> ". . . the proposed [Master Plan Amendment Project, which substituted warehouse reuse for proposed office uses] would not introduce land uses that would be substantially incompatible with existing uses, other previously approved development of the 2007 Master Plan, or various proposed uses within the Project site; incorporating the Land Use Buffer and Existing Use Disclosure measures as requirements through the Master Plan Development Plan process avoids potential adverse effects related to the proximity of new residential and non-residential uses. No mitigation measures are required."

The Project does not propose any construction, development, or operation that would alter this conclusion.

Additionally, if the City of Alameda amends the Alameda Landing Master Plan, such amendment would not be an approval necessary for the Proposed Project. Because the Proposed Project would not be caused by or dependent on such an amendment, its effects would not be within the scope of environmental review of such an amendment.

**Ala-49 Response:**

As explained in responses to comments Ala-33 and Ala-48, the Proposed Project would not be subject to the City of Alameda's jurisdiction, including Design Review, and amendment of the Bayport/Alameda Landing Waterfront Master Plan would not be required for the Proposed Project.

**Ala-50 Response:**

Please refer to response to comment Ala-33. As explained in that response, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction; therefore, the Proposed Project would not require a Marsh Crust excavation permit pursuant to the City of Alameda's "Marsh Crust Ordinance." The Port would comply with existing land use covenants for the Alameda Site under the regulatory jurisdiction of the California Department of Toxic Substances Control; these covenants are in place due to historical contamination and address excavation in the Marsh Crust. Based on comments received on the Draft EIR, a discussion a Marsh Crust has been added to Section 3.9, Hazards and Hazardous Materials, of this Final EIR.

**Ala-51 Response:**

Please refer to response to comments Ala-33 and Ala-38. As explained in those responses, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction, and the City of Alameda had no jurisdiction over the USACE's ongoing maintenance dredging following the widening of the IHTB for the -50-Foot Oakland Harbor Navigation Improvement Project; therefore, the Proposed Project would not require a dredging permit pursuant to the City of Alameda's Municipal Code.

**Ala-52 Response:**

Please refer to response to comment Ala-33. As explained in that response, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction; therefore, the Proposed Project would not be required to submit a grading and drainage plan to the City of Alameda for review and approval. As stated in the Draft EIR under Impact HYD-3, there may be minor, permanent alterations to drainage patterns at the Alameda Site as a result of IHTB widening. Alterations may include

removal, replacement, or redesign of drainage infrastructure such as curbs and gutters resulting from upland excavation and reconfiguration of the shoreline. Any such alterations would occur in compliance with applicable Municipal Storm Water Program permits from the State and Regional Water Boards, including treatment measures and other appropriate source control and site design features to minimize the pollutant load in stormwater discharges and to manage runoff flows. The Proposed Project would not entail any increase in impervious surfaces and therefore would not increase the amount of surface runoff or result in related flooding impacts.

**Ala-53 Response:**

Please refer to responses to comments Ala-46 through Ala-52.

**Ala-54 Response:**

During the feasibility study planning process, the Port and USACE developed and evaluated several alternative footprints for widening the IHTB, as described in the Draft EIR Chapter 5, Alternatives. These included two alternatives that avoided Alameda land impacts (Inner Harbor Variation 2 – Shifted North and Inner Harbor Variation 6 – New Location Outside Middle Harbor) and one alternative that would have minimal Alameda land impacts (Inner Harbor Variation 4 – Non-Circular). As summarized in Draft EIR Table 5.4-1, these alternative footprints were eliminated from further consideration because they were determined to be infeasible for one or more the following reasons: site suitability (Variations 2 and 6), environmental considerations (Variation 2), economic viability (Variations 2 and 6), impacts to businesses (e.g., Radius Recycling and Bay Ship & Yacht Co.) (Variation 2), reduced transit efficiency (Variations 4 and 6), and navigational limitations and safety considerations (Variations 4 and 6). Please also refer to response to comment Ala-34.

In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site, and a 54 percent reduction in total from the Proposed Project construction truck trips in Oakland and Alameda in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips for additional information.

Please also refer to response to comment Ala-55.

**Ala-55 Response:**

The City of Alameda's comments assumed that the formerly proposed Oakland Waterfront Ballpark District at Howard Terminal constrained further consideration of an alternative that would widen the IHTB further into Howard Terminal and avoid impacts to the Alameda shoreline. However, pushing the alignment further into Howard Terminal would require significantly more total land removal, including land that is contaminated, and would increase both costs and environmental impacts. Specifically, compared to the Proposed Project, moving the IHTB entirely out of Alameda would add approximately 400,000 cubic yards of land to be excavated, including material that could be hazardous waste; add approximately 2,000,000 cubic yards of material to be dredged; add approximately 750 days and 4 in-water work seasons of dredging; increase criteria pollutant and greenhouse gas emissions between 80 and 122 percent; and increase construction costs by approximately $200 million. Although an EIR must include alternatives that reduce a proposed project's significant impacts, this would include increased air

quality impacts from a substantial increase in the amount of construction activity. As outlined in Section 15126.6 of the CEQA Guidelines, the EIR is required to describe a reasonable range of alternatives to the proposed project that would "feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project…." The suggested alternative fails on both fronts. This alternative would also require a realignment of the approach channel limits and would add the risk of a catastrophic accident by requiring vessels to head directly into and stop prior to striking a physical barrier (i.e., bulkhead). Therefore, such an alternative is not viable.

The USACE design guidance EM 1110-2-1613 "Hydraulic Design of Deep Draft Navigation Projects includes the following standards applicable to widening the turning basins: 1) the alignment of a navigation channel is usually designed to follow the course of the deeper channel in a river or estuary to minimize initial and maintenance dredging; and 2) channels with turns and bends are generally more difficult to navigate compared with straight reaches because of reduction in sight distance, reduced effectiveness of aids to navigation, changing channel cross-sectional area, and greater effect from varying current and bank suction forces. Furthermore, the World Association for Waterborne Transport Infrastructure "Harbor Approach Channels Design Guidelines" indicates that straight channel sections are preferable to curved ones and the designer should strive for an alignment consisting of a series of straight sections connected by smooth bends, where necessary, without abrupt angles. As explained above, the suggested alternative of confining the IHTB widening to Howard Terminal would be inconsistent with these design guidelines by requiring a realignment of the approach channel limits, introducing a turn and abrupt stop, and increasing the amount of excavation and dredging required.

**Ala-56 Response:**

Background content provided regarding the Alameda Point Master Infrastructure Plan (MIP) is noted. The Proposed Project area is not included in the 2014 MIP or analysis, rather only the portions of Alameda shoreline west of Main Street are included in the 2014 MIP, as amended in 2020. Furthermore, the City of Alameda states that the "2014 Alameda Point MIP incorporated the Port's 2009 analysis of the shoreline's static slope stability and seismic performance…." However, the Port does not have any record of a 2009 slope stability analysis. Based on other references made in the letter, the Port believes that the City of Alameda is referencing geotechnical studies conducted by the Port and the USACE for the -50-Foot Deepening Project, a project that was completed in 2009. If so, that analysis of slope stability for the -50-Foot Deepening Project was conducted in 1999. Pursuant to recommendations in the 1999 Geotechnical study, the -50-Foot Deepening Project included mitigation measures for slope stability where construction occurred.

In addition, the Port and the USACE would conduct a geotechnical investigation during the pre-construction and design phase. Refer to Draft EIR, Section 3.7 Geology/Soils for a discussion of the geotechnical investigation and Responses to Comments Ala-15 and Ala-42 also provide a summary of the geotechnical investigation that will be performed. Moreover, while the Proposed Project is not expected to result in significant impacts related to geologic conditions and proposed shoreline improvements, Mitigation Measure GEO-1 has been added in response to the City of Alameda's comments and as a precaution to ensure that the final design and construction measures will comply with applicable seismic standards and maintain soil stability and structural integrity (refer to Response to Comment Ala-15).

Regarding comments that the portion of the Alameda Shoreline addressed in the MIP must be improved to protect lands at the Naval Air Station Alameda Historic District from sea level rise, as indicated above, the Proposed Project area is not included within the MIP study area. Similarly, the Naval Air Station Alameda Historic District, at its closest point, is 2,000 feet southwest of the IHTB widening footprint and would not be impacted by the Proposed Project. In addition, as further explained under response to comment Ala-60, the Proposed Project is not anticipated to exacerbate the risk of sea level rise–induced flooding.

**Ala-57 Response:**

Please refer to response to comments Ala-56 and Ala-148 regarding the referenced ENGEO report.

**Ala-58 Response:**

As noted in response to comment Ala-3, the Integrated Feasibility Report/Environmental Assessment is a separate document prepared by the NEPA lead agency, the USACE, and is not subject to the Port's authority. Please refer to response to Ala-56 and Ala-147.

**Ala-59 Response:**

The Draft EIR Geology/Soils Section (3.7) relies in part on the Geotechnical Appendix prepared by the USACE for the Oakland Harbor Turning Basins Widening Revised Draft Integrated Feasibility Report/Environmental Assessment. The USACE Geotechnical Appendix was informed by previous site-specific investigations and as-built plans, including multiple geotechnical investigations completed for the -50-Foot Oakland Harbor Navigation Improvement Project, which removed a portion of the Alameda Site and constructed the present-day bulkhead wall along the western and northwestern sides of the site. In addition, the USACE Geotechnical Appendix was informed by prior geotechnical investigations at Howard Terminal for the Waterfront District Ballpark project and at Radius Recycling (previously Schnitzer Steel). The Draft EIR also relied on references listed in Chapter 8 of the Draft EIR, including geologic mapping and hazards information. Also, refer to response to comment Ala-42 which summarizes information presented in the Draft EIR's Geology/Soils Section 3.7. The comment does not identify any specific information omitted from the Draft EIR as a result of its incorporation of the USACE Geotechnical Appendix. Although the Proposed Project is not expected to result in significant impacts related to geologic conditions and proposed shoreline improvements, Mitigation Measure GEO-1 has been incorporated in this Final EIR as a response to public comments and as a precaution to ensure that the final design and construction measures will comply with applicable seismic standards and maintain soil stability and structural integrity (refer to response to comment Ala-15).

As noted in response to comment Ala-3, the USACE's Integrated Feasibility Report/ Environmental Assessment is a separate document with the USACE as the NEPA lead agency.

**Ala-60 Response:**

Regarding comments related to the Port's consideration of existing shoreline conditions, please refer to responses to comments Ala-15, Ala-56, and Ala-59.

In response to concerns related to sea level rise, the Proposed Project is not anticipated to exacerbate the risk of sea level rise–induced flooding. The Draft EIR Hydrology/Water Quality impact analysis (Section 3.9.4) under Impact HYD-4 concluded that the Proposed Project is

unlikely to result in hydrodynamic changes that would substantially change inundation during sea level rise. Impact HYD-4 regarding flood hazard, tsunami, or seiche zones, and inundation also stated that there may be minor, permanent alterations to upland drainage patterns at the Alameda Site associated with upland excavation and reconfiguration of the facility shoreline (e.g., removal, replacement, or redesign of drainage infrastructure such as curbs and gutters), but these are not anticipated to affect flood hazards.

The existing bulkhead walls at the Alameda Site are at elevation +13.7 feet NAVD88. The Proposed Project's bulkhead walls would match the elevation of the existing bulkhead walls. The Port's Sea Level Rise Assessment used sea level rise estimates of 1 foot, 2 feet, and 3 to 5.5 feet for 2030, 2050, and 2100, respectively; these sea level rise scenarios were obtained from the 2018 California Coastal Commission Sea-Level Rise Policy Guidance document and the San Francisco Bay Conservation and Development Commission Adapting to Rising Tides program. As of 2024, the sea level elevation was +6. 5 feet NAVD88 at its highest level. Accounting for 5.5 feet of sea level rise (the high end of the estimate for 2100 based on the Port's Sea Level Rise Assessment Mapping), sea level at the site would be elevation +12 feet NAVD88 at its highest level. Therefore, the proposed bulkhead wall design elevation of +13.7 feet NAVD88 is more than sufficient to address sea level rise through 2100. It should also be noted that the California Coastal Commission adopted an update to its Sea-Level Rise Policy Guidance in November 2024 that includes reduction (lowering) of the sea level rise estimates from the 2018 Guidance on which Draft EIR and above analysis were based.

Finally, because the Proposed Project would not exacerbate the effects of sea level rise on the surrounding area, the EIR is not required to further evaluate the impacts of sea level rise resulting from global climate change. Refer to *Ballona Wetlands Land Trust v. City of Los Angeles*, 201 Cal.App.4th 455 (2011) (EIR is not required to address future impact of climate change); *Citizens' Committee to Complete the Refuge v. City of Newark*, 74 Cal.App.5th 460 (2021) (Sea level rise is not "new" in relation to the project, and thus not required under initial study checklist).

**Ala-61 Response:**

Please refer to response to comments Ala-54 and Ala-55 regarding moving the footprint of the proposed widened IHTB, Ala-60 regarding the sea level rise along the Alameda shoreline and more details regarding the planned design of the bulkhead at the Alameda Site, and Ala-148 regarding the 2013 ENGEO Report. In sum, the 2013 ENGEO Report evaluated portions of the Alameda shoreline that are not the subject of this Proposed Project, and therefore is not applicable to the Proposed Project area. Furthermore, the 2013 ENGEO report references a 12-foot width of a levee, not the need for a 12-foot-high bulkhead to be constructed. Finally, because these comments are not on areas with identified significant and unavoidable impacts, the range of alternatives for the Proposed Project need not include alternatives that would reduce these impacts.

**Ala-62 Response:**

Please refer to response to comments Ala-42 and Ala-56 through Ala-59. The Proposed Project would not have any potentially significant impacts to the Alameda shoreline stability warranting mitigation.

**Ala-63 Response:**

Please refer to responses to comments Ala-56 through Ala-62.

**Ala-64 Response:**

The comment mischaracterizes the Draft EIR. It does not state, either in the text referenced in the comment or elsewhere, that the previous removal of a portion of the Alameda Site for the -50-Foot Oakland Harbor Navigation Project and routine maintenance dredging have rendered the Alameda shoreline geologically unstable.

**Ala-65 Response:**

Please refer to response to comments Ala-15, Ala-42, and Ala-56 through Ala-59. The Proposed Project would not have any potentially significant impacts to the Alameda shoreline stability warranting mitigation.

**Ala-66 Response:**

Regarding comments related to consideration of existing conditions, refer to response to comments Ala-15, Ala-42 and Ala-59.

In response to comments related to the deferral of site-specific geotechnical investigation, the performance of a site-specific geotechnical investigation is required to inform the design and engineering for the Proposed Project and to comply with applicable building code standards as required by law, including the California Building Code. As noted in the Draft EIR Regulatory Setting (Section 3.7.2), provisions of the California Building Code require the preparation of foundation and soils reports and other geotechnical reports that address site-specific conditions, potential hazards, and required methods and design parameters for remediating and protecting against potential seismic hazards. Furthermore, as noted under responses to comments Ala-15 and Ala-42, as part of the Proposed Project's regulatory permitting review, the Proposed Project's design would be subject to review by the San Francisco Bay Conservation and Development Commission Engineering Criteria Review Board to confirm the Proposed Project is designed based on sound safety standards, including geotechnical considerations. Therefore, because performance of a site-specific geotechnical investigation is already required to design, permit, and construct the Proposed Project in accordance with existing code and regulations, it does not need to be identified as a CEQA mitigation measure, and the Draft EIR did not combine its geologic impact and mitigation analysis. Nonetheless, Mitigation Measure GEO-1 has been incorporated in response to the City of Alameda's comments and as a precaution to ensure that the final design and construction measures will comply with applicable seismic standards and maintain soil stability and structural integrity.

**Ala-67 Response:**

The Draft EIR, Section 3.7, Geology/Soils includes a detailed analysis of the potential for the Proposed Project (including anticipated maintenance dredging) to result in adverse impacts, including those related to increased risk of seismic-related hazards, landslide, lateral spreading, subsidence, liquefaction or collapse, and expansive soils, among other related impact criteria. Refer to response to comment Ala-42 which summarizes the impact determinations in the Draft EIR Geology/Soils Section regarding seismic failure. As described above in response to comment Ala-59, the Draft EIR Geology/Soils Section (3.7) considers relevant and appropriate information, including the Geotechnical Appendix prepared by the USACE for the Oakland

Harbor Turning Basins Widening Revised Draft Integrated Feasibility Report/Environmental Assessment as well as the references listed in Chapter 8. As discussed above, the USACE Geotechnical Appendix was informed by previous site-specific investigations and as-built plans, including those for the -50-Foot Oakland Harbor Navigation Improvement Project.

In response to the need to prepare a site-specific geotechnical investigation in advance of EIR development and deferral of mitigation, refer to response to comment Ala-66. As explained above, because performance of a site-specific geotechnical investigation is already required to design, permit, and construct the Proposed Project in accordance with existing code and regulations, the geotechnical investigation does not need to be identified as a CEQA mitigation measure, nor did the Draft EIR combine or defer its geologic impact and mitigation analysis.

**Ala-68 Response:**

Please refer to response to comments Ala-66 and Ala-67. As explained above, because performance of a site-specific geotechnical investigation is already required to design, permit, and construct the Proposed Project in accordance with existing code and regulations, the geotechnical investigation does not need to be identified as a CEQA mitigation measure, nor did the Draft EIR combine or defer its geologic impact and mitigation analysis.

**Ala-69 Response:**

Please refer to response to comments Ala-66 and Ala-67.

**Ala-70 Response:**

Draft EIR Table 2.6-1 identifies a list of permits and approvals that are known or anticipated to be required for the Proposed Project, and the text preceding the table notes that the Port, as a lead agency along with USACE, is responsible for obtaining approvals and documenting compliance with applicable environmental laws and regulations. National Pollutant Discharge Elimination System (NPDES) permits for construction and stormwater discharge are among the permits listed in Table 2.6-1. Because compliance with applicable regulations, including those involving the acquisition of permits, is required by law, it is not necessary to identify a CEQA mitigation measure to enforce the Port to obtain permits required to construct the Proposed Project.

Draft EIR Impact HYD-4 regarding flood hazard, tsunami, or seiche zones, and inundation stated that there may be minor, permanent alterations to upland drainage patterns at Alameda Site associated with upland excavation and reconfiguration of the facility shoreline (e.g., removal, replacement, or redesign of drainage infrastructure such as curbs and gutters), but these are not anticipated to affect flood hazard. City of Alameda General Plan policies relevant to hydrology and water quality are discussed on page 3.10-17 of the Draft EIR. The comment does not identify any specific General Plan policies that it believes the Proposed Project may be inconsistent with. Nonetheless, as explained in response to comment Ala-33, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction; therefore, the City of Alameda's General Plan policies would not apply to design and construction of the Proposed Project on the Alameda Site.

**Ala-71 Response:**

Please refer to response to comment Ala-33. As explained in that response, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be

subject to the City of Alameda's jurisdiction; therefore, the Proposed Project would not be required to submit a grading and drainage plan to the City of Alameda for review and approval.

**Ala-72 Response:**

Please refer to responses to comments Ala-15 and Ala-64 through Ala-71.

**Ala-73 Response:**

Please refer to response to comment Ala-56. As mentioned in this response, the Proposed Project area is not included in either the 2014 or 2020 MIP or analysis. Please refer to response to comment Ala-148. As stated in this response, the Proposed Project is not included in the area investigated in the 2013 ENGEO Report. Therefore, findings from neither the MIP or the 2013 ENGEO Report provide sufficient information to assess the existing conditions of the Proposed Project in terms of analyzing impacts to geology/soils, hydrology and water quality, or engineering design.

As outlined in response to comment Ala-15, based on the results of the preliminary geotechnical and structural evaluations performed by the USACE and Port to determine overall engineering feasibility, and to inform the preliminary designs of the Proposed Project (including proposed sheet piles and bulkheads), as well as observed performance of the existing shoreline protections and bulkheads at the turning basins, the USACE and Port determined that the area is expected to accommodate the Proposed Project without resulting in any significant geologic hazards (seismic risks to structures or people, or related landslide, lateral spreading, subsidence, liquefaction, or collapse). As explained in the Draft cumulative impact analysis for Geology and Soils (Section 3.8), the geographic scope of analysis for cumulative geologic impacts encompasses and is limited to the Proposed Project landside sites and the area immediately adjacent to these sites. This is because impacts relative to geologic hazards are generally site-specific and time-specific. Geologic hazards could only be cumulative if two or more geologic hazards occurred at the same time, as well as overlapping at the same location. Of the reasonably foreseeable future projects analyzed in the Draft EIR, only the proposed Oakland Waterfront Ballpark District at Howard Terminal is immediately adjacent to the Proposed Project and could overlap with the Proposed Project's implementation. Pursuant to Assembly Bill 1191 (the Oakland Waterfront Sports and Mixed-Use Project, Waterfront Access, Environmental Justice, and Revitalization Act), because the Port and Oakland Athletics did not enter into a binding agreement by January 1, 2025 for construction of the Waterfront Ballpark District at Howard Terminal project, that portion of Howard Terminal that had been proposed for development of the ballpark district project reverted to a Port Priority Use Area under the San Francisco Bay Plan as of that date (refer to Section 3.11, Land Use, in this Final EIR). Therefore, the Waterfront Ballpark District at Howard Terminal project is no longer considered reasonably foreseeable and has been removed from the cumulative impact analysis in this Final EIR. Although redevelopment may still occur at Howard Terminal, there are no specific development proposals that are reasonably foreseeable at the time of this Final EIR publication for the purpose of consideration of cumulative impacts. Any future development at Howard Terminal would be required to comply with the California Building Code and City of Oakland building regulations and standards, which by design are intended to reduce the cumulative seismic and geologic hazard risks from buildings and structures. Therefore, cumulative effects related to seismic and other geologic hazards would be less than significant. Because the area of the Proposed Project will not increase the risk of seismic hazards at the turning basins, it is not expected to have any cumulatively considerable

impact related to other, unrelated projects. However, as a precaution, this Final EIR adds Mitigation Measure GEO-1 to ensure that final design and construction measures comply with applicable seismic standards, and maintain soil stability and structural integrity at the turning basins.

**Ala-74 Response:**

In response to comments related to potential to exacerbate existing shoreline instability, refer to responses to comments Ala-15, Ala-42, Ala-56, Ala-59, Ala-60, Ala-62, and Ala-148.

As noted in response to comment Ala-3, the Port has no authority over the Integrated Feasibility Report/Environmental Assessment, because this is a separate document prepared by the NEPA lead agency, USACE. Response to comments contained in this document pertain to the Draft EIR. However, as noted in previous responses, the Draft EIR stated that during the Proposed Project pre-construction engineering and design phase, a site-specific geotechnical investigation would be performed to inform the design and engineering required to comply with applicable building code standards and ensure that the constructed facilities maintain seismic and slope reliability; this would include the portion of the Alameda shoreline included in the proposed widened IHTB footprint.

Furthermore, the comment provides no support for its assertion that the Proposed Project will exacerbate degradation, and does not identify any inadequacy in the analysis presented in the Draft EIR. Nonetheless, Mitigation Measure GEO-1 has been added at the commenter's request to ensure soil stability and structural integrity at the turning basins.

**Ala-75 Response:**

In response to comments related to the Proposed Project's potential to result in adverse impacts to the Alameda shoreline involving earthquake-induced liquefaction and increased soil destabilization, refer to responses to comments Ala-15, Ala-42, and Ala-67.

In response to comments which suggest a need to conduct a site-specific geotechnical investigation as part of the Draft EIR analysis, refer to responses to comments Ala-15, Ala-66, and Ala-67. Although the Proposed Project is not expected to increase the risk of liquefaction or soil destabilization, this Final EIR adds Mitigation Measure GEO-1, at the commenter's request, to ensure the soil stability and structural integrity at the turning basins.

**Ala-76 Response:**

Comment noted. The Port acknowledges the materials referenced by the City of Alameda. Please refer to responses to comments Ala-15, Ala-42, Ala-66, and Ala-67. The USACE and Port performed initial geotechnical and structural analyses that accompanied the Integrated Feasibility Report/Environmental Assessment, which together concluded that the Proposed Project would not increase potential risks related to rupture of a known earthquake fault, seismic shaking, or seismic-related ground failure, including liquefaction, lateral spreading, subsidence, landsides, or collapse. Any new bulkhead or sheet pile shoreline structures must comply with applicable seismic design standards. Further geotechnical investigation at the early, Draft EIR phase would not have provided complete information to the public or decisionmakers, because final design could change in response to environmental review. Furthermore, the State Building Code (adopted and incorporated by the Port of Oakland) requires geologic and earthquake engineering reports for construction, which must include a geologic investigation, evaluation of known active

and potentially active faults, ground motion parameters, evaluation of slope stability at or near the site, and the liquefaction and settlement potential of the earth materials in foundations. Considering compliance with these and related provisions of state law, the rigorous investigation process required under the engineering standard of care, and regulatory agency technical reviews (e.g., by the San Francisco Bay Conservation and Development Commission), implementation of Mitigation Measure GEO-1 further supports that the risk of seismic hazards and related geologic hazards would remain less than significant.

**Ala-77 Response:**

Please refer to response to comment Ala-33. As explained in that response, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction; therefore, findings from the Alameda Landing Master Development Plan and Alameda Point MIPs including mitigation measures would not be applicable to the Proposed Project. In addition, the geologic and seismic hazard mitigation measures in the Alameda Landing Supplemental Environmental Impact Report (SEIR) are designed with the assumption that a new structure on land is proposed. There is no new structure proposed on the land under the Proposed Project; rather the size of the property would be reduced and the existing bulkhead would be replaced with a newer bulkhead that matches the height of the existing adjacent bulkhead. However, consistent with the intent of the Alameda SEIR mitigation measures, a site-specific geotechnical investigation would be performed for the Proposed Project to inform the design and engineering required to comply with applicable building code standards and ensure that the constructed facilities maintain seismic and slope reliability (refer to response to comments Ala-15 and Ala-42, including discussion of added Mitigation Measure GEO-1). Furthermore, all hydrological impacts are found to be less than significant in the Draft EIR, so no additional mitigation is required.

**Ala-78 Response:**

As explained in responses to comment Ala-56, the Proposed Project area is not included in the 2014 MIP analysis. In addition, as stated in response to comment Ala-148, the Proposed Project is not included in the area investigated in the 2013 ENGEO Report. Furthermore, as explained in responses to comments Ala-33 and Ala-77, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction; therefore, the Alameda MIPs would not be applicable to the Proposed Project. For these reasons, mitigation measures from the 2014 MIP and 2013 ENGEO Report would not be applicable.

Although the Proposed Project is not expected to result in significant impacts related to geologic conditions and proposed shoreline improvements, Mitigation Measure GEO-1 has been incorporated in this Final EIR as a response to public comments and as a precaution to ensure that the final design and construction measures will comply with applicable seismic standards and maintain soil stability and structural integrity (refer to response to comments Ala-15 and Ala-42).

**Ala-79 Response:**

Comment noted. The Port is collaborating with the City of Alameda through participation in the Oakland Alameda Adaptation Committee, a coalition of shoreline communities and stakeholders working to accelerate sea level rise adaptation, protect and restore water quality, habitat, and

recreation, and promote community resilience. Please also refer to response to comment Ala-28, which identifies dates the Port has met with the City of Alameda to discuss the turning basins widening project.

**Ala-80 Response:**

Please refer to response to comment Ala-60.

**Ala-81 Response:**

Please refer response to comment Ala-60.

**Ala-82 Response:**

The Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction (refer to response to comment Ala-33); therefore, the City of Alameda's 2022 Climate Adaptation and Hazard Mitigation Plan (CAHMP) would not apply to the design of the Proposed Project. However, even if the CAHMP did apply, the Proposed Project would not conflict with the applicable CAHMP adaptation strategies identified for the shoreline near Webster and Posey Tubes identified in Table 5-3, page 5-10 of the 2022 CAHMP. The Proposed Project does not involve senior centers or care facilities, public trails and open space, or introduction of new land uses at the Alameda Site; therefore, the adaptation strategies pertaining to these topics are not applicable to the Proposed Project. The Proposed Project would be consistent with the mid-term strategy addressing elevating existing levees and seawalls to +13 feet North American Vertical Datum of 1988 (NAVD88). The Proposed Project's bulkhead walls would match the elevation of the existing bulkhead walls, which are at elevation +13.7 feet NAVD88.

The Draft environmental analysis does not find any way in which the Proposed Project would exacerbate the impacts of sea level rise, and a new bulkhead is proposed to be built as part of the Proposed Project; the comment does not suggest any inadequacy or inaccuracy with respect to these analyses. Please refer to responses to comments Ala-42 and Ala-60 regarding analysis of the Proposed Project's sea level rise impacts.

**Ala-83 Response:**

The 9.4 feet referred to in the CAHMP is another way of describing the 36-inch Water Level Scenario, using the NAVD88 (North American Vertical Datum of 1988) measure. The 36-inch Water Level Scenario described in the CAHMP is also described in the Draft EIR on page 3.10-10. The comment does not identify any inaccuracy or inadequacy with this discussion. Moreover, this discussion in the CAHMP does not describe existing physical conditions, nor does it describe the impact of the Proposed Project or impacts that the Proposed Project would contribute to. To gain a better understanding of future vulnerabilities, the Port is conducting an extensive study of sea-level rise and groundwater intrusion impacts at all Port areas, and developing an adaptation plan.

Please refer to responses to comments Ala-60 and Ala-82.

**Ala-84 Response:**

This comment suggests incorporating adaptation measures to address existing hazards and environmental changes not caused by the Proposed Project. This is beyond the scope of CEQA. Nonetheless, the existing bulkhead walls at the Alameda Site are at elevation +13.7 feet

NAVD88. The Proposed Project's bulkhead walls would match the elevation of the existing bulkhead walls, which is taller than the +13 feet NAVD88 target height identified on page 5-10 of the CAHMP.

Please also refer to responses to comments Ala-60 and Ala-82.

**Ala-85 Response:**

No impacts related to this comment are found to require additional mitigation in the Draft EIR. Additionally, the comment's suggestion to establish funding mechanisms to pay for later adaptation improvements for future sea level rise is not related to the impacts of the Proposed Project. As explained in response to comment Ala-33, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction; therefore, policies in the City of Alameda's CAHMP would not apply to the design of the Proposed Project. As noted in response to comment Ala-84, the Proposed Project's bulkhead walls would match the elevation of the existing bulkhead walls, which is taller than the +13 feet NAVD88 target height identified on page 5-10 of the CAHMP.

**Ala-86 Response:**

Please refer to responses to comments Ala-42 and Ala-60 regarding analysis of the Proposed Project's sea level rise impacts. The comment does not suggest any way in which the requested mitigation would relate to a significant impact of the Proposed Project.

As discussed on page 3.10-10 of the Draft EIR, the Port's own Sea-Level Rise Assessment also contains strategies to address sea level rise, including one to raise the grade of shipping berths as a long-term solution when terminals reach the end of their useful life to provide long-term flood protection once sea level rise exceeds 3 feet. As explained in response to comment Ala-33, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction; therefore, the Alameda Point MIPs would not apply to the Proposed Project. Refer to also response to comment Ala-56.

**Ala-87 Response:**

Please refer to responses to comments Ala-33, Ala-56, Ala-60, and Ala-82 through Ala-86. No revisions to the EIR were required.

**Ala-88 Response:**

This comment relates to impacts of the environment, not impacts of the Proposed Project.

Plan Bay Area 2050 has been considered, and the Port has found the Proposed Project to be consistent with Plan Bay Area 2050. The proposed design for the bulkhead walls assumed 2 feet of sea level rise by 2050, consistent with Plan Bay Area 2050 and the State of California Sea-Level Rise Guidance 2018 Update. It should also be noted that the California Coastal Commission adopted an update to its Sea-Level Rise Policy Guidance in November 2024 that includes reduction (lowering) of the sea level rise estimates from the 2018 Guidance on which Draft EIR and above analysis were based. Plan Bay Area 2050 (page 100) indicates that there are multiple adaptation options for rising sea levels, each with its own suitability along the San Francisco Bay shoreline; this includes sea walls as would be reconstructed along the Oakland and Alameda shorelines for the widened IHTB. Plan Bay Area 2050 Map 5-2, as referenced by the comment, shows adaptation investments (which may include elevated roads/rail, ecotone and

traditional levees, seawalls and tidal gates) along portions of Alameda's northern, western, and southern shorelines, but does not include the shoreline of the IHTB. As noted in response to comment Ala-79, the Port is collaborating with the City of Alameda and other stakeholders regarding sea level rise adaptation through participation in the Oakland Alameda Adaptation Committee.

Please also refer to responses to comments Ala-33, Ala-60, and Ala-82 through Ala-86.

**Ala-89 Response:**

The proposed bulkhead wall design elevation of +13.7 feet NAVD88, which would match the existing bulkhead wall elevation, is sufficient for sea level rise to 2100. This height would exceed the +13 feet NAVD88 target height for seawalls in this area of the Alameda shoreline identified on page 5-10 (Table 5-3) of the CAHMP and would not exacerbate existing inundation risks related to sea level rise. Please also refer to response to comments Ala-60 and Ala-84. This comment addresses existing hazards and risks and does not address any environmental impacts of the Proposed Project.

**Ala-90 Response:**

As noted in response to comment Ala-3, the USACE's Integrated Feasibility Report/ Environmental Assessment is a separate document, and the Port has no authority with respect to that document.

**Ala-91 Response:**

Analysis completed for the Draft EIR does not conclude or otherwise suggest that the existing or proposed bulkhead walls at the Alameda Site would not be tall enough to withstand anticipated sea level rise. Please refer to response to comments Ala-60, Ala-84 and Ala-42. In consideration of this comment, text has been added in this Final EIR under Impact HYD-4 clarifying that the proposed bulkhead wall design elevation of +13.7 feet NAVD88 is more than sufficient to address sea level rise through 2100. This does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR. As noted in response to comment Ala-3, the USACE's Integrated Feasibility Report/ Environmental Assessment is a separate document prepared pursuant to NEPA, and the Port has no authority with respect to that document.

The comment relates to impacts of the environment on the Proposed Project and other areas, and does not relate to impacts of the Proposed Project, or any way in which the Proposed Project would exacerbate existing hazards.

**Ala-92 Response:**

Please refer to responses to comments Ala-60, Ala-42, and Ala-91.

The comment relates to impacts of the environment on the Proposed Project and other areas and does not relate to impacts of the Proposed Project, or any way in which the Proposed Project would exacerbate existing hazards.

**Ala-93 Response:**

As described in Draft EIR Section 2.4, Proposed Project Objectives, the purpose of the Proposed Project is to provide navigational (i.e., maneuvering) improvements that address waterside inefficiencies and suboptimal navigational conditions currently experienced by vessels in the

Oakland Inner and Outer Harbors. Landside improvements that can change the number of containers—and by extension—the number of vessels that can be handled in a finite period (e.g., day) is not a Proposed Project objective; therefore, a direct correlation is not reasonably foreseeable. Instead, the Proposed Project allows the forecasted demand for container trade to be accommodated with less total vessels by allowing large vessels (PPX3 and PPX4) to call more frequently.

Please also refer to Global Response 5: Operational Impacts.

**Ala-94 Response:**

As described in Draft EIR Section 2.4, Proposed Project Objectives, the purpose of the Proposed Project is to provide navigational (i.e., maneuvering) improvements that address waterside inefficiencies and suboptimal navigational conditions currently experienced by vessels in the Oakland Inner and Outer Harbors. Although the commenter did not define "Vessel Turn Time,", the concept typically refers to the total time a vessel spends in a port from arrival to departure, including, but not limited to, the time spent a) maneuvering to and from a dock, b) securing a vessel to the dock, c) customs clearance (if required), d) shore power cabling connections, e) cargo handling, and f) releasing vessel from the dock. Landside improvements and landside operational efficiencies that impact the time a vessel spends at a dock are not an objective or component of the Proposed Project; therefore, a direct correlation is not reasonably foreseeable. Instead, the Proposed Project allows the forecasted demand for container trade to be accommodated with less total vessels by allowing large vessels (PPX3 and PPX4) to call more frequently. Please also refer to responses to Global Response 5: Operational Impacts.

**Ala-95 Response:**

The City of Alameda's comment provides a list of entitled projects the City of Alameda anticipates would overlap with the construction of the Proposed Project, but were not included in Draft EIR Table 4.2-1, Plans and Probable Future Projects for Cumulative Impact Analysis. Although the City of Alameda indicates it anticipates these projects would overlap with the construction of the Proposed Project, the comment does not provide the specific construction timeframe for each of the listed projects for the Port to be able to confirm the extent to which their construction may overlap with that of the Proposed Project. The comment also includes a footnote with a link to a development forecast table of projects, although it is unclear if the listed projects are those that the City of Alameda is currently considering or has already entitled, given the forecast table does not provide any information about the entitlement status or construction timing of the listed projects.

As described in Draft EIR Section 4.1, Approach to Analysis, the process for identifying projects to be included in the cumulative impact analysis included review of cumulative projects considered for other recent proposed projects at the Seaport (e.g., Eagle Rock Aggregates) and through review of major development projects identified by the City of Oakland and the City of Alameda. With regard to projects in the City of Alameda, the Draft EIR reviewed the Major Planning Projects listed on the City of Alameda's Planning Division webpage (https://www.alamedaca.gov/Departments/Planning-Building-and-Transportation/Planning-Division/Major-Planning-Projects). Specifically, during the preparation of the Draft EIR, the projects listed on this website as of April 2023 were considered for inclusion in the cumulative analysis, and notably the website, neither at the time of Draft EIR preparation or as of March 2025, does not include all those projects listed in the development forecast table referenced in the

City of Alameda's comment. The criterion for considering whether a project is reasonably foreseeable and probable to include in the Draft EIR is whether the project had been defined in adequate detail—either through the completion of publicly available preliminary evaluations, feasibility studies, or draft environmental and engineering documents—to inform understanding of potential project impacts. The list of cumulative projects included in the EIR are those that are defined in adequate detail and located close to the Proposed Project area (i.e., those that could result in overlapping impacts, such as air quality, energy, transportation and circulation, or noise and vibration); or other projects along San Francisco Bay that could result in overlapping impacts to resources, such as biological resources, hydrology, and water quality. The spatial extent for analysis of cumulative impacts varies by resource. Future projects identified are those, based on readily available public information, expected to be constructed or implemented prior to or potentially overlapping with construction of the Proposed Project, which is estimated to start in 2027 and be completed by 2029.

The following discussion addresses specific projects identified by the comment.

***Admirals Cove (250 Mosley Avenue) – 227-unit multifamily supportive housing development***

The comment provided no additional information about this project. The following discussion is from the Port's research of the project as referenced in the comment.

The City of Alameda Planning Board approved the Admirals Cove 227-unit multifamily housing project on November 14, 2022, and filed a Notice of Exemption for the project (SCH No. 2022110500) on November 22, 2022. The address for this project on the State Clearinghouse website, the Planning Board agenda, and the City of Alameda's Planning Division website is listed as 300 Mosley Avenue, not 250 Mosley Avenue as stated in the City of Alameda's comment. The Port has reviewed the project plans and associated documents approved by the commenter on November 14, 2022. These include a Transportation Demand Management Plan approved by the City of Alameda per City of Alameda Ordinance No. 3309.

The City of Alameda found the project to be consistent with its previously certified General Plan EIR and that no subsequent or supplemental EIR was required due to any changes. The only impact found to be significant and unavoidable in that original General Plan EIR arose from vehicle miles traveled (VMT; Alameda General Plan EIR, pp. 2-5 to 2-26). Again, the Admirals Cove Project was found to fall within the prior analysis, and therefore did not warrant any further environmental review. Although VMT represented a significant issue for the General Plan EIR, the Proposed Project would not meaningfully contribute to VMT impacts (Draft EIR, p. 3.14-26). Therefore, the City of Alameda has already determined that the Admirals Cove project is consistent with the analyses finding all other environmental impacts to be less-than-significant. The City of Alameda's comment that the Admirals Cove project will contribute to a cumulatively considerable impact related to construction is contradicted by its own CEQA analysis of that particular project. Furthermore, based on the Port's review, it appears speculative that this project would be constructed at precisely the same time as the Proposed Project, or otherwise contribute to any temporary cumulative impacts.

***North Housing, Habitat for Humanity (300 Mosley Avenue) – 68-unit multifamily supportive and affordable housing development***

The comment provided no additional information about this project. The following discussion is from the Port's research of the project as referenced in the comment.

The comment appears to refer to a "North Housing Study Session – 300-501 Mosley Avenue" approved by the City of Alameda's Planning Board to be held on May 11, 2020. (https://alameda.legistar.com/LegislationDetail.aspx?ID=4430531&GUID=C428193E-1075-4471-A2A7-C7D8521F4F66&FullText=1.) According to the Planning Board's discussion, Habitat for Humanity had submitted a preliminary review application at the time, proposing a project under Senate Bill (SB) 35.

It has been more than 4 years since the City of Alameda considered that preliminary study session and no additional information has been located or provided by the City of Alameda about further progress on this project, and the most recent google street view imaging does not show any construction on the site. Therefore, construction of this project in the near future is not probable or foreseeable, and is therefore speculative.

Alameda Point West Midway (Main Street/West Midway Avenue) – 22.8-acre development featuring 480 residential units, and 10,000 square feet of commercial and open space (to be constructed with RESHAP project), and Alameda Point RESHAP (Main Street/West Midway Avenue) – 309-unit affordable multifamily housing development (to be constructed with West Midway project). These projects listed in the comment were already considered in the Draft EIR cumulative impact analysis. The Alameda Point RESHAP and Alameda Point West Midway projects are part of the overall Alameda Point Project that was included in the Draft EIR cumulative project list (Table 4.2-1) and considered in the Draft EIR cumulative impact analysis.

Boatworks Townhomes (2229–2235 Clement Avenue) – 9.48-acre residential development with 182 townhomes and park space, Former Penzoil Site (2015 Grand Street) –90-townhome and 5-accessory-dwelling-unit residential development, and Alameda Marina (1815 Clement Avenue) – 182 townhomes, 218 multifamily units, and 153,000 square feet of commercial space.

The comment provided no additional information about these projects. The following discussion is from the Port's research of the projects as referenced in the comment.

These projects are more than 2 miles from the Proposed Project. At this distance, these projects would not combine with impacts from the Proposed Project for most resources to result in cumulative impacts. Although there could be some cumulative construction traffic impacts along a portion of the Alameda designated truck route along Clement Avenue, there is not any readily available public information indicating the specific timing of construction and traffic impacts of these projects to be able to determine if cumulative effects may result. Additionally, in response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the Proposed Project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site, and a 54 percent reduction in total from the Proposed Project construction truck trips in Oakland and Alameda in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips for additional information.

The City of Alameda also determined the development of the Former Penzoil Site at 2015 Grand Street, to be exempt from CEQA pursuant to a categorical exemption (https://alameda.legistar.com/LegislationDetail.aspx?ID=6007542&GUID=47EEA779-4CDD-4E6C-8B07-FF8D25E8B42C). Categorical exemptions under CEQA are classes of projects that are generally considered to have no significant environmental impact, as determined by the California Secretary for Natural Resources, and categorical exemptions are inapplicable when

they contribute to cumulative significant impacts (CEQA Guidelines, §§ 15300, 15300.2(b).) Projects that are determined by a lead agency to qualify for one or more categorical exemption classes are exempt from the provisions of CEQA and do not require preparation of environmental documents (CEQA Guidelines Section 15300). Because the City of Alameda has already determined that this project is of a type that does not generally cause significant environmental effects, and that it would not contribute to any cumulative impacts, this project was not included in the cumulative impact analysis.

The comment also contains a footnote with a link containing what the City of Alameda describes as a list of projects that it is either currently considering or have already been entitled. Neither the footnote nor the table at the link provides any information suggesting that any additional projects should be included in the cumulative projects evaluated in the Draft EIR. Based on the above information, the development projects identified in the City of Alameda's comment were: 1) accounted for in the Draft EIR cumulative impact analysis; 2) are categorically exempt from CEQA and therefore not included in the cumulative impact analysis; or 3) are at a distance from the Proposed Project at which contribution to cumulative projects was not expected or are projects for which inadequate information was publicly available to analyze cumulative impacts (refer to response to comment Ala-96). Therefore, additional revision of the EIR cumulative impact analysis to address the development projects identified in the City of Alameda's comment is not required.

**Ala-96 Response:**

Please refer to response to comment Ala-95 regarding analysis of cumulative traffic impacts related to construction truck trips.

Regarding aesthetics, the Proposed Project would not contribute to significant cumulative aesthetics impacts. Even considering the additional projects identified in the preceding comment, only the Admirals Cove and North Housing for Habitat for Humanity projects, both along Mosley Avenue, are close enough to the Proposed Project that their construction activities and those of the Proposed Project could be seen from the same viewpoint if constructed concurrently. Construction activities for the Proposed Project would appear as an extension of the surrounding maritime industrial activities at the Seaport. Furthermore, temporary views of various construction activities are common in an urban setting. Once constructed, the Proposed Project would result in minimal visual change compared to existing conditions, and would make little to no contribution to cumulative aesthetic impacts that may occur due to nearby development projects.

From the air quality perspective, the Draft EIR already designates the Proposed Project as cumulatively considerable. Information is not readily available for all potentially entitled projects to do a quantitative analysis of the impacts to determine if they would substantially increase the already cumulatively considerable impact. Additional information that would be needed to determine if there was a substantial change in severity would include the schedule and types of construction equipment that would be used. Even if such additional information were available, it would not change the significance determination that the Proposed Project has a cumulatively considerable impact to air quality. As noted in the Draft EIR under Impact C-GHG-1, GHG emissions are, by their nature, cumulative and global in nature. The Proposed Project's contribution to cumulative impacts related to GHG emissions would be less than cumulatively considerable because GHG emissions from Seaport operations would decrease, and construction

emissions would be offset by the carbon sequestration of the beneficial reuse of the dredged sediment, and further reduced with implementation of Mitigation Measure GHG-1.

Traffic congestion and delay are not, in and of themselves, CEQA impacts. To the extent that congestion can create localized "hotspot" issues, these would be limited to PM and CO, because other pollutants are evaluated on a larger scale, such as $NO_X$, ROG, secondary PM, and GHG. There is insufficient information about the timing and construction methods associated with these projects to include them in the cumulative impacts analysis. There is no evidence to suggest that they would significantly increase the severity of cumulative air quality impacts associated with project construction, which are already significant and unavoidable. With respect to impacts on emergency access, the Draft EIR includes Mitigation Measure TRA-1, requiring a traffic control plan. As the Draft EIR notes on page 4-25, most other cumulative projects also include similar traffic management measures. With Mitigation Measure TRA-1, the impact would be less than cumulatively considerable, and therefore less than significant.

**Ala-97 Response:**

Refer to Global Response 6: Air Quality Baseline for a discussion of the use of a future baseline and comparison to existing conditions. The EIR used a projected baseline for evaluating air quality impacts to ensure that impacts were accurately disclosed, and use of a current conditions baseline would have been misleading.

**Ala-98 Response:**

Refer to Global Response 2: Community Engagement and Environmental Justice for a discussion of environmental justice impacts under CEQA. Environmental impacts to all surrounding communities, including West Alameda, were fully analyzed and disclosed. The health risk assessment specifically identified the impacts to residential receptors in West Alameda.

**Ala-99 Response:**

The City of Alameda correctly states that the Draft EIR finds that the Proposed Project would have significant and unavoidable air quality and health impacts. The Draft EIR proposed mitigation measure AIR-1 to reduce the potentially significant impact to air quality, but even after implementing all feasible measures, the impact to air quality remains significant and unavoidable. (Refer to Global Response 7: Air Quality Mitigation Measures for the modified Mitigation Measure AIR-1, revised using underline to denote any additions the Port has incorporated in response to comments and strikeout to reflect any removal of text from the mitigation measure.) Furthermore, the Draft EIR evaluated air quality impacts to surrounding communities in Oakland and Alameda and concluded that project-level and cumulative air quality impacts were significant and unavoidable under Air District thresholds of significance, as well as consistency with applicable plans and policies. The significant air quality impact is due to the impacts that would occur during Proposed Project construction. Operational impacts are anticipated to be less than significant.

In response to comments related to potential conflicts with the City of Alameda's General Plan, refer to response to comment Ala-33.

**Ala-100 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for a discussion on the feasibility of using alternative or electric equipment and vehicles. The EIR requires the Port to use

alternatively fueled or electric equipment to the extent that such equipment is available. However, the Port finds impacts to be significant and unavoidable due to the uncertainty about availability of such equipment. The EIR contains clear standards for how the Port will evaluate the feasibility of this mitigation.

**Ala-101 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for a discussion on the feasibility of using alternative or electric equipment and vehicles. The EIR requires the Port to use alternatively fueled or electric equipment to the extent that such equipment is available. However, the Port finds impacts to be significant and unavoidable due to the uncertainty about availability of such equipment. The EIR contains clear standards for how the Port will evaluate the feasibility of this mitigation.

**Ala-102 Response:**

The commenter correctly stated the impacts from the Draft EIR and the comment is noted.

**Ala-103 Response:**

As discussed in response to comment Ala-33 and Ala-37, the Port is not aware of any discretionary approvals that would be required for the Proposed Project from the City of Alameda. For this reason, the Port's Proposed Project activities on that site will not be subject to the City of Alameda's jurisdiction, including its general plan and associated Health Risk Assessment requirement or conditions of approval. Nevertheless, all environmental impacts of the Proposed Project, including health risks and other impacts in the City of Alameda, have been analyzed in the Draft EIR, as explained in response to the City of Alameda's comments. With respect to mitigation, the Port has incorporated all feasible mitigation to address impacts found to be significant and unavoidable, including potential health impacts. Additionally, the Port did prepare a construction health risk assessment. Refer to page 3.3-37 of the Draft EIR. Discussion of the Proposed Project's impacts related to health impacts was included in the EIR under Impact AIR-3 and Appendix C.

**Ala-104 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for discussion of mitigation measures proposed by commenters for air quality impacts. The Port has reviewed and considered the City of Alameda's suggested edits to Mitigation Measure AIR-1. Where appropriate, suggested revisions have been partially incorporated to clarify language for contractor implementation. In addition, the response includes a discussion of performance standards to define mitigation measures listed under Mitigation Measure AIR-1.

**Ala-105 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for a strike-out/underlined revised version of Mitigation Measure AIR-1, and discussion of recommended measures proposed by commenters for air quality.

The City of Alameda has requested that documentation regarding implementation of mitigation should be provided to the City of Alameda. As explained in response to comment Ala-33, the City of Alameda is not anticipated as a CEQA "responsible agency" and has no responsibility over implementation of mitigation for the Proposed Project. The Port is responsible for enforcing its Mitigation, Monitoring, and Reporting Plan to ensure that there is compliance of all

mitigation measures. Providing information to the City of Alameda, which has no jurisdiction over the Proposed Project, would not reduce project impacts.

The City of Alameda suggested that there should be an equipment inventory of off-road equipment to be used and maintained on the Proposed Project site. The Port has incorporated this suggestion, and would make this equipment inventory list available on request.

The Port is required to ensure that all equipment and vehicles used for the project meet the regulatory requirements, which includes labeling and production of certification that their fleets are compliant with the existing regulations. Reporting the vehicles used and their certifications to the City of Alameda would not reduce the Proposed Project's air quality impacts. Nonetheless, once this information becomes available, it would be available to the Port by requesting a detailed spreadsheet of information from the contractors from their DOORS or TRUCRS compliance reports. The Port will maintain equipment report information electronically where all documentation of the MMRP will be saved. This information will not be stored on-site. To the extent that the comment suggests that the Port and/or contractors would not comply with the proposed mitigation measure or regulatory requirements, there is no evidence to support such a claim. The mitigation measure as drafted is enforceable, and the Draft EIR reasonably and appropriately assumes that regulatory requirements will be followed.

**Ala-106 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for a strike-out/underlined revised version of Mitigation Measure AIR-1 and discussion of recommended measures proposed by commenters for air quality.

The City of Alameda has requested that documentation regarding implementation of mitigation should be provided to the City of Alameda. As explained in response to comment Ala-33, the City of Alameda is not anticipated as a CEQA "responsible agency." The Port is responsible for enforcing its Mitigation, Monitoring, and Reporting Plan to ensure that there is compliance of all mitigation measures. Providing information to the City of Alameda would not reduce project impacts; however, this information will be made available on request.

**Ala-107 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for a strike-out/underlined revised version of Mitigation Measure AIR-1 and discussion of recommended measures proposed by commenters for air quality, some of which have been incorporated into the revised Mitigation Measure AIR-1.

The City of Alameda has requested that documentation regarding implementation of mitigation should be provided to the City of Alameda. As explained in response to comment Ala-33, the City of Alameda is not anticipated as a CEQA "responsible agency." The Port is responsible for enforcing its Mitigation, Monitoring, and Reporting Program to ensure that there is compliance of all mitigation measures. Although providing this information to the City of Alameda would not reduce project impacts, the Port will make records demonstrating compliance with this Mitigation Measure AIR-1 available on request.

The Port is required to ensure that all equipment and vehicles used for the Proposed Project meet the regulatory requirements, which includes labeling and production of certification that their fleets are compliant with the existing regulations. Reporting the vehicles used and their

certifications to the City of Alameda would not reduce the Proposed Project's air quality impacts. Nonetheless, this information, once it becomes available, would be maintained by the contractors as a DOORS or TRUCRS compliance report. The Port will maintain equipment report information electronically where all documentation of the MMRP will be held. This information will not be stored on the Proposed Project site. To the extent that the comment suggests that the Port and/or contractors would not comply with the proposed mitigation measure or regulatory requirements, there is no evidence to support such a claim. The mitigation measure as drafted is enforceable, and the Draft EIR reasonably and appropriately assumes that regulatory requirements will be followed.

Mitigation Measure AIR-1 as presented in the Draft EIR outlined various measures (labeled as part "a" through part "s") proposed to reduce constriction-related emissions. The City of Alameda proposed additions to these measures, resulting in measures part "a" through part "u". The following paragraphs respond the City of Alameda's specific text additions in part a through part u.

