National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

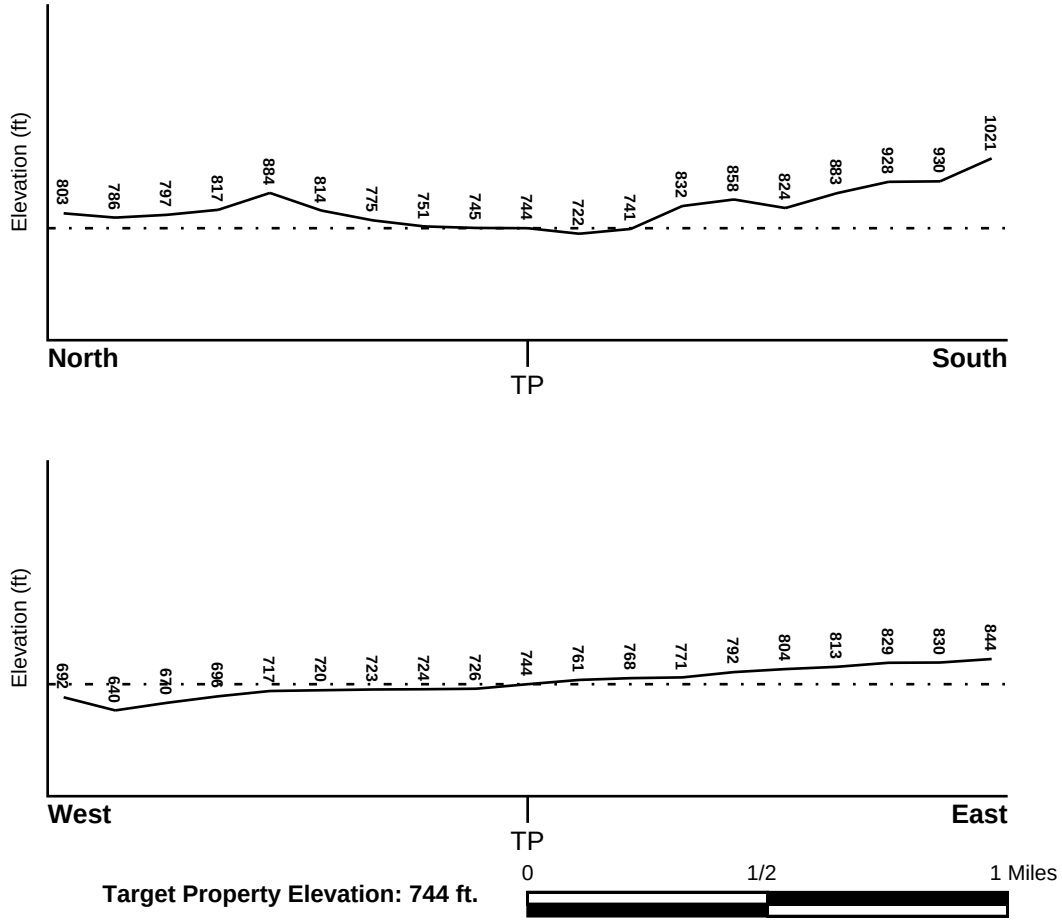
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 744 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

1.0 Introduction

Project Background

The proposed area of development is located within the County of Ventura in the City of Thousand Oaks at 195 E Hillcrest Drive. The project site's APN is 669-0-021-25 and is located West of State Route 23 and North of US Route 101. The lot is bordered by Atria Hillcrest Assisted Living Facility to the north, Kaiser Permanente medical offices to the east, E Hillcrest Dr to the south, and Lang Creek to the west. The site is approximately 6.97 acres and is currently comprised of two office buildings, two parking lots with planters, and an onsite private road.

The redevelopment of this site will include the demolition of the existing buildings and parking lots to construct a residential apartment building and a parking structure for residents.

The project site is located partially within a FEMA Flood Zone AE (Map 06111C0986E) however a current CLOMR is being processed by the Army Corp of Engineers for the adjustment of the flood zone extents. Based on this adjustment, the building footprint of this project is outside of the flood zone.

See Appendix 1 for 'Vicinity Map' and 'Site Plan.'

Purpose and Scope

This project falls under the jurisdiction of the City of Thousand Oaks. The purpose of this report is to document that the proposed project site is designed to provide adequate flood protection for onsite improvements, without adversely impacting the existing drainage facilities or adjacent properties and document the permanent stormwater treatment methods used to meet the National Pollutant Discharge Elimination System (NPDES) requirements. The study makes use of the City of Thousand Oaks Master Hydrology Study (October 2006) and the Ventura County Technical Guidance Manual dated January 2025.

2.0 Hydrology

Hydrology analysis for this report is limited to the onsite development areas affected by the proposed development.

2.1 Existing Conditions

In the existing conditions, the site generally drains west toward Lang Creek. The runoff sheet flows across the parking lots and is intercepted by storm drains located along the private road onsite. This runoff is then conveyed through existing storm drains to Lang Creek. See Appendix 3 for 'Existing Hydrology Exhibit'.
Table 1 depicts the characteristics of the project site in its current state (pre-development).

Category	Area, A (ac)	Pervious Area (ac)	% Pervious	Impervious Area (ac)	% Impervious
Existing Conditions	4.96	1.34	27	3.62	73
Existing Conditions - Road	2.02	0.61	30	1.41	70

Table 1: Existing Conditions

2.2 Proposed Conditions

The redevelopment for 195 E Hillcrest Dr includes the construction of a 6-story apartment structure fashioned with an amenities deck, parking structure for residents and outdoor lounge areas. Included in the improvements are a series of storm drains throughout the site to ensure proper drainage. The storm drains are strategically placed within the site to collect runoff and ultimately deposit it into one of a several proposed biofiltration devices.

The proposed development will maintain existing drainage patterns; however, runoff will be routed to bioretention planters on site. Specific design information and details of the treatment device are described in Section 4.0.

See Appendix 3 for 'Proposed Hydrology Exhibit'.

Table 2 depicts the characteristics of the project site once the proposed project has been completed (post-development). The existing road is not directly impacted by the proposed development and may receive some maintenance related improvements only.

Category	Area, A (ac)	Pervious Area (ac)	% Pervious	Impervious Area (ac)	% Impervious

3.0 Hydrologic Calculations

3.1 Methodology

The City of Thousand Oaks requires the use of the Ventura County Technical Guidance Manual for Stormwater Quality Control Measure and Ventura County Public Works Agency Hydrology Manual and the City of Thousand Oaks Storm Drain Master Plan Hydrology & Deficiency Study conducted in October 2006. For the proposed development, project Area (ac), 24-hr 10-yr and 100-yr Rainfall Depth (in), Percent Impervious, and Soil Type were utilized to conduct the analysis for the following Design Storm Frequencies:

- 10-year
- 100-year
- 85th percentile

Stormwater Runoff

According to the Ventura County Hydrology Manual, the methodology used for calculating stormwater runoff in the City of Thousand Oaks is the Ventura County Modified Rational Method (VCrat) as shown below:

$$Q = CIA$$

Where:

- Q = Volumetric flow rate in cfs
- C = Runoff coefficient, dimensionless
- I = Rainfall intensity at a given point in time in in/hr
- A = watershed area in acres

The primary source of the following data extracts is from the Storm Drain System Master Plan (2006) for subarea 124A supplied by the City of Thousand Oaks. Copies of these extracts are included in Appendix 2. The Ventura County Public Works Agency Hydrology Manual updated 2017 and the Ventura County Modified Rational Method (VCrat) computer model were also utilized in this analysis.

As described in Section 6 of the Design Hydrology Manual, when developments do not meet the minimum subarea guidelines for VCrat computer program, it is possible to estimate peak flows for the project area using pro-rated values based on unit runoff. This analysis applies the findings of the Master Drainage Plan and produces estimated runoff quantities based on the project site's individual characteristics. The following characteristics were utilized to conduct the hydrology study:

Soil Type:

According to the Ventura County Public Works Agency Hydrology - Southern Ventura County Soil Classification Map, the project site is located within Soil Type 4. See Appendix 2 for Soil Classification Map.

Rainfall Zone: According to the Ventura County Public Works Agency Hydrology Manual, the project site is shown to be within Ventura County Rainfall Zone K.

Percent Impervious:

Actual imperviousness was calculated by adding planned development areas within each sub-drainage area and dividing it by the drainage area. The formula below was used to obtain the percent impervious values:

$$\%\ Impervious\ (Drainage\ Area) = \frac{Total\ Impervious\ Area}{Drainage\ Area}$$

3.2 Existing Conditions Results

The existing site was analyzed as two subareas (E1 and E2) as can be seen in Exhibit H1 – Appendix 3. Subarea E1 drains west bound across the site toward Lang Creek. The existing onsite road has catch basins connecting to a series of storm drains that outlet to Lang Creek just west of the property. Subarea E2 consists of the onsite roads of the property. Table 3 illustrates the subarea characteristics as well as the prorated hydrology results for the 10-& 100-yr design storm frequencies in the existing conditions.

Subarea	Area, A (ac)	% Impervious	Design Storm Frequency	Design Storm (cfs/acre)	Clear Peak Flowrate, Q (cfs)
E1	4.96	73	10 - yr	1.84	9.13
			100 - yr	3.24	16.1
E2	2.02	70	10 - yr	1.84	3.72
			100 - yr	3.24	6.54

Table 3: Existing Conditions Hydrology Results

See Appendix 3 for Existing Hydrology Exhibit and Appendix 4 for calculations.

3.3 Proposed Conditions Results

The proposed site was analyzed as one subarea (A1) as can be seen in Exhibit H2 – Appendix 3. Subarea A1 maintains the existing drainage conditions and drains westward. Runoff from downspouts and that from impervious areas will be routed to planter boxes for biofiltration. Table 4 illustrates the subarea characteristics as well as the prorated hydrology results for the 10- & 100 yr design storm frequency for the proposed conditions.

