NOTICE OF PREPARATION (NOP)
OF AN ENVIRONMENTAL IMPACT REPORT AND
NOTICE OF PUBLIC SCOPING MEETING
RIO DEL VALLE MIDDLE SCHOOL EXISTING CAMPUS EXPANSION MASTER PLAN

Notice Is Hereby Given to all interested parties that Rio School District (RSD), as the lead agency, will prepare an environmental impact report (EIR) for the proposed Rio del Valle Middle School (RDV) Campus Expansion Master Plan Project. This is the time and place for comments regarding the scope and content of the EIR, as it is in an area of interest to you and/or the organization or agency you represent. You/your agency may need to refer to the EIR prepared by RSD when considering your permit or other approval for the proposed project.

The scoping process is intended to provide RSD with the information the public is of the opinion necessary to establish the appropriate scope for preparing the EIR. Please submit your comments, input, suggestions for project alternatives, and any other pertinent information that may enable us to prepare a comprehensive EIR for the proposed project. The Notice of Preparation (NOP) comment period begins on **June 7, 2022 and ends on July 6, 2022**. Due to the time limits mandated by Section 15082 of the State CEQA Guidelines, your response must be sent at the earliest possible date, but not later than 30 days after receipt of the notice. Please identify a contact person for your agency in your response.

Please submit written comments to:
Wael Saleh, C.P.A, M.B.A
Assistant Superintendent, Chief Business Official
Rio School District
1800 Solar Drive,
Oxnard, CA 93030

Or by email to:
wsaleh@rioschools.org

Project Title: Rio del Valle Middle School Campus Expansion Master Plan

Project Location: The proposed project includes the expansion of the RDV campus located at 3100 Rose Avenue in unincorporated County of Ventura. The existing campus is approximately 30.2 acres, including the 20.2-acre main campus (APN 144-0-110-445) and 10 acres of active agricultural lands (a portion of APN 144-0-110-225) to the north of the main campus buildings. The proposed project would add approximately 11.1-acres to the south (a portion of APN 144-0-110-590) that the District proposes to develop with new educational and support facilities, resulting in an approximately 41.3-acre campus (project Site). The geographic coordinates of the Site are approximately Latitude 34° 14' 2.39" North, Longitude 119° 9' 10.61" West.

Surface elevations at the Site are approximately 92 feet above mean sea level. The project Site is generally surrounded by agricultural lands and residential uses to the north, agricultural lands to the east, commercial uses (car dealerships) to the south, and residential uses to the west. Primary access to the project Site is off Rose Avenue.

Project Description: RSD proposes to implement the RDV Campus Enhancement Master Plan (proposed project) to meet the educational, recreational, and parking and support facilities needs of District students at RDV. The Master Plan includes improvements to the existing RDV campus and development of approximately 11.1-acres to the south of the existing campus. The proposed project includes development within the expanded campus which would occur in phases and would include options for: new classrooms, library and media center, transportation and parking facilities, student bus turnout, recreational facilities including two baseball fields, softball field, physical education (P.E.) and lunch play field, four sand volleyball courts, jogging path, an athletic restroom/storage building, and up to ten tennis courts and/or handball courts. The buildout of the RDV Campus Master Plan is anticipated to occur over approximately 5 years.

Topics Identified for Study in an EIR. RSD prepared an Initial Study (IS). Based on the environmental review contained in the IS, RSD determined that implementation of the proposed project may have a significant effect on the environment and an EIR is required. The EIR will be prepared to evaluate potentially significant impacts related to the following issues:

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Mineral Resources
- Noise
- Public Services
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems

Based on the analysis contained within the IS, impacts related to Energy, Population/Housing, Recreation, and Wildfire are anticipated to be less than significant. Therefore, these topics will not be studied in detail in the EIR. While the remaining issues, aside from Agriculture, are expected to not be significant or with mitigation can be reduced to less than significant, additional analysis and/or studies are needed to substantiate that determination. The District would note that the proposed project intends to mitigate on-site and off-site parking issues.

Scoping Meeting: RSD will conduct a public scoping meeting for the proposed project. The purpose of the scoping meeting is to solicit and receive public comment and input regarding the appropriate scope and content in the preparation of the EIR. Participation in the public meeting by agencies, organizations, and persons is encouraged.

The Scoping Meeting for the EIR for the RDV Campus Expansion Master Plan Project is scheduled for **June 23, 2022, at 6:30 p.m.** at the District Office Board Room, 1800 Solar Drive, Oxnard, CA 93030. In addition to the public scoping meeting, comments can also be submitted in writing, attention: Wael Saleh, at the address provided above.

Document Availability: The NOP and IS are both available for public review at RSD, 1800 Solar Drive, Oxnard, CA 93030 and at the Downtown Main Library, 251 South A Street, Oxnard, CA 93030 during normal business hours. They are also posted online on the District's website at: https://rioschools.org/.

1.1 RIO SCHOOL DISTRICT

Rio School District (RSD or the District) serves the unincorporated community of El Rio, the Riverpark development, and portions of the City of Oxnard. The District strives to provide world-class education to its students through five elementary schools, two K-8 school academies, and two middle schools. Since its beginnings as a one-room schoolhouse in 1885, RSD has been the center of the community for all of the families it has served. Today, the

District continues its tradition of caring for each student. Through teaching excellence, close working relationships, and community business and government partnerships, RSD inspires students and employees to strive to be lifelong learners who are engaged in the community (RSD 2021). Table 1-1 shows a list of the nine RSD schools and their existing enrollment.

1.2 PROJECT LOCATION

The proposed project includes the expansion of the Rio del Valle Middle School (RDV) campus and related programs located at 3100 Rose Avenue in unincorporated County of Ventura (Figure 1-1). The primary access to the main campus is off Rose Avenue. The existing campus is approximately 30.2 acres, including the 20.2-acre main campus (APN 144-0-110-445) and 10 acres of active agricultural lands (a portion of APN 144-0-110-225) to the north of the main campus buildings. The proposed project would add approximately 11.1-acres to the south (a portion of APN 144-0-110-590) that the District proposes to develop with new educational and support facilities, resulting in an approximately enhanced 41.3-acre campus (project Site). The District is currently in escrow to acquire the southern campus expansion area. At least two parcels (southern campus expansion area and main campus), if not all three parcels associated with the proposed project are proposed for annexation into the City of Oxnard. The geographic coordinates of the project Site are approximately Latitude 34° 14' 2.39" North, Longitude 119° 9' 10.61" West (Google Earth Pro 2021). Surface elevations at the Site are approximately 92 feet above mean sea level (EDR 2021). The project Site is generally surrounded by agricultural lands and residential uses to the north, agricultural lands to the east, commercial uses (car dealerships) to the south, and residential uses to the west, as shown in Figure 1-2. The land use designations for the project Site are identified in Table 1-2. The District remains open to annexing the entire RDV campus (all three parcels) into the City of Oxnard.

As of January 2022, planned and pending projects in the Site vicinity include Rio Urbana, the Maulhardt/Stiles NECSP Sub-Neighborhood Plan, various projects falling under the greater Riverpark development, and multiple commercial and industrial projects. The City of Oxnard currently states 290 planned and pending projects; a vast majority of these occur outside of the RDV attendance boundary. The Riverpark development, Rio Urbana, and the Maulhardt/Stiles NECSP Sub-Neighborhood Plan are the three pending projects that could directly affect the project proposed herein. The projects have the potential to bring in additional student population to the City through new residential units. While the commercial and industrial projects in the Site vicinity may add available jobs and consumer appeal to the area, these projects will not directly add permanent population and housing that would affect RSD and its student body (City of Oxnard 2022a, RSD 2021). District-wide individual school boundary adjustments will be made as needed in the future, and the proposed project will improve the District's ability to accommodate an increased student body.

1.3 SITES CONSIDERED BUT ELIMINATED

Expansion of the existing RDV campus as represented has been determined as the best option for increased middle school education service within the RSD attendance boundary. RSD has two existing middle schools: RDV and Rio Vista. There is no adjacent land available to expand the Rio Vista campus. RDV was selected because adjacent land was available to purchase by RSD for the campus expansion. Additionally, nine of the District's 14 buses are used for RDV student transportation, and RDV has an urgent need for bus parking facilities and improvements to student drop-off and pick-up accessibility and safety conditions on Site. The expanded campus, accessed from Rose Avenue and Collins Street, will inherently create the necessary parking facilities, and improve campus vehicle safety.

One of the six sites identified in the Oxnard General Plan for future school sites is currently being constructed as Del Sol High School (Oxnard Union High School District); the other five sites were determined demographically unacceptable for the proposed project, as they are outside of the current RSD attendance boundary, would create additional traffic impacts due to added vehicle and bus trips and increased travel time, and are not affordable to the District at this time. Additionally, expansion of the existing RDV Site is most cost effective, and District-wide individual school attendance boundary adjustments will be made as needed in the future. Further discussion on sites considered but eliminated will occur in the Environmental Impact Report (EIR) for the proposed project.

1.4 PROJECT OBJECTIVES

The objectives of the proposed project include the following:

A. Address significant community health, safety, and welfare issues including congested traffic and parking conditions;

B. Streamline District student transportation to improve safety and reduce vehicle miles traveled (VMT) and mitigate existing on-Site and off-Site parking impacts;

C. Accommodate existing and projected future student enrollment within the District;

D. Locate school facilities within close proximity to students' residences;

E. Provide new facilities that meet the District's educational program specifications;

F. Consolidated facilities that reflect the need and efficient use of limited land resources; and

G. Ensure cost-effective use of State and local public resources funding sources.

1.5 PROJECT DESCRIPTION

RSD proposes to implement the RDV Campus Expansion Master Plan (proposed project) to meet the immediate educational, recreational, and support facilities needs of District students. Enrollment within the District has been increasing and additional facilities are needed now to accommodate the students. The District is currently in escrow to acquire approximately 11.1 acres to the south of the existing campus that would extend the existing RDV campus boundary to Collins Street. This would increase the campus area to approximately 41.3 acres. The proposed project includes development within the expanded campus which would occur in two phases, as detailed below, and would include options for: new classrooms, library and media center, transportation and parking facilities, recreational facilities including a 320-meter track, flag football field, six basketball courts, two baseball fields, softball field, physical education (P.E.) and lunch play field, four sand volleyball courts, two soccer fields, jogging path, an athletic restroom/storage building, and up to ten tennis courts and/or handball courts. Figure 1-3 shows the Conceptual Site Master Plan. This plan was revised in March 2022 to protect the existing stand of mature oak trees present in the eastern portion of the existing RDV main campus.

The expanded campus shall provide significant health and safety improvements, additional on-Site parking, and a bus turn out lane. Nine of the District's 14 buses are used for RDV student transportation during and after school programs; these buses would be housed on the southern 11.1-acre addition to the campus with the buildout of the proposed project.

RSD buses will remain at the current District Transportation and Parking Facility on Vineyard Avenue (former El Rio Elementary School) until June 14, 2022. On June 14, 2022, RSD buses will be moved to a temporary parking facility located at Oxnard School District Transportation Center (near 516 W. Wooley Road). This temporary bus parking location will be utilized until bus parking facilities included as part of the proposed project at RDV become available; temporary bus parking per the interim joint use agreement approved at the District board meeting on March 16, 2022, is anticipated for a period of one year pursuant to the District's current agreement with the Oxnard School District. The temporary parking facility located at Oxnard School District Transportation Center is not considered part of the proposed project, and therefore is not analyzed for significant environmental impacts in this Initial Study. RSD would have lost access to the current District Transportation and Parking Facility on Vineyard Avenue in June 2022, regardless of the proposed project.

LAND USE DATA

The buildout of the RDV Campus Master Plan is anticipated to occur over approximately 5 years. A comparison of existing and proposed RDV campus configuration is provided in Table 1-3.

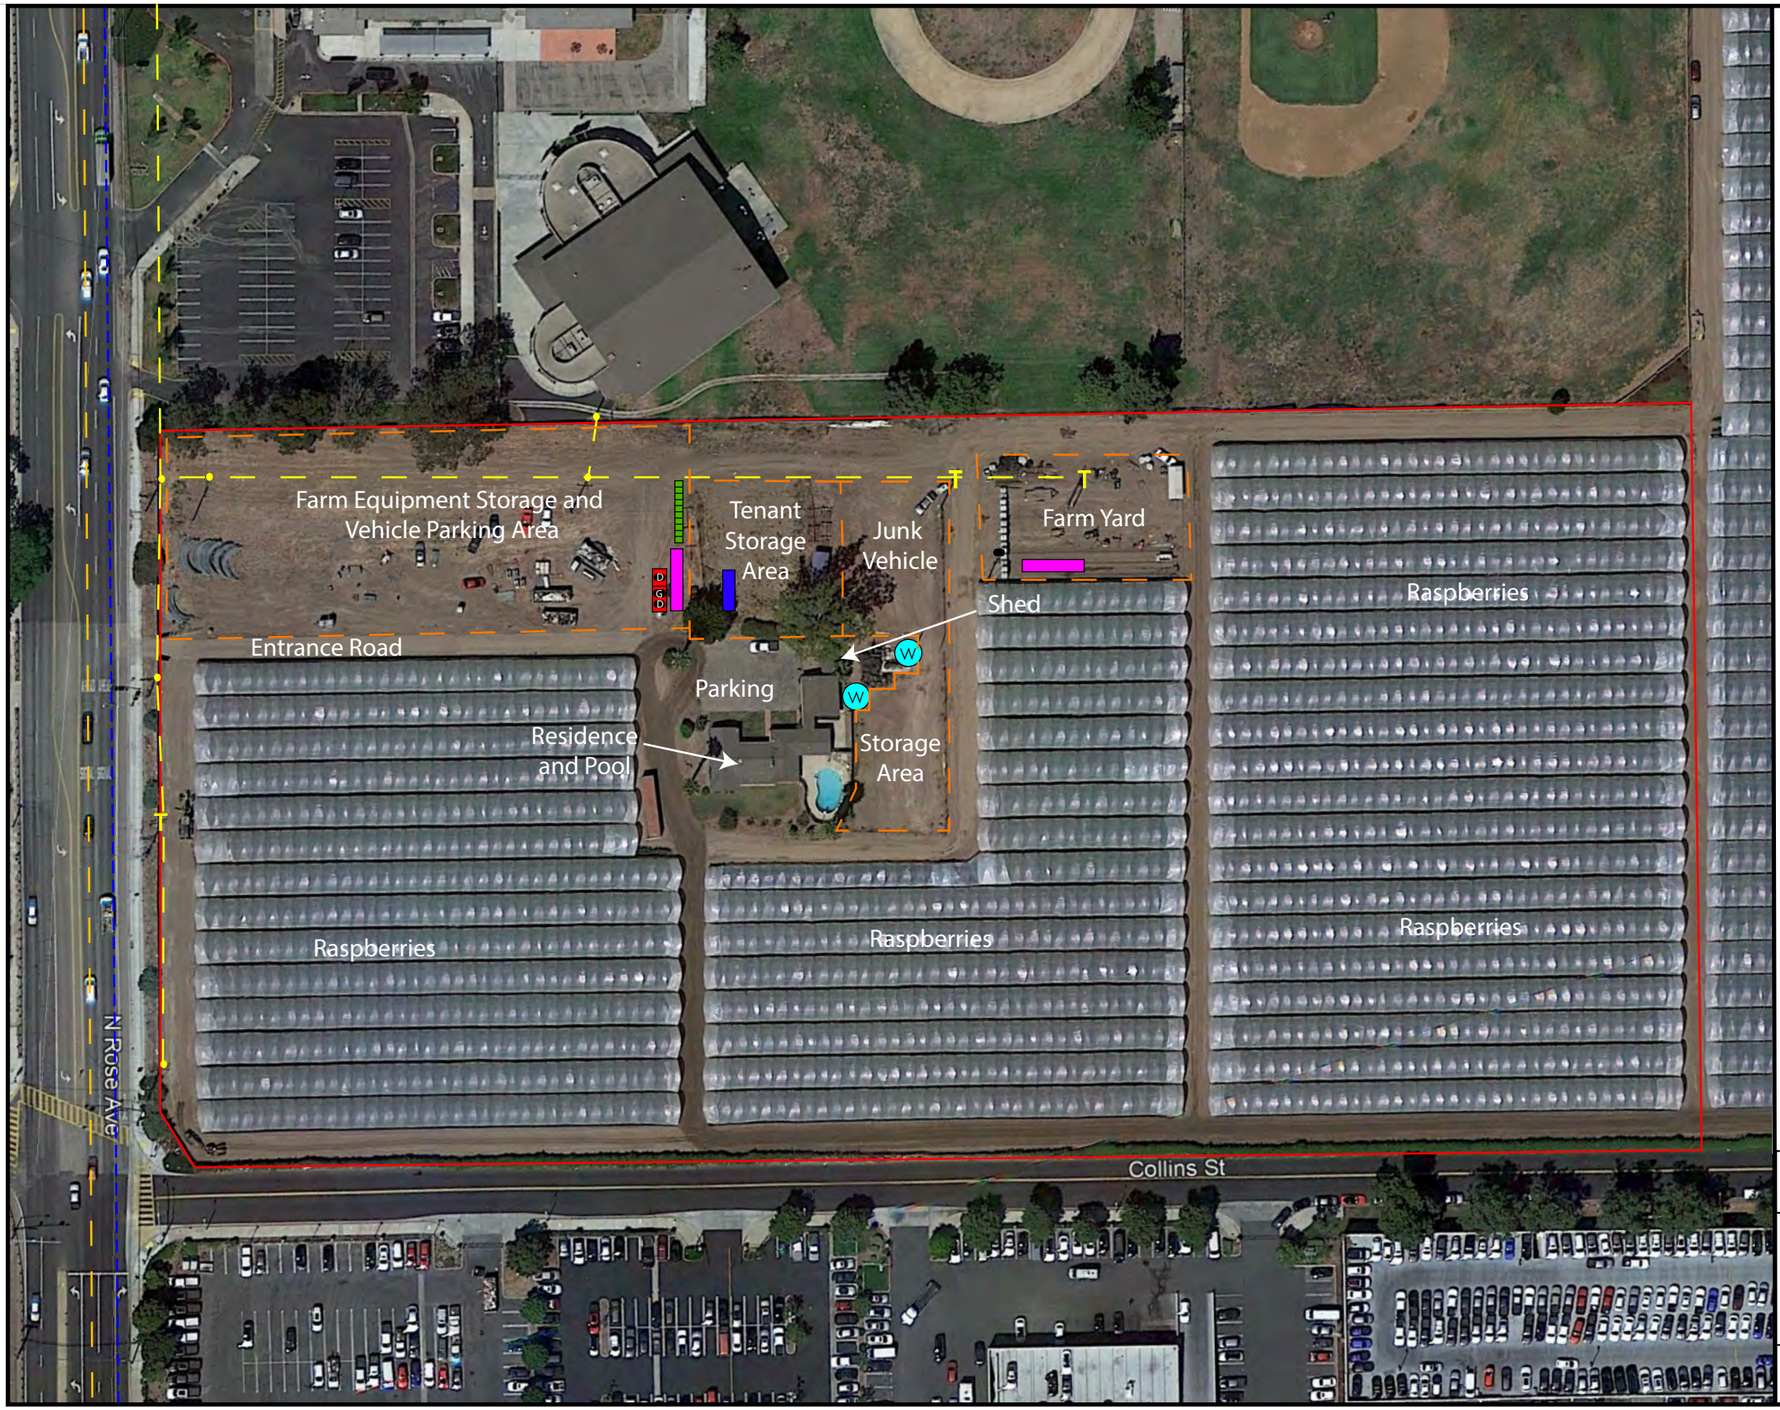

Table 1-3. Comparison of Existing and Proposed Rio del Valle Configuration

	Existing Configuration	Proposed Configuration
Student Capacity	~1,116	~1,366
Total Classrooms	39	49
Permanent Square Footage	81,024	116,882
Portable Square Footage	7,071	11,535
Total Building Square Footage	88,095	128,417
Parking Spaces	90 (84 standard and 6 accessible)	317 (277 standard, 16 accessible, and 24 bus)
Total Campus Area (Acres)	30.2	41.3

Phase I

The District proposes to annex at least two parcels (southern campus expansion area and main campus), if not all three parcels into the City of Oxnard during Phase I. Phase I activities for the proposed project will include improvements on the western portion of the south campus expansion area shown on Figure 1-3. Per the City of Oxnard Municipal Code, Chapter 21, Article III, utility undergrounding associated with the proposed project will likely be necessary, and utility undergrounding along public right of ways will likely occur as part of Phase I. Construction will start for most of the following improvements after approval of the EIR, anticipated towards the end of 2022. These construction activities are estimated to take 18 months. Phase I activities will also include replacement and relocation of some of the existing recreational facilities and parking within the existing main campus. To assist in alleviating parking and overcrowding issues, some of these facilities in the main campus will be completed in June/July 2022.

The southern campus expansion area is approximately 11.1 acres in size and is located on a portion of current APN 144-0-110-590. RDV is currently in escrow to acquire the southern campus expansion area, which would extend the existing boundary of the RDV campus south to Collins Street. The current western and eastern property lines would continue southward on their current bearings, until terminating at Collins Street. Access to the Site is proposed via driveway connections to Collins Street, from the existing campus parking lot B, and the proposed parking lot C off Rose Avenue. A 25-foot-wide access road will run from south to north providing a secondary point of access through the existing RDV parking area. The District Transportation and Parking Facility will consist of a 7,500 sq. ft. maintenance building, two 1,080 sq. ft. portable buildings, 528 sq. ft. restroom, and conversion of the approximately 3,130 sq. ft. existing residential structure located on the Site to office use by District Maintenance and Operations staff. The District Transportation and Parking Facility, including buses, can be completely closed off from the general public or staff parking areas, allowing for enhanced security and operational options. Existing utility lines are present within the southern campus expansion area. A detailed map showing current land use of the southern campus expansion area is shown in Figure 1-4.

Base Map: Google Earth Image Dated 8/19/19.

After EIR approval, if needed depending on construction phasing, an Interim Bus & District Vehicle Parking Area is proposed to be located along the Rose Avenue frontage of the southern campus expansion area and will encompass proposed Parking Lot A shown on Figure 1-3. Striping will be configured to allow for temporary bus parking in center aisle of Parking Lot A. This interim bus parking area within Parking Lot A will be used to park RDV school buses and maintenance vehicles while the permanent District Transportation and Parking Facility is under construction. Access to the interim bus parking area will provided via connection to the existing RDV campus parking. The interim bus parking area within Parking Lot A is preliminary designed to accommodate 22 bus parking spaces and 12 standard parking spaces on an approximately 1.0-acre parking surface. The construction of the Interim Bus & District Vehicle Parking Area is estimated to take six months.

Upon completion of the permanent District Transportation and Parking Facility, bus and district vehicle parking will be relocated to this new, permanent area as shown on Figure 1-3. The interim parking area within Parking Lot A will be converted to a permanent parking area to provide 91 standard and 4 accessible parking spaces for the RDV campus within 12 months.

Utility Improvements - Electrical & Lighting

Utility undergrounding associated with the proposed project will likely be necessary, and utility undergrounding along public right of ways will likely occur as part of Phase I; therefore, utility improvements associated with electrical and lighting are discussed in the Phase I text herein. Water and sewer related utility improvements associated with the proposed project will primarily occur during Phase II and are discussed below.

Southern California Edison (SCE) currently provides electrical service to RDV. SCE will provide electrical service to the proposed expansion area via new electrical secondary connection(s) and meter(s). SCE has existing 17 kilovolt (KV) overhead primary power lines located in the Rose Avenue right of way, on the eastern side of Rose Avenue along the western Site boundary. Electrical power is supplied to the southern campus expansion area from the overhead primary power lines located in the Rose Avenue right of way by a run of overhead secondary power lines routed approximately 600 feet east from Rose Avenue and approximately 55 feet south of the north boundary of the southern campus expansion area. Electrical power is also routed from this run of overhead secondary power lines to a pole on the southern boundary of the existing school campus adjacent to the Gymnasium building. There are two pole-mounted electrical transformers located along the run of overhead secondary power lines in the southern campus expansion area approximately 520 feet and 600 feet east of Rose Avenue. Another pole-mounted electrical transformer is located along the overhead primary power lines located in the Rose Avenue immediately adjacent to the western boundary of the southern campus expansion area approximately 280 feet south of the north boundary of the southern campus expansion area. While the southern campus expansion area is currently serviced by SCE with the existing secondary power lines, it is anticipated that service will be further extended from the existing SCE primary infrastructure, which is located on the same side of the street as RDV, to service the southern campus expansion area.

Recreational Facilities / Parking

In order to accommodate the increase in student populations and the associated demand on recreational facilities expected for the fall 2022 semester, the existing recreational facilities and parking will be replaced and constructed within the existing main campus. Construction on the following recreational facilities will be completed in June/July 2022: a 320-meter track, a flag football field, six basketball courts, and two soccer fields. Parking Lot C with 68 standard parking spaces and 4 accessible parking spaces will be added to the northwest corner of the existing main campus. DSA approved the Parking Lot C design and construction plans on March 15, 2022. Opportunities for use of the recreational school facilities by the community outside of school hours is planned. See Figure 1-3 for these on-Site improvements.

Phase II

Phase II activities for the proposed project will include improvements to the remaining eastern portion of the south campus expansion area, the north campus agricultural learning program area, and existing main campus. Construction will start on the following Phase II improvements in two to five years (2024 – 2027). These construction activities are estimated to take 18 to 24 months.

Agricultural Learning Program

No land use changes to the north campus agricultural learning program area are currently proposed as part of the proposed project. Approximately 10 acres on the northern portion of the project Site is currently utilized for agriculture and RSD plans to utilize the Site as an outdoor working farm "classroom." No utility expansion is proposed in this area. An outdoor lecture area and a small paved pathway are planned for this area. Possible fencing may be added for security. A Notice of Exemption (NOE) for the purchase and use of the north campus for an agricultural learning program area was filed and posted with the Ventura County Clerk on August 11, 2021; no challenges to the NOE were filed.

Classroom and Library/Media Center and Multi-Purpose Buildings

The proposed project includes the potential for construction of up to 12,000 sq. ft. for eight new classrooms and approximately 5,400 sq. ft. library/media center and 5,400 sq. ft. multi-purpose buildings. These improvements could accommodate a potential 250-student increase, expected to occur over a five-year period commencing at the earliest in the 2024/2025 school year. All these improvements are shown in Figure 1-3.

Recreational Facilities

New school and community recreational facilities would be added including two baseball field(s), softball field, P.E. and lunch play field, four sand volleyball courts, jogging path, an athletic restroom/storage building, and up to ten tennis courts and/or handball courts. The proposed project also includes two 1,080 sq. ft. portable classrooms for physical education. Opportunities for use of the recreational school facilities by the community outside of school hours is planned. See Figure 1-3 for the proposed on-Site improvements.

Utility Improvements - Water

RDV currently obtains water through three existing unique sources: The City of Oxnard, a RSD-owned and operated well, and the United Water Conservation District. Based on future direction from prospective water purveyors, as well as RSD's consultant's professional judgement, the proposed project's southern campus expansion area will obtain potable water from a new connection to the City of Oxnard water system. The anticipated point of connection would be from an existing City water line(s) located in the Rose Avenue or Collins Street right of way. An approximately 8-inch diameter water line would deliver water from the City line to the proposed southern campus expansion area. It is anticipated that the improvements proposed on the existing campus parcel will utilize connections from existing service lines. At this time, it is anticipated that the northern expansion area will continue to utilize agricultural water from current sources (well water).

Utility Improvements - Sewer

The City of Oxnard provides existing sewer service to RDV through an extension of the sewer main in Rose Avenue to the RDV Site. Sewer service is proposed to be provided to the southern campus expansion area via a new connection to the City of Oxnard sewer main, separate from the existing main campus sewer. The anticipated point of connection would be on Rose Avenue or Collins Street right of way. Sewer service for new improvements on the existing main campus will be via connecting to the existing RDV sewer Point of Connection (assuming adequate capacity).

1.6 REQUIRED PERMITS AND APPROVALS

Following this Initial Study, the forthcoming EIR will be used by RSD and responsible and trustee agencies with jurisdiction over portions of the project prior to deciding whether to approve or permit project components. A public agency, other than the lead agency, that has discretionary approval power over a project is known as a "responsible agency" as defined by CEQA Guidelines Section 15381. Anticipated permits and approvals for the proposed project are identified in Table 1-4.

Table 1-4. Anticipated Permits and Approvals (In Progress)

Agency	Permit/Approval
California Department of Education	Approval of construction plans and CDE Site Plan and Approval
California Department of General Services, Division of State Architect	Approval of construction plans and CDE Site and Plan Approval
California Department of Toxic Substance Control	Approval of Preliminary Environmental Assessment (PEA) and Supplemental Site Investigation (SSI) for Southern Campus Expansion Area
City of Camarillo	Oxnard-Camarillo Greenbelt Modification
City of Oxnard	Annexation Request, Oxnard-Camarillo Greenbelt Modification, General Plan Amendment, Zoning and Pre-zoning*
Los Angeles Regional Water Quality Control Board	Storm Water Pollution Prevention Plan
Rio School District	Approve Project (Educational Specifications, Design/Construction Funding and Associated Contract Approvals) EIR (Adopt EIR and MMRP)
Ventura County	Oxnard-Camarillo Greenbelt Modification
Ventura Local Agency Formation Commission (LAFCO)	Annexation and associated Sphere of Influence/CURB adjustments

*The District may, to the extent applicable, elect to exercise its authority pursuant to Government Code Section 53094 to overrule zoning.

1.7 CALIFORNIA NATIVE AMERICAN TRIBE CONSULTATION

Have California Native American tribes (NAT) traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

The Barbareño/Ventureño Band of Mission Indians has requested consultation under AB52. In addition, consultation will occur under SB18, Government Code Section 65352.3, for the proposed project. The District is in the process of initiating consultation with tribes, and results of consultation will be reported in the forthcoming EIR.

1.8 CALIFORNIA ENVIRONMENTAL QUALITY ACT REVIEW

In accordance with the CEQA Guidelines Section 15063, RSD has conducted an Initial Study to determine if the project may have a significant effect on the environment. The purposes of an Initial Study include providing the Lead Agency with information to use as the basis for deciding whether to prepare an EIR or a Negative Declaration. As discussed below, it has been determined that four CEQA resource issues (Energy, Population and Housing,

Recreation, and Wildfire) would not be significant and would not require further analysis in the EIR. This Initial Study determined that the proposed project may have a potentially significant impact on agricultural resources. Based on the preliminary analyses, the remaining issues are expected to not be significant or with mitigation can be reduced to less than significant; however, this conclusion may change in the EIR. Additional analysis and/or technical studies are needed to substantiate the anticipated determination, as stated in this Initial Study. The following 16 resource areas will be analyzed in detail in the respective sections of the EIR for all threshold questions not dismissed in the Initial Study: Aesthetics, Agriculture and Forest Resources, Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Noise, Public Services, Transportation, Tribal and Cultural Resources and Utilities and Service Systems.

THIS PAGE INTENTIONALLY LEFT BLANK

2.0 ENVIRONMENTAL CHECKLIST

2.1 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

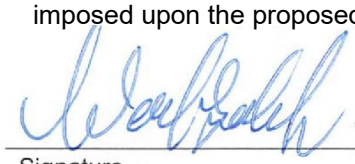
The environmental factors checked would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☒ Agriculture and Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Energy
☐ Geology/Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use/Planning	☐ Mineral Resources
☐ Noise	☐ Population/Housing	☐ Public Services
☐ Recreation	☐ Transportation	☐ Tribal Cultural Resources
☐ Utilities/Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

2.2 DETERMINATION: (TO BE COMPLETED BY THE LEAD AGENCY)

On the basis of this initial evaluation, the following will be determined:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.



☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to

that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

2.3 EVALUATION OF ENVIRONMENTAL IMPACTS

(1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained if it is based on project-specific factors as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

(2) All answers must take account of the whole action involved, including off-Site as well as on-Site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

(3) Once the lead agency has determined that a particular physical impact may occur, the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

(4) "Negative Declaration: Less Than Significant with Mitigation Incorporated" applies when the incorporation of mitigation measures has reduced an effect from a "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analyses," as described in (5) below, may be cross-referenced).

(5) Earlier analyses may be used if, pursuant to tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration (Section 15063[c][3][D]). In this case, a brief discussion should identify the following:

a. Earlier Analysis Used. Identify and state where earlier analyses are available for review.

b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards and state whether such effects were addressed by mitigation measures based on the earlier analysis.

c. Mitigation Measures. For effects that are "Less Than Significant with Mitigation Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address Site-specific conditions for the project.

(6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

(7) Supporting Information Sources. A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.

(8) This is only a suggested form (AEP 2021), and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

(9) The explanation of each issue should identify:

a. The significance criteria or threshold, if any, used to evaluate each question; and

b. The mitigation measure identified, if any, to reduce the impact to less than significant.

2.4 ENVIRONMENTAL IMPACT ANALYSIS

2.4.1 AESTHETICS

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:					
a.	Have a substantial adverse effect on a scenic vista?			X	
b.	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a scenic highway?				X
c.	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			X	
d.	Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?			X	

Discussion:

a. Would the project have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. In the City of Oxnard, key view corridors include local waterways, agricultural open space, beaches, mountains, and a variety of urban landscapes (City of Oxnard 2011). Visual characteristics in the project area include primarily residential development with agricultural uses, including the Oxnard-Camarillo Greenbelt. Agricultural greenbelt areas provide an important open space quality to the City of Oxnard's sphere of influence (SOI). The City's urban landscape is also considered an important aesthetic resource (City of Oxnard 2006).

The project Site is relatively flat; the main campus parcel is a developed school campus, and the north campus agricultural learning program area and southern campus expansion area are both currently used for agriculture as shown in Figure 1-2. The Site is adjacent to agricultural land to the north and east, Rose Avenue and residential land to the west, and commercial land in the form of car dealerships to the south. According to the El Rio del Norte Area Plan included within the Ventura County General Plan (Ventura County 2020a), Rose Avenue, which runs adjacent to the western project boundary, is a major roadway with scenic resources. The north campus agricultural learning program area and southern campus expansion area fall within the boundary of the Oxnard-Camarillo Greenbelt.

A stand of mature oak trees (*Quercus* sp. – some native) is present in the eastern portion of the existing school campus (see Figure 1-2); the proposed project will avoid impacts to this stand of oak trees, as shown in Figure 1-3. Any other trees removed due to the proposed project will be in compliance with City requirements, including the City's Landscape Standards (City of Oxnard 1988), and if needed, mitigation will be defined in the forthcoming EIR. Significant impacts to a scenic vista are not expected as the project is located in a predominately developed area,

however, the proposed project includes campus expansion that would require development and reduction of agricultural land within the Oxnard-Camarillo Greenbelt and alter the public view of the Site from Rose Avenue. Therefore, this conclusion may change, and mitigation may be required. This topic will be further analyzed in the EIR.

b. Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. The project Site is relatively flat; the main campus parcel is a developed school campus, and the north campus agricultural learning program area and southern campus expansion area are both currently used for agriculture. The project Site is not located adjacent to a designated State scenic highway or eligible State scenic highway, as identified on the California Scenic Highway Mapping System (Caltrans 2018). Therefore, the proposed project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway and this issue will not be discussed further in the EIR.

c. In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less Than Significant Impact. The project Site is relatively flat; the main campus parcel is a developed school campus, and the north campus agricultural learning program area and southern campus expansion area are both currently used for agriculture. Development of the proposed project will result in a visual change from construction and operation of the new educational facilities in the southern campus expansion area in comparison to existing conditions. Significant impacts are not expected as the project proposed project would likely be consistent with the nearby developed areas, however, the north campus agricultural learning program area and southern campus expansion area fall within the boundary of the Oxnard-Camarillo Greenbelt and are currently used for agriculture; re-zoning is anticipated as part of the proposed project. Therefore, this conclusion may change, and potential impacts to the visual character or quality of the Site and its surroundings will be analyzed further in the EIR.

d. Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. The central portion of the project Site is a developed school campus with existing associated lighting. Improvements associated with the proposed project, including the development of southern campus expansion area would include additional exterior lighting (e.g., around buildings, walkways, sports fields, and parking lots) as needed for adequate safety and security at night. In addition, it is anticipated that portions of RDV would be used outside of school hours for community recreation. It is expected that project lighting will be consistent with City and County regulations. However, as the proposed project would introduce new sources of lighting, this conclusion may change, and this topic will be further analyzed in the EIR.

2.4.2 AGRICULTURE AND FOREST RESOURCES

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:		Note: Approximately 50 percent of the proposed southern campus expansion area has not been used for agricultural for over ten years. This area contains a farmhouse, farm equipment and tenant storage areas, a vehicle parking area, and a farmyard.			
a.	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	X			
b.	Conflict with existing zoning for agricultural use, or a Williamson Act contract?			X	
c.	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined in Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				X
d.	Result in the loss of forest land or conversion of forest land to non-forest use?				X
e.	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?			X	

Discussion:

a. Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Potentially Significant Impact. The City of Oxnard 2030 General Plan Program EIR (City of Oxnard 2009) accounted for the conversion of up to 2,215 acres of important farmland (defined as Prime Farmland and Farmland of Statewide Importance) to non-agricultural use and determined the impact to be significant and unavoidable. The City certified the 2030 General Plan Program EIR on October 11, 2011 that considered the possible environmental impacts of buildout to 2030: adding approximately 40,000 people to the City's population, development of all remaining vacant land within the Oxnard CURB Line; at least two parcels associated with the proposed project are proposed to be annexed to the City of Oxnard, and as such, a corresponding SOI and City Urban Restriction Boundary (CURB) adjustment would occur.

The north campus agricultural learning program area and southern campus expansion area were identified as either Prime Farmland or Farmland of Statewide Importance by the California Department of Conservation (California Department of Conservation, Division of Land Resource Protection 2018). The proposed project would convert the approximately 11.1-acre southern campus expansion area from agricultural use to develop new educational and support facilities. At least two parcels associated with the proposed project are proposed to be annexed to the City of Oxnard, it is anticipated that consultation with the Ventura County Planning division and Agricultural Commissioner for implementation of appropriate mitigation, if feasible, will occur (Ventura County 2020a).

Results of the consultation as well as further review of available resources with regard to mitigation, including but not limited to the recently released *Teal Club Specific Plan Recirculated Draft EIR* (City of Oxnard 2021a), will determine the type and/or feasibility of mitigation. Every effort will be made to mitigate potentially significant impacts to Prime Farmland and/or Farmland of Statewide Importance. Should the analyses conducted as part of the EIR determine mitigation to be feasible, the level of impact post mitigation regarding the conversion of Farmland to non-agricultural use will be determined and thoroughly discussed. Therefore, this topic will move forward to the EIR.

b. Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

Less Than Significant Impact. The proposed project Site is not subject to any Williamson Land Conservation Act (LCA) contracts. Based on similar projects in the area, significant impacts are not expected, however, re-zoning of agricultural land is anticipated as part of the proposed project. Therefore, this conclusion may change, and this topic will be further analyzed in the EIR.

c. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Public Resources Code section 12220(g)), timberland (as defined in Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. There is no forest timberland located on the project Site. Nor is the project Site zoned for timberland use as identified above. Therefore, the proposed project would not conflict with zoning for, or cause rezoning of, forest land or timberland and this issue will not be further analyzed in the EIR.

d. Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. There is no forest land located on the project Site. Therefore, the proposed project would not result in the loss of forest land or conversion of forest land to a non-forest use and this issue will not be further analyzed in the EIR.

e. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Less Than Significant Impact. There is no forest land located on or adjust to the project Site. Therefore, the proposed project would not individually or cumulatively result in the loss of forestland to non-forest use. The project is expected to implement appropriate and applicable policies, such as those in the County of Ventura Agriculture/Urban Buffer Policy, and appropriate and applicable recommendations, such as those in Farming Near

Schools, A Community Guide for Protecting Children (Ag Futures Alliance 2002). Based on similar projects in the area, significant impacts are not expected, however, portions of the project Site are currently used for agriculture and implementation of the proposed project would convert the southern campus expansion area to a non-agricultural use. Further review of available resources including but not limited to the recently released *Teal Club Specific Plan Recirculated Draft EIR* (City of Oxnard 2021a) will be discussed in the forthcoming EIR. Therefore, this conclusion may change, and this topic will be further analyzed in the EIR.

2.4.3 AIR QUALITY

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:					
a.	Conflict with or obstruct implementation of the applicable air quality plan?			X	
b.	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?		X		
c.	Expose sensitive receptors to substantial pollutant concentrations?			X	
d.	Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			X	

Discussion:

a. Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. The project Site is located within Ventura County, and annexation of at least two parcels associated with the proposed project to the City of Oxnard is anticipated as part of the proposed project. The Ventura County Air Pollution Control District (VCAPCD) is the agency responsible for attaining federal and state clean air standards within Ventura County. To pursue improvement of air quality in Ventura County, the Ventura County Air Pollution Control Board has adopted the 2016 Ventura County Air Quality Management Plan (AQMP), which presents a comprehensive list of pollution control strategies aimed at attaining Ventura County's federal 8-hour ozone standard by 2020 as required by the Clean Air Act Amendments of 1990. These strategies are developed, in part, based on regional population, housing, and employment projections prepared by the Southern California Association of Governments and reflected in local general plans (VCAPCD 2017). A proposed project that is inconsistent with a local general plan is also inconsistent with the AQMP. A proposed project could be inconsistent with a general plan if it resulted in a land use re-designation, causing a general plan amendment and an increase in population beyond what is budgeted. Based on similar projects in the area, significant impacts are not expected, however this conclusion may change; an air quality study will be conducted for the proposed project, and this issue will be further analyzed and discussed in the EIR.

b. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less Than With Mitigation Incorporated. The proposed project will result in significant cumulative impacts if it exceeds daily thresholds of significance established by VCAPCD, or if it incurs an increase of emissions beyond what is planned for in the Ventura County General Plan (Ventura 2020a). Based on similar projects in the area, significant impacts are not expected or will be reduced to less than significant with mitigation. Nonetheless, this

conclusion may change; an air quality study will be prepared for the proposed project and this issue will be analyzed further in the EIR.

c. Would the project expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. The proposed project includes campus expansion components to help meet the educational needs of District students and recreational needs of the El Rio community. The proposed project is anticipated to have a less than significant impact on sensitive receptors. Nonetheless, an air quality study will be prepared for the proposed project and this issue will be analyzed further in the EIR.

d. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. While the northern boundary of the project would be adjacent to agricultural fields, the types of crops grown at these fields are not anticipated to create objectionable odors. Operation of the proposed project is not expected to create objectionable odors since its primary function is to provide educational services. Nonetheless, this conclusion may change; an air quality study will be prepared for the proposed project and this issue will be analyzed further in the EIR.

2.4.4 BIOLOGICAL RESOURCES

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?		X		
b.	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				X
c.	Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				X
d.	Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?		X		
e.	Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?		X		
f.	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				X

Discussion:

a. Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?

Less Than with Mitigation Incorporated. The project Site currently consists of approximately 20.2-acres of existing school facility, 10-acres of active agricultural lands to the north and 11.1-acres to the south of the existing campus buildings. The project Site is located within an urban environment, adjacent to agricultural land to the north

and east, Rose Avenue and residential land to the west, and commercial land in the form of car dealerships to the south.

Based on current and surrounding land use, the potential for candidate, sensitive, or special-status species or habitats is low within the project Site's geographic area. A general biological survey conducted on September 22, 2021, verified that the project Site is currently used as an active middle school campus and cultivation of row crops; no native vegetation communities occur within the Site boundary. During the biological survey, a total of 53 plant species (7 native and 46 non-native) and 15 native wildlife species were observed on Site. A stand of mature oak trees (some native) is present in the eastern portion of the existing school campus (see Figure 1-2); the proposed project will avoid impacts to this stand of oak trees, as shown in Figure 1-3. Other natives such as big saltbush (*Atriplex lentiformis* – observed at the boundary of the southern parcel and Rose Avenue) and jimsonweed (*Datura wrightii* – observed behind an existing building on the school campus) observed on-Site occur mostly along parcel boundaries where there is less human disturbance. The native black sage (*Salvia mellifera*) is used in some ornamental planters on the existing RDV campus Site. Wildlife observed throughout all portions of the project Site included species such as dark-eyed junco (*Junco hyemalis*), Cassin's kingbird (*Tyrannus vociferans*), western meadowlark (*Sturnella neglecta*), and California ground squirrel (*Spermophilus beecheyi*).

A query of the California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDB) was conducted to determine the known locations of any special-status species or habitats (sensitive, threatened, endangered, rare, or candidate species) within and surrounding the project Site. The special-status species presented in Table 2-1 are those with any chance of potentially occurring within or adjacent to the project Site based on regional occurrence and habitat present on the project Site (CDFW 2021). Due to the current land use of the Site and plant list established during the general biological survey, there is no potential for special-status plants to occur on the project Site.

Table 2-1. Special-Status Wildlife Species with Potential to Occur

Common Name	Scientific Name	Federal Status / State Status	Other Status
Birds			
burrowing owl	*Athene cunicularia*	- / -	S, SSC, BCC
ferruginous hawk	*Buteo regalis*	- / -	WL, BCC
white-tailed kite	*Elanus leucurus*	- / -	S, FP
California horned lark	*Eremophila alpestris actia*	- / -	WL
American peregrine falcon	*Falco peregrinus anatum*	FD / SD	FP, BCC
Insects			
Crotch bumble bee	*Bombus crotchii*	- / CE	- / -
Mammals			
pallid bat	*Antrozous pallidus*	- / -	S, SSC
Mexican long-tongued bat	*Choeronycteris mexicana*	- / -	SSC
western mastiff bat	*Eumops perotis californicus*	- / -	S, SSC

Notes: Results based on CNDDB query for six regional quadrangles (Oxnard, Ventura, Saticoy, Santa Paula, Camarillo, Point Mugu).
BCC = USFWS Birds of Conservation Concern
CE = Candidate Endangered
FD = Federally delisted
FP = CDFW Fully Protected
S = BLM Sensitive Species
SD = State delisted
SSC = CDFW Species of Special Concern
WL = CDFW Watch List

While no special status species were observed during the biological Site visit, potential habitat for special status species, such as mature trees for nesting raptors and other birds and suitable burrows for burrowing owl, was observed. Direct removal of trees, use of heavy machinery, and/or significant ground disturbance during construction activities has the potential to disturb special status species, if present, and mitigation may be required; mitigation, if needed, will be defined in the forthcoming EIR. Nonetheless, this conclusion may change, and this issue will be further analyzed in the EIR.

b. Would the project have a substantial adverse impact on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?

No Impact. The CNDDB query identified nine sensitive habitat types within a six-quadrangle search around the project Site including:

- Southern California Coastal Lagoon;
- Southern California Steelhead Stream;
- Valley Needlegrass Grassland;
- Southern Coastal Salt Marsh;
- Coastal and Valley Freshwater Marsh;
- Southern Coast Live Oak Riparian Forest;
- Southern Sycamore Alder Riparian Woodland;
- Southern Riparian Scrub; and
- California Walnut Woodland.

None of the sensitive habitats listed above occur on or within the vicinity of the project Site. The project Site is located within an urban environment, adjacent to agricultural land to the north and east, Rose Avenue and residential land to the west, and commercial land in the form of car dealerships to the south. No native vegetation communities were documented on the project Site during the general biological survey conducted on September 22, 2021. A stand of mature oak trees is present in the eastern portion of the existing RDV campus, however given the small size of the stand of trees, and the historical and current land use of the Site and vicinity, these oak trees are not considered to make up an oak woodland vegetation community on-Site. Furthermore, the proposed project will avoid impacts to this stand of oak trees, as shown in Figure 1-3. Ornamental species such as lemon scented gum (*Eucalyptus citriodora*), jacaranda tree (*Jacaranda* sp.), and rose (*Rosa* sp.) dominated the existing RDV campus Site and cultivated red raspberry (*Rubus strigosus*) dominated both the northern and southern agricultural areas. Therefore, the proposed project would have no impact on any riparian habitat or other sensitive natural community and this issue will not be discussed further in the EIR.

c. Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. During the general biological survey conducted on September 22, 2021, no jurisdictional wetlands were identified on, or directly adjacent to the project Site. Drainage features on the project Site consisted of both paved and unpaved swales/gutters, and agricultural drainage ditches. The U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory identifies the nearest wetland waters occurring approximately 0.4 mile to the north of the project Site (USFWS 2021). These wetland waters include a group of excavations characterized as freshwater ponds, that are artificially flooded. Swales and gutters on the project Site serve as stormwater drainage features. Agricultural drainage ditches observed on the project Site were used and maintained strictly for agricultural crop irrigation. Drainage features on the project Site were determined to be isolated features with no connection to a navigable water (i.e., they are not adjacent to wetlands) and do not qualify as Waters of the U.S., and therefore, are

not jurisdictional wetlands under Section 404 of the Clean Water Act. Drainage features were determined to be exempt from RWQCB jurisdiction under the State wetland definition and procedures (SWRCB 2019) since they are currently used and maintained strictly for agricultural crop irrigation, were created for the purposes of irrigation water catchment, storage, and distribution, and are not part of the natural landscape. Additionally, it was determined that CDFW would not have jurisdiction of the drainage features observed, since they did not have a defined bed, bank, and channel. Neither a change in sedimentation to differentiate a bed and bank nor an ordinary high-water mark were observed in the drainage features on-Site. The proposed project would not impact any areas outside of the project Site; as such, no impacts to protected wetlands would occur and this issue will not be discussed further in the EIR.

d. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?

Less Than with Mitigation Incorporated. The project Site is located within a developed urban environment. The project Site is not located within, or directly adjacent to, any known or mapped wildlife corridors or nursery sites; the Santa Clara River is the nearest established Habitat Connectivity and Wildlife Corridor and is approximately 1.5 miles northwest of the project Site (Ventura County 2019). Vegetation that is currently on-Site, particularly mature trees, may serve as potential nesting areas; one large inactive stick nest was observed in a eucalyptus tree at the southern boundary of the existing RDV campus. A stand of mature oak trees (some native) is present in the eastern portion of the existing school campus (see Figure 1-2); the proposed project will avoid impacts to this stand of oak trees, as shown in Figure 1-3. The proposed project includes facility updates and expansion that may require the removal of other trees on Site. Any trees removed due to the proposed project will be in compliance with City requirements. Mitigation may be required for the removal of trees on Site, or increased disturbance in the area; mitigation, if needed, will be defined in the forthcoming EIR. Nonetheless, this conclusion may change, and this issue will be further analyzed in the EIR.

e. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less Than with Mitigation Incorporated. The developed RDV campus, north campus agricultural learning program area, and southern campus expansion area all currently reside in the unincorporated County of Ventura; at least two parcels associated with the proposed project are proposed to be annexed to the City of Oxnard. Ventura County has a tree protection ordinance that applies to the pruning (beyond specified limits), removal, trenching, excavation, or other encroachment into the protected zone (5 feet outside the canopy's edge and a minimum of 15 feet from the trunk) of protected trees in unincorporated areas. In the non-coastal zone, protected trees include all oaks and sycamores 9.5 inches in circumference or larger (measured at least 4.5 feet above ground), trees of any species with a historical designation, trees of any species 90 inches in circumference or larger, and most 9.5-inch in circumference or larger native trees that are located in the Scenic Resources Protection Zone (Ventura County 2008). The City of Oxnard does not have a tree preservation policy or ordinance, however The City's urban landscape is considered an important aesthetic resource (City of Oxnard 2006). Additionally, local agencies, such as the City of Oxnard Planning Department, aid in the protection and preservation of sensitive natural resources by exercising land use controls. The Background Report of the City of Oxnard's 2030 General Plan Program EIR (City of Oxnard 2009) combined with other General Plan Elements and the Oxnard CEQA Guidelines, strive to achieve this control in defining certain goals and policies for the conservation of sensitive natural resources. A stand of mature oak trees (some native) is present in the eastern portion of the existing school campus (see Figure 1-2); the proposed project will avoid impacts to this stand of oak trees, as shown in Figure 1-3. The proposed project includes facility updates and expansion that may require the removal of other trees on Site. Any trees removed due to the proposed project will be in compliance with City requirements, including the City's Landscape Standards (City of Oxnard 1988). If needed, mitigation will be defined in the forthcoming EIR. Nonetheless, this conclusion may change, and this issue will be further analyzed in the EIR.

f. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The project Site is not included in any state, regional, or local habitat conservation plans (CDFW 2019). The proposed project would adhere to the goals included as part of the Conservation and Open Space Element included within the Ventura County General Plan (Ventura County 2020a). Compliance with Save Our Open Space and Agricultural Resources (SOAR) initiatives are discussed as part of the Land Use and Planning impact analysis (2.4.11) for the proposed project. Therefore, no project impacts would occur, and this issue will not be discussed further in the EIR.

2.4.5 CULTURAL RESOURCES

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?		X		
b.	Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?		X		
c.	Disturb any human remains, including those interred outside of formal cemeteries?		X		

Discussion:

a. Would the project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Less Than Significant with Mitigation Incorporated. Section 15064.5(a) of the CEQA Guidelines generally defines a historical resource as one that is (a) listed in, or eligible for listing in, the California Register of Historical Resources, (b) listed in a local register of historical resources, (c) identified as significant in a historical resource survey (meeting the requirements of Section 5024.1(g) of the Public Resources Code [PRC]), or (d) determined to be a historical resource by a project's lead agency. Cultural resources include historic buildings, structures, artifacts, sites, and districts of historic, architectural, or archaeological significance.

A California Historical Resources Information System (CHRIS) record search was conducted of the project Site and 0.5-mile radius via the South-Central Coastal Information Center (SCCIC), California State University, Fullerton, on November 9, 2021. The SCCIC results indicate no previously recorded historical resources are present within the project Site. Three previously conducted cultural resource surveys overlap with the project Site; these surveys were conducted over 20 years ago and are considered out of date. Review of historic topographical maps and aerial photographs indicate two historic era-built environment resources are within the project Site and are not yet formally recorded. A California Native American Heritage Commission (NAHC) Sacred Lands File Search (SLF) was submitted for the proposed project on September 8, 2021. The NAHC replied on October 13, 2021, that the SLF results were negative for the project Site.

Based on the existing Site conditions and results of the CHRIS and SLF searches, a Phase I Archaeological Survey and a Built Environment Survey will be conducted for the proposed project Site. The results of these two technical studies will be reported on in the forthcoming EIR. This conclusion may change, and this issue will be evaluated further in the EIR.

b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Less Than Significant with Mitigation Incorporated. As noted above, the CHRIS search results, conducted via the SCCIC, were negative for previously recorded archaeological resources within the project Site. Based on the desktop study, two built environment historic era resources are present within the project Site and are not yet formally recorded. Based on existing conditions, significant archaeological resources are not expected to be located on the project Site. However, a Phase I Archaeological Survey and a Built Environment Survey will be conducted

and reported on in the forthcoming EIR. This conclusion may change, and this issue will be evaluated further in the EIR.

c. Would the project disturb any human remains, including those interred outside of formal cemeteries?

Less Than Significant with Mitigation Incorporated. As noted above, the CHRIS search results were negative for previously recorded archaeological resources within the project Site. Based on existing conditions, the potential to disturb human remains is unlikely. However, a Phase I Archaeological Survey and a Built Environment Survey need to be conducted for the proposed project Site. These two technical studies related to cultural resources will be conducted and results reported in the forthcoming EIR.

Existing regulations require that if human remains and/or cultural items defined by the Health and Safety Code, Section 7050.5, are inadvertently discovered, all work in the vicinity of the find would cease and the Ventura County Coroner would be contacted immediately. If the remains are found to be Native American as defined by Health and Safety Code, Section 7050.5, the coroner will contact the NAHC by telephone within 24 hours. The NAHC shall immediately notify the person it believes to be the Most Likely Descendant (MLD) as stipulated by California PRC, Section 5097.98. The MLD(s), with the permission of the landowner and/or authorized representative, shall inspect the site of the discovered remains and recommend treatment regarding the remains and any associated grave goods. The MLD shall complete their inspection and make their recommendations within 48 hours of notification by the NAHC. Any discovery of human remains would be treated in accordance with Section 5097.98 of the Public Resources Code (PRC) and Section 7050.5 of the Health and Safety Code. A Phase I Archaeological Survey and AB52/SB18 Tribal consultation, both of which could identify the potential for human remains, will be conducted and results reported in the forthcoming EIR. This conclusion may change, and this issue will be evaluated further in the EIR.

2.4.6 ENERGY

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			X	
b.	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X	

Discussion:

a. Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less Than Significant Impact. The proposed project is intended to meet the educational, recreational, and support facilities needs of District students, and would be designed and constructed to required green building code standards and thereby the inefficient or unnecessary consumption of energy is not anticipated. According to CEQA Guidelines Appendix F, the goal of conserving energy implies the wise and efficient use of energy. The means of achieving this goal include: 1) decreasing overall per capita energy consumption; 2) decreasing reliance on natural gas and oil; and 3) increasing reliance on renewable energy resources.

Short-Term Energy Use

The construction phase associated with the proposed project is temporary, and it ends once the proposed project is built, and associated construction activities are completed. During the construction phase, energy consumption will result primarily from fuel used to power off-road construction equipment, material delivery and removal trucks, and vehicles used by employees to travel to the job Site. Construction equipment and trucks would be subject to applicable regulations which include anti-idling measures and use of efficient engines. These measures would prevent the unnecessary use of energy and inefficient equipment.

RSD buses will remain at the current District Transportation and Parking Facility on Vineyard Avenue (former El Rio Elementary School) until June 14, 2022. On June 14, 2022, RSD buses will be moved to a temporary parking facility located at Oxnard School District Transportation Center (near 516 W. Wooley Road). This temporary bus parking location will be utilized until bus parking facilities included as part of the proposed project at RDV become available; temporary bus parking per the interim joint use agreement approved at the District board meeting on March 16, 2022, is anticipated for a period of one year pursuant to the District's current agreement with the Oxnard School District. The temporary parking facility located at Oxnard School District Transportation Center is not considered part of the proposed project, and therefore is not analyzed for significant environmental effects in this Initial Study. RSD would have lost access to the current District Transportation and Parking Facility on Vineyard Avenue in June 2022, regardless of the proposed project.

There are no identified aspects of the proposed project that would incur unnecessary or inefficient use of energy. Thus, the construction of the proposed project is not anticipated to result in wasteful, inefficient, or unnecessary use of energy.

Long-Term Energy Use

The proposed project will require energy to conduct day to day operations. Energy consumption at the project Site will result from the use of electricity and potential natural gas use to power various assets including appliances, equipment, light fixtures, landscape controls and equipment. Energy consumption will also result from vehicles such as delivery trucks, school buses, and personal owned vehicles used by RDV staff and to drop off and pick up students.

The proposed project would be designed to be consistent with the City of Oxnard Energy Action Plan which implements 2030 General Plan goals and strategies and/or the energy resource goals stated in the Ventura County General Plan and constructed to require green building code standards.

RDV currently holds the largest portion of bused students within the District, and the proposed long-term bus parking on Site will minimize bus miles travelled to and from the RDV campus. Additionally, given the proximity of the proposed project to the surrounding housing developments in which the school serves, students may elect to walk to school, further minimizing vehicle trips. Therefore, the proposed project would not result in unnecessary consumption of energy resources, and this issue will not be further analyzed in the EIR.

b. Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less Than Significant Impact. The proposed project would be designed to be consistent with the City of Oxnard Energy Action Plan which implements 2030 General Plan goals and strategies, the County of Ventura 2040 General Plan Energy Resource Conservation polices and constructed to required green building code standards. Additionally, the proposed project shall be designed to comply with California requirements for energy conservation standards codified in CCR Title 24, Part 6. Therefore, the proposed project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency, and this issue will not be further analyzed in the EIR.

2.4.7 GEOLOGY AND SOILS

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
	i.) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X	
	ii.) Strong seismic ground shaking?			X	
	iii.) Seismic-related ground failure, including liquefaction?			X	
	iv.) Landslides?			X	
b.	Result in substantial soil erosion or the loss of topsoil?		X		
c.	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in an on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?			X	
d.	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?		X		
e.	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?				X
f.	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		X		

Discussion:

a. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. The project Site is not located within a designated Alquist-Priolo Earthquake Hazard Zone (CGS 2018). There are no known active faults beneath or trending toward the Site, therefore, the probability of surface rupture due to faulting at the Site is considered low. Therefore, this issue will not be discussed further in the EIR.

ii. Strong seismic ground shaking?

Less Than Significant Impact. The *City of Oxnard General Plan Draft Background Report* (City of Oxnard 2006) indicates that even though the historic record indicates that no strong earthquakes or surface displacement have occurred along the faults in southern Ventura County in the Site area. The project would be constructed with adherence to applicable regulatory guidelines and standards reducing the potential for impacts, however, the likelihood of the occurrence of one or more of such events within the next 50 to 100 years is not remote. A preliminary geotechnical assessment will be conducted for the proposed project, and results reported in the forthcoming EIR. This conclusion may change, and this issue will be analyzed further in the EIR.

iii. Seismic-related ground failure, including liquefaction?

Less Than Significant Impact. Generally, there is a potential for liquefaction when the following three conditions are met: (1) a site is located on Holocene age, unconsolidated, coarse-grained sediments; (2) the site is in area of potentially strong ground motion; and (3) groundwater is less than 50 below ground surface (bgs). The *Seismic Hazards* Zone *Report for the Oxnard 7.5-Minute Quadrangle, Ventura County California* (CGS 2002a), *State of California Seismic Hazard Zones Oxnard Quadrangle, Revised Official Map* (CGS 2002b), and Figure 6-1 of the *City of Oxnard General Plan Draft Background Report* (City of Oxnard 2006) indicates that the Site is located in a recognized geological hazard zone for earthquake induced liquefaction. This finding in these data is based on the assumptions that the Site area is underlain by coarse grained Holocene age sediments, which are generally considered have a significant liquefaction potential, and because the depth to groundwater for the Site area is estimated to be less than 50 feet bgs. The project would be constructed with adherence to applicable regulatory guidelines and standards reducing the potential for impacts. However, the Site is located in a potential liquefaction zone. A preliminary geotechnical assessment will be conducted for the proposed project, and results reported in the forthcoming EIR. This conclusion may change, and this issue will be analyzed further in the EIR.

iv. Landslides?

Less Than Significant Impact. On the basis of Site reconnaissance performed by Tetra Tech on July 21, 2020 (Tetra Tech 2020a) and April 20, 2021 (Tetra Tech 2021a), a review of the CGS Seismic Hazards Map for the 7.5 Minute Series Oxnard Quadrangle (CGS 2002b) and Section 6.2.2 of the *City of Oxnard General Plan Draft Background Report* (City of Oxnard 2006) indicates that the project Site is not in an area prone to landslides and slope instability. Therefore, project impact is less than significant, and this issue will not be discussed further in the EIR.

b. Would the project result in substantial soil erosion or the loss of topsoil?

Less Than Significant with Mitigation Incorporated. Portions of the project Site are currently used for agriculture. The project would be constructed with adherence to applicable regulatory guidelines and standards reducing the potential for soil erosion impacts, however, soil erosion would potentially occur during construction activities,

including Site grading, structure assembly, and utility extension and additional mitigation may be required for soil erosion and the loss of topsoil. This conclusion may change, and this issue will be analyzed further. A preliminary geotechnical assessment and a drainage report will be conducted for the proposed project, and results reported in the forthcoming EIR; mitigation, if needed, will be defined in the forthcoming EIR.

c. Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslides, lateral spreading, subsidence, liquefaction, or collapse?

Less Than Significant Impact. As documented above in response 2.4.7 a. iv., the project Site is not in an area prone to landslides or slope instability. Therefore, project impact with regard to landslides and slope instability is less than significant and will not be further discussed.

As documented above in response 2.4.7 a. iii., the *Seismic Hazards* Zone *Report for the Oxnard 7.5-Minute Quadrangle* (CGS 2002a), *State of California Seismic Hazard Zones Oxnard Quadrangle, Revised Official Map* (CGS 2002b), and Figure 6-1 of the *City of Oxnard General Plan Draft Background Report* (City of Oxnard 2006) indicate that the Site is located in a recognized geological hazard zone for earthquake induced liquefaction. The project would be constructed with adherence to applicable regulatory guidelines and standards reducing the potential for impacts. However, the Site is located in a potential liquefaction zone. A preliminary geotechnical assessment will be conducted for the proposed project, and results reported in the forthcoming EIR. This conclusion may change, and this issue will be analyzed further in the EIR.

d. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less Than Significant with Mitigation Incorporated. The project would be constructed with adherence to applicable regulatory guidelines and standards reducing the potential for impacts, however, the expansiveness of upper project Site soils have not been evaluated by a qualified California registered geotechnical engineer and additional mitigation may be required. This conclusion may change, and this issue will be analyzed further. A preliminary geotechnical assessment will be conducted for the proposed project, and results reported in the forthcoming EIR; mitigation, if needed, will be defined in the forthcoming EIR.

e. Would the project have soils that are incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. The proposed project would not use septic tanks or alternative wastewater disposal systems and no project impact would result. Therefore, this issue will not be discussed further in the EIR.

f. Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant with Mitigation Incorporated. Based on the review of geologic maps for the Site (Clahan 2003, Turner and Mukae 1975), the project Site is underlain at the ground surface by Holocene deltaic alluvium and wash fan deposits to approximately 70 feet bgs. These are conformably underlain by upper Pleistocene alluvial sand and gravel deposits to approximately 400 feet bgs, and the marine – non-marine clays and gravels of the Lower Pleistocene San Pedro formation to approximately 2,000 feet bgs. Older alluvial deposits, upper Pleistocene and older deposits have the potential to contain paleontological resources. Based on the estimated depth of Holocene-age deposits (to at least 70 feet bgs), surficial ground disturbance is unlikely to encounter or cause a substantial adverse change in significance to a paleontological resource (Turner and Mukae 1975). However, if project ground disturbing construction depths exceed the Holocene age deposits or grading encounters shallow Pleistocene deposits, paleontological resources may be exposed. This conclusion may change, and this issue will be evaluated further in the EIR.