In part a, the Port added a clarification to the exception for Tier 4 Final engines. The Port includes requirements for proper maintenance and tuning in part e of Mitigation Measure AIR-1, and thinks that there is no need to add further descriptions to documentation availability.

The Port has added language to part b stating the use of electric dredgers. The Port declines adding additional criteria suggested by Alameda as part a would be applicable to any fossil-fueled engines. For more information on the feasibility of using zero-emission equipment and vehicles, refer to Global Response 7: Air Quality Mitigation Measures.

The Port declines to include the additions to part c regarding zero-emission technology or RNG/ CNG trucks due to the potential for the specific type of truck needed for the Proposed Project not being readily available, and rather is requiring at least 2015 model year or newer trucks because this model year corresponds to on-road engines with lower emissions requirements as well as improved on-board diagnostics, which further help to decrease air emissions.

The Port declines to include the additions to part d because compliance with existing regulations is required and assumed.

The Port declines to include the additions to part e because they would not reduce any environmental impact. Refer to response to proposed modifications to part a above for further information. The Port modified part f, which suggests increasing watering frequency to state a minimum requirement of twice per day and to reduce visible fugitive dust. The Port declines to add the requirement for watering when wind speeds exceed 15 miles per hour because it would not effectively reduce visible fugitive dust. The performance standard in the mitigation uses the appearance of visible dust as a performance standard to address if additional watering is required rather than wind speed, which is an arbitrary measure. A wet pile would not necessarily need additional watering at 15 miles per hour, and implementation of a wind-speed-based metric would result in water waste. In addition, stockpiles also tend to develop an outer layer of crust that reduces the amount of fugitive dust generated by wind. As drafted, the measure allows for discretion in water use necessary to control the fugitive dust while not wasting water, which can be important to conserve during drought years. The Port declines to adopt the proposed addition of using reclaimed water because it would not effectively decrease the air quality impacts. In addition, use of reclaimed water could increase fugitive dust due to reclaimed water typically having higher content of salts, which may increase fugitive dust emissions during watering as these droplets evaporate.

The Port declines to adopt the proposed addition to part n of contact people for nonresponsible agencies such as the City of Alameda and Oakland, because this would not reduce Proposed Project impacts.

The Port declines to adopt the need to add the term nontoxic in part q because the term nontoxic is not applicable to native seed; native seed is inherently not toxic.

The Port declines to adopt the proposed addition to part t to include enclosing and covering exposed stockpiles because adequate mitigation is already specified in part q and part t for fugitive dust from stockpiles. The additions suggested are duplicative of measures already listed.

The Port declines to adopt the proposed addition to part u because compliance with existing regulations is assumed under CEQA. Therefore, the proposed addition would not reduce air quality impacts if added because the suggested measure is an existing regulation.

**Ala-108 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures, which examines recommended measures proposed by commenters for air quality.

The City of Alameda proposed a new mitigation measure for air quality monitoring and reporting. The Port declines to adopt the request for installing and maintaining air monitoring stations in and around the turning basin site because such monitoring would not reduce the air quality impacts found to be significant in the EIR.

**Ala-109 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures, which examines recommended measures proposed by commenters for air quality.

The Port declines to add a specific mitigation measure ensuring the dock doors, loading zones, and other on-site operations are located furthest from sensitive receptors, because there is no evidence that it would reduce significant air quality impacts. The Port is already planning to limit where construction areas may occur to specific portions of the site designated as construction and staging areas (Refer to EIR Figures 2.5-1 through 2.5-3).

**Ala-110 Response:**

The comment incorrectly captures the estimated project duration, stating that construction of the Proposed Project will take at least 2.5 years. Rather, the estimated construction duration stated in the Draft EIR is 2 years and 4 months (Section 2.5.2, page 2-28), including 20 months at the Alameda Site. Section 3.12 of the Draft EIR includes a detailed analysis of noise-related impacts of the Proposed Project, including description and analysis of anticipated construction activities, construction equipment, distances from sensitive receptors (including residences in the City of Alameda), and examines the potential for Proposed Project construction and operation activities to result in significant impacts related to noise. As discussed in Draft EIR Section 3.12.4 under Impact NOI-1, significant noise impacts during construction have the potential to occur in only two occasions: (1) during daytime pile driving, or (2) during nighttime dredging.

Regarding pile driving, as noted in the Draft EIR, the City of Alameda Noise Ordinance exempts construction noise from its exterior noise standards if occurring between 7:00 a.m. and 7:00 p.m. on Monday through Friday, and 8:00 a.m. to 5:00 p.m. on Saturdays. However, for the purpose of the Draft EIR analysis, the Port applied the City of Oakland's 65 A-weighted decibels (dBA)

construction standard for construction activity occurring over 10 days or more to receptors in Alameda. Had the Port applied the City of Alameda's Noise Ordinance, which exempts daytime construction activities Monday through Saturday, the unmitigated impacts from pile driving would not be considered significant. Applying the City of Oakland's construction standard, with implementation of Mitigation Measure NOI-1A, requiring the use of cushion blocks, there would not be significant noise impacts from pile driving to Alameda sensitive receptors.

Regarding nighttime dredging, as stated in the Draft EIR under Impact NOI-1, unmitigated construction noise levels from nighttime dredging operations would be below existing ambient nighttime noise levels at all receptors in Alameda, except for residential areas south of Mosley Avenue and planned multi-family residences at the Landing at Bay 37. With implementation of Mitigation Measure NOI-1B, requiring installation of a temporary noise barrier between the IHTB and Mosley Avenue residences, noise impacts during nighttime dredging would be reduced to less-than-significant levels for the Mosley Avenue residences. Construction of a barrier along the waterfront at the Bay 37 development would not be feasible because of the necessary height requirement to break the line-of-sight to receptors and secondary impacts related to aesthetics. There would be a residual impact to some of the Bay 37 residential units that would be significant and unavoidable related to exceeding the City of Alameda's 50 dBA exterior nighttime standard. Alameda's nighttime noise standard would only be exceeded during combined nighttime operation of the dredge and tug. During dredging operations, tugboats (the primary noise source for dredging) would be operated to either assist with anchor moves for the dredge barge or to haul scows in and out of the dredge area. There could be two to three anchor moves per day by smaller assist tugs, with each move requiring approximately 1 hour of tug operation. Larger tugboats would be used to haul scows in and out of the dredge area approximately every 12 hours, which would also result in approximately 1 hour of tug operation in the IHTB. Therefore, the combined operation of the dredge and tug would only occur for short periods each day during the 24-hour dredging operation, not all of which would occur during nighttime hours. Exceedances of Alameda's nighttime noise standard during nighttime dredging would only occur at Bay 37 residences within 725 feet of the dredging activity that are either: 1) first- and second-floor residences along the waterfront that would have direct line-of-sight to the dredging operation (which would exclude the residences closest to the Alameda Site warehouses because the warehouse structures would serve as a noise barrier for those residences); and 2) the first line of third floor residences within this distance with direct line-of-sight to the dredging activity. Nighttime dredging within 725 feet of these residences would occur intermittently over approximately 4 weeks during the 2029 in-water work window (June 1 – November 30). As noted under Impact NOI-1, Section 13 31.4(b) of the City of Alameda's Municipal Code establishes an interior Community Noise Level Equivalent (CNEL) standard with windows closed, attributable to exterior sources not to exceed 45 decibels (dB) in any habitable room. Assuming a standard building attenuation level of 20 dBA (US HUD 2009), nighttime interior noise levels at the Bay 37 waterfront units would be at most 35 dB, which would equate to a CNEL value of 42 dB. Therefore, although exterior noise levels would exceed the City of Alameda's 50 dBA exterior nighttime standard, interior noise levels would be below the City of Alameda's 45 dB CNEL standard.

In response to the general comment that the Port should incorporate additional feasible mitigation measures to avoid or substantially reduce the significant noise impacts of the Project, refer to responses below to comments Ala-114 through Ala-122.

**Ala-111 Response:**

As noted in response to comment Ala-3, the Port has no authority with respect to USACE's Integrated Feasibility Report/Environmental Assessment, prepared under NEPA.

In response to comments pointing out sensitive receptors within the sphere of impacts from the Proposed Project's generated noise, the Draft EIR Noise Environmental Setting (Section 3.12.1) identifies land uses with potentially sensitive noise receptors within 2,000 feet of the generalized IHTB and OHTB proposed construction boundaries. A 2,000-foot distance was selected as the radius based on the potential for impact from pile driving, because at 2,000 feet, noise from pile driving would be attenuated by distance and intervening structures to noise levels commensurate with existing ambient noise levels of the surrounding urbanized areas. This Final EIR has been revised to include the Alameda Housing Authority's housing development at 421 Singleton Avenue; however, impacts at this location would be less than significant with mitigation; therefore, this addition did not change the findings of the noise impact analysis. The Cardinal Point Retirement Home and Barnhill Marina floating residences are further than 2,000 feet from the proposed widened boundary of the IHTB and are therefore outside the noise analysis area considered in the Draft EIR; at these distances, construction noise from the Proposed Project would not exceed ambient noise levels, and therefore, no changes were needed in this Final EIR.

The City of Alameda's comment asserts that the Draft EIR noise analysis be revised to include all residences along Main Street, Barbers Point Road, Mosley Avenue, Singleton Avenue, and Mitchell Avenue. These residential areas are already represented by the four residential receptor locations identified in Draft EIR Table 3.12-4: Admiral's Cove, Alameda Landing, Barbers Point, and Bay 37. The noise impact analysis evaluated impacts at the closest point of these residential locations to the proposed widened IHTB. The extent of significant and unavoidable noise impacts in Alameda is limited to a few residences in the Bay 37 development; no significant and unavoidable impacts would occur in the other residential areas in Alameda. Adding additional individual residences at further distances would not change the findings of the noise impact analysis because the noise impact at residences further from the proposed widened IHTB would be attenuated by distance, and in some cases also by intervening structures, and would be less than noise impacts at the four residential receptor locations identified in the Draft EIR.

**Ala-112 Response:**

Regarding noise impacts to residents and businesses along designated haul routes from truck trips, the Draft EIR analyzed roadway noise levels with Proposed Project truck traffic for the nine roadway segments along designated haul routes with sensitive receptors. The Draft EIR found that the impact would only be potentially significant for one segment (Main Street from Willie Stargell Avenue to Ralph Appezzato Memorial Parkway, a distance of approximately 0.34 mile); Table 3.12-5). As noted under Impact NOI-1, because the noise modeling analysis used the maximum daily truck trips estimated for the transportation analysis, the estimated noise increases are conservative, because there would likely be fewer average daily truck trips. In addition, the Draft EIR concluded that with implementation of Mitigation Measure NOI-1C, which would limit the number of hourly truck trips generated, this impact would be reduced to less than significant.

As for the descriptions regarding truck trips, as mentioned in the comment, the Draft EIR describes an estimation of the maximum number of daily truck trips associated with hauling demolished, excavated, and dredged materials from Alameda as 262 round trips (524 one-way

trips). In Section 3.14, Transportation, the Draft EIR also describes that the maximum average number of dump truck trips is 380 trips. In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, and a 57 percent reduction of truck trips at the Alameda Site. As a result of this modification, the maximum average daily traffic (ADT) associated with construction at the Alameda Site has been reduced; please refer to responses to comments Ala-113 and Ala-130. With the reduction of truck trips, there would be no potentially significant noise impact related to truck traffic and Mitigation Measure NOI-1C identified in the Draft EIR is no longer required and has been removed in this Final EIR. Impact NOI-1 has been revised in this Final EIR to reflect this change. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

**Ala-113 Response:**

As presented in Draft EIR Table 3.14-6, segments along the City of Alameda's designated truck routes that would be used by the Proposed Project are anticipated to experience a percent increase in ADT ranging between 2 percent and 12 percent when the Proposed Project's maximum construction ADT occurs. In the context of the capacity of these roadway segments, these impacts were determined to be less than significant, because even with the addition of the Proposed Project's maximum ADT, these roadway segments would still be expected to operate well below their capacities. The maximum construction ADT associated with a site is a conservative value of the maximum number of trips that could occur on any one day over the construction duration at the site, and the actual contribution of the Proposed Project's construction traffic to the existing traffic levels on these roadways would be much lower on most days. However, in response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the Proposed Project sites, which is a 46 percent reduction of truck trips at Howard Terminal, and a 57 percent reduction of truck trips at the Alameda Site. This equates to a 54 percent reduction in total construction truck trips from the Proposed Project in Oakland and Alameda as outlined in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips for additional information. With this project modification, the Proposed Project's maximum ADT, inclusive of all construction-related trip types for the Alameda Site, would be 172, which is a 67 percent reduction from the maximum ADT of 524 for the Alameda Site reported in the Draft EIR. This further reduces the already less-than-significant impact to roadway capacity along designated truck routes. This Final EIR has been revised to reflect the Proposed Project's reduced maximum ADT (Tables 3.14-4 and 3.14-5) and reduced impact to roadway capacity along designated truck route segments (Table 3.14-6). This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

**Ala-114 Response:**

Please refer to response to comment Ala-110, which provides a detailed response regarding the analysis of construction noise impacts, the Draft EIR's determination of significance, and the suitability of the proposed mitigation.

In response to comments that challenge the sufficiency of the temporary 12-foot noise barrier proposed under Mitigation Measure NOI-1B for reduction of nighttime noise impacts at the Mosley Avenue residences, the City of Alameda does not provide any evidence to demonstrate the proposed noise barrier would not be effective. As stated in the Draft EIR analysis for Impact NOI-1, noise modeling was conducted to assess the potential noise reduction that could be achieved with construction of a temporary 12-foot noise barrier. Noise modeling considered implementation of a temporary 12-foot noise barrier along the southern edge of the harbor on the Alameda side of the IHTB, between the IHTB and Mosley Avenue residences, at a location approximately 220 feet from the noise source and 380 feet from the nearest receptors. This analysis found that a 12-foot noise barrier could achieve a resultant noise reduction of 5.5 decibels (dB). This would reduce the noise level to 49.5 dBA at the Mosley Avenue residences, adhering to the City of Alameda's nighttime noise ordinance, and residual impact on the Mosley Avenue residences would be considered less than significant.

**Ala-115 Response:**

The Proposed Project includes dredging 24 hours per day, 7 days per week (24/7) to complete all the in-water construction for the Proposed Project within the in-water regulatory work window of June 1 to November 30 during each construction year; no other construction activity is proposed to occur at night. If dredging were not performed 24/7, then the overall project construction schedule would need to be extended either outside the in-water work window or into a fourth in-water construction window in 2030. Both of these options would extend the overall duration of construction-related impacts, including noise and air quality. Furthermore, conducting in-water construction outside the in-water work window could result in significant impacts on special-status fish species. As described under the response to comment Ala-110, assuming a standard building attenuation level of 20 dBA (US HUD 2009), nighttime interior noise levels at the Bay 37 waterfront units would be at most 35 dB, which would equate to a CNEL value of 42 dB. Because the Draft EIR analysis found that the interior noise levels would be below the City of Alameda's 45 dB CNEL standard and would be less than significant, no additional mitigation is required.

However, the Draft EIR did find that exterior nighttime noise impacts could be significant. Such exceedances would be approximately 1-hour events and would only sporadically occur due to the combined effects of dredging with tugs (refer to Draft EIR, p. 3.12-34). These impacts would also be limited to those residences within 725 feet of the dredging that have direct line-of-sight to the dredging activity. The Port evaluated potential mitigation measures that would reduce these exterior noise impacts, including temporary barriers (refer to Draft EIR, Appendix F). However, this would cause secondary significant aesthetic impacts due to breaking line-of-sight from the residences and eliminating the waterfront views. The proposal to relocate the residents is infeasible for the same reason, because it would require the residents to relocate from their current residences, which would result in substantial disruptions despite the extremely limited duration of the significant impact. The Port does not have the authority to forcibly remove individuals from their residences, and any voluntary program would risk leaving nonparticipating individuals in their homes (and thereby not lessen the impact to a level of less than significant). Additionally, as noted above, the residents would not experience any significant impacts inside the residences, because the interior noise standard would not be exceeded at Bay 37.

**Ala-116 Response:**

Section 3.12 of the Draft EIR includes a detailed analysis of noise-related impacts of the Proposed Project, including a description and analysis of anticipated construction activities, construction equipment, distances from sensitive receptors (including residences in the City of Alameda), and examines the potential for Proposed Project construction and operation activities to result in significant impacts related to noise.

Refer to responses to comments Ala-110 through 115 for discussion of anticipated impacts and the sufficiency of the mitigation measures proposed in the Draft EIR. The Port has reviewed and considered the City of Alameda's suggested edits to noise mitigation measures. Where appropriate, suggested revisions have been incorporated. Refer to responses to comments Ala-117 through Ala-122, where the City of Alameda has provided specific recommendations for mitigation measures and the Port has provided equally specific responses that consider those recommendations.

**Ala-117 Response:**

The proposed mitigation measure does not provide any specific suggestions that would reduce any impact found to be significant and unavoidable in the Draft EIR.

The suggestion to prepare a Construction Noise Reduction Plan for Alameda City Council review and approval contains no specific suggestions that would reduce any significant and unavoidable impacts. The Port is responsible for enforcing its Mitigation, Monitoring, and Reporting Plan to ensure compliance with all mitigation measures. Providing information to the City of Alameda, which has no jurisdiction over the Proposed Project, would not reduce project impacts.

The suggested requirements for bid specifications requiring contractors to provide an equipment inventory list with available noise control devices, propose alternative construction methods to reduce noise, and use best commercially available noise-reducing technology and methods would not reduce any impact found to be significant and unavoidable in the Draft EIR. The noise impact analysis in Draft EIR Section 3.12.4 under Impact NOI-1 indicates that significant noise impacts during construction would only occur during pile driving or nighttime dredging. Potentially significant noise impacts would not occur from other daytime construction activities other than pile driving. With implementation of Mitigation Measure NOI-1A, requiring the use of cushion blocks, the noise impacts during pile driving would be reduced to less-than-significant levels at all Alameda sensitive receptors. Therefore, additional mitigation measures suggested by the City of Alameda to reduce noise from daytime construction activities are not required. As described in the response to comment Ala-115, nighttime exterior noise level exceedances would be approximately 1-hour events and would only sporadically occur due to the combined effects of dredging with tugs. The Proposed Project already includes use of an electric dredge, and there are no feasible noise control devices that could be installed to reduce noise from the dredge and tugs, or feasible alternative construction methods to dredging.

The suggestion to specify additional attenuation measures and best practices does not identify any specific additional measures that should be included. As stated above, daytime construction noise levels would be reduced to a less-than-significant level with implementation of Mitigation Measure NOI-1A. Construction noise levels from nighttime dredging operations would be below existing ambient nighttime noise levels and would have less-than-significant impacts at all receptors in Alameda except for residential areas south of Mosley Avenue and planned multi-family residences at the Landing at Bay 37. As described under response to comment Ala-114,

Mitigation Measure NOI-1B would reduce noise impacts from nighttime dredging for the Mosley Avenue residences through installation of a temporary noise barrier; installing a noise barrier for the Landing at Bay 37 residences would not be feasible. Because the Draft EIR analysis found that the interior noise levels at these residences would be below the City of Alameda's 45 dB CNEL standard, additional mitigation measures, including the use of sound blankets or offering to temporarily relocate sensitive receptors into a hotel or other accommodations when interior noise levels are expected to meet or exceed 45 dBA, are not warranted. In addition, for the reasons stated in response to comment Ala-115, the proposal to relocate the residents is infeasible and would not lessen the impact to a level of less than significant.

The suggestion to specify additional attenuation measures and best practices to reduce construction noise impacts at specified locations does not identify any specific additional measures, and except for Bay 37, proposes mitigation at locations that are not subject to significant and unavoidable noise impacts.

As stated above, interior noise levels at the Bay residences would be below the City of Alameda's 45 dB CNEL standard and therefore use of sound blankets is not warranted. Sound blankets require installation on structures and therefore would not be feasible for reducing exterior nighttime noise levels.

The suggestion to monitor the effectiveness of noise attenuation measures does not reduce any impact found to be significant and unavoidable.

The suggestion to provide alternative construction methods if a unique circumstance exists does not identify any such unique circumstance, nor does it identify any feasible alternative construction methods.

Generally, please refer to detailed responses below under comments Ala-118 through Ala-122 regarding proposed measures for construction equipment and techniques, truck traffic noise, and noise monitoring and reporting. For the reasons stated above and the discussion included below, the City of Alameda's suggested Construction Noise Reduction Plan mitigation measure was not incorporated into this Final EIR.

**Ala-118 Response:**

The noise impact analysis in Draft EIR Section 3.12.4 under Impact NOI-1 indicates that significant noise impacts during construction would only occur during pile driving or nighttime dredging. Potentially significant noise impacts would not occur from other daytime construction activities other than pile driving. With implementation of Mitigation Measure NOI-1A, requiring the use of cushion blocks, the noise impacts during pile driving would be reduced to less-than-significant levels at all Alameda sensitive receptors. Therefore, additional mitigation measures suggested by the City of Alameda for daytime operation of construction equipment and construction techniques are not required. Furthermore, as noted in the Draft EIR, the City of Alameda Noise Ordinance exempts construction noise from its exterior noise standards if occurring between 7:00 a.m. and 7:00 p.m. on Monday through Friday and 8:00 a.m. to 5:00 p.m. on Saturdays. However, for the purpose of this analysis, the Port applied the City of Oakland's daytime noise ordinance standards to receptors in Alameda. Had the Port applied the City of Alameda's Noise Ordinance, which exempts daytime construction activities Monday through Saturday, the unmitigated impacts from pile driving would not be considered significant.

Therefore, the City of Alameda's suggestion that the Port adopt numerous measures to reduce noise from daytime construction activities contradicts the City of Alameda's own noise ordinance.

The suggestion to prohibit construction activities exceeding the 45 dBA interior noise standard at night does not reduce any significant and unavoidable impact, because interior noise impacts are not found to exceed that threshold.

The suggested edits to the second paragraph of this measure expanding measures proposed to reduce noise from pile driving to apply to all construction activities do not reduce any significant and unavoidable impact for the reasons stated under response to comment Ala-117.

The suggested edits requiring best available noise control techniques were not incorporated for the reasons stated under response to comment Ala-117.

The suggested edits specific to pile driving were not incorporated because they do not reduce any significant and unavoidable impact. As stated in the Draft EIR under Impact NOI-1, Mitigation Measure NOI-1A reduces impacts from pile driving to a less-than-significant level for all residences except the proposed residences at Howard Terminal. Pursuant to Assembly Bill 1191 (the Oakland Waterfront Sports and Mixed-Use Project, Waterfront Access, Environmental Justice, and Revitalization Act), because the Port and Oakland Athletics did not enter into a binding agreement by January 1, 2025, for construction of the Waterfront Ballpark District at Howard Terminal project, that portion of Howard Terminal that had been proposed for development of the ballpark district project reverted to a Port Priority Use Area under the San Francisco Bay Plan as of that date (refer to Section 3.11, Land Use, in this Final EIR). Therefore, the Waterfront Ballpark District at Howard Terminal project is no longer considered reasonably foreseeable and has been removed from the cumulative impact analysis in this Final EIR. As a result, the proposed residences that were included as part of the Waterfront Ballpark District project have been removed as a sensitive receptor in this Final EIR and no significant and unavoidable noise impacts would occur at this location. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR. Although redevelopment may still occur at Howard Terminal, there are no specific development proposals that are reasonably foreseeable at the time of this Final EIR publication. Any future development at Howard Terminal must be consistent with the Port Priority Use Area designation. The Port Priority Use Area does not allow for residential development.

The suggested edits affecting construction staging areas do not reduce any significant impact compared to the existing Proposed Project and mitigation measures. The preliminary staging areas identified for the IHTB construction, provided in Draft EIR Figure 2.5-1, have been located away from sensitive receptors to the extent possible while maintaining necessary proximity to the construction work area. As noted in Draft EIR Section 2.5.4 under Construction Staging, these staging areas would only be used if the construction work areas do not provide sufficient area for staging. The Draft EIR analysis did not find that use of staging areas would result in potentially significant noise impacts.

The suggestion regarding backup alarms of equipment does not reduce any significant and unavoidable impacts, because such alarms are not a cause of any significant and unavoidable impacts. The proposal would also create potential safety hazards.

The suggestions regarding back-up alarms, stationary noise sources, and individual operators and techniques do not reduce any significant and unavoidable impact. These suggested measures

would only be applicable to daytime construction activities. As stated above, unmitigated noise impacts from all daytime construction activities except for pile driving would be less than significant, and impacts from pile driving would be less than significant with implementation of Mitigation Measure NOI-1A.

As described under response to comment Ala-114, Mitigation Measure NOI-1B would reduce noise impacts from nighttime dredging for the Mosley Avenue residences through installation of a temporary noise barrier; installing a noise barrier for the Landing at Bay 37 residences would not be feasible. Similarly, it would not be feasible to install other attenuating buffers (structures, truck trailers, soils piles, etc.) suggested by the comment to reduce the impact at the Bay 37 residences. Because the Draft EIR analysis found that the interior noise levels at these residences would be below the City of Alameda's 45 dB CNEL standard, additional mitigation measures, including the use of sound blankets, are not warranted. Also refer to response to comment Ala-119.

As noted in the response to comment Ala-45, the Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's noise and traffic control measures.

For the reasons stated above, the City of Alameda's proposed changes to Draft EIR Mitigation Measure NOI-1A were not incorporated into this Final EIR.

**Ala-119 Response:**

As discussed in Draft EIR Section 3.12.4 under Impact NOI-1, significant noise impacts during construction have the potential to occur in only two different occasions: daytime pile driving and nighttime dredging. Mitigation Measure NOI-1B, is proposed for the reduction of impacts during *nighttime* dredging (Mitigation Measure NOI-1A is proposed for the reduction of impacts during daytime pile driving and is discussed in response to comment Ala-120).

In response to item (1), potentially significant noise impacts would not occur from other daytime construction activities, and therefore installation of the temporary noise barrier would not be necessary to reduce, or aim to achieve reduction of, daytime noise impacts at the locations mentioned in the City of Alameda's modifications to the measure.

In response to item (2), unmitigated construction noise levels from nighttime dredging operations would be below existing ambient nighttime noise levels at all receptors in Alameda, except for residential areas south of Mosley Avenue and planned multi-family residences at the Landing at Bay 37. As described above under response to comment Ala-114, Mitigation Measure NOI-1B would reduce noise impacts from nighttime dredging to a less-than-significant level for the Mosley Avenue residences through installation of a temporary noise barrier. Installing a noise barrier for the Landing at Bay 37 residences would not be feasible because of the necessary height requirement to break the line-of-sight to receptors and secondary impacts related to aesthetics. Furthermore, given the other structures and uses adjacent to the Alameda Site where construction would be occurring, it would not be feasible to surround the entire Proposed Project area with a noise barrier because it would completely block access to the site. In addition, installation of a noise wall in the waterway would be considered infeasible, significantly constrained by constructability, environmental impacts (both equal to and more severe than the Proposed Project), and existing navigational activities.

Lastly, in response to item (3), it is unclear in the suggested additions what the other locations (not occupied by sensitive receptors) the City is referring to or why there would be a need to

reduce noise levels at the additional locations. The suggestion would not reduce any significant and unavoidable impacts.

For the reasons stated above, the City of Alameda's proposed changes to Draft EIR Mitigation Measure NOI-1B were not incorporated into this Final EIR.

**Ala-120 Response:**

With the reduction of truck trips in Oakland and Alameda as described in Global Response 4: Reducing Local Truck Trips, Mitigation Measure NOI-1C identified in the Draft EIR is no longer required and has been removed in this Final EIR. Therefore, the City of Alameda's proposed changes to Draft EIR Mitigation Measure NOI-1C were not incorporated into this Final EIR.

**Ala-121 Response:**

In consideration of comments received on the Draft EIR, the Port has modified Mitigation Measures NOI-1A and NOI-1B in this Final EIR to include a designated point of contact for noise complaints and additional information on notifying nearby property owners and residents regarding the timing and nature of construction activities.

As noted in the response to comment Ala-45, the Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's noise control measures.

**Ala-122 Response:**

The Port would document compliance with mitigation measures adopted for the Proposed Project as part of its Mitigation Monitoring and Reporting Program. The noise mitigation measures as written in the Draft EIR were determined to be sufficient to reduce the Proposed Project's potentially significant noise impacts to Alameda sensitive receptors to a less-than-significant level, except for the significant and unavoidable impact during nighttime dredging to some of the Landing at Bay 37 residences. The proposed mitigation measure does not propose any specific mitigation that would reduce any impact found to be significant and unavoidable. Therefore, noise monitoring during construction is not proposed and is not warranted.

As noted in the response to comment Ala-45, the Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's noise control measures.

**Ala-123 Response:**

The Draft EIR cumulative analysis considered four development projects in Alameda: Landing at Bay 37, Alameda Housing Authority North Housing, Alameda Point Project, and Encinal Terminals. Construction of the Landing at Bay 37 residential development will be completed prior to construction of the Proposed Project, and therefore would not combine with the Proposed Project to result in cumulative truck traffic noise impacts. The Alameda Housing Authority North Housing was determined to be exempt from CEQA, so there was no available analysis under CEQA of this project's potential impacts related to incremental noise impacts from construction traffic. The EIRs for the Alameda Point Project and Encinal Terminals projects, available on the City of Alameda's Planning Division webpage, did not analyze impacts related to construction traffic noise. Therefore, there was no available environmental analysis for the Alameda Housing Authority North Housing, Alameda Point, or Encinal Terminals projects to inform analysis of

cumulative impacts related to construction noise traffic, nor is it probable or foreseeable that these projects would be constructed at the same time. For all of these reasons, any cumulative analysis performed would be speculative. This has been clarified in this Final EIR.

**Ala-124 Response:**

Comment noted. No changes to the EIR have been made in response to this comment.

**Ala-125 Response:**

Comment noted. No changes to the EIR have been made in response to this comment.

**Ala-126 Response:**

The City of Alameda asserts, without support, that vessel transit times (delays) will increase. The Port has concluded, based on its harbor simulation studies, that vessel transit time will, in fact, be reduced because of the Proposed Project. Please refer to responses to comments Ala-93 and Ala-94 addressing vessel turnaround time.

The Draft EIR provided support for its assertion that the overall cargo handled by the Port will increase due to economic considerations with or without the Proposed Project. Refer to Global Response 5: Operational Impacts for a discussion on operational impacts and growth inducement as well as the impact of more large vessels calling the Port. Refer to Global Response 6: Air Quality Baseline for a discussion of the use of the first operational year as a baseline as well as comparison to existing conditions.

**Ala-127 Response:**

As stated in the Draft EIR Section 3.8.3, the Port used the goals set forth in SB 32 and applicable strategies outlined in the latest Scoping Plan (CARB 2022 2022 Scoping Plan for Achieving Carbon Neutrality) to evaluate the significance of the GHG emissions. The Port declines the suggestion of no net increase in GHG emissions because the State has developed a plan to meet the State's GHG emission reduction goals, including projected growth.

As discussed under impact GHG-1, the total Proposed Project construction would result in a one-time occurrence of 10,205 metric tonnes of carbon dioxide equivalent ($CO_2e$), which would only exist during the 3-years of construction. Typically, construction projects are amortized over the life of the project. As reported in the Draft EIR in Section 3.8.4 Impact GHG-1, operational emissions would result in a decrease compared to the future No Project. In addition to the net reduction in operation emissions, the beneficial reuse of dredged material has the potential to sequester carbon as outlined in the Draft EIR using a credible rate of carbon sequestration in wetlands supported by a scientific report on wetland sequestration. Although the phasing of overall reduction in GHG emissions would happen over time, the Port included Mitigation Measure GHG-1 to include GHG reduction measures that are feasible for construction equipment and vehicles even though the analysis would still indicate a net reduction in GHG emissions without implementation of Mitigation Measure GHG-1 when amortized over the life of the project. As discussed in Draft EIR Impact GHG-2, the Proposed Project does not impede the achievement of the statewide GHG goals and policies, and does not conflict with any strategies outlined in the State's Scoping Plan. Transportation sector regulations and future measures designed to achieve the emission reductions assumed as part of the Scoping Plan are applicable to the Proposed Project operations, including truck efficiency, low carbon fuel standard, at-berth regulation, commercial harbor craft regulations, transition to ZEV and vessels, transitioning and enhancing electrical and alternative fuel

infrastructure, and decarbonization of the electricity supply. These measures would result in reduction of operational GHG emissions associated with the Proposed Project. These regulations would reduce GHG emissions for both the Proposed Project and No Project scenarios. Therefore, the Proposed Project properly evaluated the GHG emissions compared to the State goals and polices.

The Port continues to plan for reducing the GHG emissions of Seaport activities that are in line with the goals of AB 32 and SB 32 and the policies for zero-emissions transportation and electricity supply. The Board of Port Commissioners has approved GHG emission reduction programs via the 2020 and Beyond Plan. Post-construction, the operation of the Seaport will be improved with more efficient vessel fleet mix and number of calls in the future compared to the No Project future scenario. The Proposed Project would allow for proper orientation of vessels to better use shore power while at-berth. The Proposed Project would add electrical infrastructure that enhances the available electricity at Berth 26 and Howard Terminal and allows for construction of the Proposed Project to use electric dredgers.

**Ala-128 Response:**

The Draft EIR used reasonable estimates to determine the volume of material that would be available for beneficial reuse to restore and enhance wetlands. The Draft EIR also included reasonable estimates of the material that would be sent for recycling, and Class I or Class II landfills as outlined in Tables 2.5-3 and 2.5-4. The USACE is responsible for maintenance dredging of the Inner and Outer Harbor navigational channels, and the Port has no involvement in determining the placement location of dredged materials from this maintenance dredging. For additional information, please refer to the Draft EA/EIR for the San Francisco Bay Federal Channels Operation and Maintenance Dredging and Sediment Placement Activities, Dredging Years 2025-2034, published by the USACE and San Francisco Bay Regional Water Quality Control Board in October 2024 (https://ceqanet.opr.ca.gov/2024020498/2). This document considers multiple alternatives with varying placement locations for Oakland Harbor, and presents estimated volumes of dredged material that would go to each placement location under each alternative, as summarized in Table ES-2 of the EA/EIR.

However, even without taking credit for carbon sequestration, the net GHG emissions would result in a reduction when construction is amortized over the life of the project. The projected reduction in the future operations in 2050 is larger than the estimated construction emissions of 10,205 metric tonnes of $CO_2e$ compared to a 2050 difference of 13,545 metric tonnes of $CO_2e$. Therefore, even without taking credit for the carbon sequestration resulting from beneficial reuse, the Proposed Project results in a net reduction in GHG emissions when amortized over the life of the project compared to the No Project operational baseline, as discussed in this Final EIR Section 3.8.4 under impact GHG-1.

**Ala-129 Response:**

The Draft EIR is correct in stating that the impact to GHG emissions is less than significant with mitigation, because the Proposed Project would result in a net reduction in overall GHG emissions, as described in response to comment Ala-128. Even without mitigation, the Proposed Project impact is not significant. Although the beneficial reuse of dredged material will increase carbon sequestration over time as well, the Port conservatively required construction GHG emission reductions to be implemented to minimize some of the GHG emissions at the time of construction. Therefore, although not required to conclude a less-than-significant impact, the

Port chose to require at least some reductions at the time of construction as outlined in Mitigation Measure GHG-1.

**Ala-130 Response:**

The Draft EIR transportation impact analysis (Section 3.14.4) acknowledges under Impact TRA-1 that the Proposed Project's construction delivery and dump truck traffic, if not properly managed, could impact local roadway, bicycle and pedestrian circulation, and conflict with local plans, ordinances, or policies addressing the circulation system, resulting in a potentially significant impact. The Draft EIR included Mitigation Measure TRA-1 requiring the construction contractor to develop a comprehensive construction Traffic Control Plan that includes various measures to minimize the effects of the Proposed Project's construction traffic on overall circulation, including temporary traffic controls, such as signage and flaggers, to minimize conflicts; identification and enforcement of designated truck haul routes; and advance notification of neighboring residents, businesses, schools, and other property owners of any substantial increases in construction traffic. With the implementation of the required Traffic Control Plan, the volume and timing of construction traffic would be managed to avoid adversely affecting local roadway, bicycle, and pedestrian circulation, and the impact relative to potential conflicts with local plans, ordinances, or policies would be less than significant. Furthermore, as stated in the Draft EIR under Impact TRA-1, because the maximum construction ADT associated with a site is a conservative value taken over the construction duration at the site, the actual contribution of the Proposed Project's construction traffic to the existing traffic levels on these roadways would be much lower on most days.

In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, and a 57 percent reduction of truck trips at the Alameda Site. This equates to a 54 percent reduction in total construction truck trips from the Proposed Project in Oakland and Alameda as outlined in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips, for additional information. With this project modification, the maximum number of daily truck trips for the Alameda Site is reduced to approximately 60 round trips, or 120 one-way trips (i.e., maximum ADT for dump truck trips), which a 68 percent reduction from the dump truck maximum ADT of 380 for the Alameda Site reported in the Draft EIR. This reduced maximum number of truck trips (60 round trip/120 one-way) is anticipated to occur for approximately 23 weeks during warehouse demolition and Class 1 material hauling. During pile hauling activities, the maximum number of daily truck trips for the Alameda Site would be 16 round trips (32 one-way trips) for 21 weeks. For 42 weeks (approximately 10 months) of the total 20-month construction duration in Alameda, there would be zero to 10 round trips per day from trucks. With this project modification, the Proposed Project's maximum ADT, inclusive of all construction-related trip types for the Alameda Site, would be 172, which is a 67 percent reduction from the maximum ADT of 524 for the Alameda Site reported in the Draft EIR. This further reduces the already less-than-significant impact to roadway capacity along designated truck routes. This Final EIR has been revised to reflect the Proposed Project's reduced maximum ADT (Tables 3.14-4 and 3.14-5) and reduced impact to roadway capacity along designated truck route segments (Table 3.14-6). This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

The comment references the Proposed Project's "operational trucks." As explained in Draft EIR Section 3.14.3 under Approach to Analysis, Traffic Methodology and Assumptions, the Proposed Project would not generate any new vehicle trips during operations; therefore, the potential for impacts would be limited to the Proposed Project's construction-related trips.

The comment references the maximum ADT of 164 trips that would be required for the loading and hauling of dredged sediment. As indicated in Draft EIR Table 3.14-5, those trips are associated with sediment dredged from the existing Inner Harbor and would occur at Berth 10 in the Seaport's Outer Harbor in Oakland, not in Alameda. Furthermore, these truck trips may also be eliminated by using barge transport as explained in Global Response 4: Reducing Local Truck Trips.

**Ala-131 Response:**

General concern regarding the use of large trucks for construction activities and the potential for impact on the local environment is acknowledged. The Draft EIR addressed the potential for environmental impacts of the Proposed Project, including those resulting from large trucks, as part of Chapter 3 of the Draft EIR.

The Port appreciates the City of Alameda's informing the Port as to the new and revised Truck Route Map and Street Classification Appendix. The Port acknowledges that the new truck route map was adopted as part of a General Plan Mobility Element Appendix update. The proposed truck routes in Alameda for the Proposed Project shown in Draft EIR Figure 3.14-4 were based on the City of Alameda's 2009 truck route map and are consistent with those shown in the City of Alameda's current (2023) truck route map, except for one approximately 0.6-mile section along Clement Avenue. The 2023 truck route map shows a permanent truck route along Atlantic Avenue east of Webster Street that continues east on Clement Avenue until Park Street. The truck route map in the Draft EIR follows the temporary truck route designated on the City of Alameda's 2023 truck route map that deviates from Clement Avenue between Sherman Street and Grand Street, running along an approximately 0.5-mile section of Buena Vista Avenue. This temporary truck route includes an approximately 0.13-mile section along both Sherman Street and Grand Street for a total of 0.76 mile of a temporary truck route shown in the Draft EIR. This Final EIR has been updated to reflect and reference the City of Alameda's 2023 truck route map and note that the Proposed Project would follow the current City of Alameda designated truck routes at the time of construction. The City of Alameda's street classifications have also been updated in this Final EIR to be consistent with the City of Alameda's 2023 Street Classification Appendix. These revisions do not result in new or substantially more severe impacts from the Proposed Project, nor do they necessitate recirculation of the EIR. Please refer to Global Response 1: CEQA Process regarding recirculation.

**Ala-132 Response:**

Regarding comments pertaining to the City of Alameda's revised Truck Route Map and Street Classification Appendix (2023), please refer to response to comment Ala-131. Specific to the existing typical daily capacity of Ralph Appezzato Memorial Parkway west of Webster Street, it has been corrected in this Final EIR to 18,000; this revision does not change the impact of the Proposed Project on this roadway segment.

**Ala-133 Response:**

The City of Alameda's comments note that students commuting to Ruby Bridges Elementary School would have to cross a portion of the proposed truck haul route on Main Street and Ralph

Appezzato Memorial Parkway and that the Proposed Project's construction-related truck trips would significantly impact pedestrian and bicycle safety. As noted above, the Proposed Project truck routes identified in the Draft EIR are based on the truck routes designated by the City of Alameda; all road segments of the Proposed Project's truck haul routes are part of the City of Alameda's designated/approved truck routes. The Proposed Project would use the City of Alameda's designated/approved truck routes at the time of construction. The City of Alameda adopted its current (2023) truck route map as part of a General Plan Mobility Element Appendix update on January 17, 2023, via Resolution No. 16026. Item 2 of the resolution states that the General Plan amendment will have acceptable effects on the general welfare of the community. Item 4 of the resolution indicates that adoption of the Mobility Element Appendix is consistent with the finding of the General Plan EIR, that no revisions to the General Plan EIR were required due to new or substantially significant impacts, and that no further environmental review was required for adoption of the Mobility Element Appendix. Therefore, the resolution implies that the City of Alameda considered the environmental effects, including those on bicycle and pedestrian safety, in designating truck routes as indicated on the adopted 2023 truck route map. The Draft EIR transportation impact analysis (Section 3.14.4) acknowledged under Impact TRA-1 that Proposed Project's construction delivery and dump truck traffic, if not properly managed, could impact local roadway, bicycle and pedestrian circulation, and conflict with local plans, ordinances, or policies addressing the circulation system, resulting in a potentially significant impact. The Draft EIR included Mitigation Measure TRA-1 requiring the construction contractor to develop a comprehensive construction Traffic Control Plan that includes various measures to minimize the effects of the Proposed Project's construction traffic on overall circulation, including temporary traffic controls, such as signage and flaggers, to minimize conflicts; identification and enforcement of designated truck haul routes; and advance notification of neighboring residents, businesses, schools, and other property owners of any substantial increases in construction traffic. With the implementation of the required Traffic Control Plan, the volume and timing of construction traffic would be managed to avoid adversely affecting local roadway, bicycle, and pedestrian circulation, and the impact relative to potential conflicts with local plans, ordinances, or policies would be less than significant.

Furthermore, in response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the Proposed Project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site, and a 54 percent reduction in total from the Proposed Project construction truck trips in Oakland and Alameda in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips for additional information.

**Ala-134 Response:**

The City of Alameda requested analysis of how the Proposed Project's construction and operations-related truck trips may impact the City of Alameda's ongoing transportation improvement projects. The comment references the Proposed Project's "operational trucks." As explained in Draft EIR Section 3.14.3 under Approach to Analysis, Traffic Methodology and Assumptions, the Proposed Project would not generate any new vehicle trips during operations; therefore, the potential for impacts would be limited to the Proposed Project's construction-related trips. The City of Alameda provided a 2023 Transportation Capital Project Work Program Map and a City of Alameda Status Report on Projects dated August 21, 2023. It is not

clear whether the commenter believes what—if any—potential environmental effects of the Proposed Project could be related to the City of Alameda's transportation capital projects. Nonetheless, this information was reviewed to identify projects in close proximity to the Alameda Site or overlapping or intersecting with the proposed truck haul routes; the potential for the Proposed Project to affect these projects was evaluated as summarized in Table G-18.

**Table G-18 Proposed Project Impacts on City of Alameda Transportation Capital Projects**

| City of Alameda Transportation Capital Project | Potential Impact from Proposed Project |
|---|---|
| **Projects Near the Alameda Site** | |
| Main Street Ferry Terminal Refurbishment | No impact. Ferry Terminal Refurbishment was completed at the end of 2023, and therefore would not overlap with or be impacted by construction of the Proposed Project. |
| Estuary Water Shuttle Pilot | No impact. Shuttle service commenced in July 2024 and is scheduled to continue for 2 years, providing service between Alameda Landing at the Bohol Circle Immigrant Park dock and Jack London Square, according to a City of Alameda July 2, 2024, press release (https://www.alamedaca.gov/Shortcut-Content/News-Media/Oakland-Alameda-Water-Shuttle-to-Launch-July-17). In the event this service continues beyond 2026, the Proposed Project's construction would not impact this service because the shuttle service operates 1,500 feet east of the Proposed Project's in-water construction area. |
| Oakland Estuary Alameda Bridge | No impact. Bridge project is in the project initiation (pre-environmental review) phase and there is no specific information publicly available regarding the project design or anticipated construction timeframe for this project should it move forward; however, based on the City of Alameda's 2023 Transportation Capital Project Work Program Map, at its closest point, the proposed bicycle/pedestrian bridge could be 1,500 feet east of the Proposed Project's construction area eastern limit, and therefore the Proposed Project's construction would not be expected to impact the bridge project in the event the two projects overlap. |
| **Projects Along the Proposed Truck Haul Routes on City of Alameda Designated Truck Routes** | |
| Cross Alameda Trail Intersection Improvements from Constitution Way to Main Street | No impact. Construction is scheduled to be completed in 2024 and therefore would not overlap with or be impacted by construction of the Proposed Project. |
| Clement Safety Improvement Project | No impact. Construction is scheduled to be completed in 2024 and therefore would not overlap with or be impacted by construction of the Proposed Project. |
| Pavement Management and Safety Improvements | No impact. Construction is scheduled to be completed in 2024 and therefore would not overlap with or be impacted by construction of the Proposed Project. |

Three additional projects that overlap or intersect with the Proposed Project's truck haul routes are currently in the planning phase; these include the Stargell Safety Improvement Project, Clement Avenue Extension from Hibbard to Grand, and Park Street and Webster Street Safety and Enhancement Project. There is no specific information publicly available regarding the planned improvements or anticipated construction timeframe for these projects to allow detailed analysis of the Proposed Project's potential impacts; however, to the extent that the City of Alameda's designated truck routes would be affected by construction of these projects, it is assumed that detours or other appropriate traffic controls would be implemented by the City of Alameda, and the Proposed Project's construction trucks would abide by these controls.

In addition, the Alameda County Transportation Commission is currently working to advance the Oakland Alameda Access Project. This project involves multimodal safety improvements and changes to arterial roadway operations that will reduce freeway impacts on the local community. The project includes improvements to the Webster and Posey tubes. The Oakland Alameda Access Project is currently scheduled to complete construction by spring of 2029.[8] Construction at the Alameda Site for the Proposed Project would not begin until the spring of 2028; therefore, it is anticipated that construction of the Proposed Project at the Alameda Site and construction of the Oakland-Alameda Access Project could overlap for a period of approximately 12 months. During construction of the Oakland-Alameda Access Project, heavy-duty truck access in the Webster and Posey tubes may be restricted; however, even if the City of Alameda's designated truck route was limited to the Park Street Bridge, the Proposed Project's maximum construction ADT would result in less-than-significant impacts to roadway capacity along designated truck route segments, as discussed under Impact TRA-1 and Table 3.14-6 in the Draft EIR. Furthermore, as described under response to comment Ala-130, the Proposed Project has been modified in this Final EIR to reduce truck trips in Oakland and Alameda, which further reduces the already less-than-significant impact to roadway capacity along designated truck routes. Discussion of the Oakland Alameda Access Project has been incorporated into the cumulative impact analysis in Chapter 4 of this Final EIR. Addition of this project did not change the findings of the cumulative impact analysis. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

**Ala-135 Response:**

As explained in Draft EIR Section 3.14.3 under Approach to Analysis, Traffic Methodology and Assumptions, the Proposed Project would not generate any new vehicle trips during operations, and therefore no road degradation would occur. With respect to construction trips, as noted elsewhere, the trucks would use routes designated by the City of Alameda as truck routes, and construction would be temporary—that is, only for the period of time necessary to complete the Proposed Project. The "burden on the City of Alameda's transportation network" is an economic effect, not an environmental impact. The suggested mitigation measure confirms this by simply asking for a financial contribution. As economic effects are beyond the scope of CEQA except to the extent that they cause environmental impacts, this is not an issue with the Draft EIR or its analysis or mitigation of environmental impacts. This is consistent with the City of Alameda's own General Plan EIR, which does not identify roadway degradation as an environmental impact

[8] Alameda County Transportation Commission. 2025. Project website for the Oakland Alameda Access Project: Available online at: https://www.alamedactc.org/programs-projects/highway-improvement/oakland-alameda-access-project. Accessed March 31, 2025.

under CEQA even though the General Plan contemplates cumulative impacts of trucks and pedestrian traffic over a much longer time period—at least through 2040.

Furthermore, even if a regular inspection schedule were established, it would not be possible to attribute any observed damage to the Proposed Project because there would be no way to determine whether observed damage was caused by the Proposed Project or other truck and vehicle traffic sources, given the truck routes serve numerous other existing and planned developments, including those noted or referred to as part of City of Alameda comment Ala-95, Ala-96, Ala-123, and Ala-134. Therefore, this suggested mitigation measure was not incorporated into this Final EIR.

**Ala-136 Response:**

In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. The Proposed Project has been revised in this Final EIR to reflect that material destined for a Class II (nonhazardous) landfill would be transported by barge to the Montezuma Wetlands Restoration Project, where it would be offloaded and put on trucks for transport to the Potrero Hills Class II permitted landfill, which is 17 miles from Montezuma Wetlands, instead of being transported by truck from the Proposed Project sites to the Keller Canyon landfill. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site, and a 54 percent reduction in total from the Proposed Project construction truck trips in Oakland and Alameda in the Draft EIR. Please refer to Global Response 9: Biological Resources and Water Quality for additional information.

**Ala-137 Response:**

The Port acknowledges the City of Alameda's suggestions for transportation mitigation.

As noted under response to comment Ala-134, at its closest point, the proposed bicycle/ pedestrian bridge (i.e., Oakland Estuary Alameda Bridge) could be 1,500 feet east of the Proposed Project's construction area eastern limit. With the exception of the Webster and Posey tubes, the proposed bicycle/pedestrian bridge is not in close proximity to any of the truck routes proposed for use by the Proposed Project. There is no pedestrian or bicycle access in the Webster Tube. Although it is possible to walk or bike through the Posey Tube via a narrow strip hugging the eastern side of the tube; it is not wide enough for two cyclists to cross without dismounting, and there are signs instructing cyclists to walk their bikes. This example mitigation measure would, therefore, not contribute to reducing the Proposed Project's impacts and the suggestion was not incorporated into this Final EIR.

Furthermore, and more importantly, as noted under response to comment Ala-133, the Draft EIR determined that the Proposed Project's impacts on local roadway, bicycle, and pedestrian circulation would be reduced to a less-than-significant level with implementation of a Traffic Control Plan as required by Mitigation Measure TRA-1, and the transportation mitigation does not itself cause any significant and unavoidable impacts; therefore, no additional or alternative mitigation is required.

**Ala-138 Response:**

As noted under response to comment Ala-134, a water shuttle between Alameda Landing and Jack London began service in July 2024; therefore, funding is no longer required to develop this service. Similar to the proposed bicycle and pedestrian bridge discussed above as part of response to comment Ala-137, the shuttle service is 1,500 feet east of the Proposed Project and not in close proximity to any of the truck routes proposed for use by the Proposed Project, except for the Webster and Posey tubes. This example mitigation measure would, therefore, not contribute to reducing the Proposed Project's impacts and the suggestion was not incorporated into this Final EIR.

Furthermore, and more importantly, as noted under response to comment Ala-133, the Draft EIR determined that the Proposed Project's impacts on local roadway, bicycle, and pedestrian circulation would be reduced to a less-than-significant level with implementation of a Traffic Control Plan as required by Mitigation Measure TRA-1, and the transportation mitigation does not itself cause any significant and unavoidable impacts; therefore, no additional or alternative mitigation is required.

**Ala-139 Response:**

The Port has reviewed and considered the City of Alameda's suggested edits and new mitigation measures, as responded to more specifically below. Where appropriate, suggested revisions have been partially incorporated in Mitigation Measure TRA-1.

As explained under response to comment Ala-33, the Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's Traffic Control Plan. The Port would make the Traffic Control Plan available to the public by posting it on the project website. During construction, the Port would document compliance with mitigation measure truck trip limitations as part of its Mitigation Monitoring and Reporting Program and would make this documentation available on request. The remaining suggested revisions are nonsubstantive, and would not reduce any significant and unavoidable impact. The City of Alameda's proposed revisions, therefore, are not incorporated into Mitigation Measure TRA-1.

**Ala-140 Response:**

The Proposed Project does not include any closures of roadways or bicycle and pedestrian facilities that would impact connectivity to the Bay and recreational uses; therefore, adding text to mitigate for such impacts is not warranted.

**Ala-141 Response:**

As explained under response to comment Ala-33, the Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's Traffic Control Plan, nor would the proposed mitigation reduce any significant and unavoidable impact. The City of Alameda's proposed revisions, therefore, are not incorporated into Mitigation Measure TRA-1.

**Ala-142 Response:**

The suggested measure would not reduce any significant and unavoidable impact and therefore is not incorporated. Nonetheless, Mitigation Measure TRA-1 in the Draft EIR included text for

providing advance written notification of neighboring residents, businesses, and other property owners, as well as the Cities of Oakland and Alameda and key stakeholders of any substantial increases in construction traffic. In consideration of comments received on the Draft EIR, Mitigation Measures TRA-1 has been modified in this Final EIR to include a designated point a contact for addressing inquiries and complaints pertaining to constructed-related traffic. Additionally, Mitigation Measure TRA-1 has been revised to state the Traffic Control Plan will include measures for making information regarding the Proposed Project's schedule and associated truck traffic available to the City of Alameda and other interested parties as well as to the public by posting on the project website. Note that the Proposed Project does not include any travel lane closures of roadways or bicycle and pedestrian facilities.

