                                          ***     MODEL SETUP OPTIONS SUMMARY
 ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses RURAL Dispersion Only.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    280 Source(s);       3 Source Group(s); and     861
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    280 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
```

```
                and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  21112

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    48.80 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC                                 ;
Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.8 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   GHWTP Operations.err

 **File for Summary of Results:   GHWTP Operations.sum

- - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses RURAL Dispersion Only.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    280 Source(s);       3 Source Group(s); and       6
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    280 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)
```

```
 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  21112

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    48.80 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

INTENTIONALLY LEFT BLANK

1 Introduction

The City of Santa Cruz (City) Water Department has embarked on a multi-year Capital Improvement Program to renovate and upgrade its water system, which will include water supply and infrastructure projects to improve reliability and resiliency and address older infrastructure. The Capital Improvement Program includes plans and funding for numerous projects, including rehabilitation or replacement projects, upgrades and improvement projects, water supply reliability studies, and water main replacements.

The Graham Hill Water Treatment Plant (GHWTP) is an existing facility located in City limits, shown on Figure 1, Project Location. The facility was commissioned in 1960 and has served as a critical component of the City's drinking water system. The GHWTP treats local surface water and groundwater from multiple sources: the San Lorenzo River (at the Tait Diversion, Felton Diversion, and Tait Wells), Majors Creek, Laguna Creek, Reggiardo Creek (by way of Laguna Creek Diversion), Liddell Spring, and Newell Creek (Loch Lomond Reservoir). The City selects its water source and blend for treatment based on multiple variables including demands, source water availability, and source water quality. These selections vary seasonally.

The GHWTP has a rated capacity of 24 million gallons per day (mgd) and a permitted capacity of approximately 18 mgd. Several improvements and modification have been made over the years, focusing on in-kind repairs and replacements, seismic upgrades, and minor improvements in response to changing regulations and permit requirements. However, the GHWTP has several remaining deficiencies related to the age of the infrastructure, the ability of the GHWTP to efficiently meet water quality objectives and adapt to future treatment needs and source-water conditions. The proposed Graham Hill Water Treatment Plant Facility Improvements Project (Proposed Project) would address these remaining deficiencies and help to meet water quality objectives and future water supply needs. The Proposed Project is needed to provide the community with a resilient surface water treatment plant that will meet the regulatory and climate challenges of the 21st century.

The purpose of this biological resources existing conditions report is to describe the current project site conditions, provide habitat assessments for special-status species, and describe survey methodologies and results of various focused field survey efforts conducted for the Proposed Project in 2021 and 2022. This report is intended to provide baseline information to support the Proposed Project's environmental review, and help inform development of mitigation measures to address potentially significant impacts to special-status biological resources.

1.1 Project Description

The Proposed Project consists of improvements at the GHWTP to address aging infrastructure and to provide for efficiently and reliably meeting future water quality objectives and water supply needs. The Proposed Project includes the following:

- **New Water Treatment and Related Processes.** New water treatment and related processes would rehabilitate, replace or augment the existing treatment systems at the GHWTP. The proposed treatment processes would allow the City to reliably and efficiently meet existing and reasonably foreseeable regulations even with source water that is more difficult to treat as described in the Purpose and Need section. The Proposed Project would include solids dewatering to allow for more efficient separation and disposal of solids that are removed from the raw water during the treatment process. Upgrades to the

chemical feed systems would also be included as well as a replacement wash water supply tank, a new ozone contactor, pre-treatment processes, granular activated carbon contactors, and recycled water clarifiers. Space would also be reserved for a UV disinfection system and other additional treatment processes, if needed in the future. The design capacity of the Proposed Project would be approximately 18 mgd (net), a decrease from the 24 mgd capacity of the existing treatment plant.

- **New and Upgraded Buildings.** The Proposed Project would include new and upgraded buildings including a new administration building and/or operations building, new maintenance building, HVAC improvements, replacement or upgrade of the filter gallery building, and new ozone, solids dewatering, and chemical storage facilities.
- **Infrastructure and Site Improvements.** The Proposed Project would include infrastructure and site improvements including piping and storm water management improvements; electrical, and SCADA improvements; vehicular access improvements; landscaping improvements; and may include fencing and site security.
- **Removal of Existing Facilities.** The Proposed Project would include demolition of some existing buildings, water treatment facilities (e.g., sedimentation basins), and infrastructure, as needed to address facilities beyond their useful life or to accommodate new facilities.

Figure 2 (2-1 through 2-3) provides a conceptual illustration of the locations in the Proposed Project that are being considered for development. The areas shown in the *Known Development Envelope* would be prioritized for development and permanent facilities. The *Optional Development Envelope – Low Priority* is the area that could be developed but that would be less desirable because of location, topography, or other factors. Since the GHWTP is a geographically constrained site, the *Optional Development Envelope – Low Priority* portion of the Proposed Project is being retained in the event that the *Known Development Envelope* is insufficient in accommodating the necessary improvements. Specific activities, buildings, or facilities, if any, that would be placed in the *Optional Development Envelope - Low Priority Area* are not defined or known at this time. However, should activities or development be needed in the *Optional Development Envelope - Low Priority Area* those developments and activities would be described and disclosed in the Draft EIR (anticipated schedule is described below). Figure 2 also illustrates a *Traffic and Utility Improvements Area,* which could include infrastructure and site improvements including piping and storm drain system improvements; electrical, and SCADA improvements; vehicular access improvements; landscaping improvements; and site security. While not indicated on Figure 3, the existing fencing may be improved or replaced along the perimeter of the GHWTP as a part of the Proposed Project.

The two staging areas (Mt. Hermon Road Staging Area and Ocean Street Extension Staging Area) that would be used during construction of the Proposed Project are shown in Figure 1**.** In addition, locations within the GHWTP may also be used for temporary staging, laydown of equipment and/or storage during construction.

1.2 Project Location

The Proposed Project would primarily be constructed at the City's existing GHWTP, located within Santa Cruz City limits. Additionally, the Proposed Project is anticipated to involve activities outside of the GHWTP for the purposes of temporary construction staging and potential utility and traffic safety improvements. These activities would occur in both City and County of Santa Cruz (County) jurisdictions. The Proposed Project is anticipated to be located at four sublocations of the primary project site and construction would be supported using two staging areas, which together constitute the project site (see Figures 1 and 2). The Proposed Project locations include:

- Primary Project Site - The approximately 17.1-acre primary project site consisting of:
  - GHWTP Parcel. The approximately 12.4-acre City-owned GHWTP parcel located at 715 Graham Hill Road in Santa Cruz, CA 95060 on Assessor Parcel Number (APN): 060-141-05.
  - Utility Corridor. The approximately 0.2-acre, 550-linear-foot utility corridor between the GHWTP parcel and the San Lorenzo River via Ocean Street Extension and a 15-foot right-of-way on APN: 060-151-05
  - Graham Hill Road Right-of-Way. Approximately 2.3-acres, 1,620 linear feet of the Graham Hill Road public right-of-way between just north of Mosswood Court and just south of Lyle Way.
  - Alternate Sanitary Sewer Lateral Improvement Area. The approximately 2.2 acre alternate sanitary sewer lateral improvement area from the southwest corner of the GHWTP parcel at Ocean Street Extension and along Ocean Street Extension for approximately 4,500 linear feet to the City Public Works Department maintained sanitary sewer connection at Graham Hill Road.
- Staging Areas –
  - Mt. Hermon Road Staging Area. The approximately 5.1-acre staging area for the Proposed Project located at the northern intersection of Graham Hill Road and Mt. Hermon Road, in Felton, CA at APN: 071-201-43.
  - Ocean Street Extension Staging Area. The approximately 1.9-acre staging area for the Proposed Project (Ocean Street Extension Staging Area) located at 1941 Ocean Street Extension at APN: 008-031-16.

The GHWTP parcel at the primary project site is generally accessed from the south on Graham Hill Road via Ocean Street off of State Route 1 (locally referred to as Highway 1). The primary project site may also be accessed from the north on Graham Hill Road via Sims Road or Mt. Hermon Road off of State Route 17 (locally referred to as Highway 17).

Single-family residential land uses surround the GHWTP Parcel on the northern, eastern, and southern perimeters. Dense tree canopy and vegetation, and scattered residential dwellings are located beyond the western perimeter on a hillside that slopes down to the San Lorenzo River, approximately 0.3 miles to the west of the primary project site.

The western perimeter slopes down toward the San Lorenzo River and is an area of scattered residential dwellings. A narrow extension of the GHWTP extends from the otherwise rectangular parcel from the southwest corner down to Ocean Street Extension. This vegetated extension is a corridor for several different types of utilities. The site is characterized by a mix of industrial development for the purpose of water treatment, open space and vegetation. The site is generally accessed from the south on Graham Hill Road via Ocean Street off of State Route 1 (locally referred to as Highway 1) but can also be accessed from the north on Graham Hill Road via Sims Road or Mt. Hermon Road off of State Route 17 (locally referred to as Highway 17).

The Mt. Hermon Road Staging Area is located adjacent to heavily forested open space, as well as commercial and low/very low-density residential land uses. The Ocean Street Extension Staging Area is located adjacent to a crematorium and low/very low-density residential land uses, off of Ocean Street Extension.

The 17.03-acre primary project site is located within the U.S. Geological Survey 7.5-minute Felton and Santa Cruz quadrangles maps (USGS 2021a). The utility corridor is positioned directly east of the San Lorenzo River and approximately 2.7 miles from the Pacific Ocean. Elevations within the project site average approximately 325 feet above mean sea level. A 300-foot buffer added around the project site and potential staging areas described above, constitutes the 143-acre biological study area (BSA), which was used to describe biological resources within the immediate vicinity of the project site.

1.3 Environmental Setting

1.3.1 Soils

According to the U.S. Department of Agriculture Natural Resources Conservation Service (USDA 2021a), there are eight different soil mapping units within the BSA. Table 1 summarizes the soil mapping units and their associated drainage class, landform, and hydric status within the BSA. Figures 3A–3C, Soils and Topographic Setting, depict the soil mapping units and locations within the BSA.

Table 1. Summary of Soil Mapping Units

Soil Map Unit Name	Landform	Drainage Class	Hydric	Acres (Percent Total)
Primary Project Site				
Baywood loamy sand, 15%–30% slopes	Dunes	Somewhat excessively drained	No	0.14 (1%)
Ben Lomond-Catellis-Sur Complex, 30%–75% slopes	Mountains	Well-drained	No	0.04 (0.2%)
Elder sandy loam, 0%–2% slopes	Floodplains, alluvial fans	Well-drained	No	1.18 (7%)
Elder sandy loam, 2%–9% slopes	Alluvial fans, plains in narrow valleys	Well-drained	Yes	0.43 (3%)
Water	—	—	—	0.07 (0.4%)
Watsonville loam, 2%–15% slopes	Coastal terraces	Somewhat poorly drained	Yes	2.93 (17%)
Watsonville loam, thick surface, 2%–15% slopes	Coastal terraces	Somewhat poorly drained	Yes	6.97 (41%)
Zayante-Rock Outcrop Complex, 15%–75% slopes	Hills, mountains	Somewhat excessively drained	No	5.43 (32%)
			Total	**17.19**
Mt. Hermon Road Staging Area				
Elder sandy loam, 0%–2% slopes	Alluvial fans, plains in narrow valleys	Well-drained	Yes	1.48 (29%)
Elkhorn sandy loam, 2%–9% slopes	Old alluvial fans and marine terraces	Well-drained	Yes	3.66 (71%)
			Total	**5.14**
Ocean Street Extension Staging Area				
Elder sandy loam, 0%–2% slopes	Alluvial fans, plains in narrow valleys	Well-drained	Yes	1.31 (70%)
Water	—	—	—	0.15 (8%)
Watsonville loam, 2%–15% slopes	Coastal terraces	Somewhat poorly drained	Yes	0.40 (22%)
			Total	**1.86**

Table 1. Summary of Soil Mapping Units

Soil Map Unit Name	Landform	Drainage Class	Hydric	Acres (Percent Total)
Biological Study Area 300-foot Buffer				
Baywood loamy sand, 0%–2% slopes	Valleys	Somewhat excessively drained	No	2.81 (2%)
Baywood loamy sand, 15%–30% slopes	Dunes	Somewhat excessively drained	No	8.52 (6%)
Ben Lomond-Catelli-Sur complex, 30% to 75% slopes	Mountains	Well-drained	No	9.16 (6%)
Ben Lomond-Felton complex, 50% to 75% slopes	Mountain slopes	Well-drained	No	1.82 (1%)
Elder sandy loam, 0%–2% slopes	Floodplains, alluvial fans	Well-drained	No	29.45 (21%)
Elder sandy loam, 2%–9% slopes	Alluvial fans, plains in narrow valleys	Well-drained	Yes	8.93 (6%)
Elkhorn sandy loam, 2%–9% slopes	Terraces, alluvial fans	Well-drained	No	11.56 (8%)
Elkhorn-Pfeiffer complex, 30%–50% slopes	Terraces	Well-drained	No	0.15 (0.1%)
Pfeiffer gravelly sandy loam, 15%–30% slopes	Terraces	Well-drained	No	1.5 (1%)
Soquel loam, 2%–9% slopes	Valleys, plains	Moderately well-drained	No	1.39 (1%)
Tierra-Watsonville complex, 30%–50% slopes	Fan terraces, marine terraces	Moderately well-drained	No	4.66 (3%)
Water	—	—	—	5.42 (4%)
Watsonville loam, 2%–15% slopes	Coastal terraces	Somewhat poorly drained	Yes	14.8 (10%)
Watsonville loam, thick surface, 0%–2% slopes	Marine terraces	Somewhat poorly drained	Yes	0.83 (1%)
Watsonville loam, thick surface, 2%–15% slopes	Marine terraces	Somewhat poorly drained	Yes	24.85 (17%)
Zayante-Rock Outcrop Complex, 15%–75% slopes	Hills, mountains	Somewhat excessively drained	No	17.43 (12%)
			Total	**143.27**

Source: USDA 2021a.

These soils are generally classified as sandy loams. Five of the eight mapping units identified within the BSA are listed as hydric soils (Table 1). Hydric soils are defined by the National Technical Committee for Hydric Soils as soils that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part. Under natural conditions, these soils are either saturated or inundated long enough during the growing season to support the growth and reproduction of hydrophytic vegetation.

Most of the primary project site consists of two of the above-referenced soil units: Watsonville loam, thick surface, 2%–15% slopes, and Zayante-Rock Outcrop Complex, 15%–75% slopes. However, soils encountered during a focused soil field investigation at the GHWTP in 2020 by soil consultants and geologists did not match those published in the U.S. Department of Agriculture's soil survey report for the County of Santa Cruz (County) area (HDR 2020; USDA 2021a). The investigation revealed that there have been numerous cuts, excavations, and earthen materials moved throughout the project site; the Watsonville soil mapping units were properly identified in the northern portion of the project site; the Zayante-Rock outcrop complex mapping unit is actually a very shallow loamy soil with a Franciscan greywacke schist bedrock; and Santa Margarita Formation/Zayante soils at an off-site reference location (Quail Hollow Park) were consistent with the U.S. Department of Agriculture description. The report concluded that the remaining soils found at the primary project site consist of engineered fills and loamy soils, and not the sandy soils characteristic of the Zayante soil series.

1.3.2 Topography

The BSA is in the Coast Range Geomorphic Province of California, which is primarily composed of marine sedimentary deposits and volcanic rocks containing sandstone, shale, siltstone, and conglomerate (USGS 2021b). The BSA occurs in the lower San Lorenzo River Valley at the northern end of Monterey Bay and approximately 8 miles east of the Pacific Ocean. Topography of the BSA is generally flat, and elevations range from approximately 50 feet above mean sea level to approximately 320 feet above mean sea level. The project site is characterized by an overall gradual slope to the west toward the San Lorenzo River.

1.3.3 Hydrologic Features

The BSA is located within the San Lorenzo Subarea (304.12) of the Santa Cruz Hydrologic Area (304.10), which occurs within the larger Big Basin Hydrologic Unit (CCRWQCB 2019). The San Lorenzo sub-watershed is approximately 138 square miles and includes several significant drainages, including the San Lorenzo River. The sub-watershed includes the Castle Rock area of Summit to the north, Ben Lomond Mountain on the west, and the Branciforte area on the east down to the Pacific Ocean. The San Lorenzo River, which runs along portions of the BSA's western boundary, is a perennial drainage that discharges directly into Monterey Bay, which is located approximately 2.7 miles south of the BSA (see Figure 4, Hydrologic Setting).

During the literature and database review, the National Wetlands Inventory (USFWS 2021a) was consulted and revealed wetland systems that were historically mapped within the BSA. Three types of wetland systems, as defined by the Cowardin Classification System (USFWS 1992), corresponded with the San Lorenzo River and associated tributaries: riverine, upper perennial, unconsolidated bottom, permanently flooded (R3UBH); riverine, upper perennial, unconsolidated shore, permanently flooded (R3USC); and riverine, intermittent, streambed, seasonally flooded (R4SBC). Additionally, the vicinity of the BSA is characterized by urban development, and as such, various other water conveyance systems are also present in the region and BSA, such as drainage ditches and controls.

2 Methods

Data regarding biological resources present within the BSA were obtained through a review of pertinent literature, field reconnaissance, habitat assessments for plant and wildlife species, and a preliminary assessment of jurisdictional aquatic resources, which are described in detail below. For purposes of this report, special-status biological resources are defined as follows:

- Plant species that are (1) designated as rare, threatened, or endangered by the U.S. Fish and Wildlife Service (USFWS) or California Department of Fish and Wildlife (CDFW) and are protected under either the Federal Endangered Species Act (FESA) (16 USC 1531 et seq.) or California Endangered Species Act (CESA) (California Fish and Game Code 2050 et seq.); (2) candidate species being considered or proposed for listing under the FESA or CESA; (3) included on CDFW's Special Vascular Plants, Bryophytes, and Lichens List (CDFW 2022c) or species with a California Rare Plant Rank (CRPR) of 1 or 2 in the California Native Plant Society's (CNPS) Inventory of Rare and Endangered Plants of California (CNPS Inventory) (CNPS 2021); or (4) given protection under the County's General Plan and/or applicable ordinances.
- Wildlife species that are (1) listed as threatened or endangered under the FESA (16 USC 1531 et seq.) and/or CESA (CFCG, Section 2050 et seq.); (2) candidate species being considered or proposed for listing under the FESA or CESA; (3) designated by CDFW as California Species of Special Concern (SSC); (4) designated as Fully Protected species under Sections 3511, 4700, 5050, or 5515 of the California Fish and Game Code; or (5) included on the CDFW Special Animals List (CDFW 2022d).
- Vegetation communities that are (1) designated as sensitive by CDFW and assigned a CRPR of S1–S3 based on their rarity and threats (CDFW 2022a), (2) habitat for special-status plant or wildlife species, or (3) designated as sensitive by the County within Chapter 5 of the General Plan and County Code Title 16.

2.1 Literature Review

Prior to field surveys, special-status biological resources present or potentially present within the BSA were identified through queries of the County of Santa Cruz Online GIS database (County of Santa Cruz 2021), the California Natural Diversity Database (CNDDB) (CDFW 2022e), USFWS Information for Planning and Consultation (IPaC) online planning tool (USFWS 2022), CNPS Inventory (CNPS 2022), and U.S. Department of Agriculture Web Soil Survey (USDA 2021a). The CNPS Inventory and CNDDB were queried based on the U.S. Geological Survey 7.5-minute quadrangle in which the BSA is located (Felton and Santa Cruz) and the six surrounding quadrangles (Big Basin, Castle Rock Ridge, Davenport, Los Gatos, Laurel, and Soquel), which encompass the diversity of regional habitat types expected to occur in the BSA. The IPaC resource list was generated by manually drawing a polygon representing the primary project site in the IPaC online mapping tool.

General information regarding wildlife species distribution in the region and potential presence within the BSA was primarily obtained from the Cornell Lab of Ornithology (2022) for birds, Hall (1981) for mammals, and Stebbins (2003) for reptiles and amphibians.

2.2 Field Surveys

Dudek biologist Michele Laskowski conducted a biological resources reconnaissance survey within the BSA on April 23, 2021. During this site visit, Ms. Laskowski mapped vegetation communities and land covers, evaluated the BSA's potential to support special-status plant and wildlife species, and conducted a preliminary jurisdictional aquatic resources assessment. Also, on April 23, 2021, Jodi McGraw conducted a focused rare plant survey within the BSA. Two additional focused surveys for rare plants were conducted by Dr. McGraw in June and July 2021. Table 2 lists the dates, time, type/focus, scope, conditions, and personnel for each survey, and Appendix A, Site Photographs, documents photos taken during the survey efforts. Dudek biologist Kelsey Higney performed the biological reconnaissance and vegetation mapping for the alternate sanitary sewer lateral improvement area on December 6, 2022.

Table 2. Summary of Biological Surveys, Personnel, and Conditions

Date	Time	Type of Survey	Scope of Survey	Survey Conditions	Biologist
04/23/2021	1000–1630	Biological reconnaissance survey, vegetation mapping, preliminary jurisdictional aquatic resources assessment	BSA	61°F–71°F, 50%–75% CC, 0–15 mph wind	ML

2.2.1 Vegetation Communities and Land Covers

Dudek biologists used CDFW's Protocols for Surveying and Evaluating Impacts to Special-Status Native Plant Populations and Natural Communities (CDFW 2018) and the California Natural Communities List (CDFW 2022a) to map the entire BSA. Vegetation communities and land covers were delineated to the vegetation alliance level and, where appropriate, to the association level.

Vegetation communities and land uses within the BSA were mapped in the field directly onto a 1:2,400-scale (1 inch = 200 feet) aerial-photograph-based field map of the entire BSA. A minimum mapping unit of 2.2 acres (1 hectare) was established to standardize the mapping protocol among biologists. A Dudek GIS analyst processed the vegetation boundaries as delineated by the field biologists and created a GIS coverage for vegetation

communities using ArcGIS software. Once major linework and community designations were completed, a geodatabase was created to help ensure the data was topologically correct and met final quality assurance/quality control procedures.

2.2.2 Plants

Focused special-status plant surveys were conducted in the Proposed Project areas by Jodi McGraw Consulting in 2021, with the exception of the Mt. Hermon Road Staging Area, which was being used for construction and was inaccessible, and the alternate sanitary sewer lateral improvement area, which is entirely developed. Reference sites of known species occurrences were checked, and the results were used to time the survey windows within the BSA. The surveys occurred during three timeframes designed to span the flowering period for special-status species with at least a moderate potential to occur: Early Season (April 23), Mid-Season (June 2), and Late-Season (July 14) (McGraw 2021).

During each survey period, Dr. McGraw walked the survey area and compiled a list of plant species encountered. Latin and common names for plant species with a CRPR follow the CNPS Inventory (CNPS 2021). For plant species without a CRPR, Latin names follow Jepson (Jepson Flora Project 2021), and common names follow the California Natural Community List (CDFW 2022a) or the U.S. Department of Agriculture's Natural Resources Conservation Service PLANTS Database (USDA 2021b).

Appendix B contains the complete methodology of the special-status plant survey.

2.2.3 Wildlife

Wildlife species detected during field surveys by sight, calls, tracks, scat, or other signs were recorded. Binoculars were used to aid in the identification of observed wildlife throughout the BSA. In addition to species directly observed, expected wildlife use was determined by known habitat preferences of local species and knowledge of their range and relative distributions in the area.

Sources for common and scientific names used for wildlife included Crother (2012) for reptiles and amphibians, American Ornithological Society's checklist (Chesser et. al. 2020) for birds, Wilson and Reeder (2005) for mammals, the North American Butterfly Association (NABA 2001) for butterflies, and Moyle (2002) for fish.

2.2.4 Potentially Jurisdictional Aquatic Resources

Dudek biologists conducted a desktop and field review of potentially jurisdictional aquatic resources (waters of the United States and waters of the state) within the BSA. Dudek biologists conducted an initial, planning-level screening and coarse-scale mapping to identify the location and approximate extent of potentially jurisdictional aquatic resources that could present constraints to the Proposed Project. This screening step involved review of existing data sources, including high-resolution aerial imagery, and was intended to eliminate areas of the BSA from further, more detailed, analysis and field review. Potential and/or historical drainages and aquatic features were investigated based on a review of the following: U.S. Geological Survey topographic maps (1:24,000 scale), aerial photographs, the National Wetlands Inventory database (USFWS 2021a), and the Natural Resources Conservation Service Web Soil Survey (USDA 2021a).

Dudek biologists then ground-truthed results of the desktop screening for jurisdictional aquatic resources during the general biological field investigation described above. As part of the ground-truth effort, Dudek biologists documented potential aquatic resources with photographs and notes, including the estimated extent of the features. Observations within the BSA were conducted on foot except for inaccessible areas of Graham Hill Road, where a windshield assessment was performed.

2.2.5 Survey Limitations

The biological reconnaissance survey, vegetation mapping, and rare plant surveys were conducted within the entire BSA from existing easements and publicly accessible roads and rights-of-way. However, access was not available for Mt. Hermon Road Staging Area, located north of the project site. Therefore, use of aerial imagery signatures for vegetation communities and habitat suitability adjacent to the project site within the BSA were conducted for those areas that could not be accessed on foot.

Limitations of the surveys also included a diurnal bias and the absence of trapping for small mammals, reptiles, and amphibians. The surveys were conducted during the daytime to maximize the detection of most wildlife. Most birds are active in the daytime; therefore, diurnal surveys maximize the number of bird observations. Conversely, diurnal surveys usually result in few observations of mammals, many of which may only be active at night. In addition, many species of reptiles and amphibians are secretive in their habits and are difficult to observe using standard meandering transects.

The focused botanical surveys were conducted following 2 years of below-average rainfall. Based on precipitation data collected at the San Lorenzo Valley Water District's main weather station in nearby Boulder Creek since 1888, the average annual precipitation each year from October through September is 51.5 inches (SLVWD 2021). During 2019–2020 and 2020–2021, total precipitation recorded was 21.4 inches (approximately 42% of the average) and 17.2 inches (approximately 33% of the average), respectively (SLVWD 2021).

The BSA is characterized by an active water treatment plant and two active staging areas used for other projects. Vegetation management and other land use activities that remove established plant cover may have reduced the number of species detected overall.

3 Results

3.1 Vegetation Communities and Land Covers

The BSA supports seven natural vegetation communities (black cottonwood forest and woodland, California bay forest and woodland, coast live oak forest and woodland, Douglas fir forest and woodland, Ponderosa pine forest and woodland, redwood forest and woodland, and wild oats and annual brome grasslands) and five non-natural land covers (agricultural, rural residential, urban/developed, wattle grove, and disturbed habitat). Figures 5A–5C, Vegetation Communities and Land Covers, illustrate the distribution, and Table 3 summarizes the extent of vegetation communities and land covers within the BSA. Descriptions of these vegetation communities and land covers are summarized below.

3.1.1 Forest and Woodlands Alliances

Black Cottonwood Forest and Woodland

The black cottonwood forest and woodland alliance includes black cottonwood (*Populus trichocarpa*) as the dominant or co-dominant tree in the canopy. This alliance has an intermittent to continuous canopy of less than 98 feet in height with an open to continuous shrub layer (Sawyer et. al. 2009). The herbaceous layer can vary from sparse to abundant. Species associated with the black cottonwood forest and woodland alliance in California include arroyo willow (*Salix lasiolepis*), aspen (*Populus tremuloides*), bigleaf maple (*Acer macrophyllum*), box-elder (*Acer negundo*), California sycamore (*Platanus racemosa*), coast live oak (*Quercus agrifolia*), coastal dune willow (*Salix hookeriana*), Jeffrey pine (*Pinus jeffreyi*), lodgepole pine (*Pinus contorta* ssp. *murrayana*), mountain alder (*Alnus incana*), Oregon ash (*Fraxinus latifolia*), red alder (*Alnus rubra*), red willow (*Salix laevigata*), sandbar willow

(*Salix exigua*), shining willow (*Salix lasiandra* var. *lasiandra*), wax myrtle (*Morella californica*), western juniper (*Juniperus occidentalis*), white alder (*Alnus rhombifolia*), and white fir (*Abies concolor*).

This vegetation community occurs at the project site and Ocean Street Extension Staging Area, and consists of black cottonwood with California sycamore, California bay (Umbellularia *californica*), box elder, and bigleaf maple. The understory contains California blackberry (*Rubus ursinus*), periwinkle (*Vinca major*), and English ivy (*Hedra helix*).

INTENTIONALLY LEFT BLANK

California Bay Forest and Woodland

The California bay forest and woodland alliance includes California bay as the dominant or co-dominant tree in the canopy. This alliance has an intermittent to continuous canopy of less than 66 feet in height with an open to intermittent shrub layer (Sawyer et. al. 2009). The herbaceous layer can vary from sparse to abundant. Species associated with the California bay forest and woodland alliance in California include beaked hazelnut (*Corylus cornuta*), bigleaf maple, California buckeye (*Aesculus californica*), California sycamore, coast live oak, Douglas fir (*Pseudotsuga menziesii*), foothill pine (*Pinus sabiniana*), interior live oak (*Quercus wislizeni*), madrone (*Arbutus menziesii*), red alder, redwood (*Sequoia sempervirens*), Southern California black walnut (*Juglans californica*), tanoak (*Notholithocarpus densiflorus*), and white alder.

Within the BSA, this vegetation community consists of California bay, coast live oak, bigleaf maple, redwood, poison oak (*Toxicodendron diversilobum*), California blackberry, lady fern (*Athyrium filix-femina*), sword fern (*Polystichum munitum*), and polypody fern (*Polypodium californicum*). Invasive wattle (*Acacia* sp.) trees were observed growing in some areas. This alliance occurs mostly in riparian corridors and was often adjacent to coast live oak and redwood-dominant vegetation communities. It was found near the project site along the San Lorenzo River.

California Sycamore Woodland

California sycamore woodland alliance communities include California sycamore as the dominant or co-dominant tree in the canopy, which is less than 115 feet in height with a variable shrub layer and sparse or grassy herbaceous layer (Sawyer et. al. 2009). California sycamore woodland often occurs in gullies or along streams, springs, seeps, and associated terraces where floodplains are subject to high-intensity flooding.

Within the BSA, California sycamore woodland forms an open to intermittent tree layer dominated by California sycamore in association with coast live oak, California bay, and box elder. The understory consists of California blackberry, current (*Ribes menziesii*), and cow parsnip (*Heracleum maximum*). The California sycamore woodland alliance occurs adjacent to Mt. Hermon Road Staging Area.

Coast Live Oak Woodland and Forest

The coast live oak woodland alliance is characterized by coast live oak being the dominant or co-dominant tree in the canopy. This alliance has an open to continuous canopy less than 98 feet in height, with a sparse to intermittent shrub canopy and a sparse or grassy ground layer (Sawyer et. al. 2009). Species associated with the coast live oak woodland alliance in California include bigleaf maple, blue oak (*Quercus douglasii*), box elder (*Acer negundo*), California bay, Engelmann oak (*Quercus engelmannii*), California sycamore, Southern California black walnut, valley oak, arroyo willow, California black oak (*Quercus kelloggii*), and madrone (Sawyer et. al. 2009).

Within the BSA, this vegetation community consists of coast live oak, California bay, madrone, Douglas fir, and ponderosa pine (*Pinus ponderosa*). Other species observed in the understory included coyote brush (*Baccharis pilularis*), poison oak, bracken fern (*Pteridium aquilinum* var. *pubescens*), and California blackberry. Invasive plants observed in some areas of this community include pepper tree (*Schinus molle*) and French broom (*Genista monspessulana*). The understory includes species such as giant chain fern (*Woodwardia fimbriata*), sword fern, lady fern, pink honeysuckle (*Lonicera hispidula*), horsetail (*Equisetum* sp.), red elderberry (*Sambucus racemosa*), cow parsnip, and hedge nettle (*Stachys* sp.). This alliance occurs at the project site and at both staging areas.

Douglas Fir Forest and Woodland

The Douglas fir forest and woodland alliance is characterized by Douglas fir being the dominant or co-dominant with other hardwood trees in the canopy. This alliance has an intermittent to continuous canopy less than 246 feet in height, with a shrub layer that varies from infrequent to common and herbaceous layer that varies between sparse to abundant (Sawyer et. al. 2009). Species associated with the Douglas fir forest and woodland alliance in California include bigleaf maple, California black oak (*Quercus kelloggii*), coast live oak, golden chinquapin (*Chrysolepis chrysophylla*), incense cedar (*Calocedrus decurrens*), Jeffrey pine, lodgepole pine, madrone, Oregon white oak (*Quercus garryana*), Pacific dogwood (*Cornus nuttallii*), Port Orford cedar (*Chamaecyparis lawsoniana*), redwood, sugar pine (*Pinus lambertiana*), white alder (*Alnus rhombifolia*), and white fir (*Abies concolor*).

Within the BSA, this vegetation community consists of Douglas fir associated with redwood, knobcone pine (*Pinus attenuata*), coast live oak, and madrone. Understory plants included tanoak, coffee berry (*Frangula californica*), ocean spray (*Holodiscus discolor*), wood rose (*Rosa gymnocarpa*), coyote brush, bracken fern, sword fern, Douglas iris (*Iris douglasiana*), and yerba buena (*Satureja douglasiana*). This alliance was limited to the project site.

Ponderosa Pine Forest and Woodland

The ponderosa pine forest alliance includes ponderosa pine as the dominant or co-dominant tree in the canopy. The alliance has an open to continuous canopy less than 164 feet in height with an open to continuous shrub layer and a sparse, abundant, or grassy herbaceous layer (Sawyer et. al. 2009). Species associated with the alliance include California black oak (*Quercus kelloggii*), canyon live oak (*Quercus chrysolepis*), Coulter pine (*Pinus coulteri*), Douglas fir, incense cedar, Jeffrey pine, lodgepole pine, mountain juniper (*Juniperus grandis*), sugar pine (*Pinus lambertiana*), tanoak, western juniper, and white fir.

Within the BSA, this vegetation community consists of ponderosa pine associated with Douglas fir, coast live oak, and madrone. The understory consists primarily of coffee berry, poison oak, California blackberry, and bracken fern. The understory in some locations supported shrubs characteristic of silverleaf manzanita (*Arctostaphylos silvicola*) chapparal, including buckbrush (*Ceanothus cuneatus* var. *cuneatus*), chamise (*Adenostoma fasciculatum*), and yerba santa (*Eriodictyon californicum*). This community, sometimes referred to as "maritime coast range ponderosa pine forest," is unique because the ponderosa pine population is highly disjunct from populations found at higher elevations in the Hamilton Range and Santa Lucia Mountains, and the forests of the Sierra Nevada and Cascade Range (McGraw 2004). This alliance was limited to the project site.

Redwood Forest and Woodland

The redwood forest and woodland alliance includes redwood as the dominant or co-dominant tree in the canopy. The alliance has a continuous to intermittent canopy less than 400 feet in height with an infrequent to common shrub canopy and a variable herbaceous layer (Sawyer et. al. 2009). Species associated with the alliance include bigleaf maple, California bay, red alder, giant chinquapin, tanoak, Douglas fir, and Pacific madrone, among others (Sawyer et. al. 2009).

Within the BSA, this vegetation community consists of an overstory of redwood and tanoak with scattered bigleaf maple in the tree layer. The shrub layer is dominated by California blackberry, poison oak, and Himalayan blackberry (*Rubus armeniacus*), and the herbaceous layer included redwood sorrel (*Oxalis oregana*), western sword fern, sugar scoop (*Tiarella trifoliata*), stinging nettle (*Urtica dioica*), American speedwell (*Veronica americana*), western rush

(*Juncus patens*), and horsetail (*Equisetum* sp.). This alliance occurs at the project site and at Ocean Street Extension Staging Area.

3.1.2 Shrubland Alliances and Stands

Coyote Brush Scrub

The coyote brush scrub (Baccharis pilularis Shrubland Alliance) includes coyote brush as the dominant or co-dominant in the shrub canopy with bush monkeyflower (*Diplacus aurantiacus*), California blackberry, California buckwheat (*Eriogonum fasciculatum*), California coffee berry, California sagebrush (*Artemisia californica*), deer weed (*Acmispon glaber*), poison oak, purple sage (*Salvia leucophylla*), wax myrtle, white sage (*Salvia apiana*), and yellow bush lupine (*Lupinus arboreus*). This alliance has a variable shrub canopy less than 10 feet in height with a variable ground layer (Sawyer et. al. 2009). Emergent tree species associated with the alliance may occur at low cover, including Bishop pine (*Pinus muricata*), Douglas fir, coast live oak, or California bay (Sawyer et. al. 2009).

Within the BSA, this vegetation community consists of primarily coyote brush with pink honeysuckle, bush monkeyflower, and wedgeleaf ceanothus (*Ceanothus cuneatus*). Scattered coast live oak trees are interspersed with an understory of annual grasses and forbs. This alliance was limited to the area adjacent to Mt. Hermon Road Staging Area.

3.1.3 Herbaceous Alliances and Stands

Wild Oats and Annual Brome Grasslands

The wild oats and annual brome grasslands (*Avena* spp. – *Bromus* spp. Herbaceous Semi-Natural Alliance) is dominated by several grass species, including big quaking grass (*Briza maxima*), mouse barley (*Hordeum murinum*), purple false brome (*Brachypodium distachyon*), ripgut brome (*Bromus diandrus*), slender oat (*Avena barbata*), soft brome (*Bromus hordeaceus*), and wild oat (*Avena fatua*). The alliance has an open to continuous herbaceous canopy less than 4 feet in height (Sawyer et. al. 2009). Additional species in low cover associated with this semi-natural stand includes Australian saltbush (*Atriplex semibaccata*) and other *Hordeum* species.

Within the BSA, this vegetation community consists of non-native grasses such as wild oats (*Avena* sp.), soft chess brome (*Bromus hordeaceus*), and rip-gut brome (*Bromus diandrus*). Other cover included smooth cat's ear (*Hypochaeris glabra*), English plantain (*Plantago lanceolata*), and spring vetch (*Vicia sativa*). This alliance occurs at the project site and at Mt. Hermon Road Staging Area.

3.1.4 Non-Natural Land Covers

Agricultural

The agricultural mapping unit refers to areas that are actively being used for cultivation of food crops, consisting of bare soils for planting row crops and orchards of fruit trees such as citrus, pomegranate, and persimmon. This land cover type supports habitat for a range of native wildlife species, including foraging habitat for songbirds and raptors.

Within the BSA these areas are closely associated with rural residential areas, representing small scale agricultural systems between residential development and woodland or forest.

Dirt Road

The dirt road mapping unit refers to areas that have been graded and are actively used and maintained for vehicular access. These linear routes are not paved but characterized by compacted soils that generally lack vegetation. These areas provide relatively low biological value but may serve as movement routes for some wildlife species.

Within the BSA, this mapping unit included established dirt access roads and trails at Mt. Hermon Road Staging Area. Dirt roads also occur at the GHWTP (e.g., behind lab) but did not meet minimum mapping criteria so are not delineated on Figure 5A.

Disturbed Habitat

The disturbed habitat mapping unit refers to areas where soils have been recently or repeatedly disturbed by grading, compaction, or clearing of vegetation. Structures are typically not present within disturbed habitats, and these areas provide relatively low value for most plant and wildlife species. When vegetated, disturbed habitat supports predominantly non-native plant species, such as ornamentals or ruderal exotic species, that take advantage of disturbance.

Within the BSA, disturbed habitat corresponds with graded areas and unpaved urban areas. Associated species observed in the field included star thistle (*Centaurea solstitialis*), *Bromus* sp., shortpod mustard (*Hirschfeldia incana*), and other non-native grasses. This mapping unit occurred at both staging areas. Disturbed habitat also occurs on the primary project site (e.g., behind lab, utility corridor) but did not meet minimum mapping criteria so are not delineated on Figure 5A.

Eucalyptus Groves

This mapping unit refers to non-native eucalyptus (*Eucalyptus* spp.) planted as groves or windbreaks. Blue gum (*Eucalyptus globulus*) has a California Invasive Plant Council (Cal-IPC) rank of Moderate and grows throughout cismontane California. Widespread commercial plantings occurred after 1870 and in the early 1900s for lumber and firewood. Seedlings aggressively invade neighboring areas from original plantings if adequate moisture is available. Within the BSA, this land cover type occurs as a small 0.1-acre patch along Graham Hill Road approximately 400 feet north of the southern terminus of the alternate sanitary sewer lateral (Figure 5C).

Monterey Pine Forest and Woodland

This mapping unit refers to stands of Monterey pine (*Pinus radiata*) planted as plantations, groves, or windbreaks. This species is native to California, but natural stands are limited to three disjunct areas: near Año Nuevo, on the Monterey Peninsula, and at Cambria. It is widely naturalized along the California coast. Within the BSA, this land cover type occurs as a small 0.4-acre patch on the slope above 2218 Ocean Street Extension.

Rural Residential

The rural residential mapping unit identifies land occupied by residential structures, paving, and other impermeable surfaces in remote settings. Natural and non-natural vegetation communities are often interspersed within areas of low density. These areas may support vegetation or habitat for species.

Within the BSA, this mapping unit consists of residential development and ornamental vegetation, including redwoods, madrone, coast live oak, English ivy, California blackberry, French broom, beaked hazelnut, and ornamental landscaping. This mapping unit occurs near the project site and Ocean Street Extension Staging Area.

Urban/Developed

The urban/developed mapping unit refers to areas that have been constructed on or otherwise physically altered to the point where vegetation is no longer present. Urban or developed areas are characterized by permanent or semi-permanent structures, hardscapes, and landscaped areas that require irrigation. It also includes areas where non-native ornamental species and landscaping schemes have been installed and maintained, usually as part of commercial or residential property/park. This habitat type typically supports myriad ornamental species, including Bermudagrass (*Cynodon dactylon*), hottentot fig (*Carpobrotus edulis*), Peruvian peppertree (*Schinus molle*), Brazilian peppertree (*Schinus terebinthifolius*), and red apple iceplant (*Aptenia cordifolia*). This mapping unit identifies developed areas for dense residential, commercial, and industrial uses, as well as areas managed for public access and recreation, and occurs throughout the BSA. It also includes a small portion of Felton Covered Bridge County Park south of the Mt. Hermon Road staging area and Graham Hill Road.

Wattle Groves

The wattle groves mapping unit identifies areas that are dominated or co-dominated by silver wattle (*Acacia dealbata*) and black wattle (*Acacia melanoxylon*) in the tree canopy. These invasive trees that originate from Tasmania typically establish along disturbed roadsides and human-altered landscapes within nutrient-poor soils where these trees have been planted as ornamental vegetation. The leaves and seed pods of these species produce allelopathic chemicals that cover the ground in a thick duff, which inhibits seed germination and growth of other species. As a result, the shrub and herbaceous layer is typically absent or sparse.

Within the BSA, this mapping unit consists of patches that were dominated by silver wattle and black wattle with a tree canopy cover greater than 50% and limited understory growth. This mapping unit is limited to a small area of Ocean Street Extension Staging Area.

3.2 Plants and Wildlife Observed

3.2.1 Plants

A total of 136 plant species, consisting of 64 native species (47%) and 72 non-native species (53%), were recorded within the BSA during surveys conducted by Dudek and Jodi McGraw Consulting biologists in 2021 and 2022. A full list of plant species observed is provided in Appendix C, Plant Compendium.

Special-status plant species that have at least a moderate potential to occur within the BSA are discussed under Section 3.3.2, Special-Status Plants.

3.2.2 Wildlife

A total of 49 wildlife species, consisting of 46 native species (94%) and 3 non-native species (6%), were recorded within the BSA during surveys conducted by Dudek and Jodi McGraw Consulting biologists in 2021 and 2022. A full list of wildlife species by taxonomic group observed is provided in Appendix D, Wildlife Compendium. Several other common wildlife species are expected to occur within the BSA and are noted below for each group of species. Special-status wildlife species that have at least a moderate potential to occur within the BSA are discussed under Section 3.3.3, Special-Status Wildlife.

3.2.2.1 Birds

A total of 39 avian species were detected within the BSA, including the following commonly occurring species: acorn woodpecker (*Melanerpes formicivorus*), American crow (*Corvus brachyrhynchos*), American goldfinch (*Spinus tristis*), Anna's hummingbird (*Calypte anna*), Bewick's wren (*Thryomanes bewickii*), black phoebe (*Sayornis nigricans*), bushtit (*Psaltriparus minimus*), California scrub-jay (*Aphelocoma californica*), California towhee (*Melozone crissalis*), common raven (*Corvus corax*), house finch (*Haemorhous mexicanus*), lesser goldfinch (*Spinus psaltria*), mourning dove (*Zenaida macroura*), pacific-slope flycatcher (*Empidonax difficilis*), red-shouldered hawk (*Buteo lineatus*), spotted towhee (*Pipilo maculatus*), turkey vulture (*Cathartes aura*), and western gull (*Larus occidentalis*), among many others.