2.4.8 GREENHOUSE GAS EMISSIONS

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
b.	Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			X	

Discussion:

a. Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact. The project Site is located within Ventura County, and annexation of at least two parcels associated with the proposed project to the City of Oxnard is anticipated as part of the proposed project. The VCAPCD is the agency responsible for attaining federal and state clean air standards within Ventura County. The proposed project would generate GHGs during construction and operation activities. Pursuant to state law (CEQA Guidelines 15064.7), VCAPCD is authorized to adopt thresholds of significance for GHG emissions. To date, VCAPCD has evaluated multiple options, but has not decided to adopt any of these options. Additionally, a proposed project that is inconsistent with a local general plan is also inconsistent with the Ventura County AQMP. A proposed project could be inconsistent with a general plan if it resulted in a land use re-designation, causing a general plan amendment and an increase in population beyond what is budgeted. A land use re-designation is anticipated as part of the proposed project.

RSD buses will remain at the current District Transportation and Parking Facility on Vineyard Avenue (former El Rio Elementary School) until June 14, 2022. On June 14, 2022, RSD buses will be moved to a temporary parking facility located at Oxnard School District Transportation Center (near 516 W. Wooley Road). This temporary bus parking location will be utilized until bus parking facilities included as part of the proposed project at RDV become available; temporary bus parking per the interim joint use agreement approved at the District board meeting on March 16, 2022, is anticipated for a period of one year pursuant to the District's current agreement with the Oxnard School District. The temporary parking facility located at Oxnard School District Transportation Center is not considered part of the proposed project, and therefore is not analyzed for significant environmental effects in this Initial Study. RSD would have lost access to the current District Transportation and Parking Facility on Vineyard Avenue in June 2022, regardless of the proposed project.

Based on similar projects in the area, significant impacts are not expected. Nonetheless, GHGs resulting from the proposed project will be calculated using the latest version of California Emissions Estimator Model (CalEEMod), and results reported on in the forthcoming EIR. This conclusion may change, and this issue will be further analyzed in the EIR.

b. Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less Than Significant Impact. As noted above, a proposed project that is inconsistent with a local general plan is also inconsistent with the Ventura County AQMP. A proposed project could be inconsistent with a general plan if it

resulted in a land use re-designation, causing a general plan amendment and an increase in population beyond what is budgeted. A land use re-designation is anticipated as part of the proposed project. Based on similar projects in the area, significant impacts are not expected. Nonetheless, GHGs resulting from the proposed project will be calculated using CalEEMod, and results will be reported in the EIR. Using these results, the proposed project will be thoroughly analyzed in the EIR for potential conflict(s) with applicable plans, policies, or regulations of an agency adopted for the purpose of reducing the emissions of GHGs. This conclusion may change, and this issue will be evaluated further.

2.4.9 HAZARDS AND HAZARDOUS MATERIALS

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b.	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X	
c.	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?		X		
d.	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?		X		
e.	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?			X	
f.	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			X	
g.	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?			X	

Discussion:

a. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. The proposed project would not handle or generate large quantities of hazards materials. Potential hazardous materials used on-Site include those needed during short term temporary construction activities such as architectural coatings and sealants. During long term operations, potential hazardous materials stored at the 20.2-acre main campus and southern 11.1-acre school and vehicle parking facilities area would include cleaners (e.g., disinfectants, bleach) and office supplies (e.g., toner). As is standard for schools,

these materials would be kept in cabinets or supply rooms and therefore, would not be considered a hazard to students, staff, or the public. Nonhazardous organic farming fertilizers and pesticides will continue to be used at the northern 10.0-acre parcel. No agricultural products will be stored on the northern 10.0-acre parcel. Therefore, project impact would be less than significant, and this issue will not be discussed further in the EIR.

b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less Than Significant Impact. The proposed project would not create a significant hazard to the public or the environment involving the likely release of hazardous materials. As noted in response 2.4.9 a) above; the proposed project would be a public school, vehicle parking areas, and organic farming area that would not handle or generate large quantities of hazardous materials. Common hazardous materials needed for routine maintenance and operations would be stored in small quantities in cabinets and supply rooms. Hazardous materials on campus would be limited and stored away from students and the public. Therefore, project impact would be less than significant, and this issue will not be discussed further in the EIR.

c. Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less Than Significant with Mitigation Incorporated. The proposed project includes development within the expanded campus which would occur in two phases, as detailed in Section 1.5. Figure 1-3 shows the Conceptual Site Master Plan. As noted above, the expanded middle school and organic farm would not generate hazardous emissions or use materials in hazardous quantities. The new District Transportation and Parking Facility proposed as part of the project would include the handling potentially hazardous materials and substances and generate hazardous waste. There are no plans to further develop the organic farm on the northern parcel at this time. If the organic farm on the northern parcel were developed in the future, any impacts from past agricultural activities or the development would be evaluated at that time.

Radon is a naturally occurring, odorless, colorless gas produced by certain geologic materials. It is known to be a human carcinogen and can pose a cancer risk greater than one in one million in humans at concentrations equal to or greater than 4 picoCuries per liter (pCi/L). The EDR environmental database search indicated that Ventura County is in a Radon Zone 1 area. Zone 1 areas have a predicted average indoor screening level greater than 4 pCi/L. The EDR database search reported that of 18 sites listed in the California Radon database that have been tested for the zip code of 93036, one had radon at levels greater than 4 pCi/L. The Federal Area Radon Information database reported 135 sites tested for radon in the 93036-zip code. The average concentration of tested sites was 1.185 pCi/L in first floor living areas (EDR 2021). The EDR report gives a passing result for the project Site with no further action required. These findings suggest there are no health concerns related to radon at the Site.

Potential hazardous materials use and storage at the Site in the past from agriculture practices is discussed below. Because the District Transportation and Parking Facility would include the handling of potentially hazardous materials and substances and generate hazardous waste, the potential impact to the Site will be evaluated further as discussed in the EIR. This conclusion may change, and this issue will be further analyzed in the EIR.

d. Would the project be located on a site which is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less Than Significant with Mitigation Incorporated. Based on information provided in the 2020 Phase I ESA (Tetra Tech 2020a) for the northern 10.0-acre parcel and 2021 Phase I ESA (Tetra Tech 2021a) for the southern 11.2-acre parcel, the proposed project Site would not be located on a site included on a list of hazardous material sites. A Phase I ESA has not been performed for the 20.2 main campus; however, the information reviewed for the surrounding properties in the 2020 Phase I ESA (Tetra Tech 2020a) for the northern 10.0-acre parcel and 2021

Phase I ESA (Tetra Tech 2021a) for the southern 11.2-acre parcel indicates that it is also not included on a list of hazardous material sites.

A Phase II ESA (Tetra Tech 2020b) was performed for the northern 10.0-arcre parcel to assess three recognized environmental concerns (RECs) identified in the Phase I ESA:

- REC 1: Potential former agricultural pesticide application (specifically organochlorine pesticides [OCPs] and arsenic pesticides);
- REC 2: Potential bunker oil releases from potential former smudge pot frost abatement practices; and
- REC 3: Three pole-mounted electrical transformers potentially releasing dielectric fluids with polychlorinated biphenyl (PCB) to Site soils.

The Phase II ESA results indicated that the northern parcel was slightly impacted by OCPs (specifically dieldrin) and significantly impacted by diesel range total petroleum hydrocarbons (TPHd), and crude oil range total petroleum hydrocarbons (TPHc) from past agricultural production activities. The Phase II ESA Addendum (Tetra Tech 2021b) was completed to gather additional data to define the vertical and lateral extent of OCP and TPHd and TPHc impacted soil at the northern parcel and perform a human health risk screening evaluation. The findings from the Phase II ESA Addendum indicate that the vertical and lateral extent of dieldrin and TPHd and TPHc at concentration equal to or exceeding their relevant screening levels was confined to the surface soil in the vicinity of the samples where they were detected. Information provided by Reiter Affiliated Companies (the tenant performing the organic farming at the northern parcel) indicated that it is was likely that the TPHd and TPHc detected at the northern parcel was from a non-toxic organic mineral oil based miticide used at the northern parcel. The human health risk screening evaluation results indicated that risks associated with residential exposure to maximum detections of detected pesticides in surface soil of the northern parcel are 1×10^{-6} and meets the DTSC target risk of 1×10^{-6}. Therefore, future unrestricted use of the northern parcel is supported based on the human health risk screening evaluation. Tetra Tech determined that no further action is recommended for the northern parcel for as long as the northern parcel is used for agricultural production. Therefore, this issue for the northern parcel will be not evaluated further in the EIR.

A Phase II ESA (Tetra Tech 2021c) was performed for the southern 11.2-acre parcel to assess five recognized environmental concerns (RECs) identified in the Phase I ESA:

- REC 1: Potential former agricultural pesticide application (OCPs and arsenic pesticides);
- REC 2: Potential bunker oil releases from potential former smudge pot frost abatement practices;
- REC 3: Observed vehicle-related hydrocarbon and potentially toxic metals releases to surface and near surface soil at the Site from recent storage of junk automobiles and vehicle parking at the Site;
- REC 4: Observed releases to surface and from near surface soil from two diesel and one gasoline above ground storage tanks (ASTs) at the Site; and
- REC 5: Three pole-mounted electrical transformers potentially releasing dielectric fluids with polychlorinated biphenyl (PCB) to Site soils.

The Phase II ESA results indicated that the southern parcel surface soils are impacted by total purgeable petroleum hydrocarbons (TPPH), TPHd, and hydraulic oil/motor oil total petroleum hydrocarbons (TPHh/m) released from the junk vehicles previously stored at the southern parcel and fuel storage ASTs. TPPH, TPHd and TPHh/m were detected in the southern parcel surface soils at concentrations exceeding relevant screening levels. Tetra Tech recommends that the RSD submit the Phase I ESA report (Tetra Tech 2021a) and Phase II ESA report (Tetra Tech 2021c) to the DTSC and enter the southern parcel into the DTSC Voluntary Cleanup Program (VCP). The Phase I ESA report and this Phase II ESA report should be used to support implementing potential remedies for the areas of shallow soil impacted with TPPH, TPHd and TPHh/m at concentrations exceeding the screening levels including either a Housekeeping Removal Action and/or the execution of land use covenants (LUCs). It is expected that with implementation of these remedies, any significant impacts will be reduced to less than significant; these remedies

will likely take the form of mitigation measures, which if needed, will be defined in the forthcoming EIR. This conclusion may change, and this issue particularly for the southern parcel will be evaluated further in the EIR.

e. For a project located within an airport land use plan area or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Less Than Significant Impact. California Code of Regulations Title 21 requires the State Department of Transportation to review any proposed school site that is located within two nautical miles of a runway. Based on review of a Google Earth Pro 2021 and AirNav.com (AirNav.com 2021), no airports are located within two nautical miles of the Site. The Oxnard Airport is located approximately 3.3 nautical miles southwest of the Site, and the Camarillo Airport is located approximately 3.3 nautical miles southeast of the Site. The Site is located within two nautical miles of a heliport. The St John's Regional Medical Center Heliport is located approximately 0.96 nautical miles south of the Site (AirNav.com 2021). This heliport is not identified as a primary noise source in the City of Oxnard's General Plan Noise Element (City of Oxnard 2011), nor is it called out in the Ventura County General Plan (Ventura County 2020a). Therefore, this heliport would not result in a safety hazard or excessive noise for people residing or working in the project area. Therefore, project impact is less than significant, and this issue will not be discussed further in the EIR.

f. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. The project Site is not located in or near a state responsibility area, nor is it within lands classified as very high fire hazard severity zones (CalFire 2007). The project Site is not located on the City of Oxnard emergency evacuation routes as shown on the City of Oxnard's Disaster Preparedness website (City of Oxnard 2022b). The project Site is not located on the County of Ventura's tsunami evacuation routes as shown on the Ready Ventura County website (Ventura County 2022). Therefore, project impact is less than significant, and this issue will not be discussed further in the EIR.

g. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less Than Significant Impact. The *Ventura County Community Wildfire Protection Plan* (Ojai Valley Fire Safe Council 2010) (VCCWFPP) was created in accordance with Healthy Forest Restoration Act (HFRA) (enacted by the U.S. Congress in 2003) to serve as a Community Wildfire Protection Plan (CWPP) to protect communities at risk from wildland fires in Ventura County. The VCCWFPP defines an "at risk community" for wildland fires as:

- One that is listed in the notice entitled "Wildland Urban Interface Communities Within the Vicinity of Federal Lands That Are at High Risk From Wildfire";
- A community in which conditions are conducive to a large-scale wildland fire disturbance event; and
- A community for which a significant threat to human life or property exists as a result of a wildland fire disturbance event.

The VCCWFPP does not identify the project Site area as a "at risk community" for wildland fires. Therefore, project impact would be less than significant, and this issue will not be discussed further in the EIR.

2.4.10 HYDROLOGY AND WATER QUALITY

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?			X	
b.	Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			X	
c.	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
	i.) result in substantial erosion or siltation on- or off-site;			X	
	ii.) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;			X	
	(iii.) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or			X	
	(iv.) impede or redirect flood flows?				X
d.	In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?		X		
e.	Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			X	

Discussion:

a. Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less Than Significant Impact. At least two parcels associated with the proposed project are planned for annexation into the City of Oxnard, and additional sewer and water service from the City of Oxnard will be needed to accommodate the proposed project. Additional connection to a sanitary sewer main which conveys domestic wastewater to the Oxnard Wastewater Treatment Plant (OWTP) is anticipated as part of the proposed project.

The City of Oxnard provides existing sewer service to RDV through an extension of the sewer main in Rose Avenue to the RDV Site. Sewer service is proposed to be provided to the southern campus expansion area via a new

connection to the City of Oxnard sewer main, separate from the existing main campus sewer. The anticipated point of connection would be on Rose Avenue or Collins Street right of way. Sewer service for new improvements on the existing RDV parcel will be via connecting to the existing RDV sewer point of connection. These connection points assume adequate capacity of existing infrastructure and OWTP, located at 6001 South Perkins Road, Oxnard, California; the assumption of adequate capacity will be verified by the forthcoming sewer calculations. The OWTP, owned and operated by the City of Oxnard, is a secondary treatment facility that collects, treats, and disposes of wastewater within its service area with a dry weather capacity of 31.7 million gallons per day. The OWTP treats and discharges wastewater pursuant to National Pollutant Discharge Elimination System required Industrial Pretreatment Program (City of Oxnard 2021b). The project would generate domestic wastewater from restroom/sink facilities, which would be treated by the OWTP. The construction and operational impacts of the project will be in accordance with a Construction General Permit Storm Water Pollution Prevention Plan (SWPPP). The proposed project's southern campus expansion area will obtain potable water from a new connection to the City of Oxnard water system. The anticipated point of connection would be from an existing City water line(s) located in the Rose Avenue or Collins Street right of way. An approximately 8-inch diameter water line would deliver water from the City line to the proposed southern campus expansion area. It is anticipated that the improvements and expansions proposed on the existing campus parcel will utilize connections from existing service lines on the current RDV campus. The northern campus agricultural learning area will continue to utilize agricultural water from the existing well water source. Based on similar projects in the area, impacts are not expected to be significant, however, this conclusion may change; additional Site-specific studies including sewer calculations and a water demand analysis will be prepared and reported in the forthcoming EIR. Therefore, this issue will be further analyzed in the EIR.

b. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less Than Significant Impact. The proposed project is designed to meet the educational and recreational needs of students and the Rio community. Stormwater improvements are proposed as part of the project, such as a permanent storm water treatment basin adjacent to Collins Street (see Figure 1-3). Proposed Site improvements and land use changes, such as the addition of parking facilities and hardscape sports facilities, will increase impermeable surfaces on the Site. The construction and operational impacts of the project will be in accordance with a Construction General Permit Storm Water Pollution Prevention Plan (SWPPP). The proposed project's southern campus expansion area will obtain potable water from a new connection to the City of Oxnard water system. The 2015 Sustainable Groundwater Management Act (SGMA) required the establishment of a Groundwater Sustainability Agency (GSA) for each California groundwater basin, which is required to develop a Groundwater Sustainability Plan (GSP) that is submitted to the California Department of Water Resources by 2020. The GSPs are to describe the basin's sustainability goal, actions needed to achieve the goal in 20 years, a 50-year planning and implementation plan, and a monitoring program. The Fox Canyon Groundwater Management Agency (FCGMA) is the local GSA and has finalized a GSP for the Oxnard Subbasin. While the City of Oxnard is pursuing indirect potable reuse of recycled water, the City currently obtains water from three sources, which is blended to balance water quality and cost (MNS Engineers, Inc. 2018). The sources are:

- Groundwater pumped directly from the underlying aquifer, which is regulated by the FCGMA;
- Groundwater purchased from United Water Conservation District (UWCD), which is also under the FCGMA jurisdiction; and
- State Water Project water purchased from Metropolitan Water District of Southern California (MWD) as part of the local Calleguas Municipal Water District (CMWD).

Based on similar projects in the area, impacts are not expected to be significant, however, this conclusion may change; additional Site-specific studies including a water demand analysis will be prepared and reported in the forthcoming EIR. This issue will be further analyzed to confirm alignment with the goals and actions stated in the

GSP, and further evaluate the projects impact regarding groundwater. Therefore, this issue will be discussed further in the EIR.

c. Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:

i. Result in substantial erosion or siltation on- or off-site;

Less Than Significant Impact. The project Site is not located adjacent to the Santa Clara River or ephemeral or perennial surface streams. Therefore, the proposed project would not alter the course of a stream or river. However, the project would result in a change in the runoff patterns in the local area because due to Site improvements and land use changes, thereby increasing the amount of hardscape on the Site and potentially increasing runoff in the area. While all phases of the project will be in accordance with a Construction General Permit SWPPP and impacts are not expected to be significant, ground disturbance during the construction phase has the potential to impact erosion or siltation on- or off-Site. A drainage report will be prepared and reported in the forthcoming EIR. This conclusion may change, and the projects effects on erosion or siltation will be discussed further in the EIR.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

Less Than Significant Impact. The project Site is not located adjacent to the Santa Clara River or ephemeral or perennial surface streams. Therefore, the proposed project would not alter the course of a stream or river. Stormwater improvements are proposed as part of the project, such as a permanent storm water treatment basin adjacent to Collins Street (see Figure 1-3). The project would be designed to prevent downstream flooding, reducing impacts to less than significant. However, the project would result in a change in the runoff patterns in the local area because due to Site improvements and land use changes, thereby increasing the amount of hardscape on the Site and potentially increasing runoff in the area. A drainage report will be prepared and reported on in the forthcoming EIR. This conclusion may change, and this issue will be discussed further in the EIR.

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

Less Than Significant Impact. The project Site is not located adjacent to the Santa Clara River or ephemeral or perennial surface streams. Therefore, the proposed project would not alter the course of a stream or river. However, the project would result in a change in the runoff patterns in the local area because due to Site improvements and land use changes, thereby increasing the amount of hardscape on the Site and potentially increasing runoff in the area. While stormwater improvements are proposed as part of the project and impacts are not expected to be significant, this conclusion may change, and further analysis of potential impacts on the stormwater drainage system capacity is necessary. A drainage report will be prepared and reported on in the forthcoming EIR, and this issue will be discussed further in the EIR.

iv. Impede or redirect flood flows?

No Impact. According to the U.S. Department of Homeland Security Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map No. 06111C0910E, the Site is not located in a flood hazard area (FEMA 2010). Therefore, the proposed project does not have potential to impede or redirect flood flows, and this issue will not be further analyzed in the EIR.

d. Would the project, in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Less Than Significant with Mitigation Incorporated. According to the U.S. Department of Homeland Security Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map No. 06111C0910E, the Site is not

located in a flood hazard area (FEMA 2010). The project Site is not within a tsunami evacuation area. A seiche is very similar to a tsunami with the difference being that the water waves are generated in a closed or restricted body of water such as a lake or within a harbor. There is no record of a seiche occurring in Ventura County. Thus, the actual threat that is posed by seiches in Ventura County is small. Figure 11-5 of the *Ventura County General Plan Hazards and Safety Background Report* (Ventura County 2020b) indicates that the project Site is within the dam inundation area of the Bouquet Canyon, Castaic, and Santa Felicia dams. During an inundation event, all pollutants stored at the project Site are at risk of release to areas downstream of the project Site. As such, mitigation may be required to reduce impacts to less than significant, and if needed, mitigation measures will be defined in the forthcoming EIR. Further analysis of potential pollutants on Site and potential inundation flows as a result of reservoir failure is necessary. Therefore, this conclusion may change, and this issue will be discussed further in the EIR.

e. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less Than Significant Impact. Based on similar projects in the area, impacts are not expected to be significant. However, the water supply needed for the long-term function of the project requires further evaluation, and this conclusion may change in the forthcoming EIR. Therefore, the projects effect on the current water quality control plan or sustainable groundwater management plan will be discussed further in the EIR.

2.4.11 LAND USE AND PLANNING

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Physically divide an established community?			X	
b.	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			X	

Discussion:

a. Would the project physically divide an established community?

Less Than Significant Impact. With implementation of the proposed project, access to the surrounding community would still be available via the existing roadway network including Rose Avenue and Collins Street. Alterations to the public roads system are not part of the proposed project. RSD proposes to transfer the existing school bus parking and workroom facilities (District Transportation and Parking Facility) from the current location on North Vineyard Avenue to the project Site. The District Transportation and Parking Facility will take primary access off Collins Road to the south of the facility via a proposed driveway. A 25-foot-wide access road will run from south to north through the District Transportation and Parking Facility, providing a secondary point of access through the existing RDV parking area. The expanded campus will provide for significant health and safety improvements, additional on-Site parking, and a bus turn out lane, which will resolve the current dangerous traffic and parking conditions that affect community members at the RDV campus. Therefore, the proposed project would not physically divide an established community and project impact would be less than significant. This issue will not be discussed further in the EIR.

b. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less Than Significant Impact. The proposed project will require multiple adjustments to current land use regulations. Based on similar projects in the area, this impact is not expected to be significant, however, the proposed project includes campus expansion that would require development and reduction of agricultural land within the Oxnard-Camarillo Greenbelt. At least two parcels associated with the proposed project are proposed for annexation into the City of Oxnard. Re-zoning of agricultural land is anticipated as part of the proposed project, and compliance with all applicable LAFCo policies is anticipated. Additional land use topics to be addressed in the EIR include a potential joint-use agreement for community use of recreational facilities, SOAR, City of Oxnard SOI and CURB adjustments, and necessary permits and approvals. Consultation with LAFCo has commenced. A meeting was held on August 9, 2021, with City of Oxnard staff, Ventura LAFCo staff, and Jensen Design and Survey. This conclusion may change, and this topic will be further analyzed and discussed in the forthcoming EIR.

2.4.12 MINERAL RESOURCES

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?			X	
b.	Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?			X	

Discussion:

a. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Less Than Significant Impact. According to the Ventura County General Plan, mineral resources are defined as naturally occurring inorganic materials in the earth's crust that are of economic value and can be extracted. Mineral resources in Ventura County consist primarily of aggregate resources, more commonly known as construction grade sand, gravel, and stone. Other mineral resources within the County include clay, shale, gypsum, silica sand, limestone, and phosphate (Ventura County 2020a). As the project Site is located in a predominately developed area, mineral extraction activities would be unlikely at the Site. However, both the southern campus expansion area parcel and northern agricultural learning area parcel are zoned as Mineral Resource Protection (MRPs) areas by the County of Ventura. Therefore, this conclusion may change, and this topic will be discussed further in the EIR.

b. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

Less Than Significant Impact. As the project Site is located in a predominately developed area, mineral extraction activities would be unlikely at the Site. However, both the southern campus expansion area parcel and northern agricultural learning area parcel are zoned as Mineral Resource Protection (MRPs) areas by the County of Ventura. Therefore, this conclusion may change, and this topic will be discussed further in the EIR.

2.4.13 NOISE

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in:					
a.	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b.	Generation of excessive groundborne vibration or groundborne noise levels?			X	
c.	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X	

Discussion:

a. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less Than Significant Impact. The project Site is located within an urban environment, adjacent to agricultural land to the north and east, Rose Avenue and residential land to the west, and commercial land in the form of car dealerships to the south. The existing noise environment consists of vehicle noise from local street traffic primarily from Rose Avenue and Highway 101, nature sounds, sounds associated with agricultural use of adjacent lands (such as tractors and other machinery), sounds associated with school activities, and community sounds. No ambient noise monitoring data has been identified for the Project vicinity, however the Ventura County General Plan projected 2040 noise levels on Rose Avenue north of Collins Street at 50 feet from the roadway to be 67.3 dBA. The proposed project will be held to the noise compatibility standards and Community Noise Equivalent Levels (CNELs) set forth in the Ventura County General Plan (Ventura County 2020a) and/or City of Oxnard specified noise requirements.

RSD buses will remain at the current District Transportation and Parking Facility on Vineyard Avenue (former El Rio Elementary School) until June 14, 2022. On June 14, 2022, RSD buses will be moved to a temporary parking facility located at Oxnard School District Transportation Center (near 516 W. Wooley Road). This temporary bus parking location will be utilized until bus parking facilities included as part of the proposed project at RDV become available; temporary bus parking per the interim joint use agreement approved at the District board meeting on March 16, 2022, is anticipated for a period of one year pursuant to the District's current agreement with the Oxnard School District. The temporary parking facility located at Oxnard School District Transportation Center is not considered part of the proposed project, and therefore is not analyzed for significant environmental impacts in this Initial Study. RSD would have lost access to the current District Transportation and Parking Facility on Vineyard Avenue in June 2022, regardless of the proposed project.

Based on similar projects in the area, noise impacts are not expected to be significant; however, this conclusion may change in the forthcoming EIR. A noise study will be prepared to evaluate the potential impacts from the construction and operation of the proposed project related to applicable noise standards, and results will be reported in the forthcoming EIR. Therefore, this issue will be further analyzed in the EIR.

b. Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Less Than Significant Impact. Operation of the expanded school would not generate perceivable vibration levels; however, construction of the classroom buildings and Site grading would require the use of equipment that could generate significate vibration levels. Possible sources of vibration may include bulldozers, dump trucks, backhoes, rollers, and other construction equipment that produces vibration. Based on similar projects in the area, groundborne vibration impacts are not expected to be significant; however, this conclusion may change in the forthcoming EIR. A noise study will be prepared to evaluate the potential impacts from the construction and operation of the proposed project, and results will be reported in the forthcoming EIR. Therefore, this issue will be further analyzed in the EIR.

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Less Than Significant Impact. California Code of Regulations Title 21 requires the State Department of Transportation to review any proposed school site that is located within 2 nautical miles of a runway. Based on review of a Google Earth Pro 2021 and AirNav.com (AirNav.com 2021), no airports are located within two nautical miles of the Site. The Oxnard Airport is located approximately 3.3 nautical miles southwest of the Site, and the Camarillo Airport is located approximately 3.3 nautical miles southeast of the Site. The Site is located within two nautical miles of a heliport. The St John's Regional Medical Center Heliport is located approximately 0.96 nautical miles south of the Site (AirNav.com 2021). This heliport is not identified as a primary noise source in the City of Oxnard's General Plan Noise Element (City of Oxnard 2011), nor is it called out in the Ventura County General Plan (Ventura County 2020a). Therefore, this heliport would not result in a safety hazard or excessive noise for people residing or working in the project area and project impact would be less than significant. This issue will not be discussed further in the EIR.

2.4.14 POPULATION AND HOUSING

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			X	
b.	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?			X	

Discussion:

a. Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The proposed project is needed to accommodate existing and anticipated future enrollment in RSD. The project Site is located within a developed urban environment. Extensions or alterations to the public roads system are not part of the proposed project. RSD proposes to transfer the existing school bus parking and workroom facilities (District Transportation and Parking Facility) from the current location on North Vineyard Avenue to the project Site. The District Transportation and Parking Facility will take primary access off Collins Road to the south of the facility via a proposed driveway. A 25-foot-wide access road will run from south to north through the District Transportation and Parking Facility, providing a secondary point of access through the existing RDV parking area. While the educational facilities would be contained within the project Site, the City of Oxnard and/or County of Ventura may require additional street and sidewalk improvements to service the proposed project. As noted below in section 2.4.17, a traffic and circulation study will be prepared for the proposed project and potential impacts related to traffic and transportation will be evaluated in the EIR.

In general, educational facilities are growth accommodating, not growth inducing. Increased demand for school services is generally linked to changes in local land use patterns such as the construction of new dwelling units and the generation of new jobs that encourages new people to move into the area. No housing is proposed as a part of the project. The proposed project may generate some new jobs associated with the school expansion. Additional staff may include teachers, administrative, and support staff, however RDV is an existing active middle school, so new jobs associated with the proposed project would be minimal. Most or all the potential additional staff could be hired from the existing qualified applicant pool already residing within or near the District. However, if teachers or other staff are hired outside the District area to fill a specific role(s), it may result in a few new people and their families moving into surrounding neighborhoods, thus creating a slight increase in the local population. Given the location of the project Site within an existing developed urban environment, the proposed project is not anticipated to be growth inducing outside of what is anticipated in the City of Oxnard General Plan (City of Oxnard 2011) and Ventura County General Plan (County of Ventura 2020a). Therefore, project impact would be less than significant, and this issue will not be discussed further in the EIR.

b. Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Less Than Significant Impact. The project Site currently consists of approximately 20.2-acres of existing school facility, 10-acres of active agricultural lands to the north and 11.1-acres to the south of the existing campus buildings. The southern campus expansion area has one approximately 3,130 sq. ft. existing residence, which is currently occupied. The use of this building would change with the proposed project; it is anticipated that this building would shift from residential use to office space available for District Maintenance and Operations staff. The District is currently in escrow to acquire the southern campus expansion area, and the occupants of the single-family residence would be displaced once escrow closes. While the proposed project will require multiple adjustments to current land use regulations (discussed in section 2.4.11), a substantial number of existing people or housing would not be displaced as a result of the proposed project. Therefore, a less than significant impact would occur, and this issue will not be discussed further in the EIR.

2.4.15 PUBLIC SERVICES

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
	i.) Fire protection?			X	
	ii.) Police protection?			X	
	iii.) Schools?				X
	iv.) Parks?			X	
	v.) Other public facilities?			X	

Discussion:

a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i. Fire Protection?

Less Than Significant Impact. The proposed project would be designed and constructed to meet required fire protection standards including adequate emergency access. Construction would comply with OSHA and Fire and Building Codes. As a middle school expansion, operation of the proposed project would be anticipated to generate a typical range of service calls including fire suppression, emergency medical, and emergency rescue requests for service. Consultation with the City of Oxnard and/or the Ventura County Fire Department is anticipated during the EIR phase of the proposed project. Based on similar projects in the area, impacts are not expected to be significant; however, this conclusion may change. In order to incorporate information from the consultation, potential physical impacts on the environment with regard to fire protection services will be further evaluated, and this issue will be further analyzed in the EIR.

ii. Police Protection?

Less Than Significant Impact. The proposed project would be designed and constructed to ensure adequate emergency access. As a middle school expansion, operation of the proposed project would be anticipated to generate a typical range of service calls including fire suppression, emergency medical, and emergency rescue requests for service. Consultation with the City of Oxnard and/or Ventura County Police Department with regard to annexation of the three project parcels to the City of Oxnard and associated police service area boundary is anticipated as part of the proposed project. Based on similar projects in the area, impacts are not expected to be significant; however, this conclusion may change. In order to incorporate information from the consultation, potential

physical impacts on the environment with regard to police protection services will be further evaluated, and this issue will be further analyzed in the EIR.

iii. Schools?

No Impact. The proposed project includes educational facilities for an expanded middle school that is needed to accommodate existing and anticipated future enrollment in the RSD. The increased middle school capacity with the proposed project would have a beneficial impact on public school facilities. Therefore, no adverse project impact on public school facilities would result and this issue will not be further analyzed in the EIR.

iv. Parks?

Less Than Significant Impact. The proposed project is designed to meet the educational, recreational, and support facilities needs of District students and the El Rio community. Demand for park and recreational facilities are typically linked to an increase in population growth in the area through the development of new housing units or the generation of new jobs. No housing is proposed as a part of the project. The proposed project may generate some new jobs associated with the school expansion. Additional staff may include teachers, administrative, and support staff, however RDV is an existing active middle school, so new jobs associated with the proposed project would be minimal. New recreational facilities that would be added as part of the proposed project include a 320-meter track, flag football field, six basketball courts, two baseball field(s), softball field, P.E. and lunch play field, four sand volleyball courts, two soccer fields, jogging path, an athletic restroom/storage building, and up to ten tennis courts and/or handball courts. Opportunities for use of the recreational school facilities by the community outside of school hours is planned, which will likely lessen the physical impacts/demand on nearby park and recreational facilities. A potential joint-use agreement for community use of recreational facilities will be evaluated under the Land Use and Planning section of the EIR. Therefore, project impact would be less than significant, and this issue will not be further analyzed in the EIR.

v. Other Public Facilities?

Less Than Significant Impact. The proposed project would not result in substantial increased demand for other public facilities such as libraries. The proposed project is designed to meet the educational, recreational, and support facilities needs of District students and the El Rio community. Therefore, project impact is less than significant, and this issue will not be further analyzed in the EIR.

2.4.16 RECREATION

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			X	
b.	Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			X	

Discussion:

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. The proposed project is designed to meet the educational, recreational, and support facilities needs of District students and the El Rio community. Demand for park and recreational facilities are typically linked to an increase in population growth in the area through the development of new housing units or the generation of new jobs. No housing is proposed as a part of the project. The proposed project may generate some new jobs associated with the school expansion. Additional staff may include teachers, administrative, and support staff, however RDV is an existing active middle school, so new jobs associated with the proposed project would be minimal. New recreational facilities that would be added as part of the proposed project include a 320-meter track, flag football field, six basketball courts, two baseball fields, softball field, P.E. and lunch play field, four sand volleyball courts, two soccer fields, jogging path, an athletic restroom/storage building, and up to ten tennis courts and/or handball courts. The proposed project will not be dependent upon City or County parks for student recreational needs. Opportunities for use of the recreational school facilities by the community outside of school hours is planned, which will likely lessen the physical impacts/demand on nearby park and recreational facilities. A potential joint-use agreement for community use of recreational facilities will be evaluated under the Land Use and Planning section of the EIR. Therefore, project impact would be less than significant, and this issue will not be further analyzed in the EIR.

b. Would the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Less Than Significant Impact. The proposed project includes the construction of additional recreational facilities, which are planned for community use outside of school hours. As such, the physical impacts/demand on nearby recreational facilities will likely be lessened. New recreational facilities that would be added as part of the proposed project include a 320-meter track, flag football field, six basketball courts, two baseball fields, softball field, P.E. and lunch play fields, four sand volleyball courts, two soccer fields, jogging path, an athletic restroom/storage building, and up to ten tennis courts and/or handball courts. The proposed project will not be dependent upon City or County parks for student recreational needs. Additionally, according to the Civic Center Act (California Education Code 38130), every public school facility is considered a civic center where citizens, school-community councils, and clubs as well as senior, recreation, education, political, artistic, and other organizations may meet (California Legislative Information 2021). A potential joint-use agreement for community use of recreational facilities will be evaluated under the Land Use and Planning section of the EIR. Therefore, project impact would be less than significant, and this issue will not be further analyzed in the EIR.

2.4.17 TRANSPORTATION

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?		X		
b.	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?		X		
c.	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			X	
d.	Result in inadequate emergency access?			X	

Discussion:

a. Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Less Than Significant with Mitigation Incorporated. A traffic and circulation study has commenced for the proposed project. As part of this study, traffic counts at study area intersections will be collected for AM and PM peak hours. Existing data will be obtained to determine existing trip generation based on current land use. Trip generation estimates will be determined for the project Site based on anticipated enrollment increase, standard trip generation rates, and other sources. The trip generation will be coordinated with City/County staff. Trips will be distributed based on school routes and student zip code information. The traffic and circulation study will calculate intersection levels of service for existing conditions, cumulative conditions, and General Plan conditions with and without the proposed project. Based on similar projects in the area, impacts are expected to be less than significant or mitigated to less than significant; however, this conclusion may change. The traffic and circulation study will identify feasible mitigation measures where applicable, and if needed, associated mitigation measures will be defined in the forthcoming EIR. The potential for the proposed project to conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system will be evaluated further in the EIR based on the results of the traffic and circulation study.

b. Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less Than Significant with Mitigation Incorporated. Based on similar projects in the area, impacts are expected to be less than significant or mitigated to less than significant; however, this conclusion may change. As noted above, a traffic and circulation study has commenced for the proposed project. This technical study will include an evaluation of the proposed project's transportation impacts using the vehicle miles traveled (VMT) metric, in accordance with CEQA Guidelines section 15064.3. Therefore, this issue will be evaluated further in the EIR, where the results of the traffic and circulation study will be discussed in the forthcoming EIR.

c. Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less Than Significant Impact. The proposed project would be designed and constructed to meet required standards including adequate emergency access. Based on similar projects in the area, impacts are expected to be less than significant; however, this conclusion may change. A review of project Site access and circulation plan, including bicyclist and pedestrian access and safety will be conducted as part of the traffic and circulation study. The project is anticipated to comply with the City's adopted Bicycle and Pedestrian Master Plan. Therefore, this issue will be evaluated further in the EIR.

d. Would the project result in inadequate emergency access?

Less Than Significant Impact. The proposed project would be designed and constructed to meet required standards including adequate emergency access. While no significant impacts to emergency access are anticipated, this conclusion may change. A review of project Site access will be conducted as part of the traffic and circulation study and the results reported in the forthcoming EIR.

2.4.18 TRIBAL AND CULTURAL RESOURCES

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:		--		
	i.) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or		X		
	ii.) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.		X		

Discussion:

a. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

Less Than Significant with Mitigation Incorporated. As noted in Section 2.4.5, the CHRIS search results, conducted via the SCCIC, and NAHC SLF search results were negative for previously recorded archaeological and historical resources within the project Site. A Phase I Archaeological Survey and a Built Environment Survey need to be conducted for the proposed project Site. These two technical studies will be conducted, and results reported on in the forthcoming EIR.

The Barbareño/Ventureño Band of Mission Indians has requested consultation under AB52. In addition, consultation will occur under SB18, Government Code Section 65352.3, for the proposed project. The District is in the process of initiating consultation with tribes, and results of consultation will be reported in the forthcoming EIR. This conclusion may change; this issue will be evaluated further, and mitigation, if needed, will be defined in the forthcoming EIR.

ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Less Than Significant with Mitigation Incorporated. As noted in Section 2.4.5, the CHRIS search results, conducted via the SCCIC, and NAHC SLF search results were negative for previously recorded archaeological and historical resources within the project Site. Based on existing conditions determined during the desktop study, significant tribal cultural resources are not expected to be located on the project Site. However, this conclusion may change. A Phase I Archaeological Survey and AB52/SB18 Native American Tribal consultation will be conducted and results reported on in the forthcoming EIR; this issue will be evaluated further, and mitigation, if needed, will be defined in the forthcoming EIR.

2.4.19 UTILITIES AND SERVICE SYSTEMS

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			X	
b.	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?			X	
c.	Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			X	
d.	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			X	
e.	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			X	

Discussion:

a. Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less Than Significant Impact. Implementation of the proposed project would require additional water and wastewater treatment services and other public utility connections. At least two parcels associated with the proposed project are planned for annexation into the City of Oxnard, and additional connection to a sanitary sewer main which conveys domestic wastewater to the OWTP is anticipated as part of the proposed project.

The City of Oxnard provides existing sewer service to RDV through an extension of the sewer main in Rose Avenue to the school Site. Sewer service is proposed to be provided to the southern campus expansion area via a new connection to the City of Oxnard sewer main, separate from the existing main campus sewer. The anticipated point of connection would be on Rose Avenue or Collins Street right of way. Sewer service for new improvements on the existing RDV campus parcel will be via connecting to the existing RDV sewer point of connection. These connection points assume adequate capacity of existing infrastructure and OWTP; this assumption will be verified by the forthcoming sewer calculations. The proposed project's southern campus expansion area will obtain potable water from a new connection to the City of Oxnard water system. The anticipated point of connection would be from an existing City water line(s) located in the Rose Avenue or Collins Street right of way. An approximately 8-inch diameter water line would deliver water from the City line to the proposed southern campus expansion area. It is

anticipated that the improvements and expansions proposed on the existing RDV campus parcel will utilize connections from existing service lines on the current RDV campus. The northern campus agricultural learning area will continue to utilize agricultural water from the existing well water source. SCE currently provides electrical service to RDV. SCE will provide electrical service to the proposed expansion area via a new electrical connection(s) and meter(s). SCE has existing overhead power lines located in the Rose Avenue right of way. This existing electrical infrastructure is located on the eastern side of Rose Avenue. It is anticipated that service will be extended from this existing infrastructure, which is located on the same side of the street as RDV, to the southern campus expansion area. Per the City of Oxnard Municipal Code, Chapter 21, Article III, utility undergrounding associated with the proposed project will likely be necessary. If needed, it is anticipated natural gas and telecommunication service will be extended from existing infrastructure. While it is anticipated that the proposed project can utilize connections to existing utility services and impacts associated with project demand will be less than significant, this conclusion may change. Additional Site-specific studies including sewer calculations and a water demand analysis will be prepared and reported in the EIR. Therefore, this issue will be evaluated further in the EIR.

b. Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Less Than Significant Impact. Implementation of the proposed project would require additional water service. At least two parcels associated with the proposed project are planned for annexation into the City of Oxnard, and the proposed project's southern campus expansion area would obtain potable water from a new connection to the City of Oxnard water system. The northern campus agricultural learning area will continue to utilize agricultural water from the existing well water source. While it is anticipated that the proposed project can utilize connections to existing utility services and impacts associated with project demand will be less than significant, this conclusion may change. Additional Site-specific studies including a water demand analysis will be prepared and reported in the EIR. Therefore, potential impacts to water supply will be evaluated further in the EIR.

c. Would the project result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. Implementation of the proposed project would require additional wastewater treatment services. Additional connection to a sanitary sewer main which conveys domestic wastewater to the OWTP is anticipated as part of the proposed project. The City of Oxnard provides existing sewer service to RDV through an extension of the sewer main in Rose Avenue to the school Site. Sewer service is proposed to be provided to the southern campus expansion area via a new connection to the City of Oxnard sewer main, separate from the existing main campus sewer. The anticipated point of connection would be on Rose Avenue or Collins Street right of way. Sewer service for new improvements on the existing RDV campus parcel will be via connecting to the existing RDV sewer point of connection. These connection points assume adequate capacity of existing infrastructure and OWTP; this assumption will be verified by the forthcoming sewer calculations. Based on similar projects in the area, project impacts are expected to be less than significant; however, this conclusion may change. Additional Site-specific studies including sewer calculations will be prepared and reported in the EIR. Therefore, potential impacts to wastewater treatment capacity will be evaluated further in the EIR.

d. Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less Than Significant Impact. While it is anticipated that the City of Oxnard will provide solid waste service during operation of the proposed project through the SOI adjustment planned as part of the proposed campus expansion project, further construction and operation plan details are needed to fully assess the generation of solid waste associated with the proposed project. Evidence that adequate capacity exists within the City and/or County solid waste system for the processing, recycling, transmission, and disposal of solid waste is necessary for the proposed project. AB 341 requires California to achieve a 75 percent reduction in solid waste disposal to landfills by 2020; the requirement of disposal reduction for jurisdictions remains at 50 percent. Based on similar projects in the area,

project impacts are expected to be less than significant; however, this conclusion may change in the forthcoming EIR. Assessment of the proposed project in relation to compliance with AB 341 will occur as part of the EIR. Therefore, potential impacts with regard to generation of solid waste in excess of State or local standards, in excess of the capacity of local infrastructure, or the attainment of solid waste reduction goals will be evaluated further in the EIR.

e. Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less Than Significant Impact. It is anticipated that the City of Oxnard will provide solid waste service during operation of the proposed project through the SOI adjustment planned as part of the proposed campus expansion project. Based on similar projects in the area, project impacts are expected to be less than significant; however, this conclusion may change. Further construction and operation plan details are needed to fully assess the generation of solid waste associated with the proposed project. Therefore, this issue will be evaluated further in the EIR.

2.4.20 WILDFIRE

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:					
a.	Substantially impair an adopted emergency response plan or emergency evacuation plan?				X
b.	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?				X
c.	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?			X	
d.	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?				X

Discussion:

a. Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

No Impact. The project Site is not located in or near a state responsibility area; the Site is within the unincorporated Ventura County local responsibility area (CalFire 2007). The project Site is within a Moderate Fire Hazard Severity Zone and is not within a determined "Community at Risk." Within Ventura County, a "Community at Risk" is defined as a community within close proximity to chaparral vegetation, that if ignited, would present a high or very high hazard to nearby homes, infrastructure, and/or assets (Ojai Valley Fire Safe Council 2010). The project Site is not located in or near a state responsibility area, nor is it within lands classified as very high fire hazard severity zones. Therefore, no project impacts would occur, and this issue will not be discussed further in the EIR.

b. Would the project due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. The project Site is not located in or near a state responsibility area, nor is it within lands classified as very high fire hazard severity zones. There are no project factors that would exacerbate wildfire risks; therefore, no project impacts would occur, and this issue will not be discussed further in the EIR.

c. Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less Than Significant Impact. The project Site is not located in or near a state responsibility area, nor is it within lands classified as very high fire hazard severity zones. SCE will provide electrical service to the proposed expansion area via a new electrical connection(s) and meter(s). SCE has existing overhead power lines located in the Rose Avenue right of way. This existing electrical infrastructure is located on the eastern side of Rose Avenue. It is anticipated that service will be extended from this existing infrastructure, which is located on the same side of the street as RDV, to the southern campus expansion area. The urban infrastructure installation/expansion associated with the proposed project would not exacerbate fire risk or result in temporary or ongoing impacts to the environment. Therefore, a less than significant impact would occur, and this issue will not be discussed further in the EIR.

d. Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No Impact. The project Site is not located in or near a state responsibility area, nor is it within lands classified as very high fire hazard severity zones. The Site is not located in a flood hazard area (FEMA 2010) or landslide area (City of Oxnard 2006) and the proposed project would not expose people or structures to significant risks such as downstream flooding or landslides. Therefore, no project impacts would occur, and this issue will not be discussed further in the EIR.

2.4.21 MANDATORY FINDINGS OF SIGNIFICANCE

		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:					
a.	Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?		X		
b.	Have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects).		X		
c.	Have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?		X		

Discussion:

a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Less Than Significant with Mitigation Incorporated. As noted in this Initial Study analysis, several resource issues will be analyzed further in the EIR. It is unlikely that the proposed project would substantially degrade the environment for biological or cultural resources and project impacts are expected to be less than significant or mitigated to less than significant. However, this conclusion may change, and this issue will be analyzed further in the EIR. If needed, mitigation will be defined in the forthcoming EIR.

b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects).

Less Than Significant with Mitigation Incorporated. As noted in this Initial Study analysis, several resource issues will be analyzed further in the EIR. Project impacts are expected to be less than significant or mitigated to less than significant. However, this conclusion may change, and this issue will be analyzed further in the EIR. If needed, mitigation will be defined in the forthcoming EIR.

c. Does the project have environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly?

Less Than Significant with Mitigation Incorporated. The proposed project would be designed and constructed to meet required safety standards. As identified in this Initial Study, several resource issues will be analyzed further in the EIR and project impacts are expected to be less than significant or mitigated to less than significant. However, this conclusion may change, and this issue will be analyzed further in the EIR. If needed, mitigation will be defined in the forthcoming EIR.

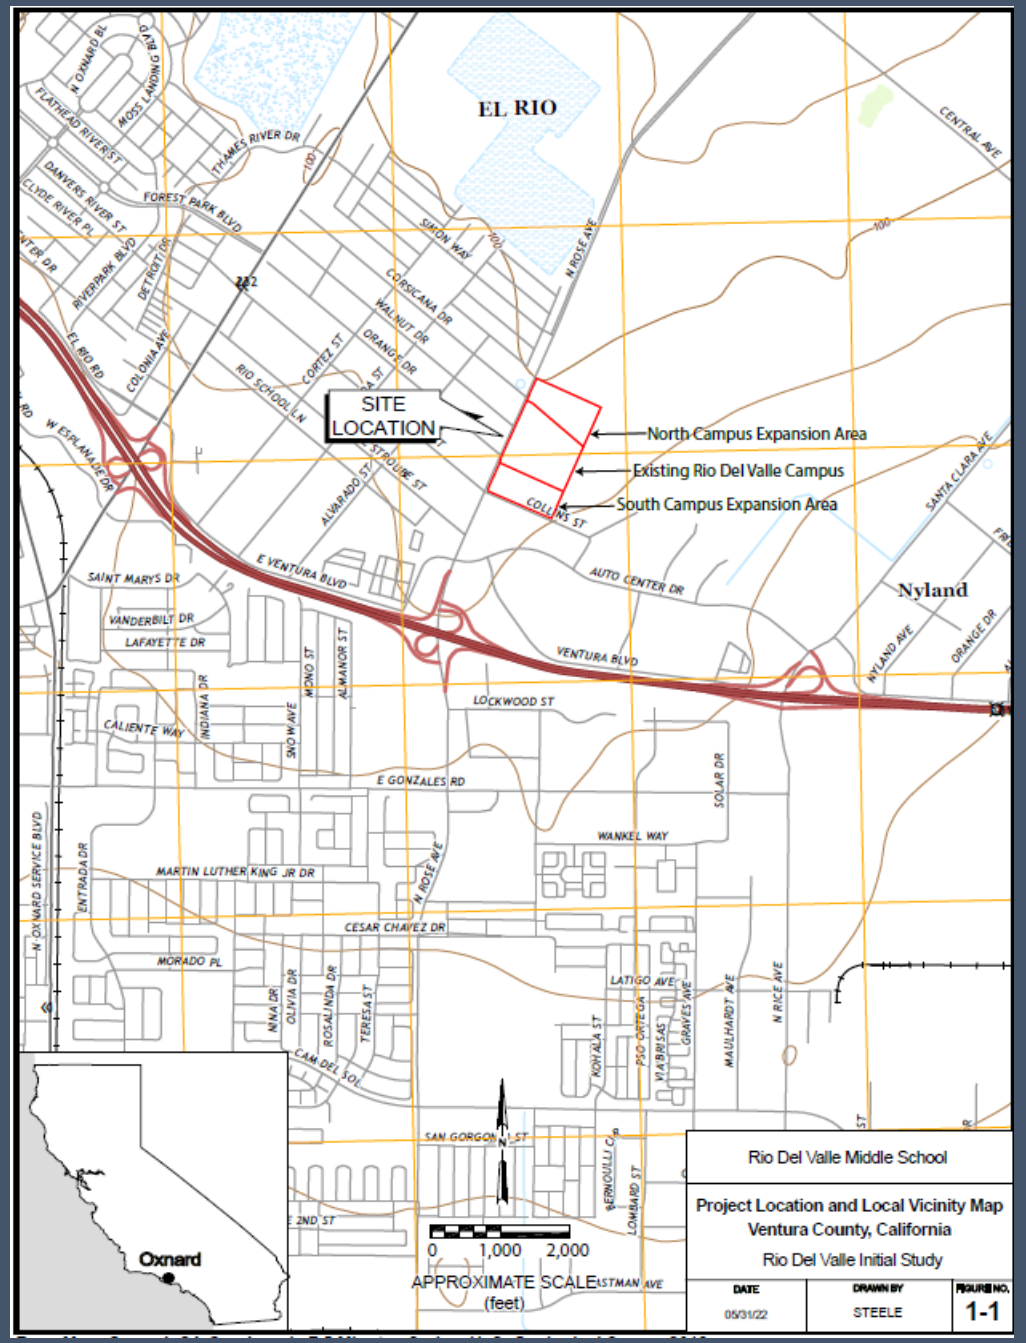
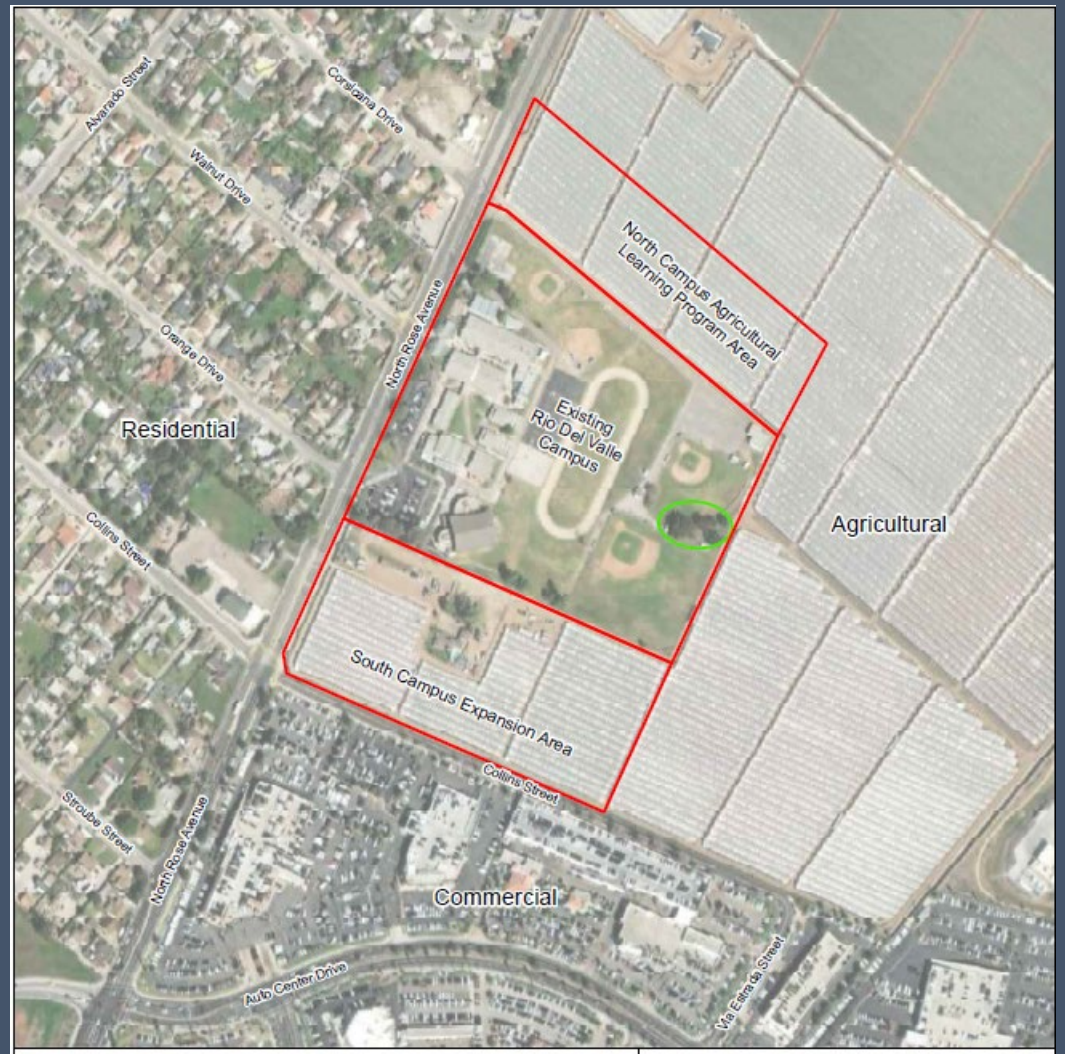
Public Scoping Meeting for the Rio Del Valle Middle School Existing Campus Expansion Master Plan Project Environmental Impact Report



JUNE 23, 2022



Scoping Meeting Agenda:

- Introductions
- Description of Proposed Project
- Summary of Environmental Review Process
- Public comments

Project Location

- Northeast of Rose Avenue and Collins Street, Ventura County, CA.
- Project site is located in unincorporated Ventura County.
- At least two parcels (southern campus expansion area and main campus), if not all three parcels associated with proposed project, are proposed for annexation into City of Oxnard.

Proposed Project

- Rio School District (RSD) proposes to implement the RDV Campus Expansion Master Plan (proposed project) to meet the immediate educational, recreational, and support facilities needs of District students.
- RSD is currently in escrow to acquire approximately 11.1 acres to the south of the existing campus, increasing campus area to approximately 41.3 acres.
- Proposed project includes utility connections such as water, sewer, gas, electric, data/telecommunications, and storm water collection.

Proposed Project

- Development would occur in two phases, including options for:
  - New classrooms
  - Library/Media Center and Multi-Purpose Building
  - Transportation and Parking Facilities
  - Recreational Facilities
  - Health and safety improvements (additional on-site parking, bus turn out lane, and bus housing on the southern 11.1-acre addition.

Rio Del Valle Middle School
Conceptual Master Plan
Ventura County, California
Rio Del Valle Initial Study
SCHOOL DISTRICT
STEDLE
1-3

Proposed Project

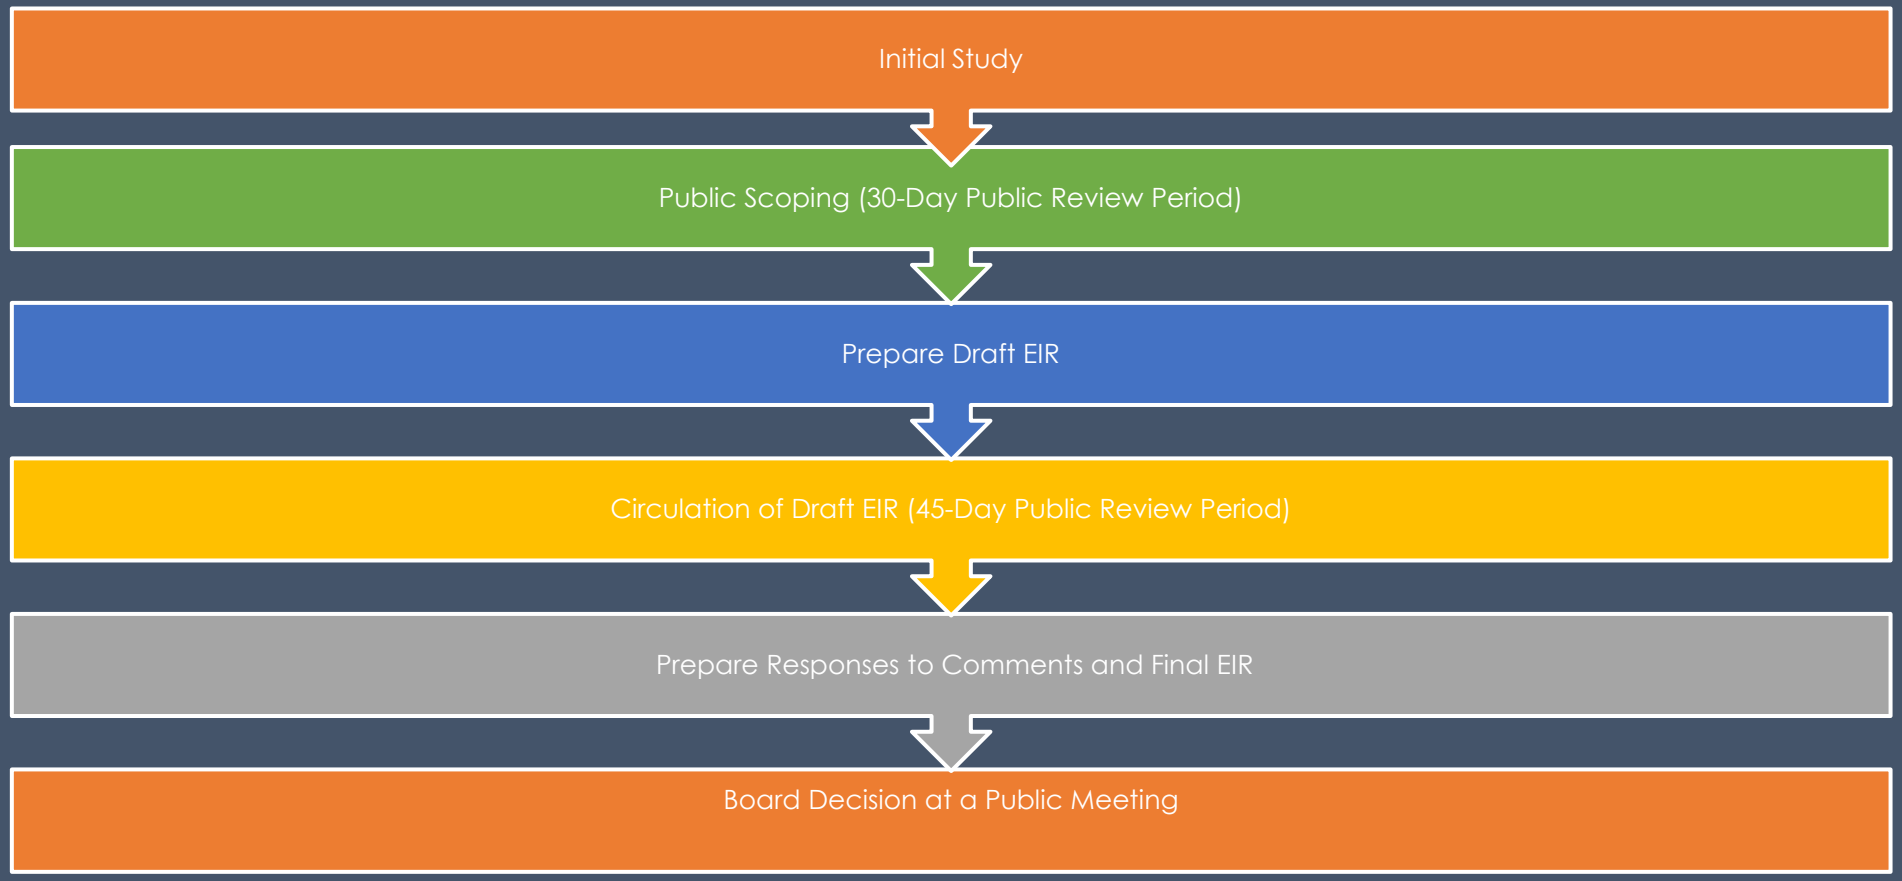
- Phase I
  - RSD proposes to annex at least two parcels (southern campus expansion area and main campus) and possibly north campus expansion area parcel into City of Oxnard.
  - Improvements on the western portion of south campus expansion area.
  - Utility undergrounding along public right of ways.
  - Replacement and relocation of some existing recreational facilities and parking within existing main campus.
  - Construction anticipated to occur over an 18-month period beginning in late 2022.

Proposed Project

- Phase II
  - Agricultural Learning Program
    - No land use changes proposed
    - Outdoor lecture area and small paved pathway
  - Classroom and Library/Media Center and Multi-Purpose Buildings
    - Potential construction of up to 12,000 sq. ft. for eight new classrooms and ~5,400 sq. ft. library/media center and 5,400 sq. ft. multi-purpose buildings.
  - Recreational Facilities
    - (two baseball fields, softball field, physical education and lunch play field, four sand volleyball courts, jogging path, athletic restroom/storage building, and up to 10 tennis courts and/or handball courts.

Proposed Project

- Phase II (cont.).
  - Utility Improvements – Water
    - Southern campus expansion area will obtain potable water from a new connection to City of Oxnard water system.
    - Existing campus parcel will continue to use water connections from existing service lines.
    - Northern expansion area will continue to use agricultural water from current sources (well water).
  - Utility Improvements – Sewer
    - Sewer service is proposed to be provided to southern campus expansion area via a new connection to City of Oxnard sewer main.
    - Sewer service for improvements on existing main campus will be via connecting to existing RDV sewer Point of Connection.
  - Construction anticipated to start between 2024 and 2027 over an 18 to 24-month construction period.



Comparison of Existing and Proposed Rio del Valle Configuration

	Existing Configuration	Proposed Configuration
Student Capacity	~1,116	~1,366
Total Classrooms	39	49
Permanent Square Footage	81,024	116,882
Portable Square Footage	7,071	11,535
Total Building Square Footage	88,095	128,417
Parking Spaces	90 (84 standard and 6 accessible)	317 (277 standard, 16 accessible, and 24 bus)
Total Campus Area (Acres)	30.2	41.3

Anticipated Permits and Approvals

Agency	Permit/Approval
California Department of Education	Approval of construction plans and CDE Site Plan and Approval
California Department of General Services, Division of State Architect	Approval of construction plans and CDE Site and Plan Approval
California Department of Toxic Substance Control	Approval of Preliminary Environmental Assessment (PEA) and Supplemental Site Investigation (SSI) for Southern Campus Expansion Area
City of Camarillo	Oxnard-Camarillo Greenbelt Modification
City of Oxnard	Annexation Request, Oxnard-Camarillo Greenbelt Modification, General Plan Amendment, Zoning and Pre-zoning*
Los Angeles Regional Water Quality Control Board	Storm Water Pollution Prevention Plan
Rio School District	Approve Project (Educational Specifications, Design/Construction Funding and Associated Contract Approvals) EIR (Adopt EIR and MMRP)
Ventura County	Oxnard-Camarillo Greenbelt Modification
Ventura Local Agency Formation Commission (LAFCO)	Annexation and associated Sphere of Influence/CURB adjustments

Environmental Review Process

Initial Study

- RSD has prepared an Initial Study and determined that an Environmental Impact Report (EIR) is required. The EIR will be prepared to evaluate potentially significant impacts related to the following issues:
  - Aesthetics
  - Agriculture and Forest Services
  - Air Quality
  - Biological Resources
  - Cultural Resources
  - Geology/Soils
  - Greenhouse Gas Emissions
  - Hazards/Hazardous Materials
  - Hydrology/Water Quality
  - Land Use and Planning
  - Mineral Resources
  - Noise
  - Public Services
  - Transportation/Traffic
  - Tribal and Cultural Resources
  - Utilities/Service Systems

Public Scoping

- The Notice of Preparation comment period began on June 7, 2022 and ends on July 6, 2022.
- Public scoping process is intended to provide RSD (as Lead Agency for CEQA) with information the public feels is necessary to establish the appropriate scope for preparing the EIR.
- Please provide your comments, input, suggestions for project alternatives, and any other pertinent information that may enable us to prepare a comprehensive EIR for the proposed project.