**Ala-143 Response:**

As explained under response to comment Ala-33, the Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's Traffic Control Plan. The City of Alameda's proposed revisions, therefore, are not incorporated into Mitigation Measure TRA-1. The Port would make the Traffic Control Plan available to the public by posting it on the project website. During construction, the Port would document compliance with mitigation measure truck trip limitations as part of its Mitigation Monitoring and Reporting Program and would make this documentation available on request.

The suggested measure would not reduce any significant and unavoidable impact and is not incorporated.

**Ala-144 Response:**

The following City of Alameda requested additions to the identified content of the Traffic Control Plan were measures already addressed in the Draft EIR mitigation language: maintaining safety for bicyclist and pedestrians; identification and enforcement of designated truck routes; maintaining emergency access; and notifications of nearby residents, businesses and property owners. As explained under response to comment Ala-33, the Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's Traffic Control Plan; therefore, the suggested addition for truck route enforcement compliance monitoring reporting to the City of Alameda Department of Transportation and Public Works was not incorporated.

In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site. This equates to a 54 percent reduction in total construction truck trips from the Proposed Project in Oakland and Alameda as outlined in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips for additional information. With this project modification, the maximum number of daily truck trips for the Alameda Site is reduced to approximately 60 round trips, or 120 one-way trips (i.e., maximum ADT for dump truck trips), which a 68 percent reduction from the dump truck maximum ADT of 380 for the Alameda Site reported in the Draft EIR. This reduced maximum number of truck trips (60 round trip/120 one-way) is anticipated to occur for approximately 23 weeks during warehouse demolition and Class 1 material hauling. During pile hauling activities, the maximum

number of daily truck trips for the Alameda Site would be 16 round trips (32 one-way trips) for 21 weeks. For 42 weeks (approximately 10 months) of the total 20-month construction duration in Alameda, there would be zero to 10 round trips per day from trucks. The Draft EIR found the Proposed Project's impacts on overall circulation, including traffic, transit, bicycle, and pedestrian routes, safety, and emergency access, to be less than significant with mitigation; these effects would be further reduced with the reduction of truck trips at the Alameda Site as noted above. No additional mitigation is required to reduce this impact; therefore, the following City of Alameda's suggested additions were not incorporated into Mitigation Measure TRA-1: guidance on the number of trucks per day entering and leaving the construction sites, arrival and departure times to minimize traffic impacts, and limitations on construction activities during peak/holiday weekend and special events.

In consideration of the City of Alameda's comments, Mitigation Measure TRA-1 has been revised to include identification of construction staging areas.

In consideration of the City's comments, Mitigation Measure TRA-1 also has been revised to state the Traffic Control Plan will include a measure for making information regarding the Proposed Project's schedule and associated truck traffic available to the City of Alameda and other interested parties, which would include proponents of other projects, as well as to the public by posting on the project website.

The Proposed Project does not propose any traffic obstructions that would interfere with emergency evacuation events; therefore, this proposed measure was not incorporated.

As explained above under response to comment Ala-135, monitoring haul routes for damage from the Proposed Project's truck traffic is not incorporated.

**Ala-145 Response:**

Mitigation Measure TRA-1 states that the Traffic Control Plan would include designated construction worker parking locations and management plan. This could include carpool/vanpool programs from designated public rideshare areas as well as leased parking in remote/off-site parking facilities; therefore, the suggested performance standard limiting construction employee parking to lots owned or leased by the Port was not incorporated.

The following City of Alameda suggested performance standards for the Traffic Control Plan address items that are not identified as potential impacts of the Proposed Project or proposed elements of the Traffic Control Plan, and therefore establishing performance measures for them is not warranted: staging on adjacent streets, closures on Main Street on peak activity days, monitoring traffic at major intersections, and placement of construction-related obstructions in the right-of-way.

As explained above under response to comment Ala-135, monitoring haul routes for damage from the Proposed Project's truck traffic is not incorporated and therefore no performance standard for such a measure is established. Please also refer to discussion in response to comment Ala-144 describing how the Proposed Project has been modified to reduce truck trips in Alameda and Oakland in response to comments received on the Draft EIR.

**Ala-146 Response:**

Please refer to response to comment Ala-28, which identifies dates the Port has met with the City of Alameda to discuss the Proposed Project.

**Exhibit A, Attachment 1**

**Ala-147 Response:**

As noted in response to comment Ala-3, the Integrated Feasibility Report/Environmental Assessment is a separate document developed by the USACE, the NEPA lead agency, and is not subject to the Port's authority. The Port responses to comments included in this document are in response to comments received regarding the Draft EIR. The comments included in the Exhibit A, Attachment 1 pertain to the Integrated Feasibility Report/Environmental Assessment and the Proposed Project's compliance with NEPA, and do not include comments that pertain to the Draft EIR analysis or the Draft EIR's sufficiency as it pertains to Proposed Project compliance with CEQA.

**Exhibit A, Attachment 2**

**Ala-148 Response:**

Because the 2013 ENGEO Report does not include any individual comments pertaining to the Draft EIR analysis or its sufficiency as it pertains to CEQA compliance, the Port need not respond to each assertion therein. Furthermore, the 2013 ENGEO Report investigated an area that is outside the Proposed Project area. The Proposed Project area is approximately 0.3 mile east of the closest boundary of the area investigated in the 2013 ENGEO Report, and the nearest geotechnical boring conducted along the Alameda shoreline is approximately 0.5 mile west of the Proposed Project. The nearest inland geotechnical boring is also approximately 0.5 mile southwest of the Proposed Project. For engineering design drawings, only site-specific data can be used to inform design. Findings from the ENGEO Report do not provide either sufficient information to assess the existing conditions of the Proposed Project in terms of the analyzing the Proposed Project's impacts on geology/soils or hydrology and water quality, or engineering design.

**Exibit A, Attachment 3**

As Exhibit A, Attachment 3, the City of Alameda provided a letter from Ninyo & Moore containing comments on geotechnical issues in the Draft EIR.

**Ala-149 Response:**

Comment noted.

**Ala-150 Response:**

Refer to responses to comments Ala-15, Ala-42, Ala-59, Ala-60, Ala-66, and Ala-67. The Draft EIR discloses existing conditions in and adjacent to the Proposed Project area, including the area of the Alameda shoreline where the Proposed Project is located, and analyzes the Proposed Project's potential to exacerbate site-specific conditions, including seismic hazards and sea level rise in Sections 3.7, Geology/Soils and 3.9, Hydrology/Water Quality, respectively. As described above under response to comment Ala-56, the Proposed Project area is not included in the 2014 MIP or analysis, rather only the portions of Alameda shoreline west of Main Street are included in the 2014 MIP, as amended in 2020. Therefore, the analysis referenced in the City of Alameda's comment pertaining to this report is not relevant to the Proposed Project.

As described above in comment Ala-15 and Ala-59, the Draft EIR Geology/Soils Section (3.7) considers relevant and appropriate setting information, including the Geotechnical Appendix

prepared by the USACE for the Oakland Harbor Turning Basins Widening Revised Draft Integrated Feasibility Report and Environmental Assessment, as well as the references listed in Chapter 8 to understand existing conditions of the area.

The Proposed Project properly described the area of the Alameda Shoreline where the Proposed Project is located; the Proposed Project is not required to describe the "existing deteriorated condition of the Alameda shoreline along the entire Inner Harbor Channel…" because this is outside the scope of the Proposed Project area. The Draft EIR appropriately focuses on describing existing conditions at areas that may be affected by the Proposed Project in its vicinity, because the purpose of describing the existing environmental setting is to provide an understanding of a project's impacts. (Refer to CEQA Guidelines, § 15125(a).)

The ongoing deterioration of shorelines discussed in the comment is not caused by the Proposed Project. The setting is described to the extent it is relevant to the Proposed Project and its environmental effects, but CEQA only requires an analysis of how a project might exacerbate existing hazards. The analysis of the Proposed Project's impacts to soil stability, including how it contributes to existing soil stability conditions, is undertaken in Impacts GEO-1 and GEO-3. As stated therein, the impact would be less than significant. The new bulkheads would be similar to those previously constructed, and therefore, would be similar to existing conditions. Furthermore, an in-water bulkhead would also be proposed in the northwestern portion of the IHTB to ensure that the widening does not compromise the shoreline stability at Radius Recycling (Schnitzer Steel). This Final EIR also includes Mitigation Measure GEO-1, which will help ensure final design sufficient maintain soil stability and structural integrity.

The comment's focus is on areas that are more than a mile from the IHTB, in areas that would not be affected by the Proposed Project, and it does not identify any information relevant to the Draft EIR that has been omitted.

**Ala-151 Response:**

As discussed in response to comment Ala-60, the Proposed Project is not anticipated to exacerbate the risk of sea level rise–induced flooding. The Draft EIR Hydrology/Water Quality impact analysis (Section 3.9.4) under Impact HYD-4 regarding flood hazard, tsunami, or seiche zones, and inundation concluded that the Proposed Project is unlikely to result in hydrodynamic changes that would substantially change inundation during sea level rise. Impact HYD-4 also stated that there may be minor, permanent alterations to upland drainage patterns at the Alameda Site associated with upland excavation and reconfiguration of the facility shoreline (e.g., removal, replacement, or redesign of drainage infrastructure such as curbs and gutters), but these are not anticipated to affect flood hazard. Please also refer to responses to comments Ala-42, Ala-59, and Ala-61.

**Ala-152 Response:**

Regarding the engineering analysis performed for the Proposed Project, please refer to response to comment Ala-15. In response to comments regarding the currently proposed concept for shoreline protection and potential for impacts from sea level rise, refer to response to comment Ala-60, which discusses the Proposed Project's potential to exacerbate existing conditions related to sea level rise and the sufficiency of the proposed design elevation for the replacement bulkhead walls.

**Ala-153 Response:**

Comment summarizing the commentor's understanding of the Proposed Project is noted.

**Ala-154 Response:**

The commenter asserts that observed conditions and deterioration along the Alameda/Alameda Point shoreline are mainly due to a combination of wave action from vessel wake and propeller wash from large ships, ferries, and tugboats maneuvering/transiting the channel; however, in asserting that shoreline conditions would continue to deteriorate more with more frequent visits by larger vessels, the commenter has not provided evidence as to what extent current large vessel visits have contributed to shoreline deterioration compared to other vessels that use the channel, or how more frequent visits by larger vessels would result in increased deterioration. As it notes, the deterioration is due to ongoing conditions and activities that are not impacts of the Proposed Project.

These impacts of the Proposed Project are evaluated under Impact GEO-3 in the Draft EIR and are found to be less than significant. The comment's statements regarding ongoing deterioration and impacts of the environment are noted.

**Ala-155 Response:**

Regarding the retaining structure constructed as part of the widening of the IHTB in 2009, the bulkhead is composed of a sheet pile wall with a concrete pile cap. The bulkhead itself extends below the depth of the turning basin and riprap was installed in front of the bulkhead. Please note that the Proposed Project includes approximately 6 acres of the 19 acres of private property in Alameda that would be excavated and dredged as part of the Proposed Project. Additional areas would also be used for construction staging. The entirety of the 19 acres of property would not be encroached on. Because these statements do not contain specific comments regarding the adequacy of the Draft EIR, no further response is provided.

**Ala-156 Response:**

Comment noted. The referenced 1999 report by SCI was used to inform the design and construction of the existing IHTB (which was both deepened and widened), the Inner Harbor Channel which was deepened, and other areas that were improved as part of the -50-Foot Project that was completed in 2009. The design of the existing IHTB considered the condition of the existing shoreline; therefore, the bulkhead itself was an identified mitigation measure that was selected as opposed to having a waterfront cut slope with no slope retaining structure. The bulkhead was designed to address slope stability issues, including seismic design criteria, as well as design standards set forth by the USACE. Similarly, the 2013 report by ENGEO included information from the 1999 report by SCI and analyzed areas outside of the Proposed Project area. Because these statements do not contain specific comments regarding the adequacy of the Draft EIR, no further response is provided.

**Ala-157 Response:**

Commenter inaccurately associates the Proposed Project and the corresponding accommodation for large vessels (ships), which notably already call the Port today with an exacerbation of shoreline deterioration. Commenter's claim is fundamentally flawed in two main respects. First, as presented in Section 3.1.1, Baseline Environmental Conditions, Future Operational Baseline for Vessel Calls, large vessels will continue to call the Port with and without the Proposed

Project. Therefore, the Proposed Project does not allow or disallow large vessels. Instead, the Proposed Project increases the use of larger vessels to decrease the total number of container vessels required to service the same amount of cargo throughput; simply stated, a future with the Proposed Project is one with less vessels transiting the Oakland Harbor. Secondly, the slow speeds container vessels (all sizes) transit in the Oakland Harbor do not result in significant wave and/or current action. Speeds are even further reduced (nearing zero), while a vessel is maneuvering (e.g., turning around in a turning basin). During a turning maneuver, a vessel is reoriented with the assistance of the vessel's bow thruster and support of tugboats, each of which can generate localized thrust currents. As can be observed, these thrust currents dissipate rapidly before reaching the shoreline. Furthermore, given that the Proposed Project increases the area available for thrust current dissipation, the risk of shoreline impacts from thrust currents is further reduced.

**Ala-158 Response:**

Please refer to responses to comments Ala-152 and Ala-156.

**Ala-159 Response:**

As noted in response to comment Ala-56, the Port is not aware of the commenter's reference to the "2009 study." As discussed in response to comment Ala-148, the 2013 ENGEO Report does not include the shoreline for the Proposed Project area. Please also refer to response to comment Ala-154.

**Ala-160 Response:**

The Draft EIR Geology/Soils Section (3.7) includes a detailed analysis of the potential for Proposed Project activities (including those required for widening the IHTB) to result in adverse impacts, including those related to increased risk of shoreline stability, landslide, lateral spreading, subsidence, liquefaction or collapse, and expansive soils, among other related impact criteria. As described in response to comment Ala-59, the Draft EIR Geology/Soils Section (3.7) identifies relevant and an appropriate level of detailed information to establish existing conditions of the shoreline. As discussed in response to comment Ala-42 and Ala-15, the Draft EIR impact analysis indicates under Impacts GEO-1, GEO-3, and GEO-4 that during the Proposed Project pre-construction engineering and design phase, a site-specific geotechnical investigation would be performed to inform the design and engineering required to comply with applicable building code standards and ensure that the constructed facilities maintain seismic and slope reliability (refer to Mitigation Measure GEO-1). As discussed above, the geotechnical investigation would include advancing soil borings to characterize soil properties, and to provide engineers with information necessary to determine design features and construction measures that would minimize risk to structures and people due to seismic shaking and seismic-related ground failure, including liquefaction; landslide, lateral spreading, subsidence, liquefaction, or collapse; and expansive soils. The Proposed Project would comply with all seismic standards, requirements, and conditions contained in engineering design and construction-related codes, which would ensure structural integrity of built features and safe construction, and therefore would not result in increased risk of seismic or other geologic hazards from the constructed widened turning basins. Future maintenance dredging of the widened areas of the turning basins would be confined to the removal of loose sediment accumulated in the widened dredge prism and therefore would not result in increased risk of seismic or slope stability–related hazards, because it would not further expand the turning basins. The Draft EIR determined these

construction and operation impacts to be less than significant, and therefore no further mitigation is required.

**Ala-161 Response:**

In response to comments regarding potential for impacts from sea level rise, refer to response to comment Ala-60, which discusses the Proposed Project's likelihood to exacerbate existing conditions related to sea level rise, and the sufficiency of the proposed design elevation for the replacement bulkhead walls.

**Ala-162 Response:**

Comment noted. Because these statements do not contain specific comments regarding the adequacy of the Draft EIR, no further response is provided.

**Ala-163 Response:**

The comment does not provide any specific comment on the analysis in the Draft EIR, and the environment's impact on a project is not within the scope of CEQA unless the project exacerbates existing hazards.

The Draft EIR Geology/Soils Section (3.7) includes a detailed description of the regional setting, including disclosure of existing faults, seismically active areas, and existing potential for seismic-induced risks. As discussed above in responses to comments Ala-160 and Ala-15, the Draft EIR impact analysis indicates under Impact GEO-1 that during the Proposed Project pre-construction engineering and design phase, a site-specific geotechnical investigation would be performed to inform the design and engineering required to comply with applicable building code standards, and ensure that the constructed facilities maintain seismic and slope reliability. As discussed above, the geotechnical investigation would include advancing soil borings to characterize soil properties, and to provide engineers with information necessary to determine design features and construction measures that would minimize risk to structures and people due to seismic shaking and seismic-related ground failure, including liquefaction; landslide, lateral spreading, subsidence, liquefaction, or collapse; and expansive soils. The Proposed Project would comply with all seismic standards, requirements, and conditions contained in engineering design and construction-related codes, which would ensure structural integrity of built features and safe construction, and therefore would not result in increased risk of seismic or other geologic hazards from the constructed widened turning basins. Nonetheless, this Final EIR adds Mitigation Measure GEO-1 to ensure that final design and constructure measures will maintain soil stability and structural integrity.

**Ala-164 Response:**

Regarding the reduction of the footprint of the existing wharf and the stability of the remaining warehouse structures, provisions of the California Building Code require the preparation of foundation and soils reports and other geotechnical reports that address site-specific conditions, potential hazards, and required methods and design parameters for remediating and protecting against potential seismic hazards. The Proposed Project would remove a portion of the warehouse structures and wharf, similar to the -50-Foot Oakland Harbor Navigation Project, which removed a portion of the northern warehouse and northwestern portion of the wharf, and the Proposed Project would not modify the portion of the wharf or its foundations below the

warehouse structures that would remain on the Alameda Site. Please also refer to response to comments Ala-15, Ala-66, Ala-160, and Ala-163.

**Ala-165 Response:**

Please refer to responses to comments Ala-15, Ala-42, and Ala-56.

**Ala-166 Response:**

Please refer to response to comment Ala-60, which discusses the Proposed Project's lack of potential to exacerbate existing conditions related to sea level rise and the sufficiency of the proposed design elevation for the replacement bulkhead walls.

**Ala-167 Response:**

Please refer to response to comment Ala-15.

**Ala-168 Response:**

Regarding the existing IHTB slopes and bottom, past topographic and bathymetric surveys, dredging plans, and geotechnical investigation reports were used to create cross sections for the IHTB to inform the channel design (Appendix B1: Channel Design of the USACE's Integrated Feasibility Report and Environmental Assessment); this includes a hydrographic survey performed in 2020. As discussed in the Draft EIR Geology/Soils Section (3.7), under Impact GEO-3, the proposed new bulkheads for Howard Terminal and the Alameda Site are similar to that constructed at the Alameda Site as part of the -50-Foot Project, and rock slope protection would be placed in front of the new bulkheads, similar to existing conditions. Lastly, the proposed in-water bulkhead in front of the Schnitzer/Radius Recycling Terminal in the northwestern portion of the IHTB would be designed to ensure that widening the IHTB does not compromise the shoreline stability at Schnitzer/Radius Recycling. As stated in previous responses, a site-specific geotechnical investigation (Mitigation Measure GEO-1) would be performed during the Proposed Project's pre-construction engineering and design phase to further refine the Proposed Project design to comply with applicable building code standards, and ensure that the constructed facilities maintain slope reliability.

As discussed in the Draft EIR Geology/Soils Section (3.7), under Impact GEO-2, landside portions of the Proposed Project where ground-disturbing activities would occur are fully paved, with fill material beneath. There is no topsoil in the Proposed Project construction footprint at Howard Terminal, the Alameda Site, and Berth 26; consequently, no effects on topsoil would occur. Construction staging would occur in paved areas and would not involve disturbance below the ground surface that could result soil erosion or loss of topsoil. Furthermore, preparation and implementation of a stormwater pollution prevention plan would include erosion and sedimentation controls such as silt fences, fiber rolls, wind erosion controls, and stabilized construction entrances/exits to reduce potential impacts from ground-disturbing construction activities associated with electrical infrastructure installation at Berth 26 and Howard Terminal, and the removal of land at Howard Terminal and the Alameda Site. With implementation of proper erosion control measures, construction of the Proposed Project would not result in substantial soil erosion during construction.

**Ala-169 Response:**

As described in Chapter 2, Proposed Project Description, of the Draft EIR, design criteria for determining the width of a turning basin includes vessel length, space requirements for assist tugs working around the vessel, water movement, and safety considerations related to the interaction between environmental conditions (currents, waves, and wind) and the maneuvering vessel. The industry standard for turning basins is to provide a minimum of 20 percent of the vessel's length on either side (bow and stern) as a buffer for impacts, such as propeller wash and scour (San Francisco Bar Pilots 2023a). The purpose of the Proposed Project is to increase the width of the existing turning basin so that it will accommodate the minimum 20 percent industry standard for larger vessels and comply with specific restrictions in place for all vessels (San Francisco Bar Pilots 2023b). Additional analysis related to propeller wash and scour from tugboats is therefore unwarranted, particularly because the Proposed Project is replacing (and improving) existing shoreline protection and bulkheads in the IHTB, and the use of tugs in the Inner Harbor is an existing condition involving ongoing operations. The Proposed Project would not increase operational tug use nor the potential for wash or scour in the Inner Harbor Channel.

**Ala-170 Response:**

As discussed in response to comment Ala-15 and Ala-42, the Draft EIR impact analysis indicates under Impacts GEO-1, GEO-3, and GEO-4 that during the Proposed Project pre-construction engineering and design phase, a site-specific geotechnical investigation would be performed to inform the design and engineering required to comply with applicable building code standards and ensure that the constructed facilities maintain seismic and slope reliability. The required geotechnical investigation would involve analysis for protection of the slope and the recommendation of measures, such as riprap. As discussed above, because performance of a site-specific geotechnical investigation is already required to design, permit, and construct the Proposed Project in accordance with existing code and regulations, the geotechnical investigation does not need to be identified as a CEQA mitigation measure. Nonetheless, this Final EIR adds Mitigation Measure GEO-1 at the commenter's request as a precaution.

**Ala-171 Response:**

As discussed in response to comment Ala-15 and Ala-42 (including Mitigation Measure GEO-1), the Draft EIR impact analysis indicates under Impacts GEO-1, GEO-3, and GEO-4 that during the Proposed Project pre-construction engineering and design phase, a site-specific geotechnical investigation would be performed to inform the design and engineering required to comply with applicable building code standards and ensure that the constructed facilities maintain seismic and slope reliability. At base, and as verified by the observed performance of the existing bulkhead and channel, the Proposed Project is not expected to change the underlying conditions in the navigation channel.

For operations and maintenance, the USACE currently conducts annual hydrographic surveys using multibeam echosounder methods that include the Inner Harbor Channel and the IHTB to assist in planning for maintenance dredging activities. It is expected that such surveys would continue after the Proposed Project.

**Ala-172 Response:**

As far as routine maintenance involving the inspection of bulkheads, as identified in the comment, it is expected that the bulkhead would be visually inspected above and below water at

an interval not to exceed 3 years, which is consistent with ongoing maintenance required for the existing bulkheads at the Seaport. The commenter has not provided substantial evidence to support why the existing, and required, interval frequency is not sufficient.

**Ala-173 Response:**

Please refer to response to comment Ala-60.

**Ala-174 Response:**

Please refer to responses to comments Ala-15 and Ala-156.

**Ala-175 Response:**

Please refer to responses to comments Ala-15, Ala-42, Ala-56, and Ala-164.

**Ala-176 Response:**

Please refer to responses to comments Ala-15, Ala-42, Ala-59, and Ala-60.

**Ala-177 Response:**

CEQA guidelines section 15126.6(a) provides that "An EIR shall describe a range of reasonable alternatives to the project, or location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives." As discussed in Section 5.1, CEQA Requirements for Alternative Evaluation, of the Draft EIR, the EIR is not required to consider every conceivable alternative to a project. In particular, the purpose of presenting a range of alternatives compared with a proposed project is to focus on those alternatives that can reduce or eliminate the significant effects identified in an EIR (CEQA guidelines section 15126.6). As discussed in the Draft EIR and responses to the City of Alameda's comments above, the Proposed Project's design, including its bulkhead wall design at the IHTB, was determined to result in less-than-significant impacts related to the stability of soils, and sufficient for predicted sea level rise. Therefore, alternative bulkhead designs would not be necessary.

**Ala-178 Response:**

Contrary to the commenter's suggestion, the Draft EIR discloses existing conditions that exist in the Proposed Project area, including those of the Alameda shoreline, and analyzes the Proposed Project's potential to exacerbate site-specific conditions, including seismic hazards in Sections 3.7, Geology/Soils.

A cumulative impact is an impact caused when a proposed project combines with other past, present, and probable future projects (CEQA Guidelines Section 15130[a][1]). As discussed in Section 4.8, Geology/Soils, of the Draft EIR, the geographic scope of analysis for cumulative geologic impacts is limited to the Proposed Project landside sites and the area immediately adjacent to these sites. This is because impacts relative to geologic hazards are generally site-specific. For example, the effect of erosion would tend to be limited to the localized area of a project and could only be cumulative if erosion occurred as the result of two or more adjacent projects that spatially overlapped. In addition, impacts relative to geologic hazards are generally time-specific. Geologic hazards could only be cumulative if two or more geologic hazards occurred at the same time, as well as overlapping at the same location.

As discussed in the Draft EIR, the Proposed Project would have less-than-significant impacts related to seismic hazards, unstable geologic units and soils, and expansive soils. New bulkheads to be installed as part of the Proposed Project would comply with all applicable building code and engineering regulations, including seismic standards. Of the reasonably foreseeable future projects, only the proposed Oakland Waterfront Ballpark District at Howard Terminal is immediately adjacent to the Proposed Project, and as mentioned by the City of Alameda in their comments, this project is no longer being pursued. As described in the Draft EIR, cumulative effects related to seismic and other geologic hazards would be less than significant. Even so, the Ballpark would similarly have addressed site-specific geologic conditions and would not be expected to impact the bulkhead along the City of Oakland.

**Ala-179 Response:**

Please refer to response to comment Ala-150.

**Ala-180 Response:**

Please refer to response to comment Ala-60, which discusses the Proposed Project's potential to exacerbate existing conditions related to sea level rise and proposed replacement bulkhead walls, and the sufficiency of the proposed design elevation for the replacement bulkhead walls.

**Ala-181 Response:**

Please refer to responses to comments Ala-15, Ala-42, Ala-59, and Ala-60. The Draft EIR and responses to comments provide an appropriate level of detail describing the design concept for the proposed project bulkhead sufficient to demonstrate its effectiveness in informing the geotechnical analysis and conclusions. The EIR is an informational document for use by governmental agencies and the public to aid in the planning and decision-making process by disclosing the physical environmental effects of the proposed action, and identifying possible ways of reducing or avoiding the potentially significant impacts; and use by a lead agency in their decision to approve, disapprove, or modify the Proposed Project. As discussed in the Draft EIR, during the Proposed Project pre-construction engineering and design phase, a site-specific geotechnical investigation would be required for compliance with applicable building code standards, performed to inform and advance the design and engineering. A geotechnical investigation would entail the drilling of soil borings to characterize soil properties, and to provide engineers with information necessary to confirm final design features and construction measures to minimize risk. Because it proposes to replace existing shoreline protections and bulkheads, the Proposed Project is not expected to exacerbate seismic or related geologic hazards of existing shoreline infrastructure. Nonetheless, this Final EIR adds Mitigation Measure GEO-1 to ensure that the new shoreline protection and bulkheads retain or improve shoreline soil stability and structural integrity.

**Ala-182 Response:**

Please refer to response to comments Ala-177 and Ala-60.

**Exhibit A, Attachment 4**

**Ala-183 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for discussion of mitigation measures proposed by commenters for air quality impacts. Additionally, refer to responses to comments Ala-104 through Ala-107.

**Ala-184 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for discussion of mitigation measures proposed by commenters for air quality impacts.

In response to comments related to Mitigation Measure AIR-2, refer to responses to comments Ala-108 through Ala-109.

**Ala-185 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for discussion of mitigation measures proposed by commenters for air quality impacts.

In response to comments related to Mitigation Measure AIR-3, as discussed in Global Response 7: Air Quality Mitigation Measures, it is suggested that all construction staging facilities be sited at least 1,000 feet away from the nearest sensitive receptor. This is infeasible, because even some of the land to be excavated is closer than 1,000 feet from some of the sensitive receptors noted. Therefore, the Proposed Project could not be undertaken while incorporating the suggested mitigation measure. The City of Alameda suggested that the Port require installation of air filters at sensitive receptors within a 600-foot radius of the turning basin and all construction areas. The Port does not have authority to require third parties to implement mitigation measures, including installation of air filters in privately owned buildings.

**Ala-186 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for discussion of mitigation measures proposed by commenters for air quality impacts.

In response to comments related to Mitigation Measure AIR-1, refer to responses to comments Ala-105 through Ala-107. In response to comments related to Mitigation Measure AIR-2, refer to responses to comments Ala-108 through Ala-109. In response to comments related to Mitigation Measure AIR-3, refer to response to comment Ala-185.

**Ala-187 Response:**

Please refer to response to comment Ala-117.

**Ala-188 Response:**

Please refer to response to comment Ala-118.

**Ala-189 Response:**

Please refer to response to comments Ala-114, Ala-117, and Ala-119.

**Ala-190 Response:**

Please refer to response to comment Ala-120.

**Ala-191 Response:**

Please refer to response to comment Ala-121. In consideration of comments received on the Draft EIR, the Port has modified Mitigation Measures NOI-1A and NOI-1B in this Final EIR to include a designated point of contact for noise complaints and additional information on notifying nearby property owners and residents regarding the timing and nature of construction activities.

**Ala-192 Response:**

Please refer to response to comment Ala-121. In consideration of comments received on the Draft EIR, the Port has modified Mitigation Measures NOI-1A and NOI-1B in this Final EIR to include a designated point of contact for noise complaints and additional information on notifying nearby property owners and residents regarding the timing and nature of construction activities.

**Ala-193 Response:**

Refer to response to comments Ala-122. The Port would document compliance with the mitigation measures adopted for the Proposed Project as part of its Mitigation Monitoring and Reporting Program. The noise mitigation measures as written in the Draft EIR were determined to be sufficient to reduce the Proposed Project's potentially significant noise impacts to Alameda sensitive receptors to a less-than-significant level, except for the significant and unavoidable impact during nighttime dredging to some of the Landing at Bay 37 residences. As described above, although exterior noise levels would exceed the City of Alameda's 50 dBA exterior nighttime standard at some of the Landing at Bay 37 residences, interior noise levels would be below the City of Alameda's 45 dB CNEL standard when accounting for standard building attenuation. Therefore, noise monitoring during construction is not proposed, and is not warranted. The Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's noise control measures.

**Ala-194 Response:**

Refer to response to comments Ala-115.

**Ala-195 Response:**

Although the comment offers new mitigation, it fails to explain why the impact is not sufficiently addressed or why such new mitigation is needed. As indicated in the Draft EIR under Impact NOI-2, groundborne vibration generated from pile driving and other activities associated with construction is predicted to be below applicable thresholds; impacts would less than significant, and no mitigation is required. Therefore, the City of Alameda's proposed vibration mitigation measure has not been incorporated into this Final EIR.

**Ala-199 Response:**

Please refer to response to comments Ala-136.

**Ala-200 Response:**

Please refer to response to comment Ala-137.

**Ala-201 Response:**

Please refer to response to comment Ala-138.

### G.5.1.10 Housing Authority of the City of Alameda (AlaHA)

**AlaHA-1 Response:**

The Port recognizes the Housing Authority's contributions in providing quality, affordable, and safe housing to low-income families, seniors, and vulnerable members of the community. Regarding the Housing Authority's concerns on air, noise, and construction duration, please refer to responses to comments AlaHA-2 through AlaHA-4.

**AlaHA-2 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures for a discussion of mitigation measures proposed by commenters for air quality and GHG impacts. Dredged material is wet and would not be expected to generate fugitive dust. Therefore, there would not be an increase in fugitive dust from the dredged material. The majority of dredged material would be placed into scows and transported to the Montezuma beneficial reuse or its material rehandling facility. All dredged material is anticipated to be classified as Class II (nonhazardous) or meet the criteria for placement at a beneficial reuse site. Dredged material considered Class II (nonhazardous) would be barged to Berth 10 or the Montezuma rehandling facility prior to continued transport via truck to an appropriate Class II nonhazardous landfill. Therefore, no substantial increase into the air from the dredged material is anticipated.

The Alameda Housing Authority suggested pushing the removal of dredged material to the Oakland side of the Proposed Project and for the barges to be filled on the Oakland side. The Port declines to include this suggestion because it would result in an increase in air emissions to the already significant and unavoidable impact.

The Alameda Housing Authority suggested that air monitoring and soil testing be conducted at Estuary Park. However, monitoring would not actually mitigate impacts to air quality. As discussed in the Draft EIR, air quality impacts associated with construction, although temporary, would be significant and unavoidable. Soil testing was suggested to determine if there was deposition of air toxics into the soil that could potentially leave a long-term impact. There is no evidence to suggest any material deposition of toxic contaminants in soil would result from the Proposed Project. Most of the air toxics emitted as part of the Proposed Project are from the combustion of fossil fuel, including diesel fuel, renewable diesel fuel, and gasoline. The air toxics from fossil fuel combustion tends to be volatile organic compounds that would volatilize and disperse in the atmosphere before depositing on the ground, and would degrade naturally in

the soil over time. There are not any substantial amounts of long-lasting hazardous air toxics such as heavy metals and semi-volatile organic compounds in fossil fuels used for transportation and construction equipment, and the additional emissions related to the Project are nominal in comparison to emissions already occurring on a daily basis in and around the Port. Therefore, there is unlikely to be any long-term buildup of pollutants in the soil from airborne releases from combustion of fossil fuels in equipment and vessels used during the Proposed Project's construction. As discussed in the Draft EIR, some of the dredged material and excavated land may contain pollutants. Nonhazardous dredged material that is temporarily stored at Berth 10 for some drying before further transport for disposal would still have high moisture contents at the time of transport that would inhibit fugitive dust formation. Regarding landside excavated material, existing Land Use Covenants apply at both the Howard Terminal and Alameda Site under the regulatory jurisdiction of the Department of Toxic Substances Control (DTSC). Therefore, planned excavation activities would comply with existing LUCs and be conducted under DTSC review and approval to be protective of human health and the environment. Several fugitive dust control measures are in place to minimize the dispersal of fugitive dust from the Proposed Project site. For example, Mitigation Measure AIR-1: Construction Air Quality Mitigation requires soil piles to be watered twice per day and all haul trucks transporting soil, sand, or other loose material off site to be covered. These measures would minimize the potential for fugitive dust to be generated at the construction site or during truck transport of materials containing elevated pollutant concentrations. Please also refer to Global Response 7: Air Quality Mitigation Measures. For these reasons, the Port declines to include the suggestion to conduct air monitoring and soil testing.

The Alameda Housing Authority suggested providing upgrades to filtration systems at all residential buildings near the construction. The Port declines to add this suggestion because the Port lacks authority to require action by third parties not within the Port jurisdiction.

**AlaHA-3 Response:**

As discussed in Draft EIR Section 3.12.4 under Impact NOI-1, significant noise impacts during construction have the potential to occur in only two occasions: (1) during daytime pile driving or (2) during nighttime dredging. Neither impact is due to street traffic. Construction traffic noise was also evaluated in the Draft EIR and found to be potentially significant, and Mitigation Measure NOI-1C was proposed to reduce the impact to a less-than-significant level. In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site, and a 54 percent reduction in Oakland and Alameda from the Proposed Project construction truck trips in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips for additional information. With the reduction of truck trips in Oakland and Alameda as described in Global Response 4: Reducing Local Truck Trips, Mitigation Measure NOI-1C identified in the Draft EIR is no longer required and has been removed in this Final EIR.

Regarding pile driving, as noted in the Draft EIR, the City of Alameda Noise Ordinance exempts construction noise from its exterior noise standards if occurring between 7:00 a.m. and 7:00 p.m. on Monday through Friday and 8:00 a.m. to 5:00 p.m. on Saturdays. However, for the purpose of

the Draft EIR analysis, the Port applied the City of Oakland's 65 dBA construction standard for construction activity occurring over 10 days or more to receptors in Alameda. Had the Port applied the City of Alameda's Noise Ordinance, which exempts daytime construction activities Monday through Saturday, the unmitigated impacts from pile driving would not be considered significant. Applying the City of Oakland's construction standard, with implementation of Mitigation Measure NOI-1A, requiring the use of cushion blocks, there would not be significant noise impacts from pile driving to Alameda sensitive receptors.

Regarding nighttime dredging, as stated in the Draft EIR under Impact NOI-1, unmitigated construction noise levels from nighttime dredging operations would be below existing ambient nighttime noise levels at all receptors in Alameda, except for residential areas south of Mosley Avenue and planned multi-family residences at the Landing at Bay 37. With implementation of Mitigation Measure NOI-1B, requiring installation of a temporary noise barrier between the IHTB and Mosley Avenue residences, noise impacts during nighttime dredging would be reduced to less-than-significant levels for the Mosley Avenue residences. Construction of a barrier along the waterfront at the Bay 37 development would not be feasible because of the necessary height requirement to break the line-of-sight to receptors and secondary impacts related to aesthetics. There would be a residual impact to some of the Bay 37 residential units that would be significant and unavoidable related to exceeding the City of Alameda's 50 dBA exterior nighttime standard. Alameda's nighttime noise standard would only be exceeded during combined nighttime operation of the dredge and tug. During dredging operations, tugboats (the primary noise source for dredging) would be operated to either assist with anchor moves for the dredge barge or to haul scows in and out of the dredge area. There could be two to three anchor moves per day by smaller assist tugs, with each move requiring approximately 1 hour of tug operation. Larger tugboats would be used to haul scows in and out of the dredge area approximately every 12 hours, which would also result in approximately 1 hour of tug operation in the IHTB. Therefore, the combined operation of the dredge and tug would only occur for short periods each day during the 24-hour dredging operation, not all of which would occur during nighttime hours. Exceedances of Alameda's nighttime noise standard during nighttime dredging would only occur at Bay 37 residences within 725 feet of the dredging activity that are either: 1) first- and second-floor residences along the waterfront that would have direct line-of-sight to the dredging operation (which would exclude the residences closest to the Alameda Site warehouses because the warehouse structures would serve as a noise barrier for those residences); and 2) the first line of third floor residences within this distance with direct line-of-sight to the dredging activity. Nighttime dredging within 725 feet of these residences would occur intermittently over approximately 4 weeks during the 2029 in-water work window (June 1 – November 30). As noted under Impact NOI-1, Section 13 31.4(b) of the City of Alameda's Municipal Code establishes an interior CNEL standard with windows closed, attributable to exterior sources not to exceed 45 dB in any habitable room. Assuming a standard building attenuation level of 20 dBA (US HUD 2009), nighttime interior noise levels at the Bay 37 waterfront units would be at most 35 dB, which would equate to a CNEL value of 42 dB. Therefore, although exterior noise levels would exceed the City's 50 dBA exterior nighttime standard, interior noise levels would be below the City's 45 dB CNEL standard.

In consideration of comments received on the Draft EIR, the Port has modified Mitigation Measures NOI-1A and NOI-1B in this Final EIR to include a designated point of contact for

noise complaints and additional information on notifying nearby property owners and residents regarding the timing and nature of construction activities.

**AlaHA-4 Response:**

Landside construction and related truck trips are tied to the location of the Proposed Project. As described in the Draft EIR Chapter 5, Alternatives, several alternative footprints for widening the IHTB were developed and evaluated. These included two alternatives that avoided Alameda land impacts (Inner Harbor Variation 2 – Shifted North, and Inner Harbor Variation 6 – New Location Outside Middle Harbor), and one alternative that would have minimal Alameda land impacts (Inner Harbor Variation 4 – Non-Circular). As summarized in Draft EIR Table 5.4-1, these alternative footprints were eliminated from further consideration because they were determined to be infeasible for one or more the following reasons: site suitability, environmental considerations, economic viability, impacts to businesses (e.g., Radius Recycling and Bay Ship & Yacht Co.), reduced transit efficiency, and navigational limitations and safety considerations.

It is not feasible to condense the overall construction duration due to the required sequencing of construction activities needed to widen the IHTB. Condensing these activities into a shorter overall construction duration would require more activities to be conducted concurrently or longer work days/night work, both of which would exacerbate construction-related impacts related to air quality, noise, and traffic that the Housing Authority has already expressed concern over.

In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site, and a 54 percent reduction in total from the Proposed Project construction truck trips in Oakland and Alameda in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips for additional information.

Please also refer to responses to AlaHA-2 and AlaHA-3.

**AlaHA-5 Response:**

The Draft EIR evaluated alternatives that would minimize the scope of the Proposed Project, including widening of the IHTB only and widening of the OHTB only. As suggested by the comment, the OHTB only alternative would reduce some impacts but would fail to meet most project objectives. The comment is noted for consideration.

The proposed improvements and construction activities at the Alameda Site would be subject to DTSC review per a land use covenant that governs development activities at the Alameda Site. Further coordination with DTSC to facilitate compliance with the land use covenant would occur during the project pre-construction engineering and design phase, and the Proposed Project would comply with all applicable laws pertaining to worker and resident protection during construction. The applicability of this land use covenant to the Proposed Project, including necessary coordination with and approvals from DTSC, has been added in this Final EIR under the Hazards and Hazardous Materials Regulatory Setting, Section 3.9.2. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

Please also refer to responses to comments AlaHA-2 through AlaHA-4.

**AlaHA-6 Response:**

Comment noted. Residents within 0.25 mile of the IHTB were noticed regarding the availability of the Draft EIR; please refer to Global Response 2: Community Engagement and Environmental Justice. The Housing Authority will be sent future notices regarding the Proposed Project EIR.

**AlaHA-7 Response:**

The Port hosted a public meeting in Alameda at the College of Alameda on November 14, 2023, during the Draft EIR public review comment period. Please refer to Global Response 2: Community Engagement and Environmental Justice for additional information on public engagement undertaken by the Port during the CEQA process. During project construction, the Port would make information regarding the construction schedule and activities available to the public by posting it on the project website.

### G.5.1.11 Housing Authority of the City of Alameda – Sylvia Martinez (AlaHASM)

**AlaHASM-1 Response:**

Notification regarding the availability of the Final EIR will be sent to the Housing Authority's provided office address. Because the Port will also be sending notices regarding the availability of the Final EIR to all addresses within the 94501 zip code, a title search was not performed.

### G.5.1.12 San Francisco Bay Conservation and Development Commission (BCDC)

**BCDC-1 Response:**

On December 21, 2023, BCDC voted to conditionally concur with the USACE's first phase consistency determination for the Proposed Project. On December 27, 2023, BCDC issued a Letter of Agreement that, as conditioned, the Proposed Project at the feasibility stage is generally consistent to the maximum extent practicable with the San Francisco Bay Plan, as amended.

**BCDC-2 Response:**

Please refer to Global Response 1: CEQA Process.

**BCDC-3 Response:**

The information in Draft EIR Sections ES.5 and 5.5.3 is correct. The Draft EIR considered an alternative using diesel dredges for widening of the IHTB and OHTB (Alternative 3) to reduce potentially significant impacts to energy.

**BCDC-4 Response:**

The comment states that based on Draft EIR Table 2.3-1, container vessels calling the Port would have a carrying capacity of 19,000 TEU with implementation of the Proposed Project. Although the design vessel for the Proposed Project has an estimated cargo capacity of 19,000 TEU, as outlined in Table 3.1-1, consistent with current Port operations, the Port expects to continue to receive calls from a mix of vessel sizes. Following implementation of the Proposed Project, vessels ranging in capacity from less than 2,800 TEU (SPX class) to greater than 15,0000 TEU (PPX4

class) are anticipated. Regarding the Port operations and carrying capacity following implementation of the Proposed Project, please refer to Global Response 5: Operational Impacts.

**BCDC-5 Response:**

BCDC states that the Seaport currently has 28 ship calls per week; the source of those data are unclear. In 2022 and 2023, the Seaport had an average of 16 and 19 ships calls per week, respectively. Although the Proposed Project would improve vessel transit efficiency, it would not increase the number of vessel calls to the Seaport. As shown in Draft EIR Table 3.1-1, with implementation of the Proposed Project, the number of vessel calls would decrease under the Proposed Project compared to the No Project. For example, under the Proposed Project, the Seaport would average 36 and 37 calls per week in 2040 and 2050, respectively; whereas under the No Project scenario, the Seaport would average 42 and 47 calls per week in 2040 and 2050, respectively. This is because fewer larger vessels would deliver the same amount of cargo to the Seaport under the Proposed Project. Please refer to Global Response 5: Operational Impacts for an explanation of why the Proposed Project would not result in increased cargo throughput at the Seaport.

**BCDC-6 Response:**

As a matter of practice, terminal operators independent of the Proposed Project are anticipated to continue to adapt to market demands by replacing and upgrading landside facilities to handle all sizes of container vessels calling, including the largest PPX4 category of vessels already calling the Port.

Refer to also Global Response 5: Operational Impacts for a discussion on truck and traffic congestion.

**BCDC-7 Response:**

Regarding the Port's zero-emission activities and their timing relative to the Proposed Project's 2027-2029 construction timeframe, please refer to Global Response 3: Zero-Emissions Seaport. The Port provides shore power infrastructure for calling vessels to all marine terminals.

**BCDC-8 Response:**

The volume estimates for the reuse categories are based on preliminary sediment quality data. The 454,400 cy of sediment currently planned as wetland cover material would provide approximately 3 feet of cover for 94 acres. It is possible that following sediment characterization, additional material would be found suitable for use as cover material. Regardless, the beneficial reuse site operators are responsible for managing the quantities of accepted foundation and cover material in accordance with the site’s capacity. Because beneficial reuse sites accept material from multiple sources, cover material from another project could be used in conjunction with foundation material from the Proposed Project. The Proposed Project is not required to provide sufficient cover material to cover provided foundation material.

**BCDC-9 Response:**

Beneficial reuse under the USACE’s future maintenance dredging of the widened turning basins would be the subject to the USACE’s maintenance dredging permits and associated environmental review because those activities are outside the scope of this Proposed Project. In October 2024, the USACE and San Francisco Bay Regional Water Quality Control Board published a Draft EA/EIR for the USACE’s maintenance dredging of the federal navigation

channels in San Francisco Bay for the years 2025-2034. The document analyzes different placement alternatives for dredged material from Oakland Harbor, including use of beneficial reuse sites. The document also outlines a USACE-wide policy goal ("Beneficial Use of Dredged Material Command Philosophy Notice") issued in 2023 for beneficially using at least 70 percent of its dredged material by 2030.

**BCDC-10 Response:**

As discussed under Impact GHG-1, the total Proposed Project construction would result in a one-time occurrence of 10,404 metric tonnes of $CO_2e$, which would only exist during the 3 years of construction. Typically, construction projects are amortized over the life of the project. As reported in the Draft EIR, operational emissions would result in a decrease compared to the future No Project Alternative. In addition to the net reduction in operation emissions, the beneficial reuse of dredged material has the potential to sequester carbon as outlined in the Draft EIR using a credible rate of carbon sequestration in wetlands supported by a scientific report on wetland sequestration (Charpentier 2010). Although the phasing of overall reduction in GHG emissions would happen over time, the Port included mitigation measure GHG-1 to include GHG reduction measures that are feasible for construction equipment and vehicles even though the analysis would still indicate a net reduction in GHG emissions without implementation of GHG-1, or the inclusion of wetland sequestration when amortized over the life of the project. Although the Draft EIR used a scientifically reported and reasonable carbon sequestration rate for estimating the amount of carbon that would be sequestered by the restored wetlands, as illustrated by the literature cited by the commenter, there is variability in the amount of annual carbon sequestration rates observed in various wetlands around the world, with some having lower sequestration rates and others having higher sequestration rates. The Draft EIR used a value that was based on a global average sequestration value. Even without the carbon sequestration considered, the overall GHG emissions when amortized over the life of the Proposed Project would result in a net decrease in GHG emissions. Therefore, although there may be some variation in the value used to estimate carbon sequestration, the overall conclusion of the Draft EIR remains valid in that, over the life of the Proposed Project, GHG emissions would result in a net decrease in GHG emissions.

Therefore, even without carbon sequestration, an amortized accounting of the construction and operation still results in a net reduction in GHG emissions, as presented in this Final EIR Section 3.8.4 Impact GHG-1.

**BCDC-11 Response:**

The commenter is correct that there may be one-time releases of GHG emissions when disturbing sediment and soil as part of the Proposed Project construction. This type of GHG emissions release is difficult to quantify and is speculative as to the amounts of GHG emissions released, and information to quantify this is not readily available. In addition, when discussing changes to land use and carbon sequestration, the Intergovernmental Panel on Climate Change typically is only interested in the net changes at steady state, and not temporary disturbances that then changes back to the same land use. This is why the creation of wetlands is quantified while other changes are not quantified. In this case, the soil that would be disturbed is part of a built industrial environment and typically is assumed to have no annual carbon sequestration. There would be a slight increase in dredged underwater areas in the turning basins that would be assumed to sequester similar amounts of carbon and nitrogen compounds as the dredged material that is being disturbed. If the values

reported for dredged material in the commenters reference number 8 (2023 Paranaiba, Jose R. et al) (14 tons $CO_2e$ per 20,000 cubic meters) are used with the total amount of material listed in Table 2.5-3, the amount of GHGs would be 1,310 tons of $CO_2e$. This amount of GHGs is lower than the amount anticipated to be sequestered by the material by reusing it to restore wetlands, and when amortized with the construction emissions over the life of the Proposed Project, would still result in a reduction when compared to the No Project baseline.

**BCDC-12 Response:**

As stated in Draft EIR Section 4.9, GHG emissions are, by their nature, cumulative impacts; therefore, the cumulative analysis is the same as the discussion concerning project-level impacts. For a more detailed impact discussion and the considered measures under Mitigation Measure GHG-1, the commenter should refer to Section 3.8.4.

**BCDC-13 Response:**

Although the Proposed Project is not expected to "take" any species listed or proposed for listing under the California Endangered Species Act (CESA), the Draft EIR Table 2.6-1 indicates that an Incidental Take Permit from CDFW may be requested for the Proposed Project. Whether such a permit is needed will be determined by the Port in consultation with CDFW. In the Draft EIR Biological Resources Regulatory Setting (Section 3.4.2), CESA and the CDFW's role in issuing Incidental Take Permits are both described under state regulations. However, because the Proposed Project is entirely in tidally influenced areas of San Francisco Bay, a streambed alteration notification under Section 1602 of the Fish and Game Code is not required.

**BCDC-14 Response:**

Comment noted. A full sediment sampling and analysis would be prepared in close coordination with the Dredged Material Management Office (DMMO) during the pre-construction engineering and design phase. In addition, due to land use restrictions on both the Oakland and Alameda Site, the sampling and analysis plan would also be coordinated with DTSC, who has regulatory jurisdiction of these sites. Coordination with the DMMO was described in the Draft EIR project description (Section 2.5.4) as well as in the Biological Resources, Hazards and Hazardous Materials, and Hydrology/Water Quality Chapter 3 sections.

**BCDC-15 Response:**

As described in Draft EIR Sections 2.5.1 and 2.5.3, demolition activities at Howard Terminal and the Alameda Site are assumed to include removing and/or relocating existing utilities that would be impacted by the construction footprint, cutting and removing the pavement surface, and removing portions of the existing warehouse structures (Alameda Site only). The existing buildings predate the late 1970s regulatory bans on the use of hazardous building materials, such as asbestos, lead-based paint, and polychlorinated biphenyls (PCBs), and mercury. Surveys and testing of structures to be demolished would be conducted prior to demolition to identify if any hazardous building materials are present. As described in the Draft EIR Hazards and Hazardous Materials impact analysis (Section 3.9.4) under Impact HAZ-1, testing, handling, and removal of hazardous building materials would be conducted in accordance with federal, state, and local regulations.

**BCDC-16 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**BCDC-17 Response:**

As shown in Draft EIR Table 3.1-1, with implementation of the Proposed Project, the total number of vessel calls to the Seaport would decrease. Therefore, although there would be a greater proportion of larger ships, there would be fewer ships overall. Currently, the Port regularly receives ships from around the world under existing, baseline operations. The assertion that larger ships pose a greater risk than smaller ships to introduce invasive species is speculative. Therefore, the Proposed Project would not be expected to lead to the introduction of more invasive species to the Bay Area.

**BCDC-18 Response:**

Mitigation Measure BIO-1A states that silt curtains will be used when dredging within 250 meters of eelgrass beds. This is consistent with standard practices implemented during maintenance dredging. The Draft EIR finds that existing mitigation reduces this impact to a less-than-significant level. Therefore, no additional mitigation is required by CEQA, and additional monitoring of eelgrass during dredging (beyond pre- and post-construction monitoring) is not warranted.

**BCDC-19 Response:**

The Draft EIR stated that wildlife nursery sites are locations where fish or wildlife concentrate for hatching and raising young, such as nesting rookeries for birds and spawning areas for native fish. Wildlife nursery sites are areas where these activities occur on a larger scale to the extent that they are significant on a regional or population level; for example, the California least tern breeding colony at the former Alameda Naval Air Station in Alameda described in Draft EIR Section 3.4.1. Large eelgrass bands can serve as nursery sites; however, the patches of eelgrass that occur north of the OHTB are small (0.05 acre) and intermittent. Although they may be used by fish for spawning, these small patches are not of a magnitude to be considered wildlife nursery sites. Impact BIO-3 in this Final EIR has been revised to clarify the definition of a wildlife nursery site and why the eelgrass beds within 250 meters (820 feet) of the OHTB are not considered wildlife nursery sites. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

**BCDC-20 Response:**

The Draft EIR Biological Resources impact analysis (Section 3.4.4) under Impact BIO-1 indicated that 10 acres of terrestrial land would be permanently converted into intertidal or subtidal habitat as well as the conversion of shallow water to deeper water habitat from widening the IHTB and OHTB. The analysis also acknowledged that the newly dredged areas would be subject to regular disturbance from operation and maintenance dredging activity and is considered by the USFWS to be less valuable habitat. Although the benthic communities would be subject to regular disturbance from maintenance dredging, similar to the benthic communities in the existing maintained channel, it is still true that the conversion of terrestrial land to open water would create additional habitat for species, because aquatic habitat is not limited to benthic communities.

