Bay Area Air Quality Management District

Roadway Screening Analysis Calculator

County specific tables containing estimates of risk and hazard impacts from roadways in the Bay Area.

INSTRUCTIONS:

Input the site-specific characteristics of your project by using the drop down menu in the "Search Parameter" box. We recommend that this analysis be used for roadways with 10,000 AADT and above.

• County: Select the County where the project is located. The calculator is only applicable for projects within the nine Bay Area counties.

• Roadway Direction: Select the orientation that best matches the roadway. If the roadway orientation is neither clearly north-south nor east-west, use the highest values predicted from either orientation.

• Side of the Roadway: Identify on which side of the roadway the project is located.

• Distance from Roadway: Enter the distance in feet from the nearest edge of the roadway to the project site. The calculator estimates values for distances greater than 10 feet and less than 1000 feet. For distances greater than 1000 feet, the user can choose to extrapolate values using a distribution curve or apply 1000 feet values for greater distances.

• Annual Average Daily Traffic (ADT): Enter the annual average daily traffic on the roadway. These data may be collected from the city or the county (if the area is unincorporated).

When the user has completed the data entries, the screening level PM2.5 annual average concentration and the cancer risk results will appear in the Results Box on the right. Please note that the roadway tool is not applicable for California State Highways and the District refers the user to the Highway Screening Analysis Tool at: http://www.baaqmd.gov/Divisions/Planning-and-Research/CEQA-GUIDELINES/Tools-and-Methodology.aspx.

Data for Santa Clara County based on meteorological data collected from San Jose Airport in 1997

Notes and References:

1. Emissions were developed using EMFAC2011 for fleet mix in 2014 assuming 10,000 AADT and includes impacts from diesel and gasoline vehicle exhaust, brake and tire wear, and resuspended dust.
2. Roadways were modeled using CALINE4 air dispersion model assuming a source length of one kilometer. Meteorological data used to estimate the screening values are noted at the bottom of the "Results" box.
3. Cancer risks were estimated for 70 year lifetime exposure starting in 2014 that includes sensitivity values for early life exposures and OEHHA toxicity values adopted in 2013.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see https://www.fws.gov/birds/policies-and-regulations.php.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see https://www.fws.gov/birds/bird-enthusiasts/threats-to-birds.php.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/birds/policies-and-regulations/executive-orders/e0-13186.php.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Endangered Species Act Species

There is a total of 10 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

MITIGATION MONITORING AND REPORTING PROGRAM, PFAS TREATMENT & WELLS REHABILITATION PROJECT

Impact	Mitigation Measure	Implementation Responsibility	Implementation Timing	Monitoring, Enforcement, and Reporting Responsibility
Air Quality				
	Mitigation Measure AQ-1: Best Management Practices. All subsequent projects, regardless of size, shall implement the following best management practices to reduce construction impacts, particularly fugitive dust, to a less-than-significant level: • All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day. • All haul trucks transporting soil, sand, or other loose material off-site shall be covered. • All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. • All vehicle speeds on unpaved roads shall be limited to 15 mph. • All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. • Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points. • All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. • Post a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations. This signage requirement may be incorporated with other project signage requirements.	The City shall require its contractor implements all of the air quality best management practices.	During construction.	Contractor shall perform daily inspections and confirm with the City that measures are being implemented. Contractor shall be responsible for identifying any lapses or issues, rectifying them, and notifying the City.
	Mitigation Measure AQ-2: Tier 4 Engines. Prior to the occurrence of construction activities, a construction operations plan shall be prepared that demonstrates that the off-road equipment used on-site to construct the Project would at a minimum achieve a fleet-wide average 95-percent reduction in mass of exhaust emissions of diesel particulate matter (DPM). Specifically, this plan shall include, but is not limited to, the measures identified below:	The City shall require its contractor implements the Tier 4 mitigation measures.	Prior to, and during construction.	Contractor shall perform daily inspections and confirm with the City that the measure is being implemented. Contractor shall be responsible for identifying any issues, rectifying them, and notifying the City.