Public Comments

- In addition to speaking at today's meeting; comments can also be submitted in writing:

  Wael Saleh, C.P.A., M.B.A.
  Assistant Superintendent, Chief Business Official
  Rio School District
  1800 Solar Drive
  Oxnard, CA 93030

- Please submit written comments by **July 6, 2022**. Due to time limits mandated by State Law, your response must be sent at the earliest possible date but not later than 30 days after receipt of the Notice of Preparation.

Making Conservation a California Way of Life

June 29, 2022

Wael Saleh
Rio School District
1800 Solar Drive
Oxnard, CA 93030

RE: Rio del Valle Middle School Existing Campus Expansion Master Plan
Notice of Preparation (NOP) of an Environmental Impact Report (EIR)
SCH # 2022060117
Vic. VEN-101/PM: 20.891
GTS # 07-VEN-2022-00494

Dear Wael Saleh:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced NOP. The Rio School District proposes to implement the Rio del Valle Campus Enhancement Master Plan to meet the educational, recreational, and support facilities needs of District students. The Master Plan includes development within the expanded campus which would occur in phases and would include options for: new classrooms, library and media center, transportation and parking facilities, recreational facilities including 320-meter track, flag football field, six basketball courts, two baseball fields, softball field, physical education (P.E.) and lunch play field, four sand volleyball courts, two soccer fields, a jogging path, an athletic restroom/storage building, and up to ten tennis courts and/or handball courts. The buildout of the RDV Campus Master Plan is anticipated to occur over approximately 5 years. The Rio School District is the Lead Agency under the California Environmental Quality Act (CEQA).

The project site is approximately half a mile from the North U.S. 101 ramp on N. Rose Avenue. After further review of the Initial Study, it states that impacts are expected to be less than significant or mitigated to less than significant; however, this conclusion may change. A traffic and circulation study has commenced for the proposed project. This technical study will evaluate the proposed project's transportation impacts using the vehicle miles traveled (VMT) metric, per CEQA Guidelines section 15064.3. Caltrans looks forward to reviewing the technical study results in the forthcoming EIR.

For this project, Caltrans encourages the Rio School District to evaluate the potential to implement Transportation Demand Management (TDM) strategies that reduce Vehicle

Miles Traveled (VMT) and Greenhouse Gas (GHG) emissions. For TDM strategies that the Lead Agency may want to consider integrating into this project to further reduce VMT, please refer to:

- The 2010 Quantifying Greenhouse Gas Mitigation Measures report by the California Air Pollution Control Officers Association (CAPCOA), available at http://www.capcoa.org/wpcontent/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf, and/or
- Integrating Demand Management into the Transportation Planning Process: A Desk Reference (Chapter 8) by the Federal Highway Administration (FHWA), available at https://ops.fhwa.dot.gov/publications/fhwahop12035/index.htm

If there are any significant impacts to the State Highway System, the implementation of multimodal mitigation measures and other TDM strategies should be considered to reduce the number of vehicle trips generated by the project. Also, signal synchronization and other Transportation System Management should be considered to improve transportation flow.

Caltrans also encourages lead agencies to prepare traffic safety impact analysis for all developments in the CEQA review process so that, through partnerships and collaboration, California can reach zero fatalities and serious injuries by 2050.

As a reminder, any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State Highways will need a Caltrans transportation permit. Caltrans recommends that the Project limit construction traffic to off-peak periods to minimize the potential impact on State facilities. If construction traffic is expected to cause issues on any State facilities, please submit a construction traffic control plan detailing these issues for Caltrans' review.

If you have any questions, please feel free to contact Karen Herrera, the project coordinator, at Karen.Herrera@dot.ca.gov and refer to GTS # 07-VEN-2022-00494.

Sincerely,

Miya Edmonson

MIYA EDMONSON
LDR/CEQA Branch Chief

COMMUNITY DEVELOPMENT DEPARTMENT
ADMINISTRATION
214 SOUTH C STREET
OXNARD, CALIFORNIA 93030

CITY OF OXNARD CALIFORNIA

Wednesday, July 6, 2022

Wael Saleh, C.P.A., M.B.A.
Assistant Superintendent, Chief Business Official
Rio School District
1800 Solar Drive
Oxnard, CA 93030

Subject: *City of Oxnard Comments on Initial Study and Notice of Preparation*
Project Name: *Rio Del Valle Middle School Existing Campus Expansion Master Plan*, Northeast of Rose Avenue and Collins Street (APN 144-0-110-445; -225; & -590)

Dear Mr. Saleh:

The City of Oxnard (City) has received and conducted a review of the Notice of Preparation (NOP) and Initial Study (IS) of an Environmental Impact Report for the proposed new Rio Del Valle Middle School Existing Campus Expansion Master Plan (Project). This letter provides the City's comments on the NOP and IS.

The City has four global comments on the IS, two notable items of concern, and additional detailed comments on the IS.

Global Comments

1. The Project Description is incomplete as it fails to include and discuss all components of the project required by the City to allow for the Project to proceed and does not clearly define the scope of the project, with many components including the annexation and improvements to the northern campus expansion still undetermined.
2. The IS was prepared without many of the required studies being completed, including but not limited to traffic, water, sewer, air quality, geological/soil, or a fiscal analysis. As such, the City finds that the IS as prepared does not provide sufficient support for many of the conclusions reached.
3. The Project is identified as a phased project. As such, each Environmental Impact Analysis section must analyze the Project's impacts both by phase individually, by combined sequential phases, and cumulatively.

4. This Project includes Annexation into the City. This means the City and the Local Agency Formation Commission (LAFCo) will both have discretionary decision making authority on the project and will need to both have discretionary decision making authority on the project and will need the environmental document, and the Environmental Impact Analysis, to use the City of Oxnard's 2017 CEQA Guidelines[1], as the basis of the analysis. The recently added/amended sections from the State CEQA Guidelines including Energy, Tribal and Cultural Resources, and Wildfire, must also be incorporated.

For these reasons, the analysis provided in the IS is not sufficient to make a determination on any of the environmental factors and updated and/or additional analysis is required for the environmental document. The City has prepared the comments below for the purpose of providing direction for the preparation of the environmental document.

Notable Items of Concern

1. *Water Resources*

   As a water purveyor, the City of Oxnard is required to adopt an Urban Water Management Plan (UWMP) every five years to demonstrate water supply reliability under normal and well as drought conditions. The UWMP is also a tool the City uses to evaluate and plan for future demand and supply. Therefore, any projects not accounted for in the UWMP are required to assess its water resources and submit them to the City for review and approval. New projects not accounted for in the UWMP will further reduce the City's water availability and cause an increase in the water projection requirements. Therefore, new projects not accounted for in the UWMP must bring in their own water resources before the projects can be considered. Additionally, water resources are becoming harder to secure for the City of Oxnard. Per the UWMP, the City plans a 45% reduction in groundwater pumping by 2040, meaning the City will need to secure other water resources in the future. Adding more unaccounted projects will strain the supply chain, making that much harder for the City to supply water.

   Since the campus expansion is proposed to be annexed into the City of Oxnard, the project shall use City water services for the entire campus. To maintain the City's water availability consistent with the UWMP, the applicant shall acquire and transfer all required water resources for the full buildout that includes both Phases 1 and 2 of the project and transfer them to the City consistent with the City Oxnard City Code Article VI. All water resources on the project site, such as the existing well sites, must also be transferred to the City. The proposed campus expansion is not within the supply and demand forecasts in the City's most recent UWMP and the General Plan. The proposed project is required to assess its impacts and bring in sustainable water supply source(s), subject to review and approval by the City.

[1] https://www.oxnard.org/city-department/community-development/planning/ceqa/

Lastly, any new or extended service provided by the City is also subject to Ventura Local Agency Formation Commission (LAFCO) approval and annexation into the Calleguas Municipal Water District. The Initial Study has not provided the water resources analysis and how the project will impact analysis. Therefore, there aren't sufficient water resources and information available to support the proposed project.

2. *Wastewater*

The Oxnard Wastewater Treatment Plant (OWTP) collects, treats, and deposes wastewater within its service area with a dry weather capacity of 31.7 million gallons per day. At the same time, the City intends to keep up with the gradually increasing flows that correspond with an increase in population projections. New projects outside the planned service area can push treatment and operational requirements beyond the estimated projections. In this regard, the Initial Study has not provided an analysis demonstrating how this project will impact the OWTP and its current forecast. Therefore, the proposed expansion of the campus cannot be supported.

Moreover, the campus expansion will drain into the City's sewer collection system. The additional sewer discharge will take up the capacity within the existing sewer mains. As a result, the project will reduce the City's ability to provide sewer services for the existing planned development already within City limits from future development.

In summation, City staff do not agree with the findings under Section 2.4.19 and finds that:

- Water - The project will likely significantly impact the City's plan to provide water under its UWMP and the General Plan. The water resources must be assessed thoroughly before the project can be considered.
- Wastewater – The project will produce additional sewage that will need to be treated by the OWTP. Since the project was not accounted for in OWTP's future treatment capacity and operation requirements, the additional sewer flow will cause the City to escalate its projection and operation requirements. Additionally, the additional sewer flow in the sewer mains will take away the City's ability to accommodate or serve existing planned development from future development.

Additional Detailed Comments

City of Oxnard Comments on the Initial Study

1.0 Project Description and Environmental Setting

Planned and Pending Projects in the Site Vicinity

Project list is incomplete. It is not clear how projects listed were chosen. Please review the latest city project list for a complete listing of projects in the area. The project list, updated quarterly, can be found here: https://www.oxnard.org/city-department/development-services/project-list/

1.3 Site Considered

The alternative sites analysis must consider sites other than those listed in the 2030 General Plan, which were intended for new schools. Also, the discussion fails to acknowledge alternative locations for the proposed District Transportation and Bus Parking facilities. The environmental document must include a discussion of alternative locations for this area and associated activities, including maintenance.

1.5 Project Description

The Project Description fails to include and adequately discuss all of the required City of Oxnard entitlements necessary for this project to move forward. As previously communicated to the District this includes the following discretionary approvals:

- General Plan Amendment (to change the City Urban Restriction Boundary, SOAR land designation, Sphere of Influence, land use designation)
- Pre-zoning the property
- Tentative Tract Map and / or Lot Line Adjustment
- Special Use Permit or Development Design Review Permit for the proposed District Transportation and Bus Parking facilities (The final permit type will be determined by the requested pre-zoning Zoning Designation).

The Project Description must include a description of each of the requested General Plan Land Uses and Zoning Designations, Greenbelt Modifications, Sphere of Influence/CURB adjustments, and the proposed development associated with each.

The Project Description states that the project would occur in phases. The document must be revised to clearly define each proposed phase, including the location of the phase, the development associated with the phase (including a site plan), and the proposed timing of each phase. As CEQA documents are to analyze what is reasonably foreseeable, the phasing discussion is to include a discussion of the Rio School District's long range planning efforts and funding sources. Each proposed phase, including any temporary configurations, such as the temporary bus parking, must be analyzed in the environmental document. The environmental

document must identify all appropriate improvements and / or mitigation measures that are to be implemented with each phase. The existing Phase I description fails to clearly define the improvements included. Utility work is stated as "Likely" and it is not clear if the new bus facility will be constructed as part of phase I.

The Project Description must include a discussion of what will occur on the remainder of the northern and southern parcels. The environmental document must address any improvements necessary to ensure the remaining parcels maintain roadway and utility access in compliance with City and County of Ventura standards, depending on the responsible agency.

The Project Description indicates that the northern expansion area may not be included in the annexation into the City. The annexation of this north expansion area must be determined prior to proceeding with the preparation of the environmental document, to ensure all impacts are adequately analyzed. The environmental document must include an exhibit clearly indicating the area proposed to be Annexed into the City. Please be advised that City staff believes that a partial Annexation would not be consistent with LAFCo's Guidelines for Orderly Development and LAFCo policies. As identified in LAFCo's letter dated March 31, 2021, "The Guidelines contain policies that generally provide that urban development should occur only in cities or within unincorporated existing communities as defined by the County General Plan. The proposed development projects are located in neither. The transportation facility and school expansion would likely be considered urban development under the Guidelines."

The Land Use and Planning section of the Environmental Impact Analysis section must include a detailed discussion of the Projects compliance with all applicable LAFCo Guidelines for Orderly Development and LAFCo policies.

Table 1-3. "Comparison of Existing and Proposed Rio del Valle Configuration" must also include a comparison of staffing levels, such as the number of employees at the existing school and the anticipated number of employees proposed for the expanded school and the new bus maintenance and storage facility.

Agricultural Learning Program

As this area is still a part of the overall Project area, including the Annexation area, all uses and improvements associated with the "North Campus Agricultural Learning Program" area must be analyzed as part of this Project, and within the associated environmental document. CEQA requires that "the whole of an action" be considered when determining whether it will have a significant environmental effect. Therefore, the use of this area and any required or proposed improvements must be incorporated into this document. The IS identifies potential improvements to this area. The environmental document must determine whether these improvements are to be made, and if so, they must be incorporated and analyzed in the environmental document.

Transportation and Parking Improvements

As mentioned above, any interim bus and district vehicle parking area must be identified in the proposed project phasing. The study fails to identify the number of maintenance vehicle spaces that will be provided in the interim configuration.

The proposed project will be increasing the number of spaces on the project site from 90 spaces to 314 spaces. The environmental document must identify how these spaces are to be allocated, including the number of spaces to be used for the parking/storing of District buses and vehicles.

The environmental document must analyze both the initial construction of the interim parking area and the conversion of the interim parking area to a permanent parking area. Also, the IS states that the interim area would be converted to a permanent parking area "if needed". This must be clarified in the environmental document. If the area interim parking area is determined not to be needed, the Project Description must identify what will occur in the area in the long term. Otherwise, this area must be reconstructed to comply with the plans analyzed and approved, upon termination of the temporary parking area.

Utility Improvements

As the City has not received either a Water or Sewer study, there is not sufficient information available to determine the accuracy of the description of the proposed water and sewer utility improvements. Both the Water and Sewer studies should be provided as soon as possible, to allow for City review prior to completion of the environmental document. Additionally, this work is identified as part of Phase II, however these improvements will be required to serve any new or expanded facilities constructed as part of Phase I. The Project Description of the Electrical and Lighting must be revised to include the required undergrounding of any utility poles along the Project frontage.

Lastly, the Project description references starting construction of facilities as early as June/July of 2022, which is during the current NOP period. The environmental document must be revised to include feasible timelines and recognize that no improvements related to the Project shall occur until the environmental process is complete and all entitlements have been obtained.

1.6 Required Permits and Approvals

Table 1-4 fails to include all of the required City approvals, including but not limited to the:

- General Plan Amendment (to change the City Urban Restriction Boundary, SOAR land designation, Sphere of Influence, land use designation)
- Pre-zoning the property
- Tentative Tract Map and / or Lot Line Adjustment
- Special Use Permit or Development Design Review Permit for the proposed District Transportation and Bus Parking facilities (The final permit type will be determined by the requested pre-zoning Zoning Designation).

1.7 California Native American Tribe Consultation

Identify the Tribal groups that the District contacted for Tribal Consultation pursuant to SB 18 or Government Code Section 65352.3 and Public Resources Code section 21080.3.1. Additionally, please disclose the date and method of contact. Notification letters shall be included in the document.

1.8 California Environmental Quality Act Review

The Section states that "As discussed in the Initial Study below, it has been determined that several CEQA resource issues would not be significant and would not require further analysis in the EIR.". The City disagrees with this assertion. As discussed in the comments above, due to the failure to include a complete Project Description and provide all necessary studies, all issue areas will require further analysis in the environmental document based upon the content of the IS. Also, due to the insufficient preliminary analyses, the City does not agree that it can be determined that the "remaining issues are expected to not be significant or with mitigation can be reduced to less than significant".

2.1 Environmental Factors Potentially Affected

As previously mentioned, there is not sufficient information to support the conclusions reached. Many of the studies required for a complete understanding of the Project's impacts have not been completed; therefore, there is currently little to no basis for the conclusions reached in this IS. The Project Description is also incomplete, as it fails to include many of the project components necessary for this Project to proceed. The City is also concerned that the proposed partial Annexation of the Project site is not consistent with LAFCo's Guidelines for Orderly Development and LAFCo policies, and therefore cannot be supported. As the City anticipates the entire Project area will need to be included in the Annexation request, all portions of the Project must be reviewed for consistency with City policies and ordinances. Lastly, as the intent is for multiple agencies to use the same environmental document, the Project must use the City's 2017 CEQA Guidelines, as revised by more recent State CEQA Guideline changes as identified above in the Global Comments. For these reasons, all of the discussions associated with each of the environmental factors must be updated and further analyzed in the environmental document. While each area will need to be updated to address the issues identified above, the comments below are provided to assist the District and provide further direction.

2.4.1 Aesthetics

The environmental document must include an analysis of the visual impacts of the District Transportation and Bus Parking facilities. As a general comment the City recommends that the District place the school's civic buildings nearest Rose Avenue and relocate the Vehicle storage areas to the back of property to limit any potential visual impacts along Rose Avenue. If the area cannot be relocated, the project will require substantial screening along Rose Avenue at the southern frontage of the property. The environmental document must also address the aesthetic impact associated with the loss of trees onsite, and compliance with City requirements for replacement of the value of any trees removed onsite or offsite. Additionally, the DEIR should include photo simulation of the proposed Project from all vantage points of all surrounding scenic resources, including adjacent farmland, in order to assist in determining the potential impact the Project might have on visual resources. Any of the significant visual resources, as identified in the 2030 General Plan Goals and Policies or in the General Plan Background Report, that may be affected by the proposed project should be noted and described. This would include waterways, agricultural greenbelts, beaches and coastlines, scenic roadways, and well preserved urban landscapes associated with historic neighborhoods and park and open plazas.

2.4.2 Agricultural and Forest Resources

The IS identifies the Project as having a potentially significant impact on Agriculture. The IS references the City of Oxnard 2030 General Plan Program EIR. The IS notes that the 2030 General Plan Program EIR accounted for the conversion of up to 2,215 acres of important farmland to non agricultural use, however, the area proposed to be converted under this Project, was not a part of the area accounted for in the 2030 General Plan Program EIR. Therefore, this Project cannot rely on the analysis done for the 2030 General Plan Program EIR.

The analysis mentions that consultation with the County of Ventura, will be conducted, if feasible. The District should consult with the Agricultural Commissioner's office. The District must consult with the City on any potential mitigation of the potential impacts to the agricultural resources. In the preparation of the environmental document and ongoing consultation with the City, the District should consider the implementation of at least one of the following two options: Option 1, an Agricultural Conversion In-Lieu fee or Option 2, Purchase of Agricultural Conservation Easements. The District should review the Agricultural Resources discussion within the recently released Teal Club Specific Plan EIR (https://www.oxnard.org/wp-content/uploads/2021/12/Oxnard-Teal-Club-Specific-Plan-Recirculated-Draft-EIR-December-2021.pdf), as a starting point for our discussions and for additional information on the options mentioned above.

2.4.3 Air Quality

The IS identifies the Project as having a less than significant impact, with mitigation incorporated. As previously stated, without the preparation of an Air Quality Study there is not sufficient basis for this assumption. Also, the Project must use the City of Oxnard Significance Thresholds. Therefore, further analysis is required in the environmental document. The analysis must also discuss the potential for air quality impacts generated by the District Transportation and Bus Parking and Maintenance facility operations, on the students and faculty in the adjacent areas. The District should consult with the Ventura County Air Pollution Control District.

2.4.4 Biological Resources

The environmental document must include an analysis of the Project's compliance with applicable City ordinances and policies. Therefore, further analysis is required in the environmental document.

2.4.6 Energy

The IS identifies the Project as having a less than significant impact on Energy. Under the Long-Term Energy Use discussion, this is no discussion of the District Transportation and Bus Parking and Maintenance facility operations. The environmental document must include further discussion of potential impacts associated with this facility. The IS states that due to RDV having the largest number of bused students in the district, that the long term bus storage at the site will reduce VMT, however there is no information provided to support that assertion. The DEIR must provide a comparison of the number of bused students by school and a discussion of operations showing how the assumed reduction in VMT is being achieved. Additionally, per the project description the site will provide space for up to 24 buses nine of which currently serve RDV,

based on this the majority of the buses will be to serve other schools in the district. Further analysis must be conducted to analyze impacts associated with service of other schools to be served by the buses stored at the Project site.

The discussion also indicates that the proposed project would allow students to walk to the school, further minimizing vehicle trips. However, that is an existing condition, so it is not clear how that would further minimize trips as compared to the existing facility. Also, the discussion generally implies that the Project impacts would be less than significant, since the Project would comply with various City and County plans and goals, but no analysis is provided to show how the Project would comply. The environmental document must include a further and more detailed analysis of the Project's compliance with the plans, and identify any mitigation measures necessary to ensure long term compliance.

2.4.7 Geology and Soils

The IS identifies the Project as having a less than significant impact, with mitigation incorporated; however, no studies have been prepared. A soils and geological report is required for this Project. The analysis and conclusions must be revised to reflect the findings of the report.

2.4.8 Greenhouse Gas Emissions

The IS identifies the Project as having a less than significant impact; however, no studies have been prepared. An air quality report is required for this Project. The District should consult with the Ventura County Air Pollution Control District. The model must account for the various uses proposed by the Project, in particular the District Transportation and Bus Parking and Maintenance facility. Also, with regard to construction, the report must account for any foreseeable reconstruction associated with the proposed phases, including temporary configurations at the Project site. The analysis and conclusions must be revised to reflect the findings of the report.

2.4.9 Hazards and Hazardous Materials

The IS analysis only looks at typical office materials and school supplies, and fails to identify if the past practices on the agricultural lands have used hazardous materials, and the storage of future materials associated with the proposed District Transportation and Bus Parking and Maintenance facility. The environmental document must include further discussion of the proposed storage, use, and disposal of materials associated with the bus facility, such as fuel storage, storage of oils, paints, used parts, or other materials typically associated with automotive maintenance. Also, the report states that no remediation action is required so long as the northerly parcel is used for agricultural purposes. However, as improvements may be required on this site, the analysis must address if any further action would be required to allow for the improvements. The IS must also include further analysis of the Project's compliance with City and County emergency plans.

2.4.10 Hydrology and Water Quality

The IS identifies the Project as having a less than significant impact, with mitigation incorporated; however, no studies have been prepared. A drainage report, sewer report, and water

demands analysis are required for this Project. The analysis and conclusions must be revised to reflect the findings of these reports.

2.4.11 Land Use and Planning
The IS identifies the Project as having a less than significant impact; however, little analysis has been provided to support that determination. The environmental document must include a detailed analysis of the Project's compliance with all of the applicable policies and ordinances of each of the responsible agencies with either land use authority over the proposed Project or those that have Agreements associated with the land, including the City of Oxnard, City of Camarillo, County of Ventura, and LAFCo.

2.4.12 Mineral Resources
The IS identifies the Project as having a less than significant impact; however, little analysis has been provided to support that determination. The environmental document must include a detailed analysis of the project's compliance with the applicable City policies and ordinances.

2.4.13 Noise
The IS identifies the Project as having a less than significant impact; however, no studies have been prepared. A noise study is required for this Project. The IS fails to analyze the possible impacts associated with the construction and operation of the District Transportation and Bus Parking and Maintenance facility. The study and environmental document analysis must consider the noise and vibrations associated with the construction of the whole of the Project and all associated operations, including increased bus traffic and repair activities. The analysis should not only consider the noise impact on all adjacent properties including the school and classroom facilities.

2.4.14 Population and Housing
The IS discussion only discusses potential growth inducing impacts associated with roadway improvement and the school use. However, the whole of the Project must be analyzed by the environmental document. As a result, in addition to the use and road improvements, the "growth inducing impacts" associated with the extension of the utilities, the general plan amendment and associated pre- zoning, the changes to the City Urban Restriction Boundary, the changes to the SOAR land designation, the green belt amendments, and changes to the City Sphere of Influence would all need to be analyzed in the environmental document.

2.4.15 Public Services
The IS identifies the Project as having a less than significant impact, however the City, including Fire and Police have not been consulted or received applications for review. The District must submit to the City for review of the Project, to determine impacts to City services.

2.4.17 Transportation
The IS identifies the Project as having a less than significant impact, with mitigation incorporated; however, no studies have been prepared. As indicated in the IS, a traffic study will be required for this Project. The Districts traffic team must coordinate with City Staff to ensure

the appropriate analysis is provided. The Project will be required to comply with the City's adopted Bicycle and Pedestrian Master Plan, which identifies a Class II bike line along Rose Avenue. The analysis and conclusions must be revised to reflect the findings of the approved report.

2.4.18 Tribal and Cultural Resources

The IS identifies the Project as having a less than significant impact, with mitigation incorporated. However, as acknowledged in the IS the results of the limited research have not been received nor has an Archeological Survey been conducted, nor has tribal consultation been conducted. Therefore, there is not sufficient basis for this assumption. For the environmental document, a Phase I Archeological Survey for the Project area. The environmental document must also be updated to reflect the AB 52 and SB 18 consultation efforts.

2.4.19 Utilities and Service Systems

The IS identifies the Project as having a less than significant impact; however, no studies have been prepared to support this conclusion. Prior to drafting the environmental document, the District must submit a Project application to the City for review, so that the City can accurately analyze the Projects impacts on Utilities and Service Systems.

Thank you for the opportunity to comment on the NOP and IS. Please call Joe Pearson II, Interim Planning & Environmental Services Manager, at 805-385-8272, or you can email at Joe.Pearson@oxnard.org if you have any questions.

Sincerely,

NOTICE OF PREPARATION OF ENVIRONMENTAL IMPACT REPORT AND INITIAL STUDY FOR THE RIO DEL VALLE MIDDLE SCHOOL EXISTING CAMPUS EXPANSION MASTERPLAN (SCH # 2022060117)

Dear Mr. Saleh:

The Department of Toxic Substances Control (DTSC) has received your Notice of Preparation of an Environmental Impact Report and Initial Study (NOP/IS) for the Rio Del Valle Middle School (School) Existing Campus Expansion Masterplan Project. The proposed project includes the expansion of the School campus located at 3100 Rose Avenue in unincorporated County of Ventura. The School is approximately 30.2 acres, including the 20.2-acre main campus (APN 144-0-110-445) and 10 acres of active agricultural lands (a portion of APN 144-0-110-225) to the north of the main campus buildings. The proposed project would add approximately 11.1-acres to the south (a portion of APN 144-0-110-590) that the Rio School District (District) proposes to develop with new educational and support facilities, resulting in an approximately 41.3-acre campus (Project Site).

The proposed project includes development within the expanded campus and includes: new classrooms, library and media center, transportation and parking facilities, recreational facilities including a 320-meter track, flag football field, six basketball courts, two baseball fields, softball field, physical education and lunch play field, four sand volleyball courts, two soccer fields, jogging path, an athletic restroom/storage building, and up to ten tennis courts and/or handball courts. The expanded campus

shall provide significant health and safety improvements, additional on-site parking, and a bus turn out lane.

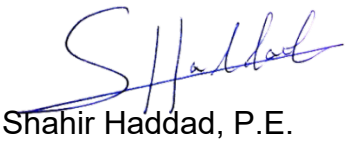
The NOP/IS states, “The Phase II ESA results indicated that the southern parcel surface soils are impacted by total purgeable petroleum hydrocarbons (TPPH), TPHd, and hydraulic oil/motor oil total petroleum hydrocarbons (TPHh/m) released from the junk vehicles previously stored at the southern parcel and fuel storage ASTs. TPPH, TPHd and TPHh/m were detected in the southern parcel surface soils at concentrations exceeding relevant screening levels. Tetra Tech recommends that the RSD submit the Phase I ESA report (Tetra Tech 2021a) and Phase II ESA report (Tetra Tech 2021c) to the DTSC and enter the southern parcel into the DTSC Voluntary Cleanup Program (VCP).” The NOP/IS further states, “Tetra Tech determined that no further action is recommended for the northern parcel for as long as the northern parcel is used for agricultural production.

On May 25, 2022, the District entered into an Environmental Oversight Agreement (Docket No. HSA-FY21/22-135) with DTSC for oversight of an environmental investigation for 11.1-acre portion of the Project Site. Therefore, the following comments are applicable only for the rest of the Project Site.

DTSC recommends the following items be addressed in the NOP/IS:

1. Identify recognized environmental conditions (REC) at the Project Site and indicate how these RECs will be addressed, and under the oversight of which regulatory agency. If state funding is anticipated for school projects, then DTSC review/approval is required pursuant to California Education Code.

2. If there are any recognized environmental conditions at the Project Site, DTSC recommends investigation and mitigation, as necessary, to address potential impact to human health and environment.



3. DTSC recommends environmental review of the Project Site under the DTSC Schools Branch oversight prior to construction to ensure the School is safe for students and staff.

4. If the project requires import soil to backfill the areas excavated, DTSC recommends sampling be conducted in accordance with DTSC's Information Advisory Clean Imported Fill Material (https://dtsc.ca.gov/wp- content/ uploads /sites/31/2018/09/SMP FS Cleanfill-Schools.pdf)

5. Discuss procedures to be taken if the soil and/or groundwater contamination is suspected or discovered during grading, construction and/or demolition.

If you have any questions regarding this letter, please contact Mr. Johnson P. Abraham, Project Manager, at (714) 484-5380 or Johnson.Abraham@dtsc.ca.gov or me at (714) 484-5368 or Shahir.Haddad@dtsc.ca.gov.

Subject: Notice of Preparation (NOP) for Rio Del Valle Middle School Campus Expansion Master Plan

Dear Mr. Saleh:

Thank you for providing the NOP for the above-referenced project to LAFCo. As an agency with approval authority over one or more aspects of the project, LAFCo will be a responsible agency pursuant to the California Environmental Quality Act (CEQA). The comments provided in this letter are solely those of LAFCo staff; they do not reflect determinations made by the Commission.

Purpose of LAFCo

LAFCos were created in each of the state's 58 counties by the State Legislature for the purposes of discouraging urban sprawl, preserving open-space and prime agricultural lands, encouraging the efficient provision of government services, and encouraging the orderly formation and development of local agencies (Govt. Code § 56301). To this end, LAFCos, which function as state agencies, were given exclusive jurisdiction to determine the jurisdictional boundary and service area of all cities and special districts in the state. The Ventura LAFCo exercises its jurisdiction over the 10 cities and 49 special districts located in Ventura County.

Project Description

Rio Del Valle Middle School, located at 3100 Rose Avenue in the unincorporated community of El Rio, is a part of the Rio School District which provides kindergarten through 8th grade education to the unincorporated communities of El Rio and Nyeland Acres and portions of the City of Oxnard. The proposed Master Plan for the Rio Del Valle Middle School campus includes 1) various improvements to facilities on the existing approximately 31-acre campus, 2) the development of a transportation facility and maintenance building, parking, classroom buildings, a library, and athletic facilities on approximately 11 acres of agricultural land located south of the existing campus ("South Campus Expansion Area"), and, 3) an agricultural learning program on 10 acres of agricultural land located to the north of the existing campus ("North Campus Expansion Area"). The applicant proposes to receive municipal services, including water and sewer service, from the City of Oxnard. Phase 1 includes plans for annexation to the City of the main campus and South Campus Expansion Area, and perhaps the North Canyon Expansion Area. However, because the North Campus Expansion Area is intended to remain in agricultural use and does not involve urban development

that would rely on municipal services, annexation of this area to the City would be considered premature and would not be consistent with LAFCo law and local policies. For this reason, the following comments apply to only the annexation of the main campus and South Campus Expansion Area. Based on the materials included in the NOP, it appears that the applicant plans to conduct an analysis of impacts to agricultural resources.

The "Project Description" and/or the list of "Required Permits and Approvals" sections of NOP should be expanded to include the following:

1. *Reorganization*: The applicant proposes to annex the proposal area to the City of Oxnard. However, the project description should be modified to include annexation to the Calleguas Municipal Water District (Calleguas). Calleguas is a wholesale water supplier to the City of Oxnard and is a member agency of Metropolitan Water District of Southern California (Metropolitan). According to Calleguas staff, it is the policy of both Calleguas and Metropolitan that water may be supplied to only territory located within each agency's respective boundaries. In addition, Section 3.2.2 of the Ventura LAFCo Commissioner's Handbook[1] generally provides that any annexation to the City of Oxnard that includes potable water service must also include annexation to Calleguas. Much of the existing school site and the South Campus Expansion Area are located outside the jurisdictional boundaries of Calleguas and Metropolitan. Therefore, the application to LAFCo should consist of a reorganization involving annexation to the City, Calleguas, and Metropolitan.

2. *Sphere of Influence Amendments*: The South Campus Expansion Area is located outside the spheres of influence for the City and Calleguas, as determined by LAFCo. LAFCo law requires that annexations be consistent with applicable spheres of influence (Govt. Code § 56375.5). Therefore, any application made to LAFCo requesting to annex the project site to the City and Calleguas must also include an application to amend the spheres of influence for both agencies. Handbook Section 4.3.3 lists a number of additional factors that apply to sphere of influence amendments specifically for schools. We encourage the school district to review these policies before submitting an application to amend the City sphere of influence.

3. *City of Oxnard Urban Restriction Boundary (CURB):* The South Campus Expansion Area is located outside the Oxnard CURB, as established by the City's Save Open Space and Agricultural Resources (SOAR) ordinance. City policies generally limit services and urbanized uses of land to within the CURB. Handbook Section 4.2.1 provides in relevant part, "sphere of influence boundaries should coincide with, or cover lesser area than, voter approved growth boundaries." Section 3.2.4.2 provides that LAFCo will not approve a proposal, such as an annexation, unless it is consistent with any city ordinance requiring voter approval. To be consistent with this policy, the City's CURB would need to be amended to include the site before the sphere is amended.

[1] The Handbook is a compendium of the Commission's adopted policies and is available on the Ventura LAFCo website by clicking here.

4. *Camarillo-Oxnard Greenbelt Agreement*: The South Campus Expansion Area is within the Camarillo-Oxnard Greenbelt. Pursuant to the greenbelt agreement, the cities of Camarillo and Oxnard and the County of Ventura "agree to a policy of non-annexation, non-development and retention of open space uses for the territory" included in the greenbelt. LAFCo has endorsed the greenbelt agreement and consistency with it is generally required pursuant to Handbook Section 3.2.4.4. Therefore, in order for the development/reorganization to proceed, the greenbelt agreement would need to be amended by all parties (i.e., the County and the cities of Camarillo and Oxnard).

5. *Discretionary approvals required*: Handbook Section 3.1.6 provides that unless exceptional circumstances exist, "no application for a change of organization [including annexation]…will be accepted until all discretionary approvals for any pending application for land use entitlements…pertaining to the subject territory are granted." Approval of a Master Plan does not constitute approval of discretionary land use entitlements. The City of Oxnard would be the agency with land use authority over the transportation facility[2] and the State Architect would appear to have authority over the approval of the school's expansion. Approval from these entities would be necessary before an application for a reorganization is submitted to LAFCo for either the transportation facility or school expansion. In addition to approval of the necessary entitlements, the City would be required to prezone the site consistent with the proposed uses (Govt. Code § 56375(a)(7)) and amend its general plan designation accordingly.

Again, thank you for the opportunity to provide comments. Please do not hesitate to contact me should you have any questions.

Sincerely,

Kai Luoma
Executive Officer
Ventura LAFCo

c: Ventura LAFCo Commissioners
Vyto Adomaitis, City of Oxnard
Dave Ward, County of Ventura, Resource Management Agency
Dan Drugan, Calleguas Municipal Water District

[2] It appears to be the school district's position that pursuant to Government Code Section 53094(b), it can render the otherwise applicable zoning ordinance inapplicable to the proposed transportation facility. However, it is the opinion of LAFCo Legal Counsel that Section 53094(b) does not provide the school district with such authority. Therefore, the City would have approval authority over the transportation facility and the approval of the City would be required in order for the proposal to be consistent with this policy.

Re: 2022060117, Rio del Valle Middle School Existing Campus Expansion Master Plan Project, Ventura County

Dear Wael Saleh:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Cody.Campagne@nahc.ca.gov.

Edmund E. Williams
Chief Deputy
Korinne M. Bell

MEMO

DATE: 1 July 2022

TO: Wael Saleh

FROM: Alec Thille

SUBJECT: NOP-EIR Rio del Valle Middle School Existing Campus Expansion Master Plan

---

The Final Initial Study Analysis (ISA) included with the Notice of Preparation (NOP) for the Rio del Valle Middle School Existing Campus Expansion Master Plan Environmental Impact Report (EIR) evaluated the project impact to surrounding agricultural resources due to incompatibility of use (section 2.4.2 item e.). The ISA found the impacts to be Less Than Significant to agricultural resources due to "The project [being] expected to implement appropriate and applicable policies, such as those in the County of Ventura Agriculture/Urban Buffer Policy, and appropriate and applicable recommendations, such as those in Farming Near Initial Study, Proposed Rio del Valle Middle School Existing Campus Expansion, County of Ventura, CA 2-8 Schools, A Community Guide for Protecting Children (Ag Futures Alliance 2002)." The ISA further notes that "this conclusion may change, and this topic will be further analyzed in the EIR."

The proposed site plan included in the ISA (Figure 1-3) shows no compliance with the County of Ventura *Agriculture/Urban Buffer Policy*. The plan shows no vegetative screen nor setbacks of sensitive uses from the immediately adjacent, offsite agriculture. The policy itself notes that non-agricultural uses conflict with agricultural uses, schools especially so. As such, unless a revised site plan is generated clearly demonstrating compliance with the policy, the EIR must find that the Project has Significant Impacts on agricultural resources as the project could result in conversion of Farmland, to non-agricultural use due to the unmitigated conflicting nature of the project.

Please direct any questions to either Alec Thille, alec.thille@ventura.org, or Korinne Bell, Korinne.bell@ventura.org.

Air Pollution Control Officer

VENTURA COUNTY
AIR POLLUTION CONTROL DISTRICT
Memorandum

TO: Wael Saleh, Assistant Superintendent, Rio School District

DATE: June 29, 2022

FROM: Nicole Collazo, Air Quality Specialist, VCAPCD Planning Division

SUBJECT: Notice of Preparation of a Draft Environmental Impact Report for the Rio Del Valley Middle School Expansion and Initial Study

Air Pollution Control District (APCD) staff has reviewed the subject Notice of Preparation (NOP) for the draft environmental impact report (EIR) and Initial Study of the project referenced above. The project location is 3100 Rose Avenue in the unincorporated area northeast of the City of Oxnard. The Lead Agency for the project is the Rio School District.

General Comments

1) The air quality assessment should consider project consistency with the 2016 Air Quality Management Plan (AQMP). The 2016 AQMP presents Ventura County's strategy (including related mandated elements) to attain the 2008 federal 8-hour ozone standard by 2020, as required by the federal Clean Air Act Amendments of 1990 and applicable U.S. EPA clean air regulations. The 2016 AQMP uses an updated 2012 emissions inventory as baseline for forecasting data, SCAG RTP 2016 data, and CARB's EMFAC2014 emission factors for mobile sources. The AQMP can be downloaded from our website at http://www.vcapcd.org/AQMP-2016.htm.

2) The Ventura County Air Quality Assessment Guidelines (AQAG) is recommended to evaluate all potential air quality impacts. The AQAG are also downloadable from our website here: http://www.vcapcd.org/environmental-review.htm. Specifically, the air quality assessment should consider reactive organic compound, nitrogen oxide emissions, and toxics from all project-related motor vehicles, sources not permitted with APCD, and construction equipment that may result from potential buildout, as appropriate to future development policies and implementation measures. We note that the AQAG has not been updated since 2003 and newer emission reduction measures have been recommended by APCD and implemented in other jurisdictions. For example, the County of Ventura recently updated a new policy in its 2040 GPU to always require Tier 3 and Tier 4 diesel construction off-road equipment (New Policy HAZ-10.13). This policy should be applied to the project.

3) We recommend emission reduction measures such as only using Tier 3 or Tier 4 construction off-road equipment be used as the construction schedule is expected to last 18 months and there are many sensitive receptors nearby, including the surrounding neighborhoods and young children

on-site at the school. Diesel particulate matter from construction equipment and ozone precursors may be emitted nearby sensitive receptors, especially infants in the development stages. Emission reduction measures such as requiring Tier 3 and/or Tier 4 off-road construction equipment can reduce pollutants by up to 85% and is highly recommended if emissions are above local and state thresholds adopted. Using low-VOC paints may also reduce ROC emissions once construction estimates are known. NOx emissions due to the amount of grading may be significant (another reduction measure is using 2010 and newer on-road engine vehicles for exporting material that comply with California State Regulation for In-Use On-Road Diesel Vehicles Title 13, CCR §2025) and using higher EPA-rated tiered equipment can also significantly reduce NOx emissions.

4) The EIR's Air Quality impact discussion should also include the expected increase in mobile emissions (new students, new employees, new maintenance and vendors, new events), area emissions (landscaping, painting/maintenance), and energy emissions (increase in natural gas usage) as a result of the school expansion.

Thank you for the opportunity to comment on the project. If you have any questions, you may contact me at nicole@vcapcd.org.

PUBLIC VENTURA COUNTY WORKS

WATERSHED PROTECTION

MEMORANDUM

DATE: June 15, 2022

TO: Anthony Ciuffetelli, Planner, Planning Division

FROM: James Maxwell, Groundwater Specialist

SUBJECT: RMA 22-014 – Rio del Valle Middle School Existing Campus Expansion Master Plan

The Ventura County Public Works Agency, Water Resources Division, Groundwater Resources Section (VCWRD-GRS) reviewed the *Initial Study Rio del Valle Middle School Existing Campus Expansion Master Plan* (IS) submitted by the City of Oxnard.

PROJECT DESCRIPTION

The proposed development project (Project) area, occupied by Rio del Valle Middle School and adjacent agricultural operations, will be located on multiple parcels encompassing a total of 41.3 acres total. The School is located at 3100 Rose Avenue in unincorporated County area. The School currently exists on 30.2 acres of Assessor's Parcel Numbers (APNs) 144-0-110-445 and -225 and will add 11.1 acres of APN 144-0-110-590 to the south of the current property. The parcels associated with the proposed project are proposed for annexation into the City of Oxnard. The Project currently falls within the boundaries of the *El Rio/Del Norte Area Plan*. The proposed project includes development within the expanded campus that would occur in two phases.

GROUNDWATER QUANTITY AND WATER SUPPLY

The Project overlies the Oxnard Subbasin, a high priority, critically-overdrafted basin designated by the Department of Water Resources (DWR) as Basin No. 4-004.02. The proposed project is located within the Fox Canyon Groundwater Management Agency (FCGMA) area. The FCGMA regulates groundwater extraction allocations for well owners and operators. Policy ED-39.1 of the *El Rio/Del Norte Area Plan* stipulates that discretionary development will not result in the net decrease in the quantity of groundwater, taking into account existing and projected water supply and demand factors. Water offsets may be utilized. Policy ED-39.4 prohibits discretionary development that would significantly decrease the recharge capability of the property.

The school currently receives water from the City of Oxnard, United Water Conservation District (UWCD) and a Rio School District-owned well on the school property. The proposed project's southern expansion will obtain potable water from a new connection to the City of Oxnard water system. Improvements proposed on the existing campus parcel will utilize connections from existing service lines. The northern expansion area

will continue to utilize agricultural water from existing groundwater wells. The City of Oxnard's water supply consists of imported water from Calleguas Municipal Water District (CMWD), groundwater extracted by United Water Conservation District and groundwater extracted from the City of Oxnard's wells.

A complete current and anticipated water usage analysis is necessary to determine the portion of water sourced from groundwater and if the proposed development would result in additional extraction of groundwater (at full build-out). The analysis should be inclusive of groundwater extraction allocations established and regulated by the FCGMA. Any additionally extracted groundwater quantity will need to be offset with water saving measures or mitigations per the *El Rio/Del Norte Area Plan*.

The site development will create new impervious surfaces and hardscape. Proposed site improvements include additional parking facilities and hardscape sports facilities. A hydrology or drainage study needs to incorporate surface water runoff controls and include infiltration mitigations that will allow surface water to percolate and recharge the underlying aquifers.

GROUNDWATER QUALITY

The Project area is currently provided sewer service by the City of Oxnard. Sewer service to the southern campus expansion area will be provided by a new connection from the City. The Oxnard Wastewater Treatment Plant (OWTP) provides treatment capacity for wastewater generated within the City's service area. The OWTP is currently operating below its daily capacity. A sewer service analysis is necessary to determine if the OWTP and service connections can accommodate the additional anticipated wastewater.

It is not known if individual septic systems or wastewater treatment systems currently provide service to the parcels within the proposed Project area. Existing wastewater treatment systems should be removed during build-out.

The County of Ventura began issuing well permits for the construction, maintenance, operation, use, repair, modification and destruction of groundwater wells in 1970 and has records of the following wells located within the parcels encompassing the proposed Project boundary:

State Well Number (SWN)	County Well Permit Number	APN	Installation/ Destruction Date	Status	Main Use	Depth (ft bgs[1])	Screened Interval (ft bgs)
02N22W26B01S	--	144-0-110-445	--	Destroyed	Domestic	191	23-190
02N22W26B02S	--	144-0-110-445	November 1927, Destroyed September 1935	Destroyed	Agricultural	--	--
02N22W26B03S	1195	144-0-110-225	August 1983	Active	Municipal	1,495	575-1,475
02N22W26C02S	--	144-0-110-445	--	Can't Locate Indeterminable	Domestic	--	--
02N22W26C03S	--	144-0-110-445	December 1948	Active	Municipal	240	98-240
02N22W26C04S	--	144-0-110-445	--	Can't Locate Indeterminable	Domestic	--	--
02N22W26F02S	--	144-0-110-590	March 1960	Active	Agricultural	292	120-280
02N22W26F03S	--	144-0-110-590	February 1953	Can't Locate	Domestic	200	146-192

Wells that will no longer be used by the project or considered as "Active" status will need to be permitted for destruction per Ventura County Ordinance No. 4468 (Well Ordinance).

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total lot 11.1 acres split into 8.4 acres for the expansionand 2.7 for parking structures

Construction Phase -

Vehicle Trips - Trip Generation Rates per Traffic Study: 2.10 ADT/student and 267 ADT/site (267 ADT/227 spaces = 1.2)

Construction Off-road Equipment Mitigation - Average engine Tier 4 Interim

Mobile Land Use Mitigation -

Mobile Commute Mitigation - Daily attendance is approximately 15,000 students in the Oxnard SD and the district claims to give rides to 2500 students daily.

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Waste Mitigation -

1.3 User Entered Comments & Non-Default Data

Rio Del Valle MS - Ventura County, Annual

Project Characteristics -

Land Use - Total lot 11.1 acres split into 8.4 acres for the expansionand 2.7 for parking structures

Construction Phase -

Vehicle Trips - Trip Generation Rates per Traffic Study: 2.10 ADT/student and 267 ADT/site (267 ADT/227 spaces = 1.2)

Construction Off-road Equipment Mitigation - Average engine Tier 4 Interim

Mobile Land Use Mitigation -

Mobile Commute Mitigation - Daily attendance is approximately 15,000 students in the Oxnard SD and the district claims to give rides to 2500 students daily.

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Waste Mitigation -

Reference: NV5 West Inc., May 30, 2017; Report of Preliminary Geotechnical Study, Proposed Kitchen Improvements, Rio Del Valle Junior High School, 3100 North Rose Avenue, El Rio Area of Ventura County, California

Dear Mr. Saleh,

NV5 West, Inc. is pleased to present this geotechnical update letter for the proposed sports field complex phase 2 improvements at Rio Del Valle Middle School in Oxnard, California. This letter presents the update to the previous geotechnical report and provides geotechnical recommendations for design and construction of the proposed site improvements. This report was revised to supplement recommendations in Section 5.5. Based on the study findings, the proposed project is considered feasible from a geotechnical perspective provided the recommendations presented in this report are incorporated into the design and construction.

NV5 appreciates the opportunity to be of service to the District on this project. If you have any questions, please do not hesitate to contact us.

Respectfully Submitted,

NV5 WEST, INC.

Shaun Simon, PE, PG, CEG
Engineering Manager

M. Bruce Smith, GE 2673
Senior Geotechnical Engineer

1. INTRODUCTION

This report presents the updates to the previous geotechnical study performed by NV5 West, Inc., for the proposed sports field complex phase 2 improvements at Rio Del Valle Middle School in Oxnard, Ventura County, California. The site location is shown on *Figure 1 – Site Location Map*.

The purpose of the update was to evaluate the geologic and engineering properties of the site as they relate to the proposed development and to provide geotechnical recommendations for the design and construction of the project.

This update was conducted in substantial conformance with the previous NV5's geotechnical report dated May 30, 2017 in response to the District's request.

1.1 Existing Site Conditions

The proposed sports field complex phase 2 improvements are planned along the eastern portions of the existing campus at Rio Del Valle Middle School located at 3100 North Rose Avenue in Oxnard, California. The area of the subject Phase 2 improvements is occupied by an asphalt parking lot in the northern portion, and by two grass ball field in the remaining portions. The remainder of the campus is occupied by buildings and parking lots in the western portion of the campus; and open grass fields, and an oval-shaped track in the central portion of the campus. The site was visited on November 6, 2020 for the purpose of this update. The site conditions appear to be similar to the conditions described at the time of our referenced report dated May 30, 2017.

Existing site conditions and proposed improvements are depicted on Figure 5 – Geotechnical Plan.

The school is bounded on the west by North Rose Avenue; and is bounded on the north, east, and south by existing agricultural fields. The area of the subject improvements is generally level to gently sloping with drainage by sheet flow generally to the south.

1.2 Proposed Improvements

Based on the information received and review of site plans (including sheet A-102) by Kruger, Benson, Ziemer it is our understanding that the proposed improvements will include sports field complex improvements consisting of two baseball/softball fields with bleachers and dugouts; and also basketball and tennis courts in the southern portion. The dugouts are planned as CMU walls up to approximately 12 feet in height. Details about the foundation system and loading are not known at this time; however, we understand that the proposed structures may be supported on conventional shallow footings, and that deep foundation may be utilized for light poles or other structures. The proposed improvements are shown on the Geotechnical Plan – Figure 5.

1.3 Previous Studies

At least two geotechnical studies have previously been performed for the adjacent, existing improvements for Rio Del Valle Junior High School:

> Earth Systems, July 22, 1997; *Geotechnical Engineering Feasibility Report, Rio Del Valle Junior High School Gymnasium, 3100 North Rose Avenue, El Rio Area of Ventura County, California.*
>
> *NV5 West Inc., May 30, 2017; Report of Preliminary Geotechnical Study, Proposed Kitchen Improvements, Rio Del Valle Junior High School, 3100 North Rose Avenue, El Rio Area of Ventura County, California.*

1.4 Scope of Services

Services performed for this study included the following tasks:

- Review of existing site geotechnical reports and research our archives for available geologic and geotechnical data pertinent to the project.
- Site reconnaissance to reconnoiter site conditions.
- Assessment of site geologic conditions and geologic hazards.
- Geotechnical engineering analysis.
- Preparation of this report.

The scope of this study did not include assessment for the presence of contaminants in the soils and groundwater. Our recommendations are based on the results of our field explorations, laboratory tests, and appropriate engineering analyses. The results of our field explorations and laboratory tests are presented in Appendices A and B.

2. EXPLORATION AND TESTING

2.1 Drilling and Sampling

For the purposes of the update report, NV5 has reviewed the previous exploration performed at the subject site. A total of four (4) exploratory borings and (2) Cone Penetrometer Test Soundings were performed by Earth Systems at the subject site (Earth Systems, 1997), and a total of two (2) exploratory borings were performed by NV5 (2017) to investigate the subsurface soil and groundwater conditions. Five of the borings were advanced to a depth of 51 feet, and the two CPTs were advanced to depths of 50 feet. Boring locations are presented in Figure 4. Borings were located in the field by measurement from existing landmarks and elevations were estimated from the plan contours.

A key for soil classification, boring legend, and boring logs is presented in Appendix A.

2.1.1 In-Situ Testing

As part of the previous exploration, Standard Penetration Tests (SPT) were performed in the borings to evaluate the general density and consistency of subsurface materials. The boring logs including penetration resistance or blow counts obtained during soil sampling and detailed description of the SPT testing are presented in Appendix A.

2.2 Laboratory Testing

As part of the previous exploration, representative samples of the soils were tested in NV5's Ventura laboratory to aid in the soil classification and to evaluate the relevant engineering properties of the site soils. The geotechnical testing included the following:

- *In situ* moisture contents and dry densities (ASTM D2216)
- Atterberg Limits (ASTM D4318)
- Particle Size Analysis (ASTM D422)
- Consolidation (ASTM D2435)
- Direct Shear (ASTM D3080)
- Expansion Index (ASTM D4829)
- Corrosion Potential (pH, Resistivity, soluble sulfates, soluble chlorides)

For in-situ moisture and dry density data, see the Logs of Borings in Appendix A, Field Exploration. For a description of the laboratory test methods and test results, see Appendix B, Laboratory Testing Program.

3. GEOTECHNICAL SITE CONDITIONS

3.1 Physiography

The project area is located within the Oxnard Plain, approximately 6 miles east of the Pacific Ocean. The site is relatively flat with a gentle gradient to the south. The site elevation is approximately 100 feet MSL. Surface drainage is generally to the south and west across the school site. Site physiography is depicted on the Site Location Map – Figure 1.

3.2 Regional Geologic Setting

The site is located in the central portion of the Transverse Range Geomorphic Province, an area generally characterized by east-west trending mountain ranges, valleys and faults. The Transverse Ranges province is tectonically active with relatively high rates of uplift resulting in steep terrain and folding/warping/fracturing of bedrock units. Erosion of the steep slopes created incised canyons and deep sedimentary valleys in the region. Locally, the site is located within a large coastal floodplain in the delta region of a major river system, the Santa Clara River.

3.3 Lithology

The majority of the subject site is underlain by younger Quaternary alluvium (Qal) consisting of unconsolidated mixtures of sand, silt and clay to the total depth explored. Total depth of younger alluvium at the site is anticipated to be greater than several hundred feet. The deposits are generally considered to be liquefiable.

Local areas of artificial fill, assumed to be primarily derived from onsite soils, may be present on the site, associated with past site development.

Detailed descriptions on lithologic units encountered at the site are provided in Appendix A – Field Exploration.

3.4 Groundwater

Groundwater was not encountered in either borings. The Seismic Hazard Zone Report for the Oxnard Quadrangle, prepared by the California Divisions of Mines and Geology (2002), presents a map indicating the historically highest groundwater levels at the site are approximately 20 feet below ground surface.

Groundwater levels will vary with time depending upon the seasonal precipitation and other factors.

4. GEOLOGIC HAZARDS

Geologic hazards that are considered to have potential impacts to proposed project were evaluated based on NV5's field observations, literature review, and laboratory test results. The following sections discuss the geologic hazards and seismic design parameters considered for the site.

4.1 Faulting

The numerous faults in Southern California include active, potentially active, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS), for the Alquist-Priolo Earthquake Fault Zoning Program (Bryant and Hart, 2007). An active fault is one that has had surface displacement within Holocene time (about the last 11,700 years). A potentially active fault has surface displacement of Quaternary age deposits (last 1.6 million years). Inactive faults have not moved in the last 1.6 million years. A list of nearby active faults (those faults included in CGS, 2008) and the distance between the site and the nearest point on the fault and the slip rate for the fault is given in Table 1. Faults in the vicinity of the site are shown in Figure 3 - Fault Activity Map.

The site could be subjected to strong ground shaking in the event of an earthquake. However, this hazard is common in Southern California and the effects of ground shaking can be mitigated by proper engineering design and construction in conformance with current building codes and engineering practices.

TABLE 1 - SUMMARY OF NEARBY FAULTS

Fault Name	Closest Distance to Site* (mi)	Direction from Site	Age (yr)	Slip Rate (mm/yr)
Wright Road Fault	2.9	NE	<15,000	unknown
Simi-Santa Rosa Fault (Springville)	3.2	E	<15,000	0.2 – 1
Oak Ridge Fault	2.5	N	<130,000	4.0
Ventura Fault	4.0	NW	<15,000	0.2 – 1
Malibu Coast Fault Zone	14	SE	<130,0000	0.2 – 1
San Cayetano Fault	14.4	NE	<15,000	>5
San Andreas Fault (Mojave Segment)	42.3	NE	<150	29

Source: USGS Website - http://geohazards.usgs.gov/qfaults/map.php

4.2 Surface Fault Rupture

The site is not within a currently established State of California Alquist-Priolo Earthquake Fault Zone (AP Zone) for surface fault rupture hazards. The Alquist-Priolo Earthquake Faulting Zone Act prohibits placing structures for human occupancy across traces of active faults (Bryant and Hart, 2007).

The closest established Earthquake Fault Zone (AP Zone) to the site is for the Wright Road Fault, located approximately 2.9 miles to the northeast. Therefore, the possibility of fault rupture beneath the proposed development is considered low.

4.3 Seismic Design Parameters

Seismic parameters based on the 2019 California Building Code and using the SEAOC/OSHPD Seismic Design Maps Tools (https://seismicmaps.org/) are provided in the table below based on representative site coordinates of 34.2328 degrees North and 119.1531 degrees West. The earthquake hazard level of the Maximum Considered Earthquake (MCE) is defined in ASCE 7-16 as the ground motion having a probability of exceedance of 2 percent in 50 years, using Seismic Risk Category II and Site Class D. The data report is provided as Appendix C.

TABLE 2 - CBC SEISMIC PARAMETERS

Parameter	Value	CBC Reference
Site Class	D	Section 1613A.2.2
Seismic Risk Category	II	
Mapped Short period (0.2-sec) Spectral Response Acceleration, S_S	1.849 g	Figure 1613A.2.1
Mapped 1-second Spectral Response Acceleration, S_1	0.688 g	Figure 1613A.2.1
Site Coefficient, F_a	1.0	Table 1613A.2.3(1)
Site Coefficient, F_v	null	Table 1613A.2.3(2)
Risk-Targeted MCE 0.2-sec period Spectral Response Acceleration, S_{MS}	1.849 g	Eq. 16A-36
Risk-Targeted MCE 1-second period Spectral Response Acceleration, S_{M1}	null	Eq. 16A-37
Design Spectral Response Acceleration for short period, S_{DS}	1.233 g	Eq. 16A-38
Design Spectral Response Acceleration for 1-second period, S_{D1}	null	Eq. 16A-39

The Peak Ground Acceleration (PGA) was determined in conformance with CBC Section 1803A.5.12 and ASCE 7-16.

TABLE 3 – PEAK GROUND ACCELERATION

Parameter	Value	
Site Modified Peak Ground Acceleration [PGA_M]	0.896 g	

The 2019 California Building Code, requires a site-specific ground motion study if the 1-second Spectral Response Acceleration, S_1, exceeds a value of 0.2. However, this project may qualify for an exemption to the site-specific ground motion study per ASCE 7-16 Section 11.4.8, if the structural engineer calculates the seismic response coefficient (C_S) from Equation 12.8-2 of ASCE 7-16 for values of $T \leq 1.5\ T_S$ and taken as equal to 1.5 times the value computed by Equation 12.8-3 for $T_L \geq T > 1.5\ T_S$ or by Equation 12.8-4 for $T > T_L$. NV5 assumes the structural engineer will utilize the exemption for this project.

4.4 Liquefaction

Liquefaction is a phenomenon in which certain types of saturated soils experience a temporary reduction in shear strength and behave as a liquid. This occurs due to the loss of point-to-point grain contact as a result of excess pore pressure that builds up due to the cyclic loading accompanying strong earthquakes. Soils most prone to liquefaction are saturated, fine-grained sands, silty sands, and some silts with low relative densities and low plasticity.

Liquefaction potential depends on soil type, age of materials, density, depth to groundwater, shaking intensity and confining pressures over the potentially liquefiable soil mass. Geologically young sediments (Pleistocene to recent) coupled with a shallow groundwater table (less than 50 feet) are conditions which are indicative of an elevated liquefaction potential.

The site is located within a mapped liquefaction hazard zone (Figure 3) and underlain by loose to medium dense sandy alluvial sediments with a historic high groundwater depth of 20 feet.

A simplified liquefaction analysis was performed using the Standard Penetration Test (SPT) data, a modal earthquake moment magnitude of 7.0, and a 0.87g peak ground acceleration (determined from a Site Specific Probabilistic Analysis of 2% probability of exceedance in 50 years). The analysis was performed using the liquefaction triggering analysis procedure proposed by Boulanger and Idriss (2014) and the CGS SP-117 procedures using data from our exploratory borings B-1 and B-2, and historically high groundwater at a depth of 20 feet below the ground surface. The analyses indicate that liquefaction is a potential in layers within approximately 50 feet of the ground surface.

Secondary effects of liquefaction, including loss of bearing, lateral spreading and seismic settlement are discussed below.

Loss of Bearing: The potential for loss of bearing was evaluated using Ishihara's (1985) boundary curves in which the thickness of overlying non-liquefiable soils is compared to the thickness of the liquefied soil layers with SPT blow counts of 10 or less per foot. The site data indicate that the risk of surface manifestation and loss of bearing are considered low.

Lateral Spreading: Seismically-induced lateral spreading involves primarily lateral movement of earth materials due to ground shaking in conjunction with liquefaction. Lateral spreading can manifest as near-vertical cracks with predominantly horizontal movement of the soil mass involved towards an adjacent open slope face. Lateral spreading occurs when there is widespread liquefaction and a gentle slope, or a free face toward which lateral spreading may occur. The potential for lateral spreading at the subject site is considered to be low.

Seismic Settlement: Seismically-induced ground settlement can occur with or without liquefaction which results from densification of loose soils as a result of strong seismic ground shaking. Seismic settlement includes both settlement of liquefied soil layers and settlement of non-liquefied, unsaturated, loose sandy sediments.

We used the method by Ishihara and Yoshimine (1992) to estimate post-liquefaction seismic settlement. Analyses utilized SPT data from our exploratory borings, B-1 and B-2. Results of these analyses indicate that unsaturated seismic settlement is not anticipated as removal of unsuitable material will remove most of the earth materials susceptible to unsaturated seismic settlement.

Assuming that the loose native soils within the upper 4 feet will be recompacted to a minimum of 90% relative compaction, our analysis results show that total seismic settlement of ½ to 1 inch is expected at the school site when subjected to a design earthquake with a 2% probability of exceedance in 50

years. For preliminary foundation design, we recommend a differential seismic settlement of ½ inch over a distance of 30 feet.

4.5 Hydrocollapse

Settlement due to consolidation upon saturation of collapse prone coarse-grained earth materials can cause moderate to severe damage at the ground surface. Earth materials subject to hydro-collapse tend to be loose to medium dense, coarse grained, with a low in-situ moisture content, and experience large vertical deformations upon an increase in vertical overburden coupled with a reduction in volume upon wetting. Results of consolidation testing indicate that the sample from NV5 Borings B-1 at 5 feet and B-2 at 7.5 feet depth have approximately 1.0% collapse upon wetting. NV5 concludes that the materials have low to moderate potential for collapse upon wetting.

4.6 Slope Instability and Landsliding

The project area is not located near slopes that may be subject to instability and is not located within a State-designated earthquake induced landslide hazard zone. The hazard associated with slope instability is considered low.

4.7 Debris Flows

The site is located in an area of relatively flat ground with no slopes in the vicinity. The risk of hazard due to debris flows is very low.

4.8 Expansive Soils

Improvements including foundations and slabs in contact with earth materials with a high potential for expansion can be expected to be subject to distress based on the potential for volume change associated with highly expansive soil. Soils such as these should not be relied upon for foundation bearing. The earth materials underlying the proposed improvements are generally coarse-grained. Fine-grained earth materials are present; however, the Expansion Index is generally low, with the exception of clayey silt from approximately 7.5 feet to 20 feet deep performed for this study. The earth materials in the zone of anticipated grading have a very low expansion potential.

4.9 Flooding & Erosion

4.9.1 Earthquake-Induced Flooding

This is flooding caused by failure of dams or other water-retaining structures as a result of earthquakes. The site is not located within a dam inundation area.

4.9.2 Tsunami Hazard

Tsunamis are caused by large offshore earthquakes or submarine landslides resulting in potentially widespread and sometimes catastrophic coastal flooding. The California Geological Survey (CGS) prepared a Tsunami Inundation Map for the coastal areas of Ventura County (CGS, 2009). According to the CGS, the project site is not located within a Tsunami Inundation Area. Therefore, the risk of hazard from a Tsunami is considered to be low.

4.9.3 Local Flooding

The Federal Emergency Management Agency (FEMA), designated the site as not within an area of flood hazard. No base flood depths or BFEs are shown within this zone (FEMA, 2016). According to the Ventura County General Plan Hazards Appendix (2013), the site is located within the inundation path of a dam, including Bouquet Canyon, Castaic, Dam, Pyramid Dam and Santa Felicia Dam. The risk of inundation from flooding is considered to be low as the possibility of a dam failure is considered remote, however, the potential for widespread damage and loss of life remains.

5. CONCLUSIONS & RECOMMENDATIONS

5.1 Summary of Findings

Based on the results of our exploration and testing program, the project is considered feasible from a geotechnical standpoint provided the recommendations presented in this report are incorporated into the design and construction. The site is underlain by relatively loose and soft alluvial sand, silt and clay deposits. The potential for liquefaction at the site also creates a hazard due to settlement on site improvement foundations. These conditions can be mitigated by incorporating the recommendations provided in this report into the design and construction of the project. The proposed improvements can be supported on shallow continuous or spread footings bearing on engineered fill, as recommended in sections 5.2 and 5.3, or pole foundations as recommended in Section 5.4.

5.2 Earthwork and Grading

5.2.1 Site Clearing and Removals

Prior to grading, the project area should be cleared of significant surface vegetation, demolition rubble, trash, pavement, debris, etc. Any buried organic debris or other unsuitable contaminated material encountered during subsequent excavation and grading work should also be removed. Removed material and debris should be properly disposed of offsite. Holes resulting from removal of buried obstructions which extend below finished site grades should be filled with properly compacted soils. No fill should be placed unless the geotechnical engineer has observed and approved the underlying soils.

