Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	During routine pressure testing of fuel lines at a service station located at 145 Via Vera Cruz in San Marcos, California, a manhole cover was reportedly placed or dropped over a diesel turbine, causing a line leak detector to break. According to a report submitted by the consultant (Geocon), the break occurred in late October 1995, resulting in a calculated release of 3,800 gallons of diesel fuel over a four-month period. The leak detector was capped and repaired on February 20, 1996, and the release was reported to DEH. Geocon performed a soil and groundwater investigation at the site in January

1998. Ten direct-push borings were advanced at the site for the collection of soil samples and groundwater grab samples. Groundwater was not encountered in seven of the borings, which were advanced to a depth of 15 feet below ground surface; thus, three groundwater grab samples were collected. Total petroleum hydrocarbons (TPH) as diesel were detected in at least one soil sample collected from nine of the borings. TPH as diesel was detected in each of the grab groundwater samples. Although the samples were not tested for TPH as gasoline, aromatic hydrocarbons were detected in both soil and groundwater, as was methyl-tert-butyl ether (MTBE). Based on the consultants report, DEH opened an unauthorized release case on April 30, 1998. Three 12,000-gallon capacity, steel, gasoline underground storage tanks (USTs), one 12,000-gallon capacity, steel diesel UST, and one 4,000-gallon capacity, steel holding tank, as well as associated dispensers and piping, were removed from the site on July 30, 1998. Thirteen soil samples were collected during the DEH tank removal inspection. Petroleum hydrocarbons were detected in three soil samples, each of which was collected beneath USTs at depths of 13 to 14 feet below ground surface (bgs). Ten additional soil samples were collected from the base and sidewalls of the UST excavation by the consultant (PIC Environmental Services, Inc.) on July 31, 1998. The excavation was enlarged and impacted soil was removed to maximum depths of 14 to 18 feet bgs until confirmation sample results for TPH as diesel were less than 500 milligrams per kilogram (mg/kg). Based on the soil sample results, 1,972 tons of impacted soil was removed from the excavation and disposed to an off-site bio-treatment facility in July and August 1998. Four groundwater monitoring wells were installed on the property in July 1999 using hollow-stem auger equipment. Groundwater sampling analytical results indicated the site chemicals of concern were aromatic hydrocarbons and the fuel oxygenates methyl-tert-butyl ether (MTBE) and tert-butyl alcohol (TBA). Water level data indicated that groundwater was approximately 7 to 12 feet below the top-of-casing reference points. A fifth groundwater monitoring well was installed on the property in March 2001. In order to assess if groundwater was impacted offsite, a boring was advanced on the west side of Via Vera Cruz in May 2002 to collect a groundwater grab sample. Additional off-site groundwater monitoring wells were installed in June 2008 and August 2011. Groundwater monitoring and sampling was performed until December 2011, when analytical data indicated the dissolved contaminant plume had been adequately delineated. Free product had been detected in one of the wells (MW-4) in September 2006 with an apparent thickness of 1.25 inches (approximately 0.10-foot) and was subsequently bailed manually until November 2006, when it was no longer detected. Approximately one gallon of free product had been removed by bailing. In June 2008, a hydrocarbon sheen was noted in MW-4. The apparent thickness of the free product increased to 1.39 feet when measured in September 2011. A pneumatic pump was used to extract 14.85 gallons of free product from the well until no measureable free product was observed in December 2011. A Corrective Action Plan CAP) was initially submitted to DEH in August 2005 that recommended remediation by natural attenuation. The initial CAP presented the results of vapor risk calculations for benzene and naphthalene in groundwater underlying an office/warehouse building on the property. The results were below the human health carcinogenic risk threshold. However, DEH did not approve the CAP citing the need for additional development of the site conceptual model. A revised CAP was submitted

