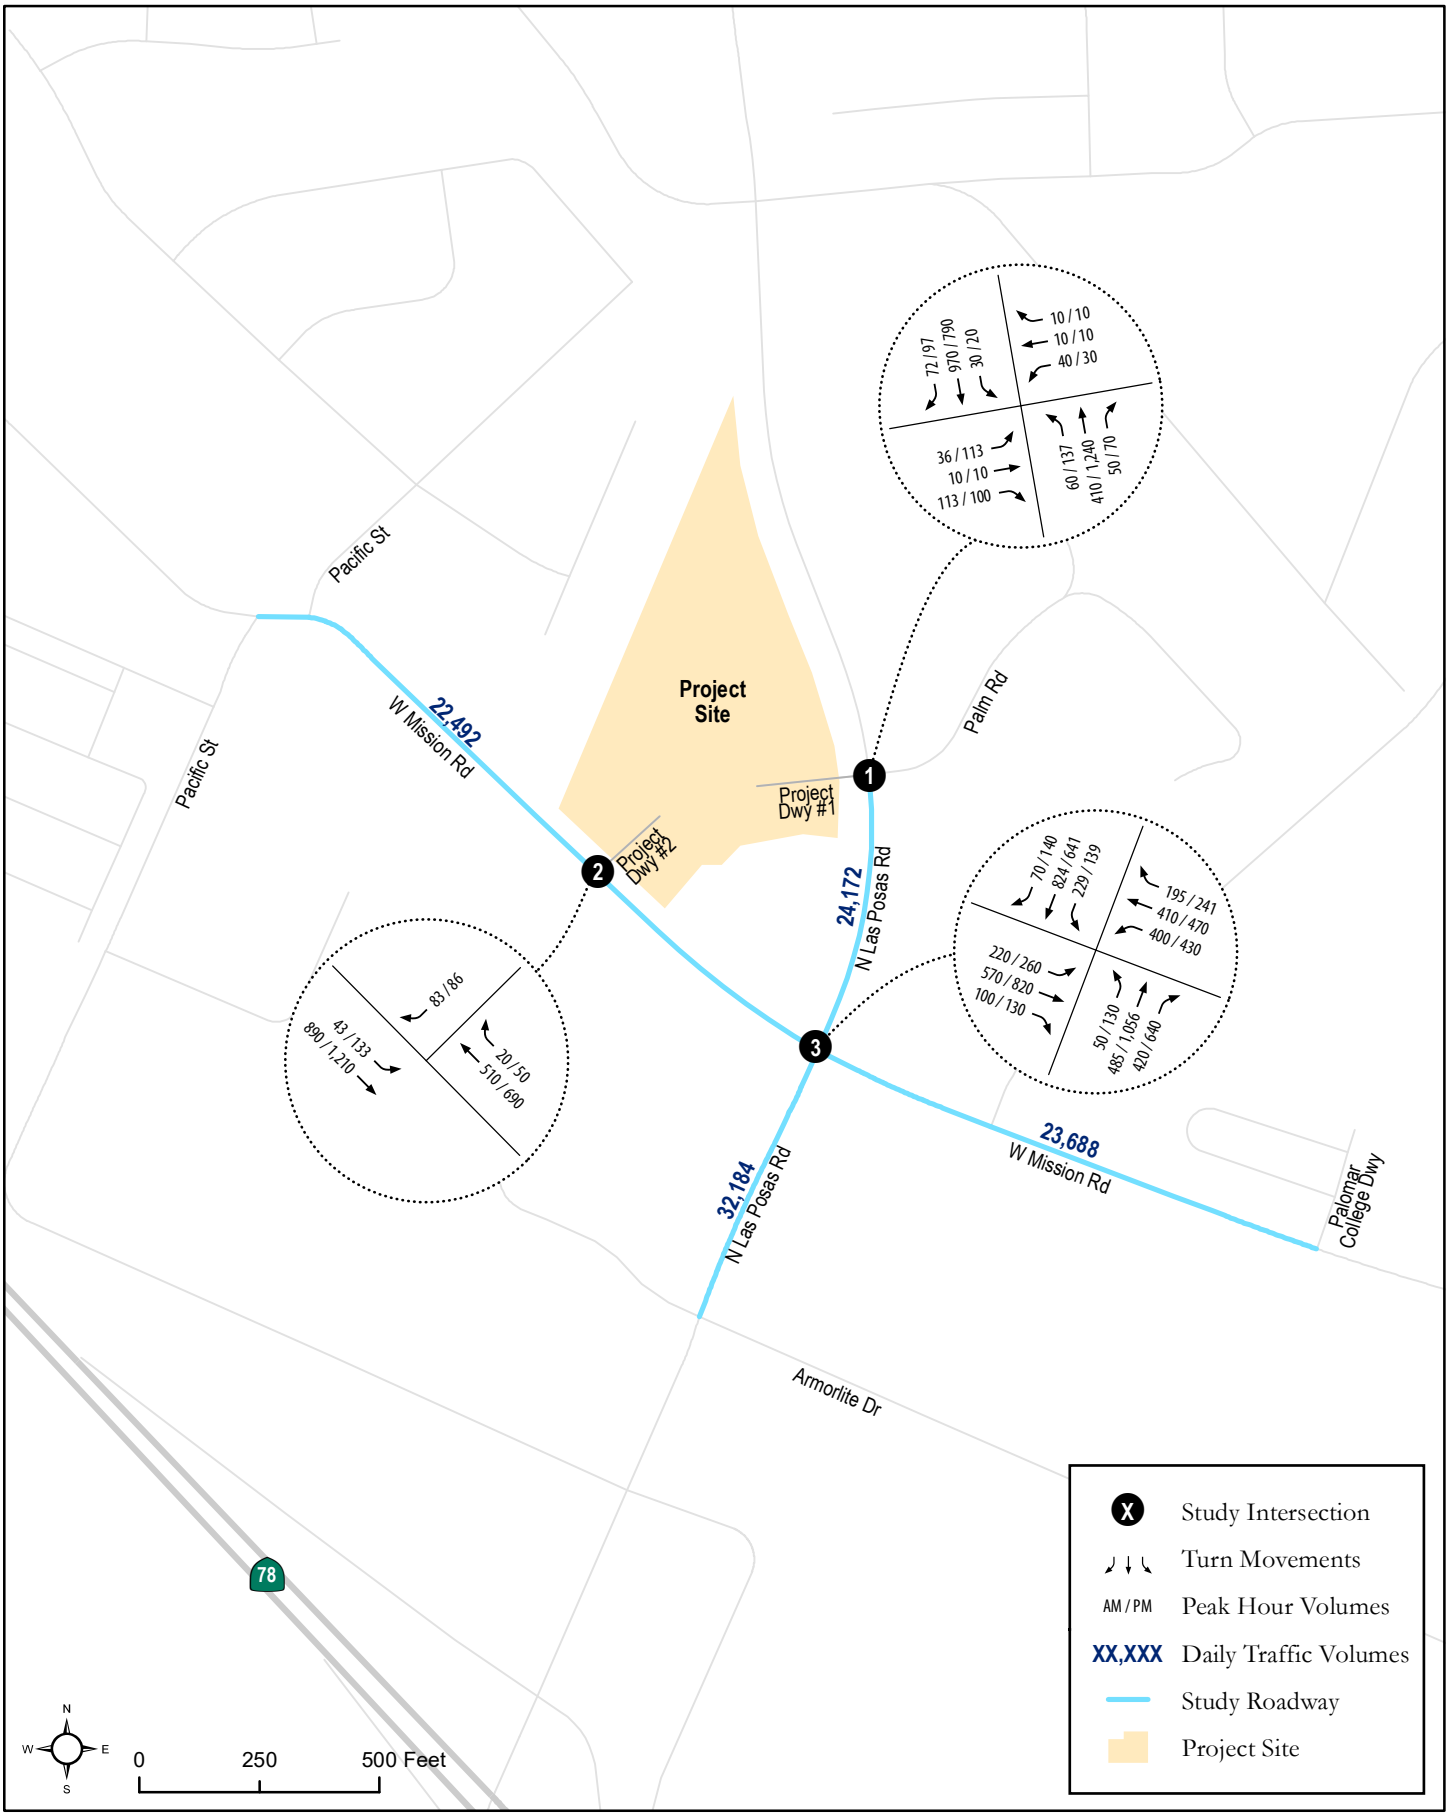

Table 7.3 - Roadway Segment LOS Results – Horizon Year 2050 with Project Conditions

Roadway	Segment	Function Classification	Daily Volume	LOS Threshold (LOS E)	V/C	LOS	LOS w/o Project	ΔV/C	I?
North Las Posas Road	Palm Road to West Mission Road	6-Lane Major Arterial	24,172	50,000	0.483	B	B	0.013	N
North Las Posas Road	West Mission Road to Armorlite Drive	6-Lane Major Arterial	32,184	50,000	0.644	C	C	0.008	N
West Mission Road	Pacific Street and North Las Posas Road	4-Lane Major Arterial	22,492	40,000	0.562	C	C	0.004	N
West Mission Road	North Las Posas Road to Palomar College Driveway	4-Lane Major Arterial	23,688	40,000	0.592	C	C	0.007	N

Source: CR Associates (2022)

Notes:
V/C = Volume/Capacity
I? = Improvement Required?

As shown in Table 7.3, all study roadway segments are projected to operate at acceptable LOS C or better under Horizon Year 2050 with Project conditions. Therefore, no study roadway segments are anticipated to degrade in LOS to unacceptable levels with implementation of the Proposed Project and no improvements will be required.

SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.
I? = Improvement Required?

8.0 LOS Deficiencies and Improvement Requirements

This chapter provides improvements requirements needed to increase LOS to acceptable or pre-project conditions for any roadway segments or intersections found to operate unacceptably with implementation of the Proposed Project.

8.1 Determination of the Need for Off-Site Improvements to Accommodate Project Traffic – Near-Term Year 2024 with Project Conditions

This section identifies required improvements for any study roadway segments or intersections that are associated with the Proposed Project under Near-Term Year 2024 Base with Project conditions.

Roadway Segment Analysis
No improvements required.

Intersection Analysis
No improvements required.

8.2 Determination of the Need for Off-Site Improvements to Accommodate Project Traffic – Horizon Year 2050 with Project Conditions

This section identifies required improvements for any study roadway segments or intersections that are associated with the Proposed Project under Horizon Year 2050 with Project conditions.

Roadway Segment Analysis
No improvements required.

Intersection Analysis
No improvements required.

9.0 Site Access & Circulation

This chapter addresses access to the project site and discusses the functionality of the project's internal circulation.

9.1 Driveway Access

The Proposed Project will be located approximately 250 feet northwest of the West Mission Road and North Las Posas Road intersection in the City of San Marcos. The project site is currently vacant and is bordered by North Las Posas Road on the northeast side, West Mission Road on the southwest side, single family dwelling units on the northwest side, and a CVS pharmacy to the south.

Project site access will be provided via two shared driveways with the adjacent CVS pharmacy with one located off North Las Posas Road and the other off West Mission Road. A brief description of each of the two driveways is provided below:

- Project Driveway #1 is located along North Las Posas Road via existing signalized intersection at North Las Posas Road / Palm Road functioning with full access. This driveway serves as the primary entry point and provides for one of the two access points to the project site from the east. This driveway is projected to operate at LOS C or better under all study scenarios.
- Project Driveway #2 is located along West Mission Road via existing side-street (the CVS driveway) stop controlled intersection that allows for left/right-in and right-out turning movements only. This driveway serves as the secondary entry point and provides for one of the two access points to the project site from the west. This driveway is projected to operate at LOS B or better under all study scenarios.

After further review of the project site plan, the following recommendations are provided:

- Driveways are recommended to be constructed in accordance with City standards
- Stop sign (R1-1) to be installed at project driveway #2
- High visibility pedestrian crossings where crossing is allowed at Project Driveway #1
- Modify existing traffic detection camera at traffic signal serving Driveway #1 to accommodate queuing vehicles exiting through this driveway

9.2 Queuing Analysis

A 95th percentile queue analysis was conducted to determine the extent of queueing at the project driveway intersections under Near-Term Year 2024 Base with Project conditions and Horizon Year 2050 with Project conditions. The queue analysis was conducted for the proposed project driveways and the movements along North Las Posas Road and West Mission Road. **Table 9.1** displays the 95th percentile queue analysis results for project driveway intersections under both analysis scenarios. Intersection queueing reports are provided in **Appendix L**.

As shown, the 95th percentile queues at project driveway intersections are projected to fit within the available storage and would not impede traffic at the driveways or adjacent roadway system.

Table 9.1 - Queuing Analysis at Project Driveways

#	Intersection	Control Type	Turning Movement	Peak Hour	Available Storage[1] (ft)	Near-Term Year 2024 with Project Conditions		Horizon Year 2050 with Project Conditions	
						95th Percentile Queue (ft)	Excess Queue (ft)	95th Percentile Queue (ft)	Excess Queue (ft)
1	North Las Posas & Project Driveway #1 / Palm Road	SSSC	NBL	AM	190	46	0	84	0
				PM		168	0	173	0
2	Project Driveway #2 & West Mission Road	SSSC	EBL	AM	135	25	0	25	0
				PM		25	0	25	0

Source: CR Associates (2022)

Note:
[1] Includes taper length.

9.3 Internal Circulation

Internal roadways on the project site allows for two-way flow of vehicle traffic. Dead-end aisles between buildings provide direct access to garages for each dwelling unit. Guest parking is also provided through the project site.

Based upon review of the project site plan, the following recommendations are provided:

- Appropriate signage to warn drivers of pedestrian foot traffic
- Consider installation of speed cushions/bumps along internal roadways to calm traffic

10.0 Parking

Parking will be provided within the Proposed Project. Per the City of San Marcos Code of Ordinance; *Title 20 – Zoning; Chapter 20.340 – Off-street Parking*, the Proposed Project is required to supply a total of 280 parking spaces. **Table 10.1** displays the Proposed Project's parking requirements.

Table 10.1 - Parking Requirements

Unit Type	Units	Requirement	Parking Stalls
2+ Bedroom	120	2 Spaces/Unit	240
Guest Parking	120	1 Space/3 Units	40
		Total	**280**

Source: City of San Marcos Code of Ordinance (2022)

The Proposed Project will provide 260 new parking spaces with the following breakdown:

- 240 garage spaces (includes 45 Tandem)
- 20 Guest Spaces (Includes 2 ADA Spaces, 2 EV Spaces and one mail space)

Additionally, there are 37 existing parking spaces located on-site that will be part of the total parking spaces provided by the project for a total of **297 parking spaces provided by the project** (260 new + 37 existing on-site), which exceeds the City's minimum requirements.

11.0 Sight Distance Analysis

A sight distance analysis was conducted at the two project driveways on September 22, 2022. The analysis was conducted consistent with the City of San Marcos Intersection Sight Distance Guidelines (December 2020) which evaluates the following:

- Intersection Sight Distance (Corner Sight Distance) is measured from the perspective of the vehicle waiting on the minor road. The setback measurement from the edge of traveled way of the major road should be 15 feet. It is measured from the driver's eye height of 3.5 feet on the minor road to the height of a 3.5-foot-tall object on the major road.

- Stopping Sight Distance is measured from the driver's eye height of 3.5 feet above the pavement surface, to an object ½-foot high on the road.

- Speed utilized to determine the minimum requirements shall be the roadway design speed.

Table 11.1 below displays the minimum intersection and stopping sight distance requirements.

Table 11.1 - Minimum Sight Distance Requirements

Design Speed	Intersection Sight Distance (left)	Intersection Sight Distance (right)	Stopping Sight Distance (ft)	Downgrades Steeper Than 3%
20	220	190	125	150
25	275	240	150	180
30	330	285	200	240
35	385	335	250	300
40	440	380	300	360
45	495	430	360	430
50	550	480	430	520

Source: City of San Marcos Intersection Sight Distance Guidelines (2020)

The design speed of North Las Posas Road and West Mission Road is determined based on their respective Mobility Element classification. North Las Posas Road is identified as a 6-Lane Major Arterial while West Mission Road is identified as a 4-Lane Major Road. According to the City of San Marcos *Urban Street Design Criteria*, both a 6-Lane and a 4-Lane Major Arterial have design speeds of 50 MPH. Therefore, a 50 MPH design speed was utilized for the analysis at both project driveways.

Figure 11.1 and **Figure 11.2** displays stopping sight distance for Project Driveway #1. **Figure 11.3** and **Figure 11.4** display the intersection and stopping sight distance measurements, respectively, for Project Driveway #2.

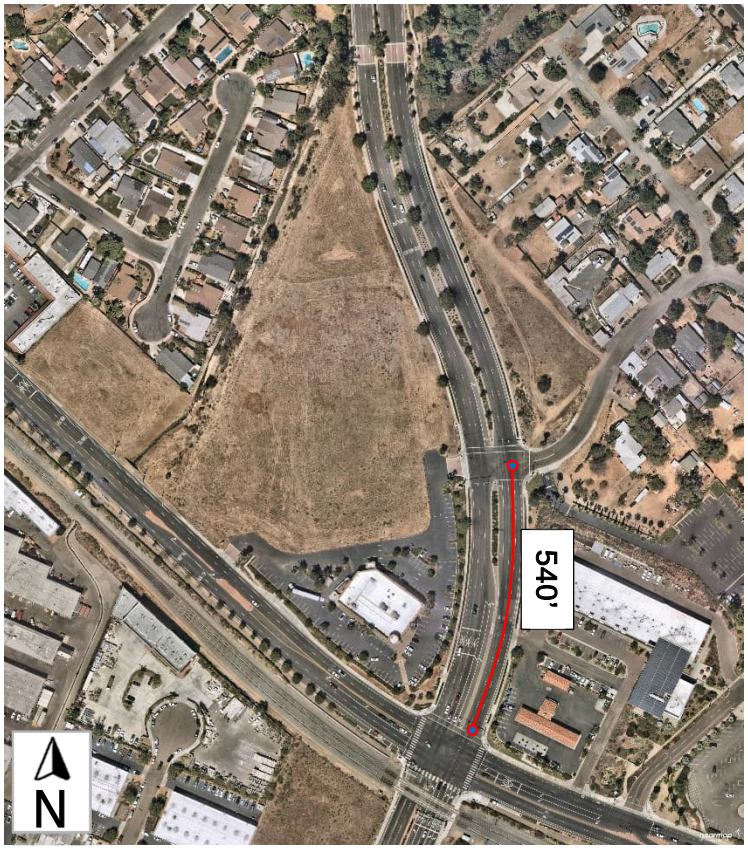

Figure 11.1 - Stopping Sight Distance at Project Driveway #1 (Southbound)

Driving Southbound Towards Project Driveway #1

Figure 11.2 - Stopping Sight Distance at Project Driveway #1 (Northbound)

		Stopping Sight Distance		
Location	**Design Speed**	**Measure (ft)**	**Required (ft)**	**Adequate?**
Project Driveway #2 & West Mission Road	50	500	430	**Yes**

Notes:
[1] XX / XX = Driving Southbound / Driving Northbound
[2] XX / XX = Looking West / Looking East
[3] Left turns are prohibited coming out of the driveway. Therefore, there are no conflicts with vehicles traveling eastbound on West Mission Road.

As shown, both project driveways meet their respective minimum intersection and stopping sight distance requirements, except for the following:

- Project Driveway #2 & West Mission Road – The intersection sight distance needs an additional 30 feet of clear line of sight looking east from the project driveway.

This is mainly due to the presence of existing vegetation at the project driveway which limits the line of sight. Therefore, it is recommended to remove the existing vegetation or that trimming and maintenance of the landscape vegetation is conducted regularly in order to increase the line of sight at the project driveway to meet minimum requirements.

Figure 11.5 displays the proposed project as well as intersection and stopping sight distance measurements at the project driveways.

Figure 11.5
Sight Distance at Project Driveways

Appendix A - Memorandum of Approach – Gran Vista Multi-Family Project

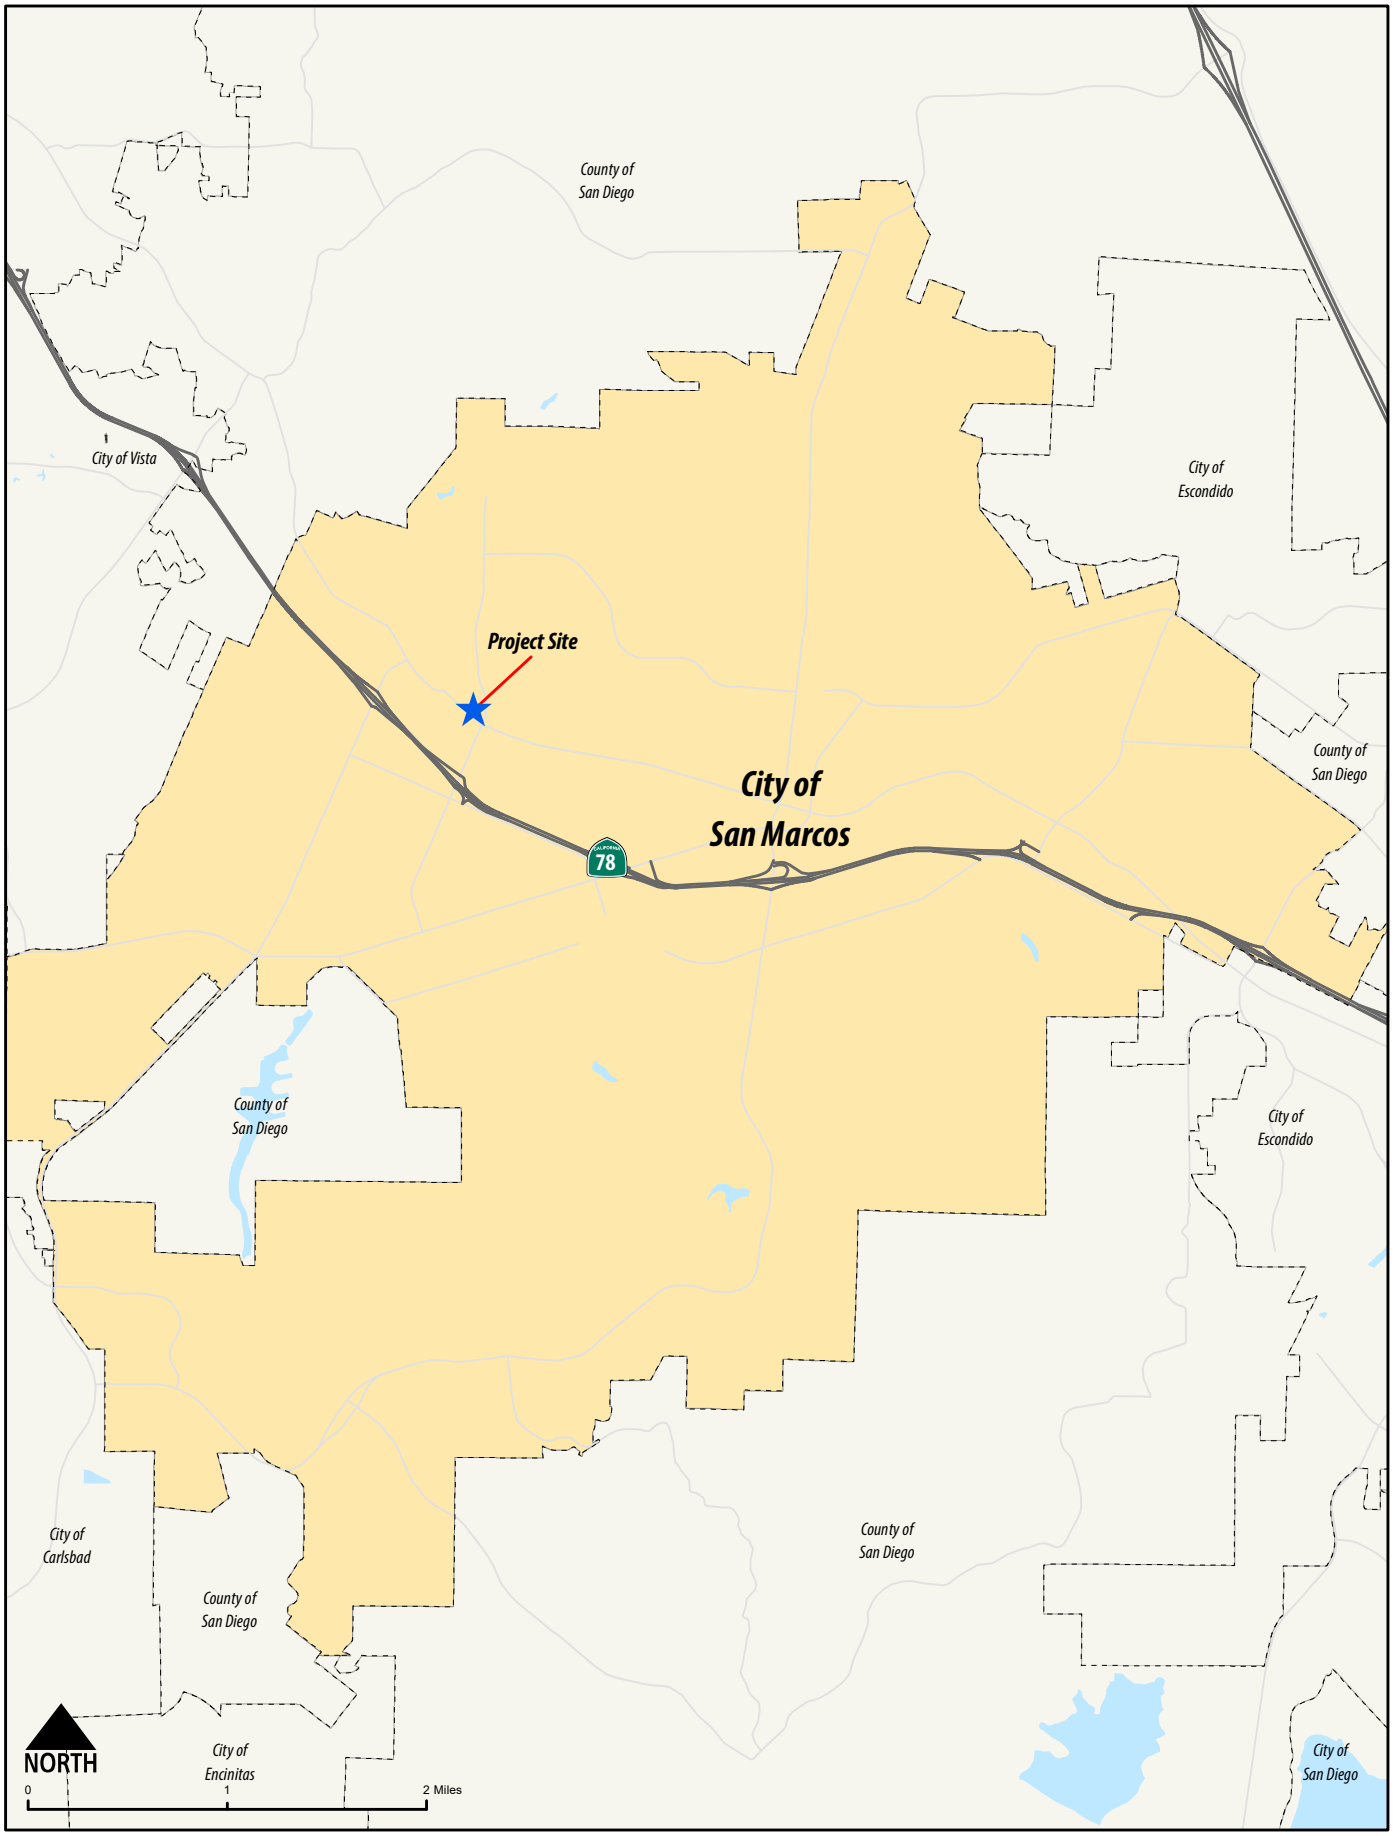
TO: Johanna Crooker, Forward Planning Manager; MLC Holdings, Inc.

FROM: Jonathan Sanchez, PE, TE, PTOE; CR Associates

DATE: January 19, 2022

RE: Gran Vista Multi-Family Project – Memorandum of Approach (MOA)

This memorandum serves to document the assumptions that will be used to conduct a both a Transportation Impact Analysis (TIA) and a Local Transportation Analysis (LTA), for the Gran Vista Multi-Family project (the "Project"). The vehicle miles traveled (VMT) analysis and level of service (LOS) analyses will be conducted in accordance with the *City of San Marcos Transportation Impact Analysis Guidelines*, *November 2020* (TIA Guidelines).



Project Description

The Gran Vista Multi-Family project (the "Proposed Project") proposes to construct 120 multi-family dwelling units at the northwest corner of West Mission Road and North Las Posas Road, in the City of San Marcos. The Proposed Project will share two driveways with the adjacent CVS pharmacy with one located off North Las Posas Road and the other off West Mission Road. The access off North Las Posas Road is via a signalized intersection at North Las Posas Road / Palm Road (Driveway 1), while the access off West Mission Road is via a side-street (the CVS driveway) stop controlled intersection that does not allow left-turn out movement (Driveway 2). **Figure 1** displays the Project's regional location. **Figure 2** displays the Project's current site plan.

VMT Analysis

According to the *City of San Marcos TIA Guidelines*, a VMT analysis will be conducted if the following criteria for screening projects are not met: (1) small project screening, (2) affordable housing screening, (3) local-serving retail or public facility screening, (3) High Quality Transit Area (HQTA) screening, (4) low VMT area screening.

The Proposed Project is within a High-Quality Transit Area, however, due to its inconsistency with the City's current general plan, the Project would have to conduct a detailed VMT analysis and document it in a TIA. The TIA will include discussions of VMT results, identify impacts, and make recommendations, as needed.

Gran Vista Multi-Family
Memorandum of Approach

C+R

Figure 1
Project Regional Location

Three-Story Townhomes
- For-sale attached townhomes provide an efficient use of land and a more financially attainable housing solution that is compatible with adjacent single family uses
- Located near SPRINTER light rail line (nearest stop is 0.36 miles) to support transit use, promote walkabilty, and potentially reduce VMT and emissions
- Withing walking dictance of retail, parks, schools and other everyday services
- Implements Policy LU-2.1 of the 2020 Climate Action Plan to "Promote compact development patterns that reduce air pollution and automobile dependence and facilitate walking, bicycling, and transit use".

Las Posas Road Frontage/Paseos
- Varied building orientation breaks up massing and provides for an eclectic and interesting street scene
- Paseo access and landscaped pedestrian pathways provide connectivity to existing sidewalks to promote walkability
- Shade trees and landscaping soften the street scene and provide pedestrian comfort

Typical Tot Lot/Excercise Station
- Tot lots with play equipment (three areas shown in red) provided throughout site area are located adjacent to barbecues and other amenities to encourage family and community gathering
- Outdoor excercise equipment (three areas shown in blue) provides an exercise loop through the community to encourage and support fitness

Community Garden
- Raised planter beds with decompsed granite pathways encourage healthy eating and wellness
- Enhanced with a potting table and storage benches

Dog Park
- Off-leash, dog area for residents to excercise and enjoy pets
- Fenced with tublar steel fencing to provide an "open" appearance
- Artificial turf surface for durability and easy maitenance
- Dog clean-up station, double gated entry, and other amenities

Primary Community Entry
- Maintains existing site access at signalized intersection
- Provides front doors facing entry for a welcoming street scene
- Enhanced paving and landscaping to be designed by landscape architect

Project Summary

Gross Area: 7.6 Acres

Total Units: 120 Homes
30 - Plan 1: 1213 Sq.Ft., 2 Bed, side-by-side garage
45 - Plan 2: 1505 Sq.Ft., 3 Bed, tandem garage
45 - Plan 3: 1802 Sq.Ft., 3 Bed, side-by-side garage

Total Open Space:
148,297 Sq.Ft. of Recreation Area
17,325 Sq.Ft. of Private Open Space
165,622 Sq.Ft. Total

Private Open Space per floor plan:
Plan 1: 87 Sq.Ft.
Plan 2: 134 Sq.Ft.
Plan 3: 198 Sq.Ft.

Parking
240 Garages (Includes 45 Tandem Spaces)
20 Guest Spaces (Includes 1 ADA space)
264 Total Spaces (not including existing spaces)

Notes:
1. APNs 219-121-15 & 16
2. Existing General Plan Designation: Commercial
3. Proposed General Plan Designation: Specific Plan Area (SPA)
4. Existing Zoning Designation: Commercial
5. Proposed Zoning Designation: Specific Plan Area (SPA)

Central Recreation Area
- Centrally located near the primary entry to provide a focal point for the community
- Amenities include lawn game area with artificial turf, barbecue counter with bar, seating, and more
- Located adjacent to a tot lot to promote family and social gathering
- Underground vaults provide storm water treatment

Children's Play Area
- Larger play area with multi-age play equipment
- Located adjacent to barbecue counter and seating area to promote family and social gathering

Secondary Community Entry
- Maintains existing site access with left/right in and right-out only turning movements
- Enhanced by adjacent open space areas, special paving and landscaping

Turf Play Area
- Open artificial turf play area
- Can be used for bad mitten, pick-up soccer, and Frisbee and other informal games

Neighborhood Edge
- Buildings oriented to minimize windows
- Landscape planting designed to provide additional screening to maximize privacy of existing single-family homes
- Underground vaults provide storm water treatment

Local Transportation Analysis

The purpose of the LTA is to evaluate how the Project will affect the surrounding local transportation network, as well as to determine if additional transportation improvements will be needed. The LTA analysis will evaluate the following six (6) scenarios:

1. Existing Conditions (2022) - This scenario is utilized to establish the existing baseline of traffic operations within the study area.

2. Near-Term 2024 Base Conditions – This scenario establishes a near-term baseline against which traffic generated by the Proposed Project can be compared to at the project opening day, anticipated to be Year 2024. Ambient growth rates or addition of cumulative projects' traffic will be used to develop the Opening Year 2024 Base Conditions.

3. Near-Term 2024 Base with Project Conditions – This scenario represents the Opening Year traffic conditions with the addition of traffic generated by the Proposed Project.

4. Horizon Year 2050 Base Conditions – This scenario represents projected long-range baseline traffic conditions for Year 2050.

5. Horizon Year 2050 Base with Project Conditions – This scenario represents Year 2050 base traffic conditions with the addition of traffic generated by the Proposed Project.

Trip Generation

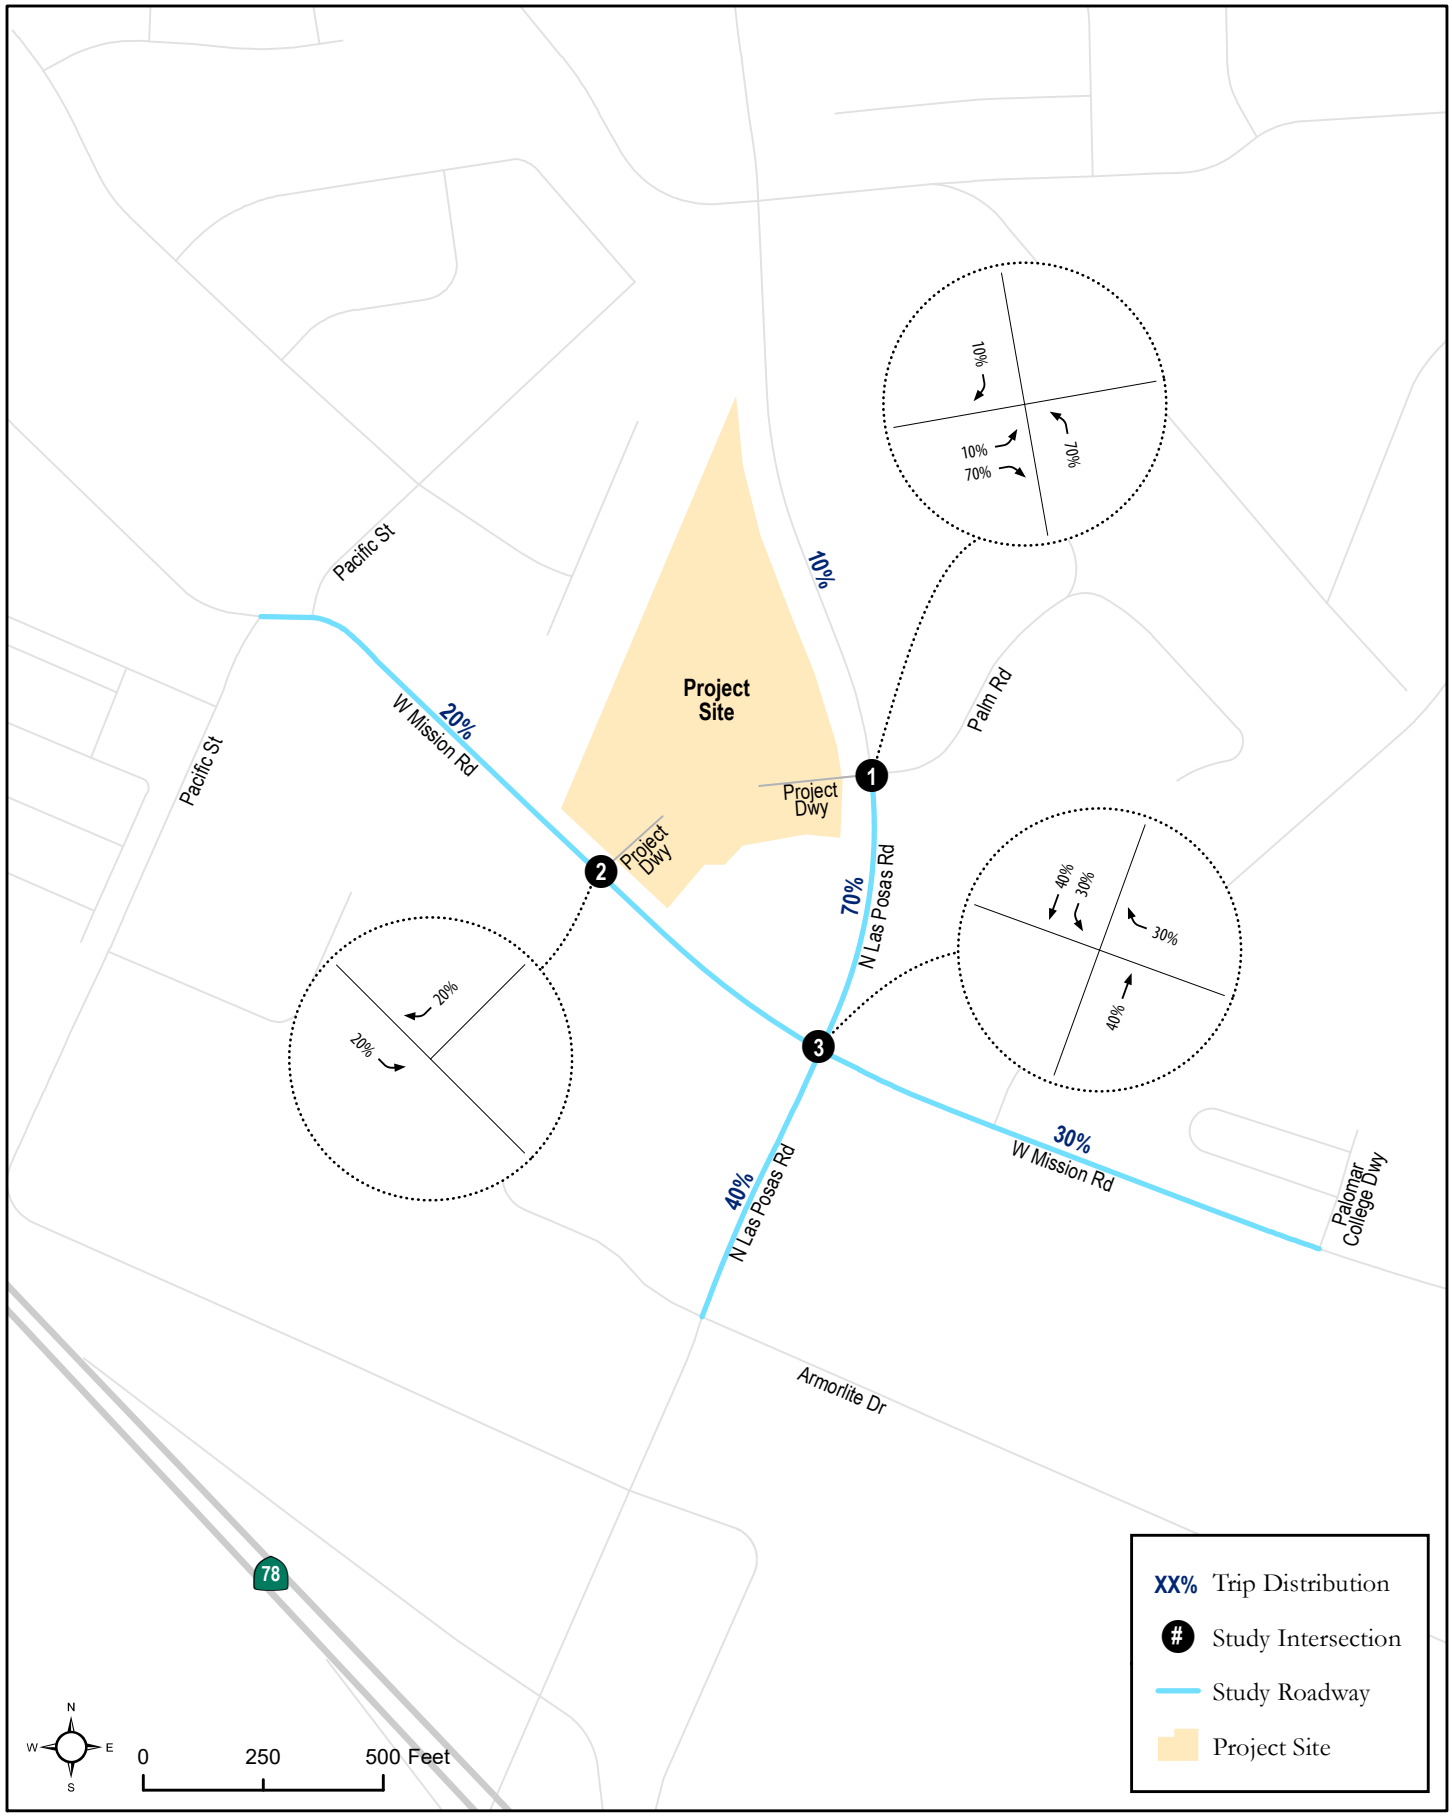
Project trip generation estimates were derived utilizing *SANDAG's (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region* (SANDAG, April 2002). **Table 1** displays daily, as well as AM and PM peak hour project trip generation.

Table 1 Project Trip Generation

		Trip		AM Peak Hour					PM Peak Hour				
Land Use	Units	Rate	ADT	%	Trips	Split	In	Out	%	Trips	Split	In	Out
Multi-family	120 DU	8 / DU	960	8	77	2:8	15	62	10	96	7:3	67	29

Source: SANDAG (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002

Note:
DU = Dwelling Unit

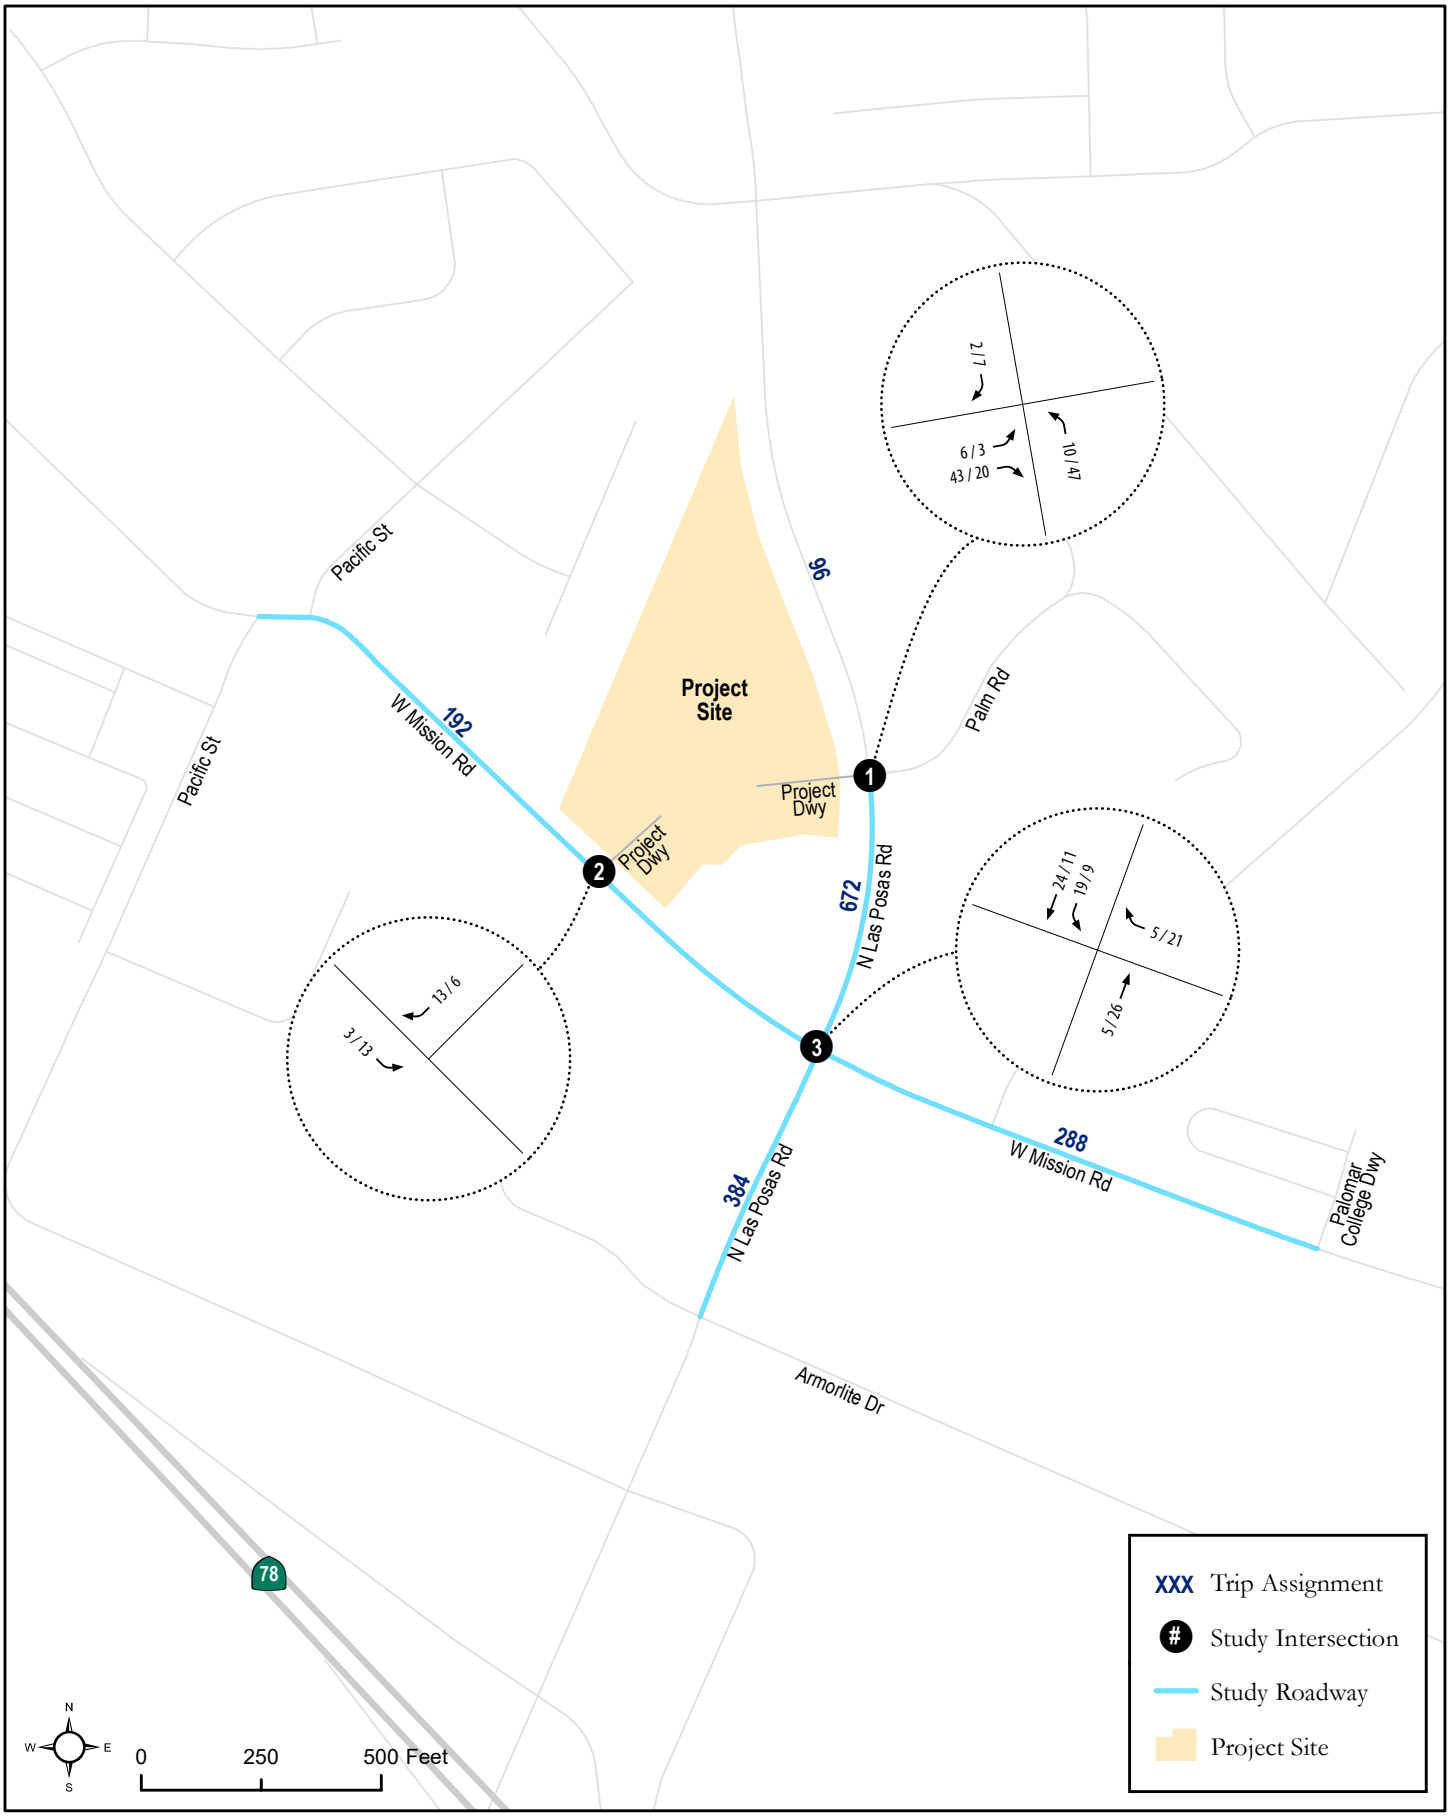


As shown in the table, the Project is anticipated to generate a total of 960 daily trips, including 77 (15-in / 62-out) trips during the AM peak hour and 96 trips (67-in / 29-out) during the PM peak hour.

