Executive Summary

Roux Associates, Inc. (Roux) has performed a Phase I Environmental Site Assessment (ESA) at 99 Southgate Avenue, Daly City, California (Property). This Phase I ESA was performed on behalf of Kimco Westlake, L.P. (User). Roux understands the proposed redevelopment plan is mixed commercial and residential.

The Property is approximately 1.93 acres and is currently occupied by a 55,000-square-foot commercial retail building with associated parking and landscaping areas.

The Property was undeveloped until the 1960s when it became utilized as a commercial non-residential space. The following hazardous waste generating facilities are listed at the Property:

- Westlake Development Company had an active HWTS listing from 1992 to 2000; and
- Burlington Store #182 has an active Hazardous Waste Tracking System (HWTS) listing from 2014 to current day.

This Phase I ESA was performed to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), and/or historical recognized environmental conditions (HRECs) at the Property, indicating past, current, or material threats of the release of hazardous materials or petroleum hydrocarbons to the Property's soil, groundwater, or surface water. The ESA was conducted by investigating past Property uses, reviewing the results of a search of environmental databases, reviewing records at relevant government agencies, and performing a Property reconnaissance.

There were no RECs, HRECs, or CRECs identified at the Property. However, the following environmental concerns were identified at the Property that do not rise to the level of a REC but are considered as business environmental risks (BERs). BERs are conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate agencies; however, these conditions may have an environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate. Roux identified the following BERs:

- Southgate Cleaners at 183 Southgate Avenue is a former dry cleaner facility, now H&R Block, and the site of an open investigation and remediation effort involving PCE impacts in soil vapor; and
- The Property is located in an area formerly used as agricultural land until approximately the 1950s. It is possible that residual impacts of pesticides may remain in shallow soil at the Property.

One data gap was identified as follows:

- Due to access issues, Roux could not enter and inspect the inside of the building. However, based on the review of Property history, this data gap is not likely to alter the findings of this Phase I ESA.

1. Introduction

At the request of Kimco Westlake, L.P. (User), Roux Associates, Inc. (Roux) performed a Phase I Environmental Site Assessment (ESA) at 99 Southgate Avenue, Daly City, California (Property). The Property location is shown in Figure 1. This Phase I ESA was conducted in accordance with the scope of work presented in the proposal submitted by Roux on January 11, 2021 and in general accordance with the American Society of Testing and Materials' (ASTM) International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments), consistent with the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries (AAI) Rule (40 CFR Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule[1]). The preamble for the AAI Rule states:

> *In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-05 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule.*[2]

This AAI Rule was subsequently amended in 2013, as indicated in the following "Background":

> *With today's action, EPA is establishing that parties seeking liability relief under CERCLA's landowner liability protections, as well as recipients of brownfields grants for conducting site assessments, will be considered to have met the standards and practices for all appropriate inquiries, as set forth in the Brownfields Amendments to CERCLA and 40 CFR Part 312, if such parties follow the procedures provided in the ASTM E1527-13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process." EPA made this determination based upon the Agency's finding that the ASTM E1527-13 standard is compliant with the All Appropriate Inquiries Rule. Therefore, parties conducting all appropriate inquiries may use the procedures in the newly issued ASTM E1527-13 standard when conducting all appropriate inquiries.*[3]

The purpose of the Phase I ESA was to identify, to the extent feasible, Recognized Environmental Conditions (RECs) in connection with the Property. ASTM Standard Practice E1527-13 defines RECs as:

> *…the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*

ASTM Standard Practice E1527-13 provides that identified RECs can be evaluated and classified into Controlled Recognized Environmental Conditions (CRECs) or Historical Recognized Environmental

1 Final Rule and information available at www.epa.gov/swerosps/bf/regneg.htm#final_rule, and https://federalregister.gov/a/2013-31112.

2 Federal Register: November 1, 2005 (Volume 70, Number 210), page 66081.

3 Federal Register: December 30, 2013 (Volume 78, Number 250).

Conditions (HRECs) based on the following definitions. ASTM Standard Practice E1527-13 defines a CREC as:

> *…a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*

ASTM Standard Practice E1527-13 defines a HREC as:

> *…a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*

In order to assess the potential for RECs associated with the Property, Roux utilized a variety of information sources to perform the Phase I ESA, including a radial information search from federal, state, and local regulatory agency databases and readily available information from the following sources: Property owner, historical aerial photographs, historical topographic maps, and city directories. Also, Freedom of Information Act (FOIA)/public records request responses from federal, state, and local regulatory agencies were conducted. The historical research and questionnaire were conducted in order to develop an understanding of the following:

- Current and past uses of the Property;
- Current and past uses of hazardous substances and/or petroleum at the Property, if any;
- Waste management and disposal practices that might have potentially caused releases or threatened releases of hazardous substances and/or petroleum products at the Property;
- Current and past corrective actions and response activities undertaken to address past and ongoing releases of hazardous substances and/or petroleum products at the Property, if any;
- The existence of any engineering and/or institutional controls recorded for the Property; and
- Current and past uses of adjoining properties that could have resulted in releases or threatened releases of hazardous substances and/or petroleum products to the Property.

Roux's Principal Engineer, Angela Liang Cutting, Ph.D., P.E., and Staff Engineer Emma Totsubo served as the Environmental Professionals who conducted the Phase I ESA. Dr. Cutting possesses sufficient specific education, training, and experience to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases, as defined in 40 CFR §312.1(c) on, at, in, or to a Property, sufficient to meet the objectives and performance factors in 40 CFR §312.20(e) and (f).

2. Methods of Investigation

The methods of investigation used to conduct this Phase I ESA are outlined in the following sections.

2.1 General

The activities performed in conjunction with the Phase I ESA of the Property include:

- Review of federal, state, and local environmental regulatory agency databases provided by Environmental Data Resources, Inc. of Milford, Connecticut (EDR), indicating locations of environmental concern within specified radii from the Property;
- Submission of FOIA requests/public requests and inquiries to federal, state, and local regulatory agencies;
- Review of historical information for the Property and surrounding area;
- Review of User provided documents;
- Reconnaissance of the Property; and,
- Review of questionnaire filled out by the Property owner.

2.2 Review of Readily Available Information

The resources compiled and reviewed by Roux to date include the following:

- EDR Radius Map with GeoCheck, dated January 19, 2021 (Appendix A);
- EDR United States Geological Survey (USGS) Historical Topographic Maps, San Mateo 15-minute, San Francisco South 7.5-minute, and San Francisco South OE W 7.5-minute, dated 1896, 1899, 1915, 1939, 1947, 1950, 1956, 1968, 1973, 1980, 1995, 1996, and 2012 (Appendix B);
- EDR aerial photographs dated 1943, 1946, 1956, 1963, 1968, 1974, 1982, 1998, 2005, 2012, and 2016 (Appendix C);
- EDR City Directory Abstract, dated January 27, 2021 (Appendix D);
- EDR Sanborn Maps dated 1960 and 1969 (Appendix E); and
- Public records from the agencies listed in Table 1 below (Appendix F).

Table 1. Public Record Requests Summary

Agency	Status
Department of Toxic Substances Control (DTSC), including Envirostor and Hazardous Waste Tracking System (HWTS)	Request submitted on January 21, 2021 via email. Response received on January 29, 2021 stating no documents were available for the Property. Online databases queried on January 21, 2021. No Envirostor listings were identified in the vicinity of the Property. Two HWTS listings were identified for the Property. This is discussed in Section 5.2.
Regional Water Quality Control Board (RWQCB), including GeoTracker, and Storm Water Multiple Application and Report Tracking System (SMARTS)	Request submitted on January 21, 2021 via email. Response received on January 28, 2021 stating no documents were available for the Property. Online databases queried on January 21, 2021, 2020. Three GeoTracker listings were identified in the vicinity of the Property. No SMARTS listings were identified for the Property.

Table 1. Public Record Requests Summary	
Agency	**Status**
Bay Area Air Quality Management District (BAAQMD)	Request submitted on January 21, 2021. Response was received on January 21, 2021 stating no documents were available for the Property.
California Department of Conservation Geologic Energy Management Division (CalGEM) Well Finder	Online database queried on January 21, 2021. No oil and gas wells were identified in the vicinity of the Property.
California Department of Forestry and Fire Protection (CAL FIRE)	Request submitted on January 21, 2021 through online portal. Response was received on February 1, 2021 stating no documents were available for the Property.
City of Daly City	Request submitted on January 21, 2021. Response was received on February 23, 2021 from the City Attorney's Office providing documents for the Property. These are discussed in Section 5.2.
San Mateo County, including SMC	Request submitted on January 21, 2021 via email. Response was received on January 25, 2021 from the County Counsel's Office stating no documents were available for the Property.

2.3 Property and Surrounding Area Reconnaissance

Due to access issues, Roux could not enter and inspect the inside of the building. However, based on the review of Property history, this data gap is not likely to alter the findings of this Phase I ESA.

2.4 Interview with Property Owner

No interviews were conducted. The Property owner, Kimco Westlake L.P., filled out the User Questionnaire, discussed in Section 7.2.

3. Property Description

Descriptions of the Property and surrounding properties are included in the following sections.

3.1 Property Location and Description

The Property is located at 99 Southgate Avenue, Daly City, California. Figure 1 presents the location of the Property in the general context of Daly City. The Property is an approximately 1.93-acre parcel consisting of one 55,000-square-foot commercial building with associated parking and landscaping areas (Figure 2).

3.2 Current Surrounding Property Usage

The Property is located in a mixed commercial-residential area. Table 2 below lists the surrounding area uses.

Table 2. Surrounding Area Uses	
North	Directly north of the Property, across Southgate Avenue, is the main portion of the Westlake Shopping Center and apartment buildings.
East	Directly east of the Property, across Palmcrest Drive, are commercial facilities and apartment buildings, beyond which are the Lake Merced Golf Club courses.
West	Directly west of the Property, across Lake Merced Boulevard, are commercial facilities and apartment buildings.
South	Directly south of the Property are apartment buildings, beyond which is Benjamin Franklin Intermediate School.

3.3 Topographic and Hydrogeologic Setting

According to the EDR Radius Map Report (Appendix A), the elevation of the Property is at 102 feet above mean sea level (amsl), consistent with historical topographic maps (Appendix B). The Property is relatively flat but generally slopes to the north-northeast.

The nearest surface water bodies[4] include Lake Merced (0.8 miles north) and the Pacific Ocean at Thornton State Beach (0.8 miles west). Minimum depth to groundwater at a nearby Geotracker case[5] was estimated to be around 53 feet bgs to a perched groundwater zone, then 126 feet bgs to the shallow groundwater aquifer. Flow direction at this site generally ranged from northeast to southeast, toward Lake Merced.

The Property is located in the Westside Groundwater Basin.[6] The Westside Basin is bounded by the Lobos Basin to the north; Downtown Basin, Islais Valley Basin, Visitacion Valley Basin, and San Francisco Bay to the east; Santa Clara Valley Basin to the south; and San Andreas Rift Zone to the west. Groundwater bearing units are mostly characterized by Quaternary Holocene-age historic artificial fill and Pleistocene-age Colma Formation[7].

4. Property History

The land use history of the Property was prepared by reviewing historical aerial photographs, historical topographical maps, and city directories. Historical research documentation is provided in Appendices B, C, and D, respectively. Based on the available sources, the chronology of the Property was developed and included in Table 3 below.

Table 3. Property History

Source	Year	Status
Topographic Map	1896	The Property is shown on an undeveloped area with mountainous terrain. It is located near tributaries to Lake Merced in the north. The elevation of the Property is around 100 to 120 feet amsl. About a half mile east is a developed area bordered by an unnamed railroad on the west and the Southern Pacific railroad on the east. A half mile north of this is another developed neighborhood.
Topographic Map	1899	The Property is located in an area called Laguna de la Merced. The rest of the 1899 topographic map is consistent with the 1896 topographic map.
Topographic Map	1915	The developed area to the east of the Property (central Daly City) has expanded to the north and south and is much more densely populated. A railroad south of the Property and several unimproved roads[8] now stretch from central Daly City west towards Lake Merced.
Topographic Map	1939	The Property still appears undeveloped near a woodland vegetation area in the 1939 topographic map. Some of the roads in the vicinity of the Property have been improved with scattered dwellings. The California Pacific Coast Highway 1 (PCH) is shown north of the Property, running southwest-northeast in the same configuration as the current John Daly Boulevard and extending south along the west coast of the Peninsula. A highway is shown west of the Property in a similar configuration as the current Skyline Boulevard. Two roadways are shown east of the Property in the same configurations as the current Interstate 280 (I-280) and Mission Street/El Camino Real.
Aerial Photograph	1943	The Property is shown in a rural area and appears to be taken up by agricultural fields and dense woodland. An unpaved road runs northwest-southeast through the Property, which is surrounded by more agricultural fields and a golf course to the east. The intersection of PCH and a road in the same configuration as the current Lake Merced Boulevard can be seen north of the Property. A small residential area can be seen southeast of the Property.
Aerial Photograph	1946	The 1946 aerial photograph is consistent with the 1943 aerial photograph.
Topographic Map	1947	The Property appears undeveloped in the 1947 topographic map. Within a mile vicinity is the Lake Merced Golf and Country Club (east), San Francisco Golf Club (north) and Olympic Golf Club (northwest). The highway north of

[8] USGS, 2005. Topographic Map Symbols (https://pubs.er.usgs.gov/publication/70039164).

Table 3. Property History		
Source	**Year**	**Status**
		the Property (formerly PCH) is now called Alemany Boulevard, and the PCH/ I-280 fork is now shown in its current configuration. The area about one-quarter mile southeast of the Property has been developed.
Topographic Map	1950	The 1950 topographic map is consistent with the 1947 topographic map.
Topographic Map	1956	No features are shown on the Property. Much of the area within a half-mile radius of the Property, the Westlake neighborhood, has been developed. Many of the streets in the vicinity of the Property, including Southgate Avenue, are shown in their current configurations. New buildings are shown directly north of the Property, currently the Westlake Shopping Center.
Aerial Photograph	1956	The Property appears to be part of a mostly empty, unpaved lot bordered by the Lake Merced Golf Club, Westlake Shopping Center, and dense residential areas. A rectangular feature can be seen on the Property, potentially a structure. Three long facilities matching a portion of the current Benjamin Franklin Intermediate School are shown on the portion of land south of the Property.
Sanborn Map	1960	The Property is unmapped in the 1960 Sanborn Map. A parking lot and portion of the J.C. Penney store at Westlake Shopping Center are shown to the north. Fire hydrants and associated water piping are shown around the building.
Aerial Photograph	1963	The Property and adjacent parcels are now developed with buildings that match current configurations. The smaller adjacent streets, including Palmcrest Drive and Lake Merced Boulevard, are now shown. The Westlake Shopping Center building footprint has been expanded. Benjamin Franklin Intermediate School's facilities have been further developed.
Topographic Map	1968	The I-280 freeway has gone through significant development. The St. Francis neighborhood, about one mile south of the Property, has been developed.
Aerial Photograph	1968	The 1968 aerial photograph is consistent with the 1963 aerial photograph.
Sanborn Map	1969	The Property is unmapped in the 1969 Sanborn Map. Westlake Center stores are shown to the north.
City Directory	1972	City directory listings for the Property include Swanson's Westlake Bowl. City directory listings for the surrounding area are for individual tenants and commercial business, including: • Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; • Southgate Thrifty Cleaner at 183 Southgate Avenue, located about 320 feet west of the Property; and • PG&E at 11 Southgate Avenue, located about 440 feet west of the Property.

Table 3. Property History		
Source	**Year**	**Status**
Topographic Map	1973	The 1973 topographic map is consistent with the 1968 topographic map.
Aerial Photograph	1974	The 1974 aerial photograph is consistent with the 1968 aerial photograph.
City Directory	1976	City directory listings for the Property include Swanson's Westlake Bowl. City directory listings for the surrounding area are for individual tenants and commercial business, including: • Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; and • Southgate Thrifty Cleaner at 183 Southgate Avenue, located about 320 feet west of the Property.
Topographic Map	1980	Scattered new development can be seen outside the vicinity of the Property. The rest of the 1980 topographic map is consistent with the 1973 topographic map.
City Directory	1981	City directory listings for the Property include Swanson's Westlake Bowl. City directory listings for the surrounding area are for individual tenants and commercial business, including: • Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; • Southgate Thrifty Cleaner at 183 Southgate Avenue, located about 320 feet west of the Property; and • PG&E at 11 Southgate Avenue, located about 440 feet west of the Property.
Aerial Photograph	1982	The 1982 aerial photograph is consistent with the 1974 aerial photograph.
City Directory	1986	City directory listings for the Property include Swanson's Westlake Bowl, Westlake Pro Shop, and Circus Town. City directory listings for the surrounding area are for individual tenants and commercial business, including: • Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; • Southgate Thrifty Cleaner at 183 Southgate Avenue, located about 320 feet west of the Property; • Richmond Paint and Hardware at 85 Southgate Avenue, located about 100 feet east of the Property; and • PG&E at 11 Southgate Avenue, located about 440 feet west of the Property.
City Directory	1992	City directory listings for the Property include Swanson's Westlake Bowl, Westlake Pro Shop, and F&F Baseball Cards. City directory listings for the surrounding area are for individual tenants and commercial business, including:

Table 3. Property History		
Source	**Year**	**Status**
		• Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; • Westlake Laundry at 169 Southgate Avenue, located about 200 feet west of the Property; and • Southgate Thrifty Cleaner at 183 Southgate Avenue, located about 320 feet west of the Property.
Topographic Map	1995	All of Daly City has been developed, excluding golf courses, beach areas, and a couple parks. The Property appears consistent with the 1980 topographic map.
City Directory	1995	There are no 1995 city directory listings for the Property. City directory listings for the surrounding area are for individual tenants and commercial business, including: • Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; • Westlake Laundry at 169 Southgate Avenue, located about 200 feet west of the Property; and • Southgate Thrifty Cleaner at 183 Southgate Avenue, located about 320 feet west of the Property.
Topographic Map	1996	The 1996 topographic map is consistent with the 1995 topographic map.
Aerial Photograph	1998	The 1998 aerial photograph is consistent with the 1982 aerial photograph.
City Directory	2000	City directory listings for the Property include Burlington Coat Factory. City directory listings for the surrounding area are for individual tenants and commercial business, including: • Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; • Westlake Laundry at 169 Southgate Avenue, located about 200 feet west of the Property; and • Southgate Thrifty Cleaners at 183 Southgate Avenue, located about 320 feet west of the Property.
Aerial Photograph	2005	A portion of the Westlake Shopping Center appears to be under development.
City Directory	2005	City directory listings for the Property include Burlington Coat Factory and Nshan's Tailor Shop. City directory listings for the surrounding area are for individual tenants and commercial business, including Westlake Arco Service at 151 Southgate Ave, located about 113 feet west of the Property;
City Directory	2010	City directory listings for the Property include Burlington Coat Factory. City directory listings for the surrounding area are for individual tenants and commercial business, including

		• Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; and • Westlake Laundry at 169 Southgate Avenue, located about 200 feet west of the Property.
Topographic Map	2012	Alemany Boulevard has been renamed John Daly Boulevard. The rest of the 2012 topographic map is consistent with the 1996 topographic map.
Aerial Photograph	2012	Various Westlake Shopping Center buildings and parking lots have been added, removed, and expanded.
City Directory	2014	City directory listings for the Property include Burlington Coat Factory. City directory listings for the surrounding area are for individual tenants and commercial business, including • Westlake Arco Service at 151 Southgate Avenue, located about 113 feet west of the Property; and • Westlake Laundry at 169 Southgate Avenue, located about 200 feet west of the Property.
Aerial Photograph	2016	The 2016 aerial photograph is consistent with the 2012 aerial photograph.
City Directory	2017	City directory listings for the Property include Burlington Coat Factory. City directory listings for the surrounding area are for individual tenants and commercial business, including • Westlake Shopping Center at 151 Southgate Avenue, located about 113 feet west of the Property; and • Westlake Laundry at 169 Southgate Avenue, located about 200 feet west of the Property.

5. Records Review

5.1 EDR Database Listings

Roux used a computerized environmental database and radius map report prepared by EDR to conduct a government records database search for sites of potential environmental concern within a maximum one-mile radius of the Property. Appendix A contains a complete copy of the EDR Radius Map Report with GeoCheck. Based on the Map Findings Summary in the EDR Radius Report, Table 4 shows the results for all the database listings that resulted in potential environmental concerns for the Property and surrounding area.

Table 4. Facilities of Potential Environmental Concern

The listings in Table 5 are further discussed below.

5.1.1 Findings at the Property

Burlington Store #182 at 99 Southgate Avenue

HWTS: This facility has an active listing since 2014.

HAZNET: In 2016, 2017, 2018, and 2019, this facility disposed of various organic waste. In 2015, this facility disposed of various organic and inorganic wastes.

SAN MATEO CO. BI: This facility is listed as generating less than 27 gallons per year of hazardous waste.

CERS HAZ WASTE: In 2017, this facility was cited for failing to provide proof of employee training, properly label containers, separating wastes, and keeping past manifests. Facility returned to compliance in all instances.

RCRA NONGEN / NLR: This facility was listed as a hazardous waste non-generator in 2014, with no violations.

FINDS: An EDR Site Report was provided in this listing summarizing facility details. No additional useful information is provided.

ECHO: A summary of compliance and enforcement information was provided in this listing. No additional useful information is provided.

Westlake Development Company at 99 Southgate Avenue

HWTS: This facility had an active listing from 1992 to 2000.

HAZNET: In 1992, this facility disposed of asbestos containing material (ACM).

Property Listings Summary

The listings for the Property date back as early as 1992. There were two HWTS listings, active from 1992 to 2000 and 2014 to present day. Small quantities of hazardous materials have been generated, disposed of, and stored on the Property, with no documented environmental impact. The Burlington facility has had CERS HAZ WASTE violations relating to administration and housekeeping, which are unlikely to affect the results of this investigation.

5.1.2 Findings at Nearby Facilities

Westlake Village Shopping Center at 75 Southgate Avenue

SAN MATEO CO. BI: This facility is listed as generating and storing hazardous waste.

RCRA NONGEN / NLR: This facility was listed as a hazardous waste non-generator in 2011, with no violations.

Westlake Arco Service (#0465) at 151 Southgate Avenue

EDR HIST AUTO: This facility is listed as a gasoline service station from 1970 to 2014.

SWEEPS UST: In 1992 and 1994, this facility reported several USTs, including a 10,000-gallon unleaded gasoline tank, 8,000-gallon unleaded gasoline tank, and 550-gallon waste oil tank.

LUST: This facility was the site of a leaking underground storage tank cleanup case involving gasoline, MTBE, TBA, and other fuel oxygenate contamination in a drinking water aquifer, reported in 2000.

UST, HIST UST, CERS, CORTESE, HIST CORTESE, CA FID UST, CERS HAZ WASTE, CERS TANKS, CHMIRS: These listings are related to the cleanup program site described above. No additional useful information is provided.

CERS: In 2015, this facility was cited for failing to maintain adequate secondary containment. In 2016, this facility was cited for storing waste oil for longer than permitted and not notifying property owner of business plan. In 2017, this facility was cited for spill bucket failure. In 2018, this facility was cited for failing to update business plan and spill bucket failure. Facility returned to compliance in all instances.

SAN MATEO CO. BI: This facility is listed as generating and storing motor vehicle fuels and waste.

RCRA NONGEN / NLR: This facility was listed as a hazardous waste non-generator in 1993, with no violations.

BP West Coast Products LLC 00465 at 151 Southgate Avenue

HIST UST: This listing references four tanks, including two 10,000-gallon, one 8,000-gallon, and one 500-gallon waste oil UST, consistent with the ARCO listing above.

HAZNET: In 2016, 2017, 2018, and 2019, this facility disposed of aqueous solutions.

HWTS: This facility had an active listing from 2016 to 2020.

RCRA NONGEN / NLR: This facility was listed as no longer generating hazardous waste in 2016, with no violations.

Westlake Shopping Center at 15 Southgate Avenue

CERS HAZ WASTE, SAN MATEO CO. BI: This facility is listed as generating and storing hazardous materials.

CERS: In 2015, this facility was cited for not maintaining adequate emergency equipment, insufficient employee training, no active EPA ID, not conducting an annual business plan review, and storing waste oil for longer than permitted. In 2017, this facility was cited for not having an active EPA ID, storing universal waste for longer than permitted, improper waste labelling, and missing waste manifest documentation. In 2019, this facility was cited for not updating contact information or business plan. Facility returned to compliance in all instances.

PG&E Westlake Substation at Park Plaza & Fairway

AST: This facility is reported as having a 1,320-gallon AST.

Southgate Cleaners at 183 Southgate Avenue

EDR HIST CLEANER: This facility is listed as a dry-cleaning plant from 1974 to 1979, as Sanford Cleaners and Dyers, and 1985 to 2008, as Southgate Cleaners.

DRYCLEANERS: This facility was an active dry cleaning and laundry service facility from 1987 to 2007.

LUST, CPS-SLIC: This facility was the site of a leaking underground storage tank cleanup case involving PCE contamination in soil.

SAN MATEO CO. BI: This facility is listed as generating and storing hazardous materials.

RCRA-SQG: This facility was listed as a large quantity generator in 1986 and a small quantity generator from 1996 to 2002, with no violations.

HWTS: This facility had an active listing from 1987 to 2007.

HAZNET: From 1993 to 2007, this facility disposed of liquids with halogenated compounds. In 1987, this facility disposed of halogenated solvents.

CERS: This facility had a listing in the EPA Air Emission Inventory System.

EMI: This facility is listed as emitting organic hydrocarbon gasses in 1990, 1995, 2003, 2004, 2006, and 2007. This facility is listed as emitting reactive organic gasses in 2007.

