1.0 EXECUTIVE SUMMARY

GEOTEK, INC. (GEOTEK) has performed a Phase I Environmental Site Assessment (ESA) for the subject property: APNs 219-222-01-00, -02-00, -03-00 and -04-00 (the "Site"), located in the city of San Marcos, San Diego County, California. Our services were conducted in substantial conformance with the scope and limitations of the American Society of Testing and Materials (ASTM) E 1527-13, "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*", which is approved to meet the requirements of the federal All Appropriate Inquiries (AAI) standards as set forth in the Code of Federal Regulations, Title 40, Section 312 (40 CFR 312), and GEOTEK Proposal No. P-0300520-SD, dated March 24, 2020. Any additions or deletions from our scope of services are discussed in the appropriate sections of this assessment.

A representative of GEOTEK conducted a Site reconnaissance on August 14, 2020. The weather was warm, and the sky was clear. The rectangular shaped Site is currently comprised of four (4) parcels of land (San Diego County APNs 219-222-01-00, -02-00, -03-00 and -04-00) and encompasses a total of approximately 33.19 acres. The Site can generally be accessed from either La Mirada Drive, South Las Posas Road, Linda Vista Drive or South Pacific Street.

The Site is currently vacant and undeveloped land. Visual evidence of hazardous substances and wastes were not observed during our Site reconnaissance. No visual indication of spills or leaks were observed. No other pungent or acrid odors were observed emanating from the Site.

The Site is in an area largely characterized by commercial/industrial facilities. The Site is bounded by La Mirada Drive, followed by numerous commercial facilities to the north; South Las Posas Road, followed by a shopping center to the east; Linda Vista Drive, followed by several commercial/industrial facilities to the south; and South Pacific Street, followed by several industrial facilities, to the west. None of the adjacent properties appear to represent an environmental concern to the Site.

Based on readily available historic information, the Site appears to have been vacant and undeveloped land since at least 1939. The surrounding properties appear to historically have been vacant land from at least 1939 until approximately 1953, when structures can be observed to the north and west of the Site. Numerous commercial structures can be observed to the north, west and south in an aerial photograph dated 1979. The vicinity appeared largely as it does at present by 2009.

The Site does not appear on the environmental database report obtained for this assessment. None of the adjacent properties appear on the database report. There are 116 facilities listed on the database report within the various search distances specified by ASTM E 1527-13. Due to their status listings, distances, and/or locations (hydro-geologically down- or cross-gradient), it is our opinion that these facilities do not represent an environmental concern to the Site.

This Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition or concern in connection with the subject Site.

This executive summary does not contain all the information that is found in the full report. The report should be read in its entirety to obtain a more complete understanding of the information provided and to aid in any decisions made or actions taken based on this information.

2.0 INTRODUCTION

GEOTEK, INC. (GEOTEK) has performed a Phase I Environmental Site Assessment (ESA) for APNs 219-222-01-01, 02-00, -03-00 and -04-00 (the "Site"), located in the city of San Marcos, San Diego County, California.

2.1 PURPOSE

The purpose of this Phase I ESA was to identify and evaluate actual and potential environmental conditions involving the subject Site. It was not the purpose of this assessment to determine the degree or extent of contamination, if any, but rather the potential for contamination.

2.2 SCOPE OF WORK

The Phase I ESA is a general characterization of environmental concerns based on reasonably ascertainable information and observations. GEOTEK performed the Phase I ESA in substantial accordance with ASTM E 1527-13. The following services were provided for the assessment:

- A reconnaissance of the Site and surrounding properties to visually assess current utilization and indications of potential surface contamination. This was accomplished by driving the Site boundaries, and then traversing the Site until the entire Site had been surveyed.

- A reconnaissance of the surrounding area for approximately one-half mile was conducted, without entering the properties, making observations concerning property uses, conditions, and housekeeping.

- A review of the geologic and hydro-geologic settings was conducted using reasonably ascertainable public records and documents.

- An environmental database report was obtained from a data service provider. This database report compiles and locates documented "hazardous waste" facilities within specific minimum search distances as defined by ASTM E 1527-13. If necessary, additional information on identified facilities was gathered by a file review at the appropriate federal, state, local, and/or tribal regulatory agency.