Subarea	Area, A (ac)	% Impervious	Design Storm Frequency	Design Storm (cfs/acre)	Clear Peak Flowrate, Q (cfs)
A1	4.96	76	10 – yr	1.84	9.13
			100 – yr	3.24	16.1

Table 4: Proposed Conditions Hydrology Results

See Appendix 3 for Proposed Hydrology Exhibit and Appendix 4 for the calculations.

Due to exceptionally poor infiltration characteristics as presented in the Geotech report, infiltration and bioretention have been found to be infeasible. As part of the improvements proposed for the project, biofiltration in the form of planter boxes are recommended as the alternative means of treatment and attenuation of stormwater runoff. The planter boxes are modified to have a slow release to provide improved biofiltration. They will capture drainage from 4.96 acres of the site and a total of 10,994 cu-ft of storm water will be captured and treated before being released. Any stormwater not captured by these basins will runoff and exit the site.

4.0 Low Impact Development (LID)

Due to constraints resulting from the project site, such as low infiltration rates due to soil conditions, the site is unable to accommodate infiltration as a best management practice. Per the geotechnical evaluation provided in Appendix 5 of this report, the field measured percolation rate does not meet the minimum infiltration criteria and therefore infiltration is not a feasible option for treatment. Therefore, biofiltration will be implemented as an alternative treatment method, enhanced to provide improved biofiltration before slow release.

Runoff from the roof, deck, and impervious areas will travel to the planter box via roof drains and downspouts, filter through the planter box media and exit the planter through an underdrain. The underdrains in the planter boxes are properly sized to ensure the planter box will retain stormwater for an extended period, enhancing the filtration process. Each underdrain, with a diameter of 0.5 inch or 1 inch, allows the planter box media to effectively remove solids, debris, and pollutants from the stormwater before it exits the planter. These underdrains have been sized using the following equation:

$$T = \frac{2A}{C_d A_o \sqrt{2g}} \left(\sqrt{H_1} - \sqrt{H_2}\right)$$

Calculations for the smallest and largest planter boxes on the site are provided in Appendix 4. As can be observed, the 0.5 inch and 1 inch diameter underdrains extend the amount of time the stormwater remains in the biofiltration system while still allowing the planter to drain within the required 72 hours. During a large storm event, overflow from the planter box will discharge though an overflow drain, however the 85th percentile volume is fully captured in the volume of the planter boxes provided.

See Appendix 3 for LID worksheets and underdrain calculations.

4.2 Pollutants of Concern

The pollutants of concern for this project are heavy metals and polycyclic aromatic hydrocarbons.

4.3 SQUIMP Compliance

The project complies with the general SQUIMP provisions as follows:

1. Peak storm water discharge rates - The post-development peak stormwater runoff rate will be treated within proposed biofiltration planter boxes on site and/or will pass through catch basin insert filters which will remove solids from runoff.

2. Conservation of natural areas –The development will introduce landscaping with native seed mix and shrubs, and this will improve conditions on site. Additionally, drainage conditions are maintained from pre-development to post-development, further protecting the natural areas.

3. Minimize storm water pollutants of concern – The project minimizes pollutants of concern using bioretention devices and catch basin insert filters for the removal of settling solids and hydrocarbons. Refer to the LID Plan in Appendix 4 for the location of the treatment devices.

4. Protect slopes & channels – The project site maintains predevelopment drainage conditions as well as utilizes existing concrete swales to convey water and protect nearby slopes. Additionally, the proposed site incorporates a vegetated swale to convey runoff and prevent erosion to existing slopes.

5. Provide storm drain stenciling and signage – Storm drain stenciling, and signage will be provided at the proposed storm water catch basin inlets.

6. Properly design trash storage areas – Trash storage areas and recycling areas will be enclosed to prevent off-site transport of trash.

4.4 Conclusion

The results of the hydrologic analysis indicate that there is no change to the peak flow runoff produced by the proposed development compared to the existing site conditions. This confirms that the project will not adversely impact the site or the surrounding stormwater infrastructure. Additionally, the proposed planter boxes have been designed to meet or exceed the minimum stormwater treatment and retention requirements established by the City of Thousand Oaks and the Ventura County Technical Guidance Manual. These findings demonstrate the project's compliance with applicable stormwater management standard and its commitment to sustainable site design.

Subject: Preliminary Geotechnical Assessment
Proposed Multi-Family Residential Development (APN: 669-0-021-255)
195, 275 and 325 East Hillcrest Drive, Thousand Oaks, California

Dear Mr. Parker:

1.0 INTRODUCTION

The purpose and intent of this document is to evaluate the soil and geological site characteristics associated with the proposed development. This report includes information from geotechnical explorations previously performed at the Project Site by Gorian and Associates, Inc. (GAI), review of published geologic data, and review of available geotechnical engineering information.

2.0 SITE CONDITIONS

The Project Site is located at 195, 275 and 325 E. Hillcrest Drive, in the City of Thousand Oaks, California. The site is bounded by 1 to 3-story residential, commercial, and medical office buildings to the north and east, by East Hillcrest Drive to the south, and an open concrete lined flood control channel (formerly known as Lang Creek) along the west property line.

The area of the Project site is approximately 8.2 acres. The site is currently developed with three 1-2 story at-grade office buildings (formerly known as Buildings A, B, and C) and associated asphalt paved parking lots. Based on review of the prior GAI reports, the existing buildings are supported on conventional foundations bearing in certified fill pads. The site is shown relative to nearby topographic features in the enclosed Vicinity Map. The locations of existing buildings and limits of the Project Site are shown in the enclosed Site Plan.

The topography of the Project Site slopes downward gently towards the west. Based on review of ALTA Survey Plan by Psomas dated March 22, 2016, several easements traverse below the existing driveways along the east and the west of the Project Site.

The Sycamore Canyon fault passes through the central portion of the site from northeast to southwest. The location of the fault is shown on the Fault Location Map. Based on the referenced map, the fault passes under existing Building C, and between Buildings A and B. Based on review of the USGS website, Sycamore fault is a potentially active Quaternary fault.

Vegetation on the site consists of isolated trees, shrubs, and grass areas located within planters. Drainage across the site within the parking lots appears to be by sheetflow to the local area drains and the city streets. The surrounding developments predominantly consist of residential and commercial structures.

3.0 PROJECT SCOPE

Preliminary information concerning the proposed development was obtained by review of conceptual design package by AC Martin dated June 19, 2024. The proposed development consists of a 4-5-story multi-family residential building and an associated 5-story parking structure with roof-top parking. Due to the gradual sloping nature of the Project Site, the proposed ground floor level of the buildings will be terraced with partial subterranean levels. The location of the proposed development is shown on the enclosed Plot Plan.

There are currently three existing 1-2-story at-grade office buildings within the limits of Project Site. The existing Building A (195 E. Hillcrest Drive) located near the southwest corner of the site will remain. The existing Buildings B and C (275 and 325 E. Hillcrest Drive) and associated parking lots will be demolished prior to construction of the proposed residential complex. The locations of the existing buildings are shown on the enclosed Site Plan.

4.0 PREVIOUS SITE EXPLORATION

The site was previously explored by Gorian and Associates, Inc (GA). The following reports were provided by the client:

- Potential for Soil Liquefaction, Proposed Thousand Oaks Financial Plaza, Work Order 852-1-11, Log No. 5089, dated November 3, 1978.
- Geologic and Soil Engineering Investigation, Proposed Thousand Oaks Financial Plaza, Hodencamp Road and Hillcrest Lane, City of Thousand Oaks, Work Order 852-1-12, Log No. 5862, dated October 4, 1979.
- Report of Controlled Grading, Proposed Thousand Oaks Financial Plaza, Hodencamp Road and Hillcrest Drive, City of Thousand Oaks, Work Order 852-1-20, Log No. 7140, dated September 13, 1981.

The GAI report dated November 3, 1978, included one exploratory boring, which was drilled to the depth of 21½ feet with a bucket-auger typed drill rig for evaluation of liquefaction potential. The location of the boring was between concrete lined channel and Hillcrest Lane near the southwest corner of the site. The referenced report concluded that liquefaction potential of the site soils was negligible due absence of shallow groundwater, compact to dense nature of the underlying Older Alluvium with significant amount of clay, and underlying Modelo Formation bedrock. However, it should be noted that the methodology of liquefaction evaluation has significantly changed since the issuance of the referenced report in 1978. Therefore, additional site exploration and new liquefaction analyses are necessary to evaluate liquefaction potential of the site soils.

The GAI report dated October 4, 1979, included 12 exploratory borings ranging in depth from 11 to 21 feet, and four exploratory backhoe trenches ranging in depth from 7 to 13 feet. A plot plan showing the locations of the exploratory borings and backhoe trenches was not included in the copy of report received from the client. Therefore, the locations of the explorations are unknown. Based on the findings by GAI, the Project Site is underlain by old fill and top soil, Older Alluvium, and bedrock of the Modelo Formation.

Based on Report of Controlled Grading dated September 13, 1981, individual compacted fill pads were created for the three existing buildings (known as Buildings A, B, and C). The compacted fill pads extend approximately to the limits of the existing buildings. The existing fill materials were compacted to a minimum of 90% relative compaction. The fill pads for the existing buildings were observed and tested by representative of GAI, and was certified by GAI on September 13, 1981. The limits of fill pads are shown in the Compaction Test Location Map of the referenced Report of Controlled Grading.

5.0 GEOLOGIC MATERIALS

Based on the referenced GAI reports, up to 2 feet of fill materials were encountered in exploratory borings prior to development of the Project Site. Fill materials consisted of sandy clay, which are mottled brown in color, moist, stiff.

The fill materials were underlain by Older Alluvium extending to depths ranging from 3 to 21 feet. Older Alluvium consisted of sandy clays, clayey sands, clayey silts, clayey sands, silty sands, sands, and gravelly sands, which are light to dark brown in color, moist to very moist, medium stiff to stiff, dense to very dense, fine to coarse grained, with shale fragments, pebbles and cobbles. The clay soils are moderately to highly expansive (expansion index is on the order of 80 to 120).

The Older Alluvium was underlain by bedrock consisting of Modelo Formation diatomaceous to clayey siltstone and shale, which was white to light gray in color, very moist, very weathered, or fractured but well laminated. The bedding of bedrock was generally to the north at 10-to-35-degree angles.