3.2.2.2 Reptiles and Amphibians

Two reptiles were detected during surveys: California mountain kingsnake (*Lampropeltis zonata*) and western fence lizard (*Sceloporus occidentalis*). Other common reptiles that are likely to inhabit the BSA include Santa Cruz gartersnake (*Thamnophis atratus atratus*) and California alligator lizard (*Elgaria multicarinata multicarinata*). No amphibians were observed during Dudek's surveys but City staff have observed Sierran treefrog (*Pseudacris sierra*), American bullfrog (Rana catesbeiana), and ensatina (*Ensatina eschscholtzii*) at the primary project site.

3.2.2.3 Mammals

Eight mammals were detected during field surveys: Botta's pocket gopher (*Thomomys bottae*), coyote (*Canis latrans*), domestic dog (*Canis lupus familiaris*), eastern fox squirrel (*Sciurus niger*), mule deer (*Odocoileus hemionus*), raccoon (*Procyon lotor*), western gray squirrel (*Sciurus griseus*), and San Francisco dusky-footed woodrat (*Neotoma fuscipes annectens*). Additionally, City staff have observed domestic cats, other rodents (e.g., rats, mice, voles), and puma (including individuals collared as part of the Santa Cruz Puma Project[1]) at the primary project site.

3.3 Special-Status Biological Resources

Special-status biological resources occurring or potentially occurring in or near the BSA were determined based on Dudek's extensive literature review and results of field surveys. The following special-status biological resources

[1] http://www.santacruzpumas.org/

are discussed below: sensitive vegetation communities, special-status plants, special-status wildlife, jurisdictional wetlands and waters, and wildlife corridors and habitat linkages. Figures 6A–6C, Special-Status Biological Resources, illustrate the location of special-status biological resources mapped within the BSA.

3.3.1 Sensitive Natural Communities

Sensitive natural communities include those designated as sensitive by CDFW (2022b), which includes riparian vegetation communities, and those designated as sensitive habitats by the County within Chapter 5 of the General Plan and County Code Title 16, some of which overlap with the CDFW designations. Each of these are briefly discussed below.

3.3.1.1 CDFW Sensitive Natural Communities

CDFW sensitive natural communities are "natural communities" (of vegetation) or "vegetation types" that have been evaluated by CDFW using NatureServe's Heritage Methodology (Faber-Langendon et. al. 2012) and vegetation community classifications from A Manual of California Vegetation (Sawyer et. al. 2009), and are ranked by rarity and threat. Evaluation is done at both the global (i.e., full natural range within and outside of California) and state (i.e., within California) levels, resulting in a single 'G' (global) and 'S' (state) rank ranging from 1 (i.e., very rare and threatened) to 5 (i.e., demonstrably secure). The five levels of S-ranks are defined as follows:

- S1 = Critically Imperiled. Critically imperiled in California because of extreme rarity (often 5 or fewer populations) or because of factor(s) such as very steep declines making it especially vulnerable to extirpation.
- S2 = Imperiled. Imperiled in California because of rarity due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors making it very vulnerable to extirpation.
- S3 = Vulnerable. Vulnerable in California due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors making it vulnerable to extirpation.
- S4 = Apparently Secure. Uncommon but not rare in California; some cause for long-term concern due to declines or other factors.
- S5 = Secure. Common, widespread, and abundant in the state.

Natural communities with an S rank of S1, S2, or S3 are considered "sensitive" by CDFW and are typically addressed in the California Environmental Quality Act (CEQA) environmental review process.

Dudek biologists reviewed A Manual of California Vegetation for sensitive vegetation communities (alliances) in the Central California Coast ecoregion that have the potential to occur within the BSA. Four sensitive natural communities were identified as occurring within the BSA. Table 4 summarizes the sensitive natural communities (alliances) that were identified as occurring in the BSA based on the field mapping conducted for the Proposed Project.

Table 4. Sensitive Vegetation Communities

Vegetation Alliance	CDFW Code	State Rarity	Area (acres)				
			Primary Project Site	Mt. Hermon Road Staging Area	Ocean Street Extension Staging Area	Biological Study Area 300-foot Buffer	Total
Forest and Woodland Alliances and Stands							
Black cottonwood forest and woodland*	61.120.00	S3	0.09	—	0.19	4.59	4.87
California bay forest and woodland*	74.100.00	S3	0.25	—	—	4.53	4.78
California sycamore woodland*	61.310.00	S3	—	0.08	—	7.73	7.81
Redwood forest and woodland	86.100.00	S3	0.73	—	—	8.37	9.11
Total	—	—	**1.07**	**0.08**	**0.19**	**25.22**	**26.57**

Notes:
CDFW = California Department of Fish and Wildlife; GHWTP = Graham Hill Water Treatment Plant; Ext = Extension
State Rarity Rank: S3 = Vulnerable
* May be classified as a riparian vegetation community

Riparian

Riparian vegetation communities occur along streams, ponds, rivers, and lakes and are considered sensitive because of their high habitat value for native wildlife. Riparian vegetation communities within the BSA included the majority of those areas mapped as black cottonwood forest and woodland, and California bay forest and woodland. However, portions of these communities also transition into upland, non-riparian settings. Also, smaller, unmapped stands may occur wherever water is available.

3.3.1.2 County of Santa Cruz Sensitive Habitats

Two additional sensitive habitat types as mapped by the County and protected under County Code 16.32: Special Forests and Sandhills Habitat. Both habitat types are defined in the County General Plan (County of Santa Cruz 1994).

Special Forests

Special forests are forests that are unique natural communities; limited in supply and distribution; threatened by substantial disturbance from human activities; and habitat for rare, endangered, and/or locally unique species of plants and animals. Examples of special forests include San Andreas oak woodlands, woodland/maritime chaparral, indigenous Ponderosa pine, and indigenous Monterey pine forests (County of Santa Cruz 1994).

No special forests have been mapped within the BSA.

Sandhills Habitat

Sandhills habitat occurs in the Scotts Valley, San Lorenzo Valley, and Bonny Doon areas. In these locations, Zayante soils provide habitat for several special-status species endemic to this area (i.e., found nowhere else in the world), such as the Mount Hermon June beetle (*Polyphylla barbata*), Zayante band-winged grasshopper (*Trimerotropis*

infantilis), Santa Cruz kangaroo rat (*Dipodomys venustus venustus*), Ben Lomond spineflower (*Chorizanthe* pungens var. *hartwegii*), Ben Lomond buckwheat (*Eriogonum nudum* var. *decurrens*), Santa Cruz wallflower (*Erysimum teretifolium*), and silver-leaved manzanita (*Arctostaphylos silvicola*). Like the special forest designation, the County maintains a map of sandhills habitat that includes the western portion of the primary project site (County of Santa Cruz 1994), but as discussed in Section 1.3.1, Soils, an investigation by HDR (2020) revealed that these soils consist of engineered fills and loamy soils instead of the sandy soils characteristic of Sandhills Habitat.

3.3.2 Special-Status Plants

Special-status plants include those listed, or candidates for listing, as threatened or endangered by USFWS and/or CDFW, and species identified as rare by CNPS (particularly CRPR 1A – presumed extinct in California; CRPR 1B – rare, threatened, or endangered throughout its range; and CRPR 2 – rare or endangered in California, more common elsewhere).

No special-status plant species were observed within the BSA during surveys conducted during focused surveys from April through July 2021 (McGraw 2021; Appendix B). Nine of the 10 target species were in bloom at reference sites, despite low rainfall conditions, indicating that these species are unlikely to be present in the survey area.

Dudek biologists performed an extensive desktop review of literature, existing documentation, and GIS data to evaluate the potential for special-status plant species to occur within the BSA. Each special-status plant species was assigned a rating of "not expected," "low," "moderate," or "high" potential to occur based on relative location to known occurrences, vegetation community, soil, and elevation. Based on the results of the literature review and database searches, 62 special-status plant species were identified as potentially occurring within the region of the BSA. Of these, six were determined to have a moderate potential to occur within the BSA based on the soils, vegetation communities (habitat) present, elevation range, and previous known locations based on the CNDDB, IPaC, and CNPS Inventory. The remaining special-status species were evaluated and determined to have little to no potential to occur within the BSA. Table 5 includes the special-status plant species with a moderate potential to occur rating. Appendix E lists the 62 special-status plant species identified as occurring within the region of the BSA and their potential to occur rating and reasoning. There is no USFWS-designated critical habitat for listed plant species within the BSA (USFWS 2022).

Table 5. Special-Status Plant Species with at Least a Moderate Potential to Occur within the Biological Study Area

Common Name	Scientific Name	Federal/State/CRPR	Potential
Ben Lomond buckwheat	*Eriogonum nudum* var. *decurrens*	None/None/1B.1	Moderate
Ben Lomond spineflower	*Chorizanthe pungens* var. *hartwegiana*	FE/None/1B.1	Moderate
northern curly-leaved monardella	*Monardella sinuata* ssp. *nigrescens*	None/None/1B.2	Moderate
robust spineflower	*Chorizanthe robusta* var. *robusta*	FE/None/1B.1	Moderate
silverleaf (Bonny Doon) manzanita	*Arctostaphylos silvicola*	None/None/1B.2	Moderate
woodland woolythreads	*Monolopia gracilens*	None/None/1B.2	Moderate

Status Legend
Federal
FE: Federally endangered

CRPR (California Rare Plant Rank)
CRPR List 1B: Plants rare, threatened, or endangered in California and elsewhere
Threat Rank: 1 Seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
2 Fairly endangered in California (20% to 80% of occurrences threatened)

3.3.2.1 Ben Lomond Buckwheat

Ben Lomond buckwheat (*Eriogonum nudum* var. *decurrens*) is a perennial herb with a CRPR of 1B.1 that blooms from June to October (CNPS 2022). This species is endemic to sandhills habitat in Santa Cruz County where it occurs on Zayante soils within chaparral, cismontane woodland, and lower montane woodland coniferous forest. The closest CNDDB occurrence was documented northwest of Redwood Glen Camp between Bean Creek and McKenzie Creek within 0.1 mile of the BSA in 2017 (CDFW 2022e; No. 1). However, this species has not been previously detected (Harris & Associates 2019, Barton 2021), nor was it detected during the focused rare plant surveys conducted by McGraw (2021).

3.3.2.2 Ben Lomond Spineflower

Ben Lomond spineflower (*Chorizanthe pungens* var. *hartwegiana*) is an annual herb that is federally endangered with a CRPR of 1B.1. It is endemic to sandhills habitat in Santa Cruz County where it occurs on Zayante soils in lower montane coniferous forest (CDFW 2022c2; CNPS 2021). The closest CNDDB occurrence was documented in three separate areas near the intersection of Graham Hill Road and Lockwood Lane in Scotts Valley, approximately 1.4 miles southeast of the Mt. Hermon Road staging area BSA in 1988 (CDFW 2022e; No. 3). However, this species has not been previously detected (Harris & Associates 2019, Barton 2021), nor was it detected during the focused rare plant surveys conducted by McGraw (2021).

3.3.2.3 Northern Curly-Leaved Monardella

Northern curly-leaved monardella (*Monardella sinuata* ssp. *nigrescens*) is an annual herb with a CRPR of 1B.2. It occurs in sandy soils in coastal dune, coastal scrub, and lower montane coniferous forest habitats. Suitable woodland, grassland, and/or Ponderosa pine sandhill habitat are present within the BSA. The closest CNDDB occurrence was documented on the south side of Quail Hollow Road approximately 2 miles northeast of the BSA in 1993 (CDFW 2022e; No. 11). However, this species has not been previously detected (Harris & Associates 2019, Barton 2021), nor was it detected during the focused rare plant surveys conducted by McGraw (2021).

3.3.2.4 Robust Spineflower

Robust spineflower (*Chorizanthe robusta* var. *robusta*) is an annual herb with a CRPR of 1B.1. It occurs in maritime chaparral, cismontane woodlands, and coastal dune habitats. Suitable open woodland habitat is present within the BSA. The CNDDB lists eight occurrences within the region, the closest of which is a 2009 occurrence between Branciforte Creek and Market Street, approximately 0.8 mile east of the BSA (CDFW 2022e; No. 34). However, this species has not been previously detected (Harris & Associates 2019, Barton 2021), nor was it detected during the focused rare plant surveys conducted by McGraw (2021).

3.3.2.5 Silverleaf (Bonny Doon) Manzanita

Silverleaf (Bonny Doon) manzanita (*Arctostaphylos silvicola*) is a shrub with a CRPR of 1B.2 that occurs in closed-cone coniferous forest, chaparral, lower montane coniferous forest, and inland marine sands/perennial evergreen shrub

(CDFW 2022c; CNPS 2022). Suitable forest and shrub habitat are present within the BSA. The closest CNDDB occurrence was documented within chaparral/sandhill habitat between Mount Hermon and Camp Evers, approximately 0.06 miles southwest of the BSA in 2014 (CDFW 2022e; No. 1). However, this species has not been previously detected (Harris & Associates 2019, Barton 2021), nor was it detected during the focused rare plant surveys conducted by McGraw (2021).

3.3.2.6 Woodland Woolythreads

Woodland woolythreads (*Monolopia gracilens*) is an annual herb with a CRPR of 1B.1. It occurs on serpentine soils in opening within broadleafed upland forests, chapparal, cismontane woodland, north coast coniferous forests, and foothill grassland. The BSA supports suitable habitat for this species, and the CNDDB lists 31 occurrences throughout the County, with the closest along the Sunset Trail at Quail Hollow Ranch, approximately 4.9 miles north of the BSA, in 1995 (CDFW 2022e, No. 18). However, this species has not been previously detected (Harris & Associates 2019, Barton 2021), nor was it detected during the focused rare plant surveys conducted by McGraw (2021).

3.3.3 Special-Status Wildlife

Special-status wildlife include those listed, or candidates for listing, as threatened or endangered by USFWS and CDFW, and designated as species of special concern by CDFW and sensitive by USFWS.

Multiple San Francisco dusky-footed woodrat (*Neotoma fuscipes annectens*) middens were observed within the BSA during the December 2021 and 2022 surveys. Additionally, the federally endangered Mount Hermon June beetle (*Polyphylla barbata*) is historically known to occur (from 2004 and 2008) within a small patch of ponderosa pine forest habitat at GHWTP (City of Santa Cruz 2013).

Similar to special-status plants, Dudek biologists performed an extensive desktop review of literature, existing documentation, and GIS data to evaluate the potential for special-status wildlife species to occur within the BSA. Each special-status wildlife species was assigned a rating of “not expected,” “low,” “moderate,” or “high” potential to occur based on relative location to known occurrences and vegetation community/habitat association. Based on the results of the literature review and database searches, 42 special-status wildlife species have been identified as occurring or potentially occurring in the vicinity of the BSA (Appendix F). Of these, four species were determined to have a moderate potential to occur, two were determined to have a high potential to occur, and two are known to occur in the San Lorenzo River. These species are summarized in Table 6. Two other listed wildlife species were initially investigated due to historical records and/or mapped habitat within the region of the BSA but were determined to have low potential to occur: California red-legged frog (*Rana draytonii*) and coho salmon (*Oncorhynchus kisutch*). The remaining species were considered to have little to no potential to occur within the BSA and are not discussed further. Occurrence and habitat information for all of the evaluated species is provided in Appendix F.

There is no USFWS-designated critical habitat for listed wildlife species within the BSA (USFWS 2022).

Table 6. Special-Status Wildlife Species Detected or with at Least a Moderate Potential to Occur within the Biological Study Area

Common Name	Scientific Name	Federal/State	Potential to Occur in Biological Study Area
Steelhead (central California coast DPS)	*Oncorhynchus mykiss irideus*	FT/None	Known
Pacific lamprey	*Entosphenus tridentatus*	None/SSC	Known

Status Legend
Federal
FE: Federally endangered
State
FP: Fully protected
SSC: California species of special concern

3.3.3.1 Steelhead (Central California Coast DPS)

Steelhead that spawn in coastal streams from the Russian River (Sonoma County) to Aptos Creek (Santa Cruz County) and drainages tributary to San Francisco and San Pablo Bays are included in the Central California Coast distinct population segment (DPS), which is federally listed as threatened. Steelhead enter rivers typically between late December and April after winter and spring rains. Steelhead enter rivers and spawn soon after reaching spawning grounds. Most spawning occurs during late spring, avoiding damaging effects of winter floods, common to the coastal watersheds along California's central coast.

Steelhead is known to occur in the San Lorenzo River throughout the year. Adults are more likely to occur during the winter migratory period (January to April), with various life stages occurring at other times of the year.

3.3.3.2 Pacific Lamprey

Pacific lamprey is a California species of special concern that occurs along the coast and in coastal and estuarine streams from Los Angeles and Del Norte Counties and the rivers in the Central Valley. Like steelhead and salmon, they are an oceanic species that enter freshwater streams and estuaries to spawn. Adults generally move into

spawning streams from late March to late June, although upstream movements in January and February have also been observed in some streams (Moyle 2002). They require cold, clear water for spawning and incubation.

Pacific lamprey are known to occur in the San Lorenzo River. During a 2002 survey, they were caught or observed in 12 of the 16 mainstem reaches of the river that were sampled and 16 of 19 tributary reaches (City of Santa Cruz 2021).

3.3.3.3 California Giant Salamander

California giant salamander (*Dicamptodon ensatus*) is a California species of special concern that occurs in wet coastal forests near streams and seeps. This species' range is limited to Mendocino County, south to Monterey County, and east to Napa County. Aquatic larvae are found in cold, clear streams and occasionally occur in lakes and ponds. Adults occur in wet forests under rocks and woody debris in the vicinity of streams or lakes (CDFW 2021b).

California giant salamander has a moderate potential to occur in riparian vegetation along the San Lorenzo River reaches within the BSA. No salamanders were observed within the BSA during surveys conducted by Dudek biologists in spring 2021 or winter 2022.

3.3.3.4 Santa Cruz Black Salamander

Santa Cruz black salamander (*Aneides niger*) is a California species of special concern that is restricted to mesic deciduous or coniferous forests in the fog belt of outer Coast Range of San Mateo, Santa Cruz, and Santa Clara Counties (CDFW 2022d). This species occurs in moist streamside microhabitats and is typically found under rocks near streams, in talus, and under damp woody debris.

Santa Cruz black salamander has a moderate potential to occur in riparian vegetation along the San Lorenzo River reaches within the BSA. No salamanders were observed within the BSA during surveys conducted by Dudek biologists in spring 2021 or winter 2022.

3.3.3.5 Western Pond Turtle

Western pond turtle (*Actinemys marmorata*) is a California species of concern that occurs in a variety of aquatic habitat types including rivers, streams, lakes, ponds, seasonal wetlands, and intermittent streams where permanent and extended seasonal pools are present and basking sites (e.g., open banks, logs) are available. Uplands with loose soils and sparse vegetation near aquatic habitat are required for nesting and overwintering.

Western pond turtle has moderate potential to occur in the San Lorenzo River reaches within the BSA. The closest CNDDB occurrences were documented approximately 6 miles northwest of the BSA in 1993 (CDFW 2022e; No. 76). There is also a known population in Salz Pond approximately 0.5 mile southwest of the Ocean Street Extension Staging Area and the species has been observed in the San Lorenzo River near Branciforte Creek (City, unpubl. data). It was not detected within the BSA during surveys conducted by Dudek biologists in spring 2021 or winter 2022.

3.3.3.6 White-Tailed Kite

White-tailed kite (*Elanus leucurus*) is a fully protected raptor species that occurs throughout California, primarily west of the Sierra Nevada in lowlands and foothills. Although white-tailed kite typically occurs in open habitats such as grassland, marsh, and savanna, it will also use marginal habitats, such as freeway edges and medians, when foraging for voles and mice. Nests are constructed in a variety of trees, with coast live oak perhaps the most common, and placed high in the crown on thin branches (Peeters and Peeters 2005).

White-tailed kite has high potential to nest but low potential to forage in the BSA. The forest and woodland vegetation communities provide suitable nest trees, but the extent of open grassland or meadows for foraging is limited. The nearest CNDDB occurrence is a 2004 nest on the University of California, Santa Cruz Reserve, approximately 1.5 miles west of the BSA (CDFW 2022e) and they have also been observed within 0.5 mile of the Mt. Hermon Staging Area (SCWD obs.). However, this species has not been previously detected in the BSA (Harris & Associates 2019, Barton 2021), nor was it detected during surveys conducted by Dudek biologists in spring 2021 or winter 2022.

3.3.3.7 San Francisco Dusky-Footed Woodrat

San Francisco dusky-footed woodrat (*Neotoma fuscipes annectens*) is a state species of concern that occurs in forest habitats with moderate canopy and dense to moderate understories, particularly on the upper banks of riparian forests or within poison oak-dominated shrublands (CDFW 2022d). San Francisco dusky-footed woodrat is a small-sized rodent that builds middens made of sticks, typically at the base of trees and shrubs, but sometimes in the low- to mid-level canopy of a tree. Dusky-footed woodrat feeds on a variety of woody plants, fungi, flowers, and seeds. This species requires ample midden building materials to construct middens of shredded grass, leaves, or other materials. This species in known to occur along Smith Grade, and was observed in 2006 near the intersection with Bonny Doon Road where multiple middens were observed, primarily located in redwood forest and coyote brush scrub habitat (CDFW 2022d).

During the April 2021 site visit, seven woodrat middens were observed at the project site just north and south of the existing water tanks (Figure 6A). One additional woodrat midden was observed during the December 2022 site visit to the project site for the alternate sanitary sewer lateral. The middens that were inspected showed signs of previous occupation by woodrats, and could be active or were active at one time. Because San Francisco dusky-footed woodrat cannot be distinguished phenotypically from the more widely distributed dusky-footed woodrat and the BSA is within the range of the San Francisco dusky-footed woodrat, it is anticipated that these middens could be used by San Francisco dusky-footed woodrats. Therefore, there is a high potential for this species to occur within the BSA.

3.3.3.8 Mount Hermon June Beetle

Mount Hermon June beetle is a member of the family Scarabaeidae (*Insecta: Coleoptera*) that occurs primarily on Zayante sand soil in central Santa Cruz County; the species has also been observed on sandy loam and loamy sand soils adjacent to Zayante soils (USFWS et. al. 2011). Mount Hermon June beetle occurs in all sandhills habitat of varying successional stages, including ponderosa pine forest, silverleaf manzanita chaparral and other chaparral, and coast live oak woodlands, as well as other woodlands and forests, and sand parkland (McGraw and Jordan 2021). It has also been observed in areas where native sandhills habitat plant species have been removed,

including those that are disturbed through development and that feature primarily ornamental or other non-native plant species (Arnold 2004).

Mount Hermon June beetle has high potential to occur in the BSA. The species is historically known to occur within an approximately 0.8-acre patch of ponderosa pine forest on the primary project site (City of Santa Cruz 2013). Surveys in 2004 and 2008 detected the species immediately south of the water tank to the paved service road, and subsequent monitoring indicated that a very small population persists at the site (City of Santa Cruz 2013).

3.3.4 Potentially Jurisdictional Aquatic Resources

The BSA was investigated to identify potentially jurisdictional aquatic resources that may be regulated by the U.S. Army Corps of Engineers, Regional Water Quality Control Board, and/or CDFW. The BSA is located outside of the coastal zone, as defined by the California Coastal Act. Federal jurisdiction within nontidal areas is determined by the ordinary high water mark, which generally corresponds with the width of the active streambed and open water. State jurisdiction corresponds with the top of bank or edge of any riparian vegetation, whichever is greater. Several potentially jurisdictional and non-jurisdictional features were identified within the primary project site and the Ocean Street Extension Staging Area of the BSA, as described below. Figure 6 illustrates the location of these features within the BSA.

San Lorenzo River

San Lorenzo River is a perennial stream that has a direct connection to the Pacific Ocean, and runs along the western edge of the BSA, along the western end of the utility corridor portion of the primary project site. The mainstem and active channel of the drainage runs along the western edge of the BSA. The portion of the natural perennial drainage which intersects the BSA is characterized by a black cottonwood forest and woodland and California bay forest and woodland vegetation alliances, and supports a clearly defined bed and bank. The mainstem and active channel would be regulated as a federal water of the United States, and the lateral extent of the associated riparian vegetation communities would be considered jurisdictional wetland waters of the state.

Concrete V-Ditch

One concrete v-ditch was identified north of the water tanks and treatment tanks within the primary project site. This feature did not support any vegetation nor evidence of frequent surface water transport/storage. Other small storm drains and roadside ditches have been constructed around the water treatment site that carry water off the impermeable surfaces. These isolated, non-natural features would most likely not be regulated as waters of the United States or state.

Ephemeral Drainage

One ephemeral drainage was identified along the south side of the primary project site near the fence line. This erosional feature is the result of concentrated stormwater runoff which will be directed into the storm drain collection system by the current construction activity at the site. This ditch does not support any distinctive riparian vegetation or species typically associated with natural drainage features. During the time of the site visit (April 2021), this feature was dry and appeared to support surface water only during and immediately after precipitation events.

Seep

One small 0.02-acre seep that occurs within the primary project site just west of the water tanks was previously mapped in 2018 (Harris & Associates 2019). This feature occurs on a slope within an opening of the mixed evergreen forest and supported non-native plants, including calla lilies (*Zantedeschia aethiopica*) and poison hemlock (*Conium maculatum*). Its source of water is unknown but may have been created by leakage from the concreate storage tanks that are currently being replaced.

Seasonal Tributary

One topographic feature located along the northern edge of the Ocean Street Extension Staging Area appears to have been excavated to transport surface water away from the parcel and possibly to the San Lorenzo River located to the west. The vegetation in this area was composed primarily of black cottonwood. However, due to its non-natural origins, further study would be required to determine its jurisdictional status and extent.

3.3.5 Wildlife Corridors/Habitat Linkages

Wildlife corridors are linear features that connect large patches of natural open space and provide avenues for the migration of animals. Wildlife corridors contribute to population viability by ensuring continual exchange of genes between populations, providing access to adjacent habitat areas for foraging and mating, and providing routes for recolonization of habitat after local extirpation or ecological catastrophes (e.g., fires).

Habitat linkages are small patches that join larger blocks of habitat and help reduce the adverse effects of habitat fragmentation. Habitat linkages provide a potential route for gene flow and long-term dispersal of plants and animals, and may also serve as primary habitat for smaller animals, such as reptiles and amphibians. Habitat linkages may be continuous habitat or discrete habitat islands that function as steppingstones for dispersal.

The BSA has value as a potential habitat linkage between areas of adjacent forest habitats. The San Lorenzo River is a regionally significant drainage that flows along the western portion of the BSA, along the western end of the utility corridor portion of the primary project site. This river corridor is likely used by a number of common and special-status wildlife species as cover and foraging habitat, and to move between adjacent similar habitats. However, the BSA is not recognized as an important regional wildlife corridor by any state agency or jurisdiction, and it is not considered critical to the ecological functioning of adjoining watersheds and open space areas.

1 Introduction

1.1 Proposed Project

The City of Santa Cruz Water Department (SCWD) is planning to implement the Graham Hill Water Treatment Plant (GHWTP) Facility Improvement Project (Proposed Project). The City conducted studies to inform planning, design, and environmental review for the Proposed Project, which is anticipated to include seismic improvements to the existing building and replacement of the treatment processes and/or other improvements to enable the GHWTP to meet treatment objectives and regulatory requirements.

1.2 Proposed Project Areas

The Proposed Project would primarily be constructed at the City's existing GHWTP, located within Santa Cruz City limits. In addition, the Proposed Project is anticipated to involve activities outside of the GHWTP for the purposes of temporary construction staging and potential utility and traffic safety improvements. The Proposed Project locations, which together constitute the *project site*, include the following:

- **Primary Project Site:** The approximately 17.03-acre primary project site consisting of:
    - GHWTP Parcel. The approximately 12.40-acre City-owned GHWTP parcel at 715 Graham Hill Road (APN 060-141-05);
    - Utility Corridor. the approximately 0.18-acre, 550-linear-foot utility corridor between the GWHTP parcel and the San Lorenzo River via Ocean Street Extension and a 15-foot right-of-way on APN: 060-151-05;
    - Graham Hill Road Right-of-Way. Approximately 2.3 acres and 1,620 linear feet of the Graham Hill Road public right-of-way between just north of Mosswood Court and just south of Lyle Way; and
    - Alternate Sanitary Sewer Lateral Improvement Area. The approximately 2.15-acre alternate sanitary sewer lateral improvement area from the southwest corner of the GHWTP parcel at Ocean Street Extension and along Ocean Street Extension for approximately 4,500 linear feet to the City Public Works Department maintained sanitary sewer connection at Graham Hill Road. This area was added to the Proposed Project in late 2022 and therefore was not included in this rare plant survey.
- **Staging Areas:**
    - Ocean Street Extension Staging Area. The approximately 1.86-acre staging area for the Proposed Project at 1941 Ocean Street Extension at APN: 008-031-16;
    - Mt. Hermon Road Staging Area. The approximately 5.14-acre staging area for the Proposed Project at the northern intersection of Graham Hill Road and Mt. Hermon Road in Felton, CA at APN: 071-201-43. However, this site was not included in the botanical survey as it was being used for construction and inaccessible during the period of this survey.
    - Other Staging Areas. Additional off-site staging may be needed, the location of which is currently unknown and were therefore not included in this rare plant survey.

These areas feature a range of land cover types that ranged between developed areas featuring pavement and buildings, to relatively intact native plant communities. Coast live oak woodland occurs throughout much of the undeveloped area within the GHWTP parcel, though a portion of the site

features Zayante sand soil that supports the Santa Cruz Sandhills (Sandhills)—an endemic ecosystem in central Santa Cruz that supports several special-status plants and animals (McGraw 2004b, Harris and Assoc. 2019). The utility corridor features black cottonwood woodland and coast redwood forest along the San Lorenzo River. Graham Hill Road has largely been residentially developed while the staging area has been used extensively for construction, though features native plants on the perimeter.

Despite the prior land uses, the Proposed Project areas feature some natural and semi-natural communities that support native plants and have the potential to feature rare native plant species.

1.3 Rare Plant Survey Goal and Objectives

To assist SCWD with planning and permitting of the Proposed Project, including preparation of the Environmental Impact Report, Jodi McGraw Consulting (JMc) conducted a rare plant survey to evaluate the occurrence of special-status plant species within the four Proposed Project areas (Figure 2; Section 1.2). For the purposes of this report, rare and special-status plant species are used interchangeably and include: 1) species designated as either rare, threatened, or endangered by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS) and are protected under either California Endangered Species Act (CESA; CFCG 2050 et seq.) or Federal Endangered Species Act (FESA; 16 USC 1531 et seq.); 2) species that are candidate species being considered or proposed for listing under CESA or FESA; 3) species that are included on the CDFW Special Vascular Plants, Bryophytes, and Lichens List (CDFW 2021a) or species with a California Rare Plant Rank (CRPR) of 1 or 2 in the California Native Plant

Society's Inventory of Rare and Endangered Plants of California (CNPS Inventory; CNPS 2021); and/or 4) species given protection under the County's General Plan/Local Coastal Program and applicable ordinances.

The goal of this rare plant survey was to map the distribution and quantify the abundance of rare plant species within the four Proposed Project areas, which constitute the Survey Area. The objectives of the survey were to:

1. **Identify target plant species:** Compile a list of the special-status plant species that have moderate to high potential to occur within the Survey Area based on a review of databases and spatial data, the prior assessment for the Graham Hill Water Treatment Plant Tank Replacement Project (Harris and Associates 2019), and updated plant community mapping for the Proposed Project (Dudek 2021a);
2. **Survey for rare plants**, throughout the flowering period for the target species, based on their published phenologies and observations of reference sites (known occurrences);
3. **Map and census all special-status plants observed**, including target and non-target species, following mapping rules designed to facilitate accurate delineation of their occurrences using global positioning systems and geographic information systems technology; and
4. **Compile a floristic species list** of all plants observed in the survey area.

1.4 Report

The *Methods* (Section 2) outlines how survey objectives were achieved while the *Results and Discussion* (Section 3) describes and discusses the survey findings. The information in this rare plant survey report can inform SCWD's efforts to plan and permit the Proposed Project; specifically, it can aid evaluation of the Proposed Project and alternatives during environmental review and help inform development of mitigation measures to reduce impacts of the Proposed Project on special-status plants.

The report was originally prepared in August 2021, but was revised in February 2023 to reflect changes in descriptions of the Proposed Project Areas (Section 1.2). No substantive changes were made to the report.

2 Methods

2.1 Study Region

The Proposed Project Area is located just north of the City of Santa Cruz in south-central Santa Cruz County (Figure 1).

2.2 Survey Area

This rare plant survey evaluated the occurrences of special-status plants within four areas that total 16.78 acres (Table 1, Figure 2).

Table 1: Rare Plant Survey Area

Proposed Project/Survey Areas	Area (Acres)	% of Total
GHWTP Parcel	12.43	74%
Utility Corridor	0.18	1%
Ocean Street Extension Staging Area	1.86	11%
Graham Hill Road Right-of-Way	2.30	14%
Total	**16.78**	**100%**

2.3 Target Species

A list of target rare plant species was identified for the survey in coordination with biologists from Dudek. Dudek biologists assembled a list of special-status plant species potentially occurring within the entire Proposed Project Area, which included a 300-foot buffer around the treatment plant parcel, pipeline easement, Graham Hill Road easement, and both staging areas (Dudek 2021b). This list was based on a comprehensive literature review and database search of the following sources: County of Santa Cruz Online GIS database (County of Santa Cruz 2021), the CDFW California Natural Diversity Database (CDFW 2021), the USFWS Inventory for Planning and Conservation (IPaC) database (USFWS 2021), the CNPS Inventory of Rare and Endangered Plants data (CNPS Inventory) (CNPS 2021), and the U.S. Department of Agriculture Web Soil Survey (USDA 1980). Each species was evaluated for its potential to occur in the Survey Area based on its documented occurrences in the region, life history, and general habitat requirements, and the overall suitability of the habitat within the Survey Area to support such species This target species list is identified in Table 2.

This target species list was used to focus the survey on the rare plants most likely to be observed; specifically, the target species list was used to inform the timing of surveys by evaluating the phenology of the target species in references sites (Section 2.4). However, all plant species were evaluated for their occurrence in the Survey Area as part of the floristic analysis (Section 2.5).

2.4 Reference Sites

To inform the timing of the surveys, reference sites for the target species were selected by using the CNDDB (CDFW 2021) and CalFlora (CalFlora 2021) to identify known occurrences of the rare plants.

Table 2: Target rare plant species with moderate to high potential to occur in the Survey Area, showing Habitat and Reference Site Location and Observations (Dudek 2021b)

Species	Status (Federal/State/CRPR)	Primary Habitat Associations, Life Form, Flowering Period, and Elevation Range (feet)	Reference Site and Observations
Silverleaf (Bonny Doon) manzanita (*Arctostaphylos silvicola*)	None/None/1B.2	Closed-cone coniferous forest, Chaparral, Lower montane coniferous forest; inland marine sands/perennial evergreen shrub/Jan–Mar/394–1,965	Perennial species that can be detected year-round
Ben Lomond spineflower (*Chorizanthe pungens* var. *hartwegiana*)	FE/None/1B.1	Lower montane coniferous forest (maritime ponderosa pine sandhills)/annual herb/Apr–July/295–2,000	Observed in flower April 2021 at Quail Hollow Quarry Conservation Areas
robust spineflower (*Chorizanthe robusta* var. *robusta*)	FE/None/1B.1	Chaparral (maritime), Cismontane woodland (openings), Coastal dunes, Coastal scrub; sandy or gravelly/annual herb/Apr–Sep/10–985	Observed in flower May 2021 along Ponza Lane (Soquel Hills Area)
Ben Lomond buckwheat (*Eriogonum nudum* var. *decurrens*)	None/None/1B.1	Chaparral, Cismontane woodland, Lower montane coniferous forest (maritime ponderosa pine sandhills); sandy/perennial herb/June–Oct/164–2,620	Perennial species that can be detected year-round
Santa Cruz wallflower (*Erysimum teretifolium*)	FE/SE/1B.1	Chaparral, Lower montane coniferous forest; inland marine sands/perennial herb/Mar–July/394–2,000	Observed in flower April 2021 at Quail Hollow Quarry Conservation Areas
Santa Cruz tarplant (*Holocarpha macradenia*)	FT/SE/1B.1	Coastal prairie, Coastal scrub, Valley and foothill grassland; often clay, sandy/annual herb/June–Oct/33–720	Observed in flower July 2021 at Arana Gulch
Kellogg's horkelia (*Horkelia cuneata* var. *sericea*)	None/None/1B.1	Closed-cone coniferous forest, Chaparral (maritime), Coastal dunes, Coastal scrub; sandy or gravelly, openings/perennial herb/Apr–Sep/33–655	Observed in flower April 2021 at Marshall Field (UCSC Upper Campus)

Table 2: Target rare plant species with moderate to high potential to occur in the Survey Area, showing Habitat and Reference Site Location and Observations (Dudek 2021b)

Species	Status (Federal/State/CRPR)	Primary Habitat Associations, Life Form, Flowering Period, and Elevation Range (feet)	Reference Site and Observations
northern curly-leaved monardella (*Monardella sinuata* ssp. *nigrescens*)	None/None/1B.2	Chaparral (SCR Co.), Coastal dunes, Coastal scrub, Lower montane coniferous forest (SCR Co., ponderosa pine sandhills); Sandy./annual herb/(Apr)May–July(Aug–Sep)/0–985	Observed in flower June 2021 at Quail Hollow Quarry Conservation Areas
woodland woolythreads (*Monolopia gracilens*)	None/None/1B.2	Broad-leafed upland forest (openings), Chaparral (openings), Cismontane woodland, North Coast coniferous forest (openings), Valley and foothill grassland; Serpentine/annual herb/(Feb)Mar–July/328–3,935	Checked Quail Hollow Ranch County Park Woodrat Trail April and May 2021; not detected, however.
San Francisco popcornflower (*Plagiobothrys diffusus*)	None/SE/1B.1	Coastal prairie, Valley and foothill grassland/annual herb/Mar–June/197–1,180	Observed in flower in May 2021 at Marshall Field.

Where multiple occurrences were identified in Santa Cruz County, the occurrence with habitat most similar to that within the Survey Area, based on the abiotic conditions, plant community, and proximity, was selected. The designated reference sites were checked for the occurrence of target rare plants based on their flowering period (Table 2) and the results were used to time the surveys.

2.5 Surveys

The Survey Area was visually evaluated for the occurrence of rare plants including the target species as well as any other rare plant species. The surveys occurred during three timeframes designed to span the flowering season for the target species and most plant species in the region:

- Early Season: April 23;
- Mid-Season: June 2; and
- Late-Season: July 14.

During each survey period, Dr. Jodi McGraw walked the Survey Area and compiled a list of plant species encountered (Appendix A). This list does not include ornamental plant species installed into landscaped areas, including along Graham Hill Road and in portions of the GHWTP parcel; instead it includes native and naturalized non-native plant species that occur in natural and semi-natural environments.

A protocol was developed and a global positioning system was on hand to map the rare plants; however, no rare plant species were encountered during the surveys.

3 Results and Discussion

No rare plant species were encountered within the Survey Area during the survey. A total of 126 native and naturalized exotic plant species were observed in the Survey Area (Appendix A), including a number of additional ornamental plant species installed in landscaped areas.

There is some limited potential that the target rare plant species (Table 2) occur below ground in the soil seed bank in areas that lack prior development or other intensive land uses. Some of the target species, such as Ben Lomond spineflower, are disturbance adapted and establish from dormant seed in the seed bank following fire or other natural or anthropogenic disturbances that removes established vegetation, frees-up resources, and/or promotes seed germination (McGraw 2004a). However, these species have not been detected during previous studies and analyses conducted for development of the GHTWP HCP (Ebbin, Moser+Skaggs and Arnold 2013) or the current Graham Hill Water Treatment Plant Tank Replacement Project (Harris and Associates 2019).

The survey occurred in the second of two years of below-average rainfall. In Boulder Creek California, 2019-20 saw just 21.4 inches of rain, which is 42% of the average 51.5 inches per year (based on annual data collected since 1888); 2020-21 received 17 inches (33% of average; SLVWD 2021). Such drought conditions in the Santa Cruz region, can limit establishment and survivorship of rare plants, particularly annual plants. However, nine out of the ten target species were observed to be in flower within the reference site locations at the time of this survey (Table 2). As a result, based on the negative results of the focused survey, the target rare plant species are considered unlikely to be present in the Survey Area.

Vegetation management and other land use activities that remove established plant cover may have also reduced the ability to detect rare plants in portions of the Survey Area. Notably, the April survey occurred soon following routine mowing and weed whacking of understory vegetation within the Graham Hill Water Treatment Plant parcel, where the herbaceous vegetation throughout much of the parcel was recently cut and covering the soil surface[1]. Such practices could have reduced the number of species observed overall (Appendix A). The central portion of the proposed staging area was used for staging as part of another project during the 2020-21 growing season, such that it was largely denuded early in the season and featured primarily disturbance-adapted ruderal and invasive plant species later in the season.

In summary, the focused surveys were conducted during three different time periods spanning the flowering season of the target species. The appropriateness of the survey timing was confirmed by inspection of reference populations of the target species within the region. Although regular vegetation management activities at the GHWTP facility may have introduced some limitations in terms of the surveyor's ability to detect rare plants during one of the survey periods, rare plant species were not detected during any of the three surveys and rare plants are therefore considered unlikely to be present within the Survey Area.

[1] The operations and maintenance practices conducted within the GHWTP parcel follow the conservation measures established in the City's low-effect habitat conservation plan for the water treatment plant (Ebbin, Moser+Skaggs and Arnold 2013).

Appendix A: Plant Species List

Table A-1: Plant species observed during the survey. Exotic vascular plant species shown in bold font. Does not include ornamental plant species.

Section	Family	Scientific Name	Common Name
Mosses	Fissidentaceae	*Fissidens c.f crispus*	
Mosses	Brachytheciaceae	*Scleropodium touretii*	
Ferns	Dennstaedtiaceae	*Pteridium aquilinum* var. *pubescens*	bracken fern
Ferns	Dryopteridaceae	*Dryopteris arguta*	coastal wood fern
Ferns	Pteridaceae	*Pellaea andromedifolia*	coffee fern
Ferns	Pteridaceae	*Pentagramma triangularis*	goldback fern
Gymnosperms	Cupressaceae	*Sequoia sempervirens*	coast redwood
Gymnosperms	Pinaceae	*Pinus ponderosa* var. *pacifica*	Ponderosa pine (Bentham's pine)
Gymnosperms	Pinaceae	*Pseudotsuga menziesii var. menziesii*	Douglas-fir
Magnoliids	Lauraceae	*Umbellularia californica*	California bay
Eudicots	Adoxaceae	*Sambucus nigra* ssp. *caerulea*	blue elderberry
Eudicots	**Aizoaceae**	***Carpobrotus edulis***	**Hottentot fig**
Eudicots	Anacardiaceae	*Toxicodendron diversilobum*	western poison oak
Eudicots	**Apiaceae**	***Conium maculatum***	**poison hemlock**
Eudicots	Apiaceae	*Sanicula crassicaulis var. crassicaulis*	Pacific sanicle, gambleweed
Eudicots	**Apiaceae**	***Torilis arvensis***	**high sock-destroyer**
Eudicots	**Apocynaceae**	***Vinca major***	**greater periwinkle**
Eudicots	**Araliaceae**	***Hedera helix***	**English ivy**
Eudicots	Asteraceae	*Artemisia douglasiana*	mugwort
Eudicots	Asteraceae	*Baccharis pilularis ssp. consanguinea*	coyote brush
Eudicots	**Asteraceae**	***Carduus pycnocephalus ssp. pycnocephalus***	**Italian thistle**
Eudicots	**Asteraceae**	***Cirsium vulgare***	**bull thistle**
Eudicots	Asteraceae	*Erigeron canadensis*	horseweed
Eudicots	**Asteraceae**	***Hypochaeris glabra***	**smooth cat's-ear**
Eudicots	**Asteraceae**	***Hypochaeris radicata***	**rough cat's-ear**
Eudicots	Asteraceae	*Madia gracilis*	slender tarweed
Eudicots	Asteraceae	*Madia sativa*	coast tarweed
Eudicots	**Asteraceae**	***Pseudognaphalium luteoalbum***	**weedy cudweed**
Eudicots	**Asteraceae**	***Senecio sylvaticus***	**woodland ragwort**
Eudicots	**Asteraceae**	***Silybum marianum***	**milk thistle**
Eudicots	**Asteraceae**	***Sonchus asper ssp. asper***	**prickly sow thistle**
Eudicots	Betulaceae	*Alnus rhombifolia Nutt.*	white alder
Eudicots	Boraginaceae	*Adelinia grande*	Pacific hound's- tongue
Eudicots	**Boraginaceae**	***Echium candicans***	**pride-of-Madeira**
Eudicots	**Boraginaceae**	***Myosotis latifolia***	**broadleaved forget-me-not**
Eudicots	Brassicaceae	*Cardamine oligosperma*	popweed
Eudicots	Brassicaceae	*Nasturtium officinale*	watercress

Table A-1: Plant species observed during the survey. Exotic vascular plant species shown in bold font. Does not include ornamental plant species.

