SRF Environmental Alternatives Analysis

ESA

SRF Environmental Alternatives Analysis
PFAS Treatment & Wells Rehabilitation Project

The City of Pleasanton considered the following alternatives for the PFAS Treatment & Wells Rehabilitation Project (Project):

- **Alternative 1. No Action:** Under this alternative, the Project would not be executed and the City would continue its current water supply and treatment practices.

- **Alternative 2. Proposed Project:** Described in greater detail in Chapter 2, Project Description, this alternative would include the construction of a centralized treatment facility (CTF) for disinfection, fluoridation, and PFAS treatment of City-owned Wells 8, 9, and 10. It would also include replacing, rehabilitating, and abandoning groundwater wells and installing pipelines to support the new facilities. In addition to groundwater supply and treatment improvements, an existing 14-inch potable water pipeline in Santa Rita Road would be replaced with a 20-inch pipeline parallel to the existing pipeline in Santa Rita Road. The City is also considering the option of constructing the southern 875 feet of the pipeline through Amador Community Park and connecting to the water system in Black Avenue.

Each of the above alternatives may result in varying temporary and permanent environmental impacts, which are summarized and compared in the attached table. The information provided in the attached table is explained in greater detail in Chapter 3.

Alternative 1, No Action, was not selected because it would not address the current supply and treatment deficiencies.

Alternative 2, Proposed Project, was selected because it minimizes public impacts, includes a centralized treatment facility which minimizes cost, and improves safety.

PFAS TREATMENT & WELLS REHABILITATION PROJECT – SRF ALTERNATIVES ANALYSIS

Environmental Factor	Alternative 1: No Project	Alternative 2: Proposed Project
Aesthetics	No impacts. As the Project would not be executed, there would be no impacts to the existing visual character or quality in the project area. No additional sources of light or glare would be added.	This alternative is not located within a designated scenic vista. It is not in view of a State scenic highways. Most of the components of this alternative would be located on or at current City properties and facilities. Construction activities would create a temporary contrast to the existing visual quality and character surrounding each of the sites. Tree removal would be required at the CTF and Well 10 sites, as well as at points along the pipeline alignment in Amador Community Park; the removed trees would be replaced after completion of construction. The Well 9 building would be located in Amador Community Park and would include permanent landscaping to improve screening and site aesthetics. there would be no impact to these scenic resources. Impacts on the existing visual character and quality of existing views would be less than significant. Precautions taken during overnight construction, minimal permanent lighting, and lack of glare sources would be a less-than-significant impact.
Agriculture and Forestry Resources	No impacts. The Project would not be construction and there are no Prime, Unique, or Statewide Importance Farmland, and no land used or zoned for agricultural use, forest land, timberland, farmland, or forestland within the Project area.	None of the project components under this alternative would be constructed in Prime, Unique, or Statewide Importance Farmland. No project component would be located near any land used or zoned for agricultural use, forest land, timberland, farmland, or forestland. There would be no impact to agriculture or forestry resources.
Air Quality	No impacts. The Project would not be constructed; therefore, there would be no associated impacts to air quality or regional air quality plans.	The Project under this alternative would be consistent with the Bay Area Air Quality Management District's (BAAQMD) 2017 Clean Air Plan. Construction activities would result in emissions of the non-attainment pollutants: reactive organic gases (ROG) and nitrogen oxides (NOx), which are ozone precursors, and particulate matter (PM_{10} and $PM_{2.5}$). These pollutant emissions would be generated in the form of fugitive dust (PM_{10} and $PM_{2.5}$) and in the form of exhaust by construction equipment, on-road vehicle trips of haul trucks, water trucks, and construction worker commutes. With implementation of the best management practices (BMPs) in Mitigation Measure AQ-1, these impacts would be less than significant. Construction and operation of the Project has the potential to generate toxic air contaminants (i.e., diesel particulate matter, $PM_{2.5}$) near sensitive receptors (e.g., residences, schools, etc.). Based on the health risk assessment prepared for the Project, the construction risk of the proposed Project would exceed BAAQMD significance thresholds. With the use of Tier 4 engines on Project construction equipment, as required by Mitigation AQ-2), the impact would be reduced to less-than-significant. Operation of the Project would not have a significant cumulative community risk impact. As a water supply project, the Project would not use chemicals, etc., that would introduce significant sources of new odors in the vicinity and the odor impacts would be less than significant.