6.0 GROUNDWATER

Based on GAI report dated November 3, 1978, no groundwater was encountered in the exploratory boring drilled to the maximum exploration depth of 21 ½ feet.

Based on GAI report dated October 4, 1979, no groundwater was encountered in exploratory borings with the exception to Boring 4, where groundwater seepage was observed at depth of 20½ feet below grade. However, the boring location plan from the referenced report is not available at this point.

Review of the Seismic Hazard Zone Report (SHZR) for the Ventura and Los Angeles 7½-Minute Quadrangle (CDMG, 2000, Revised 2006), indicates that the historically highest groundwater level at the site is on the order of 10 feet below ground surface. A copy of this plate is included in the Enclosures as Historically Highest Groundwater Levels Map.

7.0 REGIONAL GEOLOGIC SETTINGS

The Project Site is located in the Transverse Ranges Geomorphic Province. The Transverse Ranges are characterized by roughly east-west trending mountains and the northern and southern boundaries are formed by reverse fault scarps. The convergent deformational features of the Transverse Ranges are a result of north-south shortening due to plate tectonics. This has resulted in local folding and uplift of the mountains along with the propagation of thrust faults (including blind thrusts). The intervening valleys have been filled with sediments derived from the bordering mountains.

8.0 SOIL CONDITIONS AND GEOLOGIC HAZARDS

a) Regional Faulting

Based on criteria established by the California Division of Mines and Geology (CDMG) now called California Geologic Survey (CGS), Faults may be categorized as Holocene-active, Pre-Holocene faults, and Age-undetermined faults. Holocene-active faults are those which show evidence of surface displacement within the last 11,700 years. Pre-Holocene faults are those that have not moved in the past 11,700 years. Age-undetermined faults are faults where the recency of fault movement has not been determined.

These Holocene-active faults represent most of the earthquake hazard. Faults that have ruptured to the ground surface in Holocene time are considered "active" and are included in Alquist-Priolo Earthquake Fault Zones (see http://www.consrv.ca.gov/cgs/rghm/ap/ index.htm). There are several other definitions of activity, used for other purposes, such as the siting and design of large dams, power plants and other facilities. Another commonly used designation is for faults that have offset geologic units from the Quaternary period (the last 1,800,000 years). Faults that offset Quaternary units are sometimes called "potentially active."

Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be low (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude is not well established. Therefore, the potential for surface rupture on these surface-verging splays at magnitudes higher than 6.0 cannot be precluded.

A list of active faults located within 60 miles (100 kilometers) from the project site is provided in the Enclosures. This list was obtained using the USGS 2008 National Seismic Hazard Maps–Source Parameters Database. The distances provided in this table are measured from a point selected near the center of the Project Site.

b) Surface Ground Rupture

In 1972, the Alquist-Priolo Special Studies Zones Act (now known as the Alquist-Priolo Earthquake Fault Zoning Act) was passed into law. As revised in 2018, The Act defines "Holocene-active" Faults utilizing the same aging criteria as that used by California Geological Survey (CGS). However, established state policy has been to zone only those faults which have direct evidence of movement within the last 11,700 years. It is this recency of fault movement that the CGS considers as a characteristic for faults that have a relatively high potential for ground rupture in the future.

CGS policy is to delineate a boundary from 200 to 500 feet wide on each side of the Holocene-Active fault trace based on the location precision, the complexity, or the regional significance of the fault. If a site lies within an Earthquake Fault Zone, a geologic fault rupture investigation must be performed that demonstrates that the proposed building site is not threatened by surface displacement from the fault before development permits may be issued.

Ground rupture is defined as surface displacement which occurs along the surface trace of the causative fault during an earthquake. Based on a review of USGS website, the Sycamore Canyon Fault is a potentially active fault, which traverse in the northeast to southwest direction through the Project Site (see enclosed Fault Location Map). Based on review of the USGS website, Sycamore fault is a potentially active Quaternary fault.

Based on research of available literature, no known Holocene-active faults underlie the Project Site. In addition, the Project Site is not located within the Alquist-Priolo Earthquake Fault Zone. Based on these considerations, the potential for surface ground rupture within the limits of the Project Site is considered low.

c) Seismicity

As with all of Southern California, the project site is subject to potential strong ground motion, should a moderate to strong earthquake occur on a local or regional fault. Design of any proposed structures on the site in accordance with the provisions of the applicable California Building Code will mitigate the potential effects of strong ground shaking.

d) Liquefaction

Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures.

Based on review of the Earthquake Zones of Required Investigation (CGS, 2016), the site is located within a “Liquefiable” area. This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake. A copy of this map is included in the Appendix A site-specific liquefaction evaluation shall be conducted as part of the geotechnical investigation in the future.

e) Regional Subsidence

The site is not located within a zone of known subsidence due to oil or other fluid withdrawal. The Project Site is underlain by Older Alluvium and bedrock of the Modelo Formation. Therefore, the potential for subsidence is considered to be remote.

Preliminary Geotechnical Engineering Investigation, dated October 25, 2024

Dear Mr. Hungerford:

This addendum report presents the result of the percolation testing performed at the Project Site. Four additional borings (B3 through B6) were excavated at the Project Site on September 8 and September 9, 2025, for the purpose of determining the feasibility of stormwater infiltration. The borings were excavated to depths ranging from 26 feet (by refusal) to 30 feet below the ground surface (bgs), with the aid of a truck mounted hollow-stem drill rig, which was equipped with 8-inch diameter augers. Samples were taken at regular intervals using an automatic hammer, consisting of a 140-pound weight dropped from a height of 30 inches.

The exploratory boring locations excavated by this firm (B1 through B6) and the prior borings excavated by Gorian and Associates (GAI) are all shown on the enclosed Site Plan and Plot Plan. The boring logs are presented at the end of this report under Plates A-1 through A-6 (by Geotechnologies), and also Log No. B-1, B-4, B-5, B-6, and B-9 (by GAI).

Geologic Materials

Fill materials were encountered in the explorations performed by this firm, to depths ranging from 3 to 5 feet below the existing site grade. Fill materials consist of silty and clayey sands and sandy silts to sandy clays, which are dark brown in color, moist, medium dense to very dense, stiff to very stiff, fine grained.

Older Alluvium was encountered below the existing fill materials. The Older Alluvium are highly stratified with sandy to clayey silts, highly plastic clays, clayey to silty sands, and sands, which are dark and yellowish brown in color, moist to wet, medium dense to very dense, fine to medium grained, stiff to very stiff, with minor bedrock fragments.

The thickness of the upper silty and clayey sand and sand layers are highly variable in thickness. The fine-grained silt and clay layers which are stratified in between the granular zones, are relatively impervious and could also create perched groundwater zones. The highly plastic clays below the Project Site are highly expansive and compressible when wetted. Laboratory testing performed by GAI indicates that consolidation of the clay samples can reach up to 8 to 17%, and several samples have hydroconsolidation (when samples are wetted) between 1 and 3%.

A 2 to 4½ feet layer of granular silty sands, sands, and gravelly sands were encountered in GEO B1, B3, and B4, and are wet due to perched groundwater conditions above the underlying impermeable bedrock. The sand and gravelly sand layers are not continuous throughout the Project Site.

The Modelo Formation Bedrock underlies the Old Alluvium. The bedrock consists of siltstone and shale, which is light and yellowish gray to dark gray in color, moist to very moist, moderately hand to hard, weathered. The depths to bedrock encountered in exploratory borings ranges from 9½ to 22 feet. By nature, bedrock is considered to be impermeable and creates a water barrier.

Groundwater

Perched groundwater was encountered within the granular sand and gravelly sand layer immediately above the impervious bedrock at depths ranging between 20 and 22 feet bgs in Boring B1, B3, and B4 by this firm. Additionally, seepage of groundwater was encountered within bedding planes or joints of the underlying bedrock at depths of 20½ and 24½ feet bgs in GAI B-4 and B2, respectively.

The historically high groundwater level was established by review of California Geological Survey Seismic Hazard Zone Report 042, Plate 1.2 entitled "Historically Highest Ground Water Contours". Review of this plate indicates that the historically highest groundwater level is on the order of 10 feet below the existing site grade.

Fluctuations in the level of groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time of the measurements reported herein. Fluctuations also may occur across the site. High groundwater levels can result in changed conditions.

A summary of the exploration is presented in the table below.

Percolation Test Results

The four additional borings (B3 through B6) were utilized for performance of field percolation tests. Based on a meeting with the City of Thousand Oaks, the percolation tests were performed without any presoaking period. If presoaking is to occur before performing the percolation tests, the percolation rate is expected to be lower. The percolation tests were performed within the Older Alluvium, which are highly stratified, dense to very dense, and stiff to very stiff.

Boring B3 and B4 are located in the eastern portion of the Site, where the impermeable bedrock was encountered at approximately 23 to 25 feet bgs and perched groundwater at 20 to 22 feet bgs. Boring B5 and B6 are located in the southwestern portion of the Site, where the impermeable bedrock is approximately 9½ to 15 feet below the existing site grade.

A summary of the field percolation tests is presented in the table below.

The Project Civil Engineer will be responsible for evaluating the factors affecting Design Related Considerations for Infiltration Facility Safety Factors in accordance with Table C-3 of the Ventura Countywide Stormwater Quality Management Program (January 2025).

Summary and Conclusion

Based on field explorations, site findings, and laboratory testing, it is the opinion of this firm that the stormwater infiltration is not feasible for the Project Site. Even though the initial percolation rate (without presoaking) may exceed the minimum 0.3 inches per hour (prior to applying the infiltration safety factor) locally in 2 of the borings, the field measured stabilized rate is less than the minimum required infiltration rate in most of the locations tested. Once the site soils are saturated, the infiltration rate is anticipated to be less than the initial measurement. Additionally, due to the stratified nature of the underlying Older Alluvium, the percolation rate is primarily due to the discreet granular layer encountered between the more fine-grained silts and clays and are flowing laterally and not vertically. For example, the high percolation rate obtained from GEO B4 sows a sand layer at depths between 12½ and 15 feet, which is underlain by a 7½ feet thick of highly plastic clay layer.