- A review of reasonably ascertainable historical records (including aerial photographs, topographic maps, building records, and city directories) was conducted to assess the

historical land utilization and indications of potential contamination or sources of contamination for the Site.

- This report was prepared, which relates the findings of this study and presents our conclusions and recommendations.

Specific items not included in this Scope of Services are soil analysis, water analysis, asbestos containing materials analysis, radon analysis, lead-based paint analysis, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, vapor intrusion testing, high voltage power lines, and other items not within the scope of ASTM E 1527-13.

2.3 SIGNIFICANT ASSUMPTIONS

Specific assumptions by GEOTEK for this assessment include:

- GEOTEK had permission to access the Site grounds;
- The client has provided GEOTEK with available geotechnical or environmental reports for the Site;
- The client has provided GEOTEK with known current or historic uses of hazardous materials at the Site, or with other specialized knowledge of the environmental history of the Site and surrounding area;
- The client is not the sole and absolute source of information;
- Seller has provided proper and complete access to their knowledge, both written and verbal, and GEOTEK can rely on the information.

2.4 LIMITATIONS AND EXCEPTIONS

GEOTEK conducted a Phase I Environmental Site Assessment in substantial accordance with ASTM E 1527-13 and as authorized by the Las Posas Owner LPV, LLC. This study does not include sampling of soil, groundwater and/or materials on-site for environmental testing. This report is intended for the use of the Las Posas Owner LPV, LLC. The contents should not be

relied upon by any party other than the aforementioned without the express written consent of GEOTEK.

The findings, conclusions, and recommendations made in this report are based on the information that was made available to GEOTEK, in most instances from public records. The information is relevant to the date of our site work and should not be relied on to represent conditions at any later date. The opinions and conclusions expressed herein are based on information obtained during our assessment and on our experience and current standards of technical practice. GEOTEK makes no other warranties, either express or implied, concerning the completeness of the data furnished to us. GEOTEK cannot be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time our assessment was undertaken. GEOTEK is not responsible, nor liable for work, testing or recommendations performed or provided by others. This Phase I Environmental Site Assessment is not and should not be construed as a warranty or guarantee about the presence or absence of environmental hazards or contaminants, which may affect the subject site. Facts, conditions, and acceptable risk factors change with time; accordingly, this report should be viewed within this context.

Specific limitations to the scope of ASTM E 1527-13 due to contract limitations, availability of resources, and/or encountered Site conditions are discussed in the appropriate section(s) of this report.

2.5 SPECIAL TERMS AND CONDITIONS

This assessment report is presented as fulfilling the standard requirements of most financial institutions, governmental regulatory agencies, ASTM, and generally accepted industry standards and practices. Please refer to GEOTEK Proposal No. P-0300520-SD for complete terms and conditions for this assessment.

2.6 RELIANCE

This assessment has been prepared for the exclusive use and may be relied upon by the Las Posas Owner LPV, LLC and their successors and assignees. Third party reliance letters may be issued upon request and upon the payment of the, then current, fee for such letters. All third parties relying on this report, by such reliance, agree to be bound by the General Conditions and Limitations agreed to the Las Posas Owner LPV, LLC. No reliance by any party is permitted without such agreement, regardless of the content of the reliance letter itself.

3.0 DESCRIPTION OF SITE AND SURROUNDING AREA

The objective of describing the Site and surrounding area is to document current conditions as observed and to obtain information which would indicate the likelihood of a recognized environmental condition in connection with the Site. A representative of GEOTEK conducted a Site reconnaissance on August 14, 2020. The weather was warm and the sky was clear. The Site can generally be accessed from either La Mirada Drive, South Pacific Street, Linda Vista Drive or South Las Posas Road.

3.1 SITE LOCATION AND LEGAL DESCRIPTION

The Site is southwest of the intersection of La Mirada Drive and South Las Posas Road in the city of San Marcos, San Diego County, California. According to the U.S. Geological Survey (USGS) San Marcos Quadrangle topographic map sheet (7.5-minute series), the Site is located in Township 12 South, Range 3 West, San Bernardino Baseline and Meridian (see Figure 1 in Appendix A and documents in Appendix B). The Site is also known as San Diego County Assessor's Parcel Numbers (APNs) 219-222-01-00, -02-00, -03-00 and -04-00. Additional legal descriptions for the Site are included in the *Preliminary Report* (First American Title Company, 2019) document included in Appendix B.