MICHAEL OCHS (Continued) **S100852026**

in June 2009. The revised CAP included an estimate of the volume of impacted soil remaining in place as approximately 900 cubic yards. The revised CAP also identified two production wells located within a half mile of the site. One of the wells is used for irrigation purposes and is located approximately 425 feet west of the site. The other well was formerly used for municipal supply purposes and is located over 2,000 feet south of the site. However, the well was taken off line about 20 years ago by the Vallecitos Water District due to odor and color concerns. Both of the production wells are screened more than 200 feet bgs. The revised CAP was not approved pending the installation of groundwater monitoring wells MW-8 and MW-9 in August 2011 and an updated site conceptual model. A CAP addendum was submitted in May 2012 that presented an updated site conceptual model that included trend analyses for benzene and MTBE concentrations detected in groundwater samples. The trend analyses indicated decreasing trends for both benzene and MTBE for samples collected from wells in the source area. Based on the trend analyses, MTBE concentrations are estimated to fall below its Secondary Maximum Contaminant Level (MCL) in approximately 20 years and benzene levels would drop below its MCL in approximately 100 years. The revised CAP and its addendum were approved on July 9, 2012. Based on the removal of petroleum hydrocarbon-impacted soil in the source area, the decreasing trends for benzene and MTBE concentrations in groundwater, and the lack of human health risk from ingestion of groundwater or from inhalation of vapor, DEH concurs with the CAPs recommendation for soil and groundwater remediation by natural attenuation and the consultants recommendations for no further action and case closure.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 1854.8

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 36279

HUGHES CIRCUITS INC (Continued) **1005415595**

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Diesel, Gasoline
Site History:	The Site is currently an operating car wash. A single building (car wash, offices, and retail area) is present on the western third of the Site. The remaining portion of the Site is mainly covered with concrete and is used for auto drying and detailing. No fueling facilities are located at the Site. In January 1997, four underground storage tanks (USTs), 10 fuel dispensers, and associated piping were removed from the Site. Soil samples collected from beneath the center of the three fuel dispenser islands, and from beneath the northern-most UST, contained the greatest concentrations of total petroleum hydrocarbons (TPH) as gasoline (TPH-g) and diesel (TPH-d). The greatest concentrations of TPH-g and TPH-d were 1,600 milligrams per kilogram (mg/kg) and 8,200 mg/kg, respectively. Between August 2006 and August 2015, twenty-nine soil borings were drilled and sampled at the Site. Twelve of the borings were completed as groundwater monitoring wells (MWs), four as remedial wells, and two as air sparge wells. Four 48-hour High Vacuum Dual Phase Extraction (HVDPE) events were conducted at the Site in 2015 and 2016. A total of 3,791 gallons of groundwater was extracted resulting in a calculated extraction rate of 0.33 gallons per minute. The radius of influence for groundwater extraction was estimated to range from 15 feet to 37 feet. Soil samples containing concentrations of TPH-g and TPH-d in excess of 100 mg/kg are present in three areas of the Site: Beneath the former central fuel dispenser island (soil samples P5, P7 and P8). The northwest corner of the UST excavation (soil sample T1W and samples from boring B8). The southern portion of the UST excavation (soil samples T4W and T4E). Based on this data, the volume of soil containing TPH-g and TPH-d in excess of 100 mg/kg is estimated to be between 90 and 135 cubic yards. Figures 3,7,8,9 and 10 of the March 15, 2015 Revised Corrective Action Plan (RCAP), show the distribution of remaining impacted soil at the Site. MTBE has been the primary contaminant of concern and was detected at concentrations up to 22,000 micrograms per liter (ug/l) in a groundwater grab sample from boring B11 on September 11, 2006. Moreover, MTBE and TBA were the only compounds detected during the