5.2.2 Overexcavation - Structural Fill

If conventional shallow foundations are used to support the proposed structures including the proposed dugouts, the following overexcavation recommendations apply. If other types of foundations are planned, then additional recommendations should be provided.

Following site preparation, the soil in the building area should be removed to a horizontal plane at a minimum depth of 2 feet below the bottom of the deepest footing/subgrade or 4 feet below existing grade, whichever is deeper. Removals should extend at least 5 feet beyond the building footing perimeter, including 5 feet beyond any appurtenant structures rigidly attached to the building such as staircases, covered walkways, etc. During construction, locally deeper removals may be recommended based on field conditions. The exposed soil surface should then be scarified to a depth of 8 inches, moisture conditioned, and compacted to 90% (minimum) relative compaction (ASTM D 1557) prior to placing any fill.

The Geotechnical Consultant should observe the excavation progress as the bottom is reached and must observe and approve the bottom prior scarification and processing.

If the excavation bottom encounters shallow groundwater or excessive moisture, the bottom may be stabilized by placement of crushed rock of 3 to 6 inches in diameter. The rock should be mechanically worked into place in a minimum thickness to achieve a stable, firm and unyielding surface. The subgrade should be evaluated by the Geotechnical Engineer to determine if it is stable.

5.2.3 Overexcavation - Paved Areas, Flatwork and Trash Enclosures

Following site preparation, the soil in surface improvement areas including pavement and flatwork and trash enclosures should be removed to a minimum depth of 1-foot below the proposed subgrade elevation. During construction, locally deeper removals may be recommended based on field conditions. The resulting soil surface should then be scarified to 8 inches deep, moisture conditioned, and compacted to (90% minimum) relative compaction (ASTM D 1557) prior to placing any fill soil.

The Geotechnical Consultant should observe and approve the excavation bottom prior to scarification and processing.

5.2.4 Fill Placement and Compaction

Onsite soils are considered suitable for foundation support of structures if processed as detailed below:

Existing on-site soils may be incorporated into the structural fill and flatwork areas after removing organic matter and other deleterious substances. The removed soils should be mixed thoroughly prior to placement to achieve relative uniformity and consistency for the planned engineered fill.

Conventional shallow foundations with slab on grade can be supported by engineered fill derived from onsite soils with expansion index less than 21. Continuous footings, isolated pad footings, and slabs-on-grade should be supported by a minimum thickness of two feet of engineered fill.

The materials should be placed in generally even horizontal layers not exceeding 8 inches in thickness prior to compaction, and compacted to at least 90% relative compaction.

If import soils are planned to be used, samples of those soils and the locations of their source areas should be provided to the Geotechnical Consultant at least 72 hours (3 working days) before importing to the site so that appropriate tests can be performed and the materials be evaluated for suitability for use at the site.

5.2.5 Oversize Materials

Oversize material, defined as rock or other irreducible material with a maximum dimension greater than 3 inches should not be buried or placed in the fill unless the locations, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations should be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted fill. Oversize material should not be placed within (3) vertical feet of finish grade, within (2) vertical feet of bottom of footings or below a slab or hardscape, or within (5) feet of future utilities or underground construction.

5.2.6 Graded Slopes

Graded slopes should be constructed at a gradient of 2:1 (H:V) or flatter. To reduce the potential for surface runoff over slope faces, cut slopes should be provided with brow ditches and berms should be constructed at the top of fill slopes.

5.2.7 Import Soils

Import soils should be sampled and tested for suitability by NV5 prior to delivery to the site. Imported fill materials should consist of clean soils free from vegetation, debris, or rocks larger than 3 inches in maximum dimension. The Expansion Index (EI) value should not exceed a maximum of 20, and the

resistivity results should indicate that materials are non-corrosive based on Caltrans requirements, including testing for minimum resistivity, pH, soluble sulfate content, and soluble chloride content.

5.2.8 Bulking and Shrinkage

Earth materials excavated on site may have the potential to bulk shrink in volume when excavated and replaced as engineered fill. In NV5's experience, Quaternary Alluvium may shrink up to approximately 10 to 15% when replaced as engineered fill.

5.3 Foundation Design

NV5 understands that structural design for proposed improvements including restroom, dugout, and storage structures to consist of CMU walls on shallow foundations. NV5 also understands that the proposed improvements may include shade structures, backstop fences, or light poles which may be designed on either shallow spread footings or pole foundations.

If conventional shallow foundation design is selected, the structures may be supported on continuous reinforced concrete footing with a minimum of 16 inches in width and founded a minimum of 24 inches deep into engineered fill. Isolated, reinforced concrete pad footings should be a minimum of 2 feet in each dimension, and founded a minimum of 24 inches deep into engineered fill.

For support of conventional shallow foundations, NV5 recommends overexcavation as described in Section 5.2.2, and foundation design as described in 5.3.1 through 5.3.4.

NV5's recommendations for design of pole foundations are presented in Section 5.4. Recommendations for retaining wall design are presented in Section 5.5.

5.3.1 Foundation Design Values – Shallow Foundations

An allowable bearing value of 2,000 psf is recommended. The bearing pressure should not be increased for static loads. This bearing is applicable for dead plus live loads. The recommended bearing value is based on a factor-of-safety greater than 3. The bearing value may be increased by one-third (1/3) when transient loads such as wind and/or seismicity are included. The weight of the concrete foundations can be neglected.

Lateral loads may be resisted by friction and by the passive resistance of the supporting soils. A coefficient of friction of 0.35 may be applied for dead load forces between foundations and the properly compacted fill soils. This value is based on a factor of safety greater than 1.5.

Passive pressure for structures founded in the engineered fill may be taken as 250 pcf of equivalent fluid weight for resistance to lateral load. This value may be increased by 250 psf per additional foot of depth and by 150 psf per additional foot of width to a maximum of 2,000 psf. These values include a factor of safety of 1.5. When passive resistance is used in conjunction with friction in determining the total lateral resistance, the passive resistance should be reduced by one-third (1/3). Passive resistance should be neglected in the upper six (6) inches.

The modulus of subgrade reaction may be taken as 150 pounds per cubic inch for sandy engineered fill.

5.3.2 Floor Slabs

Slabs should have a minimum thickness of 5 inches and should be designed with concrete having a minimum compressive strength of 3,000 pounds per square inch (psi). The slab should be continuously reinforced with No. 4 reinforcing bars placed in both directions at a maximum spacing of 16 inches on center. Alternatively, the slab may be thickened to provide an equivalent section equal in stiffness as determined by the structural design engineer. Concrete joints should be constructed at intervals designed by the structural engineer to help minimize and control cracking of the slab.

Commonly, a capillary break is provided beneath building floor slabs that will have moisture sensitive flooring. If used, the capillary break should consist of 6 inches of clean, granular material underlying a 15-mil HDPE membrane.

5.3.3 Lateral Load Resistance from Surcharge Loads

If an adjacent structure encroaches upon any elements of the proposed or existing structures within a 1:1 (H:V) plane projected from the bottom edge of an adjacent structure or footing, additional lateral pressure should be considered as a surcharge load on the structure that is being surcharged. The magnitude and application of any surcharge loading should be evaluated by the Project Structural Engineer.

5.3.4 Settlement – Shallow Foundations

For design purposes, the estimated combined total settlement (static + seismic) is 1-1/2 inches. The estimated combined differential settlement (static + seismic) is 3/4 inch over a distance of 30 feet.

5.3.5 Foundation Observation

Footing excavations should be observed and probed for soft areas by NV5 to verify they are clear of loosened fill and debris before placing steel or concrete. If soft or loose soils or unsatisfactory materials are encountered, these materials should be removed and may be replaced with a two-sack, sand-cement slurry or structural concrete. Footing excavations should be deepened as necessary to extend into satisfactory bearing materials based upon NV5's observation and recommendation.

5.4 Shallow Pole Foundations

NV5 understands that proposed improvements consisting of a shade structure, backstop fence, and light poles, may be designed on pole foundations. Cast-In-Drilled-Hole (CIDH) piles appear suitable for the subsurface conditions encountered and for support of these structures. Design and construction of CIDH piles should consider the potential for caving granular soil layers, and the possibility of encountering cobble and boulders during drilling. Piles should be reinforced as necessary by the design civil or structural engineer. Casing may be necessary to prevent caving. Pile foundations may be designed using allowable resistance values for either end-bearing resistance, or frictional resistance, but not a combination of both. Resistance to lateral loading may be provided by passive earth pressure below a depth of 3 feet below ground surface. Piles should be a minimum 2 feet into competent alluvium. Competent alluvium is anticipated at a depth of four feet below existing ground. The depth of embedment required to resist lateral loading may be determined by Section 1807.3.2 of the 2019 California Building Code.

Overexcavation and placement of engineered fill are not required for the design of pile foundations.

5.4.1 Shallow Pole Foundations - Allowable Bearing Values

CIDH pile foundations may be designed based on an allowable bearing value of 4,000 psf for a minimum embedment of 2 feet (below a depth of 4 feet below ground surface), and a minimum diameter of 18 inches.

The recommended bearing value is based on a factor-of-safety greater than 3. The bearing capacity should not be increased for static loads. This bearing value is applicable for dead plus live loads. The bearing value may be increased by one-third when transient loads such as wind and/or seismicity are included. The weight of the concrete foundations can be neglected.

5.4.2 Shallow Pole Foundations - Allowable Lateral Passive Resistance

An allowable lateral passive resistance acting on the sides of foundations equal to 250 pcf of equivalent fluid weight may be included for resistance to lateral load. These values include a factor-of-safety of 1.5. Lateral passive resistance may be increased by 250 pcf for each additional foot in width or depth to a maximum earth pressure of 3,000 psf.

The parameters provided here are for the total of dead and frequently applied live loads and may be increased by1/3 for short duration loading, which includes the effects of wind or seismic forces. Resistance to lateral loading may be provided by passive earth pressure.

For design of isolated piles, the allowable passive earth pressure may be increased by 100 percent. Piles that are spaced more than 2-1/2 pile diameters on center may be considered to be isolated

5.4.3 Settlement – Deep Foundations

For design purposes, the estimated combined total settlement (static + seismic) is 1.5 inches. The estimated combined differential settlement (static + seismic) is 3/4 inch over a distance of 30 feet.

5.5 Surcharge Loading

If an adjacent structure encroaches upon any elements of the proposed or existing structures within a 1:1 plane projected from the bottom edge of an adjacent structure or footing, additional lateral pressure should be considered as a surcharge load on the structure that is being surcharged. The magnitude and application of any surcharge loading should be evaluated by the Project Structural Engineer.

5.6 Retaining Wall Design

5.6.1 Lateral Earth Pressures

Based on laboratory test results and encountered soil conditions, the recommended lateral earth pressures for preliminary design of retaining walls supported on shallow foundations are summarized in the table below.

TABLE 4 – RECOMMENDED LATERAL EARTH PRESSURES					
Parameter	**Recommended Value**				
	Level Backfill	**5H:1V Slope**	**4H:1V Slope**	**3H:1V Slope**	**2H:1V Slope**
Active Earth Pressure (P_a)	36H	42H	44H	48H	63H
At-Rest Earth Pressure (P_o)	60H	72H	75H	79H	87H
Seismic Earth Pressure (P_e)	37H	43H	46H	50H	66H
Coefficient of Friction (μ)	0.3				
Passive Earth Pressure (P_p)	250H				

Notes:

1. All values of height (H) in feet (ft), pressure (P) and surcharge (q) in pounds per square feet (psf).
2. Seismic earth pressure (P_e) is in addition to the active and at-rest pressures, P_a and P_o which should be distributed as an inverted triangle along the wall height and the resultant of this pressure is an increment of force which should be applied to the back of the wall in the upper one-third (1/3) of the wall height and may also be applied as a reduction of force to the front of the wall in the upper one-third (1/3) of the footing depth.
3. The above pressure values do not include hydrostatic pressures that might be caused by groundwater or water trapped behind the structure.
4. The pressures listed in the table were based on the assumption that backfill soils will be compacted to 90% of maximum dry density (per ASTM D1557).
5. The coefficient of friction (μ) should be applied to dead normal (buoyant) loads when evaluating the sliding frictional resistance.
6. A resistance factor of 0.5 has been applied to the passive earth pressure and may be combined with the sliding frictional resistance using a resistance factor of 0.80. Neglect the upper 6 inches for passive pressure unless the surface is contained by a pavement or a slab.
7. In addition to the above-mentioned pressures, retaining walls must be designed to resist horizontal pressures that may be generated by surcharge loads applied at the ground surface such as from uniform loads or vehicle loads.

5.6.2 Drainage – Retaining Walls

A backdrain or an equivalent system of backfill drainage should be incorporated into retaining wall design. Backfill immediately behind retaining structures should be a free-draining granular material. The backdrain should be a minimum of 18-inch wide continuous blanket of either Caltrans Class 2 permeable material or ¾ inch by ½ inch clean (0-4% fines) crushed rock enclosed in Mirafi 140N (or approved equivalent) filter fabric, and extended to within 1 to 1½ feet of the ground surface where a relatively impervious fill cap should be placed. A minimum 4-inch diameter PVC Schedule 40 PVC perforated drain pipe should be placed near the bottom of the drain rock with at least 2 inches of drain rock below the bottom of the pipe. All backdrain pipes should be sloped to drain at a minimum of 1 percent and collected in 4-inch diameter non-perforated Schedule 40 PVC pipes that are sloped a minimum of 2 percent and discharged into the storm drain system or a sump inside the building. Alternately, the back of walls could be lined with a geodrain system such as Mirafi 140N product or equivalent. Waterproofing should be according to the Design Engineer's recommendations.

Water should not be allowed to pond near the tops of walls. To accomplish this, the final backfill surface should be such that all water is diverted away from retaining walls.

5.6.3 Compaction Adjacent to Walls

Backfill within 5 feet, measured horizontally behind the retaining structures, should be compacted with lightweight, hand-operated compaction equipment to reduce the potential for developing compaction-induced stresses on the walls. If large or heavy compaction equipment is used, lateral earth pressures could exceed those presented previously. If larger or heavier compaction equipment is to be used, further evaluation of the potential for compaction-induced stresses in the walls is recommended.

Backfill material should be brought up uniformly behind the retaining walls (i.e., the backfill should be at about the same elevation all along the wall as the backfill is placed). That is, the elevation difference of the backfill surface along the wall should not be greater than about 2 feet, unless the wall is designed for those differences.

5.7 Utility Trenches

5.7.1 Trench Safety: The Contractor shall follow all OSHA and Cal OSHA requirements for safety of trench excavations and ensure safe access for density testing.

5.7.2 Adjacent Improvements: Unless otherwise recommended, utility trenches adjacent to existing foundations should not be excavated within the foundation influence zone. The foundation influence zone is the area below a 1:1 (H:V) plane projected downward from the outside edge of existing load-bearing foundations or rigid utilities.

5.7.3 Foundation Crossings: Utilities that must pass beneath foundations should be placed with properly compacted utility trench backfill and the foundation should be designed to span the trench.

5.7.4 Bedding and Backfill Material: Bedding material shall have a Sand Equivalent greater than 30 (SE >=30). The bedding shall be placed to 1 foot over the top of the conduit and densified by jetting or mechanical compaction to a minimum of 90 percent of the maximum dry density (ASTM D1557). Densification by jetting shall only be permitted where trench walls have a Sand Equivalent of 15 or greater (SE >=15). Backfill shall be placed and densified to a minimum of 90 percent of maximum dry density (ASTM D1557) from 1 foot above the top of the conduit to the surface.

5.7.5 Observation and Compaction Testing: Densification of bedding around conduits shall be observed by the Geotechnical Consultant. The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 250 feet of trench and 2 (vertical) feet of fill.

5.7.6 Utility Connections: Utility connections to the buildings should be flexible enough to accommodate the estimated total settlement (static, liquefaction, and dry sand) of 2 inches. Utility infrastructure beyond the building areas should accommodate the combination of total and differential settlement of 2 inches and 1 inch, respectively. This recommendation may be modified or eliminated if the potentially liquefiable soils are densified by ground modification techniques.

5.8 Soil Corrosivity

The California Department of Transportation (Caltrans) Corrosion Guidelines (March 2018) define corrosive soils as having chloride concentrations of 500 mg/kg (ppm) or greater, sulfate concentration of 1500 mg/kg (ppm) or greater, or the pH of 5.5 or less". Minimum resistivity in soil or water is considered an indicator parameter and is not used to define a corrosive soil environment. Caltrans' Guidelines state that a "minimum resistivity value for soil and/or water less than 1,100 Ohm-cm indicates the presence of high quantities of soluble salts and a higher propensity for corrosion".

Representative samples of the site soils obtained from our borings were tested to evaluate the corrosion potential. The tests include pH, electrical resistivity, and soluble chloride and sulfate concentrations. Results of corrosivity testing are summarized below and presented in Appendix B – Laboratory Testing.

TABLE 5 - SOIL CORROSIVITY TEST RESULTS

Sample ID	Material	Minimum Resistivity (Ohm-cm)	pH	Water-Soluble Chloride (mg/kg)	Water Soluble Sulfate (mg/kg)
B-1 @ 0.5'-2.5'	Alluvium – Silty SAND	8900	8.5	4.2	50

These findings indicate that the on-site soils tested are moderately corrosive in accordance with Caltrans criteria. The corrosion characteristics of the soil should be considered in the design of any buried or grade supported structures in contact with the soils in accordance with Caltrans Corrosion Guidelines. Any imported soils should be evaluated for corrosion characteristics if they will be in contact with buried or at-grade structures and appropriate mitigation measures should be included in the structural design.

5.9 Drainage

The proposed improvements are located in area partially developed with hardscape. Drainage generally occurs by sheet flow across area of the proposed improvements. The design should prevent surface water and subsurface water from flowing into temporary excavations. Proposed grades should be planned so that water run-off drains away from the proposed building improvements. The design should maintain gradients of a minimum of 2% away from these features in areas with hard surfaces, or a minimum of 5% for 10 feet in areas with dirt at the ground surface, where feasible. All structures should be provided with roof gutters and downspouts. Surface runoff across the access road should be collected in a non-erodible device and directed to the nearest stormwater collection system.

5.10 Pavements

Design of asphalt concrete pavement sections depends primarily on support characteristics (strength) of soil beneath the pavement section and on cumulative traffic loads within the service life of the pavement. Strength of the pavement subgrade is represented by R-Value test data. Traffic loads within service life of a pavement are represented by a Traffic Index (TI) which is calculated based on

anticipated traffic loads and on the projected number of load repetitions during the design life of the pavement. The design TI value should be verified by the Civil Engineer.

Based on results of laboratory classification testing and our judgment regarding variability of site soils, an assumed design R-Value of 20 was selected. Pavement sections are provided in the following table.

TABLE 6 - PAVEMENT SECTION RECOMMENDATIONS

Traffic Index	Subgrade Material Description	R-Value	Pavement Section (inches)		
			Alt 1		Alt 2
			Hot-Mix Asphalt (HMA)	Aggegate Base (AB)	Full Depth HMA
5.0	Silty SAND	20	3.0	8.0	6.5
6.0			3.0	10.0	8.5
7.0			4.0	12.0	9.5
8.0			5.0	14.0	11.0

These sections satisfy the minimum requirements of Section 630 of Caltrans Highway Design Manual (2006) for flexible pavement design using an R-value of 20 and a design service life of 20 years.

The base course should have an R-value of at least 78 and should comply with specifications for untreated crushed aggregate base (CAB), crushed miscellaneous base (CMB), or processed miscellaneous base (PMB), as defined in Section 200-2 of the current Green Book (Standard Specifications for Public Works Construction), or aggregate base (AB-Class 2) as defined in Section 605.3 of the current Caltrans Highway Design Manual. The preceding pavement sections provide the minimum thickness of asphalt concrete permitted by the Caltrans design procedure. Alternate designs with greater asphalt thickness and smaller base course thickness are also possible.

The pavement design should be revised, as needed, based on the results of R-value testing on subgrade soils following grading operations.

6. CONSTRUCTION CONSIDERATIONS

6.1 Excavation

Based on our subsurface exploration, it is anticipated that the on-site soils can be excavated by modern conventional heavy-duty excavating equipment in good operating condition.

6.2 Temporary Slopes and Shoring

Temporary excavations up to 5 vertical feet are anticipated during the overexcavation grading operations. Unsurcharged, temporary excavations should be limited to a maximum height of 3 vertical feet. Temporary slopes should be braced or sloped according to the requirements of OSHA. In accordance with OSHA requirements, the contractor should be responsible for job site safety, reviewing the soil conditions encountered during construction, and for the design of temporary slopes and shoring systems. Within the expected depth of excavation, the subsurface conditions are likely to consist of compacted fill over alluvium. Based on OSHA guidelines and the artificial fill and alluvial materials encountered, temporary slopes should be excavated no steeper than 1:1 (H:V) or be shored to support Type C soil conditions.

Slopes should not be considered stable if the slopes are to be excavated below the groundwater table or there is a potential for seepage to daylight on the slope face. Dewatering should be performed in advance of excavation, if temporary slopes are expected to extend below the water table, and the presence of groundwater should be considered in the design of temporary slopes and shoring.

Excavations should not be allowed to become saturated with water or dry out. Surcharge loads should not be allowed within a horizontal distance equal to the height of the excavation, or these excavations should be properly shored so lateral support of the excavation or any adjacent structures are not compromised.

Temporary excavations for the proposed improvements should not extend below a 1:1 H:V plane extending down from the bottom outside edge of existing utility lines or foundations. The remedial grading excavations should not cause loss of bearing and/or lateral support for adjacent structures or utilities. If remedial grading excavations extend below a 1:1 plane extending down from the bottom of the adjacent foundations or utility lines, shoring or slot cutting shall be employed. "A-B-C" slot cuts exposing native sandy soils may be excavated with maximum 8 foot long sections up to 6 feet deep to prevent the existing utility lines or adjacent structures from becoming unstable. Excavation and backfill should be accomplished in the shortest period of time possible and in alternating sections. Each slot should be backfilled prior to excavating an adjacent slot, and two slots widths should be maintained between open slot excavations.

Adjoining sidewalks or driveways may need to be closed to foot or vehicle traffic during this portion of the construction.

6.3 Groundwater and Dewatering

Groundwater conditions are discussed in Section 3.4 of this report. Relatively shallow groundwater is not anticipated at the site; however, excessively moist conditions may be encountered in the fine-grained deposits if construction overexcavations extend to approximately 7 to 8 feet or more below the ground surface. Groundwater or yielding overexcavation bottom conditions may need to be controlled when excavations are made near or below the groundwater level.

7. GEOTECHNICAL SERVICES DURING CONSTRUCTION

7.1 Plan Review

The geotechnical engineer should review the foundation and grading plans for the project prior to agency approval. The purpose of the review is to evaluate if the plans were prepared in general accordance with the recommendations of this report.

7.2 Geotechnical Observation and Testing

Field exploration and site reconnaissance provide only a limited view of the geotechnical conditions of the site. Substantially more information will be revealed during the excavation and grading phases of the construction. Subsurface conditions, excavations and fill placement should be reviewed by a geotechnical professional from this firm during construction to evaluate if the materials encountered during construction are consistent with those assumed for this report.

The geotechnical engineer's actual scope of work during construction is very limited and does not assume the day-to-day physical direction of the work, precise examination of the elements, or responsibility for the safety of the contractor's workers. Our scope of services during construction consists of taking soil tests and making visual observations, sometimes on only an intermittent basis, relating to earthwork or foundation excavations for the project. We do not guarantee the contractor's performance, but rather look for general conformance to the intent of the plans and geotechnical report. Any discrepancy noted by us regarding earthwork or foundations will be referred to the owner, project engineer, architect, or contractor for action.

8. CLOSURE

This report has been prepared for the exclusive use of the Rio School District and its agents to assist in the design and construction of the proposed project. Any reliance on this report by third parties shall be at third party's sole risk. Our services have been performed in accordance with applicable state and local ordinances, and generally accepted practices within our profession. We make no other warranty, either expressed or implied. Our conclusions and recommendations are based on the results of the field investigations and laboratory tests, combined with interpolation and extrapolation of soil conditions between and beyond the boring locations.

NV5 is not responsible or liable for any claims or damages associated with interpretation of available information provided by others. Site exploration identifies actual soil conditions only at those points where samples are taken, when they are taken. Data derived through sampling and laboratory testing are extrapolated by NV5 personnel who render an opinion about the overall soil conditions. Actual conditions in areas not sampled may differ. In the event that changes to the project occur, or additional, relevant information about the project is brought to our attention, the recommendations contained in this report may not be valid unless these changes and additional relevant information are reviewed and the recommendations of this report are modified or verified in writing. In addition, the recommendations can only be finalized by observing actual subsurface conditions revealed during construction. NV5 cannot be held responsible for misinterpretation or changes to our recommendations made by others during construction.

Our conclusions and recommendations are based on an analysis of the observed conditions. If conditions different from those described in this report are encountered, NV5 should be notified and additional recommendations, if required, may be provided upon request.

8.1 Subsurface Variations

Based on results of the subsurface exploration and our experience, some variations in the continuity and nature of subsurface conditions within the project site should be anticipated. Because of the uncertainties involved in the nature and depositional characteristics of the earth material, care should be exercised in interpolating or extrapolating subsurface conditions between or beyond the boring locations.

The field evaluation, laboratory testing and geotechnical analysis presented in this report have been conducted according to current engineering practice and the standard of care ordinarily exercised by reputable geotechnical consultants performing similar tasks in this area. No other warranty, expressed or implied, is made regarding the conclusions, recommendations and opinions expressed in this report. Variations may exist and conditions not observed or described in this report may be encountered during construction.

This report is prepared for the project as described herein; it is not applicable to any other project or purpose. The findings of this report are valid as of the present date. However, changes in the conditions of a property can occur due to natural processes or regulatory requirements. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside of NV5's scope of services. Therefore, this report is subject to review and should not be relied upon after a period of three years.

8.2 Environmental Hazards

This report does not address any evaluation for the presence of any hazardous materials or other contamination in the soil and groundwater at this site.

8.3 Construction Documents

This report is not intended for use as a bid document. Any person using this report for bidding or construction purposes shall perform such independent investigation as they deem necessary to satisfy themselves as to the surface and subsurface conditions to be encountered. The nature and extent of variations in subsurface conditions may not become evident until construction. If variations then appear evident, it will be necessary to reevaluate the recommendations of this report.

Although this report may comment or discuss construction techniques or procedures for the design engineer's guidance, this report shall not be interpreted to prescribe or dictate construction procedures or to relieve the contractor in any way of their responsibility for the construction.

8.4 Additional Work

Please be aware that the contract fee for our services to prepare this report does not include additional work that may be required, such as grading observation and testing, footing observations, plan review, or responses to governmental (regulatory) plan reviews. Where additional services are requested or required, you will be billed for any equipment costs and on an hourly basis for consultation or analysis.

Findings of this report are valid as of the date of issuance. Changes in conditions of a property may occur with the passage of time whether attributable to natural processes or works of man on this or adjacent properties. Furthermore, changes in applicable or appropriate standards occur due, for example, to legislation and broadening of knowledge. Accordingly, findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to our review and remains valid for a maximum period of three years, unless we issue a written opinion of its continued applicability thereafter.

If any changes in the nature and design (including structural loadings different from those anticipated), or other improvements are planned, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed and conclusions of this report modified or verified in writing.

This report may be subject to review by controlling agencies, and any modifications they deem necessary shall be made a part thereof, subject to our technical acceptance of such modifications. All submissions of this report shall be in its entirety. Under no circumstances shall this report be summarized and synthesized or quoted out of context for any purpose.

APPENDIX A

FIELD EXPLORATION

APPENDIX A

FIELD EXPLORATION

NV5's 2017 report presented the results of our field investigation including a site reconnaissance and a subsurface exploration program consisting of two (2) hollow stem auger borings performed on April 10, 2017. During the site reconnaissance, the surface conditions were noted and the locations of the proposed borings and CPTs were marked for utility clearance. Borings were located by pacing or by rough measurements relative to existing streets, boundary features, and physical features and should be considered accurate only to the degree implied by the method used.

Earth materials encountered in the exploratory excavations were logged by a representative of NV5 West and classified in the field by visual examination in accordance with the Unified Soil Classification System (ASTM 2488). The field descriptions have been modified where appropriate to reflect laboratory test results.

For a key to soil symbols and terminology used in the boring logs, refer to Plate A-1 – Key for Classification and Description of Soil.

Drilling, Logging, and Soil Classification

Mud rotary borings were performed by NV5's drilling subcontractor, Choice Drilling, under the continuous technical supervision of an NV5 field engineer, who visually inspected the soil samples, measured groundwater levels, maintained detailed records of the borings, and visually / manually classified the soils in accordance with the ASTM D 2488 and the Unified Soil Classification System (USCS). Logging and classification was performed in general accordance with Caltrans 'Soil and Rock Logging, Classification, and Presentation Manual (2010 Edition)'.

Sampling

Bulk samples of soil cuttings were collected at selected depths and drive samples were collected at a typical interval of 2-1/2 to 5 feet from the borings. The sampling was performed using Standard Penetration Test (SPT) samplers in accordance with ASTM D 1586 and Ring-Lined California Split Barrel samplers in accordance with ASTM D 3550. Bulk samples were collected from auger cuttings and placed in plastic bags.

SPT drive samples were obtained using a 2-inch outside diameter and 1.375-inch inside diameter split-spoon sampler without lining. The soil recovered from the SPT sampling was sealed in plastic bags to preserve the natural moisture content.

California drive samples were collected with a 3-inch outside diameter 2.5-inch inside diameter split barrel sampler with a 2.42-inch inside diameter cutting shoe. The sampler barrel is lined with 18-inches of metal rings for sample collection and has an additional length of waste barrel. Stainless steel or brass liner rings for sample collection are 1-inch high, 2.42-inch inside diameter, and 2.5-inch outside diameter. California samples were removed from the sampler, retained in the metal rings and placed in sealed plastic canisters to prevent loss of moisture.

At each sampling interval, the drive samplers were fitted onto sampling rod, lowered to the bottom of the boring, and driven 18 inches or to refusal (50 blows per 6 inches) with a 140-lb hammer free-falling a height of 30-inches using an automatic hammer.

Compared to the SPT, the California sampler provides less disturbed samples.

Borehole Abandonment

At the completion of the drilling groundwater was measured (where possible) and the borings were abandoned by backfilling the borehole with drill cuttings or Bentonite grout, or as indicated on the boring logs. Notes describing the borehole abandonment are presented at the bottom of each boring record.

Sample Handling and Transport

Geotechnical samples were sealed to prevent moisture loss, packed in appropriate protective containers, and transported to the geotechnical laboratory for further examination and geotechnical testing.

Laboratory Testing

The soils were further examined and tested in the laboratory and classified in accordance with the Unified Soil Classification System following ASTM D 2487 and D 2488. Field classifications presented on the records were modified where necessary on the basis of the laboratory test results. Descriptions of the laboratory tests performed and a summary of the results are presented in Appendix B.

KEY FOR CLASSIFICATION AND DESCRIPTION OF SOIL

Soil Classification: In general conformance with the Unified Soil Classification System as presented by ASTM D 2488.
Lithologic Variation: Natural soils are frequently stratified and vary both horizontally and vertically. Descriptions provided for samples may not be representative of the entire sample, or for intervals above and below the sample. Thus, discrepancies may occur between sample descriptions on field logs and laboratory descriptions.

DESCRIBE (1)SOIL TYPE, (2) GRAIN SIZE & DISTRIBUTION, (3)COLOR, (4)MOISTURE, (5)DENSITY, and (6)OTHER DESCRIPTORS in general order of significance (e.g. visible pores, plasticity, soil structure, odor, organics, etc.)

e.g. SILTY SAND (SM): mostly fine sand, little silt, trace medium -coarse sand, reddish brown, damp, med. dense, nonplastic, few pinhole pores (Qal)

STEP 1: SOIL CLASSIFICATION

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions				Group Symbol	Typical Names	Field Identification Procedures		
1		2		3	4	5		
Coarse-grained Soils (> 50% passing No. 200 Sieve)	Gravels >50% of coarse fraction is > 1/4in.	<= 5% fines	5 - 12% fines dual i (e.g. GW-GC or GP-GM)	GW	Well-graded gravel, gravel-sand mixtures, little of no fines.	Wide range in grain sizes and substantial amounts of all intermediate particle sizes.		
				GP	Poorly-graded gravel, gravel-sand mixtures, little of no fines.	Predominately one size or range of sizes with some intermediate sizes missing.		
		>= 12% fines		GM	Silty gravel, gravel-sand-silt mixture	Non-plastic fines or fines with low plasticity		
				GC	Clayey gravel, gravel-sand-clay mixture	Plastic fines		
	Sands <50% of coarse fraction is > 1/4in.	<= 5% fines	5 - 12% fines dual i.d. (e.g. SW-SC or SP-SM)	SW	Well-graded sand, gravely sand	Wide range in grain sizes and substantial amounts of all intermediate particle sizes.		
				SP	Poorly-graded sand, gravely sand	Predominately one size or range of sizes with some intermediate sizes missing.		
		>= 12% fines		SM	Silty sand, sand-silt mixture	Non-plastic fines		
				SC	Clayey sand, sand-clay mixture	Plastic fines		
Fine-grained Soils (< 50% passing No. 200 Sieve) (The No. 200 sieve size is about the smallest particle visible to the naked eye.)	for soils with 45 - 55% fines or roughly equal % of defining material, use Borderline Symbol (i.e. SC/CL, GP/SP, CL/ML, CL/CH)							
						Identification Procedures on Fraction Smaller Than No. 40 Sieve		
						Dry Strength (Crushing)	Dilatancy (Reaction to Shaking)	Toughness (near PL)
	Silts & Clays	Liquid limit < 50	slight - medium plasticity	ML	Silt, Clayey Silt, Silty or Clayey very fine Sand, slight plasticity	None to low	Slow to rapid	None
				CL	Clay, Sandy Clay, Silty Clay, lean clay, low - medium plasticity	Medium to high	None to slow	Medium
				OL	Organic Silts or Silty Clays of low plasticity	Slight to medium	Slow	Slight
	Silts & Clays	Liquid limit > 50	high plasticity	MH	Silt, Clayey Silt, Silty or Clayey very fine Sand, high plasticity	Low to medium	None to slow	Low to medium
				CH	Clay, Fat Clays, high plasticity	High to very high	None	High
				OH	Organic Clays of medium to high plasticity	Medium to high	None to very slow	Slight to medium
Highly Organic Soils				Pt	Peat and other highly organic soil	High organic content, color, spongy, fibrous.		

2: GRAIN SIZE & AMOUNT

PARTICLE SIZE		US Sieve	Sieve Opening
	Boulder	> 12 in	> 12 in
	Cobble	12 - 3 in	12 - 3 in
Gravel	Coarse	3 - 3/4 in	3 - 3/4 in
Gravel	Fine	3/4in - No.4	3/4in - 4.75mm
Sand	Coarse	No.4 - No.10	4.75 - 2.00mm
Sand	Medium	No.10 - No.40	2.00 - 0.475mm
Sand	Fine	No.40 - No.200	0.475 - 0.075mm
	Silt & Clay	below No.200	< 0.075

5: CONSISTENCY

SOIL CONSISTENCY		Blows/ Foot	Pocket Pen. (TSF)
SILT & CLAY[1]	Very Soft	< 2	< 0.25
	Soft	2 - 4	0.25 - 0.5
	Medium Stiff	5 - 8	0.5 - 1
	Stiff	9 - 15	1 - 2
	Very Stiff	16 - 30	2 - 4
	Hard	> 30	> 4
SAND[2]	Very Loose	0 - 4	
	Loose	5 - 10	
	Medium Dense	11 - 30	
	Dense	31 - 50	
	Very Dense	> 50	

[1] NAVFAC DM-7.1, 1982; [2] Terzaghi and Peck, 1967

6: PLASTICITY

PLASTICITY	
Nonplastic	Cannot roll into 1/8" tread
Slightly Plastic	Barely roll into thread
Medium Plastic	Can roll into thread
Highly Plastic	Cannot rupture by kneading

4: MOISTURE

SOIL MOISTURE	
Dry	Powdery
Damp	Below PL
Moist	PL - LL
Wet	above LL

BORING LOG SYMBOLS

- Cal. Mod. Sample
- No Recovery (Cal Mod.)
- SPT Sample
- No Recovery (SPT)
- Shelby Sample
- No Recovery (Shelby)

Modified California Split Barrel Sampler

Modified California Split Barrel Sampler - No Recovery

Standard Penetration Test (SPT) Sampler

Standard Penetration Test (SPT) Sampler - No Recovery

Perched Water Level

Water Level First Encountered

Water Level After Drilling

Pocket Penetrometer (tsf)

Vane Shear (ksf)

1. The approximate locations of borings were determined by sighting and pacing from nearby prominent topographic or cultural features. Borehole elevations were estimated by interpolating between available plan contour intervals. The location and elevation of each boring should be considered accurate only to the degree implied by this method.

2. Stratification lines represent the approximate boundary between soil and/or rock types. The transition between statigraphic units may be gradual.

3. Water level readings taken in boreholes are approximate and apply only to the time and date of drilling. Fluctuations in the level of groundwater from the time of initial measurement may occur due to variations in rainfall, tides, barometric pressure, temperature, or other factors.

Unified Soil Classification System (USCS)

TERMS DESCRIBING CONSISTENCY OR CONDITION

COARSE GRAINED SOILS

(Major Portion Retained in No. 200 Sieve)

Includes (1) clean gravels and sands described as fine, medium or coarse, depending on distribution of grain sizes, and (2) silty or clayey gravels and sands, condition is rated according to relative density as determined by laboratory tests or estimated from resistance to sampler penetration.

Penetration Resistance Blows/Foot*	Descriptive Term	Relative Density
0 - 10	Loose	0 to 40%
10 - 30	Medium Dense	40 to 70%
30 - 50	Dense	70 to 90%
Over 50	Very Dense	90 to 100%

*140 lbs. Hammer - 30-inch Drop

Relative Density is also used to describe condition of low plasticity (PI < 10) fine grained soils such as sandy silts.

FINE GRAINED SOILS

(Major Portion Passing No. 200 Sieve)

Includes (1) inorganic and organic silts and clays, (2) gravelly, sandy or silty clays, and (3) clayey silts. Consistency is rated according to shearing strength, as indicated by penetrometer readings or by unconfined compression tests for soils with plasticity index ≥ 10.

Descriptive Term	Compressive Strength (Tons/Sq. Ft.)
Very Soft	Less than 0.25
Soft	0.25 to 0.50
Firm or Medium Stiff	0.50 to 1.00
Stiff	1.00 to 2.00
Very Stiff	2.00 to 4.00
Hard	4.00 and higher

NOTE: Slickensided and fissured clays may have lower unconfined compressive strengths than shown above, because of planes of weakness or shrinkage cracks in the soil. The consistency ratings of such soils are based on penetrometer readings.

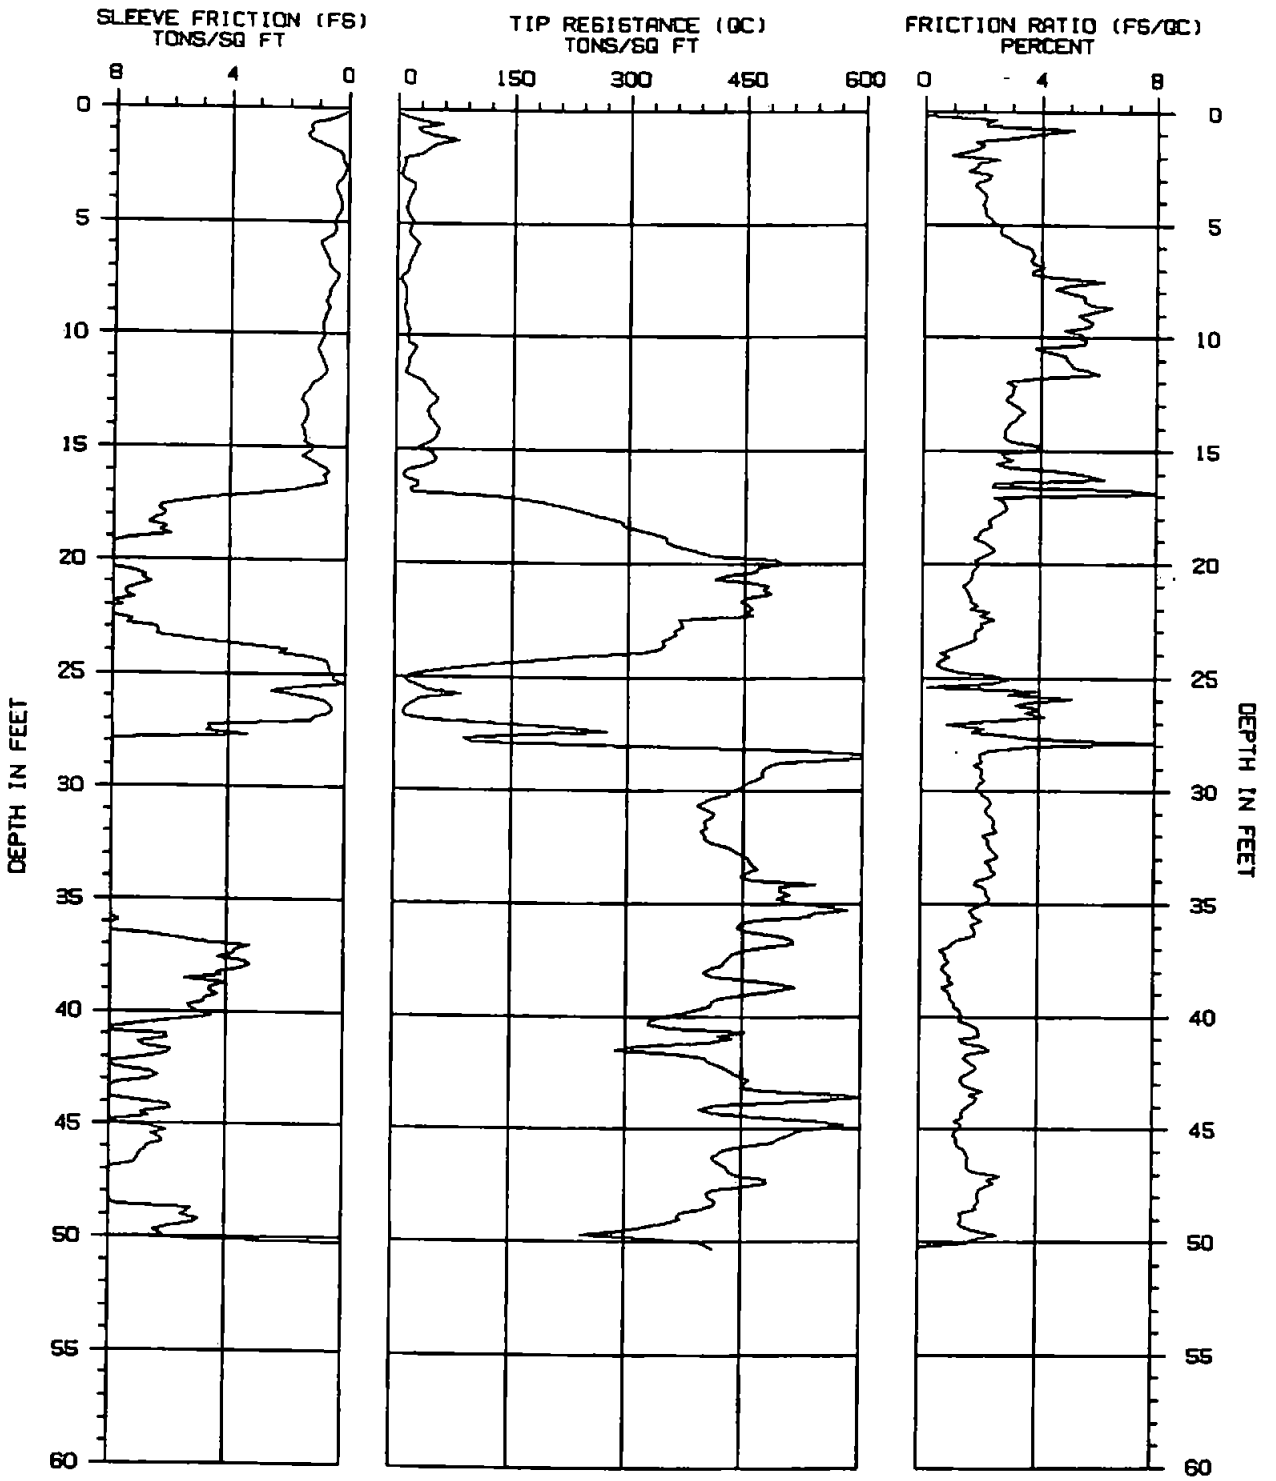
TERMS CHARACTERIZING SOIL STRUCTURE

Calcareous: containing appreciable quantities of calcium carbonate.

Interbedded: composed of alternate layers of different soil types

Well Graded: having a wide range in grain sizes and substantial amounts of all intermediate particle sizes.

Color: in color description of soil predominant color is stated after modifier; i.e. reddish brown.



Slickensided: having inclined planes of weakness that are slick and glassy in appearance.

Fissured: containing shrinkage cracks, frequently filled with fine sand or silt; usually more or less vertical.

Poorly Graded: predominately of one grain size, or having a range of sizes with some intermediate size missing.

APPENDIX B

LABORATORY TESTING

APPENDIX B

LABORATORY TESTING

As part of the NV5 (2107) study, tests were conducted in our laboratory on representative soil samples for the purpose of classification and evaluation of their physical properties and engineering characteristics. The amount and selection of tests were based on the geotechnical parameters required for this project. Test results are presented on the Boring Logs in Appendix A - Field Exploration and herein in Appendix B. The following is a summary of the various laboratory tests conducted for this project.

Moisture Content and Dry Density - Results of these tests performed on relatively undisturbed ring samples were used to aid in the classification and to provide quantitative measure of the in situ dry density. Data obtained from this test provides qualitative information on strength and compressibility characteristics of the site soils. For test results, see the Logs of Borings in Appendix B, Field Exploration and on the attached Reports of Moisture & Density Tests of Driven Ring Samples.

Grain Size Testing- Grain size analyses were performed on representative samples to assist in soil classification and evaluation per ASTM Standard D422. The test results are presented on the attached Reports of Sieve Analysis Test.

Atterberg Limits – Atterberg Limits tests were conducted on representative clayey/silty soil samples. Results of Atterberg Limits test are summarized below and presented on the attached report.

Table No. B-1. Atterberg Limits

SOURCE / LOCATION	DEPTH (ft)	TEST RESULT			Soil Classification	
		LL	PL	PI	USCS	Soil Description
B-1	10	33	27	6	ML	SILT
B-2	15	43	25	18	CL	Lean CLAY

Expansion Index Test

Expansion index testing was performed on a bulk soil sample from B-2 at 0.5-2.5 feet in accordance with ASTM D 4829. The sample was surcharged under 144-pounds per square foot at moisture content of near 50% saturation. The sample was then submerged in water for 24 hours and the amount of expansion was recorded with a dial indicator.

Corrosion Testing

Soil corrosion potential was evaluated by measuring pH, resistivity, soluble sulfate content, and soluble chloride content. These tests were subcontracted to Capco Analytical Services.

Direct Shear Tests – Two (2) direct shear tests (ASTM D3080) were performed on relatively undisturbed representative samples at saturated moisture conditions. For each test, three samples were

placed, one at a time, directly into the test apparatus and subjected to a range of normal loads appropriate for the anticipated conditions. The samples were then sheared at a constant strain rate of 0.05 inch/minute. Shear deformation was recorded until a maximum of about 0.25-inch shear displacement was achieved. Ultimate strength was selected from the shear-stress deformation data and plotted to determine the shear strength parameters. The shear test results are used to evaluate bearing capacity and lateral earth pressures. Test data are summarized below:

Table No. C-2, Direct Shear Test Results

Boring No.	Depth (feet)	Test Conditions	Soil Classification	Ultimate Strength Parameters			
				Peak Friction (degrees)	Peak Cohesion (psf)	Ultimate Friction (degrees)	Ultimate Cohesion (psf)
B-1	10	Native, Saturated	Sandy SILT (ML)	29	400	29	250
B-2	15	Native, Saturated	Sandy SILT (ML)	28	420	28	280

Consolidation Tests – Two (2) one dimensional consolidation tests (ASTM D2435) were performed on relatively undisturbed representative alluvial samples. These test results were used to predict the settlement of the foundations founded in engineered fill over the alluvium.

Table No. C-3, Consolidation Test Results

Boring No.	Depth (feet)	Description	Compression Ratio (max)
B-1	5.0	Silty SAND (SM)	3.6
B-2	7.5	Silty SAND (SM)	5.2

Report Date: April 26, 2017
Laboratory Number: 170815
Project Name: Rio School District/Rio Del Valle Junior High School
Project No: 17-2094
Sampled by: Client

Enclosed are the analysis results for samples received April 19, 2017 with the Chain of Custody document. The sample was received in good condition, at 15°C, and it was identified and assigned the laboratory ID number listed below:

SAMPLE DESCRIPTION	CAS LAB NUMBER ID
B1@0.5ft-2.5ft	170815-01

By my signature below, I certify that the results contained in this laboratory report comply with applicable standards for certification by the California Department of Public Health's Environmental Laboratories Accreditation Program (ELAP), both technically and for completeness, and that, based on my inquiry of the person or persons directly responsible for performing the analyses, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Lance Lewy-Laboratory Director

If you have any further questions or concerns, please contact me at your convenience. This report consists of 2 pages excluding the cover letter and the Chain of Custody.

This report shall not be reproduced except in full without the written approval of CAS. The test results reported represent only the item being tested and may not represent the entire material from which the sample was taken.

CERTIFICATE OF ANALYSIS

SEISMIC DESIGN PARAMETERS

Rio Del Valle MS

Latitude, Longitude: 34.2328, -119.1531

Date	11/3/2020, 12:31:18 PM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	D - Stiff Soil

Type	Value	Description
S_S	1.849	MCE_R ground motion. (for 0.2 second period)
S_1	0.688	MCE_R ground motion. (for 1.0s period)
S_{MS}	1.849	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	1.233	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	1	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.814	MCE_G peak ground acceleration
F_{PGA}	1.1	Site amplification factor at PGA
PGA_M	0.896	Site modified peak ground acceleration
T_L	8	Long-period transition period in seconds
SsRT	1.849	Probabilistic risk-targeted ground motion. (0.2 second)
SsUH	2.089	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
SsD	2.453	Factored deterministic acceleration value. (0.2 second)
S1RT	0.688	Probabilistic risk-targeted ground motion. (1.0 second)
S1UH	0.775	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
S1D	0.84	Factored deterministic acceleration value. (1.0 second)
PGAd	0.995	Factored deterministic acceleration value. (Peak Ground Acceleration)
C_{RS}	0.885	Mapped value of the risk coefficient at short periods
C_{R1}	0.887	Mapped value of the risk coefficient at a period of 1 s

PROJECT INFORMATION

Project Name	Rio Del Valle Middle School Kitchen Improvements
Project No.	114517-0002094.00
Project Location	Oxnard, CA
Analyzed By	Carlos Amante
Reviewed By	Shaun Simon

SITE CONDITIONS

Boring No.	B-1
Ground Surface Elevation	99.00 feet
Proposed Grade Elevation	99.00 feet
Topographic Site Condition:	TSC1 (Level Ground with No Nearby Free Face)
- Ground Slope, S	0.00 %
- Free Face (L/H) Ratio	N/A
Ave. Total Unit Weight of New Fill	120.00 pcf
GWL Depth Measured During Test	100.00 feet
GWL Depth Used in Design	20.00 feet
Borehole Diameter	8.00 inches
Hammer Weight	140.00 pounds
Hammer Drop	30.00 inches
Hammer Energy Efficiency Ratio, ER	80.00 %
Hammer Distance to Ground Surface	5.00 feet

SEISMIC DESIGN PARAMETERS

Earthquake Moment Magnitude, M_w	7.00
Peak Ground Acceleration, A_{max}	1.10 g
Site to Seismic Source Distance, R	2.20 mi

SUMMARY OF RESULTS

Severity of Liquefaction:

Cumulative Thickness of Liq. Soils, H_{liq}: 5.00 feet (cumulative total thickness in the upper 65 feet)

Liquefaction Potential Index (LPI): 1.45 *** (Low risk, with minor liquefaction effects)

Seismic Settlements:	**Analysis Method**	**Upper 30 feet**	**Upper 50 feet**	**Upper 65 feet**
Seismic Compression Settlement:	Pradel (1998)	0.00 inches	0.00 inches	0.00 inches
Liquefaction-Induced Settlement:	Ishihara and Yoshimine (1992)	0.00 inches	0.45 inches	0.45 inches
Total Seismic Settlement:		0.00 inches	0.45 inches	0.45 inches

Seismic Lateral Displacements:	**Analysis Method**	**Upper 30 feet**	**Upper 50 feet**	**Upper 65 feet**
Cyclic Lateral Displacement:	Tokimatsu and Asaka (1998)	2.38 inches	3.33 inches	3.35 inches
Lateral Spreading Displacement:	Zhang et al. (2004)	0.00 inches	0.00 inches	0.00 inches

NOTES AND REFERENCES

\+ This method of analysis is based on observed seismic performance of level ground sites using correlation with normalized and fines-corrected SPT blow count, $(N_1)_{60cs} = f\{(N_1)_{60}, FC\}$ where $(N_1)_{60} = N_{field}\, C_N\, C_E\, C_B\, C_R\, C_S$

++ Based on criteria for liquefaction susceptibility screening selected by the user.

* FS_{liq} = Factor of Safety against liquefaction = (CRR/CSR), where CRR = $CRR_{7.5}$ MSF K_σ K_α, MSF = Magnitude Scaling Factor, $K_\sigma = f[(N_1)_{60}, \sigma'_{vo}]$, K_α =1.0, (level ground),
CSR = Cyclic Stress Ratio = 0.65 A_{max} $(\sigma_{vo}/\sigma'_{vo})$ r_d, and $CRR_{7.5}$ = Cyclic Resistance Ratio is a function of $(N_1)_{60cs}$ and corrected for an earthquake magnitude M_w of 7.5.

** Residual strength values of liquefied soils are based on correlation with post-earthquake, normalized and fines-corrected SPT blow count derived by Idriss and Boulanger (2008).

*** Based on Iwasaki et al. (1978) and Toprak and Holzer (2003)

NOTES AND REFERENCES

\+ This method of analysis is based on observed seismic performance of level ground sites using correlation with normalized and fines-corrected SPT blow count, $(N_1)_{60cs} = f\{(N_1)_{60}, FC\}$ where $(N_1)_{60} = N_{field}\, C_N\, C_E\, C_B\, C_R\, C_S$

++ Based on criteria for liquefaction susceptibility screening selected by the user.

* FS_{liq} = Factor of Safety against liquefaction = (CRR/CSR), where CRR = $CRR_{7.5}$ MSF K_σ K_α, MSF = Magnitude Scaling Factor, $K_\sigma = f[(N_1)_{60}, \sigma'_{vo}]$, K_α =1.0, (level ground),
CSR = Cyclic Stress Ratio = 0.65 A_{max} $(\sigma_{vo}/\sigma'_{vo})$ r_d, and $CRR_{7.5}$ = Cyclic Resistance Ratio is a function of $(N_1)_{60cs}$ and corrected for an earthquake magnitude M_w of 7.5.

** Residual strength values of liquefied soils are based on correlation with post-earthquake, normalized and fines-corrected SPT blow count derived by Idriss and Boulanger (2008).

*** Based on Iwasaki et al. (1978) and Toprak and Holzer (2003)

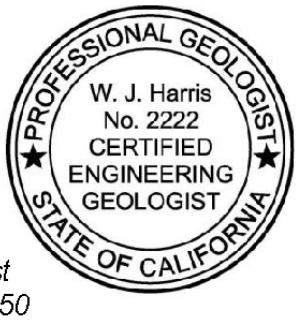
Subject: **Engineering Geology and Seismology Review for**
Rio Del Valle Middle School – Sports Field Complex, Phase 2
3100 N. Rose Avenue, Oxnard, CA 93036
CGS Application No. 03-CGS5517

Dear Wael Saleh:

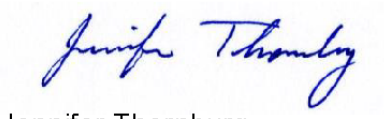
In accordance with your request and transmittal of documents received on July 21, 2022, the California Geological Survey (CGS) has reviewed the engineering geology and seismology aspects of the consulting report prepared for the subject project at Rio Del Valle Middle School in Oxnard, California. It is our understanding that this project involves the construction of a new field house modular building, modifications to existing baseball dugouts, and field lighting installation. This review was performed in accordance with Title 24, California Code of Regulations, 2019 California Building Code (CBC) and followed CGS Note 48 guidelines. We reviewed the following report:



> **Update Report of Geotechnical Study, Rio Del Valle Middle School Sports Field Complex, Phase 2 Improvements, Rio School District, Oxnard, California:** NV5 West, Inc., 1868 Palma Drive Suite A, Ventura, California 93003, company Project No. 45020-002685.00, report dated November 12, 2020, 22 pages, 5 figures, and 4 appendices.

Based on our review, the consultants provide a thorough and well-documented assessment of engineering geology and seismology issues with respect to the proposed improvements. The principal concern identified by the consultants is the potential for strong ground shaking and liquefaction. The consultants recommend map-based design spectral acceleration parameters of $\mathbf{S_{DS} = 0.885}g$, which is considered reasonable provided that the provisions of Exception 2 in ASCE 7, Section 11.4.8, are applied in structural design. Their evaluation indicates that deep-seated slope instability that is not a design concern for the project.

In conclusion, ***the engineering geology and seismology issues at this site are adequately assessed in the referenced reports, and no further information is requested***. If you have any further questions about this review letter, please contact the primary reviewer at will.harris@conservation.ca.gov.



Respectfully submitted,

Will Harris

Note 48 Checklist Review Comments

In the numbered paragraphs below, this review is keyed to the paragraph numbers of California Geological Survey Note 48 (October, 2019 edition), *Checklist for the Review of Engineering Geology and Seismology Reports for California Public Schools, Hospitals, and Essential Services Buildings.*

Project Location

1. Site Location Map, Street Address, County Name: Adequately addressed.
2. Plot Plan with Exploration Data with Building Footprint: Adequately addressed.
3. Site Coordinates: Adequately addressed. Latitude and Longitude provided in report: 34.2328°N, 119.1531°W.

Engineering Geology/Site Characterization

4. Regional Geology and Regional Fault Maps: Adequately addressed.
5. Geologic Map of Site: Not provided, and therefore not reviewed.
6. Geologic Hazard Zones: Adequately addressed. The consultants report the site is not located within an Alquist-Priolo Earthquake Fault zone, nor located within a State-designated earthquake-induced landslide hazard zone. The consultants note the site is within a CGS-mapped liquefaction hazard zone.
7. Subsurface Geology: Adequately addressed. The consultants reference four borings and two cone penetrometer test (CPT) soundings made at the site in 1997, as well as two additional borings drilled in 2017. Five of the borings extended to 51 feet below ground surface (bgs), and the CPTs extended to 50 feet bgs. Earth materials encountered consisted of interbedded mixtures of clay, silt, sand, and some gravel. Dense fine to coarse sand with gravel was encountered below 20 to 25 feet bgs in the borings. Groundwater was not encountered in the borings drilled in 2017. For the borings drilled in 1997, groundwater was encountered between 35 and 38 feet bgs. The consultants report that historic high groundwater for the area is approximately 20 feet bgs.
8. Geologic Cross Sections: Not provided, and therefore not reviewed.
9. Geotechnical Testing of Representative Samples: Adequately addressed.
10. Consideration of Geology in Geotechnical Engineering Recommendations: Adequately addressed.
11. Conditional Geotechnical Topics: Not applicable

Seismology & Calculation of Earthquake Ground Motion

12. Evaluation of Historic Seismicity: Not provided by consultant and therefore not reviewed. The consultants provide a fault activity map for the site region and a table of summarizing the known faults that are in proximity to the site.
13. Classify the Geologic Subgrade (Site Class): Adequately addressed. The consultants classify the site soil profile as Site Class D. This appears to be an appropriate designation based on boring logs and blowcount data presented in the consultants' report.

14. General Procedure Seismic Parameters: Adequately addressed. The consultants report the following parameters derived from a map-based analysis:
    S_S = 1.849 and S_1 = 0.688
    S_{DS} = 1.233 (and S_{D1} = not reported, for the purpose of calculating T_s)
    Ts = Not provided by the consultants but may be taken as S_{D1}/S_{DS}.
    These seismic parameters are acceptable **provided a Site Class D soil profile is appropriate and that C_s is calculated as required in 11.4.8, Exception 2, and that $T<1.5T_S$.** If otherwise, then a site-specific ground motion hazard analysis should be prepared and submitted for CGS review.
15. Site-Specific Ground Motion Analysis: Not addressed by consultant and therefore not reviewed.
16. Deaggregated Seismic Source Parameters: Not applicable.
17. Time-Histories of Earthquake Ground Motion: Not applicable.

Fault Rupture Hazard Evaluation

18. Active Faulting & Coseismic Deformation Across Site: Adequately addressed. The consultants report that the site is not within an established State of California Alquist-Priolo Earthquake Fault Zone for surface fault rupture hazards and conclude that the possibility of fault rupture beneath the project is considered low. The data appear to support this conclusion.

Liquefaction/Seismic Settlement Analysis

19. Geologic Setting for Occurrence of Seismically Induced Liquefaction: Adequately addressed. The consultants note that the site is within a CGS-mapped liquefaction hazard zone. The consultants conducted a liquefaction analysis using a historic high groundwater level of 20 feet bgs and conclude that liquefaction is a potential within a cumulative total thickness of 6.5 feet of sediment layers that are within 65 feet of the ground surface. This conclusion appears reasonable based on the analysis presented.
20. Seismic Settlement Calculations: Adequately addressed. The consultants conducted a seismically-induced settlement analysis using boring data, a PGA_M of 0.87g, a M_W of 7, and a groundwater depth of 20 feet bgs. The consultants conclude from the analysis that total seismic settlement would be up to one inch, with differential settlement of ½ inch over a distance of 30 feet. The consultants' conclusions assume in their settlement analysis that the upper 4 feet of loose native soils are recompacted to a minimum of 90% relative compaction (90% of the soil's maximum density). The data provided appear to support the consultants' conclusions.
21. Other Liquefaction Effects: Not applicable.
22. Mitigation Options for Liquefaction: Adequately addressed. The consultants provide recommendations to mitigate potential liquefaction including over excavation of soil to a depth of 2 feet below the bottom of the deepest footing or 4 feet below existing grade.

Slope Stability Analysis

23. Geologic Setting for Occurrence of Landslides: Adequately addressed. The consultants report the site is not located near slopes that may be subject to instability and not within a State-designated earthquake induced landslide hazard zone. The consultants conclude that hazard associated with slope instability is considered low.

24. Determination of Static and Dynamic Strength Parameters: Not applicable.
25. Determination of Pseudo-Static Coefficient (Keq): Not applicable.
26. Identify Critical Slip Surfaces for Static and Dynamic Analyses: Not applicable.
27. Dynamic Site Conditions: Not applicable.
28. Mitigation Options/Other Slope Failure: Not applicable.

Other Geologic Hazards or Adverse Site Conditions

29. Expansive Soils: Adequately addressed. The consultants report that the near-surface earth materials have a very low expansive potential.
30. Corrosive/Reactive Geochemistry of the Geologic Subgrade: Adequately addressed. The consultants report that on-site soils are moderately corrosive.
31. Conditional Geologic Assessment: Adequately addressed. No significant conditional hazards of potential concern were identified by the consultants.

Report Documentation

32. Geology, Seismology, and Geotechnical References: Adequately addressed.
33. Certified Engineering Geologist: Adequately addressed.
    Shaun Simon, Certified Engineering Geologist #2461
34. Registered Geotechnical Engineer: Adequately addressed.

Attention: Wael Saleh

Subject: **ADDENDUM GEOTECHNICAL LETTER**
Proposed Fieldhouse Building, Sports Field Complex Phase 2 Improvements
Rio Del Valle Middle School
3100 N Rose Avenue, Oxnard, California

Reference: NV5 West Inc., November 12, 2020; Update Geotechnical Letter, Proposed Sports Field Complex Phase 2 Improvements, Rio Del Valle Middle School, 3100 North Rose Avenue, Oxnard, California

Dear Mr. Saleh,

NV5 West, Inc. is pleased to present this geotechnical addendum letter for the proposed sports field complex phase 2 improvements at Rio Del Valle Middle School in Oxnard, California. This letter presents addendum geotechnical recommendations for design and construction of the fieldhouse building portion of the proposed site improvements. Based on the study findings, the proposed project is considered feasible from a geotechnical perspective provided the recommendations presented in this report are incorporated into the design and construction.

At the time of the referenced geotechnical letter, details regarding the proposed fieldhouse building were not known. Based on January 26, 2022 email by the project architect, Todd Jespersen (of Kruger Bensen Ziemer Architects), NV5 understands that a modular fieldhouse building is now proposed as part of the project improvements. Pre-check plan sheets by American Modular Systems proposes a 48 ft x 40 ft one-story modular building with shallow foundations. NV5 understands that the foundation loading is 100 psf, and that continuous footings are shown as 12 inches in width (perimeter) and 22 inches in width (interior).

For the proposed modular building, NV5 recommends that the structures may be supported on continuous reinforced concrete footings with a minimum of 12 inches in width and founded a minimum of 18 inches deep into engineered fill. Isolated, reinforced concrete pad footings should be a minimum of 2 feet in each dimension, and founded a minimum of 24 inches deep into engineered fill.

All other recommendations from the referenced report remain applicable.

NV5 appreciates the opportunity to be of service to the District on this project. If you have any questions, please do not hesitate to contact us.

Respectfully Submitted,

NV5 WEST, INC.