3.2 SITE AND VICINITY GENERAL CHARACTERISTICS

The Site is bounded by La Mirada Drive, followed by numerous commercial facilities to the north; South Las Posas Road, followed by a shopping center to the east; Linda Vista Drive, followed by several commercial/industrial facilities to the south; and South Pacific Street, followed by several industrial facilities, to the west.

3.3 CURRENT PROPERTY USE

The Site is vacant and undeveloped land.

3.4 SITE IMPROVEMENTS

The Site is vacant and undeveloped land. Photographs of the Site are included in Appendix C.

3.4.1 Hazardous Substances

3.4.4 Controlled Substances

GeoTek consulted the U.S. Drug Enforcement Agency (DEA) website to cross-check the Site address against published facilities subject to DEA enforcement. The Site did not appear on the list of published facilities. A copy of the DEA printout is included in Appendix B.

GeoTek did not observe evidence of illegal or controlled substances being used or manufactured at the Site.

3.4.5 Indications of Solid Waste Disposal

Waste disposal for the Site and Site area is provided by EDCO Waste and Recycling Services.

3.4.7 DRAINAGE

Natural drainage at the Site is generally interpreted to be toward the southeast, conforming to the natural topography in the area. Ponded water was not observed during our Site reconnaissance.

3.4.8 OTHER CONDITIONS OF CONCERN

No visual indication of conditions of concern (wells, drywells, cesspools, etc.) that would indicate a recognized environmental condition was observed during the Site reconnaissance.

3.4.9 INTERVIEWS

GEOTEK interviewed the following individuals while performing this assessment, in the form of completing a *User Questionnaire*:

- Mr. Greg Waite (a representative of the future Site owner) completed a User Questionnaire.

Information from these interviews are incorporated into the appropriate sections of this report.

3.5 CURRENT ADJOINING PROPERTY USE

The Site is in an area largely characterized by commercial/industrial facilities. The Site is bounded by La Mirada Drive, followed by numerous commercial facilities to the north; South Las Posas Road, followed by a shopping center to the east; Linda Vista Drive, followed by several commercial/industrial facilities to the south; and South Pacific Street, followed by several industrial facilities, to the west. None of the adjacent properties appear to represent an environmental concern to the Site.

4.0 CLIENT PROVIDED INFORMATION

As a form of interview, a representative of the future Site owner completed a "User Questionnaire" for the Site in accordance with ASTM E 1527-13. A copy of the completed questionnaire is included in Appendix B.

4.1 ENVIRONMENTAL CLEAN UP LIENS

Mr. Greg Waite is not aware of any environmental clean-up liens at the Site.

4.2 ACTIVITY AND USE LIMITATIONS

Mr. Greg Waite is not aware of any activity use limitations at the Site.

4.3 SPECIALIZED KNOWLEDGE

Mr. Greg Waite is not aware of any specialized knowledge of the Site or nearby properties.

4.4 PURCHASE PRICE

Mr. Greg Waite states that the purchase price being paid for the Site reasonable reflects the fair market value.

4.5 COMMONLY KNOWN INFORMATION

Mr. Greg Waite states that he is not aware of any commonly known or reasonably ascertainable information for the Site.

4.6 OBVIOUS INDICATORS OF CONTAMINATION

Mr. Greg Waite states that he is not aware of any obvious indicators of a likely environmental impact at the Site.

4.7 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION

Multiple entities currently own and manage the Site (First American Title Company, 2019). The Site is currently vacant and undeveloped land; hence there is no occupant information.

4.8 Reason for Performing Phase I ESA

This Phase I ESA was performed at the request of the Las Posas Owner LPV, LLC as part of their due diligence for possible future improvements on the Site.

4.9 Other User Provided Information

GeoTek was not provided with any other information for the Site from an environmental perspective by the Las Posas Owner LPV, LLC.