FINDS, ECHO: A summary of compliance and enforcement information and EDR Site Report was provided for this facility. No additional useful information is provided.

Yamat, Librada DDS at 187 Southgate Avenue

SAN MATEO CO. BI: This facility is listed as generating medical waste.

Daly City Clinic at 219 Southgate Avenue

SAN MATEO CO. BI: This facility is listed as generating medical waste.

City of Daly City Westlake Pump Station at 295 Coronado Avenue

SAN MATEO CO. BI: This facility is listed as storing hazardous materials.

EMI: This facility reported emitting organic hydrocarbon gasses, reactive gasses, carbon monoxide, oxides of nitrogen (NOx), oxides of sulphur (SOx), and particulate matter between 2004 and 2018.

CERS: In 2016, this facility was cited for missing employee training documentation. In 2018, this facility was cited for not updating business plan. Facility returned to compliance in all instances.

Westlake Village Apartments at multiple addresses

RCRA NONGEN / NLR listings for the following facilities were consistent – facility was listed as a hazardous waste non-generator, with no violations.

Offsite Listings Summary

There were two facilities with documented instances sub-surface contamination in the vicinity of the Property:

- Westlake Arco gas station, located about 100 feet west of the Property across Lake Merced Boulevard, has a documented release of gasoline and rinsate to the subsurface, impacting drinking water. More details are provided in the site's GeoTracker profile, discussed in Section 5.2.
- Southgate Cleaners, located about 500 feet west of the Property, along Southgate Avenue, has a documented case of PCE-impacted soil. More details are provided in the site's GeoTracker profile, discussed in Section 5.2.

5.2 FOIA/Public Records Request Responses

FOIA/public records requests for the Property were submitted to federal, state, and local regulatory agencies (Section 2.2). Information obtained from all agency correspondence as well as their associated online databases is included in Appendix F and is summarized below.

Department of Toxic Substances Control (DTSC)

On January 29, 2021 the DTSC informed Roux via email there are no documents available for the Property.

Envirostor (DTSC's online database) was queried on January 21, 2021 and no listings were identified in the vicinity of the Property.

Online records available through the DTSC Hazardous Waste Tracking System (HWTS) were searched for the Property on January 21, 2021. One inactive listing was identified for Westlake Development Company and one active listing was identified for Burlington Store. These findings are consistent with the HWTS listings discussed in Section 5.1.1.

San Francisco Regional Water Quality Control Board (RWQCB)

On January 28, 2021, the RWQCB informed Roux via email there are no documents available for the Property.

On January 21, 2021, Roux searched the SMARTS Database and found no listings for the Property.

On January 29, 2021, Roux searched the California GeoTracker Database and found the following open cases in the vicinity of the Property:

- Arco #465[9] at 151 Southgate Avenue: This facility, located about 100 feet west of the Property, is the site of a leaking UST investigation and remediation program for total petroleum hydrocarbons (TPH) and other fuel-related contaminants of concern (COC) including MTBE, benzene, ethylbenzene, naphthalene, and poly-aromatic hydrocarbons (PAHs). This site remains an active gas station and currently has three USTs.

  TPH-impacted soil and groundwater were found during a 1992 subsurface investigation and a temporary soil vapor extraction (SVE) system was installed in 1993. It was shut down in 1994 for a system modification in 1995 to make it quieter. The system was run off and on until September 1997 when the SMCEHS Groundwater Protection Program (GPP) approved its shutdown. In October 1997, a waste oil UST was removed and TPH contamination was detected in the soil beneath. The area was over-excavated and new UST/ piping installed. In 1999, TPH-impacts were found beneath UST product lines during removal and the area was over-excavated.

  During the removal and replacement of three USTs in September 2000, a leak of approximately 500 gallons of gasoline/rinsate water was reported. Shortly after, a dual-phase extraction system was deployed for mitigation. Between 2001 and 2011, several additional characterization investigations were conducted to assess the full impacts at the site.

  Installation of a full SVE system began in August 2011 and operation began in October 2012. Between March 2013 and October 2018, several additional site assessment investigations were conducted as well as a vapor extraction pilot test. The most recent investigation findings are summarized below:

  - March 2019 – MTBE was detected above its RWQCB Residential Environmental Screening Level (ESL) of 0.028 mg/kg in several deep soil samples but showed that soil may be being influenced by the SVE on the site.
  - August 2019 – Pilot testing was conducted to investigate if MTBE recovery could be increased with the current SVE system. It was determined to be unfeasible and the GPP approved shutting down the SVE system in November 2019.
  - February 2020 – A shallow soil assessment was conducted; benzene, ethyl benzene, and naphthalene were not detected above laboratory reporting limits which were below Low-Threat Case Closure Policy (LTCP) thresholds.
  - In total, there are 27 groundwater monitoring wells, 13 SVE wells, and one dual-nested soil vapor probe installed for this site. Boring depths ranged from 5 feet bgs to 220 feet bgs.

[9] Arco #465 GeoTracker Profile, accessed January 29, 2021 (https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608100027)

According to a Case Closure request[10], dated April 21, 2020, the extent of TPH impacts were limited to above 10 feet bgs and the site's groundwater characterization met the requirements for LTCP status. Closure was denied by the GPP[11] due to the following reasons:

- Boring analyses used to delineate TPH soil impacts contained fill from the 1999 excavation backfill and therefore do not accurately represent remaining impacts,
- MTBE was still being detected above the ESL and at the bottom of a boring in at least one case,
- The Westlake municipal well is only 500 feet southwest of the site and two new San Francisco Public Utilities Commission wells are now present around 1,200 feet downgradient of the Arco Station; and
- Antea's modeling and simulations of MTBE were not adequate in terms of predictions or conservativeness.

Antea responded to GPP's comments in a letter[12], dated July 1, 2020, from Remediation Management Services Company (RMS). Annual Sampling would continue, and no additional actions would be proposed until the Closure Request and response was reviewed by California Regional Water Quality Control Board. The last action provided on the Geotracker database was a GPP response letter[13], dated August 19, 2020, confirming that on-going monitoring of deep wells was necessary at this site due to its proximity to the Westlake municipal well.

With regard to the Property, the maximum extent of soil contamination is believed to be bounded on the east by a monitoring well[14] (MW-1R) on the east edge of the Arco station and a soil boring (SB-9) at the concrete median bordering Lake Merced Boulevard and the Property's parking lot. The closest groundwater sampling location (MW-8) is located at the median, and in January 2020, no detections were found. Based on this information, these VOC impacts are unlikely to pose a threat to the Property.

- Southgate Cleaners[15] at 183 Southgate Avenue: This former dry cleaner facility, now H&R Block, was found to have PCE-impacted soil vapor during investigations that took place from 2002 to 2011. A SVE system was installed in 2014 and ran from July to December 2016. Rebound testing was completed in 2017 and an additional sampling plan was requested by GPP to characterize vapor intrusion (VI) at the site.

  Sampling was performed in September 2019 by Northgate Environmental Management, Inc. (Northgate), and included HVAC-on/off soil vapor, IA, and ambient air (AA) sampling. the results were provided in an Interim VI and Indoor Air (IA) Data Submittal[16], dated May 15, 2020. PCE and its associated break down products were detected in all soil vapor samples. Out of 18 HVAC-off soil vapor samples, all but one had PCE concentrations exceeding the Commercial ESL of 67 ug/m^3, detecting as high as 1,420 ug/m^3 below the former dry cleaner. Two out of three HVAC-on soil vapor samples exceeded the Commercial ESL, detecting as high as 920 ug/m^3 PCE. No IA or AA detections exceeded the Commercial ESLs. Soil vapor samples taken closest to the Property were located in Westlake Laundromat at 169 Southgate Avenue, about 230 feet west. The PCE concentrations at this facility ranged from 83 to 603 ug/m^3 during the September 2019 sampling event.

  The latest action provided on the Geotracker database is a letter[17] from the GPP with comments on the Data Submittal. The GPP indicated that long term vapor mitigation may be necessary pending

[17] GPP, 2020. Data Submittal Comments, Southgate Cleaners, 183 Southgate Avenue, Daly City, California. July 14.

additional sampling. The next sampling event has been postponed to early 2021, with a report expected by April 15, 2021. This is considered a Business Environmental Risk.

- Westlake French Cleaners[18] at 247 Westlake Center: PCE impacts were found in the soil vapor during SMCEHS investigations from 2002 to 2011. The SVE system was installed in 2014 and operated until July 2016 by Northgate Environmental Management, Inc. (Northgate). Rebound testing was conducted in May 2017. From the results of this rebound testing, the GPP requested semi-annual rebound testing as well as an indoor air sampling plan. Results from the first half of 2018 sampling showed little improvement from pre-SVE VOC levels, and, upon GPP's request. Northgate prepared a Source Area Characterization Work Plan[19] to further delineate the impacts. The plan was conditionally approved by the GPP on November 27, 2018. Northgate prepared a 2018 Annual Rebound Test Report in which they found PCE concentrations to not yet be at equilibrium. At the time of this Phase I, there are no more recent reports available. However, due to being over one quarter mile down gradient, these VOC impacts are unlikely to pose a threat to the Property.

Bay Area Air Quality Management District (BAAQMD)

On January 21, 2021, the BAAQMD informed Roux via email there are no documents available for the Property.

California Department of Conservation Geologic Energy Management Division (CalGEM) Well Finder

On January 21, 2021, Roux searched the CalGEM database as part of its record review. No oil and gas wells were identified in the vicinity of the Property.

California Department of Forestry and Fire Protection (CALFIRE)

On February 1, 2021, CALFIRE informed Roux via email there are no documents available for the Property.

City of Daly City (DC)

On February 23, 2021, the City Attorney's Office of Daly City provided the following documents for the Property:

- Swanson's Westlake Bowl (SWB) civil drawings, dated June 13, 1958;
- Sign Column and Footing drawing stamp for SWB, dated July 10, 1958;
- Illegible drawing, Building Department approved November 13, 1958;
- Construction drawings for SWB addition and apartments south of Southgate, approved July 20, 1959;
- Sign drawings for SWB, dated November 15, 1963;
- Illegible drawing, Planning Commission approved January 6, 1972;
- Building Permit Application, dated December 16, 1985;
- Mechanical Permit Application for SWB, dated January 29, 1986;
- Business License Application for Papito's Restaurant, dated March 3, 1986;
- Business License Application for Bowlers World, dated March 4, 1986;
- Application for Sign Permit for Papito's Restaurant, dated March 17, 1986;
- Business License Application for SWB, dated August 30, 1988;

[18] Westlake French Cleaners GeoTracker Profile, accessed January 29, 2021 (https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL0608106505)

[19] Northgate, 2018. Source Area Characterization Work Plan, 183 Southgate Avenue, Daly City, California. October 12.

- Building Inspector structural comments for T.I. Burlington Coat Factory (BCF), dated July 21, 1992;
- Building Permit Record for BCF, dated August 3, 1992;
- Building Permit Record, dated September 4, 1992;
- Building Permit Record and Application for Sign Permit at BCF, dated September 21, 1992;
- Construction Contractor Permit for BCF, dated October 1, 1992;
- Building Permit Record, dated October 8, 1992;
- Building Permit, dated October 8, 1992;
- Fire Department Report of Alarm and memorandum regarding structural damage at BCF building during reconstruction, dated October 18, 1992;
- Building Permit Record, dated October 21, 1992;
- Certificate of Occupancy for BCF, dated December 14, 1992;
- Building Permit Record and Application for Sign Permit for BCF, dated January 6, 1993;
- Building Project Permit for BCF, dated February 15, 1993;
- Building Permit Record, dated February 16, 1993;
- Building Inspector letter regarding Sign Permit for BCF, dated September 7, 1993;
- Building Permit Record and Permit Application for sewer repair at BCF, dated November 5, 1997;
- Construction Permit Record and Permit Application for electrical work, dated November 21, 2005;
- Construction Permit Record and Permit Application for HVAC work, dated January 30, 2006;
- Construction Permit Record and Permit Application for electrical work, dated March 28, 2007;
- Permit Application for BCF façade renovation, dated June 26, 2012;
- Structural Observation form for BCF façade renovation, dated January 28, 2013;
- L.S. Mason and Associates letter regarding BCF façade renovation inspections, dated February 13, 2013;
- Construction Testing Services final affidavit letter regarding BCF façade renovation inspections, dated October 28, 2013; and
- Roofing contractor Agreement, dated April 14, 2017.

San Mateo County

On January 25, 2021, the San Mateo County Counsel's Office informed Roux via email there are no documents available for the Property.

On January 28, 2021, the San Mateo County Environmental Health Services Division (SMCEHS) provided the following documents for the Property:

- Hazardous Waste Generator Inspection Report, dated April 21, 2015 – One violation found for not having a contingency plan;
- New/Change of Information Form, dated April 22, 2015, designating the Property as a new HazMat Facility;
- Facility and Contact Information as of April 22, 2015;
- SMCEHS Certified Unified Program Agency (CUPA) Permit, dated June 1, 2015, designating facility as a small quantity (less than 27 gallons per year) hazardous waste generator;

- Uniform Hazardous Waste Manifests and associated Land Disposal Restriction Notifications, dated July 2015, September 2015, November 2015, February 2016, August 2016, February 2017, and January 2019;
- Hazardous Material Program HazWaste Small Quantity Generator (SQG) Inspection Report, dated April 14, 2017 – Five violations found, including non-compliance with waste handling and labelling practices. This is consistent with the CERS HAZ WASTE listing discussed in Section 5.1.1. These instances of non-compliance are not likely to impact the subsurface;
- Notice of Violation, dated June 1, 2017, summarizes inspection conducted on April 14, 2017;
- Burlington Letter, dated June 15, 2017, providing documentation of return to compliance;
- Letter, dated June 16, 2017, confirming facility returned to compliance;
- Hazardous Material Program HazWaste Small Quantity Generator (SQG) Inspection Report, dated April 17, 2019 – No violations found. Waste streams include stage regulated toxics, aerosols/flammables, corrosives, and universal waste;
- Food Program Application, dated April 25, 2019, for Burlington facility to sell pre-packaged food;
- Retail Food Inspection Program Inspection Report, dated May 1, 2019 – No violations found;
- SMCEHS Permit to Operate as a retail store with food sales, dated May 18, 2020;
- SMCEHS CUPA Permit dated June 1, 2020, designating facility as a small quantity hazardous waste generator;
- Retail Food Inspection Program Inspection Report, dated December 17, 2020 – Inspector observed the store completely empty; and
- California Environmental Reporting System (CERS) Business Data Sheet, dated January 26, 2021, stating all hazardous wastes generated are the result of damaged or faulty retail products.

5.3 Documents Provided by the User

The following is a list of the relevant documents provided by the User (Appendix I):

- Preliminary Report, dated July 27, 2020, prepared by First American Title Insurance Company National Services for Westlake Shopping Center at 515, 75 and 151 Southgate Avenue, 33 Southgate Avenue #65, 2 Coronado, Avenue, 169 Southgate Avenue #209, and 526 and 251 Westlake Center;
- Architectural Plans, dated September 16, 2020, prepared by Van Meter Williams Pollack LLP for Kimco Westlake South at 99 Southgate Avenue; and
- Phase I Environmental Site Assessment, dated March 10, 2017, prepared by Roux Associates for the Westlake Shopping Center northeast corner at John Daly Boulevard and Park Plaza Drive, located about a quarter mile north of the Property. This site consisted of two commercial buildings, a parking area, and a passageway containing a soil vapor extraction (SVE) system installed to remediate VOC-impacted soil vapor from a former drycleaner onsite.

  The former drycleaner, Westlake French Cleaners, at 247 Westlake Center (formerly 3300 S Mayfair Ave) was located about 0.3 miles north of the Property and is the only REC identified in this Phase I. More details are provided in the site's Geotracker profile, see Section 5.2.

6. Property Reconnaissance

Due to access issues, Roux could not enter and inspect the inside of the building. However, based on the review of Property history, this data gap is not likely to alter the findings of this Phase I ESA.

7. User-Provided Information

User-provided information is included in Appendix G. In addition, Mr. Spencer Ingrim, the User's Regional Property Manager, filled out an Owner Questionnaire for the Property on March 1, 2021. According to Mr. Ingrim, besides the nearby Arco gas station, the User is unaware of any environment liens, land use limitations, engineering controls, or any other environmental issues related to the Property. The Owner Questionnaire is included in Appendix H.

8. Phase I ESA Conclusions and Recommendations

Roux Associates, Inc. (Roux) has performed a Phase I Environmental Site Assessment (ESA) at 99 Southgate Avenue, Daly City, California (Property). This Phase I ESA was performed on behalf of Kimco Westlake, L.P. (User). Roux understands the proposed redevelopment plan is mixed commercial and residential. The Property is approximately 1.93 acres and is currently occupied by a 55,000-square-foot commercial retail building with associated parking and landscaping areas.

The Property was undeveloped until the 1960s when it became utilized as a commercial non-residential space. The following hazardous waste generating facilities are listed at the Property:

- Westlake Development Company had an active HWTS listing from 1992 to 2000; and
- Burlington Store #182 has an active Hazardous Waste Tracking System (HWTS) listing from 2014 to current day.

This Phase I ESA was performed to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), and/or historical recognized environmental conditions (HRECs) at the Property, indicating past, current, or material threats of the release of hazardous materials or petroleum hydrocarbons to the Property's soil, groundwater, or surface water. The ESA was conducted by investigating past Property uses, reviewing the results of a search of environmental databases, reviewing records at relevant government agencies, and performing a Property reconnaissance.

There were no RECs, HRECs, or CRECs identified at the Property. However, the following environmental concerns were identified at the Property that do not rise to the level of a REC but are considered as business environmental risks (BERs). BERs are conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate agencies; however, these conditions may have an environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate. Roux identified the following BERs:

- Southgate Cleaners at 183 Southgate Avenue is a former dry cleaner facility, now H&R Block, and the site of an open investigation and remediation effort involving PCE impacts in soil vapor; and
- The Property is located in an area formerly used as agricultural land until approximately the 1950s. It is possible that residual impacts of pesticides may remain in shallow soil at the Property.

One data gap was identified as follows:

- Due to access issues, Roux could not enter and inspect the inside of the building. However, based on the review of Property history, this data gap is not likely to alter the findings of this Phase I ESA.

.

9. Report Assumptions and Limitations

The Phase I ESA described herein was conducted by Roux in accordance with ASTM Standard Practice E1527-13, which is consistent with the regulatory requirements for conducting all appropriate inquiries (40 CFR Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule[20]). The preamble for the AAI Rule states:

> *In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-05 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule.*[21]

This AAI Rule was subsequently amended in 2013, as indicated in the following "Background":

> *With today's action, EPA is establishing that parties seeking liability relief under CERCLA's landowner liability protections, as well as recipients of brownfields grants for conducting site assessments, will be considered to have met the standards and practices for all appropriate inquiries, as set forth in the Brownfields Amendments to CERCLA and 40 CFR Part 312, if such parties follow the procedures provided in the ASTM E1527-13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process." EPA made this determination based upon the Agency's finding that the ASTM E1527-13 standard is compliant with the All Appropriate Inquiries Rule. Therefore, parties conducting all appropriate inquiries may use the procedures in the newly issued ASTM E1527-13 standard when conducting all appropriate inquiries.*[22]

It is Roux understanding that this Phase I ESA was requested by the User so that the User may qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on liability under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). One of the requirements that a person acquiring real property must meet in order to qualify for one of these limitations on liability under CERCLA is to perform all appropriate inquiries in conformance with the AAI Rule (or the ASTM Standard Practice E1527-13) prior to acquisition of the property. The User has acknowledged that, under the AAI Rule, Roux performance of the Phase I ESA described herein will not alone result in the User satisfying all of the requirements of the AAI Rule and provide a defense to CERCLA liability. Further, the User has acknowledged that the AAI Rule requires that certain additional inquiries be undertaken to satisfy the CERCLA AAI requirements. **ACCORDINGLY, ROUX MAKES NO GUARANTEES OR WARRANTIES, EXPRESSED OR IMPLIED, REGARDING THIS PHASE I ESA, INCLUDING WITHOUT LIMITATION, ANY WARRANTY THAT THIS PHASE I ESA WILL IN FACT QUALIFY USER FOR A DEFENSE TO CERCLA LIABILITY.**

Roux has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Rule requires, and the conclusions stated herein represent the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Property. As such, these

20 Final Rule and information available at www.epa.gov/swerosps/bf/regneg.htm#final_rule, and https://federalregister.gov/a/2013-31112.
21 Federal Register: November 1, 2005 (Volume 70, Number 210), page 66081.
22 Federal Register: December 30, 2013 (Volume 78, Number 250).

conclusions are based on subjective interpretations and the exercise of discretion. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions must be considered within this context.

The User has agreed that Roux shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the Phase I ESA was performed. To the extent practicable, Roux has identified data gaps, and has evaluated the potential significance of such data gaps.

It should be noted that Roux has not collected any samples on the Property and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does not accept responsibility for the accuracy of the underlying data or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. The Phase I ESA was conducted with a reasonable degree of inquiry to identify RECs, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

This Phase I ESA Report is not an appraisal or value judgment of the Property. The User has agreed that Roux shall not be liable for any use of the Phase I ESA Report as an appraisal or value judgment of the Property.

The Phase I ESA Report has been prepared for the exclusive use of the User for specific application to the Property. The User has agreed that any third-party use of this Phase I ESA Report is the User's sole responsibility and at the User's sole liability.

We declare that, to the best of my professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312; and,

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Respectfully submitted,

ROUX ASSOCIATES, INC.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

TARGET STORE T3353 EPA ID:: CAR000304774	100 WESTLAKE CENTER	N 1/8 - 1/4 (0.174 mi.)	H77	298

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 30 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

MONTE MIKE	151 SOUTHGATE AVE	W 0 - 1/8 (0.021 mi.)	C14	49

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE:

Name:	BURLINGTON STORE #182
Address:	99 SOUTHGATE AVE
City,State,Zip:	DALY CITY, CA 94015
Site ID:	272708
CERS ID:	10626745
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	272708
Site Name:	Burlington Store #182
Violation Date:	04-14-2017
Citation:	40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description:	Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes:	Returned to compliance on 06/16/2017. OBSERVATION: At the time of inspection, it could not be demonstrated that employees who handle hazardous waste were properly trained. The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. CORRECTIVE ACTION: Immediately provide training to all employees who handle hazardous waste and submit a copy of the training records to the inspector within the comply by date.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW
Violation Source:	CERS

Site ID:	272708
Site Name:	Burlington Store #182
Violation Date:	04-14-2017
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 06/16/2017. OBSERVATION: Manifest numbers

BURLINGTON STORE #182 (Continued) **S121758240**

008517451FLE and 008517703FLE were found without signed off copies from the destination facility. Hazardous waste generators shall retain copies of all manifests signed off by the destination facility on site for three years and have them readily available for review. Submit to the inspector within the comply by date copies of the signed off manifests.

Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 272708
Site Name: Burlington Store #182
Violation Date: 04-14-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 06/16/2017. Two bins of toxic and state regulated waste, one bin of universal waste, two bins of aerosols/flammables/combustibles, one bin of oxidizers, and two bins of corrosive bases did not have their labels filled out (all of the hazardous waste containers). All hazardous waste containers must be properly labeled. Immediately label all hazardous waste containers and submit documentation (photos) to the inspector within the comply by date. When filing out labels, use the date from around the time of the last pickup.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 272708
Site Name: Burlington Store #182
Violation Date: 04-14-2017
Citation: 40 CFR 1 265.177 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.177
Violation Description: Failure to separate incompatible wastes from the same container, nearby containers, or unwashed containers which previously contained incompatible waste or materials.
Violation Notes: Returned to compliance on 06/16/2017. Oxidizers bin contains state regulated waste/toxics. Flammables were in both state regulated waste/toxics and oxidizers bin. State regulated waste/toxics were placed in flammable bin. OBSERVATION: No determination was made as to the compatibility of the wastes stored together. CORRECTIVE ACTION: Immediately transfer or separate incompatible wastes to other containers and submit documentation to the inspector within the comply by date that wastes are properly sorted and segregated.

BURLINGTON STORE #182 (Continued) **S121758240**

12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 06/16/2017. Candles were found in both state regulated waste/toxics and flammable bin. Make a waste determination for the candles and submit documentation to the inspector within the comply by date. Please advise also why batteries are not removed from watches before being placed in the state regulated waste/toxics bin.