Subject: **PRELIMINARY GEOTECHNICAL INVESTIGATION REPORT**
RIO DEL VALLE MIDDLE SCHOOL
SOUTH CAMPUS EXPANSION PROJECT
2600 North Rose Avenue
Oxnard, California

Dear Mr. Saleh:

Tetra Tech is pleased to submit the results of our preliminary geotechnical investigation for the Rio Del Valle Middle School South Campus Expansion Project located at 2600 North Rose Avenue in the city of Oxnard, California. The purpose of our investigation was to evaluate the subsurface conditions at the property and to provide recommendations for design and construction of the proposed development. Additionally, this report provides support for preparation of the California Environmental Quality Act (CEQA) site assessment. This report includes a brief description of the proposed development, a discussion regarding the field exploration and laboratory testing, a description of subsurface conditions, a discussion on engineering seismology and geological hazards, and provides geotechnical conclusions and recommendations. The appendices to the report include logs of exploratory borings, results of laboratory tests, seismic demand, liquefaction evaluation, and responses to the threshold questions established in Section VII –Appendix G Environmental Checklist Form contained in the CEQA Guidelines.

We appreciate the opportunity to provide our professional services on this project. If you have any questions regarding this report or if we can be of further service, please do not hesitate to contact the undersigned.

Respectfully submitted,
Tetra Tech

1. INTRODUCTION

This report presents the results of Tetra Tech's geotechnical engineering evaluation and preliminary design recommendations for an 11.1-acre portion of Assessor's Parcel No. (APN) 144-0-110-590, located south of the existing Rio Del Valle Middle School (RDVMS). The property address is 2600 North Rose Avenue, Oxnard, California. The location of the site is shown in Figure 1 – Site Location Map.

The purpose of our investigation was to evaluate the subsurface conditions at the property and to provide preliminary recommendations for design and construction of the proposed improvements for the South Campus Expansion Project. Additionally, this report provides support for preparation of the California Environmental Quality Act (CEQA) site assessment.

This report includes a brief description of the proposed development, a discussion regarding the field exploration and laboratory testing, a description of subsurface conditions, a discussion on engineering seismology and geological hazards, and provides geotechnical conclusions and recommendations. The appendices to the report include logs of exploratory borings, results of laboratory tests, seismic demand, liquefaction evaluation and responses to the threshold questions established in Section VII – Geology and Soils of the Appendix G Environmental Checklist Form contained in the CEQA) Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3, Article 20). From a geotechnical viewpoint, for the final design of the project an evaluation will need to be performed to verify that the project is in full compliance with 2019 CBC Chapter 18A.

2. SCOPE OF SERVICES

Tetra Tech's scope of services for this project consisted of the following tasks:

- Review the provided environmental reports for the site.
- Review aerial photographs, geotechnical literature, geologic maps, and seismic hazard maps relevant to the subject site.
- Notify Underground Service Alert (USA) prior to drilling for clearance of underground utilities.
- Procure a drilling permit from the County of Ventura.
- Perform subsurface exploration consisting of drilling and sampling 2 soil borings to depths of 26.5 and 51.0 feet.
- Conduct laboratory testing of selected samples recovered from the exploratory borings to evaluate geotechnical properties of the on-site soils.
- Process and evaluate the collected geotechnical data for use in developing geotechnical recommendations including the following items:
    - General subsurface conditions and description of types, distribution, and engineering characteristics of subsurface materials;
    - Liquefaction potential and seismic settlement of the on-site granular materials;
    - Sensitivity of the on-site fine-grained materials;
    - Suitability of on-site soils for the support of structures;
    - Seismic design parameters in accordance with 2019 California Building Code (2019 CBC); and
    - Corrosion potential of the on-site soils to buried concrete and steel.
- Develop preliminary design and construction recommendations for the following items:
    - Shallow foundations including allowable bearing pressures, lateral resistance, and settlement estimates; and
    - Asphalt pavement and Portland cement concrete pavement sections for parking and approaching aprons at the site.
- Prepare this report documenting reference maps and illustrations, collected field and laboratory data, and preliminary geotechnical recommendations for the design and construction of the proposed development.

3. SITE DESCRIPTION

The site is an 11.1 acre rectangular-shaped parcel of land. The site is margined by North Rose Avenue to the northwest, the existing RDVMS campus to the northeast, by agricultural fields to the southeast and by Colins Street to the southwest. The site is relatively flat and gently sloping downward to the south-southeast. Surface elevations at the site vary from approximately 94 feet at the northwest corner of the site to 89 feet at the southeasterly portion of the site (Google Earth Imagery, 2022).

The site is currently being used for farming purposes. Associated with the farming activities are large green houses, dirt access roads, dirt-covered storage yards, and a single-story residence located at the center of the site. Improvements associated with the residence include a swimming pool, a yard, a parking area with a garage, a tool shed, overhead utility lines and poles, and an aggregate base-covered driveway that provides access from North Rose Avenue. We also understand that the residence is on a private septic system. An existing state water well (#02N22W26F02S) is also present on the site, east of the residence. Based on our review of the referenced literature, historical aerial photographs from as far back as 1947 (Historical Aerials by Netroline: https://www.historicaerials.com/viewer), and Google Earth images no other previous site use is known for the property.

4. PROJECT DESCRIPTION

The construction of the South Campus Expansion Project improvements will be conducted in phases and will include options for new classrooms, library and media center, transportation and parking facilities, and recreational facilities. The existing residence is to remain in place and is to be converted into an office. We understand that the residence will be tied into the public sewer system and the private sewage system will be abandoned. Also proposed at the southerly margin of the site is the construction of a stormwater infiltration basin. The locations of these various improvements, based on the latest conceptual plan provided at the time of writing, are shown schematically on Figure 2A- Conceptual Project Layout.

Neither site grading nor foundation plans have been prepared for the project at this time. However, we anticipate that future site grading will primarily involve minor cuts and fills to achieve future design surfaces. Future buildings will consist of both conventional structures built on a slab-on-grade and supported on shallow footings, and prefabricated modular buildings supported on a perimeter wall/strip footings. Once the actual location, configuration, dimensions of the buildings, and the foundation loads are developed, this office should be contacted to verify that the recommendations provided herein are still applicable and to prepare updated recommendations if needed and finalize this preliminary report. Furthermore, a final geotechnical investigation and report should be performed in accordance with 2019 CBC Section 18A.

5. FIELD INVESTIGATION

The subsurface soil and groundwater conditions beneath the site were explored by Tetra Tech on April 19, 2022 and included drilling, logging, and sampling of 2 exploratory hollow stem auger borings, B-1 and B-2. The locations of these borings are shown on Figure 2B – Boring Locations Map. Relevant boring information including latitude and longitude, approximate ground surface elevation, and exploration depth is included in Table 1 below.

Table 1
Boring Locations Information

Boring ID	General Location	Latitude (degrees)	Longitude (degrees)	Approximate Depth(ft)	Approximate Ground Elevation (ft)
B-1	West central portion of property	34.230845	-119.155019	51.0	91
B-2	Northwest portion of property	34.231589	-119.155542	26.5	93

Prior to initiation of the field exploration program, a field reconnaissance was conducted to observe surface conditions and to mark the locations of the planned subsurface explorations. Underground Service Alert was notified of the exploratory boring locations at least 48 hours prior to drilling. A drilling permit was obtained from the County of Ventura prior to performing the field work.

The borings were excavated using a truck-mounted CME 75 drill rig. The rig was equipped with 8-inch diameter hollow-stem augers. Bulk, driven California-type ring samples, and Standard Penetration Test (SPT) samples were collected during the drilling and transported to a laboratory for testing. The SPT sampler consisted of a 2-inch outside diameter, 1.4-inch inside diameter split barrel without liners, while the California-type sampler consisted of a 3-inch O.D., and a 2.4-inch I.D. split barrel. The interior of the California-type sampler was lined with 1-inch-long brass rings.

SPT testing was performed using an SPT sampler driven by an automatic 140-pound hammer with a drop of 30 inches in general accordance with ASTM D1586. The total number of hammer blows required to drive the sampler the final 12 inches is termed the "blow count." The hammer calibration record indicated an average energy transfer ratio of 81 percent. Ring-type samples were collected by driving the California-type sampler using the same equipment as for the SPTs. Sampling was generally carried out at 2.5- or 5-foot vertical intervals.

The borings were surface logged by a Geologist in general accordance with the visual-manual procedure for description and identification of soils per ASTM D2488. The Geologist prepared the recovered samples for subsequent reference and laboratory testing. At the completion of drilling, boring B-1 was backfilled with cement-bentonite grout and boring B-2 was backfilled with tamped soil cuttings per County of Santa Cruz requirements. All remaining excavated materials were dispersed on site. The exploratory boring logs are presented in Appendix A.

6. LABORATORY TESTING

Laboratory tests were performed on selected samples recovered from the borings to aid in the classification of soils and to evaluate pertinent engineering properties of the site soils. The following tests were performed:

- In-situ Moisture Content and Dry Density, ASTM D2937;
- Percent Passing #200, ASTM D1140;
- Atterberg Limits, ASTM D4318;
- Expansion Index, ASTM D4829;
- Consolidation, ASTM D2435;
- Direct Shear, ASTM D3080; and
- Corrosion Testing in Soils:
    - pH and resistivity, CTM 643;
    - Sulphates, CTM 417; and
    - Chlorides, CTM 422.

Laboratory testing was performed in general accordance with applicable ASTM Standards and California Test Methods. Results of all laboratory tests are presented in Appendix B. For ease of referral to the soil profile, selected laboratory results have been included on the boring logs in Appendix A.

7. GEOLOGIC AND SUBSURFACE CONDITIONS

Regionally, the site is located in Ventura County on the Oxnard Plain of the central Ventura Basin within the Western Transverse Ranges geomorphic province of California. This geomorphic province is distinguished by the prevailing east-west linear trend of its geologic structure and geomorphology in contrast to the predominant northwest-southeast trend of the geomorphic features within most other provinces of the state. The province is bounded by major faults, including the San Andreas Fault zone in the northeast, the Big Pine fault in the north and the Malibu Coast fault in the south. Most of the faults in Ventura County are reverse faults which dip to the north, including the Pine Mountain, Red Mountain, San Cayetano, Santa Susana, Simi, Ventura and Malibu Coast faults (Norris and Webb 1990).

The Ventura Basin is a large synclinal structure situated between the Santa Ynez Range and Topa Mountains on the north, the Channel Islands and the Santa Monica Mountains on the south, the San Gabriel Fault on the east, and extends to the western end of the Santa Barbara Channel (Norris and Webb 1990). Structure in the Oxnard Plain is characterized by a series of broadly folded west-trending and east-northeast–trending anticlines and synclines associated with thrust and reverse faults that formed in the Saugus Formation and may have also deformed the overlying older alluvium (California Department of Conservation, California Geologic Survey [CGS] 2002).

Locally, the site is situated in the Oxnard Plain sub-province. Lithologic units of sedimentary origin underlying the nearly flat Oxnard Plain are approximately 45,000 feet in thickness and consist of Upper Cretaceous, Tertiary, and Quaternary-age units which have been deposited on a pre-Upper Cretaceous base of igneous and/or metamorphic rock. As shown on Figure 3-Regional Geologic Map, the site is underlain by unconsolidated Holocene (last 11,000 years) alluvial sediments. These sediments were deposited during the post-glacial period associated with the ancient Santa Clara River and Calleguas Creek. These alluvial sediments can reach a depth of approximately 900 feet (Turner and Mukae 1975).

The subsurface soils encountered during Tetra Tech's field exploration consisted of artificial fill soils over native alluvial deposits. Detailed descriptions of the soil units encountered during our field exploration are presented below and in the boring logs presented in Appendix A.

7.1. Undocumented Artificial Fill (af)

Shallow undocumented artificial fill soils associated with agricultural activity are present throughout the site. These fills were generated from the tilling of the near surface native soil over the years as well as associated with drainage berms and other associated agricultural and residential improvements. These fills consist of brown silty sands that are loose and damp. The fills were encountered down to a depth of roughly 2 feet but may be locally deeper in association with underground improvements.

7.2. Alluvium (Qha2)

Holocene-age alluvial deposits underlie the fill materials and were encountered to the maximum explored depth of 51 feet during our field exploration. The upper alluvial soils encountered generally consisted of fine-grained silty sands, that were brown, olive, light olive gray and yellowish-brown in color, very loose to loose in density, and damp to moist. Also included in the upper alluvial materials were sandy silt layers and occasional very thin organic rich seams. Below the upper alluvium, the encountered alluvial soils consisted primarily of poorly graded fine to coarse-grained sands with gravels that were light brownish gray in color, medium dense to very dense, and damp.

7.3. Groundwater

Groundwater was not encountered to the maximum explored depth of 51 feet during our field exploration. Based on the previous environmental reports prepared for the site by Tetra Tech (2021a and b), groundwater depth beneath the site during the period from 1972 through 2016 ranged from approximately 33 to 133 feet. These reported groundwater depths were based on data from the Fox Canyon Groundwater Management Agency. Our review of the Mapping by the State of California (California Department of Conservation, Division of Mines and Geology, 2002) for the Oxnard 7.5-minute Quadrangle indicates that the historic high groundwater level at the site is at a depth of about 20 feet (see Figure 4 – Historic High Groundwater Depth Map).

It should be noted that groundwater levels may fluctuate due to seasonal variations, rainfall, irrigation, or other factors. Evaluation of such factors is beyond the scope of this study. For our liquefaction analyses the historic high groundwater depth of 20 feet was utilized.

8. GEOLOGIC HAZARDS

8.1. General Seismic Setting

The Southern California region is known to be seismically active. Earthquakes occurring within approximately 60 miles of the project sites are considered capable of generating ground shaking of engineering significance to the proposed construction. The project area is located in the general proximity of seismically active faults, as shown on Figure 5 – Regional Faults and Seismicity Map.

The closest seismically active faults to the site include the Oak Ridge fault located approximately 2.2 miles north of the site, the Wright Road fault located approximately 3.1 miles northeast of the site, and the Simi Santa Rosa fault located approximately 3.2 miles east of the site. The San Andreas fault is the most significant fault in the area in terms of Maximum Magnitude and is located approximately 42 miles southwest of the site. Table 2 summarizes known seismically active faults within a distance of approximately 40 miles from the project site as identified by the USGS Quaternary Fault Database and in the 2008 National Seismic Hazard Maps (https://usgs.maps.arcgis.com/apps/webappviewer/index.html?id=5a6038b3a1684561a9b0aadf88412fcf and https://earthquake.usgs.gov/cfusion/-hazfaults_2008_search/query_main.cfm).

Table 2
Summary of Active Faults

Sierra Madre Connected	39	reverse	7.30
S. San Andreas: PK+CH+CC+BB+NM+SM+NSB+SSB+BG+CO	41.84	strike slip	8.18

[1] Information from https://maps.conservation.ca.gov/cgs/EQZApp/app/

8.2. Historical Earthquakes

The project area is located in the general proximity of several active faults, as shown on Figure 5. A large amount of seismic activity and associated events with their epicenters have been recorded

surrounding the project site with magnitude of M_w 5 or greater. Table 4 summarizes historic earthquakes with a magnitude greater than M_w 6.0 within a distance of approximately 60 miles from the project site obtained using the USGS Earthquake Catalog (https://earthquake.usgs.gov/earthquakes/search/). The most significant historic earthquakes near the project site are the 1994 Northridge earthquake and the Cajon Creek earthquake.

Table 3
Historic Earthquakes in Southern California
Referenced Site Latitude and Longitude: 34.230770 °, -119.154630 °

Earthquake Name	Year	Fault and Fault Type	Earthquake Magnitude*	Epicenter	
				Latitude	Longitude
Northridge	1994	Northridge Thrust (blind thrust) (a.k.a. Pico Thrust)	6.7 M_w	34.21°N	-118.54°W
San Fernando	1971	San Fernando fault (thrust)	6.5-6.7 M_w	34.42°N	-118.37°W
Grapevine	1952	Pleito fault zone (thrust)	7.5 M_w	34.96°N	-119.00°W
Santa Barbara	1925	Oak Ridge fault (thrust)	6.8 M_w	34.30°N	-119.80°W
Oxnard	1922	Simi Santa Rosa (reverse)	6.5 M_w	34.21°N	-119.14°W
Santa Barbara Channel	1812	Channel Islands Western Deep Ramp (thrust)	7.1 M_L	34.20°N	-119.90°W

Notes:
* M_w refers to Moment Magnitude scale
M_L refers to Local Magnitude scale

8.3. Seismic Hazards and Surface Fault Rupture Potential

The engineering seismology study for the subject site included reviewing local and regional fault maps, reviewing historical earthquake data, and reviewing regulatory maps prepared by the State and local governing agencies. Specifically, the following engineering seismology issues were addressed:

8.3.1. Seismic Hazards

The Seismic Hazards Mapping Act (SHMA) of 1990 directs the California Geological Survey (CGS, formerly California Department of Conservation, Division of Mines and Geology (CDMG)) to identify and map areas prone to earthquake hazards of liquefaction, earthquake-induced landslides and amplified ground shaking.

Maps of seismic hazard zones are issued by the California Geological Survey (CGS, formerly California Department of Conservation, Division of Mines and Geology (CDMG)) in accordance with the Seismic Hazards Mapping Act enacted in April 1990. The intent of the SHMA is to provide for a statewide seismic hazard mapping and technical advisory program to assist cities and counties in developing compliance requirements to protect the public health and safety from the effects of strong ground shaking, liquefaction, landslides, or other ground failure and other seismic hazards caused by earthquakes.

Based on the Official Seismic Hazard Zone Map, released December 20, 2002, for the Oxnard 7.5-Minute Quadrangle, the proposed development is located within an area identified by the State of California as subject to the hazard of liquefaction. The site is also located within an area mapped as subject to liquefaction potential according to the Ventura County Technical Guidance Manual (TGM) for Stormwater Quality Control Measures (Geosyntec, 2011), Figure B-16. The site is not located within an area identified by the State of California as subject to the hazard of seismically induced landslides (see Figure 6 – Seismic Hazard Zones Map).

8.3.2. Surface Fault Rupture

Earthquake Fault Zones (known as Special Studies Zones prior to 1994) are regulatory zones established in accordance with the Alquist-Priolo Special Studies Zones Act enacted in 1972. The Act directs the State Geologist to delineate regulatory zones that encompass surface traces of all potentially and recently active faults that constitute a potential hazard to structures from surface faulting or fault creep. The purpose of the Alquist-Priolo Act is to regulate development near active faults in order to mitigate the hazard of surface fault rupture.

Based on our field exploration and literature review there are no known surface traces of any active or potentially active faults that pass directly through or project towards the site. The closest faults that have been zoned for surface fault rupture potential by the California Geological Survey are the Wright Road Fault located approximately 3.1 miles northeast of the site and the Simi-Santa Rosa Fault Zone located approximately 3.2 miles east of the site (https://maps.conservation.ca.gov/cgs/EQZApp/app/). Therefore, the potential for surface rupture due to faulting occurring beneath the site is considered low.

8.4. Liquefaction Potential and Dynamic Settlement Assessment

The site, as previously discussed, is within an area identified by the State of California as subject to the hazard of liquefaction. Liquefaction of soils can be caused by ground shaking during earthquakes and is generally known to occur in saturated or nearly saturated cohesionless soils at depths shallower than about 50 feet. Research and historical data indicate that loose, relatively clean granular soils and low plasticity silts are susceptible to liquefaction whereas the stability of clayey silts, silty clays and clays are not typically adversely affected by ground shaking.

Dynamic settlement can occur in both unsaturated and saturated sands when loose to medium-dense granular soils tend to undergo contractive volumetric changes during ground shaking. The following sections present our assessment of liquefaction potential and dynamic settlement at the site.

8.4.1. Groundwater Level for Liquefaction Analysis

For the liquefaction analysis a groundwater depth of 20 feet was used based on the historic high groundwater as discussed in the Groundwater section of this report.

8.4.2. Liquefaction Seismic Demand

Based on the Structural Engineers Association of California (SEAOC) and the Office of Statewide Health Planning and Development (OSHPD) website application (https://seismicmaps.org/) the seismic demand was evaluated for the site with latitude 34.230770° and longitude -119.154630°. The mapped Geometric Mean Peak Ground Acceleration (PGA_M) for a ground motion corresponding to the Maximum Considered Earthquake (MCE) for a Site Class D was determined to be 0.891g. From the USGS Seismic Hazard Interactive Deaggregation website (https://earthquake.usgs.gov/hazards/interactive/) this ground motion corresponds approximately to a predominant earthquake with a magnitude of M_w 7.5. The largest contributors to the seismic hazard at the site are the Oak Ridge fault located about 2.2 miles northwest of the site, the Pitas Point-Ventura fault located about 5.7 miles northwest from the site, and the Simi-Santa Rosa fault located about 3.2 miles east of the site. These ground motion parameters were used in the liquefaction analyses. A summary of the seismic demand parameters is presented in Appendix C.

8.4.3. Evaluation of Liquefaction Potential and Sensitivity Analyses

The analyses were based on SPT blowcounts obtained from the 2 exploratory borings and laboratory test results. The field SPT blowcounts were converted considering the energy ratio correction factor C_E of 1.35 as indicated by the hammer calibration records. The borehole diameter factor C_B of 1.0 was used per SP117 based on the internal diameter of the hollow stem auger system used during drilling. The blowcounts recorded for soils driven with the 3-inch O.D. California-type sampler with brass rings were converted to equivalent SPT blowcounts using a reduction factor of 0.7 as recommended by SP117.

The liquefaction potential of cohesionless (sandy) soils was evaluated in general accordance with the procedure published by Boulanger and Idriss and (2014) and in conformance with SP117A. The anticipated dynamic settlement of the saturated soils was evaluated using procedure by Yoshimine et al. (2006) which was further adjusted by a calibration factor of 0.9 as recommended by Cetin (2009).

Seismic sensitivity of fine-grained soils was evaluated based on the following 3 categories:

1. Soils with Plasticity Index < 7 (typically silts) are classified as fine-grained soils susceptible to liquefaction like coarse-grained soils.

2. Soils with Plasticity Index > 18 and a degree of sensitivity $S_t > 6$ are classified as seismically sensitive soils susceptible to significant loss of strength during seismic shaking and require additional evaluation. The sensitivity of the on-site fine-grained soils was evaluated based on the water content, Atterberg limits, and effective vertical stresses using the procedures suggested by Terzaghi, Peck and Mesri (1996).

3. Fine-grained soils falling outside the two categories described above are considered to behave like clays and are not considered susceptible to liquefaction or cyclic softening.

Evaluation of the liquefaction potential of granular soils and fine-grained soils with Plasticity Index less than 7 are presented in Appendix D and are summarized in Table 4 in the next section of the report. Evaluation of the sensitivity of the saturated fine-grained soils (i.e., Category 2) to ascertain the potential for cyclic softening was not performed since the fine-grained materials were encountered above the historic high groundwater depth of 20 feet. Therefore, the fine-grained soils encountered in the borings are not considered to be susceptible to cyclic softening during the design earthquake event.

8.4.4. Dynamic Settlement

Dynamic settlement can occur in both unsaturated and saturated sands when loose to medium-dense granular soils undergo volumetric changes during ground shaking. Dynamic settlement can occur in saturated sands due to liquefaction or in unsaturated sands due to densification of the soil matrix. The anticipated dynamic settlement of the saturated soils at the site was evaluated using SPT data from the current field exploration in accordance with the procedures outlined by Yoshimine et al (2006) and Cetin (2009).

The unsaturated dynamic settlement was calculated based on SPT data according to the procedure outlined by Pradel (1998a and 1998b). Table 4 presents the results of the liquefaction analyses and corresponding settlement evaluation as well as the dynamic settlement of unsaturated soils. Details of dynamic settlement analyses are presented in Appendix D.

As shown in Table 4, the total (combined) dynamic settlement was estimated to be about 1.4 inches. The differential seismic settlement was estimated to be 0.7 inches or less over a horizontal distance of 30 feet. Therefore, structural mitigation of the total and differential seismic settlement is considered acceptable for the project design.

Table 4
Results of Liquefaction and Dynamic Settlement Analyses

Boring No.	Groundwater Depth (feet)	Liquefiable Zone Depth Interval (feet)	FS_{liq}	Approximate Dynamic Settlement (inches)		
				Saturated Soils (liquefaction)	Unsaturated Soils	Combined
B-1	20	20-30	0.74-0.99	1.0	0.2	1.2
B-2		Not liquefiable	n/a	0	1.4	1.4

8.5. Lateral Spreading

Due to the level topography and the absence of free face slopes lateral spreading is not considered to be a hazard at the site.

8.6. Landslide Hazard

The site is not located within a State designated hazard zone for earthquake-induced landslides. Due to the level topography the potential for landslides is not considered a hazard to the site.

8.7. Expansive Soils

Expansive soils are characterized by their ability to undergo significant volume changes (shrink or swell) due to variations in moisture content. Changes in soil moisture content can result from precipitation, landscape irrigation, utility leakage, roof drainage, perched groundwater, drought, or other factors which can cause unacceptable settlement or heave that could negatively affect the performance of structures or slabs supported on grade.

Expansion Index (EI) testing of the surficial materials within the upper 5 feet of sandy materials showed an EI of 1 for 1 sample and of 0 for another sample, indicating that the surficial soils are not expansive. The site is also located within an area mapped as having low expansion potential according to the Ventura County TGM for Stormwater Quality Control Measures (Geosyntec, 2011), Figure B-16. Thus, expansive soils are not considered a hazard to the site.

8.8. Collapsible Soils

The phenomenon of hydro-consolidation is typically exhibited in geologically young, unconsolidated, low-density, loose, dry soils commonly present in arid to semi-arid regions. Collapsible soils are usually composed of granular particles that are supported by a clay or silt matrix that can be chemically cemented in place creating a porous structure. The bonds supporting this porous structure have enough shear strength to support loads at low moisture contents, however, once water is introduced the cemented bond structure breaks down and the granular particles are re-arranged causing significant volume loss. Based on the consolidation testing it was observed that only one sample out of 3 samples exhibited a minimal amount of collapse upon (0.16%). Therefore, collapsible soils are not considered a hazard to the site.

8.9. Oil and Gas Fields

The site is not located within an oil field according to the State of California Department of Conservation's Division of Oil, Gas and Geothermal Resources Map (https://maps.conservation.ca.gov/doggr/wellfinder/).

8.10. Flood Hazard

The project site is not located within an area mapped by the California Department of Water Resources within the 100-year, 200-year, or 500-year projected floodplains (https://gis.bam.water.ca.gov/bam/).

8.11. Tsunamis and Seiches

A tsunami is a sea wave generated by large-scale displacements of the ocean floor that causes a sudden surge of water onto the land. Tsunamis are most commonly caused by movement along faults and underwater landslides activated by earthquakes. Seiches are earthquake-induced displacements of water within an enclosed body of water such as a lake. Strong ground motions from an earthquake cause the water to slosh back and forth onto land. The site is elevated 89 feet and more above sea level and is located at a substantial distance from a significant body of water within an enclosed basin. The site is also not located within a Tsunami Inundation Area, based on our review of the State of California-County of Ventura Tsunami Inundation Map for Emergency Planning for the Oxnard Quadrangle, dated February 15, 2009 https://maps.conservation.ca.gov/cgs/informationwarehouse/ts_evacuation/. Therefore, geologic hazards associated with a tsunami or seiches are not anticipated at the site.

8.12. Reservoir Failure Inundation

A dam that stores more than 1,000 acre-feet of water, is higher than 150 feet, and has the potential to cause downstream property damage is classified as a high hazard dam by FEMA. A review of Section 2.11 and Figures 2.11.1 and 2.11.2 of the Ventura County General Plan, Hazards Appendix (County of Ventura, 2013) and Section 4.3.3.1 and Tables 4-5, 4-6, and 4-7, and Figure 4-3 of the Multi-Jurisdictional Hazard Mitigation Plan for Ventura County, California (County of Ventura, 2005) indicates that there are four major reservoirs in the Santa Clara River watershed upstream of the site that are FEMA high hazard dams. These dams include the Santa Felicia Dam, Castaic Dam Pyramid Dam and Bouquet Canyon Dam. Based on their respective inundation maps, only the Castaic Dam and the Pyramid Dam would inundate the site area in the event of a reservoir failure. Information for these two dams is summarized below:

- Castaic Dam. The Castaic Dam is operated by the California Department of Water Resources (CDWR), can hold up to 325,000 acre-feet of water, and is located on Castaic Creek approximately 45.5 miles upstream of the site. Data provided by the CDWR indicates that the site would be inundated by flood waters in about 4 hours and 15 minutes after a failure of the Castaic Dam (CDWR, 2018a).

- Pyramid Dam. The Pyramid Dam is operated by the CDWR, can hold up to 179,000 acre-feet of water, and is located on Piru Creek approximately 20 miles upstream of the Santa Felicia Dam and approximately 56 miles upstream of the Site. Data provided by the CDWR indicates that the site would be inundated the site in about 5 hours and 15 minutes after a failure of the Pyramid Dam (CDWR, 2018b).

The need for dam failure disaster planning was demonstrated by the midnight collapse in March 1928 of the St. Francis Dam in Los Angeles County, which occurred after the newly constructed cement arched dam was completely filled for the first time. The ensuing flooding from the dam's total collapse resulted in the loss of over 400 lives in Ventura County as floodwaters washed out homes and structures along the banks of the Santa Clara River. The communities of Piru, Fillmore, Santa Paula, Bardsdale, Saticoy, Montalvo and El Rio, where the site is located, sustained extensive life and property loss from the flood (County of Ventura, 2013).

More recently, the San Fernando Earthquake in 1971 resulted in ground shaking in the vicinity of the Van Norman Dam in Los Angeles County. As a result of the earthquake, structural damage threatened the dam's immediate collapse. Approximately 80,000 residents in the San Fernando Valley had to be evacuated to areas of safety during many other earthquake-related emergencies (County of Ventura, 2013).

The California's Dam Safety Act (Section 8589.5 California Emergency Services Act) requires the preparation of dam inundation maps showing areas of potential flooding in the event of sudden or total dam failure as well as emergency procedures for notification and evacuation of nearby residents (County of Ventura, 2013).

In Ventura County, disaster coordination and planning is the responsibility of the Sheriff's Department through its Office of Emergency Services (OES). Within California's emergency management organizational structure, each county serves as an Operational Area. In this role, Sheriff's OES acts as an agent between Cal OES and the cities (including the City of Oxnard), special districts and unincorporated areas of Ventura County. OES is responsible for countywide disaster planning, mitigation, response and recovery activities. The OES serves as the depository for the County's Dam Inundation Maps and is charged with ongoing maintenance of the County's Dam Failure Response Plan which was adopted by the Board of Supervisors on September 13, 1983. The Dam Failure Response Plan was currently updated by the OES during 2013 (County of Ventura, 2013).

8.13. Subsidence

Land subsidence is the lowering of the ground surface due to extraction or lowering of groundwater water levels or other fluids within the subsurface soil pores. The fluid withdrawal causes the alluvial sediments in the basin to compact. Damage caused by subsidence can be visible soil cracks, fissures, or surface depression. The site is located in an area mapped by the United States Geological Survey (USGS) where either historical or current subsidence has been recorded due primarily to groundwater pumping. (https://ca.water.usgs.gov/land_subsidence/california-subsidence-areas.html). Provided that groundwater management strategies that include subsidence mitigation through an existing groundwater recharge program continue to be employed in the area, ground subsidence beneath the site that could result in damage to future site improvements is unlikely to occur at the site.

9. CEQA SECTION VII

The following information is being provided to support each of the responses to the threshold questions established in Section VII – Geology and Soils of the Appendix G Environmental Checklist Form of the CEQA Guidelines Title 14, Division 6, Chapter 3, Article 20. The completed Checklist Form is included in Appendix E of this document. For ease of reference, the original questions from the CEQA questionnaire and the corresponding responses are included below:

a. Would the project directly or indirectly cause substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Response: No impact.

Earthquake Fault Zones (known as Special Studies Zones prior to 1994) are regulatory zones established in accordance with the Alquist-Priolo Special Studies Zones Act enacted in 1972. The Act directs the State Geologist to delineate regulatory zones that encompass surface traces of all potentially and recently active faults that constitute a potential hazard to structures from surface faulting or fault creep. The purpose of the Alquist-Priolo Act is to regulate development near active faults in order to mitigate the hazard of surface fault rupture.

Based on our field exploration and literature review there are no known active faults that pass directly through or project towards the site. The closest faults that have been zoned for surface fault rupture potential by the California Geological Survey at this time are the Wright Road Fault located approximately 3.1 miles northeast of the site and the Simi-Santa Rosa Fault Zone located approximately 3.2 miles east of the site (https://maps.conservation.ca.gov/cgs/EQZApp/app/). Therefore, the potential for surface rupture due to faulting occurring beneath the site is considered low.

ii. Strong seismic ground shaking?

Response: Less than significant impact with mitigation incorporated.

Justification: Southern California is known to be seismically active. Earthquakes occurring within approximately 60 miles of the site are generally capable of generating ground shaking of engineering significance to the proposed construction. The project area is located in the general proximity of several active and semi active faults as shown in Figure 5 – Regional Faults and Seismicity Map. The San Andreas fault is the most significant fault in the area in terms of Maximum Magnitude and is located approximately 42 miles northeast of the site. The closest seismically active faults to the site include the Oak Ridge fault located approximately 2.2 miles north of the site, the Wright Road fault located approximately 3.1 miles northeast of

the site, and the Simi Santa Rosa fault located approximately 3.2 miles east of the site. Based on the SEAOC / OSHPD website application (https://seismicmaps.org/), the Peak Ground Acceleration (PGA) from the Design Response Spectrum at the site is approximately 0.49g. Based on review of the Ventura County 2040 General Plan (VCGPU, 2020), City of Oxnard is located in an area with strong ground shaking potential. Although strong ground shaking is a hazard at the site, this effect will be mitigated since all structures and foundations at the site will be designed to accommodate the ground motions incorporated into the Design Acceleration Response Spectrum per 2019 California Building Code (CBC).

iii. Seismic-related ground failure, including liquefaction?

Response: Less than significant impact with mitigation incorporated.

Justification: Maps of seismic hazard zones are issued by the California Geological Survey (CGS, formerly California Department of Conservation, Division of Mines and Geology (CDMG)) in accordance with the Seismic Hazards Mapping Act enacted in April 1997. The intent of the Seismic Hazards Mapping Act is to provide for a statewide seismic hazard mapping and technical advisory program to assist cities and counties in developing compliance requirements to protect the public health and safety from the effects of strong ground shaking, liquefaction, landslides, or other ground failure and other seismic hazards caused by earthquakes.

Based on the review of the Oxnard Official Map of Seismic Hazard Zones released November 17, 2000 (Figure 6 – Seismic Hazard Zones Map), the subject property is located within an area identified by the State of California as subject to the hazard of liquefaction. The site is also located within an area mapped as subject to liquefaction potential according to the Ventura County Technical Guidance Manual (TGM) for Stormwater Quality Control Measures (Geosyntec, 2011), Figure B-16. Subsurface soils within a depth of 20 to 30 feet were encountered to be susceptible to liquefaction. The total seismic settlement was estimated as 1.4 inches, with 0.7 inches of differential settlement over 30 feet, which can be mitigated with a proper structural design.

iv. Landslides?

Response: No impact.

Justification: Based on the review of the Oxnard Quadrangle Official Map of Seismic Hazard Zones released November 17, 2000, the proposed development is not located within an area identified by the State of California as subject to the hazard of landslides due to seismic shaking (see Figure 6 – Seismic Hazard Zones Map).

b. Result in substantial soil erosion or the loss of topsoil?

Response: No impact.

Justification: The proposed project site is generally level and is currently utilized and maintained for agricultural purposes. The proposed development will include grading with proper drainage, and the construction of buildings, paved parking and green areas that will minimize soil erosion.

c. *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*

Response: Less than significant impact with mitigation incorporated.

Justification: The site is not subject to landslide hazard. As discussed above, the estimated liquefaction settlements can be mitigated with proper structural design and given their relatively low magnitude (less than 0.7 inches of differential settlement over 30 feet) collapse is not expected to occur. Since liquefaction is estimated to take a place at a depth of 20 to 30 feet, and due to the relatively flat topography, lateral spreading is not considered to be a hazard to the site. Subsidence is considered a hazard at this site. Provided that groundwater management strategies that include subsidence mitigation through an existing groundwater recharge program continue to be employed in the area, ground subsidence beneath the site that could result in damage to future site improvements is unlikely to occur at the site.

d. *Be located on expansive soil as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*

Response: No impact.

Justification: Soils at the site are not expansive.

e. *Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*

Response: No impact.

Justification: This item is not applicable since there are no septic tanks or alternative wastewater disposal systems proposed for the development.

f. *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

Response: No impact.

Justification: There are no known paleontological resources or unique geologic features at the site that could be destroyed.

10. DESIGN RECOMMENDATIONS

10.1. General

Based on the results of the field explorations and engineering analyses, the proposed school facilities are considered to be feasible from a geotechnical standpoint. Preliminary recommendations for foundations and pavements are presented herein.

The design recommendations presented below are based on Tetra Tech's current understanding of the project and the subsurface conditions of the site. The designer will need to consider the estimated total and differential settlement values presented in this report in the design of foundations.

Once the project configuration is finalized, a final geotechnical investigation and report should be performed in accordance with 2019 CBC Chapter 18A.

10.2. Site Preparation

The following sections present recommendations to prepare the site before the building foundations are built.

10.2.1. Clearing and Grubbing

Prior to commencement of the earthwork, the surface of areas to be graded should be cleared of any pavement, vegetation, undocumented fills, existing structures, trash and debris. Any subterranean installations not to be preserved, such as electrical lines, pipes, utility collectors, tanks, etc., should be relocated and/or abandoned in accordance with the recommendation of the Geotechnical Engineer and applicable regulations.

10.2.2. Subgrade Preparation

In order to create uniform and competent bearing conditions for the proposed building mat foundation and other site improvements, removal of undocumented existing fills and other unsuitable materials should be performed in accordance with the recommendations provided below.

- School Buildings areas. Slab-on-grade and foundation areas should be overexcavated and recompacted to depths of at least 3 feet below the existing grade 2 foot below the foundation bottom, 1 foot below the slab bottom, or to competent native soils, whichever is deeper. Whenever practical, the excavation should extend a horizontal distance of at least 5 feet beyond the outside perimeter of the structure.

- Pavement and flatwork areas should be overexcavated and recompacted to a depth of at least 2 feet below the proposed subgrade or to uniform competent soils, whichever is deeper. To the extent practicable, the zone of overexcavation should extend a horizontal distance of at least 1 foot beyond the flatwork or pavement perimeter.

- Disturbed soils in structural and non-structural areas will likely occur after demolition of existing site improvements or during overexcavation. The disturbed soils should be overexcavated and recompacted to the total depth of the disturbed material.

The exposed overexcavation subgrade should be probed and accepted by the Geotechnical Engineer. The soils should be scarified to a depth of 6 inches, moisture-conditioned to at least 110 percent of the optimum moisture content and recompacted to at least 90 percent relative compaction (ASTM D1557).

Localized zones of loose and/or unstable soils may be encountered during the grading operations at the subgrade level and should be overexcavated and recompacted. If loose/soft/wet areas are encountered that are not practical to be excavated and processed, Table 5 below provides options for stabilizing the subgrade. The objective is to produce an acceptable subgrade with a thickness of at least 3 feet and 2 feet of competent fill to bridge over the impacted area for near-surface, foundations, and for pavements, respectively. The specific type of remediation and associated area limits will need to be evaluated in the field by the Geotechnical Engineer.

Table 5
Conceptual Options for Handling Unstable Materials at the Excavated Subgrade

Areas where the soils are soft and/or unstable at the excavation subgrade	• Overexcavate at least 3 feet for foundations, 2 feet for pavement areas • Stabilize the soft subgrade by working open-graded aggregate material (typically 3/4" or 1.5" crushed rock, coarser for softer subgrade) at least 4 to 6 inches into the soil. • Place woven geotextile, Mirafi RS580i or approved equivalent, over the stabilized subgrade. • Place and compact well-graded fill (e.g., AB, CMB) or general approved backfill material to specified compaction over the geotextile.
Larger areas where the soils are excessively soft and/or unstable	• Overexcavate at least 3 feet for foundations, 2 feet for pavement areas • Improve the soft subgrade by working in open-graded aggregate material as much as possible/practical into the subgrade. • Place woven geotextile, Mirafi RS580i or approved equivalent, over the exposed soil. • Place at least 8 inches (12-18 inches preferred) of well graded aggregate material (e.g., AB, CMB); only reasonably achievable compaction is required. • Place woven geotextile, Mirafi RS580i or approved equivalent, over the aggregate layer. • Place and compact fill to specified compaction over the geotextile.

10.2.3. Fill Placement

On-site sandy soils used for the replacement of overexcavated soils, fill placed to achieve finish grade or subgrade, or utility trench backfill should be moisture-conditioned at least 110 percent west of the optimum moisture content and compacted to at least 90 percent relative compaction (ASTM D1557). Silty or clayey soils should be moisture-conditioned to a minimum of 125 percent of optimum moisture content and compacted to at least 90 percent relative compaction. The upper 1 foot of soils below pavements, gravel roads, and any flatwork should be compacted

to at least 95 percent relative compaction. Fill should be placed in horizontal lifts not more than 8 inches in loose, uncompacted thickness.

Excavated on-site soils may be re-used as compacted fill, provided they are free of organics, deleterious materials, debris, and particles over 3 inches in largest dimension. Locally, particles up to 6 inches in largest dimension may be incorporated in the fill soils during grading based on specific approval and placement recommendations provided by the Geotechnical Engineer.

In the event that any soil materials are imported to the site, such soils should be sampled, tested, and approved by the Geotechnical Engineer of Record prior to arrival on-site. In general, any soils imported to the site for use as fill should be predominantly granular and have an Expansion Index less than 20. Import materials should be moisture-conditioned to at least 110 percent of the optimum moisture content and compacted to at least 90 percent of relative compaction per ASTM D1557. Additional recommendations for site grading are provided in the General Site Grading Recommendations section of this report.

10.3. Existing Building

The proposed site development will involve converting the existing residence to an office. It is recommended that any structural modifications to the building be reviewed by the Geotechnical Engineer in order to assess the proposed modifications from a geotechnical standpoint.

10.4. Excavation Characteristics, Temporary Slopes and Trench Excavations

The on-site soils are not expected to pose excavation difficulties, and therefore conventional earth-moving equipment can be used. It is anticipated that all excavations to reach subgrade level can be performed as sloped excavations, i.e., without the need for shoring. Where space for sloped sides is not available and shoring will be required, Tetra Tech can provide appropriate shoring recommendations.

All excavations should be performed in accordance with CalOSHA regulations. The on-site soils may be considered a Type C soil to a depth of 20 feet as defined the current CalOSHA soil classification.

Sides of temporary, unsurcharged excavations in dry conditions should be sloped back at an inclination of 1.5(H):1(V) or flatter.

Stockpiled (excavated) materials should be placed no closer to the top of an excavation than a distance defined by a line drawn upward from the bottom of the trench at an inclination of 1(H):1(V), but no closer than 4 feet. A greater setback may be necessary when considering significant surcharge loads such as heavy vehicles, concrete trucks and cranes. Tetra Tech should be advised of such heavy surcharges so that specific setback requirements can be established. Alternatively, a shoring system may be designed to allow reduction in the setback distance.

The Geotechnical Engineer should observe the excavation progress so that appropriate modifications to the excavation design may be recommended, if necessary, due to conditions differing from the design assumptions.

10.5. Seismic Design Parameters

The project site is located in an area that is subject to the hazard of liquefaction. Therefore, per ASCE 7-16 Section 20.3.1, the site needs to be defaulted as Site Class F and seismic design parameters need to be obtained by a site response analysis performed in conformance with ASCE 7-16 Section 21.1. However, ACSE 7-16, Section 20.3.1 provides an exception for structures having fundamental periods of vibration equal to or less than 0.5s, where site response analysis is not required for liquefiable soils and the site class may be determined in accordance with Section 20.3, in which case this site may be classified as a Site Class D. Although it is expected that this exception is applicable to the proposed construction, the structural engineer needs to verify that the natural period of the structures meets this condition. Alternatively, this office can perform the site response analysis under a separate scope and budget.

The seismic design coefficients provided below in Table 6 are based on Chapter 16A Section 1613A of the 2019 CBC and obtained from the Structural Engineers Association of California (SEAOC) and the Office of Statewide Health Planning and Development (OSHPD) website application (https://www.seaoc.org/page/seismicdesignmaptool). According to ASCE 7-16 Section 11.4.8, a site-specific ground motion hazard analysis shall be performed if structures on Site Class D have an S_1 greater than or equal to 0.2 unless the seismic coefficient *Cs* determined by Equation (12.8-2) is used for values of $T <= 1.5\ T_s$ and taken as equal to 1.5 times the value computed in accordance with either Equation (12.8-3) for $T_L >= T > 1.5\ T_s$ or Equation (12.8-4) for $T > T_L$. Tetra Tech can provide site-specific ground motion hazard analysis under a separate scope and budget.

Table 6
2019 CBC and ASCE 7-16 Seismic Design Parameters
Referenced Site Latitude and Longitude: 34.230770 °, -119.154630 °

Site Class Table 20.3-1 ASCE 7-16		D
Coefficients for the Maximum Considered Earthquake, MCE_R, for Site Class B	Short Period (0.2 seconds), S_S	1.842*
	1 Second Period, S_1	0.685*
Coefficients for the Maximum Considered Earthquake, MCE_R (Site Modified)	Short Period (0.2 seconds), S_{MS}	1.842*
	1 Second Period, S_{M1}	1.165**
Coefficients for the Design Earthquake	Short Period (0.2 seconds), S_{DS}	1.228*
	1 Second Period, S_{D1}	0.776**
Design PGA (risk-targeted maximum rotated direction)		0.491g*
Site Modified Peak Ground Acceleration PGA_M (geometric mean)		0.891g*

* Values obtained from Structural Engineers Association of California (SEAOC) and the Office of Statewide Health Planning and Development (OSHPD) website application, https://www.seaoc.org/page/seismicdesignmaptool **based on ASCE7-16 and 2018 International Building Code**.
** See requirements for site-specific ground motions in Section 11.4.8 of ASCE 7-16.

10.6. Foundations

The proposed structures can be supported on footings established on subgrade prepared in accordance with recommendations provided in "Site Preparation" section of this report. Foundations should be designed and reinforced in accordance with the recommendations of the Structural Engineer and should conform to the 2019 CBC.

10.6.1. Design Parameters for Footings

Footings for the proposed structures can be designed based on the parameters presented in Table 7.

Table 7
Geotechnical Design Parameters
Continuous and Spread Footings

Continuous Strip Footings	
Dimensions (feet)	• At least 18 inches wide but less than 4 feet wide
Depth of Embedment	• Embedded at least 2 feet below the lowest adjacent grade
Allowable Bearing Pressure	• 2,800 psf
Spread Footings	
Dimensions (feet)	• At least 24 inches wide but less than 6 feet wide
Depth of Embedment	• At least 18 inches below the lowest adjacent grade
Allowable Bearing Pressure	• 3,300 psf
All Footings	
Allowable Bearing Pressure for Transient Live Loads	• The allowable bearing pressure value may be increased by one-third for transient live loads from wind or seismicity.
Estimated Settlement	• Approximate 1 inches of static settlement. • Approximate 1.4 inches of dynamic settlement • Approximate combined (static plus dynamic) differential settlement of 1.2 inches between supports or over a distance of 30 feet (0.5 inches of static differential settlement, and 0.7 inches of dynamic differential settlement).
Allowable Coefficient of Friction (incorporates Factor of Safety of 1.5)	• 0.3 concrete on soil
Allowable Lateral Passive Resistance (incorporates Factor of Safety of 2)	• 220 pcf (EFD, equivalent fluid density, for compacted fill with ϕ=34°) • The passive resistance derived of the upper 12 inches should be neglected.
Allowable Combined Lateral Resistance	• Total allowable resistance to lateral loads can be calculated by combining lateral resistance due to friction at the base and lateral passive resistance. • Passive resistance values may be increased by one-third when considering transient wind or seismic loading

10.7. Shallow Foundations Adjacent to Utility Trenches

The bottom of any trenches that are required for any buried utilities should be kept outside a zone defined by a 1(H):1(V) plane projected downward from the outside bottom edge of any existing or proposed foundation. Backfill materials and procedures shall conform to the recommendations provided in the Site Preparation and General Site Grading Recommendations section of this report. If any utilities need to be placed within the zone of influence, the utility conduit (pipes, cables) should be designed to account for the increased surcharge from the foundation pressures and to withstand potential differential settlement between the surcharged and unsurcharged segments of

the pipe. Generally, the utility conduits within the impacted zone should be protected by concrete encasement or utilidors.

For utility conduits that cross underneath foundations the piping and encasement should be designed to withstand differential settlements of up to 1 inch over a distance equal to half of the depth of the pipe crown below the bottom of the foundation element. Tetra Tech should be contacted to review any specific utility interaction configurations and their proposed mitigation.

10.8. Concrete Slabs-On-Grade

The recommendations provided in this section are intended to be used for the design of the slabs on grade for the specified geotechnical condition. Moreover, the recommendations provided in the "Site Preparation" section and in this section of this report are meant to provide a firm bearing subgrade to help reduce the occurrence of cracks in concrete and associated horizontal separation and vertical offset. However, it should be understood that concrete slabs may still crack due to structural design or detailing, curing, or construction execution even when these recommendations are implemented. Therefore, the concrete slab design is ultimately the responsibility of the Structural Engineer and/or Concrete Specialist who can account for all adverse factors and loading and provide reinforcement, concrete mix, and curing specifications to minimize their adverse effects.

10.8.1. Slab Design Parameters

All concrete slabs should be placed on subgrade prepared in accordance with the respective recommendations provided in the "Site Preparation" section of this report.

For design of concrete slabs on grade, a modulus of subgrade reaction k_1 on a 1-foot by 1-foot square plate of 115 pci may be used. For the on-site sandy soils within the upper 7 feet, the design modulus of subgrade reaction k in pci for a concrete rectangular element can be determined as:

$$k = k_1 \frac{(B+1)^2}{4B^2} \frac{1 + 0.5\frac{B}{L}}{1.5}$$

Where B and L is the governing width and length of the concrete element in feet, but no more than 14 times the thickness of the element.

Slabs-on-grade should have a minimum thickness of 5 inches and be reinforced with a minimum of No.4 reinforcing bars spaced at 18 inches on-center, each way, placed in the middle one-third of the section. The slab should be doweled into the perimeter footings to reduce the potential for differential movement. Reinforcement should be properly placed and supported on blocks or "chairs". Welded wire mesh reinforcement is not recommended.

All underslab materials should be adequately compacted prior to the placement of concrete. The materials should be dry or moist and not be wetted or saturated prior to the placement of concrete.

Care should be taken during placement of the concrete to prevent displacement of the underslab materials.

10.8.2. Moisture Vapor Mitigation for Floor Slabs

Tetra Tech does not practice in the field of moisture vapor transmission evaluation/mitigation. However, to assist with the preliminary selection of the appropriate slab underlayment system, Table 8 below provides alternatives for control of vapor transmission through floor slabs placed on a properly prepared subgrade. The provided alternatives are based on local experience and may be considered appropriate for standard applications. If moisture vapor transmission is considered a risk to use and operation of the proposed structure, a qualified specialist should be engaged to evaluate the general and specific moisture vapor transmission paths and to provide recommendations for mitigation of potential adverse impact of moisture vapor transmission on various components of the structure as deemed appropriate.

All underslab materials should be compacted and moisture-conditioned prior to the placement of concrete. Care should be taken during placement of the concrete to prevent displacement of the underslab materials. The concrete slab should be allowed to sufficiently cure prior to placing vinyl or other moisture-sensitive floor covering.

10.8.3. Exterior Concrete Slabs-On-Grade

As a minimum for exterior walkways, it is recommended that narrow strip concrete slabs, such as sidewalks, be reinforced with at least No. 4 reinforcing bars placed longitudinally at 18 inches on center. Wide exterior slabs should be reinforced with at least No. 4 reinforcing bars placed 18 inches on center, each way.

10.8.4. Control Joints

Control joints should be provided in concrete slabs-on-grade as recommended by American Concrete Institute (ACI PRC-224.3-95) guidelines and at a maximum spacing (in feet) of 2 to 3 times of the slab thickness (in inches), but generally no more than 10 feet. All joints should form approximately square patterns to reduce potential for randomly oriented shrinkage cracks. The control joints should be tooled at the time of the pour or sawcut to ¼ of slab depth within 6 to 8 hours of concrete placement. All joints in flatwork should be sealed to prevent moisture, vermin, or foreign material intrusion. Precautions should be taken to prevent curling of slabs in the semi-arid southern California region (refer to ACI guidelines). Reinforcement should extend through the control joints to reduce the potential for differential movement.

Table 8
Alternatives for Control of Vapor Migration through Concrete Slab

Protection against vapor intrusion	Recommendation
"Best"	• Concrete floor slab-on-grade placed directly on a plastic membrane at least 10 mils in thickness[1] (ACI 302.1R). • The membrane should be placed on at least 2 inches of naturally moist silty sand[2]. • The silty sand should be separated from the underlying capillary break layer by non-woven geotextile, Mirafi 140N or equivalent. Alternatively, the voids at the top of the aggregate course may be filled with fine sand to minimize potential for tearing and damage to the membrane. • The geotextile should be placed on at least 4 inches of ¾-inch crushed rock[3] or clean gravel[4] to act as a capillary break placed on prepared finished grade.
"Better"	• Concrete floor slab-on-grade placed directly on a plastic membrane at least 10 mils in thickness[1] (ACI 302.1R). • The membrane may be placed on at least 2 inches of naturally moist silty sand[2,5] placed on prepared finished grade.
Standard	• Concrete floor slab-on-grade placed on 2 inches of naturally moist silty sand[2] • The silty sand should be placed over plastic membrane at least 10 mils in thickness. • The membrane may be placed on at least 2 inches of naturally moist silty sand[2,5] placed on prepared finished grade.

[1] If additional protection is desired, the plastic membrane may be replaced with a 10-mil-thick moisture vapor retarder that meets the requirements of ASTM E 1745 Class C (for example, Stego Wrap or similar).
[2] The silty sand should have a gradation between approximately 15 and 35 percent passing the No. 200 sieve and a plasticity index (PI) of less than 4.
[3] The ¾-inch crushed rock should conform to Section 200-1.2 of the latest edition of the Standard Specifications for Public Works Construction (Greenbook).
[4] The gravel should contain less than 10 percent of material passing the No.4 sieve and less than 3 percent passing the No.200 sieve.
[5] The silty sand layer is intended as a levelling course and to protect the membrane from any gravel grains that may be at the finished subgrade. It is not strictly required for vapor migration protection. It is recognized that the silty sand course may be difficult to protect during construction activities, consequently if a thicker/stronger membrane is utilized, e.g., 15-mil Stego Wrap, and an adequate caution is taken during the subgrade preparation and slab construction, then the silty sand course may be eliminated.

10.9. Embedded Posts and Poles at Grade

The allowable static lateral soil bearing pressure can be assumed to be at least 220 pcf EFD. The earth pressure value incorporates a Factor of Safety of 2. Isolated poles for uses such as flagpoles or signs and poles used to support buildings that are not adversely affected by a 0.5-inch motion at the ground surface due to short-term lateral loads can be designed using lateral soil bearing pressure of 300 pcf EFD. Vertical compressive loading can be resisted utilizing an allowable end bearing pressure of 3,000 psf.

10.9.1. Non-Constrained Case

For the non-constrained case where the pole is not restricted to move at the ground level, the minimum depth of embedment required to resist lateral loads should be determined in accordance with the 2019 CBC Section 1807A.3.2.1. Where bare ground (without concrete or asphalt cover) is present adjacent to the foundation, the lateral resistance should be ignored for the upper 12 inches below grade. Therefore, a trapezoidal pressure distribution should be used starting at 12 inches below grade.

10.9.2. Constrained Case

For the constrained case where the pole is restricted from movement at the ground level by encasement in surrounding concrete or similar, the minimum depth of embedment required to resist lateral loads should be determined in accordance with Section 1807A.3.2.2 of the 2019 CBC.

10.10. Pavement Design for Parking Lots and Driveways

Recommendations are provided below for flexible (asphalt) pavement sections for the site parking, and rigid (concrete) pavement sections in case they are needed.

10.10.1. Pavement Subgrade Preparation

The subgrade preparation and fill placement in all paved areas should follow the recommendations provided in the Site Preparation section of this report. Paved areas should be properly sloped, and surface drainage established to reduce water infiltration into the pavement subgrade. Curbing located adjacent to paved areas should be founded in the soil subgrade in order to provide a cutoff to reduce water infiltration into the base course.

10.10.2. Asphalt Concrete Pavement Design

Flexible pavement sections have been designed in general accordance with the Caltrans Highway Design Manual method for flexible pavement design using the 20-year design life period. Laboratory R-value obtained a soil sample from the expected subgrade materials, was 70. An R-value of 40 for the subgrade was used for pavement design. The recommended pavement sections for several assumed Traffic Indices are presented in Table 9.

Table 9
Flexible Pavement Sections

Location	Traffic Index	Composite Section		Full Depth Asphalt Concrete Alternative (inches)
		Asphalt Concrete (inches)	Aggregate Base (inches)	
Parking / automobiles	5.5	3.0	5.0	6.0
Trailer Parking areas	6.5	3.5	6.5	7.0
Drive aisles	7.5	4.5	7.5	8.5
Driveways/ truck traffic	8.5	5.0	9	9.5

Asphalt concrete and Aggregate Base (AB) should conform to the Specifications for Public Works Construction (Greenbook) Sections 203-6 and 200-2, respectively. The AB course should be compacted to 95 percent of relative compaction per ASTM D1557.

10.10.3. Concrete Pavement Design

The pavement subgrade should be prepared as recommended in Site Preparation section of this report. The recommended PCC pavement sections are presented in Table 10 below. Tetra Tech does not practice in the field of structural PCC pavement structural design and applies pavement section design method per ACI 330-08 based on the subgrade soil materials and the geotechnical conditions. Design and detailing of the reinforcement, jointing, doweling, mix design, concrete placement, curing, and specifications should be performed in accordance with ACI recommendations.

The PCC pavement sections were designed for a 20-year design life and assuming a Traffic Category A-1 (truck access lanes) with an average daily truck traffic (ADTT) of 10, and a Traffic Category B (bus parking areas and school buses) with ADTTs of 25 and 300. Contraction, construction, and isolation joints should be placed per ACI recommendations. The design assumes that 6 inches of Aggregate Base Materials will be placed on top of the compacted subgrade. The aggregate base materials should conform to the Specifications for Public Works Construction (Greenbook) Section 200-2. The aggregate base course should be compacted to 95 percent or more of the relative density, as evaluated by the latest version of ASTM D1557.

The design of the pavement assumes that the Portland cement concrete will have a 28-day flexural strength (modulus of rupture determined by the third-point method) of at least 550 psi (equivalent to a compressive strength of about 4,000 psi) or 650 psi (equivalent to a compressive strength of about 5,000 psi). A modulus of subgrade reaction (*k* value) of 150 pci was assumed for the compacted subgrade soils.

Table 10
PCC Pavement Sections

Subgrade Soil			Sandy Soil	
Modulus of Subgrade Reaction, k			150 pci	
Thickness of Base Course			6 inches	
PCC Pavement 28-day concrete compressive strength			4,000 psi	5.,000 psi
Category	**ADTT[1]**	**Pavement Traffic Description**	**PCC Thickness (inches)**	
A-1	10	Truck access lanes	6.0	5.0
B	25	Bus Parking areas and school buses		
	300		6.5	5.5

Note: [1]Average Daily Truck Traffic

10.10.4. Construction Considerations

Paved areas should be properly sloped, and surface drainage facilities should be established to reduce water infiltration into the pavement subgrade. Curbing located adjacent to paved areas should be founded in the soil subgrade in order to provide a cutoff to reduce water infiltration into the base course.

10.11. Feasibility of Onsite Stormwater Infiltration

A stormwater infiltration basin is proposed on the southerly margin of the site. Based on our review of the Ventura County TGM for Stormwater Quality Control Measures (Geosyntec, 2011) Figure B-15 the site is located at the boundary between mapped Soil Numbers 2 and 4. Soil Number 2 are typically sandy clay loams that have low infiltration rates, whereas Soil Number 4 are typically silty loams or loams that have moderate infiltration rates.

According to the TGM, infiltration-based BMPs should be feasible in areas mapped with Ventura County Soil Numbers 4 through 7. However, for locations mapped with Ventura County Soil Numbers 1 through 3, infiltration-based BMPs should not be designed unless site specific testing is performed and shows an infiltration rate greater than 0.5 in/hr. Therefore, for final design of the proposed storm water management facilities, field testing would be required at the locations and proposed depths of the stormwater infiltration basin. It is noted that based on the characteristics of the near surface soils i.e., silty sands, encountered in our borings up to a depth of 15 feet, shallow onsite infiltration may not be feasible. However, infiltration testing could be considered to determine the actual infiltration rates of these surficial materials. In addition, infiltration testing within the coarser-grained materials below the upper more fine-grained materials could be considered if there is the potential to deepen the proposed basins. Ultimately a hybrid system that would encompass a combination of shallow basins with vertical wells installed at the bottom of the basins and connecting to the lower more coarse-grained materials could be considered.

10.12. Soil Corrosion

The corrosion potential of the on-site materials to buried concrete and steel was evaluated based on laboratory testing. Table 11 below presents the results of the corrosivity testing.

Table 11
Corrosivity Test Results

Boring ID	Sample ID	Depth (feet)	pH CTM 643	Minimum Resistivity (ohm-cm) CTM 643	Soluble Sulfate Content (ppm / %) CTM 417	Soluble Chloride Content (ppm / %) CTM 422
Tt-1	SK-1	0-5	9.1	3,458	22/0.0022	20/0.0020
Tt-2	SPT-3	10-11.5	7.9	1,010	510/0.0510	25/0.0025

Per 2019 CBC, Section 1904A.1, concrete subject to exposure to sulfates shall comply with the requirements set forth in ACI 318, Section 19.3. Based on the measured water-soluble sulfate results the exposure of buried concrete to sulfate attack should be considered "not a concern", i.e., exposure class S0 per ACI 318, Table 19.3.1.1. Consequently, injurious sulfate attack is not a concern for concrete with a minimum 28-day compressive strength of 2,500 psi.

Per 2019 CBC, Section 1904A.1, concrete reinforcement should be protected from corrosion and exposure to chlorides in accordance with ACI 318, Section 19.3.

The evaluation of potential for corrosion of buried metals was based on the minimum resistivity per NACE (1984) and our experience with similar soils. The on-site soils are anticipated to have a "moderately corrosive" potential to buried ferrous metals. A corrosion specialist should be consulted regarding suitable types of piping and necessary protection for underground metal conduits. The corrosion potential of the on-site soils should be verified during construction for each encountered soil type. Imported fill materials should be tested prior to placement to confirm that their corrosion potential is not more severe than the one assumed for the project.

10.13. Drainage Control

The intent of this section is to provide general information regarding the control of surface water. The control of surface water is essential to the satisfactory performance of the building construction and site improvements. Surface water should be controlled so that conditions of uniform moisture are maintained beneath and adjacent to the structure, even during periods of heavy rainfall. The following recommendations should be considered as minimal.

- Ponding and areas of low flow gradients should be avoided.

- Paved surfaces within 10 feet from the building foundation should be provided with a gradient of at least 2 percent sloping away from improvements.

- Bare soil, e.g., planters, within 10 feet of the structure should be sloped away from the improvement at a gradient of 5 percent.

- Positive drainage devices, such as graded swales, paved ditches, and/or catch basins should be employed to accumulate and convey water to appropriate discharge points.

- Positive drainage devices, such as graded swales, paved ditches, and/or catch basins should be employed to accumulate and convey water to appropriate discharge points.

- Concrete walks and flatwork should not obstruct the free flow of surface water.

- Area drains should be recessed below grade to allow free flow of water into the basin.

- Enclosed raised planters should be sealed at the bottom and provided with an ample flow gradient to a drainage device. Recessed planters and landscaped areas should be provided with area inlet and subsurface drainpipes.

- To the extent practicable, planters should not be located adjacent to the structure. If planters are to be located adjacent to the structure, the planters should be positively sealed, should incorporate a subdrain, and should be provided with free discharge capacity to a drainage device.

- Planting areas at grade should be provided with positive drainage. Wherever possible, the grade of exposed soil areas should be established above adjacent paved grades. Drainage devices and curbing should be provided to prevent runoff from adjacent pavement or walks into planted areas.

- Gutter and downspout systems should be provided to capture discharge from roof areas. The accumulated roof water should be conveyed to an off-site disposal area by a pipe or concrete swale system.

- Landscape watering should be performed judiciously to preclude either soaking or desiccation of soils. The watering should be such that it just sustains plant growth without excessive infiltration. Sprinkler systems should be checked periodically to detect leakage and irrigation efforts should be reduced or halted during the rainy season.

11. GENERAL SITE GRADING RECOMMENDATIONS

The intent of this section is to provide general information regarding the site grading. Site grading operations should conform with applicable local building and safety codes and to the rules and regulations of those governmental agencies having jurisdiction over the subject construction.

The grading contractor is responsible for notifying governmental agencies, as required, the Geotechnical Engineer at the start of site cleanup, at the initiation of grading, and any time that grading operations are resumed after an interruption. Each step of the grading should be accepted in a specific area by the Geotechnical Engineer, and where required, should be approved by the applicable governmental agencies prior to proceeding with subsequent work.

The following site grading recommendations should be regarded as minimal. The site grading recommendations should be incorporated into the project plans and specifications.

- Prior to grading, existing vegetation, trash, surface structures and debris should be removed and disposed off-site at a legal dumpsite. Any existing utility lines, or other subsurface structures which are not to be utilized, should be removed, destroyed, or abandoned in compliance with current governmental regulations.