Section	Family	Scientific Name	Common Name
Eudicots	**Brassicaceae**	***Raphanus sativus***	**radish**
Eudicots	Caprifoliaceae	*Lonicera hispidula*	hairy honeysuckle
Eudicots	Caprifoliaceae	*Symphoricarpos albus var. laevigatus*	snowberry
Eudicots	**Caryophyllaceae**	***Silene gallica***	**windmill pink**
Eudicots	**Caryophyllaceae**	***Spergula arvensis***	**stickwort, starwort**
Eudicots	**Caryophyllaceae**	***Stellaria media***	**common chickweed**
Eudicots	Cucurbitaceae	*Marah fabacea*	California man-root
Eudicots	Ericaceae	*Arbutus menziesii* Pursh	Pacific madrone, madroño
Eudicots	**Euphorbiaceae**	***Euphorbia peplus***	**petty spurge**
Eudicots	**Fabaceae**	***Acacia dealbata***	**silver wattle**
Eudicots	**Fabaceae**	***Acacia melanoxylon***	**blackwood acacia**
Eudicots	Fabaceae	*Acmispon americanus var. americanus*	Spanish trefoil
Eudicots	Fabaceae	*Acmispon glaber var. glaber*	deerweed
Eudicots	Fabaceae	*Acmispon parviflorus*	small-flowered trefoil
Eudicots	**Fabaceae**	***Genista monspessulana***	**French broom**
Eudicots	**Fabaceae**	***Lathyrus latifolius***	**perennial sweet pea**
Eudicots	**Fabaceae**	***Lotus corniculatus***	**bird's-foot trefoil**
Eudicots	**Fabaceae**	***Medicago polymorpha***	**California burclover**
Eudicots	**Fabaceae**	***Spartium junceum***	**Spanish broom**
Eudicots	**Fabaceae**	***Trifolium angustifolium***	**narrow-leaved clover**
Eudicots	Fabaceae	*Trifolium ciliolatum*	foothill clover
Eudicots	**Fabaceae**	***Trifolium dubium***	**little hop clover**
Eudicots	**Fabaceae**	***Trifolium hirtum***	**rose clover**
Eudicots	**Fabaceae**	***Trifolium subterraneum***	**subterranean clover**
Eudicots	**Fabaceae**	***Vicia sativa ssp. sativa***	**spring vetch**
Eudicots	Fagaceae	*Quercus agrifolia var. agrifolia*	coast live oak, encina
Eudicots	**Geraniaceae**	***Erodium botrys***	**long-beaked filaree**
Eudicots	**Geraniaceae**	***Erodium moschatum***	**green-stemmed filaree**
Eudicots	**Geraniaceae**	***Geranium dissectum***	**common cranesbill**
Eudicots	**Geraniaceae**	***Geranium molle***	**soft cranesbill**
Eudicots	**Geraniaceae**	***Geranium purpureum***	**little robin**
Eudicots	Lamiaceae	*Clinopodium douglasii*	yerba buena
Eudicots	**Lamiaceae**	***Mentha aquatica***	**water mint**
Eudicots	Lamiaceae	*Salvia mellifera*	black sage
Eudicots	Lamiaceae	*Stachys bullata*	California hedge nettle
Eudicots	**Malvaceae**	***Malva parviflora***	**cheeseweed, little mallow**
Eudicots	Montiaceae	*Claytonia perfoliata ssp. perfoliata*	miner's lettuce
Eudicots	**Myrsinaceae**	***Lysimachia arvensis***	**scarlet pimpernel**
Eudicots	**Oxalidaceae**	***Oxalis corniculata***	**hairy wood-sorrel**

Table A-1: Plant species observed during the survey. Exotic vascular plant species shown in bold font. Does not include ornamental plant species.

Section	Family	Scientific Name	Common Name
Eudicots	**Oxalidaceae**	***Oxalis incarnata***	**crimson wood-sorrel**
Eudicots	**Oxalidaceae**	***Oxalis pes-caprae***	**Bermuda buttercup**
Eudicots	Papaveraceae	*Eschscholzia californica*	California poppy
Eudicots	**Papaveraceae**	***Fumaria parviflora***	**small-flowered fumitory**
Eudicots	Phrymaceae	*Diplacus aurantiacus*	sticky monkeyflower
Eudicots	**Plantaginaceae**	***Plantago coronopus***	**cut-leaf plantain**
Eudicots	**Plantaginaceae**	***Plantago lanceolata***	**English plantain**
Eudicots	Platanaceae	*Platanus racemosa*	western sycamore
Eudicots	**Polygonaceae**	***Rumex acetosella***	**sheep sorrel**
Eudicots	**Polygonaceae**	***Rumex crispus***	**curly dock**
Eudicots	Rhamnaceae	*Ceanothus thyrsiflorus var. griseus*	Carmel ceanothus
Eudicots	Rosaceae	*Adenostoma fasciculatum* var. *fasciculatum*	chamise
Eudicots	Rosaceae	*Fragaria vesca*	wood strawberry
Eudicots	Rosaceae	*Heteromeles arbutifolia*	toyon
Eudicots	Rosaceae	*Rosa sp.*	rose
Eudicots	Rosaceae	*Rubus ursinus*	California blackberry
Eudicots	Rubiaceae	*Galium aparine*	goose grass
Eudicots	Salicaceae	*Populus trichocarpa*	black cottonwood
Eudicots	Salicaceae	*Salix laevigata*	red willow
Eudicots	Salicaceae	*Salix lasiolepis*	arroyo willow
Eudicots	Sapindaceae	*Acer macrophyllum*	big-leaf maple
Eudicots	Sapindaceae	*Acer negundo*	box elder
Eudicots	Sapindaceae	*Aesculus californica*	California buckeye
Eudicots	**Urticaceae**	***Urtica urens***	**dwarf nettle**
Monocots	Agavaceae	*Chlorogalum pomeridianum var. pomeridianum*	soap plant
Monocots	**Amaryllidaceae**	***Leucojum aestivum***	**snowflake**
Monocots	**Araceae**	**Zantedeschia aethiopica**	**calla lily**
Monocots	Cyperaceae	*Cyperus eragrostis*	umbrella sedge
Monocots	Iridaceae	*Iris douglasiana*	Douglas's iris
Monocots	Iridaceae	*Sisyrinchium bellum*	western blue-eyed grass
Monocots	Juncaceae	*Juncus patens*	common rush, spreading rush
Monocots	Juncaceae	*Juncus phaeocephalus* var. *paniculatus*	brown-headed rush
Monocots	Liliaceae	*Calochortus albus*	white globe lily
Monocots	**Poaceae**	***Aira caryophyllea***	**silver hair grass**
Monocots	**Poaceae**	***Avena barbata***	**slender wild oat**
Monocots	**Poaceae**	***Briza maxima***	**rattlesnake grass**
Monocots	**Poaceae**	***Bromus catharticus var. catharticus***	**rescue grass**
Monocots	**Poaceae**	***Bromus diandrus***	**ripgut brome**
Monocots	**Poaceae**	***Bromus hordeaceus***	**soft chess**

Section	Family	Scientific Name	Common Name
Monocots	Poaceae	*Bromus sitchensis* var. *carinatus*	California brome
Monocots	**Poaceae**	***Cenchrus setaceus***	**purple fountain grass**
Monocots	Poaceae	*Danthonia californica*	California oat grass
Monocots	**Poaceae**	***Ehrharta erecta***	**panic veldt grass**
Monocots	Poaceae	*Elymus glaucus ssp. glaucus*	blue wild-rye
Monocots	**Poaceae**	***Festuca myuros***	**rattail fescue**
Monocots	**Poaceae**	***Festuca perennis***	**Italian rye grass**
Monocots	**Poaceae**	***Holcus lanatus***	**velvet grass**
Monocots	**Poaceae**	***Hordeum murinum ssp. leporinum***	**farmer's foxtail, hare barley**
Monocots	**Poaceae**	***Poa annua***	**annual blue grass**
Monocots	Poaceae	*Stipa pulchra*	purple needle grass

INTENTIONALLY LEFT BLANK

Appendix C
Plant Compendium

Vascular Species

Eudicots

ADOXACEAE – MUSKROOT FAMILY

Sambucus nigra ssp. *caerulea* – blue elderberry

AIZOACEAE – FIG-MARIGOLD FAMILY

* *Carpobrotus edulis* – hottentot fig

ANACARDIACEAE – SUMAC OR CASHEW FAMILY

Toxicodendron diversilobum – poison oak

APIACEAE – CARROT FAMILY

* *Conium maculatum* – poison hemlock

Sanicula crassicaulis – Pacific blacksnakeroot

* *Torilis arvensis* – spreading hedgeparsley
* *Torilis nodosa* – knotted hedgeparsley

APOCYNACEAE – DOGBANE FAMILY

* *Vinca major* – bigleaf periwinkle

ARALIACEAE – GINSENG FAMILY

* *Hedera helix* – English ivy

ASTERACEAE – SUNFLOWER FAMILY

Artemisia douglasiana – Douglas' sagewort

Baccharis pilularis ssp. *consanguinea* – coyotebrush

* *Carduus pycnocephalus* ssp. *pycnocephalus* – Italian plumeless thistle
* *Cirsium vulgare* – bull thistle
* *Delairea odorata* – Cape-ivy

Erigeron canadensis – Canadian horseweed

* *Hypochaeris glabra* – smooth cat's ear
* *Hypochaeris radicata* – hairy cat's ear

Madia gracilis – grassy tarweed

Madia sativa – coast tarweed

* *Pseudognaphalium luteoalbum* – Jersey cudweed
* *Senecio sylvaticus* – woodland ragwort
* *Silybum marianum* – blessed milkthistle
* *Sonchus asper* ssp. *asper* – spiny sowthistle

BETULACEAE – BIRCH FAMILY

Alnus rhombifolia – white alder

Alnus rubra – red alder

BORAGINACEAE – BORAGE FAMILY

* *Borago officinalis* – common borage
* *Echium candicans* – pride of Madeira
* *Myosotis latifolia* – broadleaf forget-me-not

BRASSICACEAE – MUSTARD FAMILY

Cardamine oligosperma – little western bittercress

Nasturtium officinale – watercress

* *Raphanus sativus* – cultivated radish
* *Rosmarinus officinalis* – rosemary

CAPRIFOLIACEAE – HONEYSUCKLE FAMILY

Lonicera hispidula – pink honeysuckle

Symphoricarpos albus var. *laevigatus* – common snowberry

CARYOPHYLLACEAE – PINK FAMILY

* *Silene gallica* – common catchfly
* *Spergula arvensis* – corn spurry
* *Stellaria media* – common chickweed

CONVOLVULACEAE – MORNING-GLORY FAMILY

Calystegia purpurata – Pacific false bindweed

CUCURBITACEAE – GOURD FAMILY

Marah fabacea – California man-root

ERICACEAE – HEATH FAMILY

Arbutus menziesii – madrone

EUPHORBIACEAE – SPURGE FAMILY

* *Euphorbia peplus* – petty spurge

FABACEAE – LEGUME FAMILY

* *Acacia dealbata* – silver wattle
* *Acacia melanoxylon* – blackwood

Acmispon americanus var. *americanus* – American bird's-foot trefoil

Acmispon glaber var. *glaber* – common deerweed

Acmispon parviflorus – desert deervetch

* *Genista monspessulana* – French broom

* *Lathyrus latifolius* – perennial pea
* *Lotus corniculatus* – bird's-foot trefoil
* *Medicago polymorpha* – burclover
* *Spartium junceum* – Spanish broom
* *Trifolium angustifolium* – narrowleaf crimson clover
  Trifolium ciliolatum – foothill clover
* *Trifolium dubium* – suckling clover
* *Trifolium hirtum* – rose clover
* *Trifolium subterraneum* – subterranean clover
* *Vicia sativa* ssp. *sativa* – garden vetch

FAGACEAE – OAK FAMILY

Quercus agrifolia var. *agrifolia* – coast live oak

GERANIACEAE – GERANIUM FAMILY

* *Erodium botrys* – longbeak stork's bill
* *Erodium moschatum* – musky stork's bill
* *Geranium dissectum* – cutleaf geranium
* *Geranium molle* – dovefoot geranium
* *Geranium purpureum* – Robert geranium

LAMIACEAE – MINT FAMILY

Clinopodium douglasii – yerba buena
* *Mentha aquatica* – water mint
  Salvia mellifera – black sage
  Stachys bullata – California hedgenettle

LAURACEAE – LAUREL FAMILY

Umbellularia californica – California bay

MALVACEAE – MALLOW FAMILY

* *Malva parviflora* – cheeseweed mallow

MONTIACEAE – MONTIA FAMILY

Claytonia perfoliata ssp. *perfoliata* – miner's lettuce

MYRTACEAE – MYRTLE FAMILY

* Eucalyptus globulus – blue gum

MYRSINACEAE – MYRSINE FAMILY

* *Lysimachia arvensis* – scarlet pimpernel

OXALIDACEAE – OXALIS FAMILY

* *Oxalis corniculata* – creeping woodsorrel
* *Oxalis incarnata* – crimson woodsorrel
  Oxalis oregana – redwood-sorrel
* *Oxalis pes-caprae* – Bermuda buttercup

PAPAVERACEAE – POPPY FAMILY

  Eschscholzia californica – California poppy
* *Fumaria parviflora* – fineleaf fumitory

PHRYMACEAE – LOPSEED FAMILY

  Diplacus aurantiacus – bush monkeyflower

PLANTAGINACEAE – PLANTAIN FAMILY

* *Plantago coronopus* – buckhorn plantain
* *Plantago lanceolata* – narrowleaf plantain

PLATANACEAE – PLANE TREE, SYCAMORE FAMILY

  Platanus racemosa – California sycamore

POLYGONACEAE – BUCKWHEAT FAMILY

  Persicaria punctata – dotted smartweed
* *Rumex acetosella* – common sheep sorrel
* *Rumex crispus* – curly dock

RHAMNACEAE – BUCKTHORN FAMILY

  Ceanothus thyrsiflorus var. *griseus* – Carmel ceanothus

ROSACEAE – ROSE FAMILY

  Adenostoma fasciculatum var. *fasciculatum* – chamise
* *Cotoneaster pannosus* – silverleaf cotoneaster
  Fragaria vesca – woodland strawberry
  Heteromeles arbutifolia – toyon
  Rubus ursinus – California blackberry

RUBIACEAE – MADDER FAMILY

  Galium aparine – stickywilly

RUTACEAE – RUE FAMILY

* Citrus sp.

SALICACEAE – WILLOW FAMILY

  Populus trichocarpa – black cottonwood

Salix laevigata – red willow
Salix lasiolepis – arroyo willow

SAPINDACEAE – SOAPBERRY FAMILY

Acer macrophyllum – bigleaf maple
Acer negundo – box-elder
Aesculus californica – California buckeye

URTICACEAE – NETTLE FAMILY

* *Urtica urens* – dwarf nettle

Ferns and Fern Allies

DENNSTAEDTIACEAE – BRACKEN FAMILY

Pteridium aquilinum var. *pubescens* – hairy brackenfern

DRYOPTERIDACEAE – WOOD FERN FAMILY

Dryopteris arguta – coastal woodfern

PTERIDACEAE – BRAKE FAMILY

Pellaea andromedifolia – coffee cliffbrake
Pentagramma triangularis – goldback fern

WOODSIACEAE – CLIFF FERN FAMILY

Athyrium filix-femina – common ladyfern

Gymnosperms and Gnetophytes

CUPRESSACEAE – CYPRESS FAMILY

Sequoia sempervirens – redwood

PINACEAE – PINE FAMILY

Pinus ponderosa var. *pacifica* – Pacific ponderosa pine
Pinus radiata – Monterey pine
Pseudotsuga menziesii var. *menziesii* – Douglas-fir

Monocots

AGAVACEAE – AGAVE FAMILY

Chlorogalum pomeridianum var. *pomeridianum* – wavyleaf soap plant

AMARYLLIDACEAE – AMARYLLIS FAMILY

Leucojum aestivum – summer snowflake

ARACEAE – ARUM FAMILY

* *Zantedeschia aethiopica* – calla lily

CYPERACEAE – SEDGE FAMILY

Cyperus eragrostis – tall flatsedge

IRIDACEAE – IRIS FAMILY

Iris douglasiana – Douglas iris

Sisyrinchium bellum – western blue-eyed grass

JUNCACEAE – RUSH FAMILY

Juncus patens – western rush

Juncus phaeocephalus var. *paniculatus* – brownhead rush

LILIACEAE – LILY FAMILY

Calochortus albus – white fairy-lantern

POACEAE – GRASS FAMILY

* *Aira caryophyllea* – silver hairgrass
* *Avena barbata* – slender oat
* Bamboo sp.
* *Briza maxima* – big quakinggrass
* *Bromus catharticus* var. *catharticus* – rescuegrass
* *Bromus diandrus* – ripgut brome
* *Bromus hordeaceus* – soft brome

Bromus sitchensis var. *carinatus* – California brome

Danthonia californica – California oat grass

* *Ehrharta erecta* – panic veldtgrass

Elymus glaucus ssp. *glaucus* – blue wildrye

* *Festuca myuros* – rat-tail fescue
* *Festuca perennis* – perennial rye grass
* *Holcus lanatus* – common velvet grass
* *Hordeum murinum* ssp. *leporinum* – hare barley
* *Poa annua* – annual bluegrass

Stipa pulchra – purple needlegrass

* signifies introduced (non-native) species

Appendix D
Wildlife Compendium

Birds

Blackbirds, Orioles and Allies

ICTERIDAE – BLACKBIRDS

Icterus cucullatus – hooded oriole

* *Molothrus ater* – brown-headed cowbird

Bushtits

AEGITHALIDAE – LONG-TAILED TITS AND BUSHTITS

Psaltriparus minimus – bushtit

Cardinals, Grosbeaks and Allies

CARDINALIDAE – CARDINALS AND ALLIES

Pheucticus melanocephalus – black-headed grosbeak

Cormorants

PHALACROCORACIDAE – CORMORANTS

Phalacrocorax auritus – double-crested cormorant

Finches

FRINGILLIDAE – FRINGILLINE AND CARDUELINE FINCHES AND ALLIES

Haemorhous mexicanus – house finch

Spinus psaltria – lesser goldfinch

Spinus tristis – American goldfinch

Flycatchers

TYRANNIDAE – TYRANT FLYCATCHERS

Contopus cooperi – olive-sided flycatcher

Empidonax difficilis – Pacific-slope flycatcher

Sayornis nigricans – black phoebe

Hawks

ACCIPITRIDAE – HAWKS, KITES, EAGLES, AND ALLIES

Buteo jamaicensis – *red-tailed hawk*

Buteo lineatus – red-shouldered hawk

Hummingbirds

TROCHILIDAE – HUMMINGBIRDS

Calypte anna – Anna's hummingbird

Selasphorus sasin – Allen's hummingbird

Jays, Magpies and Crows

CORVIDAE – CROWS AND JAYS

Aphelocoma californica – California scrub-jay

Corvus brachyrhynchos – American crow

Corvus corax – common raven

Cyanocitta stelleri – Steller's jay

Kinglets

REGULIDAE – KINGLETS

Corthylio calendula – ruby-crowned kinglet

New World Vultures

CATHARTIDAE – NEW WORLD VULTURES

Cathartes aura – turkey vulture

Pigeons and Doves

COLUMBIDAE – PIGEONS AND DOVES

Patagioenas fasciata – band-tailed pigeon

Zenaida macroura – mourning dove

Nuthatches

SITTIDAE – NUTHATCHES

Sitta pygmaea – pygmy nuthatch

Quails, Pheasants and Relatives

PHASIANIDAE – PARTRIDGES, GROUSE, TURKEYS, AND OLD WORLD QUAIL

Meleagris gallopavo – wild turkey

Terns and Gulls

LARIDAE – GULLS, TERNS, AND SKIMMERS

Hydroprogne caspia – Caspian tern

Larus occidentalis – western gull

Thrushes

TURDIDAE – THRUSHES

Turdus migratorius – American robin

Titmice

PARIDAE – CHICKADEES AND TITMICE

Baeolophus inornatus – oak titmouse

Poecile rufescens – chestnut-backed chickadee

Vireos

VIREONIDAE – VIREOS

Vireo gilvus – warbling vireo

Vireo huttoni – Hutton's vireo

Waterfowl

ANATIDAE – DUCKS, GEESE, AND SWANS

Anas platyrhynchos – mallard

Waxwings

BOMBYCILLIDAE – WAXWINGS

Bombycilla cedrorum – cedar waxwing

Wood Warblers and Allies

PARULIDAE – WOOD-WARBLERS

Setophaga coronata – yellow-rumped warbler
Leiothlypis celata – orange-crowned warbler

Woodpeckers

PICIDAE – WOODPECKERS AND ALLIES

Melanerpes formicivorus – acorn woodpecker
Dryobates nuttallii – Nuttall's woodpecker
Dryobates villosus – hairy woodpecker

Wrens

TROGLODYTIDAE – WRENS

Thryomanes bewickii – Bewick's wren

New World Sparrows

PASSERELLIDAE – NEW WORLD SPARROWS

Junco hyemalis – dark-eyed junco
Melozone crissalis – California towhee
Pipilo maculatus – spotted towhee
Zonotrichia atricapilla – golden-crowned sparrow
Zonotrichia leucophrys – white-crowned sparrow

Invertebrates

Butterflies

NYMPHALIDAE – BRUSH-FOOTED BUTTERFLIES

Danaus plexippus – monarch

HESPERIIDAE – SKIPPERS

Poanes melane – umber skipper

Mammals

Canids

CANIDAE – WOLVES AND FOXES

Canis latrans – coyote

Domestic

CANIDAE – WOLVES AND FOXES

* *Canis lupus familiaris* – domestic dog

Pocket Gophers

GEOMYIDAE – POCKET GOPHERS

Thomomys bottae – Botta's pocket gopher

Squirrels

SCIURIDAE – SQUIRRELS

Sciurus griseus – western gray squirrel

* *Sciurus niger* – eastern fox squirrel

Ungulates

CERVIDAE – DEERS

Odocoileus hemionus – mule deer

Rats, Mice, and Voles

CRICETIDAE – RATS, MICE, AND VOLES

Neotoma fuscipes annectens – San Francisco dusky-footed woodrat

Raccoons

PROCYONIDAE – RACCOONS AND RELATIVES

Procyon lotor – raccoon

Reptiles

Lizards

PHRYNOSOMATIDAE – IGUANID LIZARDS

Sceloporus occidentalis – western fence lizard

Snakes

COLUBRIDAE – COLUBRID SNAKES

Lampropeltis zonata – California mountain kingsnake

* signifies introduced (non-native) species

Appendix E

Special-Status Plant Species and their Potential to Occur in the Biological Study Area

INTENTIONALLY LEFT BLANK

Common Name	Scientific Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Blasdale's bent grass	*Agrostis blasdalei*	None/None/1B.2	Coastal bluff scrub, Coastal dunes, Coastal prairie/perennial rhizomatous herb/May–July/0–490	**Not expected to occur.** Suitable coastal bluff habitat for this species is absent from the biological study area (BSA).
bent-flowered fiddleneck	*Amsinckia lunaris*	None/None/1B.2	Coastal bluff scrub, Cismontane woodland, Valley and foothill grassland/ annual herb/Mar–June/10–1,640	**Low potential to occur.** Marginally suitable grassland habitat is present within the BSA. However, this species was not detected during previous surveys within the BSA (Harris & Associates 2019). The closest California Natural Diversity Database (CNDDB) occurrence was documented approximately 2.3 miles in 1990 (No. 1).
Anderson's manzanita	*Arctostaphylos andersonii*	None/None/1B.2	Broadleafed upland forest, Chaparral, North Coast coniferous forest; openings, edges/perennial evergreen shrub/Nov–May/197–2,490	**Not expected to occur.** Suitable habitat for this species is absent from the BSA. No manzanita species have been detected within the BSA (Harris & Associates 2019, Barton 2021). Nearest CNDDB occurrences are located at the U.C. Santa Cruz (UCSC) upper campus.
Schreiber's manzanita	*Arctostaphylos glutinosa*	None/None/1B.2	Closed-cone coniferous forest, Chaparral; diatomaceous shale/perennial evergreen shrub/(Nov)Mar–Apr/558–2,245	**Not expected to occur.** The BSA is outside the known distribution of this species.
Ohlone manzanita	*Arctostaphylos ohloneana*	None/None/1B.1	Closed-cone coniferous forest, Coastal scrub; siliceous shale/evergreen shrub/Feb–Mar/1,475–1,735	**Not expected to occur.** The BSA is outside of the species' known elevation range.
Pajaro manzanita	*Arctostaphylos pajaroensis*	None/None/1B.1	Chaparral (sandy)/perennial evergreen shrub/Dec–Mar/98–2,490	**Not expected to occur.** The BSA is outside the known distribution of this species.
Kings Mountain manzanita	*Arctostaphylos regismontana*	None/None/1B.2	Broadleafed upland forest, Chaparral, North Coast coniferous forest; granitic or sandstone/perennial evergreen shrub/Dec–Apr/1,000–2,395	**Not expected to occur.** The BSA is outside of the species' known elevation range.
silverleaf (Bonny Doon) manzanita	*Arctostaphylos silvicola*	None/None/1B.2	Closed-cone coniferous forest, Chaparral, Lower montane coniferous forest; inland marine sands/perennial evergreen shrub/Jan–Mar/394–1,965	**Moderate potential to occur.** Suitable forest habitat is present within the BSA. Manzanita species have not been previously detected within the BSA (Harris & Associates 2019, Barton 2021). However, the closest CNDDB occurrence was documented within chaparral/sandhill habitat approximately 0.06 mile southwest of the BSA in 2014 (Occ. No. 1).
marsh sandwort	*Arenaria paludicola*	FE/SE/1B.1	Marshes and swamps (freshwateror brackish); sandy, openings/perennial stoloniferous herb/May–Aug/10–560	**Not expected to occur.** No suitable marsh or swamp vegetation communities are present within the BSA.
Santa Cruz Mountains pussypaws	*Calyptridium parryi* var. *hesseae*	None/None/1B.1	Chaparral, Cismontane woodland; sandy or gravelly, openings/annual herb/ May–Aug/1,000–5,015	**Low potential to occur.** Although the BSA is outside of the species' known elevation range, there is marginally suitable habitat within the BSA and the nearest CNDDB occurrence was documented within 0.5 mile from the BSA (Occ. No. 13).
swamp harebell	*Campanula californica*	None/None/1B.2	Bogs and fens, Closed-cone coniferous forest, Coastal prairie, Meadows and seeps, Marshes and swamps (freshwater), North Coast coniferous forest; mesic/perennial rhizomatous herb/June–Oct/3–1,325	**Low potential to occur.** The BSA supports suitable habitat for this species. However, only one historic occurrence of this species was documented within the region. This species was documented in a bog near Camp Evers in 1944. This occurrence has since been extirpated (Occ. No. 1).
bristly sedge	*Carex comosa*	None/None/2B.1	Coastal prairie, Marshes and swamps (lake margins), Valley and foothill grassland/perennial rhizomatous herb/May–Sep/0–2,050	**Low potential to occur.** The BSA supports suitable grassland habitat for this species. However, only one historic occurrence of this species was documented within the region. This species was documented within a bog in the Forest of Nisene Marks State Park in 1994, approximately eight miles east of the study area (Occ. No. 2).
deceiving sedge	*Carex saliniformis*	None/None/1B.2	Coastal prairie, Coastal scrub, Meadows and seeps, Marshes and swamps (coastal salt); mesic/perennial rhizomatous herb/June(July)/10–755	**Not expected to occur.** No suitable meadow, marsh, or swamp vegetation communities are present within the BSA.
Congdon's tarplant	*Centromadia parryi* ssp. *congdonii*	None/None/1B.1	Valley and foothill grassland (alkaline)/annual herb/May–Oct(Nov)/0–755	**Not expected to occur.** The BSA is outside the known distribution of this species.
Ben Lomond spineflower	*Chorizanthe pungens* var. *hartwegiana*	FE/None/1B.1	Lower montane coniferous forest (maritime ponderosa pine sandhills)/annual herb/Apr–July/295–2,000	**Moderate potential to occur.** Suitable forest habitat and sandhill soils are present within the BSA. However, this species has not been previously detected within the BSA (Harris & Associates 2019, Barton 2021). The closest CNDDB occurrence was documented approximately 20 feet southwest of the BSA in 1988 (Occ. No. 3).

Common Name	Scientific Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Monterey spineflower	*Chorizanthe pungens* var. *pungens*	FT/None/1B.2	Chaparral (maritime), Cismontane woodland, Coastal dunes, Coastal scrub, Valley and foothill grassland; sandy/annual herb/Apr–June (July–Aug)/ 10–1,475	**Not expected to occur.** Although there are a couple CNDDB occurrences for this species within Santa Cruz County, they are from 2006 and located in the most southern portion of the County. The BSA is outside the known distribution of this species.
Scotts Valley spineflower	*Chorizanthe robusta* var. *hartwegii*	FE/None/1B.1	Meadows and seeps (sandy), Valley and foothill grassland (mudstone and Purisima outcrops)/annual herb/Apr–July/755–805	**Not expected to occur.** Although there are a couple CNDDB occurrences for this species within Santa Cruz County, the species is endemic to grasslands within the Scotts Valley region southeast of the BSA. Additionally, the BSA is outside of the species' known elevation range.
robust spineflower	*Chorizanthe robusta* var. *robusta*	FE/None/1B.1	Chaparral (maritime), Cismontane woodland (openings), Coastal dunes, Coastal scrub; sandy or gravelly/annual herb/Apr–Sep/10–985	**Moderate potential to occur.** The BSA supports suitable open woodland habitat for this species and there are eight CNDDB 8 occurrences in the region.
Mt. Hamilton thistle	*Cirsium fontinale* var. *campylon*	None/None/1B.2	Chaparral, Cismontane woodland, Valley and foothill grassland; serpentinite seeps/perennial herb/(Feb)Apr–Oct/328–2,915	**Not expected to occur.** There are no occurrences of this species within Santa Cruz County.
San Francisco collinsia	*Collinsia multicolor*	None/None/1B.2	Closed-cone coniferous forest, Coastal scrub; sometimes serpentinite/annual herb/(Feb)Mar–May/98–902	**Not expected to occur.** The biological study is outside the known distribution of this species.
tear drop moss	*Dacryophyllum falcifolium*	None/None/1B.3	North Coast coniferous forest; carbonate/moss/N.A./164–900	**Not expected to occur.** The BSA does not support suitable habitat for this species.
Santa Clara Valley dudleya	*Dudleya abramsii* ssp. *setchellii*	FE/None/1B.1	Cismontane woodland, Valley and foothill grassland; serpentinite, rocky/perennial herb/Apr–Oct/197–1,755	**Not expected to occur.** There are no occurrences of this species within Santa Cruz County.
Ben Lomond buckwheat	*Eriogonum nudum* var. *decurrens*	None/None/1B.1	Chaparral, Cismontane woodland, Lower montane coniferous forest (maritime ponderosa pine sandhills); sandy/perennial herb/June–Oct/164–2,620	**Moderate potential to occur.** Suitable sandhills habitat is present within the BSA. However, this species has not been previously detected within the BSA (Harris & Associates 2019). The closest CNDDB occurrence was documented within 0.1 mile in 2017 (Occ. No. 1).
Santa Cruz wallflower	*Erysimum teretifolium*	FE/SE/1B.1	Chaparral, Lower montane coniferous forest; inland marine sands/perennial herb/Mar–July/394–2,000	**Low potential to occur.** Marginally suitable coniferous forest habitat is present within the BSA. Previous surveys did not detect this species within the BSA (Harris & Associates 2019, Barton 2021). This species was documented south of the Mt. Hernon Road exit along La Madrona Road in 1995 (Occ. No. 29).
minute pocket moss	*Fissidens pauperculus*	None/None/1B.2	North Coast coniferous forest (damp coastal soil)/moss/N.A./33–3,355	**Not expected to occur.** The BSA does not support suitable habitat for this species.
fragrant fritillary	*Fritillaria liliacea*	None/None/1B.2	Cismontane woodland, Coastal prairie, Coastal scrub, Valley and foothill grassland; Often serpentinite/perennial bulbiferous herb/Feb–Apr/10–1,345	**Not expected to occur.** There are no occurrences of this species within Santa Cruz County.
Toren's grimmia	*Grimmia torenii*	None/None/1B.3	Chaparral, Cismontane woodland, Lower montane coniferous forest; Openings, rocky, boulder and rock walls, carbonate, volcanic/moss/N.A./1,065–3,805	**Not expected to occur.** The BSA is outside of the species' known elevation range.
vaginulate grimmia	*Grimmia vaginulata*	None/None/1B.1	Chaparral (openings); Rocky, boulder and rock walls, carbonate/moss/N.A./2,245–2,245	**Not expected to occur.** The BSA is outside of the species' known elevation range.
short-leaved evax	*Hesperevax sparsiflora* var. *brevifolia*	None/None/1B.2	Coastal bluff scrub (sandy), Coastal dunes, Coastal prairie/annual herb/ Mar–June/0–705	**Not expected to occur.** The BSA does not support suitable habitat for this species.
Santa Cruz cypress	*Hesperocyparis abramsiana* var. *abramsiana*	FT/SE/1B.2	Closed-cone coniferous forest, Chaparral, Lower montane coniferous forest; sandstone or granitic/perennial evergreen tree/N.A./919–2,620	**Not expected to occur.** The BSA is outside of the species' known elevation range.
Butano Ridge cypress	*Hesperocyparis abramsiana* var. *butanoensis*	FT/SE/1B.2	Closed-cone coniferous forest, Chaparral, Lower montane coniferous forest; Sandstone/perennial evergreen tree/Oct/1,310–1,605	**Not expected to occur.** The BSA is outside of the species' known elevation range.
Loma Prieta hoita	*Hoita strobilina*	None/None/1B.1	Chaparral, Cismontane woodland, Riparian woodland; usually serpentinite, mesic/perennial herb/May–July(Aug–Oct)/98–2,820	**Not expected to occur.** There are no occurrences of this species within Santa Cruz County.

Common Name	Scientific Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Santa Cruz tarplant	*Holocarpha macradenia*	FT/SE/1B.1	Coastal prairie, Coastal scrub, Valley and foothill grassland; often clay, sandy/annual herb/June–Oct/33–720	**Low potential to occur.** The BSA supports marginally suitable grassland habitat for this species. There are 14 CNDDB occurrences of this species in the vicinity of Santa Cruz and Aptos, but this species was not detected during previous surveys within the BSA (Harris & Associates 2019, Barton 2019).
Kellogg's horkelia	*Horkelia cuneata* var. *sericea*	None/None/1B.1	Closed-cone coniferous forest, Chaparral (maritime), Coastal dunes, Coastal scrub; sandy or gravelly, openings/perennial herb/Apr–Sep/33–655	**Not expected to occur.** The BSA does not support suitable habitat for this species and there are no recent occurrences in the region.
Point Reyes horkelia	*Horkelia marinensis*	None/None/1B.2	Coastal dunes, Coastal prairie, Coastal scrub; sandy/perennial herb/ May–Sep/16–2,475	**Not expected to occur.** The BSA does not support suitable habitat for this species.
perennial goldfields	*Lasthenia californica* ssp. *macrantha*	None/None/1B.2	Coastal bluff scrub, Coastal dunes, Coastal scrub/perennial herb/ Jan–Nov/16–1,705	**Not expected to occur.** The BSA does not support suitable habitat for this species.
smooth lessingia	*Lessingia micradenia* var. *glabrata*	None/None/1B.2	Chaparral, Cismontane woodland, Valley and foothill grassland; serpentinite, often roadsides/annual herb/ (Apr–June)July–Nov/394–1,375	**Not expected to occur.** There are no occurrences of this species within Santa Cruz County.
arcuate bush-mallow	*Malacothamnus arcuatus*	None/None/1B.2	Chaparral, Cismontane woodland/perennial evergreen shrub/Apr–Sep/ 49–1,160	**Low potential to occur.** The BSA supports marginally suitable habitat for this species. However, CNDDB occurrences are limited to the northern and easternmost limits of Santa Cruz County.
marsh microseris	*Microseris paludosa*	None/None/1B.2	Closed-cone coniferous forest, Cismontane woodland, Coastal scrub, Valley and foothill grassland/perennial herb/Apr–June(July)/16–1,160	**Not expected to occur.** The BSA supports marginally suitable habitat for this species. However, the three CNDDB occurrences within Santa Cruz County are historic and/or lack specific locational information. These occurrences are assumed extirpated.
northern curly-leaved monardella	*Monardella sinuata* ssp. *nigrescens*	None/None/1B.2	Chaparral (SCR Co.), Coastal dunes, Coastal scrub, Lower montane coniferous forest (SCR Co., ponderosa pine sandhills); Sandy./annual herb/ (Apr)May–July(Aug–Sep)/0–985	**Moderate potential to occur.** Suitable woodland, grassland, and/or Ponderosa pine sandhill habitat is present within the BSA. However, this species was not detected during previous surveys within the BSA (Harris & Associates 2019). The closest CNDDB occurrence was documented immediately to the northeast of the BSA in 1993 (Occ. No. 11).
woodland woolythreads	*Monolopia gracilens*	None/None/1B.2	Broadleafed upland forest (openings), Chaparral (openings), Cismontane woodland, North Coast coniferous forest (openings), Valley and foothill grassland; Serpentine/annual herb/(Feb) Mar–July/328–3,935	**Moderate potential to occur.** The BSA supports suitable habitat for this species. However, this species was not detected during previous surveys within the BSA (Harris & Associates 2018). The CNDDB lists 31 occurrences throughout Santa Cruz County.
Kellman's bristle moss	*Orthotrichum kellmanii*	None/None/1B.2	Chaparral, Cismontane woodland; sandstone, carbonate/moss/Jan–Feb/ 1,125–2,245	**Not expected to occur.** The BSA is outside of the species' known elevation range.
Dudley's lousewort	*Pedicularis dudleyi*	None/SR/1B.2	Chaparral (maritime), Cismontane woodland, North Coast coniferous forest, Valley and foothill grassland/perennial herb/Apr–June/197–2,950	**Low potential to occur.** The BSA supports suitable habitat for this species. However, the two CNDDB occurrences documented within Santa Cruz County are over 100 years old.
Santa Cruz Mountains beardtongue	*Penstemon rattanii* var. *kleei*	None/None/1B.2	Chaparral, Lower montane coniferous forest, North Coast coniferous forest/perennial herb/May–June/1,310–3,605	**Not expected to occur.** The BSA is outside of the species' known elevation range.
white-rayed pentachaeta	*Pentachaeta bellidiflora*	FE/SE/1B.1	Cismontane woodland, Valley and foothill grassland (often serpentinite)/annual herb/Mar–May/115–2,030	**Not expected to occur.** The BSA supports marginally suitable habitat for this species. However, this species was not detected during previous surveys within the BSA (Harris & Associates 2019, Barton 2021). Additionally, the last CNDDB occurrence was from 1955 and the species is presumed extirpated.
Monterey pine	*Pinus radiata*	None/None/1B.1	Closed-cone coniferous forest, Cismontane woodland/perennial evergreen tree/N.A./82–605	**Not expected to occur.** The current range of this species is limited to three stands, the northernmost of which is located east of point Año Nuevo, outside of the BSA.
white-flowered rein orchid	*Piperia candida*	None/None/1B.2	Broadleafed upland forest, Lower montane coniferous forest, North Coast coniferous forest; sometimes serpentinite/perennial herb/(Mar) May–Sep/ 98–4,295	**Low potential to occur.** The BSA supports marginally suitable habitat for this species. However, the only CNDDB occurrence within the region is located approximately 3.5 miles southeast of the BSA from 1966 (Occ. No. 2).

Common Name	Scientific Name	Status (Federal/State/CRPR)	Primary Habitat Associations/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur
Choris' popcornflower	*Plagiobothrys chorisianus* var. *chorisianus*	None/None/1B.2	Chaparral, Coastal prairie, Coastal scrub; mesic/annual herb/Mar–June/ 10–525	**Not expected to occur.** The BSA does not support suitable habitat for this species.
San Francisco popcornflower	*Plagiobothrys diffusus*	None/SE/1B.1	Coastal prairie, Valley and foothill grassland/annual herb/Mar–June/ 197–1,180	**Low potential to occur.** The BSA supports marginally suitable grassland habitat for this species. There are 19 CNDDB occurrences in the vicinity of Santa Cruz. However, this species was not detected during previous surveys within the BSA (Harris & Associates 2019, Barton 2021).
hairless popcornflower	*Plagiobothrys glaber*	None/None/1A	Meadows and seeps (alkaline), Marshes and swamps (coastal salt)/annual herb/Mar–May/49–590	**Not expected to occur.** There are no occurrences of this species within Santa Cruz County.
Scotts Valley polygonum	*Polygonum hickmanii*	FE/SE/1B.1	Valley and foothill grassland (mudstone and sandstone)/annual herb/ May–Aug/689–820	**Not expected to occur.** Although there are a couple CNDDB occurrences for this species within Santa Cruz County, the species is endemic to grasslands within the Scotts Valley region southeast of the BSA.
rock sanicle	*Sanicula saxatilis*	None/SR/1B.2	Broadleafed upland forest, Chaparral, Valley and foothill grassland; rocky, scree, talus/perennial herb/Apr–May/2,030–3,850	**Not expected to occur.** The BSA is outside of the species' known elevation range.
chaparral ragwort	*Senecio aphanactis*	None/None/2B.2	Chaparral, Cismontane woodland, Coastal scrub; sometimes alkaline/annual herb/Jan–Apr(May)/49–2,620	**Not expected to occur.** The BSA is outside the known distribution of this species.
San Francisco campion	*Silene verecunda* ssp. *verecunda*	None/None/1B.2	Coastal bluff scrub, Chaparral, Coastal prairie, Coastal scrub, Valley and foothill grassland; sandy/perennial herb/(Feb)Mar–June(Aug)/98–2,115	**Low potential to occur.** The BSA supports marginally suitable grassland habitat for this species. However, only historic CNDDB occurrences from 1983 occur within the region approximately 9.5 miles southeast of the BSA.
Santa Cruz microseris	*Stebbinsoseris decipiens*	None/None/1B.2	Broadleafed upland forest, Closed-cone coniferous forest, Chaparral, Coastal prairie, Coastal scrub, Valley and foothill grassland; open areas, sometimes serpentinite/annual herb/Apr–May/33–1,640	**Not expected to occur.** The BSA is outside the known distribution of this species.
Metcalf Canyon jewelflower	*Streptanthus albidus* ssp. *albidus*	FE/None/1B.1	Valley and foothill grassland (serpentinite)/annual herb/Apr–July/148–2,620	**Not expected to occur.** There are no occurrences of this species within Santa Cruz County.
most beautiful jewelflower	*Streptanthus albidus* ssp. *peramoenus*	None/None/1B.2	Chaparral, Cismontane woodland, Valley and foothill grassland; serpentinite/annual herb/(Mar)Apr–Sep(Oct)/312–3,280	**Not expected to occur.** There are no occurrences of this species within Santa Cruz County.
Santa Cruz clover	*Trifolium buckwestiorum*	None/None/1B.1	Broadleafed upland forest, Cismontane woodland, Coastal prairie; gravelly, margins/annual herb/Apr–Oct/344–2,000	**Low potential to occur.** The BSA supports marginally suitable habitat for this species. The CNDDB lists several occurrences from the vicinity of Boulder Creek down to Santa Cruz.
Pacific Grove clover	*Trifolium polyodon*	None/SR/1B.1	Closed-cone coniferous forest, Coastal prairie, Meadows and seeps, Valley and foothill grassland; mesic, sometimes granitic/annual herb/Apr–June(July)/ 16–1,390	**Low potential to occur.** The BSA supports marginally suitable habitat for this species. The CNDDB lists two modern occurrences of this species within wet meadows.