PFAS TREATMENT & WELLS REHABILITATION PROJECT – SRF ALTERNATIVES ANALYSIS

Environmental Factor	Alternative 1: No Project	Alternative 2: Proposed Project
Biological Resources	No impacts. The Project would not be constructed and no biological resources would be impacted.	While the Project area under this alternative is in the range of a number of sensitive and protection plant and animal species, with the exception of migratory bird and bats, no such species would be present in the work areas. Tree removal would occur outside of the nesting season (i.e., February 1-August 31). Pre-construction surveys for nesting birds and roosting bats would be conducted. If active nests are found, a work-exclusion buffer zone that shall be designated around the active nest to allow for the successful fledging of the birds. If a non-maternal roost of bats is found, the individuals shall be safely evicted, under the direction of a qualified bat biologist, by opening the roosting area to allow airflow through the cavity. No jurisdictional waters or wetlands would be impacted by the Project under this alternative. Tree removal would be required at the CTF and Well 10 sites, as well as at points along the pipeline alignment in Amador Community Park; the removed trees would be replaced after completion of construction.
Cultural Resources	No impacts. The Project would not be constructed and no cultural resources would be disturbed.	Through a records search, background research, and a site survey, it was determined that there are no architectural or structural resources on the Project site that qualify as historical resources. In the unlikely event that a previously unrecorded archaeological resource or any previously unknown human remains are identified during Project ground-disturbing activities, implementation of cultural resources awareness training and inadvertent discovery protocols would reduce potentially significant impacts to less than significant.
Energy	No impacts. The Project would not be executed and there would be no resulting change in energy consumption.	Though the Project under this alternative would increase long-term energy demand, this increase is essential to provide the required treatment to ensure that drinking water provided to the community is safe and in compliance with SWRCB standards. Increase in energy use associated with the Project would not be considered inefficient and wasteful. The project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. This impact is less than significant.
Geology and Soils	No impacts. The Project would not be constructed and not exacerbated any existing geologic hazards in the Project area.	There would be no impact related to landslides because Project components would be within developed, urbanized area with relatively flat topography. Additionally, there would be no impact related to adequate soils for the use of septic systems, as the Project would not include the installation of a septic system. There would be a less-than-significant impact related to other geologic hazards (i.e., fault rupture, ground shaking, liquefaction, and expansive soils), as Project components could be subject to these hazards. However, the Project would be required to comply with the California Building Code (CBC), which would ensure that all structures and appurtenances are constructed consistent with the recommendations provided in a site-specific geotechnical report.