File Location: Local Agency
Local Case Number: 220033
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline, MTBE / TBA / Other Fuel Oxygenates
Site History: Extracted from Stantec's June 14, 2010 Additional Site Assessment Report and Site Conceptual Model, San Mateo County does not take responsibility for the accuracy of statements or professional interpretations made in the referenced report. Refer to Appendix A in the 1Q19 Groundwater Monitoring and SVE System O&M Report prepared by the Antea Group for more recent information. The site is located at the southern corner of the intersection of Southgate Avenue and Lake Merced Boulevard in Daly City, California. The site is an active retail fuel dispensing facility with a station building and service area, six dispensers, two blended gasoline underground storage tanks (USTs) and one waste-oil UST. Currently the site has six groundwater monitoring wells (MW-1 through MW-6) and eight soil vapor extraction (SVE) wells (V-1 through V-8), one of which is used for groundwater monitoring (V-8). During the most recent assessment, wells MW-7, MW-8, and MW-9 were installed. A remediation equipment compound is located in the southern corner of the site. Mixed commercial and residential properties surround the site. Burlington Coat Factory is

ARCO 0465 (Continued) **S101303078**

located to the east of the site; two apartment complexes are located south and north of the site, a dry cleaner facility and a shopping mall are located west of the site. Site topography slopes to the northwest, at an approximate elevation of 100 feet above mean sea level (MSL). Regionally, topography near the site slopes toward the east northeast. According to the California State GeoTracker database, former Southgate Cleaners is located at 183 Southgate Avenue, Daly City, approximately 100 feet west-southwest of the site. A review of available site information indicates that a leak of tetrachloroethylene (PCE) has occurred on the property from former dry cleaning operations. Based on the information presented Treadwell & Rollos February 11, 2110 Work Plan for Additional Site Investigation, it appears dry cleaning solvent vapor is present in the shallow soil at adjacent to the western property line of the subject site. Additional assessment adjacent to the subject site has been proposed by Treadwell & Rollo. An initial subsurface investigation was performed at the site in March 1992. The results of this investigation indicated that soil and groundwater in the vicinity of the gasoline UST complex had been impacted by petroleum hydrocarbons. Soil in the vicinity of the waste oil UST was also found to be impacted by both low boiling point hydrocarbons which were quantified as total petroleum hydrocarbons as gasoline (TPHg) and higher boiling point hydrocarbons which were quantified as TPH as diesel (TPHd) and total recoverable petroleum hydrocarbons (TRPH). Low concentrations of semi-volatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs) were also reported in soil samples collected during the assessment. Groundwater monitoring wells MW-1 and MW-2 were installed at depths of approximately 70.5 feet and 61.5 feet below ground surface (bgs), respectively, to intercept a perched groundwater horizon. In October and November 1992, following additional subsurface investigation activities, deep groundwater monitoring well MW-3D was installed to a depth of approximately 220 feet bgs to intercept the upper portion of the regional groundwater aquifer. The GPP noted in a letter dated July 5, 2001, that because MW-3D is screened from 202 bgs to 220 feet bgs (below an approximate 10-foot-thick clayey silt to silty clay zone) ... (MW-3D) may represent the deeper drinking water aquifer." In January 1993, quarterly groundwater monitoring activities were initiated at the site. In June 1993, groundwater monitoring well MW-4 was installed to a depth of approximately 63 feet bgs to further assess groundwater quality in the perched groundwater horizon. In March through May 1993, an internal combustion engine SVE system was installed and started at the site. The system, which initially utilized wells V-1, V-2, V-3, V-6, V-7, V-8, MW-1, and MW-2 was operated through April 1994, when the internal combustion engine was removed. During this period of operation, an estimated 5,494 pounds of TPHg were removed from beneath the site. In June 1995, a catalytic oxidizer unit was installed and the SVE system was restarted utilizing the same well array used in July 1993. Based on a decrease in extracted petroleum hydrocarbon vapor concentrations by the SVE system and consistently low to non-detectable concentrations in groundwater, the SVE system was shut down in October 1997, and site closure was requested in November 1997. At that time, the site and vicinity contained four groundwater monitoring wells and eight SVE extraction wells (V-1 through V-8). An estimated total of 11,563 pounds of TPHg and 45.34 pounds of benzene were recovered during operation of the SVE system. On October 21, 1997, Gettler-Ryan removed a 520-gallon capacity waste

ARCO 0465 (Continued) **S101303078**

oil UST and excavated the UST cavity to approximately nine feet bgs. On October 30, 1997, Gettler-Ryan further excavated the pit to a depth of approximately 15 feet bgs, and in an easterly direction, to a depth of approximately 3 feet from the edge of the original excavation. Approximately 60 cubic yards of soil excavated from the pit was transported for offsite disposal by Dillard Trucking. The new waste oil UST and associated piping and vents were replaced, the excavation was backfilled, and the surface asphalted on October 31, 1997. In January 1998, six confirmation soil borings (CSB-1 through CSB-6) were advanced to determine if operation of the temporary soil vapor extraction system had reduced the gasoline concentration in soil to levels acceptable for regulatory case closure. The borings were advanced to depths ranging from 30.5 feet to 55.5 feet bgs using a drill rig equipped with 8-inch diameter hollow stem augers. Results of the investigation indicated that concentrations of TPHg, TPHd, and TRPH were present in soil samples collected from CSB-5 and CSB-6. Soil samples collected from CSB-6 were also reported to contain concentrations of heavy oil. Benzene was not detected in any of the soil samples collected. MtBE was reported in soil samples collected from the boring of CSB-3 at depths of 15 and 21 feet bgs. Concentrations of ethylbenzene, total xylenes, 2-methylnaphthalene, PCB aroclor 1248, and total metals were detected in soil samples collected from CSB-6 at depths of 5 and 15 feet bgs. On March 4, 1999, Gettler-Ryan removed the product lines which carried fuel from the USTs to the three fuel pump islands at the site. The soil underlying the fuel line trenches was observed to be stained and exhibited a gasoline odor. As the excavation continued, product odor and gray staining of the soil were observed in the trench between the central and northern two pump islands. Six trench floor soil samples (T-1 through T-6) and eight soil samples from beneath the dispensers (D-1 through D-8) were collected and analyzed for TPHg, BTEX, MtBE, and lead. Due to elevated concentrations of gasoline in soil samples T-2, T-4, T-6, D-5, and D-8, soil was excavated to approximately 8 to 10 feet bgs and confirmation samples (T-2A, T-4A, T-6A, D-5A, and D-8A) were collected from the bottom of the over-excavated trenches. Approximately 127 tons of soil were removed from the site after the excavation, and transported by Dillard Trucking to a Browning Ferris Industries offsite disposal facility for proper disposal. Between August 28, 2000 and September 6, 2000, two 10,000-gallon unleaded gasoline USTs, one 8,000-gallon UST, and associated product lines and dispensers were removed from the site. Over-excavation of the UST area was confined to the expansion area intended for the new USTs. During UST replacement activities performed in August and September 2000, Henderson Construction Company, the ARC subcontractor performing the replacement, reported an unauthorized release of approximately 500 gallons of a mixture of gasoline and rinsate water from one of the gasoline USTs. The spill was apparently caused by attempting to remove the UST with the rinsate water still inside the UST. A portable dual-phase extraction (DPE) system was mobilized to the site shortly thereafter, and operated for a 10-day period to mitigate the effects of the reported release. As previously noted, during UST replacement activities performed in August and September 2000, Henderson Construction Company, the ARC subcontractor performing the replacement, reported an unauthorized release of approximately 500 gallons of a mixture of gasoline and rinsate water from one of the gasoline USTs. The spill was apparently caused by attempting to remove the UST with the rinsate water still inside the

ARCO 0465 (Continued) **S101303078**

UST. A portable dual phase extraction (DPE) system was subsequently mobilized to the site by Cal Clean, and operated for a 10-day period to mitigate the effects of the reported release. Since downhole stingers were not used and groundwater was not recovered during the test, the equipment was used as soil vapor extraction system that extracted soil vapor at 250 standard cubic feet per minute (scfm) with a system vacuum of 16-inches of mercury. A source test was performed utilizing wells V-1, V-2, V-5, and V-8, and SVE was subsequently performed utilizing wells V-1, V-2, and V-5 as extraction wells, and wells V-4, V-6, V-7, and V-8 as observation wells. Individual extraction test were completed using wells V-1, V-2, and V-5. Field observations and measurements recorded during the SVE event resulted in calculation of a maximum effective radius of influence (ROI) of 50 feet in groundwater. The ROI was calculated using induced vacuum readings collected from wells V-4, V-6, V-7, and V-8 that were located from 20 to 95 feet away from the extraction well V-2. The induced vacuum readings ranged from 2.3 to 5.5-inchs of water in response to a system vacuum of 16-inches of mercury. During the 240-hour SVE event, approximately 4,333 pounds (713 gallons) of petroleum hydrocarbons were removed from the subsurface, a mass significantly greater than the reported release of approximately 500 gallons of a gasoline and rinsate mixture. A review of the data collected during the extraction event indicated that SVE wells located in the vicinity of the former fuel UST cavity and the area of the waste oil UST yielded the highest soil vapor concentrations. Soil vapor concentrations from well V-5 yielded concentrations that continued on an increasing trend throughout the 10-day period. The increase of petroleum hydrocarbons in soil vapor samples collected from V-5 at the conclusion of the interim event indicated that petroleum hydrocarbon mass remains in soil in the area of the former waste oil UST. Based on the past performance of the SVE remediation efforts, SECOR concluded that soil vapor extraction is a viable technology for removing petroleum hydrocarbon mass from the unsaturated soil beneath the site. In November 2001, SECOR installed two wells (MW-5 and MW-6) and advanced one soil boring (SB-1). Wells MW-5 and MW-6 were completed at a depth of 60 feet bgs. Groundwater samples have been obtained from MW-6, but MW-5 has been generally dry since the well was installed. Recent groundwater samples collected from MW-5 in July 2008 indicated elevated concentrations of gasoline range organics (GRO), MtBE, and tert-butyl alcohol (TBA). The soil boring of well MW-5 was advanced approximately 2.5 feet into a silty clay layer, and the well was installed at 60 feet bgs to avoid penetrating a clay layer that was encountered at 57.5 feet bgs. In April 2003, URS performed additional characterization in the vicinity of MW-5 to determine whether shallow groundwater was present at a depth greater than the 60-foot completion depth of MW-5, and to characterize the vertical extent of petroleum hydrocarbons and fuel oxygenates at this location, near the waste oil UST. Boring MW-5A was drilled adjacent to MW-5 and soil was sampled to a depth of 85 feet. After drilling through a sandy clayey silt and clayey silty sand from approximately 60 to 64 feet bgs, the augers were left open for observation for over one hour at a depth of 66 feet bgs in a moist silty sand. No water accumulated in the borehole, so an additional well was not installed at this location. GRO and BTEX with concentration greater than the laboratory reporting limits were detected in soil samples collected from 60.5 to 85 feet in the boring. However MtBE with concentrations ranging from 0.12 to 1.0

ARCO 0465 (Continued) **S101303078**

mg/kg were reported in the soil samples collected from 60.5 to 85 feet bgs. In September 2005, URS advanced nine soil borings (SB-1 renamed SB-1A, SB-2 through SB-5, and SB-7 through SB-10) to depths ranging from 50 to 81 feet bgs in order to further assess the vertical and lateral extent of dissolved hydrocarbons in the subsurface. Soil boring SB-6 was not advanced due to refusal at approximately 5 feet bgs. Grab groundwater samples were collected from onsite boring SB-3, offsite borings SB-4, SB-5, and SB-7 through SB-10. Based upon the results of this investigation, URS recommended the installation of three additional offsite groundwater monitoring wells (MW-7 through MW-9) to further delineate the lateral extent of dissolved petroleum hydrocarbons offsite. In a letter dated October 11, 2007, the GPP approved the scope of work previously proposed by URS. After access was granted to the offsite property located northeast of the site for the installation of well MW-9, the installation of wells MW-7 through MW-9 was performed on August 28 and 29, 2008.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID:	171441
Site Name:	WESTLAKE PUMP STATION
Violation Date:	03-24-2016
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 06/30/2016. OBSERVATION: [INITIAL / ANNUAL] training documentation for all applicable employees was not available. CORRECTIVE ACTION: Submit documentation to the County within 30 days demonstrating that employees have received training on safe handling of hazardous materials and the Emergency Response Plan.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS

Site ID:	171441
Site Name:	WESTLAKE PUMP STATION
Violation Date:	03-13-2018
Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 04/20/2018. Primary emergency contact Patrick left the facility in October. Update emergency contact information and resubmit HMBP on ehesubmit.smchealth.org within the comply by date.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HMRRP

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Source: CERS

Site ID: 150032
Site Name: Safeway 3031
Violation Date: 03-01-2016
Citation: 22 CCR 23 66273.36 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.36
Violation Description: Failure of the universal waste handler to initially train and provide annually, thereafter, all personnel who manage or who supervise those who manage universal wastes and to maintain a written record by date indicating the names of personnel who received the information. The universal waste handler shall maintain these records for at least three years from the date the person last managed any universal waste at the facility. This training shall include: 1) The types and hazards associated with the universal waste that personnel may manage at the facility; 2) The proper disposition of universal wastes managed at the facility; 3) The proper procedures for responding to releases of universal wastes including the position titles and the means of contacting those personnel at the facility who are designated to respond to reports of releases and/or to respond to questions received from other personnel at the facility; and 4) The applicable requirements of universal waste regarding labeling, collecting, handling, consolidating, and shipping universal wastes at the facility, including, but not limited to, the prohibition on the disposal of universal wastes, and for personnel involved in shipping universal wastes who are G hazmat employeesG .
Violation Notes: Returned to compliance on 03/01/2016. OBSERVATION: At the time of inspection, it could not be demonstrated (not necessarily documented) that employees who handle hazardous waste were properly trained. [Explain how you determined, who you "quizzed", etc.]. The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. CORRECTIVE ACTION: Immediately provide training to all employees who handle hazardous waste and submit a copy of the training records to the County within 30 days.
Violation Division: San Mateo County Environmental Health

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CHEVRON 9-6982 (Continued) **S100858432**

Local Case Number: 220028
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: Extracted from CRA's SEPTEMBER 2, 2009 SUBSURFACE INVESTIGATION AND WELL DESTRUCTION REPORT, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is an active Chevron service station located on the north side of John Daly Boulevard, approximately 100 feet east of Lake Merced Boulevard in Daly City, California (Figure 1). Existing station facilities include a store, car wash, and two gasoline underground storage tanks (USTs) connected to six dispenser islands by underground product line piping. 1998 Facility Replacement and Remedial Excavation: In July and August 1998, Armer/Norman Associates (ANA) of Walnut Creek, California removed the two hoists, dispensers, product lines, and five underground storage tanks (USTs) including three 10,000-gallon gasoline, one 10,000-gallon diesel, and one 1,000-gallon used-oil tanks. ANA transported approximately 250 cubic yards of excavated soil to an approved disposal facility, and new fuel USTs were installed in a new location. Touchstone Developments (Touchstone) collected soil samples from beneath the fuel USTs, used-oil UST, and product lines. One sample (TX1) collected from beneath the fuel USTs contained 283 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as diesel (TPHd). No other hydrocarbons were detected in any of the other seven soil samples collected from beneath the fuel USTs. Hydrocarbon concentrations as high as 1,570 mg/kg TPHd and 4,900 mg/kg total petroleum hydrocarbons as gasoline (TPHg) were detected in soil collected from beneath the product lines at 5 feet below grade (fbg). Following over-excavation of soil to approximately 7 fbg in three locations with the highest hydrocarbon concentrations, concentrations beneath the product lines were reduced to 175 mg/kg TPHd and 395 mg/kg TPHg. No hydrocarbons were detected in soil beneath the used-oil UST. 2000 Soil Borings: Based on Touchstones sampling results, San Mateo County Health Services Department (SMCHD) requested that Chevron investigate the groundwater impacts beneath the site in an August 2, 1999 letter. In August 2000, Cambria Environmental Technology, Inc. (Cambria) advanced soil borings B-1 through B-4 to approximately 30.5 fbg. Boring B-3 contained the highest hydrocarbon concentrations of 69 mg/kg TPHd and 55 mg/kg TPHd at 15 fbg. Benzene was detected in soil at 30 fbg from B-1 at 0.20 mg/kg and B-3 at 0.031 mg/kg. Groundwater was first encountered at approximately 28 fbg. Hydrocarbons were detected in groundwater at soil borings B-1, B-2, and B-3, located between the former fuel USTs and dispenser islands at maximum concentrations of 22,000 micrograms per liter (gg/L) TPHd, 57,000 gg/L TPHg, and 1,000 gg/L benzene. No hydrocarbons were detected in B-4, defining the western extent of hydrocarbons in soil and groundwater. 2002 Well Receptor Survey: Cambria completed a well receptor survey to identify all municipal groundwater wells within a 2,000-foot radius of the site, and all domestic groundwater wells within a 400-foot radius of the site. In August and September 2001, Cambria mailed a one-page questionnaire to all property owners within a 400-foot radius and contacted the City of Daly City Water and Wastewater and SMCHD for record of any wells within 2,000 feet of the property. The search identified one drinking water well, two irrigation wells, 20 monitoring wells, an unknown well, four improperly destroyed wells, and five properly destroyed wells within a 2,000-foot radius of the

CHEVRON 9-6982 (Continued) **S100858432**

site. A monitoring well owned by the City of Daly City is located approximately 500 feet north (downgradient) of the site. The nearest drinking water well is located approximately 2,100 feet south (upgradient) of the site near the intersection of Lake Merced Boulevard and Coronado Avenue (near the ARCO station). 2004 Well Installation: In April 2004, Cambria installed monitoring wells MW-2 through MW-4. The boring for MW-1 was not completed as a well to protect an underlying aquitard at a depth of approximately 30 fbg. Monitoring wells MW-2 through MW-4 were completed as 4-inch diameter wells. No hydrocarbons were detected in soil from MW-2 and MW-3 and only low concentrations were detected in soil from MW-1 and MW-4. 2005 CTP Investigation: In December 2005, Cambria advanced Cone Penetration Test (CPT) borings CPT-1 through CPT-5. No petroleum hydrocarbons were detected in soil samples collected from borings CPT-3, CPT-4, and CPT-5. The only TPHg detected in soil was 3.8 mg/kg in CPT-2 at 45.5 fbg. The only benzene and MTBE detected in soil were 0.005 mg/kg benzene and 0.003 mg/kg MTBE in CPT-1 at 30.5 fbg. The highest hydrocarbon concentrations detected in grab-groundwater samples were 4,600 gg/L TPHg, 860 gg/L benzene, and 46 gg/L MTBE detected in CPT-2, located north of the former USTs. The highest TPHd concentration in groundwater was 8,100 %g/L in CPT-3, located west of the former USTs and north of the former dispenser islands. 2006 Well Installation: In October 2006, Cambria installed monitoring well MW-5 to 35 fbg, and deepened wells MW-2 to 60 fbg and MW-3 to 50 fbg. No TPHd was detected in any of the soil samples collected. The highest hydrocarbon concentrations in soil and groundwater were detected in MW-2, located north of the existing gasoline USTs. CRA installed groundwater monitoring wells MW-3R and MW-6 on May 7 and 8, 2009 and destroyed MW-3 by pressure grouting on May 8, 2009.

Local Case Number:	220029
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	Extracted from RRM's February 8, 2010 Case Closure Summary, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located at the City of Daly City Wastewater Treatment Plant located at the northeast corner of John Daly Avenue and Lake Merced Boulevard. The UST site is located in the southeast corner of the site, between two L-shaped buildings. The UST site is located east of the southerly L-shaped building. The existing USTs are overlain by a concrete slab, with two fuel dispensers

NORTH SAN MATEO COUNTY SANITATION DISTRICT WWTP (Continued) **S101438168**

located immediately west of the existing USTs. There are two southeast to northwest trending 33 diameter sanitary sewer lines immediately east/northeast of the UST excavation. In addition, a storm drain catch basin and storm drain pipe are also located northeast of the USTs. Four fuel USTs were formerly located at the WWTP near the vehicle maintenance operations for the Waste Water and Clean Water Department for Daly City. Two 10,000-gallon USTs were used to provide diesel fuel to an emergency generator and two 2,000 gallon unleaded gasoline USTs were used to fuel gasoline powered WWTP maintenance vehicles. A diesel pump pit, which connected the underground piping from the diesel tanks to the generators entered the building via an underground piping valve vault, was located near the northeast corner of the building. All of the old tanks and piping were replaced in 1998. The replacement included the installation of shoring around the existing tank excavation, and installation of new USTs at the same location as the old. During removal of the USTs, gasoline diesel contamination was found in soil in the area of the old fuel tank location. December 1989 to January 1990: A pressurized diesel fuel line connected from the adjacent building to a fuel pump in the diesel pump pit ruptured and leaked diesel into the soil. Samples collected by Applied Consultants in January 1990 indicated diesel contamination in the soils at the diesel pump pit. The underground piping and subsurface vault were removed. The diesel fuel line that connected the UST to the generator was replaced with steel piping. The piping was also relocated into a subsurface utility tunnel where visual inspection can be performed over the entire length of the piping. Soil samples P-1 through P-6 were collected from the excavation in the area of the diesel fuel release. The soil was excavated to a maximum depth of approximately 6 feet below grade surface (bgs). Approximately 86 cubic yards of soil were excavated and transported offsite for disposal. The excavation was not continued laterally and vertically due to the close proximity to the structure. The above information was obtained from the report, Soil Sampling Daly City Waste Water Treatment Plant, Applied Consultants, February 9, 1990. September 1991: Six soil borings were drilled north and south of the diesel pump pit. These borings, originally named B-1 through B-6, will be referred to in this report as HB-1 through HB-6 (Harding) to alleviate confusion with borings B-1 through B-5 drilled by EMC. HB-1 was located inside the limits of the diesel pump pit excavation. HB-2 was located north of the diesel pump pit, just south of the existing sanitary sewer lines. These borings were drilled to 20 and 25 feet bgs, respectively. The remaining four borings were drilled to 15 feet in depth, with HB-3 located southeast of the diesel pump pit and HB-4 and HB-5 located to the north of the existing 33 sanitary sewer lines. Diesel was detected in HB-1 at the former diesel pump pit excavation at the 10 and 15 feet depth intervals. Diesel was also detected in HB-6 9.5, just west of the storm drain inlet. Deeper samples from HB-6 at 15 and 20 feet were non detect for diesel. Diesel was also detected at the five foot depth interval of HB-3, which is southeast of the diesel pump pit. Diesel was not detected at any depth in HB-2, HB-3, HB-4, or HB-5. April 1997: Additional soil borings were installed as part of a pre-tank removal investigation in 1997. Three of the borings (B-1 through B-3) surrounded the UST excavation. Boring B-5 was located between the UST excavation and diesel pump pit excavation. The fifth boring, B-4, was drilled in the diesel pump pit excavation. B-1 through B-3, the borings surrounding the UST excavation, were drilled

NORTH SAN MATEO COUNTY SANITATION DISTRICT WWTP (Continued) **S101438168**

to approximately 20 feet in depth. B-4, drilled through the diesel pump pit excavation, was extended to 35 feet in depth. Boring B-5, located between the diesel pump pit and UST excavation, was only advanced to 8 feet in depth due to auger refusal. An imported loose gravel backfill was encountered in borings B-1 through B-4 to depths of up to 14 feet bgs (boring B-1). Soils beneath the gravel generally consisted of interbedded sand, silty sand, and sandy silt. A silty clay was encountered in boring B-1 from 19 feet bgs to the total depth of the boring (21.5 feet bgs). Diesel was detected in all three borings (B-1 to B-3) surrounding the UST excavation, at both the 15 and 20 feet sampling interval. Gasoline was also reported in B-1 and B-2 but was not detected in B-3. At the diesel pump pit excavation, diesel was detected in boring B-4 at depths ranging from 6 to 26 feet in depth. Diesel was not detected in a deeper sample collected at 30 feet. During this phase of investigation, soil samples were analyzed for MTBE and lead. MTBE was not detected in any of the soil samples. Lead was detected at concentrations ranging from 1 to 11 mg/kg. None of the reported lead concentrations are above regulatory levels. December 1998: The four existing USTs were removed and replaced in essentially the same location. The removal of the USTs required the installation of shoring. During the tank replacement effort, 1,010 cubic yards of diesel impacted soils were removed from the limits of the shoring and disposed off site. After installation of the new tanks, clean backfill was placed in the excavation. Soil samples SS-1 through SS-18 were collected from below the removed USTs and from the limits of the excavation to depths up to 18 feet below ground surface. The results of the sampling indicated gasoline and diesel in SS-1 through SS-6, collected below the former USTs. In addition, diesel was also detected at the 15 or 18 feet depth interval in samples collected along the western (SS-10 and SS-12) and northern (SS-13 and SS-14) limits of the excavation. Soil samples collected below the gasoline tanks (SS-5 and SS-6) were also analyzed for lead. Lead was detected in both samples at 3 mg/kg, well below any regulatory level. All 28 soil samples during this phase were also analyzed for MTBE. MTBE was detected in SS-13 15 at a concentration of 0.584 mg/kg. MTBE was not detected in any of the remaining 27 samples.

Title:	SEL 10/05/2015 for North San Mateo County Sanitation District
Description:	Unauthorized release occurred between December 11 and December 12, 2014 (Violation ID#985190) due to effluent pump malfunction during significant rain events. More than 22,000 gallons of secondary treated but undisinfected effluent overflew into the storm drain and the Pacific Ocean. We followed it up in the 2015 Compliance Evaluation Inspection which, among other things, required NSMCSD to submit a comprehensive discussion of corrective actions taken or planned to improve their wastewater collection and treatment practices. NSMCSD responded on November 19, 2015,

NORTH SAN MATEO COUNTY SANITATION DISTRICT WWTP (Continued) **S101438168**

	in part, by revising and resubmitting its December 2014 SMR to address the issue. See attachments.

Title:	NOV 11/22/2013 for North San Mateo County Sanitation District
Description:	On December 13, 2012, the District discharged 1.31 million gallons of partially disinfected effluent into the Pacific Ocean. The incident occurred after 100 gallons of sodium bisulfite was accidentally pumped into the tank storing sodium hypochlorite, neutralizing its chemical strength. For two periods, totaling 3 hours and 42 minutes, the District allowed the plant discharge to proceed without evidence that adequate chlorine was present in the contact basin. The District did not report the incident discussed above to the Regional Water Board, the California Emergency Management Agency, or local health officers.

Title:	Oral Com 09/23/2013 for North San Mateo County Sanitation District
Description:	Overflow of 125 gallons sewage from Headwork#2 to a stormdrain. WB staff determined oral com was appropriate becasue: (1) the incident was relatively minor (2) the corrective actions the Discharger implemented were adequate, and (3) no similiar incident occured recently (the last release occurred in August 1995).