- Subsequent to cleanup operations, and prior to initial grading, a reasonable search should be made for subsurface obstructions and/or possible loose fill or detrimental soil types. This search should be conducted by the contractor, with advice from and under the observation of the Geotechnical Engineer.

- Prior to the placement of fill or foundations within the building area, the site should be prepared in accordance with the recommendations presented in the section "Site Preparation" of this report. All undocumented fill or disturbed soils within the building areas should be removed and processed as recommended by the Geotechnical Engineer.

- The exposed subgrade and/or excavation bottom should be observed and approved by the Geotechnical Engineer for conformance with the intent of the recommendations presented in this report and prior to any further processing or fill placement. It should be understood that the actual encountered conditions may warrant excavation and/or subgrade preparation beyond the extent recommended and/or anticipated in this report.

- On-site inorganic granular soils that are free of debris or contamination are considered suitable for placement as compacted fill. Any rock or other soil fragments greater than 3 inches in size should not be placed within 5 feet of the foundation subgrade.

- Any imported fill material required for backfill or grading should be tested and approved prior to delivery to the site.

- Visual observations and field tests should be performed during grading by a Geotechnical Engineer. This is necessary to assist the contractor in obtaining the proper moisture content and required degree of compaction. Wherever, in the opinion of the Geotechnical Engineer,

an unsatisfactory condition is being created in any area, whether by cutting or filling, the work should not proceed in that area until the condition has been corrected.

12. LIMITATIONS

The recommendations and opinions expressed in this preliminary report are based on Tetra Tech's review of background documents and on information obtained from field explorations and associated laboratory testing. It should be noted that this study did not evaluate the possible presence of hazardous materials on any portion of the site.

Due to the limited nature of the field explorations, conditions not observed and described in this report may be present on the site. Supplemental field investigation and a final geotechnical design report should be performed during final design of the project. This investigation should meet the requirements of 2019 CBC Chapter 18A. In addition, once the locations of the stormwater infiltration areas and depths are defined, the Geotechnical Engineer should be contacted to perform the appropriate infiltration testing.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the Project described herein. Tetra Tech should be contacted if the reader requires additional information or has questions regarding the content, interpretations presented, or completeness of this document. Reliance by others on the data presented herein or for purposes other than those stated in the text is authorized only if so permitted in writing by Tetra Tech. Such an authorization may incur additional expenses and charges.

Tetra Tech has endeavored to perform its evaluation using the degree of care and skill ordinarily exercised under similar circumstances by reputable geotechnical professionals with experience in this area in similar soil conditions. No other warranty, either expressed or implied, is made as to the conclusions and recommendations contained in this report.

PROJECT SITE

EXPLANATION

Geologic Time Scale			Years Before Present (Approx.)	Fault Symbol	Recency of Movement	DESCRIPTION: ON LAND	DESCRIPTION: OFFSHORE
Quaternary	Late Quaternary	Historic				Displacement during historic time (e.g. San Andreas fault 1096). Includes areeas of known fault creep.	
		Holocene	200			Displacement during Holocene time.	Faults offsets sea floor sediments or strata of Holocene age.
	Early Quaternary	Pleistocene	11,700			Fault showing evidence of displacement during late Quaternary time.	Faults cuts strata of LatePleistocene age.
			700,000			Undivided Quaternary faults - most faults in this category show evidence of displacement during the last 1,600,00 years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age.	Faults cuts strata of Quaternary age.
Pre-Quaternary			1,600,000			Faults without recognized Quaternary displacement or showing evidence of no displacement during Quaternary time. Not necessarily inactive.	Faults cuts strata of Pliocene or older age.

MAP SYMBOLS

- Triangle - termination portion data. Square - fault creep slippage. Hachure - linear extent of fault creep. (other symbols - see below)
- Approximate located trace
- Location uncertain
- Bar and ball on dowthrown side
- Arrows along fault indicate relative or apparent direction of lateral movement.
- Direction of fault dip
- Low angle fault (barbs on upper plate)
- Numbers refer to annotations listed in explanatory text of map.
- Subject Site Location

Logs of Exploratory Borings

Appendix A

Logs of Exploratory Borings

Bulk and relatively undisturbed drive samples were obtained in the field during our subsurface evaluation. The samples were tagged in the field and transported to our laboratory for observation and testing. The drive samples were obtained using the California Split Barrel Drive and Standard Penetration Test (SPT) sampler as described below.

California-Type Split Barrel Drive Sampler
The split barrel drive sampler was driven with a 140-pound hammer allowed to drop freely 30 inches. The number of blows per foot recorded during sampling is presented in the logs of exploratory borings. The sampler has external and internal diameters of approximately 3.0 and 2.4 inches, respectively, and the inside of the sampler is lined with 1-inch-long brass rings. The relatively undisturbed soil sample within the rings is removed, sealed, and transported to the laboratory for observation and testing.

Standard Penetration Test Sampler
The standard penetration test sampler is driven with a 140-pound hammer allowed to drop freely 30 inches in general accordance with ASTM D1586. The number of blows (N-value) required to drive the SPT sampler 12 inches is shown on the borings logs. The sampler has external and internal diameters of approximately 2.0 and 1.4 inches respectively. The sampling tube consists of an unlined split-tube barrel. The disturbed soil sample is removed, sealed, and transported to the laboratory for testing.

Appendix B

Results of Laboratory Testing

Appendix B
Results of Current Laboratory Testing

Classification
Soils were visually and texturally classified in accordance with the Unified Soil Classification System. Soil classifications are indicated on the logs of the exploratory borings in Appendix A.

In-Place Moisture and Dry Density Tests
The moisture contents and dry densities of relatively undisturbed samples obtained from the exploratory boreholes were evaluated in general accordance with the latest version of ASTM D2937. The test results are presented on the log of the exploratory borings in Appendix A.

Particle Size Analysis
An evaluation of the particle size analysis for selected soil samples were performed in general accordance with ASTM D422. The results of the analysis are presented the borehole logs in Appendix A and in the back of this Appendix B.

Percent Passing #200 Sieve
An evaluation of the percent passing #200 sieve for selected soil samples were performed in general accordance with ASTM D1140. The results of the analysis are presented the borehole logs in Appendix A and in the back of this Appendix B.

Atterberg Limits Tests
Liquid Limit, Plastic Limit, and Plasticity Index of selected and representative on-site materials were performed in general accordance with ASTM D4318. The results of this test are presented on the borehole logs in Appendix A and in the back of this Appendix B.

Consolidation Tests
Consolidation tests were performed on selected relatively undisturbed soil samples in general accordance with the latest version of ASTM D2435. The samples were inundated during testing to represent adverse field conditions. The percent consolidation for each load cycle was recorded as a ratio of the amount of vertical compression to the original height of the sample. Load versus deformation curves are presented in the back of this Appendix B.

Direct Shear Tests
The sample were tested under three different normal loads. The samples were sheared at a constant rate of strain selected in general accordance with the consolidation characteristics of the soils (Section 7.3 of ASTM D3080). The samples were inundated during shearing to represent potentially adverse field conditions. The strain rate used for shear tests was 0.002 inches per minute. Shearing of the specimens was continued until the shear stress became essentially constant or until a deformation of approximately 10 percent of the original diameter had been reached. The results of 3-point direct shear tests are presented in the back of this Appendix B.

Corrosivity Series

The corrosivity of a selected sample was evaluated in general accordance with the latest version of California Test Method (CTM) No. 417, 422 and 643. The results of these tests are presented in Table 11 in the report and in the back of this Appendix B.

Seismic Demand

OSHPD

Latitude, Longitude: 34.230770, -119.154630

Date	5/20/2022, 12:41:54 PM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	D - Stiff Soil

Type	Value	Description
S_S	1.842	MCE_R ground motion. (for 0.2 second period)
S_1	0.685	MCE_R ground motion. (for 1.0s period)
S_{MS}	1.842	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	1.228	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	1	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.81	MCE_G peak ground acceleration
F_{PGA}	1.1	Site amplification factor at PGA
PGA_M	0.891	Site modified peak ground acceleration
T_L	8	Long-period transition period in seconds
SsRT	1.842	Probabilistic risk-targeted ground motion. (0.2 second)
SsUH	2.08	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
SsD	2.445	Factored deterministic acceleration value. (0.2 second)
S1RT	0.685	Probabilistic risk-targeted ground motion. (1.0 second)
S1UH	0.772	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
S1D	0.836	Factored deterministic acceleration value. (1.0 second)
PGAd	0.991	Factored deterministic acceleration value. (Peak Ground Acceleration)
C_{RS}	0.885	Mapped value of the risk coefficient at short periods
C_{R1}	0.887	Mapped value of the risk coefficient at a period of 1 s

Liquefaction Evaluation

Summary of Liquefaction and Earthquake-Induced Settlement Analysis

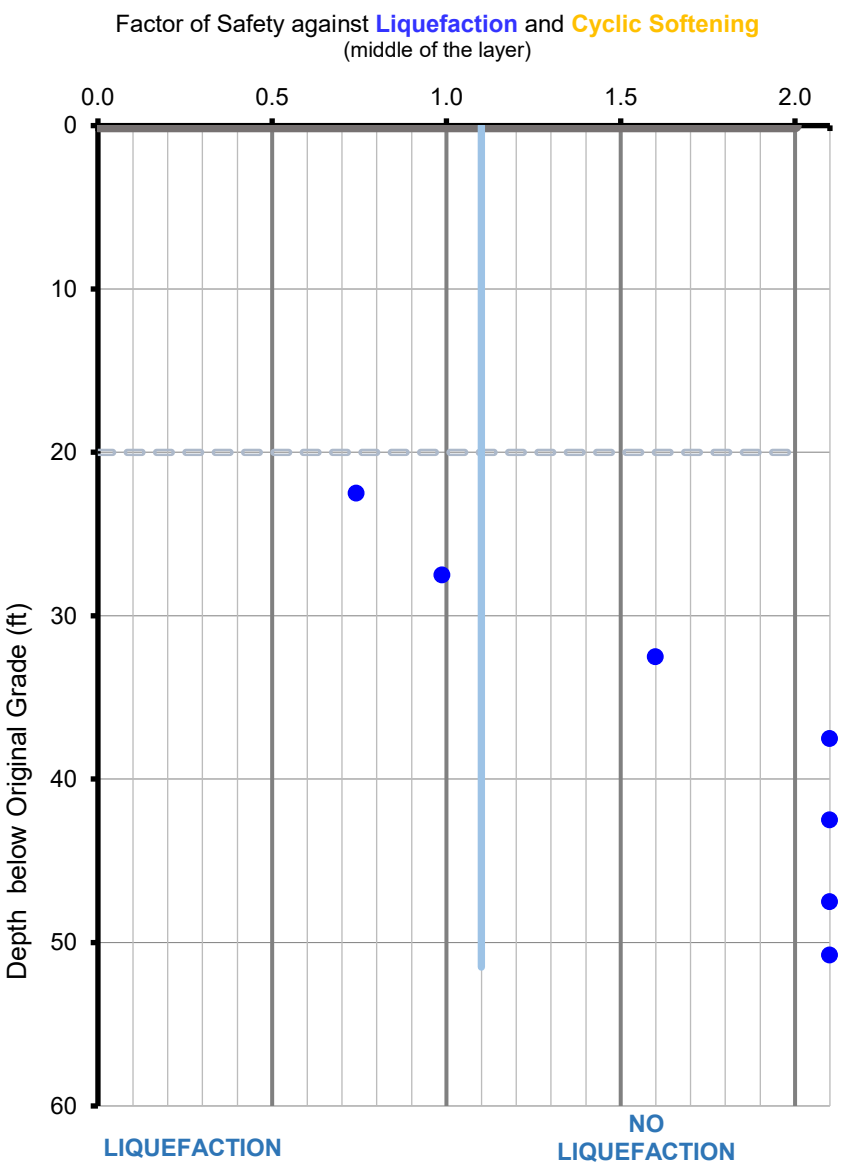
Project:	TET 22-233E Rio del Valle Junior High School	Boring:	**B-1**	Engineer:	FC	Date:	5/20/2022

Liquefaction Evaluation Method	
Correction for fines content	Idriss & Boulang. 2008, 2014
Correction for overburden C_N	Idriss & Boulang. 2014 (N1)60cs
Cyclic resistance ratio of soil CRR_{CS}	Idriss & Boulang. 2004, 2014
Correction for overburden Kσ	Idriss & Boulang. 2008, 2014
Stress reduction factor r_D	Idriss 1999, I&B 2008,2014
Magnitude scaling factor MSF	Idriss & Boulang. 2014
Dry settlement	Pradel, 1998a,b
Liquefaction settlement	Yoshimine et al., 2006 – w/ calibration

Liquefaction behavior Plasticity Index threshold	less or equal to 7
Saturated settlement threshold	less or equal to 70% fines
Dry settlement threshold	less or equal to 25% fines
Cyclic softening Plasticity Index threshold	greater or equal to 18

Liquefaction Analysis Statistics		
Total thickness of evaluated profile	51.5	feet
Profile thickness susceptible to liquefaction	10	feet
Number of evaluated intervals	14	
Number of potentially liquefiable intervals	7	
Average Factor of Safety of sandy intervals	**1.85**	
Dry sand settlement	0.24	inches
Liquefaction settlement	1.00	inches
Total earthquake-induced settlement	**1.24**	**inches**

Profile			Earthquake loading	
In-Situ Groundwater depth	no GW	feet	M	7.5
DESIGN Groundwater depth	20.00	feet	PGA	0.891
DESIGN Excavation depth	0.00	feet		
DESIGN Surcharge (fill)	0.00	feet		



Checks	
Groundwater depth check	OK
Design groundwater/excavation depth check	OK
Fines correction method compatibility	OK
Idris & Boulanger, 2004 method for C_N	not used
Cetin 2009 settlement method	not used

IV. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☐
V. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☐	☐	☐	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☐	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☐	☐
VI. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☐
VII. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:	☐	☐	☐	☐
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map, issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☑
ii) Strong seismic ground shaking?	☐	☑	☐	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☑	☐	☐
iv) Landslides?	☐	☐	☐	☑
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☐	☑

Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	✔	☐	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☐	✔
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	✔
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	✔
VIII. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☐	☐
IX. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code § 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☐
X. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☐	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	☐	☐	☐	☐

1.0 INTRODUCTION

1.1 SUMMARY

This report presents the findings of a Phase I Environmental Site Assessment (ESA) prepared by Tetra Tech for the Rio School District (RSD) to evaluate Ten-Acre Portion of Assessor's Parcel No. (APN) 144-0-110-225 in the Oxnard planning area of Ventura County, California (hereinafter referred to as the Site). Sage Realty (Sage) is coordinating this project for Rio School District (RSD). The Site location is shown on Figure 1. Figure 2 shows existing conditions, the approximate boundary of the Site, and the adjacent areas.

The Site is currently used for the agricultural production of berries. Information provided by the RSD and Ventura County Assessor's office indicates that the Site is a 10-acre portion of APN 144-0-110-225, a 92.53-acre lot. The Site is bounded by North Rose Avenue on the northwest, land developed in berry cultivation on APN 144-0-110-225 on the on the northeast and southeast, and the RSD's Rio del Valle Middle School on the southwest (Figure 2).

The Phase I ESA was performed as part of the due diligence efforts required to support development of the Site by the RSD. It is our understanding that the RSD proposes to initially develop the Site for District office, and a maintenance, operations, and transportation (MOT) facilities. School site expansion may be performed in approximately 10 years.

This Phase I ESA was performed by Tetra Tech under contract with RSD, in accordance with our proposal dated April 21, 2020, and ASTM International (ASTM) Standard Practice E1527-13 document entitled *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2013). In addition, as a conservative measure the assessment was conducted in accordance with the guidelines of proposed Title 40, Code of Federal Regulations (40 CFR) Part 312, *Standards and Practices for All Appropriate Inquiries* (AAI) (Federal Register 2015).

1.2 PURPOSE AND SCOPE

The purpose of this Phase I ESA was to evaluate potential Recognized Environmental Concerns (RECs) associated with the areas of the Site included in the proposed modernization project. Pursuant to the updated ASTM standard effective November 1, 2013, ASTM defines RECs as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions." This study was conducted to identify, to the extent possible and based on available information, whether former activities at or near the Site may have involved or resulted in the use, storage, disposal, and/or release of hazardous or potentially hazardous substances to the environment. Using professional judgement, Tetra Tech has developed an opinion regarding the potential for environmental concerns at the Site.

The scope of services performed for this project included the following tasks:

- Research and review of pertinent and readily available geologic and hydrogeologic literature and available historical aerial photographs and topographic maps of the Site and surrounding area;
- A reconnaissance of the Site and surrounding properties;

- Interviews with the current property owner, employees, and tenants;
- Evaluation of on-Site hazardous substance use, storage, and/or disposal;
- Interaction with appropriate municipal, regional, and state agencies to review available records and permits;
- Acquisition and review of a regulatory agency database report; and
- Preparation and submittal of this report summarizing the results of the Phase I ESA and presenting interpretations and recommendations.

1.3 METHODS OF INVESTIGATION

Literature Review. Available published and unpublished geologic, hydrogeologic, and environmental reports were reviewed. A list of these reports is presented in Section 10.0 of this report.

Topographic Map Review. Historical topographic maps obtained through Environmental Data Resources, Inc. (EDR) (EDR 2020) were reviewed to evaluate past land use and site development. These topographic maps are provided in Appendix A.

Aerial Photograph Survey. Historical aerial photographs obtained through EDR were reviewed and incorporated into this report (EDR 2020). This review consisted of examining the photographs for evidence of previous activities that may affect the environmental condition of the Site. The aerial photographs are provided in Appendix B.

Site Reconnaissance. Site reconnaissance, consisting of a walk-through visit of the Site and surrounding area. During the reconnaissance, visible indications of hazardous substance use, storage, and/or disposal practices were evaluated at the Site and adjacent areas. Photographs of the Site taken during the reconnaissance are provided in Appendix C.

Interviews. Interviews were conducted by email, telephone, or in person with various regulatory agency representatives (see below), and current Site occupants (business owners/managers) to obtain information on the Site history, land use, surrounding land use, and regulatory agency data.

Agency Contacts. During this assessment, the following agencies/organizations were contacted via email, telephone, personal interviews, and/or record searches for information relating to the Site:

- The California Environmental Protection Agency - Department of Toxic Substances Control (DTSC);
- California State Water Resources Control Board (SWRCB);
- Regional Water Quality Control Board, Los Angeles Region (LARWQCB);
- Ventura County (Air Pollution Control District, Environmental Health Division, Building Department, Fire Department, and Planning Department);
- California Department of Conservation Geologic Energy Management Division (CGEMD);

- National Pipeline Mapping System (NPMS); and
- U.S. Department of Homeland Security Federal Emergency Management Agency (FEMA).

Documentation of these contacts is provided in Appendix D.

Regulatory Agency Database and Sanborn Map Search. EDR maintains comprehensive environmental information databases and historical information, including Certified Sanborn Map Report and ERD-City Directories Abstract, and specializes in providing such data for use in real estate and environmental documents. EDR performed a search of multiple databases containing specific government records, each within a prescribed search radius of the Site. The search radii varied from 0.25 to 1 mile depending on the database. The specific search radii for each database are listed in the EDR report (Appendix E).

1.4 SIGNIFICANT ASSUMPTIONS, LIMITATIONS, AND EXCEPTIONS, SPECIAL TERMS AND CONDITIONS

1.4.1 Significant Assumptions

Information provided by others to Tetra Tech is assumed to be accurate and complete. When provided, Tetra Tech has made reasonable inquiry into the accuracy of such information. Unless such inquiry indicated otherwise, the information was considered accurate and complete. As discussed in Section 1.4.2, there are limitations to this assumption.

There were no other significant assumptions made during the conduct of this Phase I ESA.

1.4.2 Limitations and Exceptions

Tetra Tech did not significantly delete or deviate from the scope and limitations set forth in the ASTM Standard Practice E1527-13 document entitled "Standard Practice for Environmental Assessments: Phase I Environmental Site Assessment Process", except for the following:

- A limited visual survey of the Site for the presence of suspect asbestos containing materials (ACMs), lead based paint (LBP) and other lead containing materials (LCMs), and obvious mold/microbial growth/moisture accumulation or water damage. Tetra Tech's limited visual inspection for suspect ACMs, suspect LBP and other LCMs, and obvious mold conditions or water damage included observations in readily and physically accessible areas. The limited visual survey was not a formal survey and was not performed by a certified asbestos, LBP/LCM, and mold inspector.
- A specific search for environmental liens and activity use limitations (AULs) was not performed for the Site parcels; however, the EDR RadiusMap™ Report with Geocheck® (EDR 2020) (which contains regulatory agency database listings for environmental liens) was reviewed for such information.

Our professional services have been performed, our findings obtained, and our conclusions prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. Tetra Tech is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, Site inspection, and/or laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn from information obtained from limited research and Site evaluation. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surficial observations. Additionally, the passage of time may result in a change in the environmental characteristics at this Site and surrounding properties. This report does not warrant against future operations or conditions, nor does this warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit.

Tetra Tech reviewed past ownership of the Site with the intent to evaluate past Site usage. Tetra Tech is not a professional title insurance firm and makes no guarantee, either explicit or implied, that the listing which was reviewed represented a comprehensive delineation of past Site ownership or tenancy for legal purposes.

Certain information contained in this report may have been rightfully provided to Tetra Tech by third parties or other outside sources. When provided, Tetra Tech has made reasonable inquiry into the accuracy of such information; however, Tetra Tech does not make any warranties or representations, either expressed or implied, regarding the accuracy of such information, and shall not be held accountable or responsible in the event that any such inaccuracies are present.

1.4.3 Special Terms and Conditions

There were no special terms or conditions associated with this Phase I ESA.

1.5 USER RELIANCE

It is Tetra Tech's understanding that this Phase I ESA is being requested in conjunction with due diligence activities by the RSD. Tetra Tech recognizes that this report is to be used exclusively by RSD, and it is a report upon which RSD can rely, in accordance with the provisions of the contract between RSD and Tetra Tech.

1.6 STATEMENT OF QUALIFICATIONS

Tetra Tech is a leading provider of specialized management consulting and technical services in three principal business areas: resource management, infrastructure and communications. The Company's clients include a diverse base of public and private sector organizations serviced through more than 400 offices located in the United States and internationally.

Our technical staff have demonstrated competence and ability in preparing environmental assessments through long-term working relationships with local commercial firms and government agencies.

Tetra Tech has conducted environmental assessments at a wide variety of properties including industrial, manufacturing, commercial, and residential sites. Tetra Tech has performed Phase I ESAs for banks, private developers, county and city agencies, and commercial firms.

Tetra Tech personnel are well-trained and have extensive experience in the acquisition and interpretation of the collected data. Data gathering efforts focus on historic aspects of site activities that would contribute to spills, leakage or disposal of hazardous materials and petroleum products. Identifying contaminant issues that could impede development of the site, through either high costs or extended time periods for remedial actions, is a goal of data gathering and interpretation. Tetra Tech also identifies potential sources of contamination in the areas adjacent to the site, such as leaking underground storage tanks that could impact the site, and therefore become a REC.

2.0 SITE DESCRIPTION AND HISTORY

2.1 SITE LOCATION

The Site is located on a 10-acre parallelogram-shaped portion of APN 144-0-110-225, a 92.53-acre parcel in the Oxnard planning area of Ventura County, California (Figures 1 and 2). The geographic coordinates of the Site are approximately Latitude 34° 14' 2.39" North, Longitude 119° 9' 10.61" West (Google Earth 2019). Surface elevations at the Site are approximately 90 feet above mean sea level (United States Geological Survey [USGS] 2018).

2.2 SITE VICINITY CHARACTERISTICS

The Site is located in an area developed primarily for residential and agricultural land use situated in the El Rio/Del Norte General Plan Area of Ventura County (Ventura County 2011). (Figures 1 and 2). The Ventura County zoning for Site and adjacent areas is shown on Figure 2 (Ventura County 2019; Ventura County Resource Management Agency Planning Division 2020). The Site and areas adjacent to the Site on the northeast and southeast are developed for agricultural production and the area on North Rose Avenue northwest of the Site are zoned AE-40 ac/MRP (Agricultural Exclusive minimum 40-acre lot/Mineral Resources Protection). The lot adjacent to the southwest of the Site occupied by the RSD's Rio del Valle Middle School is zoned RE-20,000 square ft (Rural Exclusive 20,000-square foot minimum lot). The area adjacent to the south corner of the Site on North Rose Avenue is zoned RE-20 ac (Rural Exclusive 20-acre minimum lot). The areas across North Rose Avenue from the Site are largely developed in residential housing are zoned RE-10,000 square ft (Rural Exclusive 10,000-square foot minimum lot) and RE-20,000 square ft (Rural Exclusive 20,000-square foot minimum lot).

2.3 CURRENT AND PAST USES OF THE SITE

Currently, the Site is used for agricultural production of organic raspberries. Historical aerial photographs and Google Earth images indicate that the Site was previously used for cultivation of row crops and orchards.

2.4 DESCRIPTION OF STRUCTURES, ROADS, AND OTHER IMPROVEMENTS

2.4.1 Site

At the time of the July 21, 2020 Site reconnaissance, the Site comprised an approximate 10-acre area of the 92.53-acre parcel owned by KMS Industries, Inc. and was leased by Reiter Affiliated Companies for raspberry production (Figure 2). The entire Site was planted in organic raspberries under shade structures when the Site reconnaissance was performed.

The utility providers for the Site are summarized in Table 1. Because the Site has been used for crop production since at least 1927 and no buildings or other facilities that require utilities are known to have existed on the Site, no utilities are located the Site. The water for crops at the Site is provided by five groundwater production wells owned and operated by the Site owner, KMS Industries, Inc. The locations of three of the KMS Industries, Inc. well are shown on Figure 2. All utilities in the Site area, except for electricity, are routed through pipelines and cables buried in the subsurface in the public right of way beneath North Rose Avenue.

Table 1: Utilities

Utility	Provider
Electricity	NA
Natural Gas	NA
Potable Water	NA
Crop Irrigation Water	Five groundwater production wells owned by KMS Industries, Inc.
Sewage Disposal	Rented portable restrooms
Refuse Disposal	Harrison Industries

2.4.2 Adjacent Residential and Commercial Areas

North Rose Avenue is located immediately adjacent to the northwestern Site boundary. The area across North Rose Avenue from the Site is largely developed in residential land use except for the water production well and water storage tank facility owned and operated by the Vineyard Avenue Estates Water Mutual Company at the corner of North Rose Avenue and Corsicana Drive (Kadah 2020). The groundwater production well (OH Well # 14), owned and operated by the United Water Conservation District (UWCD), is located immediately adjacent to the southwest corner of the Site (Kadah 2020). Rio del Valle Middle School is located adjacent to southwest Site boundary. The areas northeast and southeast of the Site are being used for raspberry production by Reiter Affiliated Companies (Figure 2). The UWCD El Rio Spreading Grounds are located approximately 0.25 to 1.0 mile north of the Site on the northwest side of North Rose Avenue. Water is diverted from the Santa Clara River to the El Rio Spreading Grounds to recharge the underlying aquifers (refer to Section 3.3.1).

2.5 HISTORICAL RECORDS REVIEW

Past uses of the Site and surrounding properties were evaluated by reviewing available historical map coverage, historical aerial photographs, and information obtained from various agencies identified in Section 1.3. The information collected is summarized in the following sections.

2.5.1 Sanborn Map

The EDR Sanborn Map Report is included in Appendix E. The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others, which track historical property usage in approximately 12,000 American cities and towns. The Sanborn Map Report indicated there were no Sanborn Maps for the Site area (EDR 2020).

2.5.2 City Directory Review

The City Director Review is included in Appendix E. The EDR-City Directory Abstract is a screening tool designed to assist in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five-year intervals. Listings were found in the City Directory under the Site address 3410 North Rose Avenue, Oxnard, CA 93036 for 1975, 1980, 1985, and 1986 indicating that the follow parties owned the Site:

- Petre, Archie, 1975;
- McGrath, Thos., 1980;

- McGrath, Thos., 1985; and
- Laubacher, Steve Jr., 1986.

All of these owner listings appear to be private individuals. A listing for 2002 did not have a party associated with it.

The ownership history for 63 properties on the streets in the residential neighborhood across North Rose Avenue northwest of the Site were listed for years ranging from 1961 through 1986. All owners listed appeared to be private individuals.

2.5.3 Topographic Map Review

The following historical USGS topographic maps were obtained from EDR (EDR 2020): 15-minute Topographic Series Santa Paula and Hueneme maps dated 1903, 1904, 1941, 1943, and 1947; and 7.5-minute Topographic Series Saticoy, Oxnard, and Camarillo maps dated 1951, 1967, and 2012. Copies of the maps are provided in Appendix A. The maps were reviewed to evaluate previous development of the Site, adjoining properties, and surrounding areas.

The 15-minute 1903/1904 map displays the current major roads near the Site, including unnamed roads on the current alignments of North Rose Avenue, Central Avenue, Santa Clara Avenue, and the US 101 freeway. One building exists directly across the Site on the other side of the unnamed road on the current alignment of North Rose Avenue. A few buildings are scattered throughout both sides of unnamed road on the current alignment of North Rose Avenue. The community of El Rio is identified approximately 0.5 mile west of the Site.

The 15-minute 1941/1943 map displays the Site in an agricultural field, denoted by small green dots that indicate it is an orchard. A building is shown directly northeast of the Site on the east side of Ditch Road (renamed North Rose Avenue in 1963 [Find a Grave 2020]) and no building exists directly across from the Site northwest of Ditch Road (present-day North Rose Avenue). Ventura Boulevard is shown on the current alignment of the US 101 freeway, and Santa Clara Avenue and Vineyard Avenue are identified. Farmland is scattered throughout the map. More development is present southeast of the Site on the corner of present-day US 101 and Santa Clara Avenue.

The 15-minute 1947 map does not display any significant changes from the 15-minute 1941/1943 map.

The 7.5-minute 1951 map presents added farmland throughout the area, signified by yellow-green dots that indicate orchards. Furthermore, the town of El Rio is more developed. Now, about three buildings exist approximately 260 to 370 feet northeast of the Site. The road network is similar to the 1947 map.

The 7.5-minute 1967 map exhibits numerous more roads between the Site and Vineyard Avenue with a configuration similar to the present. The Rio del Valle Middle School is shown southwest of the Site identified as “Del Valley Sch”. The Ventura Freeway (US 101 freeway) is along the former alignment of Ventura Boulevard. Two new residential neighborhoods are shown south of the US 101 freeway and El Rio. New buildings can be found at the very northern section of the map northeast of Central Avenue.

The 7.5-minute 2012 map shows significant enlargement of the road network in the town of El Rio and south of the Site including Auto Center Drive and Ventura Boulevard north of the US 101 freeway and new road networks south of the US 101 freeway. The areas north and west of the Site are shown as vacant land.

The Rio del Valle Middle School adjacent to the Site is not displayed on this map. The UWCD El Rio Spreading Grounds are shown approximately 0.25 mile northwest of the Site.

2.5.4 Aerial Photograph Review

A review of historical aerial photographs obtained from EDR included photographs dated 1927, 1938, 1947, 1953, 1959, 1967, 1978, 1985, 1994, 2005, 2009, 2012, and 2016 (EDR 2020). Historical aerial photographs dating from 1958 from the University of California Santa Barbara (UCSB) Library Map and Imagery Laboratory were also reviewed (UCSB Library Map and Imagery Laboratory 2020). The photographs are included in Appendix B. A summary of the data from the aerial photography is provided in the following paragraphs.

The 1927 photograph is a black and white image at a scale of one inch equals 500 feet. The Site is within a larger lot of land (approximately 100 acres) and is cultivated with grain as are the areas adjacent to the Site on the south, east, and north. A road (present-day North Rose Avenue) is adjacent to the northwest Site boundary along the current alignment of North Rose Avenue. The lot to the northwest of the Site across Ditch Road contains orchards. Approximately 300 feet to 400 feet northeast of the Site is a large residential/farmyard area with four structures and a farmyard. Windrows of eucalyptus trees line the entire visible portion of Ditch Road and many of the lot parcel boundaries. Relict arcuate lineation patterns from former channels of the Santa Clara River flood plain are visible on the ground surface throughout the image.

The 1938 photograph is a black and white image at a scale of one inch equals 500 feet. An orchard has been planted on the Site and on the land adjacent to the Site on the south and southeast within the larger parcel which includes the Site. A dark line trending northwest-southeast through the southwest portion of the Site appears to be an irrigation ditch. Recently planted eucalyptus windrows are visible along the northeast Site boundary extending through the entire parcel that the Site is a part of, and along the southeast boundary of the entire parcel that the Site is a part of. The residential/farmyard area approximately 300 to 400 feet northeast of the Site has a similar appearance to the 1927 image. An orchard of larger trees is present on the land northeast of the Site. The parcels north of the Site across Ditch Road and to the south of the larger parcel the Site is part of are cultivated in grain while the parcel northwest of the Site across Ditch Road contains orchards. Relict arcuate lineation patterns from former channels of the Santa Clara River flood plain are still visible on the ground surface throughout the image.

The 1947 photograph is a black and white image at a scale of one inch equals 500 feet. The Site and adjacent areas appear similar to the 1938 photograph, except that the orchards and windrow trees are more mature. The residential/farmyard area approximately 300 feet to 400 feet northeast of the Site has a similar appearance to the 1938 image. More orchards have been planted on the southeast side of Ditch Road including on the parcel to the south of the larger parcel which includes the Site. Collins Street and Stroube Streets have been constructed approximately 1,475 feet and 2,100 feet southwest of the Site on the northwest side of Ditch Road with residential lots on each side of them. The relict arcuate lineation patterns from former channels of the Santa Clara River flood plain are still visible on the ground surface on the lot north of the Site on the northwest side of Ditch Road (which is planted with row crops and grain) but have been largely obliterated in the south part of the image including the Site area.

The 1953 photograph is a black and white image at a scale of one inch equals 500 feet. The Site and adjacent areas, and the areas on the southeast side of Ditch Road appear similar to the 1947 photograph. The residential/farmyard area approximately 300 to 400 feet northeast of the Site has a similar appearance to the 1947 image. More residential development has occurred on the northwest side of Ditch Road with new lots and housing along Orange Drive, Walnut Drive, and Corsicana Drive across from the Site. The large lot to the north of the Site on the northwest side of Ditch Road is planted in grain with the relict arcuate

lineation patterns from former channels of the Santa Clara River flood plain are still visible on the ground surface.

The 1958 photographs are black and white images at a scale of one inch equals 800 feet. The Site and adjacent areas on the entire parcel that the Site is a part of have been cleared of the orchards and eucalyptus windrows visible in previous images, with a small remnant of eucalyptus windrows approximately 850 feet long on the northwest side of Ditch Road across from the Site. The Site appears to have been recently graded with two dirt roads trending northwest-southeast through the Site. A cleared, unpaved yard approximately 125 feet long from northeast to southwest and 60 to 100 feet wide from northwest to southeast straddles the north corner of the Site along Ditch Road. A rectangular gable roofed structure approximately 30 feet wide by 40 feet long is located in the southern corner of this yard straddling the Site boundary. Four automobiles and three trucks are parked in this yard. Pole-mounted electrical power lines are visible along the southeast side of Ditch Road and a bank of pole-mounted transformers is visible near the southern corner of the Site. A recently planted orchard is visible in the east-southeast area of the larger parcel which includes the Site. Ditch Road has been widened to include a central left turn lane. The two southern structures in residential/farmyard area approximately 300 feet to 400 feet northeast of the Site are no longer present. More residential development has occurred on the northwest side of Ditch Road with new lots and housing along Helsam Avenue, Salem Avenue, Simon Way, Will Avenue, Lamar Avenue, George Street, and Ditch Road. The Rio Plaza Elementary School is visible approximately 1,650 feet northwest of the Site. Residential development is visible on the southern corner of the large lot to the north of the Site on the northwest side of Ditch Road with the remainder developed with water infiltration ponds. The relict arcuate lineation patterns from former channels of the Santa Clara River flood plain visible in previous images are totally gone.

The 1959 photograph is a black and white image at a scale of one inch equals 500 feet. The appearance of the Site and all areas in the image is similar in appearance to the 1958 image.

The 1967 photograph is a black and white image at a scale of one inch equals 500 feet. The Site and adjacent areas on the entire parcel that the Site is a part of to the north and east of the Site contain orchards. The Rio del Valle Middle School is present immediately adjacent to the southwest side for the Site on a new lot that includes approximately 5.7 acres that were formerly part of the larger lot which includes the Site. The school includes nine buildings, a parking lot along North Rose Avenue, a track, two baseball fields, two paved court areas, and turfed fields. The remainder of the area on the southeast side of North Rose Avenue is developed in orchards. North Rose Avenue has four lanes and median islands similar to its current configuration. The residential/farmyard area approximately 300 feet to 400 feet northeast of the Site has a similar appearance to the 1959 image. The area on the northwest side of North Rose Avenue is similar in appearance to the 1959 image.

The 1978 photograph is a black and white image at a scale of one inch equals 500 feet. The Site is part of a larger orchard that occupies the lager parcel which includes the Site. The appearance of the Site and all areas in the image is similar in appearance to the 1967 image except some of the areas formerly planted with orchards have been converted to row crops. Pole-mounted electrical power lines are visible along the southeast side of North Rose Avenue and a bank of pole-mounted transformers are visible near the southern corner of the Site. A track is now present at the Rio del Valle Middle School.

The 1985 photograph is a black and white infrared image at a scale is one inch equals 500 feet. The appearance of the Site and all areas in the image is similar in appearance to the 1978 image except the Site and all of the farmland on the southeast side of North Rose Avenue have been converted to row crops.

The 1994 photograph is a black and white image at a scale of one inch equals 500 feet. The appearance of the Site and most areas in the image is similar in appearance to the 1985 image. All the structures in the residential/farmyard area approximately 300 feet to 400 feet northeast of the Site are gone. Auto Center Drive and commercial businesses are now present to the south of the Site.

The 2005 photograph is a colored photograph at a scale of one inch equals 500 feet. The appearance of the Site and most areas in the image is similar in appearance to the 1985 image. The Site and most of the farmland southeast of North Rose Avenue appear to be planted in strawberries. New parking lots and buildings are visible along Auto Center Drive to the south of the Site. The agricultural land neighboring the school and Site has been divided into long, rectangular parallel parcels.

The 2009, 2012, and 2016 are colored photographs with a scale of one inch equals 500 feet. The appearance of the Site and most areas in the image is similar in appearance to the 2005 image. The Site is planted in strawberries in the 2009 and 2016 images and row crops in the 2012 image.

2.5.5 Agency Records Review

The following is a summary of information obtained from correspondence with agencies during this assessment. These agencies were contacted via email, telephone, and/or records searches for information relating to the Site and surrounding areas. Documentation obtained from the various agencies is included in Appendix D.

2.5.5.1 California Department of Conservation, The Geologic Energy Management Division

Tetra Tech reviewed the Geologic Energy Management Division's (CalGEM, formerly DOGGR) online mapping application Well Finder (CalGEM 2020), Map 214 (California Department of Conservation, Division of Oil, Gas, and Geothermal Resources [DOGGR] 2000]), and associated well history documents to evaluate potential presence of oil fields and wells within the Site vicinity (Appendix D). Records indicate that the Site is not located in an oil field. The nearest oil field to the Site is the Santa Clara Avenue Field, located approximately 0.5 to 1 mile southeast of the Site. There are no known active or abandoned wells on Site. Two plugged wells are located within 0.4 miles or less of the Site. The online map shows that well "McGrath-McCormick 1", located approximately 500 feet northeast of the Site, is the oil well closest to the Site. This well was drilled by Union Oil Company of California to a depth of 11,058 feet and abandoned and plugged in 1959 as a dry hole (non-oil producing). Another plugged dry hole well, "Snodgrass 1", is located 0.4 miles west of the Site. The well was drilled by Shell Western E&P Inc. in 1928 "for geologic information only" to a depth of 1,530 feet and abandoned.

2.5.5.2 California State Water Resources Control Board

Tetra Tech reviewed online resources at the California Environmental Protection Agency (Cal EPA) State Water Resources Control Board (SWRCB) GeoTracker database (SWRCB 2020) for any records pertaining to the Site (Appendix D). The GeoTracker database includes files from the Ventura County Resource Management Agency Environmental Health Division (VCEHD). The GeoTracker database did not show any records for cases located on the Site. According to the GeoTracker database, two closed Leaking Underground Storage Tanks (LUSTs) are present approximately 0.25 miles northeast of the Site on North Rose Avenue. In addition, another LUST cleanup site is present approximately 0.5 miles northeast of the Site, also on North Rose Avenue.

Two LUST cleanup sites, UWCD El Rio Booster Pumping STN (T0611171990) and Oxnard College-Tech Building (T0611100790) are located on North Rose Avenue, just south of the UWCD facilities and 0.25

northeast of the Site. No cleanup action reports for these sites exist on the GeoTracker database. The UWCD El Rio LUST leak was discovered, reported, and mitigated in 2003. The contaminant of concern (COC) was potential lead soil contamination. The Oxnard College LUST leak was discovered and reported in 1991 and was closed with no further action in 2003. This tank's COC was potential oil soil contamination. These sites do not pose a risk to the Site.

The Donlon Citrus Company LUST cleanup Site (T0611193065) is located 0.5 miles northeast of the Site on North Rose Avenue. No cleanup action reports exist on the GeoTracker database. Its leak was discovered and reported in 2000 and the site was closed with no further action in 2003. This tank's COC was lead. This site does not pose a risk to the Site.

2.5.5.3 Department of Toxic Substances Control

Tetra Tech reviewed online resources provided by the DTSC for any records pertaining to the Site. No records for the Site were located in the DTSC EnviroStor database (Appendix D). One school cleanup site, Rio Vista Middle School, was identified within 1-mile northwest from the Site. In 2009, the DTSC issued a No Further Action letter for the site and certified that all response actions have been completed (DTSC 2020). This site does not pose a risk to the Site.

2.5.5.4 Ventura County Resource Management Agency Environmental Health Division

All pertinent VCEHD files for the Site area were reviewed in Section 2.5.5.2. The files reviewed are included in Appendix D.

2.5.5.5 Ventura County Certified Unified Program Agency

All pertinent Ventura County CUPA files for the Site area were reviewed in Sections 5.1.1 through 5.1.5 from records provided by EDR (EDR 2020). The information is included in Appendix E.

2.5.5.6 Hazardous Pipelines

Tetra Tech evaluated the Site area to determine if hazardous pipelines are located within 1,500 ft of the Site. California Code of Regulations (CCR) Title 5, Section 14010(h) defines hazardous pipelines as:

- Pipelines carrying chemical products, natural gas, and other hydrocarbon products that are operating at a pressure of 80 pounds per square inch gauge (psig) or higher; and
- High-volume water lines, which are defined as water lines 12 inches or greater in diameter, and open aqueducts of comparable and greater volume handling capacity.

Two potentially hazardous pipelines located with 1,500 feet of the Site were identified.

National Pipeline Mapping System

The U.S. Department of Transportation (DOT) Pipeline and Hazardous Materials Safety Administration NPMS website is an interactive database that maps the locations of hazardous liquid and gas transmission pipelines under DOT jurisdiction. Tetra Tech reviewed the NPMS website for information on hazardous liquid and gas transmission pipelines in the Site area. The NPMS data base indicated that no hazardous liquid pipelines are located within 1,500 feet of the Site (Appendix D). The nearest natural gas pipeline transmission pipeline under NPMS jurisdiction is located approximately 0.86 miles east from the Site along Santa Clara Avenue (NPMS 2020) (Appendix D).

City Oxnard Public Works

The City of Oxnard Public Works Water Division is the water purveyor for the Site area. Tetra Tech contacted the City of Oxnard Public Works Water Division for information on water pipelines within 1,500 feet of the Site and was provided with the City of Oxnard Water Atlas pages showing water pipelines within 1,500 feet of the Site (Magana 2020; City of Oxnard 2018; City of Oxnard 1992) (Appendix D). The City of Oxnard Water Atlas shows a 16-inch diameter steel water pipeline buried at approximately 4 feet below ground surface (bgs) operated by the City of Oxnard routed northeast-southwest beneath North Rose Avenue approximately 30 feet northwest of the Site (Figure 2).

United Water Conservation District.

The UWCD manages the water resources of the Santa Clara River and its associated aquifers and provides water to Ventura County and the cities of Oxnard, Port Hueneme, Ventura, Santa Paula, and Fillmore. The Oxnard Water Atlas indicates that the UWCD maintains a 42-inch water pipeline beneath North Rose Avenue approximately 40 feet northwest of the Site (Figure 2) (Magana 2020; City of Oxnard 2018) (Appendix D). The pipeline is constructed with cement mortar-lined steel and is buried at approximately 4 feet bgs (Kada 2020).

2.5.5.7 Federal Emergency Management Agency

Tetra Tech obtained the Flood Insurance Rate Map No. 06111C0910E for the Site vicinity from the FEMA website for information regarding the current location of flood zones (FEMA 2010). This information is summarized in Section 3.3.2.

3.0 PHYSICAL SETTING AND CONDITIONS

The Site is depicted on the Oxnard, California Quadrangle USGS 7.5-minute topographic series map (USGS 2018) (Figure 1). The geographic coordinates of the Site are approximately Latitude 34° 14' 2.39" north, Longitude 119° 9' 10.61" west. The EDR report indicates that the Site elevation is approximately 90 feet above mean sea level (amsl) (EDR 2020).

3.1 REGIONAL GEOLOGY

The Site is located in Ventura County on the Oxnard Plain of the central Ventura Basin within the Western Transverse Ranges geomorphic province of California. This geomorphic province is distinguished by the prevailing east-west linear trend of its geologic structure and geomorphology in contrast to the predominant northwest-southeast trend of the geomorphic features within most other provinces of the state. The province is bounded by major faults, including the San Andreas Fault zone in the northeast, the Big Pine fault in the north and the Malibu Coast fault in the south. Most of the faults in Ventura County are reverse faults which dip north, including the Pine Mountain, Red Mountain, San Cayetano, Santa Susana, Simi, Ventura and Malibu Coast faults (Norris and Webb 1990).

The Ventura Basin is large synclinal structure situated between the Santa Ynez Range and Topa Mountains on the north, the Channel Islands and Santa Monica Mountains on the south, the San Gabriel Fault on the east, and extending to the western end of the Santa Barbara Channel (Norris and Webb 1990). Structure in the Oxnard Plain is characterized by a series of broadly folded west-trending and east-northeast–trending anticlines and synclines associated with thrust and reverse faults that formed in the Saugus Formation and may have also deformed the overlying older alluvium (California Department of Conservation, California Geologic Survey [CGS] 2002).

3.2 LOCAL GEOLOGY

Locally, the Site is situated in the Oxnard Plain sub-province. Lithologic units of sedimentary origin underlying the nearly-flat Oxnard Plain are approximately 45,000 feet in thickness and consist of Upper Cretaceous, Tertiary, and Quaternary-age units which have been deposited on a pre-Upper Cretaceous base of igneous and/or metamorphic rock. Unconsolidated Holocene (last 11,000 years) sediments beneath the Site were deposited during the post-glacial period in marine, lagoonal, lacustrine, fluvial-flood plain, deltaic and eolian environments, including the pre-historic delta of the ancient Santa Clara River and Calleguas Creek and reach a depth of approximately 900 feet beneath the Oxnard Plain (Turner and Mukae 1975).

3.3 HYDROLOGY

3.3.1 Hydrogeology

The Site is situated at the eastern edge of the Oxnard Forebay basin, a subbasin of the larger Santa Clara-Calleguas groundwater basin. The Oxnard Forebay is an important groundwater recharge area for valuable resources of groundwater in aquifers underlying the Oxnard Plain. The unconsolidated sediments beneath the Oxnard Forebay and the project site are composed of both continental and marine deposits of Tertiary and Quaternary age. They contain multiple aquifers of coarse grain sediments with intervening fine grain aquitards. Aquifers have been grouped into an Upper Aquifer System (UAS) and a Lower Aquifer System (LAS) based on changes in geologic structure and separated in many areas by regional layers of low permeability clay. The UAS sediments are relatively flat lying and extend to approximately 400 feet beneath the Site. The sediments in the LAS are more structurally complex, resulting from folding and faulting. In the Oxnard Forebay, alluvial sediments in the subsurface are predominantly coarse grain sands

and gravels. Fine grain sediments, such as silts and clays, that can act as confining layers are generally absent or discontinuous. This condition allows for direct recharge of the UAS from the surface and some recharge of the LAS from the UAS in the subsurface (Fox Canyon Ground Water Management Agency 2017; Turner and Mukae 1975).

The first encountered groundwater beneath the Site is in the UAS. Review of potentiometric maps for the UAS from 1972 through 2018 indicate that the depth to groundwater ranged from approximately 33 feet bgs to 139 feet bgs during that time period (Fox Canyon Groundwater Management Agency 2015) (Appendix D). The most recent groundwater elevation data for spring 2018 indicates that the first encountered groundwater in the Site area was at approximately -39 feet below mean sea level (msl) or approximately 138 feet bgs (Fox Canyon Groundwater Management Agency 2019). The depth to the highest known historical groundwater level in the Site area is approximately 20 feet bgs (CGS 2002).

3.3.2 Flood Zoning

According to the FEMA Flood Insurance Rate Map No. 06111C0910E, the Site is not located in a flood hazard area (FEMA 2020) (Appendix D).

3.3.3 Wetlands

The EDR report indicates that the Site area is covered in the National Wetlands Inventory prepared by the U.S. Fish and Wildlife Service (USFWS) (EDR 2020) (Appendix D). The U.S. Fish and Wildlife Service maintains the National Wetlands Inventory (NWI), a geographic information system (GIS)-based relational database of wetlands that have been mapped throughout the country. Based on the information provided in the EDR Report and review of the USFWS map for the area surrounding the Site, the nearest wetland is the UWCD El Rio Spreading Grounds, located 0.25 to 1 mile north of the Site (USFWS 2020) (Appendix D).

3.3.4 Asbestos Containing Rocks

Tetra Tech has reviewed available topographic and geologic maps for the Site area and *A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos* (CDMG 2000) for potential sources of naturally occurring asbestos (NOA) and believes the risk for NOA at the Site is low. The nearest sources of NOA are approximately 40 miles northwest of the Site in the Santa Ynez River Watershed of Santa Barbara County.

4.0 SITE RECONNAISSANCE AND INTERVIEWS

On July 22, 2020, Tetra Tech performed a visual reconnaissance of the Site property and conducted an interview with Mr. Luis Calderon, Director at Reiter Affiliated Companies, and Mr. Ben Lapointe, Broker Associate at Engel & Völkers West Hollywood. The purpose of the reconnaissance was to evaluate the Site and neighboring properties for visible indications of potential hazardous substance use, storage, and disposal, including the presence of underground storage tanks (USTs), above ground storage tanks (ASTs), asbestos-containing materials, polychlorinated biphenyl (PCB) containing transformers or electrical equipment, and/or evidence of soil staining, stressed vegetation, ponds, pits, sumps, suspicious odors, fill and depressions, drums and barrels, or any other condition indicative of potential contamination. Tetra Tech used the information provided in the interview to complete the Checklist for Phase I Site Visit (Appendix F). Mr. Calderon also completed the Phase I Environmental Site Assessment Owner/Occupant Questionnaire included in Appendix G.

4.1 SITE RECONNAISSANCE

Photographs were taken during the Site reconnaissance to document current conditions. Copies of the Site photographs are included in Appendix C. The Site layout is shown on Figure 2.

4.1.1 Storage Tanks and Drum Storage

No evidence for existing or past use of storage tanks (UST or ASTs) or drum storage was observed on the Site during the Site reconnaissance.

4.1.2 Hazardous Substances and Petroleum Products

Based on review of historical aerial photographs of the Site area, the Site was part of an orchard (possibly citrus) from at least 1938 to 1978. Smudge pots were commonly used to burn bunker oil for frost abatement in orchards during this time period. There is a potential that bunker oil from former smudge pot frost abatement activities at the Site is present in surface and near surface soil at the Site. No other potentially hazardous substances or petroleum products were identified at Site.

4.1.3 PCB-Containing Transformers and Equipment

One electrical power pole with three pole-mounted transformers is currently located at the boundary of southern corner of the Site along North Rose Avenue (Photos 3, 23, and 24, Appendix C). No evidence of transformer leakage, such as soil staining, was observed during the Site reconnaissance.

Mr. Jim Osborne from Southern California Edison (SCE) was contacted to provide further information about the transformers' size and the presence of PCBs. Mr. Osborne stated that the three transformers are 50 kilovolts (kV) each and were manufactured in 2004. Due to the somewhat recent manufacture date, it is unlikely that they contain PCB dielectric fluid. However, this cannot be confirmed unless a test is performed (Osborn 2020). It is not known whether other pole-mounted electrical transformers that contained PCB dielectric fluid were located at this location prior to 2004.

4.1.4 Stained Soils/Stains/Stressed Vegetation

No stained soils, stains, or stressed vegetation was observed on Site.

4.1.5 Asbestos-Containing Materials

During the Site reconnaissance, no buildings were observed on Site. Consequently, asbestos-containing materials are not present at the Site.

4.1.6 Lead-Based Paint

During the Site reconnaissance, no buildings were observed on Site. Furthermore, no buildings have ever existed on Site as reviewed in the historic aerial photos. Consequently, lead-based paint is not present at the Site.

4.1.7 Pipelines

Two high volume water transmission pipelines are located approximately at 30 and 40 feet west of the Site buried beneath North Rose Avenue (Magna 2020). These are considered to be potentially hazardous pipelines within 1,500 feet of the Site as defined in CCR Title 5, Section 14010(h) and are discussed in Section 2.5.4.6.

4.1.8 Electromagnetic Radiation

Title 5 of the California Code of Regulations (CCR) stipulates that a school site shall not be within the following distances from a high power electric transmission line:

- 100 feet from a 50-133 kV line;
- 150 feet from a 220-230 kV line; or
- 350 feet from a 500-550 kV line.

Pole-mounted electrical power lines owned and operated by SCE are located along the northwest Site boundary along North Rose Avenue (Figure 2).

Mr. Jim Osborne from SCE indicated that the kV rating for the electrical power lines are rated at 16 kV (Osborn 2020).

4.1.9 Hazardous Air Emitters

Tetra Tech evaluated the neighborhood during the Site reconnaissance for facilities or businesses considered likely to emit hazardous air pollutants; none were observed in the Site vicinity. Based on observations of surrounding properties and review of the EDR Radius Report (EDR 2020) (Appendix E) which tracks the emissions database inventory of the California Air Resources Board, there are no hazardous air emission sources located within 0.25 mile of the Site and it is unlikely that the Site would be impacted by hazardous air emissions.

4.1.10 Pesticides/Herbicides/Fertilizers

Based on review of historical aerial photographs of the Site area, the Site was part of an orchard (possibly citrus) from at least 1938 to 1978, and for row crop production from at least 1985 to the present. During the Site reconnaissance, it was confirmed that the Site is currently used as an organic raspberry farm and that no pesticides or herbicides are currently used. Therefore, it is likely that organochlorine pesticides

(OCPs) and arsenic-based presides were formerly used at the Site. OCPs were used for insect control on farms throughout the United States from the 1940s through 1972, when they were banned by legislation due to their toxic characteristics. They persist in the environment and are commonly found on lands that were farmed from the 1940s through 1972. Some OCPs, such as DDT, are human carcinogens.

4.1.11 Rodents

During the Site reconnaissance, no evidence of rodents was observed.

4.1.12 Potable Water Supply/Wells

No wells were observed at the Site during Site reconnaissance. In addition, the EDR report does not indicate that any water wells are located on the Site (Appendix E). Mr. Calderon stated that the water used to irrigate crops at the Site is from five groundwater production wells owned by the Site owner (KMS Industries, Inc.) located approximately 1,170 feet to 2,850 feet northeast of the Site and approximately 1,000 southwest of the Site (Calderon 2020) (Appendix D). The locations of three of the KMS Industries, Inc. wells are shown on Figure 2.

4.1.13 Wastewater

During Site reconnaissance, no industrial wastewater generation was observed.

4.1.14 Storm Water

Storm water runoff on the Site drains to the drainage ditches bordering the raspberry rows and is carried offsite to the southeast following the natural topography of the Site area (Photos 10 and 13, Appendix C).

4.1.15 Wetlands/Intertidal Lagoon

The EDR report indicates that the Site is covered in the National Wetlands Inventory prepared by the USFWS (EDR 2020) (Appendix E). Based on the information provided in the EDR Report and review of the USFWS map for the area surrounding the Site, the nearest wetland is the UWCD El Rio Spreading Grounds, located approximately 0.25 to 1 mile north of the Site (USFWS 2020) (Appendix D).

4.1.16 Sewage Disposal System/Septic Systems

No evidence of septic systems was noted at the Site during the reconnaissance.

4.1.17 Drains/Sumps/Vaults/Pools

During the Site Reconnaissance, no drains, sumps, vaults, or pools were observed.

4.1.18 Solid Waste

No evidence of solid waste disposal was observed at the Site. Domestic trash collection and disposal is managed by Harrison Industries.

4.1.19 Other Site-specific Environmental Conditions

There were no other Site-specific environmental conditions noted during the site reconnaissance.

4.2 INTERVIEWS

4.2.1 Reiter Affiliated Companies

Mr. Luis Calderon gave Mr. Steele and Ms. Sawaya a tour of the raspberry farm during the Site reconnaissance and answered questions about the Site. Mr. Calderon escorted the team along the border of the farm and through the agricultural rows. He answered questions regarding ASTs or USTs, pesticide/herbicide use, storage drums, etc. (Calderon 2020).

4.2.2 Interview with Past Owners and Occupants

There are no other past owners to interview. Past occupants were not able to be contacted.

4.2.3 Interview with Local Government Officials

Tetra Tech contacted local government officials at agencies where records for the Site were available and reviewed them. Additional information from interviewed government officials, if any, is included in the discussion in previous sections of this report.

4.2.4 Interview with Others

Mr. Jim Osborne, Planning Specialist with Southern California Edison, was contacted to inquire about neighboring powerline and transformer voltage and potential presence of PCBs. Mr. Michel Kadah, Engineer with UWCD, provided information about potential hazardous water pipelines and the water treatment facilities adjacent to the Site. Ms. Clara Magana of the City of Oxnard was contacted for information about water pipelines operated by the City of Oxnard in the Site area. No other interviews were conducted with individuals other than those cited in this section of the Report.

5.0 ENVIRONMENTAL RECORDS REVIEW

5.1 EDR RECORDS

As part of this assessment, Tetra Tech retained the services of EDR, a Connecticut-based company that maintains comprehensive environmental information databases and specializes in providing such data for use in real estate and environmental documents, such as this Phase I ESA. EDR performed a database search for the target property in accordance with current ASTM standards. A copy of this report is included as Appendix E.

Among the environmental databases searched were National Priorities List (NPL) sites; RCRA - Small Quantity Generators (RCRA-SQG); DTSC EnviroStor Database (ENVISTOR); Leaking Underground Fuel Tank Report (GEOTRACKER) (LUST); Statewide SLIC Cases (GEOTRACKER) (CPS-SLIC); Active UST Facilities (UST); Aboveground Petroleum Storage Tank Facilities (AST); California Environmental Protection Agency (CalEPA) Regulated Site Portal (CERS HAZ WASTE); Statewide Environmental Evaluation and Planning System Listing (SWEEPS UST); Hazardous Substance Storage Container Database (HIST UST); California Environmental Reporting System (CERS) Tanks (CERS Tanks); California Facility Inventory Database (Cal FID UST); "Cortese" Hazardous Waste & Substances Sites List (CORTESE); and Hazardous Waste & Substance Site List (HIST CORTESE); sites. Each of the databases was searched at a radius appropriate for ASTM E1527-13. Sites identified in the databases are listed and plotted in the complete environmental database report provided in Appendix E. The following includes a summary of information regarding the Site itself, properties immediately adjacent to the Site, and/or properties that have the potential to affect the Site based on their proximity to the Site.

5.1.1 On-Site EDR Listings

Listing 1. Listing 1 from the HIST UST database was identified by the EDR Report database search for the Site. The Hazardous Substance Storage Container Database is a historical listing of UST sites referenced to local/county sources. Listing 1 is from the GeoTracker database for the former Ditch Ranch. The data is a SWRCB Hazardous Substance Storage Container Information for Ventura County record dated June 6, 1988. The record is for a 550-gallon single-wall construction motor vehicle fuel/waste oil tank at the Ditch Ranch at 3410 North Rose Avenue, owned by the McGaelic Group. The record indicates that the UST was located on a farm, was empty, and that the contents were unknown.

Buildings and areas where fueling facilities would have been present onsite were not identified in the historical aerial photographs reviewed in Section 2.5.3. The historical UST associated with the HIST UST record for Listing 1 was likely located at the former site of the farmyard approximately 300 feet northeast of the Site. It is unlikely that the Site has been impacted by any material releases associated with this historical UST.

5.1.2 EDR Listings within 0.125 Mile of the Site

No listings were identified by the EDR Report database search for locations within 0.125 mile from the Site.

5.1.3 Properties Between 0.125 and 0.25 Mile from the Site

Five sites (Listings A2, A3, A4, B5, and B6) were identified by the EDR Report database search located 0.125 to 0.25 mile from the Site. The EDR database indicates that Listings A2, A3, A4, B5, and B6 are the UWCD located at 3561 North Rose Avenue, located approximately 0.14 to 2.15 mile north of the Site

boundary. Review of the Google Earth image dated April 2019 for the Site area indicates that the UWCD at 3561 North Rose Avenue is El Rio Spreading Grounds, located approximately 0.25 to 1.0 mile northeast of the Site Boundary (Google Earth 2019). Due to the database type, their distance from the Site, and regulatory status, Listings A2, A3, A4, B5, and B6 are not considered a REC for the Site. Because these listings are the nearest to the Site, the information for each of these listings from the database are summarized in detail below. Refer to the EDR report in Appendix E for more information.

Listing A2. Listing A2 was included in the CERS HAZ WASTE, SWEEPS UST, HIST UST, CERS TANKS, CA FID UST, and CERS databases and is 1 site of 3 in cluster A.

- The CERS HAZ WASTE database lists sites in the CalEPA Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs. The CERS HAZ WASTE database indicates Listing A2 is a hazardous waste generator.

- The SWEEPS UST is a statewide environmental evaluation and planning system for USTs. The listing was updated and maintained in the early 1990s and is no longer updated or maintained. The SWEEPS UST for Listing A2 was created in 1992 and indicates a 525 gallon UST was located at Listing A2.

- The HIST UST was described in the section for Listing 1. Listing A2 is from the GeoTracker database for the UWCD. The data for Listing A2 is a SWRCB Hazardous Substance Storage Container Information for Ventura County record dated June 6, 1988. The record is for a 580 gallon single wall construction fuel (unleaded gasoline) tank and a 211-gallon single-wall waste oil tank at the El Rio Booster Plant at 3561 North Rose Avenue. The tanks are owned by the UWCD.

- The CERS TANKS database lists sites in the CalEPA Regulated Site Portal, which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CERS TANKS database for Listing A2 indicates an above ground petroleum storage tank is present at the listing.

- The CA Facility Inventory Database (FID) UST contains a historical listing of active and inactive underground storage tank locations from the SWRCB. The CA FID UST database for Listing A2 indicates an UST was located at the listing.

- The CalEPA Regulated Site Portal Data (CERS) database combines data about environmentally regulated sites and facilities in California into a single database. This data includes hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. The CERS database for Listing A2 cites violations for the storage and treatment of hazardous waste on August 14, 2013; September 2, 2014; August 25, 2016; and May 9, 2019, all of which were brought back into compliance.

Listing A3. Listing A3 was included in the AST database. This is site 2 of 3 in cluster A. The AST database lists all aboveground storage tank petroleum storage tank locations. The AST database for Listing A2 indicates an AST is present at the listing.

Listing A4. Listing A4 was included in the RCRA-SQG, ICIS, US AIRS, FINDS, HAZNET, and HWTS databases. This is site 3 of 3 in cluster A.

- The RCRA-SQG database is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The RCRA-SQG database for Listing A4 indicates the listing is a small quantity hazardous waste generator generating between 100 kilograms (kg) and 1,000 kg of hazardous waste per month.

- The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NDPES) program. The ICIS database for Listing A4 indicates that there was a notice of violation enforcement action for the UWCD/El Rio Booster Plant for an air violation. No date was provided.

- US Aerometric Information Retrieval System (AIRS) contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. No useful information was provided by this database listing.

- The Facility Index System (FINDS) contains both facility information and 'pointers' to other sources that contain more detail. No useful information was provided by this database listing.

- The HAZNET database lists facility and manifest data that is extracted from the copies of hazardous waste manifests received each year by the DTSC. Manifest data for shipping waste from 1994 through 2018 were contained in this database.

- The Hazardous Waste Tracking System (HWTS) is the Department of Toxic Substances Control's data repository for hazardous waste identification numbers and manifest information. No useful information was provided by this database listing.

Listing B5. Listing B5 was included in the UST database. This is site 1 of 2 in cluster B. The UST database lists active UST facilities gathered from the local regulatory agencies. The UST database for Listing B5 indicates that the facility is inactive.

Listing B6. Listing B6 was included in the LUST, HIST UST, Cortese, and CERS databases. This is site 2 of 2 in cluster B.

- The LUST database lists sites in GeoTracker. The LUST database for Listing B6 indicates that the case is closed.

- The HIST UST was described in the section for Listing 1. The data for Listing B is for two USTs; a 580 gallon single wall construction fuel (unleaded gasoline) tank and a 211-gallon single-wall waste oil tank at the El Rio Booster Plant at 3561 North Rose Avenue. The tanks are listed as owned by the UWCD.

- The Cortese database lists sites designated by the SWRCB LUST, the Integrated Waste Board, and the DTSC Cal Sites. The Cortese database for Listing B6 indicates there is a closed LUST Cleanup Site at this listing.

- The CERS database was described for Listing A2. The CERS database for Listing B6 indicates there was a LUST Cleanup Site at this listing.