SAN MARCOS CARWASH (Continued) **S103634897**

fourth quarter 2018 groundwater sampling event. The lateral extent of groundwater containing MTBE in excess of 1,000 ug/l has been adequately assessed and is estimated to range in size from 500 to 1,000 square feet. Figure 5 of the January 2019 Request for No Further Action show the most recent distribution of dissolved MTBE levels at the Site. The consultant is proposing natural attenuation for following reasons: The plume is stable and decreasing. No product has been detected on the groundwater. There are no supply wells within \\% mile of the site. Benzene is currently non-detect. Based on a trend analysis, primarily utilizing post remedial monitoring of MW-2, it is estimated that MTBE will degrade to the primary MCL of 13 ug/l by 2025. There are no health risks based on the absence of benzene or ethylbenzene in soil and groundwater samples. All utilities are generally above the groundwater table, which is at an average of 8.5 to 15 feet below grade surface (bgs). However, the California Aqueduct, and various storm drains, run down South Rancho Santa Fe Road, located adjacent to the Site to the west. In addition, a buried creek channel runs diagonally from northwest to southeast beneath South Rancho Santa Fe Road. The exact depth of these three features could not be obtained from the City of San Marcos, and it is possible for groundwater to migrate through utility lines. However, because the plume is limited to the Site, shrinking, and is estimated to degrade by 2025, utilities would be unlikely to act as a conduit for plume migration of contaminants. Figure 2 of the March 15, 2015 Revised Corrective Action Plan shows the location of utilities near the Site. Based on the results of this soil investigation, and historical soil sampling conducted at the Site, the case meets the general and media specific criteria outlined in the State Water Resources Control Board (SWRCB) Low-Threat Underground Storage Tank Case Closure Policy (LTCP). Public notification was completed per the Policy. DEH concurs with the closure of Unauthorized Release Case H03924-001. All monitoring wells associated with the case were destroyed under permit DEH2019-LMWP-004346. The wells were destroyed on December 12 to 16, 2019. The closure of the Unauthorized Release Case is based on the current use of the property as an operating carwash. ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME. Any future development of the property may require reassessment to determine if the activities could result in a risk to public health.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: Local Agency
Local Case Number: H04763-001
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: The Site is located on the southwestern corner of the intersection of South Rancho Santa Fe Road and Grand Avenue in San Marcos, California. The Site was a former gasoline station but is currently occupied by a convenience store. In December 1999, two 10,000-gallon USTs and associated dispenser island and product lines were removed from the site. Liquid-phase hydrocarbons (LPH) and groundwater were observed in the UST cavity at approximately 10 feet below ground surface (bgs). Approximately 175 gallons of LPH and groundwater were removed from the excavation. Soil samples collected beneath the dispenser and stockpiles contained maximum concentrations of total petroleum hydrocarbons as gasoline (TPHg), benzene, and methyl tert-butyl ether (MTBE) of 2,800 milligrams per kilogram (mg/kg), 17 mg/kg, and 140 mg/kg, respectively. Based on observations in the field, Unauthorized Release Case H04763-001 was opened. On March 14 and 15, 2011, six temporary soil gas probes (SGP-1 through SGP-6) were installed. In March and April 2011, soil gas samples were collected from soil gas probes SGP-1 through SGP-6. The highest contaminant concentrations were detected in the March 30, 2011 sample collected from SGP-5. TPHg and BTEX were detected at concentrations of up to 4,200 parts per million by volume (ppmv), 0.18 ppmv, 1.3 ppmv, 1.7 ppmv, and 6.0 ppmv, respectively. MTBE was also detected, at concentrations of up to 2.0 ppmv, while naphthalene was not detected in any of the soil gas samples. URS utilized the soil vapor analytical data to complete SAM Level 1 Vapor Risk Assessment models for the analyzed constituents. The risk models indicated that there is no significant health risk to occupants in the commercial building present on the western portion of the property. DEH concurred with this conclusion in a letter dated July 7, 2011. Between September 12 and 14, 2012, DPE wells DPE-3 through DPE-5 and injection wells IP-2 through IP-4 and IP-8 were installed. The injection wells were subsequently utilized for an injection feasibility test; the results of which suggested the injection of liquid-phase oxidants into the subsurface beneath the site is not feasible. In July and August 2015, approximately 2,858 tons of petroleum hydrocarbon-impacted soil centered in the area of the former UST basin were excavated. The excavated area was approximately 51 feet by 33.5 feet and extended to a depth of approximately 27 feet bgs. The clean backfill was amended with 1,560 pounds of ORC Advanced that was mixed in the backfill material emplaced at a depth of 10 to 20 feet bgs. Following excavation activities in the former UST basin, confirmation sampling indicated that residual soil contamination still exists in the former UST basin at depths greater than 27 feet bgs. Based on concentrations greater than 100 mg/kg, the amount of hydrocarbon impacted soil for the entire Site is conservatively estimated at approximately 3,775 pounds. As requested by the DEH, periodic removal of liquid phase hydrocarbons (LPH) in well MW-7, including the installation of a passive skimmer, commenced in April 2016. Due to the rapidly declining LPH thicknesses in well MW-7, the skimmer was removed on September 23, 2016. Monthly monitoring of LPH thicknesses in well MW-7 were performed through January 2017. LPH is no longer present in well MW-7. Based on the trend analysis data, the well with the longest estimated time to reach the benzene MCL is 84 years and the well with the longest estimated time to reach the MTBE MCL is 12