**BCDC-21 Response:**

The Draft EIR Biological Resources impact analysis (Section 3.4.4) under Impact BIO-1 indicated that impacts to shallow-water habitat at the IHTB and OHTB would be minimal because construction would be mostly confined to existing moderately deep waters or shoreline areas currently occupied by marine structures proposed for removal. In addition, construction would not

occur in waters adjacent to known California least tern colonies at the former Alameda Naval Air Station or known foraging and roosting habitat in the Middle Harbor Enhancement Area. Impact BIO-1 further noted that suitable foraging habitat for least tern is widely available outside the proposed construction limits, including along the southern Alameda shoreline and the Bay Farm borrow pits to the south of Alameda. Impact BIO-1 also described that turbidity plumes from dredging would be localized and would affect a relatively small area in relation to the surrounding areas of similar habitat, and would be quickly diluted to near or within background levels, similar to those from annual maintenance dredging. San Franciso Bay is naturally turbid, and in the Seaport area, propeller wash from vessel traffic contributes to elevated ambient turbidity levels. Least tern regularly travel around the Bay in search of prey; therefore, the temporary displacement of fish due to the incremental increase in turbidity from Proposed Project construction would not be expected to substantially impact least tern foraging activity, given the abundance of other suitable foraging habitat in the vicinity. Similarly, permanent deepening of an area of subtidal waters adjacent to the Outer Harbor Channel to widen the OHTB would not substantially impact least tern foraging, considering the abundance of other suitable foraging habitat in the vicinity and because least tern already regularly travel around the Bay in search of prey. Furthermore, the USFWS concurred with the USACE's Not Likely to Adversely Affect determination for least tern pursuant to Section 7 of the federal Endangered Species Act.

**BCDC-22 Response:**

When underwater noise interacts with bottom substrates and shorelines, some noise energy is reflected, but a large portion is also absorbed into the substrate. This interaction is complex and difficult to model. The underwater noise analysis in the Draft EIR uses the “practical spreading model” that is recommended for use by the National Marine Fisheries Service (NMFS), and commonly used by other agencies (such as Caltrans) for identifying the underwater noise effects of pile driving in shallow bays or other nearshore areas. Although the practical spreading model does not take into account reflected sound, there are also many aspects of the practical spreading model that tend to overestimate noise effects; for example, the model does not take into account the increased noise attenuation that occurs in shallow waters. Although the practical spreading model does not capture many nuances regarding the propagation of underwater noise, it is accepted by NMFS as being adequate to assess noise effects for pile driving for shoreline and waterfront projects in San Francisco Bay.

**BCDC-23 Response:**

Please refer to response to comment BCDC-21.

**BCDC-24 Response:**

On December 21, 2023, BCDC voted to conditionally concur with the USACE's first phase consistency determination for the Proposed Project. On December 27, 2023, BCDC issued a Letter of Agreement that, as conditioned, the Proposed Project at the feasibility stage is generally consistent to the maximum extent practicable with the San Francisco Bay Plan, as amended. The Letter of Agreement acknowledged that no public access was included in the first-phase consistency determination, but that the USACE and Port will continue to coordinate with the Commission on this issue and would propose public access amenities, if legally required, in the Port's BCDC permit application or USACE second-phase consistency determination. However, any future public access requirements will have to consider the nature of the difficulties and challenges of providing public access in restricted areas reserved for maritime uses, and whether

such access is required in light of the consistency of the Proposed Project with the designation of the property as a seaport priority use area.

**BCDC-25 Response:**

The Proposed Project would not restrict access to any landside recreational facilities, and therefore the Proposed Project does not include signage regarding the availability of other facilities. For in-water construction activities, as stated in the Draft EIR Transportation impact analysis (Section 3.14.4) under Impact TRA-3, the contractor would publish a Notice to Mariners including a description of project activities, work and start and end dates, vessel information, and the size and placement of construction equipment. The comment addresses impacts found to be less than significant for which no additional mitigation is required.

**BCDC-26 Response:**

Comment noted. The Seaport Plan was approved by the Office of Administrative Law effective May 14, 2024. This Final EIR has been updated to reflect the approved amended Seaport Plan. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

### G.5.1.13 San Francisco Bay Regional Water Quality Control Board (RWQCB)

**RWQCB-1 Response:**

As noted in the comment, the Port is committed to beneficial reuse of all suitable excavated and dredged material, obtaining a water quality certification and coverage under the NPDES Construction General Permit, and coordinating with DTSC regarding Howard Terminal. The Port will also coordinate with DTSC regarding the Alameda Site, which is under a land use covenant subject to DTSC's jurisdiction.

**RWQCB-2 Response:**

The Port will be listed as a co-applicant with the USACE on permit applications to the Water Board.

**RWQCB-3 Response:**

Sampling and analysis of soil, sediment, and groundwater would be conducted during the Proposed Project pre-construction engineering and design phase, in coordination with the Water Board as necessary.

## G.5.2 Organizations

### G.5.2.1 350 Bay Area Oakland Hub (350BA)

**350BA-1 Response:**

Comment noted. Please refer to responses to comments 350BA-2 through 350BA-6.

**350BA-2 Response:**

Refer to Global Response 8: City of Oakland Plans and Policies for a discussion of applicability of Oakland 2030 Equitable Climate Action Plan. For more information regarding effects on the West Oakland Community, refer to Global Response 2: Community Engagement and

Environmental Justice. Although the Oakland 2030 Equitable Climate Action Plan is not applicable to the Proposed Project, the Port of Oakland's 2020 and Beyond Plan outlines its actions to modernize the Seaport and head toward a zero-emission seaport. For more information on the activities of the Port toward zero emission, refer to Global Response 3: Zero-Emissions Seaport. For more information about mitigation measures implemented for the Proposed Project, refer to Mitigation Measure AIR-1 in Section 3.3.4 of the Draft EIR and Mitigation Measure GHG-1 in Section 3.8.4 of the Draft EIR. For a discussion on feasibility of other mitigation measures suggested by commenters, refer to Global Response 7: Air Quality Mitigation Measures. No specific mitigation is suggested by the comment that would reduce any significant and unavoidable impact of the Proposed Project.

**350BA-3 Response:**

The comment does not accurately describe the $102 million in CalSTA funding. These improvements are general to serving all classes of vessels that call the Seaport and are not specific to accommodating large vessels, increasing berth capacity, or to facilitating increased container throughput. This funding would support design of improvements to facilitate more efficient and safe handling of cargo at the Seaport. These projects include wharf improvements, transition of cargo handling equipment to zero-emissions equipment, and improvements to facilitate re-occupancy of previously established marine terminal space. The Proposed Project has independent utility from these other projects, and therefore is an independent project for purposes of CEQA. Regarding the relationship of these projects to the Proposed Project and comments pertaining to increased throughput, please also refer to Global Response 1: CEQA Process, and Global Response 5: Operational Impacts.

**350BA-4 Response:**

For a discussion on the impact of large vessels at the Seaport refer to Global Response 5: Operational Impacts. The IHTB and OHTB widening is an efficiency project aimed at reducing inefficiencies at the Port. With the ability to handle large vessels better, the Port anticipates less delays due to greater efficiencies in turning the vessels as well as fewer ships calling the Port for the same amount of cargo. The Port already receives these large vessels and the landside operations have dealt with the landside operational impacts. The Port's current landside operations include an appointment system and a comprehensive truck management plan to aid in the administration of cargo movement inside the Port; the appointment systems are maintained and managed by the individual terminal operators to moderate transactions (e.g., hourly truck arrivals to a terminal) in accordance with available equipment and staffing. The Proposed Project does not include plans to modify these systems, which are designed to enhance and support efficiencies in container deliveries and pickups (e.g., truck movements), thereby aiding to reduce truck-related emissions on the local community.

The Draft EIR used the first operational year as a baseline for comparison to the Proposed Project. This beginning of operation and all future years contains the Port's anticipated growth in containers handled with and without the Proposed Project. There would be negligible changes in criteria pollutant emissions associated with landside operations because of the Proposed Project. There may only be potential changes in localized emissions if there are any changes to peak activity, but this would not change the annual values used to determine significance of the Proposed Project compared to the No Project future baseline scenario. Comparing the localized emissions from receiving large vessels, there would be no change compared to existing

conditions as well as the No Project future baseline; because the Port has received large vessels, and will continue to receive large vessels without the Proposed Project, any potential peak emissions due to surges in volumes from unloading large vessels has been experienced in existing conditions and would be experienced in the No Project future conditions. Therefore, under CEQA, the incremental change in peak emissions would be zero, and would not have an impact compared to existing or No Project future conditions.

The existing activities at the impacted land areas would be relocated or consolidated, and there would be negligible changes in air quality emissions associated with the relocation or consolidation of existing activities outside of the physical change in location where they are released if relocated. Any change due to differences in minor trip lengths and activity would be minimal overall, because the Proposed Project would not cause any changes to demand and growth.

**350BA-5 Response:**

Refer to Global Response 8: City of Oakland Plans and Policies for a discussion of applicability of Oakland 2030 Equitable Climate Action Plan. Although the Oakland 2030 Equitable Climate Action Plan is not applicable to the Proposed Project, the Port of Oakland's 2020 and Beyond Plan outlines its actions to modernize the Seaport and head toward becoming a zero-emission seaport. For more information on the activities of the Port toward zero emissions, refer to Global Response 3: Zero-Emissions Seaport. For more information about mitigation measures implemented for the Proposed Project, refer to Mitigation Measure ENE-1 in Section 3.6.4 of the Draft EIR. The commenter is correct in noting that Mitigation Measure ENE-1 calls for the electrical dredgers to switch to diesel dredging during any periods where the Port receives an Energy Emergency Alert 3 Notice to prepare for rotating power outages issued by the California Independent System Operator (CAISO) for the Northern California Region and/or CAISO Grid and/or Alameda Municipal Power. As stated in the Draft EIR, this mitigation measure is required to avoid impacts to peak electricity demand in the region. To complete the dredging activities during the allowed in-water work window for dredging based on protection of biological species, the dredgers must continue working during electricity outages. This is in line with California's regulations regarding OGVs using shore power that similarly unplug and use diesel-fueled auxiliary power during peak electricity demand events, such as California experienced in 2022. For a discussion on feasibility of other mitigation measures suggested by commenters, refer to Global Response 7: Air Quality Mitigation Measures.

**350BA-6 Response:**

Please refer to Global Response 1: CEQA Process.

### G.5.2.2 Earthjustice on Behalf of San Francisco Bay Area Physicians for Social Responsibility, Sierra Club, West Oakland Environmental Indicators Project, Environmental Defense Fund, Union of Concerned Scientists, Pacific Environment, West Oakland Neighbors, 350 East Bay, and Center for Biological Diversity (EJC)

**EJC-1 Response:**

Please refer to responses to comments EJC-5 through EJC-88 explaining how the Draft EIR satisfied CEQA requirements.

**EJC-2 Response:**

Please refer to Global Response 1: CEQA Process. In addition, the USACE's Integrated Feasibility Report/Environmental Assessment is a separate document with the USACE as the NEPA lead agency. The NEPA process was completed on August 21, 2024, when the USACE issued a Finding of No Significant Impact. The Port, as the Lead Agency under CEQA, prepared the Draft EIR in accordance with CEQA Guidelines Sections 15000 et seq. As part of the CEQA process, the Port is required to respond to comments submitted on the Draft EIR during the Draft EIR public review period. The USACE responded to the comments submitted during the NEPA process in both its Revised Draft Integrated Feasibility Report/Environmental Assessment and Final Integrated Feasibility Report/Environmental Assessment.

**EJC-3 Response:**

Please refer to responses to comments EJC-5 through EJC-88, which explain how the Draft EIR satisfied CEQA requirements.

**EJC-4 Response:**

Please refer to Global Response 1: CEQA Process. There is no legal obligation under state or federal law to provide concurrent review. Additionally, the USACE issued a Finding of No Significant Impact for the EA on August 21, 2024, finalizing the NEPA review for the Proposed Project, and therefore concurrent review is not possible.

**EJC-5 Response:**

The project description in the Draft EIR did not omit any integral components of the full project or reasonably foreseeable consequences of the Proposed Project. As described in Draft Section 2.5, the Proposed Project would not change the projected cargo throughput at the Port; the Port's total projected volume serviced would remain the same with and without widening of the turning basins. In addition, the Proposed Project does not include landside improvements to increase the Port's cargo (or container) handling capacity; and as a result, the Port's capacity remains constant with this Proposed Project, and landside operations following widening of the turning basins are assumed to remain consistent with existing conditions, including management of cargo volume fluctuations. Therefore, impacts related to expanding the Port's capacity or changes in landside operations were not analyzed in the Draft EIR because they are not a component or reasonably foreseeable outcome of the Proposed Project. To the extent that the comment suggests that "ongoing Port operations" cause environmental impacts, those are a part of the baseline for environmental review and are not impacts of the Proposed Project.

Please refer to Global Response 1: CEQA Process, and Global Response 5: Operational Impacts.

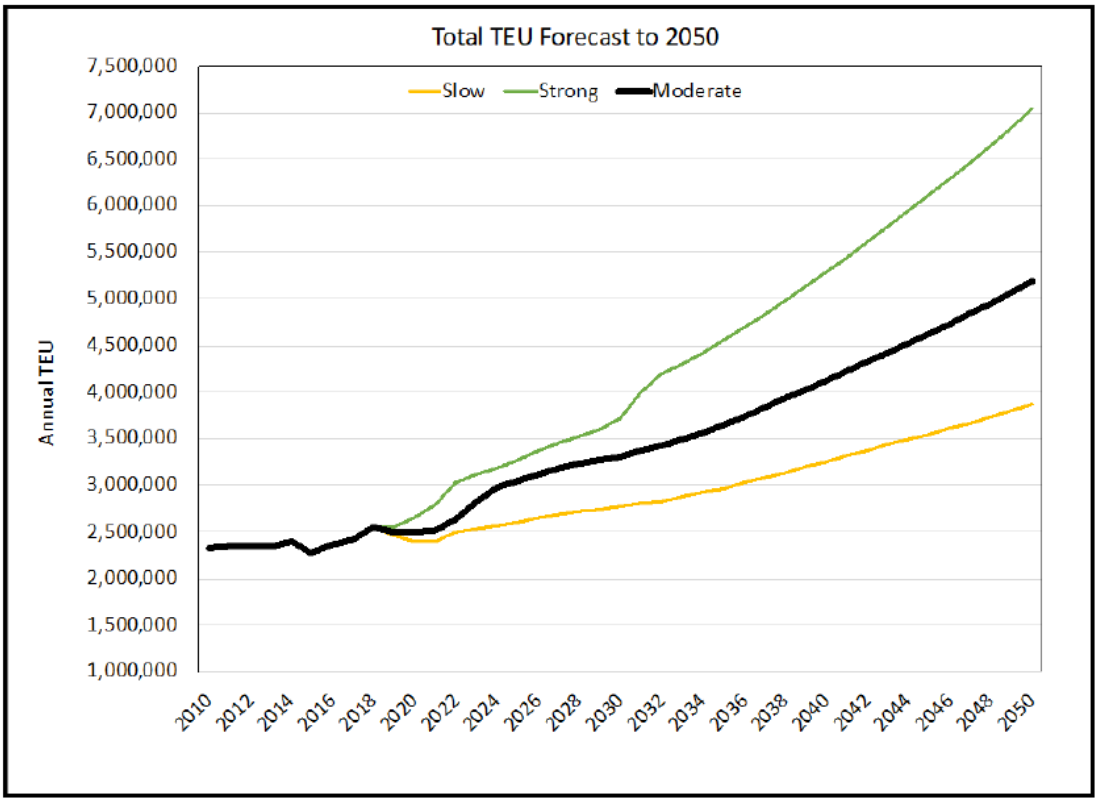
**EJC-6 Response:**

Analysis of the project's environmental analysis varied by resource as described in each Draft EIR Chapter 3 resource section, and extended beyond 1 mile where appropriate. The Proposed Project is not expected to result in any discernable change in shipping beyond the immediate area surrounding the Inner and Outer Harbors. Please refer to response to comment EJC-23 addressing the analysis area for health effects.

**EJC-7 Response:**

The Draft EIR appropriately defines the project description. Please refer to Global Response 1: CEQA Process, and Global Response 5: Operational Impacts.

**EJC-8 Response:**



The Draft EIR accurately concludes that throughput (the amount of cargo containers that can and will pass through the Port) will not change as a result of the Proposed Project. As described in Section 6.3, Growth-Inducing Impacts, of the Draft EIR, the Port's maximum practical throughput (measured in TEUs), is limited by the number of vessels it can accept ("berth-constrained") or by how much cargo its landside facilities (e.g., container yards) can service ("yard-constrained"). The Proposed Project does not increase the number of berths or landside facilities; therefore, the maximum practical throughput remains unchanged by the Proposed Project. Furthermore, the turning basins have no effect on market demands and the global container fleet composition. Instead, the number or size of vessels (i.e., "supply") that call the Port is driven by broader economic drivers, including, but not limited to, regional demands for goods, strength of the U.S. dollar compared to foreign currencies, foreign trade policies, population growth or contraction (collectively, "demand"), and the availability of vessels to service said demand. Therefore, the demand market drives the vessel supply market. This assertion is supported throughout the Tioga Report and by Port historical data trends. Furthermore, the Proposed Project would not change the size of vessels that can call the Port. As detailed in Section 2.3 (Table 2.3-2), Port Operations, the world's largest container vessel category (known as Post Panamax Generation IV), have called and will continue to call the Port, albeit with additional restrictions as discussed in Section 2.3.1. (Waterside – Vessel Maneuvering Restrictions) due to the inability of vessels generally exceeding 14,000 TEU to use the Inner Harbor Turning Basin (as the Tioga Report supports). Instead, the Proposed Project would allow the size of vessels already calling the Port today to do so more efficiently by allowing them to use the Turning Basins more safely and with fewer logistical restrictions.

Furthermore, as supported by the Tioga Report, even after the –50-Foot Deepening Project at the Port in 2009, growth at the Port was slower than other areas of the North American West Coast, because economic and landside infrastructure factors (e.g., new distribution centers) affect competitiveness with other facilities along the West Coast far more than vessel call size capabilities. For example, competing ports such as those in Southern California and British Columbia were able to capture more market throughput than the Port of Oakland even after the –50-Foot Deepening Project because they are able to accommodate the same large vessels, while also having advantages such as greater local population size and economic activity, new or expanded distribution centers, or better rail connectivity. Because there is only so much market share to be captured, increasing vessel call size capacity and efficiency overall has historically not induced cargo growth. Refer to Exhibit 77 from the Tioga Report for reference trend data supporting these assumptions.

The commenter's assertion that the USACE forecasts a sharp increase in TEU growth in and after 2029 is inaccurate. Instead, the USACE used the cargo forecast in the Tioga Report to perform an economic evaluation of the Proposed Project. Exhibit 3 from The Tioga Report includes three different scenarios of future growth in container cargo from 2020-2050: slow, moderate, and strong. Each growth scenario is independent of the Proposed Project. As the Tioga Report explains, the nongradual sharp increases for the strong and moderate growth rate graph

lines are representative of the supply market adjusting to the demand market with the introduction of first call services. The USACE used the moderate container cargo growth forecast of 2.2 percent, which is in line with recent throughput trends at the Port, excluding years of lower throughput due to the COVID-19 pandemic. Furthermore, as shown in Exhibit 3, there is no sharp increase in rate of growth for this moderate growth scenario starting in 2030; instead, cargo growth occurs gradually over extended time periods as the Port's historical trends support.

**Exhibit 3: Total TEU Forecast to 2050**

Please also refer to the Draft EIR analysis of the Proposed Project's potential to induce growth (Section 6.3, Growth-Inducing Impacts) and to Global Response 5: Operational Impacts.

**EJC-9 Response:**

As explained in response to comment EJC-8, the idea that increases to vessel call sizes drive increased growth is not supported by historical data. Growth is driven by economic factors and the relative demand and competitiveness of ports within the overall market. The USACE's Integrated Feasibility Report/EA and Port's EIR forecast increased volume over time consistent with the BCDC Seaport Cargo Forecast. However, the rate of forecasted volume increases will be determined by economic factors, and not by turning basin width or vessel size trends. Vessel size trends are further driven by but not limited to, global trade, national or international regulations and policies, and shipping alliances, and not the size of the turning basin for one (of many) port complexes a vessel will visit. This is particularly true at the Port, where the existing

turning basins and Port facilities can and do accommodate larger vessels. Therefore, the Draft EIR is accurate that the Proposed Project would not result in a higher growth rate than the No Project scenario. This assumption is consistent with historical data and with analysis conducted by similar projects with approved EIRs, such as the -50-Foot Deepening Study (2009) at the Port of Oakland and the Deep Draft Navigation Study (2021) conducted by the Port of Long Beach and USACE. The Proposed Project under consideration does not include potential capacity-increasing projects such as constructing (filling in the Bay) new acreage to handle containers or constructing new wharfs. Such projects have independent utility and would be carried out separately, and therefore are not part of the Proposed Project and its assessment of potential environmental impacts. (Refer to, e.g., *Paulek v. California Department of Water Resources* [2014] 231 Cal.App.4th 35 [Dam remediation and outlet tower replacement—which would have no effect on release capacity of the reservoir facility—did not have to evaluate concerns arising from related but separate emergency outlet extension project].)

Please also refer to Global Response 1: CEQA Process, and Global Response 5: Operational Impacts.

**EJC-10 Response:**

The fact that the Port previously received funding for other improvement projects—particularly projects that have independent utility and are being separately developed—does not make those projects part of the Proposed Project at issue here. In fact, the referenced activities are specifically parts of separate projects that had their own environmental review. The Proposed Project has independent utility from these other projects, and therefore is an independent project for purposes of CEQA. Nonetheless, the other projects are a part of the cumulative context for the Proposed Project. Please refer to Global Response 3: Zero-Emissions Seaport, Global Response 1: CEQA Process, and Global Response 5: Operational Impacts.

**EJC-11 Response:**

The comment misconstrues the analogy referenced in the Draft EIR, which states: "Much like widening a lane on a roadway to safely accommodate wider vehicles does not increase its vehicular handling capacity (i.e., allowing more cars to transit through the roadway), widening the turning basins to accommodate longer vessels does not change the Port's container handling capacity (i.e., the number of containers that can move through the Seaport). Widening the turning basins *would not change the number of vessels able to berth, nor would it change the constraints of the yard*." (Emphasis added.) The analogy refers to widening a single existing lane on a roadway, not adding additional lanes to the roadway, which would increase the roadway's capacity. Therefore, the research cited in the comment is not analogous to the Proposed Project. The comment also fails to recognize that Caltrans and other transportation agencies commonly conduct independent CEQA or NEPA review for separate improvements along a single roadway. That is appropriate where, as here, the distinct improvements can be instituted separately and have independent utility—e.g., public safety or other practical concerns in a particular roadway segment. Therefore, the comment's attempt to blur this analysis misses the mark.

**EJC-12 Response:**

Please refer to responses to comments EJC-13 through EJC-16 below.

**EJC-13 Response:**

The comment asserts the alternatives analyzed were inadequate because the project description was too narrowly defined. However, the project description in the Draft EIR did not omit any integral components of the full project, or reasonably foreseeable consequences of the Proposed Project; please refer to Global Response 1: CEQA Process, and Global Response 5: Operational Impacts, as well as responses to comments EJC-5 through EJC-7. Responses to specific comments regarding the range of alternatives and the "no project" alternative are provided below under comments EJC-14 through EJC-16.

**EJC-14 Response:**

The comment suggests that because the Draft EIR determined the impacts to energy to be less than significant with mitigation, consideration of an alternative involving use of diesel dredges was unnecessary, and therefore the alternatives discussion is inadequate. The Draft EIR analyzed a reasonable range of alternatives as required by CEQA. As the comment notes, energy impacts are reduced to a less-than-significant level by mitigation, and the diesel dredging alternative represents another way of reducing those impacts. In addition to this alternative, the Proposed Project fully analyzed the effects of two other action alternatives (widening the IHTB only and widening the OHTB only), which reduce impacts found to be significant and unavoidable in the Draft EIR. Therefore, the diesel dredging alternative does not preclude the Draft EIR from evaluating a reasonable range of alternatives, nor does it violate the letter or spirit of the law to include a wider range of alternatives than is mandated by CEQA.

**EJC-15 Response:**

The comment suggests other alternatives that should have been included in the Draft EIR. CEQA Guidelines Section 15126.6(a) states that an EIR must describe and evaluate a reasonable range of alternatives to a project. An EIR is not required to consider every conceivable alternative to a project or alternatives that are infeasible.

Refer to response to comment EJC-14 regarding the diesel dredging alternative.

The first suggestion is to consider an alternative that relies on commercially available zero-emissions construction equipment. The Proposed project includes the use of electric dredges for dredging. For other construction equipment, Mitigation Measures AQ-1 and GHG-1 require the Proposed Project to use electric equipment for construction if it is available as defined by the performance criteria in these mitigation measures. Although there is construction equipment that does exist as hybrid, electric, and various alternative fuels, these pieces of equipment are not always readily available for use on a construction project due to limited numbers of equipment that are in the marketplace. Because it may not be feasible to use all zero-emissions equipment for construction, this was not considered as an alternative. Please also refer to Global Response 7: Air Quality Mitigation Measures.

The other alternatives suggested in the comment pertain to limiting ship speeds to address ship strikes that cause marine mammal deaths and use of dredged materials to raise the Bay's shorelines to provide protection from rising sea levels. Neither of these suggestions would reduce any environmental impacts that were identified as significant impacts of the Proposed Project, and therefore they need not be considered as project alternatives. As described in the Draft EIR, dredged material from the Proposed Project would be used for beneficial reuse in the greater San

Francisco Bay to create wetlands, which make shorelines more resilient to the effects of sea level rise.

**EJC-16 Response:**

CEQA requires consideration of a No Project Alternative that represents the existing conditions, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved. The Draft EIR does not fail to analyze the environmental impacts of the No Project Alternative as the comment suggests. As stated in Draft EIR Section 5.5.4, under the No Project Alternative, there would be no modifications to the IHTB and OHTB, and none of the environmental impacts associated with the Proposed Project's construction and operation and maintenance would occur. Under the No Project Alternative, Seaport operations would be a continuation of existing conditions, which would not result in new adverse environmental impacts. However, as stated under Section 5.5.4, the environmental benefits of the Proposed Project would not be realized under the No Project Alternative, including an estimated 2 percent to 13 percent reduction in operational emissions that would result from implementation of the Proposed Project (as described under Impact AIR-2 in Section 3.3, Air Quality).

The comment conflates the identified objectives of the Proposed Project with impacts under the No Project Alternative, asserting that because objectives of the Proposed Project include improved operational efficiency and safety, the Port must provide data on past accidents or environmental impacts to justify these objectives and to allow evaluation of impacts under the No Project Alternative. The Proposed Project Objectives form the foundation for the underlying purpose of the Proposed Project, thereby helping with the Port development of a reasonable range of alternatives and aiding the Port Board in preparing findings or a statement of overriding considerations, if necessary. CEQA does not requires those objectives be accompanied by data of past accidents or environmental impacts as the comment suggests. The Draft EIR analysis for the No Project Alternative does not state that there would be environmental impacts associated with vessel grounding or allision (contact with a structure). To state such impacts would occur without the Proposed Project or attempt to quantify them would be speculative. Furthermore, there does not need to be a record of past incidents for the Port to recognize that the limited width of the turning basin increases the potential for groundings or allisions during the turning of larger vessels, and to therefore identify improved safety and reduced environmental risks as objectives of the Proposed Project.

In addition, the comment's assertion that the Draft EIR did not describe how navigational inefficiencies would continue is incorrect. Draft EIR Section 2.3.1 describes in detail the conditions that contribute to existing operational inefficiencies. Transportation inefficiencies and high-risk transits occur when channels and maneuvering areas do not fully accommodate the vessels using them. Current container vessels calling the Port exceed the maximum dimensions of the constructed turning basins. These inefficiencies are projected to not only continue, but to increase in the future because longer vessels are expected to transit to the Oakland Harbor with greater frequency for a variety of reasons, including fleet turnover, and projected world fleet production (Appendix C [Economics] of USACE 2023). Draft EIR Table 3.1-1 and Figure 3.1-1 show the projected number of vessels calls by vessel type for the Proposed Project and No Project Scenario in the future years 2030, 2040 and 2050; these data indicate that the proportion of larger vessels (PPX2, PPX3 and PPX4) to smaller vessels will increase over time under the No Project Scenario.

Under Impact AIR-2, the Draft EIR explained that the reduction of operational emissions under the Proposed Project would occur as a result of a reduction in the total number of vessel calls and a change in fleet mix; the Draft EIR did not attribute this reduction to lessened navigational inefficiencies as the comment suggests. Please refer to response to comments EJC-92 and EJC-97 through EJC-105 addressing the PSE Health Energy (PSE) Report assertions related to the Proposed Project's operational changes and anchorage operational emissions.

**EJC-17 Response:**

The commenter makes statements regarding the legal requirements applicable to EIRs. Please refer to response to comments EJC-18 through EJC-86.

**EJC-18 Response:**

Please refer to Global Response 6: Air Quality Baseline, for a discussion of the Proposed Project's use of an operational baseline as the first year of the Proposed Project operation and subsequent years as additional support, which is allowed under CEQA. The Draft EIR relies on substantial evidence in the form of economic forecasting of the annual growth rate, and another model to simulate vessel fleet mix and calls. The commenter has provided no evidence to the contrary. Refer to Global Response 5: Operational Impacts, for further details about landside operations with and without the Proposed Project. The Draft EIR provided extensive discussion of baseline conditions in the Draft EIR in Sections 3.1.1 and 3.3.1. This included information from the Port of Oakland 2020 Seaport Emissions Inventory, which is the most recent comprehensive emissions inventory for the Port of Oakland. The 2008 HRA by CARB and the most recent HRA done for WOCAP were included in the setting, which discusses emissions and health impacts in the Port and the larger West Oakland area. Future projections of emissions and health impacts were made in these studies using the same annual economic growth data. As the California Supreme Court held in *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority*, a future conditions baseline is appropriate where the EIR can justify that an existing conditions analysis would be misleading or without value. Such is the case here, where economic and related forecasting has shown that conditions expected to occur in the construction and operational horizons for the Proposed Project would change, and use of an existing operational baseline would create a misleading impacts analysis. However, for disclosure purposes, Global Response 6: Air Quality Baseline also addresses Proposed Project operational impacts compared to a current conditions baseline, which are less than significant.

**EJC-19 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice, for a discussion of West Oakland Community Action Plan in the context of the Draft EIR, and for a discussion of environmental justice and racial impacts in relation to the Draft EIR. For a discussion of the relevance to the City of Oakland Plans and Policies including the City of Oakland's ECAP, please refer to Global Response 8: City of Oakland Plans and Policies.

Although the heading of this comment suggests that it identifies some inadequacy with respect to the Draft EIR's description of the existing air quality setting, and the comment goes on to describe the existing setting, it does not allege any specific inadequacy with respect to the Draft EIR's description. The description given by the comment is consistent with the description in the Draft EIR, except for discussion of the City of Oakland's ECAP, which is not discussed in the Draft EIR because it is not applicable to the Port.

The commenter is also incorrect in stating that the Draft EIR did not adequately describe the existing air pollution in the surrounding communities. The Draft EIR provided extensive background in Section 3.3.1. This included information from the Port of Oakland 2020 Seaport Emissions Inventory, which is the most recent comprehensive emissions inventory for the Port of Oakland. The 2008 HRA by CARB and the most recent HRA done for WOCAP were included in the setting, which discusses emissions and health impacts in the Port and the larger West Oakland area. In addition, there was a discussion of the WOCAP policies and the Port's status of implementing these measures. The Draft EIR conducted an HRA for the Proposed Project construction and provided more information on the results of this HRA than required to make the CEQA significance determination. The Draft EIR, in addition to determining the maximum exposed individual, also presented the high values in both Alameda, the area adjacent to Howard Terminal, and the part of West Oakland most impacted by the OHTB.

**EJC-20 Response:**

Regarding the Proposed Project's operational impacts and comments referencing the Tioga Report, please refer to Global Response 5: Operational Impacts and responses to comments EJC-8 and EJC-9.

Regarding the cited Jungen study and Port of Miami dredging, as explained under Global Response 5: Operational Impacts, modeling conducted by the Port indicates that the Proposed Project is not expected to cause more truck congestion at the terminal truck gate and local roads or to increase container handling equipment use when compared to the No Project scenario. The largest class of container vessels (PPX4) is already calling the Port, and terminal operators are already managing cargo loads associated with this vessel size. Current landside operations include an appointment system and a comprehensive truck management plan to aid in the management of cargo movement and reduce the impact of truck-related emissions and traffic on the local community; the Proposed Project does not include plans to modify these systems. Furthermore, the Port of Miami example referenced in the comment is not analogous to the Proposed Project because the Port of Miami project involved deepening of its shipping canal, and allowed fully loaded post-Panamax ships carrying more TEU to call the Port of Miami, which was not achievable prior to the deepening. As noted above, the largest class of container vessels (PPX) is already calling the Oakland Seaport.

**EJC-21 Response:**

Changes to landside operations to handle growth and operational changes would need to undergo separate environmental review; please refer to Global Response 1: CEQA Process and Global Response 5: Operational Impacts for further discussion. The Draft EIR did acknowledge that there would be potential changes in localized air quality emissions for peak activity under Impact AIR-2 and AIR-3. For a discussion how marine terminal operators at the Port manage potential peak surging, refer to Section 2.3.2 in the Draft EIR. Many of the features mentioned in the PSE report are already in the works at the Port, including improvements to cranes, stacking containers, and implementing software to more efficiently move cargo including reducing dwell times. In addition, the Proposed Project would result in negligible changes in both truck demand and truck queuing. Please also refer to responses to comments EJC-99 through EJC-105, which address related comments included in the PSE report.

**EJC-22 Response:**

Anchorage emissions were not estimated because there were limited data to suggest appreciable differences in anchorage time between the different vessel classes. Whether or not a vessel goes to an anchorage is highly variable, and there are limited data to determine if vessel size is an independent factor causing a particular vessel to anchor, and once at anchorage, the duration of the anchorage time. Please refer to Global Response 5: Operational Impacts regarding operational emissions.

**EJC-23 Response:**

The receptor grid used in the Proposed Project HRA had 31,092 receptors, as described in Appendix C, page 16. It was originally developed to contain the same model domain as WOCAP (7 kilometers by 5 kilometers), and then expanded for additional coverage in both Oakland and Alameda near the IHTB for a total distance covered by the HRA of 8.75 kilometers by 6 kilometers (5.4 miles by 3.7 miles), including the entire community of West Oakland and a portion of the City of Alameda. The receptor spacing used in this large modeling domain had areas of 20-meter, 50-meter, and 250-meter spacing. Variation in receptor spacing is common in air dispersion modeling to ensure that the peak value is observed and to give a sense of the broader air dispersion impact. This is well stated in Appendix E of the Air District's 2022 CEQA Guidelines, which state "Refined modeling commonly uses Cartesian receptor grid, which is defined by an origin with receptor points evenly (uniform) or unevenly (nonuniform) spaced around the origin… The grid should encompass the entire area of the project radius and be spaced appropriately to identify the most affected receptor…Using a combination of fine, tightly spaced receptors near the source and coarse grid of receptors located outside of the fine grid reduces the modeling time but maintains sufficient resolution for identifying the maximum impact area." This guidance suggests a grid spacing of 50 meters for areas less than 325 meters from the Proposed Project site. A detailed modeling domain in other areas was not necessary to capture the peak impacts from the Proposed Project's construction emissions. Had the modeling suggested that the peak health impact lay outside of the modeling domain, additional modeling would have been warranted. This was not the case. Highway 260 is in a denser modeling grid area as well as the neighborhoods in West Oakland and near Howard Terminal. It is unclear which 6.5-mile neighborhood the commenter thinks were not covered by the modeling domain, because Figure 7 in Appendix C does not show any gaps in the denser 20- and 50-meter grids in these locations that are not on water or roadways. The peak health impact would occur along the portion of roadways nearest to the other Proposed Project construction activity, because it would be impacted by not just vehicles traveling along the roadway, but the offroad construction equipment and equipment working in the water. The CEQA threshold is based on the highest impacted receptor, and does not need to consider the impact of all individuals. The analysis appropriately placed receptors in the locations anticipated to be the highest area of impact from all of the Proposed Project's activities. There were no discrete receptors for schools, daycares, medical facilities and other types of sensitive receptors other than resident locations that were in the peak area that would have had higher exposure factors than a residential child, which was used in the HRA to evaluate cancer risk. Therefore, there was no need to further explicitly add discrete receptors to capture the maximum cancer risk, and the PSE Report's statement that the 50-meter grid spacing may not accurately capture impacts is unfounded and incorrect.

It is unclear why the commenter suggests that analysis was truncated at a 1-mile radius. It was not. Roads and the tug travel path as it heads out to the beneficial reuse sites were truncated at the WOCAP border, consistent with the Air District's approach in the WOCAP analysis of West Oakland emission sources. The length of this travel path is substantially longer than 1 mile. Similarly, on the southern end, roadway emissions were truncated on the far side after exiting Alameda and entering I-880 freeway, which is more than 1 mile from the construction area where they originate. Nowhere in our documentation in the Draft EIR and Appendix C is the HRA characterized as being truncated at a 1-mile radius. Commonly, in air dispersion modeling roadways and mobile source, travel paths are truncated once they reach a major roadway or move further away from the primary receptors anticipated to be most impacted. This again is done for modeling time, because these sources have been shown to have diminishing influence on the overall result. This can be observed by looking at these sources' contribution to the overall concentration or health impact at the peak receptor, which is used for significance determination. Receptors further out along a road that the trucks would use would have lower health impacts than compared to the same trucks on roads closer to the other major source equipment used in construction of the Proposed Project. People exposed on a roadway would only be exposed for the short duration of a truck passing by rather than those near the many pieces of larger equipment working continuously.

**EJC-24 Response:**

Please refer to Global Response 5: Operational Impacts, which discusses operational impacts and growth inducement. As the Draft EIR concludes, the incremental increase in emissions at the start of operation for the Proposed Project would not result in an increase in air quality emissions and therefore does not require mitigation. Mitigation is only required for those potentially significant impacts that are a reasonably foreseeable consequence of the Proposed Project (e.g., construction-related impacts), and not those physical changes that are occurring with or without the Proposed Project. In this respect, although the Proposed Project would create some efficiencies and improvements in safety at the turning basins, it is not expected to result in any operational changes on the landside of the Port. For discussion of a mitigation measure suggested by commenters, please refer to Global Response 7: Air Quality Mitigation Measures.

The commenter asserts that toxic air contaminants (TACs) can cause health impacts because of only 1-hour exposure. This is well described and used in the HRA for construction. The Draft EIR acknowledges that peak activity may have increases in these TACs and other pollutants in the short term. However, under CEQA, the significance determination is based on incremental change. Currently and in the future with and without the Proposed Project, because the Port does experience peak events and has taken large vessels, these short-term peak emissions of TACs have already occurred and there would be no difference in the incremental change under CEQA. For cumulative impacts, the Draft EIR did conclude that there is a significant impact to the area.

**EJC-25 Response:**

Please refer to Global Response 7: Air Quality Mitigation Measures, regarding alternative and zero emission vehicles and equipment, and mitigation. The commenter suggests that there are grants available for off-road equipment. There are various grants available for off-road equipment of different types. Because the construction activity would be done by third-party contractors, the Port cannot apply for these grants on their behalf, and it is unknown if

contractors would meet the requirements for these grants, or if they would be awarded and equipment secured prior to the start of the Proposed Project construction.

**EJC-26 Response:**

In Section 4.5 of the Draft EIR, there is a lengthy discussion of the cumulative setting and impacts to air quality. Information from several different projects was considered in the analysis as well as the WOCAP analysis, which includes all sources in West Oakland including the full Seaport, roads, and railways. A detailed HRA was conducted on the Proposed Project's construction activities to capture the additional health impacts and $PM_{2.5}$ concentrations that the overall region would experience during construction. The operation of the Proposed Project would not be substantially different in emissions and health impacts compared to the future year estimates and health impacts presented in the WOCAP HRA because growth was assumed, and the 2029 future forecast would be similar to the 2030 forecast used in the first year of operation of the Proposed Project. Therefore, because the growth in Port operations was already included in WOCAPs future scenarios, the Port has found the WOCAP's analysis to be a reasonable and accurate representation of the cumulative impacts from reasonably foreseeable projects. The Port did undertake its own independent analysis of the Project's contribution to these cumulative impacts, as well as preparation of an HRA.

As outlined in the WOCAP, the majority of the measures are for improvement over time to equipment, trucks, vessels and harbor craft. Many of these improvements are made with regulatory updates and in the Ports 2020 and Beyond Plan, and are out of the scope of the Proposed Project which is to construct more efficient and safe turning basins. Please refer to Global Response 3: Zero-Emissions Seaport regarding the 2020 and Beyond Plan. For a discussion of West Oakland and the goals of WOCAP refer to Global Response 2: Community Engagement and Environmental Justice. Additionally, the cumulative analysis in the Draft EIR does explain how the pollution would be expected to impact health (refer to Draft EIR, Table 4.4-1).

Although the comment alleges a failure to mitigate the Proposed Project's significant air quality impacts, it does not identify any additional feasible mitigation measures not already considered or adopted that would reduce these impacts. Please refer to Global Response 7: Air Quality Mitigation Measures for further discussion of air quality mitigation.

**EJC-27 Response:**

The comment takes quotes out of context and is misleading. The quotes in the comment are from various sections of the Draft EIR and Appendix C, which comprises the HRA. The comment uses these quotes to convey a different concept than the full discussion presented around their quotes. For example, their quote "would last only a small fraction of a lifetime," is only stating that there is uncertainty in evaluating cancer risk from a project that is short in duration. The quote is not discussing the magnitude of the impact of air pollutant emissions, either in the abstract or for the Proposed Project.

The analysis of air quality impacts in the Draft EIR uses a reliable methodology and analysis to apply the best estimate of vessel types and number of calls under the Proposed Project and No Project scenarios. Once the vessel arrives, similar types of land-based equipment and hours of activity are needed to unload, load, and process cargo through the terminals to their destinations. In addition, the existing facilities can accommodate and have already accommodated the larger

vessel classes expected in 2030. Therefore, the Proposed Project is expected to have no incremental increase in landside emissions over the No Project Alternative. This is also true for GHG emissions. Similarly, for possible acute health impacts from TACs and criteria pollutants associated with hot-spots such as primary $PM_{2.5}$ resulting from emissions to the ambient air from Proposed Project sources, the Port has already experienced these peak short-term impacts, because it has demonstrated an ability to handle larger vessels even without the Proposed Project. In summary, the Proposed Project would not meaningfully alter the nature or extent of landside operations; therefore, operation of the Proposed Project is not expected to result in any measurable incremental increase in impacts to air quality.

Since the Proposed Project uses the first operational year as a baseline under CEQA, the Draft EIR correctly compares and models the No Project 2030 and the Proposed Project 2030 emissions scenarios, which take into account anticipated changes in vessel fleet mix and number of calls under a specific forecasted growth rate. The applied model used the most reasonable and accurate information available regarding vessel unloading and loading. In this first operational year baseline scenario, only the vessel types and number of calls would change, impacting water-based operations. Once the vessel arrives, similar types of land-based equipment and hours of activity are needed to unload, load, and process cargo through the terminals to their destinations. Therefore, the Proposed Project is expected to have no incremental increase in landside emissions over the No Project Alternative. This is also true for GHG emissions. Similarly, for possible acute health impacts from TACs and criteria pollutants associated with hot-spots such as primary $PM_{2.5}$ resulting from emissions to the ambient air from Proposed Project sources, the Port has already experienced these peak short term impacts, because it has demonstrated an ability to handle larger vessels even without the Proposed Project. Therefore, because there would be no material change in landside equipment or landside operations, landside operations under the Proposed Project are not expected to result in any significant environmental impacts or additional mitigation. The Draft EIR's analysis is appropriately focused on the Proposed Project's incremental change in an impact. There would be no incremental change in acute health impacts during operation because operations would not be affected by the Proposed Project. Please refer to Global Response 5: Operational Impacts.

**EJC-28 Response:**

This response addresses the concern raised regarding the translation of air quality impacts to specific adverse human health impacts for the West Oakland community. The decision in Sierra Club v. County of Fresno, 6 Cal.5th 502 (2018), regarding the Friant Ranch project, requires projects with significant air quality impacts to either relate those impacts to likely health consequences or explain why it is not feasible to provide such analysis. The purpose is to inform the public and decision makers so that they can make informed decisions regarding the costs and benefits of the project.

A key difference between the Proposed Project and the Friant Ranch project is that the Friant Ranch EIR only provided quantification of pollutant emissions with no health risk assessment. Here, the Draft EIR and the Future WOCAP HRA not only provide extensive evaluation of emissions quantification, but also provide quantified health risks for cancer, chronic noncancer health impacts, and acute health impacts for all toxic air contaminants (TACs) that have toxicity factors available from the California Environmental Protection Agency (CalEPA) Office of

Environmental Health Hazard Assessment (OEHHA) (refer to Appendix B, Health Risk Assessment for the Draft EIR).

The Proposed Project's construction health impacts with Proposed Project mitigation were projected to be above the Air District significance thresholds for cancer risk and annual $PM_{2.5}$ concentration, but below the Air District significance threshold for chronic health impacts (HI) and acute HI (refer to Draft EIR Tables 3.3-14 through 3.3-16); however, the entire Proposed Project and the whole Seaport remained cumulatively significant. In addition, the $PM_{2.5}$ concentrations that would be generated by the Proposed Project in the ambient air have been quantified.

As presented in the Draft EIR, emissions of ROG, $NO_X$, $PM_{10}$, and $PM_{2.5}$ fall below the Air District significance thresholds for construction emissions. As explained by the Air District in its 2010 CEQA Air Quality Guidelines report justifying its CEQA significance thresholds, these thresholds are set at levels such that projects with emissions below the thresholds would not be expected to result in nonattainment of ambient air quality standards or to create significant contributions to existing nonattainment conditions. Because the federal and state ambient air quality standards are designed to protect against health impacts, including impacts to the most vulnerable segments of the population, exposures to direct emissions from the Proposed Project would not result in significant health impacts to the population intended to be protected by compliance with the ambient standards. Emissions of ROG and nitrogen oxides ($NO_X$) from the Proposed Project can result in production of ozone and $PM_{2.5}$ (so-called secondary $PM_{2.5}$) over the course of a few hours via chemical reactions in the atmosphere between ROG, $NO_X$, and ammonia in the presence of sunlight. The Air District significance thresholds for ROG and $NO_X$ emissions are based on the Air District's offset requirements for ozone precursors. These offset requirements are based on the San Francisco Bay Area's nonattainment status of the federal ozone standard, and therefore these significance thresholds are appropriate "to prevent further deterioration of ambient air quality and thus [have] nexus and proportionality to prevention of a regionally cumulative significant impact (e.g., worsened status of nonattainment)" (Air District 2010). As explained above, attainment of the ambient standards can be considered protective of public health, including the health of sensitive subgroups, thereby providing a strong link between a mass emission threshold and avoidance of health effects. For $PM_{10}$ and $PM_{2.5}$, Air District established CEQA significance thresholds based on the federal New Source Review program for new stationary sources of pollution, which contains stricter thresholds than the Air District's offset program for these pollutants. "These thresholds represent the emission levels above which a project's individual emissions would result in a considerable adverse contribution to the [San Francisco Bay Area Air Basin]'s existing air quality conditions" (BAAQMB 2010). As with ROG and $NO_X$ discussed above, these thresholds likewise provide a connection between a mass emission threshold and avoidance of health effects. As disclosed in this Final EIR, emissions from the Proposed Project's construction would not exceed the Air District emissions threshold; therefore, significant impacts from ozone or secondary $PM_{2.5}$ production is unlikely but cannot be ruled out based solely on the level of $NO_X$ emissions from the Proposed Project. The above considerations notwithstanding, the possibility of some localized ozone and secondary $PM_{2.5}$ formation and resulting health impacts from Proposed Project $NO_X$ emissions cannot be entirely ruled out. However, inclusion of quantitative calculations in the Draft EIR of local and regional health impacts due to any incremental ozone and secondary $PM_{2.5}$ formation from Proposed Project $NO_X$ emissions was determined not to be warranted.

There is no better scientific e method for predicting specific health impacts that could result from exposure to air quality emissions at the local project level scale beyond the risks analyzed in the HRA. Computer models (CMAQ, CAMX, and BenMap) used to generate such health impact estimates are based on rough approximations of the complex atmospheric processes involved in ozone and secondary $PM_{2.5}$ formation, transport, and dispersion, and ultimately do not reliably predict potential health outcomes at the local level. Furthermore, as noted by the Air District in the 2017 Clean Air Plan (Air District 2017), factors relating health impacts to concentration increases are also uncertain, particularly when applied to very small concentration increments. Therefore, results derived from application of these models are subject to large uncertainties, thereby limiting their value in communicating any likely health impacts. Therefore, the Draft EIR includes as much information as can be provided regarding potential health impacts.

These limitations are confirmed in the City of Oakland's February 2021 Draft EIR for the Waterfront Ballpark District at Howard Terminal Project. That Draft EIR includes a detailed health impact analysis, in addition to a localized health risk analysis, for a project that would cause significant $NO_X$ emissions during project operations. Located partially in the Proposed Project site, the Howard Terminal Project site is in a similar location with similar prevailing winds. Even making the most conservative assumptions, the Howard Terminal Project analysis found minimal potential health effects from ozone increases (Waterfront Ballpark District at Howard Terminal Draft EIR, pp. 4.2-72, 4.2-86 – 4.2-92). Even at this level, the analysis explains: "Health effects presented are conservatively estimated and may be zero." (Waterfront Ballpark District at Howard Terminal Draft EIR., p. 4.2-89). In sections headed "Uncertainty of Results," "Context of Results," and "Conclusion," the Draft EIR explains in detail why the modeling results are so uncertain, and even at the very low levels suggested by the analysis, why the impacts may be overstated (Waterfront Ballpark District at Howard Terminal Draft EIR., pp. 4.2-92 – 4.2-94).

The Proposed Project's Draft EIR does address cumulative health impacts for construction and continued operation of the Seaport in Section 4.4 by showing various projects and their health impacts to the extent available, and how this could be combined with the Proposed Project's construction impacts. In particular, the HRA conducted for WOCAP, when added with the Proposed Project construction, results in the cumulative impact of the Proposed Project's construction with the Seaport operations as well as other sources in West Oakland, and the cancer risks from external sources migrating into West Oakland.

**EJC-29 Response:**

The Draft EIR and the Future WOCAP HRA not only provide extensive evaluation of emissions quantification, but also provide quantified health risks for cancer, chronic noncancer health impacts, and acute health impacts for all TACs that have toxicity factors available from CalEPA OEHHA (refer to Appendix B, Health Risk Assessment for the Draft EIR). These directly describe how human health would be affected by the Proposed Project, including cumulatively with other projects, and represent the best available science with regard to forecasting potential health risks associated with air emissions at the project level of detail. For a discussion of West Oakland and environmental justice, please refer to Global Response 2: Community Engagement and Environmental Justice. The comment is incorrect regarding the scope of analysis, which is not limited to 1 mile. The health risk assessment in the Draft EIR encompassed an area

8.75 kilometers (5.4 miles) by 6 kilometers (3.7 miles), including the entire community of West Oakland and a portion of the City of Alameda.

**EJC-30 Response:**

It is unclear why the commenter suggests that analysis was truncated at a 1-mile radius. It was not. Roads and the tug travel path as it heads out to the beneficial reuse sites were truncated at the WOCAP border, consistent with the Air District's approach in the WOCAP analysis of West Oakland emission sources. The length of this travel path is substantially longer than 1 mile. Similarly, on the southern end, roadway emissions were truncated on the far side after exiting Alameda and entering I-880, which is more than 1 mile from the construction area where they originate. Nowhere in in the Draft EIR and Appendix C is the HRA characterized as being truncated at a 1-mile radius. Commonly, in air dispersion modeling roadways and mobile source, travel paths are truncated once they reach a major roadway or move further away from the primary receptors anticipated to be most impacted. This also done for modeling time because these sources have been shown to have diminishing influence on the overall result. This can be seen by looking at these sources' contribution to the overall concentration or health impact at the peak receptor, which is used for significance determination. Receptors further out along a road the trucks would use would have lower health impacts compared to the same trucks on roads closer to the other major source equipment used in construction of the Proposed Project. People exposed on a roadway would only be exposed for the short duration of a truck passing by rather than those near the many pieces of larger equipment working continuously.

Although a truncated travel path was used for trucks and tugs in the HRA due to diminishing impacts on the maximum exposed residential receptors, the total emissions presented in Draft EIR Tables 3.3-9 through 3.3-13 are for the complete travel path anticipated. This was chosen to be the Montezuma beneficial reuse site assumed to be 50 miles away. Trucks were assumed to travel to a Class I landfill, assumed to be Kettleman Hills Landfill, a Class II landfill assumed to be barged by tugs to Montezuma and loaded onto trucks assumed to be Portero Hills Landfill, a recycler assumed to be Argent Materials, and other miscellaneous material trips assumed to be the CalEEMod default of 20 miles. This is outlined in Table 8 of Appendix B to this Final EIR. Therefore, the Draft and Final EIRs were not deficient and were in line with best practices by including all emissions for the anticipated complete travel paths in determining the impacts to criteria air pollutants.

**EJC-31 Response:**

The commenter is incorrect in assuming that because the Port of Oakland has produced emissions inventories, it can produce an emissions inventory for the Proposed Project that reflects the differences in future activity for landside operations. There is a key difference between an annual (or other frequency) actual emission inventory that is based on the collection of detailed activity data that were recorded during the past year (or other past time frame), and an emission inventory for activity that would occur in the future. Although there are reasonable estimates of the emissions factors for OGVs, tugs, trucks, cargo handling equipment, and locomotives, it is speculation to prepare an estimation that provides the amount of activity of the cargo handling equipment, trucks, locomotives, and other equipment. There is uncertainty in how exactly individual terminals would operate and implement changes for more efficient operation in response to larger vessels enabled by the turning basin. Although the Port has handled a few of these vessels, other projects outside of the Proposed Project may occur that changes the activity.