5.0 PROPERTY PHYSICAL SETTING

Surface and subsurface environments are of interest because they control the movement of water-born contaminants, which could be transported to and from the subject Site. GEOTEK reviewed information regarding the physical setting of the subject Site and immediately surrounding area.

5.1 REGIONAL GEOLOGY

The property is situated in the Peninsular Ranges geomorphic province. The Peninsular Ranges province is one of the largest geomorphic units in western North America. Basically, it extends from the point of contact with the Transverse Ranges geomorphic province, southerly to the tip of Baja California. This province varies in width from about 30 to 100 miles. It is bounded on the west by the Pacific Ocean, on the south by the Gulf of California and on the east by the Colorado Desert Province.

The Peninsular Ranges are essentially a series of northwest-southeast oriented fault blocks. Several major fault zones are found in this province. The Elsinore Fault zone and the San Jacinto Fault zone trend northwest-southeast and are found near the middle of the province. The San Andreas Fault zone borders the northeasterly margin of the province.

5.2 LOCAL GEOLOGIC SETTING AND TOPOGRAPHY

The Site and Site area are understood to be underlain by alluvium and bedrock materials of the Santiago Formation (Kennedy, M.P. et al, 2007). Additional data regarding soil survey information for the Site and Site area is also included in Appendix B.

The Site is relatively flat, ranging in elevation from approximately 527 feet above mean sea level (amsl) in the southeast potion of the project area to 551 feet in the northwest corner of of the project Site.

5.3 VICINITY SURFACE DRAINAGE

Natural drainage at the Site is interpreted to be dominantly directed toward the southeast, conforming to the natural topography in the area. Storm water runoff does not drain towards the Site from the adjacent properties due to existing streets and/or improvements.

According to the Federal Emergency Management Agency (FEMA), the Site is not located within a 100- or 500-year flood zone (see Appendix D).

5.4 HYDROGEOLOGY

According to a review of historical groundwater data (California Department of Water Resources and California State Water Resources Control Board groundwater well data [http://wdl.water.ca.gov and http://geotracker.waterboards.ca.gov]) and in-house information, groundwater is less than 10 feet bgs with a flow estimated to be directed to the southeast.

6.0 ENVIRONMENTAL REGULATORY RECORDS REVIEW

The records review is conducted to help identify known recognized environmental conditions at the Site and/or on adjacent or nearby properties which may have impacted the subject Site.

6.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

GEOTEK obtained and reviewed an environmental database report of the federal and state environmental records specified by ASTM E 1527-13. The database report was provided by Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. Additionally, orphan or un-mappable sites listed by EDR were reviewed for the approximate minimum search distances noted and included in our discussion, if applicable. Refer to Appendix D for a copy of the database report.

6.2 Discussion of Regulatory Records

6.2.1 National Priority List

The National Priority List (NPL) is the EPA's list of confirmed or proposed Superfund sites. Our review of this data includes sites which have been delisted from the NPL. The NPL is searched for a 1.0-mile distance.

The Site does not appear on the NPL. There are no facilities on the NPL within 1.0-mile of the Site.

6.2.2 SUPERFUND ENTERPRISE MANAGEMENT SYSTEM

The Superfund Enterprise Management System (SEMS, formerly CERCLIS) is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. Our review of SEMS sites includes archive (no further remedial action planned) facilities. The SEMS list is searched for a 0.5-mile distance.

The Site does not appear on the SEMS or SEMS-ARCHIVE list.

There are two (2) facilities on the SEMS-ARCHIVE list within 0.5-mile of the Site. The first facility is listed as Moyer Chemical, located at 1227 Los Vallecitos. The facility is listed as being located 0.25 to 0.5 (0.352) mile northeast of the Site and at an elevation of 560 feet msl (20 feet higher in elevation relative to the Site).

The second facility is listed as GEC Marconi Electronic Systems, located at 1370 San Marcos Boulevard. The facility is listed as being located 0.25 to 0.5 (0.460) mile south-southwest of the Site and at an elevation of 515 feet msl (25 feet lower in elevation relative to the Site).

Due to the listings and locations (down- or cross-gradient) and/or facility status as a SEMS-ARCHIVE, these facilities do not represent an environmental concern to the Site.