CIRCLE K STORE #2969 (Continued) **1000174085**

years to reach the primary MCL of 13 parts per billion (ppb) and 13 years to reach the secondary MCL of 5 ppb. Remediation by Natural Attenuation (RNA) is currently active in remediating hydrocarbons present at the Site. The Site poses no significant risk to human health and meets the requirements of the Low-Threat UST Case Closure Policy. The case was evaluated under the States Low-Threat Underground Storage Tank Case Closure Policy (the Policy). Current and historical soil and groundwater data indicate that the secondary source has been adequately removed and a stable to decreasing plume remains. DEH concurs that the case qualifies for a low-risk closure designation. Public notification was completed per the Policy. All monitoring wells associated with the case were destroyed under permit DEH2019-LMWP-003881. The closure of the case is based on the current use of the property as a store and active service station. ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Soil
Potential Contaminants of Concern: Diesel
Site History: This site is currently vacant land to be graded and developed by the city into a single span bridge on the northern portion of the site. This release was opened in 2014 due to elevated soil and groundwater samples with gasoline and diesel. Three phases of investigation were completed between October 2009 and April 2014. The elevated hydrocarbons in soil and groundwater were located in the area where

ASTLEFORD CONSTRUCTION INC (Continued) **1000348223**

five underground storage tanks and dispenser islands were removed in 1991. Five monitoring wells (MWs) were installed in October 2015. Three quarterly sampling events did not reveal any detectable levels of contaminants in groundwater. Figure 3 of the Second and Third Quarter Groundwater Monitoring Report shows the location of the five wells and groundwater flow direction. Figure 4 of that report shows historical concentrations of the MWs. It should be noted that the groundwater concentrations from B1-GW, B2-GW, B3-GW, B4-GW, B7-GW & B9-GW on Figure 4 are from soil boring grab groundwater samples taken in 2009 and are not considered to be representative groundwater concentrations at the site. The Second and Third Quarter 2016 Groundwater Monitoring Report dated November 11, 2016 included the evaluation and request for closure using the Low Threat Closure Policy (LTCP) closure because: Groundwater has not been impacted (soils-only case) based on the data from the five monitoring wells indicating Non Detect (ND) in all sampling events. There are no health risks to current structures since the site is a vacant lot. Soil impacts are limited to diesel. The consultant states that approximately 130 cubic yards of soil remains on site with over 100 mg/kg TPH. This soil is located in northern portion of the site in the area of the four former 12,000 gallon diesel tanks from 2' -7' bgs per Figures 4 & 5 of the 2016 Site Assessment Report. DEH concurs with the consultants conclusions and approves case closure by low risk criteria. Permit #DEH2017-LMWP-002801 was issued by DEH for destruction of the 5 wells associated with the site.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	The Site is a maintenance/operations facility owned and operated by the County of San Diego. In May 1999, two USTs were removed and soil samples were collected and analyzed under the direction of DEH. Based on laboratory results, case H04814-002 was opened on July 8, 1999. A total of seven groundwater monitoring wells have been installed to investigate the petroleum release at this Site. The wells were monitored and sampled at various times between 2000 and 2009. The sampling events demonstrated that the benzene and MTBE dissolved plumes have not migrated offsite and are localized in the area of the former underground storage tank and dispensers. The consultant, by trend analysis, estimates that benzene in groundwater will reach MCLs by 2015. The consultant estimates that MTBE in groundwater will reach MCLs by 2022. TBA concentrations in some wells have increased due to the breakdown of MTBE; however the plume appears stable and the residual TBA will not adversely impact human health or the environment. DEH estimates that TBA will attenuate to action levels 10 years beyond the degradation of MTBE or by approximately 2032. The consultant estimates that the volume of petroleum hydrocarbon-impacted soil with Total Petroleum Hydrocarbon concentrations as gasoline above 100 mg/kg is approximately 35 cubic yards. A Corrective Action Plan was prepared and completed its public review period on June 4, 2010. The remedial action chosen was natural attenuation. Additionally, public notification was completed to adjacent property owners. No groundwater production wells are located on, adjacent to or within \\% mile of the Site. The closest surface water body to the Site is approximately 1.14 miles. The residual petroleum hydrocarbons in soil and groundwater do not present a significant risk to human health or the environment. DEH concurs with the recommendation of No Further Action.