Project Trip Distribution

The trip distribution for the Project was developed based on the geographical location of the Project, as well as the characteristics of the proposed and surrounding land uses. The project's trip distribution patterns for the AM and PM peak hours are in **Figure 3.**

Project Trip Assignment



Based upon the Proposed Project trip generation (Table 1) and distribution (Figure 3), AM/PM peak hour and daily project trips were assigned to the adjacent roadway network, as displayed in **Figure 4**.

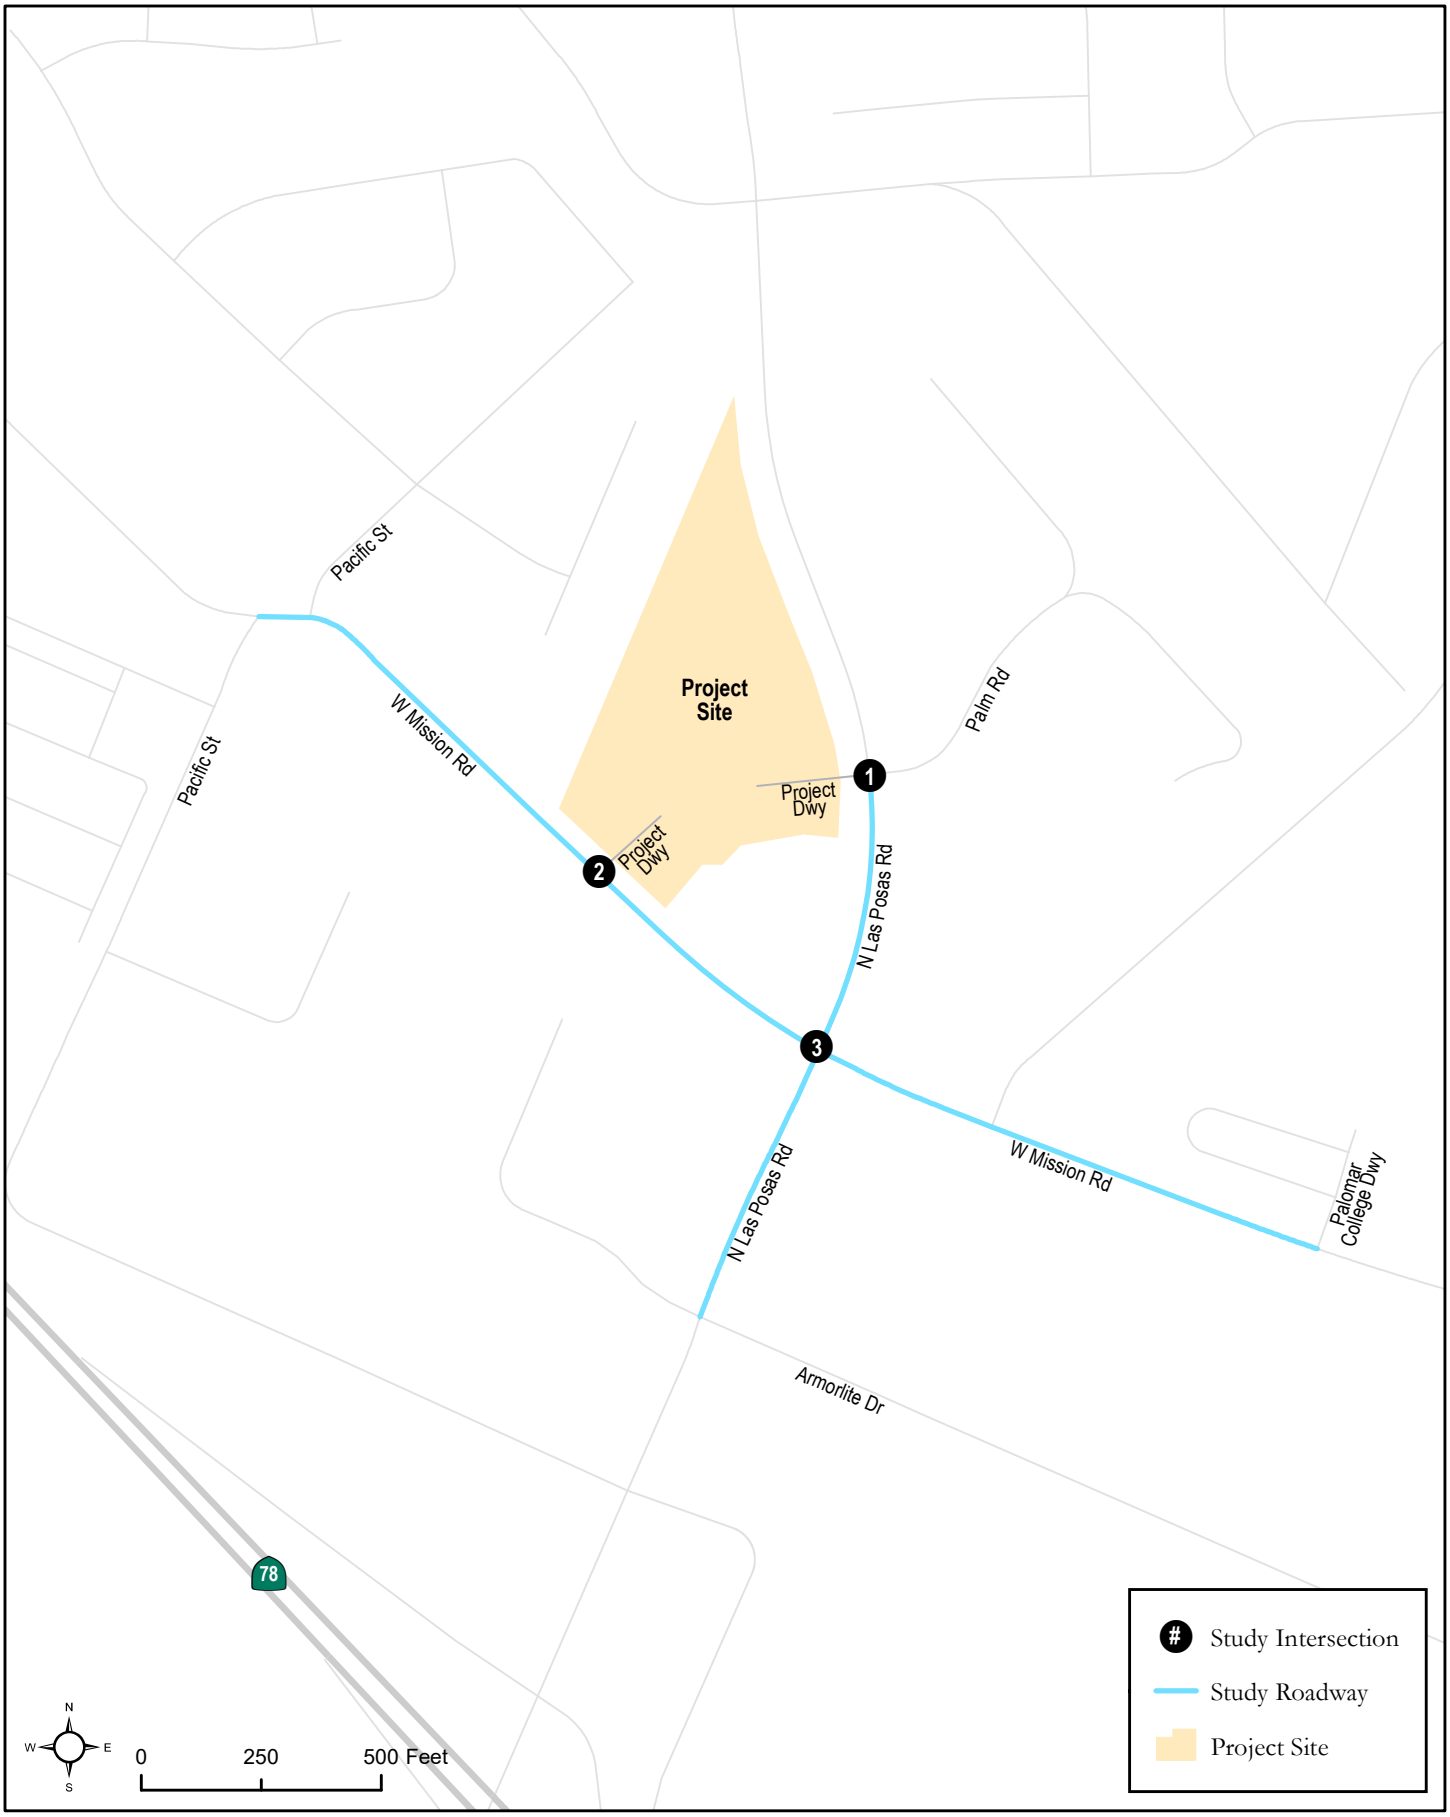
Project Trip Assignment

Project Study Area

The following roadway segments and intersections will be included within the project study area:

Roadway Segments

- North Las Posas Road, between Palm Road and West Mission Road
- North Las Posas Road, between West Mission Road and Armorlite Drive
- West Mission Road, between Pacific Street and North Las Posas Road
- West Mission Road, between North Las Posas Road and Palomar College Driveway



Intersections

1. North Las Posas Road & Project Driveway/Palm Road
2. West Mission Road & Project Driveway
3. North Las Posas Road & West Mission Road

The LTA will include a section regarding operational characteristics of the project driveways. **Figure 5** displays the project study area.

Traffic Volume Development

Traffic counts will be conducted along the study roadway segments and intersections listed above. To ensure that current travel patterns reflect traffic conditions prior to the COVID-19 restrictions, a count validation will be conducted. Historical counts will be compared against existing counts. If current travel patterns are observed to be similar (less than 5% variations) to pre-COVID-19 conditions, existing counts will be deemed appropriate to utilize for this TIA. Otherwise, existing traffic counts will be adjusted to account for reduced traffic conditions.

Appendix C - Crosswalk Discussion

September 22, 2022

MLC Holdings, Inc.
5 Peters Canyon Road, Suite 310
Irvine, CA 92606

Re: Meritage Gran Vista TIS – City of San Marcos Staff Review (2nd submittal)

Dear Johanna,

Based on the comments provided by City of San Marcos staff on the 2nd submittal of the Meritage Gran Vista Project, the implementation of a crosswalk is being requested at the south leg of the intersection of North Las Posas Road and Palm Road/Project Driveway. However, due to factors listed below, a crosswalk at this location is not anticipated to be needed or deemed appropriate.

- The existing crosswalk at the north leg of the intersection provides the same crossing opportunity to access destination points located to the north or east of the project such as Palomar Elementary School, Palomar College, the Palomar College Transit Station. Providing a pedestrian crosswalk at the south leg does not reduce travel time (walking) to any of the destinations previously mentioned.

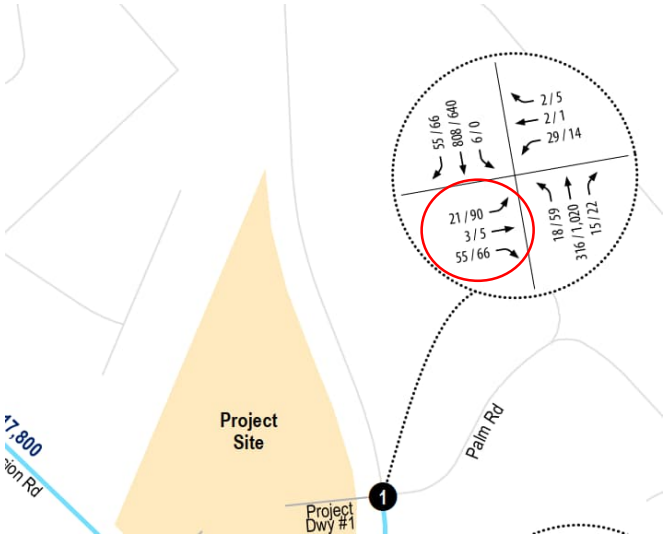
- Most of the anticipated pedestrians utilizing the requested south leg crosswalk would be coming from the Gran Vista Project. However, pedestrians are more likely to walk along the sidewalk on the west side of North Las Posas Road and head south to the intersection with West Mission Road and cross there. This is because the west side of North Las Posas Road has a more comfortable pedestrian environment as there are no driveways and wayfinding signage is present. See **Figure 1** below.

Figure 1 – West side of North Las Posas Road (looking south)

- Implementation of a crosswalk at the south leg would require providing a pedestrian phase at the existing traffic signal. The existing traffic signal has a "split phasing" configuration, and the eastbound movement (Phase 5/Project Driveway) has a minimum split of 14.6 seconds. With the implementation of the requested crosswalk at the south leg, a pedestrian phase would have to be provided at the eastbound movement (Phase 5/Project Driveway) which would extend the split phase to 44 seconds and is deemed excessive for the amount of traffic coming out of the Gran Vista Project and existing CVS pharmacy. See **Figure 2** and **Figure 3** below.
- Implementation of a crosswalk at the south leg would require shifting the existing limit line to the south, as well as modifications to the raised median, which would reduce the length of the existing left turn lane pocket providing access to the project site.

- Implementation of a pedestrian crosswalk at the south leg would be paired with the eastbound movement (Phase 5/Project Driveway), which would introduce more conflict between the vehicles coming out of the driveway and the pedestrians crossing the south leg. It is a safer alternative for pedestrians to cross North Las Posas Road by utilizing the existing north leg crosswalk as there is less conflict potential due to lower volumes coming out of Palm Road.

Figure 2 – Existing Traffic



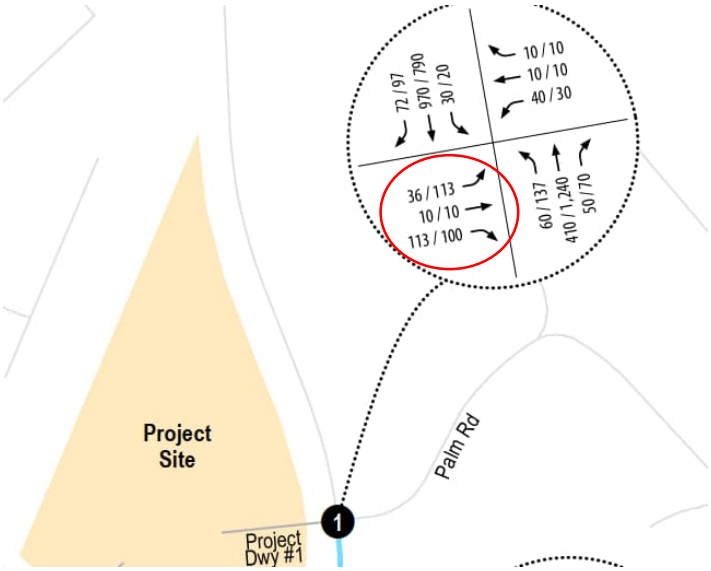


Figure 3 – Horizon Year 2050 with Project Conditions

Recommendation

Based on the discussion above, a crosswalk is not recommended to be implemented at the south leg of the intersection of North Las Posas Road and Palm Road/Project Driveway. Instead, appropriate signage and guard rail barricade shall be installed to inform pedestrians that there is no crosswalk at

the south leg. Additionally, it is recommended that a continental crosswalk is striped, to the satisfaction of the City Traffic Engineer, at the north leg of the intersection of North Las Posas Road and West Mission Road.

Please feel free to contact me with any questions and/or comments.

Sincerely,

REGISTERED PROFESSIONAL ENGINEER

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Appendix F - Cumulative Project Information

4 PROJECT TRAFFIC

This section describes the proposed project, forecast trip generation, trip distribution, and assignment of trips on the adjacent roadway network.

4.1 Project Description

The project proposes to construct 89 single-family dwelling units on the 92-acre vacant undeveloped site. Approximately 28 acres will be developed to construct the proposed project, and the remaining 64 acres will remain undeveloped.

The project will take primary access from an internal private street (Street "A") that will intersect with Las Posas Road. Gated secondary access for emergency vehicles will be provided from Las Posas Road north of Street "A".

4.2 Project Trip Generation

Trip generation rates published by the SANDAG *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002 were applied to the proposed project to determine the traffic generation characteristics of the site.

Table 4-1 summarizes the vehicular trip generation for the project site. As shown in the table, the project would generate approximately 890 average weekday trips, including 71 AM peak hour trips and 89 PM peak hour trips.

Table 4-1
Trip Generation Summary

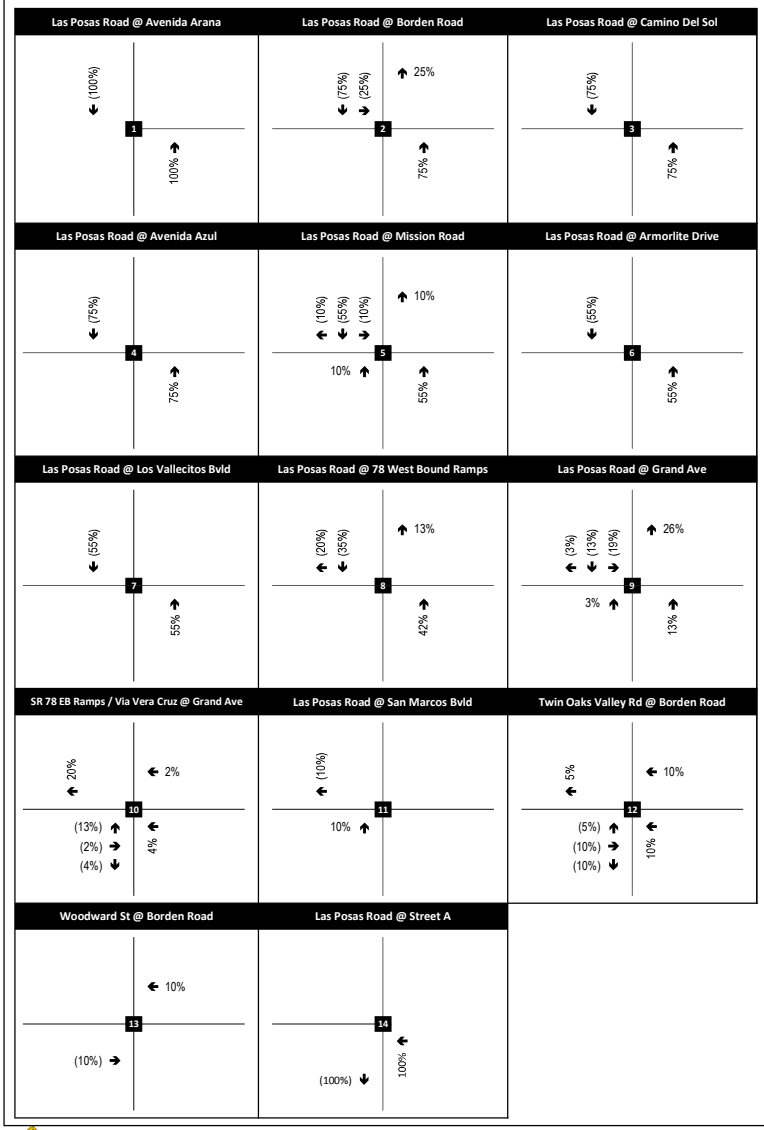
TRIP GENERATION RATES												
Land Use	Rate				AM PEAK HOUR % of ADT	AM PEAK HOUR In:Out Ratio			PM PEAK HOUR % of ADT	PM PEAK HOUR In:Out Ratio		
Single-Family DU	10	trips	/	du	8%	0.30	:	0.70	10%	0.70	:	0.30

TRIP GENERATION CALCULATIONS									
Land Use	Amount		ADT	AM PEAK HOUR Total	AM PEAK HOUR In	AM PEAK HOUR Out	PM PEAK HOUR Total	PM PEAK HOUR In	PM PEAK HOUR Out
Single-Family DU	89	du	890	71	21	50	89	62	27

Notes: DU = dwelling unit
The trip rates for the proposed uses are based on *SANDAG's Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002*.

4.3 Project Trip Distribution

The proposed Murai Subdivision project is located immediately south of the approved San Marcos Highlands project, and is also proposing the same land use as San Marcos Highlands (single-family dwelling units). Therefore, the trip distribution that was developed for approved *San Marcos Highlands Traffic Impact Analysis Report* (RBF Consulting, February 2015) is used to distribute trips generated by the proposed Murai Subdivision project. This methodology to use the San Marcos Highland trip distribution was approved by City of San Marcos staff.



Consistent with the approved *San Marcos Highlands Traffic Impact Analysis Report*, different trip distribution patterns are assumed between near-term (existing/existing plus cumulative) conditions and Horizon Year 2035 conditions due to the future extension of Las Posas Road to Buena Creek Road. The future Las Posas Road extension to Buena Creek Road is included in both the City's General Plan Mobility Element and the County of San Diego General Plan Circulation Element.

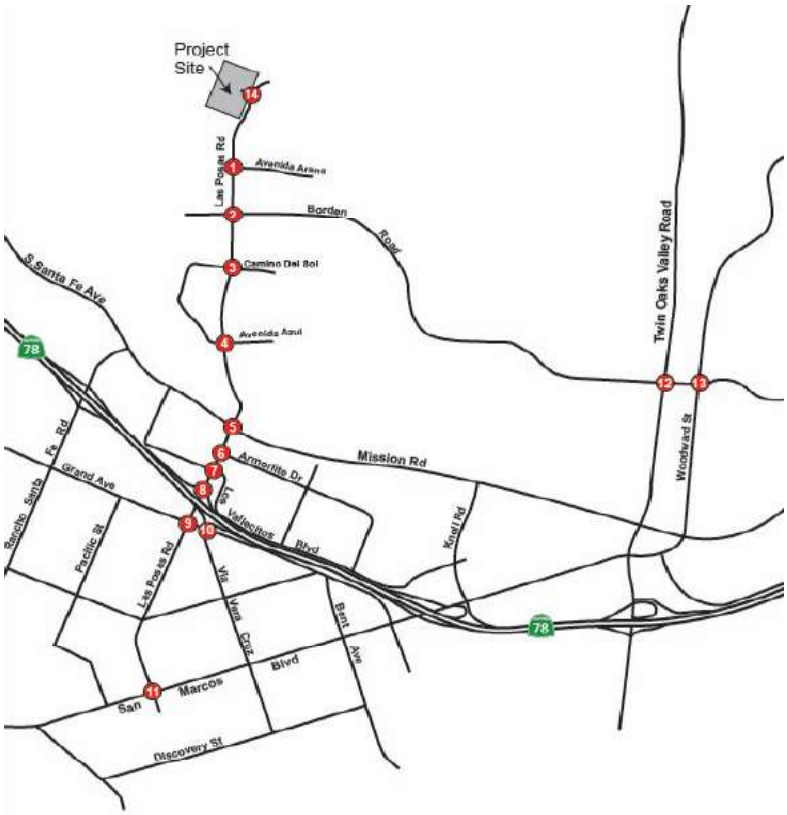


Exhibit 4-1 displays the near-term conditions trip distribution patterns at the intersections and along the roadway segments in the study area. Horizon Year 2035 trip distribution patterns in the study area are illustrated in **Exhibit 4-2**.

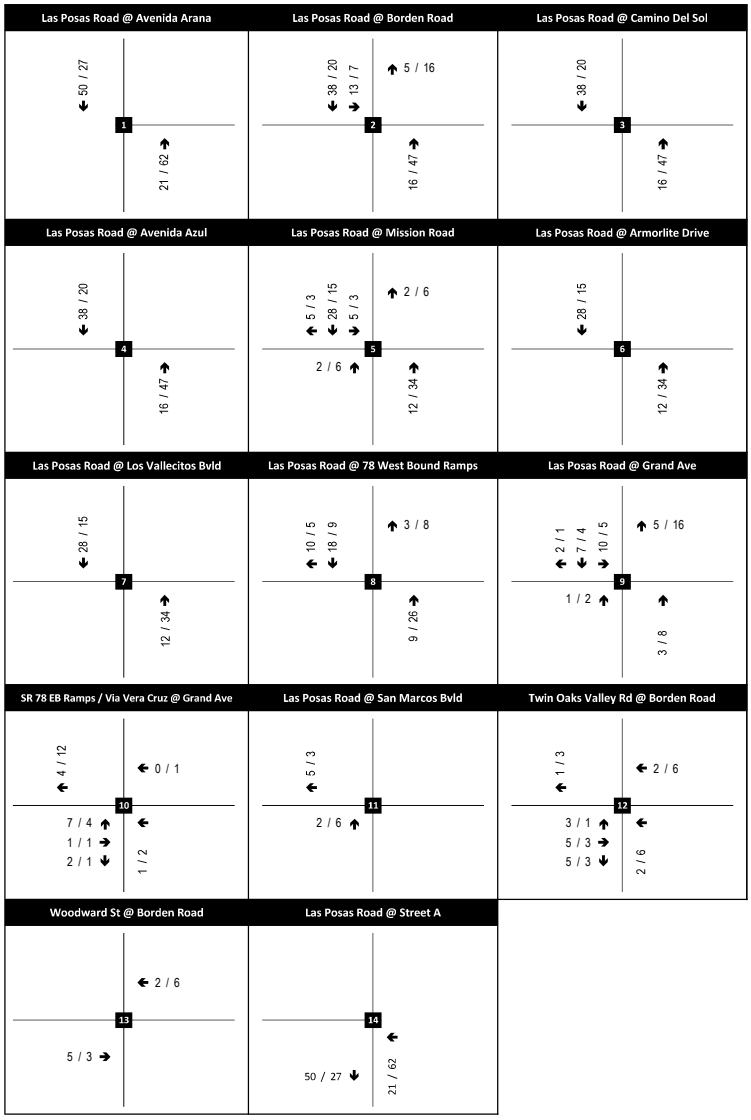
4.4 Project Trip Assignment

Based on the near-term conditions project trip distribution, project trips were assigned to the study intersections and roadway segments as displayed in **Exhibit 4-3** and **Exhibit 4-4**, respectively.



The assignment of project trips based on the Horizon Year 2035 trip distribution is shown in **Exhibit 4-5** and **Exhibit 4-6** for the study intersections and roadway segments, respectively.

TRAFFIC

PROPOSED PROJECT

The project is located on a site within both the City of San Marcos and unincorporated San Diego County. All areas proposed to be developed on the site are planned to be annexed into the City of San Marcos. The portions of the project site that will be maintained as open space will remain within unincorporated San Diego County. The proposed project will consist of 189 single-family dwelling units and a 22-acre passive park use. The project will extend Las Posas Road as a two-lane roadway through the project site and will take access from two internal streets intersecting with Las Posas Road (Street "A" and Street "D").

Project Trip Generation

To determine the trips forecast to be generated by the proposed project, *April 2002 SANDAG Trip Generation* rates were utilized in accordance with the City of San Marcos and SANTEC/ITE Traffic Study Guidelines. The SANDAG *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region* (April 2002) showing the trip generation rate for the proposed land use is provided in Appendix D. Table 5 summarizes the project trip generation. As summarized in Table 5, the proposed project will generate a net increase of approximately 1,998 trips per day, which includes approximately 165 a.m. peak hour trips and approximately 199 p.m. peak hour trips.

Table 5
Proposed Project Trip Generation

Trip Generation Rates

Land Use	Unit	Daily (per unit)	AM Peak			PM Peak		
			Total	In	Out	Total	In	Out
Single Family Residential	DU	10	8%	30%	70%	10%	70%	30%
Passive Park	acre	5	13%	50%	50%	9%	50%	50%

Forecast Project Generated Trips

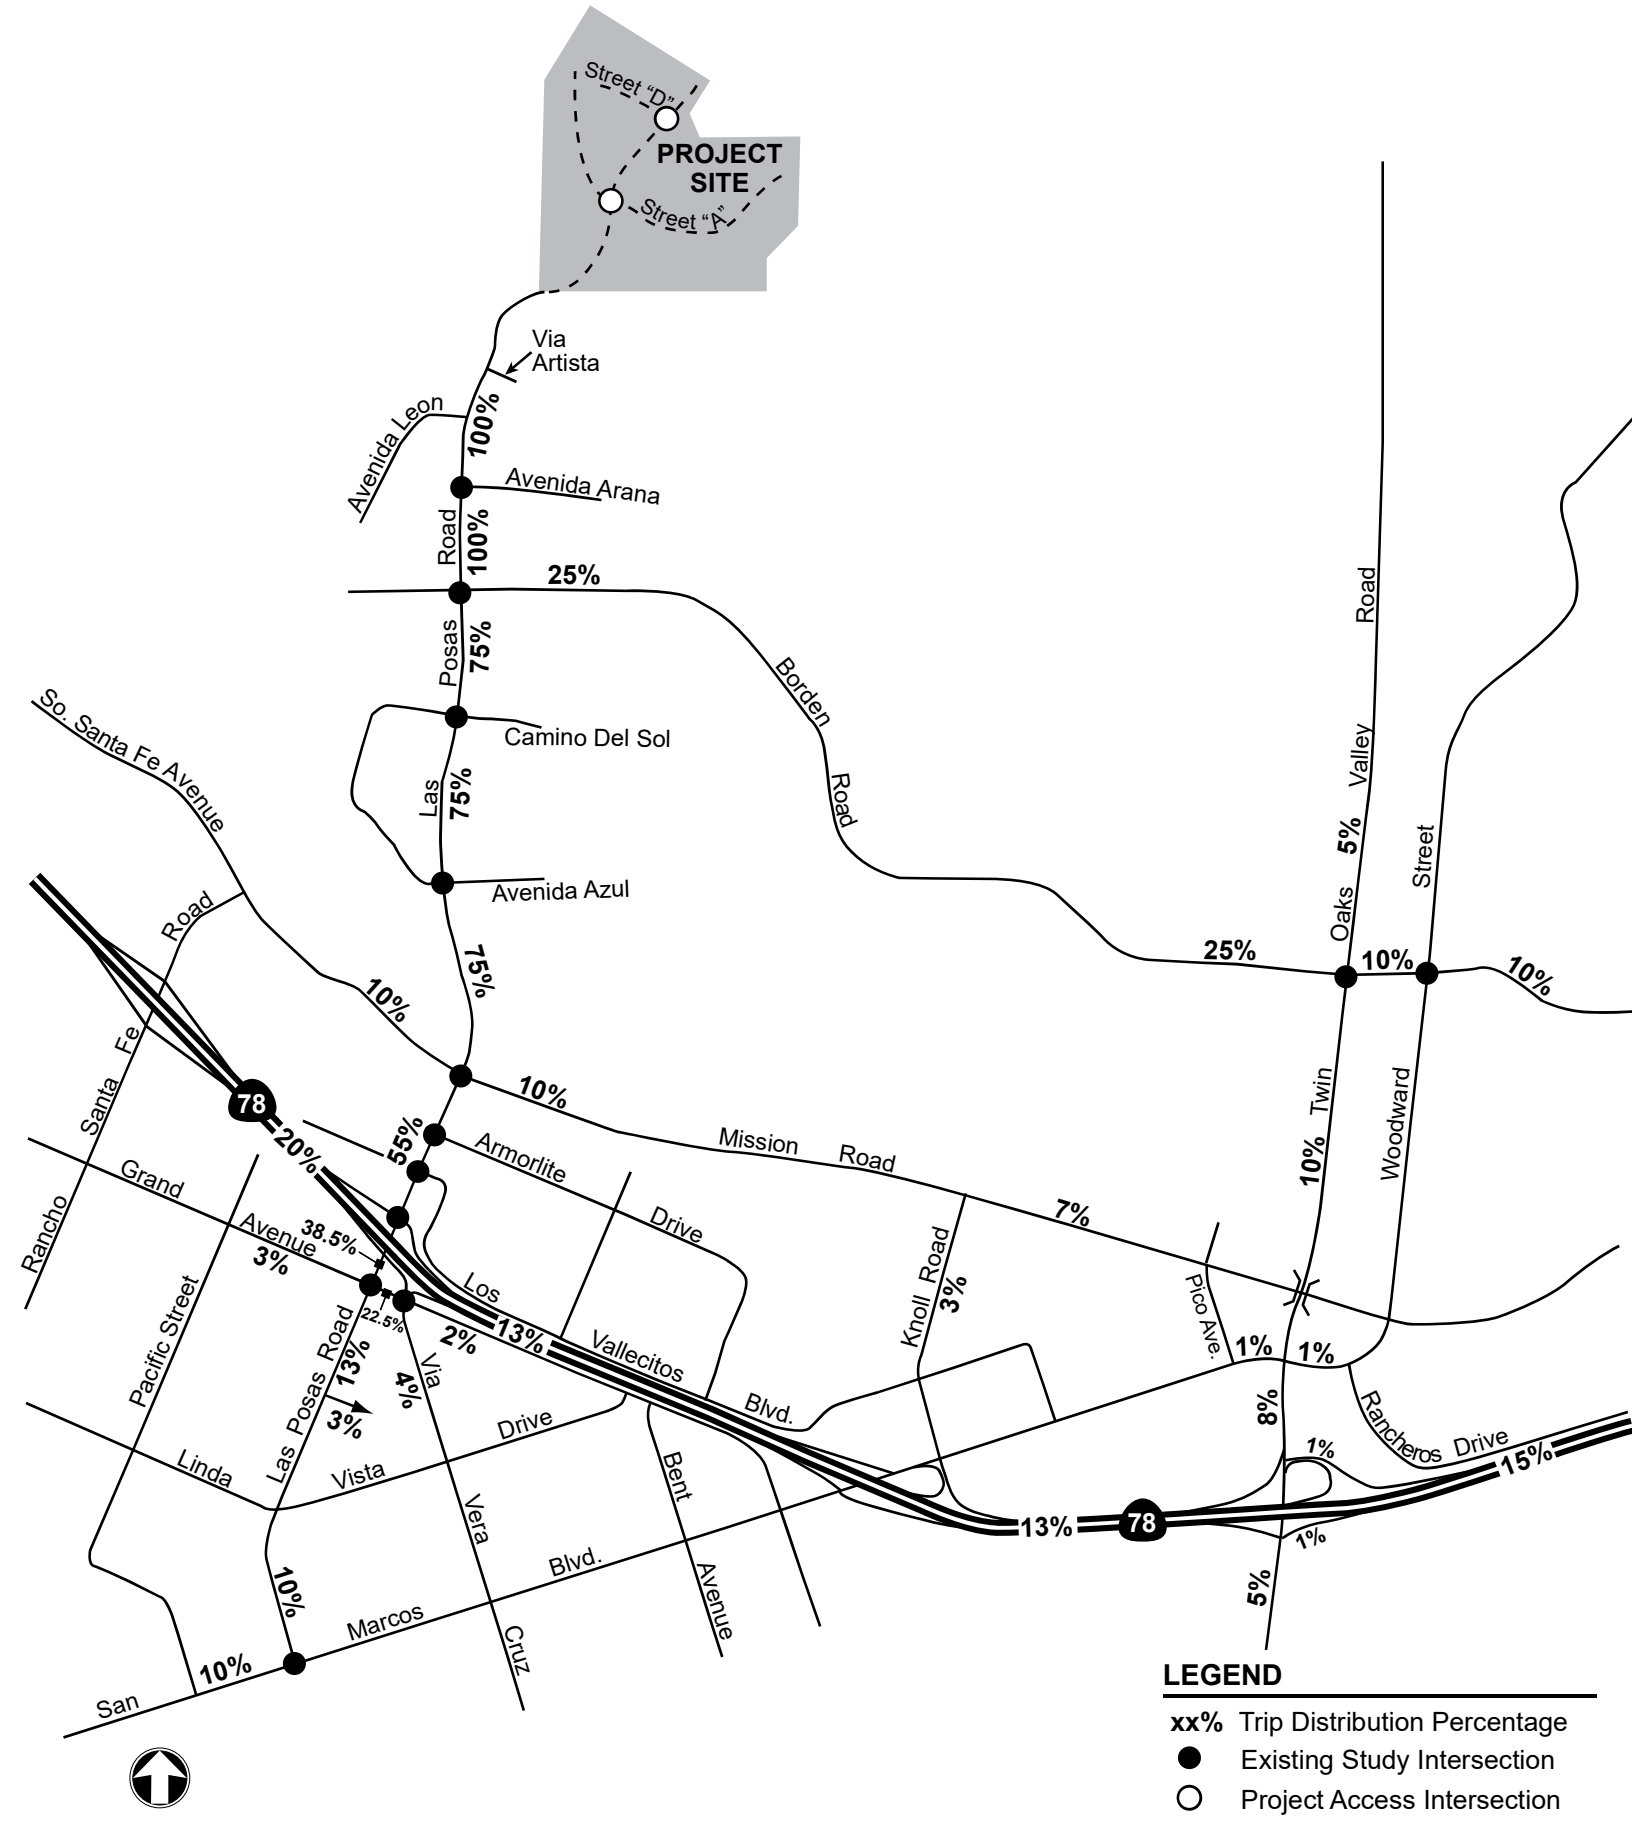
Source: SANDAG (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region (April 2002).

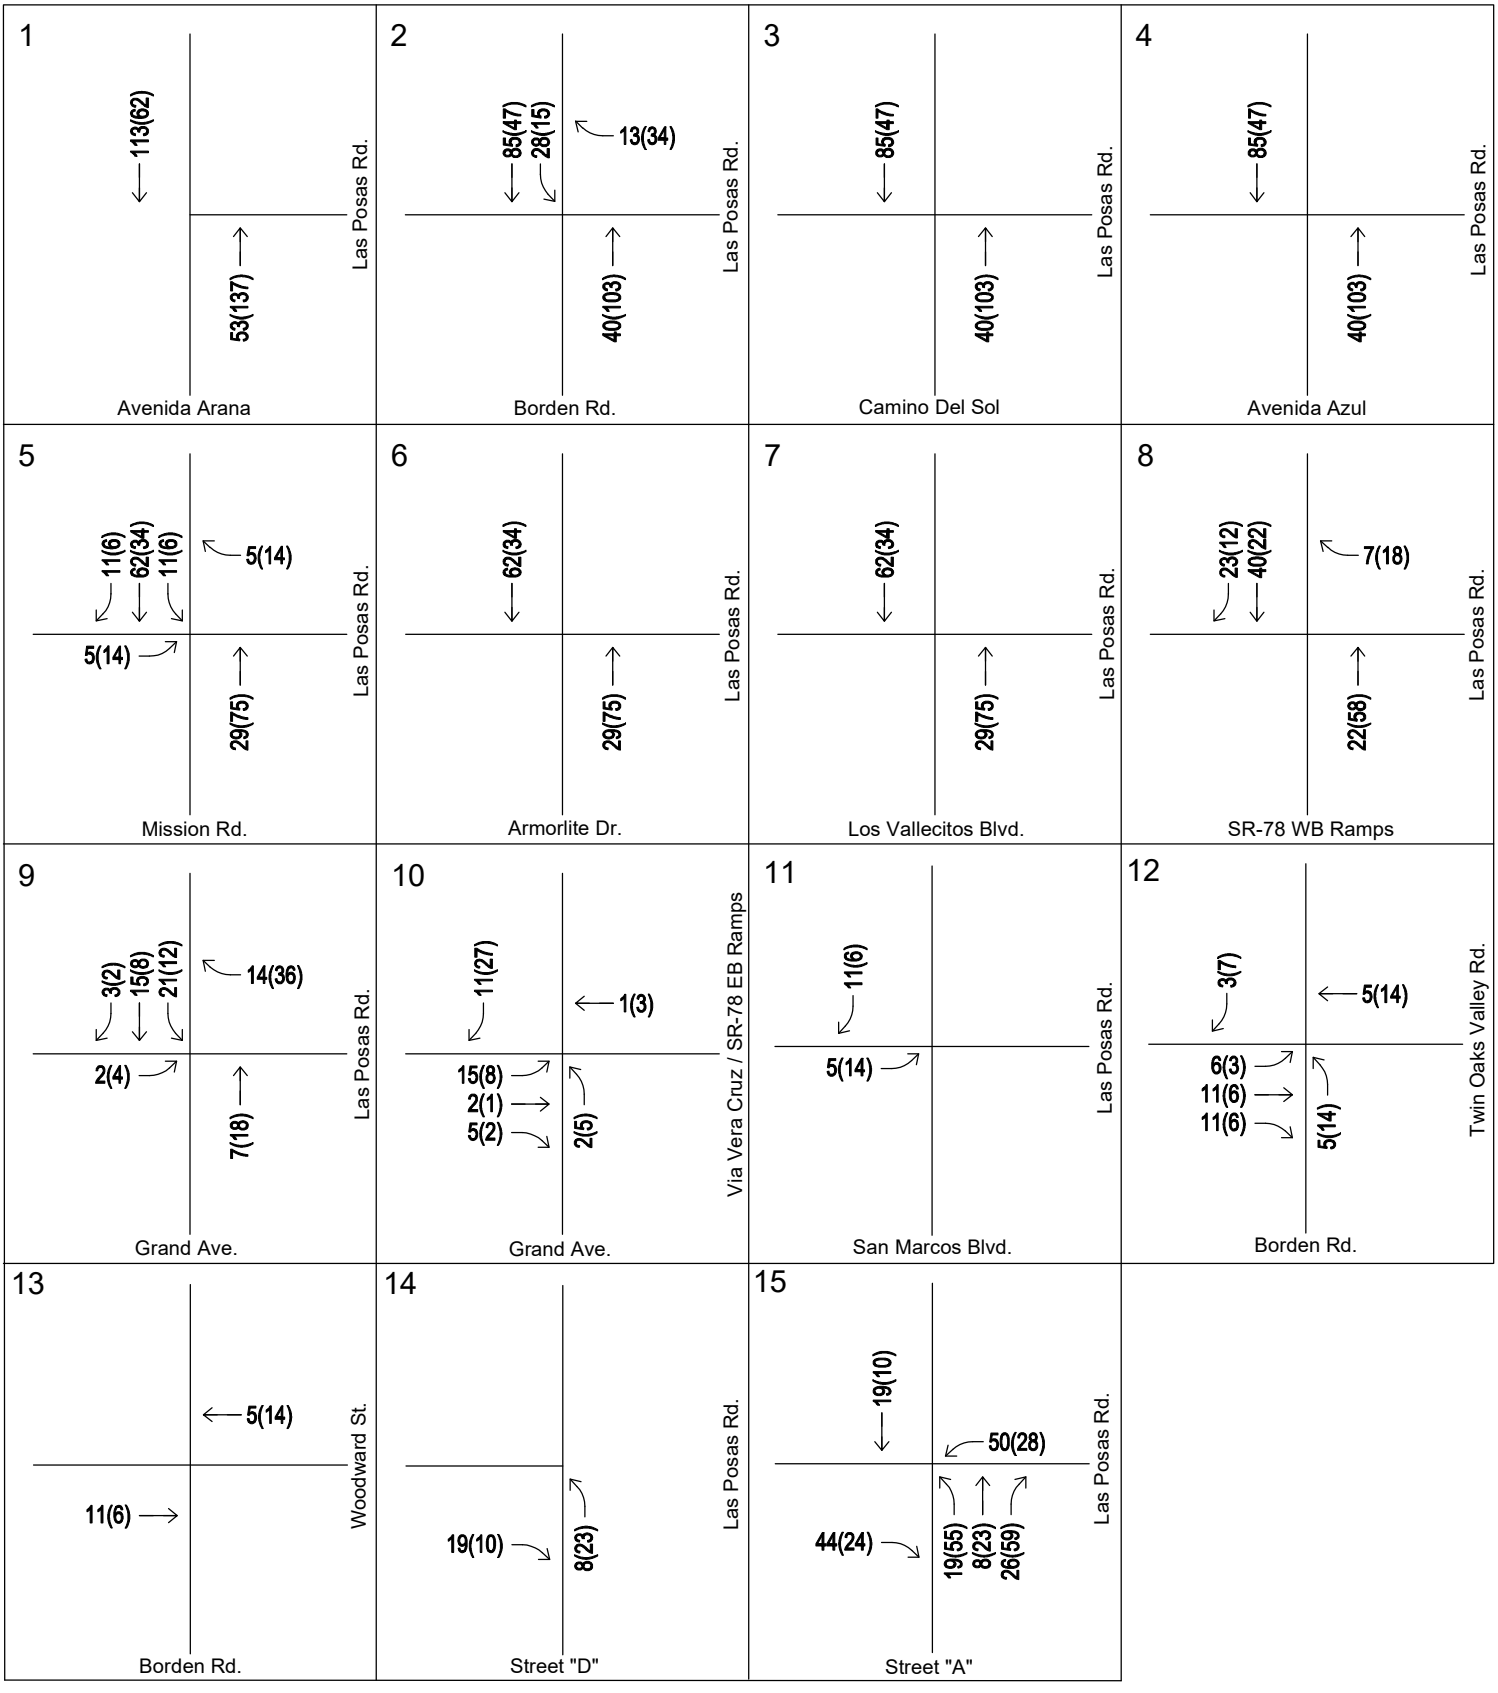


Project Trip Distribution and Assignment

The project trip distribution was developed based on the initial 2001 traffic impact analysis for the San Marcos Highlands project, but adjusted to account for the SR-78/Las Posas Road interchange and Borden Road extension that exists under the current 2014 conditions. By 2035 it is assumed that Las Posas Road is extended to Buena Creek Road based on the build-out of the County of San Diego Circulation Element. Therefore, two project trip distributions were developed for the project based on the roadway network changes from existing to year 2035 conditions.