Status Legend
Federal
FE: Federally endangered
FT: Federally listed as threatened
State
SE: State listed as endangered
SR: State listed as rare
CRPR (California Rare Plant Rank)
1A: Plants presumed extirpated in California and either rare or extinct elsewhere
1B: Plants rare, threatened, or endangered in California and elsewhere
2B: Plants rare, threatened, or endangered in California, but more common elsewhere
Threat Rank:
.1 Seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat)
.2 Fairly endangered in California (20% to 80% of occurrences threatened)
.3 Not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known)

Appendix F

Special-Status Wildlife Species and their Potential to Occur in the Biological Study Area

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Amphibians				
Ambystoma californiense	California tiger salamander	FT/ST	Annual grassland, valley–foothill hardwood, and valley–foothill riparian habitats; vernal pools, other ephemeral pools, and (uncommonly) along stream courses and human-made pools if predatory fishes are absent.	**Not expected to occur.** The biological study area (BSA) does not support suitable habitat for this species and is outside the known distribution of this species.
Ambystoma macrodactylum croceum	Santa Cruz long-toed salamander	FE/SE, FP	Dense riparian vegetation, thick coastal scrub, and oak woodland.	**Not expected to occur.** The BSA is located outside of the species known range which is restricted to southern Santa Cruz County (south of Aptos Creek) and northern Monterey County. There are no California Natural Diversity Database (CNDDB) occurrences within 5 miles of the BSA for this species.
Aneides flavipunctatus niger	Santa Cruz black salamander	None/SSC	Restricted to mesic forests in the fog belt of the outer Coast Range of San Mateo, Santa Cruz, and Santa Clara counties. Mixed deciduous and coniferous woodlands and coastal grasslands. Occurs in moist streamside microhabitats and is found under rocks, talus, and damp woody debris.	**Moderate potential to occur.** The BSA supports suitable moist streamside habitats within deciduous and coniferous woodlands as required for this species. The nearest CNDDB occurrence is a 1946 collection from the bank of the San Lorenzo River, “near [the] old covered bridge” in Felton, presumably in or near the current Felton Covered Bridge State Park approximately 0.2 mile south of the Mt. Hermon Road staging area. There is also a 2013 occurrence from Branciforte Creek in Pogonip Open Space, approximately 0.7 mile east of the BSA at the primary Project site.
Dicamptodon ensatus	California giant salamander	None/SSC	Known from wet coastal forests and chaparral near streams and seeps from Mendocino Co. south to Monterey Co. and east to Napa Co. Aquatic larvae found in cold, clear streams, occasionally in lakes and ponds. Adults known from wet forests under rocks and logs near streams and lakes.	**Moderate potential to occur.** The BSA supports suitable moist streamside habitats within deciduous and coniferous woodlands as required for this species. The closest CNDDB occurrence is a 1972 observation in Henry Cowell Redwoods State Park, approximately 2.4 miles northwest of the BSA at the primary Project site.
Rana boylii	foothill yellow-legged frog	None/SE, SSC	Rocky streams and rivers with open banks in forest, chaparral, and woodland.	**Not expected to occur.** The BSA does not support suitable stream habitat required by this species.
Rana draytonii	California red-legged frog	FT/SSC	Lowland streams, wetlands, riparian woodlands, livestock ponds; dense, shrubby or emergent vegetation associated with deep, still or slow-moving water; uses adjacent uplands.	**Low potential to occur.** The BSA supports some suitable lowland streams and riparian woodlands with few areas containing still or slow-moving water suitable for breeding. The reaches of San Lorenzo River adjacent to the project site and southern staging area may provide marginal foraging habitat, but are not expected to support breeding habitat. There are only a few records from the San Lorenzo River Basin, all from tributary streams greater than 1 mile from the BSA.
Reptiles				
Actinemys marmorata	western pond turtle	None/SSC	Slow-moving permanent or intermittent streams, ponds, small lakes, and reservoirs with emergent basking sites; adjacent uplands used for nesting and during winter.	**Moderate potential to occur.** Suitable perennial stream habitat is present within the BSA (San Lorenzo River) and may provide foraging and basking habitat for this species. Western pond turtles have been documented within San Lorenzo River near Highland County Park located approximately 6 miles northwest of the BSA.
Thamnophis sirtalis tetrataenia	San Francisco garter snake	FE/SE, FP	Wide range of habitats including grasslands or wetlands adjacent to ponds, marshes, and sloughs.	**Not expected to occur.** The BSA does not support suitable stream and open water habitats required by this species.
Birds				
Agelaius tricolor (nesting colony)	tricolored blackbird	None/ST, SSC	Nests near freshwater, emergent wetland with cattails or tules, but also in Himalayan blackberry; forages in grasslands, woodland, and agriculture.	**Not expected to nest or forage.** The BSA does not support freshwater, emergent wetland habitat as required by this species for nesting. The grasslands are disturbed and adjacent to urban/residential development and provide marginal foraging habitat. The nearest CNDDB occurrence for this species is approximately 2.5 miles south of the BSA.
Aquila chrysaetos (nesting and wintering)	golden eagle	BGEPA/FP	Nests and winters in hilly, open/semi-open areas, including shrublands, grasslands, pastures, riparian areas, mountainous canyon land, open desert rimrock terrain; nests in large trees and on cliffs in open areas and forages in open habitats.	**Not expected to nest or forage.** The BSA consists of redwood and coniferous forest, with only small grassland openings that are highly disturbed and immediately adjacent to urban/residential development, limiting the likelihood that golden eagle would nest or forage within these areas. There are no CNDDB occurrences for this species within 5 miles of the study area.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Athene cunicularia (burrow sites and some wintering sites)	burrowing owl	None/SSC	Nests and forages in grassland, open scrub, and agriculture, particularly with ground squirrel burrows.	**Not expected to nest or forage.** The BSA supports limited open grassland as required by this species. Existing grassland habitat within the study area is disturbed and immediately surrounded by urban/residential development. The nearest CNDDB occurrence is 1.35 miles southwest of the BSA at U.C. Santa Cruz, where burrowing owls are known to winter.
Brachyramphus marmoratus (nesting)	marbled murrelet	FT/SE	Nests in old-growth coastal forests, forages in subtidal and pelagic habitats.	**Not expected to nest or forage**. The BSA is within the nesting range of this species in Santa Cruz County and supports coniferous forest. However, the known nesting areas for this species are in the Pescadero Creek, Butano Creek, Little Butano Creek, Gazos Creek, Cascade Creek, Waddell Creek, and Scott Creek watersheds northwest of the BSA. The nearest CNDDB occurrence of this species is approximately 2 miles west of the BSA in the Fall Creek sub-watershed within Henry Cowell Redwoods State Park.
Charadrius alexandrinus nivosus (nesting)	western snowy plover	FT /SSC	On coasts nests on sandy marine and estuarine shores; in the interior nests on sandy, barren or sparsely vegetated flats near saline or alkaline lakes, reservoirs, and ponds.	**Not expected to nest or forage.** The BSA does not support suitable nesting or foraging habitat for this species, and this species is only known to nest along the coast within the region.
Contopus cooperi (nesting)	olive-sided flycatcher	None/SSC	Nests in mixed-conifer, montane hardwood–conifer, Douglas-fir, redwood, red fir, and lodgepole pine habitats; usually close to water.	**Low potential to nest and forage.** The BSA supports marginally suitable nesting and foraging habitat for this species, but this species has not been previously detected at the GHWTP (Harris and Associates 2019, Barton 2021).
Coturnicops noveboracensis	yellow rail	None/SSC	Nesting requires wet marsh/sedge meadows or coastal marshes with wet soil and shallow, standing water.	**Not expected to nest or forage.** The BSA does not support suitable nesting or foraging habitat for this species.
Cypseloides niger (nesting)	black swift	None/SSC	Nests in moist crevices, caves, and cliffs behind or adjacent to waterfalls in deep canyons; forages over a wide range of habitats.	**Not expected to nest or forage**. The BSA does not support suitable cliff or deep canyon habitat as required by this species. This species is known to nest along the coastal cliffs and caves of Santa Cruz, over 5 miles southeast of the BSA.
Elanus leucurus (nesting)	white-tailed kite	None/FP	Nests in woodland, riparian, and individual trees near open lands; forages opportunistically in grassland, meadows, scrubs, agriculture, emergent wetland, savanna, and disturbed lands.	**Moderate potential to nest and forage**. The BSA supports suitable woodland habitat required for nesting by this species. However, grassland habitat for foraging is sparse within the BSA and generally surrounded by urban/residential development. The nearest CNDDB occurrence is approximately 1.5 miles west of the BSA (Occ. No. 83). Additionally, this species has not been previously detected at the GHWTP (Harris and Associates 2019, Barton 2021).
Empidonax traillii extimus (nesting)	southwestern willow flycatcher	FE/SE	Nests in dense riparian habitats along streams, reservoirs, or wetlands; uses variety of riparian and shrubland habitats during migration.	**Not expected to nest or forage**. The BSA is located outside of the typical range for this species, and there are no CNDDB occurrences west of the Sierra Nevada Mountains, or north of the Santa Ynez River.
Falco peregrinus anatum (nesting)	American peregrine falcon	None/FP	Nests on cliffs, buildings, and bridges; forages in wetlands, riparian, meadows, croplands, especially where waterfowl are present.	**Not expected to nest or forage.** The BSA does not support suitable cliff habitat for nesting for this species, and this species is only known to nest along the coast within the region.
Geothlypis trichas sinuosa	saltmarsh common yellowthroat	None/SSC	Nests and forages in emergent wetlands including woody swamp, brackish marsh, and freshwater marsh.	**Not expected to nest or forage.** The BSA does not support suitable nesting or foraging habitat for this species. There are no CNDDB occurrences of this species within 5 miles of the BSA.
Laterallus jamaicensis coturniculus	California black rail	None/ST, FP	Tidal marshes, shallow freshwater margins, wet meadows, and flooded grassy vegetation; suitable habitats are often supplied by canal leakage in Sierra Nevada foothill populations.	**Not expected to nest or forage.** The BSA does not support suitable nesting or foraging habitat for this species.
Progne subis (nesting)	purple martin	None/SSC	Nests and forages in woodland habitats including riparian, coniferous, and valley foothill and montane woodlands; in the Sacramento region often nests in weep holes under elevated freeways.	**Low potential to nest and forage.** Although the BSA provides suitable woodland and coniferous habitat for this species, few suitable tree cavities were observed during biological surveys. This species is more typically associated with habitats in the Sacramento region. There are no documented CNDDB occurrences of this species within 5 miles of the BSA. Additionally, this species has not been previously detected at the GHWTP (Harris and Associates 2019).

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Riparia riparia (nesting)	bank swallow	None/ST	Nests in riparian, lacustrine, and coastal areas with vertical banks, bluffs, and cliffs with sandy soils; open country and water during migration.	**Not expected to nest or forage.** The BSA does not support suitable nesting cliff habitat for this species, and open country and water habitat for foraging is limited. The nearest CNDDB occurrence is approximately 2 miles south of the BSA; however, the occurrence is historic (1891-1954), and the exact location is unknown.
Sternula antillarum browni (nesting colony)	California least tern	FE/SE, FP	Forages in shallow estuaries and lagoons; nests on sandy beaches or exposed tidal flats.	**Not expected to nest or forage.** The BSA does not support suitable nesting or foraging habitat for this species.
Vireo bellii pusillus (nesting)	least Bell's vireo	FE/SE	Nests and forages in low, dense riparian thickets along water or along dry parts of intermittent streams; forages in riparian and adjacent shrubland late in nesting season.	**Not expected to nest or forage.** The BSA does not support suitable riparian habitat required by this species. There are no documented CNDDB occurrences of this species within 5 miles of the BSA.
Fishes				
Entosphenus tridentatus	Pacific lamprey	None/SSC	Pacific coast streams north of San Luis Obispo County. Require swift-current gravel-bottomed areas for spawning with water temps between 12-18 degrees Celsius. Ammocoetes need soft sand or mud.	**Known to occur** in San Lorenzo River.
Eucyclogobius newberryi	tidewater goby	FE/None	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County, to the mouth of the Smith River.	**Not expected to occur.** The BSA does not support suitable brackish water habitat required by this species.
Oncorhynchus kisutch pop. 4	coho salmon - central California coast ESU	FE/SE	Streams and small freshwater tributaries during first half of life cycle and estuarine and marine waters of the Pacific Ocean during the second half of life cycle. Spawns in small streams with stable gravel substrates.	**Low potential to occur.** The BSA supports suitable habitat for this species in the San Lorenzo River, but overall few coho have been observed in the watershed in recent years.
Oncorhynchus mykiss irideus pop. 8	steelhead - central California coast DPS	FT/None	Coastal basins from Redwood Creek south to the Gualala River, inclusive; does not include summer-run steelhead.	**Known to occur** in San Lorenzo River.
Thaleichthys pacificus	eulachon	FT/None	Found in Klamath River, Mad River, and Redwood Creek and in small numbers in Smith River and Humboldt Bay tributaries.	**Not expected to occur.** The BSA does not support suitable aquatic habitat required by this species.
Mammals				
Antrozous pallidus	pallid bat	None/SSC	Grasslands, shrublands, woodlands, forests; most common in open, dry habitats with rocky outcrops for roosting, but also roosts in human-made structures and trees.	**Low potential to occur.** The BSA contains suitable woodland and forest habitat for foraging and roosting. However rocky outcrops, the preferred roosting substrate for this species, are absent from the BSA. The nearest CNDDB occurrence is approximately 3 miles northwest of the BSA.
Corynorhinus townsendii	Townsend's big-eared bat	None/SSC	Mesic habitats characterized by coniferous and deciduous forests and riparian habitat, but also xeric areas; roosts in limestone caves and lava tubes, human-made structures, and tunnels.	**Low potential to occur**. The BSA supports suitable coniferous forest for this species; however, preferred roosting substrate (limestone caves and lava tubes) are absent from the BSA. The nearest CNDDB occurrence is approximately 3.5 miles southeast of the BSA.
Lasiurus blossevillii	western red bat	None/SSC	Forest, woodland, riparian, mesquite bosque, and orchards, including fig, apricot, peach, pear, almond, walnut, and orange; roosts in tree canopy.	**Low potential to occur.** The BSA supports marginally suitable forest and woodland habitat for this species.
Neotoma fuscipes annectens	San Francisco dusky-footed woodrat	None/SSC	Forest habitats with a moderate canopy and moderate to dense understory.	**High potential to occur.** The BSA supports suitable forest habitat for this species. Several woodrat middens were observed within the BSA during recent biological surveys. The nearest CNDDB occurrence is approximately 4.75 miles southwest of the BSA.
Taxidea taxus	American badger	None/SSC	Dry, open, treeless areas; grasslands, coastal scrub, agriculture, and pastures, especially with friable soils.	**Not expected to occur.** The BSA supports limited open grassland habitat required by this species. Existing grassland habitat within the study area is disturbed and immediately surrounded by urban/residential development. The nearest CNDDB occurrence is approximately 1.3 miles southwest of the BSA.

Scientific Name	Common Name	Status (Federal/State)	Habitat	Potential to Occur
Invertebrates				
Bombus crotchii	Crotch bumble bee	None/SCE	Open grassland and scrub communities supporting suitable floral resources.	**Low potential to occur**. The BSA supports limited open grassland with suitable floral resources. There are no documented CNDDB occurrences of this species within 5 miles of the BSA.
Bombus occidentalis	western bumble bee	None/SCE	Once common and widespread, species has declined precipitously from central California to southern British Columbia, perhaps from disease.	**Low potential to occur**. The BSA supports limited open grassland with suitable floral resources. The nearest CNDDB occurrence is a 1998 specimen collection approximately 3.5 miles northwest of the BSA (Occ. No. 309).
Cicindela ohlone	Ohlone tiger beetle	FE/None	Remnant native grasslands with California oatgrass (Danthonia californica) and purple needlegrass (Stipa pulchra) in Santa Cruz County.	**Not expected to occur.** The BSA does not support suitable native grassland habitat. The nearest CNDDB occurrences are near Graham Hill Road where adults were observed from 2000 to 2004.
Euphilotes enoptes smithi	Smith's blue butterfly	FE/None	Sand dunes, scrub, chaparral, grassland, and their ecotones.	**Not expected to occur.** The BSA does not support suitable habitat required by this species.
Polyphylla barbata	Mount Hermon (=barbate) June beetle	FE/None	Known only from sand hills in vicinity of Mount Hermon, Santa Cruz County.	**High potential to occur**. This species is historically known to occur at GHWTP. Surveys in 2004 and 2008 detected the species immediately south of the water tank to the paved service road and subsequent monitoring indicate that a very small population persists at the site (City of Santa Cruz 2013).
Trimerotropis infantilis	Zayante band-winged grasshopper	FE/None	Isolated sandstone deposits in the Santa Cruz Mountains (the Zayante Sand Hills ecosystem)	**Low potential to occur**. The BSA supports marginally suitable habitat for this species which prefers open sand parklands.

INTENTIONALLY LEFT BLANK

Executive Summary

The City of Santa Cruz (City) retained Dudek to complete a cultural resources inventory and evaluation report for Graham Hill Water Treatment Plant (GHWTP) Facility Improvements Project (Proposed Project). The purpose of the Proposed Project is to upgrade the GHWTP, so that it performs reliably into the future and responds appropriately to the anticipated treatment and supply challenges and to address aging infrastructure that does not meet current standards (such as seismic and wildfire hardening requirements). The Proposed Project may include funding from the State Water Resources Control Board, the Responsible Agency if the Proposed Project obtains financing through the Drinking Water State Revolving Fund (SRF) Program. The SRF Program Environmental review requirements are largely consistent with the National Historic Preservation Act (NHPA) of 1966. In accordance with the NHPA's implementing regulations, Title 36 of the Code of Federal Regulations, Section 800.4, the State Water Resources Control Board requires an inventory of cultural resources within the project's area of potential effects (APE) to determine the presence or absence of historic properties and potential effects upon those properties. The City intends to use the United States Environmental Protection Agency (USEPA) Water Infrastructure Finance and Innovation Act (WIFIA) and State of California Drinking Water SFRF low interest loans as well as the City's capital improvement budget to provide the capital funding needed for the Proposed Project.

This report includes the following components: (1) a California Historical Resources Information System (CHRIS) records search conducted at the Northwest Information Center addressing the proposed APE plus a 0.25-mile radius; (2) a Sacred Lands File (SLF) search through the Native American Heritage Commission and outreach to Native American contacts with local information about cultural and tribal cultural resources in the vicinity of the APE; (3) a pedestrian survey of the project site for archaeological and built environment resources; (4) an update to a historical significance evaluation for one previously recorded property, the GHWTP, located in the vicinity of the project APE; and (5) an assessment of project-related impacts to historical resources in conformance with the California Environmental Quality Act (CEQA) and project effects to historic properties in conformance with Section 106 of the NHPA, and in consideration of applicable local municipal code and planning documents.

The archaeological assessment results are presented in detail below. In summary, the records search indicated that no archaeological resources are present in the APE. The SLF search was positive with the Costanoan Ohlone Rumsen-Mutsen Tribe listed as the information contact in this case. The Native American outreach did not provide any new information regarding resources. The surface survey of the APE was uniformly negative. The results of the assessment show there are no historic properties of an archaeological nature in the APE and low potential for encountering unknown archaeological resources during the planned project construction. Dudek has no further recommendations regarding the discovery of archaeological resources within the APE.

Dudek personnel conducted an intensive-level pedestrian survey for built environment resources within the APE on April 23, 2021. Dudek recorded and evaluated one historic era property located within the APE, the GHWTP. The GHWTP was previously recorded and evaluated in 2019 by Carey & Co. under the National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR) and it was recommended as not meeting any of the significance criteria. Carey & Co. did not include an evaluation under City of Santa Cruz Historic Resource Inventory (CSCHRI). This previous evaluation has not received concurrence from the California State Office of Historic Preservation (commonly referred to as SHPO). As part of this report, Dudek prepared an updated evaluation and applied CSCHRI criteria. Dudek agrees with the 2019 NRHP/CRHR evaluation that the property is not eligible

for listing and found that the property also does not meet CSCHRI criteria. In summary, the GHWTP, the only built environment property within the APE, is not considered a historic property under Section 106 of the NHPA. The finding for the Proposed Project for built environment cultural resources is No Historic Properties Affected. No further work for built environment cultural resources is necessary prior to the Proposed Project implementation.

1 Introduction

The City of Santa Cruz (City) Water Department has embarked on a multi-year Capital Improvement Program to renovate and upgrade its water system, which will include water supply and infrastructure projects to improve reliability and resiliency and address older infrastructure. The Capital Improvement Program includes plans and funding for numerous projects, including rehabilitation or replacement projects, upgrades and improvement projects, water supply reliability studies, and water main replacements.

The Graham Hill Water Treatment Plant (GHWTP) is an existing facility located in City limits shown on Figure 1, Project Location. The facility was commissioned in 1960 and has served as a critical component of the City's drinking water system. The GHWTP treats local surface water and groundwater from multiple sources: the San Lorenzo River (at the Tait Diversion, Felton Diversion, and Tait Wells), Majors Creek, Laguna Creek, Reggiardo Creek (by way of Laguna Creek Diversion), Liddell Spring, and Newell Creek (Loch Lomond Reservoir). The City selects its water source and blend for treatment based on multiple variables including demands, source water availability, and source water quality. These selections vary seasonally.

The GHWTP has a rated capacity of 24 million gallons per day (mgd) and a permitted capacity of approximately 18 mgd. Several improvements and modification have been made over the years, focusing on in-kind repairs and replacements, seismic upgrades, and minor improvements in response to changing regulations and permit requirements. However, the GHWTP has several remaining deficiencies related to the age of the infrastructure, the ability of the GHWTP to efficiently meet water quality objectives and adapt to future treatment needs, and source-water conditions. The GHWTP Facility Improvements Project (Proposed Project) would address these remaining deficiencies and help to meet water quality objectives and future water supply needs. The Proposed Project is needed to provide the community with a resilient surface water treatment plant that will meet the regulatory and climate challenges of the 21st century.

This cultural resources inventory and evaluation report includes the following components: (1) a California Historical Resources Information System (CHRIS) records search conducted at the Northwest Information Center addressing the proposed APE plus a 0.25-mile radius; (2) a Sacred Lands File (SLF) search through the Native American Heritage Commission and outreach to Native American contacts with local information about cultural and tribal cultural resources in the vicinity of the APE; (3) a pedestrian survey of the project site for archaeological and built environment resources; (4) an update to a historical significance evaluation for one previously recorded property located in the vicinity of the project APE; and (5) an assessment of project-related impacts to historical resources in conformance with the California Environmental Quality Act (CEQA) and project effects to historic properties in conformance with Section 106 of the NHPA, and in consideration of applicable local municipal code and planning documents. This report is intended to provide baseline information to support the Proposed Project's environmental review and help inform development of mitigation measures to address potentially significant impacts related to cultural resources.

1.1 Project Description

1.1.1 Project Location

The Proposed Project would primarily be constructed at the City's existing GHWTP, located within Santa Cruz City limits. Additionally, the Proposed Project is anticipated to involve activities outside of the GHWTP for the purposes of temporary construction staging and potential utility and traffic safety improvements. These activities would occur in both City and County of Santa Cruz (County) jurisdictions. The Proposed Project is anticipated to be located at four sublocations of the primary project site and construction would be supported using several staging areas, which together constitute the project site (see Figures 1 and 2). The Proposed Project locations include:

- **Primary Project Site** - The approximately 17.03-acre primary project site consisting of:
    - GHWTP Parcel. The approximately 12.40-acre City-owned GHWTP parcel located at 715 Graham Hill Road in Santa Cruz, CA 95060 on Assessor Parcel Number (APN): 060-141-05;
    - Utility Corridor. The approximately 0.18-acre, 550-linear-foot utility corridor between the GHWTP parcel and the San Lorenzo River via Ocean Street Extension and a 15-foot right-of-way on APN: 060-151-05;
    - Graham Hill Road Right-of-Way. Approximately 2.30-acres, 1,620 linear feet of the Graham Hill Road public right-of-way between just north of Mosswood Court and just south of Lyle Way;
    - Alternate Sanitary Sewer Lateral Improvement Area. The approximately 2.15-acre alternate sanitary sewer lateral improvement area from the southwest corner of the GHWTP parcel at Ocean Street Extension and along Ocean Street Extension for approximately 4,500 linear feet to the City Public Works Department maintained sanitary sewer connection at Graham Hill Road.
- **Staging Areas** –
    - Mt. Hermon Road Staging Area. The approximately 5.14-acre staging area for the Proposed Project located at the northern intersection of Graham Hill Road and Mt. Hermon Road, in Felton, CA at APN: 071-201-43;
    - Ocean Street Extension Staging Area. The approximately 1.86-acre staging area for the Proposed Project (Ocean Street Extension Staging Area) located at 1941 Ocean Street Extension at APN: 008-031-16; and.
    - Other Staging Areas. Additional off-site staging may be needed, the location of which is currently unknown.

The GHWTP parcel at the primary project site is generally accessed from the south on Graham Hill Road via Ocean Street off of State Route 1 (locally referred to as Highway 1). The primary project site may also be accessed from the north on Graham Hill Road via Sims Road or Mt. Hermon Road off of State Route 17 (locally referred to as Highway 17).

Single-family residential land uses surround the GHWTP Parcel on the northern, eastern, and southern perimeters. Dense tree canopy and vegetation, and scattered residential dwellings are located beyond the western perimeter on a hillside that slopes down to the San Lorenzo River, approximately 0.3 miles to the west of the primary project site.

The western perimeter slopes down toward the San Lorenzo River and is an area of scattered residential dwellings. A narrow extension of the GHWTP extends from the otherwise rectangular parcel from the southwest corner down to Ocean Street Extension. This vegetated extension is a corridor for several different types of utilities. The site is characterized by a mix of industrial development for the purpose of water treatment, open space and vegetation. The site is generally accessed from the south on Graham Hill Road via Ocean Street off of Highway 1 but can also be accessed from the north on Graham Hill Road via Sims Road or Mt. Hermon Road off of Highway 17.

The Mt. Hermon Road Staging Area is located adjacent to heavily forested open space, as well as commercial and low/very low-density residential land uses. The Ocean Street Extension Staging Area is located adjacent to a crematorium and low/very low-density residential land uses, off of Ocean Street Extension.

The 17.03-acre primary project site is located within the U.S. Geological Survey 7.5-minute Felton and Santa Cruz quadrangles maps (USGS 2021a). The is positioned approximately 855 feet east of the San Lorenzo River and approximately 2.7 miles from the Pacific Ocean. Elevations within the project site average approximately 325 feet above mean sea level.

1.1.2 Project Description

The Proposed Project consists of improvements at the GHWTP to address aging infrastructure and to provide for efficiently and reliably meeting future water quality objectives and water supply needs. The Proposed Project includes the following:

- **New Water Treatment and Related Processes.** New water treatment and related processes would rehabilitate, replace or augment the existing treatment systems at the GHWTP. The proposed treatment processes would allow the City to reliably and efficiently meet existing and reasonably foreseeable regulations even with source water that is more difficult to treat as described in the Purpose and Need section. The Proposed Project would include solids dewatering to allow for more efficient separation and disposal of solids that are removed from the raw water during the treatment process. Upgrades to the chemical feed systems would also be included as well as a replacement wash water supply tank, a new ozone contactor, pre-treatment processes, granular activated carbon contactors, and recycled water clarifiers. Space would also be reserved for a UV disinfection system and other additional treatment processes, if needed in the future. The design capacity of the Proposed Project would be approximately 18 mgd (net), a decrease from the 24 mgd capacity of the existing treatment plant.

- **New and Upgraded Buildings.** The Proposed Project would include new and upgraded buildings including a new administration building and/or operations building, new maintenance building, HVAC improvements, replacement or upgrade of the filter gallery building, and new ozone, solids dewatering, and chemical storage facilities.

- **Infrastructure and Site Improvements.** The Proposed Project would include infrastructure and site improvements including piping and storm water management improvements; electrical, and SCADA improvements; vehicular access improvements; landscaping improvements; and may include fencing and site security.

- **Removal of Existing Facilities.** The Proposed Project would include demolition of some existing buildings, water treatment facilities (e.g., sedimentation basins), and infrastructure, as needed to address facilities beyond their useful life or to accommodate new facilities.

Figure 2 (2-1 through 2-3) provides a conceptual illustration of the locations in the Proposed Project that are being considered for development. The areas shown in the *Known Development Envelope* would be prioritized for development and permanent facilities. The *Optional Development Envelope – Low Priority* is the area that could be developed but that would be less desirable because of location, topography, or other factors. Since the GHWTP is a geographically constrained site, the *Optional Development Envelope – Low Priority* portion of the Proposed Project is being retained in the event that the *Known Development Envelope* is insufficient in accommodating the necessary improvements. Specific activities, buildings, or facilities, if any, that would be placed in the *Optional Development Envelope - Low Priority Area* are not defined or known at this time. However, should activities or development be needed in the *Optional Development Envelope - Low Priority Area* those developments and activities would be described and disclosed in the Draft EIR (anticipated schedule is described below). Figure 2 also illustrates a *Traffic and Utility Improvements Area,* which could include infrastructure and site improvements including piping and storm drain system improvements; electrical, and SCADA improvements; vehicular access improvements; landscaping improvements; and site security. While not indicated on Figure 2, the existing fencing may be improved or replaced along the perimeter of the GHWTP as a part of the Proposed Project.

The two staging areas (Mt. Hermon Road Staging Area and Ocean Street Extension Staging Area) that would be used during construction of the Proposed Project are shown in Figure 1**.** In addition, locations within the GHWTP may also be used for temporary staging, laydown of equipment and/or storage during construction.

1.2 Area of Potential Effects

The area of potential effects, or APE, is the geographic area or areas within which an undertaking may directly or indirectly cause changes in the character or use of historic properties. Determination of the APE is influenced by a project's setting, the scale and nature of the undertaking, and the different kinds of effects that may result from the undertaking (36 CFR 800.16[d]).

The Cultural Resources APE, presented in Figure 3, Area of Potential Effects Map, follows the maximum possible area of potential effects resulting from the Proposed Project, including all construction activities that will be confined to the GHWTP boundary and the public right-of-way within the limits of work for the Proposed Project illustrated on Figure 1 and 2. Any new disturbances or easements/property takes within the area surrounding the APE will require further study to determine potential adverse effects.

The APE includes multiple non-contiguous Project components, presented in Table 1 as well as in Figure 3. The existing GHWTP and a 30-foot-wide pipeline easement from Ocean Street Extension to the San Lorenzo River. The APE also includes an approximately 1,500-foot-long segment of the Graham Hill Road right-of-way that is contiguous and perpendicular to the GHWTP driveway and includes the right-of-way from Mosswood Court to Lyle Way. The APE also includes an approximately 4,500-foot-long segment of Ocean Street Extension right-of-way that is contiguous to and perpendicular to the GHWTP pipeline easement and includes the right-of-way south from the easement to the intersection of Ocean Street Extension and Graham Hill Road. Construction is anticipated throughout the GHWTP, the pipeline easement, and the segments of Graham Hill Road and Ocean Street Extension described above.

Two staging areas, Mt. Hermon Road Staging Area and the Ocean Street Extension Staging Area are also part of the APE, but no excavation is planned for either area. As described in Section 1.1.1 Project Location, the Ocean Street Extension Staging Area is a 1.86-acre parcel located at 1941 Ocean Street Extension at APN 008-031-16, and the Mt. Hermon Road Staging Area, an approximately 5.14-acre site located at the northern intersection of Graham Hill Road and Mt. Hermon Road, in Felton, CA at APN 071-201-43.

Table 1. Area of Potential Effects (APE) Table

Project Component/ Activity	Location	Length (Feet)	Width (Feet)	Depth Below Surface (Feet)	Height Above Surface (Feet)	Notes
GHWTP	715 Graham Hill Road	1,380	820	13	44	Excavation will occur
Pipeline Easement	Ocean Street Extension to the San Lorenzo River	200	30	6	0	Excavation will occur
Graham Hill Road	Segment between Mosswood Court and Lyle Way	1,500	60	9	0	Excavation will occur
Ocean Street Extension Alternative Sewer Lateral	Segment between Pipeline Easement and Graham Hill Road	4,500	3	6	0	Excavation will occur

Table 1. Area of Potential Effects (APE) Table

Project Component/ Activity	Location	Length (Feet)	Width (Feet)	Depth Below Surface (Feet)	Height Above Surface (Feet)	Notes
Ocean Street Extension Staging Area	1927 Ocean Street Extension	500	180	0	0	No excavation
Mt. Hermon Staging Area	North corner of Graham Hill Road and Mt. Hermon Road	650	520	0	0	No excavation

Only one built environment cultural resource in the APE over the age of 45 years required formal recordation and significance evaluation. This resource is the GHWTP and its associated elements. The GHWTP was previously recorded and evaluated under the National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR) significance criteria, but not under CSCHRI significance criteria. As part of this study, Dudek updated the evaluation and applied CSCHRI criteria.

Other built environment cultural resources over the age of 45 years are in the APE but will not be adversely affected by Project construction or implementation. As such, although the segment of Graham Hill Road and Ocean Street Extension, as well as several small county roads located within the APE, are not known to be previously evaluated, they were not formally recorded or evaluated in this study. These structures are not associated with the GHWTP, as they maintain distinct development histories. Roadwork proposed within the APE as part of the Project implementation will not result in a change of use for the roads, nor will the work impact the alignment of the structures. Resurfacing of roadways to the extent required for the implementation of the Proposed Project does not extend beyond that which has already taken place as part of the installation of utilities along these throughfares at multiple stages in the past. As such, there is no potential for these resources to be affected by the Proposed Project. As there is no possibility that built environment cultural resources beyond the GHWTP will be affected by the proposed undertaking, these additional resources are not included in the APE. These resources were therefore not evaluated for historic significance under NRHP, CRHR, Santa Cruz County Historic Resources Inventory, or CSCHRI criteria as a part of this report. These resources are not discussed further in the report.

1.3 Project Personnel

Archaeological Resources: John Schlagheck is an archaeologist with 10 years of cultural resources management experience along California's Central Coast with a focus on the greater Monterey Bay and San Francisco Bay areas. Mr. Schlagheck acts as principal investigator, field director, and project manager for projects under local, state (California Environmental Quality Act [CEQA]), or federal (National Historic Preservation Act [NHPA] Section 106) regulations. He meets the Secretary of the Interior's Standards for prehistoric and historical period archaeology and his extensive work experience includes Phase I survey, Phase II evaluation, and Phase III data recovery projects.

Built Environment Resources: Fallin Steffen is an architectural historian with 6 years of professional experience in historic preservation, architectural conservation, and cultural resource management in the Monterey Bay Area and northern California. Ms. Steffen's professional experience encompasses a variety of projects for local agencies, private developers, and homeowners in both highly urbanized and rural areas, including reconnaissance- and intensive-level surveys, preparation of resource-appropriate and city-wide historic contexts, and historical significance evaluations in consideration of the NRHP, CRHR, and local designation criteria. Ms. Steffen meets the Secretary of the Interior's Professional Qualification Standards for Architectural History. She is experienced with interdisciplinary projects spanning private and public development, transportation, and water infrastructure, and maintains experience forming educational sessions about the identification of and best practices for the preservation of historic resources.

Kathryn Haley is a senior architectural historian with over 18 years of professional experience in historic/cultural resource management. Ms. Haley has worked on a wide variety of projects involving historic research, field inventory, and site assessment conducted for compliance with Section 106, NEPA, and CEQA. Ms. Haley specializes in the CRHR; the NRHP; and evaluations of built environment resources, including water management structures (levees, canals, dams, ditches), buildings (residential, industrial, and commercial), and linear resources (railroad alignments, roads, and bridges). She specializes in managing large-scale surveys of built environment resources including historic district evaluations. She has prepared numerous Historic Resources Evaluation Reports and Historic Property Survey Reports for the California Department of Transportation (Caltrans). Ms. Haley also worked on the California High-Speed Rail, San Jose to Merced, and Central Valley Wye Project Sections, leading the built environment survey, conducting property specific research, and preparing the Draft Historic Architectural Survey Report as well as co-authoring the environmental section for Cultural Resources. She meets the Secretary of the Interior's Professional Qualification Standards for historian and architectural historian. Ms. Haley has also assisted in preparation of Historic Properties Inspection Reports (condition assessments) under the direction of the Naval Facilities Engineering Command in accordance with Section 106 and Section 110 of the NHPA. Moreover, Ms. Haley has served as project manager, coordinator, historian, and researcher for a wide variety of projects. She is also experienced in the preparation for NRHP nominations, as well as Historic American Building Survey, Historic American Engineering Record, and Historic American Landscape Survey documents.

1.4 Regulatory Setting

This study was completed in compliance with federal cultural resources laws and regulations, including Section 106 of the NHPA. Under Section 106, historic and archaeological districts, sites, buildings, structures, and objects are assigned significance based on their exceptional value or quality in illustrating or interpreting history, architecture, archaeology, engineering, and culture. Several criteria are used in demonstrating resource importance and are described below.

1.4.1 Federal

The NHPA established the NRHP and the President's Advisory Council on Historic Preservation (ACHP), and provided that states may establish State Historic Preservation Officers to carry out some of the functions of the NHPA. Most significantly for federal agencies responsible for managing cultural resources, Section 106 of the NHPA directs that

> [t]he head of any Federal agency having direct or indirect jurisdiction over a proposed Federal or federally assisted undertaking in any State and the head of any Federal department or independent agency having authority to license any undertaking shall, prior to the approval of the expenditure of any Federal funds on the undertaking or prior to the issuance of any license, as the case may be, take into account the effect of the undertaking on any district, site, building, structure, or object that is included in or eligible for inclusion in the NRHP.

Section 106 also affords the ACHP a reasonable opportunity to comment on the undertaking (16 USC 470f).

Title 36 of the Code of Federal Regulations, Part 800 (36 CFR 800) implements Section 106 of the NHPA. It defines the steps necessary to identify historic properties (those cultural resources listed in or eligible for listing in the NRHP), including consultation with federally recognized Native American tribes to identify resources with important cultural values; to determine whether they may be adversely affected by a proposed undertaking; and the process for eliminating, reducing, or mitigating the adverse effects.

The content of Title 36 of the Code of Federal Regulations, Section 60.4, defines criteria for determining eligibility for listing in the NRHP. The significance of cultural resources identified during an inventory must be formally evaluated for historic significance in consultation with the ACHP and the California State Historic Preservation Officer to determine if the resources are eligible for inclusion in the NRHP. Cultural resources may be considered eligible for listing if they possess integrity of location, design, setting, materials, workmanship, feeling, and association.

Regarding criteria A through D of Section 106, the quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, cultural resources, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and that (36 CFR 60.4):

A. Are associated with events that have made a significant contribution to the broad patterns of our history; or
B. Are associated with the lives of persons significant in our past; or
C. Embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
D. have yielded or may be likely to yield, information important in prehistory or history.

The 1992 amendments to the NHPA enhance the recognition of tribal governments' roles in the national historic preservation program, including adding a member of an Indian tribe or Native Hawaiian organization to the ACHP.

The NHPA amendments:

- Clarify that properties of traditional religious and cultural importance to an Indian tribe or Native Hawaiian organization may be determined eligible for inclusion in the National Register
- Reinforce the provisions of the Council's regulations that require the federal agency to consult on properties of religious and cultural importance.

The 1992 amendments also specify that the ACHP can enter into agreement with tribes that permit undertakings on tribal land and that are reviewed under tribal regulations governing Section 106. Regulations implementing the NHPA state that a federal agency must consult with any Indian tribe that attaches religious and cultural significance to historic properties that may be affected by an undertaking.

1.4.2 State

1.4.2.1 California Register of Historical Resources

In California, the term "historical resource" includes but is not limited to "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (California Public Resources Code Section 5020.1[j]). In 1992, the California legislature established the CRHR "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (California Public Resources Code Section 5024.1[a]). The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing in the NRHP, enumerated below. According to California Public Resources Code Section 5024.1(c)(1–4), a resource is considered historically significant if it (i) retains "substantial integrity," and (ii) meets at least one of the following criteria:

1) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2) Is associated with the lives of persons important in our past.
3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4) Has yielded, or may be likely to yield, information important in prehistory or history.

In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than 50 years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance (see 14 CCR 4852[d][2]).

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing in the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

1.4.2.2 California Environmental Quality Act

As described further below, the following CEQA statutes and CEQA Guidelines are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- California Public Resources Code Section 21083.2(g) defines "unique archaeological resource."
- California Public Resources Code Section 21084.1 and CEQA Guidelines Section 15064.5(a) define "historical resources." In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource." It also defines the circumstances when a project would materially impair the significance of an historical resource.
- California Public Resources Code Section 21074(a) defines "tribal cultural resources."
- California Public Resources Code Section 5097.98 and CEQA Guidelines Section 15064.5(e) set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- California Public Resources Code Sections 21083.2(b)-(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures; preservation-in-place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5[b]). If a site is either listed or eligible for listing in the CRHR, or if it is included in a local register of historic resources or identified as significant in a historical resources survey (meeting the requirements of California Public Resources Code Section 5024.1[q]), it is a "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5[a]). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5[a]).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines Section 15064.5[b][1]; California Public Resources Code Section 5020.1[q]). In turn, CEQA Guidelines section 15064.5(b)(2) states the significance of an historical resource is materially impaired when a project:

1. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or
2. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g)

of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

3. Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource's historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (California Public Resources Code Section 21083.2[a], [b], and [c]).

California Public Resources Code Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
4. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
5. Is directly associated with a scientifically recognized important prehistoric or historic event or person.
6. Impacts to non-unique archaeological resources are generally not considered a significant environmental impact (California Public Resources Code section 21083.2(a); CEQA Guidelines Section 15064.5(c)(4)). However, if a non-unique archaeological resource qualifies as tribal cultural resource (California Public Resources Code Section 21074(c), 21083.2(h)), further consideration of significant impacts is required. CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in California Public Resources Code Section 5097.98.

1.4.3 Local – Santa Cruz County

1.4.3.1 Santa Cruz County Historic Resources Inventory

Historic Resources in the County are managed under the aegis of the County Planning Department. A list of Historic Resources is maintained in the County's Historic Resources Inventory, which identifies those Historic Resources located in the unincorporated areas of the County.

- *Historic Resource* is defined in Chapter 16.42.030(I) as

  …any structure, object, site, property, or district which has a special historical, archaeological, cultural or aesthetic interest or value as part of the development, heritage, or cultural characteristics of the County, State, or nation, and which either has been referenced in the County General Plan, or has been listed in the historic resources inventory adopted pursuant to SCCC

16.42.050 and has a rating of significance of NR-1, NR-2, NR-3, NR-4, or NR-5 (County Code 16.42.030 (I) [Ord. 5061 § 28, 2009; Ord. 4922 § 1, 2008]).

- *Historic District* is defined in Chapter 16.42.30(E) as

  "…an area designated as a historic resource and which contains improvements that:

  1. Have character of special historic or aesthetic interest or value; and
     - Represent one or more periods or styles of architecture typical of one or more eras in the history of the County; and
     - Cause such area, by reason of these factors, to constitute a geographically definable area possessing a significant concentration or continuity of sites, buildings, structures, or objects that are unified by past events, or aesthetically by plan or physical development (County Code 16.42.030 (E) [Ord. 5061 § 28, 2009; Ord. 4922 § 1, 2008]).
- The processes for Historic Resource designation in Santa Cruz County are explained in Chapter 16.42.050 as follows:

  (A) Protected Historic Resources. The Santa Cruz County historic resources inventory shall consist of those structures, objects, properties, sites, and districts as designated by certified resolution of the Board of Supervisors and thereby incorporated by reference and made a part of this chapter, with subsequent amendments as provided for in subsection (E) of this section.

  (B) Rating of Significance. For purposes of administering the historic preservation program, general public information, and to aid in the nomination of historic resources to the National Register, designated historic structures, objects, sites and districts shall be assigned a National Register (NR) Rating Code for historic significance based upon guidelines published by the United States Department of the Interior, National Park Service as follows:

  (1) NR-1. A property listed in the National Register of Historic Places.

  (2) NR-2. A property that has been determined to be eligible for listing on the National Register by the U.S. Department of the Interior.

  (3) NR-3. A property eligible, in the opinion of the County Historic Resources Commission, to be listed on the National Register of Historic Places.

  (4) NR-4. Property which may become eligible for listing on the National Register if additional research provides a stronger statement of significance, or if the architectural integrity is restored. These buildings have either high architectural or historic significance, but have a low rating in the other categories.

  (5) NR-5. A property determined to have local historical significance.

  (6) NR-6. The County shall maintain a listing of those properties which have been evaluated and determined to be ineligible for designation as an historic resource based on the criteria in subsections (B) and (C) of this section and/or due to their deteriorated architectural integrity or condition. These properties shall be given a rating of significance of NR-6. An NR-6 rated property is part of the historic resource inventory but is not subject to the provisions of this chapter. An NR-6 rated property may be reevaluated periodically.

(C) Designation Criteria. Structures, objects, sites, and districts shall be designated as historic resources if, and only if, they meet one or more of the following criteria and have retained their architectural integrity and historic value:

(1) The resource is associated with a person of local, State, or national historical significance.

(2) The resource is associated with an historic event or thematic activity of local, State, or national importance.

(3) The resource is representative of a distinct architectural style and/or construction method of a particular historic period or way of life, or the resource represents the work of a master builder or architect or possesses high artistic values.

(4) The resource has yielded, or may likely yield, information important to history.