5.1.4 Properties Between 1/4 and 1/2 Mile from the Site

Eleven sites (Listings 7, 8, 9, 10, C11, C12, C13, C14, 15, D16, and D17) were identified by the EDR Report database search located one quarter to one half mile from the Site. Due to the database type, their distance from the Site, and regulatory status, none of these sites are considered a REC for the Site. Each of these sites and their respective database listings are briefly summarized below. Refer to the EDR report in Appendix E for more information.

Listing 7. Listing 7 is the UWCD El Rio Booster Pumping Station at 3561 Rose Avenue, located approximately 0.3 miles north of the Site. Listing 7 was listed in the LUST, AST, Ventura Co. BWT, EMI, and CERS databases. The LUST, AST, and CERS databases were described in previous listing descriptions. The Ventura Co. BWT database list indicates by site address whether the Environmental Health Division has Business Plan (B), Waste Producer (W), and/or Underground Tank (T) information. Emissions Inventory Data (EMI) lists toxic and criteria pollutant emissions data collected by the ARB and local air pollution agencies.

Listing 8. Listing 8 is the Lexus of Oxnard at 1621 Auto Center Drive, located approximately 0.3 miles south of the Site. Listing 8 was listed in the LUST, Cortese, and CERS databases, which were described in previous listing descriptions.

Listing 9. Listing 9 is the Federal Express at 3150 Paseo Mercado, located approximately 0.4 miles southeast of the Site. Listing 9 was listed in the LUST, Cortese, NPDES, WDS, CIWQS, and CERS databases. The LUST, Cortese, and CERS databases were described in previous listing descriptions. The National Pollutant Discharge Elimination System (NDPES) database lists all NPDES permits, including stormwater. The Waste Discharge System (WDS) database lists sites that have been issued waste discharge requirements. The California Integrated Water Quality System (CIWQS) database is generated from a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities.

Listing 10. Listing 10 is the Northfield Business Park on North Rose Avenue, located approximately 0.4 miles southwest of the Site. Listing 10 was listed in the CPS-SLIC, CHMIRS, and CERS databases. The CERS database was described in a previous listing description. Statewide SLIC Cases (CPS-SLIC), also known as Cleanup Program Sites (CPS), are sites included in GeoTracker. GeoTracker is the SWRCB's data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. California Hazardous Material Incident Report System (CHMIRS) contains information on reported hazardous material incidents (accidental releases or spills).

Listing C11. Listing C11 is the GTE-El Rio C.O. at 1505 Ventura Blvd., located approximately 0.4 miles southwest of the Site. Listing C11 was listed in the LUST, Cortese, HIST CORTESE, and CERS databases. It is site 1 of 4 in cluster C. The LUST, Cortese, and CERS databases were described in previous listing descriptions. HIST CORTESE, Hazardous Waste & Substance Site List, lists sites designated by the SWRCB LUST, the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (CALSITES).

Listing C12. Listing C12 is the GTE-El Rio Central Office at 1505 Ventura Blvd., located approximately 0.4 miles southwest of the Site. Listing C12 was listed in the LUST and CERS databases. The LUST and CERS databases were described in previous listing descriptions. It is site 2 of 4 in cluster C.

Listing C13. Listing C11 is the DCH Honda of Oxnard at 1500 E Ventura Blvd., located approximately 0.45 miles southwest of the Site. Listing C13 was listed in the RCRA-LQG, LUST, and CERS databases. It is site 3 of 4 in cluster C. The CERS database was described in a previous listing description. The Resource Conservation and Recovery Act – Large Quantity Generators (RCRA-LQG) database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste defined by RCRA.

Listing C14. Listing C14 is the Honda of Oxnard at 1500 Ventura Blvd., located approximately 0.45 miles southwest of the Site. Listing C14 was listed in the LUST and Cortese databases. It is site 4 of 4 in cluster C. The LUST and Cortese databases were described in previous listing descriptions.

Listing 15. Listing 15 is the Todey Lincoln Mercury at 1601 Ventura Blvd., located approximately 0.47 miles southwest of the Site. Listing 15 was listed in the LUST, SWEEPS UST, CA FID UST, Cortese, ENF, and CERS databases. The LUST, CA FID UST, Cortese, and CERS databases were described in previous listing descriptions. The Statewide Environmental Evaluation and Planning System underground storage tank listing (SWEEPS UST) was updated and maintained by a company contacted by the SWRCB in the early 1990s. The listing is no longer updated or maintained. The Enforcement Action Listing (ENF) database lists water board enforcement actions.

Listing D16. Listing D16 is the Donlon Citrus Co at 3840 Rose Avenue, located approximately 0.49 miles northeast of the Site. Listing D16 was listed in the LUST, UST, and CERS databases. It is site 1 of 2 in cluster D. The LUST, UST, and CERS databases were described in previous listing descriptions.

Listing D17. Listing D17 is the Donlon Citrus Company at 3840 North Rose Avenue, located approximately 0.49 miles northeast of the Site. Listing D17 was listed in the Cortese, HAZNET, and HWTS databases. It is site 2 of 2 in cluster D. The Cortese, HAZNET, and HWTS databases were described in previous listing descriptions.

5.1.5 Properties between 1/2 Mile and 1 Mile from the Site

Seven sites (Listing 18 through 24) were identified by the EDR Report database search located one half to one mile from the Site. Due to the database type, its distance from the Site, and regulatory status, this site is not considered a REC for the Site. Each of these sites and its database listings are briefly summarized below. Refer to the EDR report in Appendix E for more information.

Listing 18. Listing 18 is the Costco Wholesale No. 420 at 2001 E Ventura Blvd., located approximately 0.63 miles southeast from the Site. Listing 18 was listed in the RCRA-LQG, EnviroStor, FINDS, ECHO, HAZNET, MED WASTE VENTURA, CERS, and HWTS databases. . The RCRA-LQG, FINDS, HAZNET, CERS and HWTS databases were described in previous listing descriptions. The EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. Enforcement & Compliance History Information (ECHO) provides integrated compliance and enforcement information about 800,000 regulated facilities nationwide. MED WASTE VENTURA is a medical waste program list that protects public health and safety and the environment from potential exposure to disease causing agents. The Environmental Health Division Medical Waste Program regulates the generation, handling, storage, treatment and disposal of medical waste throughout the Ventura County.

Listing 19. Listing 19 is the Rio Vista Middle School on Vineyard & Walnut Avenue, located approximately 0.82 miles northwest from the Site. Listing 19 was listed in the EnviroStor and SCH databases. The EnviroStor database was described in a previous listing description. The School Property

Evaluation Program (SCH) category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Listing 20. Listing 20 is the Eastern Elementary School on East Vineyard Avenue/Simon Way, located approximately 0.84 miles northwest from the Site. Listing 20 was listed in the EnviroStor and SCH databases. The EnviroStor and SCH databases were described in previous listing descriptions.

Listing 21. Listing 21 is the Southern Pacific Milling Co. on 3555 Vineyard Avenue, located approximately 0.87 miles northwest from the Site. Listing 21 was listed in the EnviroStor, LUST, Ventura Co. BWT, Cortese, and CERS databases. The EnviroStor, LUST, Ventura Co. BWT, Cortese, and CERS databases were described in previous listing descriptions.

Listing 22. Listing 22 is the Teleflex Control Systems on 1950 Williams Drive, located approximately 0.89 miles south from the Site. Listing 22 was listed in the EnviroStor database.

Listing 23. Listing 23 is the Price Company on 2600 Vineyard Avenue, located approximately 0.98 miles west from the Site. Listing 23 was listed in the EnviroStor databases. The EnviroStor database was described in a previous listing description.

Listing 24. Listing 24 is the Ventura Oil on 3815 Vineyard Avenue, located approximately 0.98 miles northwest from the Site. Listing 24 was listed in the EnviroStor, LUST, CPS-SLIC, Ventura Co. BWT, EMI, Hazardous Waste & Substance Site List (HIS CORTESE), NDPES, CIWQS, and CERS databases. The EnviroStor, LUST, CPS-SLIC, Ventura Co. BWT, EMI, NDPES, CIWQS, and CERS databases were described in previous listing descriptions. The HIS CORTESE database lists sites designated by the SWRCB (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (CALSITES). This listing is no longer updated by the state agency.

5.2 PREVIOUS INVESTIGATIONS

No previous investigations of the Site are known to have occurred.

5.3 ENVIRONMENTAL CLEANUP LIENS

No environmental cleanup liens are known to have been filed against the Site under federal, state, or local laws.

5.4 RADON

Radon is a naturally occurring, odorless, colorless gas produced by certain geologic materials. It is known to be a human carcinogen and can pose a cancer risk greater than one in one million in humans at concentrations equal to or greater than 4 picoCuries per liter (pCi/L).

The EDR environmental database search indicated that Ventura County is in a Radon Zone 1 area. Zone 1 areas have a predicted average indoor screening level greater than 4 pCi/L. The EDR database search reported that of 18 sites listed in the California Radon database that have been tested for the zip code of 93036, one had a radon level greater than 4 pCi/L. The Federal Area Radon Information database reported 135 sites tested for radon in the 93036-zip code. The average concentration of tested sites was -0.185 pCi/L

in first floor living areas with 96% <4 pCi/L. The second floor living area average concentration was reported at 0.800 pCi/L with 100% of the tests at <4 pCi/L (EDR 2020).

The EDR report gives a passing result for the Site with no further action required. These findings suggest that there are no health concerns related to radon at the Site.

THIS PAGE INTENTIONALLY LEFT BLANK

6.0 USER-PROVIDED INFORMATION

Mr. Wael Saleh, Assistant Superintendent Business Services for RSD, completed the User Questionnaire for Phase I ESAs (Appendix H) as required by ASTM Standard E1527-05. The findings of the User Questionnaire for Phase I ESAs for the Site are summarized below.

6.1 ENVIRONMENTAL CLEANUP LIENS

For Item 1 of the User Questionnaire, Mr. Saleh indicated that he is not aware of any environmental cleanup liens against the Site.

6.2 ACTIVITY AND USE LIMITATIONS

For Item 2 of the User Questionnaire, Activity and Use Limitations (AULs), Mr. Saleh indicated that he is not aware of and AULs or use limitations for the Site.

6.3 SPECIALIZED KNOWLEDGE

For Item 3 of the User Questionnaire, Specialized Knowledge, Mr. Brock indicated they have no specialized knowledge of any environmental issues that might affect the Site.

6.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

For Item 4 of the User Questionnaire, Fair Market Value, Mr. Saleh indicated that the property purchase price was not significantly below fair market value.

6.5 OBVIOUS INDICATORS

For Item 5 of the User Questionnaire, Obvious Indicators, Mr. Saleh indicated that they did not know of any obvious indicators of possible contamination on or near the Site.

6.6 COMMON KNOWLEDGE

For Item 6 of the User Questionnaire, Obvious Indicators, Mr. Saleh responded as indicated in the underlined text below:

- Describe paste uses of the property: Not applicable (N/A).
- Describe specific chemicals that may have been present at the property: N/A.
- Describe any other information that may help us in identifying possible contamination: N/A.

6.7 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The current owner of the Site is KMS Industries, Inc. The Site is leased by Reiter Affiliated Companies for berry production.

6.8 REASONS FOR PHASE I ESA PERFORMANCE

It is Tetra Tech's understanding that this Phase I ESA is being requested in conjunction with the purchase of the Site by RSD.

7.0 FINDINGS

7.1 GENERAL SITE CONDITIONS

The Site appeared to be well-maintained by Reiter Affiliated Companies. The organic raspberry farm is watered and maintained daily. The grounds were clean and well-kept. No buildings exist on Site. Additionally, no chemical products, storage drums, ASTs or USTs exist on Site. Dirt roads line the southern and western sides of the Site and separate rows of raspberries. No utilities currently are connected to the Site. Utilities serving the Site area are electricity (SCE) and natural gas (the Southern California Gas Company). Water for crop irrigation at the Site is provided by five groundwater wells owned by KMS Industries, Inc. Solid waste disposal is performed by Harrison Industries. The Site is adjacent to other areas currently being used for organic raspberry production on the northeast and southeast sides. Three pole-mounted electrical transformers are adjacent to the Site's southwest corner. A groundwater production well operated by the UWCD is located adjacent to the southern corner of the Site. The Rio del Valle Middle School is located adjacent to the southwestern Site boundary. Two high volume water transmission pipelines (one operated by the City of Oxnard and one operated by the UWCD) are located 30 and 40 feet northwest of the Site beneath North Rose Avenue. A groundwater production and treatment facility operated by the Vineyard Avenue Estates Water Mutual Company is located northwest of the Site across North Rose. The Site is not located in an oil field. The nearest oil field is the Santa Clara Avenue Field, located approximately 0.5 to 1 mile southeast of the Site. There are no known active or abandoned oil wells on Site. The "McGrath-McCormick 1", located approximately 500 feet northeast of the Site, is the oil well closest to the Site. The "McGrath-McCormick 1" oil well is a dry (non-oil producing) well that was drilled and abandoned in 1959.

7.2 RECS

Based on the information discussed in this Phase I ESA and Tetra Tech's understanding of current regulatory guidelines and judgment, the following four RECs have been identified for the Site. These RECs might pose a risk to future Site occupants (students, teachers, and school district employees).

7.2.1 REC 1: Potential Former Agricultural Pesticide Application

Potential impacts to surface and near surface soil at the Site from former pesticide applications associated with former agricultural land use practices is a REC for the Site. Because the Site was used for agricultural production from at least 1927 to the present, there is a potential that OCPs and arsenic-based pesticides were formerly applied to crops at the Site. Therefore, there is a potential that the Site surface and near surface soil is impacted with OCPs and arsenic from former pesticide application.

7.2.2 REC 2: Potential Bunker Oil Releases from Potential Former Smudge Pot Frost Abatement

The review of historical aerial photographs of the Site area indicates that the Site contained orchards for citrus fruit production for most of the time between at least 1938 through 1978. Smudge pots fueled with bunker oil and similar petroleum products were commonly used for frost abatement in orchards throughout California during this time period. There is a potential that bunker oil and/or similar petroleum products were released from smudge pots formerly used at the Site to surface and near surface soil. These types of petroleum products can persist over time and if released, may still be present at the Site in surface and near surface soil. This presents a REC for the Site.

7.2.3 REC 3: PCB-Containing Transformers

One electrical power pole with three pole-mounted transformers is currently located at the boundary of southern corner of the Site along North Rose Avenue. SCE has indicated that the transformers at this location were replaced in 2004 and it is not likely that these transformers contain dielectric fluids with PCBs. However, the review of historical aerial photographs indicate that pole-mounted transformers have been at this location since at least 1959. There is a potential that transformers containing PCBs that may have been formerly used at this location and released dielectric fluids containing PCBs to the surface and near surface soils beneath them. This presents a REC for the Site.

7.2.4 REC 4: Hazardous Pipelines

CCR Title 5, Section 14010(h) requires that new school sites shall not be located or within 1,500 feet of the easement of an aboveground or underground pipeline that can pose a safety hazard as determined by a risk analysis study, conducted by a competent professional. Hazardous pipelines are defined as:

- Pipelines carrying chemical products, natural gas, and other hydrocarbon products that are operating at a pressure of 80 psig or higher; and

- High-volume water lines, which are defined as water lines 12 inches or greater in diameter and include open aqueducts of comparable and greater volume handling capacity.

Two hazardous pipelines as defined by CCR Title 5, Section 14010(h) were identified within 1,500 feet of the Site:

- The City of Oxnard maintains a 16-inch diameter steel water pipeline routed north-south beneath North Rose Avenue approximately 30 feet northwest of the Site (Figure 2) (Appendix D); and

- The UWCD maintains a 42-inch cement-mortar lined steel water pipeline beneath North Rose Avenue approximately 40 feet northwest of the Site (Figure 2) (Appendix D).

These two pipelines present a REC for the Site.

8.0 RECOMMENDATIONS

In the professional opinion of Tetra Tech, an appropriate level of inquiry has been made into the previous ownership and uses of the Site consistent with good commercial and customary practice with the intent to minimize environmental liability. Based on the information cited in this assessment and Tetra Tech's understanding of current regulatory guidelines and judgment, it is Tetra Tech's recommendation that a Phase II ESA be performed to evaluate RECs 1, 2, and 3 as described in Section 7.0 as part of the pre-acquisition due diligence process. Because the Site may become part of a K-12 school in the future, the Phase II ESA field work sampling program should be planned and performed in accordance with DTSC guidelines for completing a Preliminary Environmental Assessment (PEA) including the *Preliminary Endangerment Guidance Manual* (DTSC January 1994, Revised October 2015) (PEA Guidance Manual) and the *Interim Guidance for Sampling Agricultural Properties (Third Revision)* (DTSC 2008) (Agricultural Fields Guidance). Based on Tetra Tech's experience performing similar prescreening assessments for other K-12 school sites, performing the Phase II ESA field work sampling program in accordance with DTSC guidelines for completing a PEA will facilitate using the Phase II ESA results in a PEA if one is deemed necessary by DTSC in the future. Tetra Tech will prepare a draft version of Phase II ESA report for review by the RSD and Sage. The Phase II ESA report will document the findings and conclusions with recommendations for additional assessment or remedial actions, if necessary. A final Phase II ESA report will be prepared and submitted to the RSD and Sage following review and approval of the draft Phase II ESA report by RSD and Sage.

To evaluate the potential risks posed by REC 4, a hazardous pipeline assessment should be conducted in accordance with the *Guidance Protocol for School Site Pipeline Risk Analysis* (California Department of Education [CDE] 2007). The evaluation of potentially hazardous pipelines within 1,500 feet of the Site is not required under ASTM Standard Practice E1527-13 (ASTM 2013) but will be required by CDE under CCR Title 5, Section 14010(h) if the Site is developed as a K-12 school. Tetra Tech recommends that the RSD wait until the Site is developed as a K-12 school to complete the hazardous pipeline assessment.

9.0 DISCLAIMER

This report was compiled based partially on information supplied to Tetra Tech from outside sources and other information that is in the public domain. The conclusions and recommendations herein are based solely on the information Tetra Tech obtained in compiling the report. Documentation for the statements made in the report is on file at Tetra Tech's office in Santa Barbara, California. Tetra Tech makes no warranty as to the accuracy of statements made by others which may be contained in the report, nor are any other warranties or guarantees, expressed or implied, included or intended by the report, except that it has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing the same or similar services. Since the facts forming the basis for the report are subject to professional interpretation, differing conclusions could be reached. Tetra Tech does not assume responsibility for the discovery and elimination of hazards that could possibly cause accidents, injuries, or damage. Compliance with submitted recommendations or suggestions does not assure elimination of hazards or the fulfillment of client's obligation under federal, state, or local laws or any modifications or changes to such laws.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the AAI in conformance with the standards and practices set forth in 40 CFR Part 312.

None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature but shall be a representation of findings of fact from records examined.

Respectfully submitted,

TETRA TECH

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Tetra Tech, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 40696
Project: Rio School District Property

Coordinates:

Latitude:	34.233997 34° 14' 2" North
Longitude:	-119.152947 -119° 9' 11" West
UTM Zone:	Zone 11 North
UTM X Meters:	301709.57

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

LOG OF OIL OR GAS WELL

FIELD _____ COMPANY SHELL OIL COMPANY

Sec. 26, T. 2N, R. 22W, S.B. B. & M., Elevation 95' Well No. ~~XXXX~~-SHODGRASS # 1

In compliance with the provisions of Chapter 718, Statutes of 1915, as amended, the information given herewith is a complete and correct record of the present condition of the well and all work done thereon, so far as can be determined from all available records.

Signed W. Holmes

Date JANUARY 29, 1930. Title AGENT (President, Secretary or Agent)

The summary on this page is for the ORIGINAL condition of the well

OIL SANDS

1st sand from _____ to _____ 4th sand from _____ to _____
2d sand from _____ to _____ 5th sand from _____ to _____
3d sand from _____ to _____ 6th sand from _____ to _____

IMPORTANT WATER SANDS

1st sand from _____ to _____ 3d sand from _____ to _____
2d sand from _____ to _____ 4th sand from _____ to _____

CASING RECORD

Size of Casing	Where Landed	Where Cut	Weight Per Foot	Threads Per Inch	Kind of Shoe	Make of Casing	Cemented Yes	Cemented No	Cemented Number of Sacks
13-3/8"	132'		48#	8		Pittsburg Seamless	Yes		100
	2-1/2" Tubing landed at 1530'.								

CEMENTING OR OTHER SHUT-OFF RECORD

Casing, Size	Sacks	Time Set	Method	Test and Result (Give water level and bailing results)
				No tests.
				This well was drilled as a core hole for geological
				purposes only.

PLUGS AND ADAPTERS

Heaving Plug—Material _____ Length _____ Where set _____

Adapters —Material _____ Size _____

TOOLS

Rotary Tools were used from _____ ft. to _____ ft.

Cable Tools were used from _____ ft. to _____ ft.

PERFORATIONS

State clearly whether a machine was used or casing was drilled in shop

From	To	Size of Holes	Number of Rows	Holes Per Foot	Machine—Shop
ft.	ft.				
ft.	ft.				
ft.	ft.				
ft.	ft.				
ft.	ft.				

Well did not produce

[illegible] barrels of oil per day.

The gravity of oil was _____ degrees Baumé. Water in oil amounted to _____ per cent.

NAMES OF DRILLERS — NAMES OF TOOL DRESSERS

Urtasun, J.R., Sadler, C.H., Hart, C.M.

Date drilling started APRIL 9, 1928. Date well was completed APRIL 26, 1928.

FORMATIONS PENETRATED BY WELL

DEPTH TO Top of Formation	DEPTH TO Bottom of Formation	Thickness	Name of Formation
0	15	15	Sand and boulders
15	83	68	Sand and gravel
83	103	20	Gravel and boulders
103	110	15	Core # 1 - recovered 1' gravel and boulders
110	133	15	Core # 2 - missed; gravel and boulders
133	143	10	Core # 3 - recovered 1' sand and boulders.
143	163	20	Core # 4 - recovered 1' sand and boulders
163	187	24	Gravel and boulders
187	192	5	Clay
192	197	5	Core # 5 - recovered 6" shale
197	216	19	Core # 6 - recovered 2' sandy shale sand and gravel
216	232	16	Core # 7 - missed; sand and gravel
232	246	14	Core # 8 - recovered 2' sand and gravel streaks clay
246	262	16	Core # 9 - recovered 2' sandy clay streaks of gravel
262	277	15	Core # 10 - missed; sand and gravel
277	292	15	Core # 11 - recovered 2' sandy clay streaks of sand
292	305	13	Core # 12 - recovered 6' sandy clay streaks of sand
305	320	15	Core # 13 - recovered 2' sand and gravel
320	328	8	Core # 14 - recovered 5' sand streaks clay
328	348	20	Core # 15 - missed sand streaks clay
348	358	10	Core # 16 - recovered 4' sand and sandy shale with streaks of clay
358	373	15	Core # 17 - missed sand, gravel boulders

FIELD _____ COMPANY SHELL OIL COMPANY

Sec. 27, T. 2N, R. 22W, S.B. B. & M., Well No. ~~XXXX~~ - SHONGRASS # 1

Signed C.B. Holmes.

Date JANUARY 29, 1930. Title AGENT
President, Secretary or Agent

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reason for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.

LOCATION 1800' from south east corner of lot 92 Rancho Santa Clara Del Norte along southerly property line, thence northerly at right angles 100'.

ELEVATION 95'

17" HOLE Spudded with rotary April 9, 1928 and drilled 17" rotary hole from surface to 197' by April 11th 1928.

CEMENTED second hand 13-3/8" Pittsburg 68# A. P. I. 8 thread seamless casing at 192' with 100 sax treated Santa Cruz Oil Well Cement Perkins method April 11th.

12" HOLE Located top plug at 177' April 13th. Cleaned out cement and drilled 12" rotary hole to 1530' by April 25th. Landed 2-1/2" tubing at 1550' April 26, 1928.

HISTORY OF ABANDONMENT

Filled hole with heavy mud April 26, 1928.

SANTA PAULA Cal.

DEAR SIR:

In compliance with Section 16, Chapter 718, Statutes of 1915, as amended, notice is hereby given that it is our intention to abandon well No. SHOESTRASS # 1, Sec. 27, T. 2N R. 22W, S.B. B. & M., Oil Field, VENTURA County, commencing work on the 26TH. day of APRIL 19 26

The present condition of the well is as follows:

13-3/8" casing cemented at 192'.
2-1/2" tubing landed at 1530'.
Total depth 1530'.

The proposed work is as follows:

Fill hole with heavy mud.

JANUARY 29, 1930.
Owing to oversight this notice to abandon was not made until this date. The notice has been dated back to April 21st. 1926.

Report on Proposed Operations

No. P 2-1979

Santa Paula, Cal. April 16, 1928

Mr. W. W. Craddock,
Ventura, Cal.

Agent for Shell Company of California Company

PROSPECT WELL

DEAR SIR:

Your proposal to drill Well No. Snodgrass 1,
Section 27, T. 2 N., R. 22 W., S.B. B. & M., — Oil Field, Ventura County,
dated Apr. 9 1928, received Apr. 10 1928, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"The well is 1800' from S.E. corner of Lot #92, Rancho Santa Clara Del Norte, along Southerly property line, thence Northerly at right angles 100'.

The elevation of the derrick floor above sea level is 95 feet.

We estimate that the first productive oil or gas sand should be encountered at a depth of about -------feet, more or less."

PROPOSAL:

"We propose to use the following strings of casing, either landing or cementing them as here indicated:

Size of csg.	Wt. per ft.	New or S.H.	Depth	Landed or Cemented

THIS WELL BEING DRILLED FOR GEOLOGIC INFORMATION ONLY

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing."

RECOMMENDATION:

This office has no data to determine the depth at which oil or gas bearing formations may be encountered at this location.

Kindly notify this office as follows:

1. When and if oil or gas bearing formations are noted in drilling.
2. To witness a test of shut-off on any water string set in the well.

cc - Mr. Wm. Reinhardt (2)

SANTA PAULA, CALIFORNIA

VENTURA Cal. APRIL 9, 1928 192

MR. C. C. THOMS

Deputy State Oil and Gas Supervisor

SANTA PAULA Cal.

DEAR SIR:

In compliance with Section 17, Chapter 718, Statutes of 1915, as amended, notice is hereby given that it is our intention to commence the work of drilling well number SNODGRASS 1, Section 26 27, T. 2N, R. 22W, SB. & M., XXXXXXX Oil Field, VENTURA County.

The well is feet N. or S., and feet E. or W. from SEE LOCATION BELOW
(Give location in distance from section corners or other corners of legal subdivision)

The elevation of the derrick floor above sea level is 95 feet.

We propose to use the following strings of casing, either cementing or landing them as here indicated:

Size of Casing, Inches	Weight, Lb. Per Foot	New or Second Hand	Depth	Landed or Cemented
THIS WELL BEING	DRILLED FOR GEOLOGIC INFORMATION ONLY			

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing.

We estimate that the first productive oil or gas sand should be encountered at a depth of about feet, more or less.

Respectfully yours

Special Report on Operations Witnessed

No. T 259-152

Mr. Carl B Bowden
P O Box 670
Santa Paula California
Agent for Union Oil Company of California

Santa Paula
May 26 1959 Calif.

DEAR SIR:

Operations at well No. "McGrath-McCormick" 1, Sec. 26, T. 2N, R. 22W, S.B. B & M.
Field, in Ventura County, were witnessed on May 23, 1959. Mr. C. H. Schultz representative of the supervisor was present from 8:50 a.m. to 9:30 a.m. There were also present V. H. McDowell and William Eklund, drilling foremen.

Present condition of well: 13 3/8" cem. 1230' T.D. 11058'. Plugged with cement 2700' - 2645'± and 2600' - 2361'.

The operations were performed for the purpose of plugging the hole in the process of abandonment.

Mr. Eklund reported:

1. The 9 7/8" hole was drilled from 5250' to 11,058' (total depth).
2. No commercial oil or gas shows were encountered in drilling the well.
3. The hole was left full of 78 lb. drilling fluid.
4. On May 23, 1959, 30 sacks of cement was pumped into the hole through 4½"drill pipe hanging at 2700' (calculated to fill to 2645'±).
5. On May 23, 1959, 120 sacks of cement was pumped into the hole through 4½" drill pipe hanging at 2600' filling to 2361'.

The engineer noted:

That the cement plug at the reported depth of 2361' supported 9 points of the weight of the drill pipe.

THE PLUGGING OPERATIONS AS REPORTED AND WITNESSED ARE APPROVED.

DIVISION OF OIL AND GAS

Special Report on Operations Witnessed

No. T 259-157

Mr. Carl B Bowden
P O Box 670
Santa Paula California
Agent for Union Oil Company of California

Santa Paula Calif.
May 29 1959

DEAR SIR:

Operations at well No. "McGrath-McCormick" 1, Sec. 26, T. 2N, R. 22W, S.B. B & M.
Field, in Ventura County, were witnessed on May 23, 1959. Mr. C. H. Schultz, representative of the supervisor was present from 3:30 p.m. to 4:10 p.m. There were also present V. H. McDowell and William Eklund, Drilling Foremen

Present condition of well: 13 3/8" cem. 1230'. T.D. 11,058'. Plugged with cement 2700'-2645', 2600'-2361' and 1250'-1202'.

The operations were performed for the purpose of plugging the hole in the process of abandonment.

Mr. Eklund reported: that on May 23, 1959, 100 sacks of cement was pumped into the hole through 4 1/2" drill pipe hanging at 1250', filling to 1202'.

The Engineer noted that the cement plug at the reported depth of 1202' supported 4 points of the weight of the drill pipe.

THE LOCATION AND HARDNESS OF THE CEMENT PLUG AT 1202' ARE APPROVED.

On June 8, 1959 Mr. William Lewis reported by telephone:

1. The hole was bridged with paper sacks 43' below the cellar floor
2. On June 3, 1959 a total of 96 cu ft. of sand and cement was dumped into the hole, setting the 13⅜" casing to the cellar floor, which is 8' below ground level.
3. A ½" steel plate was welded on the casing head.

REPORT ON PROPOSED OPERATIONS

No. P 259-202

Mr. Carl B Bowden
P O Box 670
Santa Paula California
Agent for Union Oil Company of California

Santa Paula Calif.
May 26 1959

DEAR SIR:

Your proposal to abandon Well No. "McGrath-McCormick" 1,

Section 26, T. 2N, R. 22W, S.B. B. & M., - Field, Ventura County,

dated May 22, 1959 received May 26, 1959, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:
"THE PRESENT CONDITION OF THE WELL IS:
1. Total Depth: 11,058'
2. Complete casing record, including plugs:
13-3/8" C 1230

3. Last Produced: Never produced

ADDITIONAL DATA FOR DRY HOLE
4. Oil or Gas showings and results of tests: None
5. Stratigraphic markers and depths:

6. Geologic age at bottom: Sespe
7. Base of fresh water sands: 2550' "

PROPOSAL:
"THE PROPOSED WORK IS
1. Plug at 2600' with 100 sax.
2. Division of Oil & Gas to witness location of top of plug which must be above 2550'.
3. Plug at 1250' with 60 sax.
4. Division of Oil & Gas to witness location of top of plug which must be above 1210'.
5. Plug from 10' to surface with cement. Division of Oil & Gas to witness placement of plug."

DECISION:
THE PROPOSAL IS APPROVED.

REPORT ON PROPOSED OPERATIONS

No. P 259-153

Mr. C E Smith
P O Box 670
Santa Paula California
Agent for Union Oil Company of California

Santa Paula Calif.
April 15 1959

DEAR SIR:

Your proposal to drill Well No. "McGrath-McCormick" 1

Section 26, T. 2N, R. 22W, S.B. B. & M., — Field, Ventura County,

dated Apr. 13, 1959, received Apr. 15, 1959, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"Legal description of mineral right lease, consisting of approx. 390 acres, is as follows: (see attached map).
Do mineral and surface leases coincide? Yes.
Location of Well: Approximately 1200 feet Northwesterly along lot line from NE cor. of Lot #88, Rancho Santa Clara del Norte: thence, 700 feet Southwesterly at right angles Sec. 26, T2N, R22W, S. B. B. & M., or approx: 200' S., 300' W., fr. N.E. Cor. Sec. 26.
Elevation of ground above sea level 94 feet ground datum.
All depth measurements taken from top of rotary table which is 10± feet above ground."

PROPOSAL:

"Size of Casing

PROPOSED CASING PROGRAM

Inches A.P.I.	Weight	Grade and Type	Top	Bottom	Cementing Depths
13-3/8"	48#	H-40	Surface	1000'	1000'

Intended zone or zones of completion: Sespe (Name)

Estimated total depth 11,000'
It is understood that if changes in this plan become necessary we are to notify you before running casing."

DECISION:

THE PROPOSAL IS APPROVED PROVIDED THAT:

1. The 13 3/8" casing shall be cemented with sufficient cement to fill all of the space back of the casing.
2. The hole is, at all times, kept full of drilling fluid of proper weight and quality to prevent blowuts.
3. Adequate blowout prevention equipment shall be installed and maintained ready for use at all times.
4. Any hole penetrating an oil or gas zone, to be sidetracked, shall be plugged with cement insofar as possible.
5. A SUPPLEMENTARY NOTICE SHALL BE FILED prior to running any additional casing into the hole. OTHER requirements may be outlined at that time.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 11. The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

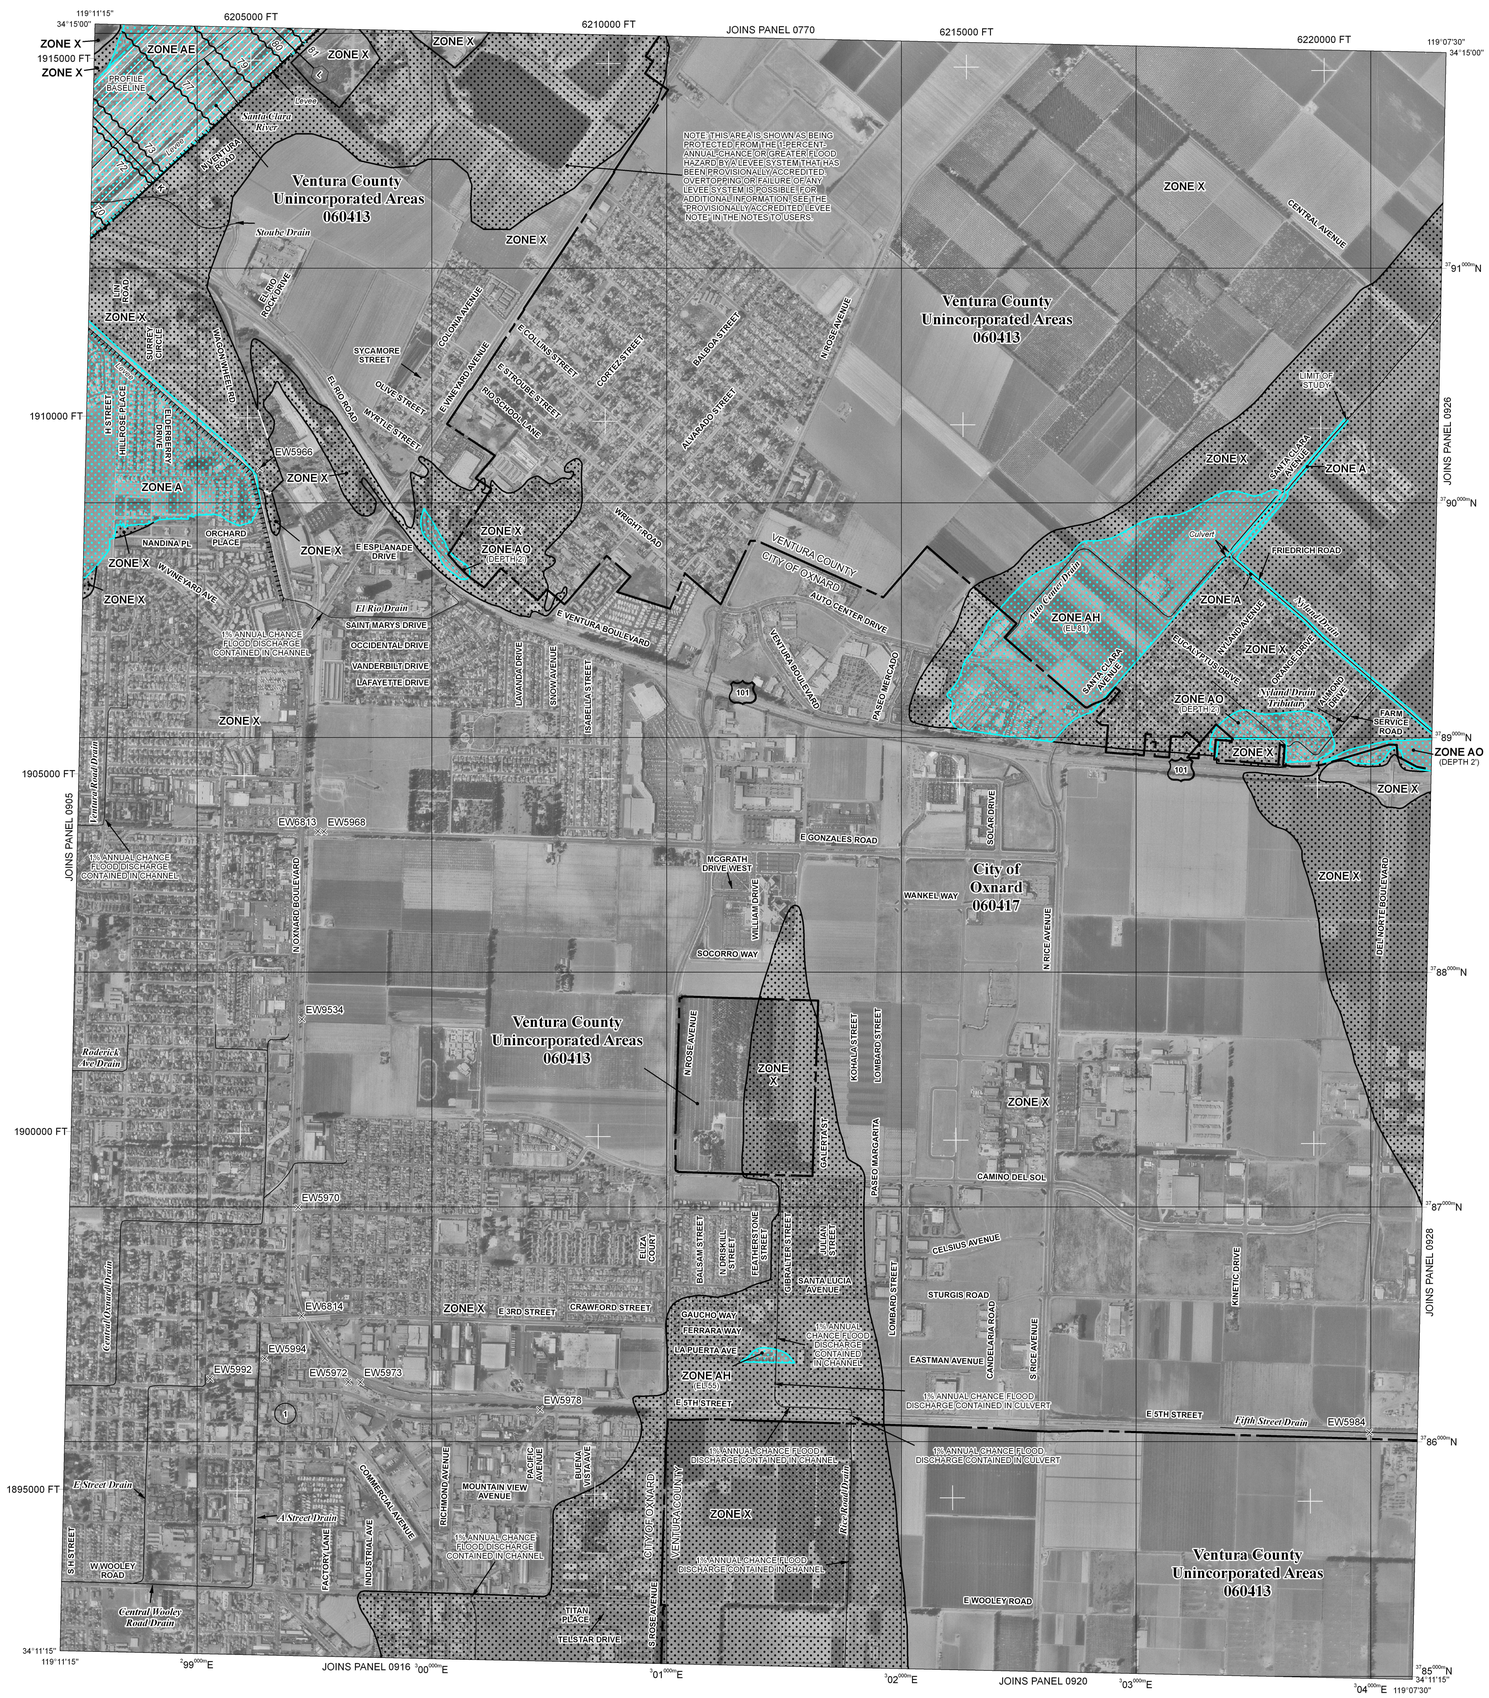
Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

Spatial Reference System Division
National Geodetic Survey, NOAA
Silver Spring Metro Center
1315 East-West Highway
Silver Spring, Maryland 20910
(301) 713-3191

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from U.S. Geological Survey Digital Orthophoto Quadrangles produced at a scale of 1:12,000 from photography dated 1994 or later.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to confirm to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.



Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://www.mcs.fema.gov.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

Provisionally Accredited Levee Notes to Users: Check with your local community to obtain more information, such as the estimated level of protection provided (which may exceed the 1-percent-annual-chance level) and Emergency Action Plan, on the levee system(s) shown as providing protection for areas on this panel. To maintain accreditation, the levee owner or community is required to submit the data and documentation necessary to comply with Section 65.10 of the NFIP regulations by December 1, 2009. If the community or owner does not provide the necessary data and documentation or if the data and documentation provided indicate the levee system does not comply with Section 65.10 requirements, FEMA will revise the flood hazard and risk information for this area to reflect de-accreditation of the levee system. To mitigate flood risk in residual risk areas, property owners and residents are encouraged to consider flood insurance and floodproofing or other protective measures. For more information on flood insurance, interested parties should visit the FEMA Website at http://www.fema.gov/business/nfip/index.shtm.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X — Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X — Areas determined to be outside the 0.2% annual chance floodplain.

ZONE D — Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
- 513 — Base Flood Elevation line and value; elevation in feet*
- (EL 987) — Base Flood Elevation value where uniform within zone; elevation in feet*

* Referenced to the North American Vertical Datum of 1988

- A — A — Cross section line
- 23 — — — 23 — Transect line
- 87°07'45", 32°22'30" — Geographic coordinates referenced to the North American Datum of 1983 (NAD 83), Western Hemisphere
- 2976000mN — 1000-meter Universal Transverse Mercator grid values, zone 11
- 600000 FT — 5000-foot grid ticks: California State Plane coordinate system, zone V (FIPSZONE 0405), Lambert Conformal Conic projection
- DX5510 × — Bench mark (see explanation in Notes to Users section of this FIRM panel)
- ●M1.5 — River Mile

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

UNITED WATER CONSERV EPA ID:: CAD983634494	***3561 N. ROSE AVE.***	***N 1/8 - 1/4 (0.144 mi.)***	***A4***	***17***

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/27/2020 has revealed that there are 7 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 10 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there is 1 CPS-SLIC site within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 01/21/2020 has revealed that there is 1 CERS HAZ WASTE site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
UNITED WATER CONSERV	***3561 N ROSE AVE***	***N 1/8 - 1/4 (0.144 mi.)***	***A2***	***9***

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

City,State,Zip: OXNARD, CA 93036
Site ID: 164770
CERS ID: 10399885
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 164770
Site Name: United Water Conservation District Oxnard
Violation Date: 08-25-2016
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 08/26/2016.
Violation Division: Ventura County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 164770
Site Name: United Water Conservation District Oxnard
Violation Date: 08-25-2016
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: Returned to compliance on 08/26/2016.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 133
. Waste name: Aqueous solution with 10% or more total organic residues

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 172
. Waste name: Metal dust (see 121) and machining waste

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 211
. Waste name: Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)

COSTCO WHOLESALE NO 420 (Continued) **1004677950**

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 213
. Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 232
. Waste name: Pesticides and other waste associated with pesticide production

. Waste code: 271
. Waste name: Organic monomer waste (includes unreacted resins)

. Waste code: 272
. Waste name: Polymeric resin waste

. Waste code: 281
. Waste name: Adhesives

. Waste code: 291
. Waste name: Latex waste

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 351
. Waste name: Organic solids with halogens

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 561
. Waste name: Detergent and soap

. Waste code: 611
. Waste name: Contaminated soil from site clean-ups

. Waste code: 791
. Waste name: Liquids with pH < 2

COSTCO WHOLESALE NO 420 (Continued) **1004677950**

. Waste name: CARBARYL (OR) 1-NAPHTHALENOL, METHYLCARBAMATE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 851.4

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 180

Waste code: D016
Waste name: 2,4-D
Amount (Lbs): 74

Waste code: D018
Waste name: BENZENE
Amount (Lbs): 2246

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Amount (Lbs): 17

Waste code: P075
Waste name: NICOTINE, & SALTS
Amount (Lbs): 19

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

CA Waste Code: 214 - Unspecified solvent mixture
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.117

Year: 2017
Gepaid: CAR000103333
TSD EPA ID: CAD008364432
CA Waste Code: 141 - Off-specification, aged or surplus inorganics
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.002

Year: 2016
Gepaid: CAR000103333
TSD EPA ID: CAD008364432
CA Waste Code: 141 - Off-specification, aged or surplus inorganics
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.022

Year: 2016
Gepaid: CAR000103333
TSD EPA ID: CAD008364432
CA Waste Code: 214 - Unspecified solvent mixture
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.0935

Year: 2016
Gepaid: CAR000103333
TSD EPA ID: CAD008364432
CA Waste Code: 311 - Pharmaceutical waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.0015

Year: 2016
Gepaid: CAR000103333
TSD EPA ID: CAT080013352
CA Waste Code: 134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 0.42

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/26/1992
Comments:	THE DEPT COMPLETED THE REVIEW OF PEA AND CONCURS WITH THE RECOMMENDATION THAT NO FURTHER ACTION IS NEEDED AT THE TIRE CENTER AREA. THE DEPT ALSO NOTIFIED THE RP THAT THE OTHER AREAS WHICH CONSIST OF THE BUILDINGS AND PAVED PARKING AREA, THE DEPT IS NOT IN A POSITION OF MAKING ANY DECISION. IN ORDER TO DETERMINE IF NO FURTHER ACTION IS REQUIRED IN THE OTHER AREAS, AN ADDITIONAL PEA REPORT WITH APPROPRIATE FEE IS REQUIRED TO BE SUBMITTED TO THE DEPT.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	07/01/1991
Comments:	Site was screened in April 1991, but screening was not recorded until July 1, 1991.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/24/1991
Comments:	The Dept has reviewed the PEA and concurs with the consultant's recommendation on that further action is needed due to the presence of TPH at the facility in the tire center area. RP is informed of it and the site referred to site mitigation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2020

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2020

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2017

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

North Map:	5619414 SATICOY, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

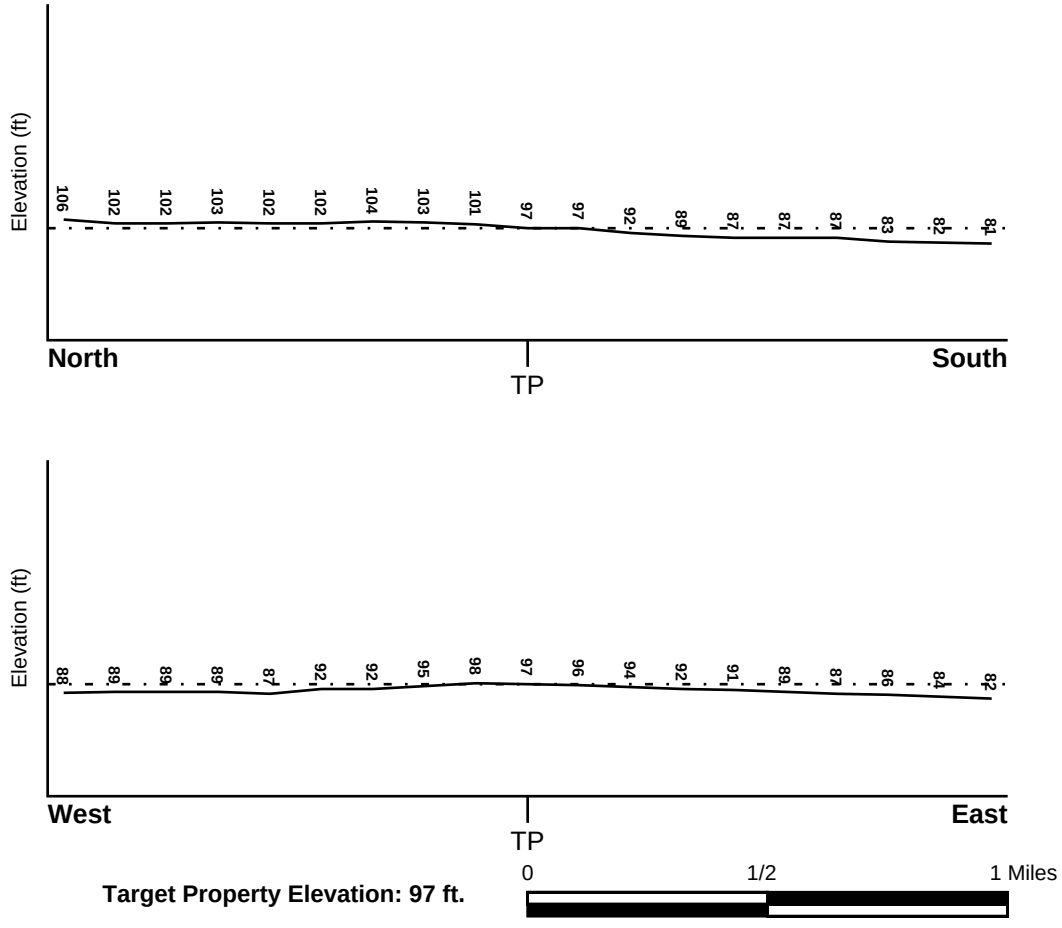
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06111C0910E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
OXNARD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PICO

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	14 inches	53 inches	stratified sandy loam to loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
3	53 inches	59 inches	stratified gravelly sand to gravelly loamy coarse sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: ANACAPA

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	35 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	35 inches	59 inches	stratified coarse sandy loam to loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: CAMARILLO

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	24 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	24 inches	50 inches	stratified sandy loam to sandy clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
3	50 inches	79 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 4

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	7 inches	59 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Tetra Tech, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 6B8C-45B1-974F

PO # 40696

Project Rio School District Property

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 6B8C-45B1-974F

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America

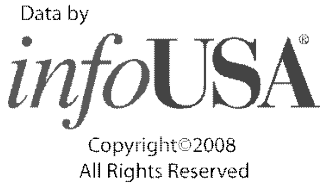
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1926 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

Address Researched	Address Not Identified in Research Source
3410 North Rose Avenue	2017, 2014, 2009, 2004, 2000, 1999, 1996, 1994, 1993, 1976, 1971, 1970, 1968, 1965, 1964, 1961, 1957, 1953, 1949, 1940, 1930, 1926

F CHECKLIST FOR PHASE I SITE VISIT

THIS PAGE INTENTIONALLY LEFT BLANK

PHASE I ENVIRONMENTAL SITE ASSESSMENT CHECKLIST

Project Name: Proposed Rio School District Offices Phase I Environmental Assessment,

Address: 10-Acre Portion of Assessor's Parcel No. 144-0-110-225 located at or near 3410 North Rose Avenue, Ventura County, California

General Site Description: Berry Farm

I. Pre-arrival Background Information

1. **Current Owner(s):** Luis- Calderon, Reiter Affiliated Companies
   Owner Since:
2. **Current Occupants:**
   Occupant Since:
3. **Year Buildings Constructed :** no buildings
4. **Site Zoning:** Agricultural Exclusive, 40 acre minimum,/Mineral Resource Protection (AE -40 ac/MRP)
5. **Land Use(s):** Commercial Quarry

II. Site Observations:

A. Lot/Property Observations:

1. **Current Groundcover (%):** **Estimated from aerial photograph review.**
   100% Berries organic raspberries, other side is conventional, but site is all organic
   Any concrete staining, soil staining or stressed vegetation? none

2. **Is there any evidence of pesticide/herbicide use, storage or disposal on the property?** none
   If yes, describe:
   Have any pesticides/herbicides been used on the property at any time?*
   - smudgepots- REC b/c of orchids REC to submit to DTSC
   - arsenic possibility b/c of pesticides
3. **Are there any electrical transformers or capacitors on the property?** 3
   If yes, location:
   Evidence of leaks? no
   Have they been tested for PCBs*? unknown, not related to this property
   Transformers owned by utility company, owner, or tenant?* SCE

* Indicates question that requires follow-up during site owner/occupant interview.

4a. Are there any visible aboveground or underground storage tanks on the property? no

If yes, location: 5,000 organic fertilizer moved in and out

Currently in use?

Contents:

Size (gallons):

Evidence of leaks?

When was the tank installed?*

Is there a permit for the tank? If so, who is the listed owner?*

Have any leak tests been performed?*

If not in use, has the tank been "abandoned"? Documentation?*

4b. Is there any evidence that an AST or UST has been removed from the site? no

If yes, describe:

When was the tank removed?*

Documentation?*

5. Are there any visible storage drums on the property? If yes, how many? none

If yes, location:

Describe size and contents (if known):

Evidence of spills/leaks?

Are they stored in a bermed area (any secondary containment)?

6. Any evidence of solid waste disposal on the property? none

If yes, location:

Describe:

Evidence of any hazardous materials?

7. Are there any ponds, pits, sumps, or ditches on the property? ditches

If yes, location: surround vegetation

Describe:

Evidence of any hazardous materials?

8. Describe the general air quality at the site: ~~none~~ good

Are there activities on the site which produce air emissions (painting, printing, venting, exhaust): none

If yes, describe:

Are the emissions monitored or permitted?*

Documentation?*

9. Are there any curb cuts, footings, or other signs of former buildings on the property? none

If yes, location:

When was the former building built/demolished?*

* Indicates question that requires follow-up during site owner/occupant interview.

- recommend a hazmans pipeline analysis
- USFA to do driveway (all driveways) planted last year
- irrigation by 1 inch well, 1 small, 1 four out 05*

B. Buildings

1. Are buildings present on site? No

If yes, when was it built

Approx. building square footage from aerial photos

Please provide any available plans for the buildings and site.

2. Are there any cracks or openings (drains or sumps) on the first floor?

If yes, location:

Are they connected to storm drains, sewer lines or discharged into the ground?

Is there any evidence of spills or stains on the ground?

Is there a possibility of hazardous waste spills or leaks?*

3. Are there painted surfaces on the exterior or interior of the building?

Evidence of lead based paint?

If yes, location:

When were the walls painted?*

Have they been tested for lead?*

4. Are there any electrical transformers or capacitors inside the building?

If yes, location:

Evidence of leaks?

Have they been tested for PCBs?*

Transformers owned by utility company, owner, or tenant?*

5. Is there any evidence of the presence of asbestos?

If yes, location:

Friable?

If no evidence of asbestos, but the building was built before 1979, has an asbestos survey been completed?*

6. Are there any chemicals or drums stored or used in the building?

If yes, location:

Evidence of leaks/spills?

If drums, secondary containment?

Have there been any documented leaks or spills of hazardous materials*?

If yes, describe and list documentation:

* Indicates question that requires follow-up during site owner/occupant interview.

air vents photo for irrigation line

III. Surrounding Properties

1. Describe generally the current use(s) of the adjacent properties (%):

Residential: 10%	**Agricultural:** 50%	**Industrial:**
Office:	**Commercial:** 40% (school)	**Manufacturing:**
Other (specify)		

Describe any adjacent propertied used for industrial, manufacturing, or refining purposes:

50% of the adjacent area is surrounding raspberry farm
10%, just west of the site, is Rose Ave. + residential homes
40% surrounding just south of the site, is Rio del Valle
junior HS. Also across from Rose Ave (west of the site)
is a water production facility

Do they pose a possible threat to groundwater or air quality at the site? no

If yes, explain: _____

* Indicates question that requires follow-up during site owner/occupant interview.

G PROPERTY OWNNER/OCCUPANT QUESTIONNAIRE

THIS PAGE INTENTIONALLY LEFT BLANK

PHASE I ENVIRONMENTAL SITE ASSESSMENT
OWNER/OCCUPANT QUESTIONNAIRE

Name of Site: :. Proposed Rio School District Offices	**Tetra Tech Project Number:** 100-SBA-T40696
Description of Project: Phase I Environmental Site Assessment	**Location of Project:** 10-Acre Portion of Assessor's Parcel No. 144-0-110-225 located at or near 3410 North Rose Avenue, Ventura County, California

This information is intended to assist the Environmental Professional conducting the Phase I Environmental Site Assessment in obtaining information indicating Recognized Environmental Conditions in connection with the property.

STRUCTURES AND OTHER IMPROVEMENTS
1. Are any structures present on the property? If so, please identify the type, size and age. *(for example: "one single-story wood-frame residence built in 1974" or "one 75,00 sq. ft. concrete warehouse built in 1993")*
No structures. Temporary hooped shades were erected over the raspberry bushes
2. Are any roads present on the property? Paved or unpaved?
No roads, just unfarmed breaks between crops for harvest trailers
3. Is there a heating or cooling system in place? What type of fuel is used? *(for example: "in-building HVAC system" or "central heat and AC" or "a propane tank is used for heating system")*
No
4. What is the source for potable water? Public water system or Private domestic well? **The Site Owner KMS Industries, Inc., provides water for crop irrigation at the Site from five groundwater production wells located within 0.25 mile of the Site. No wells are located on site. there is no potable water onsite.**
5. What type of sewage disposal system is in use? Public sewer or on-site septic tank system? **No public sewer or septic systems are present on the Site. Rented portable restrooms are present to serve the agricultural workers.**

6. Indicate the solid waste (trash) disposal provider, if any.
E.J. Harrison & Sons
7. Indicate the electrical utility provider, if any.
Southern California Edison
8. Indicate the natural gas provider, if any.
The Gas Company
9. Are any wells present at the property? *(such as water wells, groundwater monitoring wells, oil wells, dry wells, abandoned or destroyed wells)*
None
10. Are there any drains or ditches on the property for stormwater or wastewater disposal?
There are ditches to drain water from the fields.
PETROLEUM PRODUCTS AND HAZARDOUS MATERIALS
11. Has the property or any adjoining property ever been used for any of the following? *gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo-developing lab, junkyard or landfill, or as a waste treatment, storage, processing or recycling facility* Please identify the use, if any.
No
12. Are petroleum products, hazardous materials or other chemicals used or stored on-site? Identify. *(Typically, only large amounts of such items are of concern. Normal household chemicals are not generally kept in amounts that would pose a hazard. Items of concern would include damaged automotive batteries, pesticides, paints, fuels, lubricants, solvents, photoprocessing wastes and other chemicals)*
No

13. Are there or have there ever been any aboveground or underground storage tanks on the property?
(Please identify number, size, contents and location on the property, and provide recent inspections/test records)

No

OTHER ITEMS OF CONCERN

14. Are there any stained walls, flooring or soil on the property? Any evidence of water damage or mold growth?

N/A

15. Has fill dirt been brought onto the property that originated from an off-site source? If so, is the origin of the dirt known? Was the fill dirt tested for possible contamination?

No

16. Have any petroleum products, hazardous substances, tires, batteries or other waste materials been dumped, buried or burned on the property?

No

17. Are there any transformers, capacitors or hydraulic equipment on the site for which records exist indicating the presence of polychlorinated biphenyls (PCBs)?
(PCB use was generally phased out in the mid 1970s)

Yes, one electrical power pole with three pole-mounted transformers is currently located at the boundary of southern corner of the Site along North Rose Avenue

18. Are you aware of any other conditions at the site which might pose a concern, such as the presence of lead-based paint or asbestos-containing building materials?

No

19. Are you aware of any pending, threatened or past litigation or administrative proceedings regarding hazardous substances or petroleum products related to the property?

No

In addition to the responses above, please provide copies of any of the following Helpful Documents, if available:

••Environmental Site Assessment Reports (**including** previous Phase I ESA reports, subsurface investigation reports, Asbestos and Lead-based Paint Survey reports)
•Environmental Compliance Audit Reports
•Environmental Permits (for example, solid waste disposal permits, hazardous waste disposal permits, etc.)
•Registrations for underground or aboveground storage tanks
•Material Safety Data Sheets
•Community Right-to-Know
•Safety Plans, Spill Prevention Plans, etc.
•Reports regarding hydrogeologic conditions on the property or surrounding area
•Notices or correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
•Hazardous waste generator notices or reports
•Risk Assessments
•Recorded Activity and Use Limitations

The owner/occupant questionnaire was completed by:

H USER QUESTIONNAIRE

THIS PAGE INTENTIONALLY LEFT BLANK

URGENT and CONFIDENTIAL

USER QUESTIONNAIRE for PHASE I ESA

AS REQUIRED by ASTM Standard E1527-05

Site Name:, Proposed Rio School District Offices and Maintenance, Operations, and Transportation facilities
Address: 10-Acre Portion of Assessor's Parcel No. 144-0-110-225 located at or near 3410 North Rose Avenue, Ventura County, California, 93036

Completed By: Mr. Wael Saleh, Assistant Superintendent Business Services, Rio School District

The person who will use the Phase One should provide the following information. Please fill in this form to the best of your ability, explaining any Yes answers on a separate sheet of paper. Without these answers, our report would have to note that the Phase One is incomplete, and your Landowner Liability Protections could be at risk. We need these answers before we conduct the site visit.

1. **Environmental Cleanup Liens.** ASTM requires the User to check for environmental liens that may be filed or recorded against the subject property under federal, tribal, state or local law. Such liens might be listed in the "exceptions to coverage" in the property's title insurance commitment or policy. Failure to check for these liens could put your Landowner Liability Protections at risk.

   Have you checked for these environmental cleanup liens? ☒ Yes ☐ No
   Are you aware of any such liens against the subject property? ☐ Yes ☒ No

2. **Activity and Use Limitations (AULs).** These include engineering controls (e.g., slurry walls, caps) and land use restrictions or institutional controls (e.g., deed restrictions, covenants) that may be in place at the site or filed under federal, tribal, state or local law. The title commitment or policy might also list AULs.

   Are you aware of any possible AULs involving the subject site? ☒ Yes ☐ No

3. **Specialized Knowledge.** This involves personal knowledge or experience related to the subject property or nearby properties. For example, if you are involved in the same line of business as the current or former occupants of the property or an adjoining property, you would probably know of any chemicals, oil, degreasers, gasoline, or other hazardous substances commonly used in that type of business.

   Do you have any specialized knowledge that might indicate the past or present use or release of such substances on the subject or nearby properties? ☐ Yes ☒ No

4. **Fair Market Value (FMV).** A purchase price significantly below FMV may indicate an environmental problem. Please note that this question does not require an appraisal of the property. If the price is significantly below FMV, the User should consider whether it might be because contamination may be present at the property.

   Is the purchase price significantly below fair market value? ☐ Yes ☒ No

5. **Obvious Indicators.** This involves past or present spills, stains, releases, cleanups, etc. on or near the site.

   Do you know of any obvious indicators of possible contamination on or near the site? ☐ Yes ☒ No

6. **Common Knowledge.** Please use a separate sheet if necessary.

   Describe the past uses of the property: Agriculture

   Describe any specific chemicals that may have been present at the property: No Knowledge*

   Describe any other information that may help us identify possible contamination: No Knowledge*

# of separate sheets attached: _____

Your Signature_____ **Date** 9/11/2020

Mr. Wael Saleh, Assistant Superintendent Business Services
Rio School District

Explain Yes answers on a separate sheet.

1.0 INTRODUCTION

1.1 SUMMARY

This report presents the findings of a Phase I Environmental Site Assessment (ESA) prepared by Tetra Tech for the Rio School District (RSD) to evaluate and 11.1 acre portion of Assessor's Parcel No. (APN) 144-0-110-590 at 2600 North Rose Avenue in the Oxnard planning area of Ventura County, California (hereinafter referred to as the Site). Sage Realty (Sage) is coordinating this project for Rio School District (RSD). The Site location is shown on Figure 1. Figure 2 shows existing conditions, the approximate boundary of the Site, and the adjacent areas.

The Site is currently used as an organic berry farm and contains a single family residence, a farm yard area used for fuel and equipment storage, and areas formerly leased to a landscape maintenance company and for junk automobile storage (Figure 3).

The Phase I ESA was performed as part of the due diligence efforts required to support development of the Site by the RSD. The RSD proposes to acquire and develop the 11.1 acre Site with new educational and support facilities as part of the Rio Del Valle Expansion Project. The proposed development for the Site include a Transportation and Parking Facility in the western half of the Site (approximately 5.6 acres). The eastern half of the Site (approximately 5.4 acres) is planned to be developed as part of the adjacent Rio Del Valle Middle School campus at a future point in time with recreation/athletic facilities including tennis courts and basketball courts. The Rio Del Valle Expansion Project will also include new developments on the adjacent existing Rio Del Valle campus and a 10.0 acre North Campus expansion area that will continue to be used for agricultural production (Figure 1).

This Phase I ESA was performed by Tetra Tech under contract with RSD, in accordance with our proposal dated April 6, 2021, and ASTM International (ASTM) Standard Practice E1527-13 document entitled *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM 2013). In addition, as a conservative measure the assessment was conducted in accordance with the guidelines of proposed Title 40, Code of Federal Regulations (40 CFR) Part 312, *Standards and Practices for All Appropriate Inquiries* (AAI) (Federal Register 2015).