Historical data could be used to develop a ratio of truck and rail miles based on a TEU basis as well as amount of cargo handling equipment used on a TEU basis or some other scaling factor. It is difficult to distinguish between how these factors may or may not change because of a wider turning basin that can more readily handle larger vessels. In many cases, there would be little to use as a basis to distinguish the activity between larger and smaller vessels rather than a general increase in TEU volume, which is the same in the Proposed Project and No Project 2030 operational baseline. The emission factors for cargo handling equipment, trucks, and rail would all be the same, and the only distinguishing comparison between the operational emissions of the Proposed Project compared to the No Project is activity. Therefore, any substantial differences in emissions and air quality impacts would be difficult to determine unless a substantial difference in activity supported by substantial evidence can be distinguished. Unlike other EIRs for the Port of Oakland—such as the Eagle Rock Aggregates Oakland Terminal Project, where a smaller part of the Seaport is involved with a discrete terminal use and there were reasonable estimates of activity for operations based on a targeted throughput of material, as well as a clear comparison to a no project situation—this Proposed Project would result in a subtle change in emissions and activity due to long-term fleet changes rather than a discrete change in activity and emissions.

For a discussion on the data suggested for anchorage emissions, refer to response to comments EJC-22. The transportation section of the Draft EIR did not require a comprehensive traffic model, and there is little to use as a basis to distinguish average traffic volumes from the Proposed Project to the No Project operational scenario. The other model suggested was a research-grade screening tool that may or may not be able to produce the meaningful differences in activity data to distinguish changes in activity on landside operations from the Proposed Project operation and the No Project operation. Furthermore, under CEQA, if a Lead Agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact which was prepared for the Proposed Project comparison of operational emissions. Therefore, a research-grade screening model would be speculative, and beyond the reach required by CEQA. CEQA also acknowledges different degrees of specificity for EIRs of different project types. Although smaller projects can estimate reasonably operational emissions, it is substantially more difficult to estimate emissions for a whole Seaport with a small change to a turning basin and differences in ship size and vessel call numbers. Please also refer to responses to comments EJC-89 to EJC-109, which address the PSE report that was submitted as an attachment to the comment letter.

**EJC-32 Response:**

Although the comment states that additional mitigation is available, it does not identify any specific additional feasible mitigation measures that would reduce significant and unavoidable impacts identified in the Draft EIR. Although the comment asserts that mitigation is improperly deferred, it did not identify any specific mitigation measure included in the Draft EIR that is improperly deferred. Please refer to Global Response 7: Air Quality Mitigation Measures for a discussion regarding the use of performance standards in mitigation measures and a discussion of feasibility of using zero-emission vehicles and equipment. Please refer to Global Response 3: Zero-Emissions Seaport, for a discussion of the Port's plan for the whole Seaport heading toward zero emissions. Please refer to Global Response 5: Operational Impacts, addressing the Draft EIR analysis of operational emissions and health risk assessment.

**EJC-33 Response:**

The comment cites a document prepared by the group Human Impact Partners discussing Health Impact Assessments (HIAs) as establishing a legal requirement. HIAs are distinct from Health Risk Assessments (HRAs), which are prepared for CEQA analyses. An HIA includes analysis of impacts on the determinants of health, such as housing, transportation, employment and income, noise, air quality, access to goods and services, access to parks, and social networks. HRAs are typically used to analyze discrete relationships between a single environmental contaminant (e.g., diesel) and a single health outcome (e.g., lung cancer). The purpose of CEQA is to present an evaluation of potential harmful impacts and mitigate these impacts to a less-than-significant level, or to the greatest extent feasible. CEQA, unlike NEPA, does not concern itself with assessments of beneficial impacts. This is appropriately addressed in statements of overriding considerations, if necessary.

The impact that is discussed is air quality, and an HRA is the appropriate tool along with emissions inventories to assess the impacts to air quality from a project. The use of HIAs is not required nor common practice in EIRs under CEQA, and neither the comment nor the cited document suggests why one would be required here. For a discussion of impacts to disadvantaged communities, refer to Global Response 2: Community Engagement and Environmental Justice.

**EJC-34 Response:**

The Draft EIR extensively discusses consistency with WOCAP, including in the ways identified by the comment. The Draft EIR did not evaluate consistency with the remaining strategies in the WOCAP because they are not Port-related or Proposed Project-related. The comment does not identify any specific strategy that should have been discussed in more detail in the Draft EIR. For a discussion of impacts to environmental justice and further discussion of AB617 and the WOCAP, please refer to Global Response 2: Community Engagement and Environmental Justice.

**EJC-35 Response:**

Please refer to Global Response 8: City of Oakland Plans and Policies for a discussion of the relevance of City of Oakland plans and policies. For a discussion of impacts to environmental justice, refer to Global Response 2: Community Engagement and Environmental Justice.

**EJC-36 Response:**

For a discussion of community engagement activities conducted by the Port and USACE and a discussion of impacts to environmental justice, please refer to Global Response 2: Community Engagement and Environmental Justice. For a discussion of air quality mitigation, refer to Global Response 7: Air Quality Mitigation Measures. The comment does not suggest any specific mitigation measures that should be adopted.

**EJC-37 Response:**

Please refer to Global Response 5: Operational Impacts, and Global Response 2: Community Engagement and Environmental Justice.

**EJC-38 Response:**

Please refer to responses to comments EJC-39 through EJC-42.

**EJC-39 Response:**

The project description in the Draft EIR did not omit any integral components of the full project, and the Proposed Project is not expected to result in increased truck traffic or cause more truck congestion on local roads during operations. Please refer to Global Response 1: CEQA Process and Global Response 5: Operational Impacts.

CEQA Guidelines Section 15064.3 addressing VMT analysis states "for the purposes of this section, "vehicle miles traveled" refers to the amount and distance of automobile travel attributable to a project." As noted in the Technical Advisory on Evaluating Transportation Impacts in CEQA (Office of Planning and Research 2018), the term "automobile" refers to on-road passenger vehicles; specifically, cars and light trucks. Per the Technical Advisory and as noted in Section 13.4.2 of the Draft EIR, heavy-duty truck VMT is not required to be evaluated. The Proposed Project is an infrastructure construction project that is not a long-term generator of trips beyond those necessary for construction, unlike land development projects, which can have a substantial change in travel demand (i.e., increase VMT) post-construction. Even if heavy-duty trucks were to be considered, as explained under Global Response 5: Operational Impacts, the Proposed Project would not result in increased heavy-duty truck traffic related to cargo transport. Additionally, as stated in Draft EIR Section 13.4.3, the number of worker commute trips associated with future maintenance dredging events are not expected to change from baseline conditions. Therefore, the Proposed Project would not result in an increase in VMT because it would not result in a permanent increase in the amount and distance of automobile (i.e., passenger vehicle) travel, and the Draft EIR's transportation analysis did not violate CEQA guidelines. Please also refer to responses to comments EJC-89 through EJC-109 addressing the PSE Report.

**EJC-40 Response:**

The Draft EIR evaluated potential conflicts with WOCAP under Impact AIR-1, and the analysis considered WOCAP's circulation-related strategies for reducing exposure in West Oakland to pollutant emissions. Draft EIR Table 3.3-7 outlines the Proposed Project mitigation and features that align with WOCAP strategies applicable to the Proposed Project, including Strategy #26 for truck parking and container staging, #39 for truck routes, and #43 for studying the effects of truck traffic; the Draft EIR did not find the Proposed Project to be inconsistent or conflict with these strategies. Please also refer to Global Response 2: Community Engagement and Environmental Justice, addressing the Draft EIR's analysis related to WOCAP.

The comment references plans described in the Draft EIR Transportation Regulatory Setting (Section 3.14.2) related to goods movement (San Francisco Bay Area Goods Movement Plan), safety and emergency access (Emergency Response Plan for the San Francisco Bay Area), and parking (West Oakland Truck Management Plan); however, it does not identify specific plan policies that were not considered in the Draft EIR. The Draft EIR acknowledged under Impact TRA-1 that the Proposed Project's construction traffic, specifically delivery and dump truck traffic, if not properly managed, could impact local roadway, bicycle and pedestrian circulation, and conflict with local plans, ordinances, or policies addressing the circulation system. This was identified as a potentially significant impact, and with Mitigation Measure TRA-1, requiring development and implementation of a Traffic Control Plan during construction, would be reduced to a less-than-significant level. As noted in Mitigation Measure TRA-1, the Traffic Control Plan would include measures to minimize impacts on vehicle, bicycle, and pedestrian circulation, maintain emergency access, and have designated

parking. Furthermore, potential impacts to emergency access and safety (including navigational) were analyzed under Impacts TRA-2 and TRA-3, respectively. As explained in Global Response 5: Operational Impacts, the Proposed Project would not in result operational traffic impacts, and therefore would not conflict with plan policies related to goods movement, safety and emergency access, or parking during Proposed Project operations.

**EJC-41 Response:**

The Draft EIR determined that the Proposed Project's impacts on local roadway, bicycle, and pedestrian circulation would be reduced to a less-than-significant level with implementation of a Traffic Control Plan as required by Mitigation Measure TRA-1, and the transportation mitigation does not itself cause any significant and unavoidable impacts; therefore, no additional or alternative mitigation is required. The comment does not suggest any specific criteria or performance standards that would further reduce the Proposed Project's transportation impacts.

Furthermore, in response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site. This equates to a 54 percent reduction in total construction truck trips from the Proposed Project in Oakland and Alameda as outlined in the Draft EIR, which would further reduce the already less-than-significant transportation impacts.

In addition, in consideration of the City of Alameda's comments, Mitigation Measure TRA-1 has been revised to include identification of construction staging areas; a designated point of contact for addressing inquiries and complaints pertaining to constructed-related traffic; and a measure for making information regarding the Proposed Project's schedule and associated truck traffic available to the City of Alameda and other interested parties, which would include proponents of other projects, as well as to the public, by posting on the project website.

**EJC-42 Response:**

As explained under response to comment EJC-39 and Global Response 5: Operational Impacts, the Proposed Project would not result in operational traffic impacts, and therefore would not contribute to cumulative impacts during operations. Please refer to response to comment EJC-41 addressing the adequacy of Mitigation Measure TRA-1.

**EJC-43 Response:**

The Proposed Project did evaluate reasonably foreseeable increases in GHG emissions. Construction GHG emissions were evaluated as well as waterside GHG emissions, except for anchorage. CEQA requires evaluation of the incremental change compared to baseline emissions. The incremental change for the Proposed Project operations used an allowed beginning of operational year as its baseline; therefore, the key operational differences are the waterside operations, including maintenance dredging. As described for air quality, landside operations would not be meaningfully different between the Proposed Project operation and No Project operation. As discussed earlier, anchorage emissions tend not to be tied to vessel sizes but influenced by other factors. Therefore, the meaningful GHG emissions for the Proposed Project to evaluate the incremental impact was evaluated. Please refer to Global Response 5: Operational Impacts for further discussion of these issues.

The results of the operation emissions indicated that there would likely be a net reduction in GHG emissions for operation when compared to the appropriate baseline selected. Furthermore, the GHG emissions were evaluated in context of being consistent with the goals and policies of SB 32 and other state goals as well as the latest Scoping Plan, which outlines how the state will achieve its GHG goals while still allowing for planned growth, including growth at the Port. Transportation sector regulations and future measures designed to achieve the emission reductions assumed as part of the Scoping Plan are applicable to the Proposed Project operations, including truck efficiency, low-carbon fuel standard, at-berth regulation, commercial harbor craft regulations, transition to ZEV and vessels, transitioning and enhancing electrical and alternative fuel infrastructure, and decarbonization of the electricity supply. These measures would result in reduction of operational GHG emissions associated with the Proposed Project. These regulations would reduce GHG emissions for both the Proposed Project and No Project scenarios. For a discussion of the Port's path to zero emissions in its 2020 and Beyond Plan refer to Global Response 3: Zero-Emissions Seaport. The majority of GHG reductions come from efficiency improvements and reduction in emission factors.

The commenters cite statements contained in the Port's Technical Memorandum MAQIP Update: Emissions Forecast and Potential Additional Reduction Strategies adopted in July of 2018 (MAQIP Update). The first statement: "Simply stated, if the cargo throughput doubles, this analysis assumes the source category activity will also double" is taken out of context in a general explanation of how emissions inventories work. For the analysis in the MAQIP Update, this statement conveys an inaccurate impression of the key assumptions used in the analysis that preserves a constant ratio of source activity for OGVs, tugs, trucks, cargo handling equipment, and locomotives to a given amount of cargo that passes through the Port represented as the TEU. The basis of the MAQIP Update inaccurately assumes that the number and hours of activity for a source such as OGVs and cargo handling equipment changes at the same rate as TEU cargo activity changes. Therefore, as TEU doubles, each source category activity is inaccurately assumed to double. Table 3.1-1 of the Draft EIR shows that in future years, fewer but larger ships (Proposed Project) move the same amount of cargo as a greater number of smaller ships (No Project). In addition, Table 2.3-1 of the Draft EIR shows a decreasing trend in the number of total vessel calls to move a relatively similar amount of cargo (fluctuating between 2.3 and 2.5 million TEU per year). Therefore, the statement that as TEU doubles, OGV activity doubles, is incorrect. In fact, the detailed analysis results for the Proposed Project include an increase in larger ships and a decrease is total vessel calls to move similar amount of cargo per year; thus, the overall OGV activity to handle double the throughput is less than double. Therefore, this statement in the MAQIP update is over-simplified and outdated

Similarly, the second statement from the MAQIP Update: "growth outpaces the emission reductions achieved by control strategies resulting in . . . increases in $CO_2$ emissions" is outdated because the MAQIP Update later describes potential additional strategies that can be implemented to reduce emission factors from sources that are technologically feasible. Many of these strategies shown in the MAQIP Update Table 2.4 are in the process of being implemented as required under state regulation and/or Port electrification projects and grants. This includes commercial harbor craft engine replacements as required under the 2023 Commercial Harbor Craft Regulation updates, updates to Port drayage trucks, and electrification of the Port of cargo handling equipment and trucks. Thus, this statement in the MAQIP is out of date as additional strategies have been enacted.

The commenters present information on increased cargo movement seen in 2021 during the global pandemic. Relying on these numbers is misleading, because they are not representative of traditional movements in the cargo handling supply chains, but rather represent anomalous shifts that occurred during the pandemic.

**EJC-44 Response:**

The comment makes certain assumptions about increasing need for shore power and crowding that are not an impact of the Proposed Project. Instead, the Proposed Project is intended to increase efficiencies and therefore should alleviate some of the concerns raised. It is also reasonable for the Port to rely on the applicable regulatory requirements, and that those requirements will be complied with given success of shore power use at the Port post-pandemic. The Port continues to find new ways to provide shore power at the Seaport so all vessels subject to the at-berth regulation have an opportunity to plug in. This includes plans for providing mobile shore power as well as finding ways to ensure vessels not subject to the at-berth regulation can still access shore power. Currently, a vessel exceeding 1,210 feet in length is restricted from using the Inner Harbor Turning Basin and can only dock on its port (left) side with its bow (front) of the vessel facing east. With the Proposed Project, such a vessel may use the widened turning basin to allow flexibility to dock on its port or starboard (right) side. The importance of this additional flexibility regarding shore power use is because some vessels are not constructed or retrofitted to connect to shore power on their port side. At times mechanical and equipment failure and breakdowns occur that only allow a vessel to connect to shore power on one side. Therefore, the Proposed Project would assist in providing vessels more opportunities to use shore power by reducing restrictions in its availability. In addition, with a vessel docked starboard side at the Inner Harbor with its bow facing west can more readily depart, which allows the berths to be more readily available for the next vessel. This and other efficiencies from the Proposed Project would alleviate perceived concerns regarding overcrowding. In addition, because fewer vessels calls are expected with the Proposed Project, they would call with greater schedule certainty, which allows for greater efficiencies landside because marine terminals would be able to better plan for their arrival (refer to Draft EIR, Section 2.3.2. Landside, Surge Cargo Movement).

The Port's statistics available on their website regarding shore power include the percentage of vessels that used shore power regardless if required under the at-berth regulation or not. In the past, several types of vessels and vessel call situations were exempt from the emission control requirements of the at-berth regulation. the overall vessel call shore power use percentage was lower. Under the current at-berth regulation, that has changed.

A recent audit by CARB of the at-berth regulation for the Port of Oakland terminals and vessels found that the vessel fleets and terminals at the Port of Oakland are generally 95 percent compliant with the current at-berth regulation, which is consistent with the expectations in the Draft and Final EIRs.[9]

**EJC-45 Response:**

Refer to Global Response 8: City of Oakland Plans and Policies for a discussion of applicability of Oakland 2030 Equitable Climate Action Plan. The Port has developed its own plans for

[9] Email correspondence from Angela Csondes, CARB Air Resources Supervisor I to Tracy Fidell, Port of Oakland Senior Maritime Project Administrator, regarding the Port of Oakland's 2024 At Berth Regulation compliance rate, January 31, 2025.

establishing a zero-emissions Seaport in its 2020 and Beyond Plan described in Global Response 3: Zero-Emissions Seaport. The commenter misconstrues the differences in the necessary infrastructure required to use alternative and electric equipment and trucks, as well as the different types of trucks and equipment used in construction versus Port operations. Refer to Global Response 7: Air Quality Mitigation Measures, for a discussion of zero-emission equipment and vehicle feasibility.

**EJC-46 Response:**

The mitigation measure proposed for construction equipment is patterned after the Air District's recommended threshold, which has been adapted for measures relevant to the Proposed Project's construction, and enhanced by providing performance measures that are lacking in the Air District's measures. A typical fleet has a mix of ages of equipment and generally replaces only a portion of their fleet in any given year. Current regulations prohibit the addition of certain types of vehicles and equipment such as Tier 1 and Tier 2 engines that can be added to an existing fleet. The current regulations also require certain pieces of equipment and trucks to be retired or replaced as a percentage of the fleet over time to meet specified emission controls or ZEV specified in the regulations. This means that an equipment fleet that is compliant with the regulations has a mix of equipment emission technologies that improves over time and is not immediately 100 percent ZEV. The commenter misconstrues the use of drayage trucks for construction. The types of trucks that would be used for construction are not drayage trucks. Refer to Global Response 7: Air Quality Mitigation Measures for a discussion of zero-emission equipment and vehicle feasibility. In discussing the mitigation measure part for encouraging and providing carpools, shuttle vans, transit passes and or secure bicycle parking for construction workers. the commenter stated that they are unclear as to how this would function for construction crews with their equipment and vehicle fleets. For construction projects during staging and project ramp up, the heavy-duty construction equipment arrives on trucks or barges to the project site. Once on site, this equipment stays on site. The workers who would operate these pieces of equipment would commute daily to and from the project site. Trucks and their drivers may or may not arrive on site in the truck or travel to a site where the truck is staged. Because it is unknown exactly where the construction workers would be, the feasibility of different commute options would be variable and it is speculative to predict which mechanisms would be used and are feasible; however, this mitigation measure requirement means that the project contractor would be required to submit its plan for commuting to lower GHG emissions and justify the feasibility of these measures. The commenter does not understand how handling demolition debris and efficient water use relates to GHG emissions. Demolition debris that is sorted and recycled rather than going to a landfill reduces GHG emissions and the embodied energy in these recycled materials. Efficient water use reduces GHG emissions, because there are indirect GHG emissions associated with water use.

Please also refer to Global Response 5: Operational Impacts.

**EJC-47 Response:**

The Draft EIR Energy Section 3.6 gives a detailed discussion of energy resources and their use for the Proposed Project. Energy includes both fossil fuel and electricity sources. Allowing safer and more efficient vessel calls by larger vessels once the turning basins are complete would result in decreased per capita energy consumption, because the newer and larger vessels are more fuel efficient. The Proposed Project is decreasing the reliance on fossil fuels by requiring

electrical dredgers during construction of the turning basins. Therefore, this is working toward decreasing reliance on fossil fuels. Although this project does not have any renewable energy sources as part of its components, these are under consideration for the Port under its 2020 and Beyond Plan. Refer to the discussion for Impact ENE-2 for more information regarding the Proposed Project and renewable energy. In summary, all the criteria mentioned have been addressed in the Draft EIR. Please also refer to Global Response 3: Zero-Emissions Seaport regarding the Port's commitment to becoming a zero-emissions Seaport.

**EJC-48 Response:**

The comment's characterizations of the Draft EIR are incorrect. The Draft EIR did not assume cargo volumes would stay the same (unchanged from current volumes) under the Proposed Project, rather the rate of cargo growth would be the same under the Proposed Project and No Project scenarios. The Draft EIR reported fossil fuel and electricity consumption for construction and waterside operations, excluding at-berth, in Tables 3.6-4 and 3.6-5, and discussion of Impact ENE-1 for maintenance dredging. The Draft EIR states on page 3.6-17, "These larger vessels may require more power and time while at-berth than smaller vessels, and therefore would increase the electricity and potential peak load of electricity at the Seaport while at-berth compared to the No Project fleet. As electrification increases, Seaport operations would also continue to increase energy consumption as the Port implements its 2020 and Beyond Plan, which lays out a strategy to achieve future zero emissions, with electrification as the primary pathway toward zero emissions. The Plan includes substantial future investment in energy related infrastructure and purchasing of zero-emission vehicles and equipment." The discussion goes on to state that this impact is significant because it can affect local and regional energy supplies and infrastructure, and may result in brownouts if adequate electricity generation during peak demand is not available.

Please refer to Global Response 5: Operational Impacts and response to comment EJC-98.

**EJC-49 Response:**

Please refer to Global Response 1: CEQA Process, for a discussion of how the Proposed Project relates to other ongoing and future projects at the Port of Oakland. Please refer to Global Response 5: Operational Impacts, for a discussion of operational impacts and growth inducement. The Proposed Project's impacts in context with other projects are evaluated in the Draft EIR's cumulative effects section.

**EJC-50 Response:**

Refer to response to comment EJC-23.

**EJC-51 Response:**

Refer to Global Response 5: Operational Impacts for further details about landside operations with and without the Proposed Project.

As stated in Section 3.6.3, the Draft EIR's method of analysis evaluated six categories of potential energy-related environmental impacts as outlined in Appendix F of the CEQA Guidelines. Impacts ENE-1 and ENE-2 address all six of these criteria. The widening of the turning basins would create efficiencies in operations, which alone should create efficiencies in energy use. For example, a ship that can be more quickly and efficiently turned would use less energy in that process. And once turned, the ship would be able to more quickly plug in to shore

power. Furthermore, Impact ENE-2 does evaluate the Project's consistency with plans that address renewable energy. The Proposed Project does not impede the Port from installing other renewable energy or battery storage in the Seaport landside.

The majority of energy demand created by the Proposed Project is related to construction, as discussed in Sections 3.3 and 3.6 of the Draft EIR. As explained in more detail in Global Response 7: Air Quality Mitigation Measures, MM-AIR-1 requires the use of hybrid and zero-emission equipment to the extent feasible, based on commercial availability of such equipment. Therefore, Proposed Project construction has incorporated renewable energy and maximized energy efficiency.

At buildout, the Proposed Project would not increase overall energy demand. Because the Proposed Project does not include construction of buildings or other stationary structures, it is not feasible to incorporate solar panels or other forms of renewable energy for Proposed Project operation.

Furthermore, the analysis does discuss the Proposed Project's overall energy use. Mitigation is incorporated to reduce potentially significant energy impacts to a less-than-significant level. The comment does not identify why additional project changes would be required to conserve additional energy, nor does it identify any feasible ways to do so that are not already discussed.

**EJC-52 Response:**

Please refer to Global Response 5: Operational Impacts, for a discussion of operational impacts and growth inducement. The Draft EIR Energy section evaluated the Appendix F criteria and noted that there was a potentially significant impact to peak electricity demand. This was noted for construction and operation. During construction, Mitigation Measure ENE-1 requires electrical dredgers to switch to diesel until the peak electricity demand ceased. Similarly, the vessels calling the Port during operation do stop using shore power if similar peak electricity demand events occur as allowed for in CARB's most recent at berth regulation. The need for vessels to stop using shore power has occurred in the past, and will likely continue to occur, because it was explicitly added in the most recent regulatory changes to the at-berth regulation.

**EJC-53 Response:**

The Proposed Project is to increase the size of the turning basins and does not include all the infrastructure and equipment changes that will need to take place as the Port heads toward a zero-emission Seaport. Mitigation Measure AIR-1 requires use of zero-emission and hybrid-powered construction equipment, to the greatest extent possible. Please refer to Global Response 3: Zero-Emissions Seaport regarding the Port's 2020 and Beyond Plan, which outlines its path toward zero emissions. The Sustainable Freight Action Plan is the most relevant plan and more recent plan regarding energy and zero emissions for the Seaport operations, and was discussed in Impact ENE-2. Refer to Global Response 8: City of Oakland Plans and Policies, for a discussion of applicability of Oakland 2030 Equitable Climate Action Plan.

**EJC-54 Response:**

Please refer to responses to comments EJC-55 through EJC-64.

**EJC-55 Response:**

The comment incorrectly characterizes the analysis of impacts on biological resources in the Draft EIR. The analysis is not based on the premise that the aquatic habitat in and immediately adjacent to the proposed turning basin widening footprints is devoid of aquatic wildlife. The Draft EIR analysis accounts for dredging during the in-water work windows as well as the ability of special-status wildlife (if present) to avoid temporarily degraded areas of habitat. The Draft EIR analysis under Impact BIO-1 describes how adherence to the work windows, as proposed, would avoid impacts to salmonids and Pacific Herring because dredging would be conducted when these species are less likely to be present. Based on knowledge of fish habitats and monitoring data collected by the California Department of Fish and Wildlife, there is a low likelihood of Longfin Smelt occurring in Oakland Harbor. Green Sturgeon may be present in Oakland Harbor during the in-water construction period, but only in low densities. Juvenile and adult Green Sturgeon are mobile enough to avoid active dredging areas. The analysis further noted that given the abundance of suitable habitat in the surrounding waters of the Bay, special-status fish, birds, and marine mammals are expected to avoid localized areas of high turbidity during dredging, and would forage in other areas of the Bay.

The Draft EIR also analyzed noise impacts to marine mammals (including Pacific harbor seal, California sea lion, and harbor porpoise) under Impact BIO-1, and indicated that noise from dredging activities is comparable to ambient noise from shipping vessels, and therefore is not expected to cause harassment of marine mammals. The commenter's referenced Todd et al. paper on the effects of dredging on marine mammals indicates that based on existing literature, it is difficult to attribute specific dredging noise effects on marine mammals because shipping activity and other ambient industrial noise sources are often present where dredging is occurring; such is the case for ambient conditions at the Seaport. The Proposed Project is in a highly disturbed area with respect to underwater noise. In addition to existing noise from Seaport vessel traffic, water transit vessels (ferries), U.S. Coast Guard vessels, and motorized recreational vessels use the waters in and around Oakland Harbor; annual maintenance dredging is also an existing contributor to the underwater noise environment at the Seaport. Because marine mammals forage over large areas of the Bay, they can avoid areas of temporary noise disturbance as well as localized areas of increased turbidity from dredging operations. San Francisco Bay is naturally turbid, and in the Seaport area, propeller wash from vessel traffic contributes to elevated ambient turbidity levels. The Todd et al. study states that "sediment plumes are generally localized, and marine mammals reside often in turbid waters, so significant impacts from turbidity are improbable." The study further states that turbidity is unlikely to have a substantial direct impact on marine mammal foraging in naturally turbid environments because they use other senses, not solely vision, for foraging. This is consistent with the Draft EIR determination that marine mammals would not be substantially affected by the turbidity generated by the Proposed Project.

The comment asserts that the analysis of dredging impacts is inadequate because of an inappropriately narrow geographical scope and poorly defined project description; however, the comment does not specify what dredging impacts the Draft EIR did not analyze. The Proposed Project would only involve dredging to expand Oakland Harbor's Inner and Outer Harbor Turning Basins, not dredging in other locations; and as described in the biological resources and water quality impacts analyses, prior studies of dredging activities have shown the impacts to aquatic habitat during dredging to be temporary and localized to the immediate dredging area.

**EJC-56 Response:**

The Draft EIR did not analyze impacts related to ship strikes of marine mammals because large container vessels are already visiting the Seaport, so this is an existing condition that would continue with or without the Proposed Project. The commenter suggests large vessels are those that are equal to, or greater than 80 meters (or approximately 263 feet). In 2023, all container vessels that visited the Port were greater than 80 meters long and could be considered large under this criterion. Therefore, as the comment suggests, risks of whale and vessel encounters is not exclusive to ULCVs. In fact, several studies and reports (including those cited by commenter) have found that vessel speed is the primary risk factor for whale strikes and related whale fatalities. As supported by commenter's reference material (Dorman, et al.…Final Report) slow speed measures have been shown to reduce the risk of fatal vessel strikes on large whales and Vessel Speed Reduction (VSR) measures are a commonly used management tool. A VSR zone (10 knots or less) was implemented in 2012 for vessels 300 gross tons or greater (includes container vessels) transiting in and out of San Francisco Bay. This VSR zone also includes a designated International Maritime Organization Traffic Separation Scheme to organize the movement of vessels. In 2013, the approach Traffic Separation Scheme lanes were relocated and redefined to reduce risk of navigational safety and to reduce whale/vessel co-occurrence. Similarly, Bar Pilots navigate container vessels to/from the offshore pilot station and in the Bay at reduced speeds. Generally, larger container vessels require more time and distance to slow and stop and operate at lower speeds in confined areas than smaller container vessels. The Proposed Project accommodates larger container vessels and results in a decrease of total container vessels to service the same amount of cargo throughput. Therefore, the Proposed Project may in turn reduce (not increase) the likelihood of a container vessel striking a marine mammal in San Francisco Bay. Therefore, the Proposed Project would not have an impact related to increased marine mammal ship strikes.

In addition, advisory councils and work groups (to which the Port offers support or is a member) have and continue to discuss, recommend, and implement processes whereby the co-occurrence of large vessels and whales do not result in negative outcomes. The Port supports the Protecting Blue Whales and Blue Skies Incentive Program, which aims to motivate high cooperation with VSR requests. Most recently, the Port participated in the regularly occurring San Francisco Bay Harbor Safety Committee Marine Mammal Working Group (first in the nation), which proposed and received unanimous committee approval, to add a new section in the San Francisco Harbor Safety Plan to include the National Oceanic and Atmospheric Administration's Marine Mammal Guidelines. Dynamic reporting of whale sightings is being provided to the United States Coast Guard (USCG) and National Oceanic and Atmospheric Administration through the free Whale Alert, and San Francisco Bay vessel traffic service monitors whale sightings and provides live updates to all waterway users regarding nearby sighted whales (especially container vessels).

**EJC-57 Response:**

The Draft EIR did not analyze impacts related to increased noise impacts on aquatic species because large container vessels are already visiting the Seaport, so this is an existing condition that would continue with or without the Proposed Project. Sources cited by the commenters note that operational practices, such as reduced speed, effectively reduce noise from container vessels. As noted in the previous response, the Proposed Project would result in a reduction of the total number of container vessels delivering cargo to the Seaport, and larger ships require more time

to slow and stop and generally are operated at lower speeds in confined areas than smaller vessels. Therefore, because there would be fewer vessel calls and the larger vessels are operated at lower speeds, the Proposed Project is not expected to introduce significantly more noise into the marine environment.

Also, the Proposed Project is in a highly disturbed area with respect to underwater noise. In addition to existing noise from Seaport vessel traffic, water transit vessels (ferries), U.S. Coast Guard vessels, and motorized recreational vessels use the waters in and around Oakland Harbor. The Kaplan and Solomon study cited in the comment notes that "small [typically recreational] vessels can produce nearly continuous noise when they occur at high density in coastal waterways and have been shown to affect shallow-water soundscapes in significant ways." These sources would continue to contribute to ambient underwater noise levels in the Bay with or without the Proposed Project.

**EJC-58 Response:**

The Draft EIR analysis of pile-driving sound effects on fish does not rely solely on an assumption that fish would disperse to avoid physical injury from pile-driving. The analysis under Impact BIO-1 indicated that with use of a bubble curtain or similar underwater noise reduction system, as proposed under Mitigation Measure BIO-1C, impact pile driving would not be expected to generate noise exceeding the physical injury threshold for fish. The bubble curtain and other measures proposed under Mitigation Measure BIO-1C are industry standard and agency-approved practices for reducing underwater sound impacts on fish and marine mammals from pile driving. As the federal lead agency, the USACE consulted with the National Marine Fisheries Service and United States Fish and Wildlife Service regarding the potential effects of the Proposed Project on special-status fish pursuant to Section 7 of the federal Endangered Species Act. Both agencies concurred with the determination that the Proposed Project is not likely to adversely affect fish species protected under the federal Endangered Species Act that may occur in the project area, including fish species that are also listed under state law.

**EJC-59 Response:**

The comment incorrectly assumes that an increase of larger vessels would correlate to an increased risk of oil spills in the future. The risk of an oil spill is influenced by a variety of conditions and factors specific to weather and sea conditions, port operations, navigable waterway particulars, and vessel-specific factors. Weather and environmental conditions such as wind and currents can make navigation challenging, especially in narrow turning basins. Vessel condition, age, and maintenance, including hull design and integrity, engines, and adherence to proper maintenance standards, are crucial for driving down the risk of an oil spill. Navigation and maneuverability in a port can also impact risk. The limited width of the existing IHTB and OHTB results not only in navigation inefficiencies, but may also increase the risk of groundings or allisions that could result in safety and environmental risks, such as oil spills.

Large vessels already call the Seaport, and terminal operators manage the loading and unloading of both large and small vessels today. The comment argues that simply the increase in calls from larger container vessels with additional oil results in more risk. However, considering the total vessel calls by ship type with their average fuel tank size, there would theoretically still be less total fuel transiting the Bay with the Proposed Project. Although it would be impossible to predict the exact volume of fuel at any moment across all the vessel calls, a rough approximate total amount of fuel can be achieved. Using a total fuel capacity of 1 million gallons for SPX,

1.5 million gallons for PPX, 2 million gallons for PPX1, 2.5 million gallons for PPX, 3.5 million gallons for PPX3, and 4.5 million gallons for PPX4 annually, 6,645.5 million gallons of fuel capacity would call at the Port under the 2050 No Project scenario, compared to 6,606.5 gallons of fuel under the 2050 Proposed Project scenario (Table G-19).

**Table G-19 Fuel Capacity by Vessel Size for the 2050 No Project and Proposed Project Scenarios**

| Vessel Type | Fuel Tank in Millions of Gallons | Vessel Calls- No Project 2050 | Total Annual Fuel- No Project 2050 | Vessel Calls- Proposed Project 2050 | Total Annual Fuel- Proposed Project 2050 |
|---|---|---|---|---|---|
| SPX | 1 | 149 | 149 | 52 | 52 |
| PPX | 1.5 | 126 | 189 | 26 | 39 |
| PPX1 | 2 | 518 | 1036 | 92 | 184 |
| PPX2 | 2.5 | 701 | 1,752.5 | 397 | 992.5 |
| PPX3 | 3.5 | 675 | 2,362.5 | 880 | 3,080 |
| PPX4 | 4.5 | 257 | 1,156.5 | 502 | 2,259 |
| **Total** | | **2,426** | **6,645.5** | **1,949** | **6,606.5** |

Furthermore, marine vessel diesel fuel use would also be less under the Proposed Project, at 12,665,542 gallons, compared to 13,964,768 gallons under the No Project scenario in the year 2050 (refer to Draft EIR Table 3.6-5). The comment's contention that the Proposed Project would result in more oil spill risks is unfounded.

Large vessels already call the Port, and the necessary number and size of tugboats to support them are already operating in the Bay. These large vessels are expected to continue calling the Port regardless of the Proposed Project. As a result, the Proposed Project is not expected to cause changes in the number and size of tugboats operating in the Bay. Therefore, commenter's assertion that the Proposed Project would directly increase the risk or severity of oil spills and other discharges is unfounded, and the risk of oil spills from tugboats would remain the same with or without the Proposed Project.

**EJC-60 Response:**

The work windows are an avoidance and minimization measure developed by regional experts and regulatory agencies. These programmatic work windows are based on presence/absence information for various sensitive species, and establish times and locations wherein maintenance dredging and disposal activities may take place without further consultation pursuant to the federal Endangered Species Act. Although the work windows were established for maintenance dredging projects, these work windows are often considered when evaluating potential project impacts associated with new dredging and other types of in-water work. All dredging and in-water construction activities for the Proposed Project would occur during the in-water work window for special-status salmonids (June 1 through November 30). As the federal lead agency, the USACE consulted with NMFS and USFWS regarding the potential effects of the Proposed Project on special-status species and regional wildlife. Both agencies have concurred with the

determination that the Proposed Project is not likely to adversely affect species protected under the federal Endangered Species Act that are known to occur or potentially occur in the Proposed Project area. This Final EIR Biological Resources Section (3.4) has been updated to reflect the completion of these federal Endangered Species Act consultations. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR. Working outside of these windows would require additional coordination with the regulatory agencies. The Draft EIR indicated maintenance dredging, which would be conducted in the future by the USACE, is typically scheduled to be completed during the in-water work window for special-status salmonids, and the USACE would consult with NMFS, as necessary, for maintenance dredging outside of this work window or applicable work windows for other species.

The work windows vary by species and geographic location in San Francisco Bay. Based on the Proposed Project construction activities and species known or with potential to occur in the Proposed Project area, the window for special-status salmonids (June 1 through November 30) is the most relevant work window for the Proposed Project. USACE consulted with USFWS on the Proposed Project, and USFWS has agreed with the determination concurred with the determination that the Proposed Project is not likely to adversely affect least tern; therefore, no additional mitigation is required. The Proposed Project is 1.5 miles away from the nearest least tern colony in Alameda, and the Proposed Project is not expected to result in "take" of least tern. The Alameda Colony prefers foraging in the shallows off Bay Farm Island and along the southern Alameda shoreline. This is documented in the 5-year least tern foraging study conducted for the Oakland Harbor 50-Foot Navigation Project. The USACE and Port restoration at the Middle Harbor Enhancement Area also supports some foraging that appears to be increasing. The deep waters of the turning basins do not support the common fish prey of the Alameda Colony.

**EJC-61 Response:**

Please refer to response to comment EJC-60. Commitment to working within these windows is documented in the federal Endangered Species Act consultations for the Proposed Project. The Draft EIR imposes feasible and enforceable mitigation to reduce potentially significant impacts to least tern to a less-than-significant level, particularly given the distance to the Alameda Colony and other manmade and natural barriers around the turning basins.

**EJC-62 Response:**

As described in the Project Description under Dredging in Section 2.5.3, dredging and dredged material transport over water would be conducted in a manner to minimize effects from suspended sediment. This includes use of an environmental bucket (a bucket equipped with rubber seals to minimize release of sediment during dredging), restrictions on excess water discharges from barges, and not overfilling transport barges. Both the Draft EIR biological resources and water quality impact analyses evaluated impacts related to resuspension of contaminants in the water column, and concluded these impacts would be less than significant with implementation of proposed mitigation measures. The Draft EIR biological resources impact analysis under Impact BIO-1 evaluated the potential effects of contaminant resuspension on special-status marine wildlife. Citing previous studies conducted for dredging activities, the analysis (Draft EIR page 3.4-24) indicated that direct short-term effects on sensitive fish by contaminants associated with dredging plumes have been shown to be minor. The analysis

further noted that given the abundance of suitable habitat in the surrounding waters of the Bay, special-status fish, birds, and marine mammals are expected to avoid localized areas of high-turbidity plumes during dredging, and forage in other areas of the Bay. To reduce potential exposure of marine wildlife to resuspended contaminants, Mitigation Measure BIO-1A would require use of silt curtains during in-water construction in areas where sediment contains chemical contaminants with potential to cause adverse water quality conditions, as determined through the pre-construction sediment quality characterization. Use of silt curtains would contain suspended sediment, including sediment that may contain elevated contaminant levels, to the immediate work area where it would resettle to the Bay floor.

Please also refer to response to comment EJC-64 specific to the Draft EIR water quality analysis.

**EJC-63 Response:**

Contaminant resuspension that may occur during dredging for the Proposed Project construction is not expected to interplay with climate change effects to result in increased effects to fish and wildlife species. The Avala et al. study cited in the comment was for a simulation period from 2005 to 2099. The study indicated projected mercury and PCB concentrations for the studied wildlife categories varied over time during the simulation period with sustained trends of increased bioaccumulation occurring toward the end of the century 2070-2099, which is approximately 40 years after the Proposed Project would be constructed. The comment does not raise any specific issue with respect to how climate change would affect the analysis between now and when construction is expected to be completed.

**EJC-64 Response:**

The Draft EIR Hydrology and Water Quality impact analysis (Section 3.10.4) under Impacts HYD-1 and HYD-5 acknowledges that the impact to surface water quality as a result of contaminant resuspension during dredging would be potentially significant. This analysis considered existing sediment data available for the project sites and recent pore water sampling in the basin between Howard Terminal and Schnitzer/Radius Recycling. To reduce this impact to a less-than-significant level, the Draft EIR includes Mitigation Measures HYD-1, requiring use of silt curtains during in-water construction in areas where sediment contains chemical contaminants with potential to cause adverse water quality conditions, as determined through the pre-construction sediment quality characterization. The Draft EIR project description (page 2-33) states that a Water Quality Monitoring Plan would be developed, as required by project permits, that specifies sample locations, depths, constituents, and objectives during in-water construction work.

**EJC-65 Response:**

Please refer to responses to comments EJC-66 through EJC-73.

**EJC-66 Response:**

Section 15125 of the CEQA Guidelines states that the description of the environmental setting shall be no longer than is necessary to provide an understanding of the significant effects of a proposed project and its alternatives. Therefore, the Draft EIR Hazards and Hazardous Materials Environmental Setting (Section 3.9.1) described the environmental setting as relevant to the Proposed Project's potential to result in impacts under the CEQA Guidelines Appendix G evaluation criteria for hazards and hazardous materials. The analysis area for hazards and

hazardous materials impacts consisted of the areas where the Proposed Project's construction activities would occur: the Inner and Outer Harbor Channels and Turning Basins, landside portions of Howard Terminal and the Alameda Site, and Berths 10 and 26, along with the immediately adjacent areas and anticipated staging areas. These are the areas where the Proposed Project would have the potential to result in hazardous materials impacts from the routine use or an accidental spill of hazardous materials used in construction, or from ground-disturbing activities at Howard Terminal and the Alameda Site due to historical subsurface contamination at these sites. Therefore, including an exhaustive description of the contaminated sites and hazardous materials setting for all of San Francisco Bay in the Draft EIR environmental setting, as suggested by the comment, is not relevant to providing an understanding of the Proposed Project's potential impacts related to hazards and hazardous materials. Additional information regarding the Alameda Site, including the applicability of an existing land use covenant due to historical contamination and related necessary coordination with and approvals from DTSC, has been added in this Final EIR under the Hazards and Hazardous Materials Regulatory Setting, Section 3.9.2. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR. To the extent water quality in San Francisco Bay has been impacted by industrial activities in the region, those conditions are described in the Draft EIR Hydrology/Water Quality Environmental Setting (Section 3.10.1).

Regarding the conditions of sediment in the basin between Howard Terminal and Schnitzer Steel/Radius Recycling, the Draft EIR hazardous materials impact analysis (Section 3.9.4) described under Impact HAZ-1 that sediment testing would be conducted during the Proposed Project pre-construction engineering and design phase, and the results would be reviewed by the Dredged Material Management Office to identify appropriate placement site options based on the characteristics of the sediment and criteria for each placement location. Dredged sediment that does not meet the criteria for placement at a permitted beneficial reuse site would be hauled to an appropriate landfill. The testing, handling, removal, and disposal of the dredged sediment would be conducted in accordance with existing federal, state, and local regulations. The required compliance with the applicable regulatory acceptance criteria would ensure that the dredged material is managed in accordance with applicable federal, state, and local laws and regulations so that dredging and disposal of sediment from this basin would not create a significant hazard to the public or the environment related to the release of hazardous materials. Furthermore, the Draft EIR acknowledged under Impact HYD-1 that the Proposed Project has potential to degrade surface water quality during construction through the resuspension of contaminants when dredging in areas with elevated contaminant concentrations, and proposed Mitigation Measure HYD-1 to reduce this impact to a less-than-significant level. Mitigation Measure HYD-1 would require use of silt curtains during in-water construction in areas where sediment contains chemical contaminants with potential to cause adverse water quality conditions, as determined through the pre-construction sediment quality characterization, and as required by Proposed Project permits, such as the Water Quality Certification from the RWQCB.

**EJC-67 Response:**

The volume of dredged material (454,400 cubic yards) stated in Draft EIR Table 2.5-3 is the correct volume that was estimated to be suitable for beneficial reuse as cover material. The 157,000-cubic-yard volume cited in the USACE's Revised Draft EA was corrected to 454,000 cubic yards in the USACE’s Final EA (p. 146; Table 42).

Regarding disclosure of where dredged materials would be placed, as stated in Draft EIR Section 2.5.4, material to be excavated and dredged would be characterized (i.e., sampled and subjected to laboratory analysis) to determine whether it would be suitable for beneficial reuse (for the protection, restoration, or creation of aquatic wetland habitats) or would require disposal at a landfill. For the purposes of the Draft EIR, the anticipated landfills to accept material from the Proposed Project include the Kettleman Hills Class I permitted landfill at 35251 Old Skyline Road in Kettleman City, California, and the Keller Canyon Class II permitted landfill at 901 Bailey Road in unincorporated Contra Costa County near Pittsburg, California; these landfills were identified as the Class I and Class II landfills nearest to the Proposed Project sites that are expected to have sufficient capacity at the time of the Proposed Project's construction. Similarly, the assumed beneficial reuse site is the Montezuma Wetlands Restoration Project at 1485 Collinsville Road, Birds Landing, in Solano County. These landfills and beneficial reuse site were determined to be the mostly likely locations for the receipt of the Proposed Project's excavated and dredged material based on information available at the time of the Draft EIR preparation.

In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. The Proposed Project has been revised in this Final EIR to reflect that material destined for a Class II (nonhazardous) landfill would be transported by barge to the Montezuma Handling Facility, consisting of a small portion of the Montezuma Wetlands Restoration site (at 1285 Collinsville Road, Suisun City, CA 94585, where it would be offloaded and put on trucks for transport to the Potrero Hills Class II permitted landfill, 17 miles from Montezuma Wetlands, instead of being transported by truck from the Proposed Project sites to the Keller Canyon Landfill. Please refer to Global Response 4: Reducing Local Truck Trips, for additional information.

This assumption regarding the Montezuma Wetlands Restoration Project as the beneficial reuse site was developed based on available information at the time of Draft EIR preparation for the beneficial reuse sites currently permitted in San Francisco Bay. The Port selected the Montezuma Wetlands Restoration Project as the most likely location to have capacity available for the cover- and noncover dredged material. This was also a conservative assumption as the farthest likely beneficial reuse site from the Seaport for the purpose of analyzing impacts associated with the transport of dredged materials, such as air quality and greenhouse gases. At the time of this Response to Comments and Final EIR preparation, the Montezuma Wetlands Restoration Project has capacity to accept 1.5 million cubic yards for foundation material and 15 million cubic yards for cover material. However, Draft EIR Section 3.9.1 identified additional candidate beneficial reuse sites, including the Cullinan Ranch and Restoration Project site in Napa and Solano Counties in the San Pablo Bay National Wildlife Refuge for wetland beneficial reuse, and the Eden Landing Ecological Reserve on the Hayward/Union City shoreline for upland beneficial reuse. Notably, dredged material has market value and is not considered waste in the same manner as the material that would only be suitable for a landfill, which creates an opportunity for competition amongst beneficial reuse site operators. Therefore, the possibility remains that another similarly situated, or perhaps even a beneficial site that is closer in proximity, may be available at the time of construction.

In summary, disposal and beneficial reuse locations could change during the project pre-construction engineering and design phase based on the results of the soil and sediment

characterization and Dredged Material Management Office review and approval, as well as other factors (cost and available facility capacity at the time of construction). For these reasons, the Port cannot state with absolute certainty in the EIR what amount of material would go to a particular beneficial reuse site or landfill. However, because the excavated and dredged materials would be transported to permitted facilities at similar or shorter distances than those assumed in the Draft EIR, a change in the landfill or beneficial reuse site would not be expected to materially change the findings of the Draft EIR. The handling and transport of dredged material was analyzed in the Draft EIR; and to the extent these activities would contribute to potentially significant impacts (e.g., air quality), mitigation measures were proposed to lessen or avoid impacts. Section 2.5.4 of this Final EIR has been updated to reflect Montezuma Wetlands Restoration Project's current capacity, explain why it remains a conservative assumption for the purpose of the environmental impact analysis, and note additional beneficial reuse sites that could be used. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5 and does not require recirculation of the Draft EIR.

**EJC-68 Response:**

As stated in Section 2.5.4 of the Draft EIR, a sampling and analysis plan would be developed and implemented prior to construction to characterize soils and sediment to be removed or exposed to inform proper management and disposal of such material during construction. The sampling and analysis plan would identify sampling locations in the areas to be excavated and dredged, sampling protocols, and the physical and chemical parameters for laboratory analysis of collected samples. The results of the laboratory analysis would be compared to specific acceptance criteria for a given beneficial reuse site or landfill to determine where the material may be placed. Subsurface conditions beneath both Howard Terminal and the Alameda Site have been impacted by historic industrial uses, and both properties are under the regulatory jurisdiction of the DTSC; therefore, sampling and analysis at Howard Terminal and the Alameda Site would be coordinated with DTSC.

The handling and disposal of waste, including hazardous materials, during construction would be performed in accordance with applicable laws and regulations described in the Draft EIR Hazardous Materials Regulatory Setting (Section 3.9.2). Under the California Hazardous Waste Control Act, DTSC regulates the generation, transportation, treatment, storage, and disposal of hazardous waste in California. The transportation of hazardous materials is also regulated by the U.S. Department of Transportation, Caltrans, and the California Highway Patrol. All hazardous and nonhazardous material requiring landfill disposal would be sampled and profiled for landfill acceptance prior to transport to a permitted landfill facility. Transport of the material would occur in covered trucks (refer to response to comment EJC-69). Hauling of material classified as hazardous would comply with all applicable laws and regulations and would be tracked using waste manifests. As described in the Draft EIR under HAZ-1, with required compliance with the numerous laws and regulatory oversight that govern the transportation, handling, and disposal of hazardous materials, the Proposed Project would not create a significant hazard to the public or the environment. Operation of the Kettleman Hills landfill was previously authorized by federal and state permits; therefore, analysis of the environmental effects of this facility's operation in the Proposed Project's EIR is not required. Kettleman Hills was identified as the Class I (hazardous) landfill nearest to the Proposed Project that is expected to have sufficient capacity at the time of the Proposed Project's construction. The landfill is more than 3.5 miles away from Kettleman City at a remote area on Highway 41.

**EJC-69 Response:**

Transport of excavated and dredged material would not result in releases that would have a significant adverse effect on the environment (refer to response to comment EJC-68). The only subsurface material anticipated to potentially be classified as hazardous waste requiring appropriate disposal at a Class I (hazardous) landfill are materials generated from landside excavation activities. Such materials would be excavated, and either directly placed onto trucks, or stored in stockpile(s) for loading onto a truck at a later time (Draft EIR page 2-31). Mitigation Measure AIR-1: Construction Air Quality Mitigation, requires soil piles to be watered twice per day, and all haul trucks transporting soil, sand, or other loose material off site to be covered. These measures would minimize the potential for fugitive dust to be generated at the construction site or during truck transport of excavated materials classified as hazardous waste.

Based on review of historical soil and sediment quality data, material classified as hazardous waste is not expected to be present in materials to be dredged—only in soils excavated landside as noted above. The Draft EIR (page 2-33) describes how dredged material not suitable for beneficial reuse would be placed at Berth 10 for rehandling prior to continued transport to a Class II (nonhazardous material) landfill. Dredged material would be loaded into a scow and transported to Berth 10; restrictions on overflow or decant water (excess water off of the dredged sediment) (Draft EIR page 2-33) would prevent discharges from dredged material during transit to Berth 10. When sufficiently dried, the material would be loaded onto trucks for transport to a Class II landfill; the trucks would be covered in accordance with Mitigation Measure AIR-1. With the Proposed Project revised in this Final EIR to include barging the majority of anticipated Class II nonhazardous waste from the landside excavation activities at Howard Terminal and the Alameda Site, Class II (nonhazardous) dredged material from the Inner Harbor may also be barged to Montezuma, rather than barged to Berth 10 for rehandling followed by transport via truck to a Class II landfill.

As described in the Draft EIR under Impact HAZ-1, hazardous materials may also be encountered during the demolition of existing buildings and utilities. Demolition activities that may disturb or require the removal of hazardous building materials are required to be inspected and/or tested for the presence of hazardous building materials. If present at concentrations above regulatory action levels, hazardous building materials must be managed and disposed of in accordance with the existing laws and regulations described in Section 3.9.2. With required compliance with the numerous laws and regulatory oversight that govern the transportation, handling, and disposal of hazardous materials, the Proposed Project would not create a significant hazard to the public or the environment from the removal, handling, transport, or disposal of hazardous building materials.

The comment does not identify any specific hazard that it believes is inadequately analyzed or addressed in the Draft EIR.