Title:	Oral Com 08/01/2013 for North San Mateo County Sanitation District
Description:	During the first week of this month the scheduled weekly final effluent Enterococcus sample was not collected. WB staff concurred with Discharger's corrective measures (Discharger's staff has reviewed sampling schedules and procedures. The Lab supervisor has been directed to review all scheduled sampling requirements collected for the week and on Thursdays he is required to verify all have been collected and sent out or analyzed on site. Furthermore, he is to review and prepare a report advising staff that sampling for the prior week is or is not complete and state what the upcoming weeks sampling schedule will be.)

Title:	Oral Com 11/30/2012 for North San Mateo County Sanitation District
Description:	For the month of November 2012 there was only one ammonia nitrogen sample collected; the second sample was scheduled but inadvertently not collected. The WB staff concurred with Discharger's proposed corrective measure, covering both Violation ID # 942716 and # 940928. (The corrective measure going forward is the Ammonia Nitrogen sample will be collected weekly up to 4 times per month.)

Federal Facility ID:	CA9799F5875
RAB:	Not reported
NPL Status:	Not Listed
Description:	The 14.5-acre site is located 6 miles southwest of San Francisco in San Mateo County, California. The entire site has been closed to public use and the area is completely fenced. Multiple holes have been cut through the fence and the site is extensively used by the public.
History:	In 1942, the U.S. government acquired 14.5 acres of land for the harbor defense of San Francisco and as a maneuver area. The only documented improvement was a communication cable used for military purposes. In 1943, the lease was terminated. The land was used by the State of California in the 1950s and 1960s until the area was rendered unusable by landslides. No potential hazards related to Department of Defense activities have been located at this site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/28/2020

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/28/2020

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/28/2020

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

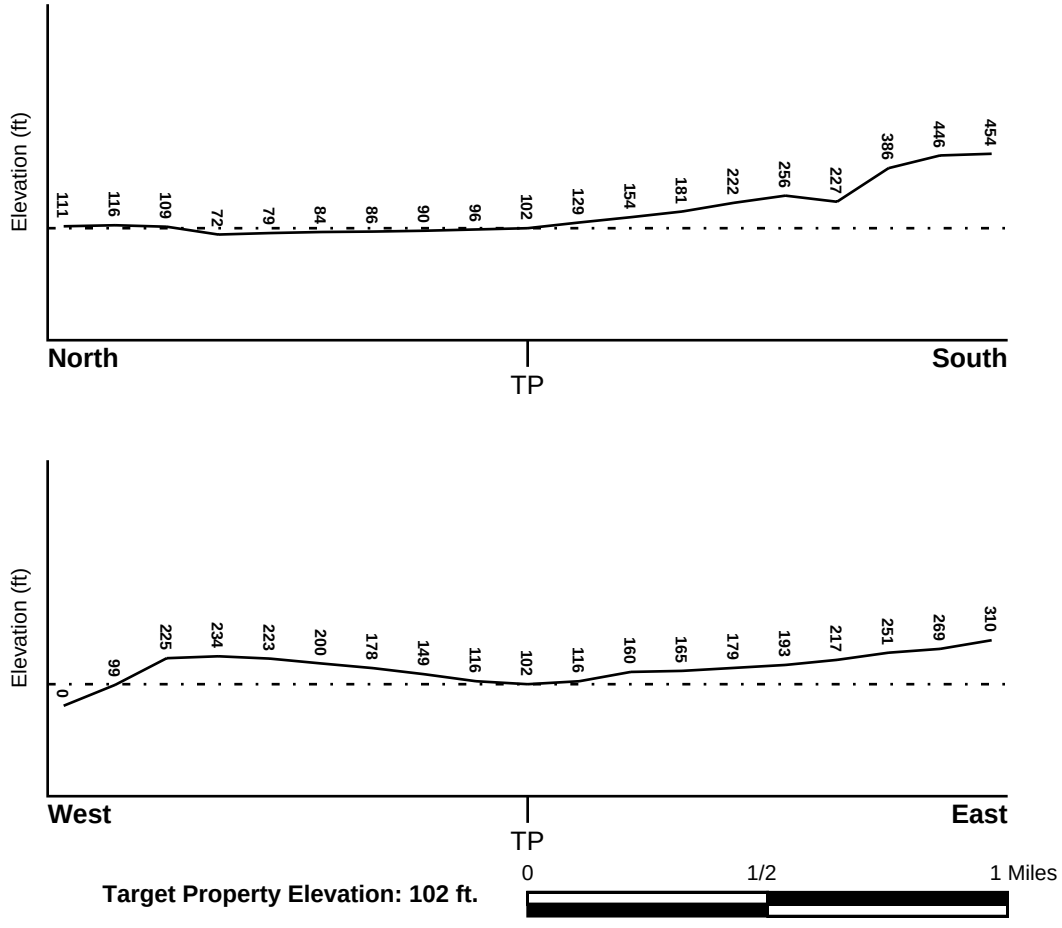
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 102 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

SAN FRANCISCO SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: Orthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	variable	Not reported	Not reported	Max: Min:	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Roux Associates Inc were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

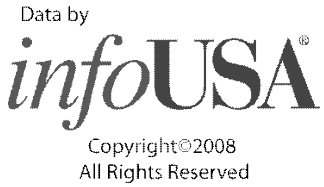
EXECUTIVE SUMMARY



DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

RE: PUBLIC RECORDS REQUEST of January 21, 2021, Reference # R000290-012121

Dear Emma Totsubo,

The CAL FIRE received a public information request from you on January 21, 2021. Your request mentioned:

"Roux Associates will be conducting a Phase I ESA and would like to request public records for the following address:

99 Southgate Avenue
Daly City, CA 94015

We are interested in files available for the entire history of the address - particularly related to land use, hazardous waste, and environmental health (e.g. environmental site assessments, hazardous waste violations, documented releases, permits etc.).

Please reach out if you have any questions."

The CAL FIRE has reviewed its files and has determined there are no responsive documents to your request.

If you have any questions or wish to discuss this further, you may contact my office at (916) 584-6314.

Sincerely,
Mark Springer
PRA Attorney
Sacramento - HQ - Legal Office

To monitor the progress or update this request please log into the CALFIRE PRA Records Center

Public Records Request Number: PR2-012121-03

Location(s): 99 Southgate Ave., Daly, City, CA 94015

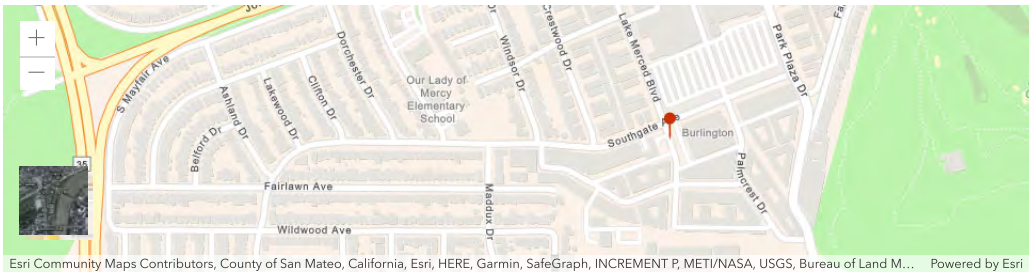
Dear Ms. Totsubo:

On January 21st, 2021 the Department of Toxic Substances Control (DTSC) received your email of January 21st, 2021 requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

Many of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 510-540-3800 or via email at Berkeleyfileroom@dtsc.ca.gov.

Sincerely,



Carl Rose

Subject: PRA request

This message originated outside your organization. Please use caution!

Good afternoon, Ms. Totsubo,

I am in receipt of your request for public records related to 99 Southgate Avenue in Daly City, received on January 21, 2021. I am writing to confirm that because the subject location is within the incorporated limits of Daly City, the County does not possess any planning or building records related to land use. However, the County's Environmental Health Division will be reaching out to you directly to assist with your request related to hazardous waste and environmental health records. Feel free to contact me if you have any questions or concerns.

Thank you,

Melissa

San Mateo County Groundwater Protection Program (GPP), Case No. 220033
Global ID T10608100027

Dear Mr. Milano,

Antea®Group is pleased to present this First Quarter 2020 Semi-Annual Groundwater Monitoring Report for ARCO #465 station located at 151 Southgate Avenue, Daly City, California (the Site). If you have any questions regarding this report or need any additional information about this Site, please contact Mr. Wade Melton at (360) 594-7978.

Sincerely yours,

Wade Melton

1.0 Introduction

On behalf of BP Products North America, Inc. (BP), Antea®Group has completed this First Quarter 2020 Semi-Annual Groundwater Monitoring Report for ARCO Service Station No. 465 (the Site) at 151 Southgate Avenue in Daly City, California, to summarize the data from groundwater monitoring events that took place from November 4 to 6, 2019, and January 20 to 24, 2020. Please refer to **Figure 1** for a Site Location Map, **Figure 2** for the Site Plan, **Table 1** for Soil Boring and Monitoring Well Construction Details, and **Appendix A** for additional Site description and a history of environmental investigations and remedial activities conducted at the Site.

1.1 WORK PERFORMED IN THE FOURTH QUARTER 2019 AND FIRST QUARTER 2020

- Antea Group conducted Fourth Quarter 2019 gauging of Site wells and collected groundwater samples from MW-16D, MW-18D, MW-19D, and V-14 from November 4 to 6, 2019. Antea Group understands that the GPP cannot recommend the Fund reimburse BP for the Fourth Quarter 2019 gauging and sampling activities, as the work was not required by the GPP; however, Antea Group believes the data to be valuable for the evaluation of groundwater conditions in the deep zone.
- Antea Group conducted operation and maintenance (O&M) activities on the Soil Vapor Extraction (SVE) system until the system shutdown was approved by the GPP in a letter dated November 13, 2019.
- Antea Group conducted the first quarter 2020 site-wide gauging and sampling event from January 20 to 24, 2020
- Antea Group conducted a shallow subsurface soil investigation event on February 18, 2020. The results from the investigation will be submitted as a separate report.

1.2 WORK PROPOSED FOR THE SECOND AND THIRD QUARTER 2020

- Antea Group will perform quarterly gauging of Site wells in Second Quarter 2020.
- Antea Group will perform semi-annual groundwater sampling of wells MW-16D, MW-18D, MW-19D, and V-14 in Third Quarter 2020.

2.0 Current Project Status

Table A: Site Status Summary

Current phase of project:	Groundwater Monitoring and Sampling
Monitoring well gauging schedule:	Quarterly: MW-1R, MW-2, MW-4, through MW-10, MW-11R, MW-12 through MW-19, MW-3D through MW-7D, MW-9D, MW-16D, MW-18D, MW-19D, V-1 through V-14
Monitoring well sampling schedule:	Annual (1st quarter): MW-1R, MW-2, MW-4, through MW-10, MW-11R, MW-12 through MW-19, MW-3D through MW-7D, MW-9D, V-1 through V-13 Semi-Annual (1st and 3rd quarter): MW-16D, MW-18D, MW-19D, V-14
Local Receptors:	One public supply well is located within 1,000 feet of the Site - the well is approximately 500 feet southwest of the Site. See **Section 2.2.**
Current Remediation Technique:	Verification Monitoring as of 11/13/2019

2.1 REGULATORY CORRESPONDENCE

On November 13, 2019, the GPP provided comments on the *Second Quarter 2019 Quarterly Remediation Status Report* dated August 14, 2019, and the *V-14 Soil Vapor Extraction Pilot Test Report* dated September 10, 2019. In this letter, the GPP approved the request to shut down the SVE system.

On January 27, 2020, the GPP provided comments on the *Third Quarter 2019 Semi-Annual Groundwater Monitoring Report*, dated November 15, 2019, and requested a work plan for soil confirmation sampling.

On February 10, 2020, BP uploaded a response to the January 27 letter to GeoTracker.

All agency correspondence is included as **Appendix B**.

2.2 LOCAL MUNICIPAL SUPPLY WELL DISCUSSION

Antea Group has reviewed the GeoTracker Groundwater Ambient Monitoring and Assessment Program (GAMA) Database and spoken with representatives from GAMA, the San Francisco Public Utilities Commission (SFPUC), the San Mateo County Office of Sustainability and the City of Daly City Department of Water and Wastewater Resources to identify local receptors within 1,000 feet of the Site. At this time, it is believed that one municipal supply well, Westlake Well, is located approximately 500 feet southwest of the Site.

Below is a summary of the well screen intervals.

- **Public Supply Well – Westlake Well** (Constructed 1995)
  - Screen 1: 340 – 380 feet bgs
  - Screen 2: 440 – 480 feet bgs
  - Screen 3: 600 – 680 feet bgs

Two additional supply wells, one irrigation well, and one unknown well have previously been reported within 1,000 feet of the Site; however, none of the aforementioned agencies have record of these previously reported wells and it is currently believed that the Westlake Well is the only well within 1,000 feet of the Site.

2.3 GROUNDWATER MONITORING

Antea Group gauged and sampled the wells listed in **Table B** below during Fourth Quarter 2019 and First Quarter 2020 per their standard protocol (**Appendix C**). Well construction details are presented in **Table 1**. Copies of Antea Group's groundwater gauging and sampling field data sheets are presented as **Appendix D**. The table below summarizes the recent gauging, purging, and sampling events. Wells MW-14, V-1, V-2, and V-4 were dry during the Fourth Quarter 2019 gauging event, and wells MW-13, MW-14, V-1, and V-2 were dry during the First Quarter 2020 gauging event.

Depth to water in MW-19D during the January 2020 groundwater monitoring event was a minimum of 4.72 feet lower than historical measurements for the well. On March 10, 2020, Antea Group staff re-gauged the well to assess whether the January measurement might be erroneous. The March 2020 measurement was approximately 8.5 feet shallower than the January measurement, which is only 1.93 feet shallower than the November 2019 measurement and consistent with the rising water table in the area (**Table 2**). The average rise in water from November 2019 to January 2020 in B Zone wells except MW-3D is 2.09 feet.

Table B: Groundwater Monitoring and Sampling Summary

Well gauging and sampling dates:	November 4 to 6, 2019 January 20 to 24, 2020 March 10, 2020
Wells gauged:	November 4, 2019: MW-1R, MW-2, MW-3D, MW-4, MW-4D, MW-5, MW-5D, MW-6, MW-6D, MW-7, MW-7D, MW-8, MW-9, MW-9D, MW-10, MW-11R, MW-12, MW-13, MW-14, MW-15, MW-16, MW-16D, MW-17, MW-18, MW-18D, MW-19, MW-19D, V-1, V-2, V-4, V-5, V-6, V-7, V-8, V-9, V-10, V-11, V-12, V-13, V-14 January 20, 2020: MW-1R, MW-2, MW-3D, MW-4, MW-4D, MW-5, MW-5D, MW-6, MW-6D, MW-7, MW-7D, MW-8, MW-9, MW-9D, MW-10, MW-11R, MW-12, MW-13, MW-14, MW-15, MW-16, MW-16D, MW-17, MW-18, MW-18D, MW-19, MW-19D, V-1, V-2, V-4, V-5, V-6, V-7, V-8, V-9, V-10, V-11, V-12, V-13, V-14 March 10, 2020: MW-19D
Wells sampled[1]:	November 4 to 6, 2019: MW-16D, MW-18D, MW-19D, V-14 January 20 to 25, 2020: MW-1R, MW-2, MW-3D MW-4, MW-4D, MW-5D, MW-6, MW-6D, MW-7, MW-7D, MW-8, MW-9, MW-9D, MW-12, MW-16, MW-16D, MW-18, MW-18D, MW-19, MW-19D, V-8, V-14
Purge method[2]:	Low-flow via bladder pump and disposable bailers
Sample collection method:	Disposable bailers or dedicated tubing
Groundwater parameters measured (Appendix B):	Dissolved oxygen (DO), temperature, conductivity, pH, oxidation-reduction potential (ORP), and turbidity
Wells with measurable light non-aqueous phase liquids (LNAPL):	None

1) Well MW-17 was not sampled during the January 2020 event due to a piece of tubing stuck in the well, blocking access for the bladder pump to reach depth to water. Antea Group attempted to remove the tubing for approximately three hours but was unsuccessful.
2) Well V-14 was collected as a grab sample using a dedicated, disposable bailer during the November 2019 and January 2020 sampling events due to there being insufficient water to perform low-flow sampling. In the GPP letter dated January 27, 2020, the GPP stated "Please employ methods to remove groundwater within the blank portion of the well casing before commencing purging across the screened interval. GPP staff could support a traditional 3-well volume purge across the screened interval prior to sampling to reduce the potential of having to change-out the purging equipment after the water within the blank portion of the casing is removed." Antea Group responded to this letter on February 10, 2020 and stated that during the January 20-24, 2020 groundwater monitoring event, which occurred prior to receipt of the January 27, 2020 letter, an attempt was made to remove groundwater from the blank portion of the casing in wells where the screen was submerged (MW-4D, MW-5D, MW-6D, MW-7D, MW-9D, MW-16, and MW-18). Stagnant water was removed from the blank casing in several wells; however, high recharge rates in five locations (MW-4D, MW-5D, MW-6D, MW-16, and MW-18) prevented the removal of all groundwater from the blank portion of the casing via disposable bailer or bladder pump. After an attempt was made to remove the stagnant water from the blank casing, Antea Group staff purged the wells with a bladder pump and waited for parameters to stabilize before sampling. BP and Antea Group recognize that this cannot be considered true low-flow purging. The removal of 3-casing volumes equates to more than 70 gallons of water in some locations, and in the response letter dated February 10, 2020, Antea Group recommended using an electric submersible pump to remove 3-well volumes from the wells where the screens are submerged during future sampling events. After removal of 3-casing volumes, a dedicated bailer will be used to sample each well.

2.3.1 Groundwater Flow Gradient and Directional Trends

Groundwater monitoring wells at the Site are mainly set within two subsurface water bearing zones: Zone A, the perched groundwater zone, contains wells screened between approximately 30 and 70 feet bgs with a maximum screen length of 20 feet; and Zone B, the region's Shallow Aquifer[1], contains wells that are screened between approximately 125 and 165 feet bgs with a maximum screen length of 20 feet. Monitoring well MW-3D is screened deeper than the rest of the deep well network with a screen interval from 202 to 220 feet bgs and is not included in groundwater contouring. Similarly, wells V-1, V-2, V-4, V-5, V-7, and V-9 through V-14 were not included in contouring as they are vapor extraction wells that are purposefully screened above Zone A and Zone B. In addition, wells MW-13 and MW-14 were not included in contouring as the wells were dry during the First Quarter 2020 event. Based on the March 2020 measurement, Antea Group believes the depth to water measured in MW-19D during the January event is erroneous therefore, MW-19D has also been omitted from contouring. **Figures 3A** and **3B** present Zone A and Zone B groundwater elevation contours calculated from the First Quarter 2020 gauging data. Groundwater elevation data are tabulated in **Table 2** (current) and **Table 3** (historical). **Appendix E** presents a hydrograph with the static water levels of all monitoring wells during every gauging event in the Site's history. Historical groundwater gradients for both units are presented in **Table 4A** and **4B** and flow directions are shown on Rose diagrams included as **Appendix F.**

2.3.2 Groundwater Quality Data

Antea Group submitted the groundwater samples collected at the Site under chain-of-custody protocol to Eurofins Calscience Laboratories, Inc. (Calscience) located in Irvine, California; a California certified laboratory under the Environmental Laboratory Accreditation Program (Certification No. 2706). The groundwater laboratory analytical reports are included as **Appendix G**. The groundwater samples were analyzed for the following:

- Gasoline Range Organics (GRO) and Stoddard Solvents by United States Environmental Protection Agency (USEPA) Method 8015M;
- Benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tert-butyl ether (MTBE), ethyl tert-butyl ether (ETBE), di-isopropyl ether (DIPE), tertiary-amyl methyl ether (TAME), and tertiary butyl alcohol (TBA), ethanol, naphthalene, 1,2 dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) by USEPA Method 8260B.

Current and Historical groundwater analytical results are tabulated in **Table 2** and **Table 3**, respectively.

2.3.3 Quality Assurance/Quality Control (QA/QC)

Antea Group's QA/QC procedures for the Fourth Quarter 2019 and First Quarter 2020 sampling events included collection of two field duplicates per sampling event (November 2019 and January 2020), and validation of the analytical data. Antea Group's data validation checklists are included with the TestAmerica laboratory reports presented as **Appendix G**.

Laboratory QA/QC Performed:	Yes (validated by Antea Group).
Laboratory Data Qualifiers as reported within the laboratory analytical reports:	440-254187-1: Method 8015B: Insufficient 8015-DRO sample was available to perform a MS/MSD associated with preparation batch 440-579542 and analytical batch 440-579986. The LCS was performed in duplicate to provide precision data for this batch: (LCS 440-579542/2A). Method 3510C: Insufficient sample volume was available to perform a MS/MSD associated with preparation batch 440-579542. Method 8015B.

[1] San Francisco Public Utilities Commission, 2018, *Annual Groundwater Monitoring Report Westside Basin, San Francisco and San Mateo Counties, California*, April.

Laboratory QA/QC Performed:	Yes (validated by Antea Group).
	440-253981-1 Method 3510C: Insufficient sample volume was available to perform a MS/MSD associated with preparation batch 440-578743. Method 3510C: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: DUP-465_20191105 (440-253981-3). 440-259635-1 Method 8015B: The matrix spike/matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-592152 and analytical batch 440-592215 were outside control limits. Sample matrix interference is suspected. The associated laboratory control sample (LCS) recovery was within acceptance limits. Method 8015B: The matrix spike duplicate (MSD) recovery for preparation batch 440-592152 and analytical batch 440-592215 was outside control limits. Sample matrix interference is suspected. The associated laboratory control sample (LCS) recovery was within acceptable limits. 440-259702-1 Method 8015B: Insufficient 8015-DRO sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-592379 and analytical batch 440-592483. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch: (LCS 440-592379/2-A). Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-592379. Method 8015B. 440-259756-1 Method 8015B: Insufficient 8015-DRO sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-592379 and analytical batch 440-592483. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch: (LCS 440-591379/2-A). Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-592379 and 440-592379. Method 8015B.
Are the data valid for their intended purpose?	Yes, the data are valid.

Antea Group did not note discrepancies in their sampling procedures and no discrepancies were noted in the Calscience analytical procedures. The qualifiers summarized in the table above resulted in issues with the MS/MSD samples and do not invalidate the field parent samples or duplicates. The notes listed above that could affect the results of certain constituent concentrations in field parent samples or duplicates would bias the concentrations high, yet associated constituents were not detected. Antea Group concludes that the laboratory data obtained during the Fourth Quarter 2019 and First Quarter 2020 sampling events are valid.

2.3.4 Groundwater Analytical Results

The table below summarizes the constituents detected above the laboratory reporting limit, frequency of detection, and the range of concentrations detected in subsurface water samples collected during the Fourth Quarter 2019 sampling event.

Constituents	Frequency of Detections Above the Laboratory Reporting Limit	Minimum Detected Concentration, in µg/L (Well ID)	Maximum Detected Concentration, in µg/L (Well ID)
GRO	0 of 4	-	-
Benzene	0 of 4	-	-
Toluene	0 of 4	-	-
Ethylbenzene	0 of 4	-	-
Total Xylenes	0 of 4	-	-
MTBE	1 of 4	-	1.5 (V-14)
TBA	0 of 4	-	-

Explanations:
µg/L = Micrograms per liter

The table below summarizes the constituents detected above the laboratory reporting limit, frequency of detection, and the range of concentrations detected in subsurface water samples collected during the First Quarter 2020 sampling event.

Constituents	Frequency of Detections Above the Laboratory Reporting Limit	Minimum Detected Concentration, in µg/L (Well ID)	Maximum Detected Concentration, in µg/L (Well ID)
GRO	0 of 22	-	-
Benzene	0 of 22	-	-
Toluene	0 of 22	-	-
Ethylbenzene	0 of 22	-	-
Total Xylenes	0 of 22	-	-
MTBE	3 of 22	2.6 (MW-3D)	67 (MW-6)
TBA	2 of 22	56 (V-14)	240 (MW-6)

Explanations:
µg/L = Micrograms per liter

MTBE was not detected at concentrations above the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Level (ESL)[2] of 5.0 µg/L in the samples collected during the November 2019 sampling event; however, it was detected above the ESL in two wells (MW-6 and V-14) during the January 2020 sampling event (**Table 2**, **Figure 4A**, and **Figure 4B**). Benzene was not detected above laboratory reporting limits in either the Fourth Quarter 2019 or First Quarter 2020 sampling events. **Figure 4A** and **Figure 4B** show GRO, benzene, MTBE, and TBA concentrations in groundwater during Fourth Quarter 2019 and First Quarter 2020, respectively. As of the Second Quarter 2019, the MTBE plume extent in Zone B has been defined to the corresponding ESL by wells MW-5D, MW-6D, MW-18D, and MW-19D. MTBE concentrations in Zone A are below the corresponding ESL with the exception of MW-6 in the First Quarter 2020.

2.3.6 Waste Disposal Summary

Antea Group generated approximately 23 gallons (1 drum) and 73 gallons (2 drums) of wastewater from well purging/sampling and equipment decontamination activities during the November 2019 and January 2020

[2] San Francisco Bay Regional Water Quality Control Board, 2019. *Environmental Screening Levels Revision 2.*

sampling events, respectively. The wastewater was stored on-site in DOT approved 55-gallon drums. Antea Group coordinated removal and disposal by Belshire Environmental Services, Inc. (Belshire). Belshire removed the drum associated with the November 2019 sampling event and transported it to Demenno Kerdoon of Compton, California, for disposal on December 24, 2019. The drum associated with the January 2020 groundwater sampling event was picked up by Belshire on March 12, 2020 and transported to World Oil Recycling of Compton, California. A copy of the waste manifests is provided as **Appendix H**.