6.2.3 RESOURCE CONSERVATION AND RECOVERY ACT

The Resource Conservation and Recovery Act compile selective information on facilities which generate, transport, store, treat and or dispose of hazardous waste. RCRA facilities can be listed on one of three databases:

- *Corrective Action Facilities (CORRACTS)* are facilities undergoing corrective action. A corrective action order is issued pursuant to RCRA Section 3008(h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. The CORRACTS list is searched for a 1.0-mile distance.

  The Site does not appear on the CORRACTS list.

  There are two (2) facilities on the CORRACTS list within 1.0-mile of the Site. The first facility is listed as Signet Armorlite, Inc., located at 1001 Armorlite Drive. The facility is listed as being located 0.5 to 1.0 (0.611) mile east-northeast of the Site and at an

elevation of 560 feet msl (20 feet higher in elevation relative to the Site). Due to the corrective status of the violations, this facility does not represent an environmental concern to the Site.

The second facility is listed as GEC Marconi Electronic Systems, located at 1370 San Marcos Boulevard. The facility is listed as being located 0.25 to 0.5 (0.460) mile south-southwest of the Site and at an elevation of 515 feet msl (25 feet lower in elevation relative to the Site). Due to the listing's location (down-gradient), this facility does not represent an environmental concern to the Site.

- *Transportation, Storage, and Disposal Facilities (TSD)* includes facilities that transport, store or dispose of hazardous waste and are not listed on the RCRA Generators list. The TSD is searched for a 0.5-mile distance.

  The Site does not appear on the RCRA TSD list.

  There is one (1) facility on the RCRA TSD list within 0.5-mile of the Site. The facility is listed as GEC Marconi Electronic Systems, located at 1370 San Marcos Boulevard. The facility is listed as being located 0.25 to 0.5 (0.460) mile south-southwest of the Site and at an elevation of 515 feet msl (25 feet lower in elevation relative to the Site).

  Due to the listing and location (down-gradient), this facility does not represent an environmental concern to the Site.

- *Generators List* identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. The RCRA generators list is searched for the Site and adjacent properties.

  The Site does not appear on the RCRA Generators list.

  There are 18 facilities listed as a RCRA Generator within 0.25 mile of the Site. However, none of these facilities are located immediately adjacent the Site, and therefore are not an environmental concern.

6.2.4 Emergency Response Notification System

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil or hazardous substances. The ERNS list is searched for the Site. The Site does not appear on the ERNS list.

6.2.5 Federal Institutional Control/Engineering Control Registries

The EPA maintains three (3) databases which list sites that have institutional and/or engineering controls in place as part of their operations. These databases are searched for a 0.5-mile distance.

The Site does not appear on the U.S. Engineering Controls databases. There are no facilities on these databases within 0.5-mile of the Site.

.

6.2.6 State Response Sites

The State Response Sites (RESPONSE) records are the state equivalent to the federal National Priorities List (NPL) database. The RESPONSE is searched for a 1.0-mile distance.

The Site does not appear on the on the RESPONSE. There are no RESPONSE facilities listed within a 1.0-mile distance of the Site.

6.2.7 EnviroStor Database

The EnviroStor Database (EnviroStor, formerly CALSITES) records are the state equivalent to the federal SEMS database. EnviroStor is searched for a 0.5-mile distance.

The Site does not appear on the EnviroStor database.

There are five (5) EnviroStor facilities within 0.5 mile of the Site. The table below provides the facility name, address, location in relation to the Site and the facility status.

No.	Facility Name	Address	Location in Relation to Site	Facility Status

administrative measures intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods. The State Institutional Control/Engineering Control Registries is searched for the Site.

The subject Site does not appear on the State Institutional Control/Engineering Control Registries.

6.2.14 Tribal Databases

Tribal governments are under the jurisdiction of the EPA for environmental concerns. Currently, the EPA Region 9 publishes LUST and UST information for tribes in Arizona, California, Hawaii, Nevada, and the Pacific Territories. The LUST database is searched for 0.5 mile, and the UST database is searched for 0.25 mile.

The Site does not appear on the Tribal LUST or UST databases. No facilities were identified on the Tribal LUST or UST databases within 0.5 mile of the Site.