The underlying Older Alluvium is highly stratified, comprising of layers of sandy and clayey silts, sandy to highly plastic silty clays, silty sands, sands, and occasional gravelly sands. The Older Alluvium is underlain by siltstone and shale bedrock of the Modelo Formation. Bedrock was encountered in all of the borings excavated by this firm and also by GAI at depths between 9½ and 25 feet below the ground surface, with the exception of GAI B-6, which terminated at a depth of 16 feet bgs. By nature, bedrock is considered to be impermeable and creates a water barrier. As seen in Boring B1, B3 and B4, which were drilled along the east side of the Project Site by this firm, perched groundwater condition was encountered within the granular zone immediately above the bedrock contact.

Bedrock is encountered at approximately 723.5 feet AMSL at the north end of the Project Site, at 720.0 feet AMSL at the west-central portion of the Site, and at 712.0 to 714.0 feet AMSL along the southern portions of the Site. Additionally, the bedrock is encountered between 713.0 and 717.4 feet AMSL along the eastern boundary of the Site. Since the bedrock is impervious and the bedrock elevation is high at the north and northwest portions of the Site, any water infiltrated into the ground will naturally flow laterally offsite to the south, east, and southwest, following the gradient of the bedrock contour.

For the eastern portion of the Project Site, the Older Alluvium above the bedrock are highly stratified with silts, highly plastic clays, clayey to silty sands, and sands (GEO B1, B3, B4, and GAI B-4, B-6, B-9). The thickness of the upper silty and clayey sand and sand layers are highly variable in thickness, and the fine-grained silt and clay layers which are stratified in between the granular zones, are significantly less permeable and could also create shallow perched groundwater zones making the water to flow laterally offsite into the neighboring properties to the east.

The thickness of the upper silty and clayey sand and sand layers are highly variable in thickness. The fine-grained silt and clay layers which are stratified in between the granular zones, are relatively less permeable and could also create perched groundwater zones. The highly plastic clays below the Project Site are highly expansive and compressible when wetted. Laboratory testing performed by GAI indicates that consolidation of the clay samples can reach up to 8 to

17%, and several samples have hydroconsolidation (when samples are wetted) between 1 and 3%. The stratified fine-grained layers (silts and clays) will create shallow horizontal perched water conditions allowing the water to flow offsite, adversely affecting the neighboring structures, site improvements, pavements, and any below grade improvements (such as swimming pools), especially if the neighboring site is underlain by the highly expansive and compressible clays which are also hydro-collapsible, similar to the soil type encountered below the Project Site. Saturation of the clay layers can result in heaving and uneven settlement of the proposed structure and offsite structures and is not recommended from a geotechnical design standpoint.

Near the southeast corner of the Project Site, up to 18 feet of highly plastic clays and clayey silts were encountered above the bedrock in GAI B-4. Due to the relatively low permeability of the silts and clays, it is not anticipated that any water infiltrated into the ground will flow to the south and exit offsite.

The southwestern portion of the Project Site (in the vicinity of the existing Building A), clayey and silty sands and sands were encountered in GEO B5 and B6 above the bedrock. Bedrock was encountered at depths between 12½ and 15 feet below the existing ground surface. GAI encountered highly plastic clays and silts, with a 2½-foot layer of gravelly sands immediately above the bedrock in GAI B-5, which is located in the area of the existing Building A. This gravelly sand layer was not encountered in the GEO B5 or B6, and is not continuous throughout the Project Site. The soil profile is highly variable in this southwest portion of the Site.

An open concrete-lined channel (formerly known as Lang Creek) exists along the west property line. Based on available drawing from the Ventura County Flood Control District, the section of concrete channel is approximately 8’2” high along the north end of the Project Site and 11’2” high along the south end of the Project Site. According to the plan, the bottom of the channel is at an elevation of 715.29 feet AMSL at the north end of the Project and at 706.07 feet AMSL at the south end of the Project Site. Based on comparison with the bedrock elevation encountered at the Project Site, it is anticipated that the bottom of the concrete channel is founded into the underlying bedrock.

The plan also shows a subdrain system located behind the channel wall near the base of the channel at elevations between 716.0 feet AMSL at the north end and 706.0 feet AMSL at the south end. The subdrain system is intended to release any hydrostatic pressure from building up behind the channel wall. Since bedrock was encountered at 723.5 feet AMSL at the north end of the Site and at 712.0 feet at the south end of the Site, any water infiltrated into the ground along the western portion of the Site will encounter the impermeable bedrock and flow along the bedrock contact to the west and into the existing subdrain system at the base of the wall discharging directly into the concrete channel, which is not the intent of the Stormwater Quality Management Program.

For the geotechnical reasons above, it is the opinion of this firm that stormwater infiltration is not feasible for the Project Site. The highly plastic clays, which exist below the Project Site in varying thickness, are highly expansive and compressible when wetted, with potential for hydro-collapse. The stratified nature of the Older Alluvium with fine-grained layers (silts and clays) will create shallow horizontal perched water conditions allowing the water to flow offsite, adversely affecting the neighboring structures, site improvements, pavements, and any below grade improvements (such as swimming pools), especially if the neighboring site is underlain by the highly expansive and compressible clays which are also hydro-collapsible, similar to the soil type encountered below the Project Site. Saturation of the clay layers can adversely result in heaving and uneven settlement of the proposed structure and offsite structures and is not recommended from a geotechnical design standpoint.

Site Address/Location: 195 East Hillcrest Drive, Thousand Oaks, CA 91360

Date: 11/6/2025
Field Tech/Engineer: Ian Edward Gallagher
General Location: 195 East Hillcrest Drive, Thousand Oaks, CA 91360
Sound Meter: Larson Davis Sound Track LxT1 **SN:** 3099
Settings: A-weighted, slow, 10-sec, 15-minute interval
Meteorological Con.: 72 deg F, 7 mph wind, 60% humidity, <5% cloud, sunny.
Site ID: NM-1 thru 4

Site Observations: Main noise sources are ground traffic & residential ambiance from human ground activity. Traffic noise from passing vehicles on E Hillcrest Dr & Hodencamp Rd. Various commercial buildings & businesses throughout site area. The bldgs reflect & refract much of the sound. Other noise sources include suburban ambiance, bird song & pedestrians . Above, occasional propeller aircraft & helicopters passing overhead. Some leaf rustle from trees & vegetation due to 7mph breeze.

Site Topo: Suburban, single & multifamily residencences, businesses.
Ground Type: Suburban like conditions, acoustically refractive, absorptive but mostly reflective off buildings and hard surfaces.

MEMORANDUM

Date:	August 21, 2025	**GTS:**	230117.01
To:	City of Thousand Oaks		
From:	GTS		
Subject:	Traffic Signal warrant analysis for the intersection of E. Hillcrest Dr. and Boardwalk Ave.		

This memo presents the results of the traffic signal warrant analysis for the intersection of E. Hillcrest Dr. and Boardwalk Ave. (City of Thousand Oaks) in conjunction with the proposed 195 E. Hillcrest Drive project.

INTRODUCTION

The existing project site at 195 E. Hillcrest Drive, Thousand Oaks, CA contains 51,554 SF of office space, which will be demolished and replaced by 297 multi-family residential units. 9,207 SF of existing retail and 2,000 SF of restaurant space will be retained, according to the site plan. A Vehicle Miles Traveled (VMT) Analysis and Level of Service (LOS) study is not required as the project is estimated to generate less than 100 net PM Peak Hour trips. The current City policy requires a VMT Analysis and LOS study when the 100 net PM peak hour trip generation threshold is exceeded.

However, one of the site's three ingress/egress driveways will be located at the north leg of the Hillcrest Drive and Boardwalk Avenue Project Driveway intersection. As such, the City requested a traffic signal warrant analysis to determine whether the added project traffic warrants the installation of a traffic signal.

The traffic signal warrant analysis was conducted following the guidelines of the latest California Manual of Uniform Traffic Control Devices (CA-MUTCD, 2014 Revision 9, released 4/1/2025) in order to assess whether a traffic signal control is justified and recommended based on meeting the standards and engineering judgement.

The Traffic Signal Warrant Analysis includes the following project impact scenarios:

a. Existing conditions
b. Existing conditions plus project – Scenario "a" plus project
c. Cumulative Conditions at Project Build-Out (2040)
d. Cumulative Conditions plus project – Scenario "c" plus project

Project Location

The study intersection is a four-way intersection located north of State Route 101 in a mostly commercial area of the City of Thousand Oaks (Exhibit 1).

Exhibit 1. Location of the Study Intersection

Existing Conditions

At the study intersection, Hillcrest Drive is classified as a Secondary/Minor arterial in the City's Mobility Element and has a curb-to-curb width of 78 feet. Boardwalk Ave. is classified as a local street with a curb-to-curb width of 48 feet. The posted speed limit in the vicinity along Hillcrest Dr. is 45 MPH. Both streets at the study intersection have sidewalks between 5 and 10 feet wide. Per the current General Plan, Hillcrest Drive is a Class III bicycle route. No sight distance restrictions were observed during site visits. The nearest transit stop is on Hillcrest Drive about 500 feet west of the intersection, served by City bus route 44. On-street parking is prohibited on Hillcrest Drive in the vicinity of the intersection.

The study intersection is currently a two-way stop intersection. The Boardwalk Ave. approaches on Hillcrest Dr. are controlled by STOP signs. Stop bars and pavement markings are painted on the pavement at both approaches. There are left-turn pocket lanes at both approaches to the intersection on Hillcrest Drive and a left-turn lane on the northbound approach of Boardwalk Ave. There are street lights at three of the four corners

of the intersection. The nearest existing traffic signal is about 900 feet to the west, at the intersection of Hillcrest Dr. and N. Moorpark Rd. Views of the intersection are shown in Exhibits 2 through 5.