1.4.4 Local – City of Santa Cruz

1.4.4.1 Santa Cruz City Historic Building Survey

Cultural landmarks in the City are termed Historic Landmarks and are under the aegis of the Planning and Community Development Department, City of Santa Cruz. The City maintains a list of Historic Landmarks, as well as other built historic resources, in the Historic Building Survey. Historic Landmark is defined in Part 5: Historic Preservation within the Community Design Chapter, as "an individual structure or other feature, or group of structures on a single lot or site, or a site having special aesthetic, cultural, architectural, or engineering interest or value of an historical nature as a 'landmark'" (Municipal Code Section 24.12.420, amended by Ordinance No. 2003-14, effective April 22, 2003).

In order to become a Historic Landmark, or to be placed on the Historic Building Survey, a property must first be evaluated for local historic significance based on the following criteria (Municipal Code Section 24.12.440, amended by Ordinance No. 2003-14, effective April 22, 2003):

c. The property is either a building, site, or object that is:

1. Recognized as a significant example of the cultural, natural, archaeological, or built heritage of the city, state, or nation
2. Associated with a significant local, state, or national event
3. Associated with a person or persons who significantly contributed to the development of the city, state, or nation
4. Associated with an architect, designer, or builder whose work has influenced the development of the city, state, or nation
5. Recognized as possessing special aesthetic merit or value as a building with quality of architecture and that retains sufficient features showing its architectural significance
6. Recognized as possessing distinctive stylistic characteristics or workmanship significant for the study of a period, method of construction, or use of native materials
7. Retains sufficient integrity to accurately convey its significance

The district is:

8. Recognized as a geographically definable area possessing a significant concentration of buildings that are well designed and other structures, sites, and objects which are united by past events or by a plan or physical development
9. Recognized as an established and geographically definable neighborhood united by culture, architectural styles or physical development

1.4.4.2 Santa Cruz City Historic Districts

The City recognizes two historic districts and several potential historic districts. A City Historic District is evaluated and defined by the following criteria (Municipal Code Section 24.06.120, amended by Ordinance No. 85-05, effective 1985):

1. The proposed historic district is a geographically definable area possessing a significant concentration or continuity of sites, buildings, structures, or objects unified by past events, or aesthetically by plan or physical development
2. The collective value of the historic district taken together may be greater than the value of each individual structure
3. The proposed designation is in conformance with the purpose of the city's historic preservation provisions, set forth in Section 24.12.400 of this title and the city's Historic Preservation Plan and the General Plan

1.4.4.3 Historic Property Zoning Incentives Ordinance

As described by the City of Santa Cruz Department of Planning and Community Development, the Historic Property Zoning Incentive Ordinance (Ord. No. 2012-19) was adopted in December 2012 to expand existing zoning variations for use by individual buildings or properties listed on the Historic Building Survey or contributing buildings or properties situated within a recognized City Historic District. The ordinance permits several Variations to Development Standards to benefit previously listed properties and incentivize owners of eligible, unlisted properties to participate in local historic preservation efforts. Additionally, these Variations help to ensure that new construction and alterations to existing historic properties within these areas conform to standards that will maintain the integrity of the City's historic landmarks, buildings, sites, objects, and contributing buildings within designated and recognized districts.

1.4.4.4 Historic Alteration and Demolition Permits

Regarding effects on federal and locally significant properties, the Santa Cruz Municipal Code states the following:

> Historic Alteration Permit: The purpose of this permit is to ensure that new construction and alterations are allowed in a manner which retains the integrity of the city's historic landmarks, buildings, sites and districts over time. Administrative historic alteration permits may be approved by the zoning administrator, without a public hearing, for minor alteration projects and accessory structures. Historic alteration permits may be approved by the city historic preservation commission, after a public hearing, for non-minor alteration projects. Such a permit is required

before any person shall carry out or cause to be carried out, on the site of a designated landmark, or on the site of a building listed in the City of Santa Cruz Historic Building Survey, or on the site of a structure in an historic overlay district, any material change in exterior appearance of any such site or structure through alteration, construction or relocation. This section of the Zoning Ordinance is also part of the Local Coastal Implementation Plan (Section 24.08.900).

Historic Demolition Permit: The purpose of this permit is to ensure that no person shall demolish or cause to be demolished any building listed on the Santa Cruz Historic Building Survey, any designated historic landmark or any building in an historic overlay district without approval of an historic demolition permit (Section 24.08.1000).

INTENTIONALLY LEFT BLANK

2 Research and Field Methods

This chapter summarizes Dudek's efforts to identify cultural resources in the APE.

2.1 CHRIS Records Search

To identify historic properties located within the APE that might be affected by the proposed undertaking, Dudek defined a study area that includes the APE and a 0.25-mile buffer to identify previously recorded resources and cultural reports near the APE. On April 28, 2021, Dudek archaeologist Sarah Brewer, BA, conducted the records search at the Northwest Information Center of the California Historical Resources Information System (CHRIS) at Sonoma State University (NWIC File No. 20-2169) for the GHWTP, the pipeline easement, Graham Hill Road, and the Ocean Street Extension Staging Area. On December 6, 2022, Charles Mikulik conducted a records search (NWIC File No. 22-0886) for the Alternate Sewer Lateral portion of the APE along Ocean Street Extension. Dudek also reviewed a previous records search (NWIC File No. 19-1522) for records information relating to the Mt. Hermon Road Staging Area. The CHRIS search also included a review of the NRHP, CRHR, California Inventory of Historic Resources, historical maps, and local inventories. The results of the Confidential Record Search are summarized below and included in Confidential Appendix A.

2.1.1 Previous Technical Studies

The records search results indicated seven previously conducted studies with coverage intersecting the APE (Table 2) and 32 additional studies with coverage outside the APE but within a 0.25-mile radius of the APE (Appendix A). The seven studies within the APE are summarized in detail below in Table 2. See Section 2.2, Additional Records Reviewed, for technical reports with coverage of a portion of the APE that were not returned with the NWIC records search.

Table 2. Previously Conducted Cultural Resources Technical Studies within the APE

Report No.	Authors	Year	Title	Publisher
Studies Intersecting the APE (n=7)				
S-004005	David Chavez	1979	Cultural Resources Assessment of the Pasatiempo/Rollingwoods Wastewater Project Locations, Santa Cruz County, California	—
S-023744	Monique M. Pomerleau	2001	Archaeological Reconnaissance for the Proposed Construction of a Sanitary Sewer Main Between Graham Hill Road and Ocean Street Extension, Santa Cruz, California	Albion Environmental Inc.
S-028809	Matthew R. Clark	2004	An Archaeological Reconnaissance of the Proposed San Lorenzo Valley Trail Alignment Alternatives, Boulder Creek-Santa Cruz, Santa Cruz County, California	Holman & Associates
S-036272	Mark Hylkema	2009	Historic Property Survey Report (HPSR), Cultural Resources Evaluation for the Proposed Incidental Take Permit at the Graham Hill Water Treatment Plant, City of Santa Cruz, California	—
S-040205	Mary Doane and Gary Breschini	2013	Preliminary Archaeological Assessment for the Rolling Woods and Graham Hill/Woods Cove Sewer Annexation Project in Santa Cruz, Santa Cruz County, California	Archaeological Consulting
S-043628	Mary Doane and Gary S. Breschini	2013	Preliminary Archaeological Reconnaissance for the Santa Cruz Memorial Park Crematorium and Landscape Building Project, in Santa Cruz, Santa Cruz County, California	Archaeological Consulting
S-052810	Submitter – J2018-007.02	2018	Archaeological Investigations at the City of San Cruz Concrete Tank Replacement Project, Graham Hill Water Treatment Plant	Albion Environmental, Inc.
Studies Outside the APE within the 0.25-mile Buffer (n=32) Appendix A				

S-4005

Chavez (1979) conducted a cultural resources assessment for a wastewater project that included survey of approximately 2.1 miles of Graham Hill Road right-of-way for a pipeline. Chavez noted the existence of CA-SCR-162 and estimated the distance of CA-SCR-162 from Graham Hill Road at 0.2 miles (1,050 feet). Chavez recommended monitoring of construction on Graham Hill Road in the vicinity of the site. CA-SCR-162 is greater than 0.25 miles from the APE .

S-23744

Albion Environmental conducted an extended phase I archaeological assessment for a sewer project that intersected the portion of the APE along Ocean Street Extension that will be used as a temporary staging area (Pomerleau 2001). The report contains negative findings from an intensive survey effort and two subsurface test probes.

S-28809

Clark (2004) conducted extensive surveys for the San Lorenzo Valley Trail alignments. The survey coverage presented in the report includes the APE along Graham Hill Road. Clark did not report any found resources in the vicinity of the GHWTP.

S-36272

Hylkema (2009) surveyed the entire 13.2 acres of the GHWTP for an incidental take permit application. The survey covered all the APE within the boundaries of the GHWTP. No new resources were reported.

S-40205

This report is from a records search and survey related to a sewer annexation project (Doane and Breschini 2013a). The project area for this report included all the APE along Graham Hill Road north of the entrance to the GHWTP. The report was negative for evidence of new archaeological resources.

S-43628

Doane and Breschini (2013b) conducted a records search and survey of the Santa Cruz Memorial Park Crematorium grounds for a landscaping project. The survey may have included a portion of the APE that will be used as a temporary staging area but the report did not include a survey coverage map. The Crematorium property is west of and adjacent to the APE. Doane and Breschini found no evidence of prehistoric or historical period resources.

S-0 52810

As part of the City of Santa Cruz Concrete Tank Replacement, Albion (2019) conducted an extended Phase I archaeological assessment. The assessment included a records search, Native American outreach, and intensive surface survey, and excavation of three shovel test pits to sample the subsurface for cultural materials. The area covered by the assessment is entirely within the APE at the GHWTP. Albion did not identify any new resources from the assessment.

2.1.2 Previously Recorded Cultural Resources

There are no previously recorded resources within the APE. There are eight recorded historical period resources outside of the APE but within the 0.25-mile buffer (Table 3 and Appendix A). The resources include three highway structures, four buildings, and one district.

Table 3. Previously Recorded Cultural Resources within a 0.25-Mile Buffer from the APE

Primary	Trinomial	Resource Name	Resource Type	Age	NRHP/CRHR Eligibility Status Code	Attributes
Resources Intersecting the APE (n=0)						
None						
Resources Outside the APE within the 0.25-mile Buffer (n=8)						
P-44-000401	CA-SCR-329H	OC-9; MC-9; Highway 9	Structure; Site	Historic	No Information	Highway
P-44-000402	CA-SCR-330H	OC-17; MC-17; Highway 17	Structure; Site	Historic	No Information	Highway
P-44-000406	CA-SCR-334H	OC-1; MC-1; Highway 1	Structure	Historic	No Information	Highway
P-44-000855	—	Cowell Home Ranch District	District	Historic	2D2	Mines/Quarries/Tailings; Single Family Property; Ancillary Building; Industrial Building
P-44-001017	—	Asst. Superintendent's House, Calif. Powder Works	Building	Historic	5S1	Single-Family Property
P-44-001058	—	Arnold's Funeral and Cremation Services	Building	Historic	No Information	1- to 3-Story Commercial Building
P-44-001059	—	Odd Fellows Cemetery Crematory-Mausoleum	Building	Historic	No Information	Religious Building; Cemetery
P-44-001087	-	Lambert & Hill CPA	Building	Historic	No Information	Single-Family Property; 1- to 3-Story Commercial Building

Status Codes: 2D2 = Contributor to a multi-component resource determined eligible for NRHP by consensus through Section 106 process. Listed in the CRHR; 5S1 = Individually eligible or designated locally.
Notes: APE = area of potential effects; NRHP = National Register of Historic Places; CRHR = California Register of Historical Resources.

2.2 Additional Records Reviewed

The following report included coverage within the APE. The report was not returned as part of the CHRIS searches and was provided for review by the City.

Carey & Co. 2019, City of Santa Cruz, Graham Hill Water Treatment Plant Concrete Tank Replacement Project Historic Resources Evaluation

In 2019, Carey & Co. completed a historic resources evaluation report for the City of Santa Cruz Concrete Tank Replacement Project, a project at GHWTP to replace three concrete water storage tanks and two associated pump

stations. The facilities proposed for removal were all part of the original water treatment plant constructed in 1959 the is included in the APE. Carey & Co. evaluated the entire original treatment plant under NHPA Section 106 and CEQA eligibility criteria. No eligible resources were identified under either set of criteria.

2.3 Native American Coordination

Sacred Lands File Search

On April 26, 2021, Dudek sent a request to the Native American Heritage Commission (NAHC) for a search of their Sacred Lands File (SLF) for the vicinity of the APE. The SLF is a list of properties important to California's Native American tribes. On May 13, 2021, Dudek received a letter from the NAHC with *positive* findings from the SLF search with the Costanoan Ohlone Rumsen-Mutsen Tribe noted as the information contact for the SLF listing. NAHC also provided a list of seven Native American contacts that might have local knowledge of cultural and tribal cultural resources for the APE. A record of the SLF search and results is included in Appendix B.

Native American Information Outreach

On May 17, 2021, Dudek provided the SLF results and the NAHC list of Native American contacts to the City for use in their outreach efforts to the seven Native American contacts. All communication with local tribes was directly between the City and the Native American contacts provide by the NAHC for the Project. The City's contact for tribal communication for this project is Jessica Martinez-Mckinney (jmartinezmckinney@cityofsantacruz.com; 831-420-5322). A communication log and supporting documentation are presented in Appendix B (confidential). The following information was provided by the City.

The City received responses from three of the seven contact provide by the NAHC. Specifically, initial responses came from Patrick Orozco, Chairman, Costanoan Ohlone Rumsen-Mutsun Tribe, Kanyon Sayers-Roods, MLD Contact, Indian Canyon Mutsun Band of Costanoan, and Mike Grone, Research Analyst, Amah Mutsun Land Trust.

Mr. Orozco provided site numbers and other identifiers for four indigenous sites that were of concern due to the project. The City provided Mr. Orozco with location information for the four sites that confirmed the sites are between 1.6 and 4.7 miles from the project APE. The evaluation included an aerial image.

Ms. Sayer-Roods had concerns about the project and requested training, acknowledgement, and monitoring. The City had a zoom meeting with Ms. Sayer-Roods and discussed cultural sensitivity and land acknowledgment, cultural sensitivity training for staff and construction workers, and additional project information. Following the meeting, the City provided a copy of a past technical report for the APE and other project information.

Regarding the Amah Mutsun Tribal Band (AMTB), Mr. Grone initially requested additional project information and a Native American monitor during construction. The City conducted two meetings with AMTB. Topics discussed included AMTB request for AB 52 consultation, integrated cultural resources surveys, history of Awaswas speaking people. Mr. Grone and Mr. Lopez did not express concern about resources related to the Project. As a result of the project consultation, AMTB requested to be added to the City's AB 52 consultation list. The City acknowledged the request and sent formal project notification under AB52. During a subsequent meeting, all elements of the APE where excavation is planned (GHWTP, Pipeline Easement, Graham Hill Road, and Ocean Street Extension

Alternative Sewer Lateral; Table 1) were discussed in detail. The City provided a summary of the AB 52 consultation meeting to AMTB for acceptance and concurrence.

2.4 Building Development and Archival Research

Santa Cruz Water Department Archives

City staff provided Dudek with a selection of materials related to the development of the GHWTP and modifications to the GHWTP and appurtenances overtime. These materials were incorporated throughout this report and used in the preparation of Chapter 3, Historical Overview, and Chapter 4, Results of Identification and Evaluation Efforts, of this report.

Historical Newspaper Review

Dudek reviewed historical newspapers from Santa Cruz covering the development of water infrastructure in Santa Cruz and the development of the GHWTP to understand the development of the historic property and the biography of the contractors involved in the construction of the built features. These documents were used in the preparation of Chapter 3 of this report.

Historical Aerial Photographs

A review of historical aerial photographs was conducted as part of the archival research effort for the Proposed Project from the following years: 1931, 1940, 1952, 1953, 1956, 1964, 1968, 1982, 1987, 1991, 1993, 2005, 2009, 2010, 2012, 2014, 2016, and 2018. Table 4 provides an overview of the development of the GHWTP (NETR 2021; UCSB 2021).

Table 4. Historical Aerial Photograph Review of the Graham Hill Water Treatment Plant

Photograph Year	Observations and Findings
1931	Graham Hill Road is well-established and visible by the time of this photograph. The GHWTP has not yet been established by this period, and the area where it will eventually be sited appears as an open space. Several clusters of buildings line Ocean Street Extension to the west.
1940	The west side of Graham Hill Road in the vicinity of the future GHWTP is sparsely populated with orchards during this period. Small clusters of residential and farm buildings are visible near the Ocean Street Extension to the west.
1952	The GHWTP has not yet been established by this period, and the area where it will eventually be sited appears as an open space.
1953	Appearance of the site is consistent with the previous photograph.
1956	Appearance of the site is consistent with the previous photograph.
1964	The GHWTP is now visible and includes four Storage Tanks, the Operations Building, the Filter Gallery, and the Sedimentation Basins. The site also includes an access road leading from Graham Hill Road, as well as multiple roads within the site circulating around the various plant elements. A small parking area is visible to the northeast and southeast of the Operations Building.
1968	Appearance of the site is consistent with the previous photograph.

Table 4. Historical Aerial Photograph Review of the Graham Hill Water Treatment Plant

Photograph Year	Observations and Findings
1982	The once cleared areas of the site between elements have been significantly infilled with vegetation. The new Sedimentation Basins have been added to the northwest of the original configuration and the Filter Gallery has been expanded to the south.
1987	The image quality is poor, so many details are obscured.
1991	The Water Quality Lab is now visible in the northeast section of the site. Otherwise, the appearance of the site appears to be consistent with the previous photograph.
1993	Appearance of the site is consistent with the previous photograph.
2005	Appearance of the site is consistent with the previous photograph.
2009	Solar panels have been added to the roof of the Operations Building and two new rectangular structures are now present to the northwest of the Sedimentation Basins.
2010–2018	Appearance of the site is largely consistent during this period with no discernible changes.

2.5 Other Interested Party Correspondence

On November 7, 2022, Dudek, Architectural Historian, Fallin Steffen, sent electronic contact letters to the Santa Cruz Museum of Art and History, the Santa Cruz Museum of Natural History, the University of California, Santa Cruz Special Collections at McHenry Library, and the San Lorenzo Valley Museum. The letters briefly described the Proposed Project and requested information about cultural resources near the APE. Nikki Patterson from the Santa Cruz Museum of Art and History responded on November 9, 2022, that the museum does not have any information regarding cultural or historical resources in the APE. No other responses have been received to date.

Copies of the historic advocacy outreach submitted in conjunction with this project and all responses are located in Appendix C.

2.6 Field Survey

2.6.1 Methods

Archaeological Resources: Dudek archaeologist John Schlagheck, MA, RPA, conducted an archaeological surface survey of the GHWTP, Pipeline Easement, Graham Hill Road and the Ocean Street Extension Staging Area on April 23, 2021. The survey of the Mt. Hermon Road Staging Area was conducted on December 2, 2020. On December 7, 2022, Dudek archaeologist Kolin Taylor, BA, conducted the survey focused on the 4,500-foot Ocean Street Extension portion of the APE. Mr. Schlagheck and Mr. Taylor conducted all survey work using standard archaeological procedures and techniques. All field practices met the Secretary of the Interior's standards and guidelines for a cultural resources inventory. The land area was surveyed in pedestrian transects with approximately 5-meter (16-foot) spacing in open areas. Two transects were used to survey the linear portions of the APE. Where a linear portion of the APE was covered by a paved road, one transect was used on both sides of the paved surface. All field notes, photographs, and records related to the current study are on file at the Dudek office in Santa Cruz, California.

Built Environment Resources: During the survey for archaeological resources, Mr. Schlagheck also completed a thorough photo documentation of all built environment elements within the APE. Dudek architectural historian Fallin Steffen, MPS, conducted an in-depth review of the photo documentation as part of preliminary assessment to determine if any built environment resources warranted historic significance evaluation. The photo documentation shows specific structural details to contextualize the built environment elements within the surrounding portion of the APE and areas adjacent to the APE. Ms. Steffen was able to view the structural details, spatial relationships, observed alterations, and examining any historic landscape features via the photo documentation of the APE. All field notes, photographs, and records related to the current study are on file at the Dudek office in Santa Cruz, California.

2.6.2 Results

Archaeological Resources: Regarding GHWTP, Pipeline Easement, Graham Hill Road, and the Ocean Street Extension Staging Area, other than where the ground was completely obscured by existing buildings and hard surfaces, the soil within the APE is fine, light-gray, sandy silt mixed in most areas with imported gravel and rock likely associated with the construction of existing facilities. While the soil is generally very loose, greater compaction exists near modern improvements such as driveways and sidewalks. Roads and foundations have been graded from the native slope and some cut banks offer very good visual access to the soil. Abundant rodent activity has ejected significant amounts of subsurface soil that also improves the effectiveness of the survey.

Regarding the Ocean Street Extension portion of the APE, access to the soil on both sides of the paved surface we very good except where driveways had been constructed using imported materials. Rodent activity was also noticeable in the area offering very good views of ejected materials from the subsurface.

Regarding the Mt. Hermon Road Staging Area, the entire area of the APE in this location was covered by a thick layer (6 to 12 inches) of imported crushed stone and gravel. At the time of survey, the area was being used as an operations center for wildfire cleanup efforts.

The survey found no archaeological resources within the APE. Specifically, Dudek found no archaeological soil (midden) or material commonly used as raw materials for prehistoric tool manufacture such as chert or obsidian. Similarly, no other evidence for use of the property during prehistoric times (such as charred faunal remains, marine shell, modified rocks, or charcoal) was observed. No bedrock was found within the APE. Other than the existing GHWTP facilities, no historical period materials except modern debris (plastic, glass, and metal fragments) were found in the APE. The Ocean Street Extension Staging Area was being used for outside storage of materials.

Built Environment Resources: From the pedestrian survey, Dudek identified and recorded one resource 45 years old or older, the GHWTP complex, located within the APE. Chapter 4 provides a detailed physical description of the structures and a significance evaluation under the CSCHRI criteria. The complete DPR 523 form set is provided in Appendix D to this report.

3 Historical Overview

The following historic context addresses relevant themes concerning the history of the APE. It begins with an overview of the environmental, prehistoric, and ethnographic history of the general area surrounding the APE. For the purposes of this Chapter, the APE refers to the GHWTP property only, as no permanent changes of ground disturbance is proposed for the two staging areas. Based on the information presented in Chapter 1.2, Area of Potential Effects, there is no possibility that built environment cultural resources beyond the GHWTP will be affected by the proposed undertaking. As such, Chapters 3.3 through 3.8 are focused on the historical development of the GHWTP. This section of the historic context begins with an overview of Santa Cruz County and the City of Santa Cruz, and concludes with a discussion of water management in North Santa Cruz and the historical development of the GHWTP.

3.1 Environmental Context

The17.03-acre primary project site is located within the U.S. Geological Survey 7.5-minute Felton and Santa Cruz quadrangle maps (USGS 2021a). This is positioned approximately 855 feet east of the San Lorenzo River and approximately 2.7 miles from the Pacific Ocean. Elevations within the project site average approximately 325 feet above mean sea level. The San Lorenzo River is the region's major watercourse for runoff from the Valley to the Bay. The GHWTP is on the east bluff of the San Lorenzo River approximately 600 feet from the river channel with an easement that extends to the river. Other perennial drainages in the vicinity, including Branciforte Creek and Carbonera Creek, trend southeast of the GHWTP and join the San Lorenzo River about 2 miles to the south. The Santa Cruz Mountains are to the east, west, and north and have moderate to severe slopes, while the topography of the lower San Lorenzo River near GHWTP has gentle to moderate slopes. GHWTP is surrounded by single-family residential land uses with commercial development to the south in downtown Santa Cruz.

Most of the APE consists of two soil units: Watsonville loam, thick surface, 2%–15% slopes, and Zayante-Rock Outcrop Complex, 15%–75% slopes. However, soils encountered during a focused soil field investigation at the GHWTP in 2020 by soil consultants and geologists did not match those published in the U.S. Department of Agriculture's soil survey report for the County of Santa Cruz (County) area (HDR 2020; USDA 2021a). The investigation revealed that there have been numerous cuts, excavations, and earthen materials moved throughout the site; the Watsonville soil mapping units were properly identified in the northern portion of the site; the Zayante-Rock outcrop complex mapping unit is actually a very shallow loamy soil with a Franciscan greywacke schist bedrock; and Santa Margarita Formation/Zayante soils at an off-site reference location (Quail Hollow Park) were consistent with the U.S. Department of Agriculture description. The report concluded that the remaining soils found at the primary project site consist of engineered fills and loamy soils, and not the sandy soils characteristic of the Zayante soil series. The region has a Mediterranean climate, with warm dry summers and cool wet winters.

3.2 Prehistory

The APE lies within the territory that was occupied by people of the Costanoan or Ohlone language family prior to European contact. The term Costanoan refers to people who spoke eight separate Penutian-stock language groups and lived in autonomous tribelet communities between the vicinities of the city of Richmond in the north to Big Sur in the south. The Awaswas tribelet occupied the Santa Cruz area at the time of European contact (Levy 1978).

New information into the lifeways of pre-contact Californians is elucidated through continued ethnographic and archaeological studies and current Native American sources. Early European explorers between the 16th and 18th centuries provided the first written descriptions about the native Californians they encountered; although, details are sparse. Attempts at systematic ethnographies did not occur until the early twentieth century, generations after the effects of colonization and missionization had altered Costanoan/Ohlone lifeways and population drastically. Many of the studies, such as those conducted by John P. Harrington (1942) and C. Hart Merriam (1967), focused on recording Native languages before they fell into disuse. Information from the archaeological record continues to fill in the gaps of prehistoric lifeways. Archaeologists extrapolate trends in tool use, trade, diet, and migration from studies of archaeological sites. Costanoan/Ohlone descendants are participating in decisions about treatment of their ancestral sites and how to educate others about their traditional lifeways.

New archaeological finds continue to fill in the gaps of our understanding of prehistoric lifeways. Jones et al. (2007) presents a synthetic overview of prehistoric adaptive change in the Central Coast. This temporal framework for the prehistoric era of greater Central California coast spans a period of approximately the last 10,000–12,000 years (a.k.a. the Holocene) and divides that span into six different periods. Researchers distinguish these periods by perceived changes in prehistoric settlement patterns, subsistence practices, and technological advances. These adaptive shifts are recognized by differences in temporally discrete artifact assemblages, site locations, and site types. Table 5 summarizes the cultural chronology presented by Jones et al. (2007).

Table 5. California Central Coast Chronology

Temporal Period	Date Range*
Paleo-Indian	pre-8000 cal BC
Millingstone (or Early Archaic)	8000 to 3500 cal BC
Early	3500 to 600 cal BC
Middle	600 cal BC to cal AD 1000
Middle-Late Transition	cal AD 1000–1250
Late	cal AD to 1250–1769

* Following Jones et al. 2007.

Paleo-Indian

The Paleo-Indian era represents people's initial occupation of the region and is quite sparse across the Monterey Bay region. Evidence of this era is generally found through isolated artifacts or sparse scatters of debris from the manufacture of stone tools (Bertrando 2004). In the San Luis Obispo area, fluted points, particular type of stone tool, characterizing this era are documented near the town of Nipomo (Mills et al. 2005) and Santa Margarita (Gibson 1996). No fluted points have been found in the northern Central Coast—Monterey, Santa Cruz, and San Mateo Counties. Possible evidence for Paleo-Indian occupation is reported at CA-SCR-38/123, at Wilder Ranch (Bryne 2002), and CA-SCR-177 in Scotts Valley (Cartier 1993). The traditional interpretation of Paleo-Indian lifeways is that people were highly mobile hunters who focused subsistence efforts on large mammals. In contrast, Erlandson et al. (2007) proposes a "kelp highway" hypothesis for the peopling of the Americas. Proponents of this model argue that the earliest inhabitants of the region focused their economic pursuits on coastal resources. Archaeological sites that support this hypothesis are mainly from the Santa Barbara Channel Islands. Some scholars hypothesize that Paleo-Indian sites in the Bay Area/northern Central Coast region may exist but have been inundated as a result of rising ocean levels throughout the Holocene (Jones and Jones 1992).

Millingstone

Settlement in the Central Coast appears with more frequency in the Millingstone Period. Sites of this era have been discovered in Big Sur (Jones 1993; Fitzgerald and Jones 1999) and Moss Landing (Jones and Jones 1992; Milliken et al. 1999). Assemblages are characterized by abundant milling stones and hand stones, cores and core-cobble tools, thick rectangular (L-series) Olivella beads, and a low incidence of projectile points, which are generally lanceolate or large side-notched varieties (Jones et al. 2007). Eccentric crescents are also found in Millingstone components. Sites are often associated with shellfish remains and small mammal bone, which suggest a collecting-focused economy. Newsome et al. (2004) report that stable isotope studies on human bone, from a Millingstone component at CA-SCR-60/130, indicate a diet composed of 70%–84% marine resources. Contrary to these findings, deer remains are abundant at some Millingstone sites (cf. Jones et al. 2008), which suggests a flexible subsistence focus. Similar to the Paleo-Indian era, archaeologists generally view people living during the Millingstone era as highly mobile.

Early

The Early Period corresponds with the earliest era of what Rogers (1929) called the "Hunting Culture." According to Rogers, the "Hunting Culture" continues through to what is termed the Middle-Late Transition in the present framework. The Early Period is marked by a greater emphasis on formalized flaked stone tools, such as projectile points and bifaces, and the initial use of mortar and pestle technology. Early Period sites are located in more varied environmental contexts than milling stone sites, suggesting more intensive use of the landscape than practiced previously (Jones and Waugh 1997).

Early Period artifact assemblages are characterized by Large Side-notched points, Rossi Square-stemmed points, and several types of Olivella shell beads including Spire-lopped End-ground, Cap, and Rectangular . Other artifacts include less temporally diagnostic Contracting-stemmed and Año Nuevo long-stemmed points, and bone gorges. Ground stone artifacts are less common relative to flaked stone tools when compared with Millingstone-era sites.

Early Period sites are common and often found in estuary settings along the coast or along river terraces inland and are present in both Monterey and Santa Cruz Counties. Coastal sites dating to this period include CA-MNT-108 (Breschini and Haversat 1992a), CA-SCR-7 (Jones and Hildebrandt 1990), and CA-SCR-38/123 (Jones and Hildebrandt 1994).

Archaeologists have long debated whether the shift in site locations and artifact assemblages during this time represent either population intrusion as a result of mid-Holocene warming trends, or an in-situ adaptive shift (cf. Mikkelsen et al. 2000). The initial use of mortars and pestles during this time appears to reflect a more labor-intensive economy associated with the adoption of acorn processing (cf. Basgall 1987)

Middle

The trend toward greater labor investment is apparent in the Middle Period. During this time, there is increased use of plant resources, more long-term occupation at habitation sites, and a greater variety of smaller "use-specific" localities. Artifacts common to this era include Contracting-stemmed projectile points, a greater variety of Olivella shell beads and Haliotis ornaments that include discs and rings (Jones 2003). Bone tools and ornaments are also common, especially in the richer coastal contexts (Jones and Ferneau 2002a; Jones and Waugh 1995), and circular shell fishhooks are present for the first time. Grooved stone net sinkers are also found in coastal sites. Mortars and

pestles become more common than milling stones and hand stones at some sites (Jones et al. 2007). Important Middle Period sites include CA-MNT-282 at Willow Creek (Jones 2003; Pohorecky 1976), and CA-MNT-229 at Elkhorn Slough (Dietz et al. 1988), CA-SCR-9 and CA-SMA 218 at Año Nuevo (Hylkema 1991).

Jones et al. (2007) discuss the Middle Period in the context of Rogers' "Hunting Culture" because it is seen as a continuation of the pattern that begins in the Early Period. The pattern reflects a greater emphasis on labor-intensive technologies that include projectile and plant processing. Additionally, faunal evidence highlights a shift toward prey species that are more labor intensive to capture, either by search and processing time or technological needs. These labor-intensive species include small schooling fishes, sea otters, rabbits, and plants such as acorn. Jones and Haney (2005) offer that Early and Middle Period sites are difficult to distinguish without shell beads due to the similarity of artifact assemblages.

Middle-Late Transition

The Middle-Late Transition corresponds with the end of Rogers' "Hunting Culture." Artifacts associated with the Middle-Late Transition include contracting-stemmed, double side-notched, and small leaf-shaped projectile points. The latter are thought to represent the introduction of bow and arrow technology to the region. A variety of Olivella shell bead types are found in these deposits and include B2, B3, G1, G2, G6, and K1 varieties, notched line sinkers, hopper mortars, and circular shell fishhooks (Jones 1995; Jones et al. 2007). Sites that correspond with this time are CA-MNT-1233 and -281 at Willow Creek (Pohorecky 1976), CA-MNT-1754, and CA-MNT-745 in Priest Valley (Hildebrandt 2006). A greater number of Middle-Late Transition sites are found in San Luis Obispo County to the south.

The Middle-Late Transition is a time that appears to correspond with social reorganization across the region. This era is also a period of rapid climatic change known as the Medieval Climatic Anomaly (cf. Stine 1994). The Medieval Climatic Anomaly is proposed as an impetus for the cultural change that was a response to fluctuations between cool-wet and warm-dry conditions that characterize the event (Jones et al. 1999). Archaeological sites are rarer during this period, which may reflect a decline in regional population (Jones and Ferneau 2002b).

Late

Late Period sites are found in a variety of environmental conditions and include newly occupied task sites and encampments, as well as previously occupied localities. Artifacts associated with this era include Cottonwood (or Canaliño) and Desert side-notched arrow points, flaked stone drills, steatite and clamshell disc beads, Haliotis disc beads, Olivella bead types E1 and E2, and earlier used B2, B3, G1, G6, and K1 types. Milling stones, hand stones, mortars, pestles, and circular shell fishhooks also continue to be used (Jones et al. 2007). Sites dating to this era are found in coastal and interior contexts. Late Period sites include CA-MNT-143 at Asilomar State Beach (Brady et al. 2009), CA-MNT-1765 at Moro Cojo Slough (Fitzgerald et al. 1995), CA-MNT-1485/H and -1486/H at Rancho San Carlos (Breschini and Haversat 1992b), and CA-SCR-117 at Davenport Landing (Fitzgerald and Ruby 1997).

Coastal sites dating to the Late Period tend to be resource acquisition or processing sites, while evidence for residential occupation is more common inland (Jones et al. 2007).

3.3 Historical Overview of Santa Cruz County

3.3.1 Spanish Period (1769–1822)

The earliest known European exploration of the Monterey Bay was a Spanish envoy mission led by Sebastián Vizcaíno in 1602. The purpose of the voyage was to survey the California coastline to locate feasible ports for shipping, and Vizcaíno had explicit instructions prohibiting the creation of settlements and interacting with local Native Americans. Finding the bay to be commodious, fertile, and extremely favorable for anchorage during eastward voyages from Manila to Acapulco, Vizcaíno named the Bay "Monterey" after the Conde de Monterey, the present Viceroy in Mexico (Chapman 1920: 293–4; Hoover et al. 2002: 225–6).

Despite being mapped as an advantageous berth for Spanish shipping efforts, the epicenter of Spanish settlement in Alta California did not make its way to the Monterey Bay until the second half of the eighteenth century. In an effort to prevent the establishment of English and Russian colonies in northern Alta California, Don Gaspar de Portolá, the Governor of Baja, embarked on a voyage in 1769 to establish military and religious control over the area. This overland expedition by Portolá marks the beginning of California's Historic period, occurring just after King Carlos III of Spain installed the Franciscan Order to direct religious colonization in assigned territories of the Americas. With a band of 64 soldiers, missionaries, Baja (lower) California Native Americans, and Mexican civilians, Portolá established the Presidio of San Diego, a fortified military outpost, as the first Spanish settlement in Alta California. In July of 1769, Padre-Presidente Franciscan Fr. Junípero Serra founded Mission San Diego de Alcalá at Presidio Hill, the first of the 21 missions that would be established in Alta California by the Spanish and the Franciscan Order between 1769 and 1823, including Mission Santa Cruz in 1791 (Hoover et al. 2002: 226; Lehmann 2000: 3; Koch 1973: 3).

On their quest to locate the Monterey Bay from the 160-year-old accounts of Sebastián Vizcaíno, the Portolá expedition first reached the present-day territory of Santa Cruz on October 17, 1769. After mistakenly circumventing the Monterey Bay and reaching the San Francisco Bay, the expedition backtracked to San Diego. The following year on May 31, 1770, a second expedition was organized by Portolá resulting in a successful location of the Monterey Bay. However, it would be an additional 21 years before the Franciscan order would establish Mission Santa Cruz in the area near the San Lorenzo River (Koch 1973: 2–3; Hoover et al. 2002: 447–8).

Father Fermín Lasuén, Corporal Luis Peralta, and five soldiers established Mission Santa Cruz on August 28, 1791, as the twelfth mission in the California Mission system. The Spanish Padres converted local Native Americans to Catholicism largely against their will, after which they were known as neophytes. Neophytes were forced to build the mission church and auxiliary structures from local timber, limestone, and adobe, as well as to cultivate wheat, barley, beans, corn, and lentils for their captors. In 1792, neophytes were directed to excavate a ditch for the purposes of carrying water from Tres Ojos de Agua (Three Eyes of Water), a group of three creeks near the modern entrance to the University of California, Santa Cruz campus, down to the Mission site. This ditch and the footpath beside it established the foundation for the future orientation of High Street in the City of Santa Cruz today, and offered the Mission a distinct advantage in a geographic area that often experienced water shortages during the summer months (Hoover et al. 2002 448; Lehmann 2000: 3-4; SCWD n.d.: 1).

From the start, Mission Santa Cruz was plagued by substantial issues. The forced conversion of the local native population by the Spanish Padres resulted in repeated rebellions, violence, desertion, and pestilence at Mission

Santa Cruz. In 1793, the neophyte population attacked the Mission guards and burned their station to the ground. In 1798, Padre Fernandez reported that 189 of the approximately 230 neophytes living on the Mission grounds had abandoned the Mission, causing the crops to fail and the livestock to be largely neglected. The Mission also experienced problems wrought by a nearby settlement known as Villa de Branciforte (Lehmann 2000: 3-4).

In 1795, Spain established three self-governing Pueblos in Alta California that, unlike the Missions, would remain free from military and religious oversight. Villa de Branciforte was established in 1797 on the opposite bank of the San Lorenzo River from Mission Santa Cruz along the present-day alignment of both Branciforte Avenue and Branciforte Creek. The 40 settlers of Villa de Branciforte were not provided with the resources promised to build housing or cultivate the land and had to make do with crude dwellings of their own design. In 1803, there were 107 inhabitants, but because the population was made up of former soldiers, artisans, and criminals, they lacked the pertinent skill to farm and sustain themselves. Despite population growth in the initial years, the settlement was quickly deemed a failure by Spain (Lehmann 2000: 4-5).

By 1817, the population of Villa de Branciforte had dwindled to 52 people. In 1818, fearing the attack of the French pirate Hippolyte de Bouchard who had recently attacked the Monterey Presidio, the Mission Padres fled from the Mission Santa Cruz and placed the care of the complex with the remaining inhabitants of Villa de Branciforte. Instead of securing the Mission, the inhabitants of the Villa looted the valuable items from the complex while the Padres were away, including furniture, doors, and flatware. Additionally, just under half of the 410 neophytes living at the Mission fled from the complex during the looting chaos and never returned (Lehmann 2000: 4-5).

3.3.2 Mexican Period (1822–1848)

After more than a decade of intermittent rebellion and warfare, New Spain (Mexico and the California territory) won independence from Spain in 1821. In 1822, the Mexican legislative body in California ended isolationist policies designed to protect the Spanish monopoly on trade, and decreed California ports open to foreign merchants. In addition to eliminating the system of Spanish nobility in California, the Spanish missions across the territory were secularized during this period (Koch 1973: 10; Lehmann 2000: 4).

The secularization of the Spanish Missions meant that all communal mission property was placed in a trust with the intention of being returned to the local Native American population. In Santa Cruz, the land stolen by the Spanish was returned to Native Americans between 1834 and 1839, but a smallpox epidemic in 1838 and reoccurring bouts of syphilis caused a massive decline in the Native American population from 284 persons in 1837 to only 71 persons in 1839. This meant that very few eligible Native American recipients remained to receive it, and records indicate that overall, only 25 Native Americans held property in the Santa Cruz area between 1834 and 1849 (Lehmann 2000: 4-5).

Extensive land grants were established in the interior during the Mexican Period, in part to increase the population inland from the more settled coastal areas where the Spanish had first concentrated its colonization efforts. Land grants to citizens covered over 150,000 acres of present-day Santa Cruz County. Three land grants covered the regions of the densely forested Santa Cruz Mountains that falls within Santa Cruz County, including Rancho Zayante (1841), Rancho Cañada del Rincon en el Rio de San Lorenzo (1843) and Rancho Carbonera (1838) (Hoover et al. 2002: 455-457; Robinson 2012: 7).

The scarcity of water in the future City of Santa Cruz intensified towards the end of the Mexican Period with assistance from a formal decree by the Santa Cruz Alcalde, Don Manuel Rodriguez. In 1844, Rodriguez transferred the rights to the water carried by the 1792 aqueduct to the limited control of the mission and eight adjacent grant-holders. After this point, the growing population in the outlying areas of Santa Cruz became exclusively reliant on water taken from shallow wells and surface sources that were subject to seasonal surge and drought cycles, such as the San Lorenzo River (SCWD n.d.: 1).

3.3.3 American Period (1848–Present)

The Mexican American War ended with the Treaty of Guadalupe Hidalgo in 1848, ushering California into its American Period. Santa Cruz was designated as one of the 27 original counties of California on February 18, 1850, shortly before California officially became a state with the Compromise of 1850. The new State of California recognized the ownership of lands in the state distributed under the Mexican land grants of the previous several decades (Lehmann 2000: 5; Koch 1973: 35).

As the Gold Rush was picking up steam in 1849, a massive influx of people seeking gold steadily flooded the rural counties of California. The gold fields quickly dried up, causing many new arrivals to refocus on other economic opportunities. In Santa Cruz County, insightful entrepreneurs saw the arrival of opportunity-seeking laborers as a means to harvest the abundant natural resources found throughout the area. In the northern areas of the young county, the lumber, mining, fishing, tanning, and leisure industries formed the economic foundation of the County. In the central and southern areas of the County, early settlers took advantage of the fertile soil and temperate climate to establish large farms and dairies. Agricultural products including grain and apples were among the County's earliest and most successful (Lehmann 2000: 7).

As the County moved into the 1900s, agriculture, extractive industries such as lumber and mining, and tourism continued as the region's most prominent economic drivers. By the late 1950s, the population began to expand with aid from the establishment of Cabrillo College in 1959 and the University of California at Santa Cruz in the 1965. These higher-education facilities brought both students and jobs as the schools became major sources of community employment throughout the County. During the 1980s, a number of technology companies settled in the area due to its proximity to Silicon Valley. Today, tourism, agriculture, manufacturing, and technology are the key industries that provide the economic base for County's 273,213 residents (U.S. Census Bureau 2019).

3.4 Water Management in North Santa Cruz County

3.4.1 Early Water Management in Santa Cruz County

Several miles north of the evolving city center at the base of the Santa Cruz Mountains, multiple mountain streams and tributaries carve deep channels and valleys through the dense redwood and oak timberlands. The extensive virgin forests and the rich underground deposits of lime in the Santa Cruz Mountains attracted opportunistic settlers and purveyors in the mid- to late-1800s who sought to harness the power of the mountain streams to move the goods located in the remote area to market (Hoover et al. 2002: 456).

The California Gold Rush of 1848 accelerated the desirability of land across the state, and before long, access to water in the drought-prone region took on the highest level of importance. Instead of adopting an equal water access

structure in the fashion of the eastern United States, the wealth potential of waterways during the Gold Rush shaped California water law into a "first in time, first in right" system known as Prior Appropriation. Under this system, riparian rights were granted to the first person to use a river or tributary for beneficial consumption like mining, farming, milling, or as-needed domestic use. When land in the Santa Cruz Mountains was subdivided and sold, access to the rivers and streams was enormously important. Not only did it mean that the initial use set out for a waterway was the primary use, it also meant that any subsequent uses could not supersede or negatively affect the chief use. The order that claims were recognized during this period established the foundation of the complicated system of water allocation rights still in use today in California (Pisani 1984: 246–247).

Many of these powerful mountain streams and tributaries were utilized by early landowners and tenant entrepreneurs to make a profit from the natural resources that formed the early economic basis of the County. Several of these mountain creeks still bear the names of the first men who established mills or permanently settled beside them. Majors Creek was named for Joseph L. Majors, who established a grist mill on the creek prior to serving as the County Treasurer between 1850 and 1853. Liddell Creek was named for George Liddell who moved to the Santa Cruz Mountains and established a sawmill on the creek in 1851. Newell Creek was named for Addison Newell who established a farm in the steep, V-shaped valley on the banks of the creek in 1867 (Koch 1973: 33–34; Clark 2008: 174, 187, 215).