Exhibit 7 illustrates the project trip distribution under near term future conditions. The Horizon Year 2035 Conditions project trip distribution, which assumes the Las Posas Road extension to Buena Creek Road, is illustrated in **Exhibit 8**.

Utilizing the project trip distributions shown in Exhibits 7 and 8, the forecast project-generated trips were assigned to the roadway network. The following exhibits illustrate the peak hour and daily project trip assignment for near term and Horizon Year 2035 Conditions:



- **Exhibit 9:** Near Term Conditions Peak Hour Project Trip Assignment
- **Exhibit 10:** Near Term Conditions Daily Project Trip Assignment
- **Exhibit 11:** Horizon Year 2035 Conditions Peak Hour Project Trip Assignment
- **Exhibit 12:** Horizon Year 2035 Conditions Daily Project Trip Assignment

Peak Hour Intersection Levels of Service

Table 6-1 summarizes the peak intersection operations for existing conditions. As seen in ***Table 6-1 (above)***, the following study intersection is calculated to currently operate at LOS F:

- San Marcos Boulevard / Knoll Road (LOS F during the PM peak hour).

Appendix C contains the existing intersection analysis worksheets.

Daily Street Segment Levels of Service

Table 6-2 summarizes the existing roadway segment operations. As seen in *Table 6-2*, all of the study segments are calculated to currently operate at LOS C or better.

TABLE 6–2
EXISTING STREET SEGMENT OPERATIONS

Street Segment	Classification	Capacity (LOS E) [a]	ADT [b]	LOS [c]	V/C [d]
W. Mission Road					
Knoll Rd to Pico Ave	4-lane Major Arterial	40,000	15,280	0.382	B
Pico Ave to Woodward St	4-lane Major Arterial	40,000	13,800	0.345	B
Knoll Road					
W. Mission Rd to Furniture Row	4-lane Secondary Arterial	30,000	8,980	0.299	B
Furniture Row to San Marcos Blvd	4-lane Secondary Arterial	30,000	17,070	0.569	C
San Marcos Boulevard

a. Capacities based on SANTEC/ITE Guidelines. b. Average Daily Traffic Volumes.

c. Level of Service.

d. Volume to Capacity.

Trip Generation

The trip generation rates for the project are based on the rates outlined in SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002*. The proposed project is planned to develop 120 residential apartments, a 1,850 square-foot community center, a 1,000 square-foot laundry facility and approximately 7,000 square feet of neighborhood retail space.

A 10% mixed-use percentage reduction was applied to the project since a portion of the trips will not have origins/destinations outside of the development but will instead match between residential and commercial uses. A 5% transit/pedestrian reduction was also applied since the project site offers transit opportunities within walking distance to the site.

In addition, to accurately estimate trips generated by a retail type development, it is important to separate total trips into primary trips and pass-by trips. Primary trips are defined as trips that return to their place of origin, such as home-to-grocery-to-home. Pass-by trips are trips attracted from traffic already on the street system passing near the site while going from one location to another such as work-to-shopping center-to-home. These trips are not new traffic to the surrounding street system. Based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002,* a 10% pass-by reduction was applied. As shown in ***Table 8–1***, the project is expected to generate approximately 430 new ADT with the addition of 23 trips during the AM peak hour (2 entering and 21 exiting) and 49 trips during the PM peak hour (30 entering and 19 exiting).

TABLE 8–1

PROJECT TRIP GENERATION

Land Use	Size	Daily Trip Ends (ADTs)		AM Peak Hour				PM Peak Hour			
		Rate[a]	Volume	% of ADT	In:Out Split	Volume In	Volume Out	% of ADT	In:Out Split	Volume In	Volume Out

Pass-By Reduction [d]			(80)			(2)	(1)			(4)	(4)
Existing Land Uses											
Apartment	29 DU	6/DU	(180)	8%	2:8	(3)	(11)	9%	7:3	(11)	(5)
Specialty Retail / Strip Commercial	8,000 SF	40/SF	(320)	3%	6:4	(6)	(4)	9%	5:5	(15)	(14)
Sit-Down, High Turnover Restaurant	2,500 SF	160/SF	(400)	8%	5:5	(16)	(16)	8%	6:4	(19)	(13)
Total New Trips		—	430	—	—	2	21	—	—	30	19

Footnotes:

a. Rate is based on SANDAG's (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002. b. A 10% mixed-use reduction was applied.

c. A 5% transit / pedestrian reduction was applied. d. A 10% pass-by trips reduction was applied.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment? Less Than Significant Impact

As identified above, the project includes private recreation space including a community building (2,960 s.f.), a pool and pool deck with shade trellises, and a barbeque area. The project also includes four tot lots distributed throughout the project area. These recreational amenities are included as part of the project description and within the footprint of the proposed project. Any impacts associated with the construction of these amenities are analyzed within this environmental document. Impacts would be less than significant.

XVI. TRANSPORTATION/TRAFFIC

a) Conflict with the applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? Less Than Significant Impact

The project would generate increased traffic through the introduction of 60 additional multi-family residential units on the site.

In accordance with the San Diego Traffic Engineers Council/Institute of Traffic Engineers (SANTEC/ITE) Guidelines for Traffic Impact Studies in the San Diego Region (March 2000), all road segments where 50 or more project-generated trips peak hour trips are forecast to be added should be addressed in a traffic impact analysis. A traffic impact study was not prepared for the project since it will not generate 50 or more peak hour trips to any road segment or intersection.

As shown in **Table 15**, the project would generate 360 additional ADT, including 29 in the AM Peak hour and 33 in the PM peak hour.

The project site is accessed from Richmar Avenue, which runs from San Marcos Middle School in the west to Twin Oaks Valley Road in the east through a primarily residential area. Mission Road is the closest major roadway to the project site and is located south of the project running parallel to Richmar Avenue. The Mobility Element of the City's General Plan (Figure 3-1) classifies the segment of Mission Road in the project vicinity (between Las Posas Road and Twin Oaks Valley Road) as a 4-Lane Major Arterial with enhanced bicycle and pedestrian facilities.

Based upon information from the City's Public Works Department (Transportation Engineering Division) existing average daily traffic (ADT) along the segments of Mission Road closest to the projects site are presented in **Table 16**.

As shown in Table 16, ADTs range from 16,716 to 19,542 along the segments of Mission Road closest to the project.

Table 15. Project Trip Generation

TRIP GENERATION RATES										
		AM PEAK HOUR				PM PEAK HOUR				
Land Use	Rate	% of ADT	In: Out Ratio			% of ADT	In: Out Ratio			
Multi-Family (greater than 20 du/acre)	6 trips/du	8%	0.20	:	0.80	9%	0.70	:	0.30	

TRIP GENERATION CALCULATIONS									
				AM PEAK HOUR			PM PEAK HOUR		
Land Use	Amount		ADT	Total	In	Out	Total	In	Out
Multi-Family (greater than 20 du/acre)	60	DU	360	29	6	23	33	23	10

Source: SANDAG 2002.
Note: DU = dwelling unit.

Table 16. Average Daily Traffic (ADT) for Select Mission Road Segments

Mission Road Segment	ADT(1)
Las Posas Road to Palomar College Entrance	18,394
Palomar College Entrance to Knoll Road	19,542
Knoll Road to Pico Avenue	15,924
Pico Avenue to Woodward Street/San Marcos Boulevard	16,716

Source: (1) City of San Marcos Traffic Counts ADT Table[1]

The City of San Marcos Urban Street Design Criteria identifies level of service (LOS) capacity for different types of roadways. For a 4-Lane Major Arterial, the capacity at LOS C is 28,000 ADT, the capacity at LOS D is 35,000 ADT, and the capacity at LOS E is 40,000 ADT.

Based upon the information presented in Table 16, all segments of Mission Road between Las Posas Road and Woodward Street/San Marcos Boulevard would operate at LOS C or better, since the ADTs are below the 28,000 ADT level. Even with the addition of project trips (up to 360 ADT), the combined ADT along these segments would still be operating at LOS C or better.

The City has established LOS D as the standard for acceptable intersection and roadway segment operations, except for roadways where the City's flexible LOS policy is implemented. Since Mission Road is operating at a minimum of LOS C and the project would not add traffic at a level that would result in a reduction from LOS C, impacts were determined to be less than significant.

HCM 6th Ctrl Delay	46.1
HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

HCM 6th LOS	D

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

VALLECITOS WATER DISTRICT

LAS POSAS MERITAGE HOMES WATER AND SEWER STUDY

WORK ORDER # 249106

FINAL TECHNICAL MEMORANDUM

March 23, 2022

Prepared By: Elizabeth Lopez, Senior Engineer, and Lisa Whitesell

---

INTRODUCTION

The proposed Las Posas Meritage Homes Project is a 120-unit multi-family residential development on 7.54-acres, located on the northwest corner of Las Posas Road and Mission Avenue (APN 219-121-15 & 219-121-16).

The Project property is located within VWD's boundaries for water and wastewater service. The property does not need to annex, both water and wastewater services can be provided by the Vallecitos Water District (VWD).

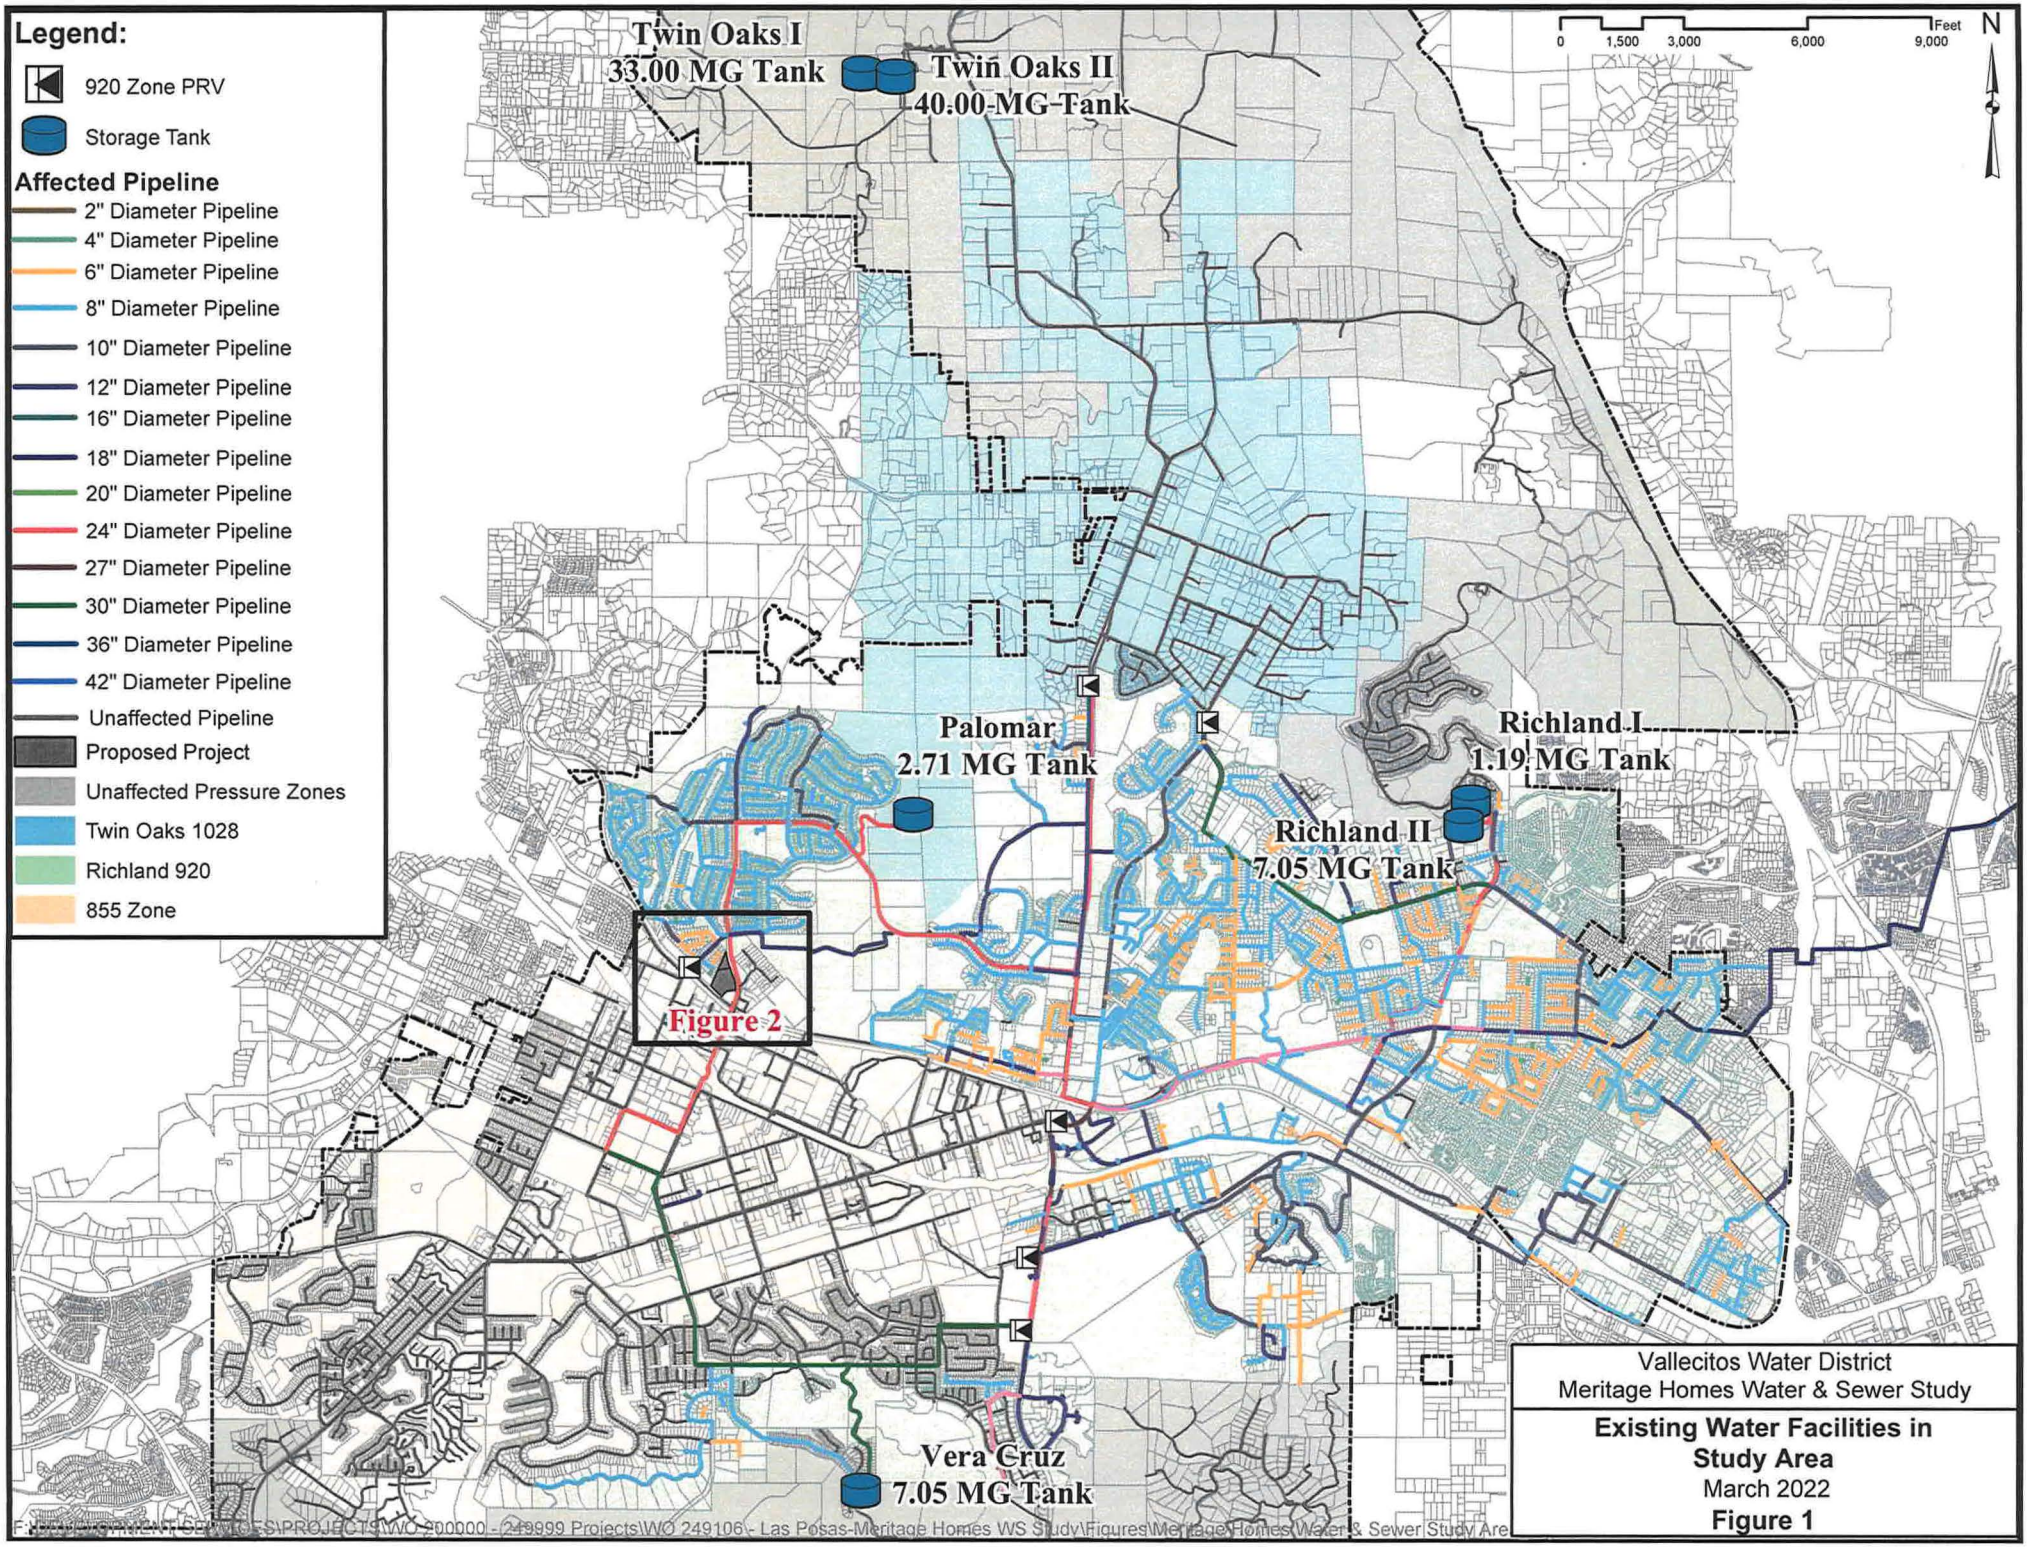
All new projects undergo evaluation by VWD to determine if the current water and sewer infrastructure is sufficient to accommodate the proposed water demands and sewage generation.

This study projects water demand and sewage generation increases due to the Project densification. It analyzes the following aspects of VWD's infrastructure and makes recommendations for capital improvements for impacts that are created due to the land use change:

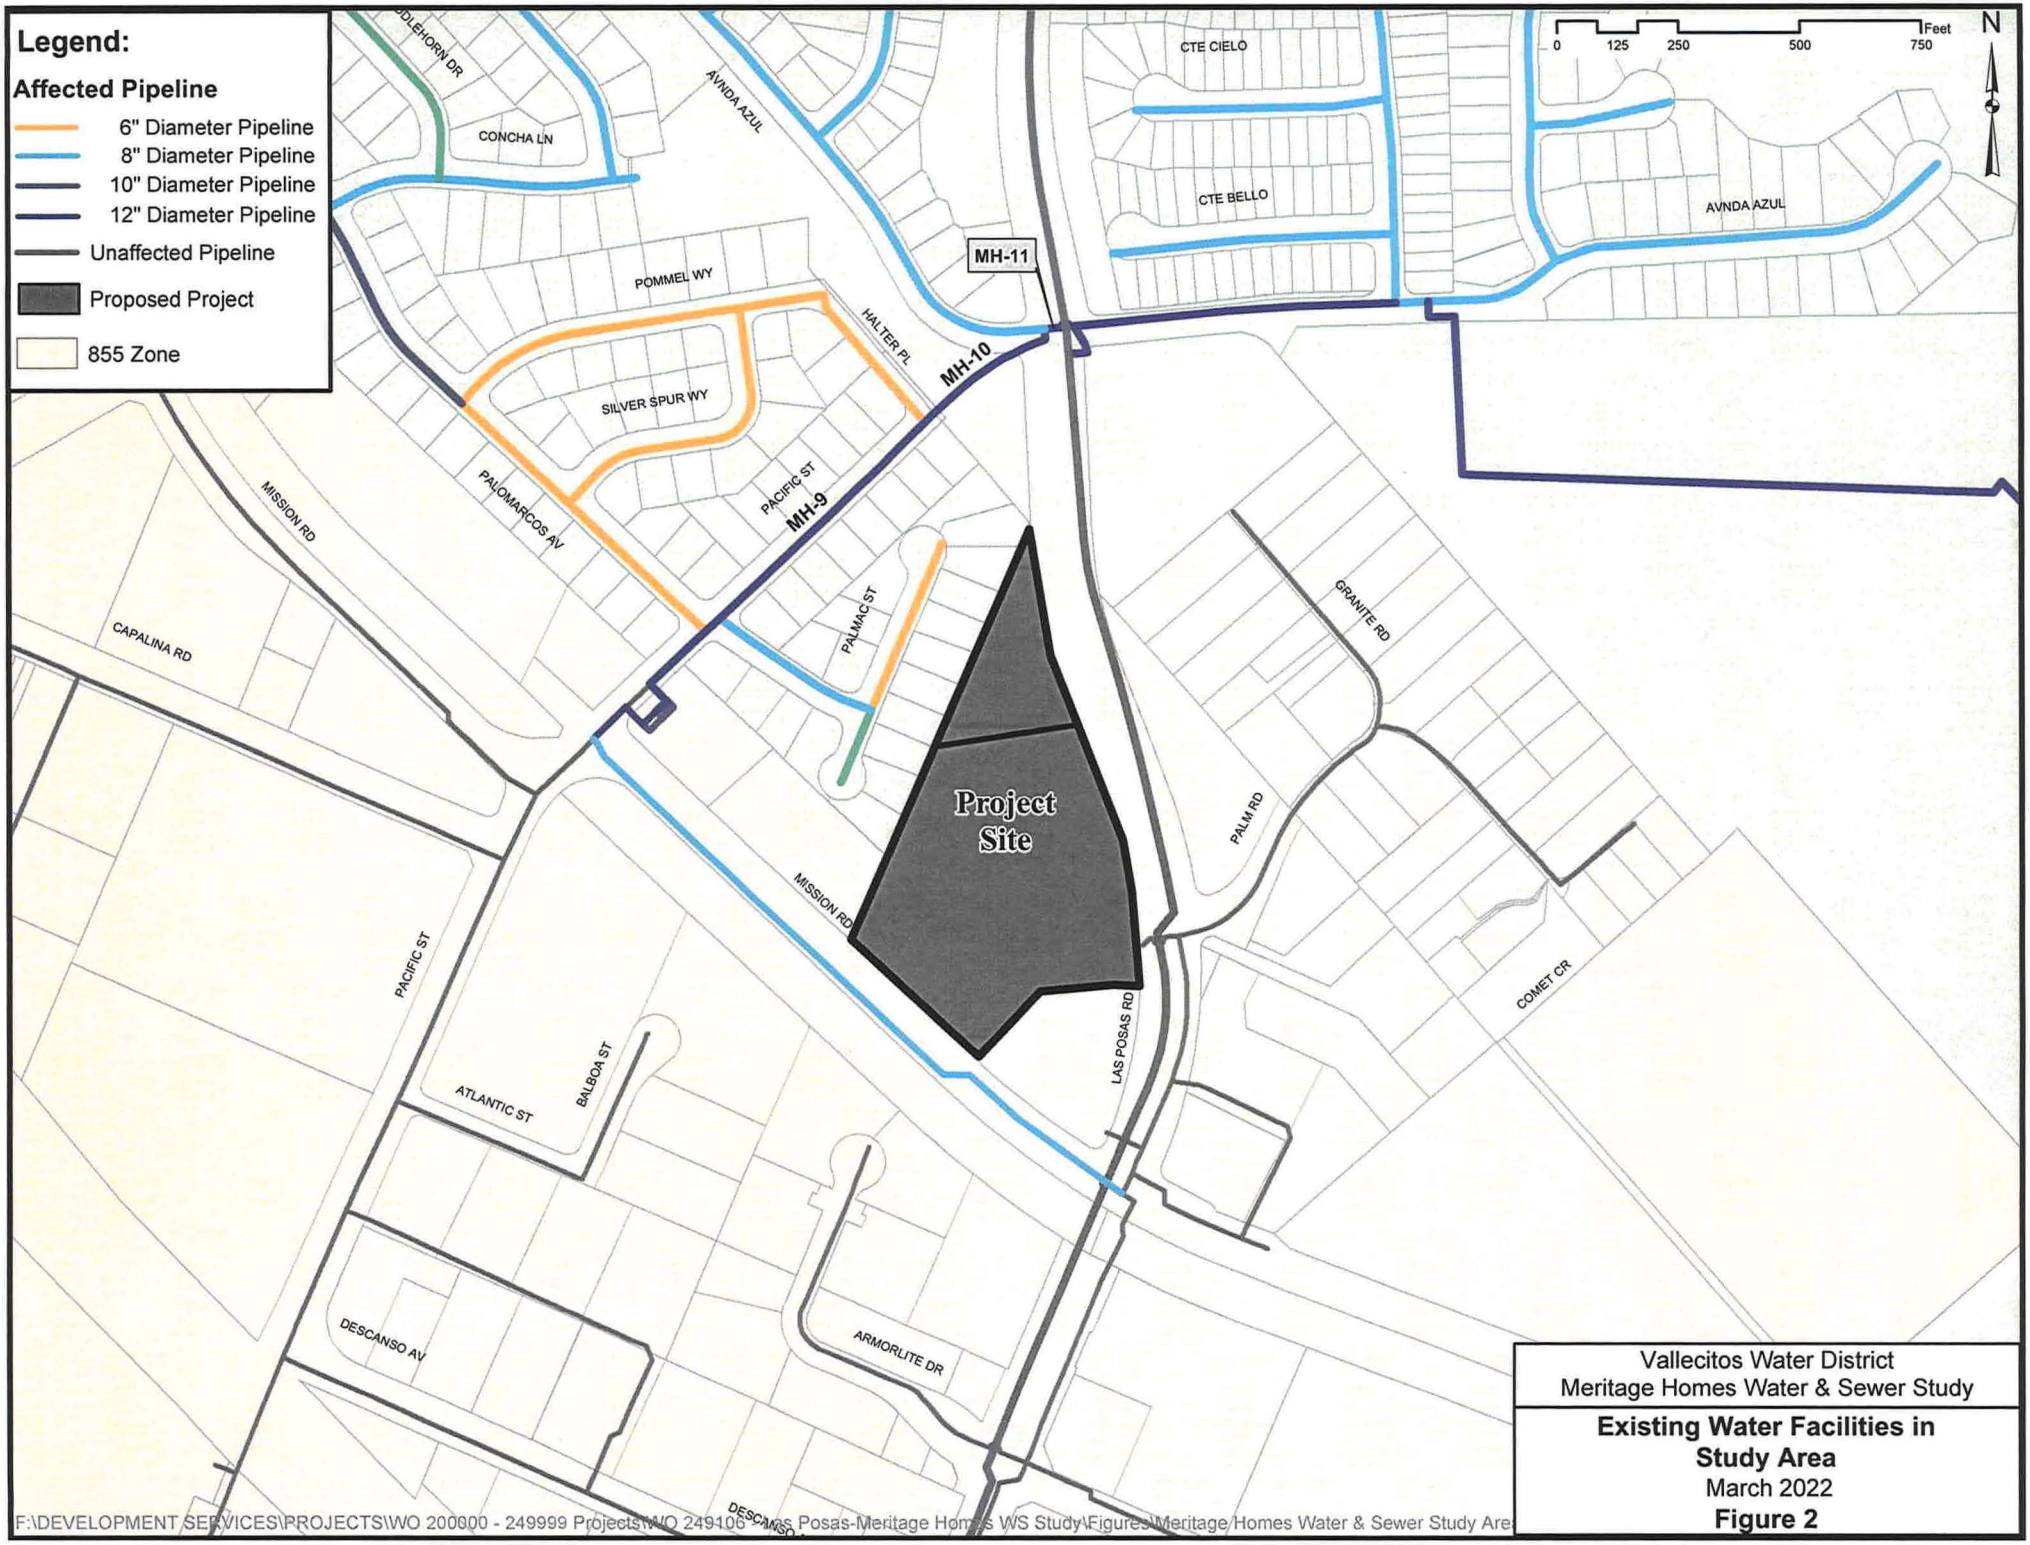
- Water distribution system, including the need to upsize pipelines, install new pipelines, or install flow control facilities.
- Water storage, including the need for additional storage and the adequacy of existing storage tanks and reservoirs to serve the proposed development.
- Water pump stations, including the need to install new pump stations or upsize existing pump stations to serve the proposed development.
- Wastewater collection system, including the need to upsize pipelines and manholes, or the need to install new pipelines and manholes.
- Wastewater lift stations, including the need to install new lift stations or upsize existing lift stations to serve the proposed development.
- Wastewater land outfall, including the need to construct a parallel land outfall to serve this and other proposed developments.

- Wastewater treatment facilities, including the need for obtaining additional capacity at the Encina Water Pollution Control Facility (EWPCF) or for expanding the Meadowlark Water Reclamation Facility (MRF).
- Existing VWD water and/or sewer facilities not being utilized for proposed development will need to be abandoned per VWD Standards and Specifications. Asbestos cement pipe shall be properly removed and legally disposed of by Developer.

WATER SYSTEM ANALYSIS



The proposed 7.54-acre Project lies completely within VWD's 855 Pressure Zone. Figures 1 and 2 show the development's location in relation to pressure zone boundaries, identify pipelines within the vicinity of the development, and identify storage reservoirs that supply the development area.



Water Demand Projections

The Project property's City of San Marcos approved land use designation for the proposed Project is Commercial. The 2018 Master Plan based its ultimate water demand on the same land use. Table 1 provides the average water demand generated both under the density planned for the 2018 Master Plan and with the proposed Project. The table shows that Las Posas Meritage Homes will increase the projected average water demand from the 2018 Master Plan land use by 26,390 gallons per day.

Table 1 – Project Estimated Water Demands for Las Posas Meritage Homes

Land Use Type	Area (acres)	Residential Units	Duty Factor (gpd/ac)	Water Demand (gpd)
2018 Master Plan Land Use Demand				
Commercial	7.54		1,500	11,310
Total	**7.54**			**11,310**
Proposed Project Demand				
Residential (15-20 du/ac)	7.54	120	5,000	37,700
Total	**7.54**			**37,700**
Water Demand Increase				**26,390**

Water Distribution System Analysis

The 2018 Master Plan water system distribution and pressure criteria are as follows:

Water Distribution Infrastructure Criteria

The water service pressure criteria to be met by this development are as follows:

- Minimum allowable pressure at peak hour demand: 40 psi
- Minimum allowable pressure at max day plus fire demand: 20 psi
- Maximum allowable pressure: 150 psi

The City of San Marcos Fire Marshall has set the required fire demand at 1,850 gpm for the Project.

To avoid excessive velocity and headloss within the distribution system, the following pipeline design criteria was also utilized:

- Maximum allowable velocity: 7 feet per second
- Maximum allowable headloss gradient: 15 feet per 1,000 feet
- Hazen-Williams C-factor: 130

Water Model Scenarios

The following scenarios were modeled to identify system impacts that may be created by the proposed water demands, and to recommend any improvements required to provide service to the Project:

- Average Day Demand with existing demands at the Project site
- Average Day Demand with the proposed Project
- Maximum Day Demand with existing demands at the Project site
- Maximum Day Demand with the proposed Project
- Peak Hour Demand with existing demands at the Project site
- Peak Hour Demand with the proposed Project
- Maximum Day Demand plus Fire Flow with existing demands at the Project site
- Maximum Day Demand plus Fire Flow with the proposed Project

Per the 2018 Master Plan, maximum day demands for this project are 300% those of average day demands, and peak hour demands are 620% those of average day demands.

Water Model Results

Modeling focused on the infrastructure in the direct vicinity of the Project and did not create distribution system deficiencies under average day demand or maximum day plus fire flow demand.

Water Storage Analysis

The 2018 Master Plan outlines VWD's potable water storage reservoirs for each pressure zone as follows:

> 1.5 times ADD (operational storage) + 3.0 times ADD (emergency storage) + fire flow demand = 4.5 times ADD + fire flow demand
>
> OR
>
> 5.0 times ADD, whichever is greater.

The Project is located entirely within the VWD 855 pressure zone. Water storage for this zone is located within the 920 zone and 1028 Twin Oaks pressure zones, as shown in Figure 1. Table 2 shows the required storage in the 855, 920, and 1028 Twin Oaks pressure zones for existing and ultimate build-out (Master Plan) conditions relative to the existing storage provided within each zone.

Table 2 – Existing Reservoir Storage Capacity and Requirements

Pressure Zone	Existing ADD (MGD)	Existing Storage Requirement (MG)	Ultimate ADD (MGD)	Ultimate Storage Requirement (MG)	Existing Storage Available (MG)
855	3.74	50.05	6.79	101.25	0
920 Richland	5.61		10.40		18
1028 Twin Oaks	0.66		3.06		73
Totals	10.01	**50.05**	20.25	**101.25**	**91**

The Project will increase the projected average water demand by approximately 26,390 gallons per day as shown in Table 1.

The amount of additional reservoir storage required is 500% of the development's average day demand or:

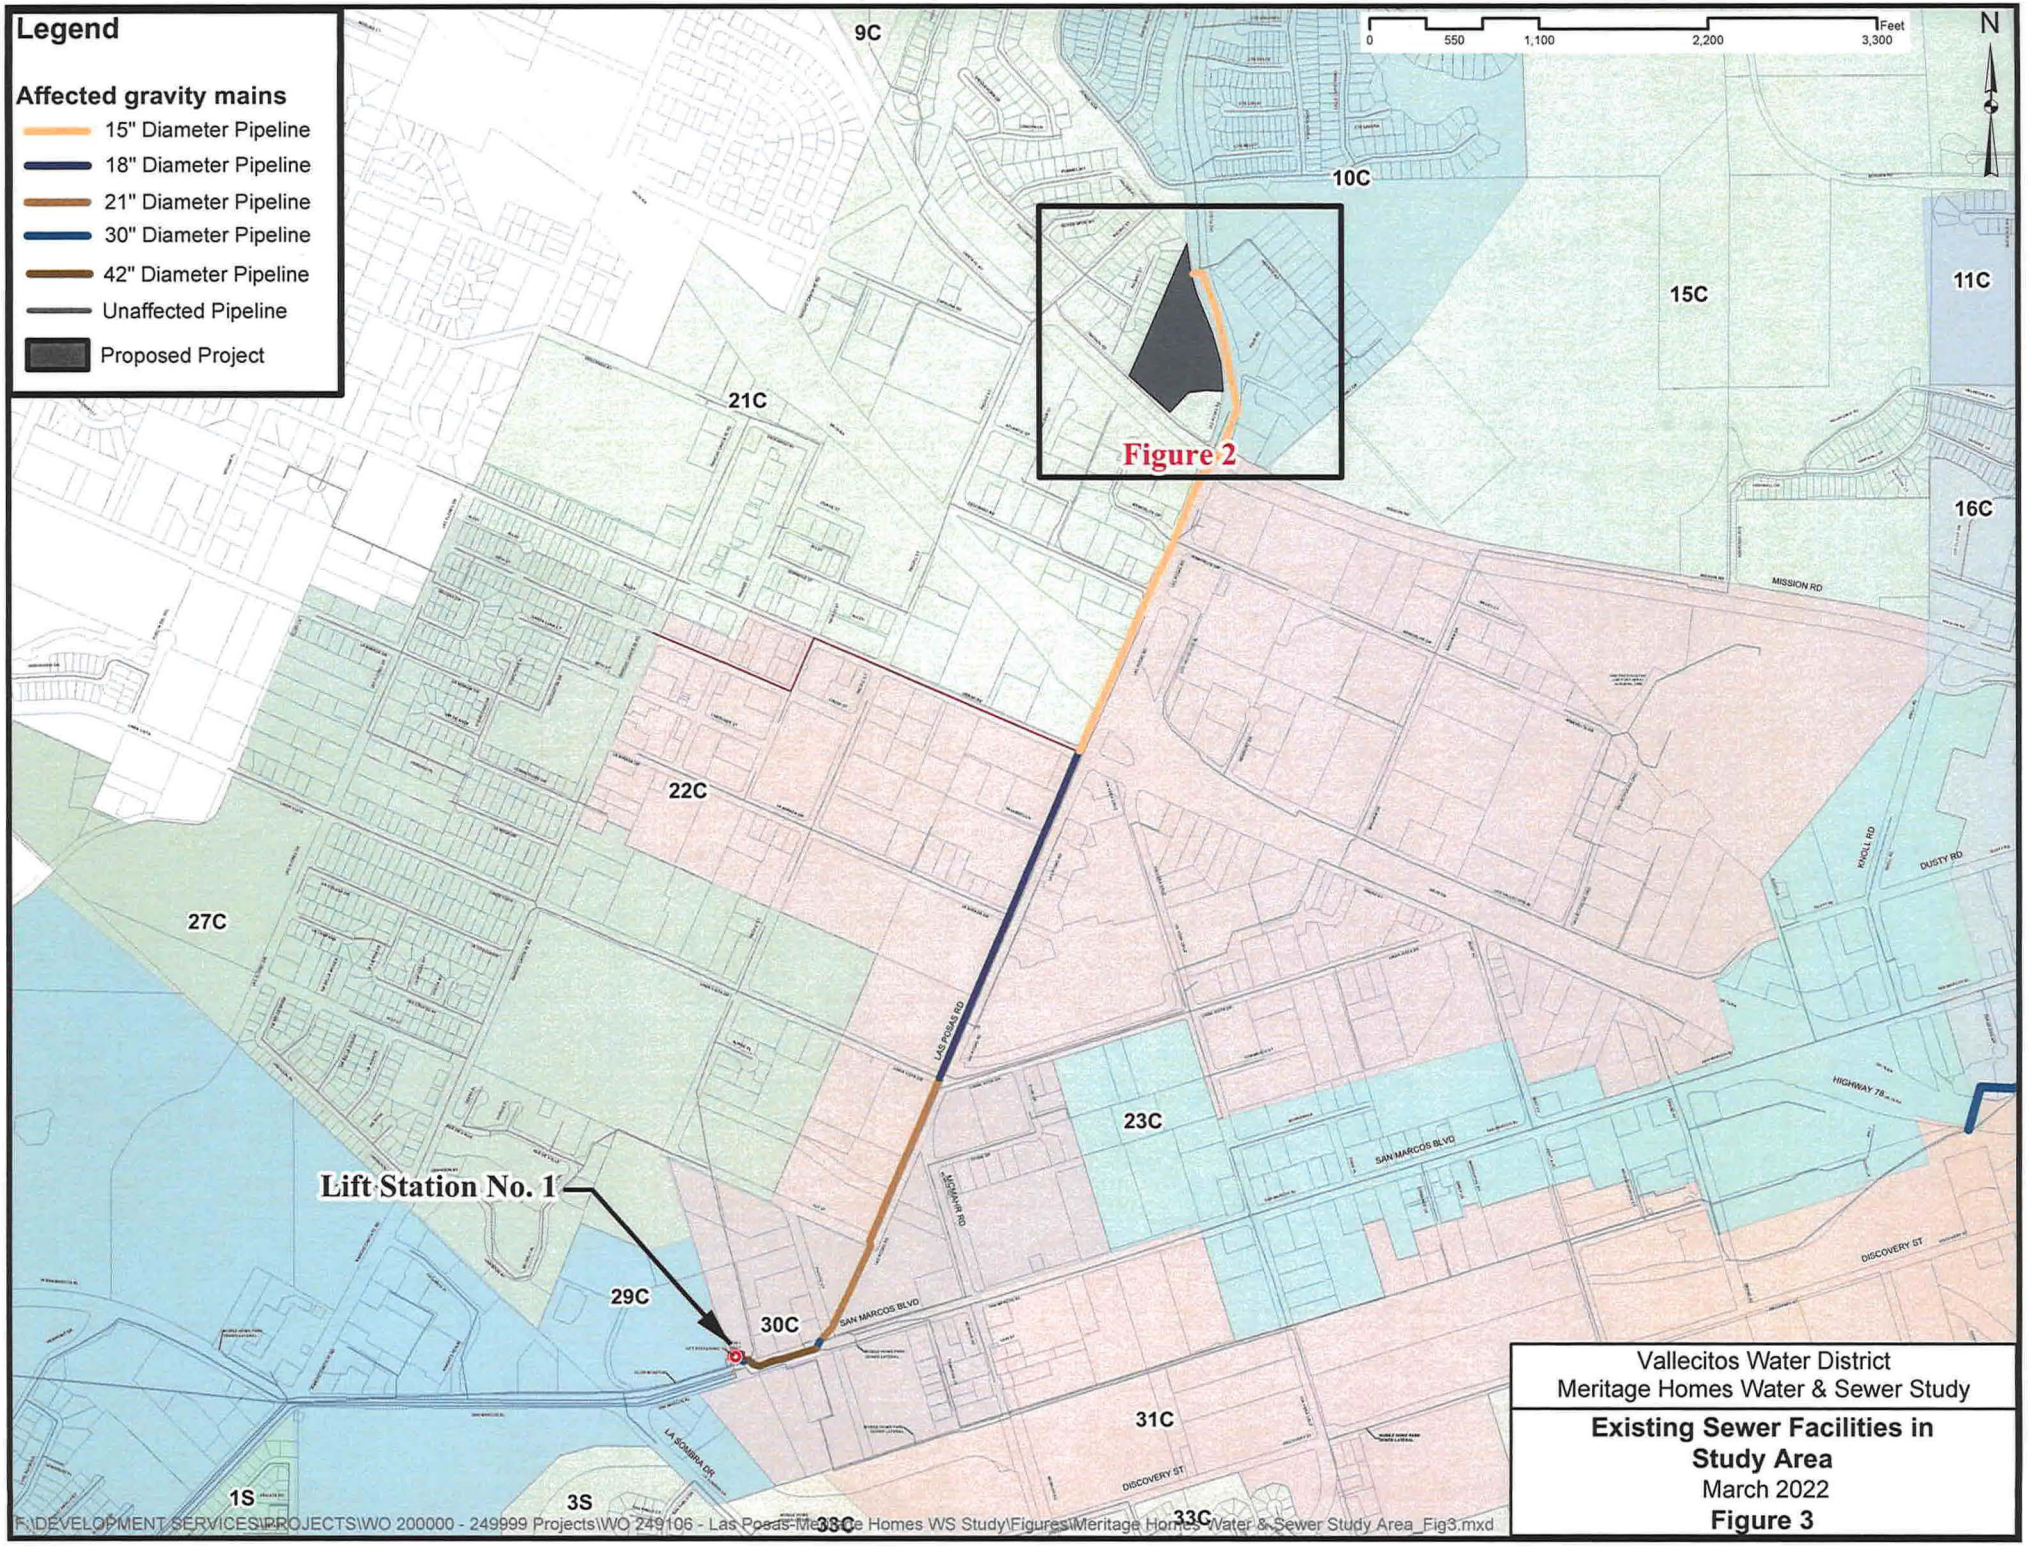
26,390 gallons * 500% = 131,950 gallons

The analysis finds that water storage capacity is currently available to serve the Project's increased storage requirements. Master Plan projects address and accommodate the ultimate build-out storage deficiency and Water Capital Facility Fees paid by this project will be used for the increase in storage necessitated by the Project's demand calculated above.