PFAS TREATMENT & WELLS REHABILITATION PROJECT – SRF ALTERNATIVES ANALYSIS

Environmental Factor	Alternative 1: No Project	Alternative 2: Proposed Project
Geology and Soils (cont.)		Soil erosion could occur as a result of the Project and BMPs would be implemented to ensure a less-than-significant impact. Protocols for the inadvertent discovery of paleontological resources would be implemented to ensure a less-than-significant impact to significant paleontological resources.
Greenhouse Gas Emissions	No impacts. No impacts. The Project would not be constructed; therefore, there would be no generation of greenhouse gas emissions (GHGs) and no conflict with applicable plans and policies.	Construction and operations of the Project would adhere to statewide efforts to minimize GHG emissions. Additionally, the air quality mitigations mentioned above would help reduce GHG emissions. The short-term impacts of construction and the long-term impacts of operations would be less than significant.
Hazards and Hazardous Materials	No impacts. As the Project would not be constructed, there would be no exacerbated risk of hazardous materials upset or disturbing recorded sites, potentially hazardous activities in proximity to schools, impair of excavation/ emergency response plans, or exposure to wildfire risk.	The Project component sites are not within a fire hazard zone, there would be no impact. A traffic control/management plan would be implemented to avoid significant impacts to emergency evacuation routes. While the Project would require the transport, use, storage, and accidental release of hazardous materials, adherence to the several federal, state, and local laws that regulate hazardous materials would be required and would reduce any significant impacts to less than significant. Additionally, impacts related to proximity to previous contamination sites would be reduced by regulations and laws. While Project activities would occur in proximity to schools, the same laws and regulations that the Project would be required to adhere to would further reduce any significant impacts related to the generation of hazardous emissions near schools.
Hydrology and Water Quality	No impacts	The Project would involve ground disturbance such as grading and excavation activities that could result in temporary impacts on surface water quality. Accidental spill controls and stormwater construction BMPs would be implemented to ensure impacts remain less than significant. The Project would not result in an increase in ground water use, is not intended to induce growth, and would have no impact on groundwater recharge. It would not alter existing drainage patterns, other than a slight increased amount of impervious surface and storm water runoff from the new Well 9 facility. The Project is not located within a flood zone
Land Use and Planning	No impacts	The Project under this alternative would not divide an established community, nor would it conflict with or change an existing land use plan, policy, or regulation. There would be no impact
Mineral Resources	No impacts. The Project would not be constructed and would not affect known mineral resources in the Project area.	The CTF/Well 8 site and road work along Busch Road are within an Aggregate Resource Area, as well as an area of Depleted Mineral Resources. However, the area is currently developed and there are no active or ongoing mining operations. The Project would not limit access to any mineral resources and this impact would be less than significant.

PFAS TREATMENT & WELLS REHABILITATION PROJECT – SRF ALTERNATIVES ANALYSIS

Environmental Factor	Alternative 1: No Project	Alternative 2: Proposed Project
Noise	No impacts. The Project would not be constructed, so no temporary sources of noise would occur near sensitive receptors (i.e., residences).	The Project would have no impacts related to excessive noise hazards from an airport. With the exception of well drilling at Well 10 and construction within a portion of Santa Rita Road, all Project construction would occur during daytime hours and Daytime construction noise control measures would be implemented to reduce potentially significant impacts during daytime construction activities. In cases where nighttime construction cannot be avoided, additional noise abatement measures would be employed, including institution of a hotline and identification of a noise disturbance coordinator to receive and address noise complaints, temporary sound barriers, and the offer of off-site lodging to the nearest residence affected by the activity. Implementation of these nighttime control measures would reduce potential impacts to a less-than-significant level.
Population and Housing	No impacts. The Project would not be constructed, potentially disrupting existing housing.	The Project does not involve demolition of existing housing or require the construction of homes elsewhere. The Project would not displace any existing housing or people. Therefore, no impact would occur.
Public Services	No impacts. The Project would not be constructed and there would be no impacts due to increased use of public services.	It is assumed that Project construction would involve two to 10 workers per day over the 28-month construction period. This would not significantly increase the demand for fire and police protection services, or park facilities. The Project would not increase demand on school or other public facilities.
Recreation	No impacts. The Project would not be constructed and there would be no impacts due to increased use of parks and other recreational facilities.	The Well 9 site is located within the southern part of the City-owned Amador Community Park. The site is not in a central location or a central feature of the park; there are no recreational facilities in that location. Amador Community Park has an area of approximately 23.7 acres. The reduction of space at the park would be approximately 0.75 percent compared to the remaining acreage available for use by the public. The park would remain open during construction of the well and building. This would be a less-than-significant impact. The southern 875 feet of the Santa Rita Road pipeline could traverse the eastern portion of Amador Community Park, which is typically used for soccer and other field sports. This portion of the park would be closed during construction and the turf restored after the pipeline trench is backfilled. This would be a temporary disruption and not cause permanent impacts to this park and other parks and recreational facilities in the Project area The Project would not require the construction or expansion of new or existing facilities and there would be no impact.
Transportation and Traffic	No impacts. The Project would not be constructed and the existing pipelines would remain in use. There would be the potential for unanticipated repairs to existing pipelines within Project area roadways.	Project construction would increase the ADT volume on study area roadways by no more than up to 2.4 percent (i.e., too small of a change to be perceived by the average motorist). Construction of pipelines in Project area roadways is assumed to progress at a rate of 100-150 feet per day, meaning that lane closures would be temporary and of short duration. With Implementation of Mitigation Measure TRA-, Construction Traffic Control/Traffic Management Plan, which would ensure the Project would be in compliance with ordinances and policies addressing circulation. This would also apply to providing adequate emergency access on affected roadways during construction.