Site History:	This Voluntary Assistance Program Case was opened in February 14, 2014 to further evaluate the impacts from chlorinated compounds and provide mitigation, if needed, for a former dry cleaner. Five soil borings were installed on site as part of a July 2006, Phase II Environmental Site Assessment Report. Groundwater samples were taken from the borings which were then converted to soil vapor probes. Additional site assessment was performed in June to July 2015 with the installation of eight soil vapor probes. These probes were sampled three times within a six week period. In addition, three permanent Monitoring Wells (MWs) were installed. Based on the concentrations of PCE and TCE from the soil borings, vapor probes, and MWs, it was determined that a greater than one in a million excess cancer risk existed on site. DEH concurred with this and recommended further evaluation. On June 28, 2017, SCS Engineers (SCS) conducted a radon tracer study to evaluate a site-specific slab attenuation rate. The results of such were submitted in a November 28, 2017 Subsurface Assessment Report and Vapor Intrusion Risk Assessment (SAR-VIRA). The SAR-VIRA compiled the sub-slab soil vapor results and the radon study and concluded that indoor air would be below screening levels for PCE and TCE. DEH indicated that indoor air sampling and an additional round of groundwater sampling be performed to provide a third line of evidence. An April 19, 2018 Groundwater and Indoor Air Sampling Report indicated that PCE and TCE were not present in detectable concentrations in Indoor Air (IA). Volatile Organic Compounds such as benzene, which were present in IA, were also present in the Outdoor Ambient Air (OA) sample. SCS concluded that they were most likely associated with the gasoline service station adjacent to the site. Moreover, other compounds, such as carbon tetrachloride, were present in equal amounts in the IA and OA samples. Based on this the consultant concluded that these compounds are typical of urban areas and are not associated with the dry cleaning chlorinated release from this site. The presence of chloroform in the IA sample nearest the restroom is most likely from chlorinated tap water. This is because the toilet was continuously

FORMER CONTINENTAL CLEANERS (Continued) **S106060561**

running due to plumbing issues during the collection of IA samples. SCS states that because PCE, TCE, and the breakdown products were not reported at detectible concentrations in indoor air, in conjunction with other lines of evidence (SAR-VIRA and the radon tracer study), a significant health risk does not exist at the Site as a result of vapor phase migration of PCE and TCE in soil vapor. DEH concurs. SCS further states that PCE and TCE concentrations in groundwater are lower and are generally stable or decreasing. DEH also concurs.

Comments:	PA Report was reviewed by Region 4 staff. The site is located at 217 Las Posas R. between Mission Rd. & Hwy 78 in San Marcos. The area is industrial, but Palomar College is north of Mission Rd. Site includes 4,000 sf bldg., 2 small storage sheds, outdoor drum storage area, and abandoned above ground storage tanks (550 gal.). Chemical company is still operating repackaging and storing various chemical products (Algi-gon pool treatment etc.). No sampling result were considered in EPA's PA. Staff recommends PEARM to de- termine if there is a problem DTSC should address.