Air Quality (cont.)				
	• All diesel-powered off-road equipment larger than 25 horsepower operating on the site for more than two days continuously shall, at a minimum, meet U.S. EPA particulate matter emissions standards for Tier 4 engines with CARB-certified Level 3 Diesel Particulate Filters, or equivalent. Exceptions could be made for equipment that includes CARB-certified Level 3 Diesel Particulate Filters or equivalent. Equipment that is electrically powered or uses non-diesel fuels would also meet this requirement • Provide electric power if feasible to avoid use of diesel-powered generator sets and other portable equipment. Off-road equipment descriptions and information shall be provided, including, but not limited to, equipment type, equipment manufacturer, equipment identification number, engine model year, engine certification (Tier rating), horsepower, and engine serial number. Prior to beginning construction activities, the City's contractor shall submit the construction operations plan and records of compliance to the City construction manager or designee.			
Biological Resources				
	Mitigation Measure BIO-1: Protection of Nesting Birds To avoid or minimize Project impacts to nesting birds, the City shall implement the following: • Tree and vegetation removal or pruning associated with project construction and commencement of outdoor project construction activities shall be avoided from February 1 through August 31, the primary local bird nesting season, to the extent feasible. If tree and vegetation removal or pruning associated with project construction is proposed during the nesting period, within seven days prior to the proposed start of construction activities a qualified biologist shall conduct a nesting bird survey of all potential habitat at the construction site and within 250 feet of the perimeter of the construction site. • If any active nests are detected during the pre-construction survey, the qualified biologist shall recommend a work-exclusion buffer zone that shall be designated around the active nest to allow for the successful fledging of the birds. At the discretion of the qualified biologist, limited work may be performed within a designated buffer if biological monitoring confirms that the work does not impact the nest. Once young birds have fledged and are independent of the nest, the qualified biologist can confirm that the buffer is no longer needed.	The City shall require its contractor implements all biological surveys and monitoring. Contractor shall notify the City immediately should they encounter any bird nests, or behavior that suggests nesting in the Project area. Contractor shall establish protections (e.g., cones, flagging) around the buffer zones if needed as directed by the contractor's qualified biologist and approved by the City. Contractor shall be responsible for proper installation, removal and disposal of protective measures as in consultation with contractor's qualified biologist and approved by the City.	Prior to and during construction. Seven (7) days prior to construction activities if occurring within the nesting season defined in Mitigation Measure BIO-1.	The contractor, in consultation with their qualified biologist and as approved by City, shall determine the buffer width and the types of construction activities allowed or prohibited within the buffer. The City shall be responsible for notifying CDFW or U.S. Fish and Wildlife Service, as needed.

Biological Resources (cont.)				
	Mitigation Measure BIO-2: Protection of Roosting Bats To avoid or minimize Project impacts to roosting bats, the City shall implement the following: • Prior to project construction, a qualified bat biologist shall conduct a pre-construction survey for roosting bats in trees to be removed or pruned and structures to be demolished within the work area. If no roosting bats are found, no further action is required. If active bat roosts are found, these roosts shall be flagged and avoided with a suitable buffer, determined in coordination with CDFW. • If a non-maternal roost of bats is found in a tree or structure to be removed or demolished as part of project construction, the individuals shall be safely evicted, under the direction of a qualified bat biologist, by opening the roosting area to allow airflow through the cavity. Removal or demolition should occur no sooner than at least two nights after the initial minor site modification (to alter airflow). This action allows bats to leave during darkness, increasing their chance of finding new roosts with a minimum of disturbance. Departure of the bats from the construction area shall be confirmed with a follow-up survey by a qualified bat biologist prior to start of construction.	The City shall require its contractor implements all biological surveys and monitoring. Contractor shall notify the City immediately should they encounter any roosting bats, or behavior that suggests roosting in the Project area. Contractor shall be responsible for proper installation, removal and disposal of protective measures as in consultation with contractor's qualified biologist and as approved by the City.	Prior to and during construction.	The City shall be responsible for notifying CDFW or U.S. Fish and Wildlife Service, as needed.
Cultural Resources				
	Mitigation Measure CUL-1a: Cultural Resources Awareness Training. Prior to authorization to proceed, the City shall be responsible for ensuring a qualified archaeologist is engaged, defined as an archaeologist meeting the U.S. Secretary of the Interior's Professional Qualification Standards for Archeology, and shall conduct a training program for all construction and field workers involved on site disturbance. On-site personnel shall attend a mandatory pre-Project training that outlines the general archaeological sensitivity of the area and the procedures to follow in the event an archaeological resource and/or human remains are inadvertently discovered.	The City shall require its contractor contacts and retains the qualified archaeologist. The City shall ensure its contractor is responsible for conducting training and ensuring this measure is incorporated in the contractor's specifications. Contractor shall provide opportunity to all workers to attend training.	Prior to and during construction.	Contractor shall provide awareness training whenever new personnel arrive onsite. The contractor shall ensure all staff are properly trained and confirm with the City that measure is being implemented.
	Mitigation Measure CUL-1b: Inadvertent Discovery of Cultural Materials or Tribal Cultural Resources. If pre-contact or historic-era cultural materials are encountered during Project implementation, the City shall halt all construction activities within 100 feet of the material, and the contractor's qualified archaeologist shall inspect the find within 24 hours of discovery and notify the City of the initial assessment. Pre-contact cultural materials might include obsidian and chert flaked-stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden")	The City shall require its contractor contacts and retains the qualified archaeologist. The contractor shall be responsible for ensuring the material is inspected by the qualified archeologist within 24 hours of discovery.	During construction.	The contractor shall be responsible for seeing that all pre-contact or historic-era cultural materials are properly inspected and recommendations are followed, and confirm with the City that measure is being implemented.