3.0 Recommendations and Conclusions

Antea Group performed the Fourth Quarter 2019 and First Quarter 2020 groundwater monitoring and sampling events in November 2019 and January 2020. Based on the groundwater sampling results, MTBE concentrations remain above the corresponding ESL at MW-6 in Zone A and at V-14 in Zone B. However, the MTBE concentration at MW-19D, which was above the ESL in the Second Quarter 2019, decreased to below the ESL in Third Quarter 2019, Fourth Quarter 2019 and First Quarter 2020, thus defining the dissolved MTBE plume boundary in Zone B to the corresponding ESL to the north of V-14. The MTBE concentration in V-14 remains two to three orders of magnitude lower than the concentration in February 2018. BP will continue to monitor the deep monitoring wells and V-14 for plume stability in the Third Quarter 2020.

4.0 Remarks

The recommendations contained in this report represent Antea USA, Inc.'s professional opinions based upon the currently available information and accepted professional standards. This report is based upon a specific scope of work requested by the client. The contract between Antea USA, Inc. and its client outlines the scope of work, and only those tasks specifically authorized by that contract or outlined in this report were performed. This report is intended only for the use of Antea USA, Inc.'s client and anyone else specifically identified in writing by Antea USA, Inc. as a user of this report. Antea USA, Inc. will not and cannot be liable for unauthorized reliance by any other third party. Other than as contained in this paragraph, Antea USA, Inc. makes no express or implied warranty as to the contents of this report.

Explanation

Wells are of poly-vinyl-chloride (PVC) construction

ft bgs = Feet Below ground surface

-- = Denotes unknown data or not applicable

Proposed soil boring SB-6 was not advanced per the April 5, 2006 Additional Soil and Groundwater Investigation Interim Report.

Notes:
TOC = Top of Casing
ft = feet
NP = No Product
LNAPL = Light Non=Aqueous Phase Liquid
* = Corrected for LNAPL if present (assumes LNAPL specific gravity = 0.75)
-- = No Information Available
Results in **bold** exceed the reporting detection limit
ug/L = micrograms per liter
< = Not detected at or above indicated laboratory reporting limit
^ = TOC elevation changed to match August 24, 2017 survey data

GRO = Gasoline Range Organics
DRO = Diesel Range Organics
MTBE = Methyl tertiary butly ether
TBA = tertiary-Butyl Alcohol
DIPE = Diisopropyl ether
ETBE = Ethyl-tert-butyl ether
TAME = tert-Amylmethyl ether
1,2-DCA = 1,2-Dichloroethane
EDB = 1,2-Dibromoethane
NG = Not Gauged
LR = LCS/LCSD recovery above method control limits

TABLE 3
Historical Gauging and Analytical Data
ARCO Service Station No. 465
151 Southgate Avenue
Daly City, CA

Well I.D.	Date	GROUNDWATER ELEVATION DATA						GROUNDWATER ANALYTICAL DATA																
		TOC Elevation (ft)	Water Level Depth (ft)	LNAPL Depth (ft)	LNAPL Thickness (ft)	Water Level Elevation* (ft)	Qualifiers	GRO (ug/L)	DRO (ug/L)	Benzene (ug/L)	Toluene (ug/L)	Ethylbenzene (ug/L)	Xylene (Total) (ug/L)	MTBE (ug/L)	Naphthalene (ug/L)	Ethanol (ug/L)	TBA (ug/L)	DIPE (ug/L)	ETBE (ug/L)	TAME (ug/L)	1,2-DCA (ug/L)	EDB (ug/L)	Stoddard Solvent (ug/L)

Notes:
TOC = Top of Casing
ft = feet
NP = No Product
LNAPL = Light Non=Aqueous Phase Liquid
* = Corrected for LNAPL if present (assumes LNAPL specific gravity = 0.75)
-- = No Information Available
Results in **bold** exceed the reporting detection limit
< = Not detected at or above indicated laboratory reporting limit
ug/L = micrograms per liter
GRO = Gasoline Range Organics
DRO = Diesel Range Organics
MTBE = Methyl tertiary butly ether
^ = TOC elevation changed to match August 24, 2017 survey data
a= Chomatogram Pattern: Weathered Gasoline C6-C12
b= Chromatogram Pattern: Gasolone C6-C12
c= The sample was diluted due to thie prescence of high levels of non-target analytes resulting in elevated reporting limits
d= Insufficient water in well to collect a sample
e= Hydrocarbon pattern is present in requested fuel quantitation range but does not resemble the pattern of the requested fuel for the Stoddard solvent
f= Discrete peak @ C6-C7 for GRO/TPH-g
g= This result was derived from a single point calibration with no MDL study for the Stoddard solvent
h= This sample was analyzed beyond the EPA recommended holding time. The results may still be useful for their intended purpose.
i= initial analysis indicated 10,000 ug/L, an estimated value above the calibration range of the instrument
j= Results for MTBE confirmed by EPA Methods 8260
k= Results of EPA Method 8240 METBE confirmation
l= Discrete peak at C5-C6
m= Hydrocarbon pattern is present in the requested fuel quantitation range byt does not resemble the pattern of the requested fuel
n= well is dry
o= well inaccessible
p= V-8 was sampled on Semptember 9,2000 because MW-1 was damaged
TBA = tertiary-Butyl Alcohol
DIPE = Diisopropyl ether
ETBE = Ethyl-tert-butyl ether
TAME = tert-Amylmethyl ether
1,2-DCA = 1,2-Dichloroethane
EDB = 1,2-Dibromoethane
IW = Inaccessible well
NG = Not Gauged
DNP = Did not purge prior to sampling
SV= Sample collected during SVE System Operation
VO = Vehicle obstruction
WD = Well Destroyed
WI = Well Inaccessible
NSP = Well not sampled this event, in accordance with groundwater sampling schedule
MD = Sampling & gauging performed over multiple days during this event
SU = Sample may be not be representative as they were collected within 48 hours of well development
VOL = Well not sampled due to insufficient volume of water in well
LQ = LCS/LCSD recovery above method control limits
N = Identity of contaminant uncertain (hydrocarbon pattern atypical of indicated analyte); see lab report

Beginning with the first quarter 2003 sampling event (3/26/03), TPH-g, BTEX and MTBE analyzed using EPA Method 8260B.

Beginning in the fourth quarter 2003, the laboratory modified the reported analyte list. Total petroleum hydrocarbons as gasoline (TPHg) has been changed resulting data may be impacted by the potential non-TPHg analytes within the requeted fuel range resulting in a higher concentation being reported

Beginning in the second quarater 2004, the carbon range fro GRO was changed from C6-C10 to C4-C12
Values for dissolved oxygen (DO) and pH were obstained through field measurements
Source: the data within this table collected prior to August 2002 was provided by URS by RM and their previous consultants. URS has not verified the accuracy of this information

Site Details and Summary of Previous Environmental Investigations

ARCO FACILITY NO. 465 - 151 SOUTHGATE AVENUE, DALY CITY, CALIFORNIA

SITE ASSESSMENT AND REMEDIATION SUMMARY

1992 Initial Subsurface Investigation. An initial subsurface investigation was performed at the Site in March 1992. Six SVE wells (V-1 through V-6) were installed around the former UST basin and near the former waste oil UST. Groundwater monitoring wells MW-1 and MW-2 were installed at depths of approximately 70.5 feet and 61.5 feet bgs, respectively, to intercept a perched groundwater horizon[1]. Results of this investigation indicated that soil and groundwater near the gasoline and waste oil USTs had been impacted by petroleum hydrocarbons, including low boiling point hydrocarbons quantified as total petroleum hydrocarbons (TPH) as gasoline (TPHg; or gasoline range organics [GRO]), higher boiling point hydrocarbons quantified as TPH as diesel (TPHd; or diesel range organics [DRO]) and total recoverable petroleum hydrocarbons (TRPH). Low concentrations of semi-volatile organic compounds (SVOCs) and polychlorinated biphenyls (PCBs) were also reported in soil samples collected during the assessment.

In July 1992, SVE well V-7 was installed to a depth of 40 feet bgs, and an SVE pilot test was performed at the Site. In August 1992, deep groundwater monitoring well MW-3D was installed to a depth of approximately 220 feet bgs to intercept the upper portion of the regional groundwater aquifer[2]. The GPP noted in a letter dated July 5, 2001, that "MW-3D is screened from 202 bgs to 220 feet bgs (below an approximate 10-foot-thick clayey silt to silty clay zone) and may represent the deeper drinking water aquifer."

1993 Groundwater Sampling and Temporary SVE System Install. In January 1993, quarterly groundwater monitoring activities were initiated at the Site. Installation of vapor extraction and conveyance pipelines and construction of a vapor extraction and treatment system in the southwest corner of the Site were completed on March 30, 1993. On May 19, 1993, SVE well V-8 was installed to a depth of approximately 60.5 feet bgs. On May 20, 1993, groundwater monitoring well MW-4 was installed to a depth of approximately 61.5 feet bgs to further assess groundwater quality in the perched groundwater horizon. A temporary SVE system with an internal combustion engine began operation on July 13, 1993[3].

1994 – 1997 SVE System Operation and Shutdown. The SVE system was shut down due to noise issues on April 21, 1994. The internal combustion engine was removed from the Site on April 26, 1994. An Airex KATOX 100C55 catalytic oxidizer was installed at the Site in May 1995. The SVE system operated full time from June 13, 1995 to October 10, 1995. The operation schedule of the SVE system was then modified to two months of operation followed by two months of non-operation. Operation of the SVE system continued with a two-month operation and two-month non-operation schedule until February 10, 1997. The SVE system was restarted on September 22, 1997 to perform a four-week system evaluation. On October 15, 1997, the SVE system was shut down with approval from the GPP.

1997 Waste Oil UST Removal. On October 21, 1997, Gettler-Ryan removed a 520-gallon capacity waste oil UST and excavated the UST cavity to approximately 9 feet bgs. A soil sample (WO-1-8) collected at 8 feet bgs (2 feet below the bottom of the tank) had reported concentrations of 2,700 milligrams per kilogram

[1] SEACOR, 1992, *Technical Report, Phase 1 Site Investigation*. July 31.

[3] SEACOR, 1993, *Project Status Report – Investigation and Remediation.* July 29.

(mg/kg) GRO and 2,700 mg/kg DRO. On October 30, 1997, Gettler-Ryan over-excavated the former waste oil UST pit to a depth of approximately 15 feet bgs. Stained soil was observed on the eastern wall of the pit approximately 4 feet bgs during over-excavation. With approval from the GPP, the over-excavation was extended in an easterly direction approximately 3 feet from the edge of the original excavation to a depth of 7 feet bgs. Three soil samples (WO-2-15, WO-3-7, and WO-4-4) were collected from the over-excavation areas and the results indicate mass was left in the subsurface. DRO concentrations ranged from 330 mg/kg to 4,000 mg/kg with the sample collected at 15 feet bgs reporting 3,100 mg/kg DRO, 2,900 mg/kg GRO, 16 mg/kg total xylenes, and 0.69 mg/kg MTBE. Approximately 60 cubic yards (yd^3) of soil excavated from the tank cavity was transported for offsite disposal by Dillard Trucking. A new waste oil UST and associated piping and vents were installed in the same tank cavity, the over-excavation was backfilled, and the surface asphalted on October 31, 1997[4].

1998 Soil Investigation. In January 1998, six confirmation soil borings (CSB-1 through CSB-6) were advanced to determine if operation of the temporary SVE system had reduced the hydrocarbon concentration in soil to levels acceptable for regulatory case closure**.** The borings were advanced using hollow stem augers to depths ranging from 30.5 feet to 55.5 feet bgs. Soil samples were analyzed for GRO, benzene, toluene, ethylbenzene, xylenes (BTEX), and MTBE. Soil samples collected from CSB-6, located near the former waste oil UST, were also analyzed for DRO, TRPH, volatile organic compounds (VOCs), halogenated VOCs, PCBs, and total metals. Concentrations of GRO, DRO, and TRPH were present in soil samples collected from CSB-5 and CSB-6. Soil samples collected from CSB-6 were also reported to contain concentrations of heavy oil. Benzene was not detected in any of the soil samples collected. MTBE was reported in soil samples collected from boring CSB-3 at depths of 15 feet bgs and 21 feet bgs with concentrations of 0.66 mg/kg and 0.15 mg/kg, respectively. Concentrations of ethylbenzene, total xylenes, 2-methylnaphthalene, PCB Aroclor 1248, and total metals were detected in soil samples collected from CSB-6 at depths of 5 and 15 feet bgs. On July 6, 1998, the SVE unit was removed from the Site[5].

1999 Product Line Removal. On March 5, 1999, Gettler-Ryan removed the product lines between the USTs and three fuel dispenser islands at the Site. The underlying soil in the trench between the central and northern two dispenser islands had gray staining and emitted a gasoline odor. Six trench floor soil samples (T-1 through T-6) and eight soil samples from beneath the dispensers (D-1 through D-8) were collected at 3 feet bgs and analyzed for GRO, BTEX, MTBE, and lead[6].

Due to concentrations of gasoline constituents in soil samples T-2, T-4, T-6, D-5, and D-8, soil was excavated to approximately 8 to 10 feet bgs and confirmation samples (T-2A, T-4A, T-6A, D-5A, and D-8A) were collected from the bottom of the over-excavated trenches on March 10, 1999. One of the five over excavation samples, T-2A located between the northern and middle dispenser island at 10 feet bgs contained 9,700 mg/kg GRO and 82 mg/kg benzene. Approximately 127 tons of soil were removed from the Site after the excavation and transported by Dillard Trucking to a Browning Ferris Industries offsite disposal facility[5].

2000 UST Removal Action. SVE well V-3 was abandoned on August 29, 2000 in preparation for UST replacement activities. Between August 28, 2000 and September 6, 2000, two 10,000-gallon capacity unleaded gasoline USTs, one 8,000-gallon capacity unleaded gasoline UST, and associated product lines

[4] SECOR, 1997, *Waste Oil Tank Removal.* October 24.
[5] SECOR, 1999, *Soil Sampling during Fuel Line Removal and Replacement.* June 25.
[6] SECOR, 1999, *Soil Sampling during Fuel Line Removal and Replacement.* June 25.

and dispensers were removed from the Site. Over-excavation of the UST area was confined to the expansion area intended for the new USTs[7].

During UST replacement activities performed in August and September 2000, Henderson Construction Company, the ARCO subcontractor performing the replacement, reported an unauthorized release of approximately 500 gallons of a gasoline and rinsate water mixture from one of the gasoline USTs. The spill occurred during the attempted removal of a UST with the rinsate water still inside. A portable dual-phase extraction (DPE) system was mobilized to the Site shortly thereafter and operated for a 10-day period to mitigate the effects of the reported release[8].

2001 Installation of MW-5 and MW-6 Monitoring Wells. In November 2001, SECOR International, Inc. (SECOR) installed two groundwater monitoring wells (MW-5 and MW-6) and advanced one soil boring (SB-1). Maximum concentrations of 21,000 mg/kg GRO and 470 mg/kg MTBE were reported in a sample collected from MW-6 at a depth of 15.5 feet bgs. The maximum benzene concentration (6.9 mg/kg) was reported in a sample collected from MW-5 at a depth of 20.5 feet bgs. Wells MW-5 and MW-6 were completed at a depth of 60 feet bgs. Groundwater samples have been obtained consistently from MW-6, but MW-5 has only had water seven times since it was installed[9].

2003 Additional Characterization near MW-5. In April 2003, URS Corporation (URS) performed additional characterization in the vicinity of MW-5 to determine whether shallow groundwater was present at a depth greater than the 60-foot completion depth of MW-5, and to characterize the vertical extent of petroleum hydrocarbons and fuel oxygenates near the waste oil UST. Boring MW-5A was drilled adjacent to MW-5 and soil was sampled to a depth of 85 feet. After drilling through soil identified as sandy clayey silt and clayey silty sand from approximately 60 to 64 feet bgs, the augers were left open for observation at a depth of 66 feet bgs in moist silty sand for over one hour. No water accumulated in the borehole, so an additional well was not installed at this location. No GRO or benzene concentrations greater than the laboratory reporting limits (LRLs) were detected in soil samples collected from 60.5 to 85 feet bgs in the boring. However, MTBE was detected in soil samples collected from 60.5 to 85 feet bgs at concentrations ranging from 0.12 mg/kg to 1.0 mg/kg[10].

2005 Additional Soil Characterization. In September 2005, URS advanced nine soil borings (SB-1 renamed SB-1A, SB-2 through SB 5, and SB-7 through SB-10) to depths ranging from 50 to 81 feet bgs in order to further assess the vertical and lateral extent of petroleum hydrocarbons in the subsurface. This work was summarized in URS' *Additional Soil and Groundwater Investigation Interim Report*, dated April 5, 2006.

Soil boring SB-6 was not advanced because no odor or photoionization detector (PID) readings were observed in boring SB-7. Benzene was not detected in onsite borings SB-1A, SB-2, and SB-3, while GRO, toluene, ethylbenzene, xylenes, and MTBE were detected. Soil samples collected from borings SB-2 and SB-3 were analyzed for the presence of additional VOCs. SB-3 had reported concentrations of 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, n-butylbenzene, and n-propylbenzene above the LRL. Soil samples collected from boring SB-1A, advanced in the vicinity of the waste oil UST, were analyzed for the presence of DRO and Stoddard Solvent; these analytes were detected in the majority of samples collected

[7] SECOR, 2001, *Report of Environmental Activities Associated with Underground Storage Tank, Product Line, and Dispenser Replacement.* January 12.

[10] URS, 2003, *Soil and Water Investigation Report*, June 3.

to a depth of approximately 51.5 feet bgs. GRO, BTEX, and fuel oxygenates were not detected in the soil samples collected from offsite borings SB-4, SB-5, and SB-7 through SB-10 at concentrations above the LRLs.

Grab groundwater samples were collected from onsite boring SB-3, and offsite borings SB-4, SB-5, and SB-7 through SB-10. The grab groundwater sample collected from onsite boring SB-3 at approximately 60.5 feet bgs, contained concentrations of GRO, BTEX, MTBE, 1,2-4 trimethylbenzene, and 1,3,5 trimethylbenzene. The grab groundwater samples collected from the offsite soil borings did not contain GRO, BTEX, and oxygenates at concentrations greater than the LRLs. Based upon the results of this investigation, URS recommended the installation of three additional offsite groundwater monitoring wells (MW-7 through MW-9) to further delineate the lateral extent of dissolved petroleum hydrocarbons offsite[11].

2008 Installation of MW-7, MW-8, and MW-9. On August 28 and 29, 2008, wells MW-7 through MW-9 were installed. Results of the investigation and an updated CSM were presented in the Stantec *Additional Site Assessment Report and SCM* dated June 14, 2010[12].

2010 -2011 Additional Assessment and Remediation Feasibility Test. In a letter dated July 6, 2010, the GPP requested a workplan for remediation feasibility testing. The proposed feasibility testing scope of work was presented in Stantec's *Additional Assessment and Remediation Feasibility Test Workplan* (Workplan) dated October 29, 2010. The GPP issued a letter dated January 13, 2011, stating the information provided in the Workplan serves as a Remedial Action Plan (RAP), and thus required BP to forego SVE feasibility testing and move directly to active SVE remediation[13]. The GPP letter also directed submittal of an addendum to the Workplan. BP provided the revised assessment and remediation workplan to the GPP via email on March 1, 2011.

In June and July 2011, Stantec completed additional assessment and bench-scale feasibility testing. The work involved the installation of three additional onsite (MW-10) and off-site (MW-11 and MW-12) groundwater monitoring wells to further characterize petroleum hydrocarbons in soil and groundwater, the installation of two additional SVE wells (V-9 and V-10) for expansion of the existing offline SVE system, and the installation of one dual-nested soil vapor probe (SV-1S/SV-1D) near the western property line to evaluate vapor phase petroleum hydrocarbon intrusion risk toward nearby potential receptors west of the site from the former waste oil and gasoline UST source areas. On December 21, 2011, Stantec collected soil vapor samples from vapor probes SV-1S and SV-1D. The tetrachloroethylene (PCE) concentrations reported in the vapor samples collected from SV-1S and SV-1D are likely derived from operations at the former Southgate Cleaners located west of the Site. Details of the completed assessment and In-Situ Chemical Oxidation (ISCO) feasibility testing utilizing hydrogen peroxide (H2O2), and an updated CSM were presented in the Stantec's report dated February 14, 2012[14].

2011-2012 SVE System Installation. Phase 1 of the SVE system installation began in August 2011 and included connection of the new SVE wells V-9 and V-10 and connection of existing well V-4 to an expanded remediation system compound through lateral conveyance piping placed underground. While reviewing

[11] URS, 2006, *Additional Soil and Groundwater Interim Report,* April 5.
[12] Stantec, 2010, *Additional Site Assessment Report and Site Conceptual Model*, June 14.
[13] Stantec, 2010, *Additional Assessment and Remediation Feasibility Test Workplan*, October 29.
[14]Stantec, 2012, *Additional Assessment Report of Findings, Bench Scale Feasibility Test Report, and Site Conceptual Model*, February 14.

historical soil analytical data, it was noted that 1,200 mg/kg GRO was present in a soil sample collected at 46 feet bgs in soil boring SB-1A, located between MW-5 and newly installed well MW-10. Since the shallow SVE wells are screened from 15 to 35.5 feet bgs, Stantec connected groundwater monitoring wells MW-5 and MW-10 (screened from 40 to 60 feet bgs) to the SVE system to insure recovery of hydrocarbon mass present in soil at 46 feet bgs. The extraction piping was installed from V-5 to MW-5 and from V-10 to MW-10 and controlled with a ball valve. The ball valve allows extraction from V-5 or MW-5 and V-10 or MW-10.

Phase 2 of the SVE system installation was completed in February 2012 with installation of a thermal oxidizer. System startup and source testing was conducted in July 2012 upon completion of Pacific Gas & Electric (PG&E) utility connection and Bay Area Air Quality Management District (BAAQMD) air permitting[15]. Stantec's *Soil Vapor Extraction System Source Test Report* was submitted to the GPP on October 19, 2012, in accordance with their directive. The SVE system startup was completed on October 22, 2012[16].

2012 SVE Source Test. In a letter dated June 19, 2012, GPP issued a notice of violation (NOV) for the failure to begin operation of the SVE system. Although significant progress had been made, additional tasks that required completion before the new SVE system could be started included connection of power and natural gas services from PG&E and issuance of an Authority to Construct (ATC) permit from the BAAQMD. As communicated to the GPP in electronic correspondence dated June 12, 2012, the BAAQMD delayed issuance of the ATC permit due to concern about chlorinated solvents present in soil vapor beneath the Site and the potential for dioxin formation when operating the thermal oxidizer to treat chlorinated solvents present in the extracted soil vapor. In order to maintain compliance with ATC permit conditions, Stantec performed an SVE source test on July 2 and 3, 2012 using Granular Activated Carbon (GAC) vessels arranged in series. Following installation of the GAC vessels, Stantec worked with the SVE equipment manufacturer to modify the SVE system controls, bypass the thermal oxidizer, and re-route the extracted soil vapor through the GAC vessels for treatment[16]. As part of the source test, individual extraction well vapor samples were analyzed for contaminant concentrations. Stantec evaluated influent vapor analytical data to determine the total chlorinated atom mass and determine whether the dioxin health risk trigger level would be exceeded. The calculated dioxin trigger level was not exceeded, and the thermal oxidizer was placed back online[17].

2013 Additional Soil and Groundwater Assessment. Between March 18 and 27, 2013, Stantec supervised National Exploration, Wells, and Pumps (NEWP) during advancement of three soil borings (SB-11 through SB-13). Soil and groundwater samples were submitted to JAG Consulting Group for bench scale testing and analysis. The results, including an updated CSM, are summarized in Stantec's *Additional Assessment Report, Bench Scale Feasibility Test Report, and Site Conceptual Model* dated June 13, 2013. The GPP reviewed the report and responded in a letter dated March 18, 2014. The GPP requested a workplan for additional assessment and well replacement. Stantec submitted the requested workplan on June 19, 2014[18]. The workplan was conditionally approved by GPP in a letter dated August 18, 2014.

2014-2015 Additional Soil and Groundwater Assessment. Between December 2014 and February 2015, Stantec completed additional assessment that included the following scope of work:

[15]Stantec, 2013, *Remediation System Installation Report*, April 12, 2013.
[16] Stantec, 2012, *Soil Vapor Extraction System Source Test Report*, October 19.
[17]USEPA, 2004, How to Evaluate Alternative Cleanup Technologies for Underground Storage Tank Sites, May 2004
[18] Stantec, 2014, *Workplan for Additional Assessment*, June 19.

- Advanced four soil borings (SB-14 through SB-17) to depths ranging from 130 to 180.5 feet bgs.
- Installed six groundwater monitoring wells (MW-1R, MW-13 through MW-17) to depths ranging from 32 to 62.5 feet bgs. The data was used to further assess the lateral and vertical extent of MTBE in soil and the lateral extent of MTBE present in the shallow perched groundwater zone underlying the site at approximately 44 feet bgs.
- Installed four groundwater monitoring wells (MW-4D through MW-7D) to depths ranging from 160 to 166 feet bgs to assess the shallow regional groundwater underlying the Site at approximately 150 feet bgs.
- Advanced three hand augers borings (HA-1 through HA-3) adjacent to the dispenser islands to further assess the extent of MTBE in soil at 5 feet bgs.