TRIP DISTRIBUTION AND TRIP ASSIGMENT

The existing patterns of traffic to and from the project site are estimated as follows:

- 50% of the traffic from/to the west
- 5% from/to the south
- 45% from/to the east

For the warrant analysis in Scenarios B and D (these scenarios include the project traffic), the following assumptions are made:

For the proposed residential development:

- 50% of inbound traffic will come from the west and use the study intersection.
- 10% of inbound traffic will come from the east and use the study intersection.
- 35% of inbound traffic will come from the east and use the right-in/right-out driveway to the east of the study intersection.
- 5% of inbound traffic will come from the south and use the study intersection.
- 45% of outbound traffic will depart eastward via the study intersection.
- 5% of outbound traffic will depart southward via the study intersection.
- 40% of outbound traffic will depart westward via the study intersection.
- 10% of outbound traffic will depart westward via the right-in/right-out driveway to the west of the study intersection.

For the existing retail and restaurant areas that will be retained:

- 65% of inbound traffic will come from the west and use the study intersection.
- 10% of inbound traffic will come from the south and use the study intersection.
- 25% of inbound traffic will come from the east and use the right-in/right-out driveway to the west of the study intersection.
- 25% of outbound traffic will depart eastward via the study intersection.
- 10% of outbound traffic will depart southward via the study intersection.
- 65% of outbound traffic will depart westward via the right-in/right-out driveway to the west of the study intersection.

The trip distribution is illustrated in Exhibit 9.

Project trips are distributed based on ITE hourly trip distribution estimates for Land Use 710 (General Office Building), 221 (Multifamily Housing, Mid-Ride), Land Use 930 (Fast Casual Restaurant), and Land Use 822 (Strip Retail Plaza), as shown in Exhibit 10.

Turning movement volumes for the four scenarios analyzed in this study are shown in Exhibit 11.

SIGNAL WARRANT ANALYSIS

This section contains the Signal Warrant Analysis under the following four scenarios:

a. Existing conditions
b. Existing conditions plus project – Scenario “a” plus project
c. Cumulative Conditions at Project Build-Out (2040)
d. Cumulative Conditions plus project – Scenario “c” plus project

All approaches except the north approach are grown based on an ambient growth rate of 0.376% per year, which results in 5.79% growth from 2025 to 2040. The north approach uses volumes from the ITE trip generation.

A. Existing Conditions

The following warrant analysis is based on existing conditions at the study intersection, determined by the traffic counts carried out for this study.

A traffic signal warrant analysis was carried out for the study intersection per the guidelines in the *California Manual on Uniform Traffic Control Devices* (CA-MUTCD) 2014 Edition, Revision 9. The CA-MUTCD contains minimum guidelines regarding traffic volumes, collisions, speeds, pedestrian crossings, and other criteria in order to satisfy the requirements for the recommendation of a traffic signal. The traffic signal guidelines are given in Chapter 4C.

As stated in these CA-MUTCD guidelines, and noted below, signalization should be considered when the following standards are met:

“An engineering study of traffic conditions, pedestrian characteristics, and physical characteristics of the location shall be performed to determine whether installation of a traffic control signal is justified at a particular location.

“The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:

Warrant 1, Eight-Hour Vehicular Volume
Warrant 2, Four-Hour Vehicular Volume
Warrant 3, Peak Hour
Warrant 4, Pedestrian Volume
Warrant 5, School Crossing
Warrant 6, Coordinated Signal System
Warrant 7, Crash Experience
Warrant 8, Roadway Network
Warrant 9, Intersection Near a Grade Crossing”

In order to justify and recommend the installation of traffic control signals, the above nine (9) CA-MUTCD Traffic Signal Warrants should be analyzed. If any, or a combination, of these warrants is met, then a traffic signal should be considered. Yet, as also stated in the

CA-MUTCD: *"The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal."*

In order to evaluate traffic volume warrants, turning movement counts were collected at the intersection of E. Hillcrest Dr. and Boardwalk Ave. on Wednesday, May 28, 2025 from 10:00 AM to 6:00 PM.

Warrant 1, Eight-Hour Vehicular Volume

Per the CA-MUTCD, the following is the standard for the eight-hour vehicular volume:

"The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal.

The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street."

As shown on the CA-MUTCD worksheet, Warrant 1 was not met for this intersection.

Warrant 2, Four-Hour Vehicular Volume

Per the CA-MUTCD, *"The Four-Hour Vehicular Volume signal warrant conditions are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal."*

"The need for a traffic control signal shall be considered if an engineering study finds that, for each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) all fall above the applicable curve in Figure 4C-1 for the existing combination of approach lanes. On the minor street, the higher volume shall not be required to be on the same approach during each of these 4 hours."

As shown on the CA-MUTCD worksheet and figure, Warrant 2 was not met.

This signal warrant shall be applied only in unusual cases of facilities that attract or discharge large numbers of vehicles over a short time. *"The need for a traffic control signal shall be considered if an engineering study finds that the criteria in either of the following two categories are met:*

Warrant 4, Pedestrian Volume

Per the CA-MUTCD, *"The Pedestrian Volume signal warrant is intended for application where the traffic volume on a major street is so heavy that pedestrians experience excessive delay in crossing the major street."*

As such, *"The need for a traffic control signal at an intersection or midblock crossing shall be considered if an engineering study finds that one of the following criteria is met:*

A. For each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) all fall above the curve in Figure 4C-5; or

Warrant 5, School Crossing

Per the CA-MUTCD, *"The School Crossing signal warrant is intended for application where the fact that schoolchildren cross the major street is the principal reason to consider installing a traffic control signal."*

"The need for a traffic control signal shall be considered when an engineering study of the frequency and adequacy of gaps in the vehicular traffic stream as related to the number and size of groups of schoolchildren at an established school crossing across the major street shows that the number of adequate gaps in the traffic stream during the period when the schoolchildren are using the crossing is less than the number of minutes in the same period (see Section 7A.03) and there are a minimum of 20 schoolchildren during the highest crossing hour.

Before a decision is made to install a traffic control signal, consideration shall be given to the implementation of other remedial measures, such as warning signs and flashers, school speed zones, school crossing guards, or a grade-separated crossing.

The School Crossing signal warrant shall not be applied at locations where the distance to the nearest traffic control signal along the major street is less than 300 feet, unless the proposed traffic control signal will not restrict the progressive movement of traffic."

The subject intersection is not an established school crossing.

Therefore, Warrant 5 is not met.

OR, The proposed signal will not restrict the progressive movement of traffic.	Yes ☐ No ☐

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

Warrant 6, Coordinated Signal System

Per the CA-MUTCD, *"Progressive movement in a coordinated signal system sometimes necessitates installing traffic control signals at intersections where they would not otherwise be needed in order to maintain proper platooning of vehicles.*

This warrant would be applicable if "adjacent traffic control signals do not provide the necessary degree of platooning and the proposed and adjacent traffic control signals will collectively provide a progressive operation."

This criterion has not been observed to be a concern for the location at hand.

Therefore, Warrant 6 is not met.

WARRANT 6 - Coordinated Signal System **SATISFIED YES ☐ NO ☒**
(All Parts Must Be Satisfied)

MINIMUM REQUIREMENTS	DISTANCE TO NEAREST SIGNAL

OR, On a two-way street, adjacent traffic control signals do not provide the necessary degree of platooning and the proposed and adjacent traffic control signals will collectively provide a progressive operation.		Yes ☐ No ☐

Warrant 7, Crash Experience

Per the CA-MUTCD, *"The Crash Experience signal warrant conditions are intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal."*

One of the conditions for this warrant is that *"Five or more reported crashes, of types susceptible to correction by a traffic control signal, have occurred within a 12-month period, each crash involving personal injury or property damage apparently exceeding the applicable requirements for a reportable crash;"*

According to data acquired from the California Crash Reporting System (CCRS) and the Traffic Injury Mapping Systems (TIMS), the numbers of crashes do not meet these criteria. From 2020 to 2024, there were not more than two crashes during any given year at the study intersection.

Therefore, Warrant 7 is not met.

Warrant 8, Roadway Network

Per the CA-MUTCD, *"Installing a traffic control signal at some intersections might be justified to encourage concentration and organization of traffic flow on a roadway network.*"

The criteria for Warrant 8 apply to *"the common intersection of two or more major routes."* In this case, Boardwalk Ave. is a minor local street and this warrant is not applicable.

Therefore, Warrant 8 is not met.

Warrant 9, Intersection Near a Grade Crossing

Per the CA-MUTCD “the center of the track nearest to the intersection is within 140 feet of the stop line or yield line”.

There is no grade crossing within 140 feet of the study intersection.

Therefore, Warrant 9 is not met.

B. Existing Conditions Plus Project

The following warrant analysis is based on existing conditions at the study intersection, plus the traffic generated by the project.

A traffic signal warrant analysis was carried out for the study intersection per the guidelines in the *California Manual on Uniform Traffic Control Devices* (CA-MUTCD) 2014 Edition, Revision 9. The CA-MUTCD contains minimum guidelines regarding traffic volumes, collisions, speeds, pedestrian crossings, and other criteria in order to satisfy the requirements for the recommendation of a traffic signal. The traffic signal guidelines are given in Chapter 4C.

As stated in these CA-MUTCD guidelines, and noted below, signalization should be considered when the following standards are met:

"An engineering study of traffic conditions, pedestrian characteristics, and physical characteristics of the location shall be performed to determine whether installation of a traffic control signal is justified at a particular location.

"The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:

Warrant 1, Eight-Hour Vehicular Volume
Warrant 2, Four-Hour Vehicular Volume
Warrant 3, Peak Hour
Warrant 4, Pedestrian Volume
Warrant 5, School Crossing
Warrant 6, Coordinated Signal System
Warrant 7, Crash Experience
Warrant 8, Roadway Network
Warrant 9, Intersection Near a Grade Crossing"

In order to justify and recommend the installation of traffic control signals, the above nine (9) CA-MUTCD Traffic Signal Warrants should be analyzed. If any, or a combination, of these warrants is met, then a traffic signal should be considered. Yet, as also stated in the CA-MUTCD: *"The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal."*

In order to evaluate traffic volume warrants, turning movement counts were collected at the intersection of E. Hillcrest Dr. and Boardwalk Ave. on Wednesday, May 28, 2025 from 10:00 AM to 6:00 PM.