1.2 PURPOSE AND SCOPE

The purpose of this Phase I ESA was to evaluate potential Recognized Environmental Concerns (RECs) and Business Environmental Risks (BERs) associated with the areas of the Site included in the proposed modernization project. Pursuant to the updated ASTM standard effective November 1, 2013, ASTM defines RECs as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A BER is defined as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice". *De minimis* conditions are not recognized environmental conditions. This study was conducted to identify, to the extent possible and based on available information, whether former activities at or near the Site may have involved or resulted in the use, storage, disposal, and/or release of hazardous or potentially hazardous substances to the environment. Using professional judgement, Tetra Tech has developed an opinion regarding the potential for environmental concerns at the Site.

The scope of services performed for this project included the following tasks:

- Research and review of pertinent and readily available geologic and hydrogeologic literature and available historical aerial photographs and topographic maps of the Site and surrounding area;
- A reconnaissance of the Site and surrounding properties;
- Interviews with the current property owner, employees, and tenants;
- Evaluation of on-Site hazardous substance use, storage, and/or disposal;
- Interaction with appropriate municipal, regional, and state agencies to review available records and permits;
- Acquisition and review of a regulatory agency database report; and
- Preparation and submittal of this report summarizing the results of the Phase I ESA and presenting interpretations and recommendations.

1.3 METHODS OF INVESTIGATION

Literature Review. Available published and unpublished geologic, hydrogeologic, and environmental reports were reviewed. A list of these reports is presented in Section 10.0 of this report.

Topographic Map Review. Historical topographic maps obtained through Environmental Data Resources, Inc. (EDR) (EDR 2021) were reviewed to evaluate past land use and site development. These topographic maps are provided in Appendix A.

Aerial Photograph Survey. Historical aerial photographs obtained through EDR were reviewed and incorporated into this report (EDR 2021). This review consisted of examining the photographs for evidence of previous activities that may affect the environmental condition of the Site. The aerial photographs are provided in Appendix B.

Site Reconnaissance. Site reconnaissance, consisting of a walk-through visit of the Site and surrounding area. During the reconnaissance, visible indications of hazardous substance use, storage, and/or disposal practices were evaluated at the Site and adjacent areas. Photographs of the Site taken during the reconnaissance are provided in Appendix C.

Interviews. Interviews were conducted by email, telephone, or in person with various regulatory agency representatives (see below), and current Site occupants (business owners/managers) to obtain information on the Site history, land use, surrounding land use, and regulatory agency data.

Agency Contacts. During this assessment, the following agencies/organizations were contacted via email, telephone, personal interviews, and/or record searches for information relating to the Site:

- The California Environmental Protection Agency - Department of Toxic Substances Control (DTSC);
- California State Water Resources Control Board (SWRCB);
- Regional Water Quality Control Board, Los Angeles Region (LARWQCB);

- Ventura County (Air Pollution Control District, Environmental Health Division, Building Department, Fire Department, and Planning Department);
- California Department of Conservation Geologic Energy Management Division (CalGEM);
- National Pipeline Mapping System (NPMS); and
- U.S. Department of Homeland Security Federal Emergency Management Agency (FEMA).

Documentation of these contacts is provided in Appendix D.

Regulatory Agency Database and Sanborn Map Search. EDR maintains comprehensive environmental information databases and historical information, including Certified Sanborn Map Report, ERD-City Directories Abstract, and EDR Building Permit Report, which are included for the Site in Appendix E of this report. EDR specializes in providing such data for use in real estate and environmental documents. EDR performed a search of multiple databases containing specific government records, each within a prescribed search radius of the Site. The search radii varied from 0.25 to 1 mile depending on the database. The specific search radii for each database are listed in the EDR report (Appendix E).

Environmental Liens and Activity Use Limitations. A specific search for environmental liens and activity use limitations (AULs) was performed for the Site by EDR and is included in EDR Environmental Lien and AUL Search report in Appendix E.

1.4 SIGNIFICANT ASSUMPTIONS, LIMITATIONS, AND EXCEPTIONS, SPECIAL TERMS AND CONDITIONS

1.4.1 Significant Assumptions

Information provided by others to Tetra Tech is assumed to be accurate and complete. When provided, Tetra Tech has made reasonable inquiry into the accuracy of such information. Unless such inquiry indicated otherwise, the information was considered accurate and complete. As discussed in Section 1.4.2, there are limitations to this assumption.

There were no other significant assumptions made during the conduct of this Phase I ESA.

1.4.2 Limitations and Exceptions

Tetra Tech did not significantly delete or deviate from the scope and limitations set forth in the ASTM Standard Practice E1527-13 document entitled "Standard Practice for Environmental Assessments: Phase I Environmental Site Assessment Process", except for the following:

- A limited visual survey of the Site for the presence of suspect asbestos containing materials (ACMs), lead-based paint (LBP) and other lead containing materials (LCMs), and obvious mold/microbial growth/moisture accumulation or water damage. Tetra Tech's limited visual inspection for suspect ACMs, suspect LBP and other LCMs, and obvious mold conditions or water damage included observations in readily and physically accessible areas. The limited visual survey was not a formal survey and was not performed by a certified asbestos, LBP/LCM, and mold inspector.

Our professional services have been performed, our findings obtained, and our conclusions prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. Tetra Tech is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, Site inspection, and/or laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn from information obtained from limited research and Site evaluation. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surficial observations. Additionally, the passage of time may result in a change in the environmental characteristics at this Site and surrounding properties. This report does not warrant against future operations or conditions, nor does this warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit.

Tetra Tech reviewed past ownership of the Site with the intent to evaluate past Site usage. Tetra Tech is not a professional title insurance firm and makes no guarantee, either explicit or implied, that the listing which was reviewed represented a comprehensive delineation of past Site ownership or tenancy for legal purposes.

Certain information contained in this report may have been rightfully provided to Tetra Tech by third parties or other outside sources. When provided, Tetra Tech has made reasonable inquiry into the accuracy of such information; however, Tetra Tech does not make any warranties or representations, either expressed or implied, regarding the accuracy of such information, and shall not be held accountable or responsible in the event that any such inaccuracies are present.

1.4.3 Special Terms and Conditions

There were no special terms or conditions associated with this Phase I ESA.

1.5 USER RELIANCE

It is Tetra Tech's understanding that this Phase I ESA is being requested in conjunction with due diligence activities by the RSD. Tetra Tech recognizes that this report is to be used exclusively by RSD, and it is a report upon which RSD can rely, in accordance with the provisions of the contract between RSD and Tetra Tech.

1.6 STATEMENT OF QUALIFICATIONS

Tetra Tech is a leading provider of specialized management consulting and technical services in three principal business areas: resource management, infrastructure and communications. The Company's clients include a diverse base of public and private sector organizations serviced through more than 450 offices located in the United States and internationally.

Our technical staff have demonstrated competence and ability in preparing environmental assessments through long-term working relationships with local commercial firms and government agencies.

Tetra Tech has conducted environmental assessments at a wide variety of properties including industrial, manufacturing, commercial, and residential sites. Tetra Tech has performed Phase I ESAs for banks, private developers, county and city agencies, and commercial firms.

Tetra Tech personnel are well-trained and have extensive experience in the acquisition and interpretation of the collected data. Data gathering efforts focus on historic aspects of site activities that would contribute to spills, leakage or disposal of hazardous materials and petroleum products. Identifying contaminant issues that could impede development of the site, through either high costs or extended time periods for remedial actions, is a goal of data gathering and interpretation. Tetra Tech also identifies potential sources of contamination in the areas adjacent to the Site, such as leaking underground storage tanks that could impact the Site, and therefore become a REC.

THIS PAGE INTENTIONALLY LEFT BLANK

2.0 SITE DESCRIPTION AND HISTORY

2.1 SITE LOCATION

The Site is located on a 11.1-acre rectangular-shaped portion of APN 144-0-110-590, a 21.98-acre parcel in the Oxnard planning area of Ventura County, California (Figures 1 and 2). The geographic coordinates of the Site are approximately Latitude 34° 13' 50.75" North, Longitude 119° 9' 15.86" West (Google Earth 2021). Surface elevations at the Site are approximately 92 feet above mean sea level (EDR 2021).

2.2 SITE VICINITY CHARACTERISTICS

The Site is located in an area developed primarily for residential and agricultural land use situated in the Rancho Santa Clara del Norte General Plan Area of Ventura County (Ventura County 2019). (Figures 1 and 2). The Ventura County and City of Oxnard zoning for the Site and adjacent areas is shown on Figure 2 (City of Oxnard 2014; Ventura County Geographical Information Systems Department 2021; Ventura County Resource Management Agency Planning Division 2021). The Site and the adjacent area to the southeast and east are zoned Agricultural Exclusive forty acre minimum lot (AE-40 ac). North Rose Avenue is adjacent to the northwest Site boundary. The area directly across North Rose Avenue from the Site is zoned Rural Exclusive 20,000 square feet minimum lot (RE 20,000 sq ft) and 10,000 square feet minimum lot (RE 10,000 sq ft). The Rio Del Valle Middle School, located adjacent to the northeast Site boundary, is zoned RE 20,000 sq ft. The Oxnard Auto Center located adjacent to the southwest Site boundary across Collins Street is zoned for Auto Sales and Service.

2.3 CURRENT AND PAST USES OF THE SITE

Currently, the Site is used for residential use, storage yard use, and the agricultural production of organic raspberries. Historical aerial photographs and Google Earth images indicate that the Site was previously used for cultivation of row crops and orchards.

2.4 DESCRIPTION OF STRUCTURES, ROADS, AND OTHER IMPROVEMENTS

2.4.1 Site

At the time of the April 20, 2021 Site reconnaissance, the Site comprised an approximate 11.1-acre area of the 21.98-acre parcel owned by KMS Industries, Inc (Figure 3). The Site was leased by Reiter Affiliated Companies for organic raspberry production. The Site contained (approximately) a 0.3-acre Residence, 0.25-acre Tenant Storage Yard, a 0.45-acre Junk Vehicle Storage Area, a 1.1-acre Farm Equipment Storage and Parking Area, and a 0.3-acre Farm Yard. The remaining 8.7 acres of the Site was occupied by areas of organic raspberry production with access roads. The Residence area contained an unmaintained swimming pool, yard, parking area and garage, and tool shed. The Junk Vehicle Storage Area contained approximately 30 junk vehicles. A trailer, motor home, two storage containers, utility truck, and vehicles were located in the Tenant Storage Area. The Farm Equipment Storage and Vehicle Parking Area contained agricultural equipment including fertilizer tanks, a storage container, shade structure parts, tarps, wood, and motorized equipment. The storage container contained various equipment including an air compressor, hoe shovel, pallet jack, hoses, and plastic trash containers, twenty one 50-pound bags of "Ultra Fines" (a gypsum based agricultural product), a pallet of bags of citric acid anhydrous (an agricultural product), a folding table and chairs, and two wooden pallets. Three cylindrical steel above ground storage tanks (ASTs) containing diesel fuel, red diesel fuel, and gasoline were observed in the Farm Equipment Storage and Vehicle Parking Area in the northeastern corner of the Site. The two diesel ASTs are approximately 300 gallons capacity

and the gasoline AST is approximately 500 gallons capacity. The ASTs are within individual steel containment bins (Section 4.1.1).

The utility providers for the Site are summarized in Table 1. A private well provides water for the onsite residence (Well 26 G1). The water for crops at the Site is provided by one groundwater production well (Well 26F2) owned and operated by the Site owner, KMS Industries, Inc. The locations of the two KMS Industries wells are shown on Figure 3. No natural gas is provided to the Site.

Table 1: Utilities

Utility	Provider
Electricity	Southern California Edison
Natural Gas	NA
Potable Water	One groundwater production well (26G1) owned by KMS Industries, Inc.
Crop Irrigation Water	One groundwater production well (26F2) owned by KMS Industries, Inc.
Sewage Disposal	Rented portable restrooms for the farm operations and a septic system for the residence.
Refuse Disposal	Harrison Industries

2.4.2 Adjacent Residential and Commercial Areas

North Rose Avenue is located immediately adjacent to the northwestern Site boundary (Figure 2). The area across North Rose Avenue from the Site is largely developed in residential land use except the church, Iglesia Ni Cristo, on the corner of Collins Street and North Rose Ave. Rio del Valle Middle School is located adjacent to northeastern Site boundary. The southwestern edge of the Site is adjacent to Collins Street with retail, commercial, and auto sales facilities to the southwest. The area southeast of the Site is used for raspberry production by Reiter Affiliated Companies. The United Water Conservation District (UWCD) El Rio Spreading Grounds are located approximately 0.25 to 1.0 mile north of the Site on the northwest side of North Rose Avenue. Water is diverted from the Santa Clara River to the El Rio Spreading Grounds to recharge the underlying aquifers (refer to Section 3.3.1).

2.5 HISTORICAL RECORDS REVIEW

Past uses of the Site and surrounding properties were evaluated by reviewing available historical map coverage, historical aerial photographs, and information obtained from various agencies identified in Section 1.3. The information collected is summarized in the following sections.

2.5.1 Sanborn Map

The EDR Sanborn Map Report is included in Appendix E. The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others, which track historical property usage in approximately 12,000 American cities and towns. The Sanborn Map Report indicated there were no Sanborn Maps for the Site area (EDR 2021).

2.5.2 City Directory Review

The EDR City Directory Review is included in Appendix E. The EDR-City Directory Abstract is a screening tool designed to assist in evaluating potential liability on a target property resulting from past

activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five-year intervals. Listings were found in the City Directory under the Site address 2600 North Rose Avenue, Oxnard, CA 93036 for 1970, 1975, 1980, 1985, 1986, 1993, 1994, 2004, 2009, 2014, and 2017 indicating that the follow parties owned the Site:

- Vincent, Doud, 1970, 1975, 1980, 1985, 1986, 1993, 1994;
- Doud, Thomas., 2004;
- Rose Doud Avenue Family LTD Partners, 2009; and
- Doud, Michael, 2014, 2017

All of these owner listings appear to be associated with Rose Doud Avenue Family LTD Partners. The ownership history for 9 properties on the streets in the residential neighborhood and commercial areas across North Rose Avenue north and west of the Site were listed for years ranging from 1926 through 2017. All owners listed appeared to be car dealerships and private owners.

2.5.3 Building Permit Review

The EDR Building Permit Report is included in Appendix E. The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Building permit data can be used to identify current and/or former operations and structures/features of environmental concern on the target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

Two building permits were identified for the Site:

- Permit No. P14-000265 issued by the County of Ventura Building and Safety dated October 23, 2014 for relocation of an existing gas meter due to the widening of North Rose Avenue; and
- Permit No. 97-00002269 issued by the County of Ventura Building and Safety dated July 1, 1997 for an encroachment permit.

Thirty nine building permits were identified for other properties located within approximately 0.125 mile of the Site. None of the information in the permit summaries in the EDR Building Permit Report indicated that they would pose a REC for the Site.

2.5.4 Topographic Map Review

The following historical U.S. Geological Survey (USGS) topographic maps were obtained from EDR (EDR 2021): 15-minute Topographic Series Hueneme maps dated 1904, 1943, and 1947; and 7.5-minute Topographic Series Saticoy and Oxnard maps dated 1949, 1951, 1967, and 2012. Copies of the maps are provided in Appendix A. The maps were reviewed to evaluate previous development of the Site, adjoining properties, and surrounding areas.

The 15-minute 1904 map displays the current major roads near the Site, including unnamed roads on the current alignments of North Rose Avenue, Central Avenue, Santa Clara Avenue, and the US 101 freeway.

Two buildings exist northeast and northwest from the Site, on the other side of the unnamed road on the current alignment of North Rose Avenue. A few buildings are scattered throughout both sides of unnamed road on the current alignment of North Rose Avenue. The community of El Rio is identified approximately 0.5 mile west of the Site.

The 15-minute 1943 map displays the Site as open land directly between three fields developed in orchards as denoted by small green dots. The road directly northeast of the Site is identified as Ditch Road (renamed North Rose Avenue in 1963 [Find a Grave 2021]) and no buildings exist northeast and northwest from the Site as indicated in the 1904 map. Ventura Boulevard is shown on the current alignment of the US 101 freeway, and Santa Clara Avenue and Vineyard Avenue are identified. The region is developed as farmland. More residential/commercial development is present northwest of the Site on the corner of present-day US 101 and Vineyard Avenue and is label as "El Rio". Likewise, additional residential/development now exists southeast of the Site on the corner of present-day US 101 and Santa Clara Avenue.

The 15-minute 1947 map does not display any significant changes from the 15-minute 1943 map.

The 7.5-minute 1949 map presents more areas (now including the Site) developed in orchards throughout the Site area. Furthermore, the town of El Rio is more developed. Ditch Road is depicted as a divided road with a blue line water course between the roads. Buildings exist directly northwest of the Site across Ditch Road along present-day Collins Street. The road network is similar to the 1947 map.

The 7.5-minute 1951 map does not display any significant changes from the 7.5-minute 1949 map.

The 7.5-minute 1967 map exhibits numerous more roads between the Site and Vineyard Avenue with a configuration similar to the present. The Rio del Valle Middle School is shown northeast of the Site identified as "Del Valley Sch". The Ventura Freeway (US 101 freeway) has been constructed along the former alignment of Ventura Boulevard. Two new residential neighborhoods are shown south of the US 101 freeway and El Rio. New buildings can be found at the very northern section of the map northeast of Central Avenue.

The 7.5-minute 2012 map shows significant enlargement of the road network in the town of El Rio and south of the Site including Auto Center Drive and Ventura Boulevard north of the US 101 freeway and new road networks south of the US 101 freeway. Almost all areas south of the US 101 freeway and west of Rice Avenue are developed with streets. The areas north and west of the Site are shown as vacant land. The Rio del Valle Middle School adjacent to the Site is not displayed on this map. The UWCD El Rio Spreading Grounds are shown approximately 0.25 mile northwest of the Site.

2.5.5 Aerial Photograph Review

A review of historical aerial photographs obtained from EDR included photographs dated 1927, 1938, 1947, 1953, 1959, 1967, 1978, 1985, 1994, 2005, 2009, 2012, and 2016 (EDR 2021). Historical aerial photographs dating from 1958 from the University of California Santa Barbara (UCSB) Library Map and Imagery Laboratory were also reviewed (UCSB Library Map and Imagery Laboratory 2021). The photographs are included in Appendix B. A summary of the data from the aerial photography is provided in the following paragraphs.

The 1927 photograph is a black and white image at a scale of one inch equals 500 feet. The Site is within a larger lot of land (approximately 100 acres) and is cultivated with grain as are the areas adjacent to the Site on the north and on the southwest corner. A road is adjacent to the northwest Site boundary (Ditch

Road) along the current alignment of North Rose Avenue. The lot to the northwest of the Site across Ditch Road contains orchards. Additionally, orchards are growing about 300 feet south of the Site. Approximately 1,000 feet northeast of the Site is a residential/farmyard area with four structures and a farmyard. Similarly, another residential/farmyard area exists about 1,700 feet south of the Site, in the southeast corner of the parcel in which apparently, the Site lies. Windrows of eucalyptus trees line the entire visible portion of Ditch Road and many of the lot parcel boundaries. Linear patterns from former channels of the Santa Clara River flood plain are visible on the ground surface throughout the image.

The 1938 photograph is a black and white image at a scale of one inch equals 500 feet. The Site continues to be used for grain cultivation. Orchards have been planted on the plots of land northeast of the Site, adjacent to the windrow of eucalyptus trees closest to the Site's northern border. A dark line trending northwest-southeast through the orchard approximately 310 feet northeast of the Site appears to be an irrigation ditch. An additional eucalyptus windrow is visible about 470 feet northeast from the Site's northeastern boundary. Another new eucalyptus windrow has been planted along the southeast boundary of the parcel directly northwest of the Site. The residential/farmyard areas approximately 1,000 feet northeast of the Site and 1,700 feet south of Site have a similar appearance to the 1927 image. An orchard of larger trees is present on the land about 700 feet northeast of the Site. Adjacent parcels northwest of the Site continue to be used as orchard farms. Similarly, the plot of land on the southwest corner to the Site remains to be used for grain cultivation. About 400 feet southwest of the Site, in the Site parcel, a new area of orchards has been planted. A few more parcels southeast of the Site's parcel also now contain orchards. Linear patterns from former channels of the Santa Clara River flood plain are still visible on the ground surface throughout the image.

The 1947 photograph is a black and white image at a scale of one inch equals 500 feet. New orchards have been planted within the Site boundary. The Site's adjacent areas appear similar to the 1938 photograph, except that the orchards and windrow trees are more mature. The residential/farmyard areas approximately 1,000 feet northeast of the Site and 1,700 feet south of Site have a similar appearance to the 1938 image. Collins Street and Stroube Streets have been constructed approximately 400 feet and 1,000 feet southwest of the Site on the northwest side of Ditch Road with residential lots on each side of them. The linear patterns from former channels of the Santa Clara River flood plain are still visible on the ground surface on the lot about 1,000 feet north of the Site on the northwest side of Ditch Road (which is planted with row crops and grain) but have been largely obliterated in the south part of the image.

The 1953 photograph is a black and white image at a scale of one inch equals 500 feet. The orchard within the Site and area to the northeast, southeast, and southwest have been removed and appears to in the process of being replanted. The residential/farmyard area approximately 1,000 feet northeast of the Site and 1,700 feet south of Site has a similar appearance to the 1947 image. More residential development has occurred on the northwest side of Ditch Road with new lots and housing along Orange Drive, Walnut Drive, and Corsicana Drive across from the Site. The large lot about 1,400 feet to the north of the Site on the northwest side of Ditch Road is planted in grain. Other plots of land southeast of the Site remain used as orchards.

The 1959 photograph is a black and white image at a scale of one inch equals 500 feet. The entire Site parcel and surrounding areas on the southeast side of Ditch Road are developed in orchards. A new residential building exists in the central area of the Site. The cleared land and building sit on about 0.25-acre of land, with about a 300-foot driveway entering the area from Ditch Road. Additionally, a small clearing within the orchard exists about 200 feet south of the Site. This clearing contains a small structure. The area adjacent to the Site's northeastern boundary includes more developed and mature orchards. Pole-mounted electrical power lines are visible along the southeast side of Ditch Road. Ditch Road has been widened to include a central left turn lane. All of the orchards and some of the eucalyptus windrows in the parcel directly north of the Site and along Ditch Road have been cleared, with a small remnant of eucalyptus

windrows approximately 850 feet long on the northwest side of Ditch Road across from the Site. A recently planted orchard is visible in the east-southeast area of this larger parcel. A road, Ventura Boulevard (present-day US 101 Freeway), is now a divided four lane highway with on and off ramps with a bridge over it where Ditch Road crosses the freeway. More residential development has occurred on the northwest side of Ditch Road with new lots and housing along Helsam Avenue, Salem Avenue, Simon Way, Will Avenue, Lamar Avenue, George Street, and Ditch Road. The linear patterns from former channels of the Santa Clara River flood plain visible in previous images are gone.

The 1967 photograph is a black and white image at a scale of one inch equals 500 feet. The parcel that the Site is a part of continues to be used primarily for orchards. The Rio del Valle Middle School is now present immediately adjacent to the Site's northeastern border on a new lot that includes approximately 5.7 acres. The school includes nine buildings, a parking lot along North Rose Avenue, two baseball fields, two paved court areas, and turfed fields. The remainder of the area on the southeast side of North Rose Avenue is developed in orchards. North Rose Avenue has four lanes and median islands similar to its current configuration. The small structure about 200 feet south of the Site has an additional small clearing of land with another small structure directly south of it. The residential/farmyard area approximately 1,000 feet north of the Site has a similar appearance to the 1959 image. The residential/farmyard area about 1,700 feet south of the Site displays an additional small building directly west of the home. The parcel directly north of the Site and Rio del Valle Middle School contains orchards again. The area on the northwest side of North Rose Avenue is similar in appearance to the 1959 image. The parcel southeast of the Site's parcel displays some plots of land that previously held orchards as areas now planted in grain.

The 1978 photograph is a black and white image at a scale of one inch equals 500 feet. The Site's parcel and the large parcel southeast of the Site is cleared of orchards and is planted in row crops. The parcel directly north of the Site and Rio del Valle Middle School remains covered in orchards. The eucalyptus trees dividing the parcels are no longer present. The appearance of the Site and neighboring residential neighborhoods remain similar in appearance to the 1967 image. The before mentioned small structure about 200 feet south of the Site appears to now be a developed residential home with a pool and land for storage. The residence within the Site also appears to have a pool and cars/storage on its property. A larger structure and paved area with cars now exists adjacent to the residential/farmyard area about 1,700 feet south of the Site. Pole-mounted electrical power lines are visible along the east side of North Rose Avenue. A track is now present at the Rio del Valle Middle School.

The 1985 photograph is a black and white infrared image at a scale is one inch equals 500 feet. The appearance of the Site and all areas in the image are similar in appearance to the 1978 image except the parcel directly north of the Site has been converted to row crops.

The 1994 photograph is a black and white image at a scale of one inch equals 500 feet. The appearance of the Site is similar in appearance to the 1985 image. The residential home 200 feet south of the Site and the residential/farmyard area about 1,700 feet south of the Site no longer exist. The land directly south of the Site is now being used as cleared land or commercial property. Auto Center Drive and many commercial businesses are now present in this area.

The 2005 photograph is a colored photograph at a scale of one inch equals 500 feet. The appearance of the Site and most areas in the image is similar in appearance to the 1994 image. The Site and most of the farmland southeast of North Rose Avenue appear to be planted in strawberries. New parking lots and buildings are visible along Auto Center Drive directly along the Site's southern edge. The bridge and on ramps at the intersection of the US 101 Freeway and North Rose Avenue have been reconstructed to their present configuration. The agricultural land neighboring the school and Site has been divided into long, rectangular parallel parcels.

The 2009, 2012, and 2016 are colored photographs with a scale of one inch equals 500 feet. The appearance of the Site and most areas in the image is similar in appearance to the 2005 image. The Site is planted in strawberries in the 2016 image and row crops in the 2009 and 2012 image.

The 2021 image from Google Earth displays about 1.5 acres of previous row crops in the northwest corner of the Site removed. The area has been leveled in dirt and is used primarily for the storage of farming equipment and vehicles.

2.5.6 Agency Records Review

The following is a summary of information obtained from correspondence with agencies during this assessment. These agencies were contacted via email, telephone, and/or records searches for information relating to the Site and surrounding areas. Documentation obtained from the various agencies is included in Appendix D.

2.5.6.1 California Department of Conservation, The Geologic Energy Management Division

Tetra Tech reviewed the Geologic Energy Management Division's (CalGEM, formerly DOGGR) online mapping application Well Finder (CalGEM 2021), Map 214 (California Department of Conservation, Division of Oil, Gas, and Geothermal Resources [DOGGR] 2000]), and associated well history documents to evaluate potential presence of oil fields and wells within the Site vicinity (Appendix D). Records indicate that the Site is not located in an oil field. The nearest oil field to the Site is the Santa Clara Avenue Field, located approximately 0.5 to 1 mile southeast of the Site. There are no known active or abandoned wells on Site. Two plugged wells are located within 0.4 miles or less from the Site. The online map shows that well "McGrath-McCormick 1", located approximately 1,500 feet northeast of the Site, is the oil well closest to the Site. This well was drilled by Union Oil Company of California to a depth of 11,058 feet and abandoned and plugged in 1959 as a dry hole (non-oil producing). Another plugged dry hole well, "Snodgrass 1", is located 0.4 miles west of the Site. The well was drilled by Shell Western E&P Inc. in 1928 "for geologic information only" to a depth of 1,530 feet and abandoned.

2.5.6.2 California State Water Resources Control Board

Tetra Tech reviewed online resources at the California Environmental Protection Agency (Cal EPA) State Water Resources Control Board (SWRCB) GeoTracker database (SWRCB 2021) for any records pertaining to the Site (Appendix D). The GeoTracker database includes files from the Ventura County Resource Management Agency Environmental Health Division (VCEHD). The GeoTracker database did not show any records for cases located on the Site. According to the GeoTracker database, four closed Leaking Underground Storage Tanks (LUSTs) are present approximately 0.2 miles southwest of the Site along Auto Center Drive. In addition, two closed LUSTs are present approximately 0.5 miles northeast of the Site on North Rose Avenue.

Two LUST cleanup sites, Lexus of Oxnard (T0611125329) and Lexus of Oxnard (T061110805), are located at the intersection of North Rose Avenue and Auto Center Drive, about 0.2 miles south of the Site. The Lexus of Oxnard (T0611125329) has one cleanup action report listed on the GeoTracker database that documents excavation on October 18, 2001. Its leak was discovered, reported, and stopped in 2001, and the site was closed with no further action in 2002. The contaminant of concern (COC) was gasoline. The other site, Lexus of Oxnard (T061110805), does not have a cleanup action report listed in the GeoTracker database. Its leak was also discovered and reported in 2001, and its case has been closed as of 2007. This tank's COC was gasoline. These two sites do not pose a risk to the Site.

The GTE El Rio Central Office (T0611100374) and the Honda of Oxnard (T0611170364) LUST cleanup sites are located at the intersection of Auto Center Drive and Ventura Boulevard, about 0.2 miles southwest of the Site. No cleanup action reports for these sites exist on the GeoTracker database. The GTE El Rio Central Office leak was discovered and reported in 1987. The site was closed in 1991, and its COC was diesel. The Honda of Oxnard leak was discovered, reported, and stopped in 2002. A soil and water investigation report and no further action letter were conducted in 2003. The COC was gasoline. These two sites do not pose a risk to the Site.

Two more LUST cleanup sites, UWCD El Rio Booster Pumping STN (T0611171990) and Oxnard College-Tech Building (T0611100790), are located on North Rose Avenue, just south of the UWCD facilities and 0.5 northeast of the Site. No cleanup action reports for these sites exist on the GeoTracker database. The UWCD El Rio LUST leak was discovered, reported, and mitigated in 2003. The COC was potential lead soil contamination. The Oxnard College LUST leak was discovered and reported in 1991 and was closed with no further action in 2003. The file indicated potential oil soil contamination. These two sites do not pose a risk to the Site.

2.5.6.3 Department of Toxic Substances Control

Tetra Tech reviewed online resources provided by the DTSC for any records pertaining to the Site. No records for the Site were located in the DTSC EnviroStor database (Appendix D). One school cleanup site, Rio Vista Middle School, was identified within 1-mile northwest from the Site. In 2009, the DTSC issued a No Further Action letter for the site and certified that all response actions have been completed (DTSC 2021). This site does not pose a risk to the Site.

2.5.6.4 Ventura County Resource Management Agency Environmental Health Division

All pertinent VCEHD files for the Site area were reviewed in Section 2.5.6.5. The files reviewed are included in Appendix D.

2.5.6.5 Ventura County Certified Unified Program Agency

All pertinent Ventura County CUPA files for the Site area were reviewed in Sections 5.1.1 through 5.1.5 from records provided by EDR (EDR 2021). The information is included in Appendix E.

2.5.6.6 Hazardous Pipelines

Tetra Tech evaluated the Site area to determine if hazardous pipelines are located within 1,500 ft of the Site. California Code of Regulations (CCR) Title 5, Section 14010(h) defines hazardous pipelines as:

- Pipelines carrying chemical products, natural gas, and other hydrocarbon products that are operating at a pressure of 80 pounds per square inch gauge (psig) or higher; and
- High-volume water lines, which are defined as water lines 12 inches or greater in diameter, and open aqueducts of comparable and greater volume handling capacity.

Three potentially hazardous pipelines located within 1,500 feet of the Site were identified.

National Pipeline Mapping System

The U.S. Department of Transportation (DOT) Pipeline and Hazardous Materials Safety Administration NPMS website is an interactive database that maps the locations of hazardous liquid and gas transmission

pipelines under DOT jurisdiction. Tetra Tech reviewed the NPMS website for information on hazardous liquid and gas transmission pipelines in the Site area. The NPMS data base indicated that no hazardous liquid pipelines are located within 1,500 feet of the Site (Appendix D). The nearest natural gas pipeline transmission pipeline under NPMS jurisdiction is located approximately 0.8 miles east from the Site along Santa Clara Avenue (NPMS 2021) (Appendix D).

City Oxnard Public Works

The City of Oxnard Public Works Water Division is the water purveyor for the Site area. Tetra Tech contacted the City of Oxnard Public Works Water Division for information on water pipelines within 1,500 feet of the Site and was provided with the City of Oxnard Water Atlas pages showing water pipelines within 1,500 feet of the Site (Magana 2021; City of Oxnard 2018; City of Oxnard 1992) (Appendix D). The City of Oxnard Water Atlas shows a 16-inch diameter steel water pipeline buried at approximately 4 feet below ground surface (bgs) operated by the City of Oxnard routed northeast-southwest beneath North Rose Avenue approximately 30 feet northwest of the Site (Figure 2). In addition, a 12-inch diameter PVC pipe runs along Collins Street, the southern edge of the Site, buried at approximately 4 feet below ground surface.

United Water Conservation District

The UWCD manages the water resources of the Santa Clara River and its associated aquifers and provides water to Ventura County and the cities of Oxnard, Port Hueneme, Ventura, Santa Paula, and Fillmore. The Oxnard Water Atlas indicates that the UWCD maintains a 42-inch water pipeline beneath North Rose Avenue approximately 40 feet northwest of the Site (Figure 2) (Magana 2021; City of Oxnard 2018) (Appendix D). The pipeline is constructed with cement mortar-lined steel and is buried at approximately 4 feet bgs (Kada 2020).

2.5.6.7 Federal Emergency Management Agency

Tetra Tech obtained the Flood Insurance Rate Map No. 06111C0910E for the Site vicinity from the FEMA website for information regarding the current location of flood zones (FEMA 2010). This information is summarized in Section 3.3.2.

THIS PAGE INTENTIONALLY LEFT BLANK

3.0 PHYSICAL SETTING AND CONDITIONS

The Site is depicted on the Oxnard, California Quadrangle USGS 7.5-minute topographic series map (USGS 2018) (Figure 1). The geographic coordinates of the Site are approximately Latitude 34° 13' 50.75" north, Longitude 119° 9' 15.86" west. The EDR report indicates that the Site elevation is approximately 92 feet above mean sea level (msl) (EDR 2021). Review of the USGS 7.5-minute topographic series map and Google Earth image dated February 28, 2021, indicates that the Site area topography is relatively flat with a slight gradient to the southeast. Site surface elevations at the Site range from approximately 95 above msl on the northwest boundary to 89 feet above msl on the southeast boundary.

3.1 REGIONAL GEOLOGY

The Site is located in Ventura County on the Oxnard Plain of the central Ventura Basin within the Western Transverse Ranges geomorphic province of California. This geomorphic province is distinguished by the prevailing east-west linear trend of its geologic structure and geomorphology in contrast to the predominant northwest-southeast trend of the geomorphic features within most other provinces of the state. The province is bounded by major faults, including the San Andreas Fault zone in the northeast, the Big Pine fault in the north and the Malibu Coast fault in the south. Most of the faults in Ventura County are reverse faults which dip north, including the Pine Mountain, Red Mountain, San Cayetano, Santa Susana, Simi, Ventura and Malibu Coast faults (Norris and Webb 1990).

The Ventura Basin is a large synclinal structure situated between the Santa Ynez Range and Topa Mountains on the north, the Channel Islands and Santa Monica Mountains on the south, the San Gabriel Fault on the east, and extending to the western end of the Santa Barbara Channel (Norris and Webb 1990). Structure in the Oxnard Plain is characterized by a series of broadly folded west-trending and east-northeast–trending anticlines and synclines associated with thrust and reverse faults that formed in the Saugus Formation and may have also deformed the overlying older alluvium (California Department of Conservation, California Geologic Survey [CGS] 2002).

3.2 LOCAL GEOLOGY

Locally, the Site is situated in the Oxnard Plain sub-province. Lithologic units of sedimentary origin underlying the nearly-flat Oxnard Plain are approximately 45,000 feet in thickness and consist of Upper Cretaceous, Tertiary, and Quaternary-age units which have been deposited on a pre-Upper Cretaceous base of igneous and/or metamorphic rock. Unconsolidated Holocene (last 11,000 years) sediments beneath the Site were deposited during the post-glacial period in marine, lagoonal, lacustrine, fluvial-flood plain, deltaic and eolian environments, including the pre-historic delta of the ancient Santa Clara River and Calleguas Creek and reach a depth of approximately 900 feet beneath the Oxnard Plain (Turner and Mukae 1975).

3.3 HYDROLOGY

3.3.1 Hydrogeology

The Site straddles the boundary between the Oxnard Forebay Basin and the Oxnard Pressure Plain Basin, subbasins of the larger Santa Clara-Calleguas groundwater basin. The Oxnard Forebay Basin is an important groundwater recharge area for valuable resources of groundwater in aquifers underlying the Oxnard Plain while the Oxnard Pressure Plain Basin contains a shallow perched water bearing zone that is separated from the underlying aquifers of the Santa Clara-Calleguas groundwater basin by an aquitard at approximately 50 to 100 feet below ground surface (bgs) that inhibits recharge of the underlying groundwater aquifers. The unconsolidated sediments beneath the Oxnard Forebay Basin and Oxnard

Pressure Plain Basin and the Site are composed of both continental and marine deposits of Tertiary and Quaternary age. They contain multiple aquifers of coarse grain sediments with intervening fine grain aquitards. Aquifers have been grouped into an Upper Aquifer System (UAS) and a Lower Aquifer System (LAS) based on changes in geologic structure and separated in many areas by regional layers of low permeability clay. The UAS sediments are relatively flat lying and extend to approximately 400 feet beneath the Site. The sediments in the LAS are more structurally complex, resulting from folding and faulting. In the Oxnard Forebay Basin, alluvial sediments in the subsurface are predominantly coarse grain sands and gravels. Fine grain sediments, such as silts and clays, that can act as confining layers are generally absent or discontinuous. This condition allows for direct recharge of the UAS from the surface and some recharge of the LAS from the UAS in the subsurface (Fox Canyon Ground Water Management Agency 2017; Turner and Mukae 1975).

The first encountered groundwater beneath the Site is in the UAS. Review of potentiometric maps for the UAS from 1972 through 2018 indicate that the depth to groundwater ranged from approximately 33 feet bgs to 139 feet bgs during that time period (Fox Canyon Groundwater Management Agency 2015) (Appendix D). The most recent groundwater elevation data for spring 2018 indicates that the first encountered groundwater in the Site area was at approximately -39 feet below msl or approximately 138 feet bgs (Fox Canyon Groundwater Management Agency 2019). The depth to the highest known historical groundwater level in the Site area is approximately 20 feet bgs (CGS 2002).

3.3.2 Flood Zoning

According to the FEMA Flood Insurance Rate Map No. 06111C0910E, the Site is not located in a flood hazard area (FEMA 2010 (Appendix D).

3.3.3 Wetlands

The EDR report indicates that the Site area is covered in the National Wetlands Inventory prepared by the U.S. Fish and Wildlife Service (USFWS) (EDR 2021) (Appendix D). The U.S. Fish and Wildlife Service maintains the National Wetlands Inventory (NWI), a geographic information system (GIS)-based relational database of wetlands that have been mapped throughout the country. Based on the information provided in the EDR Report and review of the USFWS map for the area surrounding the Site, the nearest wetland is the UWCD El Rio Spreading Grounds, located 0.5 to 1 mile north of the Site (USFWS 2020) (Appendix D).

3.3.4 Asbestos Containing Rocks

Tetra Tech has reviewed available topographic and geologic maps for the Site area and *A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos* (CDMG 2000) for potential sources of naturally occurring asbestos (NOA) and believes the risk for NOA at the Site is low. The nearest sources of NOA are approximately 40 miles northwest of the Site in the Santa Ynez River Watershed of Santa Barbara County.

4.0 SITE RECONNAISSANCE AND INTERVIEWS

On April 20, 2021, Tetra Tech performed a visual reconnaissance of the Site property and conducted an interview with Mr. Luis Calderon, Director at Reiter Affiliated Companies. The purpose of the reconnaissance was to evaluate the Site and neighboring properties for visible indications of potential hazardous substance use, storage, and disposal, including the presence of underground storage tanks (USTs), ASTs, asbestos-containing materials, polychlorinated biphenyl (PCB) containing transformers or electrical equipment, and/or evidence of soil staining, stressed vegetation, ponds, pits, sumps, suspicious odors, fill and depressions, drums and barrels, or any other condition indicative of potential contamination. Tetra Tech used the information provided in the interview to complete the Checklist for Phase I Site Visit (Appendix F). Mr. Calderon also completed the Phase I Environmental Site Assessment Owner/Occupant Questionnaire included in Appendix G.

4.1 SITE RECONNAISSANCE

Photographs were taken during the Site reconnaissance to document current conditions. Copies of the Site photographs are included in Appendix C. The Site layout is shown on Figure 3.

4.1.1 Storage Tanks and Drum Storage

Three ASTs owned by MacValley Oil Company under lease from Reiter Affiliated Companies were observed on the Site during the Site reconnaissance. The three ASTs are located next to each other in secondary containment bins in the Farm Equipment Storage and Vehicle Parking Area in the northwest corner of the Site. The ASTs are adjacent to the shipping container in the area, about 150 feet northwest of the residence. One AST holds diesel fuel, one holds red diesel fuel, and one holds gasoline. The two diesel ASTs are approximately 300 gallons capacity and the gasoline AST is approximately 500 gallons capacity. The ASTS were placed onsite in 2016. Soil staining was observed at the base of the AST secondary containment bins (Appendix C, Photos 47-51).

In addition, approximately 30 plus 1,000 liter (264 gallon) organic liquid fertilizer storage containers (totes) exist on the Site. Most of the containers are located directly north of the diesel and gasoline ASTs, and the remaining containers are spread out throughout the northwestern storage area of the Site. Some of the containers have evidence of water spillage on the nearby ground (Appendix C, Photos 40-42).

4.1.2 Hazardous Substances and Petroleum Products

Based on review of historical aerial photographs of the Site area, the Site was part of an orchard (possibly citrus) from at least 1938 to 1978. Smudge pots were commonly used to burn bunker oil for frost abatement in orchards during this time period. There is a potential that bunker oil from former smudge pot frost abatement activities at the Site is present in surface and near surface soil at the Site.

About 1 acre of the Site is used as a storage parking lot/junkyard. Old cars, camper vans, trucks, and tires are scattered in the dirt areas to the northeast and southwest of the residential home (Appendix C, Photos 23-30). A car battery was observed on the ground next to one of the cars in the junkyard (Appendix C, Photo 52). Approximately 30 abandoned cars were observed at the Site. An abandoned wooden storage shed lies north of the residence garage. The shed contains old paint, chemical containers, and miscellaneous tools and equipment (Appendix C, Photos 2-3). Additionally, fertilizers, paint, and cleaning products were observed throughout the residence in closets and the garage (Appendix C, Photos 12-13, 16, 17).

4.1.3 PCB-Containing Transformers and Equipment

Two pole-mounted electrical transformers were observed onsite and one was observed offsite, immediately adjacent to the Site boundary along the northwestern edge of the Site on North Rose Avenue (Appendix C, Site 55-60). No evidence of transformers leakage, such as soil staining, was observed during the Site reconnaissance.

4.1.4 Stained Soils/Stains/Stressed Vegetation

Various locations throughout the storage parking lot/junkyard next to the residential home displayed oil stains from old cars (Appendix C, Photos 31-32). Additionally, leaking or spills were observed near the water fertilizer containers and ASTs, as discussed above. No stressed vegetation was observed on the Site.

4.1.5 Asbestos-Containing Materials

The environmental professional preparing this report has reviewed the site history and performed a site inspection such that an educated opinion could be rendered. This opinion shall in no means constitute confirmation of the presence or absence of asbestos-containing building materials (ACBM). For confirmation, a complete survey with sampling and analysis would need to be performed. The use of asbestos was generally discontinued after 1980 with certain types of insulation, fireproofing, and acoustical materials banned by 1978.

The historical aerial photographs reviewed for this report indicate that the residence at the Site was constructed between 1953 and 1959. Given the age of the building, ACBMs may be present in building materials such as pipe insulation, wall insulation, wall board compounds, adhesives, and roofing materials.

4.1.6 Lead-Based Paint

The use of LBP was banned in 1978. Based on the age of the existing onsite structures, LBP may have been applied to the structures. During the Site reconnaissance, interior and exterior photos of building walls were taken (Appendix C, Photos 1, 2, and 10).

4.1.7 Pipelines

Two high volume water transmission pipelines are located approximately at 50 and 65 feet northwest of the Site buried beneath North Rose Avenue and one is located approximately 8 feet southwest of the Site along Collins Street (Magana 2021). These are considered to be potentially hazardous pipelines within 1,500 feet of the Site as defined in CCR Title 5, Section 14010(h) and are discussed in Section 2.5.6.6.

4.1.8 Electromagnetic Radiation

Title 5 of the California Code of Regulations (CCR) stipulates that a school site shall not be within the following distances from a high power electric transmission line:

- 100 feet from a 50-133 kV line;
- 150 feet from a 220-230 kV line; or
- 350 feet from a 500-550 kV line.

Pole-mounted electrical power lines owned and operated by SCE are located along the northern and western Site boundary along North Rose Avenue and Rio Del Valle Middle School. A line of power lines runs through the property on Site. It is unknown what the voltage is for these power lines.

Mr. Jim Osborne from SCE indicated that the kV rating for the electrical power lines along North Rose Avenue are rated at 16 kV (Osborne 2020).

4.1.9 Hazardous Air Emitters

Tetra Tech evaluated the neighborhood during the Site reconnaissance for facilities or businesses considered likely to emit hazardous air pollutants; none were observed in the Site vicinity. Based on observations of surrounding properties and review of the EDR Radius Report (EDR 2021) (Appendix E) which tracks the emissions database inventory of the California Air Resources Board, there are no hazardous air emission sources located within 0.25 mile of the Site and it is unlikely that the Site would be impacted by hazardous air emissions.

4.1.10 Pesticides/Herbicides/Fertilizers

Based on review of historical aerial photographs of the Site area, the Site was part of an orchard (possibly citrus) from at least 1938 to 1978, and for row crop production from at least 1978 to the present. During the Site reconnaissance, it was confirmed that the Site is currently used as an organic raspberry farm and that no pesticides or herbicides are currently used. Therefore, it is likely that organochlorine pesticides (OCPs) and arsenic-based pesticides were formerly used at the Site. OCPs were used for insect control on farms throughout the United States from the 1940s through 1972, when they were banned by legislation due to their toxic characteristics. They persist in the environment and are commonly found on lands that were farmed from the 1940s through 1972. Some OCPs, such as DDT, are human carcinogens.

Table 2 lists the pesticides used at the Site between September 2015 and August 11, 2021 for the organic farming operation (Calderon 2021). The complete list is included in Appendix D. Because these are applied for certified organic farming, they are not considered to pose a REC for the Site.

Table 2
Organic Pesticides Used at 2600 North Rose Avenue from September 2015 and August 11, 2021

Product Name	Total Quantity Used		Amount Used per Acre	
ACTINOVATE SP	612.00	ounces	12	ounces
AZA-DIRECT	1,909.76	ounces	32	ounces
CUEVA FUNGICIDE CONCENTRATE	1,237.00	gallons	1.5-2.0	gallons
ENTRUST SC	4,296.79	ounces	6.0-10.2	ounces
GRANDEVO	256.20	pounds	2.0-3.0	pounds
JAVELIN WG BIOLOGICAL INSECTICIDE	317.02	pounds	1.0-1.5	pounds
KINETIC	6,471.66	ounces	1.0-12.0	ounces
LEAF LIFE WIDESPREAD ORGANIC	5.63	gallon	0.1	gallon
MICROTHIOL DISPERSS	4,903.00	pounds	2.0-6.0	pounds
MILLER NU FILM P	14.63	gallon	0.01-0.06	gallon
NEEMIX 4.5 BOTANICAL AGRICULTURAL INSECTICIDE	7.88	gallon	0.1	gallon
OMNI OIL 6	69.67	gallons	1.0-1.5	gallons

Table 2
Organic Pesticide Used at 2600 North Rose Avenue from September 2015 and August 11, 2021 (continued)

Product Name	Total Quantity Used		Amount Used per Acre	
OSO 5% SC FUNGICIDE	1.07	gallon	0.1	gallon
OXIDATE	202.50	gallons	1.0-1.5	gallons
OXIDATE 2.0	39.00	gallon	0.3-1.0	gallon
PFR-97 20% WDG	61.92	pounds	2	pounds
PYGANIC CROP PROTECTION EC 5.0 II	685.85	ounces	14.0-16.0	ounces
REGALIA	131.00	gallon	0.5-0.8	gallon
SERENADE ASO	36.74	quarts	2	quarts
SUPPRESS EC	76.50	gallons	2.3	gallons
TRILOGY	252.49	gallons	0.2-2	gallons
TRI-TEK	199.52	gallons	2	gallons
XENTARI BIOLOGICAL INSECTICIDE DRY FLOWABLE	2,320.73	pounds	1.5-2.0	pounds
XENTARI(R) BIOLOGICA	160.00	pounds	2	pounds

4.1.11 Rodents

During the Site reconnaissance, no evidence of rodents was observed.

4.1.12 Potable Water Supply/Wells

Two private domestic wells were observed at the Site during Site reconnaissance (Figure 3). Well 26G1 is located approximately 10 feet southeast of the residence garage and is used to provide potable water for the Site residence. Well 26F2 is located approximately 45 feet southeast of the residence garage and is used to provide water for the berry farm. Well 26G1, draws from the Oxnard aquifer. Well 26F2, draws from the Oxnard and Mugu aquifers (Ventura County Public Works Agency Flood Control and Water Resources Department 1984, Revised 1990). Both wells are owned by the Site owner, KMS Industries, Inc. (Calderon 2021) (Appendix C, Photos 20 and 21).

4.1.13 Wastewater

During Site reconnaissance, no industrial wastewater generation was observed.

4.1.14 Storm Water

Storm water runoff on the Site drains to the drainage ditches bordering the raspberry rows and is carried offsite to the southeast following the natural topography of the Site area.

4.1.15 Wetlands/Intertidal Lagoon

The EDR report indicates that the Site is covered in the National Wetlands Inventory prepared by the USFWS (EDR 2021) (Appendix E). Based on the information provided in the EDR Report and review of

the USFWS map for the area surrounding the Site, the nearest wetland is the UWCD El Rio Spreading Grounds, located approximately 0.5 to 1 mile north of the Site (USFWS 2021).

4.1.16 Sewage Disposal System/Septic Systems

The Site's residential home has a septic system. Tetra Tech requested information on the residential septic system from the Site owner but has not received it.

4.1.17 Drains/Sumps/Vaults/Pools

During the Site Reconnaissance, one pool was observed in the backyard of the residence. The pool and pool water were in poor condition and not well maintained (Appendix C, Photo 18).

4.1.18 Solid Waste

No evidence of solid waste disposal was observed at the Site. Domestic trash collection and disposal is managed by Harrison Industries.

4.1.19 Other Site-specific Environmental Conditions

There were no other Site-specific environmental conditions noted during the site reconnaissance.

4.2 INTERVIEWS

4.2.1 Reiter Affiliated Companies

Mr. Luis Calderon gave Mr. Steele and Ms. Sawaya a tour of the raspberry farm and residential/storage area during the Site reconnaissance and answered questions about the Site. Mr. Calderon escorted the team through the residence, the neighboring storage yards, and along the border of the farm and through the agricultural rows. He answered questions regarding ASTs or USTs, pesticide/herbicide use, storage drums, etc. (Calderon 2021).

4.2.2 Interview with Past Owners and Occupants

There are no other past owners to interview. Past occupants were not able to be contacted.

4.2.3 Interview with Local Government Officials

Tetra Tech contacted local government officials at agencies where records for the Site were available and reviewed them. Additional information from interviewed government officials, if any, is included in the discussion in previous sections of this report.

4.2.4 Interview with Others

Mr. Jim Osborne, Planning Specialist with Southern California Edison, was contacted to inquire about neighboring powerline and transformer voltage and potential presence of PCBs. Mr. Michel Kadah, Engineer with UWCD, provided information about potential hazardous water pipelines and the water treatment facilities adjacent to the Site. Ms. Clara Magana of the City of Oxnard was contacted for information about water pipelines operated by the City of Oxnard in the Site area. No other interviews were conducted with individuals other than those cited in this section of the Report.

THIS PAGE INTENTIONALLY LEFT BLANK

5.0 ENVIRONMENTAL RECORDS REVIEW

5.1 EDR RECORDS

As part of this assessment, Tetra Tech retained the services of EDR, a Connecticut-based company that maintains comprehensive environmental information databases and specializes in providing such data for use in real estate and environmental documents, such as this Phase I ESA. EDR performed a database search for the target property in accordance with current ASTM standards. A copy of this report is included as Appendix E.

Among the environmental databases searched were National Priorities List (NPL) sites; RCRA - Small Quantity Generators (RCRA-SQG); DTSC EnviroStor Database (ENVISTOR); Leaking Underground Fuel Tank Report (GEOTRACKER) (LUST); Statewide SLIC Cases (GEOTRACKER) (CPS-SLIC); Active UST Facilities (UST); Aboveground Petroleum Storage Tank Facilities (AST); California Environmental Protection Agency (CalEPA) Regulated Site Portal (CERS HAZ WASTE); Statewide Environmental Evaluation and Planning System Listing (SWEEPS UST); Hazardous Substance Storage Container Database (HIST UST); California Environmental Reporting System (CERS) Tanks (CERS Tanks); California Facility Inventory Database (Cal FID UST); "Cortese" Hazardous Waste & Substances Sites List (CORTESE); and Hazardous Waste & Substance Site List (HIST CORTESE); sites. Each of the databases was searched at a radius appropriate for ASTM E1527-13. Sites identified in the databases are listed and plotted in the complete environmental database report provided in Appendix E. The following includes a summary of information regarding the Site itself, properties immediately adjacent to the Site, and/or properties that have the potential to affect the Site based on their proximity to the Site.

5.1.1 On-Site EDR Listings

No listings were identified for the target property in the EDR Radius Map report.

5.1.2 EDR Listings within 1/8 Mile of the Site

Fifteen sites (Listings A1, A2, A3, A4, A5, B6, B7, B8, A9, A10, A11, A12, C13, C14, C15 were identified by the EDR Report database search for locations within 0.125 mile from the Site. Due to the database type, their distance from the Site, and regulatory status, none of these sites are considered a REC for the Site. Each of these sites is discussed below.

Listing A1. Listing A1 is the Todey Mazda at 1521 Auto Center Drive, located about 407 feet from the Site. Listing A1 was included in the RCRA-SQG, FINDS, and ECHO databases and is 1 site of 5 in cluster A.

- The RCRA-SQG database is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The RCRA-SQG database for Listing A1 indicates the listing is a small quantity hazardous waste generator generating between 100 kilograms (kg) and 1,000 kg of hazardous waste per month.

- The Facility Index System (FINDS) contains both facility information and 'pointers' to other sources that contain more detail. No useful information was provided by this database listing.

- Enforcement & Compliance History Information (ECHO) provides integrated compliance and enforcement information about 800,000 regulated facilities nationwide.

Listing A2. Listing A2 is the DCH Audi of Oxnard at 1521 Auto Center Dive, located about 407 feet from the Site. Listing A2 was included in the AST database. The AST database lists all aboveground storage tank petroleum storage tank locations. The AST database indicates an AST is present at the listing.

Listing A3. Listing A3 is the DCH Audi of Oxnard at 1521 Auto Center Drive, located about 407 feet from the Site. Listing A3 was included in the CERS HAZ WASTE, CERS TANKS, and CERS databases.

- The CERS HAZ WASTE database lists sites in the CalEPA Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs. The CERS HAZ WASTE database indicates Listing A3 is a hazardous waste generator.

- The CERS TANKS database lists sites in the CalEPA Regulated Site Portal, which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CERS TANKS database for Listing A3 indicates an aboveground petroleum storage tank is present at the listing.

- The CalEPA Regulated Site Portal Data (CERS) database combines data about environmentally regulated sites and facilities in California into a single database. This data includes hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials.

Listing A4. Listing A4 is DCH Oxnard 1521 Imports Inc DBA DCH Audi Oxnard at 1521 Auto Center Drive, located 407 feet from the Site. Listing A4 was included in the RCRA NonGen/NLR database.

- The RCRA NonGen/NLR database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Non-Generators do not presently generate hazardous waste.

Listing A5. Listing A5 is the Lexus of Oxnard at 1621 Auto Center Drive, located about 423 feet from the Site. Listing A5 was included in the LUST, Cortese, and CERS databases.

- The LUST database lists sites in GeoTracker. The LUST database for Listing A5 indicates that the case is closed.

- The Cortese database lists sites designated by the SWRCB LUST, the Integrated Waste Board, and the DTSC Cal Sites. The Cortese database for Listing A5 indicates there is a closed LUST Cleanup Site at this listing.

- The CERS database was described for Listing A5. The CERS database for Listing A5 indicates there was a LUST Cleanup Site at this listing.

Listing B6. Listing B6 is Oxnard European Motors LLC at 1511 Auto Center Drive, located 483 feet from the site. Listing B6 was included in the CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, and HWTS databases and is site 1 of 3 in cluster B.

- The CERS HAZ WASTE database was described for Listing B6. The CERS HAZ WASTE database indicates Listing B6 is a hazardous waste generator.

- The CERS TANKS database was described for Listing B6. The CERS TANKS database indicates an aboveground petroleum storage tank is present at the listing.

- The HAZNET database lists facility and manifest data that is extracted from the copies of hazardous waste manifests received each year by the DTSC. Manifest data for shipping waste from 1994 through 2018 were contained in this database.

- The CERS database was described for Listing B6. The CERS database for Listing B6 indicates there is a chemical storage facility at this listing.

Listing B7. Listing B7 is Oxnard European Motors LLC at 1511 Auto Center Drive, located 483 feet from the site. Listing B7 was included in the RCRA NonGen/NLR database and is site 2 of 3 in cluster B. The RCRA NonGen/NLR database was described for Listing B7. Non-Generators do not presently generate hazardous waste.

Listing B8. Listing B8 is Grieco Motors West LLC DBA Mercedes-Benz of Oxnard at 1511 Auto Center Drive, located 483 feet from the Site. Listing B8 was included in the RCRA NonGen/NLR database and is site 3 of 3 in cluster B. The RCRA NonGen/NLR database was described for Listing B8. Non-Generators do not presently generate hazardous waste.

Listing A9. Listing A9 is Alexander Cadillac at 1600 Auto Center Drive, located 0.11 miles from the Site. Listing A9 was included in the AST database and is site 6 of 9 in cluster A. The AST database is described in Listing A9. The AST database indicates an AST is present at the listing.

Listing A10. Listing A10 is the Bunnin Buick-GMC at 1600 Auto Center Drive, located 0.11 miles from the Site. Listing A10 was included in the AST database and is site 7 of 9 in cluster A. The AST database is described in Listing A10. The AST database indicates an AST is present at the listing.

Listing A11. Listing A11 is R&A Alexander Investments LLC DBA Alexander Buick at 1600 Auto Center Drive, located 0.11 miles from the Site. Listing A11 was included in the RCRA NonGen/NLR database and is site 8 of 9 in cluster A. The RCRA NonGen/NLR database is described in Listing A11. Non-Generators do not presently generate hazardous waste.

Listing A12. Listing A12 is Bunnin Buick-GMC at 1600 Auto Center Drive, located about 0.11 miles from the Site. Listing A12 was included in the CERS HAZ WASTE, CERS TANKS, HAZNET, CERS, and HWTS databases.

- The CERS HAZ WASTE database was described for Listing A12. The CERS HAZ WASTE database indicates Listing A12 is a hazardous waste generator.

- The CERS TANKS database was described for Listing A12. The CERS TANKS database indicates an aboveground petroleum storage tank is present at the listing.

- The HAZNET database lists facility and manifest data that is extracted from the copies of hazardous waste manifests received each year by the DTSC. Manifest data for shipping waste from 1994 through 2018 were contained in this database.

- The CERS database was described for Listing A12. The CERS database for Listing A12 indicates there is a chemical storage facility at this listing.

- The Hazardous Waste Tracking System (HWTS) is the Department of Toxic Substances Control's data repository for hazardous waste identification numbers and manifest information. No useful information was provided by this database listing.

Listing C13. Listing C13 is DCH Toyota of Oxnard at 1631 Auto Center Drive, located 0.12 miles from the Site. Listing C13 was included in the CERS HAZ WASTE, CERS TANKS, and CERS databases and is site 1 of 7 in cluster C. All three databases were described in Listing C13. The CERS HAZ WASTE database indicates Listing C13 is a hazardous waste generator. The CERS TANKS database indicates an aboveground petroleum storage tank is present at the listing. The CERS database indicates a chemical storage facility is at this listing.

Listing C14. Listing C14 is the DCH Toyota of Oxnard at 1631 Auto Center Drive, located 0.12 miles from the Site. Listing C14 was included in the AST database and is site 2 of 7 in cluster C. The AST database lists all aboveground storage tank petroleum storage tank locations. The AST database indicates an AST is present at the listing.

Listing C15. Listing C15 is the Toyota of Oxnard at 1631 Auto Center Drive, located 0.12 miles from the Site. Listing C15 was included in the AST database and is site 3 of 7 in cluster C. The AST database lists all aboveground storage tank petroleum storage tank locations. The AST database indicates an AST is present at the listing.

5.1.3 Properties Between 1/8 and 1/4 Mile from the Site

Thirty-five sites (Listings D16, D17, D18, D19, C20, C21, C22, C23, D24, E25, E26, E27, E28, E29, E30, E31, E32, E33, E34, E35, E36, E37, E38, E39, E40, F41, F42, F43, F44, G45, G46, G47, G48, G49, and G50) were identified by the EDR Report database search located 0.125 to 0.25 mile from the Site. Due to the database type, their distance from the Site, and regulatory status, these listings are not considered a REC for the Site. Refer to the EDR report in Appendix E for more information.

5.1.4 Properties Between 1/4 and 1/2 Mile from the Site

Nine sites (Listings 51, 52, 53, H54, H55, I56, I57, I58, and I59) were identified by the EDR Report database search located one quarter to one half mile from the Site. Due to the database type, their distance from the Site, and regulatory status, none of these sites are considered a REC for the Site. Refer to the EDR report in Appendix E for more information.

5.1.5 Properties between 1/2 Mile and 1 Mile from the Site

Four sites (Listings 60, 61, 62, and 26) were identified by the EDR Report database search located one half to one mile from the Site. Due to the database type, its distance from the Site, and regulatory status, these sites are not considered a REC for the Site. Refer to the EDR report in Appendix E for more information.

5.2 PREVIOUS INVESTIGATIONS

No previous investigations of the Site are known to have occurred.

5.3 ENVIRONMENTAL CLEANUP LIENS

Tetra Tech reviewed the EDR Environmental Lien and AUL Search report that is included in Appendix E. No environmental cleanup liens are known to have been filed against the Site under federal, state, or local laws.

5.4 RADON

Radon is a naturally occurring, odorless, colorless gas produced by certain geologic materials. It is known to be a human carcinogen and can pose a cancer risk greater than one in one million in humans at concentrations equal to or greater than 4 picoCuries per liter (pCi/L).

The EDR environmental database search indicated that Ventura County is in a Radon Zone 1 area. Zone 1 areas have a predicted average indoor screening level greater than 4 pCi/L. The EDR database search reported that of 18 sites listed in the California Radon database that have been tested for the zip code of 93036, one had a radon level greater than 4 pCi/L. The Federal Area Radon Information database reported 135 sites tested for radon in the 93036-zip code. The average concentration of tested sites was 1.185 pCi/L in first floor living areas with 96% <4 pCi/L. The second floor living area average concentration was reported at 0.800 pCi/L with 100% of the tests at <4 pCi/L (EDR 2021).

The EDR report gives a passing result for the Site with no further action required. These findings suggest that there are no health concerns related to radon at the Site.

THIS PAGE INTENTIONALLY LEFT BLANK

6.0 USER-PROVIDED INFORMATION

Mr. Wael Saleh, Assistant Superintendent Business Services for RSD, completed the User Questionnaire for Phase I ESAs (Appendix H) as required by ASTM Standard E1527-05. The findings of the User Questionnaire for Phase I ESAs for the Site are summarized below.

6.1 ENVIRONMENTAL CLEANUP LIENS

For Item 1 of the User Questionnaire, Mr. Saleh indicated that he is not aware of any environmental cleanup liens against the Site.

6.2 ACTIVITY AND USE LIMITATIONS

For Item 2 of the User Questionnaire, Activity and Use Limitations (AULs), Mr. Saleh indicated that he is not aware of and AULs or use limitations for the Site.

6.3 SPECIALIZED KNOWLEDGE

For Item 3 of the User Questionnaire, Specialized Knowledge, Mr. Saleh indicated they have no specialized knowledge of any environmental issues that might affect the Site.

6.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

For Item 4 of the User Questionnaire, Fair Market Value, Mr. Saleh indicated that the property purchase price was not significantly below fair market value.

6.5 OBVIOUS INDICATORS

For Item 5 of the User Questionnaire, Obvious Indicators, Mr. Saleh indicated that they did not know of any obvious indicators of possible contamination on or near the Site.

6.6 COMMON KNOWLEDGE

For Item 6 of the User Questionnaire, Common Knowledge, Mr. Saleh responded as indicated in the underlined text below:

- Describe paste uses of the property: Agricultural Land Use.
- Describe specific chemicals that may have been present at the property (the Site): I have no knowledge of chemicals that may have been used at the property.
- Describe any other information that may help us in identifying possible contamination at the property (the Site): I have no knowledge of possible contamination at the property.

6.7 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

The current owner of the Site is KMS Industries, Inc. The Site is leased by Reiter Affiliated Companies for berry production.

6.8 REASONS FOR PHASE I ESA PERFORMANCE

It is Tetra Tech's understanding that this Phase I ESA is being requested in conjunction with the purchase of the Site by RSD.

7.0 FINDINGS

7.1 GENERAL SITE CONDITIONS