For others, the streams presented pure economic opportunity. The first power sawmill in California was built on Rancho Zayante by Isaac Graham in the 1842 and was driven by the waters of Zayante Creek. Isaac E. Davis and Albion P. Jordan of the Davis and Jordan Lime Company purchased a portion of Rancho Cañada del Rincon in 1853 as a promising quarry site. They also utilized the falling water on the property to process local lumber into fuel for their many kilns. The California Powder Works was established in 1865 on the bank of the San Lorenzo River on a portion of Rancho Carbonera. The Powder Works used the river to grind raw materials used in the production of the first smokeless powder manufactured on the west coast of the United States. By 1868, there were a sizable number of business and industries that relied on water from County waterways to operate, including 12 water-powered lumber mills, 10 steam-powered lumber mills, and 9 shingle mills in operation within the County (Clark 2008: 130–131; Hoover et al. 2002: 456; Koch 1973: 36–37; Brown 2011: 4).

3.4.2 Water Management in the City of Santa Cruz

As water management techniques were being applied to a variety of industries throughout the County, the successful technologies developed and used in early natural resource harvesting, such as flumes and pumps, prompted local residents in the City of Santa Cruz to consider why these were not being put to use for the benefit of drinking water. The following section provides an outline of specific projects and milestones related to the development of water management systems in the City of Santa Cruz.

3.4.2.1 Private Development (1864–1916)

Beginning in the 1860s, acute cyclical water shortages and pollution prompted the development of several for-profit water systems in Santa Cruz. By the end of the 1880s, the two surviving major water companies, F.A. Hihn Water Works and the Santa Cruz Water Company, were joined into a single private business that competed with the City's new municipal water system that began in 1890 for almost three decades before being purchased by the City and integrated into the municipal system in 1916.

3.4.2.1.1 F.A. Hihn Water Works (1864)

In 1864, prompted by the issue of shortage, young entrepreneurs Elihu Anthony and Fredrick A. Hihn implored the Board of County Supervisors to allow them to dig trenches and lay redwood pipes to transport water throughout Santa Cruz. The "wooden tubes" were chosen as an inexpensive alternative to iron pipes (Santa Cruz Weekly Sentinel 1864: 2). The source of the water was an 8,000-gallon reservoir on Anthony's property supplied by water from Scott's Creek, and eager recipients of the water could gain access for a fee. (Brown 2011: 1–2; Santa Cruz Weekly Sentinel 1864: 2).

By 1876, the 1864 system was known as the F.A. Hihn Water Works, and it was the largest provider of water in the newly chartered City, with Dodero and Carbonera Creeks constituting its primary sources. The company predated the incorporation of Santa Cruz by 2 years (Koch 1973: 35; Brown and Dunlap 1956: 14; City of Santa Cruz 2020).

3.4.2.1.2 The Santa Cruz Water Company (1866)

In 1866 a new, fee-based, private water supply company was founded to share in the lucrative profits of the F.A. Hihn Water Works. A man named E. Morgan acquired rights to the waters of the San Lorenzo River in 1866, just prior to the town of Santa Cruz being officially incorporated later that year. He used these rights to install a section of pipework conveying water to the area known then as the "The Flats," which comprises the modern area of Pacific Avenue and Front Street (SCWD n.d.: 1).

In 1876, Morgan sold his system to a wealthy man from San Francisco named H.K. Lowe. Under Lowe's guidance, the Santa Cruz Water Company incorporated in July 1876 and began construction on a pumping station on the San Lorenzo River approximately 1 mile upstream from the City, as well as a new reservoir located on High Street. Morgan retained 50 company shares and became the resident engineer and superintendent of the Santa Cruz Water Company. By the end of 1876, the company had also installed a Branciforte Creek diversion to deliver water via a pipeline to a new reservoir located at the base of School Street. As the City continued to grow and the steam-powered pumping plant installed on the San Lorenzo River became the source of repeated water-quality concerns, the Santa Cruz Water company acquired partial water appropriation rights to the Majors (then called Cojo Creek) in 1881. After the acquisition, the company scrapped the whole San Lorenzo pumping plant for $800 (Santa Cruz Weekly Sentinel 1877a: 1; 1877b: 2; SCWD n.d.: 1).

For the next several years, the Santa Cruz Water Company focused its attention on the construction of a pipeline to divert water from Majors Creek. This effort was very costly, and the company slipped into dire financial condition. In August 1886, the company along with all of its appurtenances was sold to the City, financed through the sale of bonds from the Bank of Santa Cruz and the Anglo-Californian Bank. Hihn bitterly opposed the issuance of the bonds and contested their legality in court. The matter reached the Supreme Court and the election in favor of the bonds was declared invalid in 1887. By this time however, the City had already operated the water system for over a year when it was re-conveyed to private owners in 1887 (Santa Cruz Weekly Sentinel 1882: 3; SCWD n.d.: 1; Santa Cruz Surf 1890a: 1).

The City voted again in March 1888 to put up the bonds necessary to purchase the Santa Cruz Water Company system from the private owners. However, while the City was in the process of securing the bonds for the purchase, the Santa Cruz Water Company system was covertly sold to F.A. Hihn in a private, backroom transaction before the City could obtain legal ownership. Hihn quickly consolidated the Santa Cruz Water Company system with his own system of works. This transaction effectively severed any opportunity the City had of acquiring an established water

works system with which to launch their own public water system (Santa Cruz Daily Surf 1888a: 3, 1888b: 2; Santa Cruz Surf 1890a: 1).

F.A. Hihn continued to operate the consolidated system as the Santa Cruz Water Company and expanded the service area east into the Seabright neighborhood until his death in 1913 (SCWD n.d.: 1).

3.4.2.2 Public Development (1890–1917)

During the 1880s, the rising price of these fee-based water systems like the F.A. Hihn Water Works and the Santa Cruz Water Company prompted the City to explore their own, city-owned, public water option. After several disappointing attempts to acquire an existing system of water works, the City revised its approach and began planning to build a diversion system and storage reservoir from the ground up, prompting the development of the first municipal water project in Santa Cruz, the Laguna Creek Dam and the Cowell Reservoir. This project led the way for other ambitious water system development in the City including several other north coast stream diversions and the first pumping plant on the San Lorenzo River. In 1916, the City acquired the rights to the Santa Cruz Water Company and began to tie in the systems as one, forming the basis of the modern City system used today.

3.4.2.2.1 The Laguna Creek Dam and the Cowell Reservoir (1890)

In July 1888, the Common Council secured the water rights to the Laguna Creek. "The Laguna," the *Santa Cruz Sentinel* reported, "is a rushing, roaring mountain stream, entirely rock bound and tree shaded above the falls where it is proposed to take the water out (Santa Cruz Sentinel 1888: 2)." The stream was capable of supplying 1.4 million gallons towards a City-owned water works. Plans were finally in motion for the construction of the first city-owned water works, supplied through a new pipeline by the waters of Laguna Creek, with reserve storage in a new City reservoir on Henry Cowell's ranch property known as the Cowell Street Reservoir, which was located roughly at the present site of the U.C. Santa Cruz Arboretum. The *Santa Cruz Surf* reported with excitement that the new project would mean open, municipal water so that each citizen of Santa Cruz could finally "quench his thirst with free water without 'dropping a nickel in the slot'" (Santa Cruz Surf 1890a: 1).

The bonds required to fund the construction of the City water works were secured within the following year, and in July 1889, a civil engineer named G.S. Schussler issues a report in favor of the project that valued the proposed undertaking at $260K (Santa Cruz Surf 1889a: 3, 1889b: 3).

The prominent San Francisco firm Risdon Iron Works was selected as the contractor, who were known for producing the great iron pipes for steam ships. The *Santa Cruz Surf* reported that work on the dam on Laguna Creek and the dam at the reservoir site would be completed by the San Francisco contracting firm Kelso and Dare (Santa Cruz Surf 1889c: 3).

On September 30, 1890, the *Santa Cruz Surf* reported that the reservoir and the pipeline of the City water works were nearly complete. The article published an in-depth description of the new Laguna Creek Dam (Exhibit 1), stating that (Santa Cruz Surf 1890b: 3):

> The dam across Laguna Creek just above the Henneuse place is one of the finest pieces of rubble stone work in the county and not to be excelled anywhere. The granite rocks used in its construction were taken from the bed of the creek, some of them weighing as much as two tons. The water will

first be diverted from the Laguna at this point into a flume 3x4 feet and one hundred feet in length, also built of solid masonry. This is nearly level and terminates in a basin two feet lower, and into which the sand and sediment which may be carried in the water in a time of storm will settle. Gates are provided by means of which this basin can be cleared as often as required. From here the water will enter the 14-inch main through which it will be carried to the storage reservoir. This pipe follows the canyon of the Laguna creek as nearly as possible to the county road about three miles.

Exhibit 1. The earliest known photograph of the Laguna Creek Masonry Dam published in the Santa Cruz Surf in 1892 (Santa Cruz Surf 1892: 2)

On October 18, 1890, the last pipe connecting the Laguna Creek to the new Cowell Street Reservoir (Exhibit 2) was put into position. The pipeline emptied into the reservoir for storage and eventual distribution to the homes and businesses of Santa Cruz (Santa Cruz Surf 1890c: 3).

Exhibit 2. The earliest known photograph of the Cowell Street Reservoir published in the *Santa Cruz Surf* in 1892 (Santa Cruz Surf 1892: 2).

3.4.2.2.2 Reggiardo Creek Diversion (Flume 1891, Dam 1912)

A 965-foot-long flume was completed in 1891 connecting the west branch of Laguna Creek, colloquially known as Reggiardo Creek, to the main Laguna Creek by emptying out water to the north of the Laguna Creek Dam. The new flume was intended to help supplement the municipal supply from Laguna Creek, as the year-old Laguna Creek Dam was quickly inundated with sediment and less water than expected was being captured by the system overall (Santa Cruz Surf 1892: 2).

In 1912, R.S. Tait, the water superintendent, announced that a dam had been completed on Reggiardo Creek to aid in the supply of daily drinking water sourced from Laguna Creek. The level of Laguna Creek had been significantly reduced by a lack of rainfall in the watershed area, causing the supply of water in the impoundment to drop below sufficient levels to support the community (SC Evening News 1912: 2).

3.4.2.2.3 High Street Distribution Reservoir (1904)

In 1894, the City purchased a parcel of land located on the south side of High Street between present-day Laurent and Storey Streets for the construction of a Distribution Reservoir. The Cowell Reservoir was constructed to hold 60 million gallons, but it was carved into a porous limestone formation known as karst that caused approximately 1 million gallons of leakage daily. The Distribution Reservoir was intended to serve are a secondary reservoir for the Cowell Reservoir to preserve the water that was otherwise lost before it could be pumped into the distribution system (Santa Cruz County Assessor 1894; SCMU 2016: 1).

The site for the Distribution Reservoir overlapped Dodero Spring Creek (then called Meyrick Brook) and provided the added benefit of impounding a percentage of the water from this source while temporarily storing the water impounded from the City Water Works on Laguna and Reggiardo Creeks. The survey and specifications for the new reservoir were completed in 1895 and the Santa Cruz Sentinel reported that the reservoir would have a capacity of 2.5 million gallons and cover three-quarters of an acre. Construction on the reservoir began in 1904 and it was completed later that year (Santa Cruz Sentinel 1895: 3, 1903: 4, 1904: 3).

3.4.2.2.4 Liddell Spring Diversion (1913)

Discussions about securing the title to Liddell Spring and utilizing it as a source of municipal water were gathering support in the City government beginning early in 1913. By July 1913, a pipeline between Liddell Spring and the main municipal pipeline from Laguna Creek was operational, and, at a rate of 590,000 gallons per day, was outproducing all the other existing municipal water sources (SC Evening News 1913a: 1).

3.4.2.2.5 Crossing Street Pump Station (1913)

In 1913, a new well was drilled on the San Lorenzo River at Crossing Street, just north of the present intersection of Highway 1 with the river. It was equipped by a 75-horsepower, 5-inch, three-step centrifugal pump that was installed by the United Iron Works. The pump was capable of pumping 500 gallons per minute and cost $1844 dollars at the time of installation (SC Evening News 1913b: 1).

3.4.2.2.6 Acquisition of the Santa Cruz Water Company System (1913–1916)

Fredrick Hihn passed away in 1913 and his ownership of the Santa Cruz Water Company passed to his children. The City seized the opportunity to acquire the Santa Cruz Water Company system, and in 1916 assumed full legal ownership of the entire system, which included right to water being drawn from Branciforte Creek, Carbonera Creek, Majors Creek, and the San Lorenzo River (SCWD n.d.: 2; Monterey American 1913: 7; SC Evening News 1914: 1).

3.4.2.3 Public Development (1918–1939)

Public development during this period was predominantly focused on the repair and upgrade of existing system components. Although upgrades and additions were added to the several major facilities to increase the ability to store and improve the overall quality of municipal water during this period, with projects such as the Bay Street Reservoir in 1924 and the New Crossing Street Pumping Plant in 1929, the output was not widely increased between 1917 and 1930. Service began expanding into the areas to the east outside of the City with focused initiatives like the East Side Water Extension during this period (Brown and Dunlap 1956: 1-2).

3.4.2.3.1 The Bay Street Reservoir (1924)

The Bay Street reservoir was completed in 1924 and was located 1 mile southeast of the Cowell Street Reservoir on a site to the east from the present intersection of Bay Street and Meder Street. The 35-million-gallon capacity open-air tank was built to replace the Cowell Street reservoir. The Bay Street reservoir was constructed of stone and lined with concrete and was intended to be much more capable of reserving water accumulated from the surface stream sources for use during the dry summer and fall months (Exhibit 3) (SCMU 2016: 1).

Exhibit 3. Construction of the Bay Street Reservoir in 1924 (SCPL 1924)

3.4.2.3.2 Crossing Street Pumping Plant (1929)

In 1929, the City completed a new, modern pumping plant on the San Lorenzo River on the southern side of Crossing Street across from the 1913 Crossing Street Pumping Plant site (Exhibit 4). Once complete, the plant went by the same name as its predecessor until it eventually was known simply as the Municipal Pumping Plant. Today, it is called the Coast Pump Station.

The new facility was designed by City engineer Roy Fowler and consisted of a pumping plant capable of producing 6 million gallons of potable water in a 24-hour period from the San Lorenzo River. The plant operated with the help of "diesel engines, pumps, motors, generators, and all other necessary auxiliary equipment" (SC Evening News 1928: 8). The plant also treated the water with chlorine, making it safer to drink (SCWD n.d.: 3; Brown and Dunlap 1956: 1; SC Evening News 1928: 8, 1929: 7).

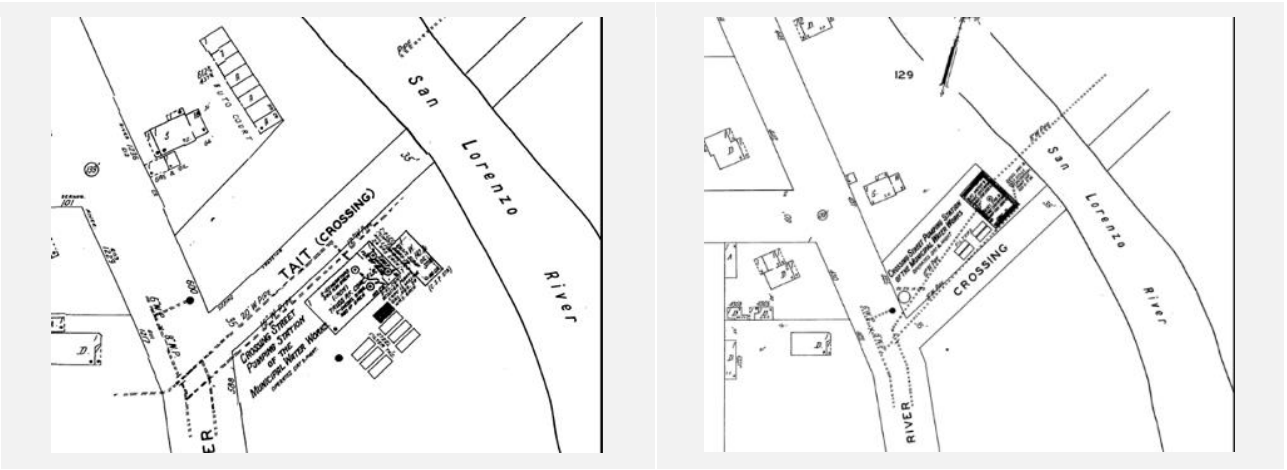

Exhibit 4. Comparison of the 1928 Sanborn Map (left) showing the old Crossing Street Pumping Plant and the 1928-1950 Sanborn Map showing the new facility completed in 1929 in approximately 1945 (right) (Sanborn Map Company 1928: 103, 1928–1950: 103)

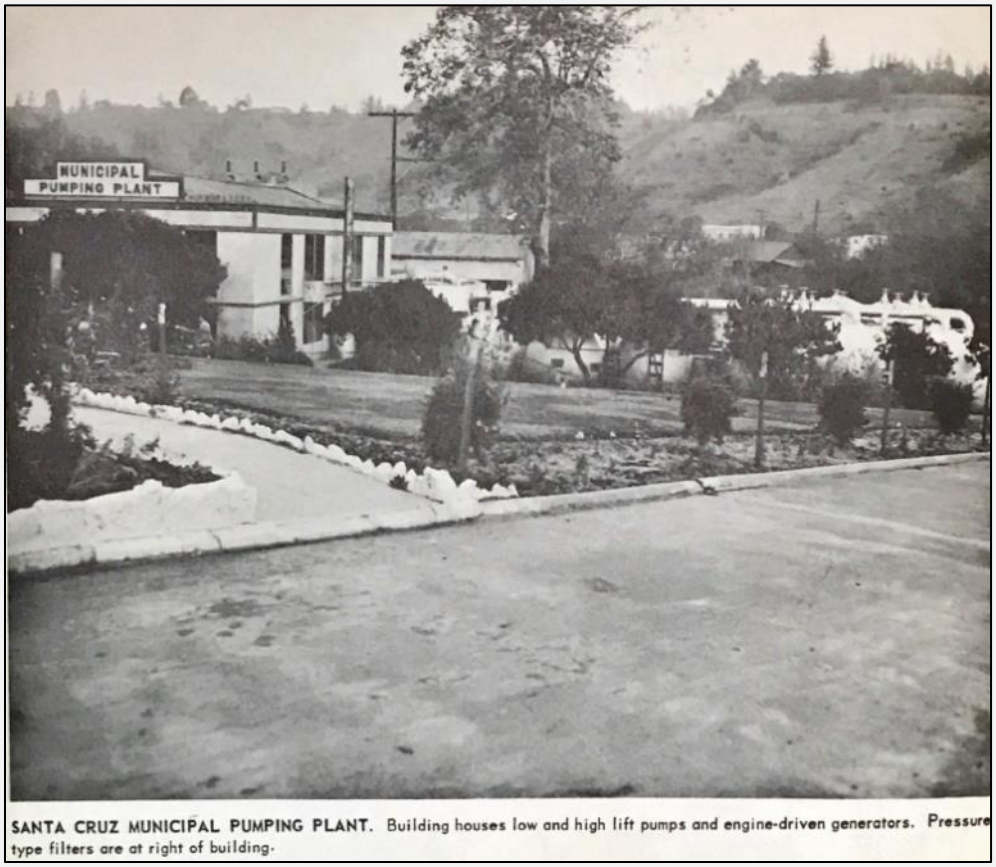
The low rainfall in winter 1931 prompted the City to drill four more wells at the site of the Crossing Street Pumping Plant. One of the wells was located at the site of the pumping plant on the west side of the river, while the remaining three were drilled on the east bank. This increased the output of the municipal water supply greatly and allowed for expansion into other parts of the City. In 1934, the City boasted in the *Santa Cruz Sentinel* that 63.4 million gallons of water had earned the City a profit of $11,119 during April 1934 (Brown and Dunlap 1956: 14; SC Evening News 1931: 5; Santa Cruz Sentinel 1934a: 7).

In 1945, Crossing Street was renamed Tait Street for Water Superintendent R.S. Tait. A photograph of the Municipal Pumping Plant included in the 1956 investigative report into the Santa Cruz area water supply projects by engineers Brown and Dunlap demonstrates how the plant appeared during this period (Exhibit 5) (Santa Cruz Sentinel 1945: 8).



SANTA CRUZ MUNICIPAL PUMPING PLANT. Building houses low and high lift pumps and engine-driven generators. Pressure type filters are at right of building.

Exhibit 5. The Municipal Pumping Plant as it appeared in 1956 (Brown and Dunlap 1956: 18).

3.4.2.3.3 East Side City Water Extension (1934)

In 1934, work began on what was known as the East Side Water Extension, to extend the municipal water service into the Seabright and Live Oak areas of Santa Cruz via a new pipeline. Santa Cruz East Side residents C.W. Raisch, E. Brandt, George Ellison, Edith H. Evans, and Nathan Menderson donated the private property to the City needed for a right-of-way, and the pipeline extended from the municipal system to the areas of the City located on the east side of the San Lorenzo River. Additionally, two 1,000,000-gallon tanks were placed in De Laveaga Park in the north of the City as a reservoir for this branch of the system (Santa Cruz Sentinel 1933: 7, 1934b: 9).

3.4.2.4 Private Development (1936–1939)

In areas of the county that were not serviced by the municipal system, private systems such as the Beltz system were developed by residents to provide water for other residents of the area.

3.4.2.4.1 Beltz Water Company (1936)

In 1936, the County granted Iowa native, Charles Lemar Beltz, the rights to begin operating a private water system in the area of the County roughly bounded by Capitola Road to the north, Rodeo Gulch and Corcoran's Lagoon to

the west, the bay to the south, and 41st Avenue to the east. The ambitious service area of the Beltz system covered approximately 25% of the Live Oaks district with water sourced from ground wells located throughout the district and conveyed through pipelines situated beside Live Oak roads (Santa Cruz Sentinel 1936: 8, 1947: 1; SC Evening News 1936: 2).

3.4.2.5 Post-War Water Infrastructure Expansion (1945–1984)

Many of the post-war water projects in Santa Cruz can be characterized as repair of existing infrastructure and expansion of the overall water system to support rapid population growth. The years following World War II provoked westward migration and an increase in birth rates, causing the population of California to increase from 6.95 million to 10.65 million between 1940 and 1950. In Santa Cruz, the growth of the community from 27,430 to 41,680 between 1940 and 1950 caused the common seasonal water shortages during dry months to become problematic in regard to growth and potential for community expansion (SCPL n.d.: 1).

In 1945, the state recognized a water shortage in Santa Cruz and authorized an investigation of available water resources. In 1946, the acute nature of the water crisis prompted the community to request a survey to determine an inventory of the available groundwater supply and plan for growth in the future. Completed In 1948, the survey determined that although the San Lorenzo pumping plant was running at full capacity, 24 hours per day during the dry summer of 1947, the river was so low that the entire run was being diverted through the pumps and into the City mains for consumption (SWRCB 1953: 57; Brown and Dunlap 1956: 1–2).

Prompted by these concerns, in 1953 the State Water Resources Board released a report that inventoried available surface and underground water sources in the County and projected increased water utilization that exceeded the available water in Pajaro Valley, the Soquel Creek area, and the coastal area around and including Santa Cruz. The report identified requirements for supplemental water for Santa Cruz and areas served by SCWD (SWRCB 1953: 57).

The County formed the Santa Cruz County Flood Control and Water Conservation district in 1955 and hired Creegan & D'Angelo Civil Engineers in 1956 to complete an extensive survey identifying dam sites, groundwater sources, and additional steps to improve control of the water supply throughout the County to compete with the City's proposals. The report asserted that population growth was a major concern for the water supply in the City because "the City of Santa Cruz has current water requirements which equal the capacity of the existing water supply system during a relatively dry era. Should an exceptionally dry season be experienced, there would be a serious water shortage in the City of Santa Cruz" (Creegan & D'Angelo 1957: 8).

Present supplies were determined to be insufficient for standard rates of population growth, including years that rainfall was considered more plentiful. Despite the rate of water consumption in the service area tripling between the mid-1930s and mid-1950s, there had been no additions to the municipal water supply during that time. Creegan & D'Angelo would also serve as the engineers for the Santa Cruz County Flood Control and Water Conservation District Advisory Committee, and ultimately, their recommendation to the council to remedy the current water crisis in the City was a dam on Newell Creek (Santa Cruz Sentinel 1953: 1, 1954: 1, 1958: 4).

A number of general obligation and revenue bonds helped to fund a wide range of water-related projects in Santa Cruz during this period, including routine maintenance and transmission line replacements, but also projects such as the Graham Hill Treatment Plant (1959), Newell Creek Dam (1960), the Tait Street Diversion (1961) and the Felton Diversion Station (1976). The need for these projects was driven by the need for more water to support a

growing, post-war population, but the use of bonds allowed for flexibility to project for future growth. In 1974, the *Santa Cruz Sentinel* surmised that "successful bond issues in 1958, 1963 and in 1967 reflected public confidence in the water administration and a recognition of the needs for more water, apparently, for there was relatively little difficulty getting approval" (Santa Cruz Sentinel 1974: 1–2).

3.5 Development of the Graham Hill Water Treatment Plant (1959)

The GHWTP is a water filtration and treatment facility designed by Brown and Caldwell Civil and Chemical Consulting Engineers that was completed in 1959. It was planned during the same period as the Newell Creek Dam and also funded by the same water revenue bonds that helped to build the dam. The GHWTP was designed with a capacity to treat 12-million gallons of water per day and was located beside Graham Hill Road, from which it takes its name. Among other sources which have been added since the plant's initial construction, water derived from the coastal watersheds including Laguna Creek, Reggiardo Creek, Liddell Spring and Majors Creek and? is transported through a blend of gravity and pumping to the GHWTP to be filtered and treated before distribution as drinking water. Raw water from the San Lorenzo River and Loch Lomond Reservoir are also treated at the GHWTP. Carey & Co. asserts that "The GHWTP provides for the treatment of all water for the city, except for water from the Beltz Wells [water treatment plants]. Water use fluctuates seasonally from 6 to 7 MG [million gallons] per day in the winter to 10 to 12 MG per day in the summer. The treatment process consists of prechlorination, flocculation, sedimentation, filtration, and post-chlorination (2019: 3)" (SCWD n.d.: 3; SCMU 2016: 1; Santa Cruz Sentinel 1961: 16).

The GHWTP was upgraded and enhanced in 1987 following a push for major upgrades throughout the municipal system beginning in 1984 (see Section 4.1.3. Modifications to the Graham Hill Water Treatment Plant, for more information) (SCMU 2016: 1).

3.6 Engineers: Brown and Caldwell Civil and Chemical Consulting Engineers (1947–Present)

Engineers Kenneth Brown and David Caldwell founded Brown and Caldwell Civil and Chemical Engineers in 1947 in San Francisco, California. The firm specialized in surveys and consultation related to water supply management and treatment, and in the design of sewer and water treatment infrastructure, water and sewage treatment plants, and delivery pipelines.

The firm is presently still in operation and continues to provide a wide selection of services related to "Safeguarding Water, maintaining infrastructure and restoring habitats" (Brown and Caldwell 2021).

A representative selection of projects completed by Brown and Caldwell is presented below (Colfax Record 1949: 4; Napa Journal 1949: 7; Press Democrat 1951: 1; Ukiah Daily Journal 1957: 9; Daily Independent Journal 1958: 11; Sacramento Bee 1960: 18):

- Auburn Domestic Water Treatment Plant (consulting engineers), Auburn, California (1949)
- Conn Water System Investigation (consulting engineers), Napa County, California (1949)
- Santa Rosa Sewer Plant (consulting and designing engineers), Santa Rosa, California (1951)

- Ukiah Treatment Plant (designing engineers), Ukiah, California (1957)
- South Tahoe Public Utility District Sewage Treatment Plant (consulting engineers), South Lake Tahoe, California (1960)

3.7 Architect: Ernest J. Kump (1911–1999)

The following section was quoted in its entirety from the DPR 523 form set prepared in 2019 by Carey & Co. for the GHWTP (Carey & Co. 2019: 4–5):

> The Operations Building is attributed to the Office of Ernest J. Kump, Architects and Planning Consultants of Palo Alto, California. Drawing sheet A-2 (Sheet No. 14/107) through A-15 (Sheet No. 27/107) have the title block of the firm. The drawings are not stamped by an architect.
>
> **Ernest J. Kump, Jr., Architect**
>
> Ernest J. Kump, born in December 1911 in Bakersfield, California, began training as a draftsman at a young age. Kump attended Kern County Union High School where he spent his high school years studying drafting under architectural educator Clarence Cullimore, FAIA. Kump completed his undergraduate degree at the University of California, Berkeley in 1932. He continued his studies at Harvard for a year before returning home because of a lack of finances. Kump joined his father's architectural firm upon arriving in Fresno, California. Kump subsequently partnered with Charles Franklin whom he met while working at his father's firm. The firm established in 1937 was praised for works which were "outstanding examples of innovative open plan modular construction."
>
> During World War II, Kump and Franklin relocated to the Bay Area, went their separate ways, and Kump became an architect for the Navy. At the end of the war, Kump and Franklin reestablished the firm with Mark Falk, a structural engineer, as a new partner. Franklin, Kump & Falk had its office in San Francisco. The firm won numerous awards for its International style designs. In 1955, Kump formed his own firm, Ernest Kump Associates, with offices in Palo Alto and New York. He became best known for his school designs, Notably, Foothill College in Los Altos, California (1962), De Anza College, Cupertino (1967), and Crown College, University of California, Santa Cruz (1967).
>
> In addition to being an accomplished architect, Kump also held 59 U.S. and international patents. He developed designs for low cost, prefabricated structures for which the American Institute of Architects identified Kump as "a pioneer of modular practices and systems concepts in architecture." He wrote several books, taught university courses and served on President Reagan's Task Force for Arts and Humanities. Upon retiring, Kump lived abroad and operated a consulting office out of London. Kump died in Switzerland in 1999.

3.8 Landscape Architect: Mary Gordon

The following section was quoted in its entirety from the DPR 523 form set prepared in 2019 by Carey & Co. for the GHWTP (Carey & Co. 2019: 5):

> The drawing sheets related to the landscaping of the site are attributed to Mary Gordon, Landscape Architect, in Palo Alto, California. Internet research resulted in several references to Mary Gordon Associates. Landscape Architect and Designer in Palo Alto. Records show it was established in 1950 and incorporated in California. The firm does not appear to have a website. Facebook has a Gordon-Mary Gordon Associates page, but is noted as "Unofficial Page" and has no information about the firm. One website, Redfin, lists Mary Gordon as the landscape architect for a "1940s Crescent Park home…landscape architect: Mary Gordon."

4 Results of Identification and Evaluation Efforts

In order to assess the property's historical significance and integrity, the GHWTP was recorded and evaluated in consideration of CSCHRI designation criteria and integrity requirements. A physical description of the property and its development history is provided below. The property was previously evaluated for NRHP and CRHR in 2019 and was found ineligible for listing under NRHP and CRHR criteria (Carey & Co. 2019). Therefore, the evaluation below only addresses CSCHRI eligibility criteria. The property significance evaluation was prepared by Dudek architectural historian Fallin Steffen, MPS, who meets the Secretary of the Interior's Professional Qualification Standards for architectural history. The subject property is described and evaluated in this section. A complete DPR 523 form set, including the 2019 evaluation and the updated evaluation information, is presented in Appendix D.

4.1 The Graham Hill Water Treatment Plant (1959)

The GHWTP (Exhibit 6) located in the City of Santa Cruz, was designed by Brown and Caldwell Civil and Chemical Consulting Engineers and completed in 1959 as a municipal water filtration and treatment facility for the City of Santa Cruz. The plant contains the following elements: Storage Tanks (1959), the Reclaim Pump and Wash Water Supply Pump Stations (1959 and 1959), the Operations Building (1959), the Filter Gallery (1959), the Sedimentation Basins (1959), the Water Quality Lab (c. 1990), and the Electrical Building (c. 1975).

Exhibit 6. Overview of the Graham Hill Water Treatment Plant, view looking south (IMG_0091)

4.1.1 Site Access

The plant is situated in a forested area that is flanked by the San Lorenzo River to the west and residential development to the north, east, and south. A paved driveway on the west side of Graham Hill Road leads onto the City-owned property (Exhibit 7). An access gate provides guarded entry onto the site (Exhibit 8). Following the field survey conducted by Dudek in April 2021, the gate and the driveway were significantly altered from the view presented below as part of the GHWTP Entrance Improvement Project completed in 2022.

Exhibit 7. Access road from Graham Hill Road, view looking west (Google 2021)

Exhibit 8. Access road from Graham Hill Road, view looking west (IMG_0102)

4.1.2 Plant Elements

The GHWTP contains a number of different functional elements and buildings spread across a 12.4-acre parcel. The features of the site include four concrete Storage Tanks, a Reclaim Pump Station, a Wash Water Supply Pump Station, an Operations Building, a Filter Gallery, Sedimentation Basins, a Water Quality Lab, and an Electrical Building. The section below provides a brief description of each of these elements.

The following descriptions of the Storage Tanks, Reclaim Pump Station and Wash Water Supply Pump Station, Operations Building, Filter Gallery, and Sedimentation Basins were quoted in their entirety from the DPR 523 form set prepared in 2019 by Carey & Co. for the GHWTP. Dudek has added associated construction dates in square brackets, as well as exhibits for each plant element called out in the text following the quoted text below (Carey & Co. 2019: 3–4):

> **Storage Tanks [1959]**
>
> The Graham Hill Water Treatment Plant has four post-tensioned concrete (cast-in-place circumferentially bar-stressed walls) water storage tanks [*Exhibit 9*] Sludge Storage Tank, Wash Water Reclamation Tank, Filtered Water Tank, and the Wash Water Storage Tank. Each tank is 77 feet in diameter and of varying height: the Sludge Storage Tank and Wash Water Reclamation Tank are approximately 23 feet in height; the Filtered Water Tank, approximately 31 feet in height; and the Wash Water Storage Tank, approximately 16 feet in height. The tanks' walls are 8 inches of concrete with 1½" of exterior gunite resting on a reinforced concrete foundation. The floor of all the tanks is reinforced concrete. The tar paper and gravel roof are supported by 6" x 14" wood beams that radiate from a centrally located reinforced concrete column. The "tanks are visually deteriorating as they approach the end of their service life." No major alterations have been undertaken to the tanks.
>
> **Reclaim Pump Station and Wash Water Supply Pump Station [1959]**
>
> The Reclaim Pump Station is located at the Wash Water Reclamation Tank. The Wash Water Supply Pump Station is located in the basement of the Operations Building. Both "have been upgraded…during the past 58 years."
>
> **Operations Building [1959]**
>
> The one-story Operations Building, which includes a basement, is rectangular in plan [*Exhibit 10*]. The concrete framed building has a variety of cladding materials that are mainly brick with cement asbestos panels, Solex and Factrolite fixed glass, glass jalousies, and folding and rolling steel doors. The building has a gable roof clad in clay tile. The building houses a number of uses including office spaces, a laboratory, a chlorine storage and chlorinator room, a chemical storage and feeder space, a work room with instrument repair, and a tools and parts storage and paint room. Notable features include a wide eave overhang and exposed rafter tails. Alterations to the building include the conversion of the laboratory space into offices in 1987 and the addition of solar panels to the roof.

Filter Gallery [1959, expanded 1968]

The Filter Gallery is attached to the south side of the Operations Building [*Exhibit 11*]. It is rectangular in plan and consists of filtering tanks flanking an enclosed central atrium open to the basement level below. The enclosed structure is steel framed with cement asbestos panels and Solex glass and has a built-up roof over steel decking. In 1968, additional filters were added.

[*Flocculation/*] Sedimentation Basins [1959, expanded 1968, 1986]

The [*Flocculation/*]Sedimentation Basins are rectangular in plan and constructed of reinforced concrete [*Exhibit 12*]. This structure consists of two distinct parts: six flocculation tanks with a volume of 68,000 gallons each and three sedimentation basins with a design capacity of 8 MG per day. In 1968, a third basin was added and subsequently, in 1986, a second flash mixer and vertical carbon mixers were added.

Exhibit 9. Storage Tanks, view looking southeast (IMG_0048)

Exhibit 10. Partial view of the Operations Building southeast elevation, view looking northwest (IMG_0074)

Exhibit 11. Partial view of the Filter Gallery as it connects with the Operations Building, view looking northwest (IMG_0053)

Exhibit 12. Sedimentation Basins, view looking west (IMG_0085)

In addition to the elements described by in 2019 by Carey & Co. above, the GHWTP also includes a Laboratory and the Electrical Building.

Water Quality Lab, 1987 [expanded/updated c.2009]

The Water Quality Lab building (Exhibit 13) is a water quality testing laboratory located in the northeast section of the GHWTP. The building features an irregular plan and multiple front-facing gable roofs. The exterior of the building is clad in both horizontal and vertical wood siding and the windows across the building are irregularly placed. A recessed porch on the southeast elevation shelters the main entrance into the building, composed of a wood, full-lite door.

Exhibit 13. View of the southeast (main) elevation of the Water Quality Lab, view looking northwest (IMG_0086)

Electrical Building, c. 1975

The Electrical Building (Exhibit 14) is located to the southwest of the Filter Gallery in the southwest corner of the GHWTP. The simple, utilitarian building is constructed of scored concrete masonry units and features a rectangular plan. The gable roof is constructed of sheet metal and covered in an unknown roofing material. Each gable end is fitted with frosted panels of glass that allow light into the interior areas of the otherwise windowless building. A metal roll-up door on the northeast elevation provides access to the interior of the building.

Exhibit 14. View of the northwest (main) elevation of the Electrical Building, view looking south (IMG_0058)

4.1.3 Modifications to the Graham Hill Water Treatment Plant

The following text provides a summary of subsequent modifications to the GHWTP following its initial completion in 1959. The following list of modifications was quoted in its entirety from the DPR 523 form set prepared in 2019 by Carey & Co. for the GHWTP (2019: 2):

> The Graham Hill Water Treatment Plant was constructed in 1959 as a conventional treatment plant with a capacity of 12 million gallons per day. It was "expanded in the late 1960s, modified in the mid-1980s, and updated again in the 1990s, 2000s, and 2010s. These updates include:
>
> - 1959 Brown & Caldwell – Original treatment plant design
> - 1968 Brown & Caldwell – Additions
> - 198[5] CH2M Hill – Modernization
> - 1987 Dewante & Stowell – Water Quality Control Lab addition
> - 200[7] Mesiti + Miller Engineering – GHWTP slide repairs
> - 2009 Bowman & Williams [*Water Quality Lab Upgrade/Expansion]*
> - 2011 CDM – Electrical improvements project
> - 2014 Kennedy/Jenks – Filter rehab and upgrades

The following list of additional modifications was compiled from a review of as-built plans and specifications provided by the City (Simpson and Stratta 1960; Brown and Caldwell 1960, 1965; SCWD 1979, 1983, 1988; CH2M Hill 1985; Kennedy/Jenks 2019a, 2019b; West Yost Associates 2020; Brian Watanabe 2022) .

- 1960 Simpson & Stratta - Structural Revisions Operations Building roof
- 1960 Brown & Caldwell - Entrance Gate and Wall
- 1965 Brown & Caldwell - Modifications for graphics panel and motor control center, installation of new transistorized tone telemetering equipment, electrical modifications for water supply and distribution systems control
- 1979 SCWD - Installation of 2 "ALUM' storage tanks
- 1983 SCWD – Sedimentation tank modernizations
- 1985 CH2M Hill – Emergency Filter Repair
- 1988 SCWD – Stairway added to Water Quality Lab
- 1998 CDM – Washwater Reclamation and Sedimentation Improvements
- 2021 Kennedy/Jenks – Tube Settler Replacement
- 2021 Kennedy/Jenks – Flocculator Replacement
- 2021 West Yost Associates – Concrete Tanks Replacement

4.2 Summary of the 2019 NRHP/CRHR Statement of Significance

The following text is quoted in its entirety from the DPR 523 form set prepared in 2019 by Carey & Co. for the GHWTP. Dudek agrees with this evaluation of the GHWTP:

> ***Evaluation – National Register of Historic Places & California Register of Historical Resources***
>
> *Criterion A/1 – Association with significant events*
>
> The Graham Hill Water Treatment Plant was constructed in 1959 in response to the need for safe drinking water. However, the property is not associated with the history of the era in an individually significant way. Therefore, it is not eligible for listing in the NRHP or CRHR under Criterion 1.
>
> *Criterion B/2 – Association with important persons*
>
> There is no indication that the Graham Hill Water Treatment Plant was associated with significant persons. Without this association, the GHWTP does not appear to be eligible for the NRHP or CRHR under Criterion 2.
>
> *Criterion C/3 – Architecture and Construction*
>
> The design of the GHWTP is not associated with innovations or new technology related to water treatment. As described, the GHWTP is a "conventional" water treatment plant. Although the civil

engineers, Brown and Caldwell, is a large, well-known engineering company, the GHWTP is not among its major projects for which it is known and for which it has won awards.

Ernest J. Kump, Jr. is a major Bay Area architect with renown designs such as Foothill College in Los Altos. At the University of California, Santa Cruz, Kump designed two buildings: Crown College (1964-1969) and Central Services Building, currently the Alfred Hahn Student Services building (1963-1971). He also was involved in the 1963 UCSC Master plan. With many major, recognized designs during his career, the Operations Building at the GHWTP does not appear to be among his notable designs. The Operations Building has some of the characteristics of ranch-style, residential architecture with its gable roof, deep overhangs and one-story height. In a nod to industrial features, Kump uses brick and concrete. These come together in a harmonious building, but one that is not illustrative of and does not rise to the level of a master architect.

The Graham Hill Water Treatment plant does not embody the distinctive characteristics of a type, period, or method of construction and does not represent the work of a master architect. Therefore, it does not appear to be eligible for the NRHP or CRHR under Criterion C/3.

Criterion 4 –Potential for important information

Research provided no indication that these structures have the potential to yield information important to the prehistory or history of the local area, California, or the nation. The property does not appear eligible for the NRHP or CRHR under Criterion D/4.

Integrity

Since the property has not been found eligible for either the NRHP or CRHR, it is not necessary to evaluate its integrity.

Conclusion

The evaluation of the Graham Hill Water Treatment Plant concluded that the property is not eligible for listing in either the NRHP or CRHR.

4.3 CSCHRI Statement of Significance

1. Recognized as a significant example of the cultural, natural, archaeological, or built heritage of the city, state, or nation

The design of the GHWTP is a conventional water treatment plant and does not constitute a significant example of cultural, natural, archeological, or built heritage of the city, state, or the nation. As such, it does not rise to the level to be called significant. For this reason, the property does not appear eligible under City Criterion 1.

2. Associated with a significant local, state, or national event

Archival research did not find any associations with events that have made a significant contribution to the broad patterns of local or regional history. While the GHWTP was developed in 1959 during a period of infrastructure and

utility expansion throughout Santa Cruz, it is not associated with any specific significant local, state, or national event. Therefore, the property does not appear eligible under City Criterion 2.

3. Associated with a person or persons who significantly contributed to the development of the city, state, or nation

Archival research did not find any associations with a person or persons who significantly contributed to the development of the city, state, or nation. For this reason, the property does not appear eligible under City Criterion 3.

4. Associated with an architect, designer, or builder whose work has influenced the development of the city, state, or nation

The GHWTP is a conventional example of a water treatment facility designed by civil engineers Brown and Caldwell. Brown and Caldwell were responsible for the design of many water treatment facilities in the western United States and as such, their contribution to the City of Santa Cruz is marginal at best. The Operations Building was designed by Bay Area architect Ernest J. Kump, and while Kump is well known for his contributions to the field of architecture, the ubiquitous nature of the Operations building within the GHWTP does not rise to the level to warrant listing for its association with Kump, nor does Kump appear to have had a large influence over the development of Santa Cruz, the state, or the nation. Therefore, for the reasons stated above, the property does not appear eligible under City Criterion 4.

5. Recognized as possessing special aesthetic merit or value as a building with quality of architecture and that retains sufficient features showing its architectural significance

The GHWTP is a conventional example of a water treatment facility, the design of which does not demonstrate the use of innovative, ground-breaking technology in the field of water treatment, nor does it demonstrate a high quality of architecture that possesses any special aesthetic merit or value. For this reason, the property does not appear eligible under City Criterion 5.

6. Recognized as possessing distinctive stylistic characteristics or workmanship significant for the study of a period, method of construction, or use of native materials

The GHWTP is a ubiquitous example of water treatment facility built from conventional, mass-produced materials during the mid-20th century. As such, it does not contain any particular distinctive stylistic characteristics or evidence of workmanship that could yield information about a particular period or method of construction. For these reasons, the property does not appear eligible under City Criterion 6.

7. Retains sufficient integrity to accurately convey its significance

Upon conclusion that the GHWTP does not meet any of the required criteria for significance, the complex's current state of integrity is inconsequential. For this reason, the property does not appear eligible under City Criterion 7.