Based on the assessment results, the vertical extent of MTBE in soil was defined to a maximum depth of 110 feet bgs and the lateral extent was defined south and east of the Site. MTBE in perched groundwater was also defined to the south and east of the Site. MTBE was only reported in a deep, water sample collected from MW-4D at a concentration of 1.9 micrograms per liter (µg/L), so it seems the bulk of the MTBE mass present in the source areas at the Site had not reached the shallow regional aquifer. Operation of the SVE system also appears to have removed the bulk of the MTBE mass present in soil above the perched water zone[19].

October – November 2015 Additional Assessment – During October and November 2015, Stantec completed the following activities at the Site:

- To assess the lateral extent of MTBE in soil between the perched groundwater zone extending to approximately 55 to 64 feet bgs and the shallow regional groundwater zone extending to approximately 145 to 150 feet bgs, and to assess the lateral extent of hydrocarbons in the perched zone and shallow regional groundwater zone, soil borings were advanced to the west (SB-18) and west-northwest (SB-19) of the Site. Analytical results indicate that MTBE is present in soil at concentrations ranging from 0.006 to 0.11 mg/kg at depths between 100 and 120 feet bgs in SB-18. A sample collected at 130 feet bgs defines the vertical extent of MTBE in this area. Non-detect results from samples collected from SB-19 define the lateral extent of impacts to the west-northwest of the Site.
- Groundwater monitoring well MW-18 was installed to a total depth of 64.5 feet bgs to assess the perched groundwater zone west of the Site.
- Due to a potentially unsuitable screen interval, the GPP approved the destruction groundwater monitoring well MW-1 by over-drilling. The screen interval of MW-1 was only 4 to 5 feet above the depth to groundwater and screened 10 feet deeper than surrounding wells in the perched groundwater zone, potentially providing groundwater samples that were not representative of the top of the perched groundwater zone. Replacement well MW-1R was installed approximately 7 feet east of the MW-1 location at a total depth of 60 feet bgs in December 2014.
- To better assess groundwater conditions in the perched zone southwest of the Site, Stantec oversaw the installation of groundwater monitoring well MW-11R. Well MW-11 was over-drilled and deepened to 65 feet bgs for the installation of MW-11R. The original depth of MW-11 was 50 feet bgs.

[19] Stantec, 2015, *Additional Assessment Report and Site Conceptual Model*, February 25.

- Vapor extraction wells V-12 and V-13 were installed to total depths of 90 feet bgs and screened from 70 feet bgs to 90 feet bgs to facilitate the remediation of deep MTBE concentrations in the northwest quadrant of the Site.
- To assess the extent of waste oil impacts to soil near the existing waste oil UST in the southwest corner of the Site, soil borings SB-21 and SB-22 were advanced to 40 and 35 feet bgs, respectively. Significant reductions in GRO, oil range organics (ORO), BTEX and MTBE concentrations were reported in samples collected from borings SB-21 and SB-22 when compared to historical data from borings CSB-6, MW-5A and well V-5[20].

May 2016 – Additional Assessment and Vapor Extraction Pilot Test – In order to assess the lateral extent of MTBE in soil between perched and regional groundwater, and to assess the lateral extent of hydrocarbons in soil in the perched groundwater zone to the north and northwest of the Site, Stantec oversaw the completion of the following work between May 9 and 20, 2016:

- Advanced soil boring SB-20D to the northwest of the Site. Soil boring SB-20D was advanced after refusal was encountered in attempted borings SB-20, SB-20B, and SB-20C in the Daly City Right-of-Way at approximately 23 feet bgs. Borings SB-20 and SB-20B were attempted in October 2015, and boring SB-20C was attempted in February 2016. Only MTBE concentrations were detected in soil samples collected from SB-20D at depths between 69.5 and 131 feet bgs. No other analytes were detected above the LRLs in soil samples collected from SB-20D.
- Installed monitoring well MW-19 northwest of the Site to assess the perched groundwater zone. MW-19 was installed to a total depth of 62.5 feet bgs with 10 feet of screen from 52.5 to 62.5 feet bgs. Soil analytical results from MW-19 did not have reported detections above the LRLs for any analyte.
- Advanced and installed offsite well V-14 to facilitate soil vapor extraction feasibility testing in the SVE wells screened from 70 to 90 feet bgs onsite. V-14 was installed to a total depth of 90 feet bgs with 20 feet of screen from 70 to 90 feet bgs. MTBE was detected in soil at concentrations ranging from 0.21 to 2.7 mg/kg at depths between 76 and 86 feet bgs. Tert-butyl alcohol (TBA) was present at a concentration of 1.2 mg/kg in the soil sample from 86 feet bgs. No other analytes were detected above the LRLs in soil samples collected from V-14.

Stantec performed pilot testing activities in the vicinity of V-14 on July 14 and 15, 2016. Pilot testing consisted of a step test, radius of influence (ROI) test, and sample collection to estimate potential MTBE mass removal rates. Step testing was performed by applying a vacuum of approximately 2, 4, 6, and 8 inches of mercury (inHg), measured at the system to extraction well V-11. A relatively linear relationship developed between the applied vacuum and the extracted flow rate, indicating that the system could operate at up to 8 inHg vacuum and not experience significant reduction in flow due to constriction of the well screen from lithology. ROI testing consisted of applying a vacuum between 8 and 9 inHg at the system, which resulted in 40 to 60 inches of water (inH_2O) at the wellhead. Vacuum influence measurements collected at V-12 and V-13, located 41 and 37 feet from the test well, respectively, were measured to be approximately 50% of the applied vacuum. The observed vacuum at V-14, located 89 feet from the extraction well, was measured to be approximately 25% of the applied vacuum. Based on these results, an estimated maximum deep well radius of effective air exchange of 96 feet was produced. To determine the concentration of MTBE in extracted soil vapor and allow for the estimation of MTBE mass

[20] Stantec, 2015, *Additional Assessment Report*, November 16.

removal rates during continuous operation, influent and effluent vapor samples were collected approximately halfway through the ROI test and submitted for laboratory analysis. Based on vapor concentrations obtained through laboratory analysis, the estimated MTBE mass removal rate from V-11 through the duration of the pilot test study was 1.69 pounds per day (lbs/day)[21].

July 2017 – Subsurface Investigation. To better delineate down gradient impacts located within the shallow regional groundwater zone at approximately 145 to 150 feet bgs., Antea Group oversaw Cascade Drilling, Inc. (Cascade) advance one soil boring to 162 feet bgs in a parking lot at the northeast corner of Southgate Avenue and Lake Merced Blvd between July 17 and 19, 2017. The boring was completed as deep monitoring well MW-9D, built at a total depth of 155 feet with 20 feet of screen from 135 to 155 feet bgs. A total of five soil samples were collected during this investigation and submitted for laboratory analysis. None of the five samples submitted had concentrations of petroleum hydrocarbon constituents that exceeded the LRLs[22].

August 2017 – Radius of Influence Vacuum Test. On June 16, 2017, GPP staff directed BP to connect V-14 to the SVE system based on a belief that the need for dilution air to operate the SVE system was not effectively removing MTBE from the soil near V-14. On August 25, 2017 Antea Group conducted another test on deep zone wells V-11, V-12, V-13 and V-14 to determine the ROI of the SVE system while operating with dilution air. Well V-12 was isolated for the ROI test due to its proximity to well V-14 using the existing SVE system operated with dilution air. An applied vacuum of 78 inH_2O was maintained at well V-12 for one hour. Wells V-11, V-13 and V-14 located approximately 41, 47 and 67.5 feet from V-12, were observed to have induced vacuums of 44, 46 and 31 inH_2O, respectively. The Environmental Protection Agency (EPA) has determined a minimum vacuum of 0.1 inH_2O is required to adequately influence volatilization and extraction of vapors[23]. Based on the ROI test results, Antea Group conservatively estimated an ROI greater than 1.0 inH_2O at approximately 330 feet, sufficient to remediate MTBE impacts near V-14[24].

March 2018 – Waste Oil Investigation. Antea Group advanced seven soil borings around the waste oil tank (SB-23 through SB-29) in response to a GPP directive from January 26, 2018. Concentrations of benzene, ethylbenzene, naphthalene, and poly-aromatic hydrocarbons (PAHs) from this investigation are below the LTCP residential thresholds. Additionally, shallow soil sample results for GRO, DRO, and ORO did not exceed the 2019, Revision 2 Tier 1 San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) of 100 mg/kg, 260 mg/kg, and 1,600 mg/kg, respectively. Additionally, benzene, ethylbenzene, and naphthalene levels in soil collected during the 2015 waste oil investigation (SB-21 and SB-22) meet the residential soil criteria for direct contact and outdoor air exposure in the LTCP[25].

May 2018 – Deep Soil Investigation. Antea Group advanced soil boring SB-30, near V-14 to 110 feet bgs to determine if deeper soil is being remediated near V-14. The investigation detected a maximum of 0.45 mg/kg TBA and 1.2 mg/kg of MTBE in soil between 81 and 91 feet bgs; however, MTBE and TBA in soil above and below those depths were non-detect. Unlike nearby well V-14, no concentrations were detected in the sample collected at 66 feet bgs in SB-30, which may indicate soil is being remediated in this area due to the high radius of influence from onsite wells. To further support this conclusion, soil

[21] Stantec, 2016, *Additional Assessment and Vapor Extraction Pilot Test Report*, August 29.
[22] Antea Group, 2017, *Subsurface Investigation Report*, November 30.
[23] USEPA, 2004, How to Evaluate Alternative Cleanup Technologies for Underground Storage Tank Sites, May 2004.
[24] Antea Group, 2018, *Radius of Influence Vacuum Test Report*, March 1.
[25] Antea Group, 2018, *Waste Oil Area Investigation Report*, July 10.

collected at 86 feet bgs from SB-30 had a lower concentration of MTBE (0.45 mg/kg) than that previously recorded in V-14 (2.4 mg/kg); although, the result for the SB-30 sample is an estimated value[26].

October 2018 – Additional Waste Oil Investigation. Antea Group advanced two soil borings, SB-31 and SB-32, in the area of the former and current waste oil tank in response to a GPP directive issued September 20, 2018. Analytical results for soil collected during investigations in March and November 2018 in the waste oil tank area (SB-23 through SB-29, SB-31, and SB-32) meet the LTCP media-specific criteria for residential direct contact and outdoor air exposure. Analytical results for samples from SB-31 and SB-32 show decreasing Stoddard Solvent concentrations when compared to previously collected soil samples from MW-5. Soil samples from MW-5 at depths from 15.5-30.5 feet bgs had Stoddard Solvent detections ranging from 6,300 mg/kg to 47,000 mg/kg. Soil samples collected from SB-31 and SB-32 at depths from 15 to 35 feet bgs had a maximum Stoddard Solvent concentration of 1,500 mg/kg. Based on soil analytical data, Antea Group proposed that the implementation of a remedial action plan, as discussed in the November 2017 work plan, was unnecessary as the shallow soil near the waste oil tank meets the LTCP direct contact criteria for residential areas. The previously implemented shallow soil vapor extraction and removal of surface material during the soil vapor system installation and expansion appeared to have been effective in remediating the shallow soil near the waste oil tank[27].

March 2019 – Deep Soil and Groundwater Investigation
From February 19 through March 14, 2019 Antea Group oversaw the installation of monitoring wells MW-16D, MW-18D, and MW-19D by Cascade. The December 2018 GPP letter stated that the vertical extent of MTBE in the vicinity of V-14 may not have been properly assessed during the advancement of SB-30, based on the termination depth of 110 feet bgs. Antea Group believes this has been accomplished with the advancement of MW-16D. Antea Group collected four soil samples between 120 feet bgs and the point of termination at 135 feet bgs. The samples did not have reported MTBE concentrations above the LRLs, which varied between 0.0035 mg/kg and 0.0041 mg/kg, or the ESL of 0.028 mg/kg.

Soil collected from MW-16D at 81 feet, 86 feet, and 91 feet bgs had MTBE concentrations of 0.97 mg/kg, 0.71 mg/kg, and 2.7 mg/kg, respectively; however, MTBE in groundwater was not detected above the LRL in that location, suggesting adsorbed impacts are not affecting the shallow regional aquifer. MTBE concentrations in the samples from both 81 feet bgs and 86 feet bgs were similar to those found in SB-30 at the same depths, and less than the concentrations in the soil samples collected from V-14 at the same depths. The MTBE concentration detected in soil from MW-16D at 91 feet bgs was higher than that detected in the sample collected from SB-30 at the same depth. This concentration is also higher than that collected from SB-16 at the same depth in 2016; however, of the five samples with MTBE detections above the ESL in SB-16, four confirmation samples from corresponding depths in MW-16D had lower MTBE concentrations. These analytical results, along with previously obtained ROI data, further support the conclusion that the soil in this area could be influenced by the onsite vapor extraction wells, which was initially presented in the *Deep Soil Investigation Report*, dated September 21, 2018[28]

June -August 2019 Pilot Testing. On July 10, 2019, BP connected V-14 to the SVE system with above ground piping to determine if extraction from V-14 would increase recovery of the residual MTBE mass in the area of MW-16D (SB-16, SB-30 and V-14). The SVE system and vapor extraction well V-12 were

[26] Antea Group, 2018, *Deep Soil Investigation Report*, September 21.
[27] Antea Group, 2018, *Additional Waste Oil Area Investigation Report*, December 12.
[28] Antea Group, 2019, *Deep Soil and Groundwater Investigation Report*, April 30.

modified to enable isolation of and extraction from V-14. The subsequent testing on V-14 resulted in a maximum MTBE mass removal rate of 0.002 lbs/day. Additionally, the rapid depletion and slow recharge of oxygen in the deep zone demonstrated that the deep extraction wells are isolated from the perched zone and air being extracted via the SVE system is from the deep zone only and no short circuiting is occurring.

To confirm the results of the initial testing, BP again connected V-14 to the SVE system on August 6, 7 and 8, 2019, resulting in a maximum MTBE mass removal rate of 0.010 lbs/day. The results of the six days of pilot testing that occurred between July and August 2019 show that connecting V-14 to the existing SVE system will not add a notable increase in MTBE mass removal to what is currently being extracted and appears to even dilute the MTBE concentrations in the soil vapor being extracted from well V-12. Furthermore, optimizing the system to extract from only V-12, the configuration that resulted in the highest mass removal of the four configurations tested, would only remove 0.63 lbs/day of MTBE from the subsurface. Based on the results of the pilot testing, BP does not believe that SVE in any configuration would be effective in further remediating the MTBE present in the vicinity of V-14 and recommended ceasing operation of the SVE system[29]. The GPP concurred with the recommendation to shut down the SVE system in a letter dated November 13, 2019.

SUBJECT: FORMER ARCO SERVICE STATION #465 AT 151 SOUTHGATE AVENUE, DALY CITY, CALIFORNIA

Dear Mr. Melton:

Antea Group uploaded to the State GeoTracker database (GeoTracker) a soil vapor extraction (SVE) system operations and maintenance (O&M) report dated August 14, 2019, and an unsolicited SVE pilot testing report dated September 10, 2019. The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of these reports and the project file.

SVE System O&M Report

GPP staff denied electronic data file (EDF) #8554101049 because it listed incorrect field point names (FPNs). Please **immediately** correct this file to complete the associated task.

The report did not discuss how the O&M data demonstrates the system is optimized for site conditions and satisfying the remedial objective(s) as required on page 3 of our June 2019 letter. However, GPP staff will defer this requirement until the Third Quarter SVE system O&M report given SVE pilot testing was performed in July and August 2019.

SVE Pilot Testing Report

GPP staff denied the EDFs for the July and August 2019 pilot testing events because they listed incorrect FPNs. Please **immediately** correct these files to complete the associated task.

It appears the two vacuum columns in Table 2 represent wellhead vacuum when extracting from a single well and system vacuum when simultaneously extracting from multiple wells. If this is correct, then the inches-Hg column does not list the correct values. In addition, some of the field sheets in Appendix C list incorrect measurement units. Please ensure this is corrected or explained if these tables and field notes will be used in future documents.

Section 1.0 of the report states the additional SVE testing was proposed in the Second Quarter 2019 SVE system O&M report. This is incorrect. This testing was performed before the Second Quarter 2019 O&M report was issued.

Section 3.3 attributes the lower flow and higher vacuum response in V-14 to finer-grained soils near V-14. Comparison of the boring logs for V-11 through V-14 does not support this conclusion. Nevertheless, the pilot testing results and those from operation of the SVE system over the past year indicate recovery of MTBE mass from SVE is negligible. Therefore, GPP staff approve the recommendation to shut-down the SVE system. Please note, however, if the registered professional cannot demonstrate the MTBE in deep soils will not impact regional groundwater and nearby well receptors, then the responsible party will need to implement an alternative form of remediation or mitigate the impact if remediation is not possible (perhaps focused SVE on V-12 if that would provide sufficient mitigation).

Please contact me at 650-372-6292 (direct), 650-372-6200 (main), or at dmilano@smcgov.org on Monday through Thursday (excluding holidays) if you have any questions.

SUBJECT: ARCO STATION #465 AT 151 SOUTHGATE AVENUE, DALY CITY, CALIFORNIA

Dear Mr. Melton:

Antea Group uploaded to the State GeoTracker database (GeoTracker) a groundwater monitoring and soil vapor extraction (SVE) system operations and maintenance (O&M) report dated November 15, 2019, that additionally proposed the drilling of two hand auger borings (unsolicited work). The following comments are based on San Mateo County Groundwater Protection Program (GPP) staff review of the report and the project file.

Tables 2 and 3 are difficult to read and Table 3 will not be legible when printed out on 8.5- x 11-inch paper for eventual case closure documentation. Please consider using a larger font on your report tables such as Table 1 in the report dated May 12, 2017, and Table 3 in the report dated May 14, 2019. Please also ensure future versions of Table 3 transfer the August 2019 gauging data from MW-1 to MW-10 (MW-1 was destroyed in 2015).

The electronic data file for the SVE influent/effluent vapor sample collected on August 18, 2019, has not been uploaded to GeoTracker. Please **immediately** upload this file to complete the associated monitoring task (the November 15, 2019, completion deadline remains in-effect).

Low-flow purging is not removing groundwater from the blank portion of the well casing in wells where the depth to groundwater is less than the depth to the top of the screened interval. Therefore, the groundwater samples from these wells may not be representative of formation groundwater opposite the screened interval. Please employ methods to remove groundwater within the blank portion of the well casing before commencing purging across the screened interval. GPP staff could support a traditional 3-well volume purge across the screened interval prior to sampling to reduce the potential of having to change-out the purging equipment after the water within the blank portion of the casing is removed. The registered professional may subsequently request GPP staff to approve a return to low-flow purging and sampling methods if warranted by an evaluation of the sampling results.

The depth to groundwater and water column height listed in Appendix D on the August 2019 groundwater sampling form for MW-19D is problematic. The depth to water reading listed does not match any reading listed on the gauging table; however, it approximates the depth to water reported in MW-19 which suggests MW-19 may have been sampled. However, the pump intake depth suggests MW-19D may have been sampled. Please investigate this anomaly and **immediately** email us your findings.

GPP staff do not object to the drilling of proposed hand auger Borings HA-4 and HA-5 to the proposed depth of 10 feet below grade (fbg). However, it appears additional borings and soil sampling to greater depths than 10 fbg may be necessary near Sample D-2, T-2A, and TP1M, Borings SB-1A, SB-3, and SB-11, and south of V-13 to evaluate the degree that SVE reduced the benzene and MTBE concentration in soil. Therefore, it appears the proposed drilling of HA-4 and HA-5 should be postponed. It also appears HA-5 may be more useful northwest of T-2/T-2A based on the location and soil sampling results from Boring HA-2. Therefore, please upload to GeoTracker by **April 21, 2020**, a work plan detailing a scope of work to accomplish these assessment objectives.

Closing Comments

The elevation datum reference errors in denied GeoZ files #3218069911 and #8774405360 have not been resolved. GPP staff denied GeoZ file #3218069911 as requested in the January 25, 2019, ARCO/BP email so the elevation datum could be corrected from NAVD-1988 to NGVD-1929. However, the file uploaded to correct the issue (GeoZ # 8774405360) modified the elevation values to values that appear to reference the NAVD-1988 datum. Elevations should be referenced to the NGVD-1929 datum because that datum was used for the previous surveys. Please **immediately** upload a correct GeoZ file referenced to the NGVD-1929 datum.

The most recent table of historical sampling results (Table 3 in the December 2018 report) has a series of entries labeled MW-4/V-9 but site figures indicate MW-4 and V-9 are distinct field points approximately 25 feet apart and the table also lists soil sampling results for V-9. In addition, the table appears to repeat the soil sampling results from Boring CSB-6 in the where the results from V-5 are listed. Please **immediately** upload to GeoTracker a correct version of this table unless the registered professional can justify the apparent discrepancy. Please also ensure this table includes the results from MW-16D, MW-18D, and MW-19D and any other recent borings.

The monitoring report proposed additional assessment but was not coded in GeoTracker as a work plan. Please ensure future documents proposing additional assessment are coded as work plans so GPP staff can track and respond to them within 60 days of upload to GeoTracker.

Please contact me at 650-372-6292 (direct), 650-372-6200 (main), or at dmilano@smcgov.org on Monday through Thursday (excluding holidays) if you have any questions.

Sincerely,

Mr. Deno Milano
San Mateo County Groundwater Protection Program
2000 Alameda de las Pulgas, Suite 100
San Mateo, California 94403

Subject: ARCO Service Station #465 at 151 Southgate Avenue, Daly City, California

Dear Mr. Milano,

BP Products North America, Inc. (BP) and Antea®Group have reviewed the San Mateo County Groundwater Protection Program (GPP) letter dated January 27, 2020, and have the following comments:

Tables 2 and 3 are difficult to read and Table 3 will not be legible when printed out on 8.5- x 11-inch paper for eventual case closure documentation. Please consider using a larger font on your report tables such as Table 1 in the report dated May 12, 2017, and Table 3 in the report dated May 14, 2019. Please also ensure future versions of Table 3 transfer the August 2019 gauging data from MW-1 to MW-10 (MW-1 was destroyed in 2015).

Response:
In previous correspondence, the GPP has commented on the length of data tables when formatted to be legible when printed on 8.5- x 11-inch paper. BP and Antea Group have been working on modifying the tables so that they are both legible on 8.5- x 11-inch paper while remaining an acceptable length. Future tables will be formatted in a similar manner as Table 1 in the report dated May 12, 2017, and Table 3 in the report dated May 14, 2019. The August 2019 gauging data for MW-10 has been corrected in Table 3 for use in future reports.

The electronic data file for the SVE influent/effluent vapor sample collected on August 18, 2019 has not been uploaded to GeoTracker. Please immediately upload this file to complete the associated monitoring task (the November 15, 2019, completion deadline remains in-effect).

Response:
After performing SVE pilot testing on V-14 from July 9 through 11, 2019, and August 6 through 8, 2019, the SVE system was temporarily shut down to allow for further testing, if necessary. Normal system operation resumed on September 10, 2019, as stated in Section 3.1.2 of the *Third Quarter 2019 Semi-Annual Groundwater Monitoring Report*. No compliance samples were collected in August as the system was off and O&M was not performed.

Low-flow purging is not removing groundwater from the blank portion of the well casing in wells where the depth to groundwater is less than the depth to the top of the screened interval. Therefore, the groundwater samples from these wells may not be representative of formation groundwater opposite the screened interval. Please employ methods to remove groundwater within the blank portion of the well casing before commencing purging across the screened interval. GPP staff could support a traditional 3-well volume purge across the screened interval prior to sampling to reduce the potential of having to change-out the purging

equipment after the water within the blank portion of the casing is removed. The registered professional may subsequently request GPP staff to approve a return to low-flow purging and sampling methods if warranted by an evaluation of the sampling results.

Response:
Antea Group performed the First Quarter 2020 groundwater monitoring event from January 20 through 24. An attempt was made to remove groundwater from the blank portion of the casing in wells where the screen was submerged, as directed in the GPP letter dated June 5, 2019, by using a dedicated bailer. The stagnant water was successfully removed from the blank casing in several wells; however, high recharge rates in two locations prevented the removal of all groundwater from the blank portion of the casing in several other wells. After an attempt was made to remove the water above the screen, staff purged the wells with a bladder pump and waited for parameters to stabilize prior to sampling. BP and Antea Group recognize that this cannot be considered true low-flow purging and will note this in the *First Quarter 2020 Semi-Annual Groundwater Monitoring Report*. The removal of 3-well volumes of groundwater for some wells with submerged screens may not be practical using a dedicated bailer as 3-well volumes equates to more than 70 gallons of water in some locations. BP and Antea Group recommend using an electric submersible pump to remove 3-well volumes from the two wells where staff were unable to draw the water table down to below the top of the well screen during the January groundwater monitoring event. After removal of 3-well volumes, a dedicated bailer will be used to sample each well. If the GPP deems it necessary to resample these wells in First Quarter 2020, Antea Group will do so. If not, we will utilize this approach during the next scheduled monitoring event.

The depth to groundwater and water column height listed in Appendix D on the August 2019 groundwater sampling form for MW-19D is problematic. The depth to water reading listed does not match any reading listed on the gauging table; however, it approximates the depth to water reported in MW-19 which suggests MW-19 may have been sampled. However, the pump intake depth suggests MW-19D may have been sampled. Please investigate this anomaly and immediately email us your findings.

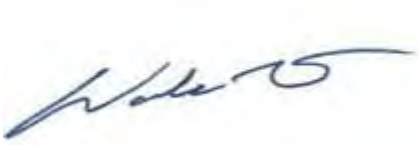
Response:
A discussion with the field staff who sampled "MW-19D" in August 2019 has confirmed that MW-19 was mistakenly sampled instead. The data in the table from this event will be moved from MW-19D to MW-19 to reflect this. Each well has dedicated tubing that remains in the well for multiple sampling events. The necessary tubing length is determined the first time a well is sampled and cut appropriately. In the future, field staff will be required to remove the dedicated tubing from the well and measure the length, prior to sampling, in order to confirm the information is correct.