	containing heat-affected rocks, artifacts, or shellfish remains; stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-era cultural materials might include building or structure footings and walls, and deposits of metal, glass, and/or ceramic refuse. If the City determines, based on recommendations from the qualified archaeologist and a Native American representative (if the resource is pre-contact), that the resource may qualify as a historical resource or unique archaeological resource (as defined in CEQA Guidelines Section 15064.5) or a tribal cultural resource (as defined in PRC Section 21080.3), the resource shall be avoided if feasible. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource, incorporating the resource within open space, capping and covering the resource, or deeding the site into a permanent conservation easement. If avoidance is not feasible, the City shall consult with appropriate Native American representatives (if the resource is pre-contact) to determine treatment measures to avoid, minimize, or mitigate any potential impacts to the resource pursuant to PRC Section 21083.2 and CEQA Guidelines Section 15126.4. This shall include documentation of the resource and may include data recovery (according to PRC Section 21083.2), if deemed appropriate, or other actions such as treating the resource with culturally appropriate dignity and protecting the cultural character and integrity of the resource (according to PRC Section 21084.3).	Contractor shall be responsible for halting all construction activities within 100 feet of the cultural materials found and will notify the City's project manager. Contractor shall be responsible for avoiding the resource if directed by the City after inspection.		
	Mitigation Measure CUL-2: Inadvertent Discovery of Human Remains. If human remains are encountered during Project implementation, the City shall halt all construction activities within 100 feet of the find until the Alameda County Coroner has been contacted to determine that no investigation of the cause of death is required. The Native American Heritage Commission shall be contacted within 24 hours if it is determined that the remains are Native American. The Commission shall then identify the person or persons it believes to be the Most Likely Descendant from the deceased Native American, who in turn would make recommendations for the appropriate means of treating the human remains and any grave goods.	Contractor shall be responsible for stopping work if any potential human remains are discovered, and will notify the City project manager. The City shall contact the County coroner. The City will also contact the NAHC and Most Likely Descendant(s) if remains are thought to be Native American.	During construction.	The City shall be responsible for seeing that the remains are handled in accordance with all applicable laws and regulations.

Geology and Soils				
	Mitigation Measure GEO-1: Inadvertent Discovery of Paleontological Resources. Prior to the start of any ground-disturbing activity, the City shall be responsible for ensuring a qualified paleontologist is retained (meeting the standards set by the Society of Vertebrate Paleontology [SVP]) to prepare paleontological resources sensitivity training materials for use during a Project-wide Worker Environmental Awareness Training (WEAP), or equivalent. The WEAP shall be conducted by a qualified environmental trainer working under the supervision of the qualified paleontologist. The training session shall focus on the recognition of the types of paleontological resources that could be encountered during construction and the procedures to be followed if they are found. Protocols for an unanticipated discovery shall also be included, in the event that fossils are encountered in areas of low paleontological potential. The contractor shall retain documentation demonstrating that all construction personnel attended the training prior to the start of work on the site and shall provide the documentation. In the event construction crews are phased, additional trainings shall be conducted for new construction personnel. Paleontological monitoring is necessary for all ground-disturbing activities that exceed 5 feet below ground surface (bgs), in previously undisturbed formations mapped as Holocene-age alluvium. Monitoring is also necessary for excavations in formations mapped as Pleistocene-age alluvium and/or Pliocene and Pleistocene-age Livermore Gravel. Paleontological monitoring shall be conducted by a qualified paleontological monitor(s) meeting the standards of the SVP. Monitoring specifications and details shall be documented in a Paleontological Resources Monitoring and Mitigation Plan (PRMMP), to be prepared by the Qualified Paleontologist. Depending on the conditions encountered, full-time monitoring can be reduced to part-time inspections or ceased entirely if determined adequate by the Qualified Paleontologist. The Qualified Paleontologist may spot check the excavation on an intermittent basis and recommend whether the depth of required monitoring should be revised based on his/her observations. Upon completion of monitoring, the results shall be documented in a paleontological resource monitoring report, to be prepared by the Qualified Paleontologist at the completion of construction. If a paleontological resource (such as fossilized bone, teeth, shell, tracks, trails, cast, molds, or impressions) is discovered during construction, the paleontological monitor shall have the authority to halt grading and excavation activities in the area of the exposed resource to evaluate the significance of the discovery. An appropriate buffer area (usually between 50 and 100 feet) shall be established by the Qualified Paleontologist around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. All significant fossils shall be collected by the paleontological monitor and/or the Qualified Paleontologist. Collected fossils shall be prepared to the point of	The City shall require its contractor contacts and retains the qualified paleontologist. The City shall require its contractor is responsible for conducting training and ensuring this measure is incorporated in the contractor's specifications. Contractor shall be responsible for stopping work if any potential paleontological resource is discovered, and will notify the City project manager. Contractor shall follow all recommendations from their qualified paleontologist if resources are discovered.	Prior to, and during construction.	Contractor shall provide awareness training whenever new personnel arrive onsite. The contractor shall ensure all staff are properly trained and confirm with the City that measure is being implemented. The contractor shall ensure paleontological monitoring occurs in all required areas and confirm with the City that measure is being implemented. The City shall ensure the resources are properly donated with necessary accompaniments.