6.2.15 Other Databases

EDR compiles information from multiple federal, state, local, and proprietary databases. Most are secondary or tertiary or redundant. Facilities compiled on these other databases are evaluated based on the severity of the listing, distance, and location.

The Site does not appear on the environmental database report obtained for this assessment. There are no facilities on the other databases within the appropriate search distances stipulated by ASTM E 1527-13.

6.2.16 Dry Cleaners

The DRYCLEANERS list is compiled and provided by EDR. The DRYCLEANER database is searched for a 0.25-mile distance.

The Site does not appear on the DRYCLEANER list. There are no DRYCLEANER facilities listed within 0.25-mile of the Site.

6.2.17 UNMAPPABLE FACILITIES

GEOTEK reviewed the listing of "orphan" or unmappable facilities in the database report. There are two (2) unmapped facilities in the report. Based on the listings provided for the orphan facilities and the locations hydro-geologically down gradient, these facilities do not represent a concern to the Site.

6.3 LOCAL REGULATORY AGENCY RECORDS

GEOTEK contacted the San Marcos Fire Department and the County of San Diego Sherriff Department regarding underground or above ground storage tanks, hazardous material permits or business plans, emergency responses, spills, inspections, or other information of an environmental or hazardous nature. Neither of these agencies had any information for the Site.

7.0 VAPOR ENCROACHMENT SCREENING

The purpose of a Vapor Encroachment Screen (VES) is to identify, to the extent feasible, if a Vapor Encroachment Condition (VEC) exists at the Site.

A Vapor Encroachment Screen Report was generated for the Site and Site area utilizing EDR's Vapor Encroachment Worksheet (see Appendix D). It was determined that there are no historical dry cleaners or auto stations within 600 feet and/or up gradient from the Site.

It is our opinion that a VEC in not likely to exist at the subject Site. The Vapor Encroachment Screen report is included in Appendix D.

8.0 SITE AND SURROUNDING AREA HISTORY

In order to construct the history of the Site and the surrounding area, GEOTEK reviewed reasonably ascertainable public documents, including aerial photographs, topographic maps, building records, city directories, fire insurance maps, and county assessor history records.

8.2.3 CITY DIRECTORIES

GEOTEK has reviewed a City Directory Image report obtained from and provided by EDR for the Site and surrounding property addresses. The City Directory Image report provides information on numerous nearby property addresses. The named facilities do not currently represent an environmental concern to the Site.

8.2.4 SANBORN MAP REVIEW

Sanborn Maps for the Site were requested from EDR-Sanborn, which owns and maintains the largest and most complete collection of the maps. Source sheets were not available for the Site. The Sanborn Map Report is included in Appendix B.

8.3 HISTORICAL USE SUMMARY

Based on readily available historic information, the Site appears to have been vacant and undeveloped land since at least 1939. The surrounding properties appear to historically have been vacant land from at least 1939 to at least 1953. Numerous structures can be observed to the north, west and south in an aerial photograph dated 1979.

Data gaps exist from 1901 to 1939, 1939 to 1946, 1953 to 1964, 1970 to 1979 and 1996 to 2005 due to the limited records which are reasonably ascertainable in the local area. However, it is our opinion that additional historic information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

9.0 SIGNIFICANT DATA GAPS

No significant data gaps were discovered while performing this Phase I Environmental Site Assessment. Therefore, it is our opinion that sufficient information was obtained to identify current Site conditions and past Site usage.

Minor data gaps include:

- Gaps in the historic records from 1901 to 1939, 1939 to 1946, 1953 to 1964, 1970 to 1979 and 1996 to 2005;

- GEOTEK has not received nor reviewed Chain-of-Title documents for the Site.