Warrant 1, Eight-Hour Vehicular Volume

Per the CA-MUTCD, the following is the standard for the eight-hour vehicular volume:

"The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal.

The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street."

As shown on the CA-MUTCD worksheet, Warrant 1 was not met for this intersection.

Warrant 2, Four-Hour Vehicular Volume

Per the CA-MUTCD, *"The Four-Hour Vehicular Volume signal warrant conditions are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal."*

"The need for a traffic control signal shall be considered if an engineering study finds that, for each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) all fall above the applicable curve in Figure 4C-1 for the existing combination of approach lanes. Warrant 3: Peak Hour

Per the CA-MUTCD, *"The Peak Hour signal warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street."*

This signal warrant shall be applied only in unusual cases of facilities that attract or discharge large numbers of vehicles over a short time. *"The need for a traffic control signal shall be considered if an engineering study finds that the criteria in either of the following two categories are met:*

1. *The total stopped time delay experienced by the traffic on one minor-street approach (one direction only) controlled by a STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach or 5 vehicle-hours for a two-lane approach; and*
    2. *The volume on the same minor-street approach (one direction only) equals or exceeds 100 vehicles per hour for one moving lane of traffic or 150 vehicles per hour for two moving lanes; and*
    3. *The total entering volume serviced during the hour equals or exceeds 650 vehicles per hour for intersections with three approaches or 800 vehicles per hour for intersections with four or more approaches.*

B. As shown on the CA-MUTCD worksheet and figure, Warrant 3 was not met.

Warrant 4, Pedestrian Volume

Per the CA-MUTCD, *"The Pedestrian Volume signal warrant is intended for application where the traffic volume on a major street is so heavy that pedestrians experience excessive delay in crossing the major street."*

As such, *"The need for a traffic control signal at an intersection or midblock crossing shall be considered if an engineering study finds that one of the following criteria is met:*

A. For each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) all fall above the curve in Figure 4C-5; or

B. The change in land use is not expected to change pedestrian volumes significantly, therefore the plus-project pedestrian volumes are assumed to be the same as the volumes without the project.

As shown on the CA-MUTCD worksheet and figures, Warrant 4 was not met.

Warrant 5, School Crossing

Per the CA-MUTCD, *"The School Crossing signal warrant is intended for application where the fact that schoolchildren cross the major street is the principal reason to consider installing a traffic control signal."*

"The need for a traffic control signal shall be considered when an engineering study of the frequency and adequacy of gaps in the vehicular traffic stream as related to the number and size of groups of schoolchildren at an established school crossing across the major street shows that the number of adequate gaps in the traffic stream during the period when the schoolchildren are using the crossing is less than the number of minutes in the same period (see Section 7A.03) and there are a minimum of 20 schoolchildren during the highest crossing hour.

Before a decision is made to install a traffic control signal, consideration shall be given to the implementation of other remedial measures, such as warning signs and flashers, school speed zones, school crossing guards, or a grade-separated crossing.

The School Crossing signal warrant shall not be applied at locations where the distance to the nearest traffic control signal along the major street is less than 300 feet, unless the proposed traffic control signal will not restrict the progressive movement of traffic."

The subject intersection is not an established school crossing.

Therefore, Warrant 5 is not met.

OR, The proposed signal will not restrict the progressive movement of traffic.	Yes ☐	No ☐

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

Warrant 6, Coordinated Signal System

Per the CA-MUTCD, *"Progressive movement in a coordinated signal system sometimes necessitates installing traffic control signals at intersections where they would not otherwise be needed in order to maintain proper platooning of vehicles.*

This warrant would be applicable if "adjacent traffic control signals do not provide the necessary degree of platooning and the proposed and adjacent traffic control signals will collectively provide a progressive operation."

This criterion has not been observed to be a concern for the location at hand.

Therefore, Warrant 6 is not met.

OR, On a two-way street, adjacent traffic control signals do not provide the necessary degree of platooning and the proposed and adjacent traffic control signals will collectively provide a progressive operation.		Yes ☐ No ☐

Warrant 7, Crash Experience

Per the CA-MUTCD, *"The Crash Experience signal warrant conditions are intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal."*

One of the conditions for this warrant is that *"Five or more reported crashes, of types susceptible to correction by a traffic control signal, have occurred within a 12-month period, each crash involving personal injury or property damage apparently exceeding the applicable requirements for a reportable crash;"*

According to data acquired from the California Crash Reporting System (CCRS) and the Traffic Injury Mapping Systems (TIMS), the numbers of crashes do not meet these criteria. From 2020 to 2024, there were not more than two crashes during any given year at the study intersection.

Therefore, Warrant 7 is not met.

Warrant 8, Roadway Network

Per the CA-MUTCD, *"Installing a traffic control signal at some intersections might be justified to encourage concentration and organization of traffic flow on a roadway network.*"

The criteria for Warrant 8 apply to *"the common intersection of two or more major routes."* In this case, Boardwalk Ave. is a minor local street and this warrant is not applicable.

Warrant 9, Intersection Near a Grade Crossing

Per the CA-MUTCD "the center of the track nearest to the intersection is within 140 feet of the stop line or yield line".

There is no grade crossing within 140 feet of the study intersection.

Therefore, Warrant 9 is not met.

WARRANT 9 - Intersection Near a Grade Crossing **SATISFIED YES ☐ NO ☒**

C. Cumulative Conditions at Project Build-Out

The following warrant analysis is based on cumulative conditions at project buildout (2040), without traffic generated by the project.

A traffic signal warrant analysis was carried out for the study intersection per the guidelines in the *California Manual on Uniform Traffic Control Devices* (CA-MUTCD) 2014 Edition, Revision 9. The CA-MUTCD contains minimum guidelines regarding traffic volumes, collisions, speeds, pedestrian crossings, and other criteria in order to satisfy the requirements for the recommendation of a traffic signal. The traffic signal guidelines are given in Chapter 4C.

As stated in these CA-MUTCD guidelines, and noted below, signalization should be considered when the following standards are met:

"An engineering study of traffic conditions, pedestrian characteristics, and physical characteristics of the location shall be performed to determine whether installation of a traffic control signal is justified at a particular location.

"The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:

Warrant 1, Eight-Hour Vehicular Volume
Warrant 2, Four-Hour Vehicular Volume
Warrant 3, Peak Hour
Warrant 4, Pedestrian Volume
Warrant 5, School Crossing
Warrant 6, Coordinated Signal System
Warrant 7, Crash Experience
Warrant 8, Roadway Network
Warrant 9, Intersection Near a Grade Crossing"

In order to justify and recommend the installation of traffic control signals, the above nine (9) CA-MUTCD Traffic Signal Warrants should be analyzed. If any, or a combination, of these warrants is met, then a traffic signal should be considered. Yet, as also stated in the CA-MUTCD: *"The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal."*

In order to evaluate traffic volume warrants, turning movement counts were collected at the intersection of E. Hillcrest Dr. and Boardwalk Ave. on Wednesday, May 28, 2025 from 10:00 AM to 6:00 PM.

Warrant 1, Eight-Hour Vehicular Volume

Per the CA-MUTCD, the following is the standard for the eight-hour vehicular volume:

"The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal.

The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street."

As shown on the CA-MUTCD worksheet, Warrant 1 was not met for this intersection.

Per the CA-MUTCD, *"The Four-Hour Vehicular Volume signal warrant conditions are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal."*

"The need for a traffic control signal shall be considered if an engineering study finds that, for each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) all fall above the applicable curve in Figure 4C-1 for the existing combination of approach lanes. Per the CA-MUTCD, *"The Peak Hour signal warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street."*

This signal warrant shall be applied only in unusual cases of facilities that attract or discharge large numbers of vehicles over a short time. *"The need for a traffic control signal shall be considered if an engineering study finds that the criteria in either of the following two categories are met:*

PART A **SATISFIED YES ☐ NO ☒**
(All parts 1, 2, and 3 below must be satisfied for the same one hour, for any four consecutive 15-minute periods)

1. The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one-lane approach, or five vehicle-hours for a two-lane approach; AND	Yes ☐ No ☐
2. The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic or 150 vph for two moving lanes; AND	Yes ☐ No ☒
3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more approaches or 650 vph for intersections with three approaches.	Yes ☐ No ☐

Warrant 4, Pedestrian Volume

Per the CA-MUTCD, *"The Pedestrian Volume signal warrant is intended for application where the traffic volume on a major street is so heavy that pedestrians experience excessive delay in crossing the major street."*

As such, *"The need for a traffic control signal at an intersection or midblock crossing shall be considered if an engineering study finds that one of the following criteria is met:*

A. For each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) all fall above the curve in Figure 4C-5; or

B. For 1 hour (any four consecutive 15-minute periods) of an average day, the plotted point representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) falls above the curve in Figure 4C-7."

Like vehicular volumes, pedestrian volumes are grown based on an ambient growth rate of 0.376% per year, which results in 5.79% growth from 2025 to 2040. However, observed pedestrian volumes were so low that this growth does not result in a change in the cumulative scenario volumes when rounded to the nearest whole number.

As shown on the CA-MUTCD worksheet and figures, Warrant 4 was not met.

Warrant 5, School Crossing

Per the CA-MUTCD, *"The School Crossing signal warrant is intended for application where the fact that schoolchildren cross the major street is the principal reason to consider installing a traffic control signal."*

"The need for a traffic control signal shall be considered when an engineering study of the frequency and adequacy of gaps in the vehicular traffic stream as related to the number and size of groups of schoolchildren at an established school crossing across the major street shows that the number of adequate gaps in the traffic stream during the period when the schoolchildren are using the crossing is less than the number of minutes in the same period (see Section 7A.03) and there are a minimum of 20 schoolchildren during the highest crossing hour.

Before a decision is made to install a traffic control signal, consideration shall be given to the implementation of other remedial measures, such as warning signs and flashers, school speed zones, school crossing guards, or a grade-separated crossing.