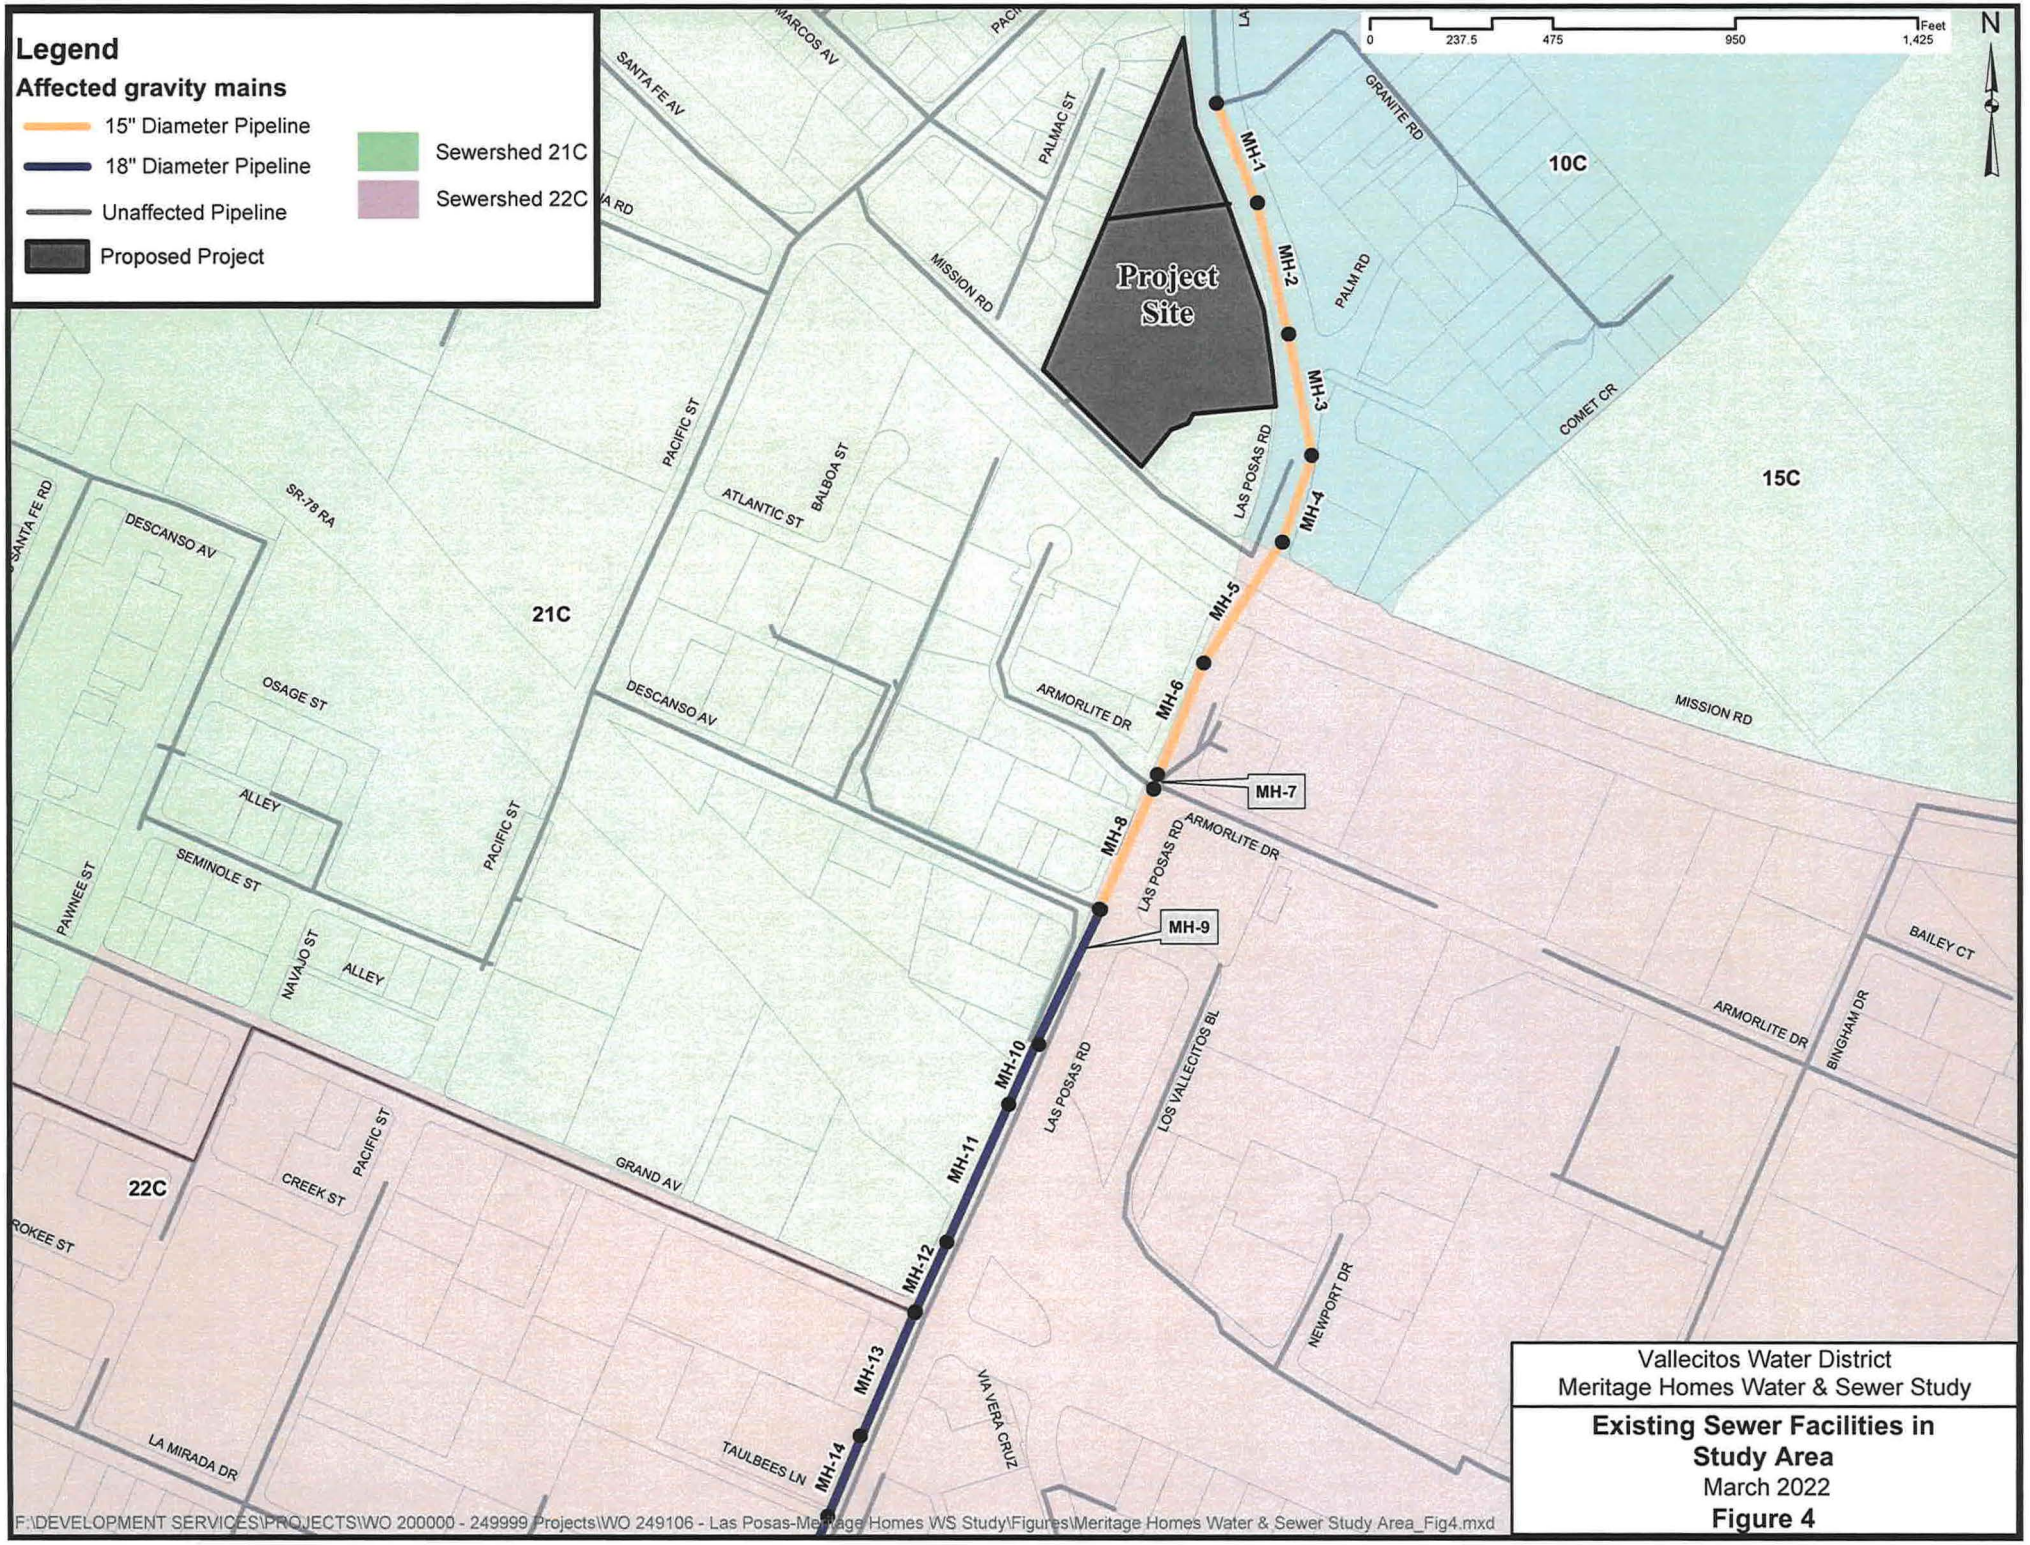
Water Pump Station Analysis

Since the proposed Project is located in a pressure zone that is not served by pumping, there are no impacts to existing or proposed pump stations by this Project.

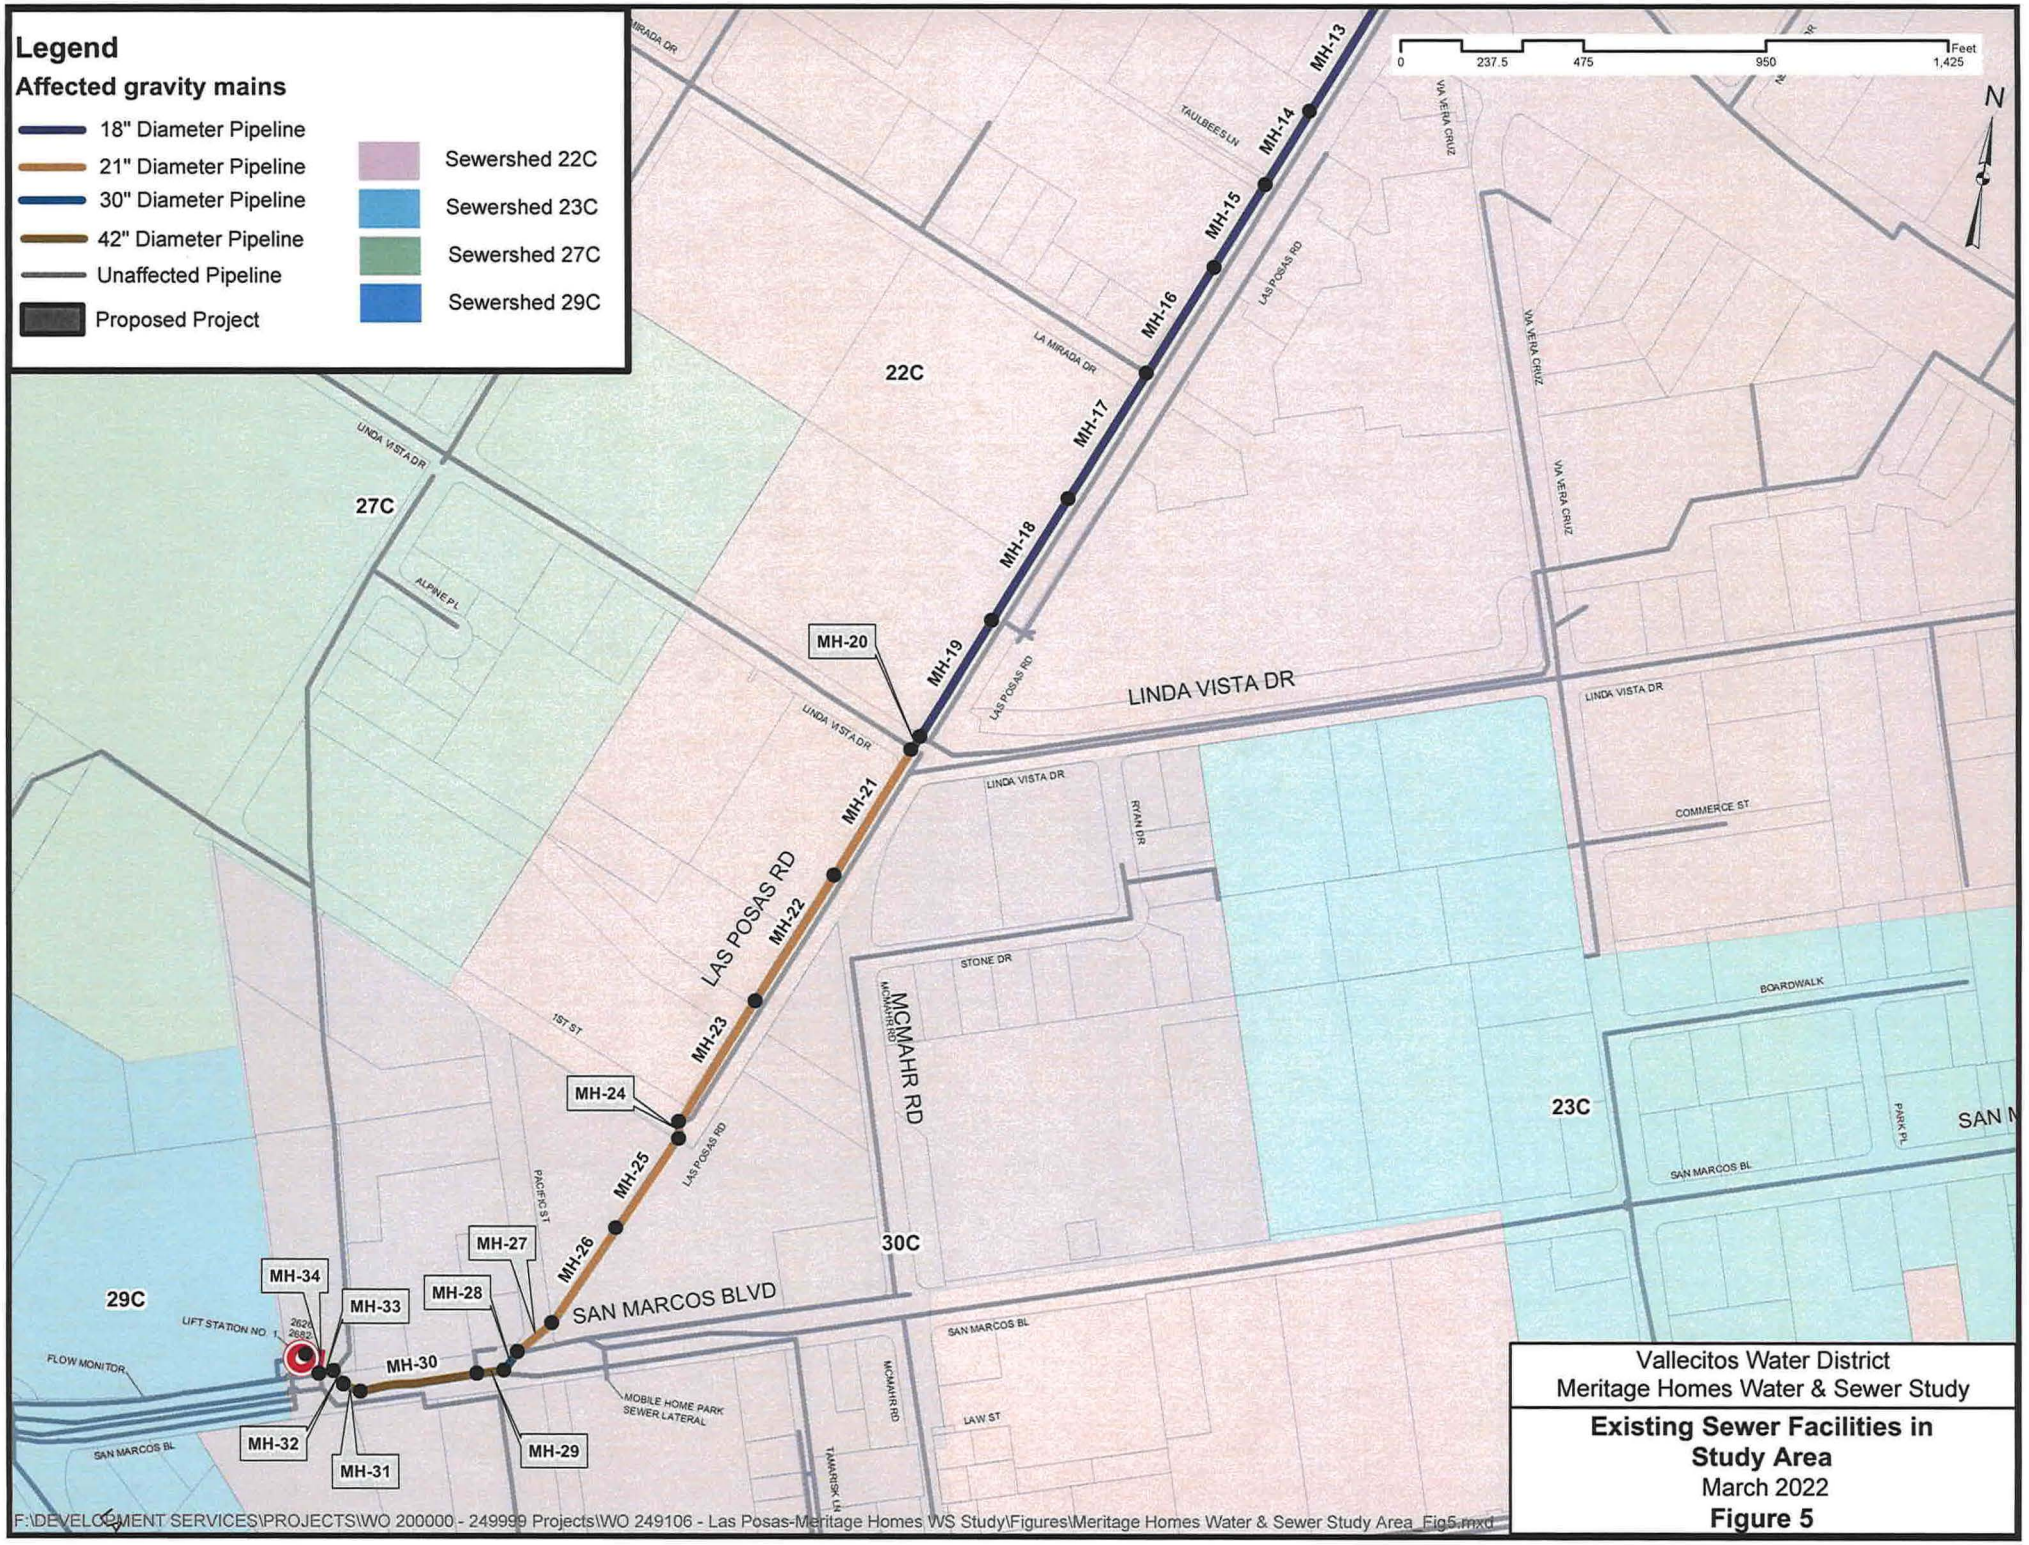
WASTEWATER SYSTEM ANALYSIS



The proposed 7.54-acre Project lies completely within VWD sewer shed 21C. Figures 3 through 5 show the development's location in relation to sewer shed boundaries, identify wastewater infrastructure within the vicinity of the development, and identify the downstream collection infrastructure that will be impacted by the development.



Wastewater Flow Projections



The Project's City of San Marcos approved land use designation for the proposed Project is Commercial. The 2018 Master Plan based its ultimate wastewater generation planning on this same land use. Table 3 provides the average wastewater flow generated both under the density planned for the 2018 Master Plan and with the proposed Project. The table shows that the Las Posas Meritage Homes project will increase the projected average wastewater generation from the 2018 Master Plan land use by 15,834 gallons per day.

Table 3 – Project Estimated Wastewater Flows for Las Posas Meritage Homes

Land Use Type	Area (acres)	Residential Units	Duty Factor (gpd/ac)	Wastewater Flow (gpd)
2018 Master Plan Land Use Flows

Wastewater Collection System Analysis

The 2018 Master Plan outlines VWD's wastewater system design criteria which are as follows:

Wastewater Collection Infrastructure Criteria

The wastewater pipeline criteria to be met both within and downstream of the development are as follows:

- Pipes 12 inches in diameter and smaller: ½ full maximum at peak flow
- Pipes over 12 inches in diameter: ¾ full maximum at peak flow
- Minimum velocity: 2 feet per second
- Maximum velocity: 10 feet per second
- Manning's n for gravity pipes: .013
- Hazen-Williams C-factor for force mains/siphons: 120
- Slope for pipes 8 inches in diameter and smaller: 0.4% minimum
- Slope for pipes over 8 inches in diameter: to be determined by VWD

When flow depth in gravity pipes exceeds maximum levels as stated above, a pipe upsize will be specified.

Wastewater Model Scenarios

The following scenarios were modeled to identify system impacts that may be created by the proposed sewer generation, and to recommend any improvements required to provide service to the Project:

- Average Dry Weather Flow with existing flows at the Project site
- Average Dry Weather Flow with the proposed Project
- Peak Dry Weather Flow with existing flows at the Project site
- Peak Dry Weather Flow with the proposed Project
- Peak Wet Weather Flow with existing flows at the Project site
- Peak Wet Weather Flow with the proposed Project

The peak dry weather curve is:

$$\text{Peak Dry Weather Factor} = 2.16 \times (\text{Average Dry Weather Flow Rate})^{-0.1618}$$

The wet weather peak curve is:

$$\text{Peak Wet Weather Factor} = 2.78 \times (\text{Average Dry Weather Flow Rate})^{-0.087}$$

Wastewater Model Results

Modeling focused not only on the sewer collection infrastructure in the direct vicinity of the Project, but also on all downstream infrastructure from the development to Lift Station No. 1 on San Marcos Boulevard that would be impacted by the Project flows (see Figures 3 - 5).

Table 4 presents a summary of the modeling results from this analysis. The modeling results showed that no deficiencies have been identified under the currently approved density under peak wet weather flows during ultimate build-out conditions.

Wastewater Lift Station Analysis

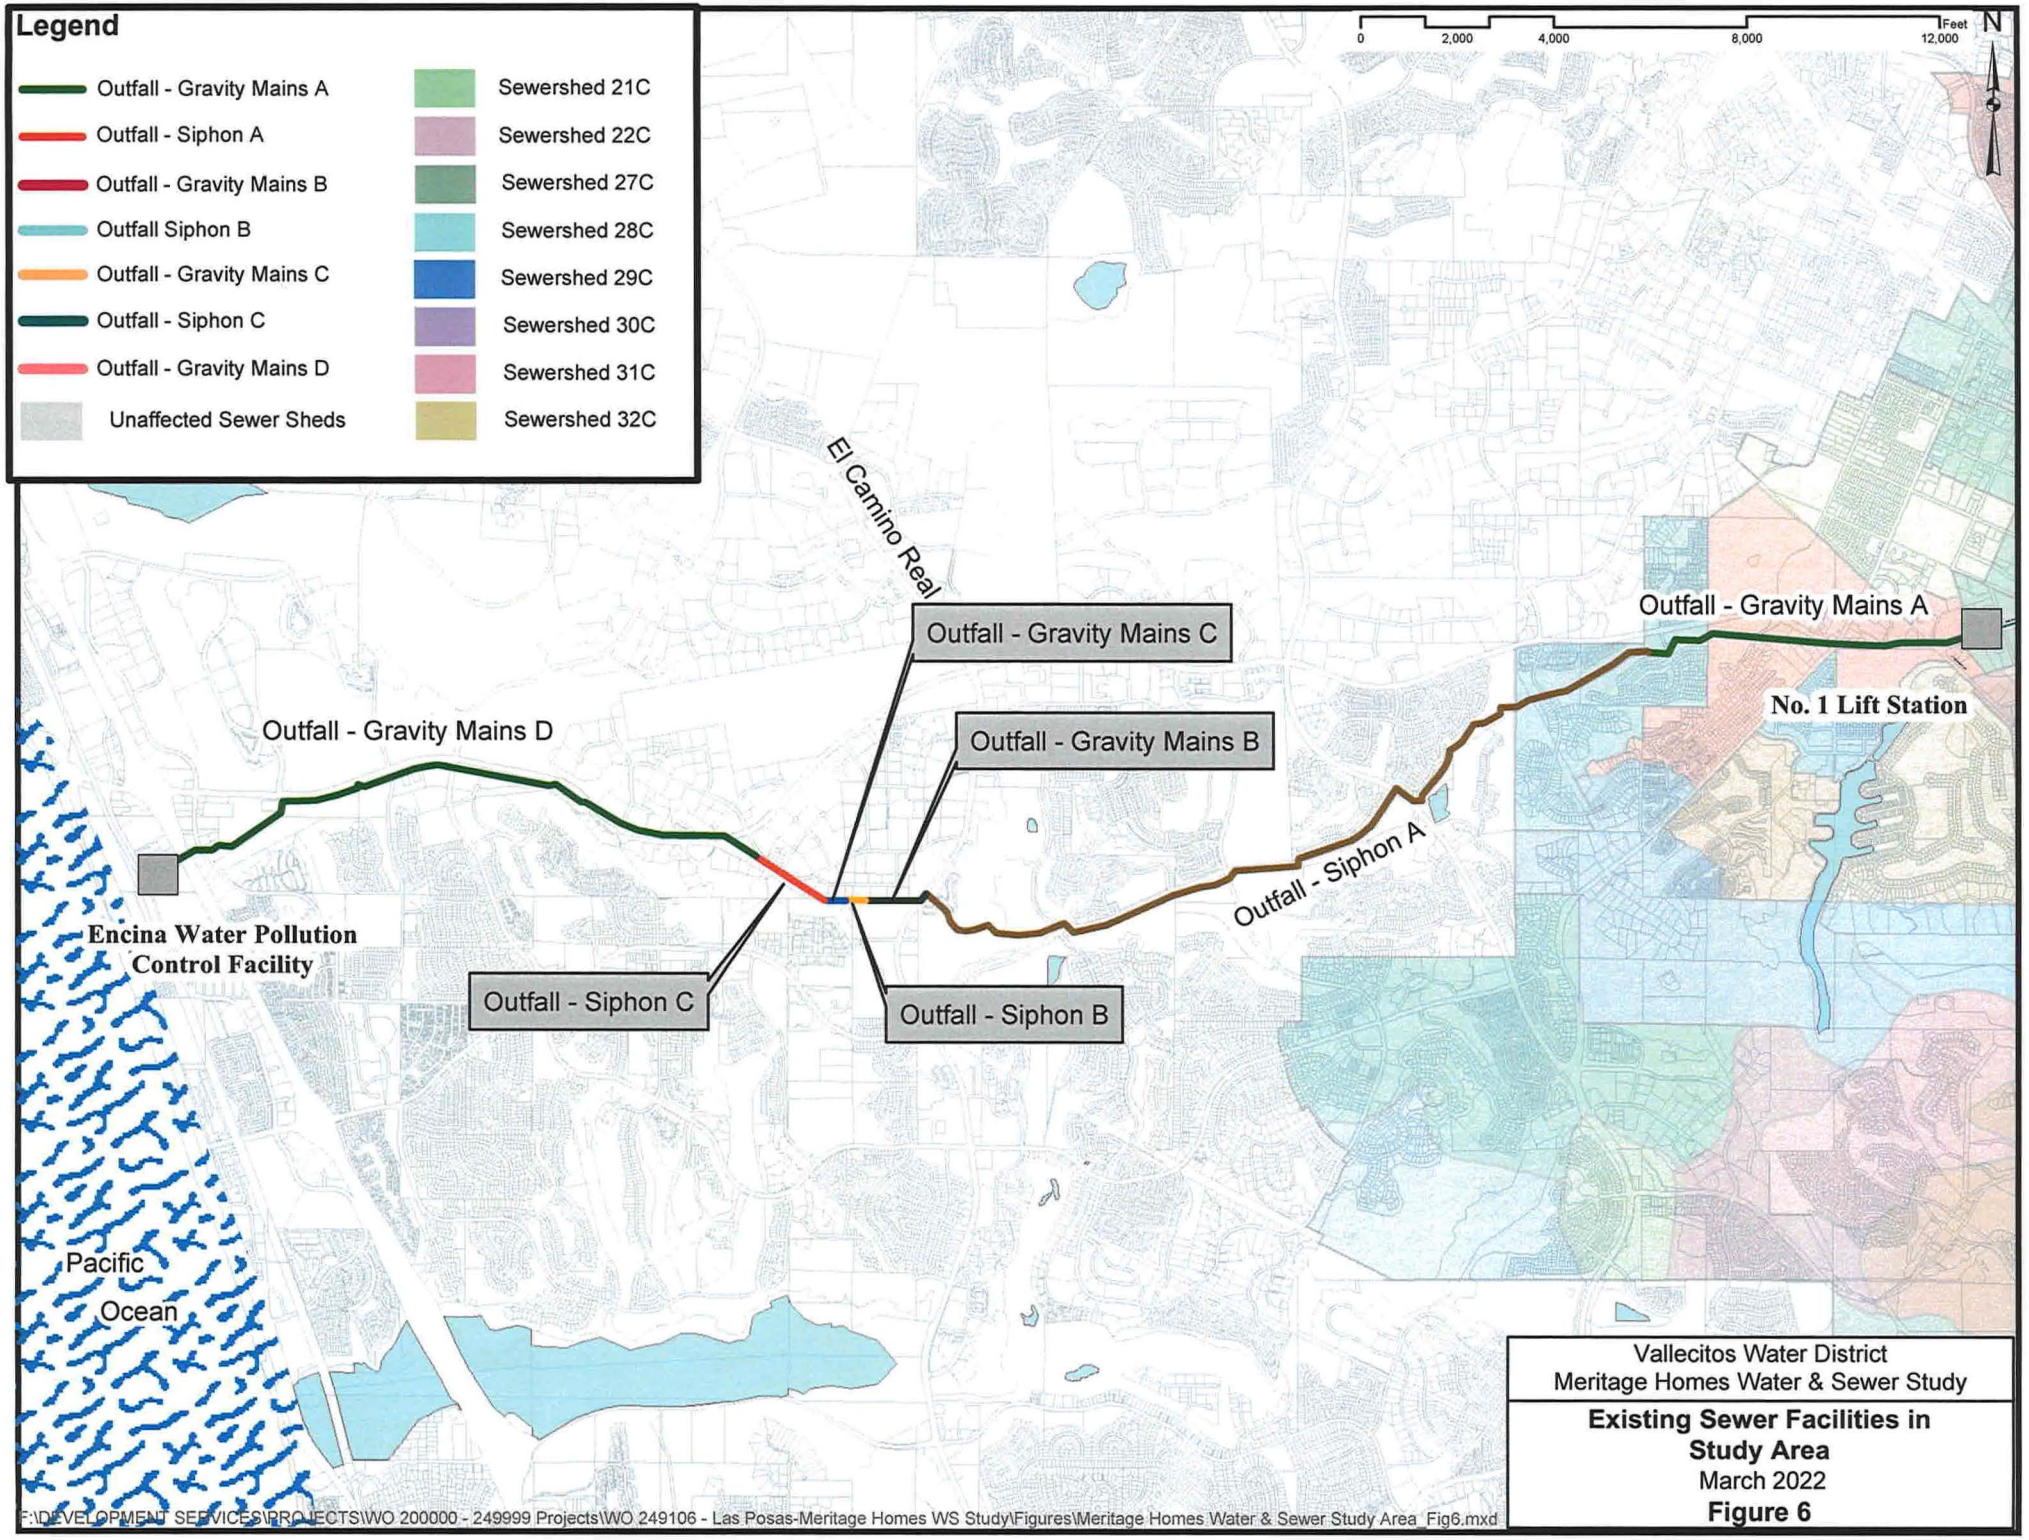
Lift stations are sized for peak wet weather flow with manufacturer's recommended cycling times for pumping equipment. Since the proposed Project is not located in a sewer shed that is served by a lift station, there are no lift station upgrade requirements for this project.

Parallel Land Outfall Analysis

VWD's existing land outfall is shown in Figure 6. The outfall is approximately 8 miles in length and consists of 4 gravity pipeline sections and 3 siphon sections varying in diameter from 20 inches to 54 inches. VWD maintains the entire pipeline from Lift Station No. 1 to the Encina Water Pollution Control Facility (EWPCF). From Lift Station No. 1 to El Camino Real, VWD is the sole user of this pipeline. From El Camino Real to the EWPCF, the ownership capacity is as shown in Table 5 below:

Table 5 – Land Outfall Capacity Ownership by Agency

Agency	Ownership Percentage	Capacity (MGD)
Carlsbad	23.98%	5.00
Vista	17.99%	3.75
VWD	58.03%	12.10
Totals	**100.00%**	**20.85**



The Meadowlark Water Reclamation Facility (MRF) has a capacity of 5.0 MGD with a peak wet weather capacity of 8.0 MGD. Therefore, VWD has a combined peak wet weather wastewater collection capacity of 20.10 MGD (12.10 MGD + 8.0 MGD).

VWD's 2014 average daily wastewater flow through the land outfall was 7.5 MGD. This corresponds to a peak wet weather flow of 17.5 MGD, which falls within VWD's combined peak wet weather collection capacity.

The 2018 Master Plan estimated that, under approved land uses, VWD has an ultimate build-out average dry weather flow of 14.4 MGD. This corresponds to a peak wet weather flow of 31.7 MGD, which exceeds VWD's combined peak wet weather collection capacity. To accommodate additional wastewater flows from planned development, the 2018 Master Plan recommended conveyance of peak flows to the EWPCF through a parallel land outfall.

The Project proposes to generate 15,834 gallons per day of additional average wastewater flow that was not accounted for in the Land Outfall's capacity studied in the 2018 Master Plan.

The analysis finds that outfall capacity is currently available to serve the Project's proposed wastewater generation. Wastewater Capital Facility Fees paid by this Project will be used toward design and construction of a parallel land outfall to be sized to accommodate ultimate build-out wastewater flows.

Wastewater Treatment Facility Analysis

VWD utilizes two wastewater treatment facilities to treat wastewater collected within its sewer service area.

- The Meadowlark Reclamation Facility (MRF) has liquids treatment capacity of up to 5.0 MGD with a peak wet weather capacity of 8.0 MGD. MRF does not have solids treatment capacity, and therefore all solids are treated at the Encina Water Pollution Control Facility (EWPCF).
- The EWPCF is located in the City of Carlsbad. This is a regional facility with treatment capacity of up to 40.51 MGD. VWD's current ownership capacity is noted below.

Solids Treatment Capacity
VWD currently owns 10.47 MGD of solids treatment capacity at EWPCF. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate solids treatment capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in a projected solids treatment capacity deficiency of 3.93 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the solid treatment capacity wastewater flow.

Liquids Treatment Capacity
VWD currently owns 7.67 MGD of liquids treatment capacity at the EWPCF in addition to the liquid's treatment capacity of 5.0 MGD at MRF for a total of 12.67 MGD of liquids treatment capacity. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate liquids treatment capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in a projected liquids treatment capacity deficiency of 1.73 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the ultimate average wastewater flow.

Ocean Disposal Capacity
VWD currently owns 10.47 MGD of ocean disposal capacity at the EWPCF. VWD's 2014 average daily wastewater flow was 7.5 MGD. Therefore, the analysis finds that adequate ocean disposal capacity exists at this time to serve the Project.

The ultimate average wastewater flow identified in the 2018 Master Plan is 14.4 MGD, resulting in an ocean disposal deficiency of 3.93 MGD. Wastewater Capital Facility Fees paid by this Project will be used towards the deficiency to accommodate the ocean disposal wastewater flow

The District has determined that adequate wastewater treatment and disposal capacity exists for the proposed Project at this time subject to the qualifications referenced in the Conclusions and Conditions.

CONCLUSION AND CONDITIONS

The proposed Las Posas Meritage Homes Project is expected to increase average daily water demands by 26,390 gallons per day and wastewater flows by 15,834 gallons per day over the ultimate flows projected in the 2018 Master Plan.

The study concludes that the proposed development will result in the following impacts:

- An increase of 26,390 gallons per day in water demand for proposed project.
- An increase of 131,950 gallons of potable water storage requirement.
- An increase of 15,834 gallons per day in solids handling, liquids handling and ocean disposal capacity requirements at Encina Water Pollution Control Facility.
- An increase of 15,834 gallons per day in the parallel land outfall's capacity requirement.

The following items are required for providing service to the proposed Project:

- Payment of all applicable Water and Wastewater Capital Facility Fees in affect at the time service is committed in accordance with District rules and regulations.
- Construction and acceptance of all on-site water and sewer facilities prior to service.

The District currently has water and sewer capacity available to serve the Project as proposed. However, the ability to provide water and sewer service in the future depends upon ultimate build-out of the Project and could change depending upon the timing of the build-out, as well as build-outs of other development projects, continued reliable water supplies from the San Diego County Water Authority, the District's treatment capacity at the EWPCF and other factors affecting growth in the District which may change over time.

This Study is based on the current adopted land use utilized in VWD's 2018 Master Plan. The study addresses the incremental facility impacts of this Project only and does not include or consider any additional projects within VWD's service area that have deviated from adopted Master Plan land uses. Any land use changes upstream and/or downstream of the Study area may necessitate a revision of any onsite and offsite studies. VWD shall determine if and when revisions to the Study are necessary. Costs for revising this Study shall be borne by the Developer. The results of this study are not the accepted conditions for the development, final conditions shall be part of the construction agreement process or issued separately by the District.

[Intentionally Blank]

1 - Introduction

1.0. Introduction

The Gran Vista Specific Plan, hereafter also noted as “Specific Plan,” has been written with the intent to provide regulations for the development of an attractive, transit-oriented, urban residential community at the west corner of North Las Posas Road and Palm Road in the City of San Marcos, California. The following chapters will explain the vision for this community and the proposed development standards, design guidelines, utilities, infrastructure, and public services necessary to implement that vision and support future development.

1.1. Overview of the Specific Plan

The Gran Vista Specific Plan provides the City of San Marcos a comprehensive planning tool to help guide the orderly development of a new planned residential community in a High Quality Transit Area as identified in the City of San Marcos’ Transportation Impact Analysis Guidelines. Located just west of Palomar College, the 7.6-acre Specific Plan planning area, hereafter also noted as “planning area,” is conveniently situated adjacent to the Inland Rail Trail and Palomar College Station, which includes a Sprinter Hybrid Rail Station and a bus depot. Based on proximity to these mobility options, the area has been designated as a High Quality Transit Area as part of the implementation of Senate Bill 743 (SB 743). The site is also within walking distance of educational, retail, office, and industrial uses, making it an ideal location for a transit-oriented infill community. The Specific Plan envisions a high quality, urban living environment that provides strong pedestrian connectivity to surrounding and modern recreational amenities. The Specific Plan proposes up to 120 three-story for-sale townhomes units with a maximum permitted density of 15.8 dwelling units per acre. New homes will range in size from a minimum of approximately 1200 square feet to 1800 square feet with two (2) to three (3) bedrooms. Each home will include private open space in the form of a patio and/or deck with an average of 146 square feet. Common recreational spaces, consisting of approximately 92,645 square feet of open space, will be designed with urban-style amenities such as tot lots, an off-leash dog space, outdoor exercise equipment, a community garden, barbecue areas, and space for a variety of outdoor games. The new community will remain open to surrounding uses without gates and minimal walls. Architectural and landscape styles will reflect the urban setting. Buildings will be designed to engage and enhance an interconnected series of internal landscaped pathways and sidewalks along North Las Posas Road and West Mission Road to support convenient, safe, and efficient pedestrian movements that promote walkability and transit use.

1.2. Specific Plan Objectives

Specific Plans provide a tool for comprehensive and creative planning strategies that respond to the unique conditions of the site while implementing the goals and policies of the General Plan. The following objectives have been crafted to guide development that is consistent with the City of San Marcos General Plan:

1. Maximize residential densities, to the extent feasible, within proximity to major transit, education facilities, commercial uses, and trails to reduce reliance on automobiles and potentially minimize greenhouse gas (GHG) emissions.

2. Create a highly connected and efficient system of sidewalks and pathways supported by pedestrian friendly architecture and landscaping to promote walkability and connect people to surrounding transit and destinations.

3. Design a vehicular circulation system that adequately accommodates traffic and minimizes traffic impacts in and around the planning area.

4. Support the housing needs of the City of San Marcos and the region by developing high-quality, workforce housing that balances density with price-points and long-term maintenance costs, such that new homes remain financially attainable to entry-level home buyers.

5. Establish development standards and design guidelines that ensure distinctive architecture, landscaping and recreational amenities that complement and enhance the existing surrounding neighborhood while providing a desirable living environment.

6. Identify a program for the long-term maintenance of the community to ensure all facilities are adequately maintained to City standards.

7. Finance or contribute a fair share of funding to all community services and infrastructure needed to support development proposed by the Specific Plan to promote economic stability.

1.3. Specific Plan Authority and Purpose

California Government Code §65450 in conjunction with the City of San Marcos Zoning Ordinance Chapter 20.535, authorizes the City's legislative body to prepare and adopt Specific Plans. The Specific Plan will become the vehicle for the systematic implementation of the City's General Plan with a defined area covered under the governing authority of the General Plan.

The Gran Vista Specific Plan serves as both a policy document and a regulatory document for the systematic implementation of the policies and goals of the General Plan. As a policy document, the Specific Plan embodies the broad policy directives of the General Plan and applies those policies and goals to the establishment of specific objectives for the planning area. As a regulatory document, the Specific Plan provides direction for the assignment of land uses, development intensities, development regulation, architectural and landscape design guidelines, grading, infrastructure design, development phasing, and financing. The planning and review process established by the Specific Plan emphasizes the direct and comprehensive correlation between land use, transportation, public services, and infrastructure necessary to support the efficient development of the planning area. When implemented, these elements of the Specific Plan will form a cohesive and rational development that complements and enhances the unique characteristics of this area of the City.

All subsequent development plans, tentative parcel and/or tract map(s) and/or similar entitlements for projects within the planning area shall be consistent with the regulations set forth in the Specific Plan and with other applicable City of San Marcos regulations. Where the Specific Plan is silent, the San Marcos Municipal Code (SMMC) shall govern. Definitions of all terms within this Specific Plan shall also be consistent with the definitions provided in the SMMC unless otherwise specified. This Specific Plan shall be adopted by Ordinance by the City of San Marcos City Council.

1.4. Contents of the Specific Plan

Per California Government Code §65451, the Gran Vista Specific Plan shall contain the following written and graphic information:

- The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.
- The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.
- Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.
- A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out [all of the above].

To comply with these requirements, the Gran Vista Specific Plan includes the following information:

- An introduction that includes the planning objectives for the Specific Plan. The Specific Plan objectives encompass the goals of, and is consistent with, the General Plan regarding land use, circulation, resource management, community design, as well as public services and utilities. A discussion of the Specific Plan's relationship to each General Plan Element is also provided (Chapter 1).
- Written descriptions and graphic illustrations of proposed land uses within the planning area, including clearly identified specific development patterns, intensity, and development standards (Chapter 2).
- Written descriptions and graphic illustrations of proposed vehicular, pedestrian, and bicycle circulation systems for the planning area and the connections to adjacent public and private transportation (Chapter 5).
- A public service and facility plan that identifies the specific agencies and extent of public services, utilities, infrastructure, and facilities necessary to serve the planning area including sewage, water, drainage, solid waste disposal, energy, and other essential facilities (Chapter 6).
- A financing and phasing plan that provides the general outline for phasing of improvements, financing mechanisms for proposed improvements and long-term maintenance of infrastructure, and an implementation program that provides the mechanisms available for project review procedures and regulations for specific development within the planning area and any future amendments to the Specific Plan (Chapter 7).

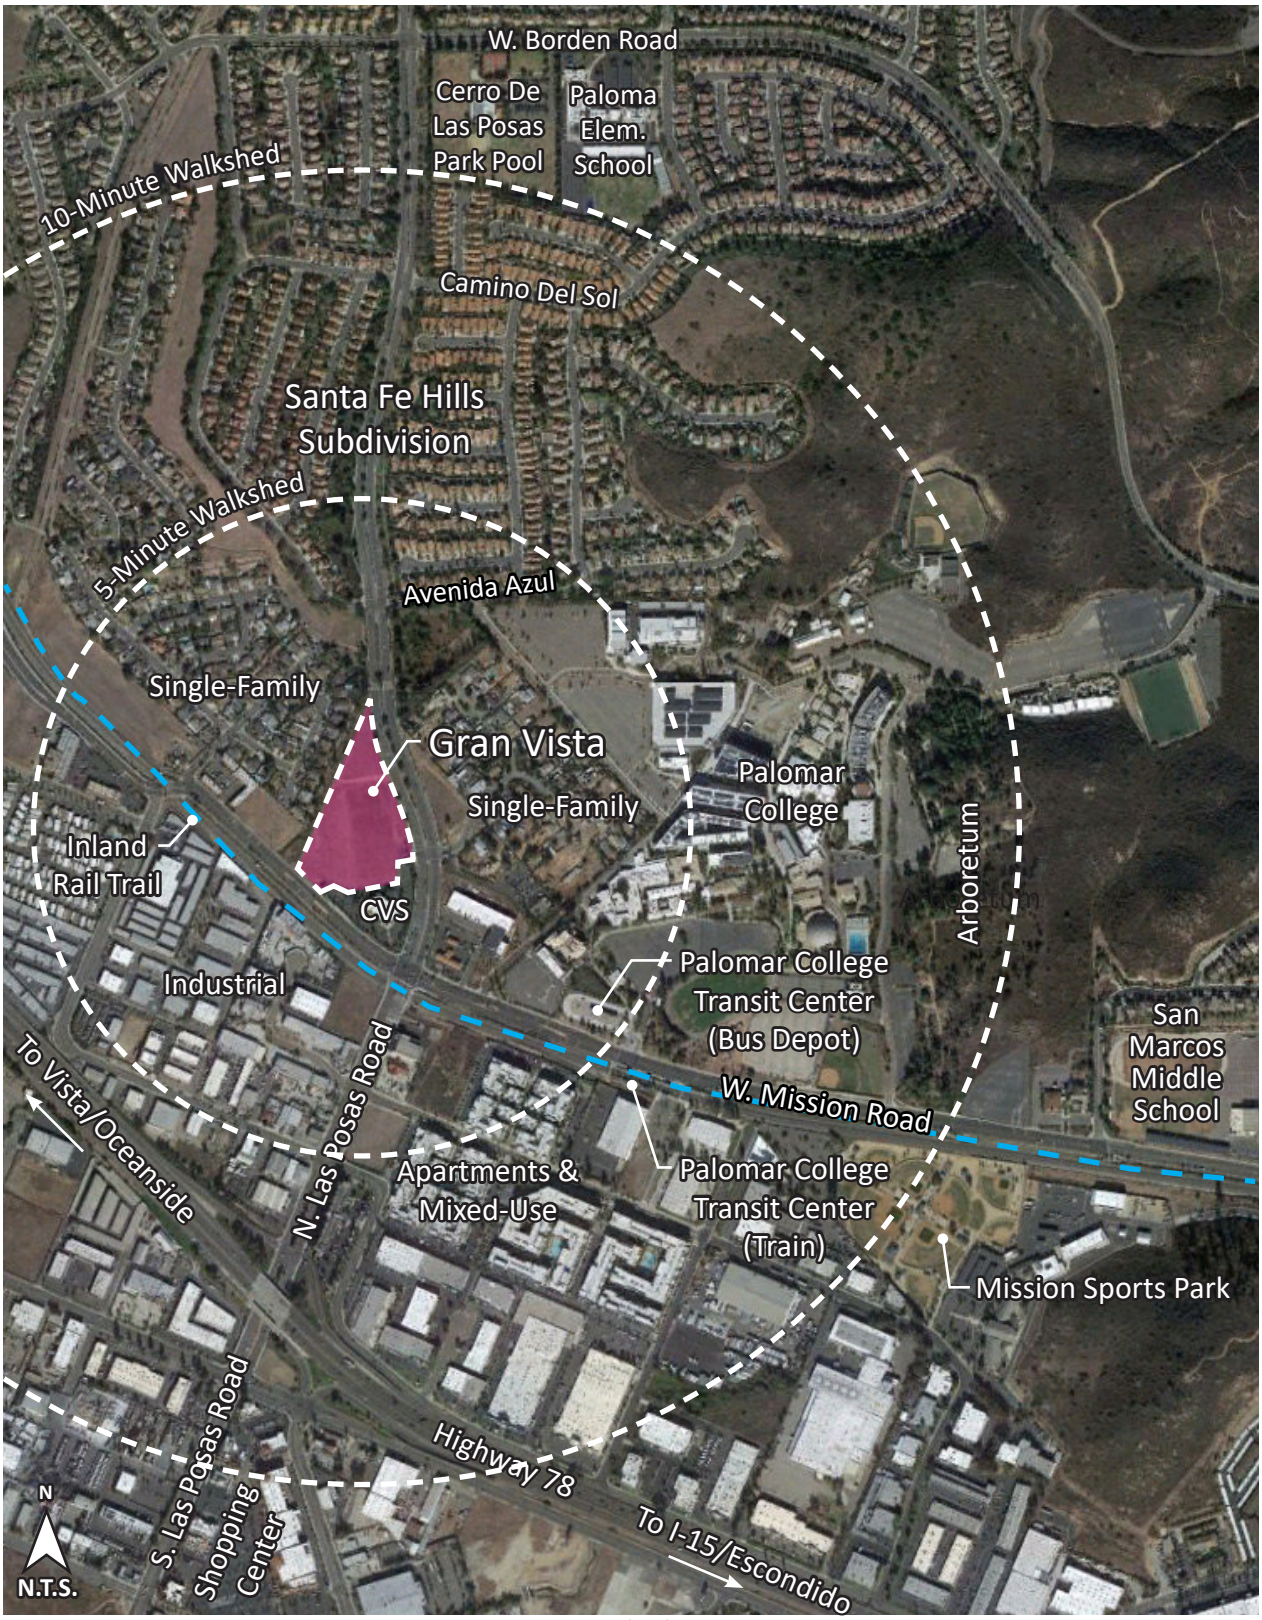
1.5. Planning Area Description

1.5.1. Regional and local Setting

The Gran Vista Specific Plan planning area encompasses approximately 7.6 gross acres. As illustrated in Figure 1.1. Regional Vicinity Map, the planning area is situated in the northwest portion of the City of San Marcos, in an area defined as the College Area Neighborhood. The planning area is located approximately 0.4 miles from Highway 78, approximately five (5) miles from Interstate 15, and across the street from Palomar College.