It is our opinion that additional information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

10.0 CONCLUSIONS AND RECOMMENDATIONS

GEOTEK has performed a Phase I Environmental Site Assessment (ESA) for the subject Site in substantial conformance with the scope and limitations of ASTM E 1527-13 and GEOTEK Proposal No. P-0300520-SD, dated March 24, 2020 Any exceptions to, or deletions from, this practice are described in the appropriate sections of this report.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status

indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2020 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/23/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1

RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 16 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information

that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 10 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that there are 57 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 4610

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 12187

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Potential Contaminants of Concern: Gasoline
Site History: Evidence of a petroleum hydrocarbon release was reported by a County inspector during removal of an underground storage tank (UST) system on May 1, 1990. Soil discoloration was observed by the inspector and hydrocarbon odors were noted as emanating from the excavation; however, no soil samples were collected from the excavation immediately following the removal of the 2,000-gallon capacity, gasoline UST and its associated dispenser. [It should be noted that a purported gasoline distribution pipeline from the UST to the warehouse/office building onsite was not removed]. The UST excavation was subsequently widened and deepened based on soil sample analytical results: if the detected gasoline concentration in a soil sample exceeded 100 milligrams per kilogram, the consultant (Geocon Environmental Consultants, Inc.) directed that additional excavation be performed. The northeastern portion of the excavation generally yielded the highest gasoline concentrations; as a result, the eastern wall of the excavation was extended two to three feet eastward beneath a concrete block building on the immediately adjoining property. Based on analytical results for soil samples collected from horizontal and vertical hand-auger borings advanced into the eastern sidewall and floor of the excavation, respectively, Geocon concluded that the extent of petroleum-impacted soils is limited in horizontal and vertical extent to less than 5 feet [into] the northeastern portion of the east wall and [below} the bottom of the excavation. A temporary groundwater monitoring well was installed to a depth of 31 feet below ground surface (bgs) near the southeastern corner of the excavated area on August 31, 1990. Gasoline and its aromatic hydrocarbon constituents (benzene, toluene, ethylbenzene, and xylenes [BTEX]) were not detected in the groundwater grab sample collected from the temporary well on September 5, 1990. Based on these results and the soil removal in the source area, DEH issued a letter on February 8, 1991, stating that no further action was required. A Phase II environmental site assessment was performed in June 2007 by Odic Environmental in association with a real estate transaction. Six borings were advanced in former UST area to depths ranging from 15 to 30 feet bgs. Groundwater was encountered in one boring and a temporary well was installed. Depth to water in the temporary well was measured as 11.40 feet bgs and a grab groundwater sample was collected. Each of the BTEX compounds was detected at concentrations in excess of their respective Maximum Contaminant Levels (MCLs) for drinking water. Naphthalene, as well as volatile organic compounds indicative of weathered gasoline, were also detected in the sample. The detection of benzene in groundwater prompted DEH to re-open the case due to concerns of potential vapor migration into the previously-described building on the adjoining property. No subsequent site assessment activities have been performed.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: On August 17, 1998, three underground storage tanks (USTs) containing gasoline and diesel, three dispensers, and associated piping were removed from the site. DEH-directed soil sampling was completed