GPP staff do not object to the drilling of proposed hand auger Borings HA-4 and HA-5 to the proposed depth of 10 feet below grade (fbg). However, it appears additional borings and soil sampling to greater depths than 10 fbg may be necessary near Sample D-2, T-2A, and TP1M, Borings SB-1A, SB-3, and SB-11, and south of V-13 to evaluate the degree that SVE reduced the benzene and MTBE concentration in soil. Therefore, it appears the proposed drilling of HA-4 and HA-5 should be postponed. It also appears HA-5 may be more useful northwest of T-2/T-2A based on the location and soil sample results from Boring HA-2. Therefore, please upload to GeoTracker by April 21, 2020, a work plan detailing a scope of work to accomplish these assessment objectives.

Response:
Per an email from the GPP dated January 30, 2020, Antea Group will move forward with advancing proposed hand auger borings HA-4 and HA-5 to a depth of 10 fbg; however, the proposed location of HA-4 has been relocated to the northwest of T-2/T-2A, rather than relocating HA-5. A site walk and private utility locate has indicated that the initially proposed location of HA-4 is inaccessible as the tanks extend farther west than originally anticipated. BP and Antea Group will evaluate next steps upon receiving the analytical data from the shallow hand auger assessment.

The elevation datum reference errors in denied GeoZ files #3218069911 and #8774405360 have not been resolved. GPP staff denied GeoZ file #3218069911 as requested in the January 25, 2019, ARCO/BP email so the elevation datum could be corrected from NAVD-1988 to NGVD-1929. However, the file uploaded to correct the issues (GeoZ #8774405360) modified the elevation values to values that appear to reference the

NAVD-1988 datum. Elevations should be referenced to the NGVD-1929 datum because the datum was used for the previous surveys. Please immediately upload a correct GeoZ file referenced to the NGVD-1929 datum.



Response:
The elevations submitted for GeoZ file #8774405360 are correct for the NGVD-1929 datum; however, the survey company updated the elevations in the file and did not update the reference in the table, despite the correct reference being used. This has been corrected and a GeoZ file has been uploaded to GeoTracker.

The most recent table of historical sampling results (Table 3 in the December 2018 report) has a series of entries labeled MW-4/V-9 but site figures indicate MW-4 and V-9 are distinct field points approximately 25 feet apart and the table also lists soil sampling results for V-9. In addition, the table appears to repeat the soil sampling results from Boring CSB-6 in the where the results from V-5 are listed. Please immediately upload to GeoTracker a correct version of this table unless the registered professional can justify the apparent discrepancy. Please also ensure this table includes the results from MW-16D, MW-18D, and MW-19D and any other recent borings.

The historical sampling results for MW-4 have been corrected and a corrected version of the table has been uploaded to GeoTracker. In addition, Table 3A submitted with the *Deep Soil and Groundwater Investigation Report* dated April 30, 2019, corrected the data for V-5 and noted that the samples taken at CSB-6 from January 1998 were duplicated as results from V-5 in previous versions of the table, as this was previously mentioned in the GPP letter dated December 18, 2018.

If you have any questions regarding this report or need any additional information about this Site, please contact Mr. Wade Melton at (360) 594-7978.

Sincerely yours,

Wade Melton

Appendix C

Antea Group Groundwater Sampling Standard Operating Procedures

Groundwater Sampling Using Low-Flow Techniques SOP

1.0 Scope/Applicability:

This standard operating procedure (SOP) provides guidance for sampling groundwater using low-flow techniques. Low-flow methods are typically used in conjunction with micropurging (see **Micro Purging a Monitoring Well SOP**).

Most contaminated site investigations utilize some form of a groundwater sampling or monitoring program to fully characterize the nature and extent of groundwater contamination. In order to obtain a representative groundwater sample for chemical analysis, it is important to first remove stagnant water in the well before collecting a sample. This may be achieved using a variety of instruments including pumps and bailers. Once purging is completed and the correct laboratory-cleaned sample containers have been prepared, sampling may proceed. Sampling may be conducted with a variety of devices and need not be the same as the device used for purging. During sampling, a field data sheet shall be completed, a Chain-of-Custody form prepared, and all pertinent data recorded in the site logbook.

This procedure is applicable to monitoring wells which are scheduled for sampling at sites where regulatory and/or client requirements call for sampling groundwater from wells with low-flow techniques.

2.0 Summary:

This procedure entails collecting a groundwater sample from a well using a low-flow (e.g., peristaltic) pump. The sampling equipment must be thoroughly decontaminated prior to sampling in order to prevent cross-contamination of wells. The number and types of sample containers to be filled is based upon the types of analyses to be performed on the sample. For certain types of analyses, samples may need to be filtered in the field prior to being transferred into sample containers. Sample containers are labeled, stored, packaged, and shipped according to pre-defined protocols that are intended to preserve sample integrity from the time the sample is collected until it is received by the analytical laboratory.

3.0 Definitions:

A list of definitions is provided in Attachment 1 (SOP Definitions).

4.0 Health and Safety:

The Health and Safety considerations for conducting this procedure are described in the following documents:

- Site Health and Safety Plan – H&S Plan Templates (https://anteaintra.anteausainc.com/h&s/plans.htm)

- Job Safety Analysis – Well Development and Groundwater Sampling (https://anteaintra.anteausainc.com/h&s/files/jsa/Well_development-GW_sampling_JSA.doc)

Specific health and safety considerations for this procedure include:

- Health and safety considerations associated with this procedure are addressed during the Job Safety Analysis.

5.0 Cautions and Interferences:

Cautions associated with conducting this procedure include:

- Before sampling, monitoring wells shall be allowed to stabilize for a minimum period of 24 hours after development.
- Analysis can be compromised by field personnel in two primary ways: 1) taking an unrepresentative sample, or 2) by incorrect handling of the sample.
- There are numerous ways of introducing foreign contaminants into a sample, and these must be avoided by following strict sampling procedures and utilizing trained field personnel.
- As a general rule, all monitoring wells should be pumped (preferred) or bailed prior to sampling.
- Ideally, sampling equipment should be completely inert, economical to manufacture, easily cleaned, sterilized, reusable, and able to operate at remote sites in the absence of power sources.
- Materials of construction for samplers and evacuation equipment (bladders, pump, bailers, tubing, etc.) should be limited to stainless steel, Teflon, and glass in areas where concentrations are expected to be at or near the detection limit. The tendency of organics to leach into and out of many materials make the selection of materials critical for trace analyses. The use of plastics, such as PVC or polyethylene, should be avoided when analyzing for organics. However, PVC may be used for evacuation equipment as it will not come in contact with the sample, and in highly contaminated wells, disposable equipment (i.e., polypropylene bailers) may be appropriate to avoid cross-contamination.
- Wells should be sampled as soon as possible after purging (certainly no more than 24 hours) and should be sampled in order from least contaminated to most contaminated or from upgradient to downgradient if chemistry is unknown.
- Water levels shall be allowed to recover to 90% of the static water level before sampling.
- All non-dedicated equipment shall be decontaminated in accordance with **Decontamination SOP** prior to use or upon completion of the sampling activities.

Interferences having the potential to impact the quality of the final product include:

- Stagnant water (e.g., the well water above the screened section in confined wells or unconfined wells with submerged screens) may contain foreign material inadvertently or deliberately introduced from the surface resulting in an unrepresentative sample.
- A non-representative sample can also result from excessive pre-pumping of the monitoring well. Stratification of the leachate concentration in the groundwater formation may occur, or heavier-than-water compounds may sink to the lower portions of the

aquifer. Excessive pumping can dilute or increase the contaminant concentrations from what is representative of the sampling point of interest.

6.0 Personnel Qualifications/Responsibilities:

Personnel performing this procedure are required to have the following qualifications:

- HSSE Training in accordance with Health, Safety, Security, and Environment Practice (https://anteaintra.anteausainc.com/h&s/practices/hsse/HSSE_Practice_Training.pdf).
- Health and Safety training in accordance with Client Required Training (if applicable) (https://anteaintra.anteausainc.com/h&s/training_client_req.htm).
- All field team members engaged in this procedure must have on file a completed Demonstration of Capability for this SOP.

The minimum roles involved and their responsibilities in this procedure include:

- **Project Manager** – Responsible for determining, communicating, and upholding the regulatory, client, and other requirements associated with performing this procedure as part of a project-specific scope of work.
- **Project Professional** – Responsible for creating project-specific scopes of work requiring this procedure in accordance with the identified requirements of this procedure.
- **Staff Professional** – Responsible for implementing project-specific scopes of work requiring this procedure in accordance with this procedure.

7.0 Equipment/Supplies:

The following is the typical list of equipment required for completing this procedure:

- Field Safety Equipment Bag - https://anteaintra.anteausainc.com/h&s/faq_field_bag.htm
- Traffic control devices, as defined in Site Control and Work Zones training - https://anteagroup.adobeconnect.com/sitecontrolworkzones/
- Field logbook and appropriate field form(s)
- Waterproof permanent pens and markers
- Mobile phone - with clock and camera feature
- Spare locks - for buildings, compounds, and well covers (if appropriate)
- Keys - to access existing on-site locks (if appropriate)
- Decontamination supplies/equipment (if appropriate)

Procedure-specific equipment/supplies include:

- Sample containers and labels
- Chain-of-Custody forms/Custody seals
- Knife or scissors
- 5-gallon buckets
- Plastic sheeting
- Shipping containers
- Packing materials
- Ziploc-type plastic bags
- Field parameter instruments (multiparameter, turbidimeter, DO meter)
- Calibration standards

- Generator, if using pump
- Gasoline for generator/air compressor
- Air compressor for bladder pumps
- Pump (peristaltic or bladder)
- Control box
- Discharge tubing for pump
- Appropriate pump fittings (e.g., hose clamps, barbed fittings, etc.)

8.0 Procedure:

1. Prepare for sampling using: **Fieldwork Documentation SOP**, **VOC Sample Collection SOP**, **Sample Packaging and Shipping SOP**, and **QA/QC Sample Collection SOP**, and Groundwater Sampling Form – Low Flow (Attachment 2).
2. Water level and liquid levels measurement shall be taken in accordance with **Water and Liquid Level Measurement SOP**.
3. Measurement of field parameters shall be done in accordance with **Measurement of Monitoring Well Field Parameters SOP**.
4. Purge the well in accordance with **Micro Purging a Monitoring Well SOP**.
5. Allow well to recharge after purging to 90% of the static water level. Variances from this requirement (e.g., for wells in low water yielding deposits) shall be approved by the Project Manager prior to implementation.
6. Disconnect flow-through cells.
7. Assemble and label appropriate sample containers.
8. Set the pump height so that the intake is near the center of the screened interval.
9. Adjust the flow rate of the pump to minimize aeration and bubble formation. A flow rate of <0.5 L/min is typically appropriate. The pump discharge should produce a thin, continuous stream of water when filling the sample container.
10. Remove the cap from the sample container and place it on the plastic sheet or in a location where it won't become contaminated or disturbed.
11. Begin using the pump to fill the appropriate container. Samples shall be collected in the following order:
    - Volatile organic compounds (VOCs)
    - Semi-volatile organic compounds (SVOCs) and polyaromatic hydrocarbons (PAHs)
    - Inorganic constituents (metals)
    - Mercury
    - Cyanide
    - Total organic carbon (TOC)
    - Total organic halogen (TOX)
    - Samples requiring field filtration
    - Samples for field parameter measurement
    - Samples for nutrient anion determinations
12. Filter and preserve samples as required by the sampling plan.
13. Tightly cap the pre-labeled sample container and place it in a pre-chilled cooler.
14. Replace the well cap.

15. Label all samples and log all samples on the Groundwater Sampling Form – Low Flow (Attachment 2) in accordance with **Fieldwork Documentation SOP**. Complete a Chain-of-Custody record in accordance with **Completing Chain of Custody SOP**.
16. Package samples and complete necessary paperwork in accordance with **Sample Packaging and Shipping SOP**.
17. Transport samples to decontamination zone in preparation for transport to analytical laboratory or to express shipping location.

8.1 Site-Specific Deviations

- Upon the event of a submerged screen interval, attempts should be made to:
  - Remove groundwater within the blank portion of the well prior to purging in the screened interval; or
  - Remove three casing volumes prior to sampling.
- Stagnant water should be removed in the blank casing.
  - However, high recharge rates may prevent the removal of all groundwater from the blank portion of the casing. If this occurs, sampling will occur within the screened interval after parameters have stabilized.

9.0 Data and Records Management:

Before finalizing fieldwork documentation:

- Recheck all data inputs to prevent errors.
- If data were generated from multiple/different sample locations (borings, wells, etc.) at the same site, use appropriate file naming conventions to distinguish one file from another.
- Ensure that any repair work needed, issues to be resolved, and/or any uncompleted fieldwork are noted in the fieldwork documentation.

Upon completion of fieldwork, field personnel shall file fieldwork documentation, any electronic field files, the Site Health and Safety Plan, and any associated health and safety forms to the correct project folder, in accordance with **Control of Records SOP**.

10.0 Quality Control:

- All data, observations, calculations must be documented in the field logbook, field forms, and/or any electronic data recording devices (field computers, digital cameras, etc.).
- Adequate traceability must be ensured between any field notes and complementary field forms.
- Any electronic data recording devices must be operated in accordance with manufacturer's operating instructions, unless documented otherwise.
- Monitoring and Measuring Equipment must be calibrated prior to the event and calibration results documented in accordance with **Equipment Calibration and Maintenance SOP**.

Micro Purging a Monitoring Well SOP

1.0 Scope/Applicability:

This standard operating procedure (SOP) provides guidance for micro purging monitoring wells. Micro purging is an approach to purging based on the observation that groundwater flows through the well screen in most formations with sufficient velocity to maintain an exchange with formation water surrounding the well screen. By placing a pump within the screen interval and pumping at a low-flow rate which does not induce significant drawdown of the water column, a representative sample of formation groundwater can be collected with minimal withdrawal of stagnant water. Ideally micro purging should be conducted in wells in which dedicated pumps have been installed. It is possible to use non-dedicated pumps if a sufficient amount of time is allowed for the water level to equilibrate following insertion of the pump.

This procedure is applicable to monitoring wells which are scheduled for sampling and where regulatory and/or client requirements require micro purging of wells prior to sampling.

2.0 Summary:

This procedure entails removing a pre-determined volume of water from a well using a pump (submersible, pneumatic, peristaltic, or bladder) at low-flow rates so that drawdown of the water column is not induced. During micro purging, field parameters may be measured as an indicator of formation water having entered the well. The well is considered adequately purged for sampling when the purge volume has been achieved and the well parameters have stabilized.

3.0 Definitions:

A list of definitions is provided in Attachment 1 (SOP Definitions).

4.0 Health and Safety:

The Health and Safety considerations for conducting this procedure are described in the following documents:

- Site Health and Safety Plan – H&S Plan Templates (https://anteaintra.anteausainc.com/h&s/plans.htm)
- Job Safety Analysis – Well Development and Groundwater Sampling (https://anteaintra.anteausainc.com/h&s/files/jsa/Well_development-GW_sampling_JSA.doc)

Specific health and safety considerations for this procedure include:

- Health and safety considerations associated with this procedure are addressed during the Job Safety Analysis.

5.0 Cautions and Interferences:

Cautions associated with conducting this procedure include:

- Analysis can be compromised by field personnel in two primary ways: (1) taking an unrepresentative sample, or (2) by incorrect handling of the sample.
- There are numerous ways of introducing foreign contaminants into a sample, and these must be avoided by following strict sampling procedures and utilizing trained field personnel.
- Stagnant water (e.g., the well water above the screened section in confined wells or unconfined wells with submerged screens) may contain foreign material inadvertently or deliberately introduced from the surface resulting in an unrepresentative sample.
- A non-representative sample can also result from excessive pre-pumping of the monitoring well. Stratification of the leachate concentration in the groundwater formation may occur, or heavier-than-water compounds may sink to the lower portions of the aquifer. Excessive pumping can dilute or increase the contaminant concentrations from what is representative of the sampling point of interest.
- Water level measurements should be taken prior to beginning the purging activities.
- As a general rule, all monitoring wells should be purged using a pump prior to sampling. Purging should continue until selected field parameters have stabilized, as evidenced by field probe readings.
- Regardless of the brand of field probe used, all meters should be properly maintained, calibrated, and operated in accordance with the manufacturer's instructions and with the **Equipment Calibration and Maintenance SOP**.
- pH calibration standards include acidic and basic liquids and therefore should be handled with care.
- Purge water should be containerized on site or handled as specified in the site-specific Work Plan.
- Materials of construction for samplers and evacuation equipment (bladders, pump, bailers, tubing, etc.) should be limited to stainless steel, Teflon, and glass in areas where concentrations are expected to be at or near the detection limit. The tendency of organics to leach into and out of many materials make the selection of materials critical for trace analyses. The use of plastics, such as PVC or polyethylene, should be avoided when analyzing for organics. However, PVC may be used for evacuation equipment as it will not come in contact with the sample, and in highly contaminated wells, disposable equipment (i.e., polypropylene bailers) may be appropriate to avoid cross-contamination.

Interferences having the potential to impact the quality of the final product include:

- Samples are intended to be representative of aquifer formation water, which is not in direct contact with the atmosphere. The potential for atmospheric exposure of the sample during collection should therefore be minimized, as exposure to aerobic conditions can have a significant effect on dissolved oxygen, ORP, and other aquifer parameters being measured. Use of a flow-through cell equipped with inlet, outlet, and probe insertion ports is essential to monitor aquifer parameters prior to sample collection.
- Water sample turbidity or chemical composition may impact the ability to measure certain field parameters.

6.0 Personnel Qualifications/Responsibilities:

Personnel performing this procedure are required to have the following qualifications:

- HSSE Training in accordance with Health, Safety, Security, and Environment Practice (https://anteaintra.anteausainc.com/h&s/practices/hsse/HSSE_Practice_Training.pdf).
- Health and Safety training in accordance with Client Required Training (if applicable) (https://anteaintra.anteausainc.com/h&s/training_client_req.htm).
- All field team members engaged in this procedure must have on file a completed Demonstration of Capability for this SOP.

The minimum roles involved and their responsibilities in this procedure include:

- **Project Manager** – Responsible for determining, communicating, and upholding the regulatory, client, and other requirements associated with performing this procedure as part of a project-specific scope of work.
- **Project Professional** – Responsible for creating project-specific scopes of work requiring this procedure in accordance with the identified requirements of this procedure.
- **Staff Professional** – Responsible for implementing project-specific scopes of work requiring this procedure in accordance with this procedure.

7.0 Equipment/Supplies:

The following is the typical list of equipment required for completing this procedure:

- Field Safety Equipment Bag - https://anteaintra.anteausainc.com/h&s/faq_field_bag.htm
- Traffic control devices, as defined in Site Control and Work Zones training - https://anteagroup.adobeconnect.com/sitecontrolworkzones/
- Field logbook and appropriate field form(s)
- Waterproof permanent pens and markers
- Mobile phone - with clock and camera feature
- Spare locks - for buildings, compounds, and well covers (if appropriate)
- Keys - to access existing on-site locks (if appropriate)
- Decontamination supplies/equipment (if appropriate)

Procedure-specific equipment/supplies include:

- As-built diagram(s) of monitoring well(s)
- Calculator
- 5-gallon buckets
- Plastic sheeting
- Generator, if using pump
- Gasoline for generator/air compressor
- Air compressor for bladder pumps
- Pump
- Control box
- Discharge tubing for pump
- Appropriate pump fittings (e.g., hose clamps, barbed fittings, etc.)
- Drums
- Marking pen for labeling drums
- Wrench for opening/sealing drums
- Probe for collecting aquifer field measurements

- Flow-through cell with inlet/outlet hose fittings and probe insertion inlet
- Sample collection bottles
- Cooler(s) packed with ice
- Product-water interface probe

8.0 Procedure:

The procedure for purging a well with a pump is as follows:

1. Collect water level measurements as described in **Water and Liquid Level Measurement SOP**.
2. All non-dedicated equipment shall be decontaminated in accordance with **Decontamination SOP** prior to sampling activities.
3. Assemble pump, hoses and safety cable, and, if using a non-dedicated pump, lower the pump into the well. The pump should be set at the midpoint of the screened interval if the aquifer is under confined conditions (depth to water is above the screen), and below the air/water interface if the aquifer is under unconfined conditions (water table straddles screen).
4. If using a non-dedicated pump, allow sufficient time for the water level to equilibrate to obtain a representative sample.
5. Make connections between the pump and control box if using an air-lift or bladder pump.
6. Use a ground fault interrupter (GFCI) or ground the generator to avoid possible electric shock.
7. Attach pump effluent line to inlet port of flow-through cell. Attach additional tubing between cell outlet port and discharge bucket.
8. Calibrate probe and insert probe into flow-through cell inlet.
9. Attach power supply and begin micro purging the well. A well should be purged at or below its recovery rate, ideally less than 0.2 to 0.3 L/min. Never purge at rates exceeding 0.5 L/min.
10. Monitor the drawdown in the well. If the drawdown exceeds 0.3 ft, then reduce the pumping rate to ensure that drawdown does not exceed 0.3 ft.
11. Purge water should be pumped into a container and disposed of as specified in the site-specific Work Plan and **Waste Management SOP**. Variances to this purge water management procedure (e.g., purge water disposal on ground surface, or treatment in mobile on-site treatment system) shall be approved by the Project Manager prior to implementation.
12. Measure field parameters, including dissolved oxygen (DO), ORP, pH, temperature, and conductivity.
13. Repeat the measurements at a regular interval (i.e., every minute). Record the values in the field logbook in accordance with **Fieldwork Documentation SOP**. Continue purging for pH, conductivity and DO until the measured parameters stabilize for three (3) successive readings. Stabilization is defined as ±0.1 pH units, ±3% of previous reading for conductivity, and ±10% of previous reading for DO.
14. If field parameters have not stabilized after 3 successive readings, continue taking measurements at 5 minute intervals up to a maximum of 5 successive readings. If, after 5 successive readings, the parameters have not stabilized, an entry shall be made in the field logbook indicating that sampling will be conducted without stabilized parameters.

9.0 Data and Records Management:

Before finalizing fieldwork documentation:

- Recheck all data inputs to prevent errors.
- If data were generated from multiple/different sample locations (borings, wells, etc.) at the same site, use appropriate file naming conventions to distinguish one file from another.
- Ensure that any repair work needed, issues to be resolved, and/or any uncompleted fieldwork are noted in the fieldwork documentation.

Upon completion of fieldwork, field personnel shall file fieldwork documentation, any electronic field files, the Site Health and Safety Plan, and any associated health and safety forms to the correct project folder, in accordance with **Control of Records SOP**.

10.0 Quality Control:

- All data, observations, calculations must be documented in the field logbook, field forms, and/or any electronic data recording devices (field computers, digital cameras, etc.).
- Adequate traceability must be ensured between any field notes and complementary field forms.
- Any electronic data recording devices must be operated in accordance with manufacturer's operating instructions, unless documented otherwise.
- Monitoring and Measuring Equipment must be calibrated prior to the event and calibration results documented in accordance with **Equipment Calibration and Maintenance SOP**.

Water and Liquid Level Measurement SOP

1.0 Scope/Applicability:

This standard operating procedure (SOP) provides guidance for measuring water and non-aqueous phase liquid (NAPL) levels in a well. An accurate water level measurement is necessary for calculating purge volumes for sampling and for creating water level surface contour maps. Non-aqueous phase liquid level measurements are required for planning, designing, conducting, and monitoring interim and final corrective action measures.

This procedure is applicable to wells that contain water and/or non-aqueous phase liquids.

2.0 Summary:

This procedure entails opening designated wells and gauging the depth to product and depth to water in the well with electronic meters.

3.0 Definitions:

A list of definitions is provided in Attachment 1 (SOP Definitions).

4.0 Health and Safety:

The Health and Safety considerations for conducting this procedure are described in the following documents:

- Site Health and Safety Plan – H&S Plan Templates (https://anteaintra.anteausainc.com/h&s/plans.htm)
- Job Safety Analysis – Well Development and Groundwater Sampling (https://anteaintra.anteausainc.com/h&s/files/jsa/Well_development-GW_sampling_JSA.doc)

Specific health and safety considerations for this procedure include:

- Health and safety considerations associated with this procedure are addressed during the Job Safety Analysis.

5.0 Cautions and Interferences:

Cautions associated with conducting this procedure include:

- Water levels in wells should be measured from the least contaminated to the most contaminated well, or from the most hydraulically upgradient to the most hydraulically downgradient well if site groundwater chemistry is unknown.

Interferences having the potential to impact the quality of the final product include:

- Viscous, weathered non-aqueous phase liquid can adhere to (cloud) the sensor on the product-water interface probe and make it difficult to verify depth to NAPL by alternate raising and lowering of the probe across the depth at which the tone sounds.
- Tightly capped wells in which surrounding formation water level is above the top of well screen may experience a water level rise following removal of the well cap, due to subsequent pressure equilibration inside the well. In this case, adequate time should be allowed before making the final water level measurement.

6.0 Personnel Qualifications/Responsibilities:

Personnel performing this procedure are required to have the following qualifications:

- HSSE Training in accordance with Health, Safety, Security, and Environment Practice (https://anteaintra.anteausainc.com/h&s/practices/hsse/HSSE_Practice_Training.pdf).
- Health and Safety training in accordance with Client Required Training (if applicable) (https://anteaintra.anteausainc.com/h&s/training_client_req.htm).
- All field team members engaged in this procedure must have on file a completed Demonstration of Capability for this SOP.