4.4 Integrity Discussion

National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation (NPS 1997) states that the integrity of a property is based upon the historical significance and character defining features of that property, and that "only after significance is fully established can you proceed to the issue of integrity." Upon conclusion that the

GHWTP does not meet any of the required criteria for significance, the complex's current state of integrity is inconsequential. As such, no assessment of integrity is provided in this evaluation.

4.5 Conclusion

In conclusion, the GHWTP is not eligible for listing in the NRHP, the CRHR, or the CSCHRI. The GHWTP was evaluated in accordance with Section 15064.5 (a)(2–3) of the CEQA Guidelines and using the criteria outline in Section 5024.1 of the California Public Resources Code and does not appear to be a historical resource for the purposes of CEQA. It is also not considered a historic property under Section 106.

5 Findings and Conclusions

Based on Dudek's research, field survey, and property significance evaluation described in this report, this chapter presents a summary of findings and management recommendations for the Proposed Project.

5.1 Summary of Findings

Archaeological Findings

The results of the assessment suggest there are no historic properties of an archaeological nature within the APE. The results also suggest that there is low potential for encountering any unknown archaeological resources during construction. Specifically, the records search did not identify any known archaeological resources within the APE and the surface survey of all elements of the APE where excavation is planned (GHWTP, Pipeline Easement, Graham Hill Road, and Ocean Street Extension) was uniformly negative for evidence of previously unknown archaeological resources. No further effort regarding the discovery of archaeological resources within the APE is recommended.

Built Environment Findings

As stated above, the GHWTP located in the APE was evaluated for listing in the NRHP, the CRHR, and the CSCHRI and was found ineligible under all criteria. As such, the GHWTP does not appear to be a historic property under Section 106 of the NHPA or a historical resource under CEQA. The recommended Status Code for the GHWTP is 6Z (found ineligible for the NRHP, CRHR, or local designation through survey evaluation). No further work for built environment cultural resources is necessary prior to the Proposed Project implementation.

5.2 Management Recommendations

Archaeological Management Recommendations

No further effort regarding the discovery of archaeological resources within the APE is recommended. However, the Proposed Project should proceed under a plan that accounts for the inadvertent discovery of archaeological resources and human remains during construction consistent with NHPA Section 106 regulations (36 CFR Section 800.13[b]), CEQA, and applicable local regulations.

Inadvertent Discovery of Archaeological Resources and Human Remains

The City has adopted standard construction practices that would be implemented by the City or its contractors during construction activities associated with the Proposed Project, Standard Construction Practice 15 regarding inadvertent discovery of archaeological deposits and Standard Construction Practice 16 regarding inadvertent discovery of human remains to reduce potential impacts to archaeological resources and human remains identified during construction consistent with NHPA Section 106 regulations (36 CFR Section 800.13[b]):

24. Any unrecorded archaeological resources (sites, features, and/or artifacts) exposed during construction are subject to protection and consideration under CEQA and the California Public Resources Code (PRC) as well as

Section 106 of the National Historic Preservation Act (NHPA) as detailed in the Code of Federal Regulations (CFR). The CEQA Guidelines Section 15064.5(f) specifically addresses provisions the City of Santa Cruz will make regarding accidental discovery of historical or unique archaeological resources during construction. The responsibilities of the lead federal agency to avoid, minimize or mitigate adverse effects to a "historic property" (36 CFR Section 800.16) are detailed in 36 CFR Section 800.13[b] and would be applicable for a project with federal involvement by way of funding, permitting, approval authority, or other means.

In general, the implementation procedures under CEQA and the NHPA in the case of an inadvertent archaeological discovery during construction are similar and are as follows:

- If archaeological resources are exposed immediately stop any construction work occurring within 100 feet which may further disturb the find. NOTE – This is a general guideline for the initial response, the exclusion zone may be contracted or expanded depending on the nature of discovery and type of construction activity proposed in the vicinity of the find. The duration of the exclusion zone will be determined by the City and the federal lead agency and is contingent on the approved course of action in response to the discovery.
- Immediately notify the City Project Manager who shall immediately notify the Water Department Deputy Director/Engineering Manager
- A qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards will evaluate the state and federal significance of the find for eligibility to the California Register of Historical Resources (CRHR) and the National Register of Historic Places (NRHP) in coordination with City staff.
- The City will notify the lead federal agency within 24 hours of discovery. The notification shall describe the assessment of the NRHP eligibility of the resource, specify the NRHP criteria used to evaluate the property's eligibility, and propose actions to resolve any adverse effects.
- The federal lead agency will contact the State Historic Preservation Officer (SHPO), the Advisory Council on Historic Preservation (ACHP), and any interested locally affiliated Native American tribes. The SHPO, ACHP, and Native American tribes will respond within 48 hours of the notification. The federal lead agency shall consider any recommendations regarding National Register eligibility and proposed actions and notify the City of the appropriate actions. The federal lead agency official shall provide the SHPO and the ACHP a report of the actions when they are completed.
- Avoidance and/or minimization of impacts/effects is the preferred course of actions under both state and federal guidelines. If preservation in place is not feasible, additional study will likely be required. In coordination with the lead federal agency, the City will prepare a data recovery/treatment plan for retrieving important archaeological data relevant to the site's significance. The data recovery/treatment plan will be submitted to participating tribes and agencies for review and comment prior to implementation.
- If the inadvertent discovery location cannot be avoided, and continuing work would have an adverse effect on the site, the federal agency, in coordination with the City, SHPO, and Native American tribes as appropriate, will need to draft and finalize a Memorandum of Agreement for the treatment of the historic property before work can proceed.

- Implementation of the data recovery/treatment plan may include archaeological excavations, technical and laboratory analysis, and further consultation and coordination with Native American tribal representatives.
- A full written report will be prepared to include the results of all technical analyses and special studies and will be provided to participating tribes and agencies for review and comment. The report will be filed with the Northwest Information Center and will also provide for the permanent curation of recovered materials.

25. In California, the illegal possession of human remains is a felony, punishable by imprisonment (California Penal Code Section 1170[h]; Public Resources Code 5097.99[a] and [b]). Inadvertent discoveries of human remains exposed during construction on non-federal lands are subject to protection under CEQA and the NHPA. In accordance with Section 7050.5 of the California Health and Safety Code and the NHPA, if potential human remains are found, immediately notify the City, the lead federal agency, and the Santa Cruz County Coroner of the discovery. The Santa Cruz County Coroner will provide a determination within 48 hours of notification. No further excavation or disturbance of the identified material, or any area reasonably suspected to overlie additional remains, can occur until a determination has been made.
    - If human remains are exposed immediately stop any construction work occurring within 100 feet which may further disturb the find. NOTE – This is a general guideline for the initial response, the exclusion zone may be contracted or expanded depending on the nature of discovery and type of construction activity proposed in the vicinity of the find. The duration of the exclusion zone is contingent on the course of action mandated by the City and lead federal agency.
    - If the Santa Cruz County Coroner determines that the remains are, or are believed to be, Native American, the coroner will notify the Native American Heritage Commission (NAHC) within 24 hours and all the actions described in these Standard Construction Practices regarding Inadvertent Archaeological Discoveries shall be followed.
    - In accordance with California Public Resources Code, Section 5097.98 and Section 106 of the NHPA, the NAHC must immediately notify those persons it believes to be the Most Likely Descendant (MLD) from the deceased Native American.
    - Within 48 hours of this notification, the MLD will recommend to the City and lead federal agency her/his preferred treatment of the remains and associated grave goods.
    - The ultimate disposition of the remains will be coordinated between the City, the federal agency, the MLD, the landowner, and the NAHC (if necessary).
    - The lead federal agency will have additional government-to-government consultation requirements per the requirements of Section 106 [36 CFR § 800.2(c)(2)(ii)] which cannot be delegated to non-federal entities.

Ms. Patterson,

I am reaching out today on behalf of Dudek and the City of Santa Cruz Water Department to provide you with some information about the Graham Hill Water Treatment Plant Facility Improvements Project. As part of the cultural resources study for the proposed project, Dudek is consulting all regional historical organizations to determine if there are any known historic or cultural resources that may be within the proposed project area. Please see the attached letter and map for more information about the nature and location of the project, and please feel free to contact me should you have questions or information regarding cultural or historical resources in this area.

Thank you,

Fallin Steffen, MPS

Subject: Graham Hill Water Treatment Plant Facility Improvements Project

Dear Ms. Patterson:

Dudek has been retained by the City of Santa Cruz Water Department to conduct a cultural resources study for the Graham Hill Water Treatment Plant (GHWTP) Facility Improvements Project (Proposed Project). The GHWTP is a conventional water treatment plant that is a critical component of the drinking water system. It is the City's only surface water treatment plant and treats over 95% of the water served to its customers.

The Proposed Project is needed to provide the community with a resilient surface water treatment plant that will meet regulatory and climate change challenges of the 21st century. The Proposed Project includes both upgrades to address aging infrastructure such as buildings and treatment basins that do not meet modern seismic standards and the water treatment process to provide reliable and efficient performance to meet existing and reasonably foreseeable regulations. The upgraded water treatment process will include the flexibility to adapt to the treatment process to meet a wide range of potential future regulations and future source water quality conditions. The Proposed Project would primarily be constructed at the City's existing GHWTP, which is located within the City of Santa Cruz (City) but is surrounded by unincorporated lands (see Figure 1 enclosed).

Additionally, the Proposed Project is anticipated to involve activities outside of the GHWTP for the purposes of temporary construction staging, laydown of equipment and/or storage during construction. Activities may also include potential utility and traffic safety improvements. These activities could occur in both City and County of Santa Cruz jurisdictions. Including the GHWTP, the Proposed Project is anticipated to be located at four locations, which together constitute the Project site. The Proposed Project locations include:

- The approximately 14.88-acre primary Project site consisting of:
    - The approximately 12.4-acre City-owned GHWTP parcel located at 715 Graham Hill Road in Santa Cruz, CA 95060 on Assessor Parcel Number (APN): 060-141-05;
    - The approximately 0.18-acre, 550-linear-foot utility corridor between the GHWTP parcel and the San Lorenzo River via Ocean Street Extension and a 15-foot right-of-way on APN: 060-151-05;
    - Approximately 2.3-acres, 1,620 linear feet of the Graham Hill Road public right-of-way between just north of Mosswood Court and just south of Lyle Way;
- The approximately 5.14-acre staging area for the Proposed Project (Mt. Hermon Road Staging Area) located at the northern intersection of Graham Hill Road and Mt. Hermon Road, in Felton, CA at APN: 071-201-43; and the approximately 1.86-acre staging area for the Proposed Project (Ocean Street Extension Staging Area) located at 1941 Ocean Street Extension at APN: 008-031-16.
- The alternate sanitary sewer lateral improvement area from the southwest corner of the GHWTP parcel at Ocean Street Extension and along Ocean Street Extension for approximately 4,500 linear feet to the City Public Works Department maintained sanitary sewer connection at Graham Hill Road.

The Proposed Project includes the following:

- *New Water Treatment and Related Processes.* New water treatment and related processes would rehabilitate, replace or augment the existing treatment systems at the GHWTP. The proposed treatment processes would allow the City to reliably and efficiently meet existing and reasonably foreseeable regulations even with source water that is more difficult to treat as described in the Purpose and Need section. The Proposed Project would include solids dewatering to allow for more efficient separation and disposal of solids that are removed from the raw water during the treatment process. Upgrades to the chemical feed systems would also be included as well as a replacement washwater supply tank, a new ozone contactor, pre-treatment processes, granular activated carbon contactors, and recycled water clarifiers. Space would also be reserved for a UV disinfection system and other additional treatment processes, if needed in the future. The design capacity of the Proposed Project would be approximately 18 mgd (net), a decrease from the 24 mgd capacity of the existing treatment plant.

- *New and Upgraded Buildings.* The Proposed Project would include new and upgraded buildings including a new administration building and/or operations building, new maintenance building, HVAC improvements, replacement or upgrade of the filter gallery building, and new ozone, solids dewatering, and chemical storage facilities.

- *Infrastructure and Site Improvements.* The Proposed Project would include infrastructure and site improvements including piping and storm water management improvements; electrical, and SCADA improvements; vehicular access improvements; landscaping improvements; and may include fencing and site security.

- *Removal of Existing Facilities.* The Proposed Project would include demolition of some existing buildings, water treatment facilities (e.g. sedimentation basins), and infrastructure, as needed to address facilities beyond their useful life or to accommodate new facilities.

As part of our study, we are consulting all regional historical organizations to determine if there are any known historic or cultural resources that may be affected by the Proposed Project. Your efforts in this process will provide invaluable information for the proper identification and treatment of such resources. If you have any information regarding known cultural resources in the Proposed Project area, please feel free to contact me via phone or email (listed below), or you can contact Jessica Martinez-McKinney, Associate Planner with the City of Santa Cruz Water Department, by email at jmartinezmckinney@cityofsantacruz.com. All comments, emails, or letters received will be included in the reports generated by this study. Thank you for your time regarding our request.

Subject: Graham Hill Water Treatment Plant Facility Improvements Project

Dear Ms. Stolk:

Dudek has been retained by the City of Santa Cruz Water Department to conduct a cultural resources study for the Graham Hill Water Treatment Plant (GHWTP) Facility Improvements Project (Proposed Project). The GHWTP is a conventional water treatment plant that is a critical component of the drinking water system. It is the City's only surface water treatment plant and treats over 95% of the water served to its customers.

The Proposed Project is needed to provide the community with a resilient surface water treatment plant that will meet regulatory and climate change challenges of the 21st century. The Proposed Project includes both upgrades to address aging infrastructure such as buildings and treatment basins that do not meet modern seismic standards and the water treatment process to provide reliable and efficient performance to meet existing and reasonably foreseeable regulations. The upgraded water treatment process will include the flexibility to adapt to the treatment process to meet a wide range of potential future regulations and future source water quality conditions. The Proposed Project would primarily be constructed at the City's existing GHWTP, which is located within the City of Santa Cruz (City) but is surrounded by unincorporated lands (see Figure 1 enclosed).

Additionally, the Proposed Project is anticipated to involve activities outside of the GHWTP for the purposes of temporary construction staging, laydown of equipment and/or storage during construction. Activities may also include potential utility and traffic safety improvements. These activities could occur in both City and County of Santa Cruz jurisdictions. Including the GHWTP, the Proposed Project is anticipated to be located at four locations, which together constitute the Project site. The Proposed Project locations include:

- The approximately 14.88-acre primary Project site consisting of:
    - The approximately 12.4-acre City-owned GHWTP parcel located at 715 Graham Hill Road in Santa Cruz, CA 95060 on Assessor Parcel Number (APN): 060-141-05;
    - The approximately 0.18-acre, 550-linear-foot utility corridor between the GHWTP parcel and the San Lorenzo River via Ocean Street Extension and a 15-foot right-of-way on APN: 060-151-05;
    - Approximately 2.3-acres, 1,620 linear feet of the Graham Hill Road public right-of-way between just north of Mosswood Court and just south of Lyle Way;
- The approximately 5.14-acre staging area for the Proposed Project (Mt. Hermon Road Staging Area) located at the northern intersection of Graham Hill Road and Mt. Hermon Road, in Felton, CA at APN: 071-201-43; and the approximately 1.86-acre staging area for the Proposed Project (Ocean Street Extension Staging Area) located at 1941 Ocean Street Extension at APN: 008-031-16.
- The alternate sanitary sewer lateral improvement area from the southwest corner of the GHWTP parcel at Ocean Street Extension and along Ocean Street Extension for approximately 4,500 linear feet to the City Public Works Department maintained sanitary sewer connection at Graham Hill Road.

The Proposed Project includes the following:

- *New Water Treatment and Related Processes.* New water treatment and related processes would rehabilitate, replace or augment the existing treatment systems at the GHWTP. The proposed treatment processes would allow the City to reliably and efficiently meet existing and reasonably foreseeable regulations even with source water that is more difficult to treat as described in the Purpose and Need section. The Proposed Project would include solids dewatering to allow for more efficient separation and disposal of solids that are removed from the raw water during the treatment process. Upgrades to the chemical feed systems would also be included as well as a replacement washwater supply tank, a new ozone contactor, pre-treatment processes, granular activated carbon contactors, and recycled water clarifiers. Space would also be reserved for a UV disinfection system and other additional treatment processes, if needed in the future. The design capacity of the Proposed Project would be approximately 18 mgd (net), a decrease from the 24 mgd capacity of the existing treatment plant.

- *New and Upgraded Buildings.* The Proposed Project would include new and upgraded buildings including a new administration building and/or operations building, new maintenance building, HVAC improvements, replacement or upgrade of the filter gallery building, and new ozone, solids dewatering, and chemical storage facilities.

- *Infrastructure and Site Improvements.* The Proposed Project would include infrastructure and site improvements including piping and storm water management improvements; electrical, and SCADA improvements; vehicular access improvements; landscaping improvements; and may include fencing and site security.

- *Removal of Existing Facilities.* The Proposed Project would include demolition of some existing buildings, water treatment facilities (e.g. sedimentation basins), and infrastructure, as needed to address facilities beyond their useful life or to accommodate new facilities.

As part of our study, we are consulting all regional historical organizations to determine if there are any known historic or cultural resources that may be affected by the Proposed Project. Your efforts in this process will provide invaluable information for the proper identification and treatment of such resources. If you have any information regarding known cultural resources in the Proposed Project area, please feel free to contact me via phone or email (listed below), or you can contact Jessica Martinez-McKinney, Associate Planner with the City of Santa Cruz Water Department, by email at jmartinezmckinney@cityofsantacruz.com. ***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
** The GHWTP was previously recorded and evaluated in 2019 by Carey & Co. under the National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR) and it was recommended as not meeting any of the significance criteria. Carey & Co. did not include an evaluation under City of Santa Cruz Historic Resource Inventory (CSCHRI).The purpose of this DPR form set is to provide an updated evaluation record including CSCHRI criteria in a DPR form set. This DPR form set was compiled by Dudek in December 2022. **(See *P11. Report Citation, *B12. References, and B13. Remarks for more information)**

Dudek agrees with the 2019 Carey & Co. NRHP/CRHR evaluation that the property is not eligible for listing and found that the property also does not meet CSCHRI criteria. In summary, the GHWTP is not considered a historic property under Section 106 of the NHPA, nor is it considered a historical resource under CEQA. The recommended Status Code for the GHWTP is 6Z (found ineligible for the NRHP, CRHR, or local designation through survey evaluation). **(*See Continuation Sheet)**

B13. Remarks: This updated DPR form set has been compiled from existing documentation and a report prepared by Carey & Co.in 2019(*see *B12. References*). Dudek concurs with the findings of eligibility for the subject property prepared by Carey & Co. in 2019 and has expanded the form set prepared at that time to include an evaluation of the subject building under CSCHRI criteria.

Update Preparer: Fallin Steffen, MPS, Dudek
Updated CSCHRI Evaluator: Fallin Steffen, MPS, Dudek
Date of DPR Update: 12/16/2022

***B14. Evaluator:** Carey & Co., a TreanorHL Company
***Date of Evaluation:** 06/28/2019

(This space reserved for official comments.)

***B10. Significance (Continued):**

CSCHRI Statement of Significance

1. Recognized as a significant example of the cultural, natural, archaeological, or built heritage of the city, state, or nation

The design of the GHWTP is a conventional water treatment plant and does not constitute a significant example of cultural, natural, archeological, or built heritage of the city, state, or the nation. As such, it does not rise to the level to be called significant. For this reason, the property does not appear eligible under City Criterion 1.

2. Associated with a significant local, state, or national event

Archival research did not find any associations with events that have made a significant contribution to the broad patterns of local or regional history. While the GHWTP was developed in 1959 during a period of infrastructure and utility expansion throughout Santa Cruz, it is not associated with any specific significant local, state, or national event. Therefore, the property does not appear eligible under City Criterion 2.

3. Associated with a person or persons who significantly contributed to the development of the city, state, or nation

Archival research did not find any associations with a person or persons who significantly contributed to the development of the city, state, or nation. For this reason, the property does not appear eligible under City Criterion 3.

4. Associated with an architect, designer, or builder whose work has influenced the development of the city, state, or nation

The GHWTP is a conventional example of a water treatment facility designed by civil engineers Brown and Caldwell. Brown and Caldwell were responsible for the design of many water treatment facilities in the western United States and as such, their contribution to the City of Santa Cruz is marginal at best. The Operations Building was designed by Bay Area architect Ernest J. Kump, and while Kump is well known for his contributions to the field of architecture, the ubiquitous nature of the Operations building within the GHWTP does not rise to the level to warrant listing for its association with Kump, nor does Kump appear to have had a large influence over the development of Santa Cruz, the state, or the nation. Therefore, for the reasons stated above, the property does not appear eligible under City Criterion 4.

5. Recognized as possessing special aesthetic merit or value as a building with quality of architecture and that retains sufficient features showing its architectural significance

The GHWTP is a conventional example of a water treatment facility, the design of which does not demonstrate the use of innovative, ground-breaking technology in the field of water treatment, nor does it demonstrate a high quality of architecture that possesses any special aesthetic merit or value. For this reason, the property does not appear eligible under City Criterion 5.

6. Recognized as possessing distinctive stylistic characteristics or workmanship significant for the study of a period, method of construction, or use of native materials

The GHWTP is a ubiquitous example of water treatment facility built from conventional, mass-produced materials during the mid-20th century. As such, it does not contain any particular distinctive stylistic characteristics or evidence of workmanship that could yield information

about a particular period or method of construction. For these reasons, the property does not appear eligible under City Criterion 6.

7. Retains sufficient integrity to accurately convey its significance
Upon conclusion that the GHWTP does not meet any of the required criteria for significance, the complex's current state of integrity is inconsequential. For this reason, the property does not appear eligible under City Criterion 7.

Integrity Discussion

National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation (NPS 1997) states that the integrity of a property is based upon the historical significance and character defining features of that property, and that "only after significance is fully established can you proceed to the issue of integrity." Upon conclusion that the GHWTP does not meet any of the required criteria for significance, the complex's current state of integrity is inconsequential. As such, no assessment of integrity is provided in this evaluation.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The Graham Hill Water Treatment Plant (GHWTP) is located approximately two miles from the City of Santa Cruz City Hall. It is one of two water treatment facilities; the other is the Beltz Wells & Treatment Plant. The Beltz facility is a minor facility, while Graham Hill supplies most of the city's water. GHWTP receives its water through two underground pipes from upstream dams. It consists of the following facilities:

- Four water tanks: Sludge Storage Tank, Wash Water Reclamation Tank, Filtered Water Tank and Wash Water Storage Tank
- Reclaim Pump Station and Wash Water Supply Pump Station
- Operations Building
- Filter Gallery
- Sedimentation Basins (See Continuation Sheets.)

Site History

The precontact, ethnographic and postcontact historic contexts are presented in the *Archaeological Investigations at the City of Santa Cruz Concrete Tank Replacement Project, Graham Hill Water Treatment Plant*.[1]

The Graham Hill Water Treatment Plant was constructed in 1959 as a conventional treatment plant with a capacity of 12 million gallons per day. It was "expanded in the late 1960s, modified in the mid-1980s, and updated again in the 1990s, 2000s, and 2010s. These updates include:

- 1959 Brown & Caldwell – Original treatment plant design
- 1968 Brown & Caldwell – Additions
- 1983 CH2M Hill – Modernization
- 1987 Dewante & Stowell – Water Quality Control Lab addition
- 2008 Mesiti + Miller Engineering – GHWTP slide repairs
- 2009 Bowman & Williams
- 2011 CDM – Electrical improvements project
- 2014 Kennedy/Jenks – Filter rehab and upgrades"[2]

(This space reserved for official comments.)

(Sketch Map with north arrow required.)

***P3a. Description, Continued:**

Three of the tanks are grouped together to the south of the Sedimentation Basins and west of the Filter Gallery and Operations Building. These storage tanks are at a lower elevation than the Operations Building, Filter Gallery and Sedimentation Basins by approximately 50-60 feet. The Sedimentation Basins are at the northern portion of the property. The Operations Building is immediately adjacent to the southeast with the Filter Gallery extending south from the Operations Building's south elevation. The Wash Water Storage Tank is located to the southeast of the Filter Gallery.

The GHWTP provides for the treatment of all water for the city, except for water from the Beltz Wells. The plant can treat an average of 1 million gallons per hour. Water use fluctuates seasonally from 6 to 7 MG per day in the winter to 10 to 12 MG per day in the summer. The treatment process consists of prechlorination, flocculation, sedimentation, filtration, and post-chlorination.

Storage Tanks
The Graham Hill Water Treatment Plant has four post-tensioned concrete (cast-in-place circumferentially bar-stressed walls)[3] water storage tanks: Sludge Storage Tank, Wash Water Reclamation Tank, Filtered Water Tank, and the Wash Water Storage Tank. Each tank is 77 feet[4] in diameter and of varying height: Sludge Storage Tank, Wash Water Reclamation Tank, approximately 23 feet; Filtered Water Tank, approximately 31 feet; Wash Water Storage Tank, approximately 16 feet. The tanks' walls are 8 inches of concrete with 1½" of exterior gunite resting on a reinforced concrete foundation. The floor of all the tanks is reinforced concrete. The tar paper and gravel roof are supported by 6" x 14" wood beams that radiate from a centrally located reinforced concrete column. The "tanks are visually deteriorating as they approach the end of their service life."[5] No major alterations have been made to the tanks.

For additional details about the storage tanks, see the Basis of Design Report.[6]

Reclaim Pump Station and Wash Water Supply Pump Station
The Reclaim Pump Station is located at the Wash Water Reclamation Tank. Wash Water Supply Pump Station is located in the basement of the Operations Building. Both "have been upgraded…during the past 58 years."[7]

For additional details about the pump stations, see the Basis of Design Report.[8]

Operations Building
The one-story with basement Operations Building is rectangular in plan. The concrete-framed building has a variety of cladding materials mainly brick with cement asbestos panels, Solex and Factrolite fixed glass, glass jalousies, folding and rolling steel doors. The building has a gable roof clad in clay tile. The building houses a number of uses including office spaces, laboratory, chlorine storage and chlorinator room, chemical storage and feeder space, a work room with instrument repair, tools and parts storage and paint room. Notable features include a wide eave overhang and exposed rafter tails. Alterations to the building include the conversion of the laboratory space into offices in 1987 and the addition of solar panels to the roof.

***P3a. Description, Continued:**

Filter Gallery
The Filter Gallery is attached to the south side of the Operations Building. It is rectangular in plan and consists of filtering tanks flanking an enclosed central atrium open to the basement level below. The enclosed structure is steel framed with cement asbestos panels and Solex glass, and has a built-up roof over steel decking. In 1968, additional filters were added.

Sedimentation Basins
The Sedimentation Basins are rectangular in plan and constructed of reinforced concrete. This structure consists of two distinct parts: six flocculation tanks with a volume of 68,000 gallons each and three sedimentation basins with a design capacity of 8 MG per day. In 1968, a third basin was added and subsequently, in 1986, a second flash mixer and vertical carbon mixers were added.

***B10. Significance, Continued:**

Project Team

Brown and Caldwell, Civil and Chemical Engineers
The firm of Brown and Caldwell, Civil and Chemical Engineers of San Francisco was selected to be the treatment plant's designers. The firm was founded by Ken Brown and David Caldwell in 1947 and continues as a major engineering consulting firm solely focused on the environmental sector. The as-built drawings are stamped by David H. Caldwell, Registered Civil Engineer.

Office of Ernest J. Kump, Architects and Planning Consultants
The Operations Building is attributed to the Office of Ernest J. Kump, Architects and Planning Consultants of Palo Alto, California. Drawing sheet A-2 (Sheet No. 14/107) through A-15 (Sheet No. 27/107) have the title block of the firm. The drawings are not stamped by an architect.

Ernest J. Kump, Jr., Architect
Ernest J. Kump, born in December 1911 in Bakersfield, California, began training as a draftsman at a young age. Kump attended Kern County Union High School where he spent his high school years studying drafting under architectural educator Clarence Cullimore, FAIA. Kump completed his undergraduate degree at the University of California, Berkeley in 1932. He continued his studies at Harvard for a year before returning home because of a lack of finances. Kump joined his father's architectural firm upon arriving in Fresno, California. Kump subsequently partnered with Charles Franklin whom he met while working at his father's firm. The firm established in 1937 was praised for works which were "outstanding examples of innovative open plan modular construction."[9]

During World War II, Kump and Franklin relocated to the Bay Area, went their separate ways, and Kump became an architect for the Navy. At the end of the war, Kump and Franklin reestablished the firm with Mark Falk, a structural engineer, as a new partner. Franklin, Kump & Falk had its office in San Francisco. The firm won numerous awards for its International style designs. In 1955, Kump formed his own firm, Ernest Kump Associates, with offices in Palo Alto and New York. He became best known for his school designs, Notably, Foothill College in Los Altos, California (1962), De Anza College, Cupertino (1967), and Crown College, University of California, Santa Cruz (1967).[10]

***B10. Significance, Continued:**

In addition to being an accomplished architect, Kump also held 59 U.S. and international patents. He developed designs for low cost, prefabricated structures for which the American Institute of Architects identified Kump as "a pioneer of modular practices and systems concepts in architecture."[11] He wrote several books, taught university courses and served on President Reagan's Task Force for Arts and Humanities. Upon retiring, Kump lived abroad and operated a consulting office out of London. Kump died in Switzerland in 1999.[12]

The University of California, Berkeley, College of Environmental Design, Environmental Design Archives has a collection of Ernest J. Kump, Jr.'s projects. A citation for "Santa Cruz Water Treatment Plant (Santa Cruz, CA; n.d.; governmental) Collaborator: Brown and Caldwell (civil and chemical engineers)" is listed as being part of the collection. Although this record was not accessed due to time constraints, the relevant drawings identified above are included in the Brown and Caldwell set of drawings.

Mary Gordon, Landscape Architect

The drawing sheets related to the landscaping of the site are attributed to Mary Gordon, Landscape Architect, in Palo Alto, California.[13] Internet research resulted in several references to Mary Gordon Associates. Landscape Architect and Designer in Palo Alto. Records show it was established in 1950 and incorporated in California.[14] The firm does not appear to have a website. Facebook has a Gordon-Mary Gordon Associates page, but is noted as "Unofficial Page" and has no information about the firm. One website, Redfin, lists Mary Gordon as the landscape architect for a "1940s Crescent Park home…landscape architect: Mary Gordon."[15]

Evaluation – National Register of Historic Places & California Register of Historical Resources[16]

Criterion A/1 – Association with significant events

The Graham Hill Water Treatment Plant was constructed in 1959 in response to the need for safe drinking water. However, the property is not associated with the history of the era in an individually significant way. Therefore, it is not eligible for listing in the NRHP or CRHR under Criterion 1.

Criterion B/2 – Association with important persons

There is no indication that the Graham Hill Water Treatment Plant was associated with significant persons. Without this association, the GHWTP does not appear to be eligible for the NRHP or CRHR under Criterion 2.

Criterion C/3 – Architecture and Construction

The design of the GHWTP is not associated with innovations or new technology related to water treatment. As described, the GHWTP is a "conventional" water treatment plant. Although the civil engineers, Brown and Caldwell, is a large, well-known engineering company, the GHWTP is not among its major projects for which it is known and for which it has won awards.

***B10. Significance, Continued:**

Ernest J. Kump, Jr. is a major Bay Area architect with renown designs such as Foothill College in Los Altos. At the University of California, Santa Cruz, Kump designed two buildings: Crown College (1964-1969) and Central Services Building, currently the Alfred Hahn Student Services building (1963-1971). He also was involved in the 1963 UCSC Master plan. With many major, recognized designs during his career, the Operations Building at the GHWTP does not appear to be among his notable designs. The Operations Building has some of the characteristics of ranch-style, residential architecture with its gable roof, deep overhangs and one-story height. In a nod to industrial features, Kump uses brick and concrete. These come together in a harmonious building, but one that is not illustrative of and does not rise to the level of a master architect.

The Graham Hill Water Treatment plant does not embody the distinctive characteristics of a type, period, or method of construction and does not represent the work of a master architect. Therefore, it does not appear to be eligible for the NRHP or CRHR under Criterion C/3.

Criterion 4 –Potential for important information

Research provided no indication that these structures have the potential to yield information important to the prehistory or history of the local area, California, or the nation. The property does not appear eligible for the NRHP or CRHR under Criterion D/4.

Integrity

Since the property has not been found eligible for either the NRHP or CRHR, it is not necessary to evaluate its integrity.

Conclusion

The evaluation of the Graham Hill Water Treatment Plant concluded that the property is not eligible for listing in either the NRHP or CRHR.

INTENTIONALLY LEFT BLANK

1 Introduction

The City of Santa Cruz (City) Water Department has embarked on a multi-year Capital Improvement Program to renovate and upgrade its water system, which will include water supply and infrastructure projects to improve reliability and resiliency and address older infrastructure. The Capital Improvement Program includes plans and funding for numerous projects, including rehabilitation or replacement projects, upgrades and improvement projects, water supply reliability studies, and water main replacements.

The Graham Hill Water Treatment Plant (GHWTP) is an existing facility located in City limits, shown on Figure 1, Project Location. The facility was commissioned in 1960 and has served as a critical component of the City's drinking water system. The GHWTP treats local surface water and groundwater from multiple sources: the San Lorenzo River (at the Tait Diversion, Felton Diversion, and Tait Wells), Majors Creek, Laguna Creek, Reggiardo Creek (by way of Laguna Creek Diversion), Liddell Spring, and Newell Creek (Loch Lomond Reservoir). The City selects its water source and blend for treatment based on multiple variables including demands, source water availability, and source water quality. These selections vary seasonally.

The GHWTP has a rated capacity of 24 million gallons per day (mgd) and a permitted capacity of approximately 18 mgd. Several improvements and modification have been made over the years, focusing on in-kind repairs and replacements, seismic upgrades, and minor improvements in response to changing regulations and permit requirements. However, the GHWTP has several remaining deficiencies related to the age of the infrastructure, the ability of the GHWTP to efficiently meet water quality objectives and adapt to future treatment needs, and source-water conditions. The GHWTP Facility Improvements Project (Proposed Project) would address these remaining deficiencies and help to meet water quality objectives and future water supply needs. The Proposed Project is needed to provide the community with a resilient surface water treatment plant that will meet the regulatory and climate challenges of the 21st century.

The purpose of this noise existing conditions report is to describe the current project site conditions, present a description of the existing ambient noise monitoring survey, describe the findings of the survey, and provide the regulatory setting. This report is intended to provide baseline information to support the Proposed Project's environmental review and help inform development of mitigation measures to address potentially significant impacts related to noise.

1.1 Project Description

The Proposed Project consists of improvements at the GHWTP to address aging infrastructure and to provide for efficiently and reliably meeting future water quality objectives and water supply needs. The Proposed Project includes the following:

- **New Water Treatment and Related Processes.** New water treatment and related processes would rehabilitate, replace or augment the existing treatment systems at the GHWTP. The proposed treatment processes would allow the City to reliably and efficiently meet existing and reasonably foreseeable regulations even with source water that is more difficult to treat as described in the Purpose and Need section. The Proposed Project would include solids dewatering to allow for more efficient separation and disposal of solids that are removed from the raw water during the treatment process. Upgrades to the

chemical feed systems would also be included as well as a replacement wash water supply tank, a new ozone contactor, pre-treatment processes, granular activated carbon contactors, and recycled water clarifiers. Space would also be reserved for a UV disinfection system and other additional treatment processes, if needed in the future. The design capacity of the Proposed Project would be approximately 18 mgd (net), a decrease from the 24 mgd capacity of the existing treatment plant.

- **New and Upgraded Buildings.** The Proposed Project would include new and upgraded buildings including a new administration building and/or operations building, new maintenance building, HVAC improvements, replacement or upgrade of the filter gallery building, and new ozone, solids dewatering, and chemical storage facilities.

- **Infrastructure and Site Improvements.** The Proposed Project would include infrastructure and site improvements including piping and storm water management improvements; electrical, and SCADA improvements; vehicular access improvements; landscaping improvements; and may include fencing and site security.

- **Removal of Existing Facilities.** The Proposed Project would include demolition of some existing buildings, water treatment facilities (e.g., sedimentation basins), and infrastructure, as needed to address facilities beyond their useful life or to accommodate new facilities.

Figure 2 (2-1 through 2-3) provides a conceptual illustration of the locations in the Proposed Project that are being considered for development. The areas shown in the *Known Development Envelope* would be prioritized for development and permanent facilities. The *Optional Development Envelope – Low Priority* is the area that could be developed but that would be less desirable because of location, topography, or other factors. Since the GHWTP is a geographically constrained site, the *Optional Development Envelope – Low Priority* portion of the Proposed Project is being retained in the event that the *Known Development Envelope* is insufficient in accommodating the necessary improvements. Specific activities, buildings, or facilities, if any, that would be placed in the *Optional Development Envelope - Low Priority Area* are not defined or known at this time. However, should activities or development be needed in the *Optional Development Envelope - Low Priority Area* those developments and activities would be described and disclosed in the Draft EIR (anticipated schedule is described below). Figure 2 also illustrates a *Traffic and Utility Improvements Area,* which could include infrastructure and site improvements including piping and storm drain system improvements; electrical, and SCADA improvements; vehicular access improvements; landscaping improvements; and site security. While not indicated on Figure 2, the existing fencing may be improved or replaced along the perimeter of the GHWTP as a part of the Proposed Project.

The two staging areas (Mt. Hermon Road Staging Area and Ocean Street Extension Staging Area) that would be used during construction of the Proposed Project are shown in Figure 1. In addition, locations within the GHWTP may also be used for temporary staging, laydown of equipment and/or storage during construction.

1.1.1 Project Location

The Proposed Project would primarily be constructed at the City's existing GHWTP, located within Santa Cruz City limits. Additionally, the Proposed Project is anticipated to involve activities outside of the GHWTP for the purposes of temporary construction staging and potential utility and traffic safety improvements. These activities would occur in both City and County of Santa Cruz (County) jurisdictions. The Proposed Project is anticipated to be located at

four sublocations of the primary project site and construction would be supported using several staging areas, which together constitute the project site (see Figures 1 and 2). The Proposed Project locations include:

- **Primary Project Site -** The approximately 17.03-acre primary project site consisting of:
    - GHWTP Parcel. The approximately 12.40-acre City-owned GHWTP parcel located at 715 Graham Hill Road in Santa Cruz, CA 95060 on Assessor Parcel Number (APN): 060-141-05;
    - Utility Corridor. The approximately 0.18-acre, 550-linear-foot utility corridor between the GHWTP parcel and the San Lorenzo River via Ocean Street Extension and a 15-foot right-of-way on APN: 060-151-05;
    - Graham Hill Road Right-of-Way. Approximately 2.30-acres, 1,620 linear feet of the Graham Hill Road public right-of-way between just north of Mosswood Court and just south of Lyle Way;
    - Alternate Sanitary Sewer Lateral Improvement Area. The approximately 2.15-acre alternate sanitary sewer lateral improvement area from the southwest corner of the GHWTP parcel at Ocean Street Extension and along Ocean Street Extension for approximately 4,500 linear feet to the City Public Works Department maintained sanitary sewer connection at Graham Hill Road.
- **Staging Areas –**
    - Mt. Hermon Road Staging Area. The approximately 5.14-acre staging area for the Proposed Project located at the northern intersection of Graham Hill Road and Mt. Hermon Road, in Felton, CA at APN: 071-201-43;
    - Ocean Street Extension Staging Area. The approximately 1.86-acre staging area for the Proposed Project (Ocean Street Extension Staging Area) located at 1941 Ocean Street Extension at APN: 008-031-16; and.
    - Other Staging Areas. Additional off-site staging may be needed, the location of which is currently unknown.

The GHWTP parcel at the primary project site is generally accessed from the south on Graham Hill Road via Ocean Street off of State Route 1 (locally referred to as Highway 1). The primary project site may also be accessed from the north on Graham Hill Road via Sims Road or Mount Hermon Road off of State Route 17 (locally referred to as Highway 17).

Single-family residential land uses surround the GHWTP Parcel on the northern, eastern, and southern perimeters. Dense tree canopy and vegetation, and scattered residential dwellings are located beyond the western perimeter on a hillside that slopes down to the San Lorenzo River, approximately 0.3 miles to the west of the primary project site.

The western perimeter slopes down toward the San Lorenzo River and is an area of scattered residential dwellings. A narrow extension of the GHWTP extends from the otherwise rectangular parcel from the southwest corner down to Ocean Street Extension. This vegetated extension is a corridor for several different types of utilities. The site is characterized by a mix of industrial development for the purpose of water treatment, open space and vegetation. The site is generally accessed from the south on Graham Hill Road via Ocean Street off of State Route 1 (locally referred to as Highway 1) but can also be accessed from the north on Graham Hill Road via Sims Road or Mount Hermon Road off of State Route 17 (locally referred to as Highway 17).

The Mt. Hermon Road Staging Area is located adjacent to heavily forested open space, as well as commercial and low/very low-density residential land uses. The Ocean Street Extension Staging Area is located adjacent to a crematorium and low/very low-density residential land uses, off of Ocean Street Extension.

The 17.03-acre primary project site is located within the U.S. Geological Survey 7.5-minute Felton and Santa Cruz quadrangles maps (USGS 2021a). The is positioned approximately 855 feet east of the San Lorenzo River and approximately 2.7 miles from the Pacific Ocean. Elevations within the project site average approximately 325 feet above mean sea level.

2 Acoustic Fundamentals

Acoustics is the scientific study that evaluates perception, propagation, absorption, and reflection of sound waves. Sound is a mechanical form of radiant energy, transmitted by a pressure wave through a solid, liquid, or gaseous medium. Sound that is loud, disagreeable, unexpected, or unwanted is generally defined as noise; consequently, the perception of sound is subjective in nature, and can vary substantially from person to person. Common sources of environmental noise and relative noise levels are shown in Table 1.

Table 1. Typical Noise Levels Associated with Common Activities

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110	Rock Band
Jet Flyover at 1,000 feet		
	100	
Gas Lawn Mower at 3 feet

Source: Caltrans 2020a.
Notes: dBA = A-weighted decibels; mph = miles per hour.

A sound wave is initiated in a medium by a vibrating object (e.g., vocal cords, the string of a guitar, the diaphragm of a radio speaker). The wave consists of minute variations in pressure, oscillating above and below the ambient atmospheric pressure. The number of pressure variation cycles occurring per second is referred to as the frequency of the sound wave and is expressed in Hertz (Hz), which is equivalent to one complete cycle per second.

Directly measuring sound pressure fluctuations would require the use of a very large and cumbersome range of numbers. To avoid this and to have a more useable numbering system, the decibel (dB) scale was introduced. Sound level expressed in decibels (dB) is the logarithmic ratio of two like pressure quantities, with one pressure quantity being a reference sound pressure and the second pressure being that of the sound source of concern. For sound pressure in air, the standard reference quantity is generally considered to be 20 micropascals, which directly corresponds to the threshold of human hearing. The use of the decibel is a convenient way to handle the million-fold range of sound pressures to which the human ear is sensitive. A decibel is logarithmic; it does not follow normal algebraic methods and cannot be directly added. For example, a 65 dB source of sound, such as a truck, when joined by another 65 dB source results in a sound amplitude of 68 dB, not 130 dB (i.e., doubling the source strength increases the sound pressure by 3 dB). A sound level increase of 10 dB corresponds to 10 times the acoustical energy, and an increase of 20 dB equates to a 100-fold increase in acoustical energy.

The loudness of sound perceived by the human ear depends primarily on the overall sound pressure level and frequency content of the sound source. The human ear is not equally sensitive to loudness at all frequencies in the audible spectrum. To better relate overall sound levels and loudness to human perception, frequency-dependent weighting networks were developed. The standard weighting networks are identified as A through E. There is a strong correlation between the way humans perceive sound and A-weighted decibels (dBA). For this reason, the dBA can be used to predict community response to noise from the environment, including noise from transportation and stationary sources. Sound levels expressed as dB in this report are A-weighted sound levels, unless noted otherwise.

Noise can be generated by a number of sources, including mobile sources (transportation) such as automobiles, trucks, and airplanes, and stationary sources (non-transportation) such as construction sites, machinery, and commercial and industrial operations. As acoustic energy spreads through the atmosphere from the source to the receiver, noise levels attenuate (decrease) depending on ground absorption characteristics, atmospheric conditions, and the presence of physical barriers (e.g., walls, building façades, berms). Noise generated from mobile sources generally attenuate at a rate of 3 dB (typical for hard surfaces, such as asphalt) to 4.5 dB (typical for soft surfaces, such as grasslands) per doubling of distance, depending on the intervening ground type. Stationary noise sources spread with more spherical dispersion patterns that attenuate at a rate of 6 dB to 7.5 dBA per doubling of distance for hard and soft sites, respectively.