**EJC-70 Response:**

Conservative estimates for material that would either require landfill disposal (as nonhazardous or hazardous waste) or could be beneficially reused were derived from existing sediment quality data collected for the Oakland Harbor -50-Foot Deepening Project and previous subsurface investigations conducted at the project sites, along with review of geologic maps. Howard Terminal and the Alameda Site have undergone years of subsurface investigation and remedial activities under the oversight of DTSC, and remain under land use covenants subject to DTSC's

jurisdiction. The contaminant conditions at these sites remain from historical uses; no changes in land use or recent reported spills have occurred that would render the existing data insufficient for analyzing the Proposed Project's potential impacts. As described above, additional soil and sediment characterization would be performed prior to construction to confirm conditions, and the Draft EIR addressed potential impacts related to the hazardous materials anticipated to be encountered and determined they would be less than significant (please refer to responses to comments EJC-66 through EJC-68). Therefore, although it is possible that based on the soil and sediment characterization conducted during the pre-construction engineering and design phase, the volumes of excavated and dredged material requiring disposal at a Class I (hazardous waste) or Class II (nonhazardous waste) landfill may differ somewhat from the conservative estimates provided in the Draft EIR, the Draft EIR's findings related to the removal, handling, transport, or disposal of hazardous materials would not change.

**EJC-71 Response:**

The Draft EIR did analyze hazardous materials impacts related to future maintenance dredging under Impact HAZ-1 and determined these activities would not create a significant hazard to the public or the environment. The analysis states that future maintenance dredging of the widened areas of the turning basins would be confined to the removal of sediment accumulated since the last dredging event. Sediment deposited since the previous dredging activities would not be expected to contain elevated levels of contaminants, because sediment testing results for previous USACE maintenance dredging episodes indicate that, in general, dredged materials are suitable for aquatic disposal and do not require disposal at a landfill (USACE and RWQCB 2015). Future maintenance dredging events would be subject to sediment characterization and Dredged Material Management Office, and the testing, handling, removal, and disposal of the dredged sediment would be conducted in accordance with existing federal, state, and local regulations.

**EJC-72 Response:**

The Draft EIR (pages 2-37 and 2-38) describes how material to be excavated or dredged would be sampled and subjected to laboratory analysis prior to construction to determine whether it would be suitable for beneficial reuse, or would require disposal at a landfill (Class I permitted landfill [for hazardous material] or a Class II permitted landfill [for nonhazardous material]). In accordance with regulatory permitting requirements, this sampling and analysis effort would be completed prior to, not during, construction so that the Dredged Material Management Office can approve the beneficial reuse and disposal locations prior to removal of sediment. The Draft EIR analysis did not identify any potentially significant impacts related to hazardous materials, and therefore no mitigation is required.

Please also refer to responses to comments EJC-66 and EJC-68 through EJC-71.

**EJC-73 Response:**

Please refer to Global Response 7: Air Quality Mitigation Measures for a discussion of fugitive dust. Clean dredged material would be transported on scows to a beneficial reuse site while it is still wet, and would not be expected to generate fugitive dust. Nonhazardous dredged material that is temporarily stored at Berth 10 for some drying before further transport for disposal would still have high moisture content at the time of transport that would inhibit fugitive dust formation. Mitigation Measure AIR-1: Construction Air Quality Mitigation, requires soil piles to

be watered twice per day and all haul trucks transporting soil, sand, or other loose material off site to be covered. These measures would minimize the potential for fugitive dust to be generated at the construction site or during truck transport of materials to a landfill.

**EJC-74 Response:**

Baseline noise levels considered in the Draft EIR analysis include noise measurements collected in 2019 and 2021; the comment does not establish why these data do not reflect conditions at the time of the NOP. The 2019 data were included because it provides the noise environment at sensitive receptors north of Howard Terminal. Additional noise measurement data were collected in 2021 for additional sensitive receptors that could be impacted by the Proposed Project in support of a Technical Noise Memorandum that was used to inform analysis of noise impacts for the proposed turning basins widening under NEPA by the USACE. Although these noise measurements were collected prior to publication of the NOP, they are representative of the noise environment in the Proposed Project area at the time of NOP publication. The Proposed Project is in a developed urban area and no land use changes occurred in the Proposed Project area that added or removed substantial operational sources of noise that would significantly change the ambient noise conditions between the time the noise measurements were collected and the date the NOP was published.

Furthermore, CEQA allows a lead agency to define existing conditions with historic conditions and does not require all studies relied on to be undertaken at the precise time the NOP is filed. (CEQA Guidelines, § 15125(a)(1).) "[T]he date for establishing baseline cannot be a rigid one. Environmental conditions may vary from year to year and in some cases it is necessary to consider conditions over a range of time periods." (*Save Our Peninsula Committee v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 125.) The data relied on in defining existing conditions is "quintessentially a discretionary determination" of the lead agency (*Cherry Valley Pass Acres & Neighbors v. City of Beaumont* (2010) 190 Cal.App.4th 316, 337). Therefore, historic conditions and averaged conditions may be, and commonly are used to accurately establish the baseline for purposes of environmental review under CEQA. (*Ibid*. [historic water use appropriately used as baseline although more recent water use has decreased]; *San Francisco Baykeeper, Inc. v. State Lands Com.* (2015) 242 Cal.App.4th 202, 217-219 [no abuse of discretion in using 5-year average of mining volumes]; *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 657-659 [4-year average of mine operations found to be appropriate baseline, provided that assumptions are clearly identified].) As stated above, the 2019 and 2021 noise measurement data the Draft EIR relied on are representative of ambient conditions at the time of the NOP.

**EJC-75 Response:**

The Proposed Project includes dredging 24 hours per day, 7 days per week (24/7) to complete all the in-water construction for the Proposed Project within the in-water regulatory work window of June 1 to November 30 during each construction year; no other construction activity is proposed to occur at night. If dredging was not performed 24/7, then the overall project construction schedule would need to be extended either outside the in-water work window or into a fourth in-water construction window in 2030. Both of these options would extend the overall duration of construction-related impacts, including noise and air quality. Furthermore, conducting in-water construction outside the in-water work window could result in significant impacts on special-status fish species. Therefore, although limiting dredging to daytime only

would avoid significant noise impacts from nighttime dredging, it was not proposed as mitigation because it would result in increased duration or magnitude of other environmental impacts. The comment does not suggest any additional feasible mitigation that could be incorporated.

The Draft EIR, under Impact NOI-1, noted that because the proposed residences at Howard Terminal would be several stories in elevation in a tower structure, the use of a noise barrier would not be a feasible measure of further reducing nose levels. The comment does not suggest any additional feasible mitigation that could be incorporated. However, pursuant to Assembly Bill 1191 (the Oakland Waterfront Sports and Mixed-Use Project, Waterfront Access, Environmental Justice, and Revitalization Act), because the Port and Oakland Athletics did not enter into a binding agreement by January 1, 2025 for construction of the Waterfront Ballpark District at Howard Terminal project, that portion of Howard Terminal which had been proposed for development of the ballpark district project reverted to a Port Priority Use Area under the San Francisco Bay Plan as of that date (refer to Section 3.11, Land Use, in this Final EIR). Therefore, the Waterfront Ballpark District at Howard Terminal project is no longer considered reasonably foreseeable and has been removed from the cumulative impact analysis in this Final EIR. As a result, the proposed residences that were included as part of the Waterfront Ballpark District project have been removed as a sensitive receptor in this Final EIR, and no significant and unavoidable impact would occur at this location. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR. Although redevelopment may still occur at Howard Terminal, there are no specific development proposals that are reasonably foreseeable at the time of this Final EIR publication for the purpose of consideration of cumulative impacts. Any future development at Howard Terminal must be consistent with the Port Priority Use Area designation. The Port Priority Use Area does not allow for residential development.

Alameda's nighttime noise standard would only be exceeded during combined nighttime operation of the dredge and tug. During dredging operations, tugboats (the primary noise source for dredging) would be operated to either assist with anchor moves for the dredge barge or to haul scows in and out of the dredge area. There could be two to three anchor moves per day by smaller assist tugs, with each move requiring approximately 1 hour of tug operation. Larger tugboats would be used to haul scows in and out of the dredge area approximately every 12 hours, which would also result in approximately 1 hour of tug operation in the IHTB. Therefore, the combined operation of the dredge and tug would only occur for short periods each day during the 24-hour dredging operation, not all of which would occur during nighttime hours. Exceedances of Alameda's nighttime noise standard during nighttime dredging would only occur at Bay 37 residences within 725 feet of the dredging activity that are either: 1) first- and second-floor residences along the waterfront that would have direct line-of-sight to the dredging operation (which would exclude the residences closest to the Alameda Site warehouses because the warehouse structures would serve as a noise barrier for those residences); and 2) the first line of third floor residences within this distance with direct line-of-sight to the dredging activity. Nighttime dredging within 725 feet of these residences would occur intermittently over approximately 4 weeks during the 2029 in-water work window (June 1 – November 30). As noted under Impact NOI-1, Section 13 31.4(b) of the City of Alameda's Municipal Code establishes an interior CNEL standard with windows closed, attributable to exterior sources not to exceed 45 dB in any habitable room. Assuming a standard building attenuation level of 20 dBA (US HUD 2009), nighttime interior noise levels at the Bay 37 waterfront units would be

at most 35 dB, which would equate to a CNEL value of 42 dB. Therefore, although exterior noise levels would exceed the City's 50 dBA exterior nighttime standard, interior noise levels would be below the City's 45 dB CNEL standard and residents would not experience any significant impacts inside the residences.

**EJC-76 Response:**

As the comment notes, PPX3 and PPX4 vessels already travel through the Golden Gate Bridge and San Francisco Bay before reaching the Seaport; therefore, the presence of these vessels in the visual landscape is already part of the existing visual setting in the Bay. The comment references the visual impacts along the coast and to neighboring communities from increased larger class vessel visits, citing an article on shipping delays during the unusual circumstances of the COVID-19 pandemic that resulted in increased container vessel queues off the Southern California coast; however, the cited article makes no statements or assertions regarding visual impacts. Transiting vessels are only part of the viewshed from a given standpoint temporarily, not a permanent fixture obscuring views from that standpoint. Under the Proposed Project, the proportion of larger class container vessels compared to smaller class container vessels is projected to increase, and fewer total vessels calls would be required to deliver the same amount of cargo to the Seaport. (i.e., there would be fewer total container vessels transiting through the Bay compared to the No Project scenario). Because PPX3 and PPX4 vessels are part of the existing visual setting of the Bay and visual impacts from transiting vessels are temporary, the incremental increase in larger class container vessel visits to the Seaport under the Proposed Project would not result in substantial adverse effects on scenic vistas, scenic resources, or the visual character of the Bay.

**EJC-77 Response:**

Please refer to responses to comments EJC-81, EJC-82, Global Response 3: Zero-Emissions Seaport, Global Response 2: Community Engagement and Environmental Justice, and Global Response 8: City of Oakland Plans and Policies.

**EJC-78 Response:**

Refer to Global Response 8: City of Oakland Plans and Policies for a discussion of applicability of the Oakland General Plan.

**EJC-79 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice, for a discussion of WOCAP. Refer to Global Response 8: City of Oakland Plans and Policies for a discussion of relevancy of City of Oakland plans and policies to the Port. Please refer to response to comment EJC-103 addressing the PSE Report's assertions regarding toxic air contaminants and acute health impacts.

**EJC-80 Response:**

Refer to Global Response 8: City of Oakland Plans and Policies for a discussion of applicability of Oakland 2030 Equitable Climate Action Plan. The Port has developed its own plans for establishing a zero emissions Seaport in its 2020 and Beyond Plan described in Global Response 3: Zero-Emissions Seaport, summarizing the Port's efforts toward transitioning to a zero-emissions Seaport.

**EJC-81 Response:**

The comment asserts that land use policies in the West Oakland Community Action Plan should have been analyzed in the Draft EIR. Table 3.3-7 of the Draft EIR outlined the Proposed Project mitigation and features that align with WOCAP strategies that are applicable to the Proposed Project, including Strategy #19 for adopting an Electrical Infrastructure Plan for the maritime waterfront areas of Oakland. The Proposed Project does not involve any infrastructure improvements or operational changes related to shifting and enforcing truck routes and hours in the community (WOCAP Strategies #5 and #9) or removing barriers to adoption of zero-emission trucks (WOCAP Strategy #19); therefore, the Proposed Project would not conflict with these strategies. As noted in Table 3.3-7, the Proposed Project would install electrical infrastructure at Berth 26 and Howard Terminal that allows for electric dredging during the Proposed Project construction, which would be consistent with the Strategy #19 objective of adding electrical infrastructure at the Seaport.

**EJC-82 Response:**

The Draft EIR did not fail to analyze impacts to applicable land use plans; please refer to responses to comment EJC-81, Global Response 3: Zero-Emissions Seaport, Global Response 2: Community Engagement and Environmental Justice, and Global Response 8: City of Oakland Plans and Policies. Cumulative land use impacts are discussed in Section 4.12 of the Draft EIR. The cumulative impact analysis did not underestimate nor fail to consider land use impacts of the Proposed Project.

**EJC-83 Response:**

Please refer to response to comments EJC-84 and EJC-85. The Port will consider the Proposed Project's significant and unavoidable impacts, including cumulative impacts, in making a decision whether or not to approve the Proposed Project. As indicated under Global Response 2: Community Engagement and Environmental Justice, implementation of the Proposed Project would also have a beneficial impact of reducing emissions from Seaport operations by bringing cleaner ships to the Port, which would improve air quality for West Oakland and other communities surrounding the Seaport.

**EJC-84 Response:**

The Draft EIR did not fail to disclose and consider changes to Port operations; please refer to Global Response 5: Operational Impacts, and response to comment EJC-5. Therefore, the cumulative impact analysis did not underestimate nor fail to consider impacts of the Proposed Project.

**EJC-85 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport.

**EJC-86 Response:**

Please refer to responses to comments EJC-32, EJC-33, EJC-41, EJC-46, EJC-52, EJC-60, and EJC-61 addressing the referenced comments in Section IV of the letter pertaining to the specificity and enforceability of mitigation measures in the Draft EIR. To the extent that the comment suggests that the Port and/or contractors would not comply with the proposed mitigation measures or regulatory requirements, there is no evidence to support such a claim.

The Port has considered and responded to public comments regarding the Draft EIR's proposed mitigation measures as part of this Response to Comments appendix. For a discussion of community engagement activities conducted by the Port and USACE, refer to Global Response 2: Community Engagement and Environmental Justice. In addition, please refer to responses to comments Lee-1 through Lee-5 addressing U.S. Representative Barbra Lee's comment letter submitted to the Port.

**EJC-87 Response:**

Please refer to Global Response 1: CEQA Process and Global Response 2: Community Engagement and Environmental Justice. NEPA and CEQA are distinct and separate legal requirements under federal and state law, respectively. There is no legal obligation to combine review, and CEQA and NEPA impose different requirements for impacts analysis and mitigation. Furthermore, there are procedural and practical reasons the federal and state lead agencies in this instance decided to proceed independently, including the disparate timelines and content requirements between EA/FONSIs and EIRs.

**EJC-88 Response:**

Please refer to Global Response 1: CEQA Process.

**EJC-89 Response:**

Comment noted. Section 3.3, Air Quality, of the Draft EIR acknowledges existing conditions of the West Oakland community, including health risks considered as part of the environmental analysis.

**EJC-90 Response:**

Comment noted. As informed by subsequent responses to comments (refer to responses to comments EJC-91 through EJC-109), additional analysis for emissions and subsequent health risks is not warranted.

**EJC-91 Response:**

The modeling conducted to evaluate Proposed Project impacts to air quality, including dispersion modeling and the HRA, uses best available technology and sound scientific methodologies. The analysis of air quality impacts, including the HRA, is valid and supported by substantial evidence. Petitioners' suggestions to the contrary do not warrant revisions or additions to the EIR analysis.

The receptor grid used in the Proposed Project HRA had 31,092 receptors as described in Draft EIR Appendix C page 16. It was originally developed to contain the same model domain as WOCAP (7 kilometers by 5 kilometers) and then expanded for additional coverage in both Oakland and Alameda near the IHTB for a total distance covered by the HRA of 8.75 kilometers by 6 kilometers (5.4 miles by 3.7 miles), including the entire community of West Oakland and a portion of the City of Alameda. The receptor spacing used in this large modeling domain had areas of 20-meter, 50-meter and 250-meter spacing. Variation in receptor spacing is common in air dispersion modeling to ensure that the peak value is observed and to give a sense of the broader air dispersion impact. This is well stated in Appendix E of the Air District's 2022 CEQA Guidelines, which states "Refined modeling commonly uses Cartesian receptor grid, which is defined by an origin with receptor points evenly (uniform) or unevenly (nonuniform) spaced

around the origin… The grid should encompass the entire area of the project radius and be spaced appropriately to identify the most affected receptor…. Using a combination of fine, tightly spaced receptors near the source and coarse grid of receptors outside of the fine grid reduces the modeling time, but maintains sufficient resolution for identifying the maximum impact area." This guidance suggests a grid spacing of 50 meters for areas less than 325 meters from the project site. A detailed modeling domain in other areas was not necessary to capture the peak impacts from the Proposed Project's construction emissions. Had the modeling suggested that the peak health impact laid outside of the dense receptor modeling domain, additional modeling would have been warranted. This was not the case. The CEQA threshold is based on the highest impacted receptor and does not need to consider the impact of all individuals. The analysis appropriately placed receptors in the locations anticipated to be the highest area of impact from all of the Proposed Project's activities. There were no discrete receptors for schools, daycares, medical facilities, and other types of sensitive receptors other than residents that were in the peak area that would have had higher exposure factors than a residential child, which was used in the HRA to evaluate cancer risk. A search was done as part of the due diligence in determining the appropriate sensitive receptor was captured, which ensured that no other type of sensitive receptor was located near the project site that had a higher health impact than the resident child. Therefore, there was no need to further explicitly add additional discrete receptors to capture the maximum cancer risk, chronic HI, acute HI, and $PM_{2.5}$ concentration. The PSE Report's statement that the receptor grid spacing may not accurately capture impacts is unfounded and incorrect.

**EJC-92 Response:**

The commenter's suggestion that the Draft EIR should have conducted an HRA for operational impacts is without merit.

The Draft EIR adequately evaluated operational air quality impacts and concluded that the impacts would be less than significant; in fact, the analysis demonstrates that at Proposed Project buildout, emissions would be comparable to emissions under current conditions, and under projected future baseline conditions. The Draft EIR prepared an emission estimate of the water-based operations, excluding anchorage emissions. This was done because there was adequate information available to predict a difference in air emissions due to changes in vessel class and number of calls. Refer to Global Response 5: Operational Impacts, for a discussion regarding the evaluation of operational land-based emissions. In addition, as explained in Global Response 5, the Draft EIR's evaluation of operational emissions found there to be no material or identifiable difference between anchorage emissions for different vessel sizes, and therefore that such emissions would not be affected by the Proposed Project. The CEQA baseline used in the Draft EIR compared the first operational year 2030 and subsequent future years 2040 and 2050 to a No Project operational baseline in these years. Global Response 5 also includes a detailed response regarding the Draft EIR's evaluation of operational emissions, including operational emissions associated with maintenance dredging related to the increased size of the turning basins as well as the emissions of vessels transiting and maneuvering to and from the Seaport berths and at-berth emissions allowed by regulation and shore power energy use. Furthermore, in response to comments, the Port compared Proposed Project conditions to a current conditions baseline and again found no material difference in emissions.

Furthermore, health impacts associated with future conditions are reflected in the HRA conducted in 2019 as part of the WOCAP.

Because the growth in Port operations was already included in WOCAPs future scenarios, the Port has found the WOCAP's analysis to be a reasonable and accurate representation of the Seaport emissions, which includes the water and land-based sources. Regarding in-water seaport operations, as explained as part of Global Response 5: Operational Impacts, because the proportion of larger vessels (PPX2 through PPX4) compared to smaller vessels (SPX, PX, and PPX 1) is projected to increase, fewer total vessels calls would be required to service the same amount of cargo. Based on forecasts for future years (e.g., 2030, 2040, and 2050), as the proportion of larger class to smaller vessels increases over time, approximately 138 fewer vessel calls (year 2030) to approximately 477 fewer vessel calls (year 2050) would be required to transport the same amount of cargo to the Seaport under the Proposed Project compared to the No Project scenario (refer to the Draft EIR Table 3.1-1). The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. This response, including discussion of changes to operation-related emissions, anticipated percentage reductions in future years, is examined in the Draft EIR analysis for Air Quality (Section 3.3.4) under Impact AIR-2, and is responded to further under Global Response 5: Operational Impacts.

For the reasons discussed above, a Health Risk Assessment that evaluates operation-related activities is not warranted.

**EJC-93 Response:**

Please refer to responses to comments EJC-96 through EJC-105, which address the comments mentioned in Section 2 of the PSE Report.

**EJC-94 Response:**

Please refer to responses to comments EJC-106 and EJC-107, which address the comments mentioned in Section 3 of the PSE Report.

**EJC-95 Response:**

Please refer to responses to comments EJC-108 and EJC-109, which address the comments mentioned in Section 4 of the PSE Report.

**EJC-96 Response:**

In response to comments related to the impacts of operational emissions, claimed growth inducement, an evaluation of anchorage emissions, and the adequacy of the Proposed Project's Health Risk Assessment (HRA), refer to Global Response 5: Operational Impacts.

In addition, the Port has, therefore, provided detailed responses to comments EJC-97 through EJC-105 that inform to the Port's decision not to include the evaluation of operation-related activities as part of the HRA.

**EJC-97 Response:**

In response to comments related to the impacts of operational emissions and the adequacy of the Proposed Project's Health Risk Assessment (HRA), refer to Global Response 5: Operational Impacts.

Although the comment states there is evidence that ship size "may" impact anchorage emissions, no such evidence is presented. Conversely, there is substantial evidence to support the Draft EIR's conclusion. As explained in Global Response 5: Operational Impacts, a vessel's decision to anchor before or after it calls at a berth and the amount of time at berth is highly variable. Limited data, even those that are referenced by the commenter, do not support a determination that vessel size has a direct or indirect correlation to anchorage duration times. The data presented in the comments do not identify the appropriate number of bins (groups) to conduct the analysis, as the chosen three bins (over 350 meters, 300 to 350 meters, and under 300 meters) do not align well with the vessel classes that call the Port shown in the Draft EIR Table 2.3-2 (e.g., SPX, PX, PPX1, PPX2, PPX3, and PPX4) nor use another approach such as linear regression of the length. Evidence referenced by the commenter does not identify the specific data set used to determine anchorage vessels and anchorage times, nor the years the data sets were collected. To the contrary, the Port used recent data specific to the vessels at issue to evaluate the significance of anchorage time in evaluating emissions. A detailed statistical analysis of the 2023 anchorage data shows that there is not a statistical difference for the PX through PPX4 vessels to decide to go to anchorage, and for the time when a vessel decides to go to anchorage, and the time spent at anchorage. The most frequent outcome is not go to anchorage, which occurs 84 percent of the time over all vessel calls in 2023. This supports the decision to not include anchorage time as a distinguishable difference in annual emissions between the Proposed Project and No Project operational comparison. The Port has evaluated the limited and reliable data to distinguish a difference in the baseline emissions compared to the Proposed Project operations for water-based emissions. Based on these emissions for maintenance dredging and water-based NOx and DPM, emissions in the projected operation baseline would decrease. For additional detail, refer to Global Response 5: Operational Impacts.

**EJC-98 Response:**

This comment and the literature collectively referenced suggests that larger vessels would necessitate changes to landside operations. For a discussion of why land-side emissions were not explicitly calculated for this specific Draft EIR refer to Global Response 5: Operational Impacts. Global Response 5 also addresses operational impacts and growth inducement. The purpose of the Proposed Project is to provide navigational (i.e., maneuvering) improvements that address waterside inefficiencies and suboptimal conditions currently experienced by vessels in the Oakland Inner and Outer Harbors. Landside operational improvements are not a part of the Proposed Project, and as the Draft EIR demonstrates, would not be required as a result of the Proposed Project. Moreover, the comment's statement larger ships are "associated with" operational growth does not suggest that such growth is an effect of or caused by larger ships. In fact, the "growth" in landside operations, energy use, and emissions claimed by this comment is not a reasonably foreseeable impact of the Proposed Project.

Please refer to EJC-48 for a discussion regarding additional electricity demand.

**EJC-99 Response:**

In response to comments related to growth inducement, refer to Global Response 5: Operational Impacts. As described in this response, the purpose of the Proposed Project is to provide navigational (i.e., maneuvering) improvements that address waterside inefficiencies and suboptimal conditions currently experienced by vessels in the Oakland Inner and Outer Harbors. Landside operational improvements are not a part of the Proposed Project, and as the comment

acknowledges, changes that actually affect throughput constraints would be independently subject to CEQA review. The commenter's statement that growth could occur in the future is speculation.

For a discussion of why land-side emissions were not explicitly calculated for this specific Draft EIR, refer to Global Response 5: Operational Impacts.

**EJC-100 Response:**

Please refer to Global Response 5: Operational Impacts. As described in this response, the Proposed Project does not include landside operational improvements, such as expanding the yard surface, adding yard equipment, stacking containers, or use of operational software to increase the yard's handling capacity; nor would the Proposed Project cause such landslide improvements. The marine terminal's capacity is limited by the number of vessels it can accept; the terminal is considered "berth-constrained," or limited by how much cargo its landside facilities can service. These constraints determine the "maximum" amount of cargo a terminal can service in a discrete period (e.g., day, month, year). Analysis of possible landside operational improvements that may yield growth inducement would be speculative in nature and would be outside the scope of the EIR. For a discussion of why land-side emissions were not calculated for this specific Draft EIR, refer to Global Response 5: Operational Impacts.

**EJC-101 Response:**

Refer to Global Response 5: Operational Impacts. As described in this response and responses to comments EJC-99 and EJC-100, the Proposed Project does not include landside operational improvements and landside improvements, and/or landside operational efficiencies are not an objective of the Proposed Project. The Proposed Project also does not cause such landslide improvements, which can and may be considered and implemented independently. Private terminal operators independent of the Proposed Project have and continue to adapt to global market demands by replacing and upgrading landside facilities to handle all sizes of container vessels calling, including the large PPX4 category, which already call the Port. In addition, the Proposed Project would result in negligible changes in both truck demand and truck queuing.

**EJC-102 Response:**

Please refer to Global Response 5: Operational Impacts.

The Draft EIR determined that short-term peak activity under Proposed Project buildout would be equivalent to short-term peak activity already occurring at the Port when large ships call. Accordingly, peak emissions would not be any greater under the Proposed Project than they are now, and the acute (short-term) health risks would also not be any more severe.

For the short-term impacts of hourly and daily averaging times, the comparison would look at if there was a difference in the number of hours per day or equipment used at the same time to determine if there are differences in daily or hourly activity usage. As mentioned, there could be differences in these values when a large vessel is unloaded/loaded compared to a smaller vessel. The larger vessels may require more hours per day and more equipment operating at the same time for a longer stretch of time, perhaps for multiple days, but would have less intense work between vessels. Although it is noted that there may be differences in short-term activity with a larger vessel, under CEQA, the impacts to air quality are concerned with the incremental change between the maximum hourly or daily emission rate between the baseline and the Proposed

Project. Under both the baseline and the Proposed Project, large vessels will be calling the Port currently and in the future with or without the Proposed Project; the difference is in the number of such vessels calling annually. In this situation, the peak hourly or peak daily emissions may occur during service of large vessels. Therefore, the peak hourly and peak daily emissions would be the same for the baseline and the Proposed Project, and the net difference would again be zero.

Differences in emission rates due to factors that may slightly modify the emission rates, such as congestion and engine power loads, are not feasible to assess at a granular level and would require a significant amount of speculative assumptions to attempt to distinguish any minor differences in emission rates; the emission inventory would be speculative and based largely on the specific assumptions chosen. Given the speculative nature of the assumptions, any conclusions would be unreliable.

**EJC-103 Response:**

Acute and chronic noncancer health effects for construction were evaluated in the Draft EIR under Impact AIR-3 with supporting HRA analysis in Appendix C. The Draft EIR and the HRA provide quantified health risks for cancer, chronic noncancer health impacts, and acute health impacts for all toxic air contaminants (TACs) that have toxicity factors available from the California Environmental Protection Agency (CalEPA) Office of Environmental Health Hazard Assessment (OEHHA) (refer to Appendix C, Health Risk Assessment for the Draft EIR). These directly describe how human health would be affected by the Proposed Project construction. As for the asserted increase in the acute hazard that is referenced by the commenter, refer to response to comment EJC-102, which shows that there is no material incremental increase in acute hazards related to peak hour and daily emissions, because large vessels currently call the Port—a trend that is not expected to change with or without the Proposed Project. As acknowledged in the Draft EIR, the acute hazard value would not change, but there would be an increase in the frequency of these peak events, and therefore, an increased frequency of these acute hazard health impacts. For acute health impacts, in general the impacts go away after exposure to emissions above a peak concentration threshold no longer occurs.

**EJC-104 Response:**

In response to comments related to potential for increases to cargo throughput at the seaport, refer to Global Response 5: Operational Impacts. At base, the commenter misconstrues the aim of the Proposed Project—to improve efficiencies and safety, not increase large vessels. Current trends with regard to larger vessels can and will continue with or without the Proposed Project.

In response to comments related to operational emissions and sufficiency of the HRA completed as part of the Draft EIR, refer to Global Response 5: Operational Impacts.

Additionally, refer to response to comment EJC-92.

**EJC-105 Response:**

Refer to Global Response 5: Operational Impacts. The Port is aware of data and estimation tools available to estimate changes in traffic and shipping emissions. As discussed in Global Response 5, the Port's cargo capacity and landside operations—elements that are independent of the Turning Basins—were assumed to remain constant for the purpose of the Draft EIR analysis.

Refer to Global Response 5: Operational Impacts for a discussion on the comparison of the CEQA baseline chosen and the differences to landside operations with respect to information available to develop an emissions inventory. Differences in emission rates due to factors such as congestion and engine power loads are speculative to assess at a granular level, and would require a significant amount of assumptions. To attempt to distinguish minor differences in emission rates and emissions inventories (if any) would be speculative and require assumptions chosen that may be inaccurate. This level of detail cannot be meaningfully conducted for future emission estimates and only attempted for emission inventories based on actual data to provide a historical emission inventory. The Eagle Rock Aggregates EIR referenced by the commenter was for a specific project that involved significant changes to landside facilities. The details used in the Eagle Rock inventory were based on limits established in the tenant's lease agreement with the Port as well as anticipated maximum air permit limits for stationary sources. At this time, further data from individual terminal operators are not available to disaggregate those changes in land-based operations resulting from landside improvements, as opposed to specific lease terms and air permit limits. Consequently, such assessment would be entirely speculative.

Furthermore, using data from existing inventories would give the same rate of trucks and or cargo handling equipment per TEU in the future, and because the same TEU is used in the operational baseline, there would be no difference shown. As discussed in EJC-97, there is no difference in anchorage times anticipated.

In response to comments related to operational emissions and sufficiency of the HRA completed as part of the Draft EIR, refer to Global Response 5: Operational Impacts.

**EJC-106 Response:**

The Draft EIR assumed that Port operations during construction were the same as current operational conditions and future projected operations in 2030, 2040, and 2050. No changes to operational activities are planned during construction, therefore there is no change in operational emissions for the major emission sources at the Seaport during construction. The Proposed Project's potential health impacts were evaluated in Section 3.3.4 Air Quality, Impact Analysis and Mitigation Measures.

**EJC-107 Response:**

The "Oakland International Airport Terminal Modernization and Development DEIR" had changes to operation that would result in new sources of emissions that did not exist previously.

The Proposed Project emissions during operation are a result of growth that would occur with or without the Proposed Project as well as anticipated change in fleet over time with increased number of longer vessels which the turning basins are designed to receive. This is discussed in more detail in the Draft EIR, Section 3.1 Introduction to Environmental Analysis. Additionally, the Proposed Project's potential health impacts were evaluated in Section 3.3.4 Air Quality, Impact Analysis and Mitigation Measures.

**EJC-108 Response:**

Refer to response to comment EJC-91 for a discussion of the receptors used in modeling for the health risk assessment. The receptor grid accounts for all types of receptors, including sensitive receptors. A dense receptor grid was used in areas anticipated to have the highest health impacts. The health risk assessment first determines the concentration of different TACs at a given

receptor location used in the AERMOD dispersion model. Once the concentrations are determined, the toxicity factors for the specific TAC as well as the exposure factors for a specific sensitive receptor type (e.g., resident child, daycare, education) are combined. For a given receptor location, the highest health impact would be seen for the exposure parameters for a resident child. Therefore, unless there is another type of sensitive receptor significantly closer than the location of the resident child, the resident child exposure factors will give the highest health impacts. As described in Appendix C of the Draft EIR, exposure factors for the resident child used the recommended Air District and OEHHA age-specific factors starting at in utero in third trimester, and continuing through the project construction time period in increments of third trimester to 2, and age 3 until end of the Proposed Project construction. Once the areas of greatest impact were determined, a manual search was used to determine the specific location of highest impact. This included looking at the specific land uses employing knowledge of the area, aerial photography, zoning information, as well as searches of state databases and google key word searches to determine locations of any other sensitive receptors that may be closer than the closest resident locations. In this case, although there were childcare facilities and schools near the locations of peak impact, these other sensitive receptors were not in a location that had a concentration of exposure high enough than the nearest resident location to the extent that the resulting health effects were higher than a resident child. The commenters do not present any specific locations or facilities that they think would have a higher health impact than the resident child identified in the health risk assessment.

**EJC-109 Response:**

The dispersion modeling used an appropriate receptor grid to evaluate air quality impacts. Commonly, in air dispersion modeling roadways and mobile source, travel paths are truncated once they reach a major roadway or move further away from the primary receptors anticipated to be most impacted. This is done for modeling time because these sources have been shown to have diminishing influence on the overall result. This can be seen by looking at these sources' contribution to the overall concentration or health impact at the peak receptor, which is used for significance determination. Receptors located further out along a road that the trucks would use would have lower health impacts than compared to the same trucks on roads closer to the other major source equipment used in construction of the Proposed Project. People exposed on a roadway would only be exposed for the short duration of a truck passing by rather than those near the many pieces of larger equipment working continuously.

The Air District CEQA threshold for health impacts is based on the maximum exposed sensitive receptor. therefore, even though there would be health impacts to sensitive receptors along Atlantic Avenue in West Alameda—Sugar Spice preschool, Peter Pan school, and Arcoiris Spanish Learning Academy—they are not a higher health impact than the maximum exposed sensitive receptor, which is a resident child identified in the EIR. The EIR went beyond its due diligence and reported the health impacts for several residences in Oakland and Alameda near the construction areas that are deemed to have the highest impact. Furthermore, detailed figures were shown of the contours of health impacts in Appendix C based on assuming all receptors modeled were a resident child. Because all other sensitive receptors have less exposure and a lower health impact than a resident child, the EIR already presents a worst-case health impact based on the contours presented in the figures.

The HRA used a truncated travel path for trucks and tugs due to diminishing contribution to total health impacts. If the truck and tug sources were extended further than their truncated travel paths, these extended sources would not make a change in the reported health impact to the appropriate number of significant digits on the most exposed residential receptors. The total emissions presented in Draft EIR Tables 3.3-9 through 3.3-13 are for the complete travel path anticipated and are not truncated—from the Proposed Project site to the Montezuma beneficial reuse site 50 nautical miles away. Trucks were also assumed to travel to a Class I landfill (Kettleman Hills Landfill), a Class II landfill assumed to be barged by tugs to Montezuma and loaded onto trucks assumed to be Portero Hills Landfill, a recycler assumed to be Argent Materials, and other miscellaneous material trips assumed to be the CalEEMod default of 20 miles. This is outlined in Table 8 of Appendix B to this Final EIR. Therefore, the Draft and Final EIRs accurately applied the appropriate methodology and best practices by including emissions for all anticipated travel paths in determining the emissions of and impacts from criteria air pollutants.

**EJC-110 Response:**

The USACE's Integrated Feasibility Report/Environmental Assessment is a separate document with the USACE as the NEPA lead agency. The NEPA process was completed on August 21, 2024, when the USACE issued a Finding of No Significant Impact. The Port, as the Lead Agency under CEQA, prepared the Draft EIR in accordance with CEQA Guidelines Sections 15000 et seq. As part of the CEQA process, the Port is required to respond to comments submitted on the Draft EIR during the Draft EIR public review period. The USACE responded to the comments submitted during the NEPA process in both its Revised Draft Integrated Feasibility Report/Environmental Assessment and Final Integrated Feasibility Report/ Environmental Assessment. Please also refer to Global Response 1: CEQA Process addressing the separate CEQA and NEPA processes.

**EJC-111 Response:**

The USACE's Integrated Feasibility Report/Environmental Assessment is a separate document with the USACE as the NEPA lead agency. The NEPA process was completed on August 21, 2024, when the USACE issued a Finding of No Significant Impact. The Port, as the Lead Agency under CEQA, prepared the Draft EIR in accordance with CEQA Guidelines Sections 15000 et seq. As part of the CEQA process, the Port is required to respond to comments submitted on the Draft EIR during the Draft EIR public review period. The USACE responded to the comments submitted during the NEPA process in both its Revised Draft Integrated Feasibility Report/Environmental Assessment and Final Integrated Feasibility Report/ Environmental Assessment. Please also refer to Global Response 1: CEQA Process addressing the separate CEQA and NEPA processes.

### G.5.2.3 Earthjustice Supporters: Compilation of Comments from 4,106 Individuals Made through the Earthjustice Website (EJS)

**Introduction:**

The Port received a compilation of comments from 4,106 Earthjustice supporters; the compilation of comments in its entirety is included in Section G.6. The majority of these comments are similarly worded paragraphs that include the following comments: 1) express

concern/opposition to the Proposed Project; 2) inviting more large ships will have a detrimental effect on air pollution and increase truck traffic; 3) the Proposed Project will disproportionately impact West Oakland; 4) the Proposed Project could harm endangered species and water quality in San Francisco Bay; and 5) the Port should redo analysis and recirculate the Draft EIR. Based on review of comments received, the apparent template language that was used for the majority of Earthjustice supporters' comments included in the compilation is as follows:

> *"As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents."*

The responses to these five common theme comments are provided below. Where additional distinct comments were provided in the compilation (as presented in Section G.3), those comments are responded to below under EJS-1 through EJS-67; some of the comments include additional opinion statements that were determined to not warrant a response.

**EJS Template Language Comment Responses**

1) *As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor.*

**Response:**

Comment noted.

2) *Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic.*

**Response:**

Please refer to Global Response 5: Operational Impacts.

3) *Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice.*

**Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

4) *Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay.*

**Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

5) *I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents*

**Response:**

Please refer to Global Response 1: CEQA Process.

**EJS Additional Individual Comments**

**EJS-1 Response:**

Comment noted. The Proposed Project is not designed to facilitate a shift to larger cargo vessels—that shift has and is already occurring. Rather, this Proposed Project is designed to ensure more efficient and safer turning of larger cargo vessels in the Oakland Turning Basins inner and outer harbors. Mitigation has been proposed, as feasible, to substantially lessen the extent of the Proposed Project's construction-related impacts that were determined to be potentially significant.

**EJS-2 Response:**

In deciding whether to approve the Proposed Project, the Board of Port Commissioners will consider the information and analysis in the Environmental Impact Report prepared by the Port as the CEQA Lead Agency, including information on feasible mitigation and a range of alternatives to lessen environmental impacts. Regarding the Proposed Project's impacts to West Oakland, please refer to Global Response 2: Community Engagement and Environmental Justice.

**EJS-3 Response:**

Comment noted. The comment is nonspecific as to the prior container trucks and idling that occurred. The Proposed Project is not designed to move container trucks and offloading operations from the Port to the City of Alameda; rather, the Proposed Project is designed to help improve the efficiency and safety of vessels turning in the inner and outer harbor of the Port of Oakland. The Proposed Project would have temporary construction impacts in the City of Alameda, which are outlined in the Draft EIR Chapters 3 and 4. Moreover, the Proposed Project has been designed and proposed mitigation measures to reduce construction emissions (refer to Draft EIR Section 3.3.4; Mitigation Measures Air-1 and Air 2).

**EJS-4 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing operational emissions associated with in-water Seaport operations. The Proposed Project would temporarily increase truck trips in Oakland and Alameda during construction; however, those trips and associated emissions have

been fully addressed. Please refer to Global Response 5: Operational Impacts, and Global Response 4: Reducing Local Truck Trips.

**EJS-5 Response:**

As described in the Draft EIR Hydrology and Water Quality impact analysis (Section 3.10.4) under Impact HYD-1, to operate in U.S. waters and ports, applicable vessels regulated by USCG under Code of Federal Regulations, Title 33, are required to provide a variety of plans—including a Vessel Response Plan—to the USCG for review and approval. A Vessel Response Plan serves as an oil spill response plan for vessels and includes spill mitigation procedures to mitigate or prevent discharge or threat of discharge resulting from operations, accidents, or emergencies. These measures would minimize the potential for the accidental release of hazardous substances from vessel operations during Proposed Project implementation to substantially degrade water quality.

As stated in Draft EIR Section 2.4, one of the Proposed Project's objectives is to improve conditions for vessel maneuvering and safety, including reducing environmental risk such as potential water quality impacts, associated with existing maneuvering limitations.

**EJS-6 Response:**

The comment expresses opposition to the Proposed Project. Comment noted. Furthermore, as the Draft EIR outlines, there are significant public benefits to widening the turning basins, including greater efficiencies in operation and improved safety and security.

**EJS-7 Response:**

Comment noted.

**EJS-8 Response:**

Comment noted. No wetland impacts would occur from implementation of the Proposed Project, and suitable sediment that is excavated or dredged during project construction would be beneficially reused for wetland restoration. The Proposed Project would not change the amount of cargo forecasted to come into the Port. Please refer to Global Response 9: Biological Resources and Water Quality, and Global Response 5: Operational Impacts.

**EJS-9 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods; thereby reducing—not adding—emissions associated with in-water Seaport operations (refer to Operation and Maintenance analysis under Impact AIR-2 in Draft EIR Section 3.3.4). Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, the Proposed Project's fundamental objectives are to improve conditions for vessel maneuvering and safety, including reducing environmental risk associated with existing maneuvering limitations.

**EJS-10 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods; thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, the Proposed Project's fundamental objectives are to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations, thereby providing greater protection for San Francisco Bay.

**EJS-11 Response:**

Comment noted.

**EJS-12 Response:**

Oakland Harbor is outside the range of Delta Smelt. Salmon are considered in the in-water work windows designated by regulatory agencies for San Francisco Bay to minimize impacts on special-status species. The in-water work window for salmonids is June 1 through November 30, which corresponds to the period where adults and juveniles are less likely to be present in the Bay (refer to Draft EIR Section 3.4, Biological Resources). In-water construction for the Proposed Project would occur during this work window. Please also refer to Global Response 9: Biological Resources and Water Quality.

**EJS-13 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**EJS-14 Response:**

Comment noted. Key drivers for the Proposed Project are logistics, safety, and efficiencies in operations.

**EJS-15 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**EJS-16 Response:**

Comment is unrelated to the Proposed Project.

**EJS-17 Response:**

The Draft EIR disclosed the environmental impacts that would result from implementation of the Proposed Project; most of these impacts are associated with the Proposed Project's construction, which is temporary. In the long term, the Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts. The Port conducted extensive public outreach to residents of Oakland as part of the CEQA process (refer to Global Response 2: Community Engagement and Environmental Justice), including noticing regarding opportunities to provide comments on the Draft EIR, and has responded to comments received in this Response to Comments Appendix.

As stated in Draft EIR Section 2.4, the Proposed Project's objectives are to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations.

**EJS-18 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

**EJS-19 Response:**

Comment noted. The Proposed Project does not involve exporting coal from the Seaport. The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods; thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, the Proposed Project's objectives are to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations.

**EJS-20 Response:**

Comment noted.

**EJS-21 Response:**

Comment noted. Key drivers for the Proposed Project are logistics, safety, and efficiencies in operations.

**EJS-22 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, one of the Proposed Project's objectives is to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations.

**EJS-23 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality, and Global Response 5: Operational Impacts. As stated in Draft EIR Section 2.4, the Proposed Project's objectives are to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations; the Proposed Project does not involve expansion of Seaport operations.

**EJS-24 Response:**

Comment noted.

**EJS-25 Response:**

Comment noted.

**EJS-26 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, one of the Proposed Project's objectives is to improve conditions for vessel maneuvering and safety, including reducing environmental risk such as potential water quality impacts, associated with existing maneuvering limitations. Regarding comments on air, water, and ground pollution, please refer to Draft EIR Sections 3.3, 3.7, 3.8, and 3.10 for analysis of the Proposed Project's impacts and mitigation measures, where warranted, for air quality, greenhouse gases, geology and soils, and water quality.

**EJS-27 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts. Please also refer to Draft EIR Section 3.1.1 under Port of Oakland Seaport Emissions, for a description of how emissions from Seaport operations have decreased.

**EJS-28 Response:**

Comment noted. Key drivers for the Proposed Project are logistics, safety, and efficiencies in operations.

**EJS-29 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods; thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

**EJS-30 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

**EJS-31 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, one of the Proposed Project's objectives is to improve conditions for vessel maneuvering and safety, including reducing environmental risk such as potential water quality impacts, associated with existing maneuvering limitations. Please also refer to Global Response 9: Biological Resources and Water Quality.

**EJS-32 Response:**

Comment noted.

**EJS-33 Response:**

Comment noted. Please refer to the Draft EIR Section 4.4 and Global Response 2: Community Engagement and Environmental Justice, regarding analysis of the Proposed Project's cumulative health impacts.

**EJS-34 Response:**

Comment noted.

**EJS-35 Response:**

Comment noted. Key drivers for the Proposed Project are logistics, safety, and efficiencies in operations.

**EJS-36 Response:**

Comment is unrelated to the Proposed Project.

**EJS-37 Response:**

Please refer to Global Response 5: Operational Impacts, and Section 3.8 of the Draft EIR addressing greenhouse gases.

**EJS-38 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

**EJS-39 Response:**

Comment noted. As stated in Draft EIR Section 2.4, the Proposed Project's objectives are to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations; the Proposed Project does not involve expansion of Seaport operations.

**EJS-40 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport. In addition, as indicated under Global Response 2: Community Engagement and Environmental Justice, implementation of the Proposed Project would also have a beneficial impact by bringing cleaner ships to the Port.

**EJS-41 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport.

**EJS-42 Response:**

Please refer to Global Response 5: Operational Impacts.

**EJS-43 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, one of the Proposed Project's objectives is to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations.

**EJS-44 Response:**

Comment noted. Key drivers for the Proposed Project are logistics, safety, and efficiencies in operations.

**EJS-45 Response:**

Comment noted.

**EJS-46 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. In addition, the Proposed Project would not result in increased truck traffic associated with Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, one of the Proposed Project's objectives is to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations.

**EJS-47 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality, and Global Response 5: Operational Impacts.

**EJS-48 Response:**

Comment noted. Mitigation has been proposed, as feasible, to lessen the extent of the Proposed Project's construction-related impacts that were determined to be potentially significant. The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

**EJS-49 Response:**

Please refer to Global Response 5: Operational Impacts. In addition, as indicated under Global Response 2: Community Engagement and Environmental Justice, implementation of the Proposed Project would also have a beneficial impact of reducing emissions from Seaport operations by bringing cleaner ships to the Port.

**EJS-50 Response:**

Please refer to Global Response 5: Operational Impacts.

**EJS-51 Response:**

Please refer to Global Response 5: Operational Impacts, and Global Response 2: Community Engagement and Environmental Justice.

**EJS-52 Response:**

Comment noted.

**EJS-53 Response:**

Comment noted. Key drivers for the Proposed Project are logistics, safety, and efficiencies in operations.

**EJS-54 Response:**

The Proposed Project does not include the construction of any new "mega structures." Regarding larger vessels, please refer to Global Response 5: Operational Impacts.

**EJS-55 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**EJS-56 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, one of the Proposed Project's objectives is to improve conditions for vessel maneuvering and safety, including reducing environmental risk such as potential water quality impacts, associated with existing maneuvering limitations. Please also refer to Global Response 9: Biological Resources and Water Quality.

**EJS-57 Response:**

Please refer to Global Response 1: CEQA Process. The Draft EIR discloses and evaluates all of the potentially significant environmental impacts of the Proposed Project, as well as mitigation and alternatives to help substantially lessen those impacts. The widening of the turning basins is expected to improve operational efficiencies and reduce the risks and hazards surrounding the maneuvering of large vessels, thereby reducing the environmental risks and operational air emissions.

**EJS-58 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**EJS-59 Response:**

Comment noted. Key drivers for the Proposed Project are logistics, safety, and efficiencies in operations.

**EJS-60 Response:**

The beneficial reuse of suitable sediment at a wetland restoration site would offset loss of habitat value resulting from the Proposed Project’s impact to subtidal benthic habitat (refer to Impact BIO-1 in Draft EIR Section 3.4). Please also refer to Global Response 9: Biological Resources and Water Quality.

**EJS-61 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice. As indicated under the response, implementation of the Proposed Project would also have a beneficial impact of reducing emissions from Seaport operations by bringing cleaner ships to the Port.

**EJS-62 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

As stated in Draft EIR Section 2.4, one of the Proposed Project's objectives is to improve conditions for vessel maneuvering and safety, including reducing environmental risk, associated with existing maneuvering limitations.

**EJS-63 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts, and the Draft EIR's health risk assessment analysis (Impact AIR-3 in Section 3.3 and Appendix C). Regarding impacts to San Francisco Bay, please refer to Global Response 9: Biological Resources and Water Quality.

**EJS-64 Response:**

In deciding whether to approve the Proposed Project, the Board of Port Commissioners will consider the analysis in the Environmental Impact Report prepared by the Port as the CEQA Lead Agency.

**EJS-65 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing emissions associated with in-water Seaport operations. Please refer to Global Response 5: Operational Impacts.

**EJS-66 Response:**

Please refer to Global Response 5: Operational Impacts.

**EJS-67 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

### G.5.2.4 Maritime Industry Coalition: Oakland Maritime, Access, Sustainability and Trade Coalition; Customs Brokers and Forwarders Association of Northern California; Dreisbach Enterprises; GSC Logistics; ILWU Local 10; Marine Engineers' Beneficial Association; Marine Firemen's Union; Pacific Merchant Shipping Association; Propeller Club of Northern California; San Francisco Bar Pilots; and SSA Marine (MIC)

**MIC-1 Response:**

Comment noted.

**MIC-2 Response:**

Comment noted.

**MIC-3 Response:**

Comment noted.

**MIC-4 Response:**

Comment noted.

**MIC-5 Response:**

Comment noted.

**MIC-6 Response:**

Comment noted.

**MIC-7 Response:**

Comment noted. In consideration of the Proposed Project's construction impacts, the Port acknowledged the No Action Alternative would be environmentally superior but would not meet any of the Proposed Project objectives. Potential incidents such as an oil spill or accidental allision are considered speculative and therefore were not factored into the determination of the environmentally superior alternative. The CEQA Guidelines require that if, based on the impact analysis, the environmentally superior alternative is the "No Project" Alternative, the EIR must then identify an environmentally superior alternative from among the other alternatives to be designated as the environmentally superior alternative. The Draft EIR identified widening of the OHTB Only (Alternative 2) as the next most environmentally superior alternative, but noted that it would fail to meet most of the Proposed Project objectives.

**MIC-8 Response:**

Comment noted.

### G.5.2.5 Pacific Merchant Shipping Association (PMSA)

**PMSA-1 Response:**

Comment noted.

**PMSA-2 Response:**

Comment noted.

**PMSA-3 Response:**

Comment noted. As part of the CEQA process, the Port is required to respond to comments submitted on the Draft EIR during the Draft EIR public review period.

**PMSA-4 Response:**

The comment is noted that there may be a global reduction in GHG emissions by helping the Port maintain its competitiveness for cargo derived from Asia. The Draft EIR is choosing not to highlight information on the global benefits of GHG emissions due to global efficiencies achieved across multiple ports; in particular, other ports on the West Coast of the United States all being able to support the larger and more fuel-efficient vessels that will be better sized for efficient calls to the West Coast ports.

**PMSA-5 Response:**

Comment noted.

**PMSA-6 Response:**

The comment is noted that there may be a global reduction in air and GHG emissions by using appropriately sized, larger, more fuel-efficient vessels from Asia. The Draft EIR is choosing not to include this study because it was written for European Ports even though the concepts remain valid to the Port of Oakland.

**PMSA-7 Response:**

Comment notes that emissions since 2005 have decreased substantially at the Port. The Draft EIR includes this information in the environmental setting under air quality in Section 3.3.1.

**PMSA-8 Response:**

Comment noted.

**PMSA-9 Response:**

Comment noted. Please refer to Global Response 5: Operational Impacts.

**PMSA-10 Response:**

Comment noted. The data support that there is not a correlation between vessel calls, cargo throughput, and air quality and GHG emissions.

**PMSA-11 Response:**

Comment noted.

**PMSA-12 Response:**

Comment noted.

### G.5.2.6 San Francisco Bay Area Physicians for Social Responsibility (PSR)

**PSR-1 Response:**

Comment noted. Please refer to responses to comments PSR-2 through PSR-6.

**PSR-2 Response:**

Please refer to Global Response 5: Operational Impacts. Ambient and baseline air quality and the burden associated with current and previous truck and rail traffic emissions are addressed in the Draft EIR Air Quality Section 3.3 and appended studies (Appendices B and C) as part of the environmental baseline. Because the Proposed Project is designed to improve maneuverability at the Inner and Outer Harbors, it is actually expected to decrease environmental risks and air emissions during operations. The Proposed Project is not proposed to, nor is it expected to increase traffic from Seaport operations.

The commenter is also incorrect in stating that the Draft EIR did not adequately describe the existing air pollution in the surrounding communities, which includes the current truck and rail air pollution burden. The Draft EIR provided extensive background in Section 3.3.1. This included information from the Port of Oakland 2020 Seaport Emissions Inventory, which is the most recent comprehensive emissions inventory for the Port of Oakland. The 2008 HRA by CARB and the most recent HRA done for WOCAP were included in the setting, which discusses emissions and health impacts in the Port and the larger West Oakland area. In addition, there was a discussion of the WOCAP policies and the Port's status of implementing these measures. The Draft EIR conducted an HRA for the Proposed Project construction, and provided more information on the results of this HRA than required to make the CEQA significance determination. The Draft EIR, in addition to determining the maximum exposed individual, also presented the high values in Alameda, the area adjacent to Howard Terminal, and the part of West Oakland most impacted by the OHTB.