Any fossils collected shall be curated at a public, non-profit institution with a research interest in the materials, such as the University of California Museum of Paleontology at Berkeley, if such an institution agrees to accept the fossils. If no institution accepts the fossil collection, they shall be donated to a local school in the area for educational purposes. Accompanying notes, maps, photographs, and a technical report shall also be filed at the repository and/or school.			
Hazards and Hazardous Materials				
	Mitigation Measure TRA-1: Traffic Control/Traffic Management Plan. Please refer to Transportation below.	See below, Transportation.	See below, Transportation.	See below, Transportation.
Noise				
	Mitigation Measure NOI-1: Daytime Construction. The City shall ensure implementation of noise controls for daytime construction activities that include a minimum of the following measures: • Use only construction equipment that has intake and exhaust mufflers recommended by the manufacturers thereof, to meet relevant noise limitations. • Maintain maximum physical separation, as far as practicable, between noise sources (construction equipment) and noise-sensitive receptors. Separation may be achieved by locating stationary equipment to minimize noise impacts on the community. • Use construction noise shields such as paneled noise shields, blankets, and/or enclosures adjacent to pumps and other small stationary equipment. Noise control shields, blankets, and/or enclosures shall be made featuring a solid panel and a weather-protected, sound-absorptive material on the noise source side of the noise shield.	The City shall require its contractor implements all noise control mitigation measures.	Prior to, and during construction.	Contractor shall perform daily inspections and confirm with the City that measures are being implemented. Contractor shall be responsible for identifying any issues, rectifying them, and notifying the City.
	Mitigation Measure NOI-2: Nighttime Construction (10:00 p.m. to 7:00 a.m.) along Santa Rita Road and at Well 10. In addition to the measures described in Mitigation Measure NOI-1, the following measures shall be implemented relative to nighttime construction activities at the Well 10 site, as indicated: • City shall distribute a “hotline” telephone number, which shall be attended during active construction working hours, for use by the public to register complaints. The hotline number shall be distributed to potentially affected residences within 150 feet of the work.	The City and its contractor shall be responsible for implementing all noise control mitigation measures. Contractor shall be responsible for following all noise control mitigation measures.	Prior to, and during construction.	Contractor shall perform daily inspections and confirm with the City that measures are being implemented. Contractor shall be responsible for identifying any issues, rectifying them, and notifying the City.