As shown in Figure 1.2. Local Vicinity Map and Surrounding Uses, the planning area is situated on the northwest corner of North Las Posas Road and West Mission Road. A drainage channel forms the northwesterly boundary. North Las Posas Road serves as a major gateway into the Santa Fe Hills Neighborhood, a large single-family subdivision located immediately to the north. Older established single-family neighborhoods are located to the east and west. The commercial parcel immediately to the south, which is not part of the planning area, has been developed with a CVS drug store. The CVS property includes a single-story commercial building surrounded by surface parking. A pharmacy drive-through is located on the north side of the building, facing the planning area. Other nearby uses include a gas station to the east, and industrial, commercial uses, and mixed-use sites south of West Mission Road.

The planning area is designated as a High Quality Transit Area due to its proximity to transit and other facilities and services that support alternatives to vehicle use. Palomar College, a public community college consisting of a 200-acre campus, is located east of the planning area. Palomar College Transit Center, a North County Transit District hub, is located less than a quarter mile from the planning area. Palomar College Transit Center consists of a bus depot on the north side of West Mission Road, near the main entrance to Palomar College, and a train station on the south side of West Mission Road that serves the SPRINTER hybrid rail train. Rail service and bus transit service offered at the Transit Center provide local and regional connections to schools, employment, shopping, and entertainment options within the City of San Marcos, as well as San Diego and Riverside Counties. An existing bus turnout and stop are also located on West Mission Road in front of CVS. The Inland Rail Trail, a proposed 21-mile Class I bikeway, runs along the south side of West Mission Road and connects the Cities of Oceanside, Vista, San Marcos, and Escondido as well as areas of unincorporated San Diego County.



1.5.2. Site Characteristics

As Illustrated in Figure 1.3. Existing Conditions and shown in Figure 1.4. Existing Site Photographs, the planning area includes two (2) parcels (Assessor Parcel Numbers 219-121-15-00 and 219-121-16-00) located at the intersection of North Las Posas Road and West Mission Road. These parcels are bound by a drainage channel to the west, North Las Posas Road to the east, and West Mission Road and a commercial parcel to the south. Both North Las Posas Road and West Mission Road have been improved with sidewalks and Class II bike lanes along the planning area's frontage. A small segment of sidewalk along West Mission Road is currently missing and the sidewalk will be extended as part of this project to complete this frontage. The planning area was originally designated for commercial uses and was previously graded into two (2) separate development pads. The pad located in the northerly portion of the planning area is elevated above North Las Posas Road and is higher than the remaining portion of the planning area. The lower pad, located in the southerly portion of the site, is elevated above West Mission Road. The planning area was also temporarily used as overflow parking for Palomar Community College, which is located across North Las Posas Road.

From south looking north

From northeast, adjacent to North Las Posas Road, looking south

From parking lot in south looking northwest

From northeast looking southwest

Existing Irrigation Well (left side of island)

From southwest looking northeast through parking lot towards CVS

Figure 1.4. Existing Site Photographs

Vegetation on the site is limited to grasses and small shrubs. A few trees are located along the periphery of the site, adjacent to the channel and North Las Posas Road.

The planning area and the CVS parcel share two (2) common access points: (1) a driveway at the signalized intersection of North Las Posas Road and Palm Road and (2) a driveway on West Mission Road that allows for left-turn in and right-in/right-out traffic movements. Both driveways have been improved with enhanced paving and landscaping. Shared use of these driveways is controlled through Covenant, Conditions, and Restriction (CC&Rs) that cover all three (3) properties. The CC&Rs also cover shared use of various utilities including storm drainage facilities.

The southerly portion of the planning area includes a paved parking lot. Spaces located within the planning area boundary were constructed to serve the future expansion of the commercial center and are not needed for the CVS building to meet the City's parking requirements. These spaces are considered shared spaces pursuant to the CC&Rs.

1.5.3. Regulatory Setting and Site History

Prior to the adoption of this Specific Plan, the planning area and the adjacent commercial parcel immediately to the south were designated as Commercial by the General Plan and the San Marcos Zoning Code. These three (3) parcels were previously designed and graded for a commercial center. In 2009, the southerly parcel was developed with the CVS pharmacy; however, due to changes in the market, the remaining two (2) parcels that make up the planning area are still undeveloped. Concurrent with this Specific Plan, a General Plan Amendment and Zone Change application were processed to redesignate the two (2) parcels that comprise the planning area to Specific Plan Area (SPA), thereby allowing for the development of the urban townhome community proposed herein.

Although previously designated as Commercial (C) by the General Plan, the residential development proposed by this Specific Plan implements AB 32, Strategy 3 of the San Marcos Climate Action Plan (CAP), SB 743, numerous General Plan goals, and various other state regulations related to reducing GHG emissions. In accordance with AB 32, the Global Warming Solution Act, the State adopted SB 97, which revised the California Environmental Quality Act (CEQA) Guidelines to require an analysis of GHG emissions as part of the CEQA process and established standards for the content and approval process of plans to reduce GHG. To comply with these requirements, the City of San Marcos adopted the Climate Action Plan (CAP) in 2013. A CAP is a long-range planning document that identified strategies to reduce GHG emissions. Since then, the State and the California Air Resources Board (CARB) have established stricter targets for reducing GHG emissions. In response, the City of San Marcos update the CAP in 2020 to reflect these new requirements. The State also adopted SB 743 to change the way CEQA evaluates traffic, making Vehicle Miles Traveled (VMT) the new metric to promote development that is walkable, has access to transit or bicycle facilities, and/or implements other mitigation measures that discourage the use of single occupancy vehicles. To implement SB 743 and Strategy 3 of the San Marcos CAP, the City of San Marcos adopted the Transportation Impact Analysis Guidelines in 2020. These Guidelines identify High Quality Transit Areas, where VMT is considered low due to the availability of transit. The intent is to encourage urban housing and other appropriate uses within these High Quality Transit Areas that encourage transit use to potentially reduce GHG emissions. The planning area is located within the half-mile walkshed of the City's most westerly High Quality Transit Area.

The reduced demand for retail coupled with an increased demand for housing in California and the City and State's Climate Change goals have changed the planning area into a prime site for urban, transit-oriented housing.

1.6. Relationship to the San Marcos General Plan

As indicated in Section 1.4, the Specific Plan is a tool that allows for the systematic implementation of the City's General Plan, effectively linking the implementing policies of the General Plan to individual development proposals in a defined area. As such, the Specific Plan is required to provide a detailed statement of the relationship of the Specific Plan to the General Plan, including consistency between both plans and a comparison of goals, objectives, and policies. The following sections discuss the various elements of the San Marcos General Plan and compares the stated intent of each element to the development proposed by this Specific Plan and describes how applicable goals are met.

1.6.1. Land Use and Community Design Element

As stated in the introduction to the Land Use and Community Design Element, the goals and policies of the General Plan are designed to:

- Ensure land use diversity and balanced development that encourage an efficient and responsible relationship between land use, transit, open space, and areas of environmental sensitivity.
- Establish and maintain community connections that better connect people to places.
- Promote economic strength and stability by maintaining a strong local economy and employment base.
- Create a synergy between the business community and academia to promote San Marcos as the educational hub for North County.
- Encourage integration of high-quality and sustainable development through the establishment of development standards and land use patterns that encourage long-term environmental sustainability.
- Promote community design that produces a distinctive built environment with memorable places.
- Direct and sustain growth through management that ensures adequate provision of urban services.

The Specific Plan achieves this as follows:

- The Specific Plan ensures land use diversity and balanced development by taking an already graded site with no significantly environmental sensitives and proposes to utilize the property to its highest and best use. Current market demands and the demand for new housing make the property most ideally suited for housing. Density of homes is increased to maximize the efficient use of the property while at the same time providing a transition between high density rental apartments in the south and lower density single family homes to the north. These townhomes offer a "missing middle" housing type that is not widely available in this part of the City. Furthermore, the Specific Plan encourages an efficient and responsible relationship between land use and transit, by providing urban housing in proximity to transit, trails, and non-residential uses.
- The proposed development maintains community connection by remaining ungated with minimal walls to create a community to that is open to the surrounding neighborhood. Walkways, architecture, and landscaping are designed to maximize pedestrian connectivity and encourage walkability.
- The Gran Vista Specific Plan promotes economic strength and stability and a synergy with nearby academia by offering entry-level, for-sale, workforce housing. This type of housing that will support the College and local businesses by providing financially attainable housing opportunities for

employees and faculty. Proximity to transit will also benefit the economic strength of the entire City and Region by providing connection between this workforce housing and employment centers. Furthermore, the Specific Plan identifies long term maintenance and financing mechanisms for infrastructure and services to ensure the community does not become a fiscal burden to the City.

- New housing proposed by this Specific Plan will be high quality, sustainable development, designed to meet or exceed current building codes and standards. The California Building Code -includes the most stringent requirements in the United States for water, material, and energy efficiency; improved air quality; and more. The Specific Plan also implements the strategies of the City's Climate Action Plan to reduce GHG emissions by including elements that support transit use, active modes of transposition, and the use of electric vehicles. Proximity to transit and trails and the walkable design of the community have the potential to significantly reduce VMT for improved air quality.
- The Specific Plan provides a detailed set of architectural and landscape design guidelines to ensure a distinctive built environment with unique and memorable amenities and spaces.
- Infrastructure and service plans provided within this Specific Plan have been developed to ensure that adequate provisions for urban services are available. Financing for both the construction and long-term maintenance of necessary infrastructure and services has also been identified in the final chapter of this Specific Plan.

The Specific Plan planning area is located at the southerly edge of the College Area Neighborhood. The General Plan describes the College Area Neighborhood as having a diverse range of uses from rural residential uses in the north, including homes in the Santa Fe Hills Master Planned Community, and commercial and light industrial uses in the south. Palomar Community College is the most prominent use within this neighborhood.

General Plan identifies Focus Areas where changes are most likely to occur. Although the Specific Plan planning area is not within a Focus Area, it is immediately north of the Urban Core Focus Area - Mission Road Focus- Area 1 (FA1). The main component of this focus area is the Palomar College Transit Station. Based on proximity to this transit station, the vision for FA1 is to "create an identifiable business area that would help attract a diversity of businesses, potentially expanding the employment base to promote economic sustain¬ability within the City of San Marcos." The plan envisions a mix of businesses along with high quality housing and parks.

The Specific Plan implements the vision for both the College Area Neighborhood and Urban Core Focus Area - Mission Road Focus Area 1 (FA1) by providing a gradual and logical transition between the high-density apartments in FA1 and the single-family homes in Santa Fe Hills. Urban townhomes offer the "missing-middle" housing for this area. This type of housing also supports the viability of the FA1 business district by creating home ownership opportunities for employees who are first-time homebuyers.

1.6.2. Mobility Element

As stated in the introduction, the purpose of the Mobility Element is to strategically enhance and manage the mobility network as a critical component in continuing the City's vibrant commercial and industrial areas, its thriving residential neighborhoods, its diverse job and employment uses, and its unique student population. The Mobility Element focuses on maximizing the quality, comfort, safety, walkability, livability, and bikeability of the City's streets, sidewalks, trails, and multi-modal transportation system while incorporating key ingredient of sustainability.

The Mobility Element identifies North Las Posas Road as a six-lane arterial with Class II or III Bicycle Facilities and West Mission Road as a four-lane arterial with enhanced bicycle/pedestrian facilities. Both roadways have already been built-out to their full right-of-way as part of the previous development proposed on the site.

The Specific Plan further implements the mobility element as follows:

- Minimizing walls and requiring multiple pedestrian connections to maximize walkability.
- Including design guidelines that require pedestrian friendly architecture and landscaping that engage the public sidewalk along public roadways and internal pathways.
- Installing EV charging and bicycle parking to support the use of electric vehicle and active modes of transportation.
- Minimizing parking in accordance with the Climate Action Plan to prioritize transit use and active transportation over private vehicle use.

1.6.3. Conservation and Open Space Element

As stated by the General Plan, the purpose of the Conservation and Open Space Element is to identify natural, cultural, historic, and open space resources. Although the site does not include any of these resources, development of the Specific Plan planning area supports the preservation of these resources elsewhere in the community by reducing development pressure on other sites that do include these valuable resources.

The Conservation and Open Space Element also seeks to address air pollution, climate change, energy independence, water supply and water quality. Development proposed by the Specific Plan will be designed to current building codes and standards. The California Building Code includes the most stringent requirements in the United States for water, material, and energy efficiency; improved air quality; and more. The Specific Plan implements the strategies of the City's Climate Action Plan to reduce GHG emissions by including elements that support transit use, active modes of transportation (e.g. bicycles, walking, etc.), and the use of electric vehicles. Proximity to transit and trails and the walkable design of the community have the potential to significantly reduce VMT for improved air quality.

1.6.4. Parks, Recreation, and Community Health Element

According the General Plan, the purpose of the Parks, Recreation, and Community Health Element is to maintain and increase access to parks, trails, recreational facilities, and community service programs. In addition, it aims to provide a healthy and safe community by taking into consideration community health and family enrichment needs of community members, including older adults, children, persons with special needs, and residents of all ages.

The Specific Plan implements this Element by including an open space plan and an amenity package designed to address the specific recreational needs of the anticipated community demographics. Standards for both private open space and common recreational open space ensure an adequate amount of space is provided to support a high quality of life. Selected amenities cater to an urban lifestyle and consider not only families, but young singles and couples who are likely to be purchasing their first home within this community. Consideration for proximity to trails is also reflected through the provision of multiple connections, bicycle parking requirement, and landscaping and architecture designed to promote pedestrian comfort. New development is also required to pay a public facilities fee to fund its fair share of public park and recreational facilities and other public facilities within the City.

1.6.5. Safety Element

The Safety Element is designed to ensure -public health, safety, and welfare of residents and their property by identifying and planning for anticipated natural and human-caused safety issues including geologic and seismic hazards, flood, fire and more.

Hazards associated with the development proposed by the Specific Plan were evaluated as part of the CEQA process and no significant hazards were identified. Homes and landscaping will be designed, built, and installed to current safety codes and standards. Additionally, the Specific Plan includes development and design standards that incorporate Crime Prevention Through Environmental Design (CPTED) strategies such as facing front doors and windows toward walkways for natural surveillance, limiting the height of shrubs to avoid creating hiding spaces for criminals, and more. CPTED strategies consider design standards that deter criminal activity and build a sense of community between neighbors so that residents are encouraged to take ownership of their neighborhood, watch for and discourage crime, and protect each other.

1.6.6. Noise

The Noise Element Identifies potential problems and noise sources threatening community safety and comfort with the intent of limiting the community's exposure to excessive noise levels.

Noise impacts to new residents as well as noise impacts generate by the development of the Specific Plan were evaluated as part of the CEQA process. Mitigation to reduce those impacts to a less than significant level have been incorporated into the Specific Plan. Additionally, new development proposed by the Specific Plan is subject to the City's noise standards, which are consistent with the General Plan.

1.6.7. Housing

As required by State law, the City of San Marcos Housing Element identifies the housing needs of both the existing and projected population and ensures that the land use plan provides adequate capacity to provide safe, suitable, and affordable housing for City residents. The Housing Element is coordinated with each element to ensure comprehensive policies and goals throughout the General Plan. These policies and goals form a framework that the Gran Vista Specific Plan will follow to systematically implement a comprehensive housing development plan that is consistent with these goals and policies. The residential development proposed by Specific Plan will encompass approximately 7.6 acres and will include a maximum of 120 multi-family residential dwelling units for an approximate total density of 15.8 dwelling units per-acre (du/ac). This residential density equates to the Medium Density Residential 2 (MDR 2) General Plan land use classification, which allows for 15.1-20.0 du/ac. Homes proposed by the Gran Vista Specific Plan are designed as entry-level, market-rate housing with a range of units sizes and price points, creating opportunities for home ownership that will be attractive to varying income levels. The townhomes proposed also offer a style of home that is not widely available in this area of the City and provide a transition between single-family homes to the north and high-density apartments to the south. Therefore, the Gran Vista Specific Plan is consistent with the goals provided within the Housing Element of the General Plan.

1.7 CEQA Compliance

An Environmental Impact Report (EIR) was prepared for the Gran Vista Specific Plan in accordance with the California Environmental Quality Act (CEQA) and serves as a comprehensive environmental document for subsequent development within the planning area. The EIR examines potential environmental impacts to the planning area and makes determinations for mitigation measures to reduce impacts to below levels of significance. The EIR was certified concurrently with the Specific Plan by the decision-making body.

A Mitigation Monitoring and Reporting Program (MMRP), adopted in accordance with Public Resources Code Section 21081.6, ensures the proper implementation of the mitigation measures outlined within the EIR. All future development within the planning area is required to adopt and implement the mitigation measures specified in the MMRP, if applicable.

Subsequent development proposals within the Gran Vista Specific Plan planning area, if found by the City of San Marcos to be consistent with this Specific Plan and the impact analysis and mitigation measures found in the certified EIR, may be approved and implemented without further public environmental review according to California Government Code Section 65457. Prior to amendment to this Specific Plan and/or a Multi Family Site Development Plan review, the City of San Marcos shall determine if further environmental review and analysis is required to satisfy CEQA requirements.

2 - Land Use & Regulations

2.0. Overview

This chapter regulates the distribution and intensity of land uses and establishes development standards that will govern all future development within the Gran Vista Specific Plan planning area. These standards and guidelines provide a foundation for the community's character and sense of place that will ultimately result in an attractive and functional community.

2.1. Land Use

As illustrated in Figure 2.1. Land Use Plan, the 7.6-acre planning area is comprised of a single land use: Gran Vista Residential (GVR). The GVR land use allows for the development of up to 120 residential units with a maximum density of 15.8 dwelling units per acre (du/ac). This density is consistent with the Medium Density Residential 2 (MDR 2) General Plan land use classification, which allows for 15.1-20.0 du/ac. Unlike other areas within the City that are designated as MDR2, the GVR land use is intended to allow for more contemporary residential development that reflects the urban setting and lifestyle within a High-Quality Transit Area. Land use permit requirements, regulations, and development standards of this section shall be applicable to all existing and new uses, structures, modifications, additions, and activities within the GVR district.

2.1.1. Allowable Uses

Table 2.1. Gran Vista Residential (GVR) Use Classifications identifies the types of land use permits required to establish uses allowed within the GVR district, consistent with this Specific Plan. Allowed uses shall be for the express purpose of establishing and protecting the residential living environment envisioned by this Specific Plan. Residential uses are intended to be the primary permitted use. All other uses are intended to support the residential use. When indicated, please also refer to the sections identified under the "Additional Use Regulations" column for additional operational standards and regulations applicable to the use. When a use is not specifically listed, that use in not permitted; However, in accordance with Section 7.3.5. of this Specific Plan, the Development Services Director shall have the authority to determine whether the proposed use shall be permitted or conditionally permitted based on a finding of substantial conformance if the proposed use is similar to a use already listed in Table 2.1.

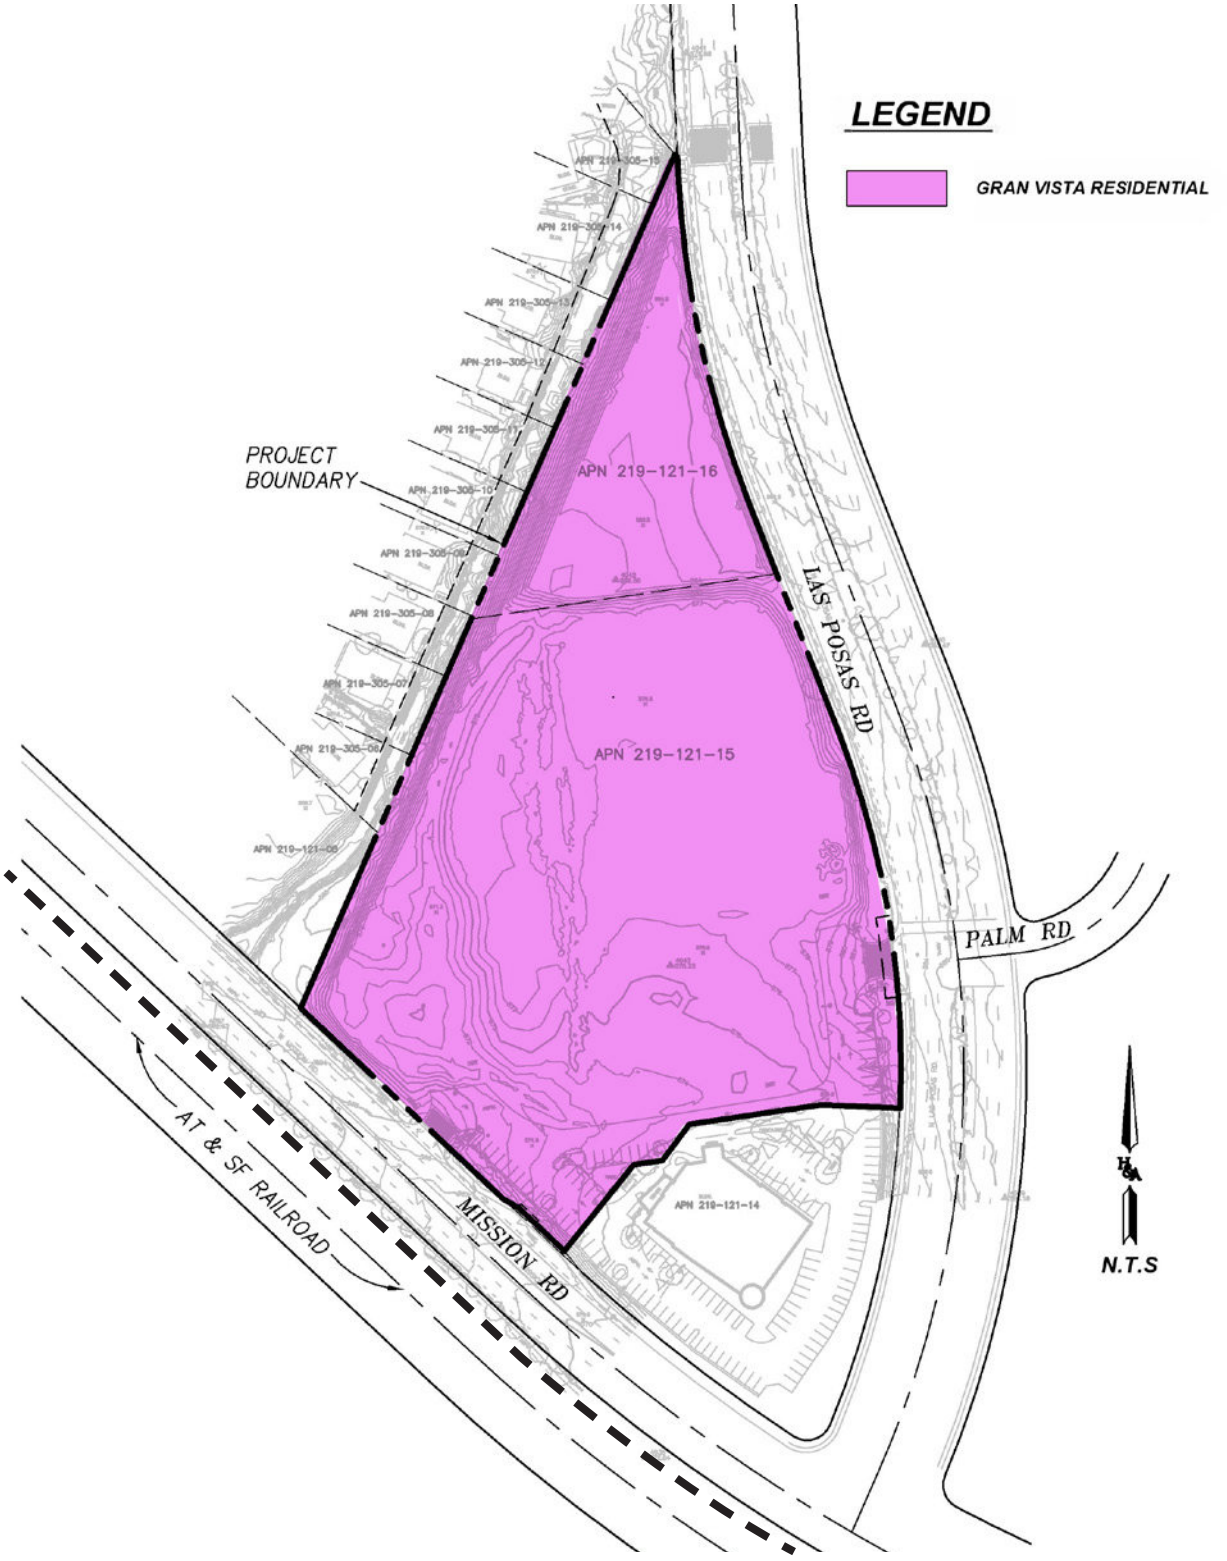

Figure 2.1. Land Use Plan

Table 2.1. Gran Vista Residential (GVR) Use Classifications.

Use	Permit Required	Additional Use Regulations
Single-family Attached	P	
Multifamily	P	
Open Space	P	Please refer to Section 2.2.2
Recreational Amenities	P	Please refer to Section 2.2.2.B.
Animal Keeping, Small and Large	P	As Permitted by the SMMC
Non-Public Antenna or Communication Facility	P	SMMC
Wireless Antenna Facilities	CUP	

Symbol:
P = Permitted use subject to compliance with all applicable provisions of the Gran Vista Specific Plan.
DP = Director's Permit (DP) is required for this use, subject to review and approval by the Director.
SMMC = San Marcos Municipal Code

Figure 2.2. Distribution of Allowable Uses and Table 2.2. Conceptual Distribution of Allowable Uses provides an illustration and summary of the amount of area dedicated to roadways, buildings, and various types of allowable uses proposed within the planning area.

Figure 2.2. Distribution of Allowable Uses

Table 2.2. Conceptual Distribution of Allowable Uses

Use	Area (Acres)	% of Total	Units (DU)
Single-Family Attached[1]	2.3	30%	120
Common Open Space with Grades 10% or Greater	1.0	13%	
Common Open Space with Grades Less than 10%	2.1	28%	
Private Drives	1.6	21%	
Private Drive Aisles	0.6	8%	
Specific Plan Total	**7.6**	**100%**	**120**

1. Includes ground floor private open space

2.1.2. Airport Overlay

The planning area is located within the Airport Influence Area – Review Area 2 as defined in the Airport Land Use Compatibility Plan (ALUCP) for McClellan-Palomar Airport. Maximum height requirements and the proposed land uses in the Specific Plan comply with the ALUCP. All permits, including building permits, for land uses and structures within the Specific Plan area shall be subject to Site Development Plan Review, to ensure consistency with the provisions of the Specific Plan and the ALUCP.

As a Condition of Approval, all new residential projects within the planning area shall record an overflight notification document, which shall be disclosed to all homeowners. The document shall include language consistent with the following:

> NOTICE OF AIRPORT IN VICINITY: This property is located in the vicinity of an airport, within what is known as an Airport Influence Area. For this reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example, noise, vibration, and odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with this property, and determine whether they are acceptable to you, before you complete your purchase.

2.2 Development Standards

Table 2.3. Development Standards provides a list of development standards that are applicable to all new development within the GVR designation. These standards include building setbacks, height limitations, open spaces requirements, and more.

Table 2.3. Development Standards

Use	Standards	Additional Standards/Notes
Density and Intensity		
Maximum Density	15.8 du/ac Max	Shall not exceed 120 units
Maximum Building Height	45 feet or 3 stories	Whichever is less; As measured from the finished adjacent grade to the top of the tallest roof or architectural feature.
Building Setbacks		
N. Las Posas Rd.	77 feet Min. from Centerline	
W. Mission Rd.	86 feet Min. from Centerline	
West Property Line	45 feet to PL and 5 feet minimum from top of slope	Top of slope shall be screened with landscaping to preserve the privacy of adjacent neighbors
Private Drive	5 feet minimum[1]	Measured from back of walk or from face of curb when no sidewalk is present
Private Drive Aisle (Alley)	3 feet minimum[1]	Measured from face of garage door
Building Separation	10 feet minimum[1]	Consistent with adopted Building Code based on building design
Parking		
Garage	2 per unit maximum	Please refer to Section 2.2.1
Guest	0.33 per unit maximum	Please Refer to Section 2.2.1
Bicycle	1 long term bike parking space per unit + 1 short term space for every 12 units	Please Refer to Section 2.2.1 and as defined by CalGreen
Open Space		
Private Open Space	250 SF patio/50 SF Balcony	Please refer to Section 2.2.2
Common Open Space	Area equal to 30% of livable ground floor area of all units	Please refer to Section 2.2.2
Walls and Fencing		Please Refer to Section 2.2.3
Landscaping		Please Refer to Section 2.2.4
Signage		Please Refer to Section 2.2.6
Other		
Refuse and Recycling		SMMC
Storage		SMMC

1. Soffits, vine trellises, upper-story cantilevers, and utility closets may encroach up to 3 feet
2. SMMC = San Marcos Municipal Code

2.2.1. Parking and Private Roadway Standards and Regulations

The purpose of this section is to regulate the provision of off-street parking and private roadway, drives, and drive aisles within the planning area. Parking standards have been developed in accordance with the City's Off-Street Parking Requirements and modified pursuant to the requirements of the Climate Action Plan.

A. General Requirements

1. Parking shall only be permitted in designated parking spaces and inside garages. No Parking shall be permitted in Private Drives, Private Drive Aisles, or driveways.

2. All circulation, ingress and egress, and off-street parking areas shall be surfaced with an asphalt or cement concrete paving, designed to withstand repeated vehicular traffic. Other paving material may be used, such as previous surfaces, subject to the approval of the Development Services Director and/or City Engineer.

3. All stormwater runoff shall be conveyed into a public storm drain or directed into planting areas. Storm drains shall be provided in accordance with the specifications of the City Engineer. Stormwater runoff shall be treated per the requirements of the latest NPDES permit for the San Diego Region and City of San Marcos BMP Design Manual prior to entering the City's municipal separate storm sewer system.

4. All guest parking spaces, Private Drives, Private Drive Aisles, pedestrian crossings, driveways and fire lanes shall be striped or otherwise designated to provide safe access and circulation. Pavement markings, signage, and other distinctions shall be maintained in a visible and legible manner.

B. Garages

The following standards shall apply to all private residential garages within the planning area:

1. Garages shall provide a minimum of two (2) parking spaces. Spaces may be provided in either side-by-side or tandem configurations.

2. Each interior garage parking space shall maintain an unobstructed dimension of 20 feet long and 10 feet wide with a minimal vertical clearance of seven (7) feet, except the front three (3) feet of a parking space located at the front of the garage may have a vertical clearance of four (4) feet.

3. Garages shall be designed to provide adequate storage for three (3) waste carts. Waste carts storage space shall not encroach into the required parking space area.

4. Garage spaces shall be used for parking and not storage, which shall be enforced through the Community's Covenants, Conditions, & Restrictions (CC&Rs)

C. Guest Parking

The following standards shall apply to all guest parking within the planning area:

1. A maximum of 0.33 guest spaces per unit shall be required. Calculations for the required number of spaces shall be rounded up to the nearest whole number.

2. Parking Space dimensions shall be provided as follows:

    a. Perpendicular guest parking spaces shall have a minimum dimension of nine (9) feet wide by 18 feet long. Bumper guards or wheel stops shall be provided in such a manner as to ensure that no portion of any parked vehicle shall touch any wall, fence, building or project beyond any lot lines bounding a parking area facility. In lieu of bumper guards or wheel stops, the paved parking space length may be decreased by up to two (2) feet by providing an equivalent vehicle overhang into landscape areas or paved walkways. Such overhang area shall not be considered as part of any open space requirement. In no case shall such overhang be considered part of a required walkway or sidewalk width.

    b. Parallel guest spaces shall provide a minimum dimension of nine (9) feet wide by 22 feet long. End spaces may be reduced to 18 feet long.

3. Guest parking spaces shall be evenly distributed throughout the planning area, designed to occur along Private Drives, or divided into small landscaped parking courts to avoid the creation of large parking lots.

4. Parking shall not be permitted within setback to North Las Posas Road and West Mission Boulevard and should be located behind buildings and interior to the planning area such that parking visibility is minimized from the public right-of-way.

5. To provide shade and reduce heat island effect, rows of new parking shall be broken up with tree planters provided at a minimum of one (1) tree for every five (5) parking spaces. Tree planters shall have a minimum interior dimension of five (5) feet. Trees shall be a minimum 24-inch box size and shall be designed to achieve a goal of fifty percent (50%) shade requirement within fifteen (15) years of planting. Landscape irrigation shall be provided per the requirements of the City of San Marcos Water Efficient Landscape Standards.

6. At least one (1) guest space shall be reserved for United States Postal Service and other delivery trucks. This delivery space shall be located in convenient proximity to grouped mailboxes.

7. Designated parking spaces for the disabled shall be provided in compliance with state law (Title 24) and the California Vehicle Code (Section 22507.8), including required number of parking spaces and design requirements.

D. Bicycle Parking

The following standards promote the use of bicycles and e-bikes as an alternative to single occupancy vehicle use in accordance with Specific Plan Objective 7:

1. Each home shall provide a minimum of one (1) secure and weatherproof bicycle parking space or as otherwise required by CalGreen, whichever is more stringent. Space may be provided within a garage, locker, or accessible indoor area.

2. Provide guest bicycle parking at a ratio of one (1) bike per 12 units or as otherwise required by CalGreen, whichever is more stringent. Guest parking shall consist of permanently anchored bicycle racks or other secure bicycle parking in a location readily visible to passers-by. Wave racks are not allowed.

E. Electric Vehicle Parking and Charging

The following standards implement Measure T-2 of the Climate Action Plan to support and promote the use of electric vehicles:

1. A minimum of six percent (6%) of the guest parking spaces required shall be equipped with EV charging stations or as otherwise required by CalGreen, whichever is more stringent. Calculations for the required number of spaces shall be rounded up to the nearest whole number.

2. Garages shall be equipped with electric vehicle charging infrastructure in accordance with CalGreen.

3. Charging stations/spaces shall be posted with signage indicating the space is only for electric vehicle charging purposes. Days and hours of operations shall be included if time limits or tow away provisions are to be enforced by the owner. Information identifying voltage and amperage levels or safety information must be posted.

4. Charging stations/spaces shall not interfere with on-site parking or pedestrian circulation.

5. Charging stations/spaces shall be maintained in functioning order in all respects.

2.2.2. Open Space

In accordance with the SMMC, new multi-family residential developments are required to provide both Private and Common Open Space:

A. Private Open Space

Private open space is defined as open space areas intended for the private use of individual dwelling units. Private Open Space areas shall be subject to the following requirements:

1. Private open space shall be directly accessible from the interior living space of the unit it is intended to serve.

2. Private open spaces shall be located on the same floor as the primary living area to maximize usability.

3. Private open space shall not be used for storage.

B. Common Open Space

Common open space areas are commonly owed for the benefit of all planning area residents and their guests. The following standards shall apply to all common open space areas to ensure that adequate landscaping and amenities are provided to support a high quality of life. Please also refer to Chapter 4.

1. An area equal to 30% of the total livable ground floor area of all units shall be provided as usable common open space.

2. Parking areas, private roads and driveways, private open space areas, and areas with slope exceeding ten percent (10%) shall not be considered usable open space.

3. Walkways and bike paths may be used in the calculation of common open space.

4. At least three (3) children's play area shall be provided within a common open space area. The children's play area shall meet the following requirements:

    a. A minimum area of 400 square feet of usable area.

    b. Effectively buffered and/or fenced from adjacent street and parking areas

    c. Equipped with at least two (2) of the following Elements: sandbox, climb bars/structure, a slide, swings, seesaw or other appropriate play equipment.

5. In addition to the children's play area, at least three (3) of the following recreational amenities shall be provided:

    a. Additional children's play area or tot lot

    b. Picnic space(s) with gas barbecue/outdoor kitchen

    c. Off-leash pet area/dog park

    d. Garden (community, meditation, or similar)

    e. Outdoor exercise equipment

    f. Ping pong table

    g. Lawn game(s) such as cornhole, bocce ball, horseshoes or similar

    h. Community outdoor fireplace

    i. Other appropriate uses as approved by the Director

6. Recreational amenities shall be located and/or designed to minimize noise and visual conflicts from adjacent properties.

7. Amenities shall be distributed throughout the site and should be selected to cater to diverse range of interests and lifestyles including pet owners, young families, singles and more. Spaces should be provided that offer opportunities to play, socialize, exercise, and/or relax.

2.2.3. Wall and Fence Regulations

The review of walls and fences shall be an integral part of any site plan, permit, or Site Development Plan Review application. Compliance with all wall and fence regulations contained herein shall be required. All retaining walls are subject to SMMC and City of San Marcos Engineering Standards.

a. Development within the planning shall be designed to minimize walls and fences to support an open and walkable community.

b. No walls or fences in excess of four (4) feet in height are permitted within the required setbacks to North Las Posas Road and West Mission Road. All other walls and fences shall not exceed six (6) feet in height. Decorative Pilasters shall be provided and spaced a maximum of 50 feet apart. Decorative Pilasters may exceed the maximum permitted height by up to one (1) foot. Taller walls and fences are permitted for retaining or sound attenuation purposes.

c. The height of all walls, fences, and architectural screening elements shall be measured from the finished grade at the base of the wall to the highest point of the element.

d. Where additional height is needed based on security or specific site operating requirements, additional wall/fence height may be approved through a DP, subject to evaluation of adjacencies and necessity.

e. Walls, fences, and architectural screening elements shall be compatible with the architectural treatment of the primary building on the parcel.

f. No wall, fence, or landscaping element shall interfere with intersection visibility, line of sight, or other safety issue.

g. Blank walls are prohibited. Where screening or security walls (excluding wrought iron or other "open" fence types) are located within ten (10) feet of a public right-of-way, landscaping shall be provided between the wall and the right-of-way to a minimum height of four (4) feet to minimize opportunities for crime and unsafe conditions.

h. Approved materials include wood, vinyl, stone, masonry, brick, block, stucco, wrought iron/steel, concrete. Comparable materials are permitted subject to approval of the Director.

i. Prohibited materials include barbed, razor, concertina, corrugated metal and plastic, tarps, and electrified wire of any kind or configuration. Chain-link fencing and similar material are prohibited along any public right-of-way regardless of setback unless required by a public agency. Where chain-link is required, it shall be black vinyl coated.

2.2.4. Landscaping Regulations

All open space areas shall be landscaped in accordance with the City of San Marcos' Water Efficient Landscape Standards. All required landscaping shall be permanently maintained in a healthy and thriving condition, free from weeds, trash, and debris.

Landscape screening shall be provided along at the top of the drainage channel slope to preserve the privacy of adjacent neighbors.

2.2.5. Lighting Regulations

Lighting fixtures shall be directed and shielded so as not to illuminate surrounding properties and to reduce glare. All lighting shall comply with the following standards, as verified through a photometric study as part of construction documents:

j. Parking areas shall be illuminated to levels that achieve a uniform ratio of three to one (3:1) (average to minimum) and maintain an average of one (1) foot candle, with a minimum of one-half (1/2) foot candle.

k. Perimeter lighting, not affiliated with the lighting of parking lots, shall not exceed one-half (1/2) foot candle at any point along the property line of the subject or adjacent parcel.

2.2.6. Signs

Signs are permitted within the Specific Plan planning area and shall be subject to the City of San Marcos sign code except as described herein. A permit shall only be required when the sign qualifies as a "structure" under the Building Code or SMMC.

Up to one (1) Monument Sign is permitted at each community entry. Monument signs shall be subject to the following requirements:

l. Each monument sign shall not to exceed six (6) feet in height. Any accent pilaster(s) may exceed this height by up to one (1) foot.

m. The sign face for each monument sign, exclusive of any decorative pilaster(s) or sign base, shall not exceed a maximum area of 50 square feet.

n. Monument signs shall be set back a minimum of five (5) feet from any property line, subject to Engineering Division approval.

o. Monument signs shall not interfere with intersection visibility, line of sight or other safety issue.

3 - Architectural Design

3.0. Applicability

Design guidelines are provided to supplement and enhance development standards and regulations as a means to ensure high quality design. Unlike development standards and regulations, design guidelines are intended to be more flexible to allow designers creativity in achieving the design intent and vision for the planning area. While designers are encouraged to adhere to the guidelines contained herein, they are also encouraged to pursue creative designs. Creative designs may not always fit exactly within the guidelines contained herein but are permitted when the Director determines that a particular design offers an equal or superior solution that supports the high-quality urban living environment envisioned by the Specific Plan.

3.1. Architectural Styles

The architectural style or styles of buildings within a community strongly define a community's character. To create successful communities, architectural design must embody methods that are flexible enough to meet the changing needs of the consumer market yet, must also be visually pleasing and complementary to the surrounding neighborhood. Gran Vista provides a transition between the traditional architectural styles founds in the single-family uses to the north, east, and west and the contemporary styles found in urban uses to the south. As such, the architectural style at Gran Vista should reflect a "transitional" style of architecture that draws inspiration from both traditional vernaculars as well as contemporary influences to blend with the existing fabric of the surrounding neighborhood. The architectural style proposed by the Gran Vista Specific Plan should be selected based on the historic and current popularity with homeowners in California.

The Gran Vista community is made up of multiple building types. This variation in building types provides diversity between buildings withing the planning area. The eight-plex (8-plex) building occurs over ten times within the community; therefore, additional variation is required and can be achieved through the design of at last two (2) architectural sub-styles. Examples of two (2) acceptable architectural sub-styles are provided below:

- Transitional Craftsman blends classic elements from the Craftsman vernacular with modern construction techniques. Simple massing with a combination of hipped and gabled roof forms are accentuated with stylistic features found in traditional craftsman homes such as decorative (faux) beams, stone or brick veneer at the ground floor, and stucco and board and batten wall materials.

- Transitional Farmhouse style blends classic elements from the Farmhouse vernacular with contemporary design features. Simple massing with hipped roof forms are accentuated with stylistic features found in a traditional Farmhouse homes such as vertical railing and double wood posts at decks, stucco with lap siding, and brick accents.

These substyles combined with a minimum of four (4) color schemes, similar to those presented later in this chapter, will work together to create diversity throughout the community.

It should be noted that architecture within the planning area should not be limited to only the styles presented herein. Additional transitional architectural sub-styles not represented in this chapter are permitted within the planning area so long as any proposed architecture is found to be an appropriate design by the City of San Marcos Development Services Department and consistent with design guidelines set forth in the sections below.

3.2 Floor Plans and Elevations

Floor plans should be designed to provide a variety of floor plans that offer different price points for varying income levels. Floor plans range from two (2) to three (3) bedrooms and have an office, niche, or flex space to support working from home. The Specific Plan proposes three (3) floor plans and four (4) building types. Floor plans area summarized in Table 3.1. Conceptual Floor Plan Summary and building types are summarized in Table 3.2. Building Type Summary. Final configurations will be approved by the City of San Marcos Development Services Department.

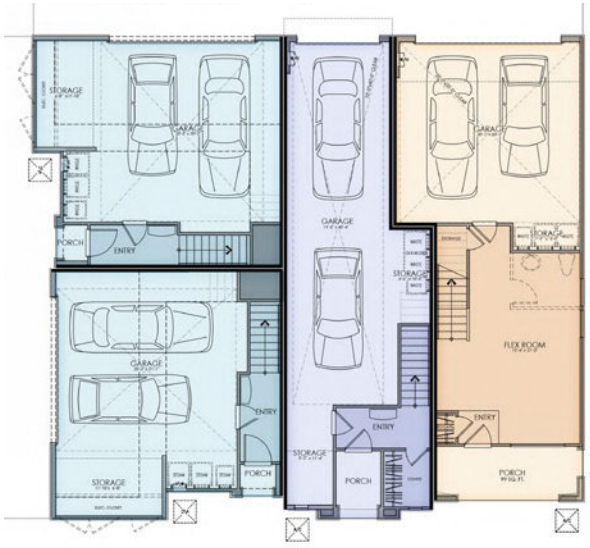
Table 3.1. Conceptual Floor Plan Summary

Plan No.	Square Footage	Bedroom Count	Garage Configuration	Unit Count
2532	1213	2	2-car, Side-by-Side	30
1633	1505	3	2-car, Tandem	45
1636	1802	3	2-car, Side-by-Side	45
Total				**120**

Table 3.2. Building Type Summary

Building Type	Plan 2532	Plan 1633	Plan 1632	Total Units per Building	Total Number of Buildings
401	2	1	1	4	2
601	0	3	3	6	2
801	2	3	3	8	30
1001	2	4	4	10	1
Total					**16**

The conceptual location for each building type is illustrated Figure 3.1. Conceptual Plotting Plan. Conceptual floor plans and two (2) conceptual transitional elevation sub-styles are illustrated in Figures 3.2.1. through 3.2.11. Sub-styles have Craftsman or Farmhouse influences expressed in contemporary interpretation. The "A" elevation has Farmhouse influences with a varying hip roof forms and composition shingle roofing materials. Primary wall materials are stucco with lap siding and brick accents. Additional details include vertical railing and double wood posts at decks. The "B" elevation has Craftsman influences with a combination of gable and hip roof forms and composition shingle roofing. Gables are accessed with decorative (faux) beams. Primary wall materials are stucco with board and batten siding with horizontal banding and stone accents. Colors create strong contrast to further articulate the massing of the building while being compatible as a theme throughout the community.



3.3 Massing and Scale

Massing and scale provide the visual identity between residential dwelling units and the environment. Those qualities help dictate the placement, size, and form for multi-family residential buildings within the planning area. Building type placement within the planning area was studied to achieve the best possible groupings as well as providing transition massing between the neighboring single-family homes and CVS, thereby enhancing the visual character of the neighborhood. Incorporation of the following design concepts should be considered for the architecture within the planning area:

- Utilize building-form elements, such as plane breaks, roof forms, and changes in material to define individual units.
- Vertically and horizontally articulate building design for both front and rear elevations.
- Break up long unbroken surfaces on front elevations by providing a change in plane at least every 25 feet.
- Break up long unbroken surfaces on rear elevations by provide second/third floor cantilevers over every other garage door.