The School Crossing signal warrant shall not be applied at locations where the distance to the nearest traffic control signal along the major street is less than 300 feet, unless the proposed traffic control signal will not restrict the progressive movement of traffic."

The subject intersection is not an established school crossing.

Therefore, Warrant 5 is not met.

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

Warrant 6, Coordinated Signal System

Per the CA-MUTCD, *"Progressive movement in a coordinated signal system sometimes necessitates installing traffic control signals at intersections where they would not otherwise be needed in order to maintain proper platooning of vehicles.*

This warrant would be applicable if "adjacent traffic control signals do not provide the necessary degree of platooning and the proposed and adjacent traffic control signals will collectively provide a progressive operation."

This criterion has not been observed to be a concern for the location at hand.

Therefore, Warrant 6 is not met.

Warrant 7, Crash Experience

Per the CA-MUTCD, *"The Crash Experience signal warrant conditions are intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal."*

One of the conditions for this warrant is that *"Five or more reported crashes, of types susceptible to correction by a traffic control signal, have occurred within a 12-month period, each crash involving personal injury or property damage apparently exceeding the applicable requirements for a reportable crash;"*

According to data acquired from the California Crash Reporting System (CCRS) and the Traffic Injury Mapping Systems (TIMS), the numbers of crashes do not meet these criteria. From 2020 to 2024, there were not more than two crashes during any given year at the study intersection.

Therefore, Warrant 7 is not met.

Per the CA-MUTCD, *"Installing a traffic control signal at some intersections might be justified to encourage concentration and organization of traffic flow on a roadway network.*"

The criteria for Warrant 8 apply to *"the common intersection of two or more major routes."* In this case, Boardwalk Ave. is a minor local street and this warrant is not applicable.

Therefore, Warrant 8 is not met.

Warrant 9, Intersection Near a Grade Crossing

Per the CA-MUTCD “the center of the track nearest to the intersection is within 140 feet of the stop line or yield line”.

There is no grade crossing within 140 feet of the study intersection.

Therefore, Warrant 9 is not met.

WARRANT 9 - Intersection Near a Grade Crossing (Both Parts A and B Must Be Satisfied) **SATISFIED YES ☐ NO ☒**

D. Cumulative Conditions Plus Project

The following warrant analysis is based on cumulative conditions at project buildout (2040), plus traffic generated by the project.

A traffic signal warrant analysis was carried out for the study intersection per the guidelines in the *California Manual on Uniform Traffic Control Devices* (CA-MUTCD) 2014 Edition, Revision 9. The CA-MUTCD contains minimum guidelines regarding traffic volumes, collisions, speeds, pedestrian crossings, and other criteria in order to satisfy the requirements for the recommendation of a traffic signal. The traffic signal guidelines are given in Chapter 4C.

As stated in these CA-MUTCD guidelines, and noted below, signalization should be considered when the following standards are met:

"An engineering study of traffic conditions, pedestrian characteristics, and physical characteristics of the location shall be performed to determine whether installation of a traffic control signal is justified at a particular location.

"The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:

Warrant 1, Eight-Hour Vehicular Volume
Warrant 2, Four-Hour Vehicular Volume
Warrant 3, Peak Hour
Warrant 4, Pedestrian Volume
Warrant 5, School Crossing
Warrant 6, Coordinated Signal System
Warrant 7, Crash Experience
Warrant 8, Roadway Network
Warrant 9, Intersection Near a Grade Crossing"

In order to justify and recommend the installation of traffic control signals, the above nine (9) CA-MUTCD Traffic Signal Warrants should be analyzed. If any, or a combination, of these warrants is met, then a traffic signal should be considered. Yet, as also stated in the CA-MUTCD: *"The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal."*

In order to evaluate traffic volume warrants, turning movement counts were collected at the intersection of E. Hillcrest Dr. and Boardwalk Ave. on Wednesday, May 28, 2025 from 10:00 AM to 6:00 PM.

Warrant 1, Eight-Hour Vehicular Volume

Per the CA-MUTCD, the following is the standard for the eight-hour vehicular volume:

"The Minimum Vehicular Volume, Condition A, is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal.

The Interruption of Continuous Traffic, Condition B, is intended for application at locations where Condition A is not satisfied and where the traffic volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street."

As shown on the CA-MUTCD worksheet, Warrant 1 was not met for this intersection.

Warrant 2, Four-Hour Vehicular Volume

Per the CA-MUTCD, *"The Four-Hour Vehicular Volume signal warrant conditions are intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a traffic control signal."*

"The need for a traffic control signal shall be considered if an engineering study finds that, for each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) all fall above the applicable curve in Figure 4C-1 for the existing combination of approach lanes. On the minor street, the higher volume shall not be required to be on the same approach during each of these 4 hours."

As shown on the CA-MUTCD worksheet and figure, Warrant 2 was not met.

Warrant 3: Peak Hour

Per the CA-MUTCD, *"The Peak Hour signal warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street."*

This signal warrant shall be applied only in unusual cases of facilities that attract or discharge large numbers of vehicles over a short time. *"The need for a traffic control signal shall be considered if an engineering study finds that the criteria in either of the following two categories are met:*

A. If all three of the following conditions exist for the same 1 hour (any four consecutive 15-minute periods) of an average day:

7. *The total stopped time delay experienced by the traffic on one minor-street approach (one direction only) controlled by a STOP sign equals or exceeds: 4 vehicle-hours for a one-lane approach or 5 vehicle-hours for a two-lane approach; and*
    8. *The volume on the same minor-street approach (one direction only) equals or exceeds 100 vehicles per hour for one moving lane of traffic or 150 vehicles per hour for two moving lanes; and*

*Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Warrant 4, Pedestrian Volume

Per the CA-MUTCD, *"The Pedestrian Volume signal warrant is intended for application where the traffic volume on a major street is so heavy that pedestrians experience excessive delay in crossing the major street."*

As such, *"The need for a traffic control signal at an intersection or midblock crossing shall be considered if an engineering study finds that one of the following criteria is met:*

A. For each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) all fall above the curve in Figure 4C-5; or

The change in land use is not expected to change pedestrian volumes significantly, therefore the plus-project pedestrian volumes are assumed to be the same as the volumes without the project. Like vehicular volumes, pedestrian volumes are grown based on an ambient growth rate of 0.376% per year, which results in 5.79% growth from 2025 to 2040. However, observed pedestrian volumes were so low that this growth does not result in a change in the cumulative scenario volumes when rounded to the nearest whole number.

"The need for a traffic control signal shall be considered when an engineering study of the frequency and adequacy of gaps in the vehicular traffic stream as related to the number and size of groups of schoolchildren at an established school crossing across the major street shows that the number of adequate gaps in the traffic stream during the period when the schoolchildren are using the crossing is less than the number of minutes in the same period (see Section 7A.03) and there are a minimum of 20 schoolchildren during the highest crossing hour.

The School Crossing signal warrant shall not be applied at locations where the distance to the nearest traffic control signal along the major street is less than 300 feet, unless the proposed traffic control signal will not restrict the progressive movement of traffic."

This warrant would be applicable if "adjacent traffic control signals do not provide the necessary degree of platooning and the proposed and adjacent traffic control signals will collectively provide a progressive operation."

Any Major Route Characteristics Met, Both Streets			Yes ☐ No ☐

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.

Warrant 9, Intersection Near a Grade Crossing

Per the CA-MUTCD "the center of the track nearest to the intersection is within 140 feet of the stop line or yield line".

There is no grade crossing within 140 feet of the study intersection.

Therefore, Warrant 9 is not met.

WARRANT 9 - Intersection Near a Grade Crossing **SATISFIED YES ☐ NO ☒**
(Both Parts A and B Must Be Satisfied)

PART A A grade crossing exists on an approach controlled by a STOP or YIELD sign and the center of the track nearest to the intersection is within 140 feet of the stop line or yield line on the approach. Track Center Line to Limit Line _____ ft	Yes ☐ No ☐
PART B **There is one minor street approach lane at the track crossing -** During the highest traffic volume hour during which rail traffic uses the crossing, the plotted point falls above the applicable curve in Figure 4C-9. Major Street - Total of both approaches: _____ VPH Minor Street - Crosses the track (one direction only, approaching the intersection): _____ VPH X AF (Use Tables 4C-2, 3, & 4 below to calculate AF) = _____ VPH	Yes ☐ No ☐
OR, There are two or more minor street approach lanes at the track crossing - During the highest traffic volume hour during which rail traffic uses the crossing, the plotted point falls above the applicable curve in Figure 4C-10. Major Street - Total of both approaches : _____ VPH Minor Street - Crosses the track (one direction only, approaching the intersection): _____ VPH X AF (Use Tables 4C-2, 3, & 4 below to calcualte AF) = _____ VPH	

The minor street approach volume may be multiplied by up to three following adjustment factors (AF) as described in Section 4C.10.

1- Number of Rail Traffic per Day_____ Adjustment factor from table 4C-2____

2- Percentage of High-Occupancy Buses on Minor Street Approach_____ Adjustment factor from table 4C-3____

3- Percentage of Tractor-Trailer Trucks on Minor Street Approach_____ Adjustment factor from table 4C-4____

NOTE: If no data is availale or known, then use AF = 1 (no adjustment)

SUMMARY

Warrant analyses were carried out for the intersection of E. Hillcrest Dr. and Boardwalk Ave. in the City of Thousand Oaks as per the guidelines set forth in the State of California Manual on Uniform Traffic Control Devices (CA-MUTCD) 2014 Edition Revision 9. The Traffic Signal Warrant Analysis was carried out for the following project impact scenarios:

a. Existing conditions
b. Existing conditions plus project – Scenario “a” plus project
c. Cumulative Conditions at Project Build-Out (2040)
d. Cumulative Conditions plus project – Scenario “c” plus project

Following a review of the guidance in the CA-MUTCD, no traffic signal warrants were met.