Noise (cont.)				
	• The distribution shall identify a noise disturbance coordinator who will be responsible for responding to any local complaints about construction noise. The disturbance coordinator shall determine the cause of any noise complaints and institute actions warranted to correct the problem. All complaints shall be logged noting the date, time, complainant's name, nature of complaint, and any corrective action taken. The distribution shall also include the construction schedule. • The City shall have Contractor install a minimum 20-foot tall, engineered noise walls along the northern and eastern perimeter of the Well 10 drill site capable of achieving a minimum noise reduction performance standard of 5 dBA. The walls shall consist of 20-foot by 4-foot and 20-foot by 8-foot sound panels, installed with sound curtains on the noise source side of the wall (batt insulation sewn between vinyl laminates with a weight of 1 pound per square feet). • At least 30 days prior to nighttime drilling activities at the Well 10 drill site, the City shall offer off-site lodging accommodations for all residences within 150 feet of the Well 10 drill site. The City shall document all communications and associated outcomes. • Open trench pipeline construction activities along Santa Rita Road shall restrict loading of trucks to daytime hours (before 10:00 p.m. and after 7:00 a.m.).			
Transportation				
	Mitigation Measure TRA-1: Construction Traffic Control/Traffic Management Plan. The City shall require the construction contractor to prepare a construction traffic control/traffic management plan and submit the plan to the City's Engineering Department for review and approval before construction. The plan will supplement any City-required encroachment permit(s), and shall be prepared in accordance with professional engineering standards and shall include, but shall not be limited to, the following requirements: • Identify hours of construction for each Proposed Project component. • Schedule truck trips outside of the peak morning and evening commute hours, when feasible, to minimize adverse impacts on traffic flow if the City identifies highly congested roadway segments during their review of the encroachment permit applications. Haul routes that minimize truck traffic on local roadways and residential streets shall be used.	Contractor shall prepare and submit a construction traffic control/traffic management plan for approval by City. Contractor shall ensure measures in the plan are adhered to during construction. The City shall be responsible for reviewing the plan.	The plan will be prepared prior to construction. The plan will be implemented during construction.	Contractor shall report any issues with plan to the City. The City shall ensure this measure is incorporated into the contractor's specifications.

Transportation (cont.)				
	• Develop circulation and detour plans to minimize impacts on local street circulation. This may include the use of signing and flagging to guide vehicles, bicyclists, and pedestrians through and/or around the construction zone. • Control and monitor construction vehicle movements by enforcing current standard construction specifications, as defined by the City, through periodic onsite inspections by the construction contractor. • Install traffic control devices where traffic conditions warrant, as specified in the City's standards (e.g., the California Manual of Uniform Traffic Controls for Construction and Maintenance Work Zones). • Perform construction that crosses on-street and off-street bikeways, sidewalks, and other walkways in a manner that allows safe access for bicyclists and pedestrians. Alternatively, provide safe detours to reroute affected bicycle/pedestrian traffic. • Consult with the Livermore Amador Valley Transit Authority at least one month before construction to coordinate bus stop relocations (as necessary) and to reduce potential interruption of transit service. • Comply with roadside safety protocols to reduce the risk of accidents, as defined in the Caltrans Division of Construction Code of Safe Practices and the California Manual of Uniform Traffic Controls for Construction and Maintenance Work Zones. Provide "Road Work Ahead" warning signs and speed control (including signs informing drivers of state-legislated double fines for speed infractions in a construction zone) to achieve required speed reductions for safe traffic flow through the work zone. • Store all equipment and materials in designated contractor staging areas. • Encourage construction crews to park at staging areas to limit lane closures in the public rights-of-way. • Include a plan and implementation process for notifications and a process for communicating with affected residents, businesses, and City facilities before the start of construction. Advance public notification shall include posting of notices and appropriate signage of construction activities at least one week in advance. The written notification shall include the construction schedule, the exact location and duration of activities within each street (i.e., which lanes and access point/driveways would be blocked on which days and for how long), and a toll-free telephone number for receiving questions or complaints.

Transportation (cont.)				
	• Include a plan and implementation process to coordinate all construction activities with emergency service providers in the area at least one month in advance. Emergency service providers shall be notified of the timing, location, and duration of construction activities. All roads shall remain passable by emergency service vehicles at all times. • Include a plan and implementation process to coordinate all construction activities with the Pleasanton Unified School District at least two months in advance. The school district shall be notified of the timing, location, and duration of construction activities. Coordinate with the school district to identify peak circulation periods at schools along the pipeline alignment and near Wells 9 and 10 (i.e., the arrival and departure of students), so that contractor can avoid construction and lane closures during those periods, if feasible. The construction contractor shall be required to provide that construction of the component does not inhibit vehicle, bicycle, pedestrian, and/or school bus service, by including such provisions in the construction contract. Temporary crossing guards may need to be assigned at designated intersections to enhance pedestrian safety during Project construction. • Identify all roadway locations where special construction techniques (e.g., trenchless pipeline installation or night construction) will be used to minimize impacts on traffic flow. Require that all open trenches and pits be covered with metal plates at the end of each workday to accommodate traffic and access.