The minimum roles involved and their responsibilities in this procedure include:

- **Project Manager** – Responsible for determining, communicating, and upholding the regulatory, client, and other requirements associated with performing this procedure as part of a project-specific scope of work.
- **Project Professional** – Responsible for creating project-specific scopes of work requiring this procedure in accordance with the identified requirements of this procedure.
- **Staff Professional** – Responsible for implementing project-specific scopes of work requiring this procedure in accordance with this procedure.

7.0 Equipment/Supplies:

The following is the typical list of equipment required for completing this procedure:

- Field Safety Equipment Bag - https://anteaintra.anteausainc.com/h&s/faq_field_bag.htm
- Traffic control devices, as defined in Site Control and Work Zones training - https://anteagroup.adobeconnect.com/sitecontrolworkzones/
- Field logbook and appropriate field form(s)
- Waterproof permanent pens and markers
- Mobile phone - with clock and camera feature
- Spare locks - for buildings, compounds, and well covers (if appropriate)
- Keys - to access existing on-site locks (if appropriate)
- Decontamination supplies/equipment (if appropriate)

Procedure-specific equipment/supplies include:

- Water level indicator
- Product-water interface probe
- Gasoline and water marking paste
- Metal tape measure
- Photo or Flame Ionization Detector

- Calculator
- Plastic sheeting
- Bolt cutters
- Cotton string
- Clear bailers
- Nylon rope
- Weights

8.0 Procedure:

Water Level Measurement

1. Start at the least contaminated well, if known, or if unknown, at the most hydraulically upgradient well.
2. Inspect the well for signs of tampering or other damage. If tampering is suspected or damage observed (i.e., casing is damaged, lock or cap is missing), then this shall be recorded in the field logbook and on the Water and Liquid Level Measurement Form (Attachment 2), and reported to the Project Manager. Wells that are suspected to have been tampered with shall not be sampled until further guidance from the Project Manager.
3. Lay plastic sheeting around the well to minimize the likelihood of contamination of equipment from soil adjacent to the well.
4. Remove the locking well cap, note location, time of day, and date in field notebook or appropriate log form.
5. Remove the well casing cap.
6. For confined aquifers, wait for water level to equilibrate before measuring water level.
7. Turn on the water level meter.
8. Press the battery check button (if so equipped). A solid tone will be heard if the battery is good.
9. Lower water the level measuring device or equivalent (i.e., permanently installed transducers or airline) into the well, slowly unreeling the measuring tape from the spool of the meter.
10. Continue lowering the probe until a continuous tone is heard. This tone indicates that the probe has come in contact with water.
11. Holding the measuring tape near the measuring reference point, alternately raise and lower the probe across the depth at which the tone sounds. This will ensure that you have an accurate measurement of the depth to water. Record the distance from water surface to the referenced measuring point on well casing in site logbook. Alternatively, if there is no reference point, note that water level measurement is from top of steel casing, top of PVC riser pipe, from ground surface, or some other position on the wellhead, typically on the north edge. Water level measurement shall be recorded to the nearest 0.01 foot.
12. Measure total depth of well (at least twice to confirm measurement) and record on the Water and Liquid Level Measurement Form (Attachment 2). Total depth measurements shall be recorded to the nearest 0.01 foot.
13. If excessive sediment buildup is suspected at the bottom of the well, the measured total depth should be compared with the total depth at the time of drilling (from the boring log). If the sediment thickness exceeds one foot, or is excessively impeding the flow of

groundwater through the well screen, the well shall be redeveloped in accordance with **Monitoring Well Development SOP**.

14. Decontaminate water level probe in accordance with **Decontamination SOP**.

Non-Aqueous Phase Liquid (LNAPL or DNAPL) Level Measurement

Organic liquids may occur in the subsurface of sites as light non-aqueous phase liquids (LNAPL) or dense non-aqueous phase liquids (DNAPL). Where possible, non-aqueous phase liquid levels in wells should be measured using a product-water interface probe. If wells are known or suspected to contain non-aqueous phase liquids, they should be measured last relative to all wells at a site in order to minimize the likelihood of cross contamination of wells by the interface probe. Non-aqueous phase liquid presence and level shall be measured using the following procedure:

1. Start at the least contaminated well or well with smallest non-aqueous phase liquid thickness, if known, or if unknown, at the most hydraulically upgradient well.
2. Inspect the well for signs of tampering or other damage. If tampering is suspected or damage observed (i.e., casing is damaged, lock or cap is missing), then this shall be recorded in the field logbook and on the Water and Liquid Level Measurement Form (Attachment 2), and reported to the Project Manager. Wells that are suspected to have been tampered with shall not be sampled until further guidance from the Project Manager.
3. Lay plastic sheeting around the well to minimize the likelihood of contamination of equipment from soil adjacent to the well.
4. Remove the locking well cap, note location, time of day, and date in field notebook or appropriate log form.
5. Remove the well casing cap.
6. For confined aquifers, wait for water level to equilibrate before measuring water level.
7. Turn on the product-water interface probe.
8. Press the battery check button (if so equipped). A solid tone will be heard if the battery is good.
9. Lower product-water interface probe into well, slowly unreeling the measuring tape from the spool of the meter.
10. Continue lowering the probe until a discontinuous (beeping) tone is heard. This tone indicates that the probe has come in contact with LNAPL. If LNAPL is not present, a solid tone will be heard.
11. Holding the measuring tape near the measuring reference point, alternately raise and lower the probe across the depth at which the tone sounds. This will ensure that you have an accurate measurement of the depth to liquid. Record the distance from liquid surface to the referenced measuring point on well casing on the Water and Liquid Level Measurement Form (Attachment 2). Alternatively, if there is no reference point, note that liquid level measurement is from top of steel casing, top of PVC riser pipe, from ground surface, or some other position on the wellhead, typically on the north edge. Liquid level measurement shall be recorded to the nearest 0.01 foot.
12. Continue lowering the probe until a solid tone is heard. This tone indicates that the probe has come in contact with water.
13. Holding the measuring tape near the measuring reference point, alternately raise and lower the probe across the depth at which the tone sounds. This will ensure that you have

an accurate measurement of the depth to water. Record the distance from water surface to the referenced measuring point on the Water and Liquid Level Measurement Form (Attachment 2). Alternatively, if there is no reference point, note that water level measurement is from top of steel casing, top of PVC riser pipe, from ground surface, or some other position on the wellhead, typically on the north edge. Water level measurement shall be recorded to the nearest 0.01 foot.

14. For sites with DNAPL, steps 12 and 13 will precede steps 10 and 11. Once step 11 has been completed, continue lowering the probe until the bottom of the well is encountered. Measure total depth of well (at least twice to confirm measurement) and record in the site logbook or Water and Liquid Level Measurement Form (Attachment 2). Total depth measurements shall be recorded to the nearest 0.01 foot.
15. Note: For sites with LNAPL, the product-water interface probe should not be used to measure total well depth so as to minimize the likelihood of contaminating additional lengths of the measuring tape.
16. Decontaminate product-water interface probe in accordance with **Decontamination SOP**.

The presence of LNAPL can be confirmed by one of two additional ways:

1. Lowering a clear bailer to just below the top of the groundwater surface, removing the bailer, and observing the contents. The volume of LNAPL recovered can be enhanced through the use of a product cup.
2. For sites where gasoline may have been released to the subsurface, gasoline and water marking paste can be applied to a metal tape measure and the tape measure inserted into the well to just below the top of the groundwater surface. The use of both types of paste will show the interval over which LNAPL is present in the well.

The presence of DNAPL can be confirmed by one of two additional ways:

1. Lowering a weighted bailer to the bottom of the well, removing the bailer and observing the contents for any free product.
2. Lowering a length of weighted cotton string to the bottom of the well, removing the string and observing the string for the DNAPL staining.

The thickness of any non-aqueous phase liquids shall be measured and recorded to the nearest 0.01 ft.

9.0 Data and Records Management:

Before finalizing fieldwork documentation:

- Recheck all data inputs to prevent errors.
- If data were generated from multiple/different sample locations (borings, wells, etc.) at the same site, use appropriate file naming conventions to distinguish one file from another.
- Ensure that any repair work needed, issues to be resolved, and/or any uncompleted fieldwork are noted in the fieldwork documentation.

Upon completion of fieldwork, field personnel shall file fieldwork documentation, any electronic field files, the Site Health and Safety Plan, and any associated health and safety forms to the correct project folder, in accordance with **Control of Records SOP**.

10.0 Quality Control:

- All data, observations, calculations must be documented in the field logbook, field forms, and/or any electronic data recording devices (field computers, digital cameras, etc.).
- Adequate traceability must be ensured between any field notes and complementary field forms.
- Any electronic data recording devices must be operated in accordance with manufacturer's operating instructions, unless documented otherwise.
- Monitoring and Measuring Equipment must be calibrated prior to the event and calibration results documented in accordance with **Equipment Calibration and Maintenance SOP**.

14	MW-9D	1/2	Y	Y	N	Y	N	2"	11/4/19	10:18	123.65	155.10	—	—	
15	MW-10	4/4	Y	N	N	Y	N	4"	11/4/19	13:07	58.85	59.46	—	—	

Notes:

* Burried up tubing stuck out of reach on MW-4D, unable to remove on 11/4/19, unable to pass Interface probe past tubing

Tubing removed from well 11/6/2019, gauged.

** All well caps opened at least 15 minutes or longer before gauging wells: **CIRCLE ONE:** (YES) or NO**

anteagroup

*Form provided by Antea Group

Note: Use G=good and P=poor for well condition

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the BPLAMP Technical Specifications, applicable federal, state, local regulations and certification requirements as well as the methodologies as described in laboratory SOPs reviewed by the BPLAMP. This Laboratory Report is confidential and is intended for the sole use of Eurofins TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The signature on the cover page extends to the case narrative and all the data and forms in the package. The Chain of Custody is included and is an integral part of this report.

Definitions/Glossary

Client: Antea Group
Project/Site: ARCO 0465, Daly City

Job ID: 440-254187-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 440-254187-1

Laboratory: Eurofins TestAmerica, Irvine

Narrative

Job Narrative

Comments
No additional comments.

Receipt
The samples were received on 11/7/2019 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.4º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015B: Insufficient 8015-DRO sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-579542 and analytical batch 440-579986. The laboratory control sample (LCS) was performed in duplicate to provide precision data for this batch: (LCS 440-579542/2-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-579542. Method 8015B

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Antea Group
Project/Site: ARCO 0465, Daly City

Job ID: 440-254187-1

Client Sample ID: MW-19D_20191106 — Lab Sample ID: 440-254187-1

No Detections.

Client Sample ID: DUP-465_20191106 — Lab Sample ID: 440-254187-2

No Detections.

Client Sample ID: TB-465_20191106 — Lab Sample ID: 440-254187-3

No Detections.

This Detection Summary does not include radiochemical test results.

Client Sample ID: MW-19D_20191106

Lab Sample ID: 440-254187-1

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Hello,

Attached please find the sample confirmation files for job 440-254187-1; ARCO 0465, Daly City

Please feel free to contact me or your PM Christian Bondoc if you have any questions.

Thank you.

The pound sign (#) in the amount added field denotes that the reagent was used undiluted. All calculations are performed using the stated concentration for this reagent.

DIESEL RANGE ORGANICS BATCH WORKSHEET

Lab Name: Eurofins TestAmerica, Irvine Job No.: 440-254187-1

SDG No.:

Batch Number: 579542 Batch Start Date: 11/12/19 06:10 Batch Analyst: Herrera, Lizette 1

Batch Method: 3510C Batch End Date:

Batch Notes	
Acid used for Clean Up ID	Sulfuric Acid 5814036
Balance ID	68
Batch Comment	3510C 8015B
Analyst ID - Concentration	LH LA
Concentration 1 Corrected Temperature	35 Degrees C
Equipment ID - Concentration 1	TV 12, 13 02
Analyst ID - Extraction	LH LA
Filter ID	FT-3-102-150
Method/Fraction	3510C 8015B SURR ID 5736803 SPIKE ID 57955879
Na2SO4 ID	5839902
pH Indicator ID	HC989495
Pipette/Syringe/Dispenser ID	9"Disposable / 040319500A 1203181000A
Prep Solvent ID	DCM 5925361
Prep Solvent Volume Used	180 mL
Analyst ID - Spike Analyst	LA
Sufficient Volume for Batch QC	Yes
Concentration 1 Uncorrected Temperature	35 Degrees C
Vial Lot Number	Thermo Scientific 18343248
Reagent Water ID	Nano pure water

Basis	Basis Description
T	Total/NA

The pound sign (#) in the amount added field denotes that the reagent was used undiluted. All calculations are performed using the stated concentration for this reagent.

Is the Data Valid? (circle) Yes / No	Preservation Temperature (if Known): 2.4 ºC

Antea Group Lab Validation Sheet

Project/Client: BP 465
Project #: 00465EA191
Date of Validation: 11/18/2019
Completed By: Jo Black **Signature:** Jo Black
Analytical Lab Used and Report # (if any): Eurofins TestAmerica 440-254187-1

	Circle or Highlight Yes/No below
1. Was the analysis the one requested?	Yes / No
2. Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	Yes / No
3. Were samples prepared (extracted, filtered, etc.) within EPA holding times?	Yes / No
4. Once prepared/extracted, were the samples analyzed within the EPA holding times?	Yes / No
5. Were Laboratory blanks performed, if so, were they below non-detect?	Yes / No
6. Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	Yes / No
7. Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	Yes / No
8. In lieu of MS/ MSD, were surrogate spike (SS) or surrogate spike duplicate (SSD) samples included in the laboratory batch samples?	Yes / No
9. Were MS/ MSD (or SS/SSD) within the acceptable range of % recovery (i.e., approx 80-120% depending on analyte)?	Yes / No
10. Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	Yes / No
11. Were Relative Percent Difference values within the acceptable range (i.e. ± 25%)?	Yes / No

If any answer is no, explain why and what corrective action was taken:

Method 8015B: Insufficient 8015-DRO sample was available to perform a MS/MSD associated with preparation batch 440-579542 and analytical batch 440-579986. The LCS was performed in duplicate to provide precision data for this batch: (LCS 440-579542/2-A)
Method 3510C: Insufficient sample volume was available to perform a MS/MSD associated with preparation batch 440-579542. Method 8015B.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the BPLAMP Technical Specifications, applicable federal, state, local regulations and certification requirements as well as the methodologies as described in laboratory SOPs reviewed by the BPLAMP. This Laboratory Report is confidential and is intended for the sole use of Eurofins TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The signature on the cover page extends to the case narrative and all the data and forms in the package. The Chain of Custody is included and is an integral part of this report.

Job ID: 440-253981-1
Project/Site: ARCO 0465, Daly City

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: Eurofins TestAmerica, Irvine

Narrative

Job Narrative
440-253981-1

Comments
No additional comments.

Receipt
The samples were received on 11/6/2019 10:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.3º C.

Receipt Exceptions
One or more containers for the following sample was received broken or leaking: DUP-465_20191105 (440-253981-3). One vial was received broken for this sample.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 440-578743.

Method 3510C: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: DUP-465_20191105 (440-253981-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Antea Group
Project/Site: ARCO 0465, Daly City

Job ID: 440-253981-1

Client Sample ID: MW-18D_20191105 — Lab Sample ID: 440-253981-1

No Detections.

Client Sample ID: V-14_20191105 — Lab Sample ID: 440-253981-2

Accreditation/Certification Summary

Client: Antea Group
Job ID: 440-253981-1
Project/Site: ARCO 0465, Daly City

Laboratory: Eurofins TestAmerica, Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State Program	CA ELAP 2706	06-30-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015B		Water	GRO (C6-C12)
8015B	3510C	Water	Stod.Sol. RO [C9-C13]
8260B		Water	Ethanol

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	False	Containers recd broken. Sufficient sample in remaining containers for analysis.
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Subject: Eurofins TestAmerica sample confirmation files from 440-253981-1 ARCO 0465, Daly City
Attachments: COC 440-253981 (201911071156).pdf; SmpLoginAckLimits_440-253981-1 [Std_Tal_Login_Limits].pdf; SampleLoginAck_440-253981-1 [Std_Tal_Login_Ack].pdf

Hello,

Attached please find the sample confirmation files for job 440-253981-1; ARCO 0465, Daly City

One of the vials for DUP-465_20191105 was received broken. It was removed from the log in.

Please feel free to contact me or your PM Christian Bondoc if you have any questions.

Thank you.

Tiffany 1 Rivera

Is the Data Valid? (circle) Yes / No	Preservation Temperature (if Known): 4.3 ºC

Antea®Group Lab Validation Sheet

Project/Client: BP 465
Project #: 00465EA191
Date of Validation: 11/12/19
Completed By: Leo Karcz **Signature:** Leo Karcz
Analytical Lab Used and Report # (if any): 440-253981-1

	Circle or Highlight Yes/No below
1. Was the analysis the one requested?	Yes / No
2. Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	Yes / No
3. Were samples prepared (extracted, filtered, etc.) within EPA holding times?	Yes / No
4. Once prepared/extracted, were the samples analyzed within the EPA holding times?	Yes / No
5. Were Laboratory blanks performed, if so, were they below non-detect?	Yes / No
6. Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	Yes / No
7. Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	Yes / No
8. In lieu of MS/ MSD, were surrogate spike (SS) or surrogate spike duplicate (SSD) samples included in the laboratory batch samples?	Yes / No
9. Were MS/ MSD (or SS/SSD) within the acceptable range of % recovery (i.e., approx 80-120% depending on analyte)?	Yes / No
10. Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	Yes / No
11. Were Relative Percent Difference values within the acceptable range (i.e. ± 25%)?	Yes / No

If any answer is no, explain why and what corrective action was taken:

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the BPLAMP Technical Specifications, applicable federal, state, local regulations and certification requirements as well as the methodologies as described in laboratory SOPs reviewed by the BPLAMP. This Laboratory Report is confidential and is intended for the sole use of Eurofins TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The signature on the cover page extends to the case narrative and all the data and forms in the package. The Chain of Custody is included and is an integral part of this report.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
LG	LG=Surrogate recovery below the acceptance limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

List Number: 1
Creator: Dolidze, Lado

List Source: Eurofins TestAmerica, Irvine

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Subject: Eurofins TestAmerica sample confirmation files from 440-253982-1 ARCO 0465, Daly City
Attachments: SmpLoginAckLimits_440-253982-1 [Std_Tal_Login_Limits].pdf; COC 440-253982 (201911071156).pdf; SampleLoginAck_440-253982-1 [Std_Tal_Login_Ack].pdf

Hello,

Attached please find the sample confirmation files for job 440-253982-1; ARCO 0465, Daly City

Please feel free to contact me or your PM Christian Bondoc if you have any questions.

Thank you.

Tiffany 1 Rivera
Project Manager Assistant

Is the Data Valid? (circle) Yes / No	Preservation Temperature (if Known): 4.8 ºC

Antea Group Lab Validation Sheet

Project/Client: BP 465
Project #: 00465EA191
Date of Validation: 11/18/2019
Completed By: Jo Black **Signature:** Jo Black
Analytical Lab Used and Report # (if any): Eurofins TestAmerica 440-253982-1

	Circle or Highlight Yes/No below
1. Was the analysis the one requested?	Yes / No
2. Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	Yes / No
3. Were samples prepared (extracted, filtered, etc.) within EPA holding times?	Yes / No
4. Once prepared/extracted, were the samples analyzed within the EPA holding times?	Yes / No
5. Were Laboratory blanks performed, if so, were they below non-detect?	Yes / No
6. Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	Yes / No
7. Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	Yes / No
8. In lieu of MS/ MSD, were surrogate spike (SS) or surrogate spike duplicate (SSD) samples included in the laboratory batch samples?	Yes / No
9. Were MS/ MSD (or SS/SSD) within the acceptable range of % recovery (i.e., approx 80-120% depending on analyte)?	Yes / No
10. Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	Yes / No
11. Were Relative Percent Difference values within the acceptable range (i.e. ± 25%)?	Yes / No

If any answer is no, explain why and what corrective action was taken:

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the BPLAMP Technical Specifications, applicable federal, state, local regulations and certification requirements as well as the methodologies as described in laboratory SOPs reviewed by the BPLAMP. This Laboratory Report is confidential and is intended for the sole use of Eurofins TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The signature on the cover page extends to the case narrative and all the data and forms in the package. The Chain of Custody is included and is an integral part of this report.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments
No additional comments.

Receipt
The samples were received on 1/22/2020 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.6º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Antea Group
Job ID: 440-259571-1
Project/Site: ARCO 0465, Daly City

Laboratory: Eurofins Calscience Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2706	06-30-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015B		Water	GRO (C6-C12)
8015B	3510C	Water	n-Octacosane
8015B	3510C	Water	Stod.Sol. RO [C9-C13]
8260B		Water	1,2-Dibromoethane (EDB)
8260B		Water	1,2-Dichloroethane
8260B		Water	Benzene
8260B		Water	Ethanol
8260B		Water	Ethylbenzene
8260B		Water	Ethyl-t-butyl ether (ETBE)
8260B		Water	Isopropyl Ether (DIPE)
8260B		Water	m,p-Xylene
8260B		Water	Methyl-t-Butyl Ether (MTBE)
8260B		Water	Naphthalene
8260B		Water	o-Xylene
8260B		Water	Tert-amyl-methyl ether (TAME)
8260B		Water	tert-Butyl alcohol (TBA)
8260B		Water	Toluene
8260B		Water	Xylenes, Total

Method Summary

Client: Antea Group
Project/Site: ARCO 0465, Daly City

Job ID: 440-259571-1

Method	Method Description	Protocol	Laboratory
8260B	Volatile Organic Compounds (GC/MS)	SW846	TAL IRV
8015B	Gasoline Range Organics - (GC)	SW846	TAL IRV
8015B	Stoddard Solvent	SW846	TAL IRV
3510C	Liquid-Liquid Extraction (Separatory Funnel)	SW846	TAL IRV
5030B	Purge and Trap	SW846	TAL IRV

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Is the Data Valid? (circle) Yes / No	Preservation Temperature (if Known): 5.6 ºC

Antea®Group Lab Validation Sheet

Project/Client: BP
Project #: 00465EA191
Date of Validation: 2/6/2020
Completed By: Katelynn Smith **Signature:** Katelynn Smith
Analytical Lab Used and Report # (if any): J259571

	Circle or Highlight Yes/No below
1. Was the analysis the one requested?	Yes / No
2. Do the sample number(s) on the chain-of-custody (COC) match the one(s) that appear on the laboratory data sheet?	Yes / No
3. Were samples prepared (extracted, filtered, etc.) within EPA holding times?	Yes / No
4. Once prepared/extracted, were the samples analyzed within the EPA holding times?	Yes / No
5. Were Laboratory blanks performed, if so, were they below non-detect?	Yes / No
6. Are the units correct? (i.e., soil samples in mg/kg or ug/g, water samples mg/L, ug/L, and air samples in volume mg/m^3,etc.)	Yes / No
7. Were appropriate Matrix Spike (MS) and Matrix Spike Duplicate (MSD) samples included in the laboratory batch sample?	Yes / No
8. In lieu of MS/ MSD, were surrogate spike (SS) or surrogate spike duplicate (SSD) samples included in the laboratory batch samples?	Yes / No
9. Were MS/ MSD (or SS/SSD) within the acceptable range of % recovery (i.e., approx 80-120% depending on analyte)?	Yes / No
10. Were MS/MSD (or SS/SSD) values used to calculate Relative Percent Difference (RPD)?	Yes / No
11. Were Relative Percent Difference values within the acceptable range (i.e. ± 25%)?	Yes / No

If any answer is no, explain why and what corrective action was taken:

The laboratory noted the following qualifier(s) in the lab report:

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the BPLAMP Technical Specifications, applicable federal, state, local regulations and certification requirements as well as the methodologies as described in laboratory SOPs reviewed by the BPLAMP. This Laboratory Report is confidential and is intended for the sole use of Eurofins TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The signature on the cover page extends to the case narrative and all the data and forms in the package. The Chain of Custody is included and is an integral part of this report.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
LM	MS and/or MSD above acceptance limits. See Blank Spike (LCS)

GC VOA

Qualifier	Qualifier Description
LR	LCS/LCSD recovery below method control limits

GC Semi VOA

Qualifier	Qualifier Description
LN	MS and/or MSD below acceptance limits. See Blank Spike (LCS)

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative
440-259635-1

Comments
Corrected sample IDs and sampling date per client revised COC.

Receipt
The samples were received on 1/23/2020 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.7º C and 2.7º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-592152 and analytical batch 440-592215 were outside control limits. Sample matrix interference is suspected. The associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8015B: The matrix spike duplicate (MSD) recovery for preparation batch 440-592152 and analytical batch 440-592215 was outside control limits. Sample matrix interference is suspected. The associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Antea Group
Project/Site: ARCO 0465, Daly City

Job ID: 440-259635-1

Laboratory: Eurofins Calscience Irvine

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2706	06-30-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015B		Water	GRO (C6-C12)
8015B	3510C	Water	n-Octacosane
8015B	3510C	Water	Stod.Sol. RO [C9-C13]

Method Summary

Client: Antea Group
Project/Site: ARCO 0465, Daly City

Job ID: 440-259635-1

Method	Method Description	Protocol	Laboratory
8260B	Volatile Organic Compounds (GC/MS)	SW846	TAL IRV
8015B	Gasoline Range Organics - (GC)	SW846	TAL IRV
8015B	Stoddard Solvent	SW846	TAL IRV
3510C	Liquid-Liquid Extraction (Separatory Funnel)	SW846	TAL IRV
5030B	Purge and Trap	SW846	TAL IRV

Protocol References:

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

List Source: Eurofins Irvine

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