3.4 Building Materials, Accents and Colors

Materials are a key factor in defining architectural styles, convey a sense of quality, and contribute to the community's character. Building color is an integral component in unifying buildings, creating variation of street scape, and building on the foundation of the community aesthetic. The following guidelines should be considered when sleeting materials and colors:

- Select material and colors that are appropriate for each facade, and contribute to enhancing the neighborhoods visual theme, match the theme of the specific style of home to which they are applied.
- Use materials and colors to accentuate changes in massing, define individual units, and complement architectural materials and features.
- Choose colors and materials that complement each other, complement neighboring developments, and add depth to the community.
- Avoid materials and colors that significantly clash with the surrounding neighborhood.
- Avoid the use of identical color palettes where possible for adjacent buildings,
- Use colors palettes to distinguish individual buildings within the planning area and improve the visual interest of streetscapes.
- Appropriate materials include wood, stone veneer, stucco, and brick. Metal accents and trims are acceptable within the planning area.
- Choose colors to achieve a reasonable representation of a particular architectural style lending authenticity to the final product.
- Accents colors should complement the palette of the main structure.

Figure 3.3.1 through 3.3.4 provide conceptual color and materials schemes chosen to accompany the architecture shown in Figures 3.2.1. through 3.2.11.; however, alternative materials and colors may be allowed so long as they are determined to be acceptable by the Development Services Department.

4 - Open Space Design

4.0. Overview

Landscaping and amenities are important components in developing and maintaining a livable, enjoyable, and comfortable residential community. As such, Objective 2 of this Specific Plan seeks to "Create a highly connected and efficient system of sidewalks and pathways supported by pedestrian friendly architecture and landscaping to promot walkability and connect people to surrounding transit and destinations." Additionally, Obejctive 5 of this Specific Plan seeks to "Establish development standards and design guidelines that ensure distinctive architecture, landscaping, and recreational amenities that complement and enhance the existing surrounding neighborhood while providing a desirable living environment."

4.1 Types of Open Space

Figure 4.1. Conceptual Open Space Plan identifies the various types and distribution of open space proposed by this Specific Plan. As summarized in Table 4.1. Open Space Summary, open space has been subdivided into three (3) categories: private open space, open space with grades of 10% or greater, and common open space. Total open space for the planning area is approximately 154,743 square feet (3.55 acres), equal to approximately 47% of the Specific Plan planning area.

Table 4.1. Open Space Summary

Type of Open Space	Total Provided (SF)	% of Specific Plan Planning Area
Private[1]	17,550	5.3%
Open space with grades of $\geq$ 10%	44,548	13.5%
Common Open space	92,645	28%
Total	**154,743**	**46.8%**

1. Private open space is encompassed within the use area of single family attached per Table 2.2.

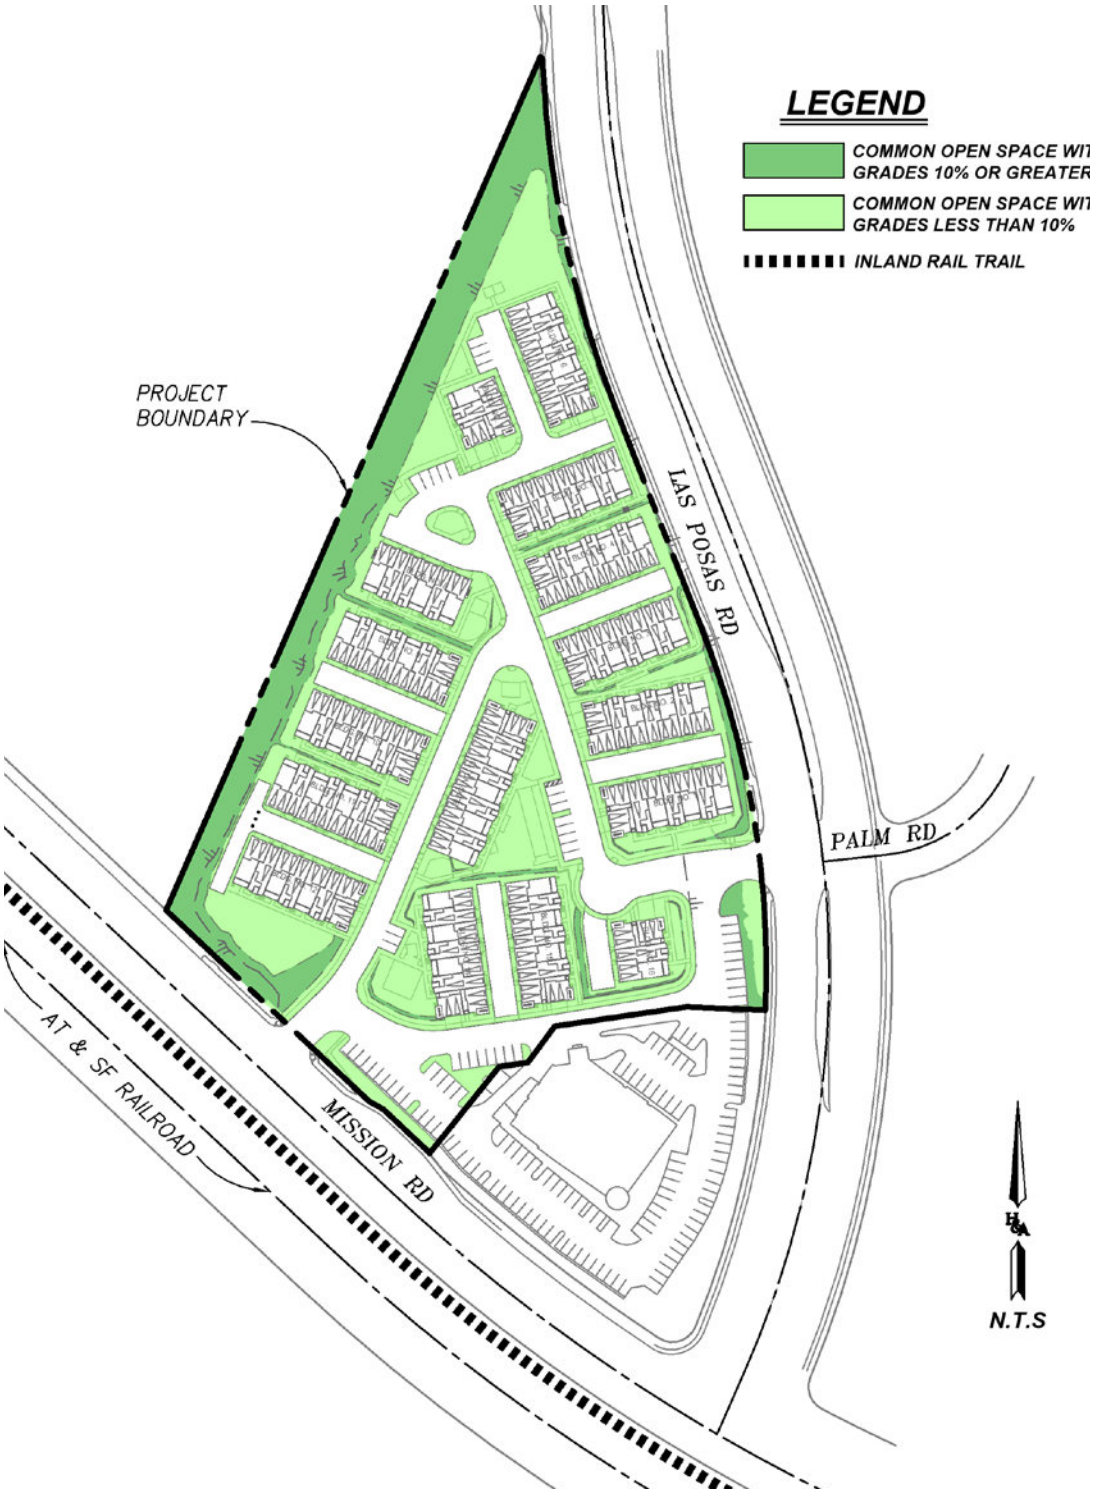

Figure 4.1. Conceptual Open Space Plan

4.1.1 Private Open Space

Private open space is defined as open space areas intended for the private use of individual dwelling units. Private open space should by directly accessible from the primary interior living space of the unit it is intended to serve to ensure the outdoor space is easily accessible and usable. Private open space has been provided in the form of a porch on the ground floor and a balcony on the second floor adjacent to the second-floor living, kitchen, and dining area. The size of each area is listed in Table 4.2. Private Open Space Summary.

Table 4.2. Private Open Space Summary

Plan No.	Porch (SF)	Balcony (SF)	Total SF per Unit	No. Of Units	Total SF for Project
2532	14	73	87	30	2,610
1633	35	99	134	45	6,030
1636	99	99	198	45	8,910
Total					**17,550**

4.1.2 Open Space with Grades of 10% or Greater

According to the City of San Marcos Zoning Ordinance, open space areas with grades of 10% or greater cannot be counted as usable open space. This category includes slopes along the channel and adjacent public roadways. Small slope areas also occur within the paseos that provide access to front doors of the homes. These spaces will be landscaped, commonly owned, and maintained by the Homeowners Association (HOA).

4.1.3 Common Open Space

Common open space includes usable open space areas with grades less than 10%, which encourage relaxation activities such as observing nature, bird watching, painting, photography, and picnicking as well as recreational open space areas such as tot lots, and barbecue areas, outdoor exercise equipment, dog parks, open laws spaces for informal play, and lawn games. This category of open space encourages an active lifestyle which promotes physical activity and community areas that include spaces for people to gather together and socialize.

Pursuant to Table 2.3. and the City of San Marcos Multifamily Residential Development Design Guidelines, an area equal to 30% of livable ground floor area of all units shall be provided as common open space. This equates to 24,431 square feet of common open space required as illustrated in Table 4.3. Common Open Space Summary. Calculations are based on conceptual architecture provided in Chapter 3. Since the main living areas for all floor plans occurs on the second floor, the common open space requirement has been calculated based upon the second floor's square footage. As illustrated in Figure 4.1. Conceptual Open Space Plan, the Specific Plan provides 92,645 square feet of common open space, which exceeds this requirement.

Table 4.3. Common Open Space Summary

Plan No.	Livable Ground Floor Area by Plan	Number of Units	Common Open Space Required (30% Ground Floor Area)	Common Open Space Provided
2532	589	30	5,301	--
1633	688	45	9,288	--
1636	729	45	9,842	--
Total		**120**	**24,431**	**92,645**

4.2. Amenities

The City of San Marcos Multifamily Residential Development Design Guidelines also provides standards for the minimum amount and type of amenities required. Figure 4.2. Conceptual Amenity Plan illustrates the proposed amenities within the planning area.

4.2.1 Children's Amenities

The SMMC provides specific requirements for children's amenities. A minimum of one (1) tot lot for every 25 dwelling units with a minimum of 400 SF of play for each tot lot is required. This would amount to approximately 4.8 tot lots with a total cumulative area of 1,920 SF. Tot lots are to be distributed throughout the planning area. Additionally, projects of 75 units or more must provide an additional usable recreation area and/or facilities that contain a level play area with a minimum area of 800 SF. The requirement for a children's play area plus required tot lots require a total area of 2,720 SF. Table 4.4. Children's Amenities summarizes the children's facilities proposed by the Specific Plan, which are illustrated in Figure 4.3. Conceptual Children's Amenities. Due to the urban character and type of homes proposed within this community, households within the planning area are anticipated to have fewer young children than typical and will include more singles and young couples without children. Therefore, the Gran Vista Specific Plan provides one (1) children's play area and two (2) tot lots with a total combined area of 5,811 SF of multi-age tot lots and play areas. Although the open space provided in this Specific Plan deviates slightly from the SMMC, the Specific Plan provides more overall square footage that would otherwise be required and includes amenities that maximize the potential usage by a broader range of household types.

Table 4.4. Children's Amenities

Facility	Required	Provided
Children Play Area	800 SF	3,434 SF
Tot Lots		
Tot Lot 2	120 du/25 x 400 = 1,920 SF	1,047 SF
Tot Lot 3		1,330 SF
Total	**2,720 SF**	**5,811 SF**

Figure 4.2. Conceptual Amenity Plan

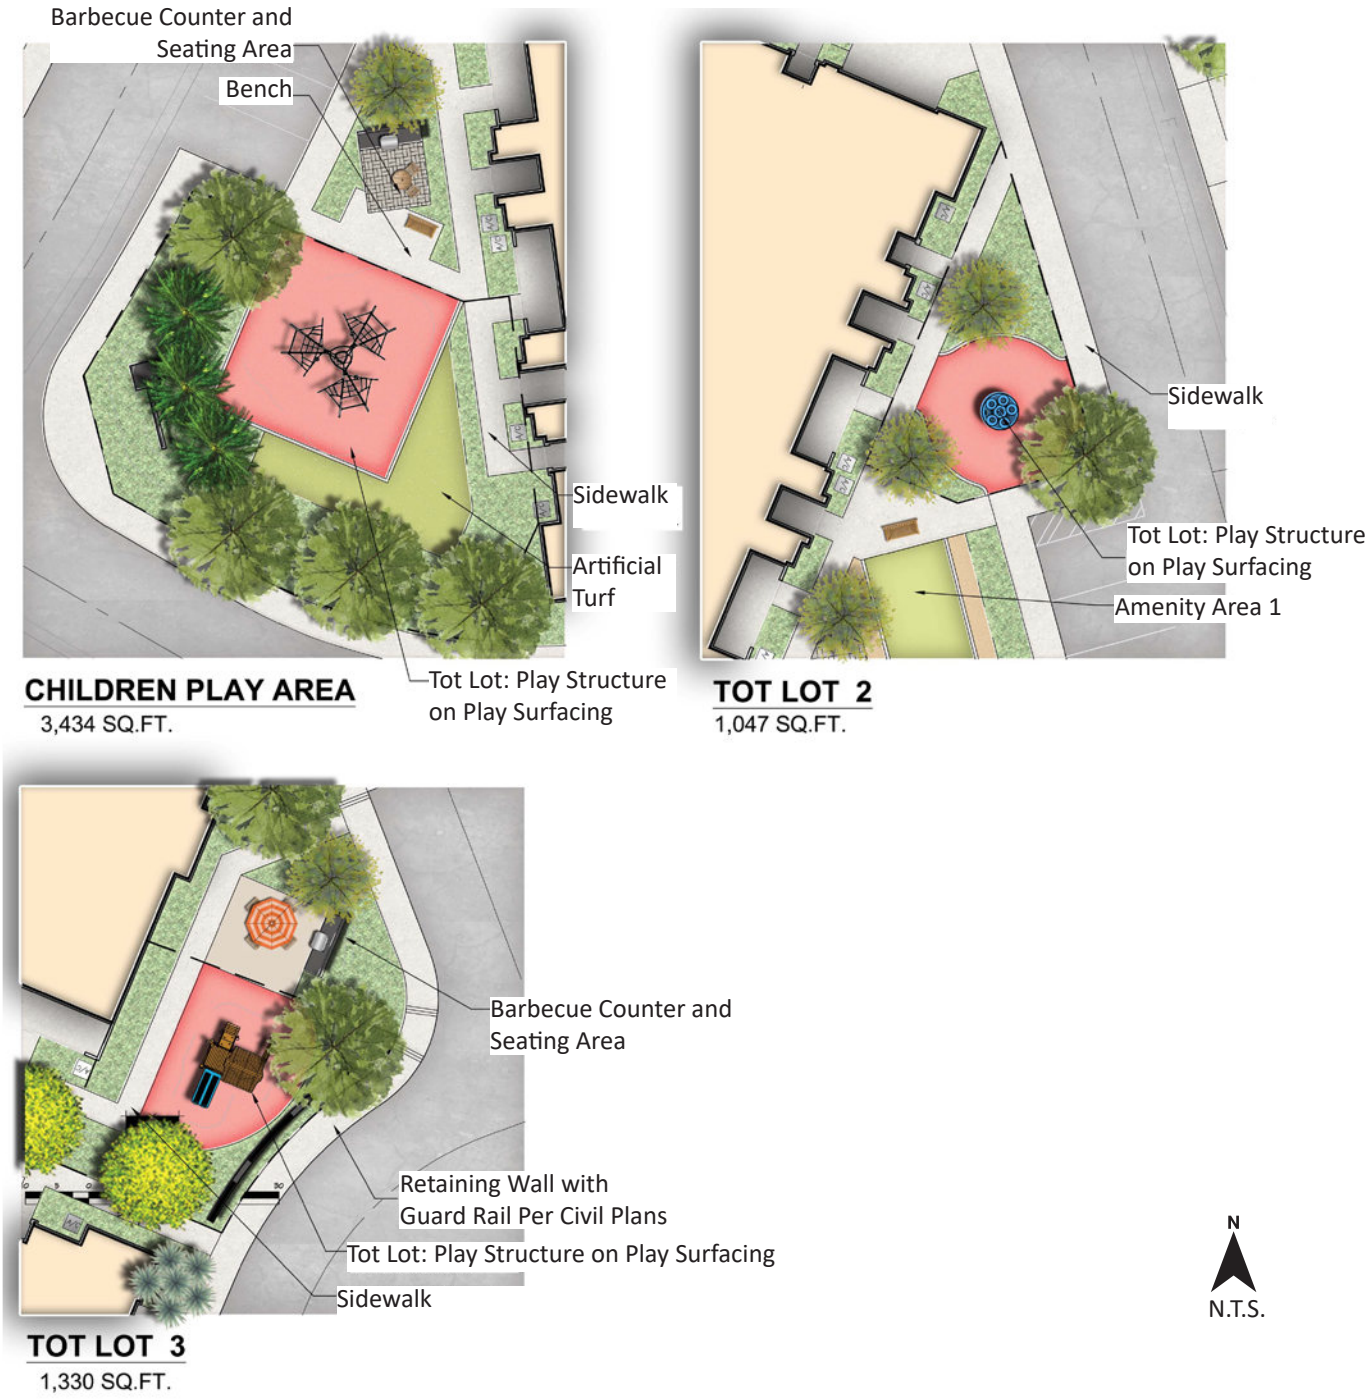

Figure 4.3. Conceptual Children's Amenities

4.2.2. Other Amenities

The SMMC also requires at least three (3) on-site amenities. The list of amenities provided in the SMMC is limited and includes facilities that are traditionally associated with more suburban types of development. In urban infill communities such as Gran Vista, amenities shown in Figure 4.2. Conceptual Amenity Plan are provided to be more flexible in design to allow for a wider range of activities that can appeal to a more diverse demographic including families, singles, and couples without children. For example, in lieu of a community room, which can only serve a single large group at a time, four (4) barbecue areas ranging from large to small are provided throughout the planning area. These spaces can accommodate large groups, such as an HOA meeting, and smaller get-togethers simultaneously. These barbecue areas are also located near children's amenities and other activity spaces to encourage social gathering. In lieu of another playground, an off-leash dog area provides space for dogs to run and play freely, accommodating the needs or residents and families with pets. Formal sport courts are limited to a single sport. Instead, multiple flexible spaces are provided to accommodate a variety of for lawn games such as cornhole and bocce ball or other informal activities such as frisbee, badminton, or similar. Additional amenities include a community garden and exercise stations scattered throughout the planning area to support healthy eating and active lifestyles. These various amenity spaces are detailed in Figures 4.4. through 4.6.

Although the standards for amenities vary from the SMMC, the Specific Plan provides more overall square footage than would otherwise be required and allows a broader range of amenities and experiences that can be used by a wider range of age groups and household types. This diversity and flexibility maximized opportunities for families and friends to interact with each other.

4.3. Walls and Fences

Walls and fences should be designed with a consistent design throughout the community to maintain a feeling of cohesiveness and quality. Wall and fence designs should also complement the adjacent architecture. Figure 4.7. Conceptual Wall and Fence Plan illustrates the location of walls and fences and includes a detail of a conceptual fence design that is consistent with the design theme for the community.

4.4. Lighting

Lighting should be designed to meet the standards in Chapter 2 while also enhancing the aesthetic of the community. The following guidelines apply to lighting within the planning area:

- Provide lighting fixtures with a consistent design throughout the planning area and that are complementary to the design theme of the community.
- Design lighting at a pedestrian scale and to promote safety and security for residents walking at night.
- Lighting attached to buildings should include fixtures that are appropriate to the architectural style of the building.
- Shield lighting to direct light downward, avoid light trespass on surrounding properties, and reduce glare.

Figure 4.8. Conceptual Lighting Plan illustrates lighting designs for the planning area.

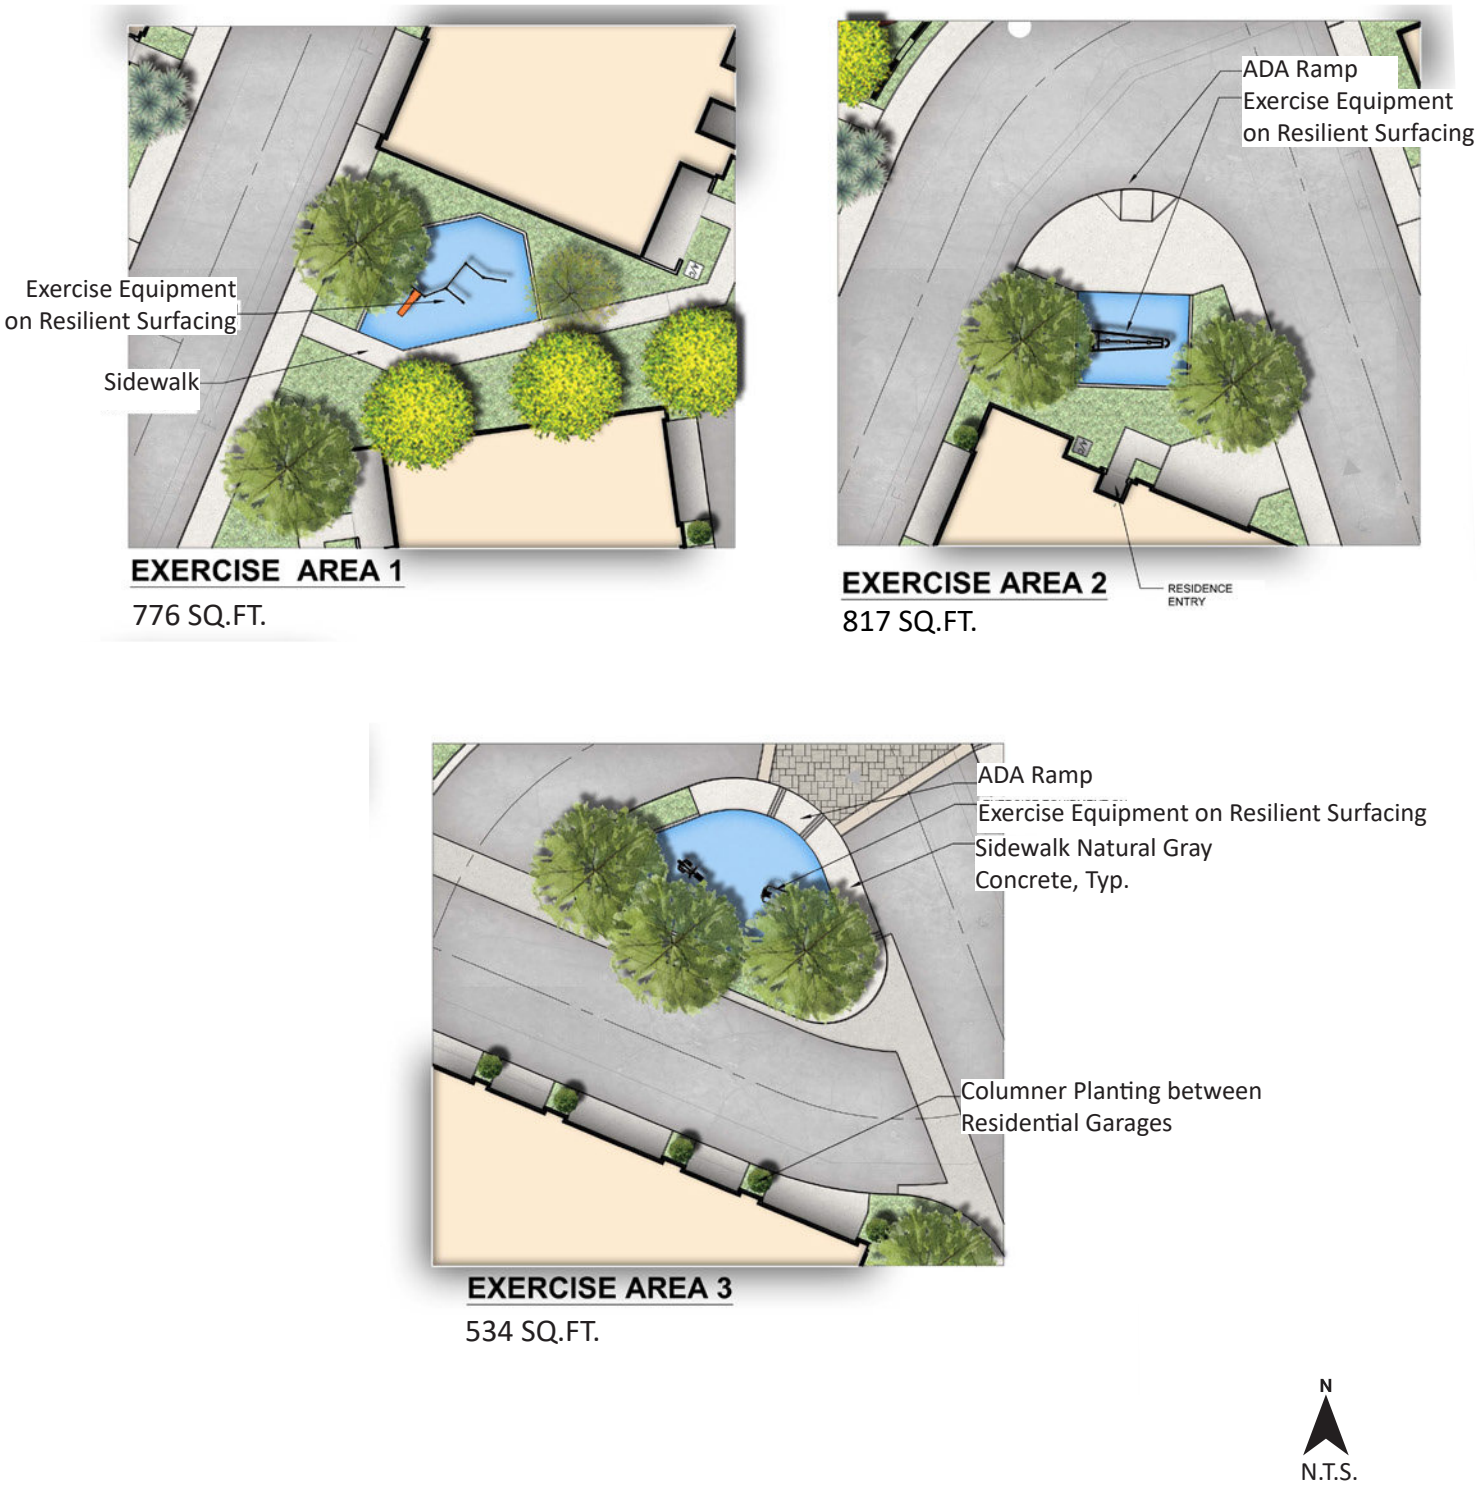

Figure 4.4. Conceptual Exercise Areas

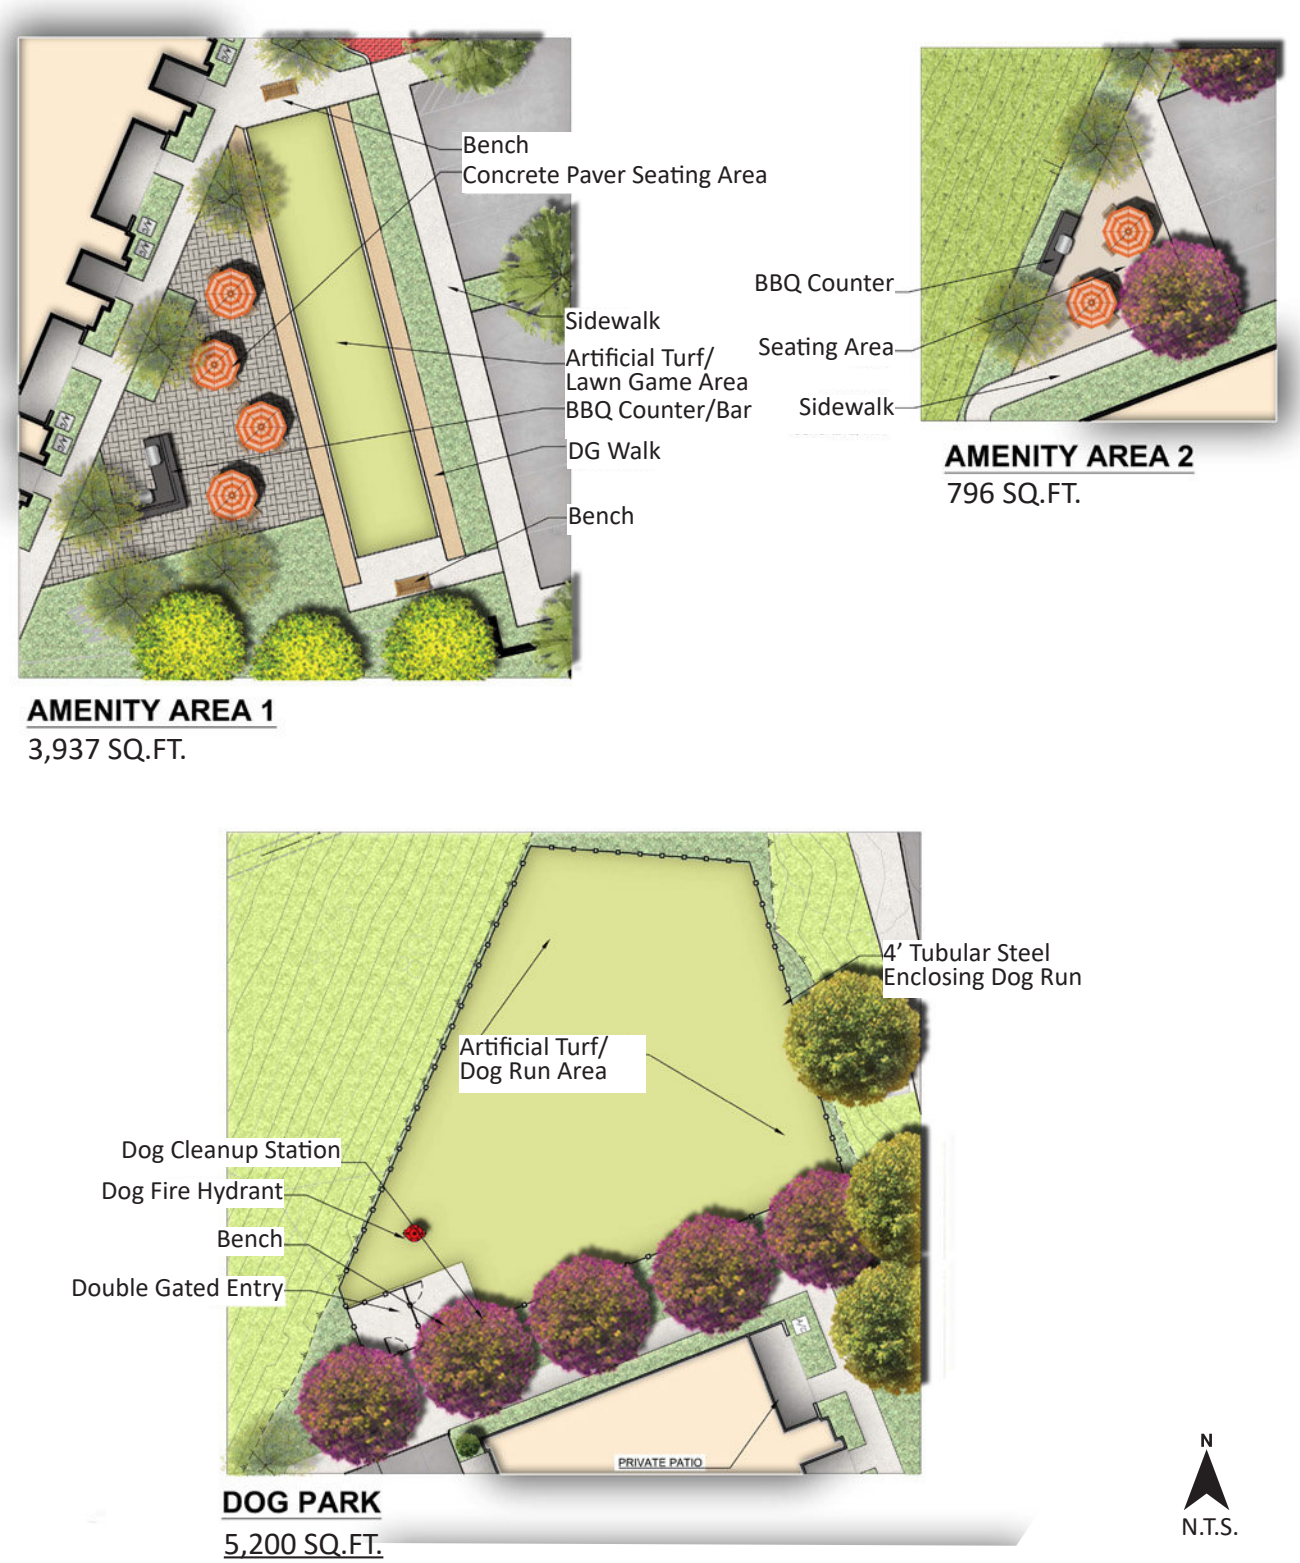

Figure 4.5. Conceptual Dog Park and Amenity Areas

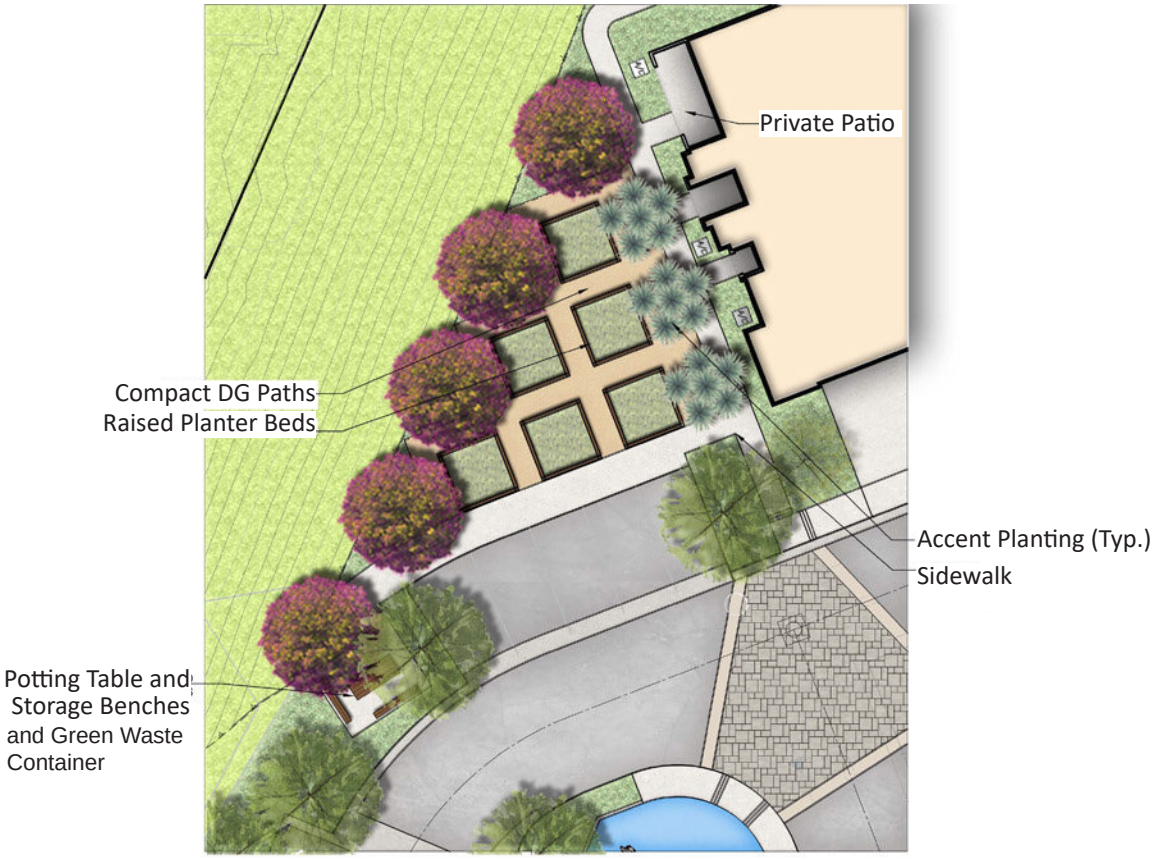

Figure 4.6. Conceptual Community Garden and Turf Play Area

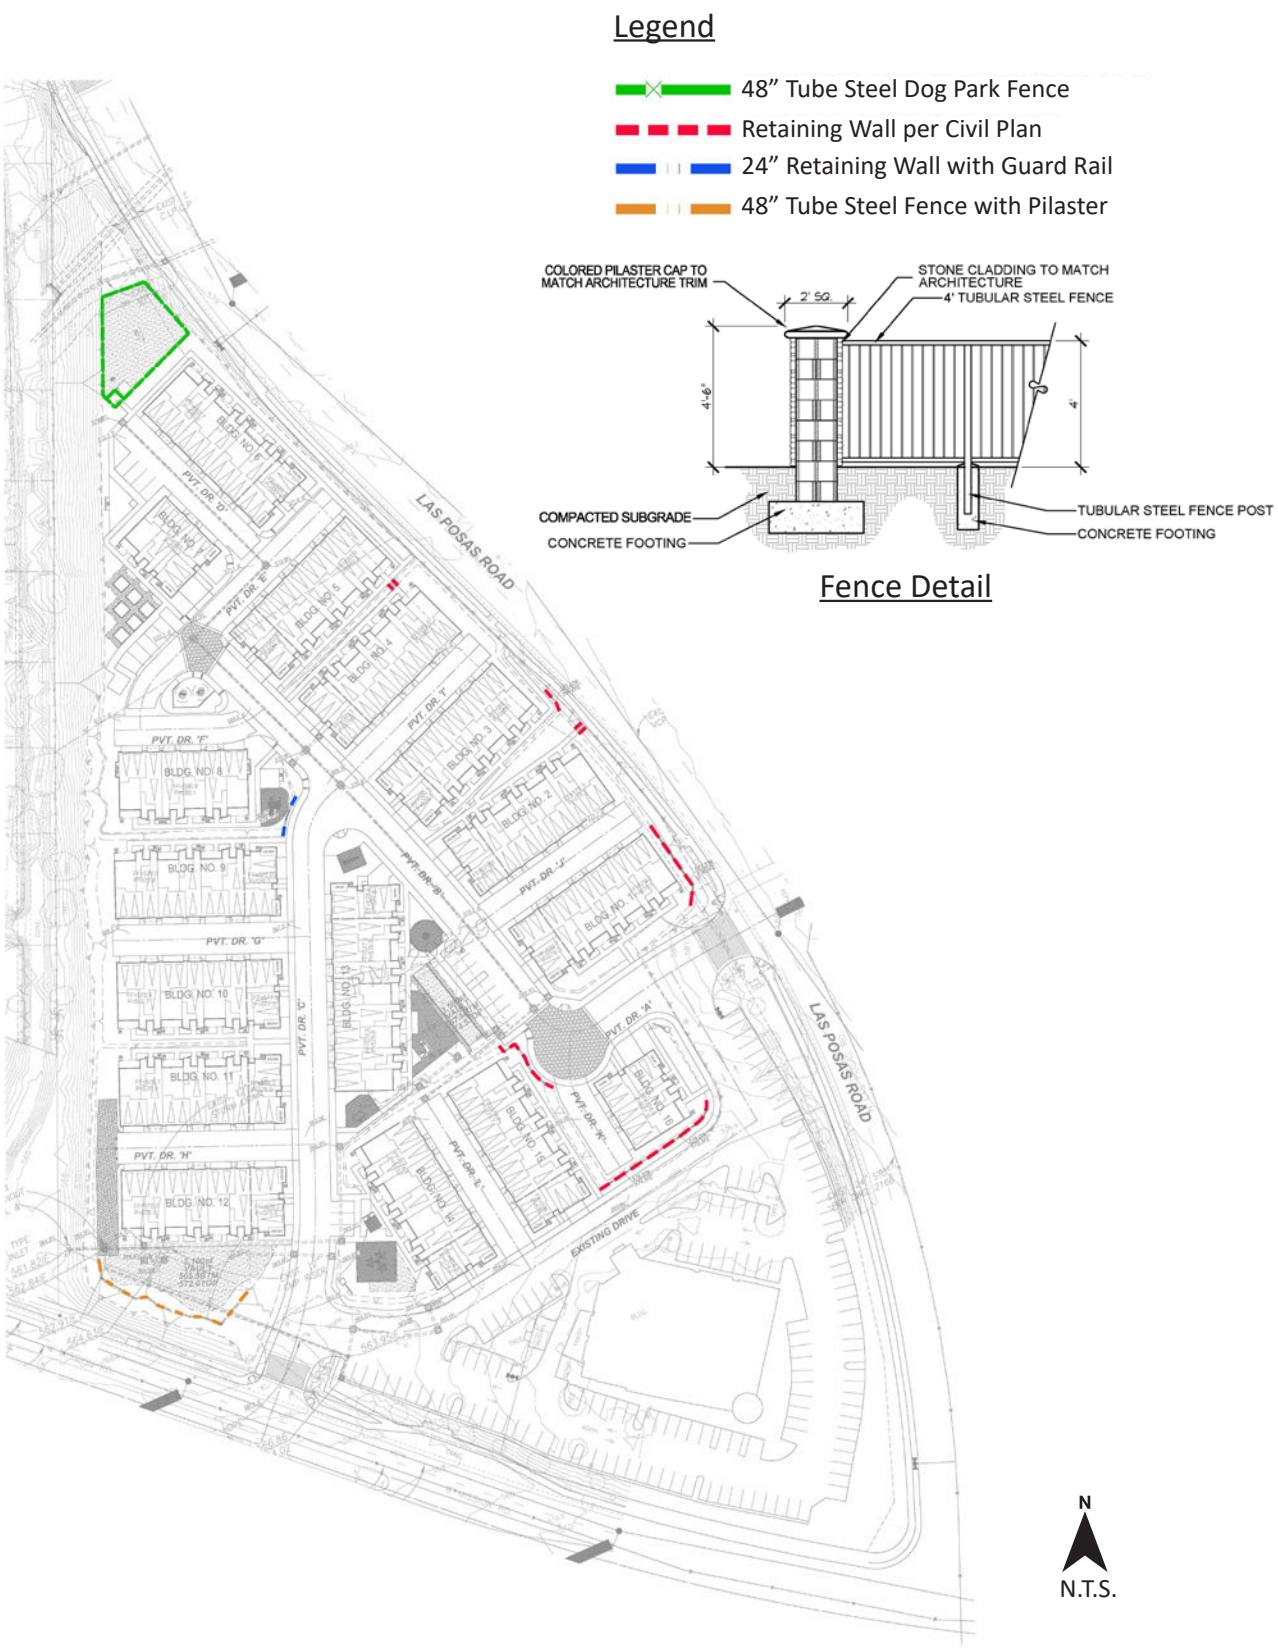

Figure 4.7. Conceptual Wall and Fence Plan

Figure 4.8. Conceptual Lighting Plan

4.5. Signs and Entries

Monument signage announces entry into a community and provides a first impression for visitors. Signage should reflect the design theme of the community and be accentuated with landscaping and lighting. Materials should complement the adjacent architecture by incorporating similar or complementary colors and materials in the monument design. Entry designs should also consider the existing enhanced paving that occurs at both entries. Enhanced paving at entries should be maintained or replaced if necessary to provide an attractive entry for both the Gran Vista community and CVS. Please refer to Figure 4.9. Conceptual Monument Sign for an example of appropriate monument signage.

Figure 4.9. Conceptual Monument Sign

4.6. Landscaping

Along with architecture, landscaping helps form an identity and theme for development. Landscaping works together with the architecture to create an attractive neighborhood, which is both functional and water efficient. To assure development of a cohesive community, the following landscape guidelines have been provided. A landscape concept for the project can be seen on Figure 4.10. Illustrative Landscape Plan. Developers and/or builders should use the following information when designing and selecting materials and lighting within the planning area. All landscaping shall comply with the City's Model Water Efficient Landscape Ordinance and the City of San Marcos Landscape Manual. Final landscape design shall be approved by City of San Marcos Development Services Department.

Table 4.5.1. and 4.5.2 provides plant material palette for developer/builder to use when selecting landscape materials for various locations such as entries, streetscapes, and common open space areas. Plant materials selected for the planning area should be chosen based on a multitude of factors and should strengthen the overall character of the community. This palette utilizes drought tolerant and California native plant palettes. Plants have been chosen for their appropriateness to the planning area design, local climate tolerance, soil conditions, and level of maintenance intensity. The selected plants are well suited to the local soils and have proven to flourish within the project area's climate. The plant materials are tolerant of a wide range of temperatures and require very little water consumption. No invasive plant species shall be used. All street trees planted within 10 feet of public improvements shall have root barriers. Plant palettes should be considered fluid and subject to change, with final approval determined by the City of San Marcos Development Services Department. Alternative plants and trees similar in tolerance and water usage to the conceptual list provided may be approved with a Minor Deviation (see Section 7.2.6.).

5 - Circulation & Transportation

5.0. Overview

The Circulation Plan facilitates the safe and efficient movement of vehicle, bicycles, and pedestrians while promoting connectivity and minimizing traffic impacts. Within the planning area, Private Drives and Private Drive Aisles are designed to provide direct and attractive shared access for vehicle and bicycles. Walkways are aligned to create convenient, safe, and comfortable pedestrian connections from individual homes to recreational amenities, sidewalks, and nearby uses.

The planning area and the CVS parcel share two (2) common access points: a driveway at the signalized intersection of North Las Posas Road and Palm Road serves as the primary entry to the planning area and a driveway on West Mission Road that include a left-turn in and right-in/right-out traffic movements serves as a secondary entry to the planning area. Both driveways have been improved with enhanced paving and landscaping. Shared use of these driveways is controlled through Covenant, Conditions, and Restriction (CC&Rs) that cover all three (3) properties.

5.1. External Roadways & Entries

Three (3) external public roadways provide access to the planning area. North Las Posas Road forms the planning area's easterly boundary. Palm Road intersects with North Las Posas Road at the project's main entrance. This main entrance is signalized. West Mission Road forms a portion of the planning area's southerly boundary and provides additional access to the site. Each of these roadways is described in greater detail in the following sections.

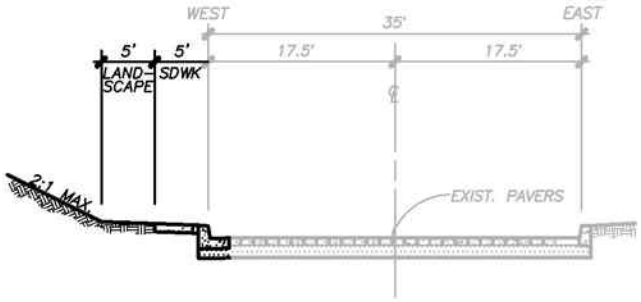
5.1.1. North Las Posas Road

The Mobility Element identifies North Las Posas Road as a six (6) lane arterial with Class II or III Bicycle Facilities. Along the planning area's frontage, North Las Posas Road has been full built to the 6-lane Prime Arterial Standard, which includes six (6) lanes of vehicular traffic (three (3) lanes in each direction); an 18-foot center landscape median with designated left-turn pockets at the intersection of Palm Road; Class II bike lanes in each direction; and five (5) foot sidewalks separate from the curb by a four (4) feet of landscaped parkway on both sides. North Las Posas Road serves as a primary entry into the Santa Fe Hills Subdivision to the north.