**PSR-3 Response:**

Please refer to Global Response 1: CEQA Process, Global Response 5: Operational Impacts, and response to comment PSR-2.

**PSR-4 Response:**

Comment noted. As identified in Chapter 2 of the West Oakland Community Action Plan, multiple emission sources impact West Oakland, including major highways, permitted stationary sources (e.g., recycling facilities, wastewater treatment plant), truck-related businesses (including the 7th Street U.S. Post Office), Port-related sources, and construction and other area sources (e.g., backyard burning, commercial cooking operations). Please also refer to Draft EIR Section 3.3.1 (Air Quality Environmental Setting), which includes a summary of existing health risks in West Oakland.

**PSR-5 Response:**

The Proposed Project would not expand Seaport operations; please refer to Global Response 5: Operational Impacts. Regarding electrification at the Seaport, please refer to Global Response 3: Zero-Emissions Seaport.

**PSR-6 Response:**

The commenter is also incorrect in stating that the Draft EIR did not adequately describe the existing air pollution in the surrounding communities. The Draft EIR provided extensive background in Section 3.3.1. This included information from the Port of Oakland 2020 Seaport Emissions Inventory, which is the most recent comprehensive emissions inventory for the Port of Oakland. The 2008 HRA by CARB and the most recent HRA done for WOCAP were included in the setting, which discusses emissions and health impacts in the Port and the larger West Oakland area. In addition, there was a discussion of the WOCAP policies and the Port's status of implementing these measures. In Section 3.4.8 under Impact AIR-2 and Impact AIR-3, the Draft EIR gave detailed analysis of the potential increase in air pollution from construction of the Proposed Project. Appendix B of the Draft EIR contained further detail on the emissions for construction, operation, and existing conditions. It also gave information on changes to operational emissions compared to the No Project projected baseline in 2030, 2040, and 2050. As discussed in the Draft EIR, the primary difference in operation emissions is for the water-based activity for vessels calls and increased maintenance dredging. Refer to Global Response 5: Operational Impacts for a discussion of land-based emissions comparisons. The Draft EIR conducted an HRA for the Proposed Project construction, and provided more information on the results of this HRA than required to make the CEQA significance determination. This included the anticipated incremental increase in cancer risk, chronic HI, and acute HI. In addition to determining the maximum exposed individual, the Draft EIR also presented the high values in Alameda, the area adjacent to Howard Terminal, and the part of West Oakland most impacted by the OHTB. Appendix C of the Draft EIR provided further details on the existing condition health impacts, incremental increase in health impacts from construction emissions, and estimates of Port operations health impacts in the future. Refer to also Global Response 2: Community Engagement and Environmental Justice for more information about West Oakland. Refer to Global Response 5: Operational Impacts for more information about operational emissions and health risk assessment.

## G.5.3 Members of the Public

### G.5.3.1 Amanda Bloom (ABl)

**ABl-1 Response:**

Please refer to Global Response 5: Operational Impacts.

**ABl-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**ABl-3 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**ABl-4 Response:**

Please refer to Global Response 1: CEQA Process.

### G.5.3.2 Alexis Franz (AFr)

**AFr-1 Response:**

Please refer to Global Response 5: Operational Impacts, Global Response 2: Community Engagement and Environmental Justice, and Draft EIR Section 3.7 addressing geology and soils.

### G.5.3.3 Ann Harvey (AHa)

**AHa-1 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport, Global Response 1: CEQA Process, and Global Response 5: Operational Impacts.

**AHa-2 Response:**

The Draft EIR evaluated the air pollutants associated with the Proposed Project in the West Oakland and I-80 Corridor as well as the emissions attributable to trucks to the Central Valley in the San Joaquin Valley Air Basin, which as noted is in nonattainment of federal standards. Please refer to Global Response 2: Community Engagement and Environmental Justice.

**AHa-3 Response:**

Please refer to Global Response 5: Operational Impacts, pending additional input if appropriate from Montrose responses. The Proposed Project is not expected to directly or indirectly increase ship delays, truck idling, or overall truck, train, or other vehicle trips on streets, freeways, or train tracks serving the Port. Instead, the Proposed Project is designed to enhance safety, and ultimately reduce environmental risks and emissions associated with vessel maneuvering in the Inner and Outer Harbor.

### G.5.3.4 Alan Tubbs (ATu)

**ATu-1 Response:**

Comment noted. The Proposed Project's construction duration is phased over 3 years to comply with in-water work windows to minimize impacts on special-status species as well as minimize impacts to use of the Inner Harbor Channel.

### G.5.3.5 Bruce Bennett (BBe)

**BBe-1 Response:**

Comment noted.

### G.5.3.6 Charles Bret (CBr)

**CBr-1 Response:**

As described in Draft EIR Section 2.5.4, Other Construction Details, under Construction Materials and Debris Management, material to be excavated and dredged would be characterized (i.e., sampled and analyzed) during the pre-construction engineering and design phase. The results of the laboratory analysis would be compared to specific acceptance criteria for a given beneficial reuse site and landfill waste acceptance criteria to determine where the material may be placed. For dredged material, the interagency Dredged Material Management Office reviews and approves sediment testing programs and suitability determinations for beneficial reuse and disposal locations. In addition, because the soil and groundwater beneath Howard Terminal and the Alameda Site have been impacted by historic uses and are under the regulatory jurisdiction of the Department of Toxic Substances Control, sampling and analysis at Howard Terminal and the Alameda Site would also be coordinated with the Department of Toxic Substances Control. For additional information related to the Proposed Project’s hazardous materials impacts, please refer to Draft EIR Section 3.9.4.

**CBr-2 Response:**

The Proposed Project does not involve the import/export of coal through the Seaport. As described in Draft EIR Section 2.4, Proposed Project Objectives, the purpose of the Proposed Project is to provide navigational improvements that address inefficiencies and suboptimal conditions currently experienced by vessels in the Oakland Harbor. Transportation inefficiencies and high-risk transits occur when channels and maneuvering areas do not fully accommodate the vessels using them, and result in cascading effects on economic, environmental, and safety considerations. Please also refer to Global Response 5: Operational Impacts, regarding analysis of traffic impacts during Seaport operations.

**CBr-3 Response:**

The Proposed Project would not expand Seaport operations (refer to Global Response 5: Operational Impacts). The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods, thereby reducing operational emissions associated with in-water Seaport operations.

### G.5.3.7 Carol Hirth (CHi)

**CHi-1 Response:**

Please refer to Global Response 5: Operational Impacts.

**CHi-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**CHi-3 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**CHi-4 Response:**

Please refer to Global Response 1: CEQA Process.

### G.5.3.8 Charlie Cameron (CCa)

**CCa-1 Response:**

Comment noted.

**CCa-2 Response:**

Comment noted. TEU in the Draft EIR refers to a 20-foot equivalent unit or a 20-foot container. A 40-foot container would represent two TEUs. Regarding 53-foot containers, no marine terminals at the Port have reported transporting them. Such 53-foot containers are commonly used for road and rail movement in the U.S.

**CCa-3 Response:**

Comment noted.

**CCa-4 Response:**

Comment noted.

**CCa-5 Response:**

Comment noted.

**CCa-6 Response:**

Comment noted.

### G.5.3.9 Christopher Kroll (CKr)

**CKr-1 Response:**

The Proposed Project would not expand Seaport operations (refer to Global Response 5: Operational Impacts). Regarding the Seaport's conversion to clean energy, please refer to Global Response 3: Zero-Emissions Seaport.

## G.5.3.10 Christopher Lish (CLi)

**CLi-1 Response:**

Please refer to Global Response 5: Operational Impacts.

**CLi-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**CLi-3 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**CLi-4 Response:**

Please refer to Global Response 1: CEQA Process.

## G.5.3.11 Kevin and Cynthia Kihn, Dianne Jonstad (KKi)

**KKi-1 Response:**

As described in the Draft EIR impact analysis for Aesthetics (Section 3.2.4) under Impact AES-1, the widened turning basins would appear visually similar to existing conditions and view of the estuary. Portions of Howard Terminal and the two existing warehouse buildings and underlying wharf on the Alameda Site would be removed to widen the IHTB, increasing the surface area of the estuary. New bulkhead sections on both sides of the Inner Harbor Channel at Howard Terminal and the Alameda Site would be constructed that would be of a size, scale, mass, and color similar to the existing adjacent bulkhead along the Alameda shoreline. Removal of portions of the warehouse buildings would increase the existing viewshed to the Inner Harbor Channel from public vantage points, including the City of Alameda's Estuary Park.

**KKi-2 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**KKi-3 Response:**

Comment noted. The Draft EIR impact analysis for Noise (Section 3.12.4) acknowledged under Impact NOI-1 that nighttime dredging construction noise impacts on some sensitive receptors in the Landing at Bay 37 residential development in Alameda would be significant and unavoidable; these impacts would occur intermittently over approximately 4 weeks during the Proposed Project construction. Noise impacts during the Proposed Project's operational phase were found to be less than significant.

**KKi-4 Response:**

The Proposed Project would not remove public open space; the landside property to be impacted is privately owned or Port-owned, with no public access.

**KKi-5 Response:**

The Proposed Project is needed for navigational efficiency and safety. It has no connection to and would not facilitate building a bridge from Oakland to Alameda.

**KKi-6 Response:**

Comment noted. The Proposed Project has no affiliation with the cement factory referenced in the comment.

**KKi-7 Response:**

Please refer to response to comment KKi-1.

**KKi-8 Response:**

Comment noted.

### G.5.3.12 David Pedersen (DPe)

**DPe-1 Response:**

Please refer to Global Response 5: Operational Impacts.

**DPe-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**DPe-3 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**DPe-4 Response:**

Please refer to Global Response 1: CEQA Process.

### G.5.3.13 Eric Pederson (EPe)

**EPe-1 Response:**

Comment noted. Portions of Howard Terminal and the two existing warehouse buildings and underlying wharf on the Alameda Site would be removed to widen the IHTB, removing industrial development and increasing the surface area of the estuary.

**EPe-2 Response:**

Please refer to Global Response 5: Operational Impacts.

### G.5.3.14 Ernie Walters (EWa)

**EWa-1 Response:**

Please refer to Global Response 5: Operational Impacts.

**EWa-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**EWa-3 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**EWa-4 Response:**

Please refer to Global Response 1: CEQA Process.

## G.5.3.15 Gina Miller (GMi)

**GMi-1 Response:**

Comment noted. The Draft EIR Figure 3.14-4 identified that during construction, trucks would use the Webster and Posey Tubes and the Park Street Bridge for arriving and departing Alameda, consistent with the City of Alameda's designated truck routes; the Proposed Project would follow the City's designated truck routes at the time of construction. In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site, and a 54 percent reduction in total from the Proposed Project construction truck trips in Oakland and Alameda in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips, for additional information.

## G.5.3.16 Greg Thomsom (GTh)

**GTh-1 Response:**

Please refer to Global Response 5: Operational Impacts.

**GTh-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**GTh-3 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**GTh-4 Response:**

Please refer to Global Response 1: CEQA Process.

## G.5.3.17 John Alfonso (JAl)

**JAl-1 Response:**

Comment noted.

## G.5.3.18 Janet Johnson (JJo)

**JJo-1 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice, and Global Response 2: Community Engagement and Environmental Justice.

**JJo-2 Response:**

Please refer to Global Response 5: Operational Impacts.

**JJo-3 Response:**

The Proposed Project would not disproportionately impact West Oakland; please refer to Global Response 2: Community Engagement and Environmental Justice. In addition, the Proposed Project would not result in landside operations changes that would result in increased truck

traffic in West Oakland from Seaport Operations; please refer to Global Response 5: Operational Impacts.

**JJo-4 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**JJo-5 Response:**

Please refer to Global Response 1: CEQA Process.

### G.5.3.19 Jessica Mitchell (JMi)

**JMi-1 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality, and Global Response 5: Operational Impacts.

### G.5.3.20 John Oda (JOd)

**JOd-1 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport.

**JOd-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

### G.5.3.21 Jason (Ja)

**Ja-1 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport.

**Ja-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

### G.5.3.22 Kat Moynahan (KMo)

**KMo-1 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**KMo-2 Response:**

Comment noted. The Proposed Project's impacts on air quality and traffic would be limited to construction. Over the long term, the Proposed Project would reduce criteria pollutant emissions for in-water operation due to changes in the fleet mix and number of annual calls. Please refer to Global Response 5: Operational Impacts.

**KMo-3 Response:**

Port Maritime Operations include a trash crew for trash collection and litter pickup from the Seaport roadways and sidewalks, including the referenced plastic bottles on a routine schedule, and has a contract for litter pickup with Civicorps, a local job training center in Oakland. In addition, the Port has completed a trash capture study and is implementing construction of three

Large Underground Full Trash Capture devices at the Seaport and 40 Small Full Trash Capture Devices across the Seaport and Airport to comply with Statewide Trash Amendments issued by the California State Water Resources Control Board. And lastly, the Port has increased their inter-jurisdictional trash collaboration with agencies, resulting in wins such as receiving a National Oceanic and Atmospheric Administration Marine Debris grant for the removal of marine debris from coastal communities in partnership with the City of Oakland and I Heart Oakland-Alameda Estuary.

**KMo-4 Response:**

Comment noted. The Proposed Project is consistent with existing land uses. Alternative plans to revitalize the Bay are beyond the scope of the Proposed Project.

### G.5.3.23 Lauren Eisele (LEi)

**LEi-1 Response:**

Comment noted.

**LEi-2 Response:**

As described in Draft EIR Section 2.4, Proposed Project Objectives, the purpose of the Proposed Project is to provide navigational improvements that address inefficiencies and suboptimal conditions currently experienced by vessels in the Oakland Harbor, not to increase the Port's operating capacity.

**LEi-3 Response:**

The Draft EIR identified significant and unavoidable air quality and noise impacts; mitigation has been proposed, as feasible, to lessen the extent of those impacts. The Draft EIR did not identify significant and unavoidable transportation and geotechnical impacts.

**LEi-4 Response:**

The nearest school to the IHTB is Ruby Bridges Elementary school, approximately 0.5 mile south. The nearest senior housing would be the proposed Alameda Housing Authority North Housing, which would include units within approximately 650 to 1,500 feet of the proposed widened IHTB. Based on the Draft EIR analysis, these locations would not experience air quality and noise impacts above established significance thresholds.

Neither Ruby Bridges Elementary nor the proposed Alameda Housing Authority North Housing are situated directly along the Proposed Project's truck haul routes; however, it is acknowledged that students commuting to Ruby Bridges Elementary School would have to cross a portion of the proposed truck haul route on Main Street and Ralph Appezzatto Memorial Parkway and that the Proposed Project's construction-related truck trips would significantly impact pedestrian and bicycle safety. As noted above, the Proposed Project truck routes identified in the Draft EIR are based on the truck routes designated by the City of Alameda; all road segments of the Proposed Project's truck haul routes are part of the City's designated/approved truck routes. The City adopted its current (2023) truck route map as part of a General Plan Mobility Element Appendix update on January 17, 2023, via Resolution No. 16026. Item 2 of the resolution states that the General Plan amendment will have acceptable effects on the general welfare of the community. Item 4 of the resolution indicates that adoption of the Mobility Element Appendix is consistent

with the finding of the General Plan EIR, that no revisions to the General Plan EIR were required due to new or substantially significant impacts, and that no further environmental review was required for adoption of the Mobility Element Appendix. Therefore, the resolution implies that the City considered the environmental effects, including those on bicycle and pedestrian safety, in designating truck routes as indicated on the adopted 2023 truck route map. The Draft EIR transportation impact analysis (Section 3.14.4) acknowledged under Impact TRA-1 that Proposed Project's construction delivery and dump truck traffic, if not properly managed, could impact local roadway, bicycle and pedestrian circulation, and conflict with local plans, ordinances, or policies addressing the circulation system, resulting in a potentially significant impact. The Draft EIR included Mitigation Measure TRA-1, requiring the construction contractor to develop a comprehensive construction Traffic Control Plan that includes various measures to minimize the effects of the Proposed Project's construction traffic on overall circulation, including temporary traffic controls, such as signage and flaggers, to minimize conflicts; identification and enforcement of designated truck haul routes; and advance notification of neighboring residents, businesses, schools, and other property owners of any substantial increases in construction traffic.

In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. This resulted in 17,770 fewer construction truck round trips directly to and from the Proposed Project sites, which is a 46 percent reduction of truck trips at Howard Terminal, a 57 percent reduction of truck trips at the Alameda Site, and a 54 percent reduction in total from the Proposed Project construction truck trips in Oakland and Alameda, as stated in the Draft EIR. Please refer to Global Response 4: Reducing Local Truck Trips, for additional information.

**LEi-5 Response:**

As described in response to comment LEi-4, the Proposed Project has been modified in this Final EIR, resulting in a 57 percent reduction of truck trips at the Alameda Site. The comment states that the Posey Tube and Park Street Bridge operate below acceptable Level of Service and asserts the Proposed Project would exacerbate congestion; however, the CEQA Guidelines Level of Service is no longer used to evaluate traffic impacts. The comment incorrectly states the Webster and Posey Tubes are not designed for heavy truck traffic. Based on the Caltrans California Truck Network website (https://quickmap.dot.ca.gov/#a4), the Webster and Posey Tubes (State Route 260) allow trucks with king-pin-to-rear axle length of 40 feet for two or more axle semitrailers and 38 feet for single-axle semitrailers as of January 2025. Draft EIR Figure 3.14-4 identified that during construction, trucks would use the Webster and Posey Tubes and the Park Street Bridge for arriving and departing Alameda, which is consistent with the City of Alameda's designated truck routes; the Proposed Project would follow the City of Alameda's designated truck routes at the time of construction.

The comment states that students commuting to local schools would have to cross a portion of the proposed truck haul route on Ralph Appezzatto Memorial Parkway, and that the Proposed Project's construction-related truck trips would increase the risk of collisions. The Proposed Project truck routes identified in the Draft EIR are based on the truck routes designated by the City of Alameda; all road segments of the Proposed Project's truck haul routes are part of the City of Alameda's designated/approved truck routes. The Proposed Project would use the City of Alameda's designated/approved truck routes at the time of construction. The City adopted its

current (2023) truck route map as part of a General Plan Mobility Element Appendix update on January 17, 2023, via Resolution No. 16026. Item 2 of the resolution states that the General Plan amendment will have acceptable effects on the general welfare of the community. Item 4 of the resolution indicates that adoption of the Mobility Element Appendix is consistent with the finding of the General Plan EIR, that no revisions to the General Plan EIR were required due to new or substantially significant impacts, and that no further environmental review was required for adoption of the Mobility Element Appendix. Therefore, the resolution implies that the City of Alameda considered the environmental effects, including those on bicycle and pedestrian safety, in designating truck routes as indicated on the adopted 2023 truck route map. The Draft EIR transportation impact analysis (Section 3.14.4) acknowledged under Impact TRA-1 that Proposed Project's construction delivery and dump truck traffic, if not properly managed, could impact local roadway, bicycle and pedestrian circulation, and conflict with local plans, ordinances, or policies addressing the circulation system, resulting in a potentially significant impact. The Draft EIR included Mitigation Measure TRA-1, requiring the construction contractor to develop a comprehensive construction Traffic Control Plan that includes various measures to minimize the effects of the Proposed Project's construction traffic on overall circulation, including temporary traffic controls, such as signage and flaggers, to minimize conflicts; identification and enforcement of designated truck haul routes; and advance notification of neighboring residents, businesses, schools, and other property owners of any substantial increases in construction traffic. With the implementation of the required Traffic Control Plan, the volume and timing of construction traffic would be managed to avoid adversely affecting local roadway, bicycle, and pedestrian circulation, and the impact relative to potential conflicts with local plans, ordinances, or policies would be less than significant.

The Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's Traffic Control Plan. If the Proposed Project is approved by the Port, and the Port seeks to acquire the necessary property for the Proposed Project as outlined in the Draft EIR, the Port would plan to purchase from the current private property owners sufficient land from the Alameda Site to construct the Proposed Project, including the approximately 6 acres of land that would be removed to widen the IHTB and adjacent land that would be used for construction. If successfully purchased from the private property owners, the subject land would be owned by the Port prior to initiation of any activities requiring permitting. Thereafter, the Port's Proposed Project activities on that site would be subject to intergovernmental immunity and not the City of Alameda's general plan, zoning, design review, or permitting jurisdiction. Refer to Lawler v. City of Redding, 7 Cal.App.4th 778 (1992) (where a city owns property in another city's territory, that property is subject to the owner's general plan, zoning and building codes rather than those of the jurisdiction where the property is located). Refer to Government Code sections 53090 and 53091, creating limited exceptions to intergovernmental immunity for certain public agencies other than cities and counties.

**LEi-6 Response:**

The comment incorrectly states that pile driving, excavation, dredging, and demolition activities would occur for 24 hours a day, 7 days a week for 2 years. Only dredging would be performed 24 hours a day, 7 days a week; for the Alameda Site, the estimated dredging duration is 3 months. All other construction activities would occur Monday through Friday between the hours of 7 a.m. and 7 p.m. The estimated construction duration stated in the Draft EIR is 2 years

and 4 months (Section 2.5.2, page 2-28), and for the Alameda Site the estimated construction duration is 20 months.

The noise impact analysis in Draft EIR Section 3.12.4 under Impact NOI-1 indicates that significant noise impacts during construction would only occur during pile driving or nighttime dredging. Potentially significant noise impacts would not occur from other daytime construction activities other than pile driving. With implementation of Mitigation Measure NOI-1A, requiring the use of cushion blocks, the noise impacts during pile driving would be reduced to less-than-significant levels at all Alameda sensitive receptors. Furthermore, as noted in the Draft EIR, the City of Alameda Noise Ordinance exempts construction noise from its exterior noise standards if occurring between 7:00 a.m. and 7:00 p.m. on Monday through Friday and 8:00 a.m. to 5:00 p.m. on Saturdays. However, for the purpose of this analysis, the Port applied the City of Oakland's daytime noise ordinance standards to receptors in Alameda. Had the Port applied the City of Alameda's Noise Ordinance, which exempts daytime construction activities Monday through Saturday, the unmitigated impacts from pile driving would not be considered significant.

The Proposed Project already includes use of an electric dredge, and there are no feasible noise control devices that could be installed to reduce noise from the dredge and tugs, or feasible alternative construction methods to dredging. Mitigation Measure NOI-1B would reduce noise impacts from nighttime dredging for the Mosley Avenue residences through installation of a temporary noise barrier; installing a noise barrier for the Landing at Bay 37 residences would not be feasible. Because the Draft EIR analysis found that the interior noise levels at these residences would be below the City's 45 dB CNEL standard, additional mitigation measures, including a Construction Noise Reduction Plan, are not warranted.

The suggestion to conduct noise monitoring does not reduce any impact found to be significant and unavoidable. Therefore, the Port declines to incorporate this suggestion as mitigation.

In consideration of comments received on the Draft EIR, the Port has modified Mitigation Measures NOI-1A and NOI-1B in this Final EIR to include a designated point of contact for noise complaints and additional information on notifying nearby property owners and residents regarding the timing and nature of construction activities.

The suggestion to relocate residents is infeasible, as it would require the residents to relocate from their current residences, which would result in substantial disruptions despite the extremely limited duration of the significant impact. The Port does not have the authority to forcibly remove individuals from their residences, and any voluntary program would risk leaving nonparticipating individuals in their homes (and therefore not lessen the impact to a level of less than significant). Additionally, as noted above, the residents would not experience any significant impacts inside the residences, because the interior noise standard would not be exceeded at Bay 37. Therefore, the Port declines to incorporate this suggestion as mitigation.

With the reduction of truck trips in Oakland and Alameda as described in Global Response 4: Reducing Local Truck Trips, Mitigation Measure NOI-1C identified in the Draft EIR is no longer required and has been removed in this Final EIR.

As explained under response to comment LEi-5, the Port would not require a construction or building permit from the City of Alameda that would provide the City of Alameda with approval authority over the Proposed Project's noise and traffic control measures.

**LEi-7 Response:**

Refer to Global Response 7: Air Quality Mitigation Measures, for discussion of mitigation measures proposed by commenters for air quality impacts. The Port has reviewed and considered the commenters' suggested edits to Mitigation Measure AIR-1. Where appropriate, suggested revisions have been partially incorporated to clarify language for contractor implementation. A discussion of performance standards to define mitigation measures listed under Mitigation Measure AIR-1 is also presented in the response.

**LEi-8 Response:**

The Draft EIR addresses the potentially significant impacts related to seismic stability of the shoreline from widening the IHTB and ongoing annual dredging under Impact GEO-1. Additional geologic hazards are addressed under Draft EIR Impacts GEO-2 through GEO-4. As part of the feasibility analysis and assessment of seismic and related geologic hazard impacts, the USACE and Port evaluated geotechnical and structural conditions and performed an engineering analysis to determine overall engineering feasibility and to inform the preliminary designs of the Proposed Project (including proposed sheet piles and bulkheads). This included review of subsurface information obtained from existing geologic mapping and soils data, previous geotechnical studies (including those performed for the -50-Foot Oakland Harbor Navigation Project and the Oakland Waterfront Ballpark District at Howard Terminal), and as-built plans for existing facilities as summarized in the USACE's Integrated Feasibility Report and Environmental Assessment for the Oakland Harbor Turning Basins Widening, Appendix B2: Geotechnical Engineering and Appendix B3: Structural Engineering. In addition, Appendix B3: Structural Engineering, identifies several design standards and references considered in the analysis. Based on that information, as well as the somewhat limited scope of the Proposed Project and observed performance of existing shoreline protections and bulkheads, the USACE and Port determined that, notwithstanding the soil characteristics along the federal navigation channel, the area is expected to accommodate the Proposed Project without resulting in any significant geologic hazards (seismic risks to structures or people or related landslide, lateral spreading, subsidence, liquefaction, or collapse). For example, in its May 2024 Integrated Feasibility Report and Environmental Assessment (Section 6.3, Geology, Soils, and Seismicity;), the USACE concluded that:

> "[T]he action alternatives would not introduce elements that would increase potential risks related to rupture of a known earthquake fault; seismic shaking; or seismic-related ground failure, including liquefaction; or landsides. Any new bulkhead or sheet pile shoreline structures that would be installed as part of the action alternatives would comply with applicable seismic standards. Similarly, the action alternatives would not involve activities that would cause geologic units or soils to become unstable, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, or collapse; this excludes minor erosion of the turning basins' side slopes from sloughing that may occur after the areas are dredged. Because the action alternatives would have no effect on seismicity or geologic resources, they would not contribute to cumulative impacts to these resources."

Moreover, as is required and assumed for pre-construction and final design-level plans, the USACE and Port must perform a site-specific, design-level geotechnical investigation to confirm the findings of the USACE's Feasibility Report Geotechnical Engineering Appendix (B2) and

Structural Engineering Appendix (B3), and the Port's Draft EIR all remain accurate, and to set final design parameters for the bulkheads and shoreline protection (e.g., slopes and material). The USACE's Feasibility Report, Geotechnical and Structural Appendices, and the Port's Draft EIR—along with observed historical performance of shoreline protection and bulkheads at the project sites—encompass standard, accepted, and proven engineering practices that are known to avoid significant adverse impacts related to seismic and other geologic hazards for this sort of shoreline infrastructure.

Although the Proposed Project is not expected to result in significant impacts related to geologic conditions and proposed shoreline improvements, the following mitigation measure is incorporated in response to public comments and as a precaution to ensure that the final designs and construction measures will comply with applicable seismic standards and maintain soil stability and structural integrity:

**MM GEO-1: Site-Specific Geotechnical and Structural Investigation**

The Port shall perform a site-specific geotechnical investigation to verify soil characteristics and inform pre-construction engineering and final design of the new bulkheads and shoreline protection along the federal navigation channel and turning basins. The investigation shall include the drilling of soil borings (e.g., cone penetrating testing) to characterize specific soil properties and provide engineers with information necessary to confirm compliance with all applicable building codes and standards, as well as to develop site-specific design features and construction measures to minimize risk to structures and people due to seismic shaking, and ensure that the constructed facilities maintain slope reliability and do not result in adverse effects related to ground failure, landslide, lateral spreading, subsidence, liquefaction, or collapse. A registered geotechnical or structural engineer must review the site-specific geotechnical and structural investigation and require compliance with all design and construction measures in the investigation for the grading, foundation, structural, infrastructure, and other relevant construction elements. The investigation must ensure that shoreline stability and structural integrity are maintained or improved. Specific design features and construction measures recommended by the Project engineer and approved by the Port as necessary to achieve that performance standard shall include, at a minimum:

- Ensure that bulkhead and sheet pile shoreline structures comply with applicable USACE seismic standards and building codes at the time of project implementation. Seismic design standards include, but are not limited to, the following:
    - USACE, 2016, Earthquake Design and Evaluation for Civil Works Projects, ER 1110-2-1806, Regulation No. 1110-2-1806, May
    - Urban Levee Design Criteria (ULDC, 2012) (also addressed in draft 2022 USACE Engineer Manual for Evaluation, Design, and Construction of Levees)
- Ensure that bulkhead and sheet pile shoreline structures are designed to withstand ground accelerations expected from known active faults.
- Institute site preparations, subsurface soil improvements, and final design parameters for walls, foundations, utilities, and other surrounding improvements, as applicable;
- Apply alternative site-specific measures to reduce the risk of liquefaction, including treatment or removal of subsurface soil or installation of deep foundations, soil cover,

dynamic compaction, or edge containment structures (berms, sea walls, retaining structures, compacted soil zones); and/or

- Impose site grading requirements for soil moisture content and fill material, utility trench backfill, grade construction, or trenching and excavation.

Performing the geotechnical investigation at the pre-construction and design phase is appropriate because final designs could change in response to environmental review. Furthermore, the State Building Code (adopted and incorporated by the Port of Oakland) requires geologic and earthquake engineering reports for construction, which must include a geologic investigation, evaluation of known active and potentially active faults, ground motion parameters, evaluation of slope stability at or near the site, and the liquefaction and settlement potential of the earth materials in foundations. Furthermore, the project design would be reviewed by the San Francisco Bay Conservation and Development Commission through their Engineering Criteria Review Board, which would include review and approval of appropriate geotechnical and structural evaluations of the existing sediments, historic fill, upland soils, and proposed construction features. This is required as a condition of the Letter of Agreement for Consistency Determination No. C23023.003.00 issued for the project by the Commission pursuant to the Commission's authority in administering the Coastal Zone Management Act. Considering compliance with the State Building Code and related provisions of state law, the rigorous investigation process required under the engineering standard of care, and regulatory agency technical reviews, implementation of Mitigation Measure GEO-1 further supports that the risk of seismic hazards and related geologic hazards would remain less than significant. The addition of Mitigation Measure GEO-1 does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

Future maintenance dredging of the widened areas of the turning basins would be confined to the removal of loose sediment accumulated in the widened dredge prism, and therefore would not result in increased risk of seismic or slope stability-related hazards because it would not further expand the turning basins. The purpose of the Proposed Project is to increase the width of the existing turning basin so that it will accommodate the minimum 20 percent industry standard for larger vessels and comply with specific restrictions in place for all vessels (San Francisco Bar Pilots 2023b). The Proposed Project is replacing (and improving) existing shoreline protection and bulkheads in the IHTB, and the use of tugs in the Inner Harbor is an existing condition involving ongoing operations. The Proposed Project would not increase operational tug use. The Draft EIR determined impacts during operations to be less than significant, and therefore no further mitigation is required.

As concluded based on geotechnical analyses, the Proposed Project is not anticipated to exacerbate seismic stability, and there are features of the Project and mitigation measures incorporated to address these possible impacts.

The Proposed Project area is not included in the 2014 Alameda Point Master Infrastructure Plan or analysis; rather, only the portions of Alameda shoreline west of Main Street are included in the 2014 MIP, as amended in 2020. Furthermore, as explained in responses to comment LEi-5, the Port's activities on lands purchased from the Alameda Site to construct the Proposed Project would not be subject to the City of Alameda's jurisdiction; therefore, the Alameda Point Master Infrastructure Plan would not be applicable to the Proposed Project. For these reasons, mitigation measures from the Alameda Point Master Infrastructure Plan would not be applicable.

In response to concerns related to sea level rise, the Proposed Project is not anticipated to exacerbate the risk of sea level rise–induced flooding. The Draft EIR Hydrology/Water Quality impact analysis (Section 3.9.4) under Impact HYD-4 concluded that the Proposed Project is unlikely to result in hydrodynamic changes that would substantially change inundation during sea level rise. Impact HYD-4 regarding flood hazard, tsunami, or seiche zones, and inundation also stated that there may be minor, permanent alterations to upland drainage patterns at the Alameda Site associated with upland excavation and reconfiguration of the facility shoreline (e.g., removal, replacement, or redesign of drainage infrastructure such as curbs and gutters), but these are not anticipated to affect flood hazards.

The existing bulkhead walls at the Alameda Site are at elevation +13.7 feet NAVD88. The Proposed Project's bulkhead walls would match the elevation of the existing bulkhead walls. The Port's Sea Level Rise Assessment used sea level rise estimates of 1 foot, 2 feet, and 3 to 5.5 feet for 2030, 2050, and 2100, respectively; these sea-level-rise scenarios were obtained from the 2018 California Coastal Commission Sea-Level Rise Policy Guidance document and the San Francisco Bay Conservation and Development Commission Adapting to Rising Tides program. As of 2024, the sea level elevation was +6.5 feet NAVD88 at its highest level. Accounting for 5.5 feet of sea level rise (the high end of the estimate for 2100 based on the Port's Sea Level Rise Assessment Mapping), sea level at the site would be elevation +12 feet NAVD88 at its highest level. Therefore, the proposed bulkhead wall design elevation of +13.7 feet NAVD88 is more than sufficient to address sea level rise through 2100. It should also be noted that the California Coastal Commission adopted an update to its Sea-Level Rise Policy Guidance in November 2024 that includes reduction (lowering) of the sea level rise estimates from the 2018 Guidance on which the Draft EIR and above analysis were based.

### G.5.3.24 Martin Horwitz (MHo)

**MHo-1 Response:**

Please refer to Global Response 5: Operational Impacts.

**MHo-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**MHo-3 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**MHo-4 Response:**

Please refer to Global Response 1: CEQA Process.

### G.5.3.25 Margie Siegel (MSi)

**MSi-1 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods; therefore, fewer container vessels would be transiting the Estuary waters used by recreational vessels.

**MSi-2 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport, and Global Response 5: Operational Impacts.

### G.5.3.26 Mark Piet (MPi)

**MPi-1 Response:**

There are currently locations along the Alameda and Oakland shorelines from which the public can view ships turning in the IHTB, including the Alameda Landing Waterfront Park and Main Street Alameda Ferry Terminal, and the Oakland Jack London Square Ferry Terminal and public observation deck at 10 Clay Street, which are both at Jack London Square in Oakland. The requirement for and feasibility of additional public access/viewing amenities as part of the Proposed Project would be evaluated during the pre-construction engineering and design phase.

### G.5.3.27 Margaret Gordon (MGo)

**MGo-1 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport, Global Response 5: Operational Impacts, and Global Response 2: Community Engagement and Environmental Justice.

### G.5.3.28 Nancy Auker (NAu)

**NAu-1 Response:**

Please refer to Global Response 5: Operational Impacts.

**NAu-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**NAu-3 Response:**

Please refer to Global Response 9: Biological Resources and Water Quality.

**NAu-4 Response:**

Please refer to Global Response 1: CEQA Process.

### G.5.3.29 Nancy Wong (NWo)

**NWo-1 Response:**

Commenter's concerns of security and illegal drug smuggling are independent of the Proposed Project's navigational improvements. As stated in Draft EIR Section 2.4, the Proposed Project improves conditions for vessel maneuvering and safety and does not include changes to regulatory security protocols or oversight. Container terminals that handle international cargo are federally regulated and will remain so with or without widened turning basins. Enforcement of these federal regulations (including security and illegal smuggling activities) are the responsibility of the U.S. Customs and Border Protection and the U.S. Coast Guard, which remain unchanged by the Proposed Project. Additionally, the Port's forecasted trade demand and total projected volume of cargo remain the same with and without widening of the turning

basins. Therefore, the Proposed Project would not change security regulations nor introduce any new or increased security issues.

### G.5.3.30 Richard Reitmeyer (RRe)

**RRe-1 Response:**

Comment noted.

### G.5.3.31 Steve Bayles (SBa)

**SBa-1 Response:**

The Proposed Project would facilitate a reduction in the total number of vessel calls to the Port to deliver the same amount of goods; therefore, fewer container vessels would be transiting the Estuary waters used by commercial recreational vessels.

### G.5.3.32 Selena Feliciano, Julio Garcia, Violet Saena (SFe)

Please refer to Global Response 5: Operational Impacts.

**SFe-4 Response:**

Please refer to Global Response 5: Operational Impacts.

**SFe-5 Response:**

Please refer to Global Response 5: Operational Impacts.

**SFe-6 Response:**

As stated in Draft EIR Section 2.5.4, material to be excavated and dredged would be characterized (i.e., sampled and subjected to laboratory analysis) to determine whether it would be suitable for beneficial reuse (for the protection, restoration, or creation of aquatic wetland habitats) or would require disposal at a landfill. For the purposes of the Draft EIR, the anticipated landfills to accept material from the Proposed Project include the Kettleman Hills Class I permitted landfill at 35251 Old Skyline Road in Kettleman City, California, and the Keller Canyon Class II permitted landfill at 901 Bailey Road in unincorporated Contra Costa County near Pittsburg, California; these landfills were identified as the Class I and Class II landfills nearest to the Proposed Project sites that are expected to have sufficient capacity at the time of the Proposed Project's construction. Similarly, the assumed beneficial reuse site is the Montezuma Wetlands Restoration Project at 1485 Collinsville Road, Birds Landing, in Solano County. These landfills and beneficial reuse site were determined to be the mostly likely locations for the receipt of the

Proposed Project's excavated and dredged material based on information available at the time of the Draft EIR preparation.

In response to public comments on the Draft EIR, the Port investigated options to reduce the number of truck trips needed in Oakland and Alameda during the Proposed Project's construction. The Proposed Project has been revised in this Final EIR to reflect that material destined for a Class II (nonhazardous) landfill would be transported by barge to the Montezuma Handling Facility, consisting of a small portion of the Montezuma Wetlands Restoration site (at 1285 Collinsville Rd, Suisun City, CA 94585, where it would be offloaded and put on trucks for transport to the Potrero Hills Class II permitted landfill, 17 miles from Montezuma Wetlands, instead of being transported by truck from the Proposed Project sites to the Keller Canyon landfill. Please refer to Global Response 4: Reducing Local Truck Trips, for additional information.

This assumption regarding the Montezuma Wetlands Restoration Project as the beneficial reuse site was developed based on available information at the time of Draft EIR preparation for the beneficial reuse sites currently permitted in San Francisco Bay. The Port selected the Montezuma Wetlands Restoration Project as the most likely location to have capacity available for the cover- and noncover dredged material. This was also a conservative assumption as the farthest likely beneficial reuse site from the Seaport for the purpose of analyzing impacts associated with the transport of dredged materials, such as air quality and greenhouse gases. At the time of this Response to Comments and Final EIR preparation, the Montezuma Wetlands Restoration Project has capacity to accept 1.5 million cubic yards for foundation material and 15 million cubic yards for cover material. However, Draft EIR Section 3.9.1 identified additional candidate beneficial reuse sites, including the Cullinan Ranch and Restoration Project site in Napa and Solano Counties in the San Pablo Bay National Wildlife Refuge for wetland beneficial reuse, and the Eden Landing Ecological Reserve on the Hayward/Union City shoreline for upland beneficial reuse. Notably, dredged material has market value and is not considered waste in the same manner as the material that would only be suitable for a landfill, which creates an opportunity for competition amongst beneficial reuse site operators. Therefore, there remains the possibility that another similarly situated, or perhaps even a beneficial site that is closer in proximity may be available at the time of construction.

In summary, disposal and beneficial reuse locations could change during the Proposed Project pre-construction engineering and design phase based on the results of the soil and sediment characterization and Dredged Material Management Office review and approval, as well as other factors (cost and available facility capacity at the time of construction). For these reasons, the Port cannot state in the EIR, with absolute certainty, the amount of material that would go to a particular beneficial reuse site or landfill. However, because the excavated and dredged materials would be transported to permitted facilities at similar or shorter distances than those assumed in the Draft EIR, a change in the landfill or beneficial reuse site would not be expected to materially change the findings of the Draft EIR. The handling and transport of dredged material was analyzed in the Draft EIR; and to the extent these activities would contribute to potentially significant impacts (e.g., air quality), mitigation measures were proposed to lessen or avoid impacts. Section 2.5.4 of this Final EIR has been updated to reflect Montezuma Wetlands Restoration Project's current capacity, explain why it remains a conservative assumption for the purpose of the environmental impact analysis, and note additional beneficial reuse sites that

could be used. This revision does not constitute significant new information in the meaning of CEQA Guidelines section 15088.5, and does not require recirculation of the Draft EIR.

As stated in the Draft EIR Hazards and Hazards Materials impact analysis (Section 3.9.4) under Impact HAZ-1, the handling, removal, and disposal of any materials found to be hazardous would be conducted in accordance with existing federal, state, and local regulations, and impacts would be less than significant; this would include material transport.

As described in the Draft EIR Hydrology and Water Quality impact analysis (Section 3.10.4) under Impact HYD-1, to operate in U.S. waters and ports, applicable vessels regulated by USCG under Code of Federal Regulations, Title 33, are required to provide a variety of plans—including a Vessel Response Plan—to the USCG for review and approval. A Vessel Response Plan serves as an oil spill response plan for vessels and includes spill mitigation procedures to mitigate or prevent discharge or threat of discharge resulting from operations, accidents, or emergencies. These measures would minimize the potential for the accidental release of hazardous substances from vessels during the Proposed Project's construction to degrade water quality.

As stated in Draft EIR Section 2.4, one of the Proposed Project's fundamental objectives is to improve conditions for vessel maneuvering and safety, which is expressly designed to reduce (not increase) environmental risks associated with existing maneuvering limitations. The Draft EIR Transportation impact analysis (Section 3.14.4) addressed the Proposed Project's possible impacts related to maritime traffic and safety under Impact TRA-3, and found that Proposed Project impacts would be less than significant.

The risk of an oil spill is influenced by a variety of conditions and factors specific to weather and sea conditions, port operations, navigable waterway particulars, and vessel-specific factors. Weather and environmental conditions such as wind and currents can make navigation challenging, especially in narrow turning basins. Vessel condition, age, and maintenance, including hull design and integrity, engines, and adherence to proper maintenance standards, are crucial to driving down the risk of an oil spill. Navigation and maneuverability within a port can also impact risk. The limited width of the existing IHTB and OHTB results not only in navigation inefficiencies, but may also increase the risk of groundings or allisions, which could result in safety and environmental risks, such as oil spills.

Considering the total vessel calls by ship type with their average fuel tank size, there would be theoretically less total fuel transiting the Bay with the Proposed Project. Although it would be impossible to predict the exact volume of fuel at any moment across all the vessel calls, a rough approximate total amount of fuel can be achieved. Using a total fuel capacity of 1 million gallons for SPX, 1.5 million gallons for PPX, 2 million gallons for PPX1, 2.5 million gallons for PPX, 3.5 million gallons for PPX3, and 4.5 million gallons for PPX4 annually, 6,645.5 million gallons of fuel capacity would call at the Port under the 2050 No Project scenario compared to 6,606.5 gallons of fuel under the 2050 Proposed Project scenario (Table G-20).

**Table G-20 Fuel Capacity by Vessel Size for the 2050 No Project and Proposed Project Scenarios**

| Vessel Type | Fuel Tank in Millions of Gallons | Vessel Calls – No Project 2050 | Total Annual Fuel – No Project 2050 | Vessel Calls – Proposed Project 2050 | Total Annual Fuel – Proposed Project 2050 |
|---|---|---|---|---|---|
| SPX | 1 | 149 | 149 | 52 | 52 |
| PPX | 1.5 | 126 | 189 | 26 | 39 |
| PPX1 | 2 | 518 | 1036 | 92 | 184 |
| PPX2 | 2.5 | 701 | 1,752.5 | 397 | 992.5 |
| PPX3 | 3.5 | 675 | 2,362.5 | 880 | 3,080 |
| PPX4 | 4.5 | 257 | 1,156.5 | 502 | 2,259 |
| **Total** | | **2,426** | **6,645.5** | **1,949** | **6,606.5** |

Furthermore, marine vessel diesel fuel usage would also be less under the Proposed Project, at 12,665,542 gallons compared to 13,964,768 gallons under the No Project scenario in the year 2050 (refer to Draft EIR Table 3.6-5).

**SFe-7 Response:**

Please refer to response to comment SFe-6 and Global Response 9: Biological Resources and Water Quality. In addition, the beneficial reuse of approximately 2.2 million cubic yards of dredged sediment at a wetland restoration site would offset loss of habitat value resulting from the Proposed Project's impact to subtidal benthic habitat (refer to Impact BIO-1 in Draft EIR Section 3.4).

**SFe-8 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice. As indicated in Global Response 2, implementation of the Proposed Project would also have a beneficial impact of reducing emissions from Seaport operations by bringing cleaner ships to the Port. Please also refer to Global Response 3: Zero-Emissions Seaport, summarizing the Port's efforts toward transitioning to a zero-emissions Seaport.

**SFe-9 Response:**

Comment noted.

### G.5.3.33 Sherrill Futrell (SFu)

**SFu-1 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice. Please also refer to Global Response 3: Zero-Emissions Seaport, summarizing the Port's efforts toward transitioning to a zero-emissions Seaport.

### G.5.3.34 Steve Gorman (SGo)

**SGo-1 Response:**

Comment noted.

### G.5.3.35 Sean Svendsen (SSv)

**SSv-1 Response:**

The Proposed Project includes use of electric dredge equipment for construction dredging at the Alameda Site.

**SSv-2 Response:**

The Draft EIR, Section 2.5.1, under Howard Terminal and Alameda Site, acknowledges that the electrical supply for dredging would be supplied from existing electrical infrastructure adjacent to the Alameda shoreline or electrical infrastructure that would be installed at Howard Terminal near Berth 68. Therefore, existing electrical infrastructure in Alameda is one power supply option for electric dredging of the IHTB.

**SSv-3 Response:**

There is existing electrical infrastructure along the Alameda shoreline adjacent to the Alameda Site that could be used for electric dredging during construction. Please also refer to response to comment SSv-2.

**SSv-4 Response:**

One of the purposes of widening the turning basis is to improve navigational safety for turning vessels; therefore, it is not practicable to provide facilities that would allow vessels to tie up along the wharf in the IHTB and potentially conflict with turning vessels.

### G.5.3.36 Todd Snyder (TSn)

**TSn-1 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport. The Port is not proposing to expand its operations as part of this particular Project, and this Proposed Project would not itself lead to any expansion of operations. Furthermore, electrification will in no way address the need to widen the turning basins.

**TSn-2**

**Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

### G.5.3.37 Virginia Moriconi (VMo)

**VMo-1 Response:**

Please refer to Global Response 5: Operational Impacts.

## G.5.4 Oral Comments from October 25, 2023, Public Meeting

### G.5.4.1 Bill Dow (BDo)

**BDo-1 Response:**

Comment noted.

### G.5.4.2 Margaret Gordon (MGoV)

**MGo-1V Response:**

The Draft EIR identified significant and unavoidable air quality and noise impacts; mitigation has been proposed, as feasible, to lessen the extent of those impacts. In addition, as indicated under Global Response 2: Community Engagement and Environmental Justice, implementation of the Proposed Project would also have a beneficial impact of reducing emissions from Seaport operations in 2030 compared to a No Project 2030 baseline.

**MGo-2V Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice and Global Response 5: Operational Impacts.

**MGo-3V Response:**

The comment asserts that the Port would be deploying up to 19,000 containers in 72 hours; however, the source of that information was not indicated. Please refer to Global Response 5: Operational Impacts, regarding a traffic study that indicates that the Proposed Project is not expected to cause more truck congestion on local roads. Current landside operations include an appointment system and a comprehensive truck management plan to aid in the management of cargo movement inside the Port. The appointment systems are maintained and managed by the individual terminal operators to moderate transactions (e.g., hourly truck arrivals to a terminal) in accordance with available equipment and staffing. The Proposed Project does not include plans to modify these systems, which are designed to enhance and support efficiencies in container deliveries and pickups (e.g., truck movements), thereby aiding to reduce truck-related emissions on the local community. This Proposed Project is designed to create greater efficiencies in turning ships. The Proposed Project is not proposing to encompass any changes in landside operations, nor are landside operational changes a reasonably foreseeable consequence of this Proposed Project.

### G.5.4.3 Bret Andrews (BAn)

**BAn-1 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice. The Draft EIR discloses and addresses this Proposed Project's potential impacts on West Oakland residents, including impacts from construction and operations. In addition, as indicated in the response, implementation of the Proposed Project would also have a beneficial impact of reducing emissions from Seaport operations in 2030 compared to a No Project 2030 baseline.

### G.5.4.4 Katrina Thomas (KTh)

**KTh-1 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

**KTh-2 Response:**

Please refer to Global Response 5: Operational Impacts, and Global Response 2: Community Engagement and Environmental Justice.

**KTh-3 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport. Electrifying equipment would not address the fundamental purpose of the Proposed Project—to improve and increase safety and efficiencies in the Inner and Outer Harbor Turning Basins.

**KTh-4 Response:**

Please refer to Global Response 1: CEQA Process.

### G.5.4.5 Fern Uennatornwaranggoon (FUe)

**Fe-1 Response:**

Please refer to Global Response 5: Operational Impacts. In addition, as indicated under Global Response 2: Community Engagement and Environmental Justice, implementation of the Proposed Project would also have a beneficial impact of reducing emissions from Seaport operations in 2030 compared to a No Project 2030 baseline.

**Fe-2 Response:**

Please refer to Global Response 2: Community Engagement and Environmental Justice.

## G.5.5 Oral Comments from November 7, 2023, Public Meeting

### G.5.5.1 Susan Ransom (SRa)

**SRa-1 Response:**

Comment noted.

**SRa-2 Response:**

Comment noted.

**SRa-3 Response:**

Comment noted.

**SRa-4 Response:**

Comment noted.

**SRa-5 Response:**

Comment noted.

**SRa-6 Response:**

Comment noted.

### G.5.5.2 Mandeera Wijetunga (MWi)

**MWi-1 Response:**

Please refer to Global Response 3: Zero-Emissions Seaport, Global Response 5: Operational Impacts, and Global Response 2: Community Engagement and Environmental Justice.

**MWi-2 Response:**

Draft EIR Table 2.5-3 identifies the estimated amounts of excavated terrestrial and dredged material and anticipated placement locations. As described in Draft EIR Section 2.5.4, Other Construction Details, the placement locations would be determined through sediment characterization and associated regulatory review during the pre-construction engineering and design phase. As stated in Draft EIR Section 2.5.3 (Detailed Construction Activities) under Dredged Material Rehandling, dredged material not suitable for beneficial reuse would be placed at Berth 10 for rehandling prior to continued transport to a landfill. The anticipated landfills to accept material from the Proposed Project include the Kettleman Hills Class I permitted landfill in Kettleman City, California, and the Keller Canyon Class II permitted landfill in unincorporated Contra Costa County near Pittsburg, California. The anticipated beneficial reuse site is the Montezuma Wetlands Restoration Project in Solano County. With the Proposed Project revised in this Final EIR to include barging the majority of anticipated Class II nonhazardous waste from the landside excavation activities at Howard Terminal and the Alameda Site, Class II (nonhazardous) dredged material from the Inner Harbor may also be barged to Montezuma rather than barged to Berth 10 for rehandling, followed by transport via truck to a Class II landfill.

**MWi-3 Response:**

Mitigation Measures were identified for the following environmental resource topics: Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Noise, Transportation, and Tribal Cultural Resources. The mitigation measures were detailed in the corresponding resource sections in Chapter 3 of the Draft EIR, and were also summarized in the Draft EIR Executive Summary Table ES-1.

### G.5.5.3 Mike Jacob (MJa)

**MJa-1 Response:**

Comment noted.

**MJa-2 Response:**

Comment noted.

**MJa-3 Response:**

Comment noted.

### G.5.5.4 Trish Herrera Spencer (TSp)

**TSp-1 Response:**

As described in the Draft EIR impact analysis for Geology and Soils (Section 3.7.4) under Impact GEO-1, the Proposed Project would comply with all seismic standards, requirements, and conditions contained in engineering design and construction-related codes, which would ensure structural integrity of built features and safe construction and therefore would not result in increased risk of seismic-related hazards. Although the Proposed Project is not expected to result in significant impacts related to geologic conditions and proposed shoreline improvements, Mitigation Measure GEO-1 has been incorporated in this Final EIR as a response to public comments, and as a precaution to ensure that the final designs and construction measures will comply with applicable seismic standards and maintain soil stability and structural integrity.

**TSp-2 Response:**

As described in the Draft EIR impact analysis for Biological Resources (Section 3.4.4) under Impacts BIO-1 and BIO-2, the Proposed Project's impacts to San Francisco Bay wildlife and aquatic habitats would be temporary during construction, and less than significant with the incorporation of mitigation measures. The landside areas of Alameda and Howard Terminal are paved and developed with structures, and provide little to no habitat for wildlife; therefore, removal of these uplands would not result in the loss of habitat with any material function and value. Please also refer to Global Response 9: Biological Resources and Water Quality.

## G.5.6 Oral Comments from November 14, 2023, Public Meeting

### G.5.6.1 Bobby Winston (BWi)

**BWi-1 Response:**

Comment noted.

### G.5.6.2 Margaret Gordon (MGo)

**MGo-4V Response:**

Please refer to Global Response 3: Zero-Emissions Seaport, Global Response 5: Operational Impacts, and Global Response 2: Community Engagement and Environmental Justice. The EIR does address operational impacts, but generally concludes that such impacts would be insignificant because the Proposed Project is expected to increase efficiencies, and therefore reduce existing impacts of the operating turning basins.