Atmospheric conditions such as wind speed, turbulence, temperature gradients, and humidity may additionally alter the propagation of noise and affect levels at a receiver. Furthermore, the presence of a large object (e.g., barrier, topographic features, or intervening building façades) between the source and the receptor can provide significant attenuation of noise levels at the receiver. The amount of noise level reduction or “shielding” provided by a barrier primarily depends on the size of the barrier, the location of the barrier in relation to the source and receivers, and the frequency spectra of the noise. Natural barriers such as earthen berms, hills, or dense woods as well as built features such as buildings, concrete berms and walls may be effective barriers for the reduction of source noise levels.

2.1 Noise Descriptors

The intensity of environmental noise levels can fluctuate greatly over time and as such, several different descriptors of time-averaged noise levels may be used to provide the most effective means of expressing the noise levels. The selection of a proper noise descriptor for a specific source depends on the spatial and temporal distribution,

duration, and fluctuation of both the noise source and the environment near the receptor(s). Noise descriptors most often used to describe environmental noise are defined as follows:

- **L_{max} (Maximum Noise Level):** The maximum instantaneous noise level during a specific period of time.
- **L_{min} (Minimum Noise Level):** The minimum instantaneous noise level during a specific period of time.
- **L_x (Statistical Descriptor):** The noise level exceeded "X" percent of a specific period of time. For example, L_{50} is the median noise level, or level exceeded 50% of the time.
- **L_{eq} (Equivalent Noise Level):** The average noise level. The instantaneous noise levels during a specific period of time in dBA are converted to relative energy values. From the sum of the relative energy values, an average energy value is calculated, which is then converted back to dBA to determine the L_{eq}. In noise environments determined by major noise events, such as aircraft over-flights, the L_{eq} value is heavily influenced by the magnitude and number of single events that produce the high noise levels.
- **L_{dn} (Day-Night Average Noise Level):** The 24-hour L_{eq} with a 10 dBA "penalty" for noise events that occur during the noise-sensitive hours between 10 p.m. and 7 a.m. In other words, 10 dBA is "added" to noise events that occur in the nighttime hours, and this generates a higher reported noise level when determining compliance with noise standards. The L_{dn} attempts to account for the fact that noise during this specific period of time is a potential source of disturbance with respect to normal sleeping hours.
- **CNEL (Community Noise Equivalent Level):** The CNEL is similar to the L_{dn} described above, but with an additional 5-dBA "penalty" added to noise events that occur during the noise-sensitive hours between 7 p.m. and 10 p.m., which are typically reserved for relaxation, conversation, reading, and television. When the same 24-hour noise data are used, the reported CNEL is typically approximately 0.5 dBA higher than the L_{dn}.
- **SEL (Sound Exposure Level):** The cumulative exposure to sound energy over a stated period of time; typically, the energy of an event, summed into a 1-second period of time.

Community noise is commonly described in terms of the ambient noise level which is defined as the all-encompassing noise level associated with a given noise environment. A common statistical tool to measure the ambient noise level is the average, or equivalent sound level (L_{eq}) which corresponds to the steady-state A-weighted sound level containing the same total energy as the time-varying signal over a given time period (usually 1 hour). The L_{eq} is the foundation of the composite noise descriptors such as L_{dn} and CNEL, as defined above, and shows very good correlation with community response to noise. Use of these descriptors along with the maximum noise level occurring during a given time period provides a great deal of information about the ambient noise environment in an area.

2.2 Negative Effects of Noise on Humans

Excessive and chronic exposure to elevated noise levels can result in auditory and non-auditory effects on humans. Auditory effects of noise on people are those related to temporary or permanent hearing loss caused by loud noises. Non-auditory effects of exposure to elevated noise levels are those related to behavioral and physiological effects. The non-auditory behavioral effects of noise on humans are associated primarily with the subjective effects of annoyance, nuisance, and dissatisfaction, which lead to interference with activities such as communications, sleep, and learning. The non-auditory physiological health effects of noise on humans have been the subject of considerable research attempting to discover correlations between exposure to elevated noise levels and health problems, such as hypertension and cardiovascular disease. The majority of research infers that noise-related health issues are predominantly the result of behavioral stressors and not a direct noise-induced response. The extent to which noise contributes to non-auditory health effects remains a subject of considerable research, with no definitive conclusions.

The degree to which noise results in annoyance and interference is highly subjective and may be influenced by several non-acoustic factors. The number and effect of these non-acoustic environmental and physical factors vary depending on individual characteristics of the noise environment such as sensitivity, level of activity, location, time of day, and length of exposure. One key aspect in the prediction of human response to new noise environments is the individual level of adaptation to an existing noise environment. The greater the change in the noise levels that are attributed to a new noise source, relative to the environment an individual has become accustomed to, the less tolerable the new noise source will be to an individual.

With respect to how humans perceive and react to changes in noise levels, a 1 dBA increase is generally imperceptible outside of a laboratory environment, a 3 dBA increase is barely perceptible, a 6 dBA increase is clearly noticeable, and a 10 dBA increase is subjectively perceived as approximately twice as loud (Egan 1988). These subjective reactions to changes in noise levels was developed on the basis of test subjects' reactions to changes in the levels of steady-state, pure tones or broad-band noise and to changes in levels of a given noise source. Perception and reaction to changes in noise levels in this manner is thought to be most applicable in the range of 50 to 70 dBA, as this is the usual range of voice and interior noise levels.

2.3 Vibration Fundamentals

Vibration is similar to noise in that it is a pressure wave traveling through an elastic medium involving a periodic oscillation relative to a reference point. Vibration is most commonly described in respect to the excitation of a structure or surface, such as in buildings or the ground. Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Sources of vibration include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) and those introduced by human activity (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, (e.g., operating factory machinery) or transient in nature (e.g., explosions, impacts). Vibration levels can be depicted in terms of amplitude and frequency; relative to displacement, velocity, or acceleration.

Vibration amplitudes are commonly expressed in peak particle velocity (PPV) or root-mean-square (RMS) vibration velocity. PPV is defined as the maximum instantaneous positive or negative peak of a vibration signal, or the quantity of displacement measured from peak to trough of the vibration wave. RMS is defined as the positive and negative statistical measure of the magnitude of a varying quantity. The RMS of a signal is the average of the squared amplitude of the signal, typically calculated over a period of one second. PPV is typically used in the monitoring of transient and impact vibration and has been found to correlate well to the stresses experienced by buildings (Federal Transit Administration [FTA] 2018). PPV and RMS vibration velocity are nominally described in terms of inches per second (in/sec). However, as with airborne sound, vibration velocity can also be expressed using decibel notation as vibration decibels (VdB) with a reference quantity of 1 micro-inch per second. The logarithmic nature of the decibel serves to compress the broad range of numbers required to describe vibration and allow for the presentation of vibration levels in familiar terms.

Typical outdoor sources of perceptible groundborne vibration include construction equipment, steel-wheeled trains, and vehicles on rough roads. Although the effects of vibration may be imperceptible at low levels, effects may result in detectable vibrations and slight damage to nearby structures at moderate and high levels, respectively. At the elevated levels of vibration, damage to structures is primarily architectural (e.g., loosening and cracking of plaster or stucco coatings) and rarely results in damage to structural components. The range of vibration relevant to

vibration analysis for environmental compliance and evaluating potential impact of a project occurs from approximately 60 VdB, which is the typical background vibration-velocity level; to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings (FTA 2018). Table identifies some common sources of vibration, corresponding VdB levels, and associated human perception and potential for structural damage.

Table 2. Typical Levels of Groundborne Vibration

Human/Structural Response	Velocity Level, VdB (re 1 µ-inch/sec, RMS)	Typical Events (50-foot setback)
Threshold, minor cosmetic damage	100	Blasting, pile driving, vibratory compaction equipment
—	95	Heavy tracked vehicles (Bulldozers, cranes, drill rigs)
Difficulty with tasks such as reading a video or computer screen	90	Commuter rail, upper range
Residential annoyance, infrequent events	80	Rapid transit, upper range
Residential annoyance, occasional events	75	Commuter rail, typical bus or truck over bump or on rough roads
Residential annoyance, frequent events	72	Rapid transit, typical
Approximate human threshold of perception to vibration	65	Buses, trucks, and heavy street traffic
—	60	Background vibration in residential settings in the absence of activity
Lower limit for equipment ultra-sensitive to vibration	50	—

Notes: µ-inch/sec = micro-inch per second; re = in reference to; RMS = root-mean-square; VdB = vibration decibels.

INTENTIONALLY LEFT BLANK

3 Regulatory Framework

3.1 Federal

3.1.1 Federal Noise Control Act

In 1981, EPA administrators determined that subjective issues such as noise would be better addressed at more local levels of government. No federal noise regulations are applicable to the Proposed Project.

3.2 State

The State of California has adopted noise standards in areas of regulation not preempted by the federal government. State standards regulate noise levels of motor vehicles, sound transmission through buildings, occupational noise control, and noise insulation.

3.2.1 Governor's Office of Planning and Research General Plan Guidelines

The Governor's Office of Planning and Research (OPR) published the State of California General Plan Guidelines (OPR 2003), which provides guidance for the acceptability of projects within specific L_{dn} contours. Table summarizes acceptable and unacceptable community noise exposure limits for various land use categories. The guidelines also present adjustment factors that may be used to help craft noise acceptability standards that reflect the noise control goals of the community, the particular community's sensitivity to noise, and the community's assessment of the relative importance of noise pollution.

Table 3. Summary of Land Use Noise Compatibility Guidelines

Land Use Category	Community Noise Exposure (dBA Ldn)			
	Normally Acceptable[1]	Conditionally Acceptable[2]	Normally Unacceptable[3]	Clearly Unacceptable[4]
Residential—Low-Density Single-Family, Duplex, Mobile Home	<60	55–70	70–75	75+
Residential—Multifamily	<65	60–70	70–75	75+
Transient Lodging—Motel, Hotel	<65	60–70	70–80	80+
Schools, Libraries, Churches, Hospitals, Nursing Homes	<70	60–70	70–80	80+
Auditoriums, Concert Halls, Amphitheaters	—	<70	65+	—
Sports Arena, Outdoor Spectator Sports	—	<75	70+	—
Playgrounds, Neighborhood Parks	<70	—	67.5–75	72.5+
Golf Courses, Riding Stables, Water Recreation, Cemeteries	<75	—	70–80	80+

Table 3. Summary of Land Use Noise Compatibility Guidelines

Land Use Category	Community Noise Exposure (dBA Ldn)			
	Normally Acceptable[1]	Conditionally Acceptable[2]	Normally Unacceptable[3]	Clearly Unacceptable[4]
Office Building, Business Commercial, and Professional	<70	67.5–77.5	75+	—
Industrial, Manufacturing, Utilities, Agriculture	<75	70–80	75+	—

Source: OPR 2003.
Notes: dBA = A-weighted decibels; L_{dn} = day-night average noise level.

1 Specified land use is satisfactory, based on the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.
2 New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.
3 New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design. Outdoor areas must be shielded.
4 New construction or development should generally not be undertaken.

Generally, residential uses (e.g., single-family homes, mobile homes, etc.) are considered to be acceptable in areas where exterior noise levels do not exceed 60 dBA L_{dn}. Residential uses are normally unacceptable in areas exceeding 70 dBA L_{dn} and conditionally acceptable within 55 to 70 dBA L_{dn}. Schools are normally acceptable in areas up to 70 dBA L_{dn} and normally unacceptable in areas exceeding 70 dBA L_{dn}. Commercial uses are normally acceptable in areas up to 70 dBA L_{dn}. Between 67.5 and 77.5 dBA L_{dn}, commercial uses are conditionally acceptable, depending on the noise insulation features and the noise reduction requirements.

3.2.2 California Department of Transportation Guideline Vibration Damage Potential Threshold Criteria

There are no state standards for vibration; however, California Department of Transportation (Caltrans) compiled a synthesis of research on the effects of vibration with thresholds ranging from 0.08 in/sec PPV to 4.0 in/sec PPV for "fragile historic buildings" and "structures of substantial construction," respectively (Caltrans 2020b). Based on the synthesis of research, Caltrans developed recommendations for guideline threshold criteria of 0.3 in/sec PPV for older residential structures and 0.25 in/sec PPV for historic buildings and some old buildings exposed to continuous/frequent intermittent sources. For extremely fragile historic buildings, ruins, and ancient monuments, Caltrans recommends a threshold of 0.08 in/sec PPV.

3.3 Local

The pertinent noise standards introduced in this section for the County of Santa Cruz (County) and the City will be considered and utilized, in part, to develop the quantified significance criteria related to increases in ambient noise levels. The quantified significance criteria will be provided in the pending Environmental Impact Report (EIR) and will be used to evaluate the potential impacts of the Proposed Project.

3.3.1 County of Santa Cruz General Plan

The County of Santa Cruz General Plan Noise Element, Chapter 9 (County of Santa Cruz 2020a) contains updated goals, objectives, and policies intended to protect citizens from exposure to excessive noise. The Noise Element establishes standards and policy to promote compatible noise environments for new development or redevelopment projects and to control excessive noise exposure of existing land uses. The following policies and standards are considered, where relevant, in the noise analysis for the Proposed Project.

Objective 9.2 Noise Exposure of Existing Sensitive Uses and Receptors

Minimize exposure of existing noise-sensitive land uses and receptors to excessive, unsafe or disruptive noise that may be generated by new land uses and development projects.

Policies

9.2.1 Require acoustical studies for all new development projects that may affect the existing noise environment affecting sensitive land uses and receptors and that may not conform to the Normally Acceptable Noise Exposure in Table 9-2 (Table 4 in this report).

9.2.2 Require site-design and noise reduction measures for any project, including transportation projects that would cause significant degradation of the noise environment due to project effects that could:

(a) Increase the noise level at existing noise-sensitive receptors or areas by 5 dB or more, where the post-project CNEL or DNL will remain equal to or below 60 dBA;

(b) Increase the noise level at existing noise-sensitive receptors or areas by 3 dB or more, where the post-project CNEL or DNL would exceed 60 dBA;

This policy shall not be interpreted in a manner that would limit the ability of the County to require noise related mitigation measures or conditions of approval for projects that may generate lesser increases than the above. Special consideration may also be applied to special events or activities subject to permit requirements, or to land use development permits for uses and activities exempted from County noise control regulations.

9.2.3 Incorporate noise considerations into the site plan review process, particularly with regard to parking and loading areas, ingress/egress points and refuse collection areas.

9.2.4 For all new commercial and industrial developments which would increase noise levels above the normally acceptable standards in Table 9-2 (Table 4 in this report) or the maximum allowable standards in Table 9-3 (Table 5 in this report), the best available control technologies shall be used to minimize noise levels. In no case shall the noise levels exceed the standards of Table 9-3 (Table 5 in this report).

9.2.5 The following noise mitigation strategies are preferable to construction of conventional masonry noise barriers where these strategies are a feasible option to reduce impacts on sensitive uses:

- Avoid placement of noise sensitive uses in noisy areas.
- Avoid placement of significant noise generators in noise sensitive areas.
- Increase setbacks between noise generators and noise sensitive uses.
- Orient buildings such that the noise sensitive portions of a project (e.g. bedrooms) are shielded from noise sources (such as through careful design of floor plan).

- Use sound-attenuating architectural design and building features.
- Employ technologies that reduce noise generation, such as alternate pavement materials on roadways, when appropriate.
- Employ traffic calming measures where appropriate.

9.2.6 Require mitigation and/or best management practices to reduce construction noise as a condition of project approvals, particularly if noise levels would exceed 75 dBA at neighboring sensitive land uses or if construction would occur for more than 7 days.

Table 4. Acceptable through Unacceptable Ranges of Noise Exposure by Land Use

Land Use		Community Noise Exposure DNL or CNEL dB(A) 55 60 65 70 75 80
A	Residential/Lodging – Single Family, Duplex, Mobile Home, Multi Family	
B	Schools, Libraries, Religious Institutions, Meeting Halls, Hospitals	
C	Outdoor Sports Arena or Facility, Playgrounds, Neighborhood Parks	
D	Office Buildings, Business Commercial and Professional	
E	Industrial, Manufacturing, Utilities, Agriculture	
	Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements, and can meet the indoor noise standards.	
	Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design to meet interior and exterior noise standards, where applicable.	
	Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design to meet interior and exterior noise standards, where applicable.	
	Unacceptable: New construction or development should generally not be undertaken.	

Source: County of Santa Cruz 2020a, Table 9-2.
Note: Outdoor noise exposure measured at the property line of receiving land use

Table 5. Maximum Allowable Noise Exposure Stationary Noise Sources[1]

Noise Metric	Daytime[5] (7 a.m. to 10 p.m.)	Nighttime[2,5] (10 p.m. to 7 a.m.)
Hourly L_{eq} – average hourly noise level, dB[3]	50	45
Maximum Level, dB[3]	70	65
Maximum Level dB – Impulsive Noise[4]	65	60

Source: County of Santa Cruz 2020a, Table 9-3.
Notes: dB = decibel; L_{eq} = equivalent noise level (time-averaged sound level).
1 As determined at the property line of the receiving land use. When determining effectiveness of noise mitigation measures, the standards may be applied on the receptor side of noise barriers or other property line noise mitigation measures.
2 Applies only where the receiving land use operates or is occupied during nighttime hours.
3 Sound of the measurements shall be made with "slow" meter response.
4 Sound level measurements shall be made with "fast" meter response.

[5] Allowable levels shall be raised to the ambient noise level were the ambient level exceeds the allowable levels. Allowable levels shall be reduced five dBA if the ambient hourly L_{eq} is at least 10 dBA lower than the allowable level

3.3.1.1 Santa Cruz County Code

The Santa Cruz County Code contains additional guidance with the intent to control noise, to promote and maintain the health, safety and welfare of its citizens. Chapter 8.30 of the Santa Cruz County Code enumerates general standards, limitations and exemptions pertaining to noise within the County. Additionally, Chapter 13.15 institutes "Noise Planning", which codifies General Plan policies and aids in regulating noise throughout the County through land use planning and permitting (County of Santa Cruz 2020b).

8.30.10 Offensive Noise

(A) No person shall make, cause, suffer, or permit to be made any offensive noise.

(B) "Offensive noise" means any noise which is loud, boisterous, irritating, penetrating, or unusual, or that is unreasonably distracting in any other manner such that it is likely to disturb people of ordinary sensitivities in the vicinity of such noise, and includes, but is not limited to, noise made by an individual alone or by a group of people engaged in any business, activity, meeting, gathering, game, dance, or amusement, or by any appliance, contrivance, device, tool, structure, construction, vehicle, ride, machine, implement, or instrument.

(C) The following factors shall be considered when determining whether a violation of the provisions of this section exists:

(1) Loudness (Intensity) of the Sound.

(a) Day and Evening Hours. For purposes of this factor, a noise shall be automatically considered offensive if it occurs between the hours of 8:00 a.m. and 10:00 p.m. and it is:

(i) Clearly discernible at a distance of 150 feet from the property line of the property from which it is broadcast; or

(ii) In excess of 75 decibels at the edge of the property line of the property from which the sound is broadcast, as registered on a sound measuring instrument meeting the American National Standard Institute's Standard S1.4-1971 (or more recent revision thereof) for Type 1 or Type 2 sound level meters, or an instrument which provides equivalent data. A noise not reaching this intensity of volume may still be found to be offensive depending on consideration of the other factors outlined below.

(b) Night Hours. For purposes of this factor, a noise shall be automatically considered offensive if it occurs between the hours of 10:00 p.m. and 8:00 a.m. and it is:

(i) Made within 100 feet of any building or place regularly used for sleeping purposes; or

(ii) Clearly discernible at a distance of 100 feet from the property line of the property from which it is broadcast; or

(iii) In excess of 60 decibels at the edge of the property line of the property from which the sound is broadcast, as registered on a sound measuring instrument meeting the American National Standard Institute's Standard S1.4-1971 (or more recent revision thereof) for Type 1 or Type 2 sound level meters, or an instrument which provides equivalent data. A noise not reaching this intensity of volume may still be found to be offensive depending on consideration of the other factors outlined below.

(2) Pitch (frequency) of the sound, e.g., very low bass or high screech;

(3) Duration of the sound;

(4) Time of day or night;

(5) Necessity of the noise, e.g., garbage collecting, street repair, permitted construction activities;

(6) The level of customary background noise, e.g., residential neighborhood, commercial zoning district, etc.; and

(7) The proximity to any building regularly used for sleeping purposes.

13.15.040 Exemptions

(A) Noise sources normally and reasonably associated with construction, repair, remodeling, or grading of any real property, provided a permit has been obtained from the County as required, and provided said activities take place between the hours of 8:00 a.m. and 5:00 p.m. on weekdays unless the Building Official has in advance authorized said activities to start at 7:00 a.m. and/or continue no later than 7:00 p.m. Such activities shall not take place on Saturdays unless the Building Official has in advance authorized said activities, and provided said activities take place between 9:00 a.m. and 5:00 p.m. and no more than three Saturdays per month. Such activities shall not take place on Sunday or a federal holiday unless the Building Official has in advance authorized such work on a Sunday or federal holiday, or during earlier morning or later evening hours of a weekday or Saturday.

(B) Emergency Work. The provisions of this chapter shall not apply to the emission of sound for the purpose of alerting persons to the existence of an emergency or in the performance of emergency work.

13.15.050 General Noise Regulations and Unlawful Noise

(A) No use, except a temporary construction operation, shall be permitted which creates noise which is found by the Planning Commission not to conform to the noise parameters established by Table 9-2 and Table 9-3 of the Santa Cruz County General Plan (Table 4 and 5 of this report) beyond the boundaries of the project site at standard atmospheric pressure.

(B) Backup emergency generators shall only be operated during power outages and for other temporary purposes. If the generator is located within 100 feet of a residential dwelling unit, noise attenuation measures shall be included to reduce noise levels to an A-weighted maximum exterior noise level of 60 dB at the property line and a maximum interior noise level of 45 dB within nearby residences.

13.15.070 Noise Generating Land Use

(A) New commercial and industrial development that would increase noise levels above the normally acceptable range in Table 9-2 or the levels in Table 9-3 of the Santa Cruz County General Plan Noise Element (Table 4 and 5 of this report) shall require acoustic studies to determine the noise reduction requirements to be included as conditions of approval. Noise levels shall not exceed the standards in Table 9-3 (Table 5 of this report), and require, as conditions of approval, site design and sound reducing measures if the project would:

(1) Increase the noise level at existing noise-sensitive receptors or areas by five (5) dB L_{dn} or more, where the post-project L_{dn} would remain equal to or below 60 dB.

(2) Increase the noise level at existing noise-sensitive receptors or areas by three (3) dB L_{dn} or more, where the post-project L_{dn} would exceed 60 dB.

(B) The standards in this section shall not limit the ability of the County to impose conditions of approval on projects that increase noise levels at existing noise-sensitive receptors or areas by any amount.

13.15.080 Exterior Noise Standards

New development shall not be exposed to noise levels that exceed the normally acceptable levels in Table 9-2 of the Santa Cruz County General Plan Noise Element (Table 4 of this report), which establishes acceptable through unacceptable ranges of noise exposure by land use.

3.3.2 City of Santa Cruz General Plan

Applicable noise standards in the City of Santa Cruz General Plan are contained within Chapter 8 of the General Plan (Hazards, Safety, and Noise) (City of Santa Cruz 2012). The Hazards, Safety, and Noise chapter contains specific goals, policies, and standards for use in planning and land compatibility determinations within the City of Santa Cruz. In particular, the Hazards, Safety, and Noise chapter establishes noise/land-use compatibility standards which are applicable to all new residential, commercial, and mixed-use projects (Figure 2 of the Hazards, Safety, and Noise chapter and Goal HZ3.2.1), and the General Plan seeks to ensure that noise standards are met in the siting of noise-sensitive uses (Goal HZ3.2).

The Hazards, Safety, and Noise chapter policies establish a maximum interior noise level threshold of 45 dBA L_{dn} for all residential uses, consistent with California noise insulation standards. Figure 2 of the Hazards, Safety, and Noise chapter indicates that exterior noise levels up to 60 dBA L_{dn} are normally acceptable for residential development and exterior noise levels up to 65 dBA L_{dn} are normally acceptable for multi-family residential and transient residential development; with noise levels up to 70 dBA L_{dn} considered conditionally acceptable. Hazards, Safety, and Noise chapter Policy HZ3.2.3 reiterates the “noise level target” of 65 dBA L_{dn} for outdoor activity areas associated with new multi-family residential developments. Policies HZ3.1.3 and HZ3.1.5 qualitatively discuss the management and monitoring of construction noise levels to minimize noise impacts on surrounding land uses.

3.3.3 City of Santa Cruz Municipal Code

Chapters 9.36 and 24.14 of the City of Santa Cruz Municipal Code (City of Santa Cruz 2021) include provisions for noise regulations. The former prohibits excessive noise during nighttime hours (10:00 p.m. through 8:00 a.m.) (Section 9.36.010, Subsection(a)), but without any quantitative (numerical) limits. For the purposes of construction activities performed in support of public works, the nighttime noise restriction shall not apply during the hours of 7:00 a.m. to 8:00 a.m.

Subsection (d) of Chapter 9.36 states that “Subsection (a) shall not apply to any person engaged in performance of a contract for public works awarded by the City of Santa Cruz, in the event of an emergency and if the city manager of the City of Santa Cruz so authorizes work.”

Subsection (e) of Chapter 9.36 allows for specific construction activities to occur between the hours of 10:00 p.m. and 8:00 a.m. where either the chief building inspector, public works director, planning and community development director or water department director have provided written determination and consent that said task is required commence or be completed between said hours.

Section 9.36.025 states "This chapter shall not apply to refuse collection, recyclable collection or street sweeping activities undertaken by, or pursuant to contract with, the city of Santa Cruz. Similarly, this chapter shall not apply to any other activity undertaken by the city, another governmental agency, or city contractor, for public health and safety purposes when, in the judgment of the city or governmental agency, such activity cannot be undertaken effectively or efficiently in compliance with the regulations set forth in this chapter.

In addition to the Chapter 9.36 regulations, Section 24.14 describes performance standards which limit noise production with respect to noise production from residential and commercial/industrial land uses: up to a 5 dB or 6 dB increase, respectively, above existing outdoor ambient sound levels. These allowable noise standards are adjusted by +5 dB for noise levels that are considered to be "containing piercing", "noise that is impulsive", or "contains speech, music or other information content".

3.4 Threshold Summary

The standards of significance used to evaluate the impacts of the Proposed Project related to noise are based on Appendix G of the CEQA Guidelines, as listed below. According to Appendix G, a significant impact would occur if the Proposed Project would:

A. Result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

B. Result in excessive groundborne vibration or groundborne noise levels.

C. Expose people residing or working in the project area to excessive noise levels in a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport.

While the County General Plan and Municipal Code do not specifically apply to the proposed project activities, the City and County General Plan and Code noise standards have been considered and are used as guidance to develop threshold criteria, as they reflect established community standards and the guidance thresholds developed by the State of California OPR. The following presents the significance thresholds to address CEQ Appendix G Standards of Significance A and B; Standard of Significance C would not be included as the project site and associated activities are not within an airport land use plan or within 2 miles of a public or public use airport.

- Significance Standard A. The Proposed Project would result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project if it would:
    - For temporary construction activities on the project site, a significant impact would result if construction noise exceeds 60 dBA between 10 p.m. and 8 a.m. or 75 dBA between 5 p.m. and 10 p.m. Between

the hours of 8 a.m. to 5 p.m. on weekdays, construction noise is exempt, based on Santa Cruz County Code Section 8.30.10.

- For construction and operational traffic noise associated with the Proposed Project, a significant impact would result if traffic noise results in an increase of 3 dB to 5 dB L_{dn} or more above existing conditions depending on whether the existing ambient levels are above or below 60 dBA L_{dn} respectively, based on Santa Cruz County Code Section 13.15.070.

- For operational noise, a significant impact would result if operational noise levels exceed the County's stationary noise thresholds (Table 5) or exceed the relative increase criteria outlined in Section 13.15.070 of the County Code. The City of Santa Cruz does not have any standards that would be applicable to this project.

- **Significance Standard B.** The Proposed Project would result in the generation of a substantial temporary ground borne noise or vibration levels in the project vicinity if it would:

  - For structures located outside of the project site, a significant impact would result if groundborne noise or vibration levels exceeded the Caltrans guidance that suggests of 0.3 in/sec PPV for older residential structures and 0.25 in/sec PPV for historic buildings and some old buildings exposed to continuous/frequent intermittent sources (Caltrans 2020b).

INTENTIONALLY LEFT BLANK

4 Existing Noise Environment

4.1 Study Area

As previously described, single-family residential land uses surround the GHWTP parcel on the northern, eastern, and southern perimeters. Dense tree canopy and vegetation, and scattered residential dwellings are located beyond the western perimeter on a hillside that slopes down to the San Lorenzo River, approximately 0.3 miles to the west of the primary project site.

The western perimeter slopes down toward the San Lorenzo River and is an area of scattered residential dwellings. A narrow extension of the GHWTP extends from the otherwise rectangular parcel from the southwest corner down to Ocean Street Extension. This vegetated extension is a corridor for several different types of utilities. The project site is characterized by a mix of industrial development for the purpose of water treatment, open space and vegetation. The Mt. Hermon Road Staging Area is located adjacent to heavily forested open space, as well as commercial and low/very low-density residential land uses. The Ocean Street Extension Staging Area is located adjacent to a crematorium and low/very low-density residential land uses, off of Ocean Street Extension. This section describes the existing noise environment within the vicinity of the Proposed Project components and activities.

4.1.1 Sensitive Noise Receptors

Certain land uses are particularly sensitive to noise, such as schools, hospitals, and rest homes. Residential land uses are also considered noise sensitive, especially during evening and nighttime hours when occupants would typically be relaxing or resting. Noise-sensitive receptors are located immediately adjacent and within close proximity to the GHWTP and the Proposed Project staging areas.

4.1.2 Existing Ambient Noise Measurements

Sound level measurements at the GHWTP and surrounding areas were conducted by Dudek staff during site visits conducted between May 6, 2021 and May 11, 2021 to establish baseline noise conditions to compare to Proposed Project noise levels. Specific consideration was given to document noise levels in the vicinity of nearby noise-sensitive receptors, and additionally to document existing periodic noise source levels. All noise measurements were performed in accordance with American National Standards Institute (ANSI) and American Standards for Testing and Measurement (ASTM) guidelines, at ten locations in and around the Proposed Project area, with three (3) long-term locations and seven (7) short-term measurement locations which are discussed in the following sections. Monitoring locations are shown on Figure 3, Ambient Noise Monitoring Locations for the Proposed Project.

Long-term noise measurements were performed using Larson Davis Laboratories (LDL) Model 831, Type 1 precision integrating sound level meters (SLMs) and a Soft dB Piccolo II Type 2 SLM. The short-term noise measurements were performed using a RION NL-62, Type 1 precision integrating SLM. Field calibrations were performed on the SLMs with acoustic calibrators before and after the measurements. All instrumentation components, including microphones, preamplifiers and field calibrators have laboratory certified calibrations traceable to the National Institute of Standards and Technology (NIST). The equipment used meets all pertinent specifications of the ANSI for Type 1 or Type 2 SLMs (ANSI S1.4-1983 [R2006]). Meteorological conditions during the monitoring periods were

fair with temperatures ranging from 43 to 78 degrees Fahrenheit (F), light winds from 0 to 10 mph, and partly cloudy skies. No precipitation was experienced during the monitoring periods.

4.1.2.1 Long-Term Monitoring

Long-term noise monitoring was performed at three (3) locations adjacent to the GHWTP property boundaries. Sound level monitoring was performed at locations representative of noise-sensitive land uses adjacent to the northern, western and eastern Proposed Project boundaries. The long-term noise monitoring equipment was configured to operate in a continuous manner for two weekdays and two weekend days (4 days total, with 24 hours per time period), cataloging all noise metrics pertinent to identification and evaluation of noise levels (i.e., L_{eq}, L_{max}, L_{dn}, etc.) present in the vicinity of the monitoring locations representative of the nearby receptors. Long-term monitoring equipment at locations LT-1 and LT-2 was started prior to the 7:00 p.m. hour, with LT-3 starting prior to the 4:00 p.m. hour on May 6, 2021. The variation in the measurement period start time at LT-3 was not found to result in a significant difference, as the background ambient noise environment at LT-3 was primarily driven by consistent exposure to on-site mechanical equipment noise and operation noise of the treatment plant (pumps, motors, water movement, etc.) during all daytime and nighttime hours for the duration of the monitoring at LT-3. Ambient noise levels recorded at the long-term noise monitoring locations are presented in Table 6 and shown in Figure 3. Additional measurement details can be found in Appendix A.

During the May 6 to May 10, 2021 monitoring period, on-site noise-generating activities were logged by GHWTP personnel. On Thursday, May 6, 2021 and Sunday, May 9, 2021, no noise-generating activities were notated. On Friday, May 7, 2021 and Saturday, May 8, 2021, a welder was on-site working in the basement, with a welding generator located in front of the Operations Building; noise levels recorded during this time frame are reasonably consistent with other periods with no on-site noise-generating activities. On Sunday, May 10, 2021, at approximately 2:20 p.m. (14:20), a septic pump truck was on-site to service the outhouses; noise levels recorded during this time frame are reasonably consistent with other periods with no on-site noise-generating activities.

Table 6. Long-Term Sound Level Measurement Summary

Site	Location	Start Time 24-Hr Duration	L_{dn}	Average Noise Levels (dBA)							
				Daytime				Nighttime			
				L_{eq}	L_{max}	L_{50}	L_{90}	L_{eq}	L_{max}	L_{50}	L_{90}
LT-1	Northern GHWTP Proposed Project Boundary	5/6/21 7:00 PM	49.6	45.3	59.7	44.2	42.3	42.7	48.4	41.5	39.7
		5/7/21 7:00 PM	50.3	46.9	62.8	45.0	43.4	43.1	56.3	42.0	40.1

		5/8/21 7:00 PM	45.6	41.5	55.9	39.5	37.2	38.7	48.0	37.1	35.8
		5/9/21 7:00 PM	45.9	42.2	57.1	40.2	37.9	38.9	48.3	37.5	35.7
LT-3	Eastern GHWTP Proposed Project Boundary	5/6/21 4:00 PM	57.8	52.1	67.1	49.7	49.0	51.3	57.6	51.2	50.1
		5/7/21 4:00 PM	58.5	52.7	63.1	50.6	48.8	51.9	57.7	51.6	50.3
		5/8/21 4:00 PM	56.8	50.2	61.8	49.0	48.1	50.4	56.5	49.9	49.2
		5/9/21 4:00 PM	56.8	51.4	68.6	50.1	49.4	50.2	55.9	50.2	49.8

Source: Dudek 2021

Notes: dBA = A-weighted decibels; L_{dn} = Day Night noise level; L_{eq} = average equivalent noise level; L_{max} = maximum noise level; L_{50} = sound level exceeded 50% of the period; L_{90} = sound level exceeded 90% of the period

As shown in Table 6, results of the long-term noise monitoring survey showed average day-night (L_{dn}) noise levels ranged from approximately 45 dBA L_{dn}, adjacent to the western GHWTP Proposed Project boundary, up to approximately 59 dBA L_{dn}, adjacent to the eastern GHWTP Proposed Project boundary. The overall average ambient noise the noise monitoring locations at the boundaries of the GHWTP (LT-1, LT-2, LT-3were primarily influenced by noise generated by the GHWTP, traffic noise on Graham Hill Road, and the natural environment. The existing ambient noise levels at the long-term monitoring locations were in compliance with the City's and County's 60 dBA L_{dn} "normally acceptable" noise exposure threshold for residential land uses (Table 4 of this report).

4.1.2.2 Short-Term Monitoring

Short-term noise monitoring was conducted at six (6) locations to provide additional insight into the existing ambient noise environment. Monitoring equipment was configured to catalog pertinent noise metrics as identified above. Ambient noise level data cataloged at the short-term monitoring locations is presented in Table 7 and locations are shown in Figure 3. Concurrent traffic and vehicle classification counts were performed during the short-term monitoring performed at location ST-4, to aid in quantifying traffic noise levels. As observed with the long-term ambient noise monitoring, the noise levels cataloged during the short-term monitoring survey were attributable to the operations of the GHWTP, traffic noise and the natural environment. Overall noise exposure was primarily observed to be dependent on the monitoring location's proximity to traffic noise sources.

Table 7. Short-Term Sound Level Measurement Summary

Site	Description	Date / Start Time[1]	L_{eq}	L_{max}	L_{50}	L_{90}
ST-1	Northern GHWTP Proposed Project boundary, adjacent to LT-1.	5/6/2021 17:55	43.9	52.9	43.2	41.1
ST-2	Northeastern corner of the GHWTP Proposed Project boundary.	5/6/2021 18:18	49.8	66.7	46.3	45.4
ST-3	Southwest portion of the GHWTP Proposed Project boundary.	5/6/2021 18:35	43.8	50.1	43.2	42.1
ST-4	Eastern portion of the GHWTP Proposed Project boundary, adjacent to Graham Hill Road.	5/7/2021 12:02	68.0	78.7	60.9	47.4
ST-5	Southern GHWTP boundary	5/7/2021 12:27	46.5	59.6	44.1	42.7
ST-6	Northern boundary of Ocean St./SC Memorial staging area	5/7/2021 12:42	46.7	61.4	43.6	41.5
ST-7	Felton Covered Bridge Park, 80-feet from Graham Hill Rd. center line.	5/7/2021 16:30	44.5	57.3	41.4	38.5

Source: Dudek 2021
Notes: L_{eq} = equivalent noise level (time-averaged sound level); L_{max} = maximum noise level; L_{50} = noise level exceeded 50% of the measurement duration; L_{90} = noise level exceeded 90% of the measurement duration, also considered equivalent to the background ambient noise conditions; ST = short-term; Temperature: 66°F, clear sky, 1-mile-per-hour calm wind.
1 – All short-term measurements were 10 minutes in duration.

Ambient Noise Monitoring Locations for the Proposed Project

Graham Hill Water Treatment Plant Facility Improvements Project - Noise Existing Conditions Report

INTENTIONALLY LEFT BLANK

4.1.3 Existing Sources of Noise

The Proposed Project site is located within City limits but the existing site is surround by unincorporated County land. The character of the ambient noise environment surrounding the Proposed Project site is typical of quiet suburban areas, with local traffic noise and general community sounds. The primary noise sources affecting the Proposed Project site are further discussed below. No railroads or significant commercial/industrial land uses are located in the vicinity of the GHWTP.

4.1.3.1 GHWTP On-Site Noise

Noise generated from the current operations of the GHWTP were documented as part of the overall existing ambient noise monitoring survey, measurements of individual pieces of equipment were not performed. A review of noise monitoring data showed that the ambient sound levels were attributable to motors, water movement, nearby traffic and sounds of nature (wind rustling, birds, etc.). Elevated sound level events were found to be attributable to aircraft overflights, vehicle engine/exhaust, birds, and nearby yard maintenance. The GHWTP operational noise levels at measurement locations LT-1 and LT-2 were found to be audible in the ambient environment at times, but not generate elevated noise level events. Nearby residents have noted noise from GHWTP's operation of the blower and clarifier; however, while the blower and clarifier were audible at times during the measurement, they were not found to result in elevated noise level events at the measurement location nearest the equipment of concern (LT-1). Measurement location LT-3 experienced a constant elevation in ambient noise levels attributable to the GHWTP operations; however elevated noise level events were not documented during the measurement period.

4.1.3.2 Aircraft Noise

During the noise monitoring survey minimal aircraft overflights were observed and were not found to affect the ambient noise measurement. The Proposed Project site is located approximately 7 miles southeast of the Bonny Doon Village Airpark and approximately 14 miles northwest of the Watsonville Municipal Airport. The Proposed Project site and surrounding noise-sensitive receptors are not located within any currently adopted 60 or 65 dB CNEL/L_{dn} airport noise contours. As such, noise associated with existing and future aircraft operations in the area is not a substantial contributor to the ambient noise environment.

4.1.3.3 Roadway Traffic Noise

Existing traffic noise levels were modeled for roadway segments in the study area based on the Federal Highway Administration (FHWA) Highway Traffic Noise Model (TNM) prediction methodologies (FHWA 1998), average daily traffic (ADT) volume data from Santa Cruz County (Santa Cruz County Regional Transportation Commission 2016). The FHWA TNM incorporates sound emissions and sound propagation algorithms based on well-established theory and accepted international standards. The acoustical algorithms contained within the FHWA TNM have been validated with respect to carefully conducted noise measurement programs and show excellent agreement in most cases for sites with and without noise barriers. The noise modeling accounted for factors Including vehicle volume, speed, vehicle type, roadway configuration, distance to the receiver, and propagation over different types of ground (acoustically soft and hard ground).

Modeled existing traffic noise levels along Graham Hill Road are summarized in Table 8, at a distance of 225 feet from the centerline of Graham Hill Road, to represent traffic noise near the eastern GHWTP property boundary and

875 feet, to represent noise levels near the western GHWTP property boundary. The distances from roadway centerlines to the 60 dBA, 65 dBA, and 70 dBA L_{dn} traffic noise level contours are also presented. The location of the 60 dBA L_{dn} traffic noise contour is approximately 118 feet from the centerline of the Graham Hill Road. The extent to which existing land uses in the study area are affected by existing traffic noise depends on their respective proximity to the roadways and their individual sensitivity to noise.

Table 8. Summary of Modeled Existing Traffic Noise Levels

Roadway	Segment	ADT	L_{dn} at 225 feet[1]	L_{dn} at 875 feet[1]	Distance to L_{dn} Contour (feet) [2]		
					70 dBA	65 dBA	60 dBA
Graham Hill Rd	North of Ocean St	15,089	55.8	46.9	25	55	118

Source: Modeling performed by Dudek 2022, based on County of Santa Cruz 2016.
Notes: ADT = average daily traffic; dBA = A-weighted decibels; L_{dn} = average day-night noise level.
1 – The modeled noise levels at the distance of 225-feet from the Graham Hill Rd. centerline represent the traffic noise exposure at the eastern property boundary. Modeled noise levels at 875-feet from the Graham Hill Rd. centerline represents the traffic noise exposure at the western property boundary.
2 – Not accounting for shielding provided by natural or man-made intervening objects. Actual distance to real-world noise level contours will be dependent upon shielding effects in the environment under consideration.

As can be seen when comparing the modeled traffic noise levels to the long-term ambient noise measurements in Table 6, the modeled traffic noise levels are relatively consistent with the measured ambient noise levels and are within the margin of error for the TNM algorithms and did not require a calibration offset in the model. These modeled existing traffic noise levels are consistent with the observations recorded during the ambient noise monitoring survey, with the noise levels at the monitoring locations primarily being influenced by the GHWTP and roadway traffic on Graham Hill Road.

It should be noted that there is a possibility that the traffic volumes observed during the ambient noise monitoring survey were at a slightly lower ADT due to the timing of the measurements and restrictions placed on travel during the Covid-19 pandemic. Existing traffic volumes from the City were cataloged in 2015 and published in 2016 (City of Santa Cruz 2016), several years prior to implementation of travel restrictions and shelter-in-place regulations. Ambient noise level surveys, traffic calibrations and observation of traffic patterns have been documented to be significantly reduced due to the travel restrictions and shelter-in-place regulations that were implemented at the state level. However, with a comparison of the modeled traffic volumes and the TNM modeling results, the modeled traffic noise levels were found to be representative of the noise levels generated by the existing traffic volumes measured during the traffic calibrations. As such, it was not necessary to apply a calibration offset to the TNM, and the model is considered validated.

While the TNM was found to be validated and reasonably predict the traffic noise levels observed during the measurement survey, and the available 2015 traffic volumes for Graham Hill Road were found to be consistent with the traffic noise levels observed during the ambient monitoring survey, It is possible that traffic volumes experienced during the measurement period could have been artificially reduced, as the survey was performed at the tail end of the Covid-19 travel restrictions. However, the ambient noise survey was performed approximately one (1) month prior to the removal of the Covid-19 restrictions in California. The existing traffic volumes following removal of the Covid-19 restrictions and would be increased in comparison to the traffic volumes cataloged by the

City in 2015; therefore, use of the 2015 volumes as existing baseline for traffic noise levels would be a conservative baseline.

4.1.4 Existing Sources of Vibration

Existing GHWTP operations do not incorporate equipment or activities that have been identified as generating on-site groundborne vibration levels. Transportation-related vibration from roadways in the study area is the primary source of groundborne vibration. Heavy truck traffic can generate groundborne vibration, which varies considerably depending on vehicle type, weight, and pavement conditions. However, groundborne vibration levels generated from vehicular traffic are not typically perceptible outside of the roadway right-of-way (Caltrans 2020a). According to the FTA and as referenced by Caltrans, typical vibration-source reference levels for loaded heavy trucks would be 0.076 in./sec. PPV at 25 feet (FTA 2018) from the centerline of the source. Due to the rapid attenuation rate of groundborne vibration and the FTA vibration-source reference levels would comply with the Caltrans recommended threshold criteria for damage to older residential structures of 0.3 in./sec. PPV at distances greater than 10 feet from the source.