5.1.2. Palm Avenue/Primary Access

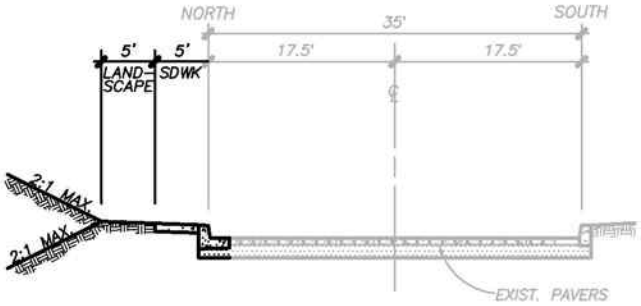
Palm Avenue is a Local Street that provides access to a church and a rural residential neighborhood to the east of the planning area. The intersection of Palm Avenue and North Las Posas Road is signalized and includes pedestrian crosswalks on the north, east and west sides of the intersection. No crosswalk is provided on the south side of the intersection. The west leg of this intersection consists of a driveway that serves as the primary entrance to the planning area. This entry has been improved with enhanced paving and landscaping as part of the CVS development. Additional landscape enhancements are proposed as part of the Landscape Plan and are described in Chapter 4 of this Specific Plan.

5.1.3. West Mission Road



The Mobility Element identities West Mission Road as a four (4) lane arterial with enhanced bicycle/ pedestrian facilities. Along the planning area's frontage, West Mission Road has been fully built to the 4-lane Major Arterial Standard, which includes four (4) lanes of vehicular traffic (two (2) lanes in each direction); a center median; Class II bike lanes on the north side; and a five (5) foot contiguous sidewalk. A small portion of sidewalk is currently missing from the frontage near the bridge crossing at the southwest corner of the planning area. The project will provide this missing portion of sidewalk by extending the existing sidewalk around an existing utility pole to the project boundary. In lieu of sidewalk and bike lanes, the south side of the roadway includes the Inland Rail Trail and the SPRINTER rail lines, which are both described later in this Chapter. At the westerly edge of the planning area, the median along West Mission Road consists of a painted two-way (2-way) turn lane, which then transitions to a constructed median with a left turn pocket at the secondary entry to the planning area. The median physically restricts turning movements at the planning area's driveway access to only allow for right-in, left-in, and right-out turning movements. Left-out turning movements are not permitted. A bus stop pull-out area is located on the north side of the roadway, immediate east of the planning area driveway, in front of the CVS parking lot.

5.2 Internal Vehicle Circulation



The internal circulation system for the planning area consists of a combination of Private Drives and Private Drive Aisles. Private Drives and Private Drive Aisles have been designed to accommodate the level of traffic generated by the project in a safe and efficient manner. Figure 5.1. Conceptual Vehicular Circulation Plan identifies the location of Private Drives and Private Drive Aisles within the planning area. The following provides a description and standard details for Private Drives and Private Drive Aisles.

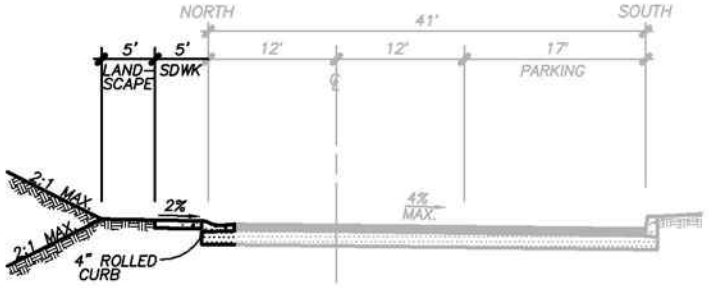


Figure 5.1. Conceptual Vehicular Circulation Plan

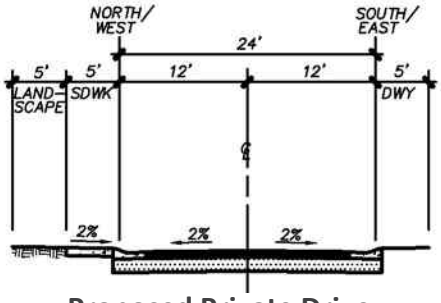
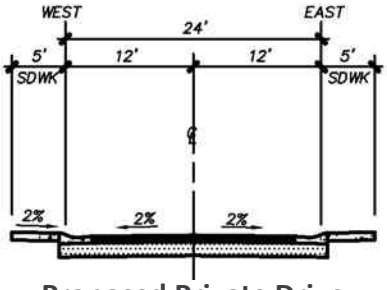
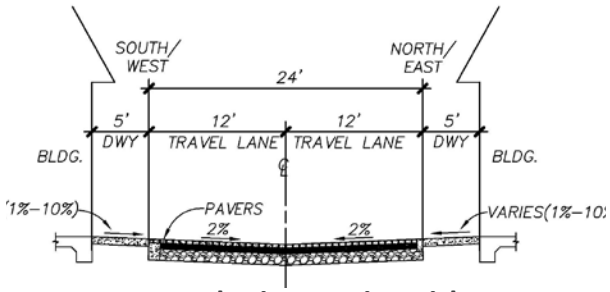


Existing Entrance
West Mission Road



Existing Entrance
North Las Posas Road/Palm Ave.



Existing CVS Edge

Proposed Private Drive
Sidewalk One Side

Proposed Private Drive
Sidewalk Both Side

Proposed Private Drive Aisle

Figure 5.2. Typical Private Drive and Drive Aisle Cross Sections

5.2.1. Private Drives

As illustrated in Figures 5.2. Typical Private Drive and Drive Aisle Cross Sections, Private Drives are low-speed streets designed with a minimum curb-to-curb width of 24-feet. This width is adequate to accommodate vehicles, emergency vehicles, and other service vehicles. This cross section allows for two (2) lanes of travel (one (1) in each direction) as well as adequate back-up space where parking spaces are providing. Parking stalls are provided along Private Drives to accommodate guest parking in accordance with the parking regulation in Chapter 2. Parking is only permitted in designated parking stalls, which are required to be adequately marked for guest parking.

Generally, Private Drives provide sidewalk on at least one (1) side of the street. Walkways adjacent to Private Drives consist of 5-foot wide pathways and make up an internal system of pathways further described in Section 5.3. The low design speed also allows Private Drives to be shared with bicycles as further described in Section 5.4. Landscaping along Private Drives consist of adjacent common area open space landscaping as described in Chapter 4.

5.2.2. Private Drive Aisles

Private Drive Aisles provide access to private garages. As illustrated Figures 5.2. Typical Private Drive and Drive Aisle Cross Sections, Private Drive Aisles are designed with a minimum width of 24-feet. A minimum dimension of 30-feet is required between garages to provide adequate back up for vehicles exiting private garages. Parking is prohibited in Private Drive Aisles.

5.2.3. Emergency Vehicle Access

Emergency Vehicle Access is provided on Private Drives as illustrated in Figure 5.3. Emergency Vehicle Access Plan. Private Drive widths, curb return radii, and turn-arounds have been designed in accordance with City of San Marcos Fire Department Standards.

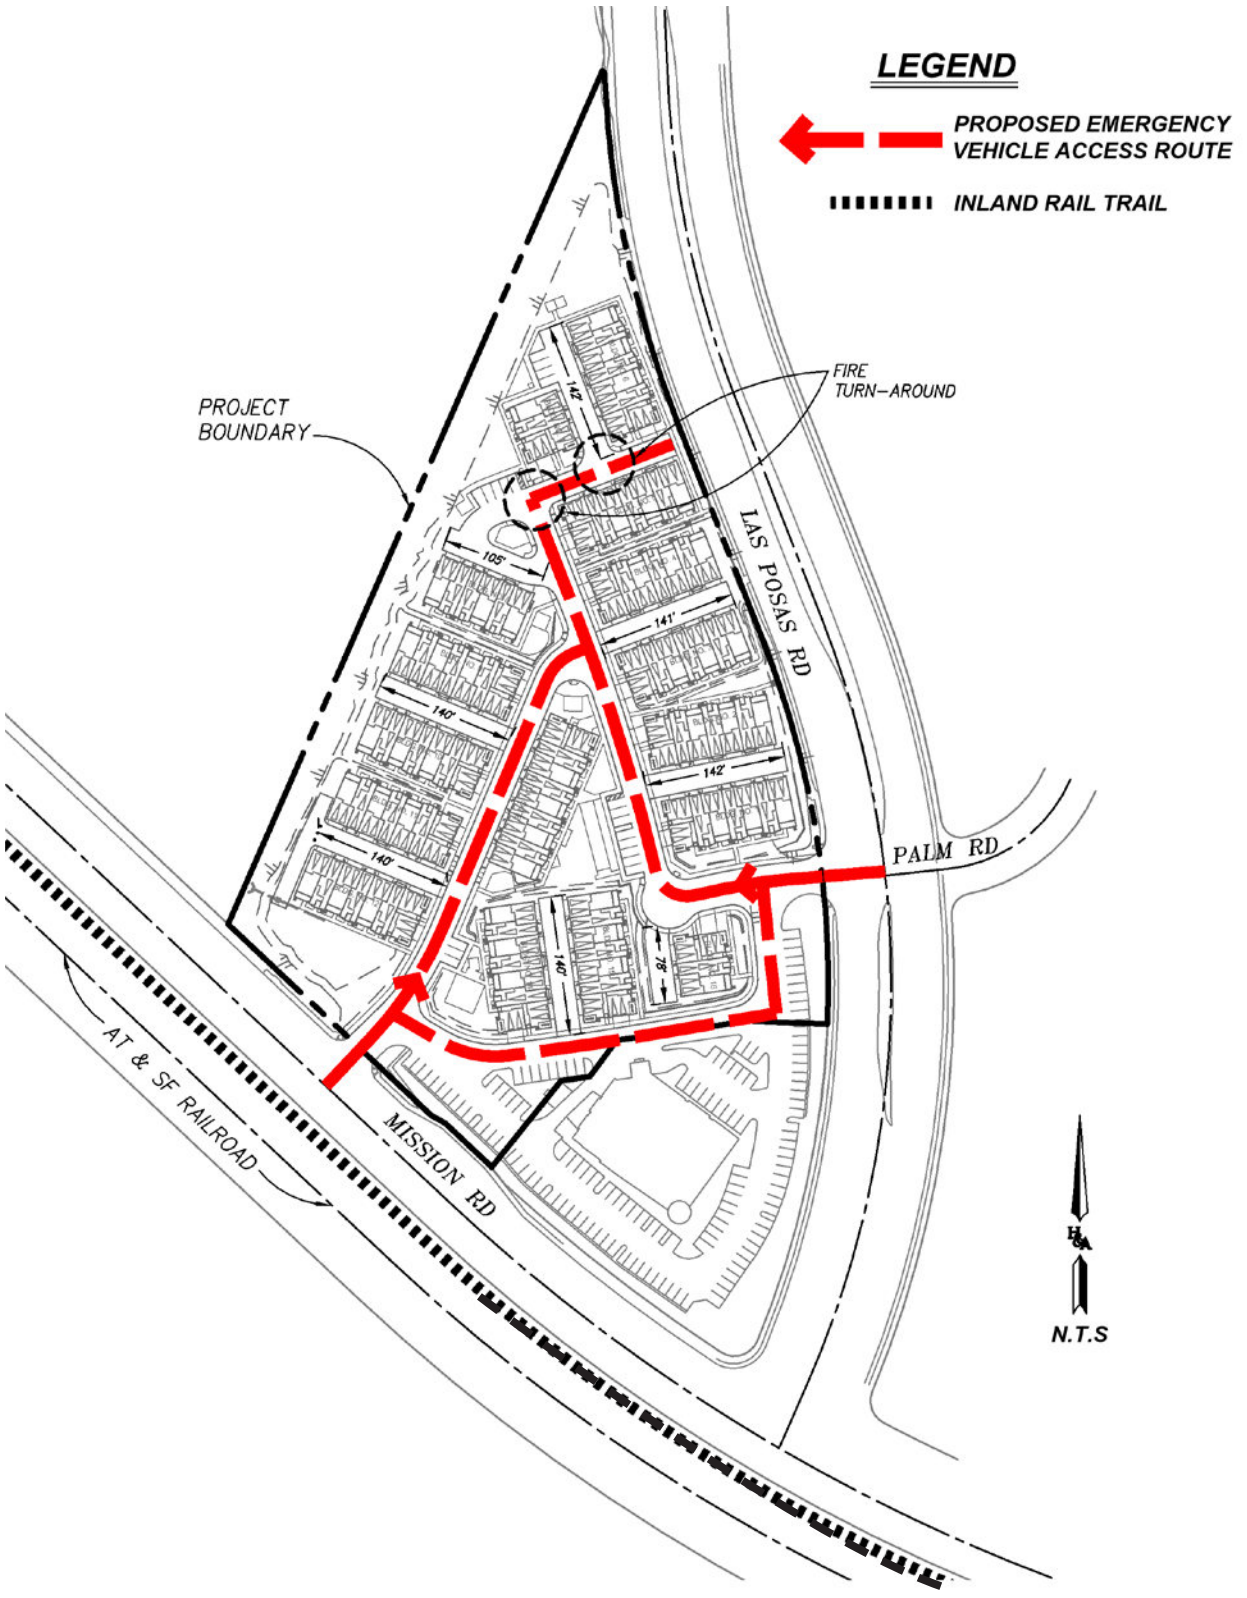


Figure 5.3. Emergency Vehicle Access Plan

5.3. VMT Reduction

According to the United States Environmental Protection Agency (EPA), transportation accounted for 29% of greenhouse emission in the United States during 2019. Light duty vehicles such as cars, vans, sport utility vehicles (SUVs), and pickup trucks, made of 59% of those GHG emissions. In effort to reduce GHG emissions, the State of California enacted SB 743, which changed the way traffic impacts are evaluated. Prior to July 1, 2020 SB, Level of Service (LOS) was used to evaluate the traffic impacts by measuring the number of cars on the road during peak driving times. LOS was typically at its worst in high-density areas, which meant urban infill development often resulted in unavoidable and significant impacts even though this type of development typically resulted in fewer GHG emissions per capita. The State sought to prioritize and promote infill development near transit and services or in areas with high walk and bike scores to encourage people to choose alternative modes of travel. By enacting SB 743, VMT became the new metric for evaluating transportation impacts. By reducing the total amount of driving, GHG emissions would also be reduced. Reducing VMT is achieved in a variety of ways. The following VMT reduction measures are provided within this Specific Plan.

- Work From Home - Floor plans are designed with office space or a niche large enough to accommodate a desk so residents have the option of working from home. Homes are equipped with Category 6 Ethernet cable to allow for higher internet speeds and greater bandwidth. Offices and niches are designed for easy internet set-up and model homes are staged to demonstrate how work from home is possible. By providing adequate working space, residents are encouraged to work from home rather than commute to work when possible, potentially reducing VMT.

- Walkability – The site's proximity to transit and services make walking a viable alternative to driving. The Specific Plan is designed to providing safe, efficient, convenient, and comfortable walking paths throughout the community that make walking more appealing. Walkability is described in more detail in Section 5.4. Pedestrian Circulation.

- Bicycle Facilities - Adjacency to existing Class II Bike lanes on both North Las Posas Road and West Mission Road as well as proximity to the Inland Rail trail makes biking a feasible substitute for vehicle use. The Specific Plan includes bike parking standards that exceed City bicycle parking standard to encourage bicycle use. Bicycle Facilities are described in more detail in Section 5.5. Bicycle Connectivity.

- Proximity to transit – The planning area is less than a quarter mile from Palomar College Transit Center, which provides access to four (4) BREEZE bus lines and the SPRINTER hybrid rail. Both forms of transit provide daily service with multiple stops each day. These transit options are described in more detail in Section 5.6. Transit.

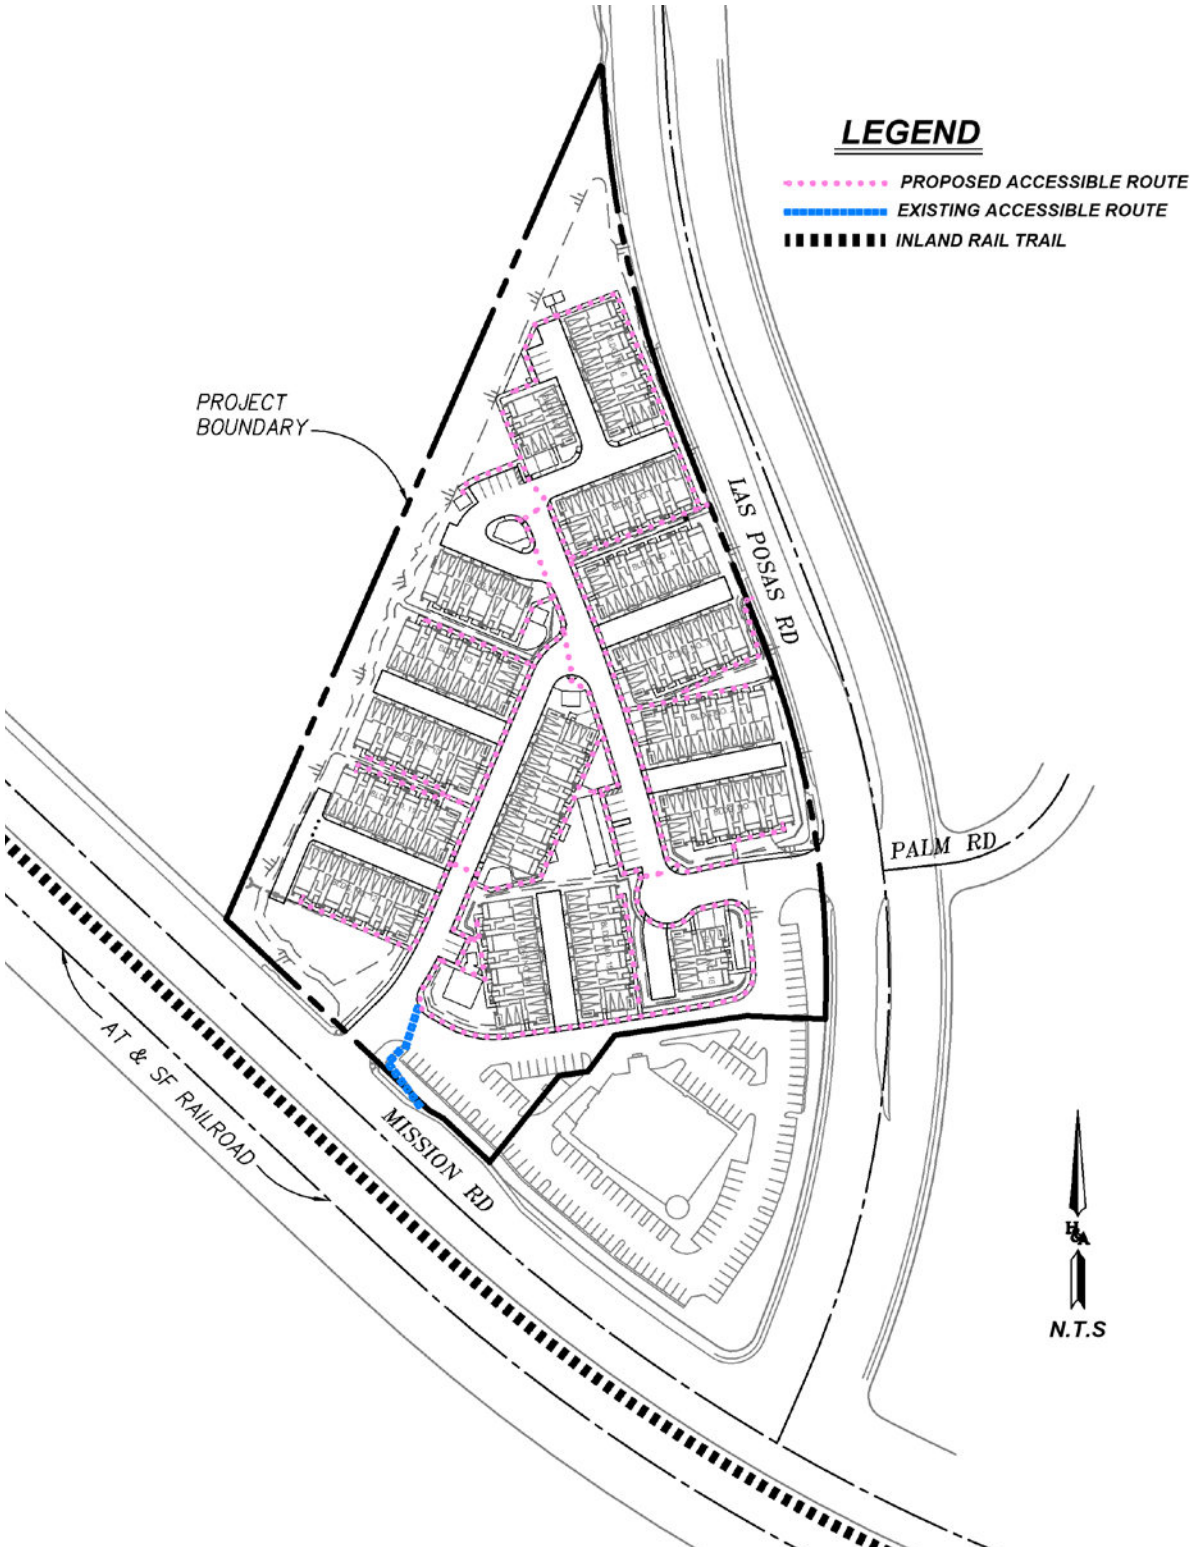

Figure 5.4. Pedestrian Circulation

5.4. Pedestrian Circulation

The planning area is located within walking distance of numerous uses, services and facilities that make Gran Vista a walkable, transit-oriented community. The adjacent CVS offers a range of everyday products, including limited groceries, a stone's throw away from new residential homes. The site is also a six (6) minute walk from Palomar College Transit Center, which provides access to regional bus and rail transit as described in Section 5.6. Transit. Nearby parks include El Dorado Park, Cerro de las Posas Park and Cerro de las Posas Park. Assigned elementary and middle schools are both located less than a mile away with existing sidewalk along the both routes. The high school is accessible via a 20-minute bus ride, which is accessible at the stop across West Mission Road.

To further enhance the walkability of the site and in accordance with Specific Plan Objective 2, Figure 5.4. Pedestrian Circulation Plan establishes a highly connected and efficient circulation system of pathways supported by pedestrian friendly architecture and landscaping. Buildings have been arranged within the planning area to create direct and frequent walkway connections throughout the planning area and to adjacent public sidewalk along North Las Posas Road and West Mission Road. Architectural elevations include windows and front doors that face sidewalks and pathways to provide natural visual surveillance, deter crime, and create a safer walking experience. Landscaping along walkways combines a variety of colors and textures for visual interest and trees offer shade for pedestrian comfort. Walkways are designed to provide access in accordance with the Americans with Disability Act (ADA) and to promote walkability and connect people to surrounding transit and places.

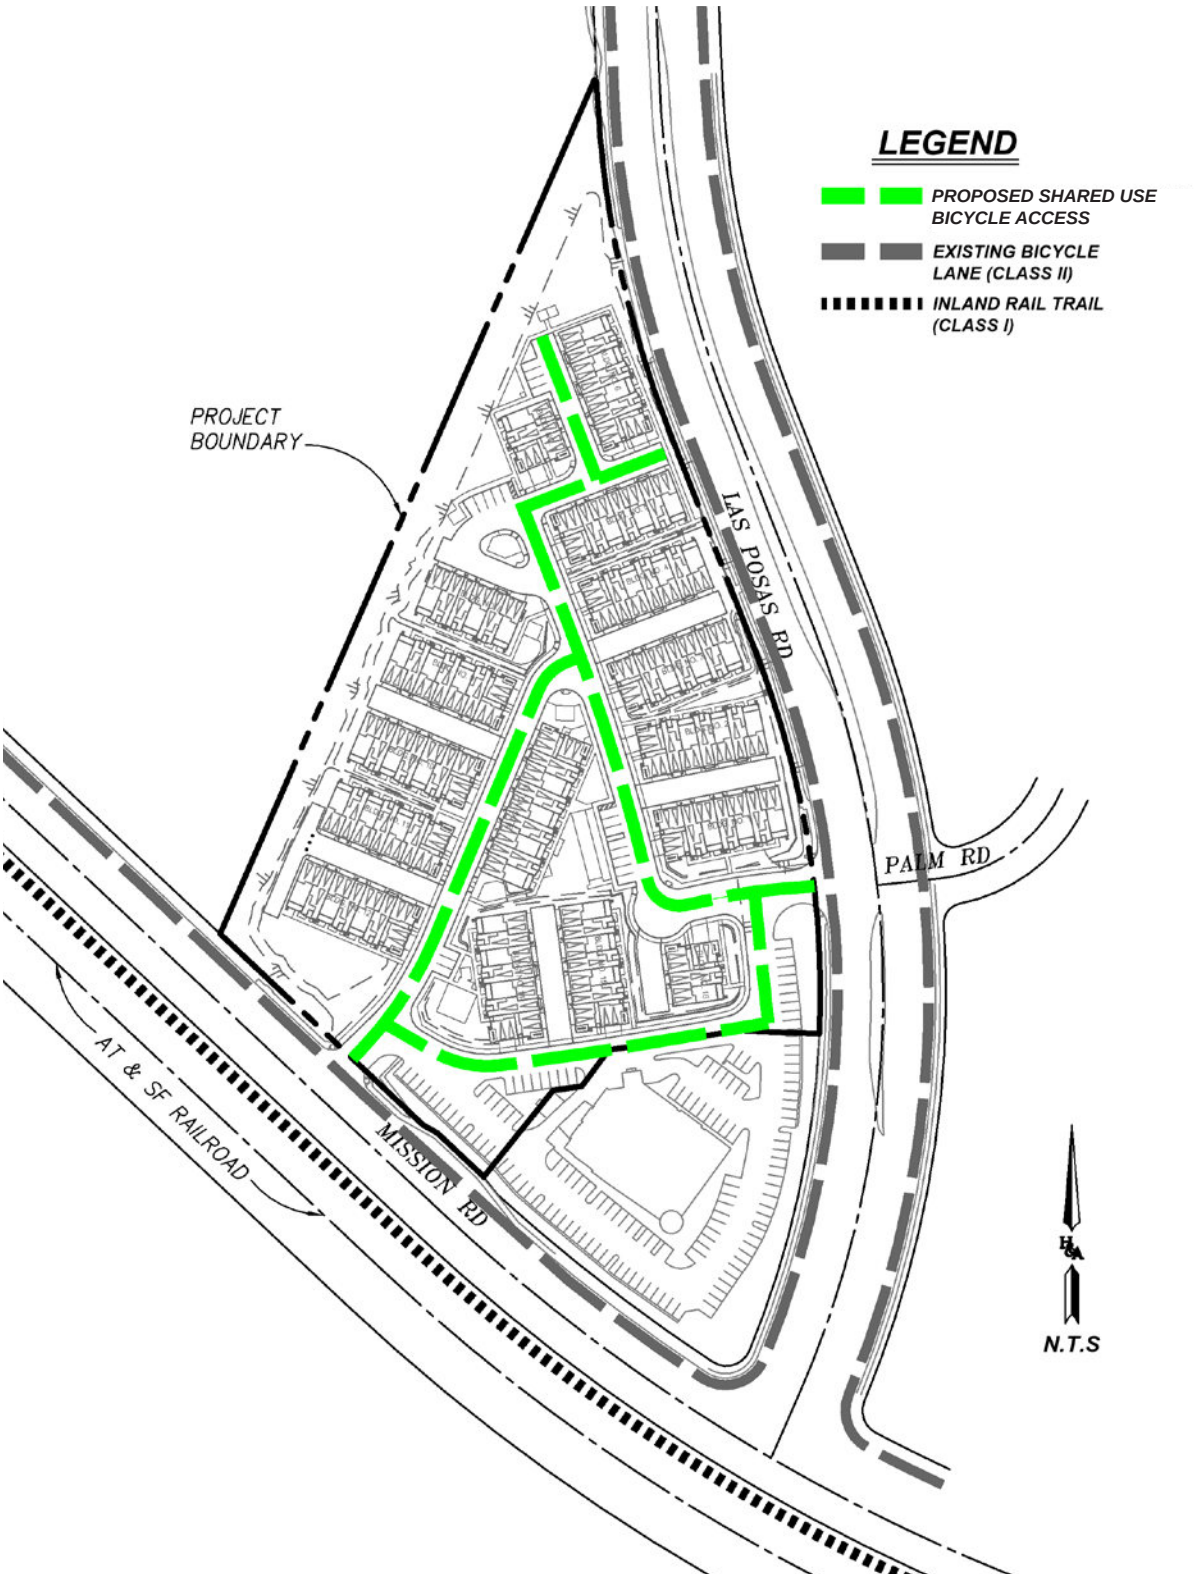

Figure 5.5. Bicycle Circulation

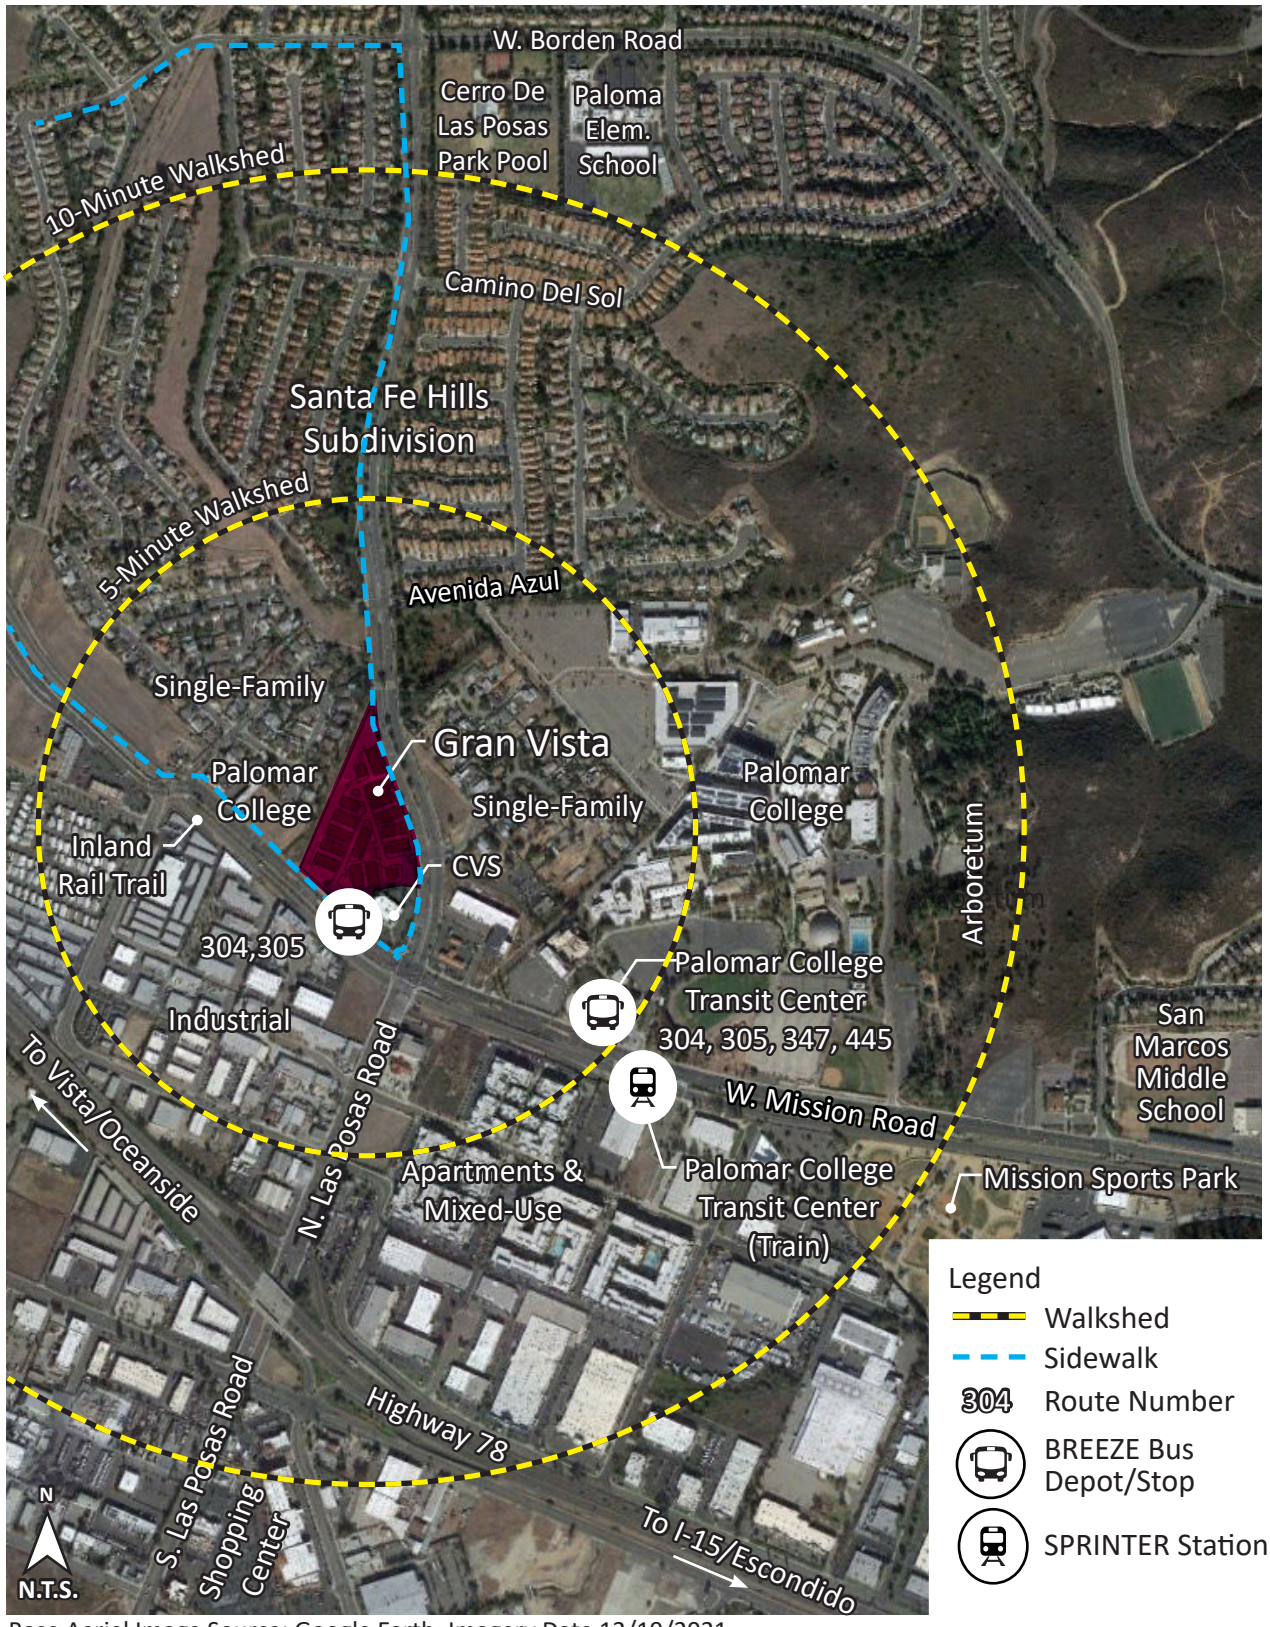
5.5. Bicycle Connectivity



Bicycling is supported by the Specific Plan by creating a network of low-speed Private Drives that can be shared by both bicycles and cars and through the provision of adequate bicycle parking that exceeds City and CalGreen standards. Figure 5.4. Bicycle Circulation Plan illustrates the bicycle access within the planning area that connect to existing Class II bike lanes on North Las Posas Road and West Mission Road. These facilities also connect to the nearby Inland Rail Trail, located along the south side of West Mission Road. The Inland Rail Trail is a proposed 21-mile Class I bikeway that connects the cities of Oceanside, Vista, San Marcos, and Escondido, and a portion of the unincorporated County of San Diego. The trail is physically separated from vehicular traffic and is located between the roadway and the SPRINTER rail line.

5.6 Transit

Riding public transit helps to decrease traffic congestion, reduce GHG emissions, and improve air quality. As illustrated in Figure 5.6. Transit Facilities, transit is readily available within walking distance to the planning area. An existing bus stop is located on West Mission Road, immediately in front of CVS. Additionally, the Palomar College Transit Center is located less than a quarter mile and (6) minute walk from the planning area on West Mission Road, at the entrance to Palomar College. The station serves as the transit hub for the North County Transit District, offering bus and train service as described below.

BREEZE bus service is provided by North County Transit District and includes 30 routes between Oceanside and La Jolla, as far east as Escondido. The bus stop in front of the planning area serves routes 304 and 305. Palomar College Transit Center serves as the terminus of all BREEZE bus lines that run through San Marcos, including routes 304, 305, 347, and 445. These routes connect to other transit Centers within the system, offering connectivity to all major destination and other transit systems within North County, connections to South County transit systems, and the greyhound bus station in Escondido.

The Palomar College Transit Center also provides a two (2) platforms at the train station with access to the SPRINTER hybrid Train. The SPRINTER is operated by North County Transit District, offering service to commuters every 30 minutes. The line extends between Oceanside and Escondido and provides connections to three (3) commuter rail lines: The Coaster, Metrolink Orange County Line, and Metrolink Inland Empire-Orange County Line. The SPRINTER also connects to Amtrak's Pacific Surfliner regional rail line.

Figure 5.6. Transit Facilities

6 - Grading, Utilities, & Services

6.0. Overview

The Grading, Utilities & Services chapter identifies the design of drainage and utility infrastructure, services, and facilities needed to support development proposed by the Gran Vista Specific Plan. Providing adequate drainage utilities, services, and facilities is required to provide a functional, safe, healthy, and well-rounded community and to ensure that new development minimizes impacts to existing service providers and does not become a burden to the City. This section will define the scope of utility improvements, services, and facilities needed to provide a comprehensive development including water, wastewater, stormwater drainage and detention, electricity and natural gas, telephone and cable services, schools, community facilities, police and fire protection, and solid waste disposal. Details on the financing and maintenance of utilities, services and facilities are provided in Chapter 7. Table 6.1. Utility and Service Providers identifies the utility and service providers anticipated for the planning area.

Table 6.1. Utility and Service Providers

Utility	Provider
On-site Drainage and Detention	Developer/Builder; HOA
Potable Water, Wastewater	Vallecitos Water District
Stormwater or municipal separate storm sewer system	City of San Marcos
Irrigation	Developer/Builder; HOA
Electricity & Natural Gas	San Diego Gas and Electric
Telecommunications	Cox Communications
Public Schools	San Marcos Unified School District
Public Parks, Recreation, and Open Space	City of San Marcos
Library Services	San Diego County Library
Fire Protection	San Marcos Fire Department
Police Protection	County of San Diego Sheriff's Department
Solid Waste Disposal	EDCO Waste & Recycling

The design, distribution, capacity, size and extent of utility infrastructure, facilities, and service improvements is dependent upon the increased population resulting from development of new housing within the planning area. According to the State Department of Finance, the estimated average number of persons per household as of January 2021 is 3.08 . This means that the 120 homes proposed by the Specific Plan will result in approximately 370 new residents in the City of San Marcos. The following chapter explains how the Specific Plan will accommodate these additional residents through the provision of additional utilities, services, and facilities.

6.1. Grading

The planning area was previously graded for commercial uses and currently consists of two (2) development pads. This project proposes to clear and grub remaining vegetation within the planning area and alter grading to further define drainage courses and create pads for each residential building. Private Drive and Private Drive Aisle sections to subgrade, and each recreation and amenity areas. As illustrated in Figure 6.1. Conceptual Grading Plan, this raw grading effort will generate a total volume of 9,335 cubic yards of cut and 9,335 cubic yards of fill, resulting in balanced earthwork that does not require any import or export of dirt. Dirt spoils from foundations and utility trenches will be handled independent of the volumes described above. Cut and fill areas are illustrated in Figure 6.2. Cut and Fill Map. The proposed grading plan has been designed to maintain the current drainage pattern of the planning area, with a high point at the north end of the site and a low point near the southwest corner of the property. Final and precise grading activities include taking roads, lots, and landscape areas to finish grades with final surface, hardscape, and planting installations and preparation of the ground for any foundations for proposed residential and community buildings.

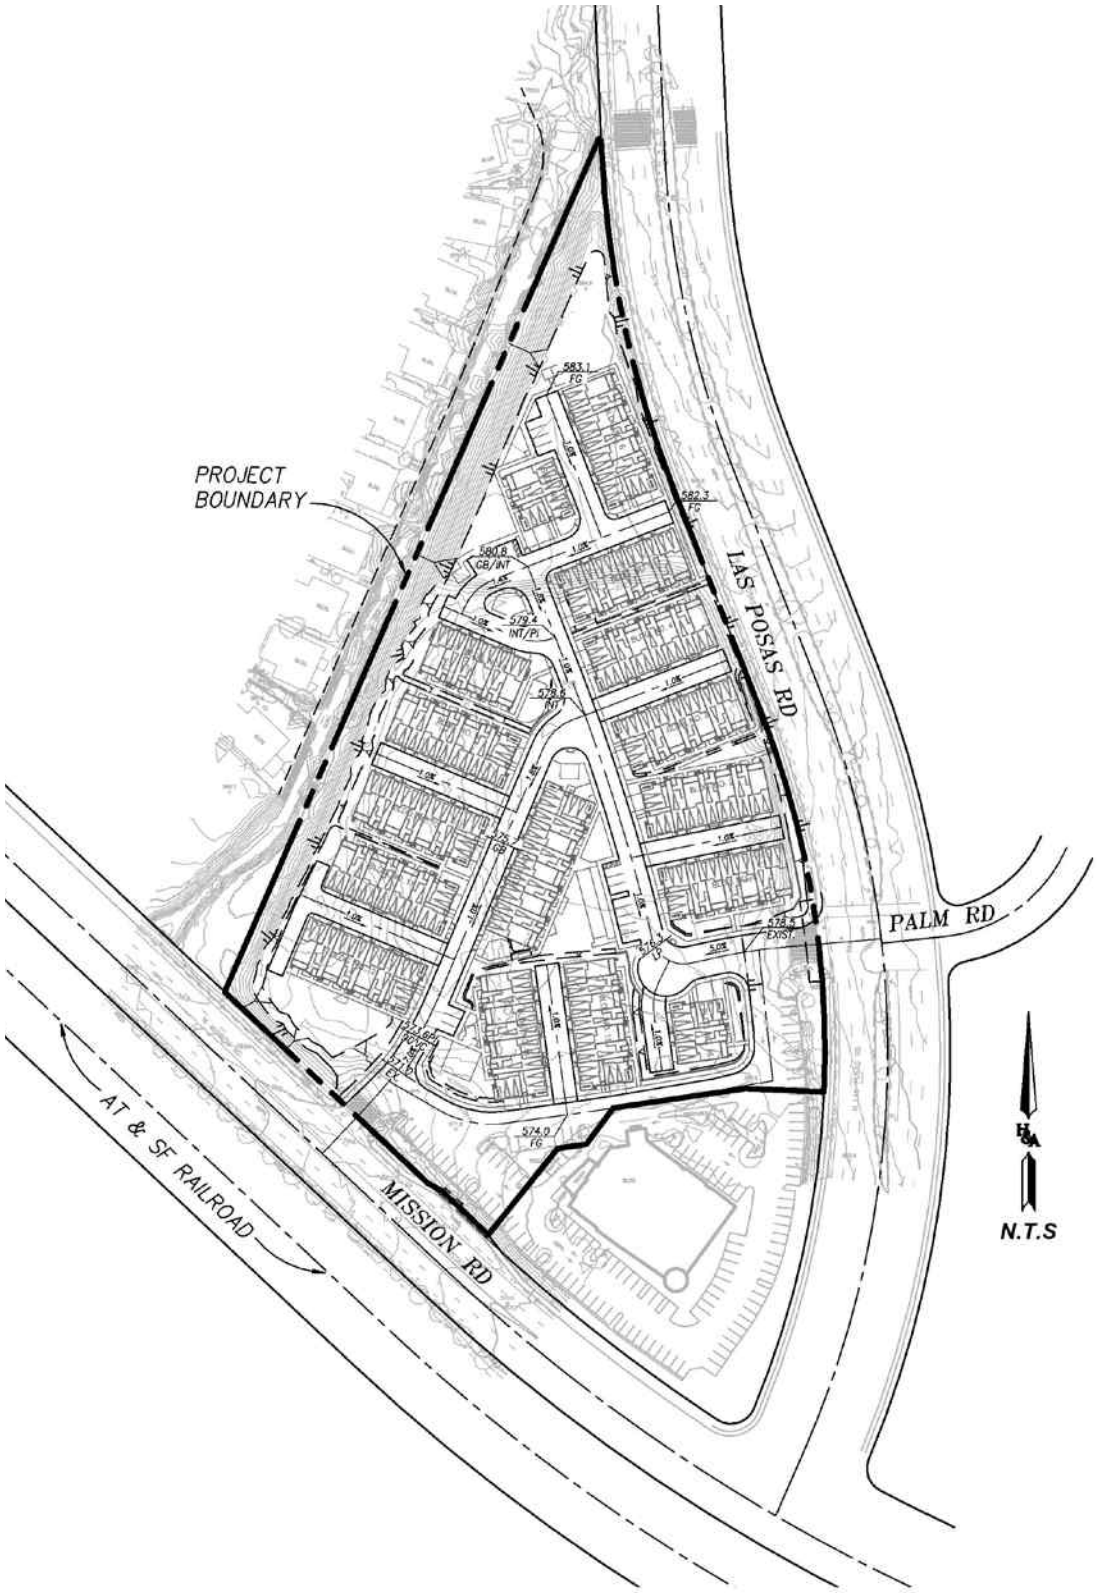

Figure 6.1. Conceptual Grading Plan

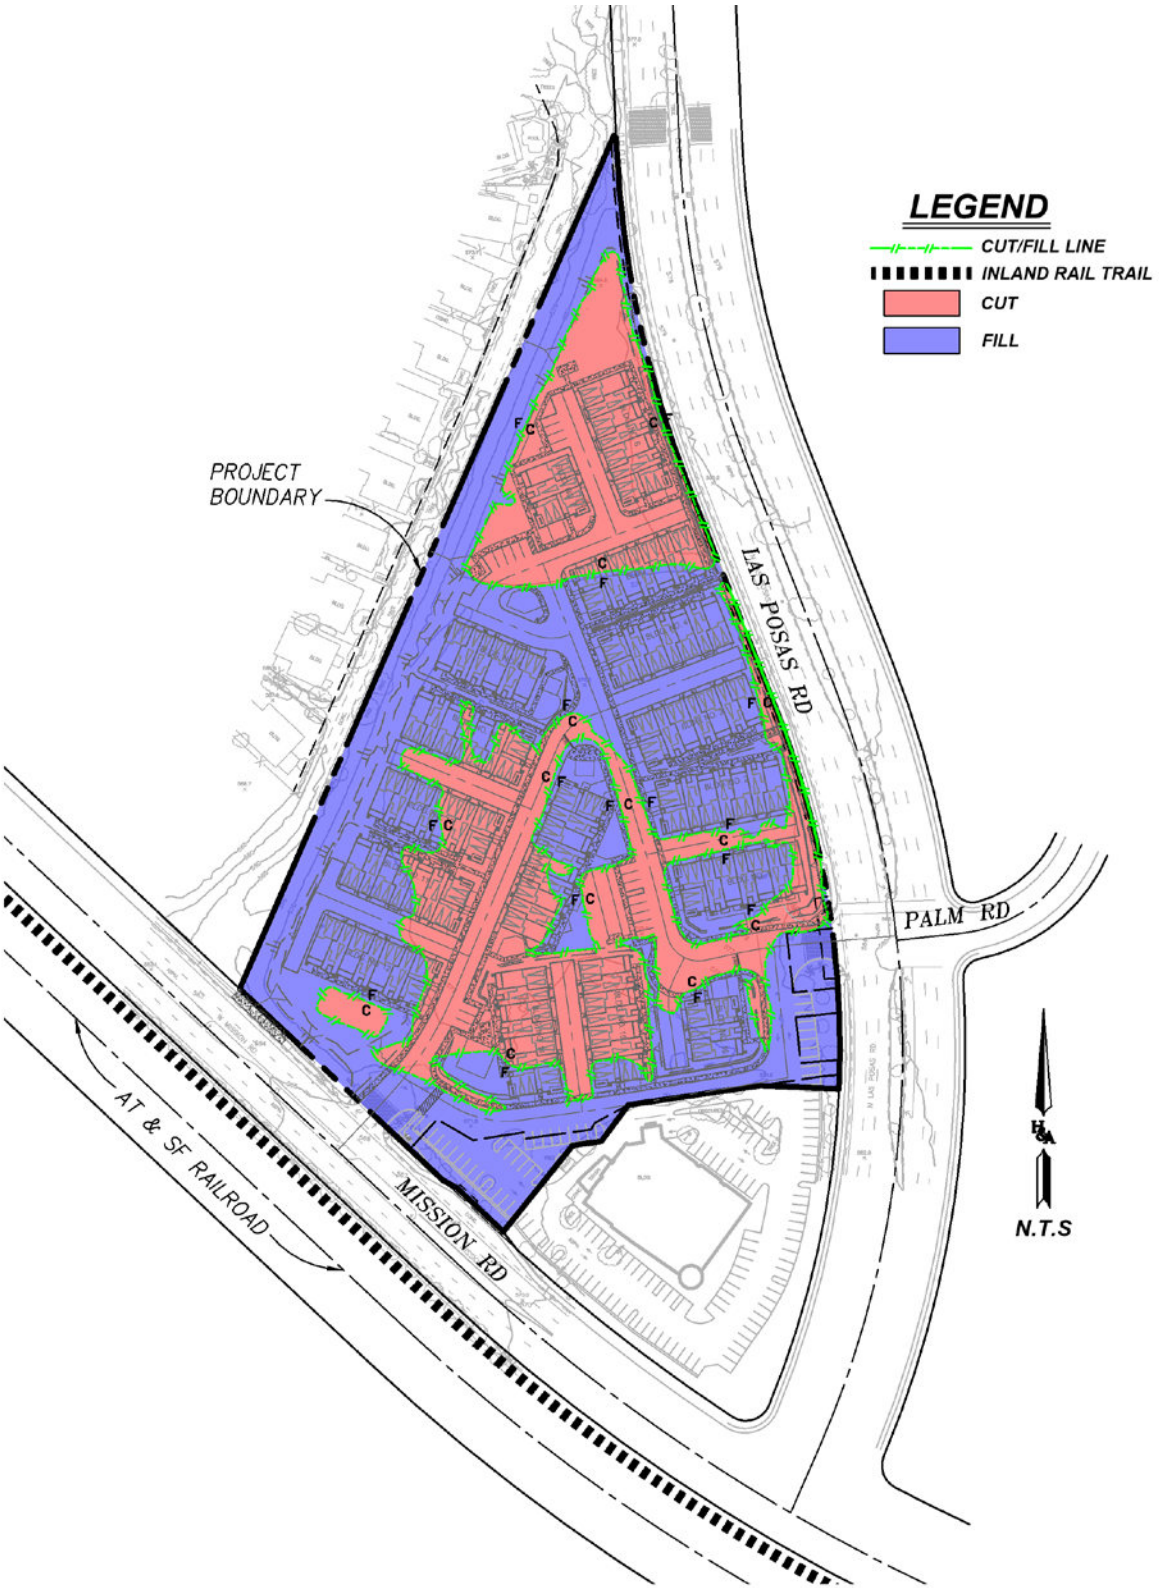

Figure 6.2. Cut and Fill Map

6.2. Stormwater Drainage and Treatment

Statewide rules and regulations require stormwater runoff to be appropriately captured and conveyed into treatment systems, so that water runoff does not increase water flows onto adjacent properties or properties downstream, which could potentially cause erosion, flooding, and damage. The planning area has carefully studied stormwater flows and designed the grading plan to direct all surface runoff to catch basins in Private Drives and Private Drive Aisles. Once captured, water is conveyed through a series of 18 to 24-inch pipes to two (2) underground vaults, located below common open space areas. Within these underground vaults, water is passed through a series of mechanical filters to remove pollutants prior to being discharged. After cleaning, water is stored and discharged at a rate equal to or less than existing water flows to the existing headwall to minimize any downstream impacts. Treated water is conveyed through an existing outfall into the adjacent channel that forms the northwesterly edge of the site. Figure 6.3. Conceptual Storm Drain System illustrates the storm drain infrastructure proposed for the planning area.