### G.5.6.3 Susan Ransom (SRa)

**SRa-7 Response:**

Comment noted.

**SRa-8 Response:**

Comment noted.

**SRa-9 Response:**

Comment noted.

**SRa-10 Response:**

Comment noted.

**SRa-11 Response:**

This e-mail was sent from a contact form on Oakland Seaport (https://www.oaklandseaport.com)

**Kathryn Hettich, Redding, CA**
As a former resident of the Oakland Bay Area, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Artemis Schatzkin, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. This concept is unacceptable. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Do the right thing. Reanalyze and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Perry Gx, Tustin, CA**
Time Is Now To Rethink Period In Regards. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**William Brown, Clovis, CA**
As a Californian, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**I-Ching Lao, Los Angeles, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Catherine Lanzl, Encinitas, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.NO MONSTER SHIPS!!! ENOUGH IS ENOUGH!!!

**rick akers, Long Beach, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Anne Spesick, Cool, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdensome by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lacey Levitt, San Diego, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Importantly, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland wildlife.

**Carole Cool, Berkeley, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Sincerely, Carole Cool

**Dani Gersalia, Woodland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you for your attention to this important matter.

**Nancy Kingston, Mission Viejo, CA**
As a California resident and as a public health professional and environmental advocate for 35+ years, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning

Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Vivian Ehresman, Chatsworth, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**R D Frankel, Cathedral City, CA**
As a California resident, as a regular voting citizen, I am writing to express my on-going dismay. The Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor is fatally flawed and must be overhauled or rejected. Inviting more megaships into Oakland will have a critical, detrimental effect on the Bay Area region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion is highly likely to harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I request that you redo the analysis and recirculate a new Draft Environmental Impact Report. This new Draft EIR must fully consider the direct and indirect negative environmental impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Jack Neff, Los Angeles, CA**
As a Californian, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that

fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**William Leo Grgurich Jr, Palo Alto, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega-ships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. At this moment two concepts come to mind. These mega ships are becoming the way to move larger cargo vessels with more items thereby shrinking the number of vessels in the Oceans. Second, currently, the Panama Canal is reporting these newer ships are only 40% full as they transverse through this area due to the lack of rainfall and available water for travel. Furthermore, is there a way to complete this transformation without the negative consequences put forward in this request? The San Francisco Bay area more than likely should make the necessary changes and adjustments for economic reasons and benefits resulting from the industry upgrades on the horizon. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**John Ripley, Pasadena, CA**
Have lived in the Long Beach port area so was exposed to the same consequences that this issue deals with. Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Thank you for your time and consideration. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Michael Terry, Santa Monica, CA**
Since my younger son is a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution offshore and onshore. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report

that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**A. Hernday, Santa Rosa, CA**
As a local north bay resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a ***detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will ***reverberate through neighboring communities, negatively impacting the health and well-being of residents. ***In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that •••are already burdened by environmental injustice. ***Furthermore, the proposed expansion could harm endangered species ***and water quality in the San Francisco Bay. •••This could have long-lasting impacts on the ecosystem and the overall health of the Bay. ***** I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that •••fully considers the negative impacts of this proposed expansion on our region and •••the health and well-being of West Oakland residents.

**Thomas Cassidy, Clovis, CA**
The usual cursory, incomplete environmental assessments used by Army Corps of Engineers subservient to oligarch interests was used to contingently proceed with th Oakland Turning basins project.. The Port of Oakland must be more observant of environmental concerns for the West Oakland area which already has an unmitigated harmful environmental burden. As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Russell Symonds, Costa Mesa, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega-ships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Janice Schroeder, Berkeley, CA**
I am strongly against the widening of the Turning Basins in the Oakland Harbor. As a local resident, I

feel this would be inviting more mega ships into Oakland which will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Debra Brackett, Sonora, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the local community by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Suzan Kaplan, Alameda, CA**
When a container company that serves the Port of Oakland moved to Alameda for several years, trucks carrying containers backed up on my street, idling in front of my house while they waited to turn left into the container lot. Let me assure you, the trucks spewing toxic pollutants poisoned the air I breathe. Today, I have Parkinson's Disease, widely believed to be caused by pollutants such as those found found in diesel fumes. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**M DuPree, Sacramento, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Betty Kissilove, San Francisco, CA**
As a local resident, I'm writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Kay Selzer, Morro Bay, CA**
As a California resident, I have great concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Please redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jodi Selene, Sebastopol, CA**
Oakland, Alameda and other cities in the Bay Area have too much pollution from trucks and ships! I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**David Perry, Palo Alto, CA**
DO NOT ALLOW WIDENING OF THE TIDAL BASINS! As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland

Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Allegra Printz, San Rafael, CA**
My concern is increased SF Bay water pollution from more & bigger cargo ship traffic. Rethink your plan. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Claire Perricelli, Eureka, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Maureen Lahiff, Oakland, CA**
As a resident of Oakland, I am very concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the

negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Elaine Benjamin, Alpine, CA**

I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jeanette King, Livermore, CA**

I live in the Bay area and am concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Rose Ann Witt, Westlake Village, CA**

As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega-ships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate throughout neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. The proposed expansion will additionally harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and on the health and well-being of West Oakland residents.

**Gloria Sefton, Trabuco Canyon, CA**

I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the

proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Krista Ward, Emeryville, CA**
As a local resident and public health professional, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Linda Melsher, Santa Barbara, CA**
Widening the turn basins in Oakland is a terrible idea. It would benefit a few giant corporations and foreign billionaires and cost Californians, especially those in the whole Bay Area. They would suffer the immediate disruptions, pay the collateral ongoing environmental & personal costs,and later when toxic waste costs come due, foot the bill with the rest of California. The Army Corps of Engineers is known for its short-sighted, costly decisions. Keep them out!

**Don Leichtling, San Diego, CA**
STOP BEINV GREEDY Potable water is the new Oil and tourists will visit because of CLEAN WATER! As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jennifer Jerlstrom, Buena Park, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This

could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sharon Barbee, Healdsburg, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Cynthia Bailey, Nevada City, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Sincerely, Cynthia Bailey

**Peter Garber, South Lake Tahoe, CA**
As a Californian, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Kimberlee Stevens, Pilot Hill, CA**
The San Francisco Bay has been used and abused for too long as a garbage dump, commodities superhighway, economic driver, and bottomless pit of resources, not the delicately balanced ecosystem that is once was and could become again. The San Francisco Bay is an estuary that filters

pollution brought in from upstream, so it cannot proceed into the ocean. By further carving-out and disturbing the wetlands and bay, you will be harming the wildlife, ecosystem, and local residents just to accommodate the delivery of more products to the west coast. As a concerned member of the community, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Stewart Wilber, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Philip Lefcourt, Pasadena, CA**
I am totally OPPOSED to the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Brenda Lee, Lakewood, CA**
As a California resident with family in the Bay Area, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a

new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Maris Arnold, Berkeley, CA**
YOU'RE ALL BONKERS TO EVEN CONSIDER ADDING MORE DANGEROUS POLLUTION TO OAKLAND. THERE'S A POINT WHERE COMMERCE ENDS & SAFETY & HEALTH MUST BECOME PRIMARY. THAT SHOULD BE YOUR STANDARD. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Shirley Cofresi, Applegate, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Via

**Elizabeth Taylor, San Clemente, CA**
As a Bay Area native, I am writing to express my deep concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Shannon Hanaway, Rohnert Park, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Suzanne Hewey, San Diego, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Douglas Hammer, Oakland, CA**
As a local resident, I continue to be concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**L. Clayton, Sacramento, CA**
As my daughter is a local resident to west Oakland, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**K Mazaika, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively affecting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Shauna Haines, Berkeley, CA**
Please do NOT widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland would have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts would reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action would disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. In addition, the proposed expansion is very likely to harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the entire Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region especially on the health and well-being of West Oakland residents. Thank you.

**C. Borello, San Jose, CA**
As a Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Please redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Freda Hofland, Los Altos Hills, CA**
I am concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts

on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Akiko Tamano, San Diego, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mary Becker, Santa Barbara, CA**
I am writing to express my concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Lynda Caesara, Berkeley, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. We have to stop polluting somewhere. The health of West Oakland and San Francisco Bay is of the utmost importance.

**Avi Shaprut, Carlsbad, CA**
As a long-time California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the

health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Nancy Anne Earl, San Francisco, CA**
As a SF Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Anastasia Yovanopoulos, San Francisco, CA**
Turning Basins in the Oakland Harbor Attn: Port of Oakland As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Sincerely, anastasia Yovanopoulos SF, CA 94114

**Angela Vanthaneeyakul, Arcadia, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Paola Accusani, Bishop, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaship s into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Christiana Hart, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Marcia Edelen, Berkeley, CA**
As a Berkeley resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. That proposed expansion could also harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative environmental impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Scott Douglas Laxier, Monterey, CA**
Governing based on greed & deceit is unsustainable and immoral. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion

could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**cheryl kozanitas, San Mateo, CA**
As a local resident of the Bay Area, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Judy Johnson, Placerville, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. NO! NO MEGA SHIPS!

**Frank Toriello, Montague, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. The Bay is already hampered by excessive water extraction for California's water projects that may have already extirpated the Delta Smelt which salmon depend on during their return migration. Further degradation of the Bay can only increase the negative impacts on biodiversity. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Phyllis Senter, Santa Rosa, CA**

I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. These impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you for your time and attention.

**tevet tee, Los Angeles, CA**

I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Laure Brecher, Goleta, CA**

As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Sincerely, Lauré Brecher

**Richard Lentz, Fair Oaks, CA**

As a frequent visitor to Oakland and San Francisco, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft

Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Rosemary Graham-Gardner, Manhattan Beach, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Rosemary Graham-Gardner, Manhattan Beach, CA**
As a local resident, I am writing to express my continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Carol Nelson, San Rafael, CA**
I am writing to oppose the plan to expand the Port of Oakland, which will increase air pollution in neighboring West Oakland. Please consider the impact of your plan on the lives and health of West Oakland residents, who are primarily people of color, and need to breathe clean air, just as we all do. They suffer disproportionately from high rates of asthma, which can be fatal to children and adolescents. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay, negatively impacting the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and on the health and well-being of West Oakland residents. It is time to stop sacrificing our health and well-being to corporate profits made from selling us stuff that we don't need.

**Henry Morgen, Los Angeles, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice.

Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Virginia Stewart Carton, Orinda, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. There is absolutely NO reason whatsoever that our community should be force-fed a plan of this nature for greedy financial reasons! Any project of this 'envergure' must be thoroughly planned and massively considerate of the people and natural environment it will effect...in this case 'victimize'!

**John Knox, Chula Vista, CA**
As a frequent visitor to the area, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jamie Scott, Pasadena, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Elinor Mattern, San Francisco, CA**
As a Bay Area native, a mother, and a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mary Lou Rosczyk, Murrieta, CA**
Seventy percent of West Oakland's residents are people of color. This area is already too polluted with emissions from trucks, trains and ships. I am writing to express concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Rich Moser, Santa Barbara, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Vasu Murti, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice.

Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. The Democratic Party platform should support: Animal Rights, Defending the Affordable Care Act, Ending Citizens United, Ending Marijuana Prohibition, Giving Greater Visibility to Pro-Life Democrats, Gun Control, Net Neutrality, Raising the Minimum Wage to $15 an Hour, Responding to the Scientific Consensus on Global Warming, and a Sustainable Energy Policy. Democrats for Life of America, 10521 Judicial Drive, #200, Fairfax, VA 22030, (703) 424-6663

**Sharon Morris, San Leandro, CA**
As a local resident, I have continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those effects will reverberate through neighboring communities, negatively affecting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. In addition, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. It could have long-lasting effects on the ecosystem and the overall health of the Bay. I strongly request that you redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative effects of this proposed expansion on our region including the health and well-being of West Oakland residents.

**Steven Collins, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening already egregious air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Dwight Johnson, Orinda, CA**
Inviting more megaships into Oakland will worsen air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. Furthermore, the proposed expansion would damage life and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of Oakland residents.

**Patricia Price, Davis, CA**
As a California resident, I am concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our

region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to prepare and circulate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents, in particular.

**Amanda Taylor, Los Angeles, CA**
So many petitions, because apparently doing the right thing is complicated for decision makers. So here is another. DO THE RIGHT THING! As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jen Rund, Novato, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers ALL impacts of the expansion - including the negative ones! - on our region and the health and well-being of West Oakland residents. As far as I can tell, a majority of Oakland residents do NOT want this expansion. Please, prove it will not harm the environment and residents before proceeding. Thank you.

**Michael Lueras, Pacific Palisades, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the

Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Michael Lueras

**Sandra Metcalf-Moore, Moorpark, CA**

I am writing to voice ongoing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Allowing even more megaships into Oakland will have a disastrous impact on the region by worsening air pollution and increasing truck traffic. Those impacts will negatively affect the health and well-being of residents and will disproportionately affect low-income communities and people of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Thomas Proett, Valley Springs, CA**

I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more giant ships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities in West Oakland. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Andre Tarverdians, San Diego, CA**

I'm including this line to indicate that I'm a real person and that this issue is important to me. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Joseph White, Cool, CA**

As a Northern California resident, I am writing to express concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega-ships into Oakland will harm our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion

could harm the San Francisco Bay's endangered species and water quality. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Willow Running Hawk, Pleasanton, CA**
I grew up in the Bay Area, and I am seriously concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. This plan will increase air pollution and truck exhaust in neighboring communities, seriously impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Marcus Maloney, Sacramento, CA**
As a local resident, I write with continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Janelle Milner, San Diego, CA**
More pollution is just not acceptable! As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. More pollution is not acceptable! I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. More pollution is just not acceptable!

**Noah Armstrong, San Jose, CA**
Please make sure not to increase the amount of toxic exhaust from ships in the San Francisco Bay Area. I already suffer enough from toxic exhaust. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by

worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Judith Smith, Oakland, CA**
I am an Oakland resident and I'm writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lois Klepin, Chula Vista, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Stephanie Hughes, Redding, CA**
As a previous resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**James Michael 'Mike' Henderson, San Luis Obispo, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Shira Sanghvi, Oakland, CA**
In 2017, during my senior year of high school, I spoke at an Oakland city council meeting against the exportation of coal through the Port of Oakland. It's disheartening that six years later, local leadership still is considering the prioritization of finances over the health and safety of its citizens and ecosystem. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Tanya Salof, Rosemead, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Poor and people of color live in polluted neighborhoods because big business gets away with it, change the narrative and do the right thing !

**Andy Bunnell, Sebastopol, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate

through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Suzanne Dods, San Rafael, CA**
As a local resident, I am writing to express continuing furor about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental deleterious effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. As a bay swimmer, this is unacceptable.This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Stacy Baar, Alameda, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. When is the well-being of the environment going to take precedence over corporate greed? NOW IS THE TIME!!

**Kathleen Duffy, San Francisco, CA**
As a local resident, who swims regularly in the bay I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Roseanne Costantino, Los Angeles, CA**
As a local resident and friend to many living near there, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**James Jordan, Davis, CA**
As a northern Californian, I am writing to express my concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Please redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you.

**Virginia Morris, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. (This makes no sense; we need to keep the Bay free of pollution and the world on its way to ending the climate crisis.)

**Rosann Lynch, Monterey, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega ships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing traffic. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. I urge you to redo the analysis and

recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you.

**Jesse Greenspan, Berkeley, CA**
I'm a Berkeley resident writing in opposition to the Port of Oakland's current plan to widen the Turning Basins in the Oakland Harbor. West Oakland is already one of the most polluted places in the area, and this plan would only bring in more air pollution and further harm water quality. Please fully consider the environmental and health implications of a port expansion. Thanks very much for your time.

**Theresa Bucher, Tarzana, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**George Hague, Moreno Valley, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. JUST DO IT === PLEASE

**Irina Irvine, Petaluma, CA**
As a concerned ecologist and local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report

that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mary Doane, Watsonville, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Due diligence should not be optional on a project this impactful.

**Rev. Allan B. Jones, Santa Rosa, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you.

**Deborah Colotti, Sebastopol, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. ******** I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. **********

**Margo Krindel, San Francisco, CA**
When I was a baby I lived in Oakland and a pediatrician found high levels of lead in me. My parents moved to San Francisco and a later test found that my lead levels went down. I almost certainly tested high for lead because of pollution in Oakland, and I will never know how that early exposure impacted my health. As a San Francisco resident, I am writing to express continuing concern about the Port of

Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Richard St. Angelo, Cloverdale, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Denise Mauldin, Walnut Creek, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low- oncome communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Unless and until we are able to anticipate and adequately mitigate the air, water and ground polluting impacts of vastly increased megaship visits to the Bay, the turning basin widening project must not proceed! I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Nancy Henry, Santa Rosa, CA**
Having grown up in Los Angeles smog in the 70s my lungs bear the detrimental results of exposure to air pollution. I have suffered from asthma and have been repeatedly hospitalized for respiratory issues. Quality air is a right for everyone and important to our society as a whole, to ensure people can grow up healthy and not become a burden on society due to pollution and ill-advised, or ill-planned commercial ventures. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively

impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Chris Eaton, Los Angeles, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Helene Minniti, Canyon Country, CA**
Planet and people before profits! As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Susan Blain, San Diego, CA**
As a concerned citizen, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Going forward with this plan in a climate crisis can come to no good and would cause a lot of harm. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Kae Bender, Lancaster, CA**
Everyone everywhere should express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. More pollution anywhere is a threat to us all. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Pamela Montgomery Montgomery, Saratoga, CA**
As a local resident, I am writing to express HUGE concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a TERRIBLE effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jean Lindgren, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic!!!! Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice!!!!!!!!! Furthermore, the proposed expansion will harm endangered species and water quality in the San Francisco Bay. This will have long-lasting impacts on the ecosystem and the overall health of the Bay!!!!!!!!!! I very strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents!!!!!!!!!!!!!!!!!!!

**Laurel Feierbach, Visalia, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mark Feldman, Santa Rosa, CA**
As a local resident, I am writing to EXPRESS CONTINUING CONCERN ABOUT THE PORT OF OAKLAND'S PLAN TO WIDEN THE Turning Basins in the Oakland Harbor. Inviting MORE MEGASHIPS INTO OAKLAND Oakland WILL HAVEA DETRIMENTAL EFFECT on our region BY WORSENING AIR POLLTION AMD OMCREASOMG TRUCK TRAFIC. and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Curtis Marantz, Riverside, CA**
I write to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Eliza Briggs, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Accordingly, I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Wendi Raw, San Francisco, CA**
Today is a yellow air day. For no other reason than the pollution, we generate ourselves here in the bay area. My asthma is flaring, everyone is talking about feeling bad, and you want to bring more pollution to our lives. As a local resident, I am deeply concerned about the Port of Oakland's plan to

widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Suzanne Ferroggiaro, Santa Rosa, CA**
I am writing on behalf of our 12 family voters and three children who are local residents, to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. We all urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Arlene Hansen, Novato, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. We're trying to DECREASE AIR & WATER POLLUTION. This "plan" is far from that! Please, terminate your plan & create non polluting plans! Thank you! I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Chris Rose, Petaluma, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the

Bay. I urge you to please redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Peggy Burns, Rowland Heights, CA**
As a Southern California Democrat resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mary Ross, Rancho Palos Verdes, CA**
I am writing as I have family members residing in this area and several friends. I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**R D Frankel, Cathedral City, CA**
As a California resident, I am writing to express my horror and continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Friend Friend, Santa Clara, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of

residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. but y'all do as you've always done and screw the poor. Stop murdering us. This shit is criminal & poison to us. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Tim Laidman, El Cerrito, CA**
As a longtime, local resident, I am writing to express my extreme and continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. I am personally already burdened by health effects probably from pollution. I have two types of cancer and had a heart attack two years ago in spite of having a vegan diet, playing soccer three times a week and having no family history of disease. Please consider he cumulative health effects of multiple sources of pollution from the port, shipping, major freeways, toxic dumps, heavy industries and refineries and see that port expansion is another step too far for the health of the Bay Area. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion and pre-existing pollution sources on our region and the health and well-being of West Oakland residents.

**Sherman Lewis, Hayward, CA**
I oppose the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor for more megaships. It will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mark Bartleman, Laguna Beach, CA**
I am concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland would appear to have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. This action would disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. And the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to revisit the analysis and recirculate

a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents. Thank you.

**Dale Haas, San Diego, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Paul Brigham, Fairfax, CA**
As a citizen and parent who cares deeply about our environment, I believe we must do everything within our power to protect it and its inhabitants for future generations. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Monica DuClaud, San Francisco, CA**
The Bay Area s my home. I want to express my deep concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a damaging effect on our region by increasing air pollution and truck traffic. This will hurt the health and well-being of our communities. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. In addition, the proposed expansion will harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jeannine Jacobs, Atascadero, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and

communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Something that large should never have been built? Oakland is' up and coming', there are more industries to consider than simply the military. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Holly Buchanan, Rancho Cucamonga, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic! Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents! In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay!!. This could have long-lasting impacts on the ecosystem and the overall health of the Bay!! I urge you to REDO the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents!!

**Lisa Carey, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Let's take care of the children and living beings, before going for the dollars!! People over profits!! I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sheila Tarbet, El Cerrito, CA**
I'm a local resident and a former public health program planner. I am writing to express my serious concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. We know this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. See CalEnviroScreen data. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Nami H, Los Angeles, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you for your kind attention.

**Ariella Granett, Berkeley, CA**
I work in downtown Oakland and I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Greg Jacobus, Murphys, CA**
As northern California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Anne Padilla, Yucca Valley, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mary Ragsdale, Ripon, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Sincerely, Mary Ragsdale

**Thorsten Ostrander, San Diego, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Please do the right thing.

**Michele Halligan, Aptos, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**nancy clatfelter, San Bernardino, CA**
As a California native and lifetime resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck

traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Robert Longer, Sacramento, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Tricia Talle, Sacramento, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Mega ships carrying large containers are not the way to go.

**Laurie Fosner, San Mateo, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. The proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. And as usual, the negative impacts on residents will affect people of low income who already suffer from environmental injustice. Pleaes redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Sincerely, Laurie Fosner

**Nancy Caponi, Santa Barbara, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a

detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you.

**Max Hallman, Merced, CA**
As a California resident and a frequent visitor to the Bay Area (including Quinn's Lighthouse Restaurant in Oakland), I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**David Felton, West Sacramento, CA**
As a regional resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**C E Mone, Trinidad, CA**
As the relative of a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report

that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Nancy Caponi, Santa Barbara, CA**
As a Santa Barbara resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I lived in Oakland in the early 1980s, and I know how overburdened that community is already. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you.

**Brenda Christensen, Redwood City, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Please be responsive to this request. It is important to the lives of so many and many unknown.

**MAUREEN PERRON, Half Moon Bay, CA**
I am very concerned. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Tanya Paul, Fair Oaks, CA**
As a person who lives close by and who frequently spends time (and money) in the Bay Area, I am writing to express my extreme and continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a terribly

detrimental effect on this region by worsening air pollution and increasing truck traffic. This plan is truly unacceptable. Those impacts will reverberate throughout the neighboring communities, negatively impacting the health and well-being of residents, human and nonhuman (who should count, too, as this planet is all living beings' only home). In particular, this action will, of course and as always, disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I most strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Bruce Coston, Sunnyvale, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Stop the insanity , and use Marcus Schulze CSSD. 2x Condorcet Voting to comply with the Universal Declaration of Human Rights part 21.3 . Increase the social safety net with minimum income .

**Carol Kinser, Elk Grove, CA**
As a local California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**James Barkovich, Mill Valley, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. SAVE THE BAY!!

**Jan Sownie, Bellflower, CA**
As a frequent visitor to Northern California, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Linda Fidell, Morro Bay, CA**
I am writing to express concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sue Yager, Los Angeles, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Pleease redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Christine Fluor, Corona Del Mar, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of

residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Marcia Edelen, Berkeley, CA**
As an E Bay resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will radiate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already extremely burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lucy Clark, Bakersfield, CA**
As a frequent visitor to this area, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**MARILYN WOOLLARD, Davis, CA**
I am writing to express MY concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Karin Lease, Sebastopol, CA**
As a local resident, I am HORRIFIED about the Port of Oakland's plan to widen the Turning Basins in

the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Catherine Nichols, Concord, CA**
As a Bay Area resident , with grandchildren born in W Oakland, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Charlotte Sach, Del Mar, CA**
My name is Charlotte Sach, I am 16 years old, and I am concerned about air pollution. For one, air pollutions causes millions of deaths worldwide per year. Secondly, the planet can't afford any more greenhouse gases in the atmosphere if we want climate change to remain below 1.5°. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Richard Lentz, Fair Oaks, CA**
As a frequent visitor to the Bay Area, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report

that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**JERI LANGHAM, Sacramento, CA**
AS A PROFESSOR EMERITUS OF BIOLOGICAL SCIENCES AFTER 38 YEARS OF TEACHING PRINCIPLES OF ECOLOGY AT CALIFORNIA STATE UNIVERSITY AND 37 YEARS OF LEADING TRIPS FOR VICTOR EMANUEL NATURE TOURS, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Michael Stolte, Upland, CA**
As a Californian who values environmental justice for marginalized communities, I am writing to express urgent concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on that region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Gary Dismukes, San Diego, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Marilyn Guida, Grass Valley, CA**
I've been to Oakland many times and I'm appalled at the plan to widen the turning basin and increase megaships in the Oakland Harbor. We can't ignore the residents. The health impacts are huge and many residents already can't afford health care. The only protection from the worsening air quality

will be moving out of the area, which people can't afford. I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Tina Arnold, Rio Vista, CA**
As a local resident, I am writing to express strong opposition to Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. Of course, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Please redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Denise Vanzago, Burbank, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on this region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents. No one should have to shoulder the economic burdens of port expansion. No one!

**Katrina Matos, Santa Rosa, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental degradation. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the

Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Patrick McKee, Mercer Island, WA**
As the grandfather of an Oakland kid, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Stephan Kuttner, Berkeley, CA**
Shipping creates massive amounts of pollution which has contributed much to our climate crisis. Local ports must pressure shipping concerns to use cleaner energy now! As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jack Fleck, Oakland, CA**
As an Oakland resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. The dredging and expansion of megaships should be coupled with electrification of all drayage trucks and electric hookups of all ships in the Port of Oakland. If these are accomplished, then the environmental impacts of the dredging also need to be mitigated before approval of the project. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Steve O'Neil, Cupertino, CA**

As a local Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. I am particularly concerned about wetland environments, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Allison Eckert, Petaluma, CA**
As a Bay Area resident and supporter of ecological and human health in West Oakland, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Dianne Sullivan, Modesto, CA**
As a CA resident, & FORMER BAY AREA REIDENT I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Ben Sieke, Torrance, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that

fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Patricia Matejcek, Freedom, CA**
As an area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay, bringing long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Karen Burtness Prak, Menlo Park, CA**
As a local resident, I want you to understand my continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega ships into Oakland will clearly have a detrimental effect on our region, worsening air pollution and increasing truck traffic. Those impacts will impact neighboring communities, negatively affecting the health and well-being of residents. It will especially, and disproportionately, affect those low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay, which in turn could create long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**L. Clayton, Sacramento, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland and Emeryville that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to accurately redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Helen Hobart, Sacramento, CA**
Greetings. I feel deep concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Such a policy will have add to air pollution and increase truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice.

Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Please pause, consider the human impact, and redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Suzanne Llewellyn, Walnut Creek, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jay Atkinson and Ariel Summerlin, El Sobrante, CA**
As East Bay residents, we oppose the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**bonnie Kohleriter, Alamo, CA**
We have been fighting pollution issues in this area of Oakland for years with the trucks and ships. More ship need to be seriously considered in view of the harm to the citizens living in that area. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Leah Halper, Santa Rosa, CA**
As a Bay area resident, I know pollution knows no bounds. So I am writing to express continuing

concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Kimberly Baker, Arcata, CA**
As California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Alisha Seaton, Los Angeles, CA**
As a CA resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Tina Digesti, San Rafael, CA**
As a Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that

fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Suzanne Lee, Saratoga, CA**
I'm writing to express my concern about the Port of Oakland's plan to widen the Turning Basins in Oakland Harbor. More mega-ships will have a detrimental effect by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively affecting the health and well-being of residents. This action will disproportionately affect low-income communities and communities of color that are already burdened by environmental injustice. And the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion.

**Menghan Zhu, Los Angeles, CA**
As a concerned resident of the local community, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Shirley McGrath, Walnut Creek, CA**
I am very concerned about the health of San Francisco Bay! Please restrict polluting boats and barges and trucks! I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Maeve Murphy, Corte Madera, CA**
As a Bay Area resident and sailor who grew up in Alameda, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened

by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. We must protect our precious Bay environment from excessive pollution levels for wildlife and all residents, especially low-income communities. Thank you.

**Joanne Hedge, Glendale, CA**
As a former Bay Area local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Therefore, I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents!

**Dehra Iverson, Costa Mesa, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on this region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on this region and the health and well-being of West Oakland residents.

**Robert Lowe, El Sobrante, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega-ships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic, with significant deleterious consequences for the health and well-being of neighboring communities especially. In particular, this contemplated action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. There are no commercial benefits that could outweigh the obviously negative environmental consequences of widening the Turning Basins. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Susan Boggiano, Oakland, CA**
As a local resident, I am concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Ashley McClure, Berkeley, CA**
As a local resident and physician practicing in Oakland, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Pavle Cajic, San Francisco, CA**
Hello, I hope this message finds you well. I'm reaching out as a 29-year-old physics and music student in San Francisco, sharing my ongoing concerns about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. As someone who has lived in Oakland recently, the thought of more megaships coming into Oakland is bothering me, knowing it could make the air quality worse and lead to more truck traffic. It's not just about ships; the ripple effect of these changes will reach communities, affecting the health and well-being of residents. I'm particularly worried about how this might hit hard on low-income communities and communities of color in West Oakland, which are already dealing with environmental injustice. What's even more concerning is the potential harm to endangered species and water quality in the San Francisco Bay. The lasting impacts on the ecosystem and the overall health of the Bay are not something we can overlook. I'm urging a second look at the analysis and a fresh Draft Environmental Impact Report that truly takes into account all the downsides of this proposed expansion on our region and the health of West Oakland residents. Thanks for listening, and I appreciate your consideration. Sincerely, Pavle Cajic

**Betty Kissilove, San Francisco, CA**
As a local resident, I'm writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice.

Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Rachel Loui, Mountain View, CA**
As a local resident and East Bay native, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Katherine Roberts, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. I was told to edit this but I can't find a single thing to add — it seems perfect as it is. So please take our objections seriously. We honestly shouldn't even have to be pointing them out.

**Mary Hicklin, Lakeside, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Susan Worden, Rio Vista, CA**

As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. I urge you to thoroughly onside the negative impacts of this project. We need to respect the life of the earth, the ecosystem of the bay, the nearby residents and animal disturbances. Who wants more truck traffic, and air and water pollution? We don't!

**Richard Youatt, Los Altos, CA**
As a Bay area resident, I write to express deep concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Deborah Svoboda, Emeryville, CA**
As a local resident, and boat owner, recreating on the bay. I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Timothy Quinn, Davis, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the

negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sheila Rollins, Laguna Woods, CA**
I love the Bay!As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**C. E. Mone, Trinidad, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Brian Waters, Orinda, CA**
As an Oakland native, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Alice Nguyen, San Jose, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and

communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. The Port must redo and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on Bay ecosystems, the health and well-being of east Bay residents, particularly those in West Oakland, and the global climate.

**Pamela Mcdonald, Riverside, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. I AM NOT A LOCAL RESIDENT, BUT A CONCERNED CALIFORNIA RESIDENT. WE LIVE IN ONE OF THE MOST DIVERSE, BEAUTIFUL, AND SUCCESSFUL STATES IN AMERICA. I'M RESPONDING WITH CONCERN TO MAINTAIN THOSE ATTRIBUTES. IT'S IMPERATIVE FOR THE FUTURE OF OUR STATE, OUR ECONOMY, AND THE LIVES OF BAY-AREA RESIDENTS. OAKLAND IS SITUATED IN ONE OF THE MOST IMPORTANT AREAS IN OUR STATE. ALTERING THE NATURAL BAY TO ALLOW LARGER SHIPS WOULD INCREASE REVENUE, BUT IT'S IMPERATIVE TO CONSIDER THE POTENTIAL HARM IT WILL LIKELY BRING WITH IT - AIR AND SEA POLLUTION HAS THE POTENTIAL TO NEGATE ANY REVENUE INCREASE, AND HEAVILY-TRAFFICED WATERFRONT WILL DEFINITELY HAVE A NEGATIVE EFFECT ON THE BAY, AS A PREVIOUS VISITOR, PERHAPS YOU SHOULD DIRECT YOUR EFFORTS TO IMPROVE YOUR 'CITY' FIRST. IT DESPERATELY NEEDS IT!

**Alexander Obersht, San Francisco, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Tony Mauro, Berkeley, CA**
As a local resident, I am writing to express my continuing concern about the Port of Oakland's plan to widen the turning basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and

communities of color in West Oakland that are already burdened by environmental injustice. The proposed expansion will probably also harm endangered species and water quality in the San Francisco Bay, with long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of residents.

**Kathy Sabatini, Fair Oaks, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and further damage water quality in the San Francisco Bay. This would have long-lasting impacts on the ecosystem and the overall health of the Bay. I ask you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully and accurately considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Michelle Petro, El Dorado Hills, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Emily Morris, San Mateo, CA**
As a local resident, I am echoing many others writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Nancy W Nelson, Mendocino, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to

widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. I do not live full time in Oakland, but have many friends who do, and I visit frequently. Please do not allow widening of turning basins in the Oakland Harbor to endanger the health of Oakland and its environs. Sincerely, Nancy W. Nelson

**c s, San Diego, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Absolutely NO megaships!!

**Elizabeth Edinger, North Hollywood, CA**
I am writing to express concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will worsen air pollution and increase truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**regula hess, Dixon, CA**
En tant que résident local, je vous écris pour vous faire part de mon inquiétude constante concernant le projet du port d'Oakland d'élargir les bassins de retournement dans le port d'Oakland. Inviter plus de méganavires à Oakland aura un effet néfaste sur notre région en aggravant la pollution de l'air et en augmentant le trafic de camions. Ces impacts se répercuteront sur les communautés voisines, ce qui aura un impact négatif sur la santé et le bien-être des résidents. En particulier, cette action affectera de manière disproportionnée les communautés à faible revenu et les communautés de couleur de West Oakland qui sont déjà accablées par l'injustice environnementale. De plus, l'expansion proposée pourrait nuire aux espèces en voie de disparition et à la qualité de l'eau dans la baie de San Francisco. Cela pourrait avoir des répercussions à long terme sur l'écosystème et la santé

globale de la baie. Je vous exhorte à refaire l'analyse et à remettre en circulation une nouvelle ébauche de rapport d'impact environnemental qui tient pleinement compte des impacts négatifs de ce projet d'expansion sur notre région et sur la santé et le bien-être des résidents de West Oakland.

**Joan Murray, Los Angeles, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sherrill Futrell, Davis, CA**
Another environmental nightmare. STOP IT. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mariana Mellor, Thousand Oaks, CA**
A healthier society will build a healthier state. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Marisa Davis, Los Angeles, CA**
I grew up in the East Bay and I am writing to express concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of

residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Stephen Shub, Oakland, CA**
As a local resident, I am writing to express continuing disappointment about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Please listen to the people and not the purses!!

**Michael Raffaeli, Truckee, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic, including more train traffic in my town. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Melissa Harper-France, Saint Paul, MN**
Though I am not a local resident, I am concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. The harms of pollution does not know city limits or state boundaries, and I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Hassan Abdul-Wahid, Los Angeles, CA**
As a human who cares, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Davena Gentry, East Palo Alto, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. How will we ever mitigate climate change if we have more polluting ships?! ??

**Cynthia Whitman, Sonoma, CA**
As a Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**michael sullivan, Albany, CA**
As a local resident, I am writing to strongly express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice.

Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**singgih tan, San Jose, CA**
As a local resident, I strongly oppose the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaship traffic will have a detrimental effect on our region by worsening air pollution and increasing truck traffic and increase climate pollution globally. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents, especially those historically disproportionately burdened with pollution. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. Please redo the current inadequate analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region's air & water quality, noise levels, traffic congestion, the Bay's ecosystems & biodiversity, the health and well-being of the region's communities and West Oakland residents in particular, the global climate.

**Victoria Friesen, South Pasadena, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**W. Lynch, Los Angeles, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Gudrun Ulman, Escondido, CA**
My son and his wife are residents of San Francisco, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on their region by worsening air pollution and

increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Duane Wall, San Luis Obispo, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. #Amen. ????????

**Yvonne Smith, Upland, CA**
I am concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbors. Inviting more megaships into Oakland would have a detrimental effect on the region, worsening air pollution and increasing truck traffic. The deleterious effect would reverberate through neighboring communities, negatively affecting residents' health and well-being. The action would disproportionately affect low-income communities and communities of color in West Oakland already burdened by environmental injustice. Furthermore, such expansion would harm endangered species and water quality in the San Francisco Bay and have long-lasting effects on the ecosystem and the overall health of the Bay. I urge you to revise the analysis and recirculate a new Draft Environmental Impact Report that fully addresses the negative effects of the proposed expansion on the region and the health and well-being of West Oakland residents.

**Ron Rouda, Venice, CA**
While I am not a Bay Area resident I do have family living in Alameda. I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Alethea MacKinnon, Oakhurst, CA**

As a resident of CA, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jane Armbruster, Oakland, CA**
I live in Oakland, and I am concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Doing so invites more megaships into Oakland. That will increase truck traffic and thereby worsen air pollution. Those impacts will reverberate through neighboring communities, and negatively impact the health and well-being of low-income communities and communities of color in West Oakland that already bear a burden of environmental injustice. Also, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Harry Williams, Santa Cruz, CA**
HELLO, As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Suzanne Jones, Moraga, CA**
As an East Bay resident, I do not support the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Our bay ecosystem and its nearby residents are already suffering from air and water pollution from the large amount of shipping traffic already being accommodated. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that

fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Felix O, Oakland, CA**
Let's do whatever we can to make it more difficult to pollute. If we don't drastically cut emissions in six years, we're looking at a temperature rise of 2.7 degrees Celsius by 2050. Good luck maintaining the status quo then. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Tamara Haw, Oakland, CA**
As a long-time Oakland resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Dorrit Ragosine, Los Angeles, CA**
As a former local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Karen Jacques, Sacramento, CA**
As a California resident who frequently visits Oakland, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and

increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Julie Kanoff, Sacramento, CA**
Oakland has had enough negative environmental impacts for a lifetime! As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Wilson Lee, Sacramento, CA**
As a state resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Veronica Oberholzer, Oakland, CA**
As a lifelong Oakland resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Judith Kirk, Redwood City, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. PLEASE, you MUST redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. How can you push all the terrible effects of enlarging this port on the people of Oakland and bring so much pollution to the Bay Area????

**Lana Touchstone, Vallejo, CA**
After four years of living in Houston I developed asthma. Now as a local resident, I am very concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Patrick Chandler, Santa Ana, CA**
People who criticize ships coming into port must not care about receiving goods. If they are concerned about the air quality they can move somewhere else.

**Joel Isaacson, Berkeley, CA**
I am a local resident, and I am writing to express my concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. More megaships? That's all we need. More air pollution and increasing truck traffic? Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sheryl Iversen, Murrieta, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate

through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**John Zimmermann, Long Beach, CA**
As a resident of California, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Maija Schaefer, Novato, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you for considering my comments.

**Marie J Salerno, Greenbrae, CA**
Is it really always just about money? The bay is an important ecosystem to many areas of the west coast not to mention the fish and others in the sea. We pay your salaries and this is not where I want my money to be going. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report

that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Carol Plantamura, San Diego, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Garth Saalfield, Fort Bragg, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I grew up and I'm intimately familiar with that area and wish it not to be destroyed by additional Super Tankers and Mega Structures! I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you for your consideration!

**Shoshana Dembitz, Berkeley, CA**
As an asthmatic local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Shirley Shelangoski, Pleasant Hill, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you for considering the marginalized in our community.

**Zoe Temple, Los Angeles, CA**
As a former local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Melissa Mendes Campos, Ben Lomond, CA**
Have you BEEN to Oakland? As a Bay Area resident and commuter, I am writing to express deep concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. This will invite more megaships into Oakland and have a detrimental effect on our region by increasing already ridiculous truck traffic and worsening air pollution. These impacts will immediately affect neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Additionally, the proposed expansion could harm threatened and endangered species and water quality in the San Francisco Bay. This could all have long-lasting detrimental impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis properly and recirculate a new Draft Environmental Impact Report that rigorously and fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Rachel Ross, Oakland, CA**
I am an Oakland resident and am very concerned about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Elizabeth Menkin, San Jose, CA**
As a Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Carol Kuelper, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. As a resident of Oakland I want to see this analysis redone. I attended a zoom meeting about this issue. It was apparent to me that there had been little to no engagement with West Oakland residents in a meaningful way. Concerns about the increased pollution and truck traffic were dismissed. Time to do better!

**Dan Stone, Carmichael, CA**
I write to express my continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on this already burdened region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland — residents who are already suffering the effects of environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that honestly and fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents. Thank you.

**Deborah Kistler, Lemon Grove, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In

particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on this region and the health and well-being of West Oakland residents.

**Julie Neidich, Ladera Ranch, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Gloria and Jim Purcell, Belmont, CA**
As local residents, we are writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion are certain in our opinion to harm endangered species and water quality in the San Francisco Bay. This would have long-lasting impacts on the ecosystem and the overall health of the Bay. We remind you that we are currently well into the Sixth Extinction! We are also seeing all waterways under threat of incredible amounts of plastic and other pollution. We urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers all of the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland and all Bayside residents. Most of all, we strongly believe that the vast and powerful changes in the overall climate and environment, including all of the above and ocean acidification and warming and more, are vital factors against building huge new projects that enlarge the human footprint. From our personal viewpoint, living on the Peninsula for 80 years, the water, air and land damages we have seen over decades have been damaging beyond words to every ecological sector and to local humans as well. Please reconsider the DEIR from a fuller realization of all of the negative impacts, especially cumulative, on all of us.

**Deb Cohen, Alameda, CA**
As a local resident, I am writing to express my anger, frustration, and alarm about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action wil bring significant sources of new air

pollution to a federally designated nonattainment area and should be subject to heightened standards of environmental review. To discount these impacts and to do a flimsy or significant preparatory lawsuit now is to invite lawsuits later. Not only that, it will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of residents of Alameda County and that proposes actionable steps to mitigate these harms, as you required to do under federal and state law. An ounce of precaution/mitigation and an intellectually honest EIR process right now is much cheapter morally, legally, and financially than a headline-grabbing class action lawsuit later by lawyer moms like me who are concerned about your lack of concern for the health of our children.. Sincerely, Deborah A. Teitler, J.D.

**Gloria Choi, Union City, CA**
I'm a local East Bay resident writing to express my continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, impacting the health and well-being of residents. Our low-income communities and communities of color are already burdened by environmental injustice, and this action will continue to perpetuate these harms. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Marci Yellin, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you.

**Ciara Preston, Caldwell, ID**
As a former resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the

Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the Bay Area and the health and well-being of West Oakland residents.

**Nicolas Riani, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. West Oakland residents who have already been dealing with pollution for years do not deserve additional pollution, impacting their health.

**Jackie Feazell, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Look what happened in Venice when they dredged to allow huge ships in. Think deeply about what you want to do. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Judy Schultz, San Francisco, CA**
As a nurse and a San Francisco resident who walks along the Bay every day, I implore you to not widen the Turning Basins in the Oakland Harbor. We need to stop prioritizing money over human health, wildlife, and their habitat. Having more megaships in Oakland's harbor will worsen air pollution in an already polluted area by increasing ship pollution and pollution for the additional truck traffic to carry goods from the port. As you know, this pollution will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. The type of expansion proposed will disrupt endangered species and adversely affect water quality in the San Francisco Bay. We have lost so much wildlife and habitat in the last fifty years that we simply cannot afford to continue to degrade places like the Bay and lose more habitat and wildlife. I implore you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Linda Penrose, Rancho Palos Verdes, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to

widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you for reading and your serious consideration to this message.

**Kate Lenhardt, Alameda, CA**
As a person of faith and a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Margaret Lyons, Palos Verdes Estates, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega-ships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. As a resident of the area near the Los Angeles and Long Beach harbors, I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents. We Californians who are affected by the pollution that accompanies a harbor for large ships hope you will spare West Oakland any more of what we already have here in Southern California.

**JUDITH STANTON, Dana Point, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the

proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Karen Naifeh, San Mateo, CA**
As a local resident, I am writing to express continuing extreme concern and upset about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I VERY strongly urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Suteibun Rin, Placentia, CA**
As a concerned citizen, I am writing to express continuing worry about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on this region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Thank you for your time and consideration.

**Kristen Wick, Pleasant Hill, CA**
As a Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Russ Purvis, Citrus Heights, CA**
As a former resident of the Bay Area, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into

Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Alan Solomon, Palm Desert, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. My name is Alan Solomon. I live in southern California. I completely Agree with and strongly Support the above statement/petition Today and for many years and generations to come. Thank you for your time Today. Alan Solomon

**Michael W Evans, Los Angeles, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more mega-ships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Elizabeth Via, Jamul, CA**
As a California resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring Oakland communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Everyone in California is affected by additional and unnecessary pollution in the Oakland area. I

urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on this region and the health and well-being of West Oakland residents.

**H. S. Nadler, Novato, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion poses harm to endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay Area. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Kathleen Smith, San Jose, CA**
As a local resident, I continue to be concerned about the harm of inviting more megaships into Oakland Harbor that would increase noxious air pollution and unsafe truck traffic. As stewards of the Earth, we must protect our environment and the health and safety of all who live here. I urge you to circulate for public comment a new Draft EIR of the proposed Oakland Harbor expansion that fully considers its negative impacts on our region and the health and well-being of West Oakland residents. The harm of such a proposed expansion to the Port of Oakland would reverberate through neighboring communities, negatively affecting the health and well-being of residents. In particular, this action would disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. The proposed expansion could harm endangered species and water quality in the San Francisco Bay -- unleashing long-lasting impacts on the ecosystem and the overall health of the Bay.

**Susan White, East Palo Alto, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. As someone who lives a couple of blocks from the bay and walks in the baylands every week, the health of the bay is incredibly important to me. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Richard Gray, Forest Knolls, CA**
As a Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice.

Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Kelalani Luong-Kha, Garden Grove, CA**
As a California resident who spends a lot of time visiting family in the Bay Area, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Janette Wolf, Benicia, CA**
As a local resident who suffers from severe asthma, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Hillary Black, Los Angeles, CA**
I am writing to express my deep concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion will harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Bridget Barron, San Anselmo, CA**
As a local Bay Area resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will

have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting, deleterious and hard-to recover-from impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Maria Reyes, San Jose, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. We have enough air, land and noise pollution in our area. We need to have relief for the families who are living under these negative conditions. People over money. Maria Reyes - Casual Community

**Suteibun Rin, Placentia, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jeannette Farley, Emeryville, CA**
As a West Oakland resident I have to say: Really? We've had huge resistance to the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by significantly worsening (currently unholy) air pollution and increasing truck traffic on already crowded Interstates 80/580/880 Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. As usual, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the

Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Kyra Rice, Oakland, CA**
As a local resident, I am writing to express extreme concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland living near the ports that are already burdened by environmental injustice. The proposed expansion will inevitable harm endangered species and water quality in the San Francisco Bay. This WILL have long-lasting impacts on the ecosystem and the overall health of the Bay - whatever wildlife that still remains and the humans. We demand you redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jennifer Russell, Walnut Creek, CA**
I am writing to express concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Allowing huge ships will have a very negative effect on the Bay Area by worsening air pollution, increasing truck traffic and causing low-income communities to be disproportionately affected. That's environmental injustice.! The proposed expansion could also harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Patrick Carr, Arcata, CA**
As a Northern California resident who regularly travels to the East Bay, I am writing to express concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on the Bay Area by worsening air pollution and increasing truck traffic. I already find traffic on 580 to be dreadful. That's a concern for me, but for local residents, even greater impacts will reverberate through neighboring communities, affecting the health of residents. Enlarging the Turning Basins will disproportionately affect low-income communities in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay, already reeling from past development.. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the impacts of this proposed expansion on the health of West Oakland residents and on the environment of the Bay and its ecosystem..

**Leslie Friedman, Mountain View, CA**
As a local resident, I am writing to express serious concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. This change will have severely negative impacts on the SF Bay. It will expose residents to more pollution which will certainly cause diseases and shortened life expectancy. There is absolutely no justification for this

outrageous project. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. The Army Corps of Engineers submitted a flawed environmental report. It is unacceptable to move forward on such a destructive project with a flawed report as its support. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lena Nilsson, Laguna Beach, CA**
I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on this region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on the region and the health and well-being of West Oakland residents.

**Linus O, Oakland, CA**
If we don't drastically cut emissions in six years, we're looking at a temperature rise of 2.7 degrees Celsius by 2050. Good luck maintaining the status quo then. Let's do whatever we can to make that less likely. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Dennis O, Oakland, CA**
It is a moral imperative to do whatever we can to make it more difficult to pollute. If we don't drastically cut emissions in six years, we're looking at a temperature rise of 2.7 degrees Celsius by 2050. Good luck maintaining the status quo then. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West

Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mical Woldemichael, San Francisco, CA**
As a young person of color with a family history of asthma, I am concerned over the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Carol Bardoff, San Leandro, CA**
We don't need any more over-sized, polluting ships coming into the Bay Area. I oppose the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. I am particularly concerned a bout the health impacts on low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Deterioration of water quality and other affects on the ecosystem of San Francisco Bay are also problematic. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Margaret Mulligan, Berkeley, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents. Please consider the needs of the West Oakland community and pay attention to what they need and deserve for a better life. Sincerely, Margaret Mulligan

**romani b, Glendora, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a

detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Susi Higgins, Glendale, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Daniel Wilkinson, Long Beach, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Carol Lake, Solvang, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Bill Lindner, San Rafael, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Mariano Svidler, San Mateo, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Rebecca Martin, Sacramento, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**kent morris, Fullerton, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lucy Gough, ,**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**R. Dene Larson, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Andrea Whitson, San Jose, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Nadya Disend, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lance Allard, San Diego, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. **Gwen Weil, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Melissa Sunderland, Sherman Oaks, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Ranel Porter, Atascadero, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**John Landmann, San Diego, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Susan Grant, Los Angeles, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lisa Henderson, Aliso Viejo, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Olivia Asemota, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**MAUREEN MCDONALD, Desert Hot Springs, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jamie Le, Alameda, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Cody Dolnick, Joshua Tree, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. **Mary Brooks, Frazier Park, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Bonnie Arbuckle, Riverbank, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Judy Madigan, Loyalton, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Kent Iverson, Sonoma, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Luis Fuentes, San Diego, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jo Mandrell, Upland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. **Michael Russell, Santa Paula, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sharon Pollock, Santa Rosa, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Patricia Rudner, Cypress, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Meredith Larsen, Sacramento, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Anne Higgins, Santa Barbara, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**cheryl wolfe, Rio Linda, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Jacoba Dolloff, La Mesa, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Robert Sykes, Salinas, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Carol Hirth, Berkeley, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**James Yarbrough, Newbury Park, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**susan fisher, Burlingame, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Carol Robertson, Santa Cruz, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lee Wasserwald, Santa Monica, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Ann Allen, San Rafael, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Lena Fine, Campbell, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Debra Hill, Eureka, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. **Colleen Cabot, San Jose, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Teresa Mynko, Lake Elsinore, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**A.L. steiner, Cornwallville, NY**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Norman Gross, Aptos, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Gail Farina, Los Angeles, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Janicedotherighthing Greenberg, Walnut Creek, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. **Denise Marie Halbe, Sonoma, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Liz Ibarra, South San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Emmanuel Ross Hartway, Santa Cruz, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Connie Stomper, Santa Barbara, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Ralph Valencia, Monterey Park, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sandra McPherson, Davis, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Phyllis Chavez, Santa Monica, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Giovannina Fazio, Belmont, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Angela Barbee, Chula Vista, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Cordi Koga, Rancho Palos Verdes, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Richard Harden, El Cajon, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sean San José, San Francisco, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Nancy Heck, Santa Maria, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Pat Brooks, Berkeley, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Laurel Harris, Rutherford, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Ann Pinkerton, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Guss Galiano, Pasadena, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. **Regina Lee, Los Angeles, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Dawnell Blaylock, Auburn, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sherrie Howell, Pleasanton, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Joan Peter, Newhall, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Deetya Thogarucheeti, Modesto, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sharon Nicodemus, Sacramento, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Catherine Harrington, Boulder Creek, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Russell Weisz, Santa Cruz, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Sally Mullen, Santa Rosa, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Roberta Schear, Oakland, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**David Gallardo, Alhambra, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts

will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Taylor Bright, Sebastopol, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Ben Brucker, Capistrano Beach, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San

Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Robert Lord, San Jose, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. **Emma Tremelo, Thousand Oaks, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Kathleen Havilan, La Mesa, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice. Furthermore, the proposed expansion could harm endangered species and water quality in the San Francisco Bay. This could have long-lasting impacts on the ecosystem and the overall health of the Bay. I urge you to redo the analysis and recirculate a new Draft Environmental Impact Report that fully considers the negative impacts of this proposed expansion on our region and the health and well-being of West Oakland residents.

**Claude Duss, Calabasas, CA**
As a local resident, I am writing to express continuing concern about the Port of Oakland's plan to widen the Turning Basins in the Oakland Harbor. Inviting more megaships into Oakland will have a detrimental effect on our region by worsening air pollution and increasing truck traffic. Those impacts will reverberate through neighboring communities, negatively impacting the health and well-being of residents. In particular, this action will disproportionately affect low-income communities and communities of color in West Oakland that are already burdened by environmental injustice.