Site History:	The Facility is approximately 11.8 acres in size and contains buildings associated with the manufacture, marketing, and distribution of optical lenses. Site assessment activities have been conducted at the Facility since the early 1990s. Investigations revealed the presence of VOCs, including methylene chloride, in soil and groundwater at the Facility. Signet has undertaken four remedial actions at the Facility, as well as subsequent investigation activities to assess the adequacy of the remedial actions. Active remediation has included operation of a multiphase extraction system (MPE system) from 1995 to 1998 to remove subsurface VOCs from source areas at the Facility. Additionally, three targeted source removal actions have been conducted at the Facility since 1986. Remedial activities have included removal and disposal of contaminated soil and addition of soil amendments to facilitate in-situ degradation. In late 2009, an interim remedial measure to extract VOCs from deep

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

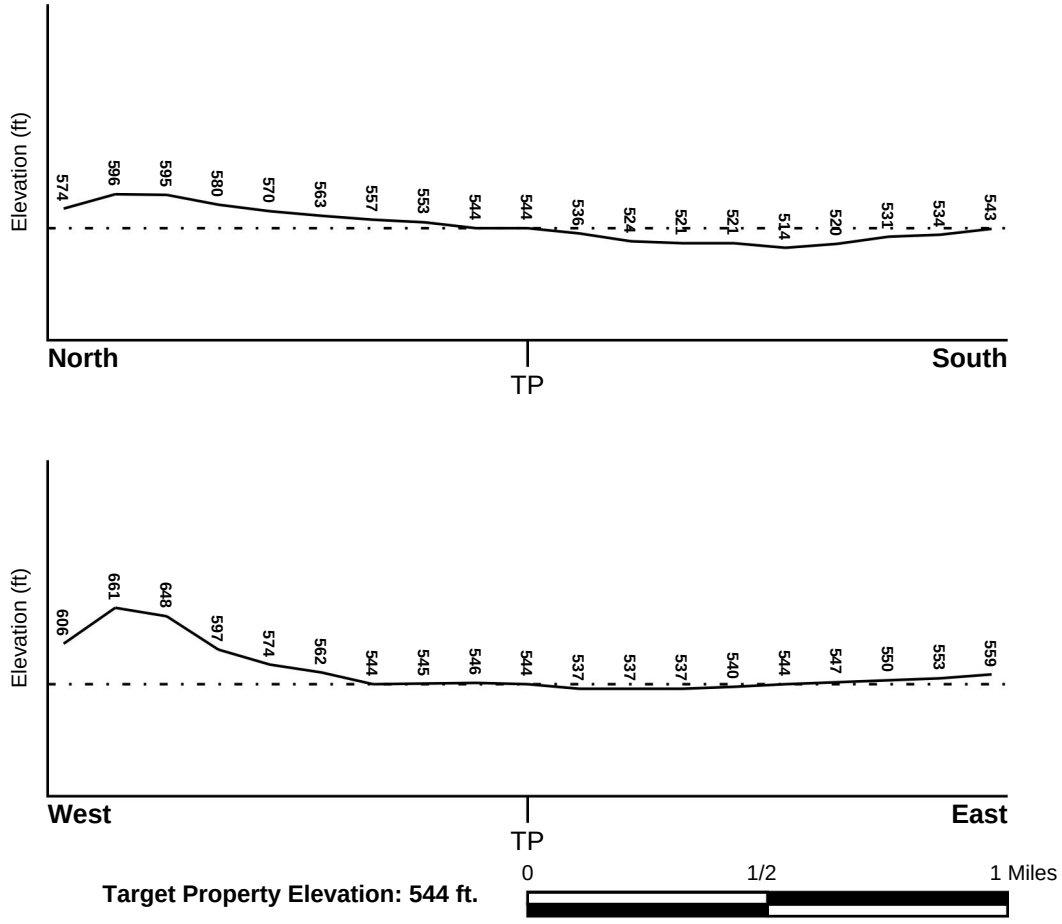
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: LAS FLORES

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification.

Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.

Please contact our office at the above address or email with any changes in your contact/mailing information within 15 days of the change.

Sincerely,

Jeff Ferrell
Senior Safety Engineer