6.3. Water

Water service for potable residential use and fire service to the planning area will be provided by Vallecitos Water District (VWD). As part of the development of the Specific Plan, a study was conducted by VWD to confirm that adequate capacity exists to serve the water needs and fire flow capacity of the proposed development.

As illustrated in Figure 6.4. Conceptual Water System, the distribution of potable water to each home is provided by a series of 8-inch public pipes and related infrastructure, The proposed system connects to an existing 8-inch pipe in North Las Posas Road. Pipes are located within Private Drives and Private Drive Aisles to create a loop system that serves the entire planning area. Individual service to homes is provided by a lateral from the main pipe to the water meter for each home. A dedicated Fire Main will provide fire service to a series of new and existing fire hydrants as well as the to the individual units for firefighting purposes. There are two (2) existing fire hydrants on site that are already in service and will remain in place.

In accordance with current Building Code, all buildings will be equipped with fire sprinklers and water conservation features such as water efficient faucets and shower heads and high-performance toilets. Homes will be Water Sense Certified to meet United States Environmental Protection Agency (EPA) standards.

Irrigation for the site will tie into the proposed loop system. Irrigation of landscaping throughout the planning area is required to comply with the City of San Marcos Water Efficient Landscape Ordinance (WELO) and the City of San Marcos Landscape Manual.

6.4. Wastewater

Wastewater service to the planning area will also be provided by VWD. Studies conducted for the planning area determined the approximate flows of wastewater from the development. Based on those conclusions, a system of pipes was designed as shown in Figure 6.5. Conceptual Wastewater System. Preliminary sewer design concluded an 8-inch PVC sewer main will be needed to adequately service individual homes and community areas discharging wastewater. Pipes will be located underneath Private Drives and Private Drive Aisles. The system will collect wastewater and direct flows into an existing 15-inch pipe in North Las Posas Road.

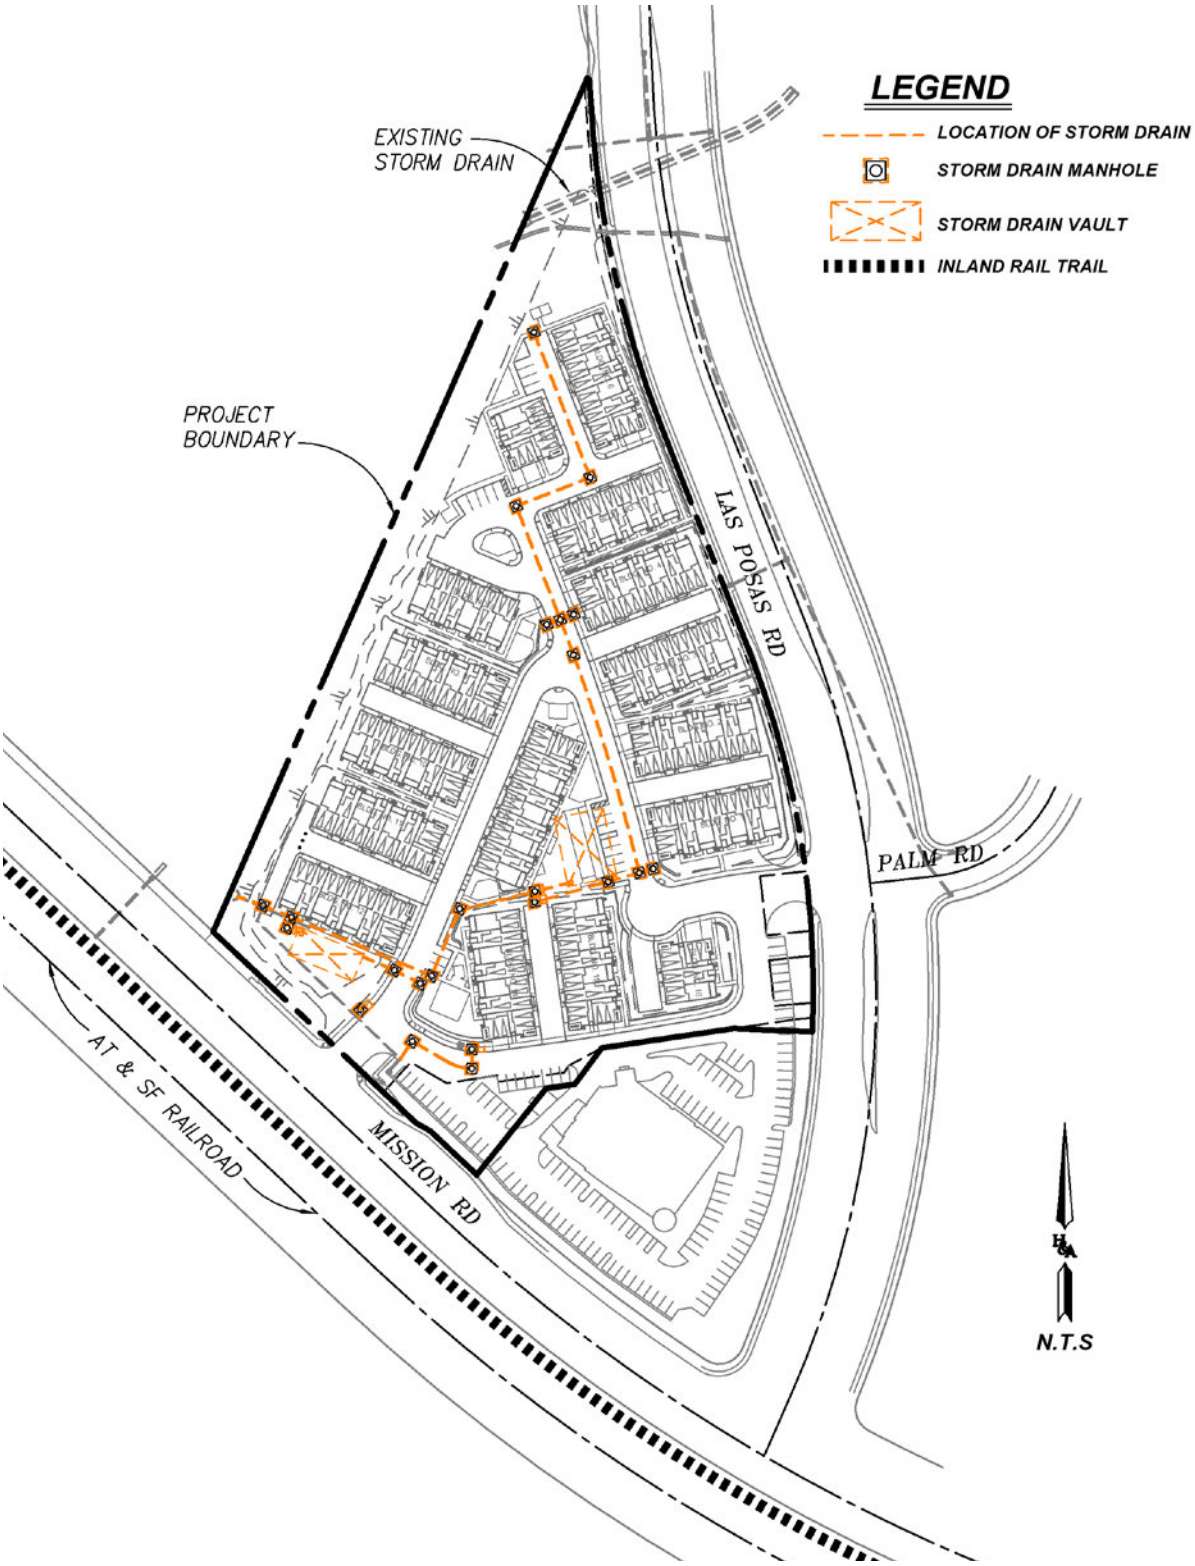

Figure 6.3. Conceptual Storm Drain System

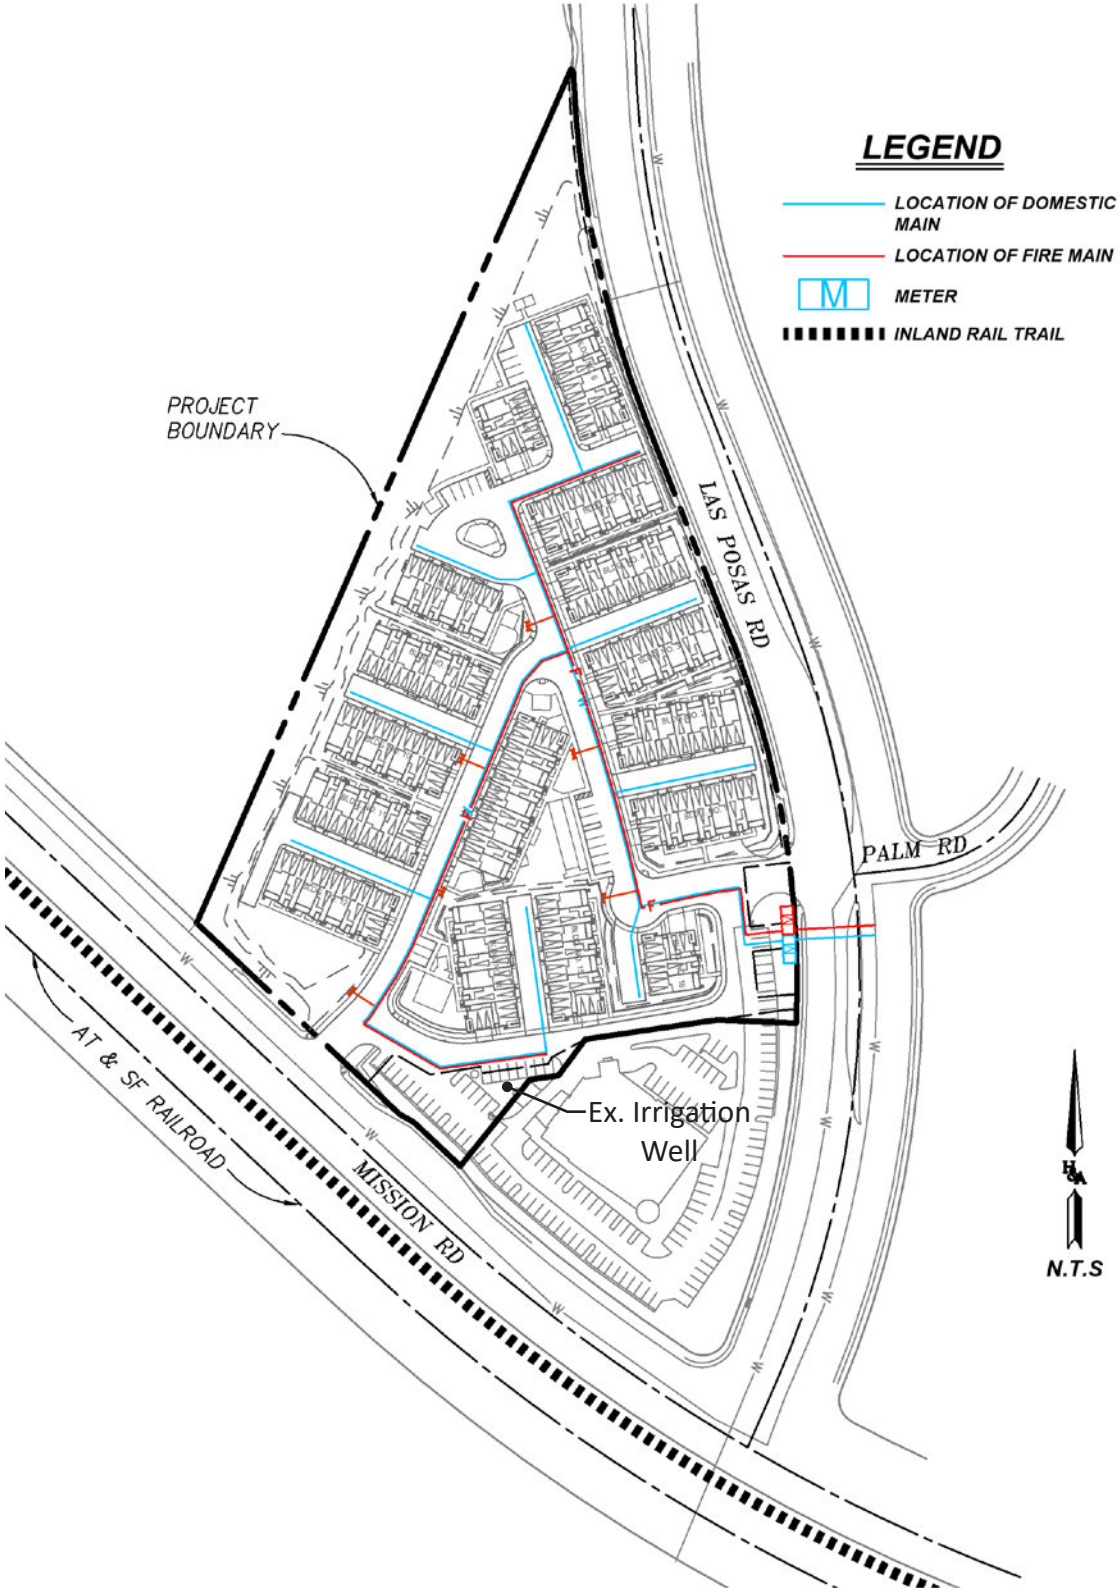

Figure 6.4. Conceptual Water System

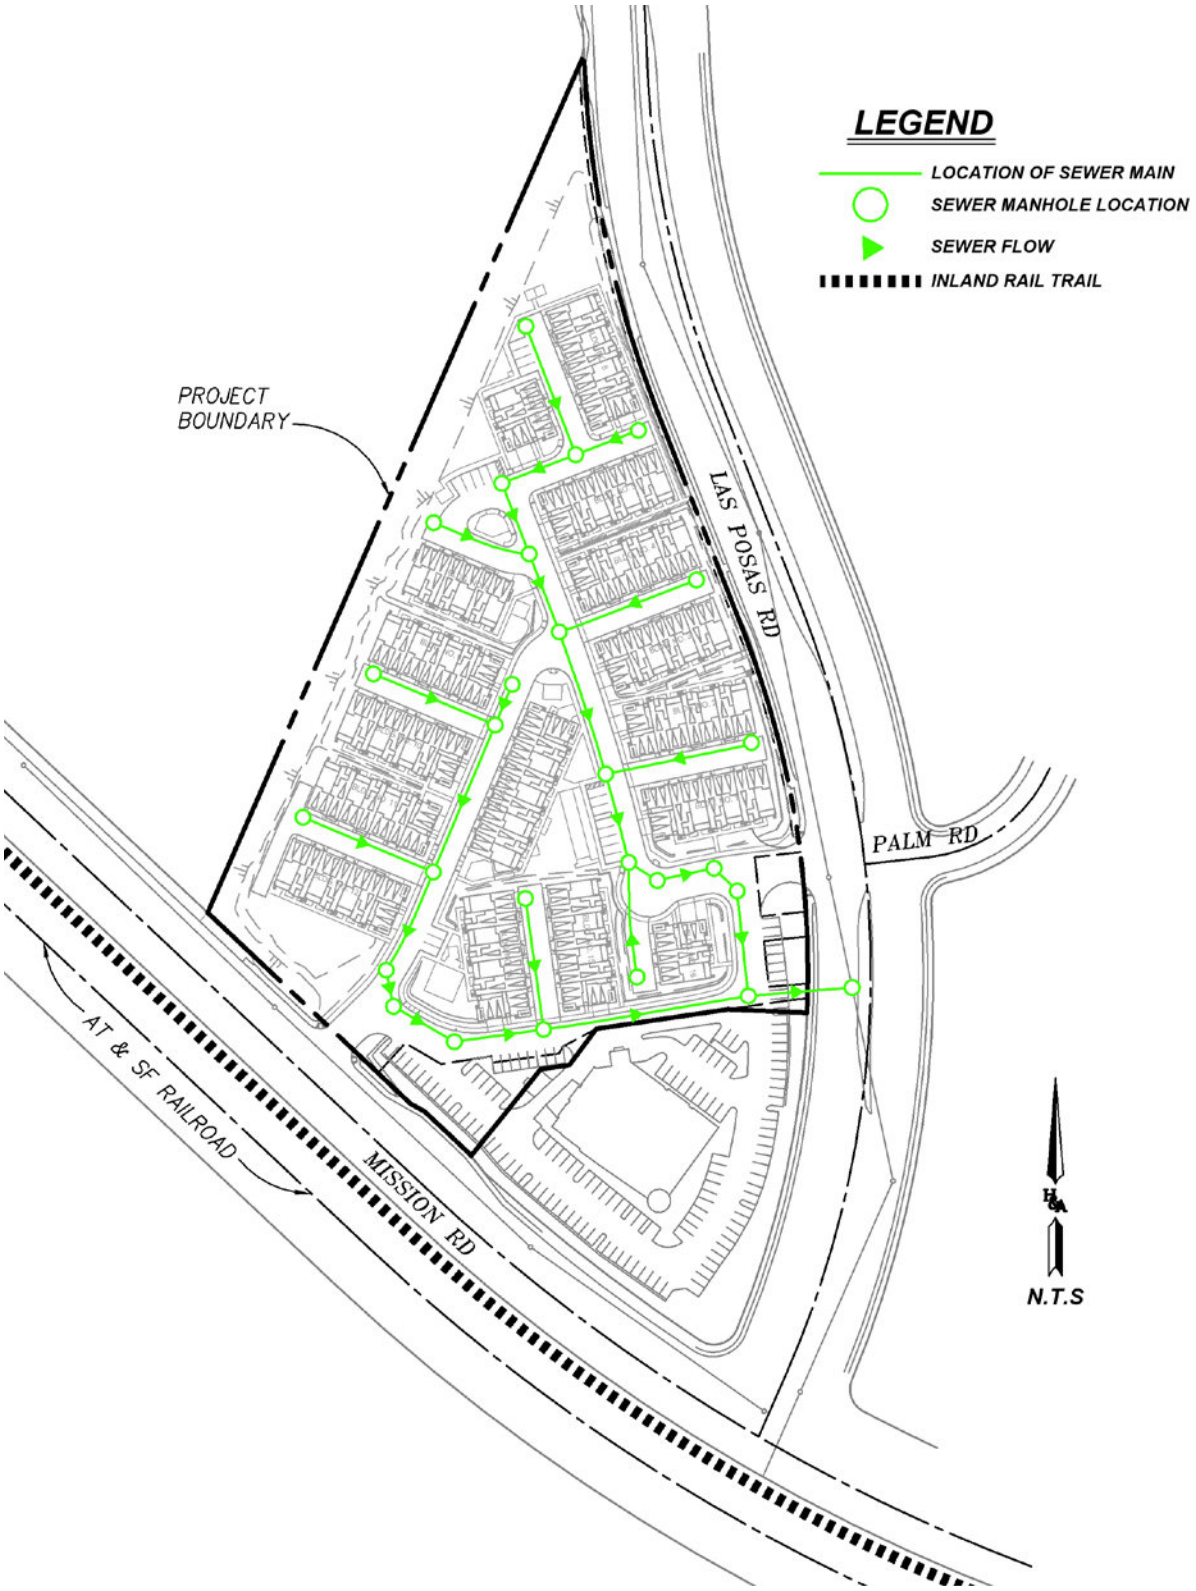

Figure 6.5. Conceptual Wastewater System

6.5. Dry Utilities

Dry Utilities include electricity, gas, and telecommunication to each home and are described in detail in the following sections.

6.5.1. Electricity

Electrical service will be provided by San Diego Gas & Electric (SDG&E). The project area will connect to an existing 12KV line in a vault on North Las Posas Road. The builder/developer of the planning area will be required to hire a contractor to provide all trenching, backfill, substructures, conduits, and transformer pads necessary for electrical utility installation work. Should SDG&E find installation of extra facilities are required for system reliability, it shall be the responsibility of the builder/developer to perform the related work aforementioned in this section. SDG&E shall be responsible for the installation of necessary cables, connectors, and pad mounted equipment as required.

In accordance with current Building Code, all buildings will be equipped with photovoltaic panels to provide solar energy to the homes. In addition, homes will include energy conservation features such as spray foam insulation, thermal breaks, low-e windows, advanced thermostats, energy star appliances, and sealed insulated ducts. Homes will be Energy Star Certified to meet EPA standards.

6.5.2. Gas

SDG&E maintains a 4-inch gas distribution system within North Las Posas Road and a 3-inch gas distribution system within West Mission Road. The gas lines will be extended to and through the planning area through the same joint trench alignment as electric and telecommunication facilities. Use of gas will be limited to gas cooktops and tankless water heaters.

6.5.3. Telecommunication

Telecommunication includes telephone, cable, and internet services, which will be provided through Cox Communications and AT&T. Telephone, cable, and internet connections will be available to each home and residents will be able to choose to connect to cable and telephone via a number of packages offered through both providers. Homes will be equipped with Category 6 cable to allow for higher speeds and bandwidth that support working from home. AT&T currently provides FTTP, fiber to the premise, which allows for higher bandwidth for multiple users allowing seamless streaming for work-from-home employee, distance learning children, or gaming family.

6.6. Schools

The San Marcos Unified School District provides educational instruction for children residing within the City of San Marcos. Table 6.2 Schools identified the assigned public educational facilities for the various age groups of children within the planning area.

Table 6.2. Schools

Age Range	Assigned School
Elementary School	Paloma Elementary School
Middle School	San Marcos Middle School
High School	Mission Hills High School

Elementary school students will be assigned to Paloma Elementary School located at 660 Camino Magnifico. Paloma Elementary is located approximately one (1) mile north of the planning area.

Middle school age students will be assigned to San Marcos Middle School located at 650 West Mission Road. San Marcos Middle School is located approximately one (1) mile east of the planning area.

All high school students will be assigned to Mission Hills High School, which is located approximately three (3) miles from the planning area at 1 Mission Hills Court. Bus Route 305 can be accessed directly in front of the planning area and provides access to the high school. Buses run every 30 minutes and the ride takes approximately 20 minutes.

The developer/builder will offset the expected increase in students through monetary contributions in the form of school district development fees paid to the San Marcos Unified School District.

6.7. Parks, Recreation, and Open Space

The Gran Vista Specific Plan incorporates 110,195 square feet (2.53 acres) of usable common and private open space (excluding open space with grades of 10%) to meet the everyday recreational needs of new residents within the planning area. Providing recreational amenities on site reduces the demand on city parks and open spaces but does not fully address the full range of resident's recreational needs. Per the SMMC, which is consistent with the Quimby Act, a total of 5 acres of park space is required for every 1000 residents generated by a proposed project, which equates to approximately 1.85 acres of parkland for this Specific Plan. The developer will be required to pay in-lieu fees as opposed to the developing or dedicating 1.85 acres of new public park space to the City of San Marcos. These fees will be used by the City to construct new public park space and recreation facilities or to maintain or improve existing public park and recreation facilities.

6.8. Library Services

The planning area is served by the San Diego County Library System. The San Marcos branch is located at 2 Civic Center Drive and is approximately two (2) miles from the planning area. Bus Route 305, which can be accessed directly in front of the planning area, provides direct access to this library. The San Marcos branch offers a variety of services to the public including book and music rentals, computer access, as well as literary programs and other programs beneficial to the community. The developer and/or builder for the Gran Vista Specific Plan will offset the expected increase to library facilities and services through the payment of Development Impact Fees.

Additional library resources are provided to the public through the colleges located in San Marcos. Palomar Community College library is located near the center of the campus on Comet Circle, approximately half a mile from the planning area. Palomar Community College library provides free access to materials with valid picture identification and proof of current mailing address. Purchase of an annual Community Borrower Card allows the public access to borrowing privileges to cover the cost of staffing and services.

6.9. Fire Protection

The Gran Vista Specific Plan is located within the San Marcos Fire Protection District boundary. The San Marcos Fire Department (SMFD) will provide fire protection for urban and wildland fires and emergency services to the entire planning area. SMFD services San Marcos with four (4) stations, the closest of which is located at 180 West Mission Road, approximately 1.7 miles from the planning area. This fire station houses an engine, truck, brush engine, ambulance, and battalion chief. The developer and/or builder for the Gran Vista Specific Plan will offset its expected increase to fire department facilities and services through the payment of Development Impact Fees.

6.10. Police Protection

The County of San Diego Sheriff's Department provides contracted law enforcement services to the City of San Marcos and the surrounding unincorporated areas. Police protection is provided from a station located at 182 Santar Place, approximately 3.2 miles from the planning area. Community law enforcement services are provided year-round, 24-hours a day. The Sheriff's Department offers a variety of services to help keep the community safe. Deputies are responsible for general patrol services including traffic enforcement, suppression of drug activities, and response to theft and gang-related crimes. The San Marcos station has the only ASTREA (Sheriff's Aviation) landing pad in the County providing assistance to ground units and extending the range deputies can patrol. Additional services to the community include detective units responsible for crime investigations, the Community Oriented Policing and Problem Solving (COPPS) program assigned to investigate community quality of life issues, crime prevention units, crime analysis, and senior volunteers, as well as various administrative services. Child Protective Services, Adult Protective Services, and Juvenile Probation all operate out of the San Marcos Station. Together, these services offer the planning area comprehensive law enforcement to help maintain community safety. The developer and/or builder for the Gran Vista Specific Plan will offset its expected increase to department facilities and services through the payment of Development Impact Fees.

6.11. Solid Waste Disposal

Solid waste collection and recycling services to the planning area shall be provided by EDCO Waste & Recycling. Non-recyclable waste, including general trash and green materials, is collected and transported to the Sycamore Sanitary Landfill in Santee. Recyclable materials are transferred to the Escondido Resources Recovery Transfer Station for further processing. Household hazardous waste can be disposed free of charge for residents of San Marcos at the Vista HHW Collection Facility at 1145 E. Taylor Street or the Poway HHW Collection Facility at 12325 Crosthwaite Circle. Service and facility fees for solid waste collection and recycling will be paid monthly by each resident.

7 - Implementation & Administration

7.0. Overview

This chapter of the Gran Vista Specific Plan is essential to establishing a thorough review process for proposed discretionary entitlements and permits as well as the financing and construction of improvements necessary to implement this Specific Plan. Sections within this chapter form the procedures for review of entitlements and modifications or amendments to the Specific Plan (i.e., administration authority of the Specific Plan, descriptions of the entitlements to be processed concurrently with this Specific Plan, compliance with CEQA, and substantial conformance and amendments to the Specific Plan). Those rules, regulations, and processes outlined within this chapter govern the lead agency's implementation of development within the planning area. In addition to the Gran Vista Specific Plan implementation, several discretionary entitlements will also be processed concurrently. This section provides a detailed description of the financing and mechanisms needed for implementation and long-term maintenance of the Specific Plan and should be the primary document consulted when questions arise concerning future development or development changes within the planning area. As the lead agency, The City of San Marcos is responsible for the administration of the Gran Vista Specific Plan and as such is responsible for ensuring the rules and procedures described herein are implemented in a consistent manner with all City rules, regulations and policies.

7.1 Implementation & Financing

This section describes the phasing of development and the various options for financing the construction and maintenance of improvements proposed by the Gran Vista Specific Plan. A financing plan is required to ensure improvements proposed by the Specific Plan are implemented in a successful manner, mechanisms are established for the long term maintenance of the community, and funding is provided to provide adequate City services such that the community does not become a fiscal burden to the City. The financing plan establishes specific methods of financing to achieve the goals and policies set forth in this Chapter. Financing mechanisms for each improvement shall be timed with established conditions of approval, and site plan and/or design review approval. The following descriptions provide information of possible methods, which could be employed to finance improvements within the planning area. It should be noted there may be other sources not listed below which would fulfill any mandates for the financing of improvements.

7.1.1. Phasing

Subsequent approvals needed to implement this Specific Plan include a tentative condominium map, multi-family site development plan, final map, grading plan, improvement plans, and building permits. Once these subsequent approvals are acquired, the project will be constructed in two (2) phases.

Phase One (1) involves preparing the site for vertical construction. The first phase will consist of clearing and grubbing the site of all vegetation, rough grading the land to bring elevations within a few inches of the final design, installation of wet and dry utilities, roadway improvements, and finish grading to shape the final contours and establish building pads. Phase One (1) is anticipated to be completed within six (6) months after Tentative Map Approval.

The second phase will involve vertical construction which entails pouring foundations and sidewalks, construction buildings, and installing landscaping and amenities. Phase Two (2) may be broken down into subphases depending upon market conditions and the availability of materials. Phase Two (2) is anticipated to be completed within one (1) year after the completion of Phase One (1).

7.1.2 Financing Improvements

The developer/builder shall be responsible for their fair share of financing construction of any public improvements as well as the entirety of private infrastructure improvements required to support development within the planning area. Improvements may include, however, may not be limited to, construction of internal and adjacent streets, water lines, sewer lines, and storm drains, and electrical and gas power delivery systems. The developer/builder can use a combination of financing mechanisms to achieve the required construction and maintenance of facilities and improvements; however, the developer/builder shall be ultimately responsible for all fair share costs identified with implementation of development within planning area, including but not limited to, costs associated with infrastructure construction, compliance with any mitigation measures identified within the EIR conditions of approval, or any other associated requirements which may need to be fulfilled.

A. Developer Funded Options

Most of the on-site facilities to be constructed will be financed and constructed entirely by the developer/builder. Some examples of these types of improvements are on-site private streets, utility connections from main trunk lines, and storm drain facilities. In the case of electricity connections, the developer/builder may be required to use the electricity providers' construction crews or contractors provided from an approved list determined by the energy provider. In those cases, correspondence will occur between the parties to establish the funding method, at a cost to the developer/builder, to finance those improvements.

B. Circulation Improvements

The Gran Vista Specific Plan proposes a comprehensive circulation plan, which includes private road improvements and may be required to provide public road improvements, public utility upgrades or other infrastructure improvements. Development within the planning area is contingent upon the financing and maintenance of both private internal streets and external public road improvements, public streetscape improvements, and any mitigation measures for traffic impacts identified in the traffic study produced for the EIR. Internal private streets will be financed in whole, by the developer or builder. Improvements to public external roads, right-of-way areas, landscaped medians, and landscaping adjacent to the project's frontage identified by the City of San Marcos may be financed and constructed by the developer and/or builder.

C. Special Assessment Districts

Special assessment districts may be used by the City of San Marcos to pay for improvements within a defined area so long as the property owner votes to allow the assessment to proceed. Once an approval vote has been made, the City has the authority to form the special assessment district by the authority of the Improvement Act of 1911, and the Municipal Improvement Act of 1913. The property owners will bond to pay for improvements such as streets, storm drains, sidewalks, landscape and lighting, water and sewer services, and other similar public improvements.

D. Community Facilities Districts and Mello-Roos

The City of San Marcos may use a Community Facility District and require Mello-Roos to finance public improvements for the planning area. The Mello-Roos, Community Facilities Act of 1982 allows the City to establish special districts and to levy special taxes and issue tax exempt bonds to finance those improvements. Mello-Roos do not require municipalities to show any specific special benefit to assessed properties, therefore they may be used to finance a broad range of general improvements such as police and fire facilities, libraries, parks, and any improvements which may benefit specific properties.

E. Other Funding Sources

The developer/builder may secure other sources of funding to construct and maintain public and private facilities such as government grants, private developer coalitions, or various bonds not specifically mentioned above.

7.1.3. Financing Public Services

The orderly development of the planning area requires the procurement of sufficient funding for public facilities and services. The following summaries provide detail on financing of facilities and services for the planning area required to be available at the time of need. The following sections provide information on specific financing options and implementation methods for facilities and service within the planning area.

A. Emergency Services and Facilities

The planning area is within the San Marcos Fire Protection District. To offset impacts to fire and paramedic services and facilities the developer/builder will pay fees to the City of San Marcos. Service to the planning area shall be provided by the San Marcos Fire Department (SMFD). The developer will pay its fair share contribution to the City of San Marcos' CFD for fire service to the planning area. Future homeowners will be assessed annual fees for this district with increases as determined by the City.

The County of San Diego Sheriff's Department, under contract with the City of San Marcos, will provide police protection services to the planning area. The builder/developer shall pay its fair share contribution to the City of San Marcos' CFD for law enforcement service. Future homeowners will be assessed annual fees for this district with increases as determined by the City.

B. Schools

The Gran Vista Specific Plan planning area is located within the San Marcos Unified School District (SMUSD). Impacts to SMUSD will be mitigated by a per square foot fee paid by the developer to the school district and based on total residential dwelling unit square footage.

C. Parks and Public Facilities

All categories of common open space located within the planning area will be financed and constructed by the developer. Maintenance responsibilities of all common area landscaping and amenities shall be the responsibility of the Homeowners Association. The developer/builder will pay in-lieu fees and Public Facilities Fees to offset the projects impacts to City-owned parks and other public facilities.

7.1.4 Financing Maintenance & Responsibilities

Improvements within the public right-of way and all public utilities within the planning area will be maintained by the City or the applicable utility provider as described in Chapter 6. Maintenance will be funded through taxes and other fees levied by these entities.

Maintenance of all other improvements within the Specific Plan, including but not limited to private streets and alleys, dry and wet utilities, parking areas, common area landscaping and amenities, drainage vaults and facilities, irrigation well, and buildings will be the responsibility of the Homeowner's Association and CVS in accordance with adopted Covenant, Condition, and Responsibilities (CC&Rs). The Homeowner's Association will also be responsible for enforcing rules and regulations related to parking and other issues as defined within the CC&Rs. The CC&Rs and any revisions shall be in conformance with the requirements of this Specific Plan and shall include language to this effect.

7.2. Administration

Any future development within the planning area may be subject to further review and subsequent discretionary permits and approval from the City of San Marcos Development Services Department. Application, fee, and processing requirements shall be in accordance with the City's regulations, unless modified by this Specific Plan. Applications for subsequent development projects or public improvements and other activities will be reviewed by the Development Services Department using established procedures to determine consistency with the Gran Vista Specific Plan and all pertinent development standards, design standards, and mitigation measures identified during the environmental review process, as well as other applicable conditions of approval adopted as part of this Specific Plan.

Review and analysis of a subsequent project permit(s) may trigger conditions of approval that the City determines to be reasonably necessary to ensure the applications and or plans achieve compliance with this Specific Plan. Procedures to amend the Gran Vista Specific Plan are also detailed in this section, should the applicant or City staff determine changes to the project would trigger an amendment to this Specific Plan in order to remain compliant with the adopted Specific Plan.

7.2.1 Specific Plan Authority

California Government Code §65450 in conjunction with the City of San Marcos Zoning Ordinance Chapter 20.535, authorizes the City's legislative body to prepare and adopt Specific Plans. The Gran Vista Specific Plan is to be adopted by Ordinance by the San Marcos City Council and used as the primary guiding document for review of all subsequent discretionary entitlements within the confines of the planning. As a regulatory document, successful implementation of a development project within the planning area is contingent upon meeting the land use and associated design, development, and infrastructure standards, and other policies outlined herein. The Gran Vista Specific Plan establishes development design, infrastructure, and implementation parameters and incorporates those standards through reference of applicable Zoning Ordinance or other appropriate standards and provisions, or the SMMC, to establish specific zoning standards, which govern all development within the planning area. Any proposed development and design activities within the Gran Vista Specific Plan planning area must be consistent with the established parameters of this Specific Plan. Should any requirements contained herein of the Gran Vista Specific Plan conflict with the SMMC, the Gran Vista Specific Plan shall be the primary document used to resolve the conflict. If the Gran Vista Specific Plan is silent on any issues, the SMMC, or other applicable adopted City standard(s) shall be referred to for regulations and standards.

7.2.2. Responsibility for Administration

Several entities may/shall be responsible for the administration and enforcement of the Gran Vista Specific Plan. The City of San Marcos' Development Services Department is the primary agency responsible for the implementation, administration, and enforcement of the Gran Vista Specific Plan. The homeowner's association or other comparable group established for the Gran Vista Specific Plan planning area shall be responsible for the enforcement of private property and open space easement requirements pursuant to standards identified herein as well as any covenants, conditions, and restrictions (CC&R's) developed separately from this Specific Plan.

7.2.3. Severability

If any section, subsection, sentence, clause, phase, or portion of this Specific Plan, or any future amendments or additions, is for any reason held to be invalid or unconstitutional by the decision of any court or competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Specific Plan or any future amendments or additions.

7.2.4. Ambiguity

If ambiguity arises concerning the appropriate classification of a particular use or regulation within the meaning or intent of this Specific Plan based on established or unforeseen circumstances, including technological changes in processing or application of materials, the Director shall have the authority to interpret the regulation based on understanding of the Specific Plan. Applicants may appeal the Director's interpretation to the Planning Commission for review and interpretation, which shall be final; thereafter, such interpretation shall govern.

7.2.5. Substantial Conformance

Substantial conformance means that any proposed activity, construction and development complies with the Gran Vista Specific Plan, adopted mitigation measures, and project conditions of approval, where no additional units (except accessory dwelling units), property, or parcels beyond that provided by the Specific Plan or approved map are involved, approved minimum lot sizes are maintained, proposed construction is consistent with the architectural guidelines provided in the Specific Plan, no grading beyond substantial conformance limits is proposed, and no new significant environmental impact is created. Additionally, uses that are not specifically listed but are similar to those already listed in Table 2.1. may be considered in substantial conformance. The Director or their designee shall make a determination of substantial conformance prior to the issuance of any permits or approval of plans. No written determination is required provided that plans submitted to the City for approval exhibit substantial conformance with the Gran Vista Specific Plan. Plans found not to be in substantial conformance shall not be approved and shall be revised or a Specific Plan amendment shall be required.

7.2.6. Minor Deviations

To provide flexibility in the development and permitting process, minor deviations to approved plans in conjunction with an approved permit may be authorized by the Director without a Specific Plan Amendment. Examples of Minor Deviations include the following:

- Modifications to the site plan, architecture, landscape treatments, wall and fence design, lighting, and signage which are generally consistent and compatible with the plans contained herein and provide an equal or superior design aesthetic and quality.
- Changes in the location, size, or type of common area amenities.
- Final facility sizing and alignment for water, sewer, and storm drain improvements (with concurrence from the City Engineer)
- Removal of unnecessary utility infrastructure or design changes to utility infrastructure (with concurrence from the City Engineer)
- Minor adjustment to the alignment, width, or grade of public or private streets within the planning area grading that are generally consistent with the Specific Plan and the exhibits herein (with concurrence from the City Engineer and Fire Department)
- Deviations that are of a similar magnitude to those listed above, which are deemed minor by the Director and conform to the objectives of this Specific Plan

Minor deviations shall be limited to actions that will not:

- Constitute a substantial change in the permit.
- Adversely affect adjacent property or adjacent property owners.
- Violate any Specific Plan Objectives or Development Standards.
- Increase of land/site coverage by more than ten percent (10%) by any increase in building size or number of structures.
- Result in an increase or decrease of more than ten percent (10%) of the:
    - Gross area of any private or common opens space.
    - Size of any building or structure or of the total land area covered by any building or structure.
    - Building/structure height or depth
    - Area of any slope.

7.2.7 Specific Plan Amendments

Amendments to the Specific Plan may be necessary respond to changes in housing market trends and the economy. Applications that are not in substantial conformance and do not qualify for a minor deviation will require an amendment to the Specific Plan. Amendments may be processed either administratively through the Director's review or through the Planning Commission. The applicant may submit an application to the City of San Marcos' Development Services Department, which may include maps, text, and or technical studies describing the nature and intent of minor modifications. Upon submittal, the Director will make a determination as to the applicability of the amendment process. No amendment shall be approved that is not consistent with the General Plan.

A. Minor Amendments

Minor Amendments include minor changes to the Specific Plan, that may be reviewed and approved by the Director for the City of San Marcos. Minor amendments may include the following:

1. Correction or revisions to text to resolve ambiguity pursuant to Section 7.2.4.

2. Additions, deletions, or modifications to Table 2.1. Gran Vista Residential (GVR) Use Classifications, which are consistent with the objectives of the Specific Plan, provided that density, intensity, and traffic, are not increased.

3. Modifications to design guidelines for architectural and open space features, materials, landscape treatments, wall and fence design, lighting, and signage which are consistent and compatible with the surrounding area and neighborhood. Changes should provide an equal or superior design aesthetic and quality.

4. Revisions to the site plan that are generally consistent with the Specific Plan and the exhibits herein and do not result in any of the following:

    - An increased number of units
    - Additional environmental impacts not previously addressed in the project EIR
    - Conflicts with final conditions of approval in City issued permits, regulations, and approvals or as issued by other agencies with jurisdiction over the project
    - Expansion or contraction of the outer geographic boundaries of the Specific Plan
    - Deviations of more than 20% from Table 2.2. Conceptual Distribution of Allowable Uses

5. Modifications to the Specific Plan that are of a similar magnitude to those listed above, which are deemed minor by the Director and conform to the objectives of this Specific Plan.

Should the Director determine a proposed revision does not meet the criteria for a Minor Amendment, a Major Amendment shall be required. The Director may delegate his/her administrative decision to the Planning Commission. The applicant may also appeal the Director's decision to the Planning Commission in accordance with the appeals procedures set forth in the SMMC.

B. Major Amendments

If no mechanism can be applied from the defined parameters listed previously in this chapter or as determined by the Director, a major amendment to the Specific Plan shall be required. The City of San Marcos shall process all formal Specific Plan Amendments in accordance with the SMMC. Additional environmental review may be required unless the proposed changes do not warrant additional environmental review in accordance CEQA.

7.2.8. Environmental Review

The Environmental Impact Report (EIR) certified concurrently with the Gran Vista Specific Plan shall serve as the primary environmental document for all subsequent discretionary entitlements within the planning area. Pursuant to Government Code Section 65456, any residential development project, including any subdivision, or any lab use permit that is undertaken to implement and is consistent with a Specific Plan for which an environmental impact report has been certified is exempt from the requirements of CEQA. However, if after adoption of the Specific Plan, substantial changes are proposed to the project that would result in additional impacts not already analyzed by the EIR, the exemption does not apply unless and until a supplemental environmental impact report is prepared and certified in accordance with CEQA. After a supplemental environmental impact report is certified, the exemption specified in this subdivision applies to projects undertaken pursuant to the Specific Plan. Subsequent determinations of the level of environmental review for discretionary approvals will be determined by the City of San Marcos on a project-by-project basis in accordance with the California Environmental Quality Act (CEQA) Guidelines.

[Intentionally Blank]