LAVENDER HILLS PROPERTIES, LLLP (Continued) **1000155063**

beneath the USTs, piping, and dispensers. Total petroleum hydrocarbons from gasoline (TPHg) was detected in the soil sample from beneath the northern gasoline dispenser at 1,000 milligrams per kilogram (mg/kg), and TPH from diesel (TPHd) was detected in the soil sample from beneath the diesel dispenser at 660 mg/kg. Based upon these results, DEH opened Unauthorized Release case H05008-001. After removal of the dispensers, the excavation was extended to approximately 18 feet below ground surface (bgs), resulting in the removal of approximately 35 cubic yards of soil. Since the excavation was extended to approximately 4 feet below groundwater and volatile organic compounds (VOCs) were not detected in confirmation soil samples, soil mitigation activities were concluded. In 1999 three borings were installed to the west, southwest, and east of the excavation. The only petroleum constituent detected in soil samples from the borings was MTBE, which was detected at approximately 19.5 feet bgs in the borings located to the west and east of the excavation. Temporary wells were installed in the borings, and groundwater samples were collected. Benzene and MTBE were the only petroleum constituents detected in the groundwater samples, and only MTBE was detected at concentrations exceeding the MCL. The extent of MTBE-impacted groundwater was assessed with the installation of six groundwater monitoring wells in 2002 (3 wells installed) and 2009 (3 wells installed). Petroleum constituents, including TPHd, xylenes, and MTBE, were detected in soil samples collected during drilling of monitoring wells MW1, MW2, and MW3 only. Groundwater monitoring was completed from 2002 to 2010. During this period, the maximum concentration of benzene detected in groundwater was 2 micrograms per liter (ug/l), and the consultant concludes that benzene impacts to groundwater are not a concern at the site. MTBE was detected at a maximum of 2,500 ug/l in monitoring well MW1 in 2007, which decreased to 1,700 ug/l in 2010. The consultant estimates that the extent of the MTBE plume that exceeds the secondary MCL is approximately 875 square yards. Since MTBE has not been detected above the MCL in up-gradient groundwater monitoring well MW5 or down-gradient monitoring wells MW4 and MW6, the consultant concludes that the dissolved-phase MTBE plume is stable. Based upon observed degradation rates in monitoring wells MW1, MW2, and MW3, the consultant estimates that MTBE concentrations in groundwater will reach the secondary MCL of 5 ug/l in approximately 495 years. DEH does not concur with this estimate, as the consultant included the results of a pre-purge groundwater sample in the calculation of the MTBE degradation rate. DEH used data from the last three groundwater sampling events to estimate the time it will take for MTBE concentrations to reach the MCL in monitoring wells MW1 and MW3. DEH estimates that groundwater concentrations of MTBE will reach the MCL in MW1 by 2026 and in MW3 by 2017. Given the limited data for the analysis and lack of decreasing trends in monitoring well MW2, a safety factor was added and DEH concludes that MTBE levels across the site will reach the MCL by 2050. A Final Corrective Action Plan and Addendum (CAP), dated September 19, 2013, was prepared for the site, and recommended remediation of the site by natural attenuation. The sensitive receptor survey completed as part of the CAP discusses potential impacts of the release to underground utility trenches, surface water, groundwater resources, and human health. The consultant states that groundwater is at least 12 feet deeper than underground utility trenches on site, and at least 5 feet deeper that underground utility trenches under Linda Vista Drive. As such, the consultant concludes

LAVENDER HILLS PROPERTIES, LLLP (Continued) **1000155063**

that there is no potential contaminant impact to utility lines on or adjacent to the property. The nearest surface water, the San Marcos Creek, is located approximately 3,500 feet to the south of the site, which the consultant concludes is too far from the site to be of concern. The consultant identified a cathodic protection well and an industrial well located approximately 626 and 959 feet from the site, respectively. The consultant also found records for two groundwater supply wells located approximately 2,000 feet from the site, but could not locate these wells. In addition, there is a potential groundwater production well (Eubanks well) located approximately 4,000 feet to the east-southeast of the site. The consultant obtained a statement from the Vallecitos Water District regarding their plans for development of groundwater resources in the area and possible use of the Eubanks well. In a letter dated September 9, 2010, the District stated that it is not pursuing the use of groundwater in the area of the site due to poor water quality and limited supply. The district further stated that it is pursuing a termination agreement with the owners of the Eubanks well, thereby releasing the Districts rights to the water. The District states that the Eubanks well has been inactive since the early 90s and the pump and motor have been removed. Given the distance of these wells from the groundwater plume, low permeability of soils on the site, stability of the dissolved-phase plume, and current and anticipated use of the wells, the consultant concludes that these wells are not currently threatened by the presence of the contamination on the site, nor are they likely to be affected in the foreseeable future. The consultant evaluated the potential health risk to on-site workers from vapor migration with the SAM Vapor Risk Model. Using the highest concentration of MTBE during the most recent groundwater monitoring event, the cancer risk was estimated at 3.88 x 10-8, which the consultant concludes represents a minimal risk. In addition, petroleum-impacted soil and groundwater are located under concrete. The consultant estimates that less than 50 cubic yards of petroleum-impacted soil remains at the site, and concludes that the petroleum contamination remaining on site is not a threat to public health. In summary, the consultant concludes that the residual petroleum hydrocarbon contamination present at the site is not likely to present a risk to public health or a useable groundwater resource. The public review period for the CAP was completed on November 8, 2013, and neither DEH nor the consultant received any comments. Based upon these findings, the consultant recommends that the case be closed. DEH concurs with the consultants conclusions and recommendation to close the case.