Subject: Water/Wastewater Availability - 195 E Hillcrest Dr, APN 669-0-021-255

Dear Mr. Martin:

The subject property is in the City of Thousand Oaks, and the following information is provided relative to wastewater and water service:

Wastewater Service

There is an existing 18-inch and 21-inch City wastewater main located on the Northwest portion of the subject property at 195 E Hillcrest Dr. The 18-inch mainline that extends into a 21-inch mainline is in the access road between the E. Hillcrest entrance of the property to the North side parking area. The 18" and 21" wastewater main has a 15' easement dedicated to the City of Thousand Oaks on the subject property.

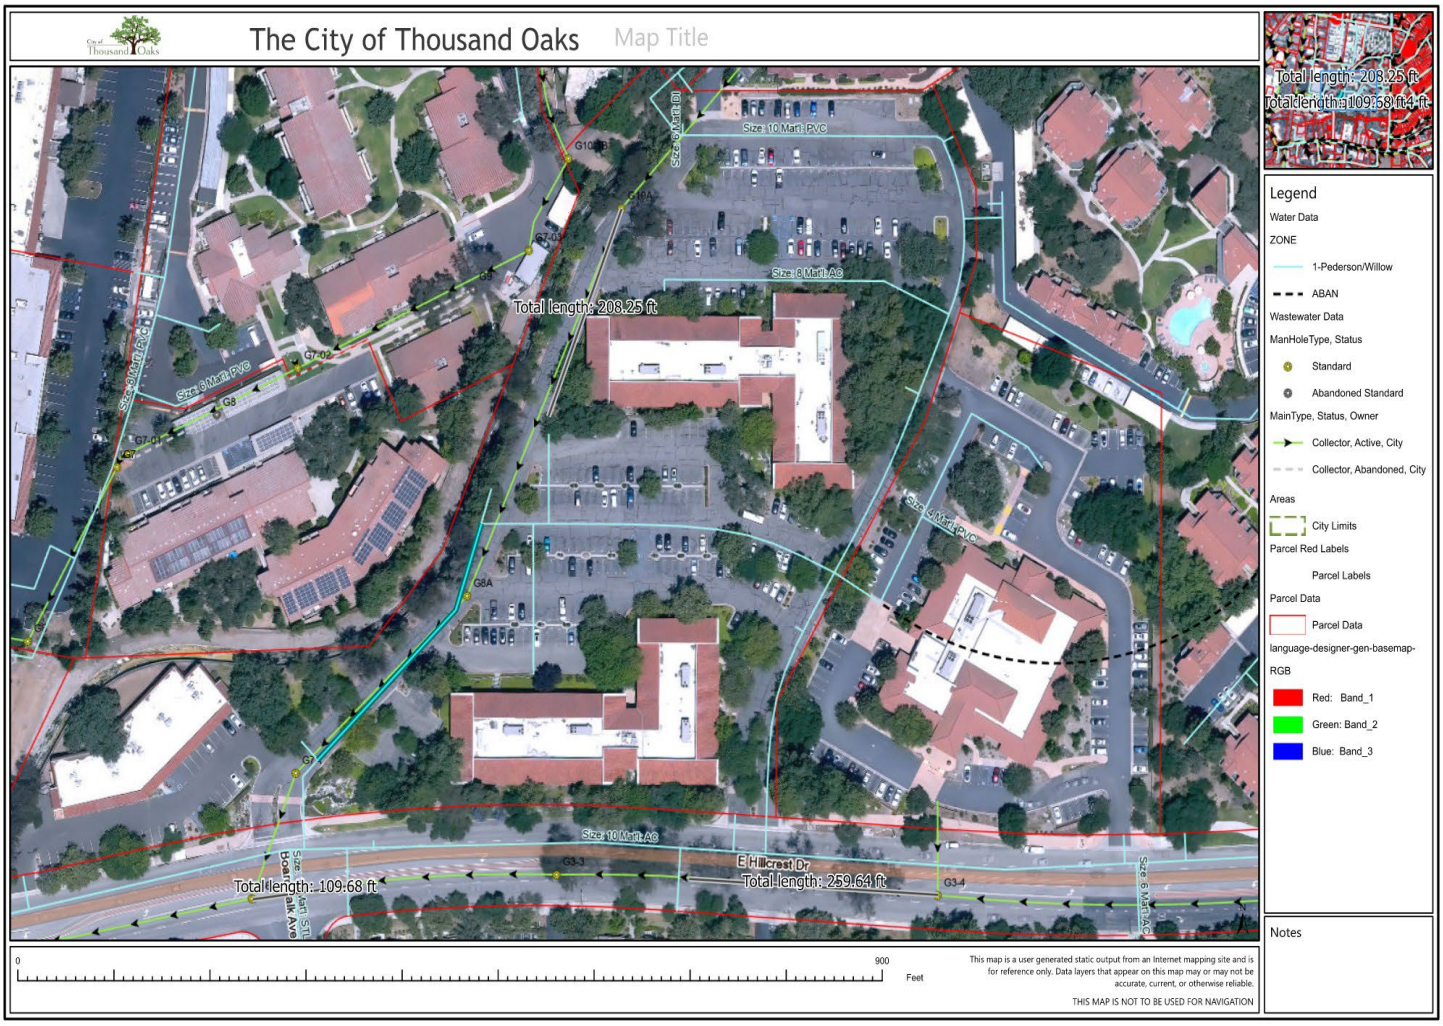
Currently, there are three laterals at the property that serve the property of 195 E. Hillcrest. A 6" lateral ties in approximately 208 ft. downstream from manhole G10A (WW DWG 10565 sheets 4 & 5 attached). Two 8" laterals located on E. Hillcrest tie in approximately 259 ft. from manhole G3-4 and 109 ft. upstream from manhole G6A (WW DWG's 10566 sheet 6 & 10723 sheet 3 attached). The 18-inch mainline connects from manholes numbered G11A to G8A, and the 21-inch mainline connects from manholes numbered G8A to G6A located in access road to between the North parking area and E. Hillcrest Dr. The existing mainline in E. Hillcrest is a 10-inch.

Water Service

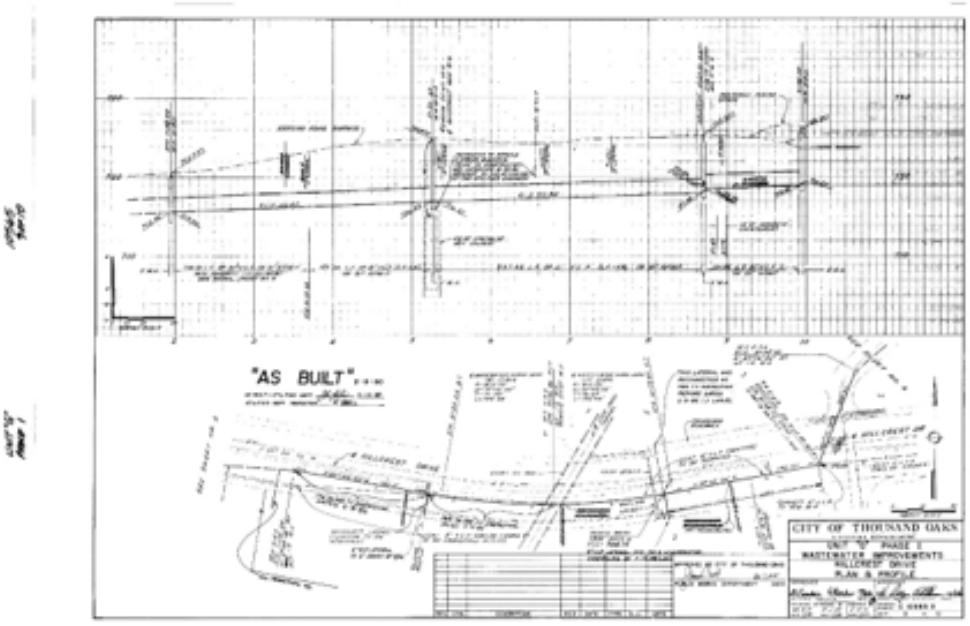
There are currently 8-inch and 10-inch City water mains located inside the subject property's parcel boundary (see enclosed drawing #20358 sheets 4 & 6 and 20406 sheet 2). The existing 8-inch and 10-inch mainlines are currently in a 15-foot easement for water purposes dedicated to the City of Thousand Oaks. Located on E. Hillcrest Dr. is a 10-inch watermain that connects to the mainlines in the subject property's area. Public access to 195 E. Hillcrest Rd is located on E. Hillcrest Rd.

Connection to the main is permitted subject to a City encroachment (right-of-way) permit that includes payment of permit fees, an approved traffic control plan and approved service-lateral plan and profile construction drawing. The applicant is advised the E. Hillcrest, access road right-of-way and parking areas may contain several utilities (e.g., gas, communication, etc.) that could affect the profile of the gravity service lateral and may wish to inquire with USA-DigAlert of Southern California to locate such utilities prior to finalizing the lateral design.

If you have any questions, please call me at (805) 449-2429.



Sincerely,



James L. Taylor

This project is located in Southern California Edison (SCE) service territory. SCE will serve the above subject project's electrical requirements per the California Public Utilities Commission and Federal Energy Regulatory Commission tariffs.

SCE may need to conduct utility studies, where applicable, to assess whether additions or modifications to the existing electric infrastructure are required to serve this project. Where applicable, SCE has attached Appendix (B) which not only describes the study, and permitting, but includes a Project Information Sheet that will need to be completed by you and submitted to SCE if your project is at a point where SCE has to determine the required electrical utility work. This Will-Serve letter does not imply that either: (i) these studies have been completed, or (ii) that any required California Environmental Quality Act (CEQA) analysis of project-related electric utility impacts has been conducted.

I am the SCE Design Representative currently assigned to this project. SCE or Applicant will design and construct all required electrical infrastructure to serve this project provided you enter into the applicable contractual agreements with SCE identify scope of electrical utility work required, and supply the following information:

- Site plans as required
- Required contracts and agreements (fully executed)
- Applicable fees
- Local permits
- Required easement documents

Your project will be scheduled for construction once SCE has all the necessary information for your project and you have submitted or agreed to the applicable requirements as stated above, and paid any necessary fees.

If your project will not require SCE services, please notify us so that we can update our records.

SCE appreciates your business. If you have any questions, please feel free to call me at 661.476.6909.

Sincerely,