PFAS TREATMENT & WELLS REHABILITATION PROJECT – SRF ALTERNATIVES ANALYSIS

Environmental Factor	Alternative 1: No Project	Alternative 2: Proposed Project
Tribal Cultural Resources	No impacts. No impacts. The Project would not be constructed and no tribal cultural materials would be disturbed.	Through a records search, background research, and a site survey, it was determined that there are no architectural or structural resources on the Project site that qualify as historical resources. Out of 13 tribal organizations contacted, only the Wilton Rancheria responded to the City's outreach, and indicated they had no concerns about the Project. In the unlikely event that a previously unrecorded cultural materials or any previously unknown human remains are identified during Project ground-disturbing activities, implementation of cultural resources awareness training and inadvertent discovery protocols would reduce potentially significant impacts to less than significant.
Utilities and Service Systems	No impacts. The current water/wastewater treatment systems would remain in use.	One of the goals of the Project is to meet developing PFAS treatment requirements being developed by the State. It would not interfere with conflict with other water/wastewater treatment or water supply requirements. The Project would not require new wastewater treatment facilities. Construction and operation of the Project would create minimal waste. Therefore, it would have less-than-significant impacts to utilities and service systems.
Wildfire	No impact. The Project would not be constructed; there would be no exacerbation of wildfire threat as a result.	The Project would involve in-street work, which could interfere with emergency response and ingress/egress during wildfire response and evacuation events. As noted above under Transportation, implementation of Mitigation Measure TRA-1 would reduce this impact to a less-than-significant level. The Project the Project site does not contain substantial fuel (vegetation) and is not located in an area with steep slopes or prevailing winds which influence wildfire risk. Additionally, the Project component sites are not located in an area that has been designated as a high fire hazard severity zone. It would not be located in an area with factors that contribute to elevated fire risk and the Project would not significantly exacerbate fire risk.

Risk Factors

	Abbreviation	UOM	2<16
8HR Breathing Rate (95th %'ile)	8HR-BR	L/kg-8HR	520
Modeling Adjustment Factor	MAF	unitless	1.4
Exposure Frequency	EF	days/year	0.49
Age Sensitivity Factor	ASF	unitless	3
Inhalation Absorption Factor	A	unitless	1
Conversion Factor	CF_1	m^3/L	0.001
Conversion Factor	CF_2	$\mu g/m^3$	0.001
Cancer Potency Factor (diesel exhaust)	CPF	$mg/kg\text{-}day^{-1}$	1.1
Averaging Time (for residential exposure)	AT	years	70.00

Intake Factor for Inhalation, IF (m^3/kg-day)

Phase Name	Construction Source	Equation	2<16
Well 10 Install Casing	C_W10	8HR-BR*MAF*EF*ED*ASF*A*CF/AT	0.00
Well 9 Install Casing	C_W9		0.00
Well 9	C_W9		0.01
Centralized PFAS/Chem Treatment/Well 8	C_W10		0.01
Pipe: Wells 9/10 to CTF	P_CTF		0.01
Pipe: Santa Rita Road	P_SRR		0.01
Well 10	C_W8		0.01
Wells 3-6 Abandonment	A_W5/A_W6		0.00
